REVENUE ACT OF 1942

THURSDAY, JULY 23, 1942

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to call, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will please come to order. The committee has before it the 1942 revenue bill, H. R. 7378. The Secretary of the Treasury is here this morning. Mr. Secretary, we will be pleased to hear from you first, and all questions will be deferred until you have finished your statement, if that is agreeable to you.

STATEMENT OF HON. HENRY MORGENTHAU, JR., SECRETARY OF THE TREASURY, WASHINGTON, D. C. (ACCOMPANIED BY DANIEL W. BELL, UNDER SECRETARY OF THE TREASURY, AND RANDOLPH E. PAUL, SPECIAL TAX ADVISER TO THE SECRETARY OF THE TREASURY)

Secretary MORGENTHAU. Mr. Chairman, and members of the committee: You will recall that in his Budget message of January 5, President Roosevelt asked for additional taxes for the fiscal year 1943, exclusive of social security taxes, of $7,000,000,000. On March 3, I appeared before the Committee on Ways and Means of the House and presented recommendations for a tax program to produce $7,600,000,000 in additional annual revenue from taxes. On May 6, I wrote a letter to the chairman of the Committee on Ways and Means recommending a reduction in personal income-tax exemption to produce approximately $1,100,000,000 more revenue. These two recommendations together involved a tax program of $8,700,000,000 of additional revenue. These amounts represented what I believed, and still believe, was the very least that the American people could afford to provide.

It is only against the background of our war expenditures that we can tell whether the revenue bill before you will fulfill its purpose. We are now spending $150,000,000 a day or almost $5,000,000,000 a month. In the fiscal year that is beginning we expect to spend the almost inconceivable sum of $77,000,000,000 to win this war for human freedom.

There can be no compromise with these war expenditures. We would not reduce them if we could. Our whole effort must be to trans-

late our spending as fast and as effectively as possible in the actual production and use of our war materials. If our expenditures this year reach $77,000,000,000, our receipts in revenue from the people must bear some reasonable relationship to that colossal figure. If the House bill were to become law it would be necessary to borrow from the public during this fiscal year about $53,000,000,000. To the extent that we enlist our current income in taxes to cut down this borrowing, we shall be protecting the future economic soundness of our country and our free institutions. To the extent that we fail, we shall be endangering the survival of all that we are fighting to preserve.

It is interesting to remember that only 2 years ago, in the fiscal year 1941, we were devoting only about 7 percent of our national income to defense expenditures. In the present fiscal year we shall be spending about half of our national income on the war. Thanks to the foresight of President Roosevelt and the splendid cooperation of Congress, we expect to devote to the war effort in our first complete fiscal year of war a proportion of our national income roughly comparable to the proportion being spent by Canada and approaching that being spent in Great Britain.

We get a different picture, however, if we look at the percent of expenditures financed through taxes in the three countries. In the fiscal year 1941 Canada financed about 70 percent of all its expenditures by taxation and in the fiscal year 1943 it expects to raise about 55 percent from taxes.

The United Kingdom, in the fiscal year 1941, financed 44 percent of all its expenditures by taxation, and in the fiscal year 1943 it expects to raise 53 percent from taxes. In the United States, however, including Federal, State and local governments, only 37 percent of all fiscal 1943 Government expenditures would be financed by taxation on the basis of the revenue bill now before you. It is clear that we are substantially behind Great Britain and Canada in the proportion of our expenditures which we are raising from taxes. Quite frankly, I do not see why we should not do at least as well as Great Britain and Canada.

TAXATION AND THE COST OF LIVING

Taxation does more than supply money to finance the war. It does more than apportion the war burden now, once and for all, instead of leaving it for further distribution through taxes after the war. Wartime taxation also plays an important part in preventing rapid and continued increases in the cost of living. The President has announced a 7-point program for holding down the cost of living. Ceilings have been placed on prices. This fact may have caused many people to be unduly optimistic about the future of the cost of living. It cannot be too strongly emphasized that if the price ceilings are to be maintained and rapid and continuous price rises avoided, the pressure of the large and expanding volume of consumer purchasing power on the diminishing supply of goods must be reduced.

To reach a much larger volume of consumer purchasing power, the bill now before you includes such a broad reduction of personal exemptions that it will affect almost seven million individuals who have never paid direct taxes to the Federal Government before. If this section of the bill is passed as it stands, some thirty-one million income-

tax returns will be filed in 1943, as against only 7,700,000 in 1940. For the first time in our history the income tax is becoming a people's tax.

Taxes cannot, by themselves, win the battle against inflation. The battle must be fought with determined and coordinated effort on many fronts. Taxation can be fully effective in this battle only if it is accompanied by restraint and self-denial in other fields. Nevertheless, taxation by itself can make the price situation more controllable and less dangerous than it otherwise would be, and it is an essential anti-inflationary weapon that must be used to the utmost. Inflation has been well described as "the ruthless process whereby sacrifice is imposed inequitably upon a people who have lacked the unity, the courage and intelligence to impose that sacrifice equitably upon themselves." It is for us to show that we have the unity, the courage and the intelligence to check inflation now.

TREASURY PROGRAM A MINIMUM PROGRAM

The administration's revenue program was presented last spring as a minimum. On March 3, when I first came before the Ways and Means Committee, our total contemplated expenditures for the fiscal year 1943 were $63,000,000,000. Since then they have risen by $14,000,000,000, and the total war appropriations, authorizations and requests for this and succeeding fiscal years have risen by $75,000,000,000. It is true that the bill before you would produce by far the greatest revenues in our history, and I would not wish for one moment to minimize the task performed by the Ways and Means Committee. Yet this bill would provide only $6,300,000,000 additional revenue in place of the $8,700,000,000 we recommended in the spring. It would fail by about $2,400,000,000 to reach that minimum of last spring, which is even more emphatically the very least we can afford to provide today.

In presenting its revenue program to the Committee on Ways and Means, the Treasury outlined methods of taxation which it considered most desirable and appropriate to raise the required amounts. I still believe that these proposals are sound and present the best sources for a revenue program of this size. They are based upon the principle of ability to pay, and they avoid such devices as a general sales tax, which would fall with the greatest impact upon those least able to bear the burden. The various provisions of the administration program are well known and it is not necessary to repeat them here. I should like, however, to emphasize certain points which I hope will be most carefully considered by the committee.

1. *Special privileges.*—The revenue bill as it stands violates the basic principle of equity which is so important to an all-out war finance program. It does this by leaving certain highly privileged groups free from tax on large portions of their income.

The first of these especially favored groups are the recipients of tax-free interest from State and municipal securities. Exemption of interest on State and local securities is a serious breach in our system of taxing according to ability to pay. For example, in the case of one individual, out of a total reported income of approximately $975,000, over $668,000 came from State and local securities. If the bill as it passed the House should become law, this individual would pay only $243,000; if, on the other hand, your committee would adopt

my suggestion and remove this pre-Pearl Harbor exemption, he would pay $832,000.

Senator BARKLEY. Let me ask you, Mr. Secretary, you emphasize pre-Pearl Harbor exemption. That was pre-World War No. 1 exemption as well as pre-Pearl Harbor, was it not?

Secretary MORGENTHAU. That is true.

Senator BARKLEY. In other words, this exemption privilege has been one that has existed ever since the local securities were issued. I think it is not quite fair to say that this exemption was a pre-Pearl Harbor exemption. While that is true, all right, it has been an exemption for years and years.

Senator VANDENBERG. It even has something to do with the Constitution, does it not?

Senator BARKLEY. I do not know about that. There is a constitutional question involved, but I do not want to go into that.

Senator VANDENBERG. That is very far back.

Senator BARKLEY. I doubt the wisdom of undertaking to create the impression that this exemption which existed for a generation is just limited to a pre-Pearl Harbor exemption. I do not see just what Pearl Harbor has to do with it.

Secretary MORGENTHAU. Well, Pearl Harbor, Senator Barkley, I need not remind you, happened to be the date when we were attacked.

Senator BARKLEY. Yes; I am familiar with that date. But the point is that this is a matter that ought to be considered on its merits and not on account of any particular date, it seems to me. I do not quite see the relevancy of using Pearl Harbor as a date when this legal exemption and privilege has existed from time immemorial, ever since these securities were issued. I am not passing on the merits of the question of their taxation.

Secretary MORGENTHAU. To answer your question or your criticism, I happen to believe that beginning with Pearl Harbor on December 7, and facing what we do, we have to change our entire mode of living. I just do not believe that the people should enjoy these special privileges that they had prior to December 7 while we are calling on the people of this country to make the sacrifices which they are going to have to make to win this war. I believe that these few people should be asked to give up these special privileges.

Senator BARKLEY. That is a question that goes to the merits of the proposition, but the point that seems to me to be impotrant involves the legality of undertaking to tax exempt securities that have been exempt under our Constitution and laws from time immemorial, since they were issued.

It involves securities upon which the rate of interest was fixed according to the exemption, and a lot of questions enter into that which bother me. I am not attempting in any way now by my question, Mr. Secretary, to foreclose the question, or to preclude myself from considering it on its merits when we get to it, but I just frankly cannot quite comprehend the necessity of using any particular date. We have all got to make more sacrifices, and we are making more and we have to make still more now than anybody contemplates, but we have also got to keep in mind the question of law, the question of the Constitution and the right of Congress to deal with subjects which have been fixed in our law and in the

Constitution of the United States for a long, long time, and I would not want to vote to violate the law and the Constitution of this country in order to make somebody sacrifice more than he would sacrifice if he complied with the law and the Constitution.

Secretary MORGENTHAU. Senator Barkley, any time that you, or the chairman, or any other member of the committee wishes, we are prepared to give the legal interpretation as to why we think that this is possible and proper and ethical.

Senator VANDENBERG. The legality did not change beyond December 7.

Secretary MORGENTHAU. No.

Senator VANDENBERG. That is the point Senator Barkley made.

Secretary MORGENTHAU. As I say, when you get into the legal question, the Treasury's attorneys are prepared to argue that point.

May I continue?

The CHAIRMAN. Yes.

Senator BARKLEY. I beg your pardon for interrupting.

Secretary MORGENTHAU. That is all right.

Senator BARKLEY. That thing kind of stuck in my craw there.

Secretary MORGENTHAU. If you do not mind my saying so, Pearl Harbor kind of sticks in my craw, too.

Senator BARKLEY. I think both of our craws have been affected very largely by Pearl Harbor.

Secretary MORGENTHAU. May I continue?

The CHAIRMAN. Yes, sir. You may continue.

Secretary MORGENTHAU. All right.

Let me put the illustration another way. If this exemption is retained, he would have $732,000 left after taxes; if it is abolished, he would have $143,000 left.

The glaring unfairness of this exemption may be seen in another way.

Under the tax rates in the House bill, a person with a surtax income of $100,000 from other sources who holds a 3-percent tax exempt security receives as much net return after taxes as from a taxable security yielding 20 percent. The existence of this special privilege for all holders of tax-free securities costs the Government and the people of the United States, under the House rates of tax, about $200,000,000 a year; and it will cost still more as our wartime taxes tempt more and more wealthy individuals to shift their investments into the hide-out of tax-exempt securities.

How can we expect to obtain an all-out war effort from all our people if we go on permitting a group of individuals and corporations owning $14,000,000,000 of State and local securities to go tax free on the income from these securities. We are asking our young men to give their lives for their country, and at the same time we are allowing many wealthy persons, safe behind the lines, to escape their fair share of the war's financial burden. At a time when we are straining our energies to the utmost to defeat a powerful and ruthless foe, common decency requires that we abolish these special tax shelters, and do it now.

Another highly privileged group having large amounts of income exempt from income tax are the owners of oil wells and mines. I refer to those provisions of the law dealing with percentage deple-

tion. Percentage depletion is a serious breach in our system of taxation according to ability to pay.

I cannot believe that the taxpayers of America would knowingly sanction a provision of the law which allows owners of oil and gas wells to deduct from their income 27½ percent of their gross receipts from such wells—not for 1 year, 2 years, or the period necessary to return investment, but for an unlimited period. For example, a leading oil company owned a number of oil properties which had cost it $3,000,000. At the time the case was examined, percentage depletion of $3,600,000 had already been allowed and the properties still had three-fourths of the oil left.

Certainly we cannot justify this exemption on the ground that it encourages exploration and drilling for oil. There is grave doubt that it has a substantial effect on oil discovery. It would have cost the Federal Government about one-third as much to have paid all the cost of every wildcat well that was drilled in 1941 as to have allowed percentage depletion and the associated intangible drilling expenses. The annual cost of these allowances under the proposed rates would be about $200,000,000.

The privilege of filing separate income-tax returns furnishes another example of special tax advantages to many married couples having larger than ordinary incomes. In families in which the income is earned partly by the husband and partly by the wife and in families in which income-earning property can be divided between husband and wife, the tax on the family income is less than where the husband or wife receives the whole income. The family is the true economic unit, and it is unfair for the amount of tax on the family to vary depending upon who earns the income or upon who in the family has income-producing property. Ability to pay taxes must be judged in terms of family incomes and not the incomes of members of the family. The failure to require joint-income-tax returns constitutes a violation of the fundamental principle upon which our tax system has been based.

The adoption of mandatory joint returns would also eliminate another discrimination prevailing under existing law. Married couples living in the eight so-called community-property States receive tax advantages which are in no way commensurate with any special relationship that may exist between husbands and wives in those States. For example, take a family in which the husband has a salary of $10,000 after deductions. If the family has its residence in, say, California, and files community-property returns, the family tax would be $1,788, while if the family lives in, say, Iowa, the tax would be $2,152 or over 20 percent more. The discrimination is even more pronounced with larger incomes. In this national emergency, how can we complacently permit the citizens of these community-property States a more favorable tax status than those of the rest of the country?

These examples of special privileges are intolerable at a time like this, when we are imposing heavy taxes on persons with small incomes and there is pressure for limiting wages and farm prices. The country is in greater danger today than ever before in its history. The war is now in its most critical phase, and only by pulling together as a united people can we make the effort that will turn the tide toward victory. At such a time any special privilege for any

group not only deprives the Treasury of revenue that is badly needed for the war effort, but hinders the war effort by undermining the morale without which the war cannot be won.

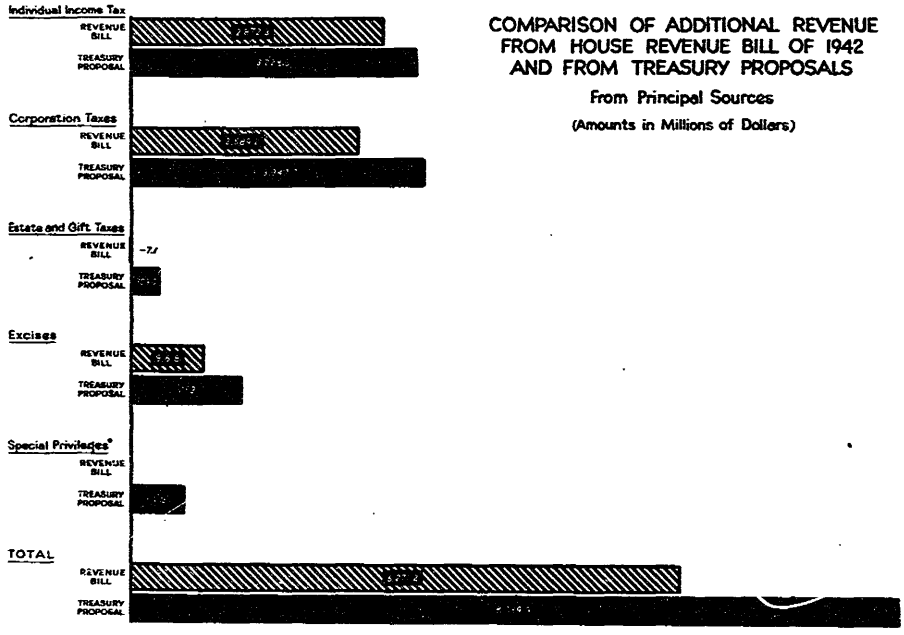
2. *Excess-profits tax.*—Another similar hindrance to the prosecution of this "people's war" is the existence of excessive profits in wartime. There is no easier way to stir the righteous anger of the American people than to let them hear constantly of excessive wartime profits that are not being recovered by adequate taxation. I have said repeatedly that we are determined to take the profit out of war, and the Treasury's recommendations have been framed with this determination in mind.

An effective excess-profits tax does much more than produce badly needed revenue in time of war. It also reassures the masses of our farmers and factory workers that industry is not being rewarded unduly for its part in the winning of the war.

I do not believe that any patriotic American needs the "incentive" of profits to produce for war at this time. Millions of our people are willing to pay new and genuinely burdensome taxes, to buy war bonds without stint, and to do without many of the accustomed luxuries and even conveniences of daily life. Their only "incentive" is their firm resolve to win this war and build a better future.

Experience has shown, however, that when excess-profits taxes are too high they may result in extravagance and waste in the conduct of business. It is vitally important that we stimulate business to produce for war purposes as economically and efficiently as possible, if for no other reason than to avoid a waste of war materials and labor and to hold down the cost of the war to the Government. Moreover, a post-war credit to industry will help toward the rebuilding of our economic life. For these reasons we have recommended a 90-percent excess-profits tax coupled with a 10-percent credit for return to the corporation after the war. The credit should, of course, be restricted in such a manner that it would be used for the direct employment of labor, the conversion of plant to peacetime business or for other uses promoting economic adjustment and growth.

3. *Tax on freight and express.*—One tax that would be imposed by the bill before you directly threatens the stability of prices. This is the tax on freight and express which would add to the cost of producing and supplying practically every commodity and service. In great numbers of cases the added cost would make it impossible for businesses to continue to operate under the price ceilings which have been imposed and the breaches in the price ceilings which would thereby be caused would threaten the whole price structure.



Conclusion.—I shall not attempt today to discuss the more technical aspects of the long and complex bill before you, nor to enlarge further upon the subjects I have mentioned already. The Treasury staff stands ready, as always, to assist you in every way possible in carrying out your difficult and responsible task. I should like, however, to make just one more appeal. Every day consumed in your committee's work will lose us substantial amounts of revenue under the excise tax portions of the bill. Every day that can be saved in enacting this bill will enable it to produce just so much more in needed revenue. Every day saved will give our citizens additional

time to adjust themselves to the impact of the most severe tax bill in all our history.

I am discussing our tax problem with you today on broader grounds than that of revenue alone. It is my conviction that the people of this country want a courageous tax bill, and want it with the least possible delay. They are ready for greater sacrifices than some of us imagine. The overwhelming majority of them, I am convinced, want us in Washington to show a determination that is worthy of their own. They will be critical of us only if we seem to palter or haggle, or if we pay too much attention to the demands of selfish groups, or if we seem half-hearted in asking self-denial of the people as a whole.

Our acceptance of sacrifice on the home front is a yardstick of our determination to win the war. For this reason it is unthinkable to me that we should be straining every effort on the fighting fronts abroad and on the production line at home, and at the same time be anything less than all-out in the financing of the war effort. This war, above all others, can be won only by hard fighting, by the acceptance of risks and deprivations and by the united effort of civilians and fighting men alike. In this kind of war a tax bill can be a decisive battle. It could be lost by narrow vision and faulty leadership. It can be won by boldness and courage. I am confident that this committee will live up to its high responsibilities and keep faith with a united people.

Office of the Secretary of the Treasury
8-828-2

The CHAIRMAN. Any questions, gentlemen?

Senator BARKLEY. Mr. Chairman, I would like to make an additional observation following my interruption of the Secretary a moment ago. You and I discussed this subject of tax-exempt securities outstanding on many occasions.

Secretary MORGENTHAU. Yes, sir.

Senator BARKLEY. Both in public and in private.

Secretary MORGENTHAU. Yes, sir.

Senator BARKLEY. And I think you know the feeling that I have had about it. This is not a new subject. It has been debated here in every tax bill we have had for years, and before we got into the war, so it is not a new problem that has arisen. Undoubtedly we need the money and I am ready to vote to tax those securities if it can be done legally, but I would not be willing to vote for an allegal tax, if it is an illegal tax, just to get some money. There are a lot of other places we can get it, if they are legal. I am open-minded on the subject, and of course, will listen to the legal advice of the Treasury. We have gone along here for years and years taxing securities. We have taxed the incoming Federal securities and securities to be issued in the future, and I think it is fair to say if there had not been a legal doubt in the mind of Congress as to whether it could tax outstanding local securities they would have been taxed also. The only reason why they are not included now is the fact that there has been a legitimate legal argument about whether we can do it. If we can do it, I am ready to do it, and I want to do it, but I do not think the mere fact that we need that much money dissolves any honest legal doubt that anyone has as to whether we can do it legitimately. That is the position I take and it is one that has bothered me for a good many years, and I think it has bothered the committees of both Houses and both Houses of Congress.

I am sure you will present your side of the matter to the committee. As far as I am concerned, I am ready to listen, but I did not want any misunderstanding as to the views which I have entertained and which I still entertain and which have not been dissolved by the mere fact that we are in a war.

Secretary MORGENTHAU. Well, Mr. Chairman, if I may answer Senator Barkley——

The CHAIRMAN. Yes.

Secretary MORGENTHAU. I would not be coming up here again and again, asking that State and municipal securities be taxed, if we in the Treasury did not think it was legal.

Senator BARKLEY. I realize that.

Secretary MORGENTHAU. We are not coming up here asking for illegal revenue, at least from our viewpoint.

Senator BARKLEY. I understand that.

Secretary MORGENTHAU. If and when the chairman thinks it is proper, we would like to have the chance to present the Treasury's viewpoint as to why we think it is legal as well as ethical.

Senator CLARK. The only way to finally determine the legality is to submit it to the courts, and that could only be done by the Congress including it in some tax provision. Is not that correct?

Secretary MORGENTHAU. I did not get that.

Senator CLARK. I say the only way to finally determine the legality is by submitting it to the courts, and that could only be done by the Congress including it in a tax provision.

Secretary MORGENTHAU. I will ask Mr. Paul to answer that.

Mr. PAUL. You are quite right.

I might say, however, if it were palpably unconstitutional we would not come up here with it.

Senator CLARK. I know I voted for it repeatedly because I thought it was constitutional and legal. The only way that can be determined is by submitting it to the courts.

Mr. PAUL. We submitted it to the Attorney General. In the Ways and Means Committee hearings, there is incorporated, I might say, an opinion from Assistant Attorney General Clark stating quite clearly his opinion that there is perfect legality in the proposal now both as to outstanding and future issues. Nobody can blame Congress for not having done so in past years, because there has been, until recent decisions of the Supreme Court, a certain amount of doubt on this question.

I refer to the decision in such cases as *Graves* v. *O'Keefe* and the *Gerhardt case*. Those cases, in the opinion of the Attorney General, clear the thing completely. I am perfectly willing to submit a statement on that if necessary.

Senator TAFT. May I suggest the example given is not quite fair, because the gentleman who invested in tax-exempt securities was getitng only perhaps two-thirds of what he would have gotten if he had not invested in tax-free securities.

It can hardly be said that the figures used as an example are quite fair. I agree with the principle of it. It seems to me, in the interest of fairness, some account should be taken of the fact that he had to pay, in order to be exempted, more for the municipal bonds. The State and municipal governments received a great advantage from that fact in getting their money at a lower cost.

Secretary MORGENTHAU. No; no.

Senator TAFT. Therefore, in giving that as an example, it seems to me that a modification should be made in the figures here.

Secretary MORGENTHAU. No; Senator. We figure, going back over a number of years, that the tax-exempt privileges cost the purchasers about one-half of 1 percent.

I think the example is perfectly proper.

Senator DANAHER. Mr. Chairman.

The CHAIRMAN. Yes; Senator.

Senator DANAHER. Mr. Secretary, since we were talking earlier about a date, I would like to have your experts, then go into the matter specifically, give us your thought on our taking the date of January 23, 1942, for the reason that that was the date on which you first announced your intention of seeking this specific program. Certainly, everybody was put on notice as of that date that you intended to seek this tax, and any State bonds or municipal bonds then outstanding that were traded in thereafter were bought with notice to the purchasers of your intention to seek a tax on them. If we are to tax outstanding issues at all, it would seem to me you might very properly direct your thought to our taking that as a

specific date and saying that municipals thereafter traded in or issued would be subject to tax, but earlier issues still in the hands of owners would not be.

Secretary MORGENTHAU. That is approximately the date.

Senator DANAHER. That was the date?

Secretary MORGENTHAU. Yes; it was on January 24.

Senator TAFT. That would not contemplate the present or outstanding municipal bonds but only those in the future.

Senator DANAHER. Whatever we have a right to do in prospect—and I think that we have that right—and whatever we have an equal right to do as to securities outstanding as of that date and thereafter traded in, for the same principle would apply to both.

Secretary MORGENTHAU. As far as the Treasury is concerned, we certainly announced where the Treasury and administration stood on that point.

The CHAIRMAN. Is there any other question?

Senator DANAHER. I would like to ask the Secretary two or three other questions, if I may.

The CHAIRMAN. All right, Senator.

Senator DANAHER. Directing your attention to the first page of your statement, sir, where you discuss the achievement of a reasonable relationship of the income to the tax to be raised, relative to the $77,000,000,000 of expenses, I notice that the $8.7 billion revenue that you recommended to the House in the spring bore a relationship of 13.8 percent to the $63,000,000,000 of predicted expenses.

Secretary MORGENTHAU. Yes.

Senator DANAHER. What do you say should be a reasonable relationship? Would you apply the same formula of 13.8 percent to be raised by taxes?

Secretary MORGENTHAU. Well, that is a very difficult question to answer. I do not know what the date was when I appeared, I think it was before this committee, or probably it was before the House, but at that time, I hoped that we could pay 66⅔ of the expenses through revenue. Since then on the expenditures side, it has gone up so rapidly that it is very hard to state any particular percentage. I simply feel this way, that as far as the present time is concerned—and this is the best answer I can give you—that if the Congress would provide the 8.7 billion plus the 2 billion additional social security, I think that possibly for this year that would be a minimum now.

Senator DANAHER. Does the 77 billion include lease-lend expenditures?

Secretary MORGENTHAU. Yes, sir.

Senator VANDENBERG. Before you leave your percentage, Senator, if I may follow it up just a little, when you started on this tough journey in January, the objective was to pay two-thirds as we go, was it not?

Secretary MORGENTHAU. It was a year ago.

Senator VANDENBERG. It was a year ago?

Secretary MORGENTHAU. Yes.

Senator VANDENBERG. Now, as I understand it, it is about one-eighth pay as you go?

Secretary MORGENTHAU. A little less than 30 percent, just under 30 percent.

Senator VANDENBERG. Does not that shift the primary importance of our fiscal problem from taxation to borrowing? I do not mean that it lessens the need to get as much as possible in taxes, but does not that shift the emphasis to the necessity of a borrowing program, rather than a taxing program?

Secretary MORGENTHAU. Senator, you and I often do not state the same problem in the same way.

Senator VANDENBERG. I think that is an accurate historical outburst.

Secretary MORGENTHAU. I have learned through experience to look twice at your questions—also your letters. I would put it this way: I think it is very important that the Congress vote every dollar possible for taxes.

Senator VANDENBERG. How much do you have to borrow next year, I mean this fiscal year?

Secretary MORGENTHAU. Well, it is over fifty billion dollars, fifty or fifty-three billions.

Mr. BELL. $53,000,000,000.

Secretary MORGENTHAU. $53,000,000,000, Mr. Bell says.

Mr. BELL. $53 billion, on the basis of the latest Budget estimates.

Senator VANDENBERG. How much are you going to get out of voluntary bond purchases?

Secretary MORGENTHAU. The program calls for $12,000,000,000.

Senator VANDENBERG. You are not reaching it, are you?

Secretary MORGENTHAU. Not quite yet; no.

Senator VANDENBERG. Suppose we take the $12,000,000,000 that leaves $41,000,000,000 to be obtained somewhere else. Where will you get that?

Secretary MORGENTHAU. Well, we will get it from the insurance companies, the savings banks, individuals, trust funds, and the banks.

Senator VANDENBERG. Well, the normal purchase by insurance companies, and so forth, would be about $8,000,000,000, would it not?

Secretary MORGENTHAU. Mr. Bell will answer that.

Mr. BELL. About $2,000,000,000.

Senator VANDENBERG. How much?

Mr. BELL. About $2,000,000,000.

Senator VANDENBERG. Only $2,000,000,000?

Mr. BELL. Yes, sir.

Senator VANDENBERG. That leaves $39,000,000,000 then of forced sales to banks. That is what I am getting at. How much have you finally got to force into the banking system?

Secretary MORGENTHAU. Well, would you mind my saying that I think the word "force" is rather unfortunate?

Senator VANDENBERG. All right.

That is a post-Pearl Harbor word.

Secretary MORGENTHAU. Up to now, we have not had to use it.

Senator VANDENBERG. You use your own words. It is $39,000,000,000, about, that has to find its way into the banking system.

Secretary MORGENTHAU. I enjoy these exchanges with you always but what we have to borrow from the banks and the whole country is a very serious business.

Senator VANDENBERG. That is right. That is the reason I am inquiring about it.

Secretary MORGENTHAU. We have to look to the banks, and I told them so at their annual meeting. After we have gone to every other group of owners of money we, in the final analysis, will have to look to the banks to provide the money to finance this war. I want to say here, Senator, that up to now—that is why I just question the word "force"—the banks have been perfectly grand about this thing.

There has not been any question of force. They have bought Government bonds cheerfully and willingly and in a big way, and I think from every standpoint they should get full credit for it.

Senator VANDENBERG. You are convinced that it is safe to continue to avoid a more general allocation of these Defense bonds among the masses of our people and that it is still safe to concentrate these bonds in the banks?

Secretary MORGENTHAU. Let me put it this way, Senator: Within the limits of my ability to look ahead on this tremendous program, and I realize the size of it and also the limits of my ability, for the rest of this year my answer to you is it is safe. If, on the other hand, I change my opinion and feel that the program that we are following now in borrowing and financing is in error, that my judgment has been in error, I will come up here and say so and ask for assistance and guidance.

Senator VANDENBERG. Thank you. I will return you to Senator Danaher, but I would like to have you come back to me again a little later.

Senator TAFT. Mr. Chairman, I would like to follow up this question.

As I understand the Secretary, he is saying that the war has to be financed by selling—I did not get the exact figure—over $30,000,000,000 of bonds to commercial banks. Is that correct?

Secretary MORGENTHAU. Could Mr. Bell answer you, please?

Senator TAFT. I would like to have the Secretary's answer. It seems to me it is a vital question in national politics, if the Secretary is willing to say so.

Secretary MORGENTHAU. I am willing to back up Mr. Bell. He has got this thing at his fingertips.

The CHAIRMAN. I think, Senator Taft, that you misunderstood the Secretary. He did not say that it would be necessary to go to the banks for this final balance of some thirty-billion-odd dollars. I do not think he intended to say that, and I do not think he did say that exactly.

Senator TAFT. That is what I understood him to say, and I would like to have him say whether that is the fact. The Senator from Michigan got it down to about $39,000,000,000.

I think there are other sources of sales that have been calculated, but I have not seen any estimate which reduces that below $30,000,000,000. I would like to find out definitely whether the program of financing the $77,000,000,000 of expenses includes the sale of $30,000,000,000 or more of bonds to the commercial banks.

Secretary MORGENTHAU. Would it be agreeable to the Senator if I let the Under Secretary state it, and then if he is not satisfied, he can question me?

Senator TAFT. Surely.

Secretary MORGENTHAU. All right.

Mr. BELL. I do not believe that you can draw any such conclusion from the figures that Senator Vandenberg arrived at.

He merely took certain classes of investors and added up what they might take during the year and then deducted that from the total. There are many other investors in this picture which we must reach. Those are mutual savings banks, individuals, corporations, trust funds, and fiduciaries.

I can take the total debt and show you where that debt was on June 30 and then take the increase in the debt during the past year and give you the percentage figures.

Senator TAFT. Mr. Bell, I was asking about the program of the Treasury for the coming year beginning the 1st of July.

Mr. BELL. The program is to sell every dollar of public debt that we can outside of the commercial banking system. How much that will be we do not know.

Senator TAFT. Altogether you have to sell $53,000,000,000, is that correct?

Mr. BELL. Yes, sir.

Senator TAFT. Do you count in that this $2,000,000,000 that you are selling to the social security fund? Is that taxes or borrowing?

Mr. BELL. That is borrowing.

Senator TAFT. That is borrowing?

Mr. BELL. Yes.

Senator TAFT. That is included in the $53,000,000,000?

Mr. BELL. Without any new law, there would be about $2,000,000,000 in that.

Senator TAFT. That leaves $51,000,000,000. Then there is the $12.000,000,000 in this program of Defense bonds, stamps, and so forth.

Mr. BELL. We hope that would be the minimum.

Senator TAFT. As a matter of fact, up to date, you haven't gotten anywhere near that?

Mr. BELL. Yes, I would say we are approaching it this month.

Senator TAFT. In March, for instance, it was only half a billion dollars.

Mr. BELL. When was that?

Senator TAFT. In March.

Mr. BELL. This is July. We are well on our way toward a billion for this month.

Senator TAFT. Assuming that will be $12,000,000,000, that leaves $39,000,000,000.

Then what are the other sources?

Mr. BELL. You have mutual savings banks, insurance companies, and all other investors in the country, such as individuals, trust funds, corporate funds.

Senator TAFT. They are not going to have an awful lot to invest after we get through with the tax bill; I mean those concerns.

Mr. BELL. They may have some reserves for depreciation and other purposes.

Senator TAFT. I am not speaking of the savings banks and insurance companies. Of course they have. I am talking about the private investor of large sums who is not reached by this Defense bonds program, he is not going to have a great deal to invest.

Mr. BELL. They may have more than we think.

Senator TAFT. What is your estimate?

Mr. BELL. I have no estimate. I would not undertake to estimate how much it will be.

Senator TAFT. You have an estimate of $2,000,000,000 for insurance companies.

Mr. BELL. That is right.

Senator TAFT. And mutual savings banks are what? A half billion?

Mr. BELL. Mutual savings banks took $476,000,000 of our debt during 1942. How much they will take in 1943 I cannot estimate.

Senator TAFT. To be liberal, you might allow a billion dollars.

Mr. BELL. That is right.

Senator TAFT. Those are the only savings institutions. $3,000,000,000 out of savings institutions?

Mr. BELL. Yes, that is about it.

Senator TAFT. That will reduce it to $36,000,000,000. Don't you think that $6,000,000,000 is a fairly liberal estimate for private investors of large sums and trust funds and the like?

Mr. BELL. They took $11,000,000,000 in the fiscal year, 1942.

Senator TAFT. How much?

Mr. BELL. $11,000,000,000 of our debt in 1942 went to other investors than the ones you have named.

Senator TAFT. Also the small investors?

Mr. BELL. That was outside the commercial banks.

Senator TAFT. I mean there was then no Defense bonds program. That included all of them?

Mr. BELL. There was a Defense program during last year.

Senator TAFT. The $11,000,000,000 included that?

Mr. BELL. Yes, sir.

Senator TAFT. That is what I thought. Don't you still think that the program calls for the sale of approximately $30,000,000,000 to commercial banks?

Mr. BELL. No, I would not say that.

Senator TAFT. Is not that the estimate of the American Bankers' Association?

Mr. BELL. Oh, you see estimates anywhere from $15,000,000,000 to $30,000,000,000.

Senator TAFT. From $15,000,000,000 to $30,000,000,000?

Mr. BELL. Yes.

Senator TAFT. And today the total holdings of Government bonds in commercial banks are about $38,000,000,000?

Mr. BELL. On June 30 the total holdings of commercial banks were estimated at about $26,000,000,000.

Senator TAFT. If they took $24,000,000,000, you are going to double their holdings in a single year, is that right?

Mr. BELL. Your mathematics are correct.

Senator TAFT. What I would like to ask is this: Does not the sale of bonds to commercial banks create just that much more purchasing power which will necessarily break down any price-control program?

Mr. BELL. Not necessarily, but it does lay the basis for inflation. All borrowing from banks is not, however, inflationary.

Senator TAFT. It creates $24,000,000,000 purchasing power against a steadily decreasing amount of materials and supplies to be bought by the people who have that money.

Mr. BELL. Senator, we realize the danger of that type of financing. That is the reason we are trying to put every dollar outside of the banking system.

Senator TAFT. I understand that. It seems to me that the program as a whole is completely inadequate to prevent the very inflation that the Secretary at length denounces and correctly renounces. It seems to me that it is so much more important than anything Mr. Henderson is doing and it is so nullifying anything he can possibly do that, unless the Treasury can present a more constructive program, the responsibility for inflation would rest more on the Treasury and not on the Congress or on Mr. Henderson.

Mr. BELL. Anything Mr. Henderson does to control prices and keep the money out of the spending stream makes that much more money available for investment in Government securities.

Senator BARKLEY. You do believe that the war can be financed, don't you?

Mr. BELL. It has got to be financed.

Senator BARKLEY. I am wondering if the Senator from Ohio can prove that it could not be.

Senator TAFT. I think that a much more extensive bond-selling program must be undertaken than anything we have heard from the Treasury yet. A program that leaves the sale of $30,000,000,000 of bonds to commercial banks destroys any hope they have of preventing inflation in that respect.

Senator BARKLEY. Let me ask you this: The people of the United States are going to be making about $30,000,000,000 more income this year than they did last year, $28,000,000,000 to $30,000,000,000?

Mr. BELL. Probably that.

Senator BARKLEY. Of course, a large part of that is due to the expansion of industry and due to the war. It seems to me incredible that out of that $30,000,000,000 of new income we could not dig up $8,000,000,000 to help finance this war by taxation.

Senator TAFT. That goes to the question of taxes and not to the question of bonds.

Senator BARKLEY. That goes to the question of taxes and it goes to the question of borrowing money, because the more money we can raise by taxes, the less we have to borrow.

I suppose any sort of large-scale borrowing program, whether the bonds are taken by the banks or by individuals, creates an inflationary situation.

Senator TAFT. I do not agree with the Senator at all. The sale of bonds to commercial banks is directly inflationary.

Senator BARKLEY. There may be degrees of difference, but any outstanding large-scale bond program is bound in some way to create an inflationary situation which you cannot control either by tax laws or by price control.

There is no way to avoid some of that, in my judgment.

Senator VANDENBERG. The question submitted by the Senator from Kentucky raises a problem which you have touched upon, Mr. Secre-

tary, on page 3 of your prepared statement, which interests me tremendously.

You say if this bill is passed as it stands, there will be 31,000,000 income tax returns in 1943 as against only 7,700,000 in 1940. That is an increase of approximately 23,000,000 income tax returns.

Now, is there any figure available to show how much of your increased tax revenue comes from the 23,000,000 new taxpayers, as compared to the 7,000,000 old taxpayers?

Secretary MORGENTHAU. I think we have those figures.

Senator VANDENBERG. Are they available?

I think it is a very important figure.

Secretary MORGENTHAU. Can Mr. Blough answer you?

Senator VANDENBERG. Yes.

Mr. BLOUGH (Roy Blough, Director of Tax Research, Treasury Department). Of course, changes took place in 1940 and 1941 and in the House bill of 1942, and the estimates would have to be made up specially. They could be made up but they are not available.

Senator VANDENBERG. I would like to know, because I think it goes to the fundamental question of whether you are reaching the inflationary hazard. I would like to know how much of this bill comes out of the 23,000,000 taxpayers and how much comes out of the 7,700,000 taxpayers.

Secretary MORGENTHAU. We will have that study made for you promptly and have it submitted here.

(The information requested is as follows:)

Estimated number of taxable individual income-tax returns and tax liabilities at levels of income estimated for calendar year 1942, under the revenue bill of 1942 (as passed by the House of Representatives, July 20, 1942) of (a) individuals taxable under the provisions of the Revenue Act of 1939 and (b) individuals made taxable by subsequent changes in income-tax provisions (including the effect of the revenue bill of 1942)

[Money amounts in millions of dollars; number of returns in thousands]

	Number of returns	Tax liabilities
Returns taxable under the Revenue Act of 1939	7,042	6,496.8
Returns made taxable by changes in income-tax provisions	19,258	1,420.3
Total	26,900	7,917.1

Source: Treasury Department, Division of Research and Statistics, July 23, 1942.

Senator DANAHER. Mr. Chairman?

The CHAIRMAN. Yes, Senator.

Senator DANAHER. Referring further to page 3 of your prepared statement, Mr. Secretary, we have figures as to how many who filed returns for the first time under the 1941 Act, were not required to pay any tax at all, do we not?

Secretary MORGENTHAU. Mr. Blough will answer that.

Mr. BLOUGH. Such figures may have been submitted for the record last year. I do not have them right at hand.

Senator DANAHER. It is my recollection that there were some 7,000,000 returns filed from which taxpayers you collected no revenue whatever. That is my recollection.

Mr. BLOUGH. You mean under the 1941 act, filing in 1942?

Senator DANAHER. Yes.

Mr. BLOUGH. Probably Mr. O'Donnell has some recollection on that.

Mr. O'DONNELL (Al F. O'Donnell, Assistant Director of Research and Statistics, Treasury Department). That is approximately correct, Senator. The number of individual income tax returns which were filed from January 1 to June 30 this year totalled 26,300,000, of which 17,700,000 were taxable returns and 8,600,000 were nontaxable.

Senator DANAHER. Is it not a fair conclusion that a further lowering of exemptions and increasing the number of taxpayers actually causes a larger payment to be made by those who were already taxpayers?

Mr. O'DONNELL. That is true. The lowered exemptions of the House bill, together with the higher levels of income this year, will make taxable this year practically all of the nontaxable returns of last year and, as you say, all previously taxable returns will pay a tax on the amount by which their exemption has been reduced.

Mr. BLOUGH. I think there will be approximately 27,000,000 taxable returns under the House bill.

Senator BARKLEY. In that connection, may I ask the Secretary whether he could furnish the committee the number of taxpayers in 1941 and 1942? You are comparing 1943 with 1940, but there has been an increase in 1941 over 1940 and another increase in 1942 over 1941.

Secretary MORGENTHAU. We will do that, Senator.

Senator BARKLEY. I think it would be interesting to know how many new taxpayers this bill brings in over and above the taxpayers for 1942, and then going back to 1940.

Senator VANDENBERG. I agree with that.

Secretary MORGENTHAU. If you wait a minute, we will have that now.

(The information requested is as follows:)

Number of individual income-tax returns (1040, 1040A, and fiduciary) filed, by calendar years in which filed

Year	Taxable	Nontaxable	Total
1940	4,048,619	3,989,388	8,038,007
1941	7,645,473	7,579,091	15,224,564
1942 (January through June)	17,688,219	8,617,981	26,306,200
1943 (estimated):			
Present law	19,902,000	6,979,000	26,881,000
Revenue bill of 1942[1]	26,930,000	4,643,000	31,573,000

[1] As passed by House of Representatives, July 20, 1942.

Source: Treasury Department, Division of Research and Statistics, July 23, 1942.

The CHAIRMAN. May I suggest that I think we will very much more intelligently get at this particular phase of the matter when we give consideration to the individual income taxes. Then the whole question will be before us and the experts of the Treasury can then furnish us the information directly on the point.

Now, we are dealing with general questions.

Senator DANAHER. Mr. Chairman?

The CHAIRMAN. All right, Senator Danaher.

Senator DANAHER. I would like to direct the Secretary's attention to page 7 of his prepared statement with reference to mandatory joint returns.

Secretary MORGENTHAU. Yes.

Senator DANAHER. I wish to ask him a question on which I would like to have a specific answer in due course.

Secretary MORGENTHAU. Yes.

Senator DANAHER. By way of preface, a woman certainly, it seems to me, ought to be able to have the avails of her own earnings, even though she be married. A woman ought to be able to have the income from an inheritance from her father or brother or her family because it is hers, even though she be married. But if there be cases of evasion of taxes where transfers have been made of property by a husband to his wife with the intent of evading taxes, we would reach right to the heart of the problem, and I think you are seeking to alleviate that in your recommendation.

Secretary MORGENTHAU. In part.

Senator DANAHER. Now then, is it possible for us to take a period and date it back, let us say, 6 years, or 3 years—make the year date arbitrary, for all of me—and say that any transfer that has been made within that period shall be prima facie construed to have been a transfer with an intention to evade, in much the same fashion that you say a transfer in contemplation of death is, prima facie, subject to a tax?

Secretary MORGENTHAU. I do not understand. You want that answered now or later?

Senator DANAHER. No; I do not necessarily want it now. I would like to have it considered, though, so that we, in due course, can go into the possibility of whether or not you can draw a dividing line between bona fide transfers that have existed long before this program was initiated, or even contemplated, and that type of transfers which obviously is made with the intention of evading tax payment.

Secretary MORGENTHAU. It is a very interesting question and our men will study it and let you know what, if anything, can be done.

The CHAIRMAN. Mr. Secretary, I would like to ask the Treasury to consider this on the question of taxing incomes from State and municipal securities, that is to say, whether you would not make very great progress toward the eradication of this loophole, this shelter against the income taxes, by confining your tax to future issues and by classifying, in the estate tax section of this bill, the incomes derived from bonds on which full taxes have not been paid? A combination of the two, it seems to me, might carry us a long way toward the objective that you have in mind and might obviate the frank, blunt decision that an outstanding State or municipal security should be now taxed. Regardless of the strict legal question involved it is difficult to say, in fact I do not believe we can say, frankly, that the general understanding of the American investor, up until very recent months, was not that a State or municipal bond issue for the purpose of carrying on the functions of government, was not, in fact, taxable, and he acted upon that in making his purchases.

So there is a principle of morality involved, I think, in frankly saying that we now propose to turn back and say because of the evolution in the decisions of the court we will regard as taxable outstanding State and municipal securities.

As far as future issues are concerned, that question is not presented. It seems to me that there is a legitimate ground for a legitimate classification of any property in an estate that has not paid its full taxes, or comparable taxes to other like income-producing property. I think, through a combination of the two, we might make some progress, or at least I hope so.

Secretary MORGENTHAU. We will be very glad to give it careful study.

Senator BARKLEY. May I ask the Secretary: In that connection, I believe you said in your statement here, that there are approximately $14,000,000,000 of these outstanding local municipal, county, and State securities.

Secretary MORGENTHAU. That is right.

Senator BARKLEY. At what rate are they being refunded?

Mr. PAUL. I have a schedule here on that.

Senator BARKLEY. We can go into details later.

Secretary MORGENTHAU. About one billion.

Senator BARKLEY. A billion a year?

Secretary MORGENTHAU. Yes.

The CHAIRMAN. Are there any other questions for the Secretary?

Senator VANDENBERG. I wanted to ask one general question as to tax sources. I notice the Secretary's enthusiasm, on page 2 of his statement, for the Canadian and British tax record.

Are there any figures available to show how much of the Canadian program, which you so heartily applaud, comes from sales taxes, and also the same figure in relation to the United Kingdom?

Mr. PAUL. As for the United Kingdom, I can say offhand, because I remember, a very small proportion from sales taxes. I am not immediately cognizant of the figures from Canada. As a matter of fact, Canada has just revamped its whole tax system and our information from there is not complete.

Senator VANDENBERG. I understood that Canada got 17 percent of its revenue from general sales taxes.

Mr. PAUL. That might be right. I can check that figure for you. It will not be under the new, recently proposed Canadian measures, but it might have been up to now.

The CHAIRMAN. That is because the other taxes have been raised very greatly.

Senator CLARK. In the case of the United Kingdom, you do not have any such thing as a doubling-up of sales taxes. They do not have anything equivalent to our State sales tax. In other words, we have State sales taxes, many of our States have, and then we will have the Federal sales taxes, and we would be doubling our sales taxes. There are not any State sales taxes in the United Kingdom.

Mr. PAUL. That is right. The United Kingdom tax is a purchase tax. It does not have for its purpose the raising of money, but rather the discouragement of the purchase of certain commodities.

Senator CLARK. It seems to me one of the principal objections to levying a Federal sales tax is the fact that the States already have a sales tax, and it amounts to a cumulative sales tax.

Mr. PAUL. That is one objection, that the Federal Government would be, to a certain extent, invading the State field of taxes.

Senator CLARK. Certainly.

Senator VANDENBERG. I did not want to start any argument against the sales tax. I want to know how much of the Canadian system was operated on this basis. I understand the figure is 11.21 percent under the new law.

Mr. BLOUGH. That would sound about right.

Mr. PAUL. We will check it for you.

(The information requested is as follows:)

Sales-tax receipts in Canada and Great Britain for fiscal years ending Mar. 31, 1941–43: Amount and percent of total ordinary revenues

[In millions of dollars]

	Actual		Estimated, 1943
	1941	1942	
CANADA			
Sales tax	$185	[1] $236	$218
Total ordinary revenue	$860	[1] $1,481	$1,672
Sales tax as a percent of total ordinary revenue.....percent	21.5	15.9	13.0
GREAT BRITAIN [2]			
Purchase tax	$105	$394	$320
Total ordinary revenue	$5,635	$8,296	$10,508
Purchase tax as a percent of total ordinary revenue.....percent	1.9	4.7	3.0

[1] Preliminary.
[2] Pound converted at $4.

Source: For Canada, the House of Commons Debates, June 23, 1942; Great Britain, the financial statements for 1941–42 and 1942–43. Treasury Department, Division of Tax Research, July 24, 1942.

Senator VANDENBERG. It is a nice little contribution, is it not, Mr. Secretary?

Secretary MORGENTHAU. It all helps.

Senator TAFT. Mr. Chairman, just to get the figures straight, on the first page in the second paragraph of the Secretary's statement, the written statement says $77,000,000,000 and the Secretary said $75,000,000,000 when he read it. Which is correct?

Secretary MORGENTHAU. $77,000,000,000.

Senator TAFT. $77,000,000,000 is correct?

Secretary MORGENTHAU. Yes.

Senator TAFT. There is also a change on the second page regarding Canada. It seems to me you said 73 percent. Is the 70 percent figure correct?

Secretary MORGENTHAU. The statement is correct whatever it says—70 percent.

Senator TAFT. The written statement is correct?

Secretary MORGENTHAU. Yes. I must have misspoken.

Senator BARKLEY. Mr. Secretary, may I ask this question: Under the present bill, as it came to us from the House, you estimate that, roughly speaking, about $6,000,000,000 will be raised?

Secretary MORGENTHAU. Yes.

Senator BARKLEY. I noticed in the newspaper account on the bill yesterday that on account of some program to collect taxes at the source, that amount would be raised to approximately $7,000,000,000.

I do not see anything in your statement about it.

Secretary MORGENTHAU. Mr. Paul will answer you.

Senator BARKLEY. If there is such a hidden billion in there, it must be interesting to know how it is arrived at.

Mr. PAUL. I think that has nothing to do with collection at the source. That is only, after all, a method of advancing the collection. I think that disparity in estimates comes from a difference of view as to how much the national income will be. Although we admit the difficulty this year of making estimates as to future income, we think our estimates are substantially correct and the figure $6,300,000,000 revenue from this bill is a correct estimate. I want to say that is on the annual basis; that is not receipts for the fiscal year 1943.

Senator BARKLEY. How nearly correct was I a moment ago in the estimated $28,000,000,000 to $30,000,000,000 increase in the income of this year?

Mr. PAUL. There are so many ways of figuring national income and so much estimating about it, I think that figure is probably substantially correct.

Senator TAFT. What was the basis that you derived this $6,200,000,000 from? On the national income figure of $125,000,000,000?

Mr. PAUL. Mr. O'Donnell could answer that question. I think the answer would be we did not quite relate it to the national income.

Senator TAFT. I know that.

Mr. O'DONNELL. I remember the colloquy last year with Senator Gerry on the same point. In estimating the revenues, we estimate only those segments of the national income which are taxable.

Senator TAFT. You say that $77,000,000,000 is to be spent by the Government. How much is to be spent for civilian purposes?

Mr. O'DONNELL. I have not made a study of that. The Department of Commerce publishes from time to time the results of their historical compilations of what the national income, as they define it, has been. This definition excludes business taxes. I do not know just what the national income will be this year. Some people say $115,000,000,000. That figure may or may not be right.

Senator TAFT. If you only leave $50,000,000,000 for domestic consumption, which is very low, you would have an income of $127,000,000,000 necessarily, it seems to me, so that I should think $117,000,000,000 would be way under. You are not contemplating reducing the civilian consumption to $40,000,000,000, I do not think. I have not seen any such figure. That is far below the depression figure, or any figure that I have ever heard of.

Senator BYRD. Mr. Chairman.

The CHAIRMAN. Senator Byrd.

Senator BYRD. I would like to ask if that figure of $77,000,000,000 includes the disbursement of the corporations of the Government?

Secretary MORGENTHAU. Everything.

Senator BYRD. That includes the R. F. C.?

Secretary MORGENTHAU. Everything.

Senator GUFFEY. Mr. Secretary, in your excess-profits tax you recommend 90 percent and a 10-percent refund after the war?

Secretary MORGENTHAU. Yes.

Senator GUFFEY. Does the Treasury Department have any objections to increasing that to 100 percent with a 20-percent refund after the war to take care of unemployment?

Secretary MORGENTHAU. This 90 percent was arrived at after very careful consultation with the War Department, the Navy Department, Maritime Commission, and with Mr. Nelson. They all agree that the figure of 90 percent was the top figure that they could go to without these agencies that have to do the contracting feeling there might be a holding back on the part of the contractor. It is their unanimous opinion that 90 percent was as high as we could go without their feeling that they would have difficulty in making contracts for war purposes. So it was arrived at very, very carefully, after consulting all the Government agencies that do the buying.

Senator VANDENBERG. I would like to ask just one further question, Mr. Secretary, on general policy. You put great emphasis on the anti-inflationary importance of the tax action that we take.

Secretary MORGENTHAU. Yes.

Senator VANDENBERG. If I understand the criteria of the War Labor Board correctly, one of its two fundamental rules in granting the wage increases is that a corporation is in a position to pay the wages, meaning that it has the income. Any wages based upon that criterion are at the expense of your tax revenues, are they not?

Secretary MORGENTHAU. I do not think I understand you.

Senator VANDENBERG. Well, I mean that if wages are to be increased solely on the basis of whether or not a corporation has the income out of which to pay the increased wages, those increases are at the expense of what would be you ultimate tax target in that corporation.

Secretary MORGENTHAU. I do not think I could answer that question.

Senator VANDENBERG. I think Mr. Paul would be able to answer it.

Mr. PAUL. I think that any of these wage increases will be deductible by the corporations, assuming they are reasonable salaries. On the other hand, of course, they will be taxable income to the individuals.

Senator VANDENBERG. What I was trying to get at, if the anti-inflationary program was important in respect to this tax bill, haven't we also a fundamental interest in gearing wages to the entire anti-inflationary program, and can we hope, merely by the tax bill, to reach the objective until and unless we do gear wages into the entire anti-inflationary program?

Secretary MORGENTHAU. Well, Senator, I tried to make it clear—maybe I was not very successful—that I think, taxes, which are part of the Treasury's responsibility, are a very important part of the anti-inflation program. I do not believe that through taxes alone we can control inflation, or through our borrowing program alone can we either create inflation or control it. I can only speak for our own particular segment that has to do with taxes, and I want to say what you gentlemen do, and the rest of the Congress does, with taxes plays a very important part in the whole picture of inflation.

Senator BARKLEY. Whether the increase in wages would reduce the size of your target would depend somewhat upon whether the price of the product produced by the labor was also increased so as to add to the profits of the corporation.

Senator MORGENTHAU. That is right.

Senator VANDENBERG. All I am saying is that the whole thing is geared together and we cannot answer this thing solely through the tax bill, and very definitely that wage factor is involved.

Secretary MORGENTHAU. Oh, I think I can agree with you on that.

Senator VANDENBERG. Thus far we are not doing anything about it, are we?

Senator JOHNSON. Mr. Chairman.

The CHAIRMAN. Senator Johnson.

Senator JOHNSON. On page 6, the second paragraph, I want to take violent exception to the inclusion of mines. The need of ores is very critical. I think it is admitted that we must have certain ores in great abundance.

Senator VANDENBERG. You mean silver?

Senator JOHNSON. Well, silver comes in, too. It is a very important ore, as the Secretary himself has testified before the Special Silver Committee, but I am referring now more especially to zinc, copper, lead, and the long list of critical and vital minerals. The production of these minerals is definitely a war industry, the mining of these minerals is definitely a war industry. In other words, they are not mined when we are not at war, such as tungsten, vanadium, chromium, and some of the others, they are not mined extensively in peacetime.

First, may I say that the ore bodies have very definite limitations, and that is, I think, admitted by everyone. With the severe excess-profits taxes assessed it amounts to a confiscation of these ore bodies if they are mined during the war, and naturally a tax bill such as we have before us will definitely stop the mining of these critical minerals.

Secretary MORGENTHAU. No, I do not think so.

Senator JOHNSON. Yes, I think you will find it will absolutely stop it; it will put the red light against their operation.

Secretary MORGENTHAU. You do not mind if I differ with you?

Senator JOHNSON. Of course, that is your privilege, to differ; but the acquisition of these ores is very important to the war industry. As a matter of fact, it is one of the bottlenecks. It and transportation are the two bottlenecks in the war industry.

I wonder if the Treasury Department has given study and thought to a different method of taxing mining operations? We have submitted plans on several occasions and we have asked the Treasury to give study to a special taxation plan on mines and mining. I just wonder if any study has been made of the plans submitted to the Treasury Department?

Mr. PAUL. Senator Johnson, we have given a good deal of study to it and have had a great many conferences with representatives of the mining industry. There is in the bill a provision exempting bonuses which are paid on the theory that a mine is working extra and thereby cramming profits in one year, and where those bonuses are paid we are providing for an exemption from the excess-profits tax on the very theory that you have in mind, I think. We are still studying all phases of the problem. It is a very complicated one.

Senator CONNALLY. May I interrupt you there, Senator?

Senator JOHNSON. Yes.

Senator CONNALLY. Mr. Secretary, do you advocate in your testimony doing away with all depletion on all property?

Secretary MORGENTHAU. Mr. Paul will answer that.

Mr. PAUL. Nobody is advocating the disallowance of depletion on a cost basis.

Senator JOHNSON. I am glad to have your statement, Mr. Paul, about the bonuses. You believe that they should be exempt from excess profits?

Mr. PAUL. There is a provision in regard to that on page 217 of the Senate print.

Senator JOHNSON. Does the Treasury concur in the language of the bill?

Mr. PAUL. We did concur in that provision; yes, sir.

Senator TAFT. Mr. Chairman, may I ask a question?

The CHAIRMAN. Senator Taft.

Senator TAFT. Do I understand that in the recommendation of a higher tax the Treasury is now returning to its recommendation of the rates which it made to the House in every respect except the excess-profits tax which they have increased. Their former recommendation was 75 percent. Now are they returning, for instance, from 45 to 55 on normal corporation profits?

Mr. PAUL. The original Treasury recommendations, which embraced corporate combined normal and surtax of 55 percent, contained a system of excess-profits taxation which did not bring as high a yield as the 90 percent later advocated, so that it is not necessary to have a rate as high as 55 percent to get the corporate yield involved in the Treasury goal.

Senator TAFT. The Secretary deals in detail with these $600,000,000 increases in special privileges, but there is no statement here at all as to what the Treasury is now proposing definitely in the way of rates on corporation and personal income taxes.

Mr. PAUL. Of course, it is very difficult to say that, Senator Taft, because there are so many combinations. For instance, if you obliterated the freight tax, that would affect your rate if you wanted to attain the total goal. Our position is we think we ought to get from corporations approximately the amount that we asked for in the Secretary's original statement of March 3. If you accept a 90 percent excess-profits tax, such as is now contained in the bill, it will not be necessary to go to the 55 percent combined normal and surtax to get that goal.

Senator TAFT. What will it be necessary to do to get the rate to 50 percent?

Mr. PAUL. That must be tied in with the committee action on other points, too. For instance, the action of the committee in regard to percentage depletion will affect the corporate yield.

Senator TAFT. I notice there is an ignoring of it also in the individual income tax. Is the Treasury advocating a return to the rate they proposed on the individual income tax?

Mr. PAUL. Approximately; yes.

Senator TAFT. You are not satisfied with those in the House bill?

Mr. PAUL. No. We think this is one of the most important phases of the bill because it has the most bearing on the inflation problem. We think we ought to get at least the rate that we recommended before the House—I haven't the figure before me—which gives you

substantially more revenue than the House bill from individual taxation. Here I have to remind you that of course the corporate and individual problems are tied in together. The higher the corporate yield the less will be the dividends and the less will be the individual yields. So you will have to think of those two together.

Senator BARKLEY. Maybe Mr. Paul can answer this. I believe it is estimated by the Treasury that the mandatory joint returns would produce about $400,000,000. Is that true?

Mr. PAUL. That is true; but the Treasury suggested a device that we call the working wife credit. Now that does not completely tie in and does not completely relate to the question of mandatory joint returns per se. Without any working wife credit the joint return provision would add to the revenue approximately $420,000,000.

Senator BARKLEY. Now, then, the taxation of outstanding local securities would produce about a billion?

Mr. PAUL. About $200,000,000.

Senator BARKLEY. $200,000,000?

Mr. PAUL. That is right.

Senator BARKLEY. So that those two items would be $600,000,000?

Mr. PAUL. That is right.

Senator BARKLEY. You recommended a reduction in the income tax exemptions, which would produce about $1,100,000,000. How much of that was done in the House bill? The point is this: If these suggestions should not be adopted by the committee, have you some alternative proposals to raise approximately the same amount, so as to make this bill bring in approximately your original figure of $8,700,000,000, or in that neighborhood?

Mr. PAUL. We haven't any alternative proposals. We still think that, in general, the proposals we made are the most acceptable, and the best ways of raising this $8,700,000,000.

Senator BARKLEY. The committee may or may not agree to all the suggestions. If they should not—and I am not at all attempting to commit the committee, and I would not do that, I am not even committing myself—if the majority of the committee did not see fit to put the items in, have you some alternative suggestions, or will you have when the time comes?

Mr. PAUL. I would like to face that fact when we come to it, Senator. I hope we are not completely limited in resourcefulness if that happens.

Senator VANDENBERG. There are limitations.

Senator GERRY. Mr. Paul, have you sufficient information now from last year's tax bill to estimate how close the Treasury's estimates were in last year's tax bill? How accurate they were on the amount of money that would be raised?

Mr. PAUL. If I understand the question, there is no way of checking it.

Senator GERRY. I wondered if you had enough in from the returns in order to state that.

Senator TAFT. Mr. Chairman, is the Secretary satisfied with the exemptions stated in the House bill, or is the Treasury now proposing any change in those exemptions?

The CHAIRMAN. I was about to ask you, Mr. Paul, about the Treasury recommendations to the House Ways and Means Committee. Was the exemption of personal income $600 for a single person?

Mr. PAUL. $600 for a single person and $1,200 for a married couple, and $300 for each dependent. The action of the House was $500 for a single person, $1,200 for a married couple without dependents, and $400, which is the present rate, for each dependent.

The CHAIRMAN. Continuing the old rate on dependents?

Mr. PAUL. That is right.

The CHAIRMAN. How did that work out in dollars of revenue? How did the rates as fixed in the House compare with the Treasury recommendations in point of revenue?

Mr. PAUL. Including the effect of special provisions recommended by the Treasury, the individual income tax yield fell off $565,000,000 from what the Treasury recommended. Now, of course, a combination of factors enters into that.

The CHAIRMAN. Yes. You recommended higher rates, too.

Mr. PAUL. That is right; we recommended some higher rates, but a higher exemption also with respect to single persons.

The CHAIRMAN. What I was trying to ascertain was whether or not the rate schedule on individual incomes, that is, personal exemptions, did not work out approximately, in dollars and cents, when compared with the Treasury recommendations? In other words, whether the loss by the House bill under Treasury recommendations was not due very largely to the fact that the House did not go up on the individual rates?

Mr. PAUL. It was due to that, and it was also quite materially due to the $400, a continuation of the $400 allowance for each dependent, which is a quite material factor.

The CHAIRMAN. That is a big factor.

Mr. PAUL. It is.

The CHAIRMAN. And the dropping down of the exemption for unmarried persons did not compensate for it

Mr. PAUL. That is right, Senator.

Senator TAFT. Is the Treasury recommending going back to the original recommendation?

Mr. PAUL. We still think the best exemptions are $600, $1,200, and $300 for dependents.

Senator BROWN. Mr. Chairman, I would like to make an observation.

The CHAIRMAN. Senator Brown.

Senator BROWN. I am very much interested in the recommendation of the Treasury with respect to the elimination of exemptions on State and municipal bonds. As the Secretary recalls, we had a special committee on that subject, I think in 1939, when the last fight upon that subject was made. My recollection is that the committee divided 3 to 2 on a constitutional question. I think we were 4 to 2 in favor of the elimination of future isues from tax exemption. I believe the Senate did not agree with us on that proposition.

We were unanimous, Mr. Secretary, in the view that we should not tax outstanding issues. As far as I can recall, in none of the amendments that have been proposed since I have been here, and I think there have been three since 1932, was it proposed to eliminate outstanding issues.

Senator CLARK. The Senate adopted an amendment in 1933 to take up those issues.

Senator BROWN. That was before I was in the Senate. I do not recall it in the House.

Senator CLARK. It was sent into conference.

Senator BROWN. I say this, Mr. Secretary, I think there is a new argument for taxing outstanding issues, right along with the question submitted by the chairman of the committee, and that is this: When those issues were made by the States and municipalities, the income-tax rates were so much less than they are at the present time that an advantage is obtained by the holders of those issues that was not at all contemplated by them and was not paid for by them, and was not contemplated by the States and municipalities when the issues were made.

Now, it seems to me that it would be somewhat unfair to eliminate entirely the advantage that they thought they were buying at the time they purchased these bonds, and that some consideration should be given to that point in any future statement that you make to us, but that there ought to be some rate or some means provided whereby we could tax those bonds.

I note in the case you give that this man who made $975,000 paid a tax of $143,000, but if it were not for the tax exempts he would pay something in the neighborhood of $833,000, or he is paying approximately a rate of 85 percent. I am fully satisfied, from what I know about the subject from our investigation 2 or 3 years ago, that he did not contemplate, at the time he bought the securities, any such advantage as that. If we can eliminate the advantage which was not fairly contemplated at the time and still leave to him what we should, I think there might possibly be a chance to get somewhere. I, myself, do not feel that I could back a proposition that would entirely eliminate the advantage that he thought he bought at that time, but the great increase in advantage ought to be eliminated, and I do not think it is unfair to do so. If it can be worked out in such a way at all, I, for one member of the committee, would be in favor of it. I would like to have Mr. Paul comment on that.

Senator CONNALLY. May I ask you a question there? You spoke about the advantage he got when he bought them.

Senator BROWN. Yes.

Senator CONNALLY. Was not the main advantage that he got a protection against the very thing you suggest—the hazard of getting an increase in taxes?

Senator BROWN. I say the normal hazard he did contemplate, but he did not expect we were going to have anything like these enormous taxes that occurred after Pearl Harbor, if I may use that statement.

Senator CONNALLY. He did gain some tax advantage.

Senator BROWN. No such advantage as enjoyed by reason of the tax exemption at the present time. That, in my mind, is the only justification in going back and taxing outstanding issues.

I may say, as a practical proposition, the great opposition to it came from the State and local associations, the Association of Attorneys-General and so on. Of course, they are not particularly interested in the taxation of outstanding issues, they are interested in the taxation of future issues.

We might not have that opposition to a proposal such as you make. I think, to be fair, we cannot just simply tax them all. I think we

cannot give them the advantage that they thought they were buying. I realize it is difficult to draw the line, to say just where that is. If it could be done, and I think it can be done with reasonable fairness, there is, in my judgment, justification for taxing outstanding issues to that extent.

Senator BARKLEY. There is associated with that idea also an advantage that the people were getting in the lower rate of interest on their municipal and State bonds which, of course, had to be reflected in local taxation to raise the money to pay interest and the principal on the bonds. I think it has been estimated that, in all probability, the rate of interest the people paid on these local bonds is about one-half of 1 percent lower than it would have been if they had not carried the tax-exempt privilege.

So there has been that advantage to the people because of tax exemption and the lower rate of interest.

Senator BROWN. 1.25 is what our committee found was the difference.

Senator BARKLEY. In other words, your commitee found that it is greater than the figure I gave.

Senator BROWN. 1.25 was the amount of advantage.

Senator BARKLEY. You mean 1¼ percent interest?

Senator BROWN. That is right.

Senator BARKLEY. So that a municipal bond that is now tax exempt that bears a 3-percent rate of interest would have borne 4¼ percent if it had not been for the tax-rate exemption.

Secretary MORGENTHAU. Senator Brown, this may not be a very good example, but if I bought an automobile a couple of years ago, I thought I would get all the tires and gasoline necessary to run it, but I am not going to.

Senator VANDENBERG. There is not anything in the Constitution on that subject.

The CHAIRMAN. Are there any other questions?

Senator CLARK. Mr. Secretary, how much revenue is involved in this tax on freight? Have you got an estimate on that?

Secretary MORGENTHAU. Yes; I think we have it.

Senator CLARK. I think it ought to be stricken out, but I think we should know what it would be.

Mr. PAUL. The gross figure was about $290,000,000. Then we reduced the tax on coal, and then the gross figure was $252,000,000.

We have to take the net figure, because that tax is a deduction you see. So the net losses in revenue will be only $163,000,000.

The CHAIRMAN. Are there any further questions of the Secretary?

Senator DANAHER. Mr. Chairman, just one.

Last year the Secretary recommended to us a selected manufacturers' excise tax. Did the program work out to your satisfaction on the selected excise taxes then recommended?

Secretary MORGENTHAU. I think so.

Senator DANAHER. It did?

Secretary MORGENTHAU. I think so, as far as I know.

Senator DANAHER. Does it make you feel any more kindly toward extending the principle to include the general manufacturers' excise tax?

Secretary MORGENTHAU. Well, the two things do not necessarily follow. This year the taxes that we selected to increase had a direct bearing with the war effort and with inflation. We tried to select those taxes where we thought it would help the whole economic program.

Senator BARKLEY. Let me ask you this: Probably you cannot answer it now but maybe you can do so later. Have you made any comparison between the effect of a manufacturer's sales tax and the lowering of the exemptions among the lower brackets as it would affect purchasing power and therefore inflation?

Mr. PAUL. We have studied the effect of lowering the exemptions and the effect of the sales tax in respect to inflation. The answer is somewhat complicated. I do not know whether you would want to go into it now.

Senator BARKLEY. No; we would not want to go into it now. I assume if you made the comparison it might be worth while to look into it. I suppose both of them would curb purchasing power to the extent that they would have to pay more for what they bought and also pay more taxes on the reduction in the lower brackets.

Mr. PAUL. That is right.

Senator CLARK. Mr. Secretary, when the Office of Price Administration increased the price of gasoline 2½ cents a gallon, that had precisely the same effect on transportation charges in the correlated field that the tax on transportation that was included in the House bill had in the related field, did it not, except the Government did not get the money?

Secretary MORGENTHAU. May Mr. Blough answer that?

Senator CLARK. Yes.

Mr. BLOUGH. The effect, when applied to commercial transportation, is substantially the same.

Senator CLARK. That is what I want to get at.

Mr. BLOUGH. Yes.

Senator CONNALLY. Is everybody through?

The CHAIRMAN. Yes.

Senator CONNALLY. I would like to ask him a question.

The CHAIRMAN. All right, Senator Connally.

Senator CONNALLY. In your views about the mandatory joint return on all income, whether from the husband or from the wife, some mention was made about the provisions you had in mind about the woman's earings. What is that?

Secretary MORGENTHAU. May Mr. Paul answer you on that?

Senator CONNALLY. Yes.

Mr. PAUL. That is not in the Secretary's statement. I referred in passing, in answer to some question about the yield of that provision, to what we call the working-wife tax credit. The credit consisted of 10 percent of the earnings of a wife with a maximum limitation of $100. The theory of the credit was where two people of the family work, there is some additional expense as compared with the family where the woman in the family, in the general case, can stay at home.

Senator CONNALLY. How about the husband? Does he get any deduction?

Mr. PAUL. If he has the smaller income.

Senator CONNALLY. Your position is on the mandatory joint return that no matter where the income comes from, whether it is from the husband or the wife, it must be put into a single return and a tax paid on that individual income?

Mr. PAUL. It must be put in a single return, but the tax liability is apportioned as between the husband and wife. There is no attempt to impose a tax on the wife that should be borne by the husband's earnings, and vice versa.

Senator CONNALLY. Now, I do not get you. I thought your theory was you put it all in one lump sum and paid the tax just as if it were an individual.

Mr. PAUL. You put it in one lump sum for the purpose of computing the tax, and then when you come to the imposition of the tax liability, you divide the liability between the husband and wife in accordance with their respective incomes.

Senator CONNALLY. It is still the same tax. The family has to pay it; is that right?

Mr. PAUL. The two of them pay the tax on the family economic unit income.

Senator CONNALLY. You do not let them settle that matter themselves?

Mr. PAUL. We have no objection to their settling it.

Senator BARKLEY. Mr. Chairman, the Senate will probably be in session only a short time. They will call a brief calendar and probably adjourn until Monday. So if the committee wants to go ahead and finish the hearings, it will not interfere with the Senate.

The CHAIRMAN. I was about to ask, there is no need of keeping the Secretary any longer this morning? If there are further questions of the Secretary, they should be asked now.

We would like to have the staff remain here perhaps, or come back this afternoon.

Senator VANDENBERG. I would like to have your figure as soon as possible showing the division of income between new taxpayers and old taxpayers.

Secretary MORGENTHAU. Yes.

Senator TAFT. Mr. Chairman, there is a new idea on this joint return here stating that the family unit is a proper unit of taxation. Does not that principle give a tremendous advantage to the single man or single woman over the married people? If we change from an individual basis to a family unit basis, then why does not that give the single man a tremendous advantage?

Mr. PAUL. I do not see how it does, Senator. Perhaps I do not understand your question.

Senator TAFT. Well, it seems to me it costs at least twice as much for two to live as one. I think it costs more in the higher brackets. It seems to me if you shift the whole thing to the family unit and the family unit consists of one person, that that one person gets a tremendous advantage, he has much more left to live on than the family has.

Mr. PAUL. If I understand you, you are premising your question now on the idea that it does cost more for two to live than one.

Senator TAFT. No; it costs twice as much. It seems to me if you want to eliminate this injustice the thing to do is to go back to the

individual basis and let the families divide their income between husband and wife equally, as they do in the community-property States, and then raise your rates if you please, to the point where you get the same income or whatever may be necessary. It seems to me that is a much more equitable way to deal with this proposed injustice than it is to throw the husband's and wife's together, no matter where their income comes from.

Mr. PAUL. That is another way to get at the problem, Senator, but it does not seem to be quite satisfactory. We have given a great deal of study to that.

Senator BROWN. Mr. Paul, what did the House do as to section 402 in regard to community property?

Mr. PAUL. The House did not accept our ideas on joint returns.

Senator BROWN. It passed something.

Mr. PAUL. That was in respect to the estate tax. They passed a provision to the general effect that a community estate should be treated like a joint estate.

Senator BROWN. It relates solely to the estate?

Mr. PAUL. That is right.

Senator CONNALLY. You say it is on a family basis. As a matter of fact, it is not on a family basis at all. Suppose there was a man and wife and they had a son that has a million dollars. You do not include his million dollars?

Mr. PAUL. That is right.

Senator CONNALLY. Although you give them $400 to help support him. It is not a family basis at all, it is just husband and wife.

Mr. PAUL. It is true that we have not been able to find a satisfactory way of including all the family income; that is, the family income of children.

Senator CONNALLY. If you have a right to assess the wife's income as part of the husband's income, why haven't you got the power and right to assess the income of a son and daughter as long as they are single.

Mr. PAUL. I do not think it is a question of right.

Senator CONNALLY. Use the word "power" instead of "right." You could do it, could you not?

Mr. PAUL. If you can do one, you can do the other.

Senator CONNALLY. Exactly.

Mr. PAUL. We have not been able to work out a satisfactory scheme of including the income of children in the joint return.

Senator CONNALLY. Why? You say you cannot get one that is satisfactory. What is the difficulty? It would have the effect, along the line of the question of some other task, of taking the side of birth control, would it not?

Mr. PAUL. Well——

The CHAIRMAN. If it is the pleasure of the committee, we will recess until 2 o'clock, and ask the Treasury staff to come back here, and Mr. O'Brien. We may wish to ask a good many questions.

Mr. Secretary, we thank you for your appearance. It will not be necessary for you to come back.

Secretary MORGENTHAU. Thank you.

(Whereupon, at 11:55 a. m. the committee recessed to 2 p. m. of the same day.)

AFTERNOON SESSION

(Pursuant to adjournment for the noon recess, the committee reconvened at 2 p. m.)

The CHAIRMAN. The committee will come to order. Mr. O'Brien, will you come around and help us this afternoon?

Senator VANDENBERG. What is he going to do, go through the bill?

The CHAIRMAN. Mr. O'Brien, will you sit down, please, sir. You have not been coached as a witness, but I presume you are ready to go on and if it pleases the committee, I thought that Mr. O'Brien might briefly state the material changes made by the House bill in the existing law; and in connection with his statement, there may be questions that some members of the committee will wish to ask of the Treasury representatives. Mr. Paul is here and the other representatives of the Treasury Department; and so we will proceed, if it is the pleasure of the committee, in that way this afternoon, so that we may have a better understanding of the bill.

Any question that any Senator wishes to ask the Treasury staff about any feature of the bill may be asked as Mr. O'Brien develops it.

All right, Mr. O'Brien.

Mr. O'BRIEN. May I say, Senator, that I won't go into this in a detailed sense at all.

The CHAIRMAN. Not at all.

Mr. O'BRIEN. I will generally touch on the high spots.

The CHAIRMAN. Yes; unless some technical question develops which may be explained then by the Treasury staff or by Mr. Stam.

STATEMENT OF JOHN O'BRIEN, OFFICE OF LEGISLATIVE COUNSEL, UNITED STATES HOUSE OF REPRESENTATIVES

Mr. O'BRIEN. I might state, briefly, that the bill is divided into six titles; the first is Individual and Corporation Income Taxes, which consists of two parts, first, the part which relates to chapter I, that is, ordinary individual and corporate income taxes and part II which relates to personal holding companies; title II of the bill relates to changes in the excess-profits tax; title III relates to capital stock and declared value excess-profit taxes; title IV is Estate and Gift Taxes, consisting of two parts, part I relating to estate taxes and part II relating to gift taxes.

Title V relates to amendments to prior Revenue Acts and miscellaneous provisions, and title VI relates to excise taxes.

First, we will take title I, which begins on page 6, line 7, part I, Amendments to Chapter I—that is, ordinary individual and corporate income taxes.

First in section 101, which makes the provision of the amendments made by this title applicable only to the years beginning after December 31, 1941. That is the general rule—the rule which was first announced in 1934. The amendments are applicable to taxable years which begin in this year, or beginning thereafter. There are exceptions to that provision.

I shall call your attention to the various sections which are made retroactive, as we come to them.

Senator VANDENBERG. At this point, what is this general objection that I hear frequently, that you have increased the burden in respect to corporations that have a different fiscal year?

Mr. O'BRIEN. That comes under section 108, Senator, and would you mind holding that for a moment until we can get to it, sir? That is an exception to the general rule and a very important one, to be sure.

Senator VANDENBERG. And a very bad one.

Mr. O'BRIEN. Page 6, line 15, section 102 relates to normal tax on individuals. The normal tax rate is raised from 4 to 6 percent by this provision.

Page 7, line 1, begins the "Surtax on Individuals," and here the surtax begins at a surtax net income not over $2,000 at the rate of 13 percent and runs up to a rate of 82 percent of the excess over $200,000. The important thing about that schedule is that under the present law the lowest bracket is 6 percent instead of 13 percent, and the highest bracket under the present law begins at $5,000,000, whereas this begins at $200,000.

The CHAIRMAN. In other words, the maximum tax is applied after $200,000 has been reached in this case?

Mr. O'BRIEN. Yes, sir; $200,000 here, as against $5,000,000 under the present law.

Senator CONNALLY. Mr. O'Brien, may I ask, in the matter of individual taxes, is there anything comparable to the excess-profits taxes in the case of corporations or does that excess of such corporations apply to individuals as well?

Mr. O'BRIEN. It relates to corporations alone.

Senator CONNALLY. Exactly. Now why should a man whose normal income from a business is, say $50,000—why should he pay only the same rate as some man who makes $50,000 here that he did not make a year ago, and out of war contracts or out of inflated business operations—why should not there be some device in this bill to tax higher, normal or higher surtaxes in some way, those unusual and uncommon profits that we all know that people are making. A man who may have been making five or six thousand dollars a year under normal conditions and normal times, pre-war times, here in war times, in 6 months, may be making $600.000 in war profits?

Mr. O'BRIEN. That, Senator, is a question of policy.

Senator CONNALLY. The reason I am raising the question is: Should there not be a way and can there not be some way worked out so that we can get back a reasonable amount of those profits for the Government?

Senator VANDENBERG. To apply the excess-profits theory to individual income.

Senator CONNALLY. Exactly; treat them as excess profits, even though they are individual, just as we do corporations.

The CHAIRMAN. That was applied in the First World War excess-profits tax, was it not—to individuals back in World War I?

Mr. PAUL. In 1917 the act applied to individuals, and in the 1918 act, the excess-profits tax on individuals was abandoned.

The CHAIRMAN. Abandoned after 1 year's trial.

Senator TAFT. I raised the same question 6 months ago with the Treasury Department, and to my recollection they agreed to the

theory but said that administrative difficulties were insurmountable, is that incorrect?

Mr. PAUL. I would not go so far as to say that I agree on the theory completely; I think there is much in the theory, but the second part of your statement is quite correct. We tried to work out an individual excess-profits tax but we found great difficulties.

Senator TAFT. You mean relating to business or individual incomes?

Mr. PAUL. We tried to look at it from the standpoint of individuals, without reference to business and increased taxation, and there were too many complications about it. We conclude, after our study of the set-up, that nobody would have been able to file so complicated a return.

Senator VANDENBERG. You mean the difficulty with the taxpayers, for comparative purposes?

Mr. PAUL. There would be a great fundamental difficulty in determining the differences between the normal increase, which would happen in the ordinary course of business at any time and increases of income which were attributable to conditions of today peculiarly arising——

Senator CONNALLY. Could you not go back and take, as you do in most cases, a 4-year term and arrive at an average by which you can determine an excess-profits tax? Here is an individual who has been going around making 4 or 5 thousand dollars a year and this war happens along—you see them every day, do you not—everybody knows the war did this when they suddenly jump to tremendous incomes, we all know that the war is directly or indirectly the contributor?

Mr. PAUL. Not in every case. Let me see if I can give you an example of the difficulties arising.

A man comes into my law office—say he gets $2,100 a year——

Senator CONNALLY. When he comes in?

Mr. PAUL. Yes; I mentioned that——

Senator CONNALLY. When he goes out you do not know how much he is getting?

Mr. PAUL. All right. I say that in 6 months or a year it would be normal to give him a raise because of good work, that would happen at all times. Now, how are you going to distinguish between that kind of an increase, that $600 a year that would normally be given, and an increase in income which was plainly attributable to conditions of the day? We tried to do it, by setting up an arbitrary percentage which might be comparable to the method employed with respect to corporations, but we found many complications with respect to items such as medical expense and unusual misfortunes that people might have; and then on the policy end of it we found some difficulty in explaining, at least to ourselves, why a man making, say, $4,000 a year should be taxed at a greater rate than another man making $4,000 a year.

Senator TAFT. Suppose you had a machine shop run by two fellows earning $3,000 a year apiece and last year one fellow was allowed to work half time—business was not very good—and suppose last year he made $1,500, and the other fellow was getting $3,000.

Mr. PAUL. That is one trouble.

Senator TAFT. Then this year, on any such tax as proposed, the one making $3,000 in both years would pay less than the man who made

$1,500 last year and $3,000 this year through business conditions alone and through no fault of his own.

Mr. PAUL. And furthermore, the man paying the bigger tax did not have previous earnings to accumulate funds with which to pay the tax.

The CHAIRMAN. Then, Mr. Paul, is it not true that finally, when we get into the higher income brackets, with these greatly increased earnings, these rates put in there are pretty steep?

Mr. PAUL. All above $200,000 is at 88 percent; that is, 82 percent plus 6 percent normal tax.

Senator GERRY. On individuals?

Mr. PAUL. Yes; and you must add to that tax——

Senator HERRING. Mr. Paul, is anything being put in there to take care of partnerships in this tax?

Mr. PAUL. We have discussed it but we felt that the same difficulties were present, such as what was their business investment capital, and so on, and there were many administrative difficulties that were encountered back in 1917 in the 1917 act.

Senator HERRING. Partnerships have increased rapidly because of that, even now.

Mr. PAUL. There is a certain amount of de-incorporation.

Senator CONNALLY. One more question: Under this theory of taxation we cannot discriminate, but we can classify, can we not?

Mr. PAUL. That is right, sir.

Senator CONNALLY. You can establish classes and then, within those classes, tax them different rates from other classes or classifications.

Mr. PAUL. That is right.

Senator CONNALLY. Has it ever occurred to you that sources of income might be used as a basis for classification, such as war contracts, or you could broaden it all you wanted—had you ever thought of that?

Mr. PAUL. Yes; we have, and you remember under the 1918 act, it had a special extra tax on income from Government contracts.

In the first place, we felt that it is almost impossible to distinguish in the kind of war we have today what is war income and what is not. We cannot tell.

Senator CONNALLY. That is where a comparison with former income would furnish some standard, at least.

Mr. PAUL. It would furnish some standard, I admit, in some cases, but we felt that the test was too crude to apply without great hardship generally.

Senator CONNALLY. That is true of all taxes. Any flat rate will catch someone inequitably in comparison with others, but that is no reason why we should have no tax.

Mr. PAUL. But there is a comparative degree involved.

Senator CONNALLY. I hope that you will study that further, during the course of the hearing, so that we can work out some way of getting these unearned and almost criminal profits that some people are getting out of this war.

I think we have only struck one or two little scratches, and we have many individuals and concerns getting unearned and undue profits out of this war, directly out of it.

I think if it goes on it will probably get worse, I don't know.

Mr. O'BRIEN. Beginning on page 8, line 1, is the provision relating to the so-called short form. You will remember that in the last revenue act there was a special section inserted to provide for short form of return. Individuals whose gross incomes did not exceed $3,000 and consisted wholly of salaries, wages, compensation for personal services, dividends, interest, rent, and annuities or royalties were in that group.

Now, in view of the fact of increased rate of normal and surtax, the amount of the tax in each of the $25 brackets in the schedule you see beginning on page 8, line 13, has been increased over the existing law for those who file short forms.

Other changes are made. First, instead of a $400 exemption for each dependent, for the purpose of the short form, the amount is made $440; second, the determination of the taxable status of the taxpayer under the present law is as of December 31 of the taxable year; that is, the determination of whether he is married, the determination of how many dependents he has, and who his dependents are, under the present law, is as of December 31. This bill proposes to make that date July 1 of the taxable year; that is, to determine the status of the taxpayer—whether he is married—for the purpose of the whole year, that determination is to be made as of July 1 of the year.

In addition to that, certain taxpayers who, under the present law are eligible to use the short form, are made ineligible by this bill. It will bar, first, taxpayers filing returns for a period of less than 12 months; second, one excluded taxpayer will be one who is on other than a calendar-year basis; that is, a fiscal-year taxpayer is not eligible to use the short form; the third major change is that a person whose spouse does not use this supplement, the short form, but files under the regular form, cannot file under the short form.

I understand that loopholes developed in the case of husbands and wives, where the wife took advantage of the theoretical deductions allowed under the short form and the husband who had the actual deductions got the benefit of them through using the long form, or regular form. This proposes to eliminate that by making it impossible for one spouse to use one type of form and another spouse the other type. Both must file the same type of form.

Senator VANDENBERG. Is this the point at which you reduce the exemptions, or does that come in somewhere else?

Mr. O'BRIEN. No; that is in connection with section 123, over about page 50.

Senator VANDENBERG. All right; go ahead.

Mr. O'BRIEN. Page 12, line 11, begins "Tax on Corporations," and I must explain, first, in connection with the tax on corporations that there is a different concept in this bill of the base of the tax, the base on which the tax is computed. Under the present law the corporate gross income minus deductions is the corporation's net income, and that is the basis upon which the normal tax is levied; but in the computation of the net income the excess-profits tax is allowed as a deduction for the purpose of arriving at normal tax net income and surtax net income, which is the base for the corporate tax.

Now, in order to explain the effect of the change, I must tell you a little bit about the new plan of excess-profits taxation. For the purposes of the excess-profits tax—that is, the amount which is sub-

ject to the 90-percent rate in this bill—the net income of the corporation is ascertained. That is the gross income minus deductions. For the purpose of computing the excess-profits tax there is allowed an excess-profits credit of 95 percent of the corporation base period earnings and a specific exemption of $10,000. To the amount of the net income that is left is applied a 90-percent rate of excess-profits tax.

Now, this bill proposes to tax at normal and surtax rates the amount of the corporate gross income minus deductions, and to allow a credit against net income of the amount on which the excess-profits tax is paid.

Let me give an example of it. Suppose a corporation has a gross income of $100,000, deductions of $40,000, thus making $60,000 net income. Suppose the corporation has a credit for excess-profits tax purposes of $30,000, the credit, plus $10,000 specific exemption, makes $40,000. Thus, the corporation pays the 90 percent rate on $20,000; that is, the difference between the $40,000 and the $60,000. This bill proposes that the net income which is not subject to excess profits tax—that is, the $60,000 minus the $20,000, or $40,000, shall be subject to the normal tax and the surtax on corporations.

Senator TAFT. Will you say that again?

Mr. O'BRIEN. Yes.

Senator TAFT. Just the tax.

The CHAIRMAN. In other words, you deduct the amount on which you compute the excess-profits tax.

Mr. O'BRIEN. That is right.

The CHAIRMAN. Rather than the tax itself.

Mr. O'BRIEN. Right.

The CHAIRMAN. And the balance is the amount on which you compute your normal and surtax.

Mr. O'BRIEN. Exactly right.

Senator TAFT. As compared to——

Mr. O'BRIEN (interposing). Take the case of the corporation with a gross income of $100,000. It has its deductions of $40,000; this gives it a net income of $60,000. Suppose it has average earnings credit of $30,000, and it has specific exemption which is free from excess-profits tax of $10,000: therefore, $30,000 plus $10,000, or $40,000, is subtracted from the $60,000 to get the adjusted excess-profits tax net income. That adjusted excess-profits tax net income, or $20,000, is subject to a 90 percent excess-profits tax.

Now, let's start again on normal tax. It has a gross income of $100,000, deductions of $40,000, thus leaving $60,000. It has been subject to a tax on $20,000. Under the excess-profits tax, that is. Therefore, from $60,000, you subtract $20,000, thus getting $40,000, which is the base for the tax for normal tax and surtax purposes.

Senator TAFT. As compared to the present law?

Mr. O'BRIEN. Under the present law?

Senator TAFT. You tax is figured on what figure?

Mr. O'BRIEN. You have no comparable figure; you must get what your excess-profits tax is.

Senator TAFT. On 90 percent, if it was 90 percent, you would deduct from $60,000 the $18,000, and that would leave $42,000, under the present law, instead of $40,000 under the proposed law?

Mr. O'BRIEN. Right.

Senator VANDENBERG. In any event, it would still be necessary to hire a tax accountant.

Mr. O'BRIEN. I am afraid so.

There has been no change in the normal tax rate on corporations except that the place where the difference between the normal tax rate on small corporations and big corporations, the so-called notch, has been set at $50,000 on normal tax, now making the point of difference between the large and small ones run up somewhat.

The CHAIRMAN. Under the existing law that is fixed at what?

Mr. O'BRIEN. Around $47,000, I think.

The CHAIRMAN. And this bill will take it to $50,000?

Mr. O'BRIEN. Yes, sir; in order to make it uniform with the surtax.

The next major change occurs on page 13, line 8, relating to surtax on corporations. I might say, of course, that in surtax net income as contrasted with normal tax net income, in the case of corporations, partially tax-exempt interest is included; and to the extent of such interest corporation surtax net income is larger than the normal tax net income. Apart from the technicalities relating to the credit for adjusted excess-profits tax net income, the major change made in this section is to apply—instead of the rate of the present law, 6 percent on the first $25,000 of corporate surtax net income and 7 percent on the remainder—a tax of 10 percent on corporation surtax net income not over $25,000 and a tax of 21 percent on corporation surtax net incomes over $50,000, with an equalizing tax in the case of corporations whose surtax net income is over $25,000 but not over $50,000.

Now, in the case of a large corporation—that is, a corporation with a net income of over $50,000—the present normal rate of 24 percent has not been disturbed. The surtax rate, however, has been raised from 6 and 7 percent to 21 percent, and that is where you get your combined normal and surtax rate of 45 percent.

Senator GERRY. Will you state that over again?

Mr. O'BRIEN. Yes, sir. Under the present law, the corporate rate on a so-called large corporation is a 24 percent normal rate, and that has been left undisturbed in this bill. Under the present law the corporate surtax rate is 6 percent on the first $25,000 and 7 percent on the excess over $25,000. For that rate, there has been substituted a 10 percent rate on surtax net incomes not over $25,000, and for corporations with a surtax net income of over $50,000, the 21 percent rate applies; so the effect is, on the large corporations, you have a combined rate of 24 percent normal and 21 percent surtax, thus giving a 45-percent rate.

The CHAIRMAN. You mean, by large corporations, corporations with net income over $50,000?

Mr. O'BRIEN. Yes, sir.

The CHAIRMAN. That is where the rate comes from, your 45-percent rate, combined rate?

Mr. O'BRIEN. Yes, sir.

Senator CONNALLY. Under the present law a corporation having only $10,000 net income does not pay any taxes?

Mr. O'BRIEN. Under the present law?

Senator CONNALLY. Yes.

Mr. O'BRIEN. No, sir; it pays a normal tax—15 percent.

Senator CONNALLY. Where does the $10,000 come in?

Mr. O'BRIEN. The $10,000 applies to excess-profits tax only. The $5,000 specific exemption under the present law is made $10,000 by this bill.

Senator CONNALLY. But you pay some percentage on all the net profits now; and under this bill you continue to pay?

Mr. O'BRIEN. Well, that is not quite true, Senator, to this extent: In the case of the corporation paying excess-profits tax the amount over the 90 percent excess-profits tax is not subject to any tax whatsoever.

Do I make that clear, sir? Because you get a credit for normal and surtax purposes of the entire amount upon which the excess-profits tax is based, so to the extent of 10 percent that income of the corporation is free of tax.

Senator CONNALLY. But it would be then pretty high.

Mr. O'BRIEN. Paying 90 percent on part, and 45 percent on the rest of it?

Senator CONNALLY. Yes.

Mr. O'BRIEN. Now, the rest of the amendments in this section are purely technical amendments relating to getting rid of the deduction for excess-profits tax which is in the present law, and various other amendments particularly in connection with the net operating loss, in order to make them come out right. You see, when you change the basis of corporate tax it involves any number of miscellaneous amendments throughout in order to make it all come out straight.

The next change is on page 18, line 8, which relates to tax on nonresident alien individuals. Under the present law, that tax is at the rate of 27½ percent, and in view of the increase in normal and surtax rates on residents proposed by this bill the rate has been made 37 percent.

There is a further amendment which is different from the existing law in the case of nonresident and alien individuals. Where, under the present law, the rate is increased, the increase is retroactive to the whole year, notwithstanding the fact that the method of collection by withholding at the increased rate does not begin until 10 days after the enactment of the act. The proposal we have here is that the new increased rate won't begin after December 31, 1941, but only after withholding at the increased rate begins. That takes effect, or begins, on the tenth day after the enactment of the act.

The CHAIRMAN. Where is the section that applies to incomes earned in foreign countries and paid by foreign countries to American citizens?

Mr. O'BRIEN. That is section 134, later on.

The CHAIRMAN. All right; go ahead.

Mr. O'BRIEN. A similar change is made in the case of foreign corporations. The rate has been raised from 27½ to 37 percent. Similarly, the rate of withholding on fixed and determinable incomes, that is, dividends and interest and rents and royalties, and that kind of thing, which the nonresident foreign corporations or nonresident alien individuals are taxed on at that withholding rate, is similarly raised from 27½ to 37 percent.

Senator VANDENBERG. And is there a relationship between that rate and the reciprocal rate with other countries?

Mr. O'BRIEN. There is one on page 20, line 3.

The CHAIRMAN. I think recently we negotiated a figure in the treaty with Canada, and I think the rate is affected by that treaty, so far as Canada is concerned.

Senator VANDENBERG. Go ahead.

Mr. O'BRIEN. That says that you cannot—these increased rates will not go into effect in violation of treaty obligations.

The CHAIRMAN. Protecting the treaties?

Mr. O'BRIEN. Yes, sir.

On page 20, line 7, is the first of a number of purely administrative amendments made by the bill, partly carrying out the policy which was announced in connection with the Revenue Act of 1941—the last revenue act, that there would be an administrative act which would plug the loopholes and relieve a good many hardships. This particular section relates to the taxation of annuity trusts.

Under the present law, the Supreme Court held that if a payment out of a trust was chargeable to corpus—that is, the capital of the trust—notwithstanding that it may actually be paid out of the income of the trust, nevertheless the beneficiary of the trust is not taxed when the amount is distributed to him. The trust itself does not get a deduction even if it does distribute, but the trust pays the tax on the amount.

This amendment proposes a more realistic approach, notwithstanding the fact that the amount payable to the beneficiary of the trust may be paid out of capital; if it is paid out of income, it is included in the income of the beneficiary and the trust gets the benefit of the deduction for the amount paid out.

This provision, as I say, is a little more realistic in its view of the situation, and further helps to close loopholes.

Senator BROWN. In that change, Mr. O'Brien, under section 101, that applies to the current year?

Mr. O'BRIEN. Yes, sir; it applies to the current year.

Senator BROWN. Is there anything unfair about that? It seems to me possibly that ought not to apply until next year.

Mr. O'BRIEN. That is a question of policy, Senator, and it could be postponed.

One thing I might call your attention to, in connection with that, Senator, under this amendment: If the amount is paid or distributed after December 31, 1941, it does not make any difference what taxable year the trust is on and what taxable year the beneficiary is on. You have to have it cut off—you have to have a cut-off date there somewhere, so this is not geared to any taxable year. It is entirely conceivable that a trust may have a taxable year beginning June 30, 1941, with a beneficiary whose taxable year begins January 1, 1942, This proposes, with respect to the year beginning June 30, 1941, the trust gets the benefit of a distribution in May 1942, and the beneficiary is taxed.

Similarly, if the trust had a calendar taxable year beginning January 1, 1942, and ending December 31, 1942, and the beneficiary had a taxable year ending June 30, 1942, the beneficiary would have to include the amount in his income and the trust would get the deduction.

Senator BROWN. Is it possible that might come in, on some case already started in a district court?

Mr. O'BRIEN. I don't think any of those cases would get that far, sir. In that respect, it is retroactive, for some people have already filed their returns for the taxable year beginning in 1941.

Senator DANAHER. That would apply to any type of beneficiary?

Mr. O'BRIEN. It would apply to any beneficiary of an estate or trust.

Page 21, line 18, is a purely technical amendment to make absolutely certain what was done when you subjected future issues of Federal obligations—subjected the interest on future issues of Federal obligations—to tax.

The bill makes perfectly certain that as to those issues that are issued after March 1, 1941, the taxpayer does not get a credit for partially tax-free obligations.

This clause may well have been put in before. Why it was not, I do not know, for there was no reason for not so doing; but the reason for putting it in now is to make absolutely certain that it accomplishes the purpose desired.

Page 22, line 14, extends the period of time during which incomes derived by corporations from the retirement of their own obligations may be excluded from gross income. By an amendment made in the Revenue Act of 1939 it was provided, in the case of a corporation which was in an unsound financial condition, if it retired its obligations at less than par, the difference between the issue price and the redemption price was to be excluded from gross income. Under the provisions of the 1939 Revenue Act that was made applicable only to taxable years beginning then and not beginning after December 31, 1942. This proposes to extend the period of time during which that relief may be allowed to corporations for 3 additional years; that is, years not beginning after December 31, 1945.

Senator CONNALLY. That only gives relief to the extent of the difference between the par value and the price at which they settled?

Mr. O'BRIEN. The price at which they redeemed.

Senator CONNALLY. If they paid the debt at par, they would not get anything of advantage?

Mr. O'BRIEN. Then they would not have any income.

The situation is, under the law as it now stands, if a corporation issues obligations at 100 and redeems them at 90, it has income of 10.

Senator CONNALLY. I understand that, but what I am trying to get at is, a corporation now that owes debts is making a plea that they should have some consideration—numbers of them are—and a little different treatment so that they can pay their debts rather than taxes, and pay their income, the bulk of their profits, not in the form of taxes, and thereby this would make it impossible to pay debts and would wreck the business.

I understand that the Treasury has been trying to work out some formula along that line. Have you got anything on that?

Mr. PAUL. There is nothing in the bill on that, no relief of the type you have in mind, Senator Connally. We have been working very strenuously on that matter and hoped that something might be worked out but we have not as yet been able to do anything about this situation.

Senator JOHNSON. Did you make a recommendation to the House, and they rejected it?

Mr. PAUL. I did not make a recommendation to the House, I simply filed a sort of an exploratory memorandum with the committee, and the committee took no action one way or the other.

Senator BROWN. Mr. Chairman, would it be possible——

The CHAIRMAN. You could do that very well if you had a post-war credit to be taken in bonds, or absorbed in debt amortization paper? If we could issue, say, post-war credits back to the individual corporations, that would make it easier to apply the principle that we desire so much.

Mr. PAUL. That is true, sir. We are very anxious to give some relief in this kind of a situation where a corporation is simply up against heavy debts, but every way we look we have found that we were creating discrimination between a person who saved by reducing debts and the person who had no debts and adopted some other form of saving.

Senator DANAHER. Mr. Chairman.

Senator BROWN. Mr. Chairman.

The CHAIRMAN. Senator Brown.

Senator BROWN. Would it not be possible for us to have a copy of the present law for comparison with the proposed bill?

I read section 22, and it does not mean anything to me.

The CHAIRMAN. I made that request of Mr. O'Brien and his staff, and he said it was practically impossible for him to do it, that there was not sufficient time.

Mr. O'BRIEN. I would like to have done it, sir.

The CHAIRMAN. We wanted that for the committee.

I think that Senator Brown is quite right because where an amendment applies merely to the Internal Revenue Code, unless we remember the entire Internal Revenue Code, which we do not, we have great difficulty in seeing just what you have done.

Mr. O'BRIEN. I can say, sir, that I wanted to make that effort for the committee, but unfortunately it is a fact that you would have to print, substantially at least, the entire income tax laws. You would have to print a great deal of them, and I would imagine that a comparison of that kind with this bill would run to some 800 or 900 pages in a comparative print.

We tried to do our best to educate by way of parenthetical expressions on each page. You will notice, beginning at page 22, line 17, "Section 22 (b) (9) (relating to exclusion from gross income of corporate income derived from discharge of indebtedness)." We tried to help along that way, but we just frankly threw up our hands over in the House. The House has done a stupendous job on this thing. This bill is perfectly enormous and it amends sections throughout the entire Internal Revenue Code.

Senator BROWN. I withdraw my request, sir.

Senator DANAHER. How far back do you go in making the last three lines on page 23 retroactive?

Mr. O'BRIEN. Page 23?

Senator DANAHER. Yes.

Mr. O'BRIEN. We have not come to that yet, Senator.

Senator DANAHER. Very well, I'll wait.

Mr. O'BRIEN. Let me tell you what it is, first.

Under the present law, there has been a good deal of confusion, until the Supreme Court by a recent decision decided that when a lessee of property puts real property improvements, such as a build-

ing, on the land and the lease is terminated, that building constitutes income to the lessor on termination of the lease. This proposes to say that in such case that amount does not constitute income to the lessor at the time of the termination of the lease. At various times in the history of the income tax, there have been somewhat conflicting rules, and it has been held that in cases in which taxpayers have taken the amount or value of the building up in income tax, then the value of the building is added to the basis for determining gain or loss, or the same basis for determining depreciation. This proposes to say if you have done that in the past, you keep the basis that you have; but proposes, with respect to future terminations, there is no increase in the basis whatsoever on account of the building coming back to the lessor.

Now, for years beginning before January 1, 1942, Senator, you apply the rule only in those cases in which as a consequence of being compelled to take the value of the building up as income or electing to adjust the basis, you are going to give them the benefit of that basis they acquired in the back years; so that in that sense it is retroactive.

Senator DANAHER. How far back in years?

Mr. O'BRIEN. Just as far back as you could go.

Senator TAFT. There is a question of perpetual lease for a building involved; say, a perpetual lease is a lease running longer than the life of the building?

Mr. O'BRIEN. Longer?

Senator TAFT. Yes; a perpetual lease. Who takes the depreciation?

Mr. O'BRIEN. The owner of the building.

Senator TAFT. The owner?

Mr. O'BRIEN. Yes, sir.

Senator TAFT. There has been no change?

Mr. O'BRIEN. No, sir; no change.

This only relates to the case where the building is put on your land by a tenant and comes back to you because of the termination of the lease. Under the present law that is income, though you might not have the money to pay taxes with. This proposes to say that there is no income on termination of the lease and the building has no basis for determining gain or loss, and you get no depreciation on it, because there is nothing to depreciate. When you sell it, you take up your entire gain, and it is taxable, and all realized gain is recognized.

Senator DANAHER. That is true for whatever reason the lease is terminated?

Mr. O'BRIEN. Yes, sir; it does not make any difference what the reason may be for which the lease is terminated.

The CHAIRMAN. That covers the cases of the railroads, where the lease may be terminated unexpectedly because of insolvency of the lessees and thrown back on the lessors?

Mr. O'BRIEN. That is true. You heretofore recognized this problem by excluding the amount of such income from excess-profits taxation. This says it is not income at all.

The CHAIRMAN. Yes.

Mr. O'BRIEN. Page 24, line 1, is another one of these administrative changes of which I spoke. It relates to bad debts, prior taxes, and amounts paid on account of taxes. It says that if you took a deduction for a bad debt in a previous year, and in that year you did not get any tax benefit on account of that deduction, if this year you made

a recovery on that bad debt, the amount of that recovery is not considered income in the year in which it was received.

Let us take an example. Here is a man who had a bad debt. The debt went worthless in 1929, let us say, when he had no income, absolutely no income whatever. Now, under the law of 1929 he was allowed as a deduction $100 on account of that bad debt but he didn't take that deduction for the reason that if he took the deduction it wouldn't do him any tax good at all, his losses from other sources were so great that he didn't have to pay any tax anyway.

Now, suppose that this year he can recover some amount on account of that bad debt. Let us say $10. He does recover $10. This says not having gotten the benefit of the deduction in the previous year you will not consider its recovery this year as income.

Senator CONNALLY. That would be a recovery of capital, would it not?

Mr. O'BRIEN. Yes.

Senator CONNALLY. That is on the theory that it is really recovery of capital rather than income.

Mr. O'BRIEN. Yes.

A similar provision applies with respect to taxes. For instance, you paid a tax during a previous year. You did not get the benefit of a deduction for a tax. For instance, a tax to a State. Now, you get a refund. You find you did not owe the tax. You find you didn't get the benefit of the deduction on account of the tax. You do not have the amount of the refund of the tax included in income.

A similar rule is applied in the case of recovery of amounts paid by reason of not filing a return or filing a late return.

Senator DANAHER. Would you amend your definition on line 14 to include amounts allowable as well as those allowed, or is this broad enough to include it?

Mr. O'BRIEN. Well, I have forgotten just how the debate raged back and forth about that word, Senator; I don't recall the details on it, but we did debate whether the word should be "allowable" or "allowed," and finally decided on "allowed." I should like to think about that again. I don't know why we said "allowed" rather than "allowable."

This provision is made completely retroactive.

Senator TAFT. If it was "allowable" and not "allowed" you wouldn't have a recovery, would you?

Mr. O'BRIEN. Probably so.

Senator TAFT. When you had collected a debt, there wouldn't be any recovery because you never took it off.

Mr. O'BRIEN. Maybe that is the answer, that you never took it off. As I say, I don't remember how the debate went.

Now, as I said, this is made completely retroactive back to the beginning of the revenue acts.

Page 27, line 1, excludes from gross income, in the case of an individual who is a member of the military and naval forces of the United States, so much of his compensation as a soldier or sailor or officer, as does not exceed $250 in the case of a single person and $300 in the case of a married person.

The effect of it is, by way of an exclusion from gross income, somewhat similar to allowing, in the case of a single person, a personal

exemption of $750, which is the same as the present law, and in the case of a married person, $1,200 which is the same as the present law.

Mr. PAUL. $1,500.

Mr. O'BRIEN. I beg your pardon; $1,500, which is the same as the present law.

One more thing about it. It relates only to what he gets from the United States. It does not relate to whatever income he may have from dividends or interest or rent or other sources.

Page 27, line 14——

Senator BROWN. Would you tell us what "C," under line 20, page 26, means?

Mr. O'BRIEN. "C"?

Senator BROWN. Yes.

Mr. O'BRIEN. "C" runs all the way back to the 1913 Revenue Act, Senator; makes these amendments applicable.

Senator BROWN. Does that mean that the Department can go back and reopen the returns for 1939, 1940, and 1941?

Mr. O'BRIEN. No. Returns which are closed by the statute of limitations aren't opened. You see, if this had been a part of the Revenue Act of 1918, if the return is closed, nothing can be done about it. That is the statute of limitations.

Senator BROWN. It seems to say that subsection A was the law in 1938, 1939, 1940, and 1941.

Mr. O'BRIEN. That is right. Suppose it was the law in 1924. Your 1924 year is closed, Senator. That doesn't do any good.

Senator BROWN. I didn't say 1924.

Mr. O'BRIEN. Well, you are assuming 1938 is closed or not closed?

Senator BROWN. Closed.

Mr. O'BRIEN. You are assuming 1938 is closed?

Senator BROWN. Yes.

Mr. O'BRIEN. This doesn't do the taxpayer any good.

Senator BROWN. I didn't think it did.

Mr. O'BRIEN. No; it does not. There is one point I want to call to your attention. Let me point this out, Senator. If 1938 is the year in which you took the bad debt deduction which did you no good, and that is a closed year, if you made a recovery of the debt in 1942, 1942 being an open year, you get the benefit of this provision. But if you took the bad debt deduction in 1924 and got a recovery in 1938, but both the years were closed, you don't get the benefit of this section.

Page 27, line 14, relates to the report requirement in connection with certain inventory methods. In the 1939 act, in the provision relating to the so-called last-in, first-out method of taking inventory, there was in connection with that change in 1939 a requirement that the taxpayer report to shareholders and report for credit purposes only on the last-in, first-out method. That requirement related not only to the annual report of the corporation to its shareholders or the annual report to its bankers, but also to so-called interim reports—that is, reports on a monthly or other basis to shareholders, and so on. This proposes to get rid of that requirement relating to the interim reports, so the taxpayer is eligible to use the last-in, first-out method, if he reports in his annual report on the last-in,

first-out method, notwithstanding the fact he may on the intermediate reports report on the first-in, first-out method or some other method of taking inventory.

This amendment is made retroactive to taxable years beginning December 31, 1940, to permit those who during 1941 submitted interim reports on the basis of other than last-in, first-out, to their shareholders or otherwise, to take advantage of the last-in, first-out method of inventorying for 1942.

Page 29, line 1, is the provision relating to alimony and separate maintenance payments. The provision, in general, is this, that if the husband is paying, let us say, alimony out of his salary, is paying his ex-wife $100 a month, they having been divorced, then the wife takes up $100 a month in her income, the husband gets a deduction for $100 on account of the payment to his wife. That is the simplest possible case.

Similarly, if the husband established a so-called alimony trust, which the Supreme Court has held is taxable to the husband, notwithstanding the fact all the income goes to the wife, it is proposed here that the wife will take up the amount of the income from the trust in her income as it comes to her.

Another major feature of this provision is that the lump-sum settlement——

Senator CONNALLY. In short, you allow the husband to take a deduction of what alimony he pays and she pays the tax on it?

Mr. O'BRIEN. That is it briefly, in the simple case.

Senator CLARK. Is that not substantially the same provision as in the last Senate bill?

Mr. O'BRIEN. Very similar to it. I think we put it in a little more streamlined language and elaborated on it a little bit.

Two more things I might call your attention to: First, in connection with the lump-sum settlement of a husband and wife. Let's say as a consequence of the decree of divorce or separation the husband gives the wife $100,000 and that is all there is to it. That $100,000, under this provision, is not income to the wife and is not deductible by the husband. It is only the periodic payments of alimony which is deductible by the husband and is income to the wife.

One other thing. If an amount is specified in the decree of divorce attributable to the support of minor children, that amount is not income of the wife and is allowed in connection with the credit for dependents of the husband if the husband is actually supporting the child. If, however, that amount paid the wife includes the support of children, but no amount is specified for the support of the children, the entire amount goes into the income of the wife and she gets the credit for the dependents if she does actually support the children.

Senator DANAHER. Suppose in a State where the wife has a statutory interest in her husband's estate, of which she cannot be divested by will or otherwise, and the court finds, in allocating so much of the husband's property to her, that this is her allocable share under the statute, or the equivalent, whether payable in installments or not—if the court so finds, wouldn't she be a purchaser for value to the extent that she is entitled to that share under the laws of that State?

Mr. O'BRIEN. My conception of that, Senator, is that that is a property settlement and being a property settlement rather than a

periodic payment for the support or in recognition of an obligation to support, is not taxable to the wife and not deductible by the husband. Like the case where there is an apartment house—or where they enter an agreement that her dowry is worth so much and he gives her that much.

Senator DANAHER. Well, until she does receive payments equal at least to the value of the estate she was entitled to take, isn't she a purchaser for value?

Mr. O'BRIEN. Well, regardless of whether she is a purchaser for value, I don't think she would be taxed on the amount she got when she got it. But I think this is true, say there was an apartment house, or securities, or something like that, if the income came to her from those securities, or from the apartment house, she would be taxed on that, but not on the capital sum which was given to her in consequence of the decree.

Senator DANAHER. And what is the principle on which you exempt from the operations of this section a lump-sum settlement.

Mr. O'BRIEN. It is not a periodic payment.

Senator DANAHER. So that the whole difference turns on whether or not she gets it all at once?

Mr. O'BRIEN. That is right. Now, there are statements here relating to installment payments.

The CHAIRMAN. What about a trust. Suppose you set up a trust. Is that considered a lump-sum payment?

Mr. O'BRIEN. If the husband has no right in it at all, and if it is the kind of a trust which under the decree of divorce is final and cannot be opened at all, under the present law the income is taxable to the wife. Under the present law, income of certain kinds of so-called alimony trusts are taxable to the husband. It is not taxable to the wife. But the income from the trust, which under the present law the Supreme Court would hold to be taxable to the husband, is now made taxable to the wife.

The CHAIRMAN. Income from the trust?

Mr. O'BRIEN. That is right.

Senator DANAHER. Do you intend that this shall be prospective only?

Mr. O'BRIEN. Prospective only.

There are rather elaborate rules here with respect to effective dates, and the effective dates with respect to which the amendments are applicable. It is geared to the wife's taxable year. That is, the husband gets deductions in the taxable year in which he pays if the payment falls in the taxable year of the wife which is subject to this act.

Senator DANAHER. I may have misled you. I want to make sure that I did not. I want to make clear whether you intend that the provisions of this shall apply retroactively to alimony arrangements entered into, let us say, in 1935?

Mr. O'BRIEN. It doesn't make any difference if it is entered into in 1902, if it is a periodic payment. Now, the time of the creation of the interest or the time of the divorce has nothing to do with it. People divorced 10 years ago are still paying a part of their salary to the wife. They will get the deduction, and the wife will take it up as income.

But I do want to make plain that the applicability of this section depends on the wife's taxable year. That is, if the income is paid in

a year when the wife will pay income tax on it, then it is deductible by the husband. If it is not, it is not deductible by the husband.

The CHAIRMAN. In other words, if she doesn't have sufficient income to get into a taxable bracket, it is still charged to the husband?

Mr. O'BRIEN. No, no. No matter whether she pays a tax on it or not, it makes no difference. It is just what year it falls in.

Let me give you a case, Senator: If the wife is on a calendar year beginning January 1, 1942, and the husband is on a fiscal year ending June 30, 1942, if he pays her the money in May 1942, since the amount which he pays falls in a year of the wife to which this acts applies, then he gets a deduction. That is a simple illustration. Whether she actually pays any tax on it is immaterial. Whether the amount is so low that her personal exemption is adequate is immaterial. It is only that it is includible in her income if she has any.

The CHAIRMAN. I see.

Mr. O'BRIEN. The thing works in reverse, too, in those odd cases where the wife is paying alimony to the husband. I understand there are such situations.

The CHAIRMAN. So much of this bill may be regarded as a relief measure then?

Mr. O'BRIEN. Yes.

Now, page 34, line 14, begins the provision relating to the so-called nontrade and nonbusiness expenses—the *Higgins case*. All the language on pages 34 and 35, is old law, except that it needs to be reorganized on account of the change which is made at the bottom of page 35 and the top of page 36. That provides that in the case of an individual all the ordinary and necessary expenses paid or incurred during a taxable year for the production or collection of income, or for the management, conservation, or maintenance of property held for the production of income, are deductible in ascertaining the net income.

The Supreme Court held in the *Higgins case* if you are not engaged in a trade or business, the expenses of an individual in, for instance, managing his securities, paying his investment counsel, and so on, are not deductible. This says they are. A similar deduction is allowed with respect to depreciation of property held for the production of income. A different rule is applied if interest, for instance, on securities would not be includible in gross income. For instance, if you hire investment counsel for the purpose of—well, take a better case: If you hire a safe deposit box to store your completely tax-exempt securities, you do not get the benefit of this deduction because the amount of income from those securities does not fall into income itself.

These series of amendments are made completely retroactive, but, Senator Brown, only to open years.

Any questions about that?

Senator TAFT. Is there an amendment for expenditures for advertising and goodwill?

Mr. O'BRIEN. That is old law, Senator.

Senator TAFT. What?

Mr. O'BRIEN. That is old law. It got in last year.

Senator TAFT. That is page 35.

Mr. O'BRIEN. Pages 34 and 35 are just a reorganization, dividing section 23 (a) into two general categories. The first is trade and

business expenses, and the second is nontrade and nonbusiness expenses.

Now, page 37, line 16, begins another important administrative change relating to bad debts. Under the present law a deduction for a bad debt is allowable only if it is ascertained to be worthless and charged off within the taxable year. This proposes to say that a deduction is allowed for a bad debt in the year in which the debt as a matter of fact became worthless, regardless of whether it was ascertained that year to be worthless, or regardless of whether it was charged off or not.

In connection with that provision I might point out that there is in here a provision to the effect that in the case of the deduction on account of a bad debt becoming worthless, the statute of limitations is 7 years rather than the 3-year statute of limitations, the reason being that it is generally so hard to ascertain just when a debt did become worthless, and it was thought desirable to have a longer period, longer statute of limitations with respect to this particular deduction.

A further change made by this section begins on page 38, line 24.

Senator CONNALLY. May I ask you right there, as I understand it the law has always been that you cannot get any deduction for gifts to individuals, but they must be given to some organization. Is that right; is that still the law?

Mr. O'BRIEN. Yes; any charitable organization, named charitable organization.

Senator CONNALLY. If some fellow comes along and touches you for $25, and you know it is a gift, you can't deduct it.

Mr. O'BRIEN. That is true.

The CHAIRMAN. You don't have to pay any gift tax on it, though.

Senator CONNALLY. No; but you are paying a gift tax when you let him have it.

Senator TAFT. Is there any change made in this particular—it is all hard to understand—that if your securities or bonds become worthless you get a 100-percent deduction, whereas if you sell them at 1 cent on the dollar, it is a loss, a capital loss, and it is a deduction for capital loss. You are limited, in other words, in your loss. There is no change?

Mr. O'BRIEN. No change.

Senator TAFT. From time to time, the Treasury suggested that that corporate securities division should be changed.

Mr. O'BRIEN. Yes.

Senator TAFT. It was changed.

Mr. PAUL. It was changed 1 or 2 years ago; 23 (k), I think it was.

Senator TAFT. That remains the way it was.

Mr. PAUL. There is no change.

Mr. O'BRIEN. The next change made by this section relates to so-called nonbusiness bad debts. Whereas, under the present law they are allowable as an ordinary loss, this proposes to treat a nonbusiness bad debt as a loss resulting from the sale or exchange during the taxable year of a capital asset held for not more than 15 months. In other words, makes them short-term losses. Instead of being deductible in full they are deductible only as a short-term capital loss. The ordinary case is where you lend a friend $100 and he doesn't pay you.

Page 40, line 16, begins the next important change, which relates

to the amortizable bond premium. It deals with the case in which a bond is purchased, let us say, for $100 and upon redemption the taxpayer gets $90, or— Well, put it the other way: The bond is purchased for $110, and on redemption the taxpayer gets $100. That $10 is bond premium. Under the present law the amount of that $10 is treated as capital loss in the year in which the bond is redeemed. This proposes in the case of such a bond, the $10 of the bond premium shall be amortized over the life, the remaining life, of the bond. In the case, let us say, of a 10-year bond, the amortization would be $1 a year for 10 years.

Senator TAFT. Are you proposing to make every individual in the country amortize his bonds?

Mr. O'BRIEN. No. In the case of a taxpayer—in the case of an individual—he can elect to have the section apply to the bonds the interest of which is partially tax exempt, the Federal Liberty bonds, and he can, if he wants to, elect to have it applied to the wholly taxable securities. As to the securities which are wholly tax exempt, it will apply automatically to him, he cannot elect it at all.

In the case of a bond the interest which is wholly or partially taxable, the amount of the amortizable bond premium for each year is allowed as a deduction and the basis of the bond is adjusted accordingly, so that when the bondholder at the end of the period redeems his bond, his basis will be down so that he has neither a capital gain or capital loss.

Senator TAFT. Is that compulsory on every bondholder?

Mr. O'BRIEN. In the case of the bonds which are wholly tax exempt it is compulsory; in the case of the bonds which are, let me say—

Senator CONNALLY. The State bonds would come under that.

Mr. O'BRIEN. In the case of a corporation and where the interest is partially taxable, or where the interest is wholly tax free, it is compulsory; in the case of an individual, where the interest is partially taxable, or where it is wholly taxable, it is elective with the individual; in the case of the wholly tax free, it is compulsory on the individual, too.

Senator TAFT. Then, last year we had this question about Government Defense bonds. Was that left optional?

Mr. O'BRIEN. That was left optional; yes.

Senator TAFT. But coupon bonds not?

Mr. O'BRIEN. They are wholly taxable now.

Senator TAFT. They are all wholly taxable?

Mr. O'BRIEN. They are all taxable now.

Senator TAFT. But an individual with a Government bond of the old type must amortize it?

Mr. O'BRIEN. If it is wholly tax free.

Senator TAFT. There aren't many of those.

Mr. O'BRIEN. No; there aren't many of those. The only important cases are the State and municipal bonds.

Senator TAFT. They must be amortized?

Mr. O'BRIEN. They must be amortized.

Senator TAFT. What is the reason for that? I mean, the ordinary taxpayer might not even keep books.

Mr. O'BRIEN. In that case the amortization is automatic.

Senator TAFT. What?

Mr. O'BRIEN. In that case the amortization is automatic.

All you do in effect is reduce the basis of the bond so that when he redeems the bond at 100 there is no loss.

Senator TAFT. Yes; but take the fellow with $10,000 in municipal bonds, say city of Cincinnati bonds, he just has his coupons, that is the only record he has—probably he has no books at all, and yet every year he has to take off or add to his income.

Mr. O'BRIEN. No; not in the case of the wholly tax free. There is an automatic reduction of the basis each year by a dollar in my example of that.

Senator TAFT. Automatic; how do you mean? No income tax is automatic. You fill it out.

Mr. O'BRIEN. No, no; he doesn't pay any tax on that interest, does he?

Senator TAFT. No.

Mr. O'BRIEN. Therefore, he doesn't include that interest in his return; therefore, he doesn't get any deduction on account of the amortization of the bond. But when the bond is redeemed by reason of the automatic operation of the amortization provision, he not having made any entry on his books whatever, the basis for determining gain or loss on the bond has been reduced from 110 to 100, so that on redemption he does not have a capital loss.

Senator TAFT. Although he paid $110 for the bond?

Mr. O'BRIEN. Although he paid $110 for the bond.

Senator TAFT. Suppose he bought the bond at 90 and then it is redeemed at maturity?

Mr. O'BRIEN. Well, there were provisions on that last year; amortized-bond discount.

Senator TAFT. What?

Mr. O'BRIEN. In the last revenue bill.

Senator TAFT. Speaking of municipal bonds, does he pay an income tax on that on the basis of buying at 90 and selling at 100; does he pay an income tax?

Mr. O'BRIEN. Yes.

Senator TAFT. He never takes a loss if he buys that bond at 110 and sells at 100.

Mr. O'BRIEN. I am not justifying it, but on the theory——

Senator TAFT. He is too well treated already.

Mr. O'BRIEN. On the theory that the interest yield on the bond is what he bargained for at 110, and he didn't bargain for a capital loss.

Senator TAFT. I see. Proceed.

Mr. O'BRIEN. And a similar provision relates to the election in the case——

Senator CONNALLY. In reverse on that, if he buys at 90, he might only make $10, but he gets the same interest rate as the other, and therefore he has a gain.

Mr. O'BRIEN. Yes; he has a gain all right.

That, in brief, is the provision about amortization. That is about all there is to that, except a lot of provisions relating to the granting of the deductions, and so forth, for amortizable bond premium to

estates and trusts and beneficiaries of estates and trusts, common trust funds, personal service corporations, and for personal holding companies.

The next provision, page 48, line 21, is an administrative change designed to close a loophole. It provides that you do not get any deduction for interest paid or accrued on indebtedness incurred or continued to purchase or carry a fully paid-up or single premium life insurance or endowment contract.

That is, you go to the bank and borrow $100,000 at 6 percent to buy a fully paid-up life-insurance policy, you don't get a deduction for the interest which you pay to the bank on account of that borrowing.

Senator CONNALLY. Does this bill do anything about the $40,000 exemption on life insurance?

Mr. O'BRIEN. Yes; it makes the combined exemption $60,000.

Page 49, line 8, allows the taxpayer to elect to treat taxes and other carrying charges as chargeable to capital account rather than deductible as current deductions. A familiar case is a man employing his own help to build a building for him, and with respect to his own help he will pay social-security taxes. This permits, under regulation by the Commission, the taxpayer to elect to include those social-security taxes as part of the cost of building rather than to deduct them this year as a deduction from current income.

Senator TAFT. Is that true of all taxes during construction; is that true generally? Must they be capitalized?

Mr. O'BRIEN. Well, taxes generally, I don't know; I think they are now; but the familiar case, of course, is where you have what is in the border line between a current running expense and something which might be attributable to a capital item, like social-security taxes on help in building a building, or like your excise tax on freight.

Senator TAFT. I was thinking of a large project, where taxes on construction are a large item and are capitalized often. Does this permit the company to capitalize or not, as it pleases?

Mr. O'BRIEN. Yes; any tax.

Senator TAFT. It may do either?

Mr. O'BRIEN. Yes.

The next change is on page 50, line 1, which relates to the personal exemption of single people and married people. With single people it is reduced from $750 to $500, and married people from $1,500 to $1,200.

Senator VANDENBERG. Now, at that point, I would like those figures, if they are available. How many additional income-tax payers does that reduced exemption produce?

Mr. O'DONNELL. We estimate that the returns that are made taxable by the reduction of the exemptions will number 6,998,000; approximately 7,000,000 returns.

Senator VANDENBERG. You mean that that is an increase of 7,000,000 taxable returns?

Mr. O'DONNELL. That is right.

Senator VANDENBERG. And how much taxes do you collect from that 7,000,000 as a result of that?

Mr. O'DONNELL. We estimate there that we will get $109,500,000 from those persons made taxable by the reduction in exemptions.

Senator VANDENBERG. And how much do you get from the balance of the tax structure as the result of reducing the exemption?

Mr. PAUL. Approximately $1,100,000,000.

Senator VANDENBERG. In other words, the reduction of the exemption is 10 times as hard on those who paid taxes before as it is on those who become new taxpayers?

Mr. PAUL. It is true that 10 times as much tax on the amount by which the exemption is lowered comes from those that have already been paying taxes as compared with new taxpayers; that is true.

Senator GERRY. In that connection, I would like to ask a question that I asked this morning in regard to the 1941 estimate. The 1941 tax returns, haven't you got enough tax returns in now, the March returns, or possibly the June returns, to see how accurate those estimates were?

Mr. PAUL. You are talking about the 1941 estimates?

Senator GERRY. Yes.

Mr. PAUL. I don't think I quite understood you this morning.

Senator GERRY. I don't think you did either.

Mr. PAUL. I thought you meant the '42.

Senator GERRY. No.

Mr. PAUL. I think perhaps Mr. O'Donnell should answer that question.

Mr. O'DONNELL. Senator Gerry, let me answer it this way: The individual income-tax Budget estimates made for the President last December were sufficiently accurate so that we changed the estimates very little in the April Budget revision. The actual receipts showed that these estimates were substantially correct.

Senator GERRY. I don't think that quite answers my question. I mean they estimated the 1941 bill would bring in this year so much revenue.

Mr. O'DONNELL. Yes.

Senator GERRY. Now, is it bringing in more or less?

Mr. O'DONNELL. Well, that is a difficult question to answer, because the provisions of the bill after it has been passed affect the actions that are taken by taxpayers with reference to components of income that they receive.

Senator GERRY. Yes.

Mr. O'DONNELL. But I would say this in general without being specific. When we met a year ago we did not anticipate the kind of expenditures that the Government has made since. No one realized the rate at which the economy would have to be converted to the war effort. The result is that the national income and all incomes are higher than we thought at that time they would be. Unquestionably provisions which became an integral part of the income-tax law yielded somewhat more money than we would have a year ago anticipated.

Senator GERRY. Well, what you are saying is that these circumstances have changed.

Mr. O'DONNELL. That is why we have to revise Budget estimates.

Senator GERRY. But the estimates of last year were lower than what the 1941 bill has shown, as far as you can tell from your March returns and your June returns. Now, there were certain of us in the committee that thought that was going to be the case, apart even from the war effort. That is neither here nor there, but I am just trying to see how accurate your estimates were.

Mr. O'DONNELL. I think you are quite right, Senator Gerry. The accentuated industrial activity and augmented incomes which have

come about in large measure by virtue of the extension of the Government expenditures and the conversion to the war effort have resulted in larger incomes and larger taxes than we expected a year ago. I think that the end result is in the direction you state.

Senator GERRY. Pretty largely.

Mr. O'DONNELL. With reference to excise taxes, it worked in the other direction, because of the necessity to convert civilian economy to the war effort. Priorities, allocations, and rationing were used to a greater extent than we had anticipated and production of goods for civilian use were greatly curtailed and will be curtailed still further. The result is that some of the excise taxes won't yield in a full year of operation in the future as much as we expected a year ago that they would yield.

Senator GERRY. The net result is what I am interested in. That answers my question.

Mr. PAUL. Very frankly, we were just a little low.

Mr. O'DONNELL. I think that is true.

Senator VANDENBERG. Mr. O'Donnell, while you still have your figures before you, can you tell me how much you expect to get out of this bill from persons with incomes of $3,000 and under.

Mr. O'DONNELL. Yes, sir; I think so. I will have to add some figures together, or perhaps you can do it for me.

From individual taxpayers with net incomes of under $1,000 we expect—and this includes new and old returns—$103,000,000.

Senator VANDENBERG. Yes.

Mr. O'DONNELL. From individual taxpayers having net incomes of $1,000 to $2,000, we expect $1,103,000,000; from individual taxpayers having net incomes of $2,000 to $3,000, we expect $1,050,000,000.

Senator VANDENBERG. Do you mean you will get $2,250,000,000 from incomes of $3,000 and less?

Mr. O'DONNELL. That is right. I will insert in the record a table (exhibit A) giving this information by certain net income classes, both under the bill and under present law.

(The table referred to is as follows:)

EXHIBIT A.—*Estimated number of returns, net income, and tax, by net-income classes, at levels of income estimated for calendar year 1942, under present law and under the revenue bill of 1942 (H. R. 7378) as passed by the House of Representatives, July 20, 1942*[1]

[Money amounts in millions of dollars; number of returns in thousands]

Net-income classes	Number of returns		Net income		Tax	
	Present law	Revenue bill of 1942	Present law	Revenue bill of 1942	Present law	Revenue bill of 1942
	Returns made taxable by reduction in exemptions					
Under $1,000	.....	1,764	.....	1,047	.....	24.5
$1,000 to $2,000	.....	4,882	.....	6,859	.....	80.8
$2,000 to $3,000	.....	334	.....	703	.....	3.9
$3,000 to $4,000	.....	16	.....	55	.....	.3
$4,000 to $5,000	.....	2	.....	8	.....	(2)
Total under $5,000	.....	6,998	.....	8,733	.....	109.5
$5,000 to $10,000	.....	.....	.....	.....	.....	.....
Over $10,000	.....	.....	.....	.....	.....	.....
Total	.....	6,998	.....	8,733	.....	109.5

EXHIBIT A.—*Estimated number of returns, net income, and tax, by net-income classes, at levels of income estimated for calendar year 1942 under present law and under the Revenue Bill of 1942 (H. R. 7378) as passed by the House of Representatives July 20, 1942*—Continued

Net-income classes	Number of returns		Net income		Tax	
	Present law	Revenue bill of 1942	Present law	Revenue bill of 1942	Present law	Revenue bill of 1942
	Returns taxable under present law exemptions					
Under $1,000	2,493	2,493	1,984	1,650	15.7	78.3
$1,000 to $2,000	7,705	7,705	12,224	12,048	304.5	1,021.8
$2,000 to $3,000	5,697	5,697	13,826	13,564	434.4	1,045.9
$3,000 to $4,000	1,877	1,877	6,510	6,393	279.7	579.2

Total under $5,000	18,636	18,636	38,111	37,169	1,255.5	3,167.6
$5,000 to $10,000	881	881	5,879	5,751	538.3	946.6
Over $10,000	385	385	9,461	8,767	3,250.7	3,693.4
Total	19,902	19,902	53,451	51,687	5,044.8	7,807.6
	All returns taxable under proposed reduced exemptions					
Under $1,000	2,493	4,257	1,984	2,697	15.7	102.8
$1,000 to $2,000	7,705	12,647	12,224	18,907	304.5	1,102.6
$2,000 to $3,000	5,697	6,031	13,826	14,327	434.4	1,049.8
$3,000 to $4,000	1,877	1,893	6,510	6,453	279.7	579.5
$4,000 to $5,000	804	806	3,507	3,517	221.2	442.4
Total under $5,000	18,636	25,634	38,111	45,902	1,255.5	3,277.1
$5,000 to $10,000	881	881	5,879	5,751	538.3	946.6
Over $10,000	385	385	9,461	8,767	3,250.7	3,693.4
Total	19,902	26,900	53,451	60,420	5,044 8	7,917.1

[1] Increased surtax rate schedule and adopted 6-percent normal tax; changed treatment of capital gains and losses; and lowered personal exemptions to $1,200 for a married couple or the head of a family, and to $500 for a single person, or a married person not living with husband or wife.
[2] Less than $0.05 million.

NOTE.—Figures are rounded and will not necessarily add to totals.

Source: Treasury Department, Division of Research and Statistics, July 21, 1942.

Senator VANDENBERG. And what do you get out of the total bill, for everybody, in income taxes? What is your grand total?

Mr. O'DONNELL. We estimate that the individual income tax liabilities, at estimated calendar year 1942 levels of incomes will total $7,917,000,000.

Senator BROWN. That is this bill?

Mr. O'DONNELL. That is the total yield of the individual income tax provisions of this bill. It is not an additional yield over the yield of the existing law. What Senator Vanderberg asked for was the amount of taxes to be paid in the aggregate by persons paying an individual income tax.

Senator BROWN. Under this bill.

Senator CLARK. You mean the total income from personal income tax is $8,000,000,000.

Mr. O'DONNELL. $7,917,000,000.

Senator CLARK. Out of which $2,250,000,000 is from net incomes of $3 000 and less?

Mr. O'DONNELL. Yes, sir.

Senator VANDENBERG. I thought the whole bill was only between $6,000,000,000 and $7,000,000,000.

Mr. O'DONNELL. That is correct, but that is in addition to the present law yield from all taxes. I will insert in the record at this point a table showing the increase in each of the taxes included in the bill over the yield of the present law.

(The table referred to is as follows:)

EXHIBIT B.—*Summary of revenue effect of the revenue bill of 1942 as passed by House of Representatives, July 20, 1942*

[In millions of dollars]

	Increase (+), decrease (−) over yield of present law		Increase (+), decrease (−) over yield of present law
Income and excess-profits taxes:		Manufacturers' excise taxes:	
Corporation:		Lubricating oil	+13.9
Income	+383.4	Photographic apparatus	+7.6
Excess profits	+2,315.8	Rubber articles	−8.9
Declared value excess-profits tax	−58.5	Electric signs	−.1
Total corporation income and excess-profits taxes	+2,640.7	Washing machines	−.1
Individual income tax	+2,872.3	Optical equipment	−.3
Total income and excess-profits taxes	+5,513.0	Total manufacturers' excise taxes	+12.1
Miscellaneous internal revenue:		Miscellaneous taxes:	
Capital stock tax	−51.5	Telephone, telegraph, radio and cable facilities, leased wires, etc.	+26.8
Estate tax	−14.8	Telephone bill	+36.8
Gift tax	+7.7	Transportation of persons	+33.0
Total	−58.6	Coin-operated amusement and gaming devices	+4.4
Liquor taxes:		Transportation of property	+252.9
Distilled spirits [1]	+266.1	Pari-mutuel wagers	+23.6
Fermented malt liquors [1]	+61.8	Total miscellaneous taxes	+378.4
Wines [1]	+11.6	Total miscellaneous internal revenue	+758.2
Total liquor taxes	+339.5	Total internal revenue	+6,271.2
Tobacco taxes:			
Cigarettes [1]	+51.4		
Tobacco, smoking	+11.8		
Cigars (large)	+15.8		
Cigarette papers and tubes	+7.8		
Total tobacco taxes	+86.8		

[1] Excluding nonrecurring floor-stocks taxes which are estimated to yield: Distilled spirits, $80.0 millions; fermented malt liquors, $2.0 millions; wines, $2.3 millions; cigarettes, $5.8 millions; smoking tobacco, $1.4 millions; cigars (large), $1.6 millions.

NOTE.—All estimates show full year effect assuming all proposed changes were fully reflected in revenue for an entire year. Estimates of income and excess-profits taxes and the gift tax are at levels of income estimated for calendar year 1942. All other estimates are at levels of income estimated for fiscal year 1943.

Source: Treasury Department, Division of Research and Statistics, July 21, 1942.

Mr. O'DONNELL. Under the present law we estimate the calendar year 1942 individual income-tax liabilities at $5,045,000,000. The difference between $5,045,000,000 and the $7,917,000,000 estimated calendar year 1942 income-tax liabilities under this bill represents the increment of $2,872,000,000 in individual income taxes attributed to the bill. The distribution of this increased individual income-tax yield over the yield of the present law is shown in the following table.

(The table referred to is as follows:)

EXHIBIT C.—*Estimated tax liabilities and percentage distribution by net income classes, at levels of income estimated for calendar year 1942, under present law and under the revenue bill of 1942 (H. R. 7378) as passed by the House of Representatives, July 20, 1942* [1]

[Money amounts in millions of dollars]

Net-income classes	Total tax liabilities				Increase over yield of present law	
	Amount		Percentage distribution			
	Present law	Revenue bill of 1942	Present law	Revenue bill of 1942	Amount	Percentage distribution
	Returns made taxable by reduction in exemptions

[1] Increased surtax rate schedule and adopted 6 percent normal tax; changed treatment of capital gains and losses; and lowered personal exemptions to $1,200 for a married couple or the head of a family, and to $500 for a single person, or a married person not living with husband or wife.

[2] Less than $0.05 million.

NOTE.—Figures are rounded and will not necessarily add to totals.

Source: Treasury Department, Division of Research and Statistics, July 21, 1942.

Senator BARKLEY. In other words, on the subject of income taxes, the bill is rewritten. In other words, it is as if there had been no law. You write it all over again, and it gets from the taxes levied $7,900,000,000.

Mr. O'DONNELL. That is correct, Senator Barkley. I have a table which gives this information for all of the income taxes and will insert it in the record at this point. The table advisedly contains not only the estimates of the individual income tax yield but also the estimates of the corporate tax yield. It is necessary that these estimates be presented together because variations in the corporation taxes have a direct effect upon the yield of the individual income taxes. As corporate taxes become larger, corporations are less able to pay dividends and the result is a smaller amount of dividends received by taxpayers with the consequent diminution in the tax yield from any given schedule of income taxes.

I think that I should point out in passing that when we compare the individual income tax yield of H. R. 7378 with the yield of the individual income taxes contained in the present law we do not fully measure the amount by which the individual income tax law has been strengthened. In other words, because of the increased corporation taxes contained in H. R. 7378, the present individual income tax law would yield less money than it will yield under the corporation taxes contained in the present law. Consequently, the income tax provisions in H. R. 7378 have to make up the loss in revenue caused by the diminution in dividends before we begin to measure the increased yield over the yield of the present law.

(The table referred to is as follows:)

EXHIBIT D.—*Income and excess-profits taxes—estimated revenue effect, at levels of income estimated for the calendar year 1942, of the revenue bill of 1942 (H. R. 7378) as passed by House of Representatives, July 20, 1942*

[In millions of dollars]

	Estimated liabilities under present law	Increase (+), decrease (−), due to revenue bill of 1942	Total income tax yield, revenue bill of 1942
Corporation income and excess-profits taxes:			
Income tax (current)	3,941.9	+383.4	4,325.3
Excess-profits tax	3,597.7	+2,315.8	5,913.5
Declared value excess-profits tax	107.5	−58.5	49.0
Total corporation income and excess-profits taxes	7,647.1	+2,640.7	10,287.8
Individual income tax (current)	5,044.8	+2,872.3	7,917.1
Total	12,691.9	+5,513.0	18,204.9
Back taxes:			
Income	400.0	.....	400.0
Unjust enrichment	4.0	.....	4.0
Total back income taxes	404.0	.....	404.0
Total income and excess-profits taxes	13,095.9	+5,513.0	18,608.9

Source: Treasury Department, Division of Research and Statistics, July 21, 1942.

Senator BARKLEY. So that if you take the whole field of taxation, based on that analogy, how much will this bill get in total revenue?

Mr. O'Donnell. I appreciate that it is difficult to follow statistics presented orally. If you wish I can insert in the record a table which, when studied in conjunction with the income-tax yield table just inserted in the record, will be helpful in answering the question which you have asked. A categorical answer to the question without a detailed technical explanation would be subject to misunderstanding.

The Chairman. We will be glad to have it in the record.

(The table referred to is as follows:)

Exhibit E.—*Miscellaneous internal revenue—Estimated fiscal year 1943 receipts under present law and estimated full-year effect of the revenue bill of 1942 (H. R. 7378) as passed by the House of Representatives July 20, 1942, at levels of income estimated for fiscal year 1943*

[In thousands of dollars]

	Estimated receipts under present law	Estimated increase or decrease (−) due to revenue bill of 1942 [1]	Estimated total receipts, present law plus revenue bill of 1942 [1]
Miscellaneous internal revenue:			
Capital stock tax	$290,000	−$51,500	$238,500
Estate tax	500,000	−14,800	485,200
Gift tax	30,700	7,700	38,400
Liquor taxes:			
Distilled spirits (domestic and imported) (excise tax)	710,000	266,100	976,100
Fermented malt liquors	386,700	61,800	448,500
Rectification tax	6,800		6,800
Wines (domestic and imported) (excise tax)	35,600	11,600	47,200
Special taxes in connection with liquor occupations	11,600		11,600
Container stamps	11,700		11,700
Floor stocks taxes	5,300		5,300
All other	1,400		1,400
Total liquor taxes [2]	1,169,100	339,500	1,508,600
Tobacco taxes:			
Cigarettes	761,800	51,400	813,200
Tobacco (chewing and smoking)	53,000	11,800	64,800
Cigars (large)	14,700	15,800	30,500
Snuff	7,500		7,500
Cigarette papers and tubes	1,800	7,800	9,600
All other	142		142
Total tobacco taxes [2]	838,942	86,800	925,742
Stamp taxes:			
Issues of securities, bond transfers, and deeds of conveyance	23,800		23,800
Stock transfers	12,800		12,800
Playing cards	5,400		5,400
Silver bullion sales or transfers	25		25
Total stamp taxes	42,025		42,025
Manufacturers' excise taxes:			
Gasoline	242,100		242,100
Lubricating oils	42,500	13,900	56,400
Passenger automobiles and motorcycles	3,000		3,000
Automobile trucks, busses, and trailers	4,000		4,000
Parts and accessories for automobiles	8,000		8,000
Tires and inner tubes	8,000		8,000
Rubber articles	8,900	−8,000	
Electrical energy	51,400		51,400
Electric, gas, and oil appliances	1,500		1,500
Electric light bulbs	3,400		3,400
Electric signs	50	−50	
Radio receiving sets, phonographs, phonograph records, and musical instruments	6,100		6,100
Refrigerators, refrigerating apparatus, and air conditioners	4,300		4,300
Washing machines	50	−50	
Business and store machines	2,500		2,500

See footnotes at end of table.

EXHIBIT E.—*Miscellaneous internal revenue—Estimated fiscal year 1943 receipts under present law and estimated full-year effect of the revenue bill of 1942 (H. R. 7378) as passed by the House of Representatives July 20, 1942, at levels of income estimated for fiscal year 1943*—Continued

[In thousands of dollars]

	Estimated receipts under present law	Estimated increase or decrease (−) due to revenue bill of 1942	Estimated total receipts, present law plus revenue bill of 1942
Manufacturers' excise taxes—Continued.

Total miscellaneous internal revenue (collection basis)	3,937,267	758,300	4,695,567

[1] Assuming that all provisions of the law were fully reflected in receipts for an entire year.
[2] Excluding nonrecurring collections of floor-stock taxes: Liquor taxes, $91.3 millions; tobacco taxes, $8.8 millions.

Source: Treasury Department, Division of Research and Statistics, July 21, 1942.

Senator VANDENBERG. As I understand it, you get, in round numbers, about $3,000,000,000 increased individual income-tax revenues from this bill as it now stands; is that right?

Mr. O'DONNELL. That is $2,872,300,000, to give you the exact figure.

Senator VANDENBERG. All right. Now, can you tell me how much of that two billion eight comes from net incomes under $3,000?

Mr. O'DONNELL. The total yield from these taxpayers is the figure which you and I totaled together, $2,256,000,000. Under the present law it is estimated that taxpayers in these same net income classes will have income-tax liabilities of $16,000,000 for the group with net incomes under $1,000; $305,000,000 for the group with net incomes of $1,000 to $2,000 and $434,000,000 for the group with net incomes of from $2,000 to $3,000.

Senator VANDENBERG. That is $755,000,000.

Mr. O'DONNELL. Yes, sir; and if you will subtract it from the $2,256,000,000 for which they would be liable under the proposed legislation we see that the group with net incomes of less than $3,000 have their taxes increased $1,501,000,000 by the bill.

Senator VANDENBERG. About one and a half billions out of the $2,872,000,000 comes from this group.

Mr. O'DONNELL. Yes, sir. A table which shows this tax liability cumulated by net income classes can be inserted in the record for your convenience.

Senator TAFT. Could you insert also the number of returns?

Mr. O'DONNELL. Yes, sir; I shall be glad to do that.

Senator BARKLEY. Will you indicate, if you have the figures on it, the total net income under this bill—what it would be—which includes all that has heretofore been levied and what is added by this bill?

Mr. O'DONNELL. Yes, sir. In the table which I shall label "Exhibit F" for the record, you will find a comparison by net income classes not only of the tax due under present law with that due under the revenue bill of 1942, but also comparable figures for the number of returns and for the net income, likewise classified by net income classes.

This table, which also shows the cumulated figures for the specified net income classes, enables us to study the percentage distribution of the number of returns, the net income, and the tax liability under existing law and under the revenue bill of 1942, so that the shifting in the relative importance of each net income class with reference to the contribution which the taxpayers in each class makes to the total income tax liability may be ascertained.

The table shows that in the higher net income classes such a large percentage of the net incomes is already taken in taxes and such a relatively small absolute amount of net income remains that any substantial increase in income taxes must result in a downward shift in the relative income tax burden by net income classes.

From the table showing the simple distribution of the tax by net income classes it is clear that for each class shown, up through the class with net incomes from $5,000 to $10,000, the percentage of the total tax burden which each class bears has been increased under the revenue bill of 1942 as compared with the present law and for each class with net incomes in excess of $10,000, the relative percentage of the total burden has been decreased. The absolute amount of tax liability has been increased in each net income class. However, in the column of the table showing the cumulative distribution of the tax liability it is clearly shown that the relative percentage of the total burden has been shifted downward by the revenue bill of 1942 as compared with the present law.

For the purposes of illustration, take the group that Senator Vandenberg was discussing with net incomes of less than $3,000. These taxpayers, with respect to the total individual income tax liability on calendar year 1942 incomes, will be liable for $755,000,000, or 15.0 percent, of the total individual income tax liability under the present law, whereas their $2,256,000,000 liability will represent 28½ percent of the total individual income tax liabilities under the revenue bill of 1942.

(The table referred to is as follows:)

EXHIBIT F.—*Estimated number of returns, net income, and tax under the present law and the revenue bill of 1942 (H. R. 7378) as passed by the House of Representatives July 20, 1942, at net income levels estimated for calendar year 1942, distributed by net income classes*

NOTE.—Figures are rounded and will not necessarily add to totals.

Source: Treasury Department, Division of Research and Statistics, July 21, 1942.

Senator BARKLEY. You don't know now, in one lump sum, how much it will raise?

Mr. O'DONNELL. The reason I did not immediately state a figure was because I did not want to get into a technical discussion. Because of the difference in the effective dates of the amendments made by the revenue bill, it is impossible to make an over-all estimate of the revenue effect of all the changes at the same levels of income. It is our practice to prepare estimates of the revenue effect of a tax bill by adding together the yield of each provision of the bill for the first year in which each of the provisions is effective. We assume that each provision could be fully effective for some period for which we have been required to make forecasts of business and income levels in making the official Budget estimates of the revenues of the United States Government. Our experience is that this is the most practical way to estimate the yield of the bill since some of the provisions of this bill will not become fully effective until 1948 and it is obviously impossible to forecast that far ahead. Therefore, our estimates of the effect of the income-tax revision are based on levels of income estimated for calendar year 1942, while estimates of the excise taxes are based in general on levels of income estimated for the fiscal year 1943.

Senator BARKLEY. I mean the whole amount the Treasury will get out of the tax law when this bill is written.

Mr. O'DONNELL. Under the present law, we estimate that we will get nearly $17,000,000,000 in the fiscal year 1943.

The CHAIRMAN. Is that exclusive of the social security?

Mr. O'DONNELL. That is after the net appropriation for Federal old-age and survivors insurance trust fund.

The CHAIRMAN. $17,000,000,000?

Mr. O'DONNELL. The best way to explain what this bill adds is to say that the bill in a full year of operation will add $6,271,200,000. That will, however, not all be received in the fiscal year 1943.

The CHAIRMAN. About how much of that will be?

Mr. O'DONNELL. A little over $4,000,000,000, depending on the effective date of the new law.

The CHAIRMAN. So you would add four billion to seventeen billion?

Mr. O'DONNELL. That is correct.

Senator BARKLEY. That is what I was trying to get at.

Mr. O'DONNELL. Approximately $21,000,000,000 for the fiscal year 1943.

Senator BARKLEY. The total annual revenue the Treasury will receive from this law.

Mr. O'DONNELL. The bill will add $6,271,200,000.

Senator BARKLEY. I am not talking about this particular bill. I mean the total under the law as it will be.

Mr. O'DONNELL. As I noted before, as the period upon which estimates of the revenue bill of 1942 are based varies for the several taxes affected, it is impossible to combine the estimated increase in yield of $6,300,000,000 with present law receipts for any specific period. Although neither method is correct, the total yield of the bill might be expressed in two ways. The simpler would be to add the full year effect of the bill, $6,300,000,000 to estimated receipts in fiscal year 1943 under the present law, which amount to $16,900,000,000. This total would be $23,200,000,000. This would not, however, be the maximum figure for the period for which we have forecast incomes and revenues

as it would not fully reflect the changes in the income-tax law. A better method would be to take the total income-tax liabilities under the bill for calendar year 1942 and combine it with estimated receipts under the bill for a full year of operations at fiscal year 1943 estimated levels of incomes and business for all other tax sources. Under this method, the total annual revenue from the bill amounts to $24,200,000,000.

Senator BARKLEY. I am trying to get the figure for any given year based upon your estimate.

The CHAIRMAN. In a full year of operation.

Mr. O'DONNELL. I am inclined to use the total of $24,200,000,000. Let us say that is a hypothetical figure, because it does not apply to a particular year.

The CHAIRMAN. That is exclusive of social security.

Mr. O'DONNELL. It is after the net appropriation for the Federal old-age and survivors insurance trust fund. The laws, including the provisions of this bill, may yield in any specific year very much less or very much more than this amount, depending upon the levels of business and incomes.

The CHAIRMAN. You estimate that about $4,000,000,000 only will be produced during this present fiscal year. You get only a part of your excise taxes and gift taxes.

Mr. O'DONNELL. When I say $4,000,000,000, I assume that this bill will be passed in time for its excise-tax provisions to become effective October 1.

The CHAIRMAN. At least get that one quarter in 1942.

Mr. O'DONNELL. Yes, sir. And then we will get two quarters of the income-tax installment payments of the calendar year 1942 income-tax liabilities plus one quarter's collections of the withholding tax. I have a table (exhibit G) showing these data in detail which I shall offer for the record at this point.

(The table referred to is as follows:)

EXHIBIT G.—*Estimated Federal revenue for the fiscal year 1943, assuming enactment effective Oct. 1, 1942, of the revenue bill of 1942 (H. R. 7378) as passed by House of Representatives July 20, 1942*

[In millions of dollars]

[1] Collections for credit to trust funds are not included.
[3] Includes $319,800,000 to be collected at source and credited against taxes collected in 1944 on 1943 incomes.
[3] Revised subsequent to the April Budget revision.
[4] All other, including repealed taxes. Includes brandy used for fortifying sweet wines; tobacco floor-stocks taxes; toilet preparations 5 percent and 11 percent; narcotics, including marihuana and special taxes; National Firearms Act; hydraulic mining tax; and all other repealed taxes not reinstated by the Revenue Act of 1941.

Source: Treasury Department, Division of Research and Statistics, July 21, 1942.

Mr. O'DONNELL. In analyzing the figures presented in exhibit G, it is necessary to realize that some of the provisions in the bill will not be reflected in any way in the fiscal year 1943 receipts. For instance, gift tax provisions apply only to gifts made after January 1, 1943, and the gift tax due with respect to gifts so made would not be due until March 1944, which falls in fiscal year 1944. Although the provisions of the estate tax take effect upon the effective date of the new legislation with respect to the estates of persons dying after that time, estate tax returns need not be filed for 15 months following such date.

Certain of the excise provisions, such as those applying to taxes which are collected through the sales of stamps, will be reflected in larger current collections almost immediately after the provisions become effective. From other excise taxes, such as the manufacturers' excise taxes, collections are not received by the Federal Government until the end of the month following the month in which the new provisions first become effective. In the case of certain other taxes, such as the tax on transportation of property, the bill provides for an extension of time at the discretion of the Commissioner of Internal Revenue in the payment of the tax. Under the Internal Revenue Code extensions of time are allowed in the payment of the various taxes, such as telephone and telegraph taxes. The effect of the bill on these telephone taxes will be delayed in fiscal year 1943 to the extent that such extensions exist.

In interpreting the income tax estimates of receipts in fiscal year 1943, it is important to remember that under present law, receipts which are expected in the fiscal year 1943 include the collections of the two final installments in respect of calendar year 1941 income-tax liabilities.

With respect to the collection of the calendar year 1942 individual income-tax liabilities, whether under present law or under the proposed bill, some payments are made in full but with respect to the bulk of the amount due only two of the four installment payments are received during the fiscal year 1943. The fiscal year 1943 figure for the individual income tax is further complicated by the inclusion of $319,800,000 to be collected at the source and credited against income taxes to be collected in calendar year 1944 on calendar year 1943 incomes. Furthermore, certain provisions of the bill have a different effect in the actual calendar year 1942 than they have in a full year at 1942 levels of income in which all provisions of the bill would be fully reflected in revenues. This is particularly true of the proposal to tax 1942 net income of corporations with fiscal years which end in 1942 other than December 31, and of the capital gains and loss provisions which are not fully reflected in actual calendar year 1942 because of the nonoperation to the full extent of the 5-year capital loss carry-over.

The CHAIRMAN. Mr. O'Donnell, I would like to ask in this connection—I don't know whether you can give it now, but will you furnish it for the committee and put it in the record—the amount of the base on which the several taxes in here, as calculated, are applied in making up the estimates on the House bill?

Mr. O'DONNELL. Yes, sir. I think I have in mind the type of information you want.

The CHAIRMAN. That is excess-profits tax, the normal and surtax, individual, and so forth.

Mr. O'DONNELL. Yes, sir; I will be very glad to do that. I have the information with me, but I do not have it in the tabular form that I think would be most useful to the committee.

The CHAIRMAN. Will you give us that?

Mr. O'DONNELL. I will be very glad to. I will put that in the record so that it can be printed up tomorrow.

The CHAIRMAN. Yes.

(The table referred to is as follows:)

EXHIBIT H.—*Income and excess-profits taxes—Estimated individual income and corporation income and excess-profits tax bases for taxable individuals and corporations only, at levels of income estimated for calendar year 1942, under the revenue bill of 1942 (H. R. 7378)* [1] *and under the present law*

[In millions of dollars]

	Revenue bill of 1942	Present law
Individual:		
Normal tax net income	20,220	22,480
Surtax net income	31,530	26,300
Corporation:		
Normal tax net income	10,010	13,120
Surtax net income	10,330	13,430
Excess-profits tax:		
Excess profits net income	13,210	12,540
Excess-profits credit	6,310	5,640
Specific credit	360	220
Adjusted excess profits net income	6,570	6,680

[1] As passed by the House of Representatives, July 20, 1942.

Source: Treasury Department, Division of Research and Statistics, July 23, 1942.

The CHAIRMAN. Now, all right, Senator Brown.

Senator BROWN. That was the question I wanted to ask, the question you just covered.

Mr. O'BRIEN. Page 51, line 16, relates to the computation of net operating loss credit and dividends paid credit in the case of companies subject to the tax under section 102. That is, companies improperly accumulating surplus and personal holding companies.

The amendments are purely technical, to straighten out a kink in the present law in which the limitations are geared to the adjusted net income instead of to the base upon which the tax is founded, to wit, section 102 net income or a personal holding company net income, as the case might be.

The present law, as I say, is out of whack on that point. In some cases it gives the corporation too much and in some cases too little. It is a purely technical amendment to straighten that out.

Senator CONNALLY. That is our friend, about personal holding companies; isn't it?

Mr. O'BRIEN. It has to do with personal holding companies, Senator, but it is just a mistake in the present law, in determining how much net operating loss they carry from the previous year to this year and where their dividends paid credit is carried over.

Page 54, line 17, begins a series of provisions which relate to the income which, under the present law, is includible in the income of a decedent in the year in which he dies. Since 1934 the law has read that in the case of a decedent there should be included in his gross income for the year of his death all amounts accrued up to the date of his death. The Supreme Court in the *Phaff* and *Enright cases*

has given a very broad construction to that language, so that in the case of an insurance agent's renewal commissions, they have held that all such renewal commissions are includible in his income for the year in which he dies.

This proposes to go back to a rule which might have been the rule enacted in 1934, that as to those matters you accrue only what would have accrued under an accrual system of accounting. You exclude from the rest of his income in the year in which he dies such amounts and include that amount in the income of the person who actually does get the income. In the ordinary case, that would be his estate, or if it descends directly to his heir it will be taxable to his heir.

Senator CONNALLY. Under the present law, suppose a man leaves an estate, and suppose that estate is not wound up for years, can that estate return the income as an estate matter and not be taxable to the recipients?

Mr. O'BRIEN. Yes.

Senator CONNALLY. That is the law now.

Mr. O'BRIEN. Yes; sure.

Senator CONNALLY. Does this change that?

Mr. O'BRIEN. No; this does not change it at all. Well, let me put it this way: Under the present law, let's take an insurance agent's renewal commission, which he has not yet received. The Supreme Court says, under the statute as it stands, that $100, let us say, goes into the income of the decedent for the year in which he dies. The estate, of course, will pay his income tax on that. Under the present law, when that $100 comes to the estate, as the law now reads, that is not income to the estate. So they pay no tax on it. However, the amount or the value of that right to receive income is includible in the decedent's gross estate, and hence taxable under the estate tax. This proposes to say that that $100 is not income to the decedent, so the decedent and the estate pay no tax on account of his income. The amount, however, is included in the gross estate of the decedent; hence the estate tax is paid on it.

This says if the executor gets that $100 it is income to the executor, but this also provides that with respect to that $100 there shall be allowed as a deduction an amount equal to the pro rata share of the estate tax which that $100 represented in the gross estate of the decedent.

Senator CONNALLY. What I had in mind was this: Suppose the estate dragged along for 2 or 3 years.

Mr. O'BRIEN. Right.

Senator CONNALLY. The estate may return that income as the estate of the decedent.

Mr. O'BRIEN. Yes.

Senator CONNALLY. And they pay on it as such.

Mr. O'BRIEN. That is right.

Senator CONNALLY. And the ultimate recipients would not have any obligation at all until they received their share from the estate.

Mr. O'BRIEN. That is right.

Senator CONNALLY. And it would then be taxable as an inheritance.

Mr. O'BRIEN. Well, it might be subject to inheritance tax in the hands of the beneficiary, but not subject to an income tax.

Senator TAFT. I understand that would apply in the case of a lawyer——

Mr. O'BRIEN. A contingent fee is a good example.

Senator TAFT. Suppose a lawyer dies and he is owed a fee of $5,000 when he dies. Do I understand that his estate has to pay an income tax on that $5,000? First, the $5,000 is included in his estate, because it is a fee due to him.

Mr. O'BRIEN. Yes.

Senator TAFT. But he is on a paid basis.

Mr. O'BRIEN. Yes. That is under cash receipts and disbursements.

Senator TAFT. That is a receipt basis.

Mr. O'BRIEN. Yes.

Senator TAFT. So he doesn't return it as income in his individual return.

Mr. O'BRIEN. Are you talking about the present law or the new?

Senator TAFT. The new proposal.

Mr. O'BRIEN. Under the new proposal it is not included in the decedent's gross income for the year of his death, but is includible in the income of the estate.

Senator TAFT. It is included in his estate.

Mr. O'BRIEN. Yes.

Senator TAFT. And he pays an estate tax on it.

Mr. O'BRIEN. Yes.

Senator TAFT. Then, the executor has to pay a proportional amount out of the $5,000 due him, and, say, $2,000 of it represents the estate tax and the other $3,000 is then income to the estate. Is that the effect of this law?

Mr. O'BRIEN. Yes. $3,000 is income to the estate, but the estate gets a deduction for the pro rata part of the estate tax paid on account of that.

Senator TAFT. Yes. Deducting the paid 40-percent estate tax, that would be $2,000 to come off of the $5,000, and $3,000 would be income to the estate.

Mr. O'BRIEN. That is right. Actually, the $5,000 is income to the estate, but it gets a deduction on account of its pro rata part of the estate tax paid. I did not follow your mathematics but assume your arithmetic was correct; that is the principle.

Senator DANAHER. How do you compute the present value as of the date of the death of the decedent?

Mr. O'BRIEN. I don't know. I suppose it is a question of valuation.

Senator DANAHER. You have an actual appraisal of the property?

Mr. O'BRIEN. Yes; you must have an appraisal, but as to the method of appraising, I am not familiar with that. I assume that has a value, just as any other claim which the decedent has.

Senator DANAHER. The renewal is 5 years hence and may never be paid. Actually, the policy may lapse. I wonder how you would appraise it.

Mr. O'BRIEN. I don't know.

Senator DANAHER. Do you know, Mr. Paul?

Mr. PAUL. You would discount that for the time factor and then again you would have to take into consideration the hazard, by which I mean that the insured might not pay the premium, and when you got through you would reduce the total amount payable 5 years hence in accordance with some appraisal.

Senator DANAHER. And leave it as a question of fact in any given case?

Mr. PAUL. That is right.

Mr. O'BRIEN. Further, to carry out the analogy of the estate, or the heir which gets this income, as being in the shoes of the decedent, the character of the income, if it had been received by the decedent, determines the character of the income in the hands of the recipient. That is, if it would be earned income of the decedent if he had gotten it, it is treated as earned income on the part of the heir. If it is capital gain to the decedent, it is capital gain to the heir.

Senator TAFT. But you still have to separate income tax. You don't regard the individual as a continuing entity until the end of the fiscal year.

Mr. O'BRIEN. No, no; you don't do that. He chops off at death.

This provision is made retroactive to the taxable year beginning after December 31, 1933, but only if the estate and the people acquiring the property from the estate say that it shall be. It is designed to be a relief provision, relieving the decedent as to his last year of life from the tax, but it relieves him retroactively only if the people who get the income agree to take it up. They would be obligated to take it up if this law had been in effect with respect to them. Again, as to the closed years, the provision is not applicable, but I understand most of these cases are open.

Page 64, line 12, relates to placing the income of a corporation on an annual basis.

Senator DANAHER. Mr. Chairman, before you open on that page 64, suppose that a husband dies and all his estate goes to his wife; suppose she claims a deduction for some item which is disallowed on the ground that it would have been allowable only to the husband, but suppose the years in which he could have taken an allowance had passed, is there any way in the world in which that situation is met in this bill?

The reason I ask that is that in behalf of a constituent I sent a case, specifically on those facts, down to the Treasury recently, and I was told by way of reply that there had been no adjudication on such a question. I wonder if you know of any language meeting such situation in this bill.

Mr. O'BRIEN. No, I do not; at least, it has not been a problem that has come up in this bill.

Senator DANAHER. Don't let's spend any time on it now. We can take it up later.

Mr. O'BRIEN. Page 64, line 12, relates to placing returns of a corporation on an annual basis. Under the present law, in the case of the corporation having a taxable year of less than 12 months, the income is not put on an annual basis for the purpose of the corporation's normal tax and surtax. It is for the purpose of excess-profits tax.

Of course, when you have a flat rate of tax, it does not make any difference whether the income is put on an annual basis or not. This proposal is that in a case of a taxable year which is less than 12 months, then you ascertain what would be its annual income for the purpose of applying graduated rates by multiplying the amount of the income by 12 and dividing by the number of months in the short period. You see, you have the same problem in connection with the graduated corporation normal and surtax as you have in the case of

an individual. An individual, for instance, having a short taxable year of say 6 months and earning $5,000, though actually he is earning $5,000 in 6 months, which would be at the rate of $10,000 a year, in order to put him in the proper bracket, you put the income in on an annual basis. This proposes to do the same thing in the case of a corporation, with two exceptions. It is conceivable that by reason of that rule there might be some hardship to a corporation whose income happened to fall in the short period and they would not normally earn at the same rate during the succeeding part of the year. It is proposed in such cases to provide that they can take the 12 months beginning with the beginning of the short period and use that as the measure of the tax for the short period, or in cases in which the corporation was not in existence for 12 months at least, after the end of the short period, they can take the back period beginning with the end of the short period. In other words, the corporation has got an opportunity to show, in case it continues in existence, what would be its income for the full 12 months, and not have this formula for the ascertainment of the amount of what the income would be if it was put on an anual basis.

Senator VANDENBERG. Has this got anything to do with the question which I asked when we started out?

Mr. O'BRIEN. No, Senator.

Senator VANDENBERG. All right, when we get to it.

Mr. O'BRIEN. Section 129 of this bill, 108 of the Internal Revenue Code.

Page 68, line 10, is a purely technical amendment to the taxation of section 102 companies; that is, companies which improperly accumulate surplus. Under the present law a section 102 company is allowed a carry-over of a capital loss. That, itself, constitutes a loophole because section 102 companies are allowed their capital losses. The effect of giving them capital losses in the year in which they sustained them and a carry-over of a capital loss to a future year is to give them the capital loss twice. This proposes to give them the capital loss but once and that for the year in which it is sustained, with no carry-over to a subsequent year.

Page 69, line 1, begins a revision of the provisions under which certain classes of taxpayers are allowed, in effect, to spread certain kinds of income over a longer period, over the period roughly in which it was earned. Under the present law in the case of an individual who renders personal service extending over a period of more than 5 years, if he receives 95 percent or more of that income in the sixth year, let's say, he is permitted to pay a tax on the 95 percent equal to the amount which he would have paid had the amount that he got this year been spread over the years in which he did the work in equal installments.

First, it proposes to make a reduction in the 5-year period under the present law to 36 months. That is, the work done and the compensation for personal services must be over a period of 36 months or more. The second change proposes to reduce the 95-percent test amount to 80 percent. For taxable years beginning after December 1940, and not after December 31, 1941—that is, the taxable period in 1941—it is made retroactive, but the period is made 60 calendar months and the

percentage is 75 percent instead of 80 percent. So you have three rules: Back years, 5 years and 95 percent; 1941, 60 months and 75 percent; for this year and future years, 36 months and 80 percent.

Senator CONNALLY. What effect, if any, would that have on an individual this year, for instance, after war was declared, who would make a big profit? Could he spread it over 5 years or 36 months?

Mr. O'BRIEN. If he had been working on it that long. This contemplates a continuous service over that period and at least 80 percent of the income falling within a year.

Senator CONNALLY. I say, he made the bulk of his money this year, and this would permit him to spread his profits out over 36 months if he continued to work on the job?

Mr. O'BRIEN. That is right, if he continued to work all that time and had not gotten paid for it. This provision is further expanded to include the case of a person who composes a literary, musical, or artistic composition, or has a patent or copyright covering an invention or composition of his. If the work on it covered a period of 36 calendar months from the beginning to the completion of the composition or invention, and then if in the taxable year the amount which he received, together with the amount which he received in the next succeeding taxable year is not less than 80 percent of the income, not less than 80 percent of the entire amount he got during those years, then he equally can spread that amount over 36 calendar months ending with the close of the taxable year in which he received the sum. This extends slightly different but substantially the same relief to authors, inventors, and musicians.

The CHAIRMAN. He can spread it over the actual time required to do the work if he had a minimum of 36 months?

Mr. O'BRIEN. No; this does not spread it over the actual time; it spreads it over 36 months even if he worked on it 10 years.

The CHAIRMAN. He just gets the three installments.

Mr. O'BRIEN. That is right.

The CHAIRMAN. And if he is writing a book for 5 years, then he could not get that in 5 years?

Mr. O'BRIEN. No; he could not spread it more than 36 months.

The CHAIRMAN. So the author had better complete his work in less than 5 years.

Senator BARKLEY. If the man cannot tell all he knows in 3 years he had better quit now.

Mr. O'BRIEN. Then, the next is page 70, line 24, which deals with fiscal year taxpayers, of which Senator Vandenberg spoke.

Senator VANDENBERG. Where?

Mr. O'BRIEN. Page 70, line 24.

Senator VANDENBERG. Tell me about that.

Mr. O'BRIEN. Ever since 1934, the income-tax acts have provided that the changes made in them shall be only applicable to taxable years beginning after a particular time, and in every case it has been the end of the year. This provision constitutes an exception from that rule, and says, in the case of the taxpayer who has a taxable year ending in 1942 and beginning in 1941, that he shall compute his tax, making his computation first for the period beginning 1941 and ending in 1942, computing his tax under the old law, and take a proportion of that tax which the number of months falling in 1941 bears to the entire number of months. He then computes the tax for the entire

period beginning in 1941 and ending in 1942, under the 1942 law, and takes the same proportion, takes the proportion of that tax which the number of months falling in 1942 bears to the entire number of months in his entire taxable year. He then adds those two proportional amounts together and that is the tax for the taxable year ending in 1942. So that if you had a case in which a man, let us say, had a net income of $1,200, and part of that was earned in 1941 and part in 1942, suppose he had 8 months in 1941 and 4 months in 1942. He computes his tax on $1,200 at the old rate, and takes eight-twelfths of that amount; he computes his tax on $1,200 at the new rate and takes four-twelfths of that amount. Adding those two together gives his tax for the taxable year 1942.

Senator VANDENBERG. That applies for corporations as well?

Mr. O'BRIEN. It applies to corporations, individuals, everybody except specified corporations which are exempt from it: First, insurance companies; second, foreign personal-holding companies; third, regulated investment companies; fourth, section 102 companies—that is, companies improperly accumulating surplus—and, fifth, personal-holding companies.

Senator VANDENBERG. Does that result in putting a corporation which had a fixed fiscal year and considered that it had its tax liability closed and financed itself accordingly under a retroactive disadvantage which might be totally fatal?

Mr. O'BRIEN. I cannot answer on that. The thing is retroactive. Whether the effects are bad or not is a matter of policy.

Senator TAFT. This used to be the rule, as I remember, in the old days, and it was changed.

Mr. O'BRIEN. Yes.

Senator TAFT. What is the reason for changing it back again?

Mr. O'BRIEN. That is not my problem, sir.

Mr. PAUL. As to the theory of this thing, I think perhaps that Mr. Stam ought to answer the question.

Senator VANDENBERG. Don't tell me Mr. Stam is responsible for this.

Mr. PAUL. It is not a Treasury subsection, but the theory is that a corporation with a fiscal year ending November 30, that corporation is escaping, for 11 months of the calendar year 1942, the impact of the new very decidedly higher applicable calendar-year rate.

Senator TAFT. Why was it changed before?

Mr. O'BRIEN. I think, perhaps, Mr. Stam, I can answer that.

Mr. STAM (Colin F. Stam, chief of staff, Joint Committee on Internal Revenue Taxation). I think I can tell you the story, if you want me to.

You see, naturally, it is very simple when changing a revenue law to have it apply to taxable years beginning after the beginning of the effective date of the act. For example, if we were passing a tax law for the year 1941, we would apply it to taxable years ending after December 31, 1939. It simplifies the law and does not make much difference as long as rates are not as substantially increased, but when you come to a period when the rate is increased very rapidly, it gives a great advantage to the corporation on the fiscal-year basis. For example, a corporation that had a fiscal year ending November 30, 1940, would have 11 months of 1940 income, on which it paid no excess-profits tax at all on that 1940 income.

Now, the same corporation with a fiscal year ending November 30, 1941, instead of paying the increased 1941 rates on that 1941 income, only paid at the 1940 rate.

Now, we have increased the excess-profits tax rate tremendously in this bill. We have gone up as high as 90 percent, and the old rate, the top rate, was 60 percent. We have increased the normal and surtax rate from 31 percent, under the old bill, to 45 percent.

If a corporation has a fiscal year ending, say, November 30, 1942, it will escape these high rates on 11 months of its 1942 income, and we didn't feel that that was an equitable proposition as compared with the calendar-year corporation. The calendar-year corporation may be getting profits from Government contracts, and the fiscal-year corporation may be getting like profits from Government contracts, both in 1942, and it did not seem to us altogether fair to apply the lower rates to the fiscal-year corporation merely because of its method of accounting, when all of that income was earned in 1942, and there is a very great discrimination between the calendar-year corporations and the fiscal-year corporations if you are not going to apply the increased rates to the fiscal-year corporation.

The Canadians apply a rule something like we have in this bill to tax the income that is earned after the effective date of the act at the same rate. So do the British companies, and that is the reason for this change.

Senator TAFT. Has there been any indication or tendency to take advantage of this by moving the fiscal year toward the end of the calendar?

Mr. STAM. There has been, as the result of the increased rates last year. Particularly some of the aviation companies and others having war contracts have changed their taxable years over to a fiscal-year basis in order to take advantage of these lower rates.

Senator TAFT. But the Commissioner could have prevented that by refusing to permit them to make that change.

Mr. STAM. He could have, and I understand he has in some cases.

Senator TAFT. Yes.

Mr. STAM. But the inequity is still there with respect to the corporations that have been on this fiscal-year basis for a long period of time.

Senator VANDENBERG. I think that is a very persuasive statement from the standpoint of relative equity, but it seems to me you have still left the corporation, perhaps, at a fatal disadvantage, whom you allowed to makes its budget on a given tax basis, and now you come along and destroy it, isn't that true?

Mr. STAM. Well, it seems to me, in answer to that question, that the corporation probably should have anticipated that something like this was going to happen. There was a lot of agitation about this situation in 1940. I remember a Member of Congress was very much agitated about it and wanted to rush through a joint resolution at that time; and we have talked about this thing considerably in the last 2 or 3 years. It seems to me that a corporation that went ahead blindly and did not take into account that there might be some change along this line——

Senator VANDENBERG. He went ahead blindly and depended on the Government's word.

Mr. STAM. I do not think that is altogether true for the reason that when the change was made in 1934 it was made with the under-

standing that there was no increase in rates at that time. It was solely on this basis that Senator Couzens withdrew his objections to this change of policy.

Senator TAFT. What about the situation of a corporation that had to pay out its money, came to the end of the year, say, or the 1st of July, and under section 102 had to pay out all its profits in dividends for fear of being penalized, and now you come along and by a retroactive tax which takes away not only what they had left but probably a large part of the money they had paid on dividends. Does it apply to that kind of a corporation?

Mr. STAM. No; we are not applying a retroactive tax. This provision applies only to that part of the income received after January 1, 1942.

Senator TAFT. Take a corporation whose fiscal year ended the 1st of July, when they got to the end of that year they figured their taxes on the old rate, then they are required by section 102 to pay that all out in dividends, or most of it out in dividends, for fear of becoming subject to section 102, the penalty if you don't pay out dividends. And now you come along and make them recalculate their tax for those 6 months of 1942, and you have got them in a box.

Senator VANDENBERG. A pine box.

Senator TAFT. They may have even violated the law which prohibits the payment of dividends from surplus, because what they paid out is no longer profits.

Mr. STAM. But that corporation, of course, would not file its tax return until October because that return wouldn't be due until then. We have had no situations of that sort. Moreover, it should be remembered that a liability which did not exist at the close of the taxable year will not reduce the earnings and profits of a corporation for that year, so far as dividends actually received by the shareholders are concerned. Such a situation arises daily in the case of additional assessments of income taxes made after the close of the year.

Senator TAFT. But it could be.

Mr. STAM. Yes. I do recall this, under the 1918 tax, which was passed February 24, 1919, and was retroactive to January 1, 1918, that some corporations actually went out of existence before the act was passed, and those corporations were required, that is, the trustees or representatives of those corporations were required, to file a supplemental return covering the income for the period in 1918 in which they were in existence, although they had actually dissolved before the act was passed, because we were levying a tax on 1918 income. A number of those cases arose, I know, under the 1917 and 1918 acts.

I don't think there was any great criticism of that situation because there we were trying to collect an excess-profits tax on 1918 income. Here we are trying to collect at these high rates which are applicable to 1942 on 1942 income, and I don't believe that any corporation can say that they were very much surprised by this provision. If they were, it seems to me they were very foolishly surprised, because we have talked about it informally for several years.

Senator TAFT. I am not thinking of surprise, I am saying that the corporation in the case I cited was compelled by the existing law to pay out as dividends money that you now say they should pay in taxes. That is the thing that worried me somewhat.

Mr. STAM. I don't believe any corporation at the present time that is engaged in any sort of activity, particularly war activity, would be compelled to pay out dividends, because I think most of them could find some need for retaining their earnings in the business.

Senator VANDENBERG. Well, what happens to that company? Here is a company, this is a realistic case—here is a war contractor who at the urgent insistence of the Government commits its entire prospective net revenue for its fiscal year to new machinery for the purpose of responding to the war effort. Now, how are they going to pay for it when you come along and say that they had no right to depend on this Government tax program and that two-thirds of the investment they have made in inventory has got to be duplicated in taxes?

Mr. STAM. What can the calendar-year corporation do in that case? It has to pay its tax on its 1942 income.

Senator VANDENBERG. But it knows in advance precisely what to figure on.

Mr. STAM. Well, this other corporation, of course, has been able to accumulate a considerable reserve at the expense of the calendar-year corporation by virtue of the fact that it was not subject to any excess-profits tax in 1940 and was subject to a very low excess-profits tax rates in 1941. In other words, that corporation has gotten quite a bonus in the past, it seems to me.

Senator DANAHER. Mr. Chairman——

The CHAIRMAN. Senator Danaher.

Senator DANAHER. May I read a few words right there on that point from a telegram at hand?

The CHAIRMAN. Yes, sir.

Senator DANAHER (reading):

> Many companies, such as ours, have undertaken large contracts for war products which have required unusual bank borrowings and substantial investments in plant, which although justified today by contemplated operation, result, after taxes based upon the 1941 act, would be unwarranted by the net operating result after taxes under the proposed new act. The necessity for high tax rates is recognized but it is also important to preserve the financial position of important manufacturers of war products who are on a fiscal-year basis. Our fiscal year started December 1, 1941, and our plans for additional manufacturing facilities and financing for this fiscal year were adopted originally upon the 12 months of operation under the 1941 act instead of only 1 month under such act and 11 months under the proposed 1942 act.

Does that raise a typical case such as the Senator from Michigan spoke of?

Senator VANDENBERG. Precisely.

Mr. STAM. That corporation has 11 months of 1942 operation and the calendar-year corporation has 12 months. Now, the calendar-year corporation would be subject to a rate of 90 percent, and if we leave the old rule in, that corporation would only be subject to a rate of maybe 60 percent on its 1942 operations.

Senator TAFT. Would it be feasible to take it as of the day the House passed the tax bill instead of the first of January, dividing it on that basis, so far as this year is concerned only?

Mr. STAM. Of course, my point was that this is the year in which we have made a drastic increase in the rates. We are up to 90 percent now, and, of course, we have increased our surtax considerably. So that if this change isn't made this year, in 1942, I don't believe it will be much use in making it next year, because I don't believe we can go very much further.

Senator TAFT. I was suggesting that you go back to the day that the House passed the tax bill rather than the first of July, if possible.

Mr. STAM. Well, of course, there you discriminate somewhat against those corporations. It wouldn't do Senator Vandenberg's case any good, or the other cases any good, when the fiscal year closed before the adoption of the House bill. It seems to me it would be better to apply those provisions to all fiscal-year corporations than to distinguish between those whose fiscal years happened to end merely after the passage of the House bill. We have provided in this amendment that those corporations that are required to pay any additional tax due to the 1942 rates can file a supplemental return on March 15 of next year and pay that tax. In other words, they won't have to file the return before that time.

Senator TAFT. If you don't give them back the money they may not have any more to pay it with.

Mr. O'BRIEN. There is no such thing in the bill on that point.

Mr. STAM. We talked about it.

Mr. O'BRIEN. Something needs to be done about it. I want to say that the bill does not provide for any such thing.

The CHAIRMAN. It was left out, you mean, or was just not included?

Mr. O'BRIEN. Was not included because we did not have time to work it out.

Senator VANDENBERG. Do I understand you to say the Treasury didn't recommend this, or didn't you think of it, or something?

Mr. PAUL. I may say the Treasury was cognizant of the problem but did not make any recommendations on this point. The study of the point went on through the hearings. The suggestion was made late in the executive session of the Ways and Means Committee. While I would support the change on balance, I think that there are problems to be worked out, and that the problem that Senator Danaher cited is a typical problem which must, frankly, be faced. I do not know how it can be solved. Senator Taft's hypothetical case is not entirely a hypothetical case; it may be a real case, and I am frankly troubled by it, but my present impression is that on balance the inequity or disparity between the situation of calendar-year corporations and fiscal-year corporations, especially fiscal-year corporations with fiscal years ending late in the calendar year 1942, is a serious one that ought to have some treatment, if it is not too much of a hardship.

Senator BYRD. How much revenue does it bring in?

Mr. PAUL. $148,000,000. There is another angle to the problem, and that is what will happen if ever the rates go down at some point in the future. If the rates stayed the same we would make up this loss of revenue then, but that is so problematical that I don't think we can figure very much on it.

Senator TAFT. I hoped you would give us some hope.

Senator VANDENBERG. I am hopeful because he says that he is troubled by it.

Senator CONNALLY. Is there any sound reason why they should not be all on the same basis? Why should one corporation have a fiscal year on the 1st of July and another one on another date, for taxation? Why shouldn't they all be on the same basis?

Mr. PAUL. There are several reasons, Senator Connally. The seasonal business of certain corporations makes the fiscal year more adaptable.

Senator CONNALLY. It may be for their convenience, but from the Government's standpoint it should be from January 1 to January 1. All this talk about the promise of the Government—anyone who has got enough sense to be in a corporation knows that the Government can change the tax laws whenever they get good and ready.

Mr. PAUL. That is right, and I think there is much in what Mr. Stam says about people, particularly since December, being required to a certain extent to be aware of these possibilities in the corporate picture. I think they all ought to be on the same basis, just as I think all estates ought to be on the same basis. I don't think there ought to be community estates, but the fact remains that there are.

Senator CONNALLY. If the Senator has got as much influence at home as he has got here, why doesn't he fix his State?

We run our own affairs and he runs his.

Senator JOHNSON. What do you think of the proposition of Senator Taft, Mr. Paul, of not going back of July 1?

Mr. PAUL. I agree with Mr. Stam, as I understood him on that. It seems to me that we ought to do it or not to do it completely or it wouldn't be worth all the trouble.

Senator JOHNSON. For 1 year.

Mr. PAUL. There is a tremendous amount of trouble about this provision. We have to adjust the difficulties mentioned on page 92 of the House committee report, and some of them haven't been worked out yet, and if we broke in the middle of the year, I don't think it would be worth the whole trouble. We ought to go the whole hog or not do it at all.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. I want to call your attention to an important typographical error on page 73, line 3. That 139 should be 142.

The CHAIRMAN. Where is that?

Mr. O'BRIEN. Page 73, line 3.

Senator DAVIS. 70 what?

Mr. O'BRIEN. Page 73, line 3.

Senator CONNALLY. 139?

Mr O'BRIEN. 139 should be 142. It is an erroneous cross reference.

Senator CONNALLY. All right.

Mr. O'BRIEN. I guess you got the general principle of that. I can go into detail for you on it if you want me to.

The next change is on page 74, line 17, which is purely a technical clarifying amendment to the present law.

Senator TAFT. We are now on something else. Is it on gift taxes?

Mr. O'BRIEN. No; still income taxes.

Under the present law, in section 113, which relates to the basis for determining gain or loss and the basis for depreciation, there is some doubt as to whether a gift in trust falls under paragraph (2) of section 113 (a), or paragraph (3) of section 113 (a) which provides a different basis. The most important difference being that in the case of a gift the basis for determining loss is the fair market value, if the basis in the hands of the donor is greater than the fair market value. This proposes to clarify the statute by providing that in the case of gifts in trust they shall be subject to the gift rule rather than the transfer in trust rule.

Senator TAFT. Is that retroactive?

Mr. O'BRIEN. No; it is not retroactive—well, it is retroactive in this sense—I mean it does not relate merely to gifts made hereafter. It relates to the basis of gifts no matter when made for the purpose of a future determination with respect to the basis of the gift. That is, if you make a gift after 1920, after December 31, 1920, made a gift in 1935 and the donee sells in 1943, this rule applies. And the rule, of course, naturally applies to all gifts in trust in taxable years beginning after December 31, 1941. To that limited extent it is retroactive.

Page 75, line 14, relates to percentage depletion in the case of fluorspar mines. The allowance for depletion shall be 15 percent, the same rate as applies to metal mines.

Senator GUFFEY. That is the only change in that provision?

Mr. O'BRIEN. Yes. It does not affect oil, or otherwise, it merely lets in the fluorspar mines at the same rate as other mines.

My attention has been called to the fact that there has been eliminated from this section the requirement first placed in the statute in 1934, that the taxpayer, to get percentage depletion, had to elect percentage depletion and stick by it.

Senator TAFT. Is this the section the Secretary doesn't like, the provision he did not want put in?

Mr. O'BRIEN. No; it is in the same section but the other provision relates to oil and gas and this is merely coal mines, fluorspar mines, and sulfur mines.

Senator TAFT. The other applies solely to oil.

Mr. PAUL. Oil and gas.

Senator TAFT. Oil and gas.

Mr. PAUL. Oil and gas and mines, too; but this particular amendment, as long as percentage depletion was allowed, we thought should be allowed. In other words, we were against percentage depletion, but if percentage depletion is in the statute it ought to apply to fluorspar as well as the others.

The CHAIRMAN. At one stage in the House bill was fluorspar eliminated?

Mr. PAUL. No; fluorspar was given discovery depletion under the existing act and the change made was to grant them percentage in lieu of discovery depletion.

Senator TAFT. I was a little surprised because the Secretary's statement this morning said "another highly privileged group having large amounts of income exempt from income tax are the owners of oil wells and mines."

Mr. PAUL. Doesn't it say "and mines"?

Senator TAFT. Yes; it does; "and mines."

Mr. PAUL. I thought so.

Mr. O'BRIEN. Senator George, at one stage of the House bill the fluorspar rate was 5 percent and later was made 15 percent. I think that is what you were thinking of.

The CHAIRMAN. It was given a different treatment in another stage.

Mr. O'BRIEN. Five percent, and then raised to 15; yes.

Senator JOHNSON. What is the present law?

Mr. O'BRIEN. Given discovery depletion. It is not given percentage depletion at all.

Page 76, line 12, is another purely technical amendment of the revenue act. The Second Revenue Act of 1940 wrote in provisions for the determination of earnings and profits which were necessary to establish the taxability of dividends and for the purposes of excess-profits tax. Under that provision earnings and profits were not increased by a so-called unrecognized gain. This proposes an almost clerical amendment to accomplish the same result in cases in which there are wash sales, that is, you trade one share of stock for, and later get, another. I think if we had thought of it in writing the 1940 bill it would be in the 1940 bill. It is purely technical.

Page 77, line 1, amends section 115, which relates to corporate distributions. Under the present law a distribution in partial liquidation of a corporation is treated as a capital gain, if there is a gain, and 100 percent is taken into account. That is, for that purpose the gain on the stock is considered just as if it were a short-term gain, regardless of the period for which it was held. This provision proposes to abrogate that rule so that in cases in which there is a partial liquidation of a corporation, when the stock is redeemed it is—the gain thereon is taxable as a capital gain, but the holding period of the stock is whatever the period for which the stockholder held it and it is not considered to be a short-term gain. The effect of that, of course, being to reduce the amount of gain which is recognized on the transaction if the stock is held for the period under the law provided in the case of a long-term gain.

Page 78, line 7, we have a series of amendments relating to income from sources without the United States. The first amendment, page 78, line 9, subsection (a), proposes to strike out section 116 (a) of the present law under which earned income in the case of citizens of the United States who work in a foreign country more than 6 months during a taxable year is excluded from the gross income. The effect of the amendment is to include that amount in the gross income as being earned there.

The CHAIRMAN. Is that a Treasury recommendation, Mr. Paul?

Mr. PAUL. Yes; it is, Senator George.

Senator TAFT. What is the reason for it? I would think it would be a duplication, because certainly they are going to have to pay the other country on income earned in that other country.

Mr. PAUL. That is true. I think there were two underlying ideas in connection with that amendment. One was that the exemption in the existing law has been somewhat abused. There has been a great deal of avoidance of tax under it. There has been much juggling with the period of absence. And another thing, perhaps more important, is that a number of contractors are now making a considerable amount of money in Panama and some of those places—Bermuda and those places—and we feel that they should pay their taxes just like anyone else who is making the same money here in this country.

The CHAIRMAN. Well, now, would it be necessary to go all the way you have gone by eliminating that?

Mr. PAUL. They have a foreign tax credit, Senator George. If they pay income tax in this foreign state, they get relief under section 131 of the code.

The CHAIRMAN. I was just thinking of how it would affect us in the expansion of our trade and commerce in outside countries. If I were

a citizen who resided there, I would be at a pretty bad competitive disadvantage.

Mr. PAUL. There is that problem. We have to decide some of these things on balance. We thought on the whole it was an advisable amendment. It is true there are certain citizens, American citizens abroad, who will be put at some possible disadvantage, although they do have, as I said before, the foreign tax credit.

Mr. STAM. I might state on that particular amendment that the Ways and Means Committee itself felt that the amendment went too far, because it applied to the bona fide American citizens who had been residents in these countries for a number of years. The committee did instruct the Treasury and our staff to try to work out a provision to alleviate this situation. I think it is only fair to the Committee on Ways and Means to state that they were not in favor of an outright repeal of section 116 (a).

The CHAIRMAN. Without some saving clause.

Mr. STAM. Without some modification.

The CHAIRMAN. That is the way it occurs to me without studying it. I didn't know it was in there.

All right, Mr. O'Brien.

Mr. O'BRIEN. The next case relates to income from sources in possessions of the United States. There is included within the income which is subject to tax as though earned within the United States, all amounts paid by the United States or any agency thereof as compensation for labor or personal services or under any contract with the United States or any agency thereof. These amounts are added to the income which is subject to the American tax, notwithstanding the fact it is income from sources within a possession of the United States. The definition of "possessions," for the purpose of section 251, has been somewhat narrowed to include only the Philippines and Puerto Rico, to avoid any possibility of the Panama Canal Zone, American Samoa, the Virgin Islands, from being included—being given similar treatment.

Senator CLARK. Does this include the Philippines in its present form?

Mr. O'BRIEN. Yes; in its present form.

Senator CLARK. We had this up in regard to the Philippines a few years, in regard to which the American residents in the Philippines claimed that in many cases they were at a serious competitive disadvantage with American resident citizens in China and other places in the Far East, because the people in China and other Far East points didn't have to pay an income tax and that they did, and since they were in a competitive business they were at a serious disadvantage.

Mr. O'BRIEN. I think their complaint a number of years ago was based on the retroactive application of the tax to them.

Senator CLARK. That is true, but at the same time they represented that unless they were exempted they were at a serious disadvantage with Americans in China and other places.

Mr. O'BRIEN. This does not propose to change the law in that respect, except with respect to those amounts which they get from the United States, or get under contract with the United States. Those amounts are taxable even though received from sources within the

Philippines. Under the present law if you get more than 80 percent from the active conduct of a trade or business in the Philippines you are not subject to the American tax even though you are a citizen of the United States.

Page 79, line 13, allows the same treatment with respect to representatives of the Commonwealth of the Philippine Islands in the United States as is allowed in the case of foreign diplomats and counselor officials. Under the present law, a foreign diplomat who earns income in the United States from his salary is exempt from the Federal income tax if the foreign country allows a similar exemption with respect to our people doing the same thing in that foreign country. This proposes to extend that rule to the representatives of the Philippine Islands and to other employees of the Philippine Islands employed in that capacity if they do the same thing for us.

Page 31, line 12, relates to capital gains and losses. The first important change is to change the holding period, the period of differentiation between long-term and short-term losses from 18 months to 15 months. Long-term and short-term gains and losses, I should have said, are divided into two categories now instead of three categories under the present law. Up to 18 months is one group; between 18 months and 24 is another; and 24 up is the third. This proposes to divide them, making a dividing line between long-term and short-term of 15 months.

The second important change with respect to capital gain and loss treatment is to allow both short-term and long-term losses against short-term gains and long-term gains. Under the present law you have the allowance only of short-term losses against short-term gains or long-term losses against long-term gains. In the case of taxpayers other than corporations—that is, individuals, estates, or trusts—there is allowed to be deducted the excess of losses over gains to the extent of $1,000, or the net income, whichever is the smaller. The present 1-year capital loss—short-term capital loss—carry-over is eliminated and there is substituted therefor, applicable to all taxpayers, a 5-year carry-over of capital losses.

The final change in capital gain and loss treatment is to allow, in the case of a corporation and in the case of long-term capital gains, a maximum tax of 25 percent on long-term capital gains.

The CHAIRMAN. Do you have a 5-year carry-over in the case of a long term and short term?

Mr. O'BRIEN. Yes; a 5-year carry-over of the excess of losses over gains, Senator.

The CHAIRMAN. Losses over gains?

Mr. O'BRIEN. Yes.

The CHAIRMAN. Your short-term gains are still treated—they still go into your ordinary income?

Mr. O'BRIEN. Short term goes in at 100 percent.

The CHAIRMAN. In the ordinary income?

Mr. O'BRIEN. No losses are deductible against the short terms, of course, but if you have no losses, if you have no losses, that is true. The short-term gains go in 100 percent. Long-term gains go in at only 50 percent.

Senator TAFT. And the tax on the long-term gain is how much?

Mr. O'BRIEN. Twenty-five percent.

Senator TAFT. Twenty-five?

Mr. O'BRIEN. Yes.

Senator TAFT. Have you any figures to show how much money has been collected, how much money has been brought in by the capital-gains tax and how much money has been lost by the capital-loss provision during the last half dozen years?

The CHAIRMAN. Have you those figures, Mr. O'Donnell?

Mr. O'DONNELL. Yes, sir; I have a table of such estimates here. We can insert it in the record.

The CHAIRMAN. You can?

Mr. O'DONNELL. Yes, sir.

(The information requested is as follows:)

Individuals—Taxes on capital gains and losses, taxes on all other income, and total taxes, 1926–40

[In thousands of dollars]

Calendar year	Estimated taxes on capital gains and losses [1]	Estimated taxes on all other income	Total taxes [2]
1926	225,485	506,990	732,475
1927	296,879	533,760	830,639
1928	576,001	588,253	1,164,254
1929	420,971	580,967	1,001,938
1930	−15,226	491,941	476,715
1931	−80,001	325,128	246,127
1932	−79,917	409,879	329,962
1933	16,167	357,953	374,120
1934	17,197	494,203	511,400
1935	85,257	572,182	657,439
1936	201,941	1,012,076	1,214,017
1937	58,188	1,083,381	1,141,569
1938	52,878	712,960	765,833
1939	26,995	901,699	928,694
1940	12,868	1,481,271	1,494,139

[1] The tax on capital gains and losses is the difference between (1) the total tax under the provisions of the particular revenue act applicable to each specified income year, and (2) the total tax which would have been realized if capital gains and losses had been entirely excluded from the tax computation.

[2] Actual 1926 through 1940 (1940 preliminary). Data for 1937 and subsequent years include taxable fiduciary income-tax returns.

NOTE.—The above data are limited to income-tax returns taxable under the revenue acts in effect in the respective years.

Source: Treasury Department, Division of Research and Statistics, July 22, 1942.

The CHAIRMAN. We are not getting very much revenue out of the capital gains tax now, are we?

My general understanding is we get a very small amount; and I had hoped that when it got to the point where we are neither winning nor losing by it, we could experiment with it a little bit.

Mr. PAUL. It is not the revenue producer it used to be in the twenties, that is true. There is some revenue from it, and on balance over the years.

Senator TAFT. So many people seem to think the whole thing should be eliminated, and I wonder whether that is a sound view of it, whether at least it shouldn't be entirely separated from the income tax. I see a good deal desirable in permitting capital losses to be deducted from current income.

Mr. PAUL. That is one of the main changes, and is to prevent capital losses from being deducted from ordinary income.

Senator TAFT. This will no longer permit short-term capital losses to be deducted from ordinary income.

Mr. PAUL. That is right. On that point you asked about—I have here the figures on the estimated net revenue from capital gains and losses over a number of years. The figures are very high in the years 1926 to 1929, reaching a total of $120,000,000 in the year 1929. Then, for 3 years they were very small. There were very small revenue losses from the statute—that is, 1930, 1931, and 1932; and then we began to gain.

Senator TAFT. You say small losses. You mean small net losses?

Mr. PAUL. Small net losses. In other words, the losses exceed the gains.

Senator TAFT. Didn't they greatly exceed the gains in those years?

Mr. PAUL. The figures are: 1930, fifteen million; in 1931, eighty-nine million; in 1932, seventy-nine—practically eighty million, and then the tide turned.

Senator TAFT. You mean you actually lost revenue by having a capital gains tax at all in those 3 years?

Mr. PAUL. Yes; because the losses exceeded the gains. There was more revenue lost by the deduction of losses than by the taxation of gains. And then in 1933 the tide turned in a very small way until it built up to 1936, where the net revenue was two hundred million gain.

Senator TAFT. That was during the period when you were not allowing those losses from net income?

Mr. PAUL. That was true in 1934. There was a limitation. You could not deduct more than two thousand.

Then the revenue has been plus right along through 1940. I can insert these figures in the record: 1937, fifty-eight million; 1938, fifty-two million; 1939, twenty-six million; and in 1940, twelve million.

Senator TAFT. What would be the Treasury's thought in abandoning the tax altogether or at least filing it entirely separate?

Mr. PAUL. I think we will be opposed to that, for various reasons, one of which would be the tendency toward tax avoidance, and for various other reasons.

Senator TAFT. I understand that they have had it in England.

Mr. PAUL. Well, we could discuss that question at some length. They have a different conception of capital gain over there, but in general it is true and over in England a good deal of income tax is avoided by the absence of such a provision.

Mr. O'BRIEN. One other change on capital gains and losses.

The CHAIRMAN. Yes.

Mr. O'BRIEN. In the case of banks and life insurance companies, if their losses from sales or exchange of bonds exceed their gains from sales or exchanges of bonds, then all their transactions in bonds are not considered capital transactions; the result of which is to allow their excess losses against ordinary income.

The CHAIRMAN. All right. Where does that take you, Mr. O'Brien?

Mr. O'BRIEN. That takes us to page 92—I beg your pardon, page 90, line 1.

The CHAIRMAN. Ninety-two, line 1?

Mr. O'BRIEN. Page 90, line 1.

The CHAIRMAN. Page 90, line 1.

Now, what is the pleasure of the committee? Shall we go along longer today?

Senator CONNALLY. No.

The CHAIRMAN. Is it the pleasure of the committee then to return tomorrow, so that we may have Mr. O'Brien and the staff go over this bill with us at 10 o'clock?

Senator CONNALLY. Does the Chairman want to go on all day or just until noon?

The CHAIRMAN. I think we might finish by noon or 1 o'clock.

Senator CONNALLY. Until noon then, I am with you.

The CHAIRMAN. Before you go, gentlemen: Is it the pleasure of the committee to hold a Saturday session next week?

Senator CONNALLY. No.

The CHAIRMAN. Will it be agreeable to the committee if we undertake to close the Friday hearings about 1 o'clock on Friday rather than run the whole afternoon on Friday?

Senator CONNALLY. Yes.

The CHAIRMAN. Very well, we will meet regularly at 10 o'clock and try to conform to that general schedule.

(Whereupon, at 4:50 p. m., an adjournment was taken until 10 a. m., Friday, July 24, 1942.)

REVENUE ACT OF 1942

FRIDAY, JULY 24, 1942

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312 Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. Well, we might as well proceed. Mr. O'Brien, you might take up where you left off.

STATEMENT OF JOHN O'BRIEN, OFFICE OF LEGISLATIVE COUNSEL, UNITED STATES HOUSE OF REPRESENTATIVES—Resumed

Mr. O'BRIEN. The first section this morning begins on page 90, line 1. The first change is that real property improvements, buildings and so forth, are considered capital assets. Under the present law land is a capital asset, the building on it is not, when used in trade or business.

The CHAIRMAN. Does that apply to any ordinary buildings in connection with the business?

Mr. O'BRIEN. Yes; buildings used in trade or business.

The CHAIRMAN. Or a farm, for instance?

Mr. O'BRIEN. Yes.

The CHAIRMAN. That becomes a capital asset?

Mr. O'BRIEN. Yes; it was a capital asset up to the 1938 act, and in 1938 depreciable property was not considered a capital asset.

This goes back to the old rule in the case of buildings. Under the present law if you sell land with a building on it, the land is a capital asset and the building is not a capital asset.

The CHAIRMAN. All right.

Mr. O'BRIEN. The second major change relates to involuntary conversions of property (when property is condemned or destroyed by casualty). Where the gains from those involuntary conversions exceed the losses then all the transactions are considered capital transactions. If the losses exceed the gains, then none of the transactions is considered a capital transaction and the loss is allowed against ordinary income. The rule is applied in the case of a depreciable property and of capital assets held for more than 15 months.

Page 92, line 10 straightens out the law with respect to the holding period of stock acquired through the exercise of rights. It says when you exercise the right to subscribe for stock then that is the beginning of the holding period of the stock which you get as a consequence of the exercise of the right. The present law causes some administrative difficulties.

Page 92, line 21, extends the time during which the election may be made to treat the proceeds of Commodity Credit Corporation loans as income. The 1938 act allowed that election, but some people did not exercise the election. This gives them an opportunity, in connection with their return for the taxable year beginning in 1942, to elect to treat that amount as income.

Page 93, line 15, first extends the benefits of the amortization deduction for emergency facilities to taxpayers other than corporations; and, second, it extends the period of time during which the facility may have been completed back to January 1, 1940. The present law allows the deduction only if the facility was completed after June 10, 1940.

The CHAIRMAN. That was originally the provision in the Senate bill, was it not?

Mr. O'BRIEN. Yes.

The CHAIRMAN. Finally, it is about to get straightened out.

Mr. O'BRIEN. Page 100, line 15, and running over to page 102, line 7, allows a foreign tax credit to a domestic corporation on account of the tax paid by a foreign subsidiary of a foreign subsidiary of the domestic corporation.

Senator VANDENBERG. How is that?

Mr. O'BRIEN. Well, under the present law, a domestic corporation which has a foreign subsidiary gets credit for the foreign tax paid by the foreign subsidiary. This proposes to extend the rule down one more point in the chain, so that the domestic corporation can get a credit on account of the foreign tax paid by the foreign subsidiary of the foreign subsidiary of which the domestic corporation is the parent.

Senator VANDENBERG. I will talk that over Sunday at St. Elizabeths.

The CHAIRMAN. Does that mean a wholly owned subsidiary?

Mr. O'BRIEN. That means a wholly owned subsidiary; yes.

Page 102, line 19, provides for consolidated returns. The effect of this section is to permit corporations to file consolidated returns for corporation normal and surtax purposes.

Under the present law that is allowed only for excess-profit tax purposes. This provides if a corporation uses consolidated returns for one tax it must use consolidated returns for both. Under the present law the so-called Pan-American Trade Corporation and railroad corporations may file consolidated returns for the purpose of corporation normal and surtax. That privilege is still allowed those corporations, except that in the case of any corporation filing a consolidated return under the new provision the tax imposed by section 15 is increased by 2 percent of the consolidated corporation surtax net income of the group of corporations filing.

Senator GUFFEY. Mr. O'Brien, will that permit the newspaper publishers to file consolidated returns?

Mr. O'BRIEN. I think so if the requisite stock ownership is there. It is allowed to all corporations without any discrimination as to their character.

The CHAIRMAN. They are required to pay the 2 percent?

Mr. O'BRIEN. They are required to pay the 2 percent.

The CHAIRMAN. The 2 percent penalty for that privilege.

Senator GUFFEY. Then they can cover up the losses of one newspaper, like they did 2 years ago, is that right?

Mr. O'BRIEN. That is the effect of the consolidated return provision. You treat the whole group as one corporation. The losses of one offset the gains of another.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. The next change is page 108 line 22. Under the present law foreign corporations and nonresident aliens, if they have an office or place of business in the United States are taxed in the manner in which domestic corporations and citizens are taxed on income from United States sources.

Senator VANDENBERG. How is that?

Mr. O'BRIEN. Under the present law, foreign corporations and aliens which do business in the United States or have an office or place of business in the United States are taxed the way domestic corporations and citizens are taxed. This proposes that any foreign corporation or nonresident alien individual who merely has an office or place of business in the United States but does not do business in the United States shall be treated as foreigners.

Senator CONNALLY. What do they have an office here for if they do not do any business?

Mr. O'BRIEN. I understand that some of those people have offices here notwithstanding the fact that they are not doing business, just to get the benefit of our rate, which is more favorable in some cases. This constitutes the closing of a loophole.

Senator CONNALLY. Does it permit holding companies to make consolidated returns, too?

Mr. O'BRIEN. Yes; that is a typical case.

Mr. TARLEAU. That is a typical case, a holding company which has a consolidated subsidiary.

Senator GUFFEY. I think they should pay more than they have been paying. I am going to look into it. I am for more taxes.

Mr. O'BRIEN. Page 110 line 12 relates to pension trusts. That section has been substantially revamped. It relates to the employees' trusts which are exempt from taxation as a trust.

Senator CONNALLY. You are not talking about the congressional pension now, are you?

Mr. O'BRIEN. Not that pension, Senator. I do not think that was a trust.

Senator CONNALLY. It was a distrust.

Mr. O'BRIEN. It was a distrust; yes. Generally speaking, the section has been revamped to permit this tax exemption only in the case of nondiscriminatory trusts, that is where there is not discrimination in favor of the higher-priced employees and where the coverage is pretty extensive.

Senator TAFT. What does that exemption extend to? You mean they are exempt from paying taxes on their income?

Mr. O'BRIEN. It exempts completely the employees' pension trust if it is a good pension trust.

The CHAIRMAN. Is any limitation placed upon the amount of benefit that any one beneficiary might get?

Mr. O'BRIEN. No.

Mr. PAUL. That is not in this bill.

The CHAIRMAN. Was it rejected?

Mr. PAUL. There were difficulties about it.

The CHAIRMAN. Was it actually voted on?

Mr. PAUL. No; we did not press it, Mr. Chairman.

Senator VANDENBERG. Does the pension trust include profit-sharing plans?

Mr. O'BRIEN. Yes. When I say "pension trust," that mean a profit-sharing plan, annuity plan, stock-bonus plan. They are all in the same picture.

Senator CONNALLY. This just exempts the trusts?

Mr. O'BRIEN. This just exempts the trusts.

Senator CONNALLY. It does not exempt the pensions?

Mr. O'BRIEN. No; it also allows a deduction to the employer on account of the payment into the pension fund of an amount not in excess of 5 percent of the compensation. The remainder over 5 percent may be spread over a period of 60 calendar months and deductible after the payment is made, somewhat similar to the present law.

Senator TAFT. Has there been some abuse in the exemption of the pension trust? Offhand I do not see why they should be taxable at all. It seems to me an indirect method of paying wages of employees. When employees get the money I think they should pay the income tax, but why should the trust be taxable at all? Has there been some abuse of it.

Mr. O'BRIEN. I understand there has been some abuse of it, particularly in some cases in which the attempt has been made really to pay additional compensation to the higher-priced employees. Actually that is a way of paying a salary to an employee. Under the present law, some of those trusts are exempt.

Senator TAFT. Of course, when the fellow actually gets the money, he has to pay on the income. He cannot avoid it that way.

Mr. O'BRIEN. That is true. That constitutes a postponement. Giving deductions to an employer in the current year constitutes a postponement of income tax.

Senator TAFT. A postponement for a time until he gets the money.

Mr. O'BRIEN. Take the $100,000 man and you want to pay him $150,000, you pay him a salary of $100,000 and put $50,000 in the pension trust, and then when he does actually get the $50,000, he is not in as high a bracket as he would be if he got the $150,000 in the current year. I understand there have been some abuses in connection with it.

Senator TAFT. Suppose he made a contract to pay him $150,000 after he retired, that would not be a tax exemption. He would pay it when he got it.

Mr. O'BRIEN. Yes; he would pay it when he got it.

Senator TAFT. How does the pension trust differ from that?

Mr. O'BRIEN. It does not differ in the sense that they postpone compensation.

Mr. PAUL. It is different in the sense that they do not get the extra deduction, Senator. The vice is that the corporation immediately gets a deduction against its higher rate of tax. The employee, frequently an officer or key employee, does not pay any tax on that which is allowed as the deduction to the corporation, and then many years hence, I might say a good many years, when the employee retires and when his bracket is much lower because he is not getting his ordinary salary,

the amount given to him is not superimposed over his salary. He gets the amount paid out of the pension trust, and so that amount is taxed at a very much lower rate.

Senator TAFT. The Government does not get it, but I do not see how anybody suffers from it.

Mr. PAUL. The Government suffers very decidedly in two ways.

Senator TAFT. I do not see what difference it makes. The Government gets the tax when the people get the income.

Mr. PAUL. The money is paid out of the corporation and therefore is not taxed to the corporation because it is deducted by it.

Senator TAFT. I understand. Nobody gets that money. That is the substance of it.

Mr. PAUL. That goes into the trust for the benefit of the employee. Under the present law there is no tax on it. Neither the trust is taxed nor the employee is taxed until it is paid out.

Senator TAFT. This way you get it twice. It is taxed when it goes to the pension, and you get it once more when it goes to the employee.

Mr. PAUL. We are not abolishing pension trusts at all, Senator.

Senator TAFT. You are taxing them when it is paid into the trust and you are taxing them when it goes to the employees.

Mr. PAUL. Not at all. We are simply asking that trusts be more bona fide and non-tax-avoiding if they are going to get the benefit of the statute. We are not changing the rule with regard to pension trusts at all, only the rules as to which trust will qualify to get the benefit of the statute.

Senator TAFT. What are those qualifications, the new ones?

Mr. O'BRIEN. Beginning on page 111, line 16, 70 percent or more of all the employees, except part-time employees and except casual employees, must be eligible. In the alternative, the scheme must be under a classification set up by the employer and found by the Commissioner not to be discriminatory in favor of officers, shareholders, or highly priced employees.

Senator TAFT. Are those the only qualifications?

Mr. O'BRIEN. Then there are some qualifications the same as under the present law, for instance, that it is impossible for any part of the corpus or income of the trust to revert back to the employer.

Senator TAFT. What about that provision? How can you get rid of that possibility in the pension trust? Supposing a corporation was finally dissolved, what happens to the money that is left?

Mr. O'BRIEN. What happens to the money that is left?

Senator TAFT. Yes.

Mr. O'BRIEN. Theoretically, there should not be any money left at all.

Senator TAFT. I do not know about that. Naturally, with a pension trust you want to build up a big enough reserve to be sure the fellow is going to get the pension that you agreed to pay. You probably have an excess, and therefore you probably have reserves of some kind. What happens to those reserves? I can see why they should be taxed to somebody sometime, but I do not see why the whole trust should be disqualified because they have common sense enough to accumulate a reserve that might conceivably go back to the corporation.

Mr. O'BRIEN. In that case the amount would go to the employee. That is the employee's amount.

Senator TAFT. Suppose the employees died? The question is whether you can make a provision by which you can find people to pay that excess to.

Mr. O'BRIEN. The law says it has to go to the employee, it cannot go back to the employer.

Mr. PAUL. If the corporation is to get the benefit of the deduction it must be an unqualified payment. In the case you cite, a corporation dissolving, the trust would presumably either be dissolved also or continue for the benefit of the employees because the money is not money of the dissolved corporation.

Senator TAFT. Yes; but your qualifications about life extension may be wrong. If you guarantee to your employees 4 percent you are taking an awful chance, so you naturally want a reserve, and a reserve is built up which probably, in the natural course of events, never may go to the corporation, probably will go on forever.

Mr. PAUL. That is right.

Senator TAFT. Supposing something did happen and it was a contingency under which it might go back to the corporation, then under this, as I understand it, the whole thing would be taxable at once.

Mr. PAUL. That is one of the qualifications in the existing law. That is not changed. We are not making any change in that requirement.

One of the requirements in the present law and regulations is that the trust be put on a sound actuarial basis.

Senator CONNALLY. Mr. Paul, let me ask you a question. As I understand it, your theory is when this goes into the trust, it is in the trust and it cannot revert back to the corporation?

Mr. PAUL. That is right.

Senator CONNALLY. And because it is not permitted to go back to the corporation, it will be utilized as a device all the time.

Mr. PAUL. Not only that but the corporation would be getting the benefit of the deduction.

Senator CONNALLY. In the case of dissolution, it would be a matter for a court of equity to decide. I found lots of them that have not got pensions and that want pensions. You will not have any trouble in finding somebody that will take the pension. If there were any pensioners that could not be found, it would be different, but they would be found. I can furnish a good many, if you want any.

Mr. PAUL. As a matter of fact, they are provided for usually in the instrument.

The CHAIRMAN. A trust would hardly be approved that did not provide for contingencies, would it, as a fair trust?

Mr. PAUL. Well, there is not any requirement in the law specifically requiring that there be a provision for distribution on dissolution, but there is a requirement negatively that it cannot come back to the corporation.

The CHAIRMAN. That is what I mean.

Senator TAFT. I just have difficulty in seeing how you can draw up a pension trust that, under some circumstances, something might not come back to the stockholders of the corporation.

Mr. PAUL. It can be done and has been done very extensively.

That, however, is not a change in the law. I want to make that clear. It was adopted, I think, in 1939.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. The next change begins on page 119, line 7 and relates to life-insurance companies. The definition of life-insurance companies has been changed slightly, and in lieu of a deduction of 3¾ percent of the mean of the reserve funds required by law, and in lieu of the double deduction, what is, in effect, a double deduction for the partially tax-free interest, and tax-free interest there has been substituted a new deduction which is called the "reserve and other policy liability credit."

I do not know how deeply you want to go into this. I am not sure that I can go all over it, but that is roughly what is the change.

The change in the definition of life-insurance companies is to exclude the so-called burial- and funeral-benefit companies and to include within life-insurance companies certain companies to the extent of their business on noncancelable health and accident policies.

Senator CONNALLY. Then would the burial and funeral life-insurance companies be taxable here?

Mr. O'BRIEN. They would be taxed as ordinary corporations, not as insurance companies.

The CHAIRMAN. If this definition remains in. That question has already arisen, I presume.

Mr. TARLEAU (Thomas Tarleau, Legislative Counsel, Treasury Department). It has been called to our attention by some of these burial and funeral companies, that there is a great deal of variance among several States as to how they are conducted. Some of them are conducted, from information given to us, on a system that is quite similar to that of insurance companies, and others are conducted very much like an ordinary corporation; they just make an arrangement to sell their goods and services, namely, a casket, the funeral, and so on.

At the moment we are going into the problem of seeing how we may adequately take care of the burial and funeral companies that operate very much like insurance companies that have reserve funds.

The chairman asked us to see some people from one of the States yesterday, and we are actively working with them this morning.

Senator CONNALLY. As a rule do the States have pretty stringent laws in regard to insurance companies? My conception is a lot of those concerns are rackets.

Mr. TARLEAU. The information given to us that a great many of them are not actually insurance companies at all but are companies engaged in the manufacture of caskets; and, in order to sell their caskets, they make an arrangement with future clients of theirs during their lifetime to get those caskets when they die.

Of course, it is that type of company that we want to exclude from the provisions of this insurance-company section. On the other hand, we were told yesterday that in the State of Alabama the State law provides for the supervision of those companies under the insurance laws, and consequently the situation there may be quite different.

The CHAIRMAN. Yes; some operate on the same basis as these industrial insurance companies, but the benefits are payable in specifics rather than money.

Mr. TARLEAU. Yes.

The CHAIRMAN. That would seem to be the only difference.

Senator VANDENBERG. This section does not deal with insurance deductions of the individual taxpayers?

Mr. O'BRIEN. No; just the taxation of the companies themselves.

Senator TAFT. If this plan works out, does it meet with the general approval of the insurance companies?

Mr. PAUL. This provision has been worked out in concert with the insurance companies, the two main associations representing the life insurance companies and several independent companies that were not in the associations. The Treasury put up another proposal which we thought was a satisfactory solution of the problem.

The insurance companies protested, not on the ground of the amount of the tax which it called for, but rather the distribution of that tax load among the companies. The companies thereupon, made a counter proposal, which is the one incorporated in the statute which they said, and passed resolutions to the effect that it was satisfactory to them, and that is what is in the statue.

Senator TAFT. We are not likely to have any protest on this?

Mr. PAUL. None whatever.

Senator TAFT. What about the question of mutuals?

Mr. PAUL. We will come to that next.

You mean mutual other than life?

Senator TAFT. Yes.

Mr. PAUL. We have another provision about that.

Senator VANDENBERG. How much more do you take out of life insurance companies?

Mr. PAUL. A little over $26,000,000.

Senator VANDENBERG. And you are all agreed on it?

Mr. PAUL. In complete agreement.

Senator VANDENBERG. I think we ought to have a recess and a little drink.

Mr. PAUL. I might say, I would like to put it on the record that the insurance companies cooperated very faithfully with us. It was a hard job to get this thing worked out.

The CHAIRMAN. Go ahead, Mr. O'Brien.

Mr. O'BRIEN. The next subject is the insurance companies other than life or mutual. That is the stock fire companies and stock casualty companies.

To the extent that they partake of the character of mutual companies, they are permitted deductions somewhat similar to mutual companies by the change made in this provision.

The next subject is on page 130, line 17, mutual insurance companies other than life. The exemption provision relating to mutual insurance companies other than life—and that is mutual casualty and fire insurance companies—has been changed so that only those companies are exempt the mean of the ledger assets of which do not exceed $100,000.

Furthermore, if their surtax net income does not exceed $50,000, they are not subject to tax. Other substantial changes have been made in the case of these mutual insurance companies other than life, the effect of which is to put them on substantially the same basis of taxation as stock companies doing the same business.

Senator VANDENBERG. Do they agree to that?

Mr. TARLEAU. You can divide the mutual insurance companies other than life into the farmers type of small mutual company and the larger mutual company that is in competition with the stock com-

panies, like the Lumbermen's and other types of large million-dollar concerns. The small farmers' mutual companies have passed resolutions in most of the Midwestern States, which I am prepared to supply to the committee, in which they have stated that they are satisfied with the Treasury amendment.

I think in the case of one or two of them, I believe in Iowa and Illinois, the State Grange, which runs these small farmers companies, stated that they would actively support the Treasury proposal, but that deals with the farmers' type, the local type, of mutual company.

The large mutual company that does a large business throughout the State like the Lumbermen's and the Liberty Mutual are not satisfied with the treatment because they feel the very fact that they are mutual companies gives them a status that is different from that which they are accorded under this bill.

In this bill, as Mr. O'Brien will explain to you, we tried to put these companies more in line with the treatment that we give to stock companies. The very fact that they are mutual companies makes an exact correspondence impossible, but there has been a wide discrepancy between the tax paid by the million-dollar or two-million-dollar mutual type company and the stock type company.

What we have done is to pretty generally exempt from taxation the farmers' type of local mutual company in which the mutual element is extremely great, run by the farmers themselves, or run by the State Grange, and things of that sort.

But the ordinary type of large mutual company that is in active competition with the stock companies, will stand more nearly in the position of the stock company.

Senator RADCLIFFE. In any instance, the income comes from the same source, it comes from the premiums paid.

Certainly, there does not seem to be any reason why there should be any exception.

Senator GERRY. Why was it made $100,000? Was there any special reason for that?

Mr. TARLEAU. No. The exemption provision says, "if the mean of the ledger asset held at the beginning and end of the taxable year does not exceed $100,000."

Either one of two tests qualifies you as an exempt mutual company. If your income is less than $50,000—which eliminates practically all of the farmers' type of companies—then you are out, or even if your income is in excess of $50,000, if the mean of your ledger asset does not exceed $100,000, then you are out.

If for some reason, in 1 year they go up to $60,000, if they are still a small company because their assets are small, they are still exempt.

Senator GUFFEY. Did I understand you to say the farmers are satisfied?

Mr. TARLEAU. Yes, sir.

Senator GUFFEY. I am glad to hear that.

The CHAIRMAN. What is the estimated increase in revenue?

Mr. PAUL. Just short of $10,000,000 a year.

Senator RADCLIFFE. I understand there is no distinction, except the $2,000 that has been mentioned, as to the amount of reserve. I mean, you have no exemption based on the character of the business.

Mr. PAUL. No; those two exemptions are designed to clear out of the picture a lot of the small farmers' type of real mutual company.

Senator CONNALLY. Has not that been more or less your theoretical test, that the real mutuals were these little concerns and a few large ones were utilizing this exemption to do business pracically on the same basis as the old line companies and get the advantage of not paying any tax, thereby competing and being able to give their officers a bigger slice of salary?

Mr. PAUL. I do not know about the last conclusion, but certainly section 101 (11) when it was originally passed was designed to protect the small type of company. It gradually worked out so the large company has been able to compete in what we think is an unfair way with the stock company.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 139, line 13, is a purely technical change relating to the taxation of nonresident alien individuals, and so forth.

Under the present law, such people are exempt from the tax on the gain on sales on commodity exchanges. This amendment is designed to close the loophole where they are dealing in commodities not on exchanges.

Such dealing is subject to tax and is not exempt from the tax in connection with capital gains.

Page 140, line 4 makes numerous technical changes in the statute of limitations on refunds and credits. What it is designed to do is to equalize the situation with respect to the statute of limitations in the case of taxpayers and in the case of the Commissioner, particularly in cases in which, for instance, the taxpayer has filed a waiver of assessment and collection of the tax. I do not think I need to go into this section because it is constantly being revised as new things come up.

The next change relates to the taxes on regulated investment companies, page 146, line 5.

The most substantial change is to tax the so-called closed-end companies under this supplement, the same as open-end companies are now taxed. The present tax is a kind of undistributed profits tax and only those companies are eligible which permit a redemption of their stock under certain conditions.

The whole section has been broadened to bring the taxation treatment more nearly in line with their regulation by the Securities and Exchange Commission.

Senator CONNALLY. This relates to investment trusts. Every time we have a tax bill, we are mixed up with them.

Mr. O'BRIEN. That old row has been finally settled by permitting the closed-end companies to have the same treatment as the open-end companies.

The CHAIRMAN. I need not ask whether they have all agreed to this treatment.

Mr. PAUL. That is unnecessary and I might add the Securities and Exchange Commission has approved it, too.

The CHAIRMAN. It is in line with the recommendations they previously made.

Mr. PAUL. That is right, sir.

Mr. O'BRIEN. The next subject is on page 158, line 23, and that is the collection of tax at the source, the so-called withholding provi-

sion. If you do not mind, I should like to have you postpone consideration of that until I can get Mr. Rice, because Mr. Rice wrote this and is more familiar with it than I am.

The CHAIRMAN. What page?

Mr. O'BRIEN. Page 158, line 23, and it runs over to page 181, line 6.

I ask that you postpone that until Mr. Rice comes. He happens to be at another committee meeting just now.

I have passed over one important change, page 152, line 14, amendments to supplement R. Supplement R is the supplement under the present law which permits the receipt of property without the recognition of gain by a public-utility company when it is required by the Securities and Exchange Commission to integrate its system under the Public Utility Holding Company Act of 1935.

Under the present law those transfers, in pursuance of the orders of the Securities and Exchange Commission, are tax exempt.

This proposes to broaden the treatment so that notwithstanding the fact that the public utility holding company may get some property which is subject to the tax, that is so-called nonexempt property, this says if they take such nonexempt property and within 24 months convert it into exempt property, that is, they take the money and buy, say, an electric plant with it; then the gain is still not recognized on account of the earlier transaction, but the amount of the gain which would be recognized is applied in reduction of the basis for determining gain or loss on all of the remaining properties of the company.

Senator CONNALLY. Would this cover a case like this—I had that up some time ago—there was a project for a big self-liquidating municipal plant. The city of Beaumont, I think it was, was going to get a great loan from the Government and build a water supply. The local company that owned the water was also owned by the utility. One of the conditions of the loan was they must get the local utility out, they must buy their water plant. In the process of going through all this, the local company was perfectly willing to sell the water plant, exchange it for a gas plant.

Well, if they did that under the existing law, they would have to pay a tremendous tax on the exchange for the gas plant, because they are only allowed to buy another electric plant, the same business that they are in. It was blocking the whole deal. They were perfectly willing to take the gas plant, but they could not do it under the law.

Would that cover this?

Mr. O'BRIEN. Not unless they were required to get the gas plant in pursuance of an order of the Securities and Exchange Commission. This relates only to the integration of those systems under the Public Utility Holding Company Act of 1935.

Senator CONNALLY. This company was going through that process.

Mr. O'BRIEN. They are all right then.

Senator CONNALLY. But they would not be required to divest themselves, by the Securities and Exchange Commission, of the water plant. They are willing to do it in order to let this deal go through, but if they made the trade for the gas plant instead of for the water plant, it would be such a prohibitive tax that it would take all the holdings, and they would not do it.

I will talk with you later on that. I had them contact the Treasury about it. I do not know what they ever did about it.

Mr. O'BRIEN. Passing over the collection of the tax at the source, which Mr. Rice is to touch on, I will next turn to page 181, line 7, which relates to personal holding companies.

The first change is to raise the rate of tax on personal holding companies. Under the present law the rate is 71½ percent on the first $2,000 and 82½ percent on the remainder. Those rates have been raised to 75 percent on the first $2,000 and 85 percent on the remainder.

The next change in personal holding companies is on page 182, line 14, which has the effect of exempting from the personal holding company tax certain loan and investment corporations subject to supervision by State authority, a substantial part of the business of which consists of receiving funds not subject to check and evidenced by installment or fully paid certificates of indebtedness or investment.

I understand there are such regulated companies throughout the States. This proposes to give them the same exemption as in the case of licensed finance companies. This provision is made retroactive to the taxable years beginning after December 31, 1938, that is, 1939, 1940, and 1941.

Senator TAFT. Does this meet the objection that we hear all the time by the personal finance companies? There are quite a few in Ohio. They have been here every year for the last 4 years.

Mr. TARLEAU. I think they were Indiana companies that came in to see us, but I think the situation is pretty well the same in Indiana as in Ohio.

Mr. O'BRIEN. The next change is on page 183, line 6.

Under the present law, a personal holding company and railroad corporations are permitted to file consolidated returns. This proposes to confine that privilege to personal holding companies and railroads and not to extend the privilege to all personal holding companies and other types of companies.

Page 183, line 19, is a purely technical amendment relating to deficiency dividends. Those are dividends which a personal holding company is permitted to pay after it has received the notice of deficiency and thus get credit. It is permitted to pay the money to the stockholders. The stockholders pay the tax and the personal holding company gets out of the tax.

By reason of the increase in rate from 65 to 71½ and from 71½ to 75, and on up, for the various years with respect to which the deficiency dividend credits are allowed, those rates are raised here accordingly.

On page 184, line 12, begins a series of amendments relating to distribution by personal holding companies. Under the present law, by reason of the fact that a dividends-paid credit is only allowed for dividends paid out of earnings and profit, there have been situations arising in which a corporation has distributed all its income but has not been able to get a credit for distributions, because the distributions were not out of earnings and profits. The net income, in other words, was greater than earnings and profits.

Distributions not in liquidation, even though not out of earnings and profits, will constitute dividends and hence the corporation gets a dividends-paid credit for it, and the shareholders will pay tax on those dividends under the proposed change.

Those provisions are made retroactive back to 1936.

The next series of changes relates to excess-profits tax and begins on page 194, line 14.

Senator VANDENBERG. Have you made any change anywhere here, or are you familiar with the deduction of the expense in hiring counsel and corporation tax attorneys?

Mr. O'BRIEN. No. On page 194, line 14, begins the excess-profits tax.

The amendments made by this title are applicable only to taxable years beginning after December 31, 1941, except where otherwise noted.

The next section, section 202, raises the rate of excess-profits tax from a graduated rate beginning at 35 percent and a top rate of 60 percent to a flat 90 percent.

Senator CONNALLY. The bill has changed the definition of "excess profits"?

Mr. O'BRIEN. No; the average earnings and invested capital credits are still retained, Senator. There have been some changes, but the basic theory of the excess-profits tax has not changed.

Senator BROWN. That leaves the option in?

Mr. O'BRIEN. The option still exists; yes.

On page 195, line 3, the present specific exemption of $5,000 from excess-profits tax is raised to $10,000. Correspondingly, the mutual insurance companies other than life have a specific exemption of $50,000, because they have, in effect, a specific exemption of $50,000 from normal tax and corporation surtax.

Page 195, line 15 relates to the invested capital of insurance companies, the most important provision is that the reserves of an insurance company are not included in computing equity invested capital but are treated as borrowed capital.

Page 197, line 11 makes numerous technical amendments to the excess-profits tax, made necessary by reason of the change in the method of computing the normal tax. As I mentioned yesterday, instead of taking excess-profits tax as a deduction for the purpose of computing the normal tax, a corporation is allowed a credit on account of the amount which is subject to the excess-profits tax. These are technical amendments to carry out that policy.

There is one other provision on page 198, line 19, the excess-profits credit carry-over. For the purpose of the excess-profits carry-over, the excess-profits credit and the excess-profits net income for any taxable year beginning in 1940 or 1941 is computed under the law applicable to taxable years beginning in 1942. That is carrying forward the policy that you had in the last amendment to the excess-profits tax.

Page 199, line 3 makes necessary changes in the capital gains and losses treatment by reason of the change in capital gains and losses in the basic income tax, the change from 18 to 15 months, and so forth.

Page 200, line 21, section 207, applies in the case of the excess-profits tax, the same rule to corporations having an office or place of business in the United States as is applicable for the purposes of the normal tax and corporation surtax.

Page 201, line 9 provides a rule for putting the excess-profits net income of a corporation having a short taxable year on an annual basis. The rule is substantially similar to the one which I explained yesterday in connection with the ordinary normal and corporation surtax.

Senator BROWN. Mr. O'Brien, I want to ask a question that is not exactly in point but this section 208 reminds me of it.

Through the action of the Supreme Court in declaring the processing tax of 1934 to be invalid, a great many companies will pay in 1942 and probably in 1943 on any refund of those taxes. Will they be taxed under the 1934 rates or under the 1942 and 1943 rates?

Mr. O'BRIEN. The 1942 and 1943 rates.

Senator BROWN. What justification is there in that?

Mr. O'BRIEN. I do not know.

Senator CONNALLY. Did they take a deduction for the tax when they paid it?

Senator BROWN. I presume they did.

Mr. O'BRIEN. Those amounts are not included in excess-profits net income, Senator. They are specifically excluded.

Senator BROWN. Your previous law did that?

Mr. O'BRIEN. Yes.

Senator BROWN. I am fully satisfied that that does it.

Mr. O'BRIEN. Page 203, line 22, section 209 makes a purely technical amendment to the definition of "deficit" in excess-profits net income. The major effect of it is to say if a corporation has income from partially tax-exempt interest that income is used for the purpose of ascertaining whether or not it did actually have a deficit.

Under the present law the excess of your deductions over gross income establishes the deficit for excess-profits tax purposes. This says that you add back the partially tax-exempt interest for the purpose of ascertaining whether or not you do have a true deficit.

Senator CONNALLY. For instance, that is taking the Federal obligation that is taxable only on the surtax, is that right?

Mr. O'BRIEN. Yes; you include that interest for the purpose of ascertaining really whether the fellow has had a loss.

The next section, section 210, capital reduction in case of members of controlled group, relates to the adjustments in capital in the case of average earnings corporations and is an attempt to take care of a case in which there is a split-up of an average earnings corporation into two corporations.

This says that you make adjustments in the capital of the parent corporation on account of the split-off of the subsidiary corporation from the parent.

Senator DANAHER. Mr. Chairman, a question.

The CHAIRMAN. Senator Danaher.

Senator DANAHER. Is there a definition in existing law of what is meant by the term in line 21 "the same controlled group"?

Mr. O'BRIEN. "The same controlled group"?

Senator DANAHER. Yes; on page 204.

Mr. O'BRIEN. No. The definition for this purpose is on page 206, line 3, Senator, "As used in this paragraph, a controlled group means one or more chains of corporations," and so forth.

The next change is on page 206, line 18, relating to the invested capital credit. Under the present law the invested capital credit is 8 percent of the invested capital not over $5,000,000 and 7 percent on the invested capital over $5,000,000. Those two brackets have been retained, and two additional brackets have been added. If the invested capital is over $10,000,000 but not over $200,000,000, then the invested capital

credit is $750,000 plus 6 percent of the excess over $10,000,000. And there is allowed as an invested capital credit 5 percent on any excess over $200,000,000.

Senator DANAHER. Mr. O'Brien, before you get into a new topic, referring to that definition on page 206 that you mentioned, starting in line 3, is there any distinction between the definition of "controlled group" therein appearing, and cases where a given subsidiary corporation is necessary to carry on the business of the parent corporation?

Mr. O'BRIEN. I am afraid I do not quite understand you.

Senator DANAHER. There could be easily a controlled group in the sense that the parent corporation will hold 50 percent or more of the stock of a good many owned corporations, but the latter would not necessarily be engaged in effectuating the business of the parent corporation.

Is there any distinction between corporations that are necessary to carry on the business of the parent corporation and those that are not?

Mr. O'BRIEN. No; this is not geared on their business relationships; it is just stockholding. If you have more than 50 percent of the stock, then that corporation is a member of the group that you control. It is not geared to what kind of business it is engaged in.

Senator DANAHER. Or even the necessity for the subsidiary does not enter into it?

Mr. O'BRIEN. No; that has nothing to do with it.

Senator DANAHER. The sole base is the ownership of the stock?

Mr. O'BRIEN. That is right.

Senator TAFT. Mr. Paul, what is the exact justification for reducing the percentage of invested capital in the case of corporations over $10,000,000? I see some reason for reversing the invested capital now, but it seems to me once a corporation gets to be a $5,000,000 corporation, it is about as big as most of corporations of that kind get.

I do not see why everything over that should not be pretty much the same. There is some reason for the scale of rates in corporations up to $1,000,000, but I do not see why a corporation which has an invested capital of $200,000,000 should be treated differently than a $5,000,000 or a $10,000,000 corporation.

Mr. PAUL. While I am in sympathy with that change, I think I should pass that question to Mr. Stam, since he is the original inventor of that change.

The CHAIRMAN. Mr. Stam.

Senator TAFT. It would affect the stockholders more than anybody else in the corporation.

Mr. STAM. The only question involved here is that a lot of the large corporations have never earned, at least for a long period of time, as much as 8 or 7 percent on their invested capital. A lot of them have been earning but 2 or 3 percent. Our studies indicated that at least so far as the net income corporations were concerned, the return on the invested capital was less with respect to the larger invested capital corporations than with respect to the smaller corporations.

Senator TAFT. I can see some reason to scale that up to $5,000,000 or $10,000,000, but I do not see any reason for going from $10,000,000 to $200,000,000.

Mr. STAM. Many corporations above $200,000,000 do not earn over 5 percent on their invested capital.

Senator TAFT. A lot of the little ones do not either.

Mr. STAM. A lot of the little ones did earn more than 5 percent, and that is why we made the arbitrary rule. We did not want to hurt the corporations that had been able to earn 8 percent. But those corporations which had never earned as much as 8 percent—and now you are giving them a credit of 8 or 7 or some other percent—will not pay any excess-profits tax.

Senator TAFT. I understand that. That is a perfectly good reason for reducing everybody to 5 percent. I think the whole principle of graduating the percentages on corporations is doubtful, except as you might regard it as a kind of a bonus for what you might call small business, which certainly would be under $5,000,000. Otherwise I do not see any basis for graduating the thing.

Your argument is a perfectly good argument for reducing it from 8 to 5 percent, which I think should be done, but I do not see the reason for graduating it.

Mr. STAM. If you reduce it to 5 percent you would be doing a lot of harm to small corporations that had been making a return of 8 percent on their invested capital in back years.

Senator TAFT. They would just shift over to the average-earnings basis.

Mr. STAM. We do not look altogether at the average-earnings years because a lot of these corporations did not make a very high return in the base period and therefore they cannot use the average-earnings credit, but when you look over a long period of time you will find that a lot of these corporations have been making as much as 7 percent, and some of them as much as 8 percent.

Senator TAFT. Why would it be more of a hardship on a $5,000,000 corporation than on a $200,000,000 corporation?

Senator CONNALLY. May I interrupt you there?

Senator TAFT. Yes.

Senator CONNALLY. According to your theory, there ought to be some relationship between the tax and what they had been formerly earning?

Mr. STAM. That is right.

Senator CONNALLY. Therefore, if you make it 5 percent you are taxing the little companies on the theory of excess profits at a much higher rate than you would be taxing the big companies who have not been making, theoretically, at least, as high a percentage of income as the little ones?

Mr. STAM. That is right.

Senator CONNALLY. That is your theory?

Mr. STAM. That is right.

Senator CONNALLY. And being an excess-profits tax, there must be some relationship.

Senator TAFT. I do not see any relationship between the graduated rates and what they happened to be earning. Any corporations over $5,000,000 that may have been earning 2 percent are mostly the capital-goods corporations. You can have a pretty good-sized corporation on the capital of $5,000,000.

Mr. STAM. That is true. But, as I say, the excess-profits tax is imposed on the theory that we are taxing the excess over what they had been earning.

Senator TAFT. No. This tax is imposed on the theory that a man should be entitled to earn a certain percentage on money that he has invested, regardless of the earnings.

Mr. STAM. I do not think so. Suppose he never has, over a long period of time, earned more than 2 or 3 percent on his invested capital, it does not seem to me, in a time like this when you are trying to raise all the revenue you can, that you can say to that corporation that never has earned more than 2 or 3 percent on its invested capital that "we will allow you 6 or 8 or 7 percent before the excess-profits tax applies."

Senator TAFT. That is an argument against putting in this alternative.

Mr. STAM. No.

Senator TAFT. Certainly that is an argument for eliminating this alternative. It is not an argument for graduating the scale between corporations of $5,000,000 and corporations of $200,000,000. What is the difference between a corporation of $5,000,000 and one of $200,000,000?

Mr. STAM. The only difference is this: That, by and large, corporations of $200,000,000 or over do not earn as much as 7 or 8 percent on their invested capital.

Senator TAFT. I think that is a rather violent assumption. I do not know. The figures may show that. It may be true. I think the distinction is not between the size but between those that require very large capital for operation and those that have a small capital for operation.

Mr. STAM. We had some cases where the corporations had as high an invested capital as $2,000,000,000 and they did not earn anything like 8 or 7 percent on that $2,000,000,000; they earned 2 or 3 percent. We felt 5 percent was a rather fair return to allow those large corporations.

Senator TAFT. Let me put it this way: If a stockholder in a corporation of $10,000,000 that has never earned but 2 percent is entitled, before he pays excess profits, to get 7 percent on that money that he put in the business, why should not a stockholder who has put his money in a $200,000,000 corporation get the same?

Mr. STAM. The way this works is that on the first $5,000,000 of the invested capital we allowed 8 percent. In other words, the stockholder in the large corporation is going to be allowed 8 percent on the first $5,000,000.

In other words, it is not going to be taken away from the large corporation.

Senator TAFT. That represents 1 percent of what he had put in the business. That does not help him any.

Mr. STAM. Then the large corporation with an invested capital of between $5,000,000 and $10,000,000 is going to be allowed 7 percent on the excess over $5,000,000.

Every corporation is treated alike under this rule. In other words, up to the first $5,000,000 it does not make any difference whether it is in a large corporation or whether it is in a small corporation, they are going to be allowed 8 percent, and between $5,000,000 and $10,000,000 they are going to be allowed 7 percent.

Senator TAFT. I cannot understand the basis of distinguishing between the stockholder in a $5,000,000 corporation and a stockholder in a $200,000,000 corporation. They are both in companies that may have earned 2 percent. I see a reason for reducing them all to 5 percent; I have no objection to that, but I cannot see the basis for the graduation.

Senator RADCLIFFE. Mr. Stam, in giving your experience in regard to big companies and small companies, and also considering it from the standpoint of contrast, have you prepared any figures showing the percentages in cases of that sort, or have you relied more or less on general impressions?

Mr. STAM. We have some general statistics that we have gotten up showing the different relationships in regard to the net income of the companies.

Senator RADCLIFFE. I think it might be interesting to see what those figures are, the relative experiences of the small companies and the large companies.

Mr. STAM. I want to make this clear: We are not denying the large company the credit that the smaller company gets on the first $5,000,000 of its invested capital.

Senator RADCLIFFE. That is brought out very clearly in your statement.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 207, line 1 relates to the amount which is included in invested capital on account of property which is paid in for stock. This says if the property which was paid in for stock was disposed of before the taxable year, then its basis shall be determined in accordance with the law applicable to the taxable year when it was disposed of.

Under the present law the concept is you still hold the property, that is, you determine its basis in accordance with the law now in effect.

Page 207, line 15 contains the so-called relief provisions.

I do not think it is possible really to summarize them. They have to be read. In certain circumstance where it can be shown that the average earnings credit of a corporation is too low, then the Commissioner or the Board of Tax Appeals, as the case may be, will construct a fair and just constructive average base period net income for the purposes of that corporation. That summarizes it very briefly, but there is no way to cover it except to just read the whole thing all the way through to get it.

Senator CONNALLY. Have you laid down any standards that they should follow in doing it, or is it arbitrary?

Mr. O'BRIEN. There are standards laid down here, Senator, and the circumstances and the amount of the adjustment. Page 208, line 19 subsection (b) lays out the conditions that have to be complied with in order to be eligible for relief at all.

For instance, the first one is, if in one or more taxable years in the base period normal production, output or operation was interrupted or diminished because of the occurrence, either immediately prior to or during the base period, of events unusual and peculiar in the experience of such taxpayer, and so on.

Senator CONNALLY. All right.

Senator BROWN. It seems to me we are coming pretty close to what Senator George and some of the rest of us proposed a few years ago.

Mr. TARLEAU. This is certainly a much broader relief provision than in the existing law.

Senator BROWN. It does vest a very large amount of authority in the Commissioner.

Mr. O'BRIEN. Oh, yes, indeed; very broad authority.

Senator BROWN. I do not see how you can solve the problem in any other way.

Mr. O'BRIEN. Of course, his judgment is subject to review by the Board of Tax Appeals, but it is turning over a large job to him.

On page 217, line 13 is a new exclusion from excess-profits tax net income. This is an exclusion of the amount derived from bonus payment made by any agency of the United States Government on account of production in excess of a specified quota of a product the exhaustion of which gives rise to an allowance for depletion.

Page 218, line 7, gives relief against excess-profits taxes in the case of an installment basis taxpayer. If the average volume of credit extended to purchasers on the installment plan in the 4 preceding years was more than 125 percent of the volume of credit extended to purchasers during the current year, then the taxpayer may elect instead of treating those installment payments as income in the year in which he receives them, to treat them as installment payments made in the year in which he accrued them, that is, for the back year. That is a form of adjustment to take care of, as I understand it, the shrinking volume of installment sales by installment basis taxpayers.

Page 220, line 16, is a purely clerical amendment to rewrite the provision exempting investment companies from the excess-profits tax.

Page 220, line 23, strikes out the present provisions of the consolidated excess-profits tax returns, because the provisions relating to consolidated excess-profits tax returns have been combined in the ordinary corporation normal and surtaxes.

Page 221, line 8, completely rewrites supplement A of the excess-profits tax. That supplement relates to the inclusion within the average base period net income of corporations which are so-called components of the taxpayer corporation, for instance, a predecessor corporation merges into another corporation.

Under the present law, the resulting corporation can include the earnings experience of the first corporation in the base period.

This provision, however, has been substantially broadened to include all corporations which were in existence in the base period. Under the present law, only the experience of those corporations which were in existence during the entire base period is permitted to be included.

The second important change is the allowance of the so-called growth formula where the earnings in the last half of the base period exceed earnings in the first half of the base period. That formula which is now applicable to nonsupplement A companies, for the purpose of increasing the average base period net income of the nonsupplement A companies, is made applicable to supplement A corporations, so if the experience of the entire group during the last half of the base period is greater than the first half of the base period, then the taxpayer gets benefits of the growth formula.

A further change freezes the base period. Under the present law a supplement A company can have a base period varying with the date on which its taxable year in the taxable period begins. This says that the base period is the years 1936 to 1939 and freezes them that way.

It also permits corporations which are not in existence during the entire period in the base period to have a hypothetical experience based upon 8 percent of their invested capital. Under the present law that fill-up is allowed in the case of a nonsupplement A company but is not allowed in the case of component corporations under supplement A. The provision has been extended to include that case.

I think, outside of minor technical amendments, that covers all the amendments in connection with supplement A. However, I must call your attention to one provision in connection with it. The amendments made by this section are applicable to taxable years beginning after December 31, 1941—that is, this year and the following years—but if the taxpayer wants to take the benefit of these amendments for the previous excess-profits tax years 1940 and 1941, he may elect to take them, but if he takes them he takes the bad with the good, he takes the whole amended supplement.

Page 238, line 22, begins the amendment to the so-called supplement B, which relates to the highest-bracket amount. Under the present law there are some complicated provisions designed to plug the loophole where the split-up of corporations into smaller corporations results in a lower rate of excess-profits tax. For future taxable years these provisions have been eliminated because there is no inducement to split up, because the flat 90-percent corporation rate is applicable.

Various other purely technical amendments are made to this provision relating to liquidations of corporations and tax-free exchanges of property between corporations.

The next major series of changes are on page 246, line 14, relating to capital stock and declared-value excess-profits taxes. The first change is to permit an annual declaration of value. The rest of the changes in this title carry out that general policy.

They also make the necessary technical amendments on account of the change in the basis for corporation tax—that is, the allowance of the credit for adjusted excess-profits tax net income.

Senator TAFT. What is the date of the declaration?

Mr. O'BRIEN. June 30, 1942. There is a provision here for extending the time for filing those returns.

Senator TAFT. For this year?

Mr. O'BRIEN. Yes. There is a provision putting the declared-value excess-profits tax net income on an annual basis, similar to the ordinary corporation taxes. I think that is all in connection with this matter.

The next series of changes begin on page 251, line 14, Estate and Gift Taxes. In the estate tax part, the amendments, except as otherwise noted, are applicable only to estates of decedents dying after the date of the enactment of the act. The first major change is in section 402, page 251, line 21. It includes within the gross estate of the decedent property held as community property, except such part of the property as may be shown to have been received as compensation for personal services or from separate income of the other spouse.

Senator CONNALLY. How far back do you go to determine whether or not it is the income of the other spouse? Just for that taxable year?

Mr. O'BRIEN. No; derived originally from such compensation, that is, compensation for personal services or from separate property.

Senator CONNALLY. Then they have to go back to the time they were first married?

Mr. O'BRIEN. They have got to go back and find out how much of this property was received as compensation for personal services or from separate income of the other spouse.

Senator CONNALLY. If they are married 50 years they have got to figure back 50 years?

Mr. O'BRIEN. That is right.

Senator CONNALLY. You will go into a lot of trouble and get nothing.

Senator BARKLEY. How would it operate if you were married just a few weeks?

Senator CONNALLY. It is not difficult to get it now.

Very briefly, under this then, if the married man dies and he has a community estate he has got to pay on the estate as a single entity?

Mr. O'BRIEN. There is included in his gross estate the amount of the value of the community property at the time of his death.

Senator CONNALLY. If there is any record, he can go back then and exclude from that any property that his wife had from her own earnings, or as her own separate property?

Mr. O'BRIEN. As a practical matter, the executor would do that, Senator. To the extent that he could show that the wife put money into this property, that amount is excluded from the gross estate of the decedent.

Senator CONNALLY. Do you Treasury people know that under the laws of most of the community-property States every dollar of income that the wife has and every dollar of income that the husband has is community income? Do you know that? You treat these matters as if they were alien people. As a matter of fact, in my State every nickel that a husband earns by personal services, or the income from his property that he owned when he married her—he might have had a million dollars, but he gets married and half of that income belongs to his wife.

And the same with her. So, if you tax a community estate, you are taxing every dollar that comes in, I mean, insofar as income is concerned.

Those ideas just do not seem to have permeated the knowledge of the Treasury Department. They are treating this just as if it was a matter of tax evasion, or something. We have had it as a law in our State since 1840. I do not remember any income-tax laws being in existence at that time, or estate taxes either.

I will not take up any more of your time at this time, but you lay down a rule there that you can go back and sift out the incomes of the husband and wife, and you are going to have an interminable lot of difficulty. Talk about administrative difficulties, you are going to have plenty of administrative difficulties if you adopt this.

Senator TAFT. Can you explain what the law is in regard to the estate tax now?

Mr. O'BRIEN. The law is now that only a part of these community interests are included in the gross estate.

Senator TAFT. If the husband dies now in Texas, what happens? What tax is there?

Mr. O'BRIEN. Well, half of his property is included.

Senator TAFT. Half of his property is included?

Mr. O'BRIEN. Yes.

Senator TAFT. This provides that all of the property should be included except the original separate property of the wife and that which she has earned?

Mr. O'BRIEN. That is right.

Senator CONNALLY. Senator Taft, under the law of my State, when he dies any property that she had, separate property, goes to her, because it is hers all the time. The income from it, however, due to the marriage relationship, goes one-half to the husband and one-half to her. Upon death, the joint earnings that have been accumulated since they married, whether from income or from separate property or personal services or in any other way except by gift, forms a community fund.

Now, upon the death of the husband or wife, one-half of that is the property of the survivor, so she does not pay any tax on it. His half goes to the estate and is subject to, and does pay, a tax.

When she dies, then in turn her one-half pays the tax. It is based absolutely on the theory that it never was his at all, it has been hers all the time.

Senator TAFT. I am expressing no opinion in favor of it or against it, I just want to get the distinction.

Senator CONNALLY. I understand. You asked what would happen when they died.

The CHAIRMAN. Proceed, Mr. O'Brien.

Mr. O'BRIEN. The next section on page 252, line 21, relates to powers of appointment. I think that can be summarized by saying that there has been a general tightening up of the provisions relating to powers of appointment in order to close the substantial loopholes that exist in the present law.

Page 256, line 23, relates to the proceeds of life insurance.

In the main, this section writes into the statute the rule announced by the regulations of the Treasury to the effect that if life insurance is purchased with premiums paid, directly or indirectly, by the decedent to the extent of his proportionate payment of the premiums, the amount of the life insurance is included in his gross estate.

Senator DANAHER. What is the theory of it, please?

Mr. PAUL. The theory of using the source of premium payments as a test of estate taxability?

Senator DANAHER. Yes.

Mr. PAUL. Up to January 10, 1941, the test had been whether the decedent insured had any interest in the policy at the date of death. That test did not work, it permitted avoidance of tax.

That is, it permitted an avoidance in that the insured would transfer the incidents of ownership to his wife, so that, outside of the

contemplation of death provision, there would not be any tax on his estate, although a great deal of insurance would be existing.

Thus section 811 (g) would be completely avoided.

About a year ago the Treasury put into effect a source of premium test. The *Bailey case* in the Court of Claims and various other courts originated the theory that the true test of taxability of insurance proceeds should be who paid the premiums.

Thereupon, the regulations were adopted, incorporating these decisions, and this statutory provision really enacts the rule. There is a double test now, either in proportion to payment of premiums there is taxability in the estate, and also if the decedent retains any incidents of ownership there is a taxability.

Senator GERRY. Mr. O'Brien, was the word "illegitimate" on line 4, page 254, in the statute before?

Mr. O'BRIEN. No; that is new.

Senator GERRY. What was the reason for that? An enlargement?

Mr. O'BRIEN. Yes; an enlargement. The thought was we were not altogether sure what the term "descendant" meant, so we decided to make it perfectly clear.

Senator BROWN. How does that rule, Mr. O'Brien, in regard to insurance exemptions operate in the community-property States?

Would it be taxable one-half or in its entirety?

Mr. O'BRIEN. Look at page 258, Senator. There is a whole rule on it. That is page 258, line 8.

Mr. PAUL. Page 258, line 8, section (4).

Senator BROWN. Oh, yes; I see it covered here.

Senator DANAHER. Did you mention, Mr. Paul, that it is only one-half?

Mr. PAUL. No; we carry over the rule that has just been discussed, that is used for estate-tax purposes, to the insurance provision there. If the husband's earnings are used to pay premiums that is a source of the premium payment.

Senator DANAHER. The more I hear of a community-property State, the better I like it.

I think we had better transfer to the Texas basis.

Senator CONNALLY. Well, that is pretty near right.

Senator BARKLEY. What connection does this life insurance company provision have with the $40,000 provision?

Mr. O'BRIEN. None, sir. That comes later on in the bill.

Senator BARKLEY. They raised it to $60,000 in the House bill?

Mr. O'BRIEN. That is right. They combined the two exemptions of $40,000 and $40,000 and made it $60,000.

Mr. PAUL. It cost us about $15,000,000 in revenue.

The CHAIRMAN. Every estate does not have insurance, so we actually get a raise of $20,000.

All right, Mr. O'Brien.

Senator BROWN. Is there any constitutional doubt about your right to enact subsection (4), on page 258, to determine whether the net income came from a source other than described?

Mr. PAUL. I do not think there is any doubt about that.

Senator BROWN. There has not been any decision on that subject?

Mr. PAUL. No; but there are a great many decisions in various cases, such as the *Jacobs case*, that deal with the joint-estate provision.

Senator TAFT. I do not quite understand, Mr. Paul, this provision in connection with the $40,000 exemption. Does that mean that insurance policies for which the decedent has paid the premiums are taxable regardless of the $40,000?

Mr. PAUL. The $40,000 used to be an exclusion irrespective of this other rule. The other rule applied only with respect to insurance over $40,000. Forty thousand dollars under the old rule, previous to this act, was exempt in any event, if it was payable to beneficiaries other than the insured.

Senator TAFT. Yes.

Mr. PAUL. That is a totally different matter from the question of taxing the insurance proceeds over $40,000.

Senator TAFT. Yes.

Well, now, if this was purchased with premiums paid by the decedent, it is taxable regardless of the exemption?

Mr. PAUL. Of course, the new rule was put in the statute which does not give the special life-insurance exclusion. That is why it is hard to reply to that, but if we had continued the old $40,000 exemption, the new rule would only apply with respect to insurance over the $40,000.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 259, line 6, relates to deductions which are not allowable in excess of the value of certain property of the estate. The provision disallows deductions to the extent that they exceed the value at the time of the decedent's death of property which is subject to claims. In any number of instances some property does not go to the executors, not included in the gross estate, but it has claims against it. If those claims are allowable against what is included in the gross estate, that means a reduction in the value of the estate for estate tax purposes. This says if those claims are against property not included in the gross estate, then the claims are not allowable for the purpose of deduction of the estate tax.

Senator GERRY. How does that work out? I do not think I understand it.

Mr. O'BRIEN. Take a case in which you have land that is subject to a mortgage, land that is worth $2,000 and that has a mortgage of $1,000 on it.

The land does not go to the executor. Now the claim of $1,000 may have to be paid by the executor, notwithstanding the fact that all that property is not in his hands. Therefore, you disallow——

Mr. PAUL. Just a minute. I think you are wrong.

Mr. O'BRIEN. All right, I am wrong.

Mr. PAUL. I think the best example of explaining that provision comes in connection with insurance. A great many State laws exempt insurance from the debts of the decedent. I remember one case where there was $2,000,000 of insurance in an estate but there were $6,000,000 of debts, but the debts were not enforcible against the insurance.

Senator CLARK. You mean the insurance was not made payable to the estate?

Mr. PAUL. No; this was not made payable to the estate. I presume, in most States they are made payable to the estate and in that case it would be different. Here was a family getting $2,000,000 of insurance with $6,000,000 of claims that could not be collected deductible against the insurance.

Senator CONNALLY. The theory there is that the beneficiary of an insurance policy takes that as his property and not the property of the estate.

Mr. PAUL. That is true. That is the theory of the estate law. That is true, Senator; but our theory is insurance is taxable over a certain amount. It is not fair to allow claims that are not enforcible against the assets of an estate to be deducted in computing the net estate. In other words, you can wipe out the net estate with claims that cannot be collected against certain assets in the estate.

Senator CONNALLY. On the other hand, if you do that, you make it impossible for me or anyone else, that wants to assure the income of property to your wife and your child, you make it subject to the hazards of my business which I am trying to protect?

Mr. PAUL. That is true now and was true before. All insurance over a certain amount is subject to the tax. In other words, the theory of these State laws does not come through to the Federal laws.

Senator BARKLEY. In other words, if I should die and leave $2,000,000—which I will not—and I owed a million dollars, that they could not collect out of my estate, what you are seeking to do is to avoid the beneficiary of my insurance being able to deduct an uncollectible debt against the estate from the amount of insurance she would receive?

Mr. PAUL. That is right.

Senator TAFT. Which is taxable.

Senator BARKLEY. Which is taxable.

Mr. PAUL. The same theory goes through to mortgages.

Senator GERRY. How would it work out in the mortgages?

Mr. TARLEAU. Suppose you have a mortgage on property worth $10,000 and the mortgage is $30,000 but the only property out of which the debtor can get his $30,000 is the mortgaged property; now, the property goes in at $10,000 in the estate tax return, and you have a $30,000 claim, the claim can only be satisfied against that property. To allow the excess of $20,000 to be deducted against other property would reduce the value of that property for estate tax purposes without any warrant, since that other property is not subject to the payment of that $20,000.

Senator TAFT. In that case you allow the deduction of $10,000 instead of $30,000?

Mr. TARLEAU. That is right.

Mr. O'BRIEN. Page 263, line 9, is the next change. It provides for the case where a claim against the estate is founded on a promise or agreement of the decedent to make a gift to a charity, then if that gift is made the estate gets a deduction for it just as if the bequest were made to the charity in the first place.

Senator TAFT. I wish it were done years ago.

Mr. O'BRIEN. It is not retroactive, Senator.

The CHAIRMAN. You say it is not retroactive?

Mr. O'BRIEN. It is not retroactive.

Senator BYRD. You mean by that if you sign a pledge to make a certain gift to a charitable organization, then the amount of the pledge can be deducted from the estate?

Mr. O'BRIEN. If the claim is enforcible against the estate and the amount given to the charity it is considered just as if you made the bequest to the charity in the first place by your will.

Page 264, line 12, makes numerous technical amendments to provisions relating to deduction on account of previously taxed property. The major change is to correct an error in the 1932 act under which, literally, the deduction is not allowed if the only tax paid is the additional estate tax of 1932. In addition to which there are a number of minor loopholes closed up in connection with that problem. These amendments are made retroactive because of that mistake, and the retroactivity of the amendment in the case of the allowance of the deduction is to the benefit of the taxpayer.

Page 269, line 15, permits a deduction for estate-tax purposes in case a disclaimed legacy passes to charity. The situation is one in which, let us say, the residuary legatee of the estate is the charity. The decedent's son disclaims his legacy, and the result is that the amount of that legacy goes to charity. This says the amount of that legacy going to charity shall be considered just as if it were a bequest directly to charity.

Senator CONNALLY. Does that apply to lapsed legacies? Suppose the son died, and there is no change in the will, that legacy would lapse?

Mr. O'BRIEN. Lapse?

Senator CONNALLY. Yes. It would be the same in legal effect as if he disclaimed?

Mr. O'BRIEN. Yes.

Senator CONNALLY. I do not know whether the word "disclaimed" would cover it or not.

Mr. O'BRIEN. Well, lapsed legacies now are covered.

The CHAIRMAN. That is already in the law.

Mr. PAUL. Confusion had arisen where there was not a disclaimer, and we are trying to correct that.

The CHAIRMAN. This disclaimer must be made prior to the date of the filing of the tax return; is that right?

Mr. O'BRIEN. Yes. This amendment is made retroactive and applicable to estates of decedents dying after December 10, 1939. That is the date of the enactment of the Internal Revenue Code.

Page 270, line 17. The estate-tax-deduction section is sprinkled all through with provisions relating to the charitable organizations to which a bequest or devise constitutes a deduction from the gross estate, and there is language which denies the deduction unless no substantial part of the activities of that organization shall be carrying on propaganda or otherwise attempting to influence legislation. We found one situation in which that language was not put in and inserted it to round out the whole.

Senator CONNALLY. Does that apply to columnists?

Mr. O'BRIEN. No. Page 271, line 8, reverses the credit for State inheritance taxes and gift taxes. Under the present law the gift tax is taken off first and the State tax is taken off second. This says that the State tax shall be taken off first and the gift tax second, the effect of which is to increase the amount of the credit on account of local State taxes.

Senator CONNALLY. The State has inheritance taxes where each heir pays a certain rate. In giving the credits I think you segregated those inheritances.

Mr. O'BRIEN. Yes.

Senator CONNALLY. They allowed deductions for five children or two children.

Mr. O'BRIEN. Whatever that tax is.

Mr. PAUL. You get a credit of 80 percent of the total local State or inheritance tax. There is no distinction made for the purpose of the credit. The trouble with the present statute here is you take the gift tax off first, and that reduces the amount against which the 80-percent rule works. We have reversed it, applying the 80-percent credit to the total tax, and then applying the gift-tax credit afterward.

Senator BROWN. I do not know whether I understood Senator Connally's question right. It seems to me your answer was not in accordance with my understanding of the Federal estate tax. The Federal estate tax is against the whole estate, not a tax on the inheritance.

Mr. PAUL. It is an estate tax, it is not an inheritance tax; that is right.

Senator BROWN. Most State taxes are based upon the inheritance received by the respective heirs. In other words, a State tax is much less on leaving five children when one dies than leaving one child. As far as the Federal Government is concerned, it is practically the same.

Mr. PAUL. I was speaking about the credit against the Federal tax.

Senator BROWN. I would like to get that straight. I myself have always felt the Federal Government ought to follow the State plan rather than the plan it followed. Your reply to Senator Connally's question, I think was contrary to what I understand.

Mr. PAUL. I was not trying to describe the nature of the Federal tax. You are not quite correct about that. The Federal tax is a tax on the estate. Whether or not it should be, that is another quesion.

Senator GELRY. The Senator said they were only on the beneficial interests. For example, in my State we have both a tax on the estate and on the inheritance beneficial interests.

Mr. PAUL. There may be two taxes, of course.

Senator BROWN. I do not know that that is the case in every State, but I think most States tax on the inheritance basis.

Mr. PAUL. I do not know what the general practice is now. I know there are some States which have turned from the inheritance to the estate tax.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 272, line 4, expands and clarifies the provision of the present law under which a transferee of a part of the estate of the decedent is liable for the estate tax if the estate tax is not paid.

Page 273, line 7, allows a specific exemption of $2,000 to estates of nonresidents, not citizens of the United States. Corresponding provisions relate to the filing of returns in such cases.

Page 274, line 11, section 413, relates to the estate-tax specific exemption. The effect of this is to strike out the existing specific exemption of $40,000, to strike out the insurance exclusion of $40,000, and to make the exemption $60,000 in all.

Senator CONNALLY. How much under this would be exempt from the estate tax?

Mr. O'BRIEN. Sixty thousand dollars, whether it is in insurance or whatever it is.

Senator CONNALLY. Whether it is in property or whether it is insurance?

Mr. O'BRIEN. No matter what it is.

Senator CONNALLY. It has been $40,000?

Mr. O'BRIEN. It has been $40,000 in insurance and $40,000 otherwise.

Senator BROWN. This reduces it from $80,000 to $60,000?

Mr. PAUL. This reduces it from $80,000 to $60,000 only if the decedent is insured to the extent of $40,000.

Senator CONNALLY. The effect of that is if a man leaves more than $60,000 worth of property he is denied the insurance benefit.

Mr. O'BRIEN. That is true. He gets just one $60,000. The insurance may be in the $60,000.

Senator CONNALLY. How is that?

Mr. O'BRIEN. He may have $40,000 insurance and $20,000 other property, making a total of $60,000.

Senator BROWN. What is the general effect of the exemption on revenue?

Mr. PAUL. The exemption costs about $15,000,000.

Senator BROWN. You lose rather than gain.

Mr. PAUL. We lose $15,000,000 in the estate-tax amendment and pick up $7,000,000 in the gift-tax amendment.

Senator TAFT. What about the effect of that other provision? Does that bring in any money, the one we were discussing awhile ago, put in by regulation in January?

Mr. PAUL. That is existing law. That is the way the law is now being administered. It will pick up revenue.

Senator TAFT. The law last year was administered differently. Do you know how much that change will increase it?

Mr. PAUL. No; I do not remember.

Senator BYRD. Does the Treasury recommend this amendment?

Mr. PAUL. The $60,000?

Senator BYRD. Yes.

Mr. PAUL. Both staffs agreed on that amendment.

Senator VANDENBERG. Did the House committee vote on exempting life-insurance premiums?

Mr. PAUL. No.

Senator BROWN. I want to ask one more question. Is any change being made in the rate of interest that is charged to decedent's estates that are unable to pay within the time limit?

Mr. O'BRIEN. No.

Senator BROWN. What is the rate now?

Mr. O'BRIEN. Four percent.

Senator BROWN. We modified that considerably a couple of years ago. No change has been made in that?

Mr. PAUL. No change has been made.

Senator BROWN. You can still extend it over a period of something like 8 or 9 years?

Mr. PAUL. Ten years.

Senator DANAHER. Mr. Chairman, a question.

The CHAIRMAN. Yes; Senator Danaher.

Senator DANAHER. What would be the effect if you had a single $80,000 general exemption?

Mr. PAUL. The effect, in the first place, would be it would cost us a lot of money in revenue. It would increase everybody's exemption, instead of permitting an $80,000 exemption simply to people who can take out $40,000 in insurance.

Senator DANAHER. Why should you make the equivalent of a capital levy on a man who saves and buys insurance?

Mr. PAUL. What is the estate tax but a capital levy?

Senator DANAHER. If you had a general exemption of $80,000, you would hit everybody, whether the man has insurance or not.

Mr. PAUL. Our theory is the levy should be general, but that $60,000 is enough in these times.

Senator TAFT. What is the advantage in that?

Mr. PAUL. We are losing $15,000,000.

Senator TAFT. I mean what is the corresponding benefit to us losing $15,000,000 and annoy everybody practically?

Mr. PAUL. We could easily remove that effect by reducing the $60,000.

Senator TAFT. Surely.

Mr. PAUL. The presence of the $40,000 special life-insurance exclusion seems to us to put into the statute a discrimination in favor of a certain type of investment, in favor of a certain type of person who can get insurance. Not all people can. The provision has permitted a great deal of avoidance of tax. It is quite fashionable now to get $40,000 insurance when your estate is in the millions.

Senator DANAHER. How much of the deficit-financing program is going to be handled by life-insurance companies?

Mr. PAUL. Oh, the insurance companies are buying bonds very heavily, but I do not see what the relation of what the insurance company does is to what is allowed as an exemption to a deceased insured man.

Senator TAFT. It seems to me this is the time to encourage investment in insurance. It seems an inappropriate time to make the change, particularly if we care going to lose $15,000,000 by it.

Mr. PAUL. If the insurance companies are investing heavily, that is right; but it is a matter of policy and it seems to us a bad provision in the statute not compensated for or without relation to the activities of the insurance companies for which we are very grateful.

Senator DANAHER. It would seem to me that while buying War bonds out of current income might be the very best way of curbing inflation, the second best way would be to buy from current income life insurance policies, because you are diverting from current funds money that might be spent in competition for the dwindling supply of consumer goods and at the same time you are making possible heavy investment in the Government bonds. If you continue the $40,000 exemption for life insurance, which certainly has been in the law for time immemorial, as far as I can recall, it seems to me you would be denuding the contract of one of the most difficult features.

Mr. PAUL. The insurance contract?

Senator DANAHER. Yes.

Mr. PAUL. We are very decidedly against the avoidance of tax by the insurance mechanism.

Senator CONNALLY. Under your new law if the man wants to take out $40,000 in an insurance policy he may do so?

Mr. PAUL. He may take out $60,000.

Senator CONNALLY. The only thing is he is denied then the additional $20,000 under the present law in other property. That is the effect of it?

Mr. PAUL. That is right.

Senator CONNALLY. If a man wants to take out insurance rather than buy a house or store, he can do it now?

Mr. PAUL. That is right.

Senator VANDENBERG. If we finally get around to it and we are pressed by the necessity of getting some increased revenue, would that be a logical way to increase your revenue, according to your philosophy of this situation, rather than to go back to the 40–40?

Mr. PAUL. You mean if we are pressed for the need of increased sources of borrowing?

Senator VANDENBERG. I mean when this bill is all totaled up and we need some more money, would you be too unhappy if we found $15,000,000 more by going back to the 40–40?

Mr. PAUL. Yes; I would prefer to lose the $15,000,000 to putting back that provision, which seems to me to do much more harm than losing the $15,000,000 in revenue.

Senator BARKLEY. It is not totally lost, anyway.

Mr. PAUL. Yes, it is. It is only fair to say it is, because the gift tax amendments do not really offset that.

Senator BARKLEY. I think you said it was $7,000,000.

Mr. PAUL. I said the total effect of this was a loss of $15,000,000 and then I said the gift tax amendments, which I must say are independent of this one, bring in $7,000,000.

Senator BARKLEY. You would offset the $15,000,000 loss in one category with a $7,000,000 gain in another?

Mr. PAUL. I was just doing that as a matter of convenience.

Senator BARKLEY. I wish you could do that in regard to all taxes. Even if you do not have this provision you would probably be changing the other.

Mr. PAUL. I have just been talking about them as being consolidated. They are frequently referred to together, the estate and gift taxes, and I volunteered the information that the net loss would be $7,000,000. If we wanted to make up the $15,000,000, we could reduce the $60,000 to $50,000, or something of that sort.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 274, line 19, is a purely technical amendment to the provision relating to the statute of limitations in the case of estate taxes, and a somewhat similar amendment is made to this provision as was made in the income-tax amendment to section 322.

Page 275, line 1, begins the gift taxes. The gift-tax amendments are applicable only to gifts made in the calendar year 1943 and succeeding calendar years.

The first amendment, section 452, page 275, line 7, writes into the gift tax a rule similar to the estate-tax rule relating to powers of appointment.

Page 277, line 1, provides that where there is a gift of community property the gift shall be considered the gift of the husband except that such amounts as are shown to have been received as compensation for personal services actually rendered by the wife, or that are derived originally from such compensation or from separate property of the wife, and in that case to the extent of such amounts the gift is considered the gift of the wife.

Page 277, line 11, reduces the exclusion from net gifts. Under the present law there is excluded from net gifts an amount equal to $4,000 for each year to any number of donees. That is reduced to $3,000 for 1943 and succeeding years.

Senator GERRY. Mr. O'Brien, what is that section (d) on page 275? What is the power of appointment?

Mr. O'BRIEN. I did not hear that.

Senator GERRY. How does that affect the question of the power of appointment? What does that do?

Mr. O'BRIEN. What it does is tax certain exercises and nonexercises of powers of appointment as a gift. I think the kind of thing you are interested in is where a bank or a trust company is authorized to appoint among a limited class of beneficiaries, the exercise of that power of appointment does not constitute a gift. The so-called fiduciary powers are not taxable under either the estate tax or gift tax.

Page 278, line 4, section 455, reduces the specific exemption of gifts. Under the present law you can give away, during your lifetime, $40,000 above the exclusions and not be subject to any gift taxes. This proposes that the so-called lifetime exemption for gifts be reduced from $40,000 to $30,000. All above $30,000 is taxable.

Page 279, line 3, makes the same kind of amendment to the statute of limitations on gift taxes as was made in the estate tax.

Page 279, line 9, makes purely a technical amendment to the gift tax under which stock in a domestic corporation owned or held by a nonresident citizen of the United States is deemed to be property situated in the United States for the purpose of the gift tax.

Page 279, line 19, begins the amendment to prior revenue acts and miscellaneous provisions. Section 501 allows as a credit for undistributed profits taxes levied under the 1936 Revenue Act the amounts which cannot be distributed in that the earnings and profits would not be adequate. It is a somewhat similar relief provision to the one I spoke of in connection with the personal-holding-company tax.

Page 281, line 21, imposes a stamp tax on certain insurance policies written by foreign insurance companies. In the main the tax is imposed at the rate of 4 cents on each dollar, or fractional part thereof, of the premium charged for indemnity, fidelity, and surety bonds, and for insurance other than life, and at the rate of 1 cent on each dollar, or fractional part thereof, of the premium charged for reinsurance on accident policies, annuity contracts, or contracts of insurance, and so forth. The attempt here is to equalize the situation between domestic corporations engaged in casualty and other kinds of insurance and foreign corporations where the insurance is taken out in the United States but the policy is countersigned abroad.

Senator VANDENBERG. Does that apply to Lloyds for instance?

Mr. O'BRIEN. Lloyds; yes.

Senator TAFT. That applies only to foreign insurance?

Mr. O'BRIEN. Yes.

Senator CLARK. Have you got any idea how much that raises on the present basis? I never got any estimate on the effect it would have on the revenue. It does not make any difference, it could be done anyhow.

Mr. PAUL. Yes; it could be done anyhow. I do not think that is a tremendous sum, but it should be done.

Senator CLARK. These foreign insurance companies are not subject to any regulations.

Mr. PAUL. That is right.

Mr. O'BRIEN. Page 284, line 21, provides that a suit against the collector of internal revenue shall be considered a suit against the United States in the application of the doctrine of res judicata; that is, in determining whether or not the issue is settled. It provides in such case, in a subsequent suit, the doctrine shall be applied as if the United States had been a party to the suit in all suits instituted after June 15, 1942, and in all proceedings before the Board of Tax Appeals, and on review of the decision of the Board of Tax Appeals, where the petition to the Board of Tax Appeals was filed after June 15, 1942.

Senator DANAHER. Have you had some cases?

Mr. O'BRIEN. We have had some.

Mr. PAUL. There is a case in the Supreme Court, the *Nunnally case*, just decided this last term, that held the other way. We are overruling the Supreme Court here in a way.

Senator DANAHER. Maybe we will not be.

Mr. PAUL. So far we are.

Senator BARKLEY. The Supreme Court interprets the law. They do not set down the principle.

Mr. PAUL. That is quite correct.

Mr. STAM. I might say the Supreme Court said in their opinion that the Congress ought to correct the situation.

Senator BARKLEY. So we are not overruling them; we are complying with them.

Mr. PAUL. We are complying with their suggestions.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 285, line 13, changes the name of the Board of Tax Appeals to the United States Tax Court and the names of the members of the Board to the presiding judge and the judges of the United States Tax Court.

The CHAIRMAN. Is that all it does?

Mr. O'BRIEN. That is all.

The CHAIRMAN. Is there anything that follows from that that does not follow from the present law?

Mr. O'BRIEN. I do not think so.

Senator TAFT. It does not give them life tenure?

Mr. O'BRIEN. It certainly does not give them life tenure.

The CHAIRMAN. Have they life tenure now?

Mr. O'BRIEN. No.

The CHAIRMAN. Does this give it?

Mr. O'BRIEN. It does not. The specific provision on page 285, line 21, says:

The jurisdiction, powers, and duties of the United States Tax Court, its divisions, and its officers and employees, and their appointment, including the designation of its officers, and the immunities, tenure of office, powers, duties, rights, and privileges of the presiding judge and judges of the United States Tax Court shall be the same as by existing law provided in the case of the Board of Tax Appeals.

Senator CONNALLY. The argument that was made to me about this thing was the reason they wanted to name it a court was in cities around the country the Federal judges frequently would not permit them to use the courthouses and quarters, they said it was not a court but just a commission, and if they let them have the courthouse they would have to let every other commission have it that comes down, or any other Federal agency.

Senator BARKLEY. Under this you would call them judges?

Mr. O'BRIEN. Yes; you would call them judges.

Senator CONNALLY. They like to be called judge instead of commissioner; is that about the upshot of it?

Mr. O'BRIEN. This statute says you have to call them judge. It says: "The Board shall be known as the United States Tax Court, and the members thereof shall be known as the presiding judge and the judges of the United States Tax Court." I do not know that you would go to jail if you failed to call them judge, but the statute says they shall be known as judge.

Senator CONNALLY. You say "rights and duties." It is not granting them any more privileges except those specifically set forth. I do not think we ought to take any chance on retirement privileges or exemption from taxation.

The CHAIRMAN. I do not know whether the question has been looked into, but if they are given the status of a court and become judicial officers, I think we ought to make an inquiry as to whether or not that would entitle them to retirement benefits.

Mr. O'BRIEN. Senator, they are not given the status of a court by this bill. This merely changes their name from the Board of Tax Appeals to United States Tax Court. To acquire the status of a court, what you would have to do would be to create a court, fire the existing members and appoint new members to a court, and this proposes no such thing. It says these people who are there, this organization shall be known as the United States Tax Court and the members shall be known as the presiding judge and judges of the United States Tax Court. Their status is unchanged, and I think subsection (b) of this section clinches the matter.

The CHAIRMAN. It would seem to; yes.

Senator CONNALLY. Under the present law all judges pay the income tax if appointed subsequent to the tax law?

Mr. O'BRIEN. Yes.

Senator CONNALLY. This would not exempt them in any way from that?

Mr. O'BRIEN. No.

Senator CONNALLY. All judges pay the tax?

Mr. O'BRIEN. That is right.

Senator CONNALLY. I mean after a certain date.

Mr. O'BRIEN. Yes.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 286, line 19, relates to the requirement of filing notice of a tax lien. Under the present law as construed by the Treasury all the Treasury need do to establish a tax lien is to file notice of a lien in the proper place designated by the State for filing notice of lien. There have been some recent decisions indicating that this statute has been interpreted to mean that the Treasury must comply with the requirements of State law in order to have a valid notice of lien, particularly the requirement that the property to which the lien will attach be particularly described. This goes back to the construction which the Treasury has heretofore put on the statute, which is merely that they have to file a notice of lien.

Senator CONNALLY. You mean that gets all his property regardless of whether they describe it or not?

Mr. O'BRIEN. That is right, all his property within the State.

Senator CONNALLY. It looks to me like not in his interest but the public interest, people dealing with the property, there ought to be some description that the proposed purchaser would know whether he is getting a piece of encumbered property or otherwise. Not for his advantage but to help innocent purchasers who might deal with it.

The CHAIRMAN. When the lien is filed it is notice that all of his property is subject to the assessment.

Senator CONNALLY. He does not have to file it in the county either. Now, you can file it in the Federal district court. Is that right?

Mr. TARLEAU. You have to file wherever the State requires you to file.

Mr. PAUL. The district court requirement only applies where there is no local requirement.

Senator BROWN. Does this mean the filing of a lien in one county would cover property in another county, where the State law requires it to be filed in the county where the property is situated?

Mr. PAUL. No.

Senator TAFT. The State must pass a specific law saying that the Federal Government can file the lien.

Senator CONNALLY. Most States have a general act covering the filing of any sort of a lien.

Senator TAFT. I think under the Ohio law you can file in the district court, because there is no Ohio law authorizing the filing of a lien, except a general judgment law. Of course, every judgment is a lien. They have to go through the district court anyway. It does not make any difference because they have to go through the district court anyway to file liens on real estate before Federal judges.

The CHAIRMAN. This seems specifically to require the filing under the State law, where the State has an act governing the filing. Otherwise, it can be filed in the office of the clerk of the United States district court for the judicial district where the subject of the lien is situated.

Senator BROWN. I think there is something to Senator Taft's point. By the use of the language, "filing of such notice," what you mean is a notice similar to the notices of liens required by the State law. It seems to me we ought to revamp that language slightly to conform with your desire.

Mr. PAUL. If we need to, we will. Certainly it is clear what our intention is.

Senator BROWN. Yes; it may mean they would have to pass a specific law with respect to Federal notice.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 287, line 18, suspends the period for the computation of interest in the case of nonresident alien individuals and foreign corporations, from the period beginning with the date of the enactment of this act to the period ending with the fifteenth day of the sixth month following the month of termination of the war, if the payment of their tax was prevented due to restrictions imposed on such individuals or corporations by any foreign country. The idea is this: The people cannot pay the tax, the foreign country prevents them from doing it, and therefore the running of interest is suspended for the period outlined.

The CHAIRMAN. Is there any provision made in the case of the man in foreign service, or military service, regarding the time of filing?

Mr. O'BRIEN. Yes, Mr. Chairman. On the next page, page 289, is an elaborate provision on that.

Senator TAFT. What about the case where there is a nonalien and the money cannot be paid because the United States Government has issued an order preventing it?

Mr. O'BRIEN. That is not included here. It is only where it is prevented by reason of the action of a foreign government.

Senator TAFT. I was wondering what you would do where the United States Government says it cannot be paid.

Mr. PAUL. They will all have to pay the taxes.

Mr. O'BRIEN. Page 288, line 10, exempts from the stamp tax conveyances and transfers of securities in pursuance of orders of the Securities and Exchange Commission under supplement R. The situation is that a public utility holding company is obliged to transfer stock to some other company or property in obedience to an order of the Securities and Exchange Commission. This says they will be exempt from the stamp tax on the transfer of that stock or property.

Page 289, line 10, begins a long series of amendments relating to the postponing of time during which certain acts are to be performed by reason of the war. What it does is done in the case of people who are outside the Americas. It says the time when they are outside, if they are outside for more than 90 days continuously, shall not be considered in determining the period in which they have got to file an income-tax return, file a petition to the Board of Tax Appeals, bring suit, or have a suit brought against them. There are elaborate provisions suspending the time in which those acts may be performed on both the side of the Commissioner and the taxpayer.

The CHAIRMAN. It is only in case they are in Central America or South America?

Mr. O'BRIEN. There is a further provision in the case of a soldier. The Commissioner may, by regulations, apply the provisions of this section to persons who, by reason of being in the military and naval service, are outside of the States of the Union, or the District of Columbia. So these provisions can be applied to the soldier who is in Venezuela or Trinidad or Bermuda.

Senator VANDENBERG. Are they outside the Americas when they are in the Philippine Islands?

Mr. O'BRIEN. Yes; they are outside the Americas when they are in the Philippine Islands. The Americas are roughly the North and South American continents, and the islands in the Caribbean.

Senator VANDENBERG. Does it not apply to the Philippine Islands?

Mr. O'BRIEN. It does apply to the Philippine Islands. Even when they are inside the Americas, outside of the States of the Union and the District of Columbia, the Commissioner may apply these provisions to such soldiers.

Senator DANAHER. It would bring in the civilian employees of contractors engaged in base construction?

Mr. O'BRIEN. If they are outside the Americas; yes, sir.

The CHAIRMAN. Does that mean that it is extended to a soldier or sailor in the armed forces, that the Commissioner may do so by general order?

Mr. O'BRIEN. By regulation; yes.

The CHAIRMAN. Would he also have the authority and power to deal with it in specific cases if the question arose, or must it be by general order?

Mr. PAUL. That could be dealt with separately in each regulation. That is the idea of doing it by regulation, to give flexibility to it.

The CHAIRMAN. I see. All right.

Mr. O'BRIEN. I take it he can lay down general standards in his regulations and then apply the general standards to specific cases.

Mr. PAUL. Yes.

Mr. O'BRIEN. Page 297, line 1, begins title VI, the excise taxes.

Senator VANDENBERG. Those are the sales taxes.

Mr. O'BRIEN. Excise taxes; they are not all sales taxes, Senator. The changes in these excise taxes are made effective on the first day of the first month which begins more than 10 days after the date of enactment of the act.

The first change is to increase the tax on distilled spirits from $4 to $6 per proof gallon. Similarly, a floor-stocks tax at the rate of $2 per proof gallon is imposed on distilled spirits held for sale on the date when these provisions become effective, that is, the first day of the first month which begins more than 10 days after the date of enactment of the act.

Senator BARKLEY. In view of the conversion of practically all the distilleries for the industrial alcohol plants for war purposes, what effect will this have on the revenues?

Mr. O'BRIEN. Of course the whisky tax is a tax on withdrawal.

Senator BARKLEY. I know, but if they are not making whisky but are going to make industrial alcohol for war purposes, which they are planning to do, over a period of years the amount that will be withdrawn from bonded warehouses for tax purposes would be reduced, I guess.

Mr. PAUL. We have tried to take that into consideration, Senator Barkley. Of course there is quite a supply, I understand about a 4 years' supply. We have tried to allow for that in our calculations of revenue.

Senator BARKLEY. I wondered if in the production of this commodity it would tend to offset the increase in the tax that you put on it?

Mr. PAUL. There would be a tendency in that direction. We tried to allow for it in our estimate.

Senator CONNALLY. If you have got a 4 years' supply of whisky on hand, the transfer over to industrial alcohol would not affect the supply very badly.

Senator BARKLEY. Not for the time being, but if the situation should last for 4 years the situation would be a hiatus.

Mr. PAUL. You are quite right.

Senator GUFFEY. If you wanted to buy by the case it would cost $6 more under the new law.

Senator BARKLEY. I was not interested in that phase of it.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 299, line 1, raises the rates on fermented malt liquors; that is, beer, and so forth, from $6 to $7 per barrel.

The CHAIRMAN. The floor stock provisions in both cases follow pretty generally the general law?

Mr. O'BRIEN. We follow the latest pattern of the floor stock provisions in the law in each case. The floor-stock rate of $1 per barrel of 31 gallons is to be paid for beer held for sale.

Page 300, line 18, section 604, raises the rates on wines from 8 cents to 10 cents per gallon and from 30 cents to 40 cents per gallon, and from 65 cents to a dollar. A similar change is made in the rates on sparkling wines, liqueurs, and cordials.

Senator CONNALLY. Does that amendment provide the same relationship between the different kinds of wines that we had formerly? We always had a query here on how much each wine should have.

Mr. PAUL. I am not sure it does. There was a good deal of discussion on that point. The original Treasury proposals were not followed. The original Treasury proposals were more greatly reduced on still wine.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. A floor stocks tax equal to the increase in rates of the tax on wines is imposed on wines which are held for sale on the effective date of the title.

Page 302, line 9, section 605, relates to the tax on tobacco, cigars, cigarettes, and cigarette papers and tubes. The rate on smoking tobacco has been raised from 18 cents per pound to 24 cents per pound.

Senator BARKLEY. Let me ask you about that. The tax on tobacco, unmanufactured, where the farmer either himself or through an agent employed by him sells tobacco for consumption direct to the consumer, whether it is chewing or smoking tobacco, it is put up in packages for mailing purposes, the mail-order business, the same type of tobacco can be used for chewing and for smoking. I mean, many people chew tobacco that has not been put up in packages and sweetened and treated and medicated, and to make them smell good. There is no difference in the cost of producing that tobacco and putting it up in these packages and wrapping it up for mailing purposes as between the type that is chewed and the type that is smoked; therefore, why make the difference in this rate? Why make the difference in the rate in the type of tobacco where the grower is permitted under the law to sell it to the consumer directly, either himself or by the employment of an agent?

Mr. O'BRIEN. I have had the same trouble myself, Senator. I asked the Treasury people and they said they could distinguish between smoking and chewing tobacco.

Senator BARKLEY. They could?

Mr. O'BRIEN. Yes.

Senator BARKLEY. I do not see how it is possible in that particular type where it is all put up alike; I do not see how it is possible to distinguish it. A man can crumble it up and put it in his pipe and smoke it, or he can wad it up and put it in his mouth and chew it.

Senator CLARK. Some chew and smoke the same tobacco at the same time.

Senator CONNALLY. Don't they sometimes chew it and then dry it up and smoke it?

Senator BARKLEY. You are probably thinking about the cow that chews her cud twice.

The CHAIRMAN. Did not the State Department raise some question about the tobacco tax?

Mr. PAUL. I did not hear the question.

The CHAIRMAN. I say, has not some question been raised by the State Department with reference to the tobacco tax?

Mr. PAUL. With reference to cigars; yes.

The CHAIRMAN. Exclusively in regard to the cigars?

Mr. PAUL. Just cigars; yes.

The CHAIRMAN. That has been taken care of?

Mr. PAUL. The problem is being considered by the Treasury. That was the Cuban situation.

The CHAIRMAN. That was the Cuban situation?

Mr. PAUL. That is right.

Senator BARKLEY. I am going to make some further inquiry about this difference later on.

Mr. PAUL. I would be glad to supply that information. We haven't got our tobacco people here today, I am sorry to say.

Senator GUFFEY. Mr. O'Brien, on page 303, that difference in cigar prices, what have you to say in regard to that?

Mr. O'BRIEN. I am just coming to it, Senator. That is the new cigar rate, beginning on page 302, line 22, and running over to page 304, line 7.

Senator GUFFEY. What about those cigars that formerly sold at 2½ cents? What was the cigar tax on that?

Mr. O'BRIEN. At 2½ cents, Senator?

Senator GUFFEY. Retailed two for a nickel.

Mr. O'BRIEN. $2 per thousand.

Senator GUFFEY. You raised that how much? 50 cents?

Mr. O'BRIEN. $2.50 per thousand; yes.

Senator GUFFEY. The man who manufactured cigars for 4 cents, what was the former price on them? It is $3.50 now; and what was it formerly?

Mr. O'BRIEN. It was $2 and is made $3.50.

Senator GUFFEY. $2?

Mr. O'BRIEN. Yes.

Senator BARKLEY. May I ask how much increased revenue will this section 2,000 (a), on page 302, bring in? I do not want to delay it, but if you have it at hand I would like to have it.

Mr. O'DONNELL. $11.8 millions increase.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. The next change is the tax on cigarettes, page 304, line 8. The small or standard cigarette rate is raised from $3.25 per thousand to $3.50. The large cigarette is raised from $7.80 per thousand to $8.40.

Senator BYRD. May I ask, is that in accordance with the recommendation of the Treasury?

Mr. PAUL. It is not. The Treasury recommended a differential rate as between the cheap—well, the 10-cent cigarette and the 15-cent cigarette, but that was turned down by the committee.

Senator BYRD. What was the recommendation?

Mr. PAUL. The Treasury recommendation on the 10-cent brand was $3.50 as against the present $3.25. We proposed to raise the present $3.25 applicable to the 15-cent brands to $4. In other words, both brands get taxed $3.25 now. We proposed to raise the 10-cent brand to $3.50, and the 15-cent brand to $4, but the committee put a tax of $3.50 on both.

Senator BARKLEY. We had somewhat the same proposition up here some years ago, we put a graduated tax on cigarettes according to the price, and nearly all of the tobacco growers in my State came up here and protested against it on the ground that it drove down the price on the better grades of tobacco. I do not know what their attitude would be on this.

Mr. PAUL. There was a good deal of discussion on that point.

Senator TAFT. What does the language "tobacco or any substitute therefor" mean? What substitutes are there?

Mr. O'BRIEN. I do not know. It is old language.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 304, line 14, raises the tax on cigarette papers and tubes. Under the present law packages of cigarette papers or tubes containing not more than 25 papers or tubes are not taxed. This proposes a tax of one-half cent. Where the package contains more than 25 papers or tubes, or fractional part thereof, the tax is one-half cent for each 25 papers or tubes or fractional part thereof.

Subsection (e) imposes a floor-stocks tax equal to the increase in the rate of tax on the articles which are increased by this section.

Subsection (f) on page 306, line 9, permits additional sizes of packages for tobacco and snuff. Under the present law there was a limitation on the size can in which the tobacco may be packaged. This permits liberality in the case of the small cans.

Senator BARKLEY. Is that liberality toward the canner?

Mr. O'BRIEN. I understand the situation is this, that if the tobacco manufacturers can put up the tobacco in the smaller-size cans, they would still be able to sell the can of tobacco for the same price as the old can sold for notwithstanding the increase in the tax on tobacco.

Senator BARKLEY. That reduces the size of the can?

Mr. O'BRIEN. Yes.

Senator BARKLEY. And therefore the contents?

Mr. O'BRIEN. Yes.

Senator BARKLEY. The consumer gets less tobacco at the same price?

Mr. O'BRIEN. That is what they hope.

Senator BARKLEY. But the Government gets a little more of it?

Mr. O'BRIEN. I understand so.

Senator BARKLEY. The fellow that smokes gets stuck.

Senator CONNALLY. Gets smoked out.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. The next section, section 606, relates to the telephone and telegraph tax. Under the present law where the telephone toll charge is more than 24 cents, the tax is 5 cents for each 50 cents or fractional part of it. This tax is made an ad valorem tax of 20 percent on the amount that is paid. In cases in which the telephone subscriber is billed for the charge the tax applies to the entire amount of the charge under the bill and not separately to each of the items of toll charge. On telegraph, cable, and radio dispatches or messages, the tax has been raised from 10 percent of the amount paid to 15 percent of the amount paid. There has been a fundamental change in the whole telephone and telegraph tax. Under the present law the tax is paid on messages originating within the United States. This proposes a tax on the amount paid in the United States regardless of where the message originated.

The tax on leased wires, teletypewriter, and so forth, has been raised from 10 to 15 percent, and the tax on local telephone service for which a bill is rendered is increased from 6 to 10 percent.

Senator VANDENBERG. Is there any change in the definition of leased wires?

Mr. O'BRIEN. No; I do not think so, Senator—just a minute. Yes; my attention has been called to the fact that one of the double taxes under the leased wire taxes has been eliminated.

Page 310, line 4, section 607, photographic apparatus. The rate has been increased from 10 to 25 percent on lenses, photographic apparatus, and so forth, and on unexposed photographic films and plates, the rate has been raised from 10 to 15 percent. There have also been exempted from the tax cameras weighing more than 4 pounds exclusive of lens and accessories.

Senator VANDENBERG. What is that?

Mr. O'BRIEN. You remember that great debate about the big cameras in connection with the last revenue act.

Senator TAFT. Why is the camera tax so high, 25 percent? Is not that about the highest tax?

Mr. PAUL. It is. Well, it is one of the luxuries, and it is using a scarce material to some extent.

Senator TAFT. Twenty percent ought to be the highest put on that, instead of 25 percent.

Mr. O'BRIEN. Page 310, line 16, raises the tax on lubricating oils from 4½ cents a gallon to 6 cents a gallon.

Senator VANDENBERG. The Treasury is in favor of all these sales taxes?

Mr. PAUL. All these excise taxes, all except the freight and express.

Mr. O'BRIEN. Page 310, line 20, raises the tax on transportation of persons by ordinary coach and by Pullman from 5 percent of the price paid for the transportation to 10 percent of the price paid for the transportation.

Page 311, line 1, section 610, provides for a refund of tax in the case of organs, which are subject to the taxes on musical instruments that you put on last year, where the contract for the organ was entered into before October 1, 1941.

Section 611, page 311, line 9, terminates some of the excise taxes which you put on last year, first the tax on electric signs; second, the tax on rubber articles; third, the tax on washing machines of the commercial type; and, fourth, the tax on optical equipment.

Senator TAFT. Was that because of lack of yield?

Mr. PAUL. For instance, the electric sign tax seemed to be administratively impossible.

Senator TAFT. Have we got a table of the estimates last year on these sales taxes, and the actual result? Is there any way we get a comparison and see how the different ones worked out? It would be very interesting to have it and put it in the record.

Mr. PAUL. A comparison of the kind which you suggest, Senator Taft, is practically impossible to make and, if made, would not be meaningful. For these excise taxes, the repeal of which we now suggest, the estimates presented at the time of the passage of the revenue bill of 1941 were based on a full year of collections at the fiscal year 1942 levels of business. Since the Revenue Act of 1941 was effective October 1, 1941, with respect to these taxes, collections were received from November 1941, through June 1942. Of course, we could now make an estimate of what would have been received had the act been effective on June 1, 1941, but such a comparison would not be significant.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 311, line 22, relates to the affixing of cigarette stamps in foreign countries. It provides if the Government of a foreign country permits the stamps of that country to be attached in this country to cigars and cigarettes going there, then we will permit the attachment of our cigarette and cigar stamps in the foreign country to cigars and cigarettes that are coming here.

I understand it relates particularly to Cuba. The desire of the State Department is to permit the affixing of internal revenue stamps to cigarettes, and so forth, in Cuba.

Page 312, line 11, section 613, exempts the insignia, cap devices, chin straps, and so forth, for use in connection with the uniform of the armed forces of the United States from the jewelry tax. It also exempts from the jewelry tax smokers' pipes if the only part of the pipe which is made of precious metal is the part which is essential to the functioning of the device.

Page 313, line 1, section 614, exempts from the definition of "sale" water coolers the lease of which was made or renewed by the manufacturer or importer before October 1, 1941.

Section 615 exempts from the tax on business machines, cash registers of the type used for registering over-the-counter retail sales.

Senator CLARK. Is that a recommendation of the Treasury?

Mr. PAUL. It is not. One of the committee recommended that.

Senator DANAHER. Why should there be an exemption of cash registers and not business machines generally?

Mr. PAUL. I do not know any reason why there should, except that it was done.

Senator TAFT. Did the Treasury recommend the elimination of these other taxes?

Mr. PAUL. Yes; it did. You mean the rubber and electric signs?

Senator TAFT. Yes.

Mr. PAUL. Yes.

Mr. O'BRIEN. The next change, section 616, exempts from the tax on transportation of oil by pipe line certain what might be called local transportation within bulk plants or refinery or terminal plants if that transportation is not part of the through taxable transportation of oil.

Section 617 revamps the tax on so-called coin-operated amusement and gaming devices. The first major change is to include different kinds of amusement devices, not limiting it as the present law does to so-called pinball and similar amusement devices.

A further change is that in the case of a vending machine which operates by means of the insertion of a 1-cent coin, if that dispenses a prize of the value of not more than 5 cents, then it is to be classified at the $10 rate rather than the $50 rate. In other words, it is not a gaming device; it is classified as an amusement device.

Senator BYRD. Has the rate of tax been changed?

Mr. O'BRIEN. The rate of tax has not been changed.

Senator BYRD. What is the tax?

Mr. O'BRIEN. $10 and $50; $10 on the amusement devices, and $50 on the slot machines.

A further amendment provides that there shall not be a requirement that there be posted a list of special taxpayers who pay the tax on the slot machines. Under the present law it is required that there be posted in the collector's office a list of all taxpayers who are paying a special tax; that is, an occupational tax. This says that that list shall not include those paying the slot-machine tax.

Page 315, line 11, section 618, imposes a tax of 5 percent on the total amount that is received in the pari-mutuel or totalizator pool.

Senator DANAHER. When you say "total amount," does that include breakage?

Mr. O'BRIEN. I do not know, Senator. I do not know anything about that.

Senator TAFT. You mean they go broke?

Senator DANAHER. I do not know.

Mr. SURREY (Stanley Surrey, Assistant Legislative Counsel, Treasury Department). I could explain that.

Senator BARKLEY. What breakage are you talking about? Is it financial or physical?

Mr. SURREY. The tracks pay off in even multiples of 10 cents or 5 cents. The difference between the odd amount of pennies and 5 and 10-cent multiples is generally retained by the track, and that is what is called breakage.

Senator CLARK. What is the revenue?

Mr. PAUL. A little over $23,000,000.

The CHAIRMAN. All right, Mr. O'Brien.

Mr. O'BRIEN. Page 316, line 17, relates to sales under chattel mortgage.

Senator TAFT. One other question I had in mind. Is there any other means of wagering? Supposing you had an old-style race track and wagering—there may not be any left; I don't know—does this discriminate against the pari-mutuel?

Mr. TARLEAU. Yes; it does to the extent there are other types of betting going on. This is the one that is capable of administration. Chasing around to the pool halls, barber shops, and so forth, for a tax on those other types of wagers would be impossible.

Senator TAFT. I was wondering whether the race track shifted over from the pari-mutuel to some other system.

Senator BARKLEY. What is the totalizator? Is that where you total the horses?

Mr. PAUL. I am afraid our specialist will have to answer that.

Mr. SURREY. That refers to the machine which performs the computations.

Mr. O'BRIEN. Page 316, line 17, section 619 provides that where, under the existing excise taxes, an article is sold under chattel mortgage arrangement providing for the payment of the sales prices in installments, then instead of collecting the tax on the amount of the sale at the time when the sale is made, on the entire amount, you collect the tax on the installments as they come in. In short, it provides the same treatment as it provided in the case of a conditional sale. I understand in some States they do not have a system of conditional sales, but have a chattel mortgage arrangement which is very similar to it. You pay the tax on the installments and not on the total amount at the time the article is sold.

Page 317, line 7, repeals existing taxes on the occupation of being engaged in the manufacture of mixed flour and on the manufacture and sale of mixed flour.

Senator CLARK. Is that the same old controversy about mixed flour?

Mr. O'BRIEN. I understand that has all died out, Senator.

Page 317, line 11, is the tax on the transportation of property. It is a tax equal to 5 percent of the amount paid for tranportation, except that in the case of coal the tax is 5 cents per long ton. The tax is to be paid by the person paying for the transportation. The tax applies only where the transportation charge is paid to the person engaged in the business of transporting property for hire, and where the payment is made to a freight forwarder the tax is on the amount paid to the freight forwarder, but there is no tax on the amount paid by the freight forwarder to the transportation company.

Senator BYRD. How much revenue does that bring in?

Mr. PAUL. $163,000,000 on a net basis. By that I mean when you charge this tax you must take into consideration a deduction for other purposes. That is the true way to figure it.

Senator BYRD. The Treasury is opposed to it?

Mr. PAUL. It is.

Senator CONNALLY. It is opposed to the tax, you mean, on transportation?

Mr. PAUL. Our reason for being opposed to the tax is we have been told by O. P. A. it would interfere very seriously with price ceilings.

Senator VANDENBERG. You were also told by W. P. B. when you went over 80 percent on excess-profits taxes it would interfere with the war effort?

Mr. PAUL. That is why we came in here with a proposal for the post-war credit.

Senator BARKLEY. What does this transportation tax return in money?

Mr. PAUL. About $163,000,000 on a net basis.

Senator DANAHER. Mr. Chairman.

The CHAIRMAN. Yes, Senator Danaher.

Senator DANAHER. When do we expect to take up supplement U, commencing at page 159?

The CHAIRMAN. We are waiting for Mr. Rice.

Senator CONNALLY. Is that all on the excise taxes?

Mr. O'BRIEN. That is all.

Senator CONNALLY. I certainly want to express my appreciation. I do not find any excise tax on husband and wife in community property.

The CHAIRMAN. Is Mr. Rice here now?

Mr. O'BRIEN. I hoped he would be here before now.

The CHAIRMAN. Mr. Rice did not come in. Could you explain it?

Mr. O'BRIEN. I do not know enough about it to explain it.

The CHAIRMAN. What is this? The withholding provision?

Mr. O'BRIEN. Yes.

Mr. PAUL. If you want to go on, or I think Mr. Tarleau or Mr. Stam could explain it.

Mr. O'BRIEN. We might take up a few more things in connection with the freight taxes.

First, transportation by or for the United States is exempt, and, second, whereas the other amendments in this title go into effect the 1st day of the first month which begins more than 10 days after the date of the enactment of the act, this tax is postponed to the 1st day of the first month which begins more than 30 days after the date of the enactment of the act. It gives a little more time to prepare for this tax.

Furthermore, everybody who engages in the business of transporting property for hire is required to register with the collector of internal revenue in the district in which his principal place of business is located.

I think that is all in connection with this.

I understand Mr. Rice is on his way.

The CHAIRMAN. Is it the pleasure of the committee to hear Mr. Rice and then adjourn until Monday?

Senator BARKLEY. Yes.

The CHAIRMAN. Senator Davis wished to ask the Treasury a question.

Senator DAVIS. Mr. Paul, yesterday I happened to be out of the committee meeting when you were discusssing the section relating to the taxable years embracing the calendar years. In regard to these changes, I would like to ask the Treasury whether the accounting difficulties of the Treasury would be greatly increased under this change in the law?

Mr. PAUL. I do not know whether I would use the word "greatly," but they will certainly be increased.

Senator DAVIS. How much? Can you give us an estimate on that?

Mr. PAUL. It is pretty hard to estimate accounting difficulties, but there will be a considerable amount of new work that has to be done on returns to be filed. However, it seems to me that those difficulties and the other more serious problems in connection with that section—by the more serious problems I refer to the fact that the people have committed themselves on dividends and inventory problems—are probably worth the fairness that is achieved and the additional amount of revenue that is derived.

Senator DAVIS. Inasmuch as there is a shortage of help around here, would not there be some advantage to the Treasury in trying to stagger it?

Mr. PAUL. We do not have any requirement in this section depriving taxpayers of the fiscal year. All this section does is put the fiscal-year taxpayers on a par with the calendar-year taxpayers. There is no attempt—I want to make this clear—to say to taxpayers: "You cannot use the fiscal year any more."

Senator TAFT. "You can have it, but!"

Mr. PAUL. That water is pretty much over the dam, Senator. If you have a fiscal already established, then you are up against this rule and you are depending on what the committee does.

The CHAIRMAN. All right, Mr. Rice, if you will explain to us briefly the provisions of supplement U on page 159 of the bill.

STATEMENT OF STEPHEN E. RICE, OFFICE OF THE LEGISLATIVE COUNSEL, UNITED STATES SENATE

Mr. RICE. This is the supplement that provides for collection at the source on wages, bond interest, and dividends which are includible in gross income. It applies only to individuals, partnerships, trusts, and estates. It does not apply to dividends or bond interest paid to corporations or other organizations which are exempt from tax.

The problems the Bureau expects to encounter in administering the supplement are similar in a great many respects to the problems they have encountered in connection with social-security taxes. In one respect the problem under supplement U has greater administrative complexity than under social security because the supplement U tax is merely a collection device and if at the end of the year $50 has been withheld from the wages of an individual but because he was laid off during the year or because he suffered a large deductible loss and had no tax liability, the $50 withheld at the source would have to be refunded to him. There is no such problem under the social-security taxes since an employee's wages are subject to the tax whenever they are paid and the tax money goes into a trust fund to pay him benefits in later years.

The supplement has 8 sections beginning with section 425 and ending with 432. Section 425 contains the definitions used in the supplement.

Section 426 contains the requirement of withholding 5 percent in 1943 and 10 percent thereafter.

Section 427 contains the rules for determining the status of individuals for purposes of the withholding deduction, whether they are married, single, or head of a family. The cases where both husband and wife work. The rules applicable when the status is changed.

Section 428 specifies the person who is required to withhold the tax and includes officers and employees of the United States and the States.

Section 429 requires the withholding agent to make return and pay the tax quarterly.

Section 430 deals with receipts required to be furnished the employee by his employer showing the wages paid and the amount of tax withheld and collected. Employers of less than eight are required to give a receipt each pay day and also a receipt at the end of the year covering the whole year. Employers of eight or more are required to give the receipt only at the end of the year. The theory upon which the

smaller employer must give a receipt with each payment of wages while the larger employer must give it only once a year is based upon the fact that as a general rule employment is steadier with the larger employer. His bookkeeping is more efficient. There are not so many "fly-by-the-night" larger employers. The experience under social security led the Bureau to recommend that smaller employers give the receipt with each payment of wages.

Section 431 requires every employee to furnish withholding deduction certificates to his employer showing whether he is single, married, or a head of a family, so that the employer will be able to compute the withholding deduction and thus be enabled to withhold the correct amount of tax.

Section 432 provides for a fine of $1,000 and 1 year and a civil penalty of $50 if the withholding agent refuses to furnish receipts to his employees or furnishes false ones. It also provides a $500 fine and 1 year where the employee willfully fails to furnish the deduction certificate to his employer or willfully supplies false information with respect to it.

Senator VANDENBERG. Does not this involve a tremendous bookkeeping burden on the part of every employer and the Government itself?

Mr. RICE. Not too much in addition to what they already do, Senator.

Under title II of the Social Security Act, as you know, that covers one employee or more. All of the employers have had 7 years' experience with that, and they will be in a much better position to do this job than they were to do the social security job back in 1936 when it first went into effect.

Senator VANDENBERG. Yes; but they are in the position where the multiplicity of work placed on them by the Government is just about ready to break their backs.

Mr. RICE. This will be an added burden; there is no question about that.

Senator BARKLEY. To what extent will this change involve the amount of revenue collected?

Mr. RICE. I think you will have to call on the Treasury for that information.

Mr. PAUL. This will not change the amount of revenue in one sense. Let me make this clear. This is not an additional tax, a withholding tax, it is a collection in advance.

Senator BARKLEY. It will make a difference, whatever difference it will amount to between getting it at the source and running the risk of not getting it at all at the end of the year.

Mr. PAUL. There is that risk, that is right. We cannot estimate that. What I can say in answer to your question is we will collect an advance payment of one and one quarter billion under the 5 percent and two and one-half billion under the 10 percent of the following year.

Senator VANDENBERG. Will it not involve a tremendous additional administrative expense to you?

Mr. PAUL. It will certainly involve an additional administrative expense. Whether it is tremendous is a problem that has to be worked out.

Senator TAFT. How many withholding agents will there be?

Mr. PAUL. You mean withholding agents in a nontechnical sense? That is the person who investigates these returns?

Senator TAFT. No; how many will collect the taxes and pay them to the Government for somebody else?

Mr. RICE. All the employers of the country.

Mr. PAUL. About two and one-half million employers.

Senator TAFT. How many employees? 50,000,000?

Mr. PAUL. I am told something like 27,000,000 persons would have taxes withheld at the source. There is exempted from this, farm labor and domestic labor, so that, together with the exemptions allowed before withholding begins, cuts down the number to a very large extent.

Senator TAFT. There will be two and one-half million more returns. How often do they pay it over to the Government?

Mr. RICE. Quarterly.

Mr. PAUL. Quarterly.

Senator TAFT. There will be 10,000,000 new returns practically over what they have now.

Senator VANDENBERG. Is the Treasury in favor of this provision?

Mr. PAUL. It is very much in favor of it. It regards it as extremely important.

Senator CLARK. This is not a revenue measure.

Mr. PAUL. It is definitely important from the anti-inflationary standpoint. It is also important in the sense which is suggested by Senator Barkley, in that we will collect some money from people who would not otherwise make any report on income. We cannot get those fellows unless we have the collection-at-the-source method.

It is important in another sense, because with our tax rates going up, it is important that the taxpayers get on a current basis with respect to the payment of their taxes.

Senator CLARK. They pay 2 years' taxes in 1.

Mr. PAUL. That is why we made it only 5 percent the first year.

Senator TAFT. Or 3 years' taxes in 2.

Mr. PAUL. We tried to meet that problem by having the first year only 5 percent, in order to get over the hump of the first year.

Senator TAFT. It seems to me we are permanently adding to the revenue during the war $2,500,000,000. I cannot see why that money for all time to come will not be an additional $2,500,000,000. It will serve the purpose of an additional $2,500,000,000 tax.

Mr. PAUL. That is true. We have the large number of returns provided for under this bill, something like 30,000,000 returns filed, and it seems to me it is absolutely essential to the operation of the tax that we have this system in the bill.

Senator CONNALLY. Mr. Paul, I readily agree with your theory that a good many taxes will be gotten this year that would not otherwise be gotten, because the taxpayers in the lower brackets have never been used to paying taxes, do not know about it and would not pay it; but, on the other hand, I understand there are 150,000 delinquents in the social-security taxes of employees. Is that true?

Mr. PAUL. Yes; that is right.

Senator CONNALLY. A similar situation probably would obtain in this respect.

Mr. PAUL. We will have a delinquency problem, Senator Connally.

Mr. RICE. Senator—if I may interrupt there, Mr. Paul?

Mr. PAUL. All right.

Mr. RICE. There is one difference between the social-security employer not paying and an employee under the withholding system not paying, because the employer at the end of the year has to pay an income tax anyhow, if he is taxable. You might say he is putting it in a savings bank until the time comes to figure his tax liability.

Senator CONNALLY. He is allowed a deduction, of course, on whatever he has paid.

Mr. PAUL. If the employer withholds it; yes.

Senator BYRD. What you do is that in 1943, for example, he has got to pay the 1942 tax, and then he pays the 5 percent in 1943 on his income in 1943. That pyramids it.

Mr. RICE. Then, on March 15, 1944, he is entitled to deduct from his tax liability then payable the amount withheld in 1943.

Senator BYRD. It does change the collection in the sense that it anticipates it.

Mr. RICE. That is right.

Senator BYRD. Because, otherwise, under normal conditions he would not pay his 1943 tax until 1944—March 15, 1944.

Mr. RICE. That is right.

Senator BYRD. I want to ask Mr. Paul of the Treasury if they have made an allowance for that additional income that would come in 1943 by reason of this anticipation within that calendar year?

Mr. PAUL. Yes; that affects our estimate when you come to collection basis.

Senator BYRD. I mean, have you in your estimates of revenue to be derived in the next fiscal year made that allowance?

Mr. PAUL. Yes. Mr. O'Donnell said yesterday that the added yield of the House bill on the collection basis was a little over $4,000,000,000, and in the second half of the fiscal year this collection will be in operation—collection at the source will be in operation—if this bill is adopted. That has been taken into account.

Senator BYRD. What will be the revenue from this 5 percent that you collect in 1943 on the 1943 income?

Mr. PAUL. A billion and a quarter.

Senator BYRD. Then the next year you have the same performance, except you make it 10 percent?

Mr. PAUL. That is right; that will make it two and one-half billion then.

Senator BYRD. That is an anticipation of revenue which normally would not come in until the next year.

Mr. PAUL. Almost a year later. It brings the revenue in practically a year earlier than under the present system.

Senator BARKLEY. After you get started out on a dead level, you collect practically the same every year, assuming the wages would be the same.

Mr. PAUL. That is right, if the rate would be the same.

The CHAIRMAN. Was this withholding rate of 5 and 10 percent recommended by the Treasury?

Mr. PAUL. It was.

Senator BYRD. Now, this billion and a quarter additional that will come in the calendar year 1943, that has been allowed for in your revenue estimate as an income?

Mr. PAUL. Yes.

Senator BYRD. How much will that increase the income in 1943 for this entire bill?

Mr. O'DONNELL. As I understand it, the tax is to be collected by the withholding agents currently and returned to the Treasury quarterly. In one of the tables which I introduced yesterday in the record as exhibit G, you will find a footnote which shows that of the individual income tax collections of $6,840,000,000 in the fiscal year 1943, the receipts of the withholding tax in respect of calendar year 1943 incomes which are included amount to $319,800,000. That represents the receipts of 3 months' withholdings on 1943 calendar year incomes as the first quarter's withholdings are all that will be received during the fiscal year 1943. We have not attempted to forecast business and income levels beyond the fiscal year 1943, but if we assume that the same levels prevail in calendar year 1943 as are forecast for fiscal year 1943, then the withholdings for a whole year would amount to $1,285,000,000, and that will not all be received by the Treasury until the first quarter of calendar year 1944.

Senator BYRD. There will be a greater anticipation in the fiscal year 1944. You get four quarters.

Mr. O'DONNELL. That is right. You get receipts of one quarter's withholding at the 10-percent rate so that the Treasury will receive about $1,600,000,000 withholdings during fiscal year 1944, although as I have said we have not attempted to forecast accurately that far ahead. Of course the $1,285,000,000 withheld during 1943 is an offset reducing the payments due in fiscal year 1944 on calendar year 1943 incomes. The end result is receipts of 3 month's withholdings at the 10-percent rate or some $600,000,000, but credit against the March payments included some $300,000,000 withheld and received in the previous fiscal year so that it results in a net additional increase of some $300,000,000 in individual income tax collections during the fiscal year 1944.

Senator BYRD. Your estimates have allowed for that?

Mr. O'DONNELL. That is correct, as Mr. Paul describes it, on the collection basis for fiscal year 1943, which is as far into the future as we have forecast. All future Budget estimates would take collection at the source into account if this method becomes law.

Senator BYRD. Your position is—and I assume it is correct—that this is an anticipation and not an additional revenue?

Mr. O'DONNELL. That is correct. It is another way of collecting a tax, the liability for which is fixed by law now.

Senator DANAHER. Mr. Chairman.

The CHAIRMAN. Yes; Senator Danaher.

Senator DANAHER. I would like to ask Mr. Paul if we have authority in the law to hold liable, under threat of a penalty, the officers of a State, Territory, or political subdivision thereof, who refuse to withhold?

Mr. PAUL. Well, we have discussed that question. Maybe we do not. I do not expect any violent opposition from these people. I think it can be worked out on a cooperative basis if we have not that technical capacity.

Senator DANAHER. So you would really anticipate being able to achieve a cooperative effort?

Mr. PAUL. That is right.

Senator DANAHER. Now, with reference to the matter of bond interest as one of the items in the tax collected at the source, suppose that a local political subdivision litigates the question of whether or not the bond interest should be withheld and refuses thereafter to withhold in an assertion of its own rights?

Mr. RICE. That is not includible in gross income, Senator. That will not be subject to withholding. You are talking about municipal bonds now?

Senator DANAHER. Yes.

Mr. RICE. If the interest on such bonds becomes taxable and is required to be included in gross income, such interest will fall in the same category as State salaries and will be subject to withholding.

Senator DANAHER. On page 160, lines 14 and 15, you say, talking about bonds: "including those issued by a Government or political subdivision thereof, or any agency or instrumentality."

Mr. RICE. That is right. Now, look on page 161, the next page, the requirement about withholding down at the bottom of the page.

Mr. DANAHER. I see.

Mr. RICE (reading):

> There shall be withheld, collected, and paid upon all dividends, bond interest, and wages of every person, to the extent that such dividends, interest, and wages are includible in gross income.

Municipal bond interest is not.

Senator DANAHER. You are definitely excluding that?

Mr. RICE. Yes, sir; because it is not includible.

The CHAIRMAN. What about in the case of the New York Port Authority, or some other instrumentality?

Mr. RICE. If that is includible in gross income, it is subject to withholding.

The CHAIRMAN. Suppose it claims it is not, and the Treasury claims it is; then you have a lawsuit.

Mr. RICE. That is right.

The CHAIRMAN. Then what are you going to do in the meantime? Are you going to penalize them?

Mr. TARLEAU. They would be liable or they would not be liable.

The CHAIRMAN. It says: "willfully refusing."

Mr. TARLEAU. "Willfully" would mean plainly in disregard of the law and regulations without color of right.

The CHAIRMAN. In other words, he refuses at his peril.

Mr. TARLEAU. No; "willfully" would mean recognizing his responsibilities under the statute but not caring to comply with the statute. "Willfully disregarding the act of Congress," that would be the type of willful disregard that the statute contemplates.

The CHAIRMAN. I was referring specifically to the penalty section.

Mr. TARLEAU. Certainly you were. I know that point has already arisen, but a willful disregard would be just a contemptuous defiance of the act of Congress. You know there happened certain instances of that in the past, persons who were just willfully disregarding the requirements of the statute.

Senator BARKLEY. In other words, knowing what his duty is he refuses to perform it.

Mr. TARLEAU. Certainly, but denying that he has a duty and denying that the statute applies to him is an altogether everyday occurrence. People very frequently contest the Treasury's position or deny the act is constitutional as to them. If they have a color of right, of course it is not willful. Willful is used in the sense of where a person knowing his responsibility disregards it.

The CHAIRMAN. Where they have a bona fide dispute as to whether they are liable, then you do not think they can be classified as doing that willfully. If it is a bona fide question, where the courts have not settled it and he in good faith raises the issue, you would not regard that as justifying the imposition of a penalty?

Mr. TARLEAU. Certainly not. As has been pointed out, if you wilfully fail to file a return on a matter which is subject to tax, of course, it is subject to penalties. We have the question of taxability under the statute now of holders of these Port of New York Authority bonds. If they do not pay a tax on the bond interest, and they claim under the statute that they are not subject to tax although we claim they are, and they do not include bond interest in their income, of course, they are not subject to penalty. As I have indicated, they have a claim which defeats any claim that they are willful.

The CHAIRMAN. That would be my interpretation of it. I wanted to see whether that is the Treasury's attitude about it.

Mr. PAUL. I do not think there is any question about it.

Senator TAFT. Mr. Chairman, is not this thing going to be infinitely more complicated for the employers than under social security, asking them to allow these exemptions every week, figuring out what must be deducted? It seems to me it is going to be much more difficult for the employers than anything we have under social security, which is just a flat rate on everything they pay.

Mr. RICE. Senator, the scheme in general is that the employee will file a withholding deduction certificate, which will be printed here in Washington and sent out by the Treasury to all employers. It will show whether he is single, whether he is married, whether he is the head of a family, and it will show his dependents. That will be filed with the employer at the beginning of the pay-roll period. The only thing the employer's bookkeeper has to do is look at that and then go to the table which is set out on page 162 to find out how much he will have to withhold over and above the withholding deductions that are set up in that table. For instance, if a man is single he will so indicate on his certificate that he files with the employer. If he has a weekly pay-roll period, the employer will withhold on that part of his wages which exceeds $11.

Senator TAFT. It makes an awful difficult job to get those certificates. That would be a perfectly tremendous job. A man that has 5,000 employees, he will just be hammering day and night to get them out.

Mr. RICE. If he does not, then the employer treats them as a single person and he withholds everything over $11, no matter whether he is married, no matter how many dependents he has.

Senator TAFT. If he is getting $50 that week and he deducts $11, that leaves $39.

Mr. RICE. He withholds $3.90.

Senator TAFT. He has got to figure 5 percent on that. Each week you pay them different amounts because they work different hours, so it has to be figured each week as to what the withholding is going to be.

The chief reason I would be opposed to it, it seems to me, is that it almost eliminates the possibility of a compulsory savings plan, which I think we must come to in the case of bonds. I do not think we can duplicate a withholding tax. The only way I can see whereby you can work out a possible savings plan would be to withhold.

Mr. RICE. These people way down in the lower-income group of $11 a week are not going to be able to buy bonds anyhow, with the higher cost of living and the higher taxes being imposed; they just cannot buy bonds.

Senator TAFT. They cannot pay taxes either.

Mr. RICE. They cannot do both. This will help them to pay their taxes.

Senator TAFT. This is based apparently on the theory that the total pay roll that is going to pay the taxes will be only $25,000,000,000. That seems to be the basis of the figures. Whereas we know the total pay roll of the country is going to be $75,000,000,000. So these deductions, when you get through, are going to be taken from one-third of the pay roll, although the complication of calculating them is a tremendous complication. Is not that correct? I mean, when you get all through you deduct about one-third of the pay roll.

Mr. PAUL. That is about right. I want to go back, however, to a previous statement you made, Senator Taft, that this would be a bar to the compulsory savings plan, if it should be necessary to adopt that. It seems to me that quite the contrary is the case. This sets up the machinery which will facilitate the operation of a compulsory savings program if it should be necessary to put such a program into effect.

The CHAIRMAN. If you could raise your percentage of withholding to 10 percent or 15 percent and go away from your normal on your individual income, you would have that system set up?

Mr. PAUL. Yes.

Senator TAFT. It seems to me if you would just take a flat 5 percent from everybody, as the social security does, and let the social security do it, you could work it with half the machinery.

Mr. RICE. The social security does not collect those taxes, Senator.

Senator BYRD. What classes are exempt?

Mr. PAUL. Agricultural workers and domestic servants.

Senator BYRD. Where does the difference between the 25,000,000,000 and the 75,000,000,000 go? Where is that 50,000,000,000 exemption?

Mr. PAUL. Anybody who gets below these exemptions enumerated here, depending on the status of the employee. For instance, a married person with dependents making less than $26 a week would not get any withholding.

Senator BYRD. As a matter of fact, is not this true, Mr. Paul: That the anticipation of this really gives you $1,250,000,000 additional revenue?

Mr. PAUL. In one sense it does, in that the year following you are constantly ahead of the game, too.

Senator BYRD. You are still anticipating?

Mr. PAUL. That is right.

Senator BYRD. This will give you, even through the period of 10 years—it will give you $1,250,000,000 more revenue than what you would otherwise get?

Mr. PAUL. If business goes bad it starts to go in the other direction and you would have an effect in reverse.

Senator BARKLEY. That only applies for the 1 year.

Senator BYRD. It applies constantly.

Senator BARKLEY. It comes off the next year's taxes.

Senator BYRD. You get the taxes the next year.

Mr. PAUL. You are always a year ahead on the collections.

Senator BARKLEY. You are a year ahead on the collections but you are not ahead on the liability.

Mr. PAUL. In the sense of liability, you are not ahead; in the sense of collection you are ahead.

Mr. TARLEAU. If this fellow from whom you collect the 5 percent becomes unemployed, within the year of unemployment under the existing system you still get the taxes of the prior year, which is one of the reasons we like this new system. Under this system in a year of nonemployment you will not be collecting the 5 percent.

Senator BYRD. Assuming the same level of employment, you would be getting in actual cash $1,250,000,000 more than you would otherwise get over a period of years.

Senator TAFT. Two and one-half billion more.

Senator BARKLEY. You do not get any more money, simply because you collect in advance.

Mr. PAUL. You are always ahead a year on the collection basis.

Senator CONNALLY. Is it not just like the fellow who rents an apartment and pays $25 in advance, and when he pays the balance he does not pay the $25 that he has already paid?

Mr. PAUL. That is because in your example, Senator Connally, when your lease terminates you get credit for the $25. But the Senator is right in respect to the thought that you are always, on the collection basis, so much ahead.

Senator CONNALLY. You are not getting so much total revenue more. The revenue you would be anticipating this year you would get next year.

The CHAIRMAN. You get another anticipatory payment each year. If we pay the taxes in advance currently, it is all right until you come to the end some place. You finally lose something somewhere.

Senator VANDENBERG. How does the employee get his refund if he gets some back?

Mr. RICE. He is given a receipt by the employer on each payment of wages, or at the end of the year, or upon termination of employment. That receipt is filed with his return to show if too much was deducted. For instance, if he has only worked half the year, the employer deducted only during the first 6 months that he worked; and, since he did not work for the other 6 months, he would have no tax liability. He will file his receipt with his return, and, if the amount

of the refund is $50 or less, it is paid to him immediately. If it is more than that, it takes the ordinary course of refunds.

Senator VANDENBERG. That would be 3 or 4 years?

Mr. RICE. I don't think they are that far behind.

Senator TAFT. Looking at it from the point of view of the work that is involved, you are imposing a new 19-percent income tax, and this has the effect of making it 24 percent next year; as far as I can see it is a tremendous increase on the individual workman.

Mr. PAUL. It has the effect of increasing the payment next year to 24 percent. That is 19-percent liability for the previous year and 5 percent out of the current year.

Senator RADCLIFFE. How would you reckon the amount of taxes paid on this bill that might be deducted? When would the accounting come in on that?

Mr. RICE. You would withhold during the calendar year 1943 5 percent of his wages, all through the calendar year 1943; then, when it came to paying his income tax on March 15, 1944, for his 1943 income, he would look to see, as evidenced by the receipts that his employer gave him, how much had been withheld. Say, for instance, $25 had been withheld during the calendar year 1943 and his tax liability was $100, he would owe the Treasury at that time $100 minus the $25, or $75. There will be a space on these income-tax returns to show the credits, and he will just fill in that amount and then deduct it from his tax liability.

Senator TAFT. How many employees would it take in the Treasury Department to run this show?

Mr. RICE. It has been estimated between 8,000 and 10,000.

Senator TAFT. From 8,000 to 10,000?

Mr. RICE. Additional employees.

Senator CONNALLY. Just on this one item alone?

Mr. RICE. Yes, sir.

The CHAIRMAN. Are there any further questions of the Treasury at this time, or shall we now recess until Monday at 10 o'clock?

Senator VANDENBERG. The next year sometime.

The CHAIRMAN. No; Monday at 10 o'clock. Mr. Rice, you will be designated as the expert on this particular division.

(Whereupon, at the hour of 1:25 p. m., the committee recessed to 10 a. m., Monday, July 27, 1942.)

REVENUE ACT OF 1942

MONDAY, JULY 27, 1942

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will please come to order. Mr. Seidman, you are listed as the first witness this morning. You may proceed.

STATEMENT OF M. L. SEIDMAN, CHAIRMAN, TAXATION COMMITTEE, NEW YORK BOARD OF TRADE, NEW YORK, N. Y.

Mr. SEIDMAN. Gentlemen, I am appearing here as the chairman of the taxation committee, New York Board of Trade.

The obvious reaction to a tax bill that is to raise $6,000,000,000 to meet a 1943 deficit of nearly $60,000,000,000 is that it is totally inadequate.

This is not to say that the tax bill now before you gentlemen fails to dig deeply into additional sources of revenue. It does, in fact, go to the limit of endurance for many who are already carrying a terrific tax load.

What it fails to do is to bring in everybody who can and should share the burden. Instead of 7,000,000 new taxpayers, this bill should produce twenty-five or thirty million new taxpayers. It could do it either by removing all exemptions or by a sales tax.

No one need worry about wartime millionaires under this bill. There is one person in this country who in 1940 reported a taxable income of $5,000,000. Under this bill, his Federal tax would be $4,374,616, and if he happens to live, say, in California, his State tax would be $740,590, making a total tax of $5,115,566 on his $5,000,000 income.

If this man, on a cash basis, were smart enough to prepay some of the State tax, he might perhaps be let out with an even $5,000,000 tax on his $5,000,000 income, but anyone who is dumb enough to have a $5,000,000 taxable income, would not be smart enough to come in out of the rain. For, if this man had only a million dollar income, he would actually be permitted to keep $4,000 of it instead of ending up $115,566 behind the eight ball. At any rate, it is obvious that incomes in this class can be crossed off the list if we are looking for more taxes.

On a $100,000 income under this bill the Federal tax is $65,000 and the top rate is 83 percent. Even at $10,000 the rate is 38 percent and at $26,000 it is 61 percent. Here, too, then, it is obvious that the proposed rates are exceedingly high and that after their imposition, even moderately large incomes will no longer exist. If all incomes over $25,000 were completely confiscated instead of being taxed as proposed under this bill, I estimate the Government would collect an additional $500,000,000, which is less than 1 percent of the $53,000,000,000 deficit. It should thus be clear enough that additional revenue in any sizable amount can come only from income sources not now taxed.

While this bill goes all out in taxing our middle and upper classes, it completely exempts from income tax more than 60 percent of our families, about half the number of our wage earners and more than half of our total national income. Here, then, is its major defect. Our able Secretary of the Treasury, in his excellent statement made before you gentlemen last week, stated it to be his conviction that the people of this country want a courageous tax bill and that they are ready to make greater sacrifices than some of us imagine.

I propose, for the duration, a 10-percent war tax on every dollar of net income that is exempt under this bill because of personal exemptions or credit for dependents. This is to be conditioned upon the present normal tax remaining at 4 percent instead of the proposed 6 percent. I estimate that the net result would be an additional $5,000,000,000 in revenue. In the alternative, I propose a sales tax to raise about the same amount.

Coupled with this, there should be removed the exemption now enjoyed by tax-exempt securities. No exempt securities should hereafter be permitted, and exemption of those already outstanding should be removed for the duration. While it is undoubtedly true that investors have bought these securities on a low-yield basis, so that they are in effect already paying a tax on the income, it is nevertheless in the interest of morale, especially when people with small incomes are required to make great sacrifices, that this exemption be removed.

Senator VANDENBERG. Do you dismiss the constitutional question, or are you satisfied that there is no constitutional question?

Mr. SEIDMAN. I am satisfied there is a constitutional question that will be before the Supreme Court very shortly in the *New York Port Authority case* and they will decide that for us.

Senator BARKLEY. You do not want to wait until they decide it, you want to go ahead now?

Mr. SEIDMAN. I believe there is a doubt. I believe we have passed legislation here before on the basis of the supposition that it is constitutional.

Senator BARKLEY. Let me ask you this question. I am asking the question in good faith. Where a Member of Congress has an honest doubt about the constitutionality of a measure, he may vote for it with those reservations, understanding, of course, that the courts will have to pass upon it, but where a Member is convinced in his own mind that an act is unconstitutional, do you think he ought to vote for it regardless of that?

Mr. SEIDMAN. I do not think so.

Senator BARKLEY. I agree with you.

Mr. SEIDMAN. Thank you, sir.

Senator BROWN. Mr. Seidman, does this represent a change from the former attitude of your association?

Mr. SEIDMAN. No; we have always been for the removal of tax exemption on securities.

Senator BROWN. I did not know that.

Mr. SEIDMAN. Yes, sir. I have repeated that before this body for some years past.

This bill proposes to withhold at the source the income tax on wages, dividends, and bond interest at the rate of 5 percent in 1943 and 10 percent thereafter. The stated objective is to retard inflation and to collect tax now escaping through sheer failure on the part of the recipient to report it as taxable income. As to wages, however, only a tax on income above exemptions is to be withheld. The employer is accordingly required to give effect to a pro rata credit for personal exemptions and dependents with every payment and every withholding. He is made the Government's tax collector, bookkeeper, and custodian. In addition, he is required to obtain a certificate from each employee as to his or her marital and dependency status, and to give a receipt for all taxes withheld. Receipts are also called for in connection with each dividend and interest item paid, and, of course, all withholders must file detailed returns and regularly pay over the tax withheld.

Because of the strictly prescribed nature of the income to be withheld, careful definitions and minute rules are laid down covering master and servant relationship, and the treatment of such items as commissions, bonuses, profit-sharing arrangements, and so forth.

Payments to independent contractors, individuals in the professions or in business, also come in for detailed treatment. The whole scheme is so elaborate and is bound to impose such a terrific burden upon business already overwhelmed by governmental requirements, that this newest of proposals seems entirely out of gear when considered in terms of additional revenue or in terms of arresting inflation.

If any taxable income under present law escapes tax, it can readily be discovered by a check against the Government's social security records or by tightening up the reporting machinery now in operation. Every income payment instead of only those above certain exemptions could be reported. And as to the effect upon inflation, considering the rate of withholding and the exclusions for personal exemptions and deductions, the plan does not seem worth the candle. Possibly the implication made here the other day that this would set up machinery for a compulsory savings plan throws some needed light on the subject.

For a more effective check on buying power, as well as for getting the revenue more quickly into the Treasury, I suggest that all income and excess-profits taxes—and I mean income and excess-profits taxes of corporations and income taxes of individuals—be hereafter payable in monthly instead of quarterly installments. For what is still uncollected for 1941 and due next December, the first monthly installment can begin with October 1, 1942. Similar payments can be made on November 1 and December 1, 1942.

Beginning with January 1, 1943, and monthly thereafter, all taxpayers could be required to remit one-twelfth of their estimated self-calculated tax liability for the year 1942, until their actual liability is determined through their filings of a timely 1942 return.

After that, they can continue to pay monthly installments on an actual liability basis. Or, January and February can be passed by and beginning with March 15, 1943, and monthly thereafter, payments can be made on an actual liability basis.

Except for some minor concessions to small corporations, this bill proposes a 45-percent tax on all normal profits and a 90-percent tax on excess profits.

In judging whether or not that is desirable or economically sound, we must not lose sight of the fact that a corporation's income is earned for its stockholders. To the extent that it pays a tax on its income before distribution to stockholders, there is thus a tax duplication. Such duplication is reasonably tolerable when tax rates are low, but it becomes unbearable with extremely high rates. It is hardly necessary to demonstrate that under the proposed corporate rates, even for stockholders in the middle-income brackets, every dollar earned by a corporation would leave them only a few cents after they are through paying their own tax on the little that is left for dividend distribution.

If we were to grant that the profit motive is today unnecessary, there would still be needed an incentive for efficiency and economy in production. As the Secretary well pointed out, experience has shown that when taxes are too high they result in extravagance and waste in the conduct of business. With a 90-percent excess-profits tax rate, I am of the opinion that the combined normal and surtax rates for corporations should not exceed 33⅓ percent, except for capital-stock tax adjustments, which I shall comment upon in a moment. Also, I would rather see a 100-percent tax on excess profits, with a 25-percent post-war credit, than a 90-percent tax with a 10-percent post-war credit.

Senator VANDENBERG. Everything depends, does it not, on an accurate definition of what excess profits are?

Mr. SEIDMAN. That is correct. That is always a prerequisite.

In any event, once normal profits are arrived at, the full amount—not 95 percent of it, as is now the case—should be used as the yardstick for measuring excess profits. Why this yardstick should be tampered with and shrunk by 5 percent, after it has been carefully determined, the taxpayer never can understand, and he will continue to feel short-changed until this obvious injustice is corrected.

Many small businesses are today severely punished under our tax laws for having adopted the corporate form of doing business. These little companies are nothing more than partnerships, originally incorporated for such minor advantages as the corporate form of doing business affords. They did not then bargain for a steep income tax, plus a healthy surtax, plus a guessing-contest capital-stock tax, plus a burdensome excess-profits tax, plus substantial individual income taxes upon receipt of the remains of the corporate income. Small wonder that these little businesses would now like to be recognized as partnerships, which, in effect, they really are.

There is no reason, in justice or equity, why they should not be so treated for tax purposes. Each stockholder could then be required to pick up his pro rata share of the corporation income in his personal return, just as he would have to do in a partnership. Loss of revenue could easily be made up by rate adjustments. I respectfully urge that this change be made.

The bill still proposes to retain the capital-stock tax in spite of the Treasury's recommendation for its complete elimination. The Secretary had this to say on the subject when appearing before the Ways and Means Committee:

> The uncertainties of this period also make it important to reduce to the minimum the necessity for prophesying. The capital-stock tax and the associated declared value excess-profits tax are determined largely by the accuracy of guesses about futures profits. It is suggested that the revenue produced by these taxes can be more fairly and less harmfully produced by the other taxes on corporations and that accordingly the capital-stock tax and declared value excess-profits taxes be repealed.

It is difficult for taxpayers to understand why, in the face of such a recommendation, this thing should not be done. The Ways and Means Committee in its report accompanying this bill, recognizes some of the difficulties and tries to remedy them by providing for an annual declaration of value in lieu of the present 3-year requirement. That still leaves a substantial element to chance and coin-flipping. Certainly should be substituted for guesswork. The tax should be removed and loss of revenue made up by adjustment of the normal or surtax rate on corporate income.

Senator VANDENBERG. Do you have in mind the figure on that point that would be lost in revenue?

Mr. SEIDMAN. I do not believe it would make a difference of a fraction of 1 percent on income. The loss of revenue, I think, is $200,000,000.

The bill proposes a complete rearrangement in the treatment of capital gains and losses for individuals and corporations. The changes are in the right direction except for continuing to tax short-term gains at full normal and surtax rates and for limiting the deductibility of a net capital loss to $1,000 in any 1 year. I appreciate the difficulty of some of the problems here involved and the extent to which the drafters of this bill have gone to overcome them. I believe, however, that simplicity and considerably fairer results can be attained if no distinction were made between short- and long-term gains or losses. If, however, the distinction is to be made, then I suggest, both as to individuals and corporations, a tax limit of 15 percent for long-term gains and losses and 30 percent for short-term gains and losses.

This should prove desirable even from a revenue point of view. Experience has shown that the volume of capital transactions increases in inverse proportion to the tax rate; the higher the rate, the smaller the volume. That is readily understandable, for such transactions are nearly always within the control of the taxpayer, and since they frequently mean nothing more than his getting out of one investment and into another, they are avoided altogether if the tax cost is too high. As a result, the Government gets no revenue at all when it might get some if the rates were not so high. As an unfortunate byproduct, these high taxes act as an obstacle to the free movement of capital from industry to industry. In terms of our war effort, that means capital is being prevented from moving into industries where it is most needed or from being converted into cash for the purchase of War bonds.

The act proposes a basic change in the treatment of fiscal year taxpayers. The Ways and Means Committee, in its report, makes the point that so long as there is no great difference in tax rates between years, the present arrangement works out well but with drastic rate increases, hardships and competitive disadvantages result to calendar year taxpayers as compared with those on a fiscal year basis.

If this be true, then the converse is also true and competitive positions will be reversed when rates are adjusted downward as we hope some day they will be. Over a period of time, such advantages and disadvantages necessarily cancel out. There are, however, other important considerations involved. For nearly two decades, business associations and professional accountants' organizations have stressed the advantage of the natural business year in particular trades or businesses, for the taking of inventories, closing of books and preparing tax returns. Income is more clearly reflected in a natural fiscal year than in a calendar year. Among other things, seasonal pressure is avoided, inventories and receivables are then usually at their minimum, debts are correspondingly liquidated and accounts can be closed with the least number of adjustments.

Accounting firms have particularly appreciated this spreading out of their auditing and tax work over the year and have passed along to their clients the benefit of reduced costs over calendar year closings. Also, the work is done more carefully, with less pressure to meet the March 15 deadline for calendar year returns. Similar pressures have been eased for the Government as well, resulting in fewer extensions and more accurate returns.

If it is the purpose of the bill to tax all income earned in the same calendar year at uniform rates, then the bill is seriously defective in that it taxes 1941 income of fiscal year partnerships at 1942 rates to partners reporting on a calendar year basis. Thus, if a partnership is on a January 31 fiscal-year basis, the partners in their 1942 calendar year returns will be taxed as if their share of the partnership income were all earned in 1942, although in fact only one-twelfth of it was earned in 1942 and eleven-twelfths were earned in 1941 and should be taxable at the lower 1941 rates. Surely this change should not be made only in the case of corporations, where it happens to work out in favor of the revenue and not in the case of partnerships, where it works against the revenue. At least this correction in the bill should therefore be made, otherwise the effect will be to discriminate against the smaller businesses which are usually conducted in partnership form.

The entire proposal as to fiscal years harks back to the system last embodied in the 1932 Revenue Act. We had experience with the administration of this provision in that and prior revenue acts. Thtere were good and sufficient reasons for making the change to the present method. Those same reasons still apply. The preparation of a fiscal year return on a double tax-law basis is so thoroughly confusing and the arrangement carries with it so many undesirable features for the taxpayer that he is bound to want to return to a calendar-year basis of reporting. That would be a great pity after these many years of accomplishment in the field of fiscal-year accounting and income-tax reporting.

The bill proposes to treat losses from nonbusiness debts less favorably than those incurred in a trade or business. They would be con-

sidered as short-term capital losses and their deductibility limited to that extent. It is contended that nonbusiness bad debts are frequently the result of loans made to friends or relatives, and that repayment is not expected. Of course, where that is actually so, it has been the practice of the Treasury Department to disallow them as gifts and not debts at all. That practice can and should be continued. On the other hand, where the taxpayer has made a bona fide loan in good faith, the loss should be allowed as any other bad debt.

With the extreme tax rates under this bill, on profits that are likely to evaporate, one wonders what has happened to the announced purpose of permitting a reasonable reserve to be set up out of taxable income for possible inventory losses. One must remember in taxing a business, that it is the average income over a number of years rather than that of a single year that counts. The profit of a single year, even in normal times, does not represent the true earning power of a business. Yet, with tax rates reaching the confiscation point, a single year's profit is still the basis for tax. Should a loss year follow rather than precede a profit year—a phenomenon with which I fear we're going to have a lot of experience—then even the slight relief afforded by the limited net-loss carry-over provision is denied the taxpayer.

The net effect of this is to tax profitable years with little regard for loss years. That is indeed a one-sided arrangement even in normal times, but is particularly objectionable in times like these, when staggering losses may appear overnight, wiping out accumulated earnings, reserves, and even the capital of a business.

Good accounting practice and good business usage call for reasonable reserves to be set up out of current earnings to meet such risks. This is urgently necessary today in the valuation of inventories. For, with rising prices under war conditions, there is an element of inflation in inventories which should not be included in taxable income. A tax is now paid on this inflation, and there is no way in which the taxpayer can hope to recover it when the bubble bursts. The obviously equitable thing to do is to provide for the loss by a reserve taken out of the very profits which include the inflation. At present, such a reserve is not deductible from taxable income. It should be.

The present law gives a limited right for carrying forward net losses from one year to another. No provision, however, is made to carry losses back to profitable years. Such a provision is today sorely needed.

No one can say whether a company has really made any excess profits until this war is over. Much will depend upon what happens from here out and especially during the first 2 or 3 post-war years. All of the profits which corporations have been permitted to retain will usually be found in the form of inventory, plant, and other assets at inflated values. Substantial post-war losses may be expected in the liquidation of these assets. Such was the case after the last World War. Many companies who had paid huge excess-profits taxes found themselves in bankruptcy when the assets represented by these profits had finally to be liquidated.

To avoid a similar condition, it would seem appropriate to provide that profits made in any year beginning with 1940 shall be subject to adjustment because of losses in any of the 3 years following.

That is not too much for business to ask when it is required to pay a 90-percent tax on profits that may turn out to be nonexistent.

I respectfully urge you gentlemen to make that provision in this bill.

Senator VANDENBERG. Mr. Chairman, I want to comment on one figure on page 2 of Mr. Seidman's prepared statement, because I think it is very important.

Ever since the President and the Treasury made their widely publicized suggestion that incomes should be held to a ceiling of $25,000 my mail would indicate that there are thousands of people in the country who think that is all we need to do to pay for the war.

In fact, I received some resolutions this morning from very important labor organizations, passed on the theory that all you have to do is put this $25,000 income ceiling into effect, and that settles everything, you do not have to raise any more taxes. I want to emphasize Mr. Seidman's figure and I want to place it alongside Mr. Morgenthau's figure of how much we are spending a day. He says we are spending $150,000,000 a day on the war. You estimate that if we confiscate all of the $25,000 incomes and above in addition to the existing taxes, we would only get some $500,000,000.

Therefore, instead of paying for the war, we would just pay for 3½ days of the war. I just want to make that plain, because I think it is essential to straighten out public thinking on the subject.

Senator BARKLEY. Do you have the figures as to how many individuals this would apply to?

Mr. SEIDMAN. I estimate about 45,000, under 50,000. There are under 50,000 individuals in this country who have an income of more than $25,000 a year.

Senator BARKLEY. If you limited the income to $25,000 after the payment of taxes, of course, that would be a variable sum, depending upon the individual, so that the real net income would not be $25,000 but it would be a variable figure, depending on how much taxes the individual paid—State, county, city, and others.

Mr. SEIDMAN. That is correct, of course. For instance, a man living in North Dakota, in order for him to have $25,000 left, may have to receive a $100,000 income, because the State takes about $12,000 from the $100,000 and the Federal Government may take away about $65,000; that totals $77,000.

He would not have $25,000 if he makes $100,000 of income. There are only about 3,000 individuals in this country who have a $100,000 income.

Senator BARKLEY. Have you given any study, or do you know of anybody who has, to the relative merits of a proposal to exempt all taxes in arriving at a ceiling income of say, of $25,000, and the exemption of insurance premiums on the life of the taxpayer?

Of course, everybody who owns property pays taxes on it to support the Government, and, of course, to prevent it from being sold and to prevent dispossession; for the same reason, to protect one's family they insure their lives and pay out insurance premiums on it.

Have you given any thought to the relative merit of those two exemptions, taxes and insurance premiums, for instance?

Many people have no property, but in order to protect their families in case of death, they insure their lives, and that operates in the

same way, in the long run, as bequeathing property to a descendant upon which taxes are paid; this thing presents to me some analogous possibilities of treatment. I wonder if you have thought anything about it?

Mr. SEIDMAN. I have, sir.

In attempting to limit income to $25,000 you would, in justice, have to make some provision for obligations of that kind, but I would like to say in this regard that, in my opinion, this present bill that is now before you gentlemen in effect eliminates incomes over $25,000 completely. If you give effect to provisions for insurance and a reasonable provision for payment of debts that very bill before you confiscates everything above $25,000.

As you have seen, in the case of the $1,000,000 income, it may take everything; in the case of the $5,000,000, the taxpayer may owe the Government money for making the income.

Senator BARKLEY. You mean, over and above the income?

Mr. SEIDMAN. Yes, indeed, sir.

The CHAIRMAN. You mean when taking into consideration the State income tax.

Mr. SEIDMAN. Yes; but that is a deductible tax.

The CHAIRMAN. Yes.

Mr. SEIDMAN. He cannot retain that to pay his living expenses with.

The CHAIRMAN. You suggest setting up reserves here, Mr. Seidman, out of the profit of the current year You do not suggest any figure.

Have you given any thought to that point, as to what reserve it should be?

Mr. SEIDMAN. In connection with inventories I do not believe that you can arbitrarily set up any figure and say this shall be the measure of the reserve to be set up. Our revenue laws have had experience with reserves.

For instance, in the case of bad debts, the law permits a reasonable reserve to be taken out of the annual income for bad debts.

Now, the law can well be in as broad terms as that in connection with inventories.

The CHAIRMAN. I see.

Are there any other questions, gentlemen?

Senator BYRD. Mr. Seidman, I was not here when you read the first part of your paper. This estimate of $500,000,000 increase in Federal taxes on income above $25,000, the proposal, as I understand it, was that $25,000 be permitted to be allowed after the payment of taxes. When you stated that would bring in $500,000,000 did you take into consideration the taxes?

Mr. SEIDMAN. Yes, indeed; I am taking into consideration the taxes proposed by this bill, how much would be left to the taxpayer if the Government took the rest of it over $25,000.

Senator BYRD. Then you would get the $500,000,000 by taxing down to $25,000?

Mr. SEIDMAN. Yes, sir.

Senator BYRD. After they paid the present taxes?

Mr. SEIDMAN. That is right, sir.

Senator VANDENBERG. No; your figure means that if they took everything, you would only get $500,000,000?

Senator BARKLEY. You mean, of course, after allowing the man $25,000, after his taxes have all been paid. Those taxes are normal taxes that he has paid. You say then there would be still $500,000,000 more that would be gotten by limiting all incomes to $25,000?

Mr. SEIDMAN. That is correct. If this bill were to read that all incomes above $25,000 are hereby confiscated instead of what it now does read, the net result would be $500,000,000 more to the Treasury.

Senator BYRD. In other words, that is based exactly on the proposal that the President made.

Mr. SEIDMAN. Yes, sir.

Senator BYRD. In other words, that you could be allowed $25,000 above your taxes.

Mr. SEIDMAN. Yes, sir.

Senator BYRD. And this $500,000,000 would be all that would accrue from that taxation.

Mr. SEIDMAN. Yes, sir.

Senator BARKLEY. In case where a man had a million dollars' worth of property, he would be allowed to deduct taxes on all that property in arriving at the $25,000?

Mr. SEIDMAN. Yes, sir.

Senator BARKLEY. And it might absorb the difference between $25 000 and his actual income, might it not?

Mr. SEIDMAN. Yes.

Senator BARKLEY. In the case of a man who had no property, in the case of a man who made $30,000 a year, he would have to give up $5,000 of that; whereas, a man having a million dollars' worth of property, if the taxes absorbed all the tax between $25,000 and his actual income, he would not pay anything more.

Mr. SEIDMAN. That is correct.

Senator BYRD. Even then it would bring in only enough to pay the expenses of the Government for 3 days, approximately?

Mr. SEIDMAN. Yes, sir.

The CHAIRMAN. All right, Mr. Seidman. Thank you very much for your appearance.

(The following letter from Mr. Seidman was ordered printed in the record:)

SEIDMAN & SEIDMAN,
New York, N. Y., July 28, 1942.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I intended to point out before completing my testimony yesterday that in the case of a taxpayer on an accrual basis it would not be possible for the combined effect of Federal and State taxes to be as my examples indicate. That is because to such a taxpayer the State tax is an income deduction in the same year and to that extent decreases the income subject to Federal tax.

As indicated, my examples involve a cash-basis taxpayer, and, of course, were chosen for emphasis. The taxpayer there, having a $5,000,000 income in 1942, would be called upon, under the proposed bill, to pay in 1943 a Federal income tax of $4 374,616 and a California tax of $740,950, or a total of $5,115 566. The $740,950 State tax so paid would, of course, be deductible from his 1943 income, subject to Federal income tax, if he has any such income in that year.

I would appreciate having this communication appear as a part of the record immediately following my statement.

Respectfully yours,

M. L. SEIDMAN.

The CHAIRMAN. Mr. Samuel Greenfield.
(No response.)
The CHAIRMAN. Mr. William Citron.

STATEMENT OF WILLIAM CITRON, REPRESENTING RIT PRODUCTS CORPORATION, CHICAGO, ILL.

The CHAIRMAN. Will you give your name to the reporter?
Mr. CITRON. William Citron.
The CHAIRMAN. What is your business, Mr. Citron?
Mr. CITRON. Manufacturer of household package dyes.
The CHAIRMAN. You are appearing for your own organization?
Mr. CITRON. That is right, and such other firms as may come under the same classification so far as this complaint that I have to register is concerned.
The CHAIRMAN. All right, sir. We will be very glad to hear you.
Mr. CITRON. In the first place, I would like to say in explanation at the beginning, that this taxpayer has no objection to the raising of taxes, realizing that there is a war on, that it will be necessary to pay for this war, and we have no objection to the rates. Our objection is that we have found ourselves in an inequitable position in regard to the manner of arrival at the normal tax.
The 4 years which we use as the basis for which normal taxes are now determined are the 4 worst years that this company has ever had in its existence.
There are no provisions in the present bill under which the taxes have been paid heretofore that give us any relief. The business that we are engaged in is not either helped or hindered by the war or the war operations.
Primarily, we manufacture a household dye. It is used for rehabilitation of clothing, men's, women's, and children's, as well as household fabrics. There has been a change in the general situation with regard to that. There have been quite a number of new fabrics come into the market, synthetics, acetates, that could not be dyed by the ordinary dye and the business required a new product. We had with us at the time an outstanding chemist, who has since died, in June of 1940. He was given the job of bringing out a new product that would take care of all of these new synthetics and instead of being able to do that in the 3 or 6 months that it would normally take, the man having been sick with hypertension, it took him about 4 years to complete that job.
May I give you some figures here that will clarify what I have in mind?
Senator BARKLEY. Are you speaking of excess-profits taxes?
Mr. CITRON. No; I am speaking of the basis on which we arrive at the normal taxes.
The CHAIRMAN. Arrive at the normal taxes?
Mr. CITRON. Yes, sir.
The CHAIRMAN. All right.
Mr. CITRON. We arrive at the normal taxes on the basis of the earnings during 1936 to 1939, both inclusive, those were the 4 worst years, that this company has ever experienced, for the reasons that I have assigned for that.
Prior to the 1936 period and subsequent to the 1939 period, the company was again on a normal-profit basis, that is, they made their

usual profits. We were more or less trapped behind those 4 years, not for any reasons we could help. It was just unfortunate that the doctor who was in charge of our chemical laboratory was sick, and subsequently died, and it took him 4 years to complete the job that he normally would have done in a few months.

What we are asking for under those conditions is to have a right to use any other 4 years during the depression period, or in lieu of that to have the right to use the intangible assets that we acquired at the time the company was taken over from a bankrupt concern, so that the normal taxes we would be paying on would be the normal taxes that we normally earned, that we had earned before this depression and subsequent to the depression; in other words, the average amount of earnings that we have had during a period of 12 years, from 1930 to date, or such other relief as the committee in its judgment, might dictate.

The CHAIRMAN. Are there any questions, gentlemen?

Senator TAFT. I do not quite understand what effect it has on the normal income. It has an effect on the excess-profits tax.

Mr. CITRON. That is the effect of the normal tax on the excess-profits tax, it brings the excess-profits tax to a higher level.

Senator TAFT. Yes.

The CHAIRMAN. That is undoubtedly true, but I made the same inquiry. On the normal you are only paying on what you actually earn, and if you raise at that point, it would simply mean a higher tax, unless you are also looking beyond that to your excess-profits tax.

You mean you haven't got a proper credit base against your excess-profits tax.

Mr. CITRON. That is right.

The CHAIRMAN. We understand that.

Senator TAFT. Have you studied the provisions of section 722, known as the relief provision?

Mr. CITRON. You mean the new bill coming out?

Senator TAFT. Yes.

Mr. CITRON. No.

Senator TAFT. It takes care of it.

Mr. CITRON. It takes care of it under certain categories. I believe I have got a copy of it in its initial form. It has subsequently been changed.

But all of the matters that are referred to in there, we do not come under that classification.

The CHAIRMAN. If you give careful study to section 722, I think you will find it will give you some relief. It may not give you full relief, but I think it undoubtedly will give you some relief in your case.

Senator TAFT. That is on page 209 of the bill.

Mr. CITRON. May I ask our accountant to come up a moment? He is pretty familiar with this bill.

Senator TAFT. I do not quite see why it is not covered by paragraph (2) on page 209 of the bill.

Senator CONNALLY. What he has in mind when he says "normal tax" is the normal tax in estimating the excess profits.

The CHAIRMAN. That is right.

Senator CONNALLY. Not the normal tax that everybody pays?

Mr. CITRON. No.

Senator CONNALLY. It is only the basis that you arrive at in determining the excess profits. You think you ought to have a larger percentage, because you did not make much during the 4 years, before we take 90 percent of the balance; is that what you mean?

Mr. CITRON. I feel Congress did not have in mind just getting a fellow behind a certain number of years, which are below the normal years, where everybody has had a more equitable arrangement.

The CHAIRMAN. That is true, but there are a great many relief provisions in the bill, in section 722 of the present bill, that undertakes to reach, in a large measure, your situation.

I think it does give you some relief. Of course, you have the general relief provision that you can take your invested-capital basis.

Mr. CITRON. That does not help us any. We took over a bankrupt concern, and in the process of taking it over we took over a great many intangibles, and we are not permitted to use these intangibles.

The CHAIRMAN. Did you say you had counsel here?

Mr. CITRON. Yes; I did.

The CHAIRMAN. He may come around just for a minute to show us just what your trouble is, but I think you are covered under section 722.

STATEMENT OF CARLETON M. TOWER, REPRESENTING RIT PRODUCTS CORPORATION, CHICAGO, ILL.

Mr. TOWER. My name is Carleton M. Tower.

The CHAIRMAN. Now, before you begin, when did you take over the bankrupt concern?

Mr. TOWER. As of January 1, 1927.

The CHAIRMAN. You took it over before the base period years?

Mr. TOWER. Yes, sir.

The CHAIRMAN. Have you studied section 722?

Mr. TOWER. Yes, sir. Section 722 does not give us relief, for the reason that the one point that would apply would be if the nature of the business has changed before or during the base period.

Now, it happens that the nature of the business changed immediately after the base period and the preliminary work for making the change was during the base period, so that section 722 does not afford this taxpayer any relief whatever.

Senator TAFT. The relief is in case—

the business of the taxpayer was depressed in the base period because of temporary economic circumstances unusual in the case of such taxpayer or because of the fact that industry of which such taxpayer was a member was depressed by reason of temporary economic events unusual in the case of such industry.

Mr. TOWER. That all depends upon the definition or the interpretation that is put on words. Now, if it is a temporary economic depression in this industry, it may be included there. The fact is this: This company has been making household dyes for a great many years, and until a few years ago the only fabrics to be dyed were the natural fabrics of wool, cotton, silk, and linen, and now all of a sudden science comes out with the acetates, with new fabrics, and they still use silk threads to put the new fabrics together.

Senator TAFT. Why is not that a temporary economic event in the history of the industry?

Mr. TOWER. It is a pure case of definition of words. It may or may not be. There is no certainty of it. I would like to suggest this to the committee, as a very simple and direct thing. I believe that what the Congress is after is a measuring stick to reasonably measure the ability of one taxpayer as compared to another to pay taxes. The Congress saw fit to elect as a base period a particular 4-year term. Now, it is perfectly true that a taxpayer who happened to have the best 4 years of his history is put in a very remarkably advantageous position, and it is equally true that a taxpayer who happened to have the only losses that ever occurred to the corporation during that base period is put in a most unfortunate position, and at best it is nothing but relying upon the interpretation of some words.

Senator CONNALLY. Would that not happen in any series of years?

Mr. TOWER. Well, sir, it may very well be; but it would create greater justice for a taxpayer to have a right, without appealing to any court or board, to elect to use as his base any 4 consecutive years during the depression period or, if you please, the whole of the depression period. I mean, if the purpose is to measure the ability to pay taxes, under this unfortunate circumstance, there should be a right, I believe, without an appeal to an administrative body.

The CHAIRMAN. Well, now, of course corporations have always had trouble with the excess-profits tax. A great many of them want to take 3 out of the 4 years. Nearly all corporations can point out that 1 of the 4 years in the base period was an unusually bad year. But you have got to have some base period, and you have got to have as nearly adequate relief provisions as you can devise. That is what Congress has been seeking to do, is to provide reasonable relief provisions. To allow taxpayers to select any group of years would, of course, obviously operate against the Treasury, because all of them would take the years in which they had the largest credit.

On page 210 of the bill, if you will look at it, it says:

> For the purposes of this subparagraph, the term "change in the character of the business" includes a change in the operation or management of the business, a difference in the products or services furnished, a difference in the capacity for production or operation—

and other things. So it does not all depend upon arbitrary discretion.

Mr. TOWER. I think the section you speak of is prefaced by another thing, it says that the change must have occurred during or immediately prior to, within 2 years prior to, the base period, and the fact is that the change in this taxpayer's business occurred a year after the base period.

The CHAIRMAN. I do not understand how the change did occur, because Mr. Citron here said he had abnormally low earnings during this base period because of this illness of a doctor.

Mr. TOWER. That is right.

The CHAIRMAN. On whom he mainly depended.

Mr. TOWER. That is perfectly true, but the profits arose from the introduction of a new product that this chemist devised.

The CHAIRMAN. I understand that. You had an abnormal condition in your business that seems to me is cared for in some respects. We get your point. You would like to have a longer period than the 4-year period.

Mr. TOWER. A specific right of the taxpayer to elect, without appealing to any governmental agency for interpretation, either any 4 consecutive years of the depression period or the entire whole of the depression period.

The CHAIRMAN. Yes. All right, thank you, sir.

Mr. Hyde.

STATEMENT OF WILLIAM TRUSLOW HYDE, JR., OF JOSEPHTHAL & CO., SCARSDALE, N. Y.

The CHAIRMAN. Will you give the reporter your full name and address?

Mr. HYDE. William Truslow Hyde, Jr., Scarsdale, N. Y.

The CHAIRMAN. All right, sir.

Mr. HYDE. Mr. Chairman, I do not have a copy of my statement, but I have a tabulation which I might want to refer to. I think it might be helpful if some of the members had a copy of it.

The CHAIRMAN. Very well.

(The tabulation referred to is as follows:)

[All figures in thousands]

Company	Preferred dividends	Net income, range 1936-39	Available for common stock based on 1941 earnings		
			Reported	(1)	(2)
Alabama Power [3]	$2,269	$1,407	$2,873	$251	$1,292
Cincinnati Gas & Electric [3]	2,000	1,951	1,020	335	1,235
Cleveland Electric Illuminating [3]	1,147	5,897	5,909	3,978	4,504
Consolidated Edison (N. Y.)	10,922	24,207	22,999	10,008	20,913
Consolidated Gas, Electric Light & Power (Baltimore)	1,279	5,205	5,102	3,697	4,254
Consumers Power [3]	3,425	5,670	5,920	2,486	4,028
Dallas Power & Light [3]	507	1,060	1,418	638	1,066
Dayton Power & Light [3]	450	2,260	1,972	1,190	1,395
Duquesne Light	1,375	8,615	8,035	6,771	7,390
Georgia Power	2,676	1,038	3,656	1,083	3,187
Gulf States Utilities	585	1,409	1,319	775	1,038
Idaho Power [3]	414	1,057	886	553	739
Jersey Central Power & Light	1,346	656	788	279	885
Kansas Gas & Electric [3]	521	729	525	238	472
Metropolitan Edison	1,265	2,160	1,955	1,206	1,776
Montana Power	958	2,209	2,558	1,485	1,916
Ohio Edison	1,867	2,331	2,032	926	1,767
Pacific Gas & Electric [3]	7,970	10,804	14,493	8,902	12,488
Public Service of Colorado [3]	670	2,621	2,311	1,403	1,795
Rochester Gas & Electric	1,393	1,232	888	465	1,094
Southern California Edison	6,004	7,268	7,689	4,783	7,061
Texas Power & Light [3]	865	1,291	840	302	692
Toledo Edison [3]	946	1,326	1,254	755	1,135
Virginia Electric & Power	1,172	2,295	2,659	1,599	2,126
West Penn Power [3]	1,337	4,856	4,415	2,818	3,473
Total	52,422	106,542	103,986	63,907	87,721

[1] Adjusted for House tax bill.
[2] Adjusted for tax rates in House bill and for deduction of preferred dividends from taxable income.
[3] Earnings subject to excess-profits tax.

The CHAIRMAN. You may proceed. Speak loud enough for the committee to hear what you have to say.

Mr. HYDE. My only purpose in appearing before your committee is to request that corporations be permitted to deduct preferred dividends from their taxable income. The higher rate of taxes which will apply to the 1942 earnings will make this necessary for public-utility companies to maintain their credit standings, to pro-

vide sufficient power for the armament industries, and to prevent their earnings from dropping sharply below normal levels.

Public-utility companies have a large investment in relation to their gross income, which means that their operating costs are low but their capital costs are high. To meet these conditions and to avoid possible financial difficulties during periods of low demand public utilities obtained some of their capital through the sale of preferred stocks. Preferred stocks are a hybrid security. Omission of dividends cannot precipitate receivership, but yet those dividends must be paid at a fixed rate before the common stockholders can receive any return on their investment, and I think that they should be treated as fixed charges for tax purposes.

To cite a specific example, the Public Service Corporation of New Jersey last year had an income, before taxes and before preferred dividends of $38,200,000. Under the rates of taxes in the House bill the company would be subject to a tax bill of $20,200,000, which will leave $18,000,000 available for dividends. It then must pay $11,500,000 in preferred dividends, leaving only $6,500,000 for the common stock.

Senator CONNALLY. Wait a minute now. The preferred dividend is on money that you borrow; is it not?

Mr. HYDE. If it were borrowed money the dividend would be deductible, but it is not borrowed money; it is a hybrid security, as I said. Preferred stock is not borrowed capital. You do not ever have to repay it. It is not a liability. Nobody can demand their money at a certain date, and omission of the dividend cannot put the company into receivership, but yet that dividend must be paid at a fixed rate just as though it were bond interest.

Senator CONNALLY. Somebody put the money; did he not?

Mr. HYDE. Yes.

Senator CONNALLY. You are paying him a dividend on it.

Mr. HYDE. Yes.

Senator GUFFEY. The company got the full benefit of all the money; did it not?

Mr. HYDE. The company got the full benefit of the money; yes.

Senator GUFFEY. When they borrowed it they contracted to put a certain rate on that money.

Mr. HYDE. Yes; but there is a distinction.

Senator GUFFEY. It is a cumulative preferred stock.

Mr. HYDE. Yes; it is not a bond. If it were bond interest, it would be deductible. That is my request, to allow the company to deduct their preferred dividends just as if it were bond interest.

The CHAIRMAN. You want the preferred dividend to stand on the same basis as interest on borrowed money.

Mr. HYDE. That is it exactly.

Senator BARKLEY. Of course, the interest on the bonds has to be paid before any common stockholder gets any money.

Mr. HYDE. Exactly.

Senator BARKLEY. And the dividends on the preferred stock have to be paid before the common stockholders get any money.

Mr. HYDE. Exactly.

Senator BARKLEY. So they enjoy a privilege that the common stockholders do not enjoy.

Mr. HYDE. Yes; and that is why they should be deductible.

Senator GUFFEY. That is, provided they are cumulative. Some preferred stock dividends are only paid from dividends earned. There are all kinds of preferred stock.

Mr. HYDE. Yes. If the dividend is paid it is paid at a fixed rate, regardless of the earnings.

Senator GUFFEY. That is right.

Senator BROWN. That fixed rate is generally quite a little higher than bond interest.

Mr. HYDE. Usually 1 to 2 percent higher, except in the case of recently refunded debt which carries a much lower interest rate. These earnings of $6,500,000 would compare with earnings of $14,500,000 during the years 1936 to 1939, which has been taken as the period of normal earnings.

The CHAIRMAN. Can you give us in percentage the holders of preferred stock that pays dividends held by people outside of the corporation or the utility as a general rule?

Mr. HYDE. I haven't any exact figure, but most of these utility preferred stocks were sold to small investors.

The CHAIRMAN. They were sold to people within the organization? They were not sold to common stockholders?

Mr. HYDE. No; they were mostly sold to raise outside capital.

The CHAIRMAN. You haven't any table showing the percentage in which they are held by outsiders?

Mr. HYDE. I am sorry; I do not. When I return I will get that figure and forward it to the committee.

The CHAIRMAN. I will be glad to get it.

Mr. HYDE. If the preferred dividends were permitted as a deduction, as they would be if they represented interest paid, the earnings of the company would be $11,600,000 on the basis of last year's earnings and on the basis of the rates approved by the House in this 1942 tax bill. That $11,600,000 is approximately what they earned last year for the common stock. It is a great deal better than what they will earn under the House bill, but it is still below what they earned in the base period.

This table shows many other companies. There are 25 of them that I have compiled, and in the total column I think it tells the story very clearly. The first column shows the preferred dividend requirements. The next column of figures is the average earnings over the base period. The next column is the earnings reported last year, then the column following that is adjusted for the House bill, the same earnings adjusted for the House bill. The final column would be the earnings adjusted for deduction of the preferred dividends. Now, in the total column the base period earnings average $106,000,000. Last year they declined to $104,000,000. Under the House bill, they would be only $64,000,000. This is all available for the common stock. Under my proposal, they would be close to $88,000,000. That, while not up to the normal earnings, is still somewhat better than what the House would permit these companies to earn.

An individual case—this is very interesting here—is the Consumers' Power. They earned $5,600,000 in the base period. Under the House bill they would earn $2,500,000. I would raise that up to $4,000,000. The individual companies are all quite similar to that, with the exception of the Georgia Power Co., which will earn more

this year. That merely reflects a saving of $2,000,000 through refunding all high-coupon bonds.

The present method of taxation, which does not recognize the fixed charge, which preferred dividends are, is also very unfair to these holders of the preferred stocks themselves, not the common but the preferred stocks. These stocks were sold as high-grade investments to individuals, usually in the territory served by the company. These individuals were willing to accept the fixed and limited rate of return for the added protection they received from the preferred stock, but now the Government is injecting itself ahead of these small investors and is removing their protection, which they acquired when they agreed to accept a limited return.

In the past the earnings of Cincinnati Gas & Electric have been sufficient to afford ample protection for the preferred dividend, and the preferred stock rarely sold below par. Today it is selling in the low seventies. I think that company is in this table. That company, on the basis of the House bill, would have only $300 000 as a protection for that preferred dividend. In other words, it would earn $2,300,000, and $2,000,000 of it would have to go out in preferred dividends. Normally, under the base period they would have $4,000,000 available for that $2,000,000 preferred dividend.

The Pennsylvania Power & Light Co., which is not listed is another company, and there are hundreds of others that would be similarly affected.

Senator TAFT. When they bought this preferred stock they knew the corporation net income taxes would always be ahead of the preferred stock dividend on whatever return they may receive. That is one difference between dividends on preferred stock and interest on bonds.

Mr. HYDE. That is true, but the tax at that time was 10 or 15 percent and not what it is today. Nobody objected to it, when the taxes were so low.

Senator BARKLEY. Of course, that might apply to taxation on real estate. The taxes might go up, and anybody who buys property knows they might go up. There is no difference in regard to preferred stocks as compared to any other property. There is no guaranty when they buy it that the tax rate will stay where it is.

Mr. HYDE. If these companies had sold bonds then the interest on those bonds would come ahead of the income taxes.

Senator BROWN. Yes; but they got a higher rate for their preferred stock.

Mr. HYDE. Not because of the tax.

Senator BROWN. That is one of the factors in it.

Mr. HYDE. Because the tax was so low at that time it did not make much difference.

Senator BROWN. Generally, the return on preferred stock dividends was higher than the return on corporate bonds. One of the reasons for it was because of the tax situation.

Mr. HYDE. A very minor reason. The principal reason is because preferred stock is junior to the bond. It is quite similar to the fact that a mortgage bond carries a lower rate of interest than a debenture bond because it has first claim on the earnings. Similarly, any preferred stock has a junior claim to any bond, and naturally must have the higher rate of return.

Senator TAFT. Mr. Hyde, I think the discrimination of this tax is so much greater against the common stockholder as compared to the preferred stockholder that there is no comparison at all. I do not think the preferred stockholder has anything to complain of. He is going to get his dividend. The common-stock holder on this same basis, where half of this preferred stock is not going to get dividends, the common stockholder is not going to get any dividends at all, although it represents money that he put in.

Mr. HYDE. That is quite right.

Senator TAFT. I cannot see any reason to say that the preferred stockholder is discriminated against. It seems to me the discrimination is against the common stockholder and not the preferred stockholder.

Mr. HYDE. Naturally, the earnings left over for the common stockholder are affected.

The CHAIRMAN. That, I think, is the point Mr. Hyde is making, that is, he wants this dividend treated as an interest payment.

Senator BROWN. For the benefit of the common stockholder.

Mr. HYDE. Yes; for the benefit of the common stockholder, and also for the benefit of the preferred, although, as Senator Taft says, it is not as pressing in their case as it is in the case of the common stockholder.

The CHAIRMAN. We get your point. Is there anything else?

Mr. HYDE. I just wanted to mention the cost of it to the Treasury. That, of course, in these times, is a very important factor. I, unfortunately, have no figure on the total preferred dividends paid, but according to the Edison Electric Institute, last year utility companies paid $132,000,000 in preferred dividends. Utilities are the primary, shall I say, users of preferred stock, because it is so adaptable to their business. I doubt whether the total preferred dividends would amount to more than $150,000,000.

Senator TAFT. Every corporation formed after this time would have two-thirds of its capital in preferred stocks.

Mr. HYDE. I think it must be definitely limited to preferred stocks outstanding, not to extend it in the future. As a matter of fact, as to public utilities the S. E. C. would not allow them to.

Senator TAFT. You haven't got many preferred stocks in other companies.

Mr. HYDE. No. On the basis of 45 percent as the tax rate the $150,000,000 exemption would mean only about $70,000,000 to the Treasury, which is a cheap price to pay for the maintaining of the credit of utility companies, which includes the ability to raise equity capital and to protect the dividends. There are 3,000,000 holders of utility stocks, and it would help to protect their dividends during the period of increased living costs.

Senator BROWN. This bill will greatly interfere with the financing of preferred stocks in the future?

Mr. HYDE. Most specifically. It will be practically impossible. As a matter of fact, the Virginia Public Service recently abandoned an original plan of refinancing, which was approved, or I might say met the requirements of the S. E. C., and included the preferred stock. It superseded that with a plan which did not include any preferred stock but instead had debenture bonds, and that was approved by the

S. E. C. with reservations, yet it was just a stopgap until a better plan could be arranged.

The CHAIRMAN. Any additional questions, gentlemen?

Thank you very much, sir.

Mr. HYDE. Thank you.

The CHAIRMAN. Mr. Eagle.

STATEMENT OF J. FREDERICK EAGLE, OF PATTERSON, EAGLE, GREENOUGH, AND DAY, NEW YORK, N. Y., REPRESENTING TENANT-OWNED APARTMENT ASSOCIATION

The CHAIRMAN. Mr. Eagle, give the reporter your name.

Mr. EAGLE. J. Frederick Eagle, on behalf of Tenant-Owned Apartment Association, New York, N. Y.

I am advocating an amendment to the Internal Revenue Code so as to permit a cooperative apartment owner to deduct from his net income, in determining his Federal income tax, the taxes and interest which he is required to pay as part of the maintenance of the cooperative enterprise. I am advocating this because I think it is eminently fair, and, on the other hand, I am convinced that if the legislation is enacted it will inure to the benefit not only of the public but to the benefit of the Treasury of the United States. My memorandum is printed in part and typewritten in part, and I think probably it would be better if I stick pretty closely to the printed part and will not go into the balance.

The so-called cooperative apartment corporation is one organized not for profit but for the purpose of holding title to an apartment house and providing and leasing apartments therein as permanent homes to its stockholders.

Senator VANDENBERG. How extensive is that practice?

Mr. EAGLE. Well, in New York the investment in 1941 I think was about $350,000,000, and throughout the United States I am told it is vastly in excess of half a billion dollars.

It allocates its entire capital stock to such apartments according to their size and desirability, and as landlord leases them under what are termed "proprietary leases." Every stockholder must be a proprietary lessee and every proprietary lessee of an apartment must own the number of shares of the corporation's capital stock which has been allocated to it.

Each proprietary lessee agrees to pay as rental for his apartment his pro rata share, based on stock ownership, of the maintenance charges of the cooperative enterprise, including taxes, interest, and general and overhead expenses.

The cooperative apartment house in its inception was planned as an economic venture whereby several people, desiring to curtail expenses, might acquire and maintain permanent homes in a multiple dwelling building and use a corporation for the purpose of holding title to and managing the property, but without compensation.

The term "cooperative apartment owner" is a misnomer but is generally used in referring to the proprietary lessee, that is, the stockholder-tenant.

Cooperative apartment houses as a class have been failures, as a result of which:

1. The proprietary lessees and stockholders have lost or are losing their entire investments.

2. Mortgagees have lost and are losing taxable incomes.

3. The value of all apartments and residential property has been impaired.

4. Real-estate assessments have necessarily been reduced.

5. Writs of certiorari to review assessments are constantly being prosecuted, resulting in large tax refunds.

6. Federal and State income, inheritance, and estate taxes are adversely affected.

The plight of the cooperative apartment houses, and incidentally, the plight of the holders of mortgages thereon, is attributable largely, if not solely, to the fact that a person who acquires a cooperative apartment for his home is not entitled to deduct from his net income in determining his Federal income tax, the taxes and interest which he is required to pay as part of the maintenance of his cooperative apartment.

I might say in connection with the cooperative apartment that the taxes and interest constitute about two-thirds of the maintenance of the apartment. Therefore, if a person paid $3,000 rent for a cooperative apartment, $2,000 of that would be paid on account of taxes and interest.

A person who owns a house as his home may make such deductions, and if several people hold real property jointly or in common, they are likewise permitted to make such deductions, and there is every equitable reason why a person who owns a cooperative apartment as his home should have the same right.

When President Roosevelt was Governor of the State of New York, the New York Legislature enacted subdivision 13, now subdivision 12, of section 360 of the tax law (chapter 412, section 1 of the Laws of 1931), which reads as follows:

In the case of any taxpayer who is the owner of shares of stock in a corporation organized and existing exclusively for the purpose of owning and operating a cooperative multiple dwelling no part of the net earnings of which inures or is calculated or intended to inure to the benefit of any stockholder or individual, and all the expenses of which are paid annually by the stockholders in proportion to their ownership, a deduction shall be allowed to such taxpayer as to the share of his payments for all taxes, other than franchise taxes, paid or accrued by such corporation during the taxable year, and all interest paid or accrued by such corporation during the taxable year on its indebtedness.

Anent that legislation the New York Herald Tribune of January 29, 1931, contained the following article:

TWO TAX MEASURES HELP PARTNERS IN APARTMENTS

BILLS AIMED TO PERMIT DEDUCTION OF MAINTENANCE CHARGES FROM INCOMES

(By a staff correspondent)

ALBANY, January 28.—Legalization of the existing practice of the State department of taxation and finance in permitting owners of cooperative apartments to deduct on their personal income tax returns the portion of annual maintenance charges spent for water taxes, real-estate taxes and interest is the aim of measures introduced in the legislature today by Senator Samuel H. Hofstadter and Assemblyman Abbot Low Moffat, New York Republicans.

"A man who owns his own home is permitted to deduct the taxes which he pays on it and the interest which he pays on his mortgage when computing his income tax," Mr. Moffat said today.

"There is no reason whatsoever why people who jointly own the building in which they live and create a non-profit-making corporation for the purpose of holding title and operating a building should not equally be entitled to deduct their share of the taxes on the building and their share of the interest paid on the mortgage.

"The fairness of this position has long been recognized by the department of taxation and such deductions are permitted at present."

Eminent counsel were of the opinion that such enactment merely clarified the true, logical, and equitable intent of the New York tax law as previously enacted and as previously construed by the State tax commission, and were also of the opinion that the United States income tax laws should be similarly construed. A cooperative apartment corporation is not run for profit and, insofar as taxes and interest are concerned, merely acts as intermediary in behalf of those beneficially interested, that is, the cooperative apartment owners.

If Congress should enact a similar law, it is submitted that an immediate demand for cooperative apartments would be created, the taxable values of all property would be increased, mortgages would be better secured and the possibility of adding to the large quantities of "frozen real estate" would be greatly lessened.

Assuming that the theory of the cooperative apartment is economically sound—and naturally it costs less to maintain a multiple dwelling than to maintain a number of separate homes of equal character—it should be encouraged and the participants therein should not be penalized as they now are.

It is well recognized that home owners in any——

Senator BROWN. Mr. Eagle, might I interrupt?

Mr. EAGLE. Yes.

Senator BROWN. I am impressed with the fairness of your proposition, but it seems to me there is a failure to distinguish between the taxes and interest and the general and overhead expenses. I grant you should be, it seems to me, entitled to deduct interest on the mortgage and taxes, but not general and overhead expenses to maintain that building.

Mr. EAGLE. No, no; you should not; of course not.

Senator BROWN. You are talking about it in your second and third paragraphs. You include general and overhead expenses. They ought not be deducted.

Mr. EAGLE. If that is the way you read it, it was not the way I intended it.

Senator BROWN. You are clear on the point that what you are asking for here is a deduction of the interest on the mortgage and the taxes?

Mr. EAGLE. That is all.

Senator BROWN. Nothing more?

Mr. EAGLE. That is all.

Senator CLARK. In other words, you are asking to have an owner of an undivided share in one of these cooperative apartments put in exactly the same position as if he bought a house and had a mortgage on it?

Mr. EAGLE. That is exactly it.

Senator BROWN. Not to maintain it?

Mr. EAGLE. No; not at all. I am sorry if it is confused.

Senator TAFT. Mr. Eagle, there are some cooperative villages now authorized by the Housing Authority. Do you know what the law is that applies to them?

Mr. EAGLE. I do not; no.

Senator TAFT. There are several in Cincinnati.

Senator RADCLIFFE. Mr. Eagle, the interest which any one man would have in the cooperative apartment would be restricted to what might be termed the proportionate value of the property?

Mr. EAGLE. That is right.

Senator RADCLIFFE. I can readily see where otherwise you might be getting the benefit of an investment which really did not apply on owned houses. In other words, if there were 10 apartments there, his interest might be one-fourth or one-fifth of the total. You would restrict it to what would represent the actual value of his property?

Mr. EAGLE. Absolutely. That is the way the New York statute is. My suggestion is that you adopt the wording of the New York statute. I have the New York statute right in my memorandum.

It is well recognized that home owners in any community have a stabilizing effect, not only on the community but also upon the values of real estate therein. The Federal Government, as evidenced by its H. O. L. C. and F. H. A., recognizes the importance of home owners but the Federal tax law—probably through inadvertence but nevertheless as administered—penalizes the owner of a cooperative apartment if he lives in it. Furthermore, cooperative apartment owners are abandoning their investments for the reason that under the existing conditions the inequitable tax burden more than offsets the economy of a cooperatively owned multiple dwelling.

It might be contended that the amendment now advocated would adversely affect Federal income taxes but it is submitted that that is not true. If a cooperative apartment owner sublets his apartment and it thereby becomes a business venture, he becomes entitled to deduct not only his pro rata share of interest and taxes but also his share of all other maintenance charges, and the vast majority of cooperative owners have been driven to that expedient. Furthermore, the plight of the cooperative apartments has had, and is having devastating effects on mortgages and real-estate values which adversely affect income-tax collections. A demand for cooperative apartments would tend to lessen the depression in respect of real-estate values, which in itself would create taxable income. Enormous losses—income-tax deductions—which are constantly being taken as a result, directly and indirectly, of foreclosures, would be decreased. Mortgages on cooperative apartment houses would be better secured and mortgagees would receive greater taxable income. These changed conditions would necessarily inure to the benefit of the entire community and create additional taxable income.

Of course, the amendment would result in increased Federal and State inheritance and estate taxes as the proprietary lease with accompanying stock would then have a taxable value which is not a fact at the present time.

The inequitable burden placed upon cooperative apartment owners is without compensating tax revenue, hence, and in the public interest, it is submitted that Congress should enact a law amending section 23 of the Internal Revenue Code by adding thereto a new subdivision after subdivision (c) thereof, to read as follows:

In the case of any taxpayer who is the owner of shares of stock in a corporation organized and existing primarily for the purpose of owning and operating a cooperative multiple dwelling no part of the net earnings of which inures

or is calculated or intended to inure to the benefit of any stockholder or individual, and all the expenses of which—less an amount equal to rentals received by it from tenants other than stockholders—are paid annually by the stockholders in proportion to their ownership, a deduction shall be allowed to such taxpayer as to the share of his payments for all taxes, paid or accrued by such corporation during the taxable year, and all interest paid or accrued by such corporation during the taxable year on its indebtedness.

The above is the same as the New York law, with the following exceptions:

1. In the second line, the word "primarily" is substitued for the word "exclusively." The reason for this is that many cooperative apartment houses have doctors' offices or stores on the ground floor which are not necessarily cooperatively owned.

2. In the fifth line, the parenthetical clause "(less an amount equal to rentals received by and from tenants other than stockholders)" has been inserted. This would cover a situation where there are doctors' offices, and so forth, on the ground floor or where some of the cooperative owners may have become insolvent, resulting in the cooperative apartment corporation reacquiring the stock and lease of the insolvent proprietary lessee.

3. The words "other than franchise taxes" have been omitted, for the reason that those words refer to New York franchise taxes, and under the Federal statutes all taxes are deductible.

I believe the New York statute has been construed by its taxing authorities as though the above suggested changes 1 and 2 were, in fact, embodied therein.

Attached to my memorandum is a supplemental memorandum and a copy of my letter of May 7, 1942, to Hon. William T. Pheiffer, M. C., each of which was submitted to Randolph E. Paul, Esq., Assistant to the Secretary of the Treasury; Mr. Colin F. Stam, Chief of Staff, Joint Committee on Internal Revenue Taxation; and Mr. Timothy C. Mooney, Deputy Commissioner, Bureau of Internal Revenue, on June 9, 1942, at a conference held in Congressman Pheiffer's office.

The letter among other things refers to the supplemental memorandum and the fact that a proposal similar to that now advanced had been considered in 1928, included by the Committee on Ways and Means in its bill but deleted by the Senate Finance Committee. The reasons for deletion and the fallacies thereof as I see them are stated in the letter.

It seems to me that the adoption of the proposed legislation would be a gesture which would help thousands of people to use an economic method of maintaining a home, would be in the public interest, and would cost the Federal Government nothing.

The CHAIRMAN. Mr. Eagle, I believe there was some effort some years ago, was there not, to deal with this?

Mr. EAGLE. There was in 1928.

The CHAIRMAN. There was a provision in the House bill that undertook to cover your situation?

Mr. EAGLE. That is correct.

The CHAIRMAN. Now, did you present this problem to the Ways and Means Committee?

Mr. EAGLE. Not to the committee, but through Chairman Doughton I had the opportunity to present it to Mr. Stam and to Mr. Paul, and we had a conference on it. I was received so courteously that

I think it was sympathetically. Whether I am wrong or not I do not know.

The CHAIRMAN. You misinterpreted the courtesy for relief.

Mr. EAGLE. That may be. I may have misinterpreted sympathy for sympathetic. Maybe they thought I was a poor boob.

Senator RADCLIFFE. Do you think the language you just read clearly precludes the owner shares of stock from getting the benefit for shares which represent a greater amount than the value of the shares for his particular apartment in the apartment house?

Mr. EAGLE. It is not conceivable under the New York statute, and it is not conceivable under the legislation I propose.

Senator RADCLIFFE. It says one who holds shares should have a credit for those shares. Those shares may represent more than the value of his part of the apartment. I have no doubt that may be covered somewhere else, but I do not think that language there makes it clear.

Mr. EAGLE. The language of the act, you mean?

Senator RADCLIFFE. The language of your proposal. He may own shares, but they may be more than his proportion, looking at it from the standpoint of his home.

Mr. EAGLE. In the cooperative apartment house, the stock is so allotted as to cover each apartment. Suppose there are 10 apartments in the house, if they are all exactly of the same value each one gets one-tenth of the stock, but if 1 was a very poor apartment he might only get one one-hundredth part of the stock. Any person who had one one-hundredth part of the stock would only get the benefit of one one-hundredth part of the tax and interest which is paid by the cooperative apartment.

Senator RADCLIFFE. What would the man get if he had one-fifth share? Is not he getting more than his share?

Mr. EAGLE. No.

Senator RADCLIFFE. His home is only one-tenth; now, why should he get more than the one-tenth?

Mr. EAGLE. If his home is only one-tenth, he gets one-tenth.

Senator TAFT. The stock is tied up with the home. He cannot get more?

Mr. EAGLE. No, he cannot.

Senator RADCLIFFE. He said a poor man might own one one-hundredth instead of one-tenth. Who owns the remaining part to correspond to his one-tenth?

Mr. EAGLE. There may be 99 tenants in the apartment, and he has one-tenth of the entire cooperative enterprise; he has a little apartment for which he has bought a very small amount of stock. The other people have bought the remaining stock and the remaining interest in the cooperative enterprise.

Senator RADCLIFFE. Would not that mean in that case that someone would get more credit than he would if he were simply paying taxes on what he really owned?

Mr. EAGLE. No, sir.

Senator HERRING. The one with the larger interest would see that he got what he was entitled to.

Senator BARKLEY. He would get credit in the proportion that his apartment bears to the whole.

Mr. EAGLE. Yes.

Senator BARKLEY. They are different-size apartments.

Mr. EAGLE. They are different size and in different localities. Some have the south, some the east, and so forth. They are better or worse.

Senator BARKLEY. The price is fixed on the value of the apartment?

Mr. EAGLE. The price is fixed upon the value of the apartment, the value which a real-estate appraiser would put upon the apartment.

Senator BARKLEY. It could not be the same in each case.

Mr. EAGLE. It could not be the same in each case.

Senator BARKLEY. Each one does bear a relationship to the whole.

Mr. EAGLE. That is right.

Senator BARKLEY. One man might own an apartment that would be about one-tenth of the enterprise, while another one might own a small one, a back corner one, that would not be more than one-thirtieth of the total?

Mr. EAGLE. That is correct.

Senator CONNALLY. Is it your contention that if a man owned an apartment and subrented it, that he would be entitled to a deduction?

Mr. EAGLE. Under the present law, as I understand it, if a person owns a cooperative apartment and subrents it, it then becomes a business enterprise and he is then entitled to deduct his entire maintenance from the income.

The CHAIRMAN. He can deduct both the interest and the overhead?

Mr. EAGLE. All the overhead.

The CHAIRMAN. The Treasury has ruled undoubtedly that the owner of an apartment in one of these enterprises cannot deduct the taxes paid or the interest paid as a deduction from his personal income.

Mr. EAGLE. They have always held that, and then it went up to the Circuit Court of Appeals, Second Circuit, and they held that the literal interpretation of the statute as enacted would not permit it. They said if Congress wanted to grant this relief they ought to enact a law. That is why we are here.

Senator CONNALLY. In case he sublet he would treat his rent as income?

Mr. EAGLE. Exactly.

Senator RADCLIFFE. The amount of stock would correspond exactly with the interest in the apartment?

Mr. EAGLE. That is right.

Senator RADCLIFFE. The ownership of stock by him could not either be increased or decreased?

Mr. EAGLE. Not at all; no.

Senator CLARK. In the case of a small fellow who has a less desirable apartment, his part of it in the interest and taxes would be less than that of the man who owned a more desirable apartment, just the same as the owner of a small house pays less tax and interest than the owner of a big house?

Mr. EAGLE. Exactly.

Senator VANDENBERG. Like renting a room in a hotel; you might get a $2 hall bedroom or you might get a $12 bridal suite.

Mr. EAGLE. Quite right.

The CHAIRMAN. Mr. Eagle, thank you, sir, for your remarks.

(The supplemental memorandum and letter submitted by Mr. Eagle are as follows:

SUPPLEMENTAL MEMORANDUM, SUBMITTED BY J. FREDERICK EAGLE, NEW YORK, N. Y., RE PROPOSED AMENDMENT TO INTERNAL REVENUE CODE TO PERMIT COOPERATIVE APARTMENT OWNER TO DEDUCT FROM HIS INCOME THE PROPORTIONATE SHARE OF TAXES AND INTEREST PAID BY HIM AS PART OF THE MAINTENANCE OF THE COOPERATIVE ENTERPRISE

In the city of New York and elsewhere there are innumerable unoccupied, unproductive, and unsalable residential properties owned by people of large means. The owners thereof deduct from their incomes, in determining their Federal income taxes, the real-estate taxes paid on such unproductive properties, as well as interest paid on any mortgages thereon. Of course, the deductions come from the top brackets, and, if the owners are of large means, the resulting loss to the income-tax collectors is large.

Naturally, if a plan could be devised under which a demand could be created for such unoccupied residences by people of small means, there would be a net gain to the tax collectors, as the deductions would come from lower income-tax brackets. The proposed legislation would create such demand.

The present-day cooperative apartment house, which is rapidly vanishing, is an outcome of an earlier economic practice of friends combining their resources to acquire homes by purchasing a house for their joint use and having the title held by a corporation so as to avoid title complications in the event of death. The resulting economies, such as one kitchen, one furnace, less service, and no middleman's profit, were appealing and would be appealing to home lovers of moderate means, and, were it not for the present tax law, such persons would create a demand for the now unoccupied and unproductive residential properties. Of course, only people of moderate means would resort to that practice, but, if they purchased properties from people of large means, the advantage to the income-tax collector is apparent.

Assume that a person has taxable income of, say, $16,000. Under the present tax law he pays 4 percent normal tax and 20 percent surtax in excess of $12,000. That leaves him about $13,000 unless, of course, he has to pay a State income tax as well. If he and a friend buy a house which is assessed at $30,000 and place a 5 percent $20,000 mortgage thereon, the taxes and interest would amount to approximately $1,000. If, as tenant in common, he owned one-half the house, he would be entitled to deduct $950 from his income in determining his income tax, which would reduce his income tax by about $314. If, on the other hand, the title were held by a corporation, i. e., a cooperative apartment corporation, under the present tax law he would be penalized to the extent of $314, which would, of course, offset all preconceived economies.

Large apartments, i. e., over 10 rooms, are a drug on the market, and the situation has been aggravated by the owners of cooperative apartments being unwilling or unable to occupy them, due to the tax discrimination. Rents are thereby reduced, and high-class buildings—built for, say, 12 apartments—are being converted into glorified tenements to contain 4 or 5 times that number of apartments. Where this practice obtains to any great extent, the character of the neighborhood is changed, and the assessable values of the properties are decreased. A casual observer can notice that ever-increasing trend in the Park Avenue and Fifth Avenue sections in New York City. We all love babies, baby carriages, bicycles, and kiddy cars if they are our own, but too many of them crowded into one building do not add to the value thereof.

It would be a godsend to the city of New York if the character of the large apartments and the neighborhood wherein they are located could be maintained, and that result could be accomplished by the proposed legislation inasmuch as cooperative apartments of considerable size could be occupied and economically maintained by the owners thereof, if they were not discriminated against under the tax law.

PATTERSON, EAGLE, GREENOUGH & DAY,
New York, N. Y., May 7, 1942.

HON. WILLIAM J. PHEIFFER, M. C.,
House of Representatives, Washington, D. C.

DEAR MR. PHEIFFER: I have your letter of May 5, 1942, and am very glad to note your interest in the proposed amendment to the Internal Revenue Code whereby a cooperative apartment owner would be entitled to deduct from his income, in determining his income tax, his proportionate share of the taxes and interest paid by him as part of the maintenance of the cooperative enterprise.

I have asked the Tenant-Owners Apartment Association, Inc., of 660 Madison Avenue, New York City, to obtain the information which you desire and have been assured that it will be forthcoming early next week.

Many of the real estate firms in New York are interested in the subject and I believe that practically any of them would be glad to give such information as was available. I have in mind Pease & Elliman, Inc., 660 Madison Avenue; Douglas L. Elliman & Co., Inc., 15 East Forty-ninth Street; Brown, Wheelock, Harris, Stevens, Inc., 14 East Forty-seventh Street; and Douglas Gibbons & Co., Inc., 73 East Fifty-seventh Street.

Some days ago a publicity man from the office of Pease & Elliman, Inc., talked with me in the hope that he could get the New York newspapers to advocate the legislation. For his guidance I gave him an additional memorandum, of which the within is a substantial copy.

I note that Mr. Randolph E. Paul, in his letter to you, of which you forwarded me a copy, says that a proposal similar to that now advanced received consideration in the Revenue Act of 1928. In that connection, we should consider the conditions which then prevailed. Rents were abnormally high and a cooperative apartment seemed to offer a haven for which there was a great demand. The tax discrimination was then of little consequence as compared with the excessive rent of a similar apartment in a commercial apartment house. Now, that income taxes are of real moment, the tax discrimination cannot and will not be borne—that is to say, it is more economical for the cooperative apartment owner to abandon his investment and rent in a commercial apartment house—a practice which has become prevalent.

Mr. Paul, in assigning the reasons for the Senate deleting the provision in the 1928 Revenue Act, says:

(1) "It was believed that such a deduction would be practically impossible to administer and would afford an easy means of tax evasion in many cases";

(2) "It was also pointed out that no comparable deduction was given to the great number of individuals who leased apartments by the year;" and

(3) "The purchaser of a cooperative apartment is permitted to deduct the interest on the unpaid portion of the purchase price of an apartment."

As to (1), the belief has proved to be inaccurate. The New York income-tax law, since 1931, permitted a similar deduction. Insofar as I know, the administration thereof has been simple and has not afforded an easy means of tax evasion. Each cooperative apartment corporation files an income-tax return and each one allocates to each proprietary lessee therein his proportionate share of the taxes and interest payments. Every taxpayer, in claiming such deduction, must show in his return the particulars thereof and every such deduction can be readily checked.

As to (2), it should be borne in mind that the proprietary lessee has an investment whereas the ordinary tenant has no investment. Furthermore, a prospective tenant, if he rents an apartment in a commercial building, must pay the rental demanded by the landlord, but the landlord, if he runs a commercial apartment house, is running it for profit. He deducts from his income, in determining his income tax, the amount which he pays out as taxes and mortgage interest, and naturally the amount that he can deduct from his income is a principal factor in determining the amount which he must demand for rental. The greater deduction which the landlord can make, the less he is required to demand from the tenant, and the tenant does thereby get the benefit of the deduction.

As to (3), possibly I do not understand the third objection. There is no objection to the purchaser of a house deducting the interest on a purchase money mortgage, and if that is correct, why should not the purchaser of a cooperative apartment be entitled to deduct the interest on a purchase-money mortgage; i. e., the unpaid portion of the purchase price of an apartment.

I am confident that a careful study of the situation will clearly demonstrate that the stated reasons for deleting the provision from the Revenue Act of 1928 will show that they are without merit, particularly in view of present conditions.

As you doubtless know, the right of a cooperative apartment owner to make the deductions under the present law has been litigated. *Wood* v. *Rasquin, Collector of Internal Revenue* (21 Fed. Supp. 201), affirmed without opinion by Circuit Court of Appeals, Second Circuit (97 Fed. Rep. 2d, 1023), is the principal case. This was decided against the taxpayer on the theory that the tenant was not obligated to pay the tax and that the tax had, in fact, been paid by the corporation and had been claimed by it as a deduction in its income-tax return. The reasons are literally sound, but the Court intimated that if Congress wished to remedy the situation it could do so by legislation.

I call to your attention also *Boland* v. *Commissioner of Internal Revenue* (123 Fed. 2d. 358).

In considering these cases it should be borne in mind that the person who really pays the tax is the cooperative apartment owner and that funds for such payments are merely siphoned through the corporation. In this siphoning process the corporation receives and pays out exactly the same amount for interest and taxes, but the apartment owner, who is the real payer of the taxes and interest, receives no income-tax benefit therefrom.

Perhaps it would be helpful if I explained my position in the matter. Although I have appeared as attorney for the Tenant-Owners Apartment Association, Inc., I expect no compensation from it or from anyone else for my services.

I was president of a cooperative apartment for about 10 years, and during that period represented five or six other cooperative-apartment corporations. Furthermore, I owned a cooperative apartment and still own one, although I have initiated proceedings whereby I will be able to abandon it. From my experience I became convinced that the tax discrimination against cooperative owners was the primary cause of their troubles and that it was, in fact, harmful to all real estate. After I had given the matter considerable thought I determined to urge the legislation in the public interest. I doubt very much if the legislation would be helpful to me, individually, although if it were enacted promptly I might determine to hold my apartment.

If you wish any further information on the matter which I can furnish, please do not hesitate to call upon me.

Yours very truly,

(Signed) J. F. EAGLE.

The CHAIRMAN. Mr. Henry Forster.

STATEMENT OF HENRY FORSTER, OF BROWN, WHEELOCK, HARRIS, STEVENS, INC., NEW YORK, N. Y.

The CHAIRMAN. Will you give your name and address?

Mr. FORSTER. Henry Forster, Garrison, N. Y.

The CHAIRMAN. You represent Pease & Elliman, Inc.?

Mr. FORSTER. No, sir; that is a typographical error. It should be Brown, Wheelock, Harris, Stevens, Inc.

The CHAIRMAN. You want to be heard on the same question?

Mr. FORSTER. Yes, sir. I have just a few remarks to make.

The CHAIRMAN. We will be glad to hear you.

Mr. FORSTER. I have no prepared or formal statement.

I wish to second what Mr. Eagle has so clearly stated. Possibly he did not emphasize enough the benefit to the Federal Government that would accrue if the proposed deductions are permitted. The real-estate market would certainly be stimulated. This would mean increased commissions to brokers, which would be taxable; also profits to recent buyers of properties which would also be taxable income. With the increased activity and increased real-estate values all sorts of benefits would accrue and many losses now facing owners or mortgagees would not occur. Many of the mortgages are split up in the form of bonds and certificates held by the public. Increased business and reduced losses always mean increased taxes, and the Government is the gainer.

For more than 30 years I have been in the real-estate business, specializing in residential properties in the Borough of Manhattan, New York City. For two-thirds of that time I have been very actively engaged in all phases of cooperative apartment work, selling the land, arranging for the construction of the building, pricing and selling the apartments, managing the completed buildings, working out their financing, and so on.

For the last 10 years there has, of course, been very little selling of such apartments, due in great measure to a decline in rents and the extra burden thrown on the individual owners by reason of their not being allowed interest and tax deductions. The home owners of the Nation are admittedly a most desirable group. They should be encouraged.

In many cities the ownership of private houses has become economically impossible. To encourage urban home ownership the cooperative apartment owner should be given the same tax deductions and interest deductions that he would get if he owned a private house.

If you have any questions I should be very glad indeed to try to answer them.

Senator VANDENBERG. You say this is the chief reason for the failure of cooperative housing?

Mr. FORSTER. One of the chief reasons.

Senator DANAHER. Mr. Chairman, a question.

The CHAIRMAN. Yes.

Senator DANAHER. Is there any reason why a cooperative may not take over two apartments, live in one and rent the other?

Mr. FORSTER. No objection to his doing that, but if he does that, then the second one, the one he rents, would become a business investment, and he would then pay an income tax on the net rent he received. In other words, assuming he got $2,000 rent for the one he rented and assuming that his maintenance charges and upkeep, entire upkeep, what you would call maintenance charges, would amount to $1,000, he would then have to add to his personal income $1,000, the net difference.

Senator DANAHER. And if an individual were responsible, he might take a third one for his son, let us say?

Mr. FORSTER. Yes. If he held it in his own name, his son would pay the rent, of course. It would be treated the same way. If his son did not pay the rent, he would be entitled to the deduction.

Senator DANAHER. The only point of my inquiry, I think Mr. Eagle left the impression that one owner may only have one share in this cooperative venture. He may have as many units as he wishes.

Mr. FORSTER. The one he occupies is the only one that he gets the benefit for in regard to the taxes.

Senator TAFT. As I understand it, the owners' shares of stock are absolutely tied up in that particular apartment. They cannot be separated. They relate to that apartment and cannot be related to any other apartment; is that right?

Mr. FORSTER. That is right.

Senator TAFT. They may be transferred with the apartment, but not otherwise.

Mr. FORSTER. There is a reason why an owner would not want more stock with any apartment that he occupied. He would prefer to have less, because his maintenance charges are dependent on the number of shares of stock. If he had 10 shares and was told he could have 10 extra shares he would refuse them, because it would mean his rent would be doubled, and he naturally would want as low a rent as he could get. From that standpoint there is no danger of his getting any extra stock that would in any way help his tax situation.

The CHAIRMAN. If there are no other questions, we thank you, Mr. Forster, for appearing.

Mr. FORSTER. Thank you.

The CHAIRMAN. Mr. Ruml.

STATEMENT OF BEARDSLEY RUML, OF R. H. MACY & CO., INC., NEW YORK, N. Y.

The CHAIRMAN. You may give your name to the reporter, and your business connections.

Mr. RUML. Mr. Chairman, my name is Beardsley Ruml. I am appearing as an individual. I am the treasurer of R. H. Macy & Co. and also chairman of the Federal Reserve Bank of New York and adviser of the National Resources Planning Board.

The committee is familiar with the weakness in the American scheme of things which is caused by the universal indebtedness of income-tax payers to the Federal Government. It is my purpose to emphasize the seriousness of this weakness, to point out briefly some of the consequences, and to make a suggestion as to what may be done about it at the present time. I should like, if I may have permission, to submit for incorporation in the record a printed statement which analyzes the problem and the suggested solution in some detail.

The CHAIRMAN. You may have the privilege of filing that with the reporter if you desire to put it into the record.

Mr. RUML. Every income-tax payer on the 1st of January of this year was in debt to the Federal Government for his income tax on his income for 1941. By the time he paid the first installment on March 15, 1942, he was already in debt for the tax on his income from the 1st of January 1942 to the middle of March, so he is always in debt for the tax on about a year's income.

The situation is not a new one. The year before he was similarly in debt, and so also in the year before that, back to the first year after he had a taxable income. Generally speaking, this debt, the income tax on last year's income, was paid out of the next year's income, and, by and large, it didn't cause any difficulty; rates were low and most citizens weren't liable for any income tax, anyway. But the days of low rates and general immunity from income tax have gone, and what was once a minor defect has become a serious and growing weakness and an obstacle to urgently required tax measures.

In general, the American taxpayer is counting on paying his 1941 tax out of 1942 income. Some few, to be sure, being accounting-minded, have accrued their income taxes, but these are few, indeed. For most the desirability of accruing personal income taxes only became evident after rates became so high that it was impossible to double up—to accrue the tax on this year's income and to pay the tax on last year's income during the same year.

Nothing is to be gained by arguing that people ought to save this year's tax out of this year's income. The fact exists that they did not do it, and now they cannot do it. We need, rather, to adopt a plan which automatically shifts taxpayers to a current basis. It would have done little good to argue with employers or employees that, in order to save power, everyone ought to go to work at 8 o'clock in the morning instead of at 9; the same result in power saving was achieved much more simply by moving all the clocks forward an hour, so that we actually go to work at 8 o'clock, although we normally still go at 9.

And so, as a matter of practical fact, most income-tax payers are counting on paying their year's debt to the Federal Government out of income they haven't yet received and which will itself be subject to income tax.

Some day, for each and every taxpayer that counted-on income to pay last year's income tax will not materialize. Already today, many an income-tax payer is in difficulties because of this income-tax debt. Who are these tax payers? First of all, there are the men in the armed forces and those who have gone into Government service at lower income. Next, there are those who had been successfully employed in nonwar industries, who have seen their income shrink because of priorities and allocations, and who have not completed their adjustment to war occupation. There are the thousands and thousands who every year suffer reduced income because of accident, sickness, old age. For all of these, their income-tax debt, especially now because of the high rates, creates an intolerable situation.

And for the tens of thousands who are actually in distress, there are millions who are in danger, in danger of loss of income through being drawn into military or Government service, through wartime industrial displacement, through accident, through sickness, through retirement because they can no longer keep up the pace. To be sure, the lightning will not strike all in 1942; but it is sure to strike some of us—which, we do not know, but we are all in danger.

This danger will be increasingly felt by the people as income-tax rates go higher and as a friend here and an acquaintance there is engulfed by his income-tax debt. For the welfare and morale of the country it is a situation which is not good. We should get our income taxes on a current basis and at once. We should get out of debt to the Federal Government.

There is a compelling reason for doing something about it now. Sooner or later we shall be demobilizing our war industries and wartime incomes will cease. There will be a period of readjustment. Suppose we are still a year behind, a year in debt on income tax. Can we imagine income taxes being paid by the unemployed out of their unemployment compensation?

Finally, this income-tax debt makes difficult or impossible the full use of the withholding tax. If we did not have this debt, if we were currently tax debt free, there would be no problem of paying 2 years' taxes in 1, and a withholding tax could be imposed forthwith.

I believe I have said enough to demonstrate that the tax debt of income-tax payers is a dangerous weakness, that it causes widespread hardship and apprehension, that the danger is an increasing one, and that it obstructs desirable tax measures. I think all will agree that it would be highly desirable to get rid of this tax debt and that it is well worth while to attempt to solve this major problem even at the risk of a few minor imperfections.

The suggestion that I am offering is not being presented as the only or even as the best solution. It is the best that I and those with whom I have consulted have been able to devise. In any case, it may serve to emphasize the problem and to be a starting point for others who will have alternative and better suggestions.

The pay-as-you-go income-tax plan is intended to apply to individual income, not to corporations or to estates.

In order to get individuals free of tax debt to the Federal Government, and to keep them on a current basis from that time on, we must solve three problems.

1. How can we get on to a current basis without paying 2 years' taxes in 1 year?

2. If we are to file a tax return near the beginning of a year, how can we estimate in advance the amount of the new year's income?

3. What tax rate should be applicable to the new year's income?

Taking up these problems in order, we make these suggestions:

1. How can we get on to a current basis without paying 2 years' taxes in 1 year? We are now paying a tax in 1942. It is considered a tax on 1941 income. Suppose we move the tax clock ahead, suppose we redefine our tax and say that the tax we are paying in 1942 represents a tax on our income for 1942. In 1943 we continue to pay a tax which becomes a tax paid with respect to income which will be received in 1943. Although the tax on 1941 income drops out of existence, the Treasury continues to receive its revenue and the taxpayer continues to pay his taxes. The great difference is that the taxpayer is now on a current basis. He continues to pay his taxes every year on income received in that year. But when he dies or ceases to receive income, he does not owe a tax as he does under the present system. Reduction of tax payment by the taxpayer as a result of setting the tax clock ahead occurs only at some future date when and as the taxpayer's income increases or declines. The reduction is therefore spread over the lifetime of the present income-tax-paying generation, and occurs beneficially for each taxpayer at the time when his income fails. As for the Treasury, the Treasury has never considered taxes receivable as an asset, and accordingly they can be written off the balance sheet of the Government without the change of a single penny.

As to the second problem: If we are to pay in any given year a tax based on the income of that year, how are we to know the amount of the income? We make this suggestion: In March of each year the taxpayer should declare a tentative tax for that year, but because he does not yet know the exact amount of income for the current year, the tentative tax should be measured by the income of the preceding year; that is, a return filed on March 15, 1942, would be a return of tentative tax for 1942, based on 1941 income, rather than a tax for 1941. In the subsequent year's return, end-of-the-year adjustments would be made to correct the tentative tax to the actual tax liability. I will try to explain a little later the way in which these adjustments could be made.

The problem of how the taxpayer will know what tax rate is applicable can be solved by a technical change. Under the present system when the Congress changes the rates of tax this year, the new rates will be made applicable to 1942 income but the tax on 1942 income will not be paid until 1943. We suggest that under the pay-as-you-go plan the new rates, for taxpayers subject to the plan, be made first applicable to income received in 1943. Insofar as the Government is concerned, this change will make no difference in tax collections in 1943; under the present system, as well as under the proposal, the new rates first affect payments of income tax made in 1943.

The way in which the plan would work out in practice is perhaps made clearer by a simple example. Suppose a taxpayer received $5,000 taxable income in 1941. His return filed on March 15, 1942, showed a tax measured by the 1941 income. Under the plan this tax, instead of being his 1941 tax, would be his tentative tax on 1942 income. This tentative tax is paid in 1942. If at the end of 1942 he finds his taxable income in that year was actually $5,000,

the same amount as in 1941, his full tax has been paid and he owes the Government nothing. If at the end of 1942 he finds instead that his 1942 income was actually $5,500, he owes the Government a tax on the additional $500, but this is certainly better than his owing the Government, as under the present system, a tax on the full $5,500. This deficiency tax on the additional $500 would be payable in March of 1943 at the time his tentative tax for 1943 is returned. If at the end of 1942 he finds that his 1942 income was actually $4,500, the Government owes him a refund or a credit of the tax on the $500 differential. The tax on that amount could be credited against the taxpayer's tentative tax liability for 1943. Continuing into 1943—the taxpayer would file a return in March 1943 showing tentative tax for 1943 based on his actual 1942 income. He would pay in 1943 this tentative tax plus any deficiency that was owed for 1942 or minus any credit for an overpayment of his 1942 tax. In the same way, in each succeeding year the taxpayer would pay a tentative tax for the current year plus or minus any differential between the tentative tax and the actual tax liability for the preceding year.

For taxpayers with stable income the plan means that they owe no taxes to the Government at the end of the year. For taxpayers with increasing or decreasing income, there is ordinarily an adjustment to be made at the end of the year. However, there are some cases where it would seem to be unnecessary for the taxpayer whose income has decreased to pay his tentative tax at the high level of the preceding year and then claim a credit for the overpayment. Take, for example, the men who have gone into the armed services. Suppose a particular individual, who received $7,500 in 1941, and who is now holding a commission in the Army and receiving $2,000. Under the plan as stated he would pay tentative tax for 1942 on the basis of the $7,500; but since his actual income in 1942 is only $2,000, he would be entitled to a credit on the overpayment. We suggest that in such cases as this, where income has decreased and will clearly remain at the lower level, the taxpayer should, upon proper certification, be required to pay tax only on the lower income of the current year. In such cases provision could now be made for waiving collection of future installments payable in 1942 to the extent they exceeded the amended 1942 tax, or for crediting the taxpayer with amounts already paid in excess of that figure. We have called this the relief provision, and have suggested that it be made applicable only to income from personal services. In these cases the lower current income could be certified and tax paid only on that amount. This would give immediate relief to the taxpayer whose income has decreased, and eliminate the necessity for unnecessary payment and crediting. The relief provision could probably not be extended beyond income from personal services as the administrative difficulties might outweigh the advantages.

When income has increased in the current year over the level of the preceding year, we suggest that the taxpayer should be given the right to, and be encouraged to, make a voluntary declaration of the increase and pay tentative tax at the higher current level. At the present time it is impossible for a taxpayer to pay his tax on a high income in the year it is received, and the higher income is never reflected in tax receipts until the following year. Certain taxpayers

with fluctuating income might be glad of the opportunity to pay their taxes on the high income currently and certainly the option to do so could never operate to the disadvantage of the revenues.

I do not want to take the committee's time to go into any detailed consideration of the general effects of the plan on taxpayers and on the Government; these are outlined in the printed statement of the plan. The advantages of the plan to taxpayers are self-evident. All taxpayers would be largely freed of tax debt immediately since the larger part of their tax liabilities would be paid in the years in which the income was received. When a taxpayer died, or ceased to receive income, or came to a period when his income had markedly decreased, there would not be the additional burden of a tax debt based on the full earnings of a previous year.

We do not believe that the adoption of the plan would prejudice the revenues. Every taxpayer will continue to pay income tax every year—the only difference is that under the plan he would be paying a tax on this year's income rather than on last year's income. The skipping of a year's tax actually occurs only when the taxpayer dies or he ceases to receive income. This resulting loss of revenue is spread over the years as the current generation of taxpayers ceases to be taxpayers. This loss of revenue, spread perhaps over a period of 50 years, would be partially offset by certain increases in tax collections under the plan; and in any case could be made up by slightly higher rates over this long period of time.

Balancing any possible net loss in revenue to the Government are certain important advantages. It is as essential for the Government to collect taxes currently as it is for the taxpayer to pay them currently. The problem of delinquencies in tax collections, although it has not been serious in past years of higher exemptions and lower rates, is certain to become serious in the future if taxes are not paid on a current basis. The entire problem of tax collection in general becomes more difficult as we widen the income-tax base. The collection problem has brought to the forefront the desire for some type of withholding tax. Yet a withholding tax implies current tax collections—it does not fit well into our present tax system. In one sense, as a withholding tax becomes more desirable, our present tax-collecting system becomes more cumbersome.

The pay-as-you-go plan, although it is primarily designed as a method of getting taxpayers out of tax debt and onto a current taxpaying basis, does, however, also solve the great difficulty encountered under the present system in the imposition of a withholding tax. Under the present system it is extremely difficult to institute a withholding tax without some amount of double taxation during the transition period. The difficulty lies in the fact that under the present system taxpayers will be paying in 1943 a full year's tax on 1942 income. If withholding is instituted in 1943 against 1943 income and therefore credited against 1943 tax which is not payable until 1944, the taxpayer will have to pay in 1943 not only the full year's tax on 1942 but also the amounts withheld out of 1943 income. Even under the provision in the bill as it was passed by the House under which the withholding rate in 1943 would be 5 percent instead of 10 percent, there would still be 5 percent additional tax during both of the transition years 1943 and 1944. With the rate schedule

of the House bill this will mean that the taxpayer will be paying in 1943 a rate of 24 percent on the lowest bracket of taxable income.

Under the pay-as-you-go plan the tax paid in 1943 would be a current tax on 1943 income; therefore, amounts withheld against 1943 income could be directly credited against the installments of tentative tax on 1943 income. Further, since the amounts withheld in 1943 could be directly credited against the installments of tentative tax, the withholding rate could be set at the rate equivalent to the sum of the normal tax rate plus the lowest bracket surtax rate—19 percent, under the rates of the bill as it was passed by the House. Under the Treasury's proposal it would be impossible to set the withholding rate so high since withholding superimposed on the present system necessarily involves to a considerable extent an additional tax burden during the transition period.

In our discussions during recent months we have sincerely looked for objections and criticisms, and the plan as it now stands has profited greatly from these conversations. One criticism that the plan does not meet should be mentioned and answered.

It has been pointed out that under the pay-as-you-go plan there will be a certain number of individuals who will benefit unduly because of the fact that for them 1941 happened to be a year of unusually large income, larger than that of the years that preceded or that followed. Consequently, in selecting 1941 as the year to be omitted, they receive unintended benefits.

We concede the fact. In answer, we point out that no tax program will cut with the precision of a surgical knife. Furthermore, these few individuals could not have built up their 1941 incomes with prevision that this plan would be suggested or adopted, and therefore no deliberate manipulation of income for this purpose is involved. Insofar as there is inequity in the plan on this account, it resides in being too beneficial to some few taxpayers; but since the plan is beneficial to all and harmful to none, inequity of this kind, though regrettable, is an imperfection of a minor order as compared with the great good that will be achieved.

We believe that the problem of tax debt must be solved in some manner. As I have pointed out, the problem is an intensely personal one, affecting every taxpayer. The suggested solution offered in the pay-as-you-go plan gives relief to the taxpayer and yet does not embarrass the revenues. Whether the solution of the problem of income tax debt takes the form suggested in the pay-as-you-go plan or some other form is not important; what is important is that the problem should be solved.

Thank you very much, Mr. Chairman.

The CHAIRMAN. Are there any questions by any member of the committee?

Senator DANAHER. Have you taken this up with the Treasury?

Mr. RUML. Not officially, but it has been discussed with a number of the experts of the Treasury.

Senator DANAHER. What do they say about it?

Mr. RUML. I think the Treasury can best speak for itself; but I will say this, that the plan as it now stands incorporates as many of the suggestions that were received from the technicians as it was possible to incorporate, with the exception of one criticism which I have specifically mentioned.

The CHAIRMAN. Are there any other questions?

Senator CLARK. Mr. Ruml, I do not see how it is that you figure this 1941 tax that is being omitted. The 1941 tax is now being paid or has already been paid.

Mr. RUML. That is true. My point is if we consider these payments as payments against 1942, then at the end of this year we all start fresh and clean, and we have a clean piece of paper to write on. So you see it is the 1941 tax that is being skipped.

Senator CLARK. The payments made in this year would be credited against this year's taxes?

Mr. RUML. That is correct, sir.

Senator CONNALLY. You would not pay any tax at all in 1941?

Mr. RUML. The 1941 tax would not be paid, but the reduction of income would only come over the whole lifetime of the present generation that is paying an income tax, because each year we go along and pay our tax as a bona fide declaration, and it is only as we die or as we lose our income——

Senator CONNALLY. I mean nobody is paying taxes on 1941 income.

Mr. RUML. 1941 would drop out, but everyone would pay what he would have paid in 1941 but pay it in 1942 against 1942 income.

The CHAIRMAN. He would pay every year?

Mr. RUML. He would pay every year, but it is on the new year, so when we come to the end of this year we are out of debt to the Government.

Senator CLARK. The taxes you pay in 1942 would be credited on the 1942 income as against 1941 income?

Mr. RUML. That is correct, sir.

The CHAIRMAN. Thank you very much for your appearance.

(The pay-as-you-go income tax plan submitted by Mr. Ruml is as follows:)

THE PAY-AS-YOU-GO INCOME TAX PLAN

[March 25, 1942, revised June 30, 1942]

The pay-as-you-go income tax plan is the result of much consultation and the working of many minds. It is offered by its friends as a possible solution of a serious national problem, the indebtedness of millions of citizens to their Government because of the present practice of assessing and collecting the Federal income tax.

BEARDSLEY RUML.

NEW YORK, N. Y., *June 30, 1942.*

THE PAY-AS-YOU-GO INCOME-TAX PLAN

The plan outlined below is proposed as a method whereby individual taxpayers can be put on a current taxpaying basis so that the income taxes they pay in any 1 year represent the taxes on that year's income rather than on the income of the preceding year.

I. THE PROBLEM

Under our present system of paying income taxes every taxpaying individual is always in debt to the Government. In 1942 we are now paying taxes on the income we received, and probably spent, in 1941; but the tax on the income we are now receiving in 1942 has not yet been paid, and by the end of 1942 we shall each owe the Government 1 year's tax. In many instances, when income continues from year to year without much change and when there is little change in the tax rates, the present system may not seem to work any hardship. We receive income in every year, and we pay a tax in every year, and we may not be concerned by the fact that the tax we have paid is on last year's income and that we still owe a tax on this year's income. Nevertheless, whether we are conscious of it or not, we are always in debt.

There are times in nearly every taxpayer's life when the existence of debt creates particular hardship. Every taxpayer dies some time; most taxpayers suffer some time during their lives a decrease in income which may be very sharp, as when an individual retires, or suffers an accident, or finds his income sharply cut by general economic dislocations. A man earning $10,000 a year may retire on an income of $3,000 a year; in the first year in which he receives $3,000 he has to find the money to pay a tax on his last year's $10,000 income. When a taxpayer dies, his estate is liable for the payment of a tax on the income he received in the year of death. But in the year in which payment is due there may be no income out of which to pay the tax. The tax, if it is paid at all, must be paid out of whatever capital the decedent leaves, which may seriously deplete the amount remaining for his surviving family. For many people the payment of tax on 1 year's income at the present high rates can be a serious problem when there is no more income coming in. The general problem which exists in peacetime as well as wartime is brought into sharp focus in the case of the men who have this year entered the armed services. Many of these men will receive during this year incomes far below their 1941 incomes; but out of their small 1942 incomes they must pay a tax on the higher incomes of the preceding year. Even though collection of this tax is deferred, the debt remains.

There are unquestionably some taxpayers who are careful enough to provide in advance for their tax liability, but they are a minority. These are the people who, for instance, in 1942, would try to estimate their probable 1942 income and their tax on that income; and would then set aside out of 1942 income funds with which to pay the tax. These people, although they owe the Government a debt, will have provided funds with which to meet it. But most taxpayers do not provide for their taxes in that manner, partly because of a general tendency not to provide for the payment of a debt until the period when the payment is due, and partly because estimating the amount of tax is often impossible.[1] For example, taxpayers have known all during this year that the tax rates applicable to 1942 income would be changed, but lacking the quality of omniscience they could not know in advance the rates which would be applicable to their particular incomes. The taxpayer, with the best will in the world, could not estimate the tax that would be due on 1942 income, even if he knew in advance the amount of his 1942 income.

Certainly the majority of people do not even try to provide in advance for their tax liability. They somehow find the money in 1942 to pay the tax for 1941, and wait until 1943 to worry about their 1942 tax. The consequence is that at the end of every year they are in debt for a year's taxes and have not provided out of their income for the payment of that debt. The present proposal is made in an effort to find some way to get taxpayers out of tax debt and on a pay-as-you-go basis, so that the tax they pay during any year is to the fullest possible extent the tax in the income received during that year, and so that at the end of the year they will not owe money to the Government.

Nothing is gained by arguing that people ought to save out of this year's income enough money to pay the tax on this year's income. The fact exists that they do not do it. We need, rather, to develop some system which automatically shifts taxpayers to a current basis. It would have done little good to argue with employers or employees that in order to save power, everyone ought to go to work at 8 o'clock in the morning instead of at 9; the same result in power saving was achieved much more simply by moving all the clocks forward an hour, so that we actually go to work at 8 o'clock, although we nominally still go at 9.

The present tax collecting system has developed out of apparent necessity. Taxes are not paid on 1941 income until 1942 because it is not until 1942 that the taxpayer knows certainly what his income was in 1941 and what rate of tax is applicable. But in spite of the seeming necessity for the present system, if it does produce unnecessary hardship, it is worth some effort to find out if there is a feasible method by which taxpayers can pay their tax on a current basis.

II. THE MAIN DIFFICULTIES IN THE WAY OF A PAY-AS-YOU-GO SYSTEM

In order to put taxpayers on a current basis, we must find some system under which the tax paid in any 1 year is the tax that is owed on the income received during that year. Three main difficulties stand in the way:

[1] Heretofore taxpayers, generally, have not been conscious of the problem, primarily because they did not have to face the possibility of paying last year's taxes and also paying, in the event a withholding tax is initiated, part of this year's taxes.

(1) Since we are 1 year behind in our tax payments, how are we going to catch up with ourselves—what do we do with the extra year?

(2) If we are to file a tax return in March of any given year, representing tax on that year's income, how are we to know in advance the amount of that year's income?

(3) If we are to file a tax return in March of any given year, representing tax on that year's income, how are we to know in advance the tax rate applicable to that year's income?

Taking up these problems in order, we make these suggestions:

(1) We are paying a tax in 1942 anyway. It is now considered a tax on 1941 income. Suppose we redefine it and say that the tax paid in 1942 represents a tax, tentative to be sure, on the income we are going to receive in 1942. In 1943 we continue to pay a tax which becomes a tax paid with respect to income which will be received in 1943. The tax on 1941 income apparently drops out of existence, but the taxpayer continues to pay a tax every year. The only difference is that he is now on a current basis. He continues to pay a tax every year on the income received or to be received that year. But when he dies or ceases to receive income, he does not owe a tax, as he does under the present system. Although the tax on 1941 income seems to have been presently canceled, cancelation actually occurs only a the time the individual ceases to be a taxpayer. As is pointed out below, so far as the Government is concerned, any loss in revenue would be largely offset by an acceleration in collection of tax from new taxpayers and from present taxpayers receiving increased incomes, and by an increase in estate-tax collections.

(2) It is perfectly clear that most taxpayers could not have filed a return, say in 1942, on the basis of their 1942 income, since they would not know the amount of the income until the end of the year. To avoid this obvious difficulty we suggest that each year a taxpayer should compute his tax for that year, measured by the income of the preceding year; that is, the return filed on March 15, 1942, would be a return of tax due on 1942 income, but because of practical necessity it would be based on the 1941 income. Suppose a taxpayer received $5,000 taxable income in 1941. His return filed on March 15, 1942, showed a tax measured by 1941 income; under the plan this would be his tentative tax on 1942 income. If at the end of 1942 he finds that his taxable income actually was $5,000, the same income as in 1941, his full tax has been paid. If he finds, instead, that his 1942 income was $5,500, he owes the Government a tax on the additional $500. (But that is far better than his owing the Government, as under the present system, a tax on the full $5,500.) If he finds that his 1942 income was $4,500, rather than $5,000, the Government owes him a refund or a credit of the tax paid on the additional $500.

(3) The problem of how the taxpayer will know what tax rate is applicable can be solved by a technical change. Under the present system, when the Congress changes the rates of tax this year, the new rates will be made applicable to 1942 income. But the tax on 1942 income will not be paid until 1943. We suggest that under the pay-as-you-go plan the new rates, for individual taxpayers subject to the plan, be made first applicable to income received in 1943.[2] The returns filed in March 1942 on the basis of the 1941 act rates could then properly represent the tentative tax on 1942 income. In March 1943 the taxpayer would use the new rates in computing the tentative tax payable in 1943 measured by 1942 income. Insofar as the Government is concerned, this change will make no difference in the tax collections in 1943; under the present system, as well as under this proposal, the new rates first affect payments of income tax made in 1943.

III. THE ESSENTIAL POINTS OF THE PAY-AS-YOU-GO PLAN

The proposed plan is intended to apply only to individual income, including partnership income and the income of trusts taxable to the beneficiary or the grantor. It would not apply to corporations, to estates, or to the income of trusts taxable to the trustee, since corporations normally report on an accrual basis, and executors and trustees necessarily provide for the payment of taxes before distribution is made.

The plan contemplates the following modifications in the present tax system. (In the following statements it is assumed that the plan goes into effect in 1942.)

[2] It could be provided, however, that the 1942 act provisions for the alternative tax with respect to capital gains and losses and the limitation on capital losses should apply to capital gains and losses realized during 1942.

(A) *Tentative tax.*—In March of each year the taxpayer would file a return showing a tentative tax for that year; the tax would in general[3] be measured by the income of the preceding year but computed according to the rates and exemptions applicable to the current year. That is, the tax shown on the return filed in 1942 would represent a tentative tax on 1942 income, measured by 1941 income but computed according to the rates and exemptions applicable to 1942 income.[4]

(B) *Changes in rates of tax and exemptions.*—Whenever changes are made in tax rates or exemptions, the new rates and exemptions, for individual taxpayers subject to the plan, would not become operative until the first of the year following enactment.[5] That is, a change in rates enacted in 1942 would be applicable to 1943 income but not to 1942 income. However, this does not postpone the effect on collections of a change in the rate scale or in the exemptions. Under the present system, a change in rates enacted in 1942 will be applicable to 1942 income, the tax on which is collected in 1943; under the proposed plan the change would first apply to 1943 income, the tax on which would also be collected in 1943.[6]

(C) *Adjustment of tentative tax to actual tax liability.*—The plan contemplates that, in general,[7] the tentative tax is to be measured by the income of the preceding year, since the actual income of the current year cannot be known until the end of that year. Therefore, at the end of each year the taxpayer may find that he has paid too little or too great a tax on the current year's income.[8] Suppose, for instance, that a taxpayer received income of $5,000 in 1941 and $5,500 in 1942. The tentative tax paid in 1942 would have been measured by his 1941 income of $5,000. At the end of 1942, since the taxpayer's income in 1942 was actually $5,500, he would owe the Government a tax on the additional $500 at rates applicable to 1942 income; this differential would be payable the following March (1943)[9] at the time the tentative tax for 1943 is returned. In the same way, if at the end of 1942 the taxpayer found that his actual 1942 income was $4,500 rather than $5,000, the Government would owe the taxpayer a refund or a credit on the differential of $500. The tax on that amount could be credited against the taxpayer's tentative tax liability for 1943.[10] No substantial administrative difficulty or expense would be involved because the taxpayer's return of tentative tax for the following year, 1943, would show his actual income for 1942; any deficiency due on 1942 income or claim for credit because of an overpayment on 1942 income would be computed and shown on the 1943 tentative tax return.[11]

Under the proposed plan (except for the operation of the relief provision outlined in III (D) below), all individuals would pay the same amount of tax in 1942 as they would under the present law, i. e., each individual would pay a tax measured by 1941 income but at the rates and exemptions applicable to 1942

---

[3] See III (D) below for a suggested relief provision to take care of certain cases of increasing or decreasing income.

[4] Since we are suggesting (see (B) immediately following) that any change in rates and exemptions, except perhaps as to capital gains and losses (see footnote 2), should first become operative the first of the year following enactment, the rates and exemptions applicable to 1942 income would be the rates and exemptions of the 1941 Revenue Act. However, under the proposed plan the tax on 1942 income, computed at the 1941 net rates and exemptions, is collected in 1942; under the present system the tax collected in 1942 is also computed at the rates and exemptions of the 1941 Revenue Act.

[5] Except perhaps as to capital gains and losses, see footnote 2.

[6] The plan originally contemplated that the rates about to be enacted should be applicable to 1942 income. However, it was found that where the year of transition is one of increased rates, the increase in tax payments (as distinguished from tax liability) in the year following the year of transition is probably too steep. It is true that this burden would be more than offset by the complete or relatively complete freedom from obligation at the time of death or retirement. Moreover, the increase in tax payments in 1943 would, in most cases, probably not be substantially greater than the amount that would be payable if a withholding tax were initiated in that year. But people generally are more interested in immediate consequences than in ultimate effects.

[7] See III (D) below for a suggested relief provision to take care of certain cases of increasing or decreasing income.

[8] This would result solely from an increase or decrease in income over the preceding year, or a change in status as regards the personal exemption or credit for dependents during the preceding year.

[9] If the deficiency were very large in proportion to the total liability, provision could be made for paying it in installments.

[10] Since the overpayment could be credited against the tentative tax liability for the following year, there would, in normal times, be relatively few occasions for an actual cash refund. Refunds would ordinarily be necessary only in the case of taxpayers who had died or who had ceased to receive taxable income.

[11] An example of a return showing tentative tax for 1943 and a deficiency tax for an underpayment in 1942 is given in table VII of the appendix.

income.[12] But instead of this being a tax on 1941 income, it would be at tentative tax on 1942 income. At the end of the year 1942, if the taxpayer's 1942 income was different in amount from his 1941 income, he would owe to the Government or be owed by the Government the tax on the differential. But if at the end of 1942, he found that his 1942 income was the same as his 1941 income, his full tax on his 1942 income would be paid and there would be no differential to be adjusted. In 1943 he would pay a tentative tax measured by 1942 income but at the rates and exemptions applicable to 1943 income; this would be the same amount of tax he would pay in 1943 under the present system. However, he would also pay to the Government or be credited by the Government in 1943 for any difference in the tentative tax paid for 1942 and the actual tax liability for that year. Thus in 1943 and in each succeeding year the taxpayer would (except in cases where the relief provision outlined in III (D) might be applicable) pay a tentative tax measured by the income of the preceding year, plus or minus any differential between the tentative tax and the actual tax liability for the preceding year.

(D) *Relief provision for certain cases of increasing or decreasing income.*—Under the pay-as-you-go plan taxpayers whose income is stable from year to year would be on a completely current basis. A tentative tax for 1942, measured by 1941 income, would equal the actual tax liability for 1942; there would be no deficiency to be paid nor any overpayment to be credited in 1943.

However, for taxpayers whose income is not stable the tentative tax may be either greater or less than the actual tax liability. As in the example given in III (C) above, the taxpayer whose 1941 income was $5,000 and whose 1942 income was $5,500 would owe a deficiency equal to the tax on $500; the taxpayer whose 1941 income was $5,000 and whose 1942 income was $4,500 would be owed by the Government a refund or credit of the tax on the $500.

A relief provision could be added to allow taxpayers, in certain cases, when income had decreased or increased over the preceding year, to report a tentative tax based on the current year's income rather than on the income of the preceding year.

(1) *Decreasing income.*—In order to avoid too great administrative difficulty, the relief provision for decreasing income should probably be limited to income from personal services. In such cases it could be provided that upon proper certification of a decrease in income the taxpayer would be permitted to return tentative tax upon the basis of the lower current income. There are many obvious cases where 1942 income, for instance, has decreased from the level of 1941 income and where it is quite clear that 1942 income will remain at the lower level. The outstanding example is, of course, the taxpayers who have entered the armed services. This relief provision would allow the men in the armed services, and other taxpayers receiving income from wages and salaries who could certify that the current year's income would be at a level lower than that of the preceding year, to pay tax only on the current year's income. This provision would eliminate the necessity for the taxpayer to pay a tentative tax on the higher income of the preceding year and then claim a credit in the following year for the overpayment.[13]

(2) *Increasing income.*—When income had increased over the level of the preceding year, taxpayers could be given the right to, and be encouraged to, make a voluntary declaration of the increase and pay tentative tax at the higher current level. There would seem to be no necessity of restricting this voluntary declaration of increase in income to income from wages and salaries; instead the provision could apply to all income. To the extent to which the right to declare a higher income and pay tax at the higher current level was taken advantage of, taxpayers with increasing income would be on a completely current basis. It is impossible to know in advance to what extent taxpayers whose income had increased would voluntarily declare the higher income and pay tax at that level. However, it is unquestionably true that many taxpayers are concerned by the fact that the tax on their income in a

[12] The tentative tax paid in any year under the proposed plan would (except for the relief provision) be the same as the actual tax liability that would be paid under the present system, except if there had been a change in status as regards the personal exemption or the credit for dependents. Under the proposal the tentative tax paid, for example, in 1943 would be computed according to the taxpayer's status with regard to the personal exemption and credit for dependents as of the beginning of the year; if the status had changed during the preceding year, the tentative tax under the proposal would be slightly different from the actual tax that would be paid that year under the present system.

[13] To safeguard the revenues an interest penalty could attach to any deficiency resulting from an unwarranted or false certification of a decrease in income.

particularly high income year is not currently paid but becomes a liability to be met in the following year. Although it is also true that these taxpayers probably do not accrue their taxes, they might welcome the opportunity to pay taxes on the high income in the year it was received. At the present time it is impossible for a taxpayer to pay his tax on a current high income and the higher income is never reflected in tax receipts until the following year. Even if taxpayers as a whole did not take advantage of the right to pay taxes at the level of their higher current income, the right to do so could never be to the disadvantage of the revenues.

The relief provision, although it could clearly not be extended too broadly because of possible administrative problems, could nevertheless take care of the most flagrant difficulties. It could cover almost completely the men who have entered the armed forces or other Government services, and would reach to a great extent the problem of the men whose economic status has been changed through the conversion of plant to war industry. Further, when a taxpayer retires and expects to receive in the future either no income or markedly lower income, the operation of the relief provision would eliminate the necessity for the payment of tentative tax in income which would not be received followed by the repayment of the tax in the form of a refund or credit.

IV. ADVANTAGE OF THE PAY-AS YOU-GO PLAN OVER THE PRESENT SYSTEM IN CONNECTION WITH THE INSTITUTION OF A WITHHOLDING TAX

The pay-as-you-go plan is offered primarily as a method of getting taxpayers out of tax debt and onto a current taxpaying basis. However, the plan also solves the great difficulty encountered under the present system in the imposition of a withholding tax. Under the present system, it is extremely difficult to institute a withholding tax without some amount of double taxation during the transition period. The difficulty under the present system lies in the fact that taxpayers would be paying in 1943 a tax on 1942 income. If withholding is instituted in 1943 against 1943 income (and therefore credited against 1943 tax which is not payable until 1944), the taxpayer will be paying in 1943 not only the tax on 1942 income but also the amounts withheld out of 1943 income. Even under the Treasury proposal under which 50 percent of the amounts withheld in 1943 would be credited against taxes on 1942 income, there would be additional taxation during the transition years 1943 and 1944 equal to approximately one-half the amount of the withholding rate.[14]

Under the pay-as-you-go plan the tentative tax paid in 1943 would be a tax on 1943 income; therefore amounts withheld against 1943 income could be directly credited against the instalments of tentative tax on 1943 income. At most the additional tax during the transition period would be equal to the amount withheld for 1 month. Further, since the amounts withheld in 1943 could be directly credited against the installments of tax payable in 1943, so that there would be practically no double tax burden, the withholding rate could be set at the rate equivalent to the sum of the normal tax rate plus the lowest bracket surtax rate—18 percent, under the rates adopted by the Ways and Means Committee. Under the Treasury's proposal it would probably be impossible to set the withholding rate so high, since withholding superimposed on the present system necessitates an additional tax burden during the transition period.

The pay-as-you-go plan, combined with a withholding tax, might operate as follows:

Suppose a taxpayer (married with no dependents) receives income from wages or salary amounting to $3,000 in both 1942 and 1943. He would report in 1943 tentative tax of $306, payable in four installments of $76.50. The amounts withheld during 1943 (at a rate of 18 percent) would be $25.50 a month. Against the installment of tentative tax due March 15, 1943, the taxpayer could credit the amounts withheld during January and February 1943, equaling $51, and pay the balance of $25.50. Against the installment due June 15 the taxpayer could credit the amounts withheld in March, April and May, amounting to $76.50—and would therefore owe no balance. Against the installments due September 15 and December 15 the taxpayer would likewise be able to credit the amounts withheld during a three months' period and therefore owe no balance. The total effect would be that his payments in 1943—the amounts actually paid plus the

[14] Under the modified Treasury proposal whereby the withholding rate in 1943 would be 5 percent rather than 10 percent, there would still be an additional tax of 5 percent during the transition years 1943 and 1944.

amounts withheld—would be $331.15; during this transition period the only increase in tax caused by the institution of a withholding system would be the amount of $25.50 withheld during 1 month.[15]

V. GENERAL EFFECTS OF THE PLAN

(A) *From the viewpoint of the Government.*—(1) The Treasury would collect in 1942 substantially[16] the same amount that it would under existing law. Therefore, the Government's cash position in that year would not be disturbed by the change-over. Similarly in 1943 (except with respect to taxpayers who die during 1942[17]) the Treasury would collect in cash at least as much as it would under the existing system. This is because the tentative tax paid in 1943 would be a tax measured by 1942 income but computed according to the new rates applicable to 1943 income; under the present system the actual tax collected in 1943 would be a tax on 1942 income at the new rates applicable to 1942 income. Further, the Government would collect in March 1943 any deficiencies representing the excess of the actual tax liability over the tentative tax on 1942 income. Since 1942 is expected, on the whole, to be a year of higher income than 1941, it may reasonably be anticipated that the deficiencies due in 1943 would exceed the refunds or credits in that year.[18]

(2) Nevertheless, it is true that in 1943 the Treasury would not, under the proposed plan, collect the tax on the 1942 income of decedents who died in 1942. This loss of tax would, however, be at least partially offset, and perhaps more than offset, by the following increases in tax collections that would occur under the plan.

(*a*) There would be an acceleration in the collection of tax from new taxpayers—those whose incomes first reached a taxable level during the preceding year. In 1943 a taxpayer whose 1942 income first brought him into the taxpaying group would be liable for tentative tax based on his 1942 income; he would also be liable for a deficiency tax measured by his 1942 income (since he would not have returned a tentative tax in 1942). Although the plan contemplates that deficiency taxes on 1942 income are ordinarily to be paid in March 1943, the extra burden on the new taxpayer might be mitigated by allowing his deficiency tax to be paid in installments.[19] The amount of the deficiency tax, however payable, would nevertheless represent an increase over the collections which would be received in 1943 under the present system.

(*b*) There would also be an acceleration in the collection of tax on an increase of income received in 1942 over income received in 1941. Under the plan, an increase in income in 1942 would result in a deficiency tax payable in March 1943 which would be in addition to the tentative tax payable in installments in 1943 on 1943 income. The amount of this deficiency tax also represents an increase over the collections which would be received in 1943 under the present law.

(*c*) Further, there would be some increase in estate tax. Under the plan the estate would not be liable for the tax on the income of a decedent in the year of death, since the tax would have been paid currently.[20] The net estate would,

---

[15] An alternative plan for combining a withholding tax with the pay-as-you-go plan would entirely eliminate any additional taxation during the transition period. The taxpayer could return in 1943 tentative tax based on 1942 income, deduct from that tax the amount that would be withheld in 1943 at that income level, and pay merely the balance. Any change in 1943 income over 1942 income would affect both the amount of the actual tax liability and the amount withheld in 1943; both of these amounts could be adjusted at one time and a deficiency paid or an overpayment credited in March 1944.

[16] The Treasury would collect exactly the same amount were it not for the relief provision suggested under III (D).

[17] And also with respect to taxpayers who receive decreased income in 1943, and where certification is made under the relief provision (see III (D)).

[18] The refunds and credits would be made only to those persons whose 1942 incomes were lower than their 1941 incomes. This group would consist, to an overwhelming extent, of people who either gave up lucrative positions to enter the Army, Navy, or other Government service at lower pay, or were thrown out of employment by reason of the economic dislocations resulting from the war. The plan would thus afford some relief to such persons.

[19] If a withholding tax is initiated in 1943, the tentative tax on the 1943 income of the new taxpayer would be largely collected at the source, and only the deficiency tax would need to be paid in installments. If a withholding tax becomes a permanent part of the tax structure, no difficulty will arise with respect to persons who first become taxpayers in future years. For instance, a person whose income first brought him into the taxpaying group in 1943 would have paid tax in 1943 through the withholding provisions, and would therefore not owe a deficiency tax in 1944.

[20] The maximum for which the estate could be liable would be the tax on 2½ months' income (the period between the beginning of one quarter and the due date for payment of tax on that quarter, e. g., April 1–June 15), plus any unpaid deficiency tax on the previous year's income.

therefore, be increased by the amount of that tax liability and, if the estate were taxable, the estate tax would be increased by the amount of tax on the increase in value of the net estate.

(3) Any cancelation in tax that would occur under the plan would be a cancelation with respect to present taxpayers only. New taxpayers would immediately be on a current basis and as to them there would be no possible loss in tax receipts. Any net loss in tax receipts which might result under the plan would last only during the taxpaying period of the present generation of taxpayers.

(4) Under the plan a withholding tax could be instituted at any time without hardship. As outlined in IV above, the instituting of a withholding tax in conjunction with the plan would not necessitate the payment of more than 1 year's income taxes in any 1 year, as it would under the present system where a withholding tax on 1943 income would have to be credited, at least in part, not against taxes paid in 1943, but against taxes on 1943 income payable in 1944. Further, a withholding tax imposed in connection with the plan could be set during the transition period at a higher rate than under the Treasury proposal, and thereby a larger proportion of the tax collected at the source.

(5) Nominally the Treasury would lose a potential asset, i. e., income taxes receivable. However, from a practical viewpoint this is hardly a serious disadvantage, since the Treasury does not carry this asset in its balance sheet. Moreover, the loss of this potential asset would be counterbalanced to a considerable extent by an increase in another potential asset, estate taxes receivable.

(6) In a period of rising income the Treasury's collections would be accelerated. An inflationary rise in income would be counteracted to some degree, at least, by the collection of higher taxes,[21] with a consequent diminution of spending power. On the other hand, in a period of declining income, the Treasury's net collections would be reduced sooner, leaving in the hands of taxpayers an increased amount for spending at a time when they need it and should have it. The refunds of taxes might minimize the Government's relief obligations.

(7) Delinquencies in the collection of taxes would be virtually eliminated.[22] This is extremely important. In any future period of depression and unemployment there will be grave danger of wholesale defaults in payment of tax liabilities.[23] At such a time the Government will be unlikely to enforce collection; collection of last year's taxes out of current unemployment benefits would hardly be expedient. The whole tax collection system may be subjected to too severe a strain. The danger to the self-assessment system which is inherent in tax debt should be eliminated before we face the unknown economic dislocations which may follow the end of the war.

(8) The entire Nation would gain in morale if taxpayers could be relieved of the worry of their last year's income taxes. Many people who are faced with a reduction in their income or with possible temporary unemployment now have the additional problem of an income-tax debt based on a previous year's income. Their economic position would be far less precarious if they could pay their income taxes in the same year in which they received the income. This is particularly true at the present time when the war is affecting the incomes of many individuals, such as the men going into the armed forces and the industrial workers who are emporarily thrown out of employment during the shift from peacetime to wartime production. These men would be greatly aided if in the year of reduced income they were liable only for a reduced tax.

(B) *From the viewpoint of the taxpayer.*—(1) In a period of stable incomes and stable tax rates, individual taxpayers would be at all times solvent so far as income tax liability is concerned.[24]

(2) In a period of rising incomes, individual taxpayers would in nearly all cases have paid the major portion of their tax liabilities in the year in which the income was earned, and could therefore more easily adjust their spendable income to their actual income after deducting tax liability.

---

[21] This results from the fact that in a period of increasing incomes there would be a deficiency tax on the preceding year's income to be paid in March; the amount of the deficiencies represents an increase in tax collections under the proposed plan as compared with the present system.

[22] The resultant saving in administrative expense would probably compensate for the increase in expense that a large number of refunds might necessitate. However, as stated in footnote 10, the number of actual refunds in normal times would be relatively low.

[23] With exemptions as low as they now are, the number of taxpayers who would be in default in the event of a depression and period of unemployment would be tremendous.

[24] Except as to a maximum of 20.83 percent of the annual tax. (This percentage is the proportion of 2½ months to 12 months. See footnote 20.)

(3) In a period of declining incomes, individuals would be entitled to refunds, which would ease the hardship of reduced income.

(4) When an individual died, his heirs would be free of the burden of paying any income taxes except as to any deficiency that might be due to increased income (and also a current tax on a maximum of 2½ months' income during the year of death). On the other hand, if the individual left an estate large enough to be subject to estate tax, the latter tax would be higher by reason of the elimination of the income tax liability.

(5) If an individual retired, say on a pension equal to half pay, he would nominally, except for the operation of the relief provision, have to pay a tax in the year of half pay measured by the year of full pay; but actually he would be subject to tax on only the half pay, and if he paid a tentative tax based on the full pay, he would be entitled to a refund at the end of the year.

(C) *From the viewpoint of the employer.*—Employers would benefit from the plan because their employees, when they retired, would not have a tax debt based on their previous full earnings; or if they died, their estates would not be liable for taxes on previous earnings. The employer would not have even a moral obligation to put the retired employee or the decedent's heirs in funds with which to meet tax liabilities. The plan would tend to accelerate retirements of executives and avoid prolongation of employment beyond the point of decreasing efficiency.

VI. SOME EXAMPLES

In all of these examples it is assumed that the taxpayer is married and has no dependents.[25]

(A) Adams has an income of $5,000 in 1941, gradually increasing by $500 increments to $6,500 in 1944. In 1942, under the present system he would pay a tax on 1941 income at 1941 act rates amounting to $375. Under the proposed system he would pay in 1942 a tentative tax on 1942 income measured by 1941 income and at 1941 act rates—also amounting to $375. At the end of 1942, since his actual income had been $5,500 rather than $5,000, he would owe the Government a tax on the additional $500 computed at 1941 act rates—amounting to $63. This deficiency tax would be payable in March 1943. In March 1943, under the proposed system, he would return a tentative tax measured by 1942 income at the new rates applicable to 1943 income—amounting to $822; this is the same amount that he would pay in 1943 as an actual tax liability under the present system. However, under the proposed plan his actual payments in 1943 would be the tentative tax of $822 on 1943 income, payable in installments, plus the deficiency of $63 on 1942 income, payable in March, a total of $885. If he dies at the end of 1944, under the proposed plan his estate would be liable for only the deficiency of $122 on 1944 income; while under the present system his estate would be liable for tax on the full 1944 income—amounting to $1,066 (table I).

(B) Baker, an engineer, whose 1941 taxable income amounted to $7,500, obtains a commission in the armed forces. His taxable income in 1942 is $2,000. Under existing law he will have to either pay a tax of $770 on his 1941 income out of the $2,000, or carry over a debt until the end of the war. Under the proposed plan without the operation of the relief provision, Baker would still nominally be required to pay $770 in 1942, but at the end of the year he would be entitled to a refund of $728. Since he would be entitled to this refund, there would be a clear case for the operation of the relief provision. The Treasury could waive collection of the full tax measured by 1941 income and substitute a tentative tax measured by the lower 1942 income. If at the beginning of 1944 Baker returns to private life and to his former taxable income level of $7,500, he would in 1944 be required to pay a tentative tax on only $2,000. This would also be the result under existing law and may be all to the good as the period following his return to private life is likely to be one of readjustment requiring capital expenditures. However, in the absence of a withholding tax, Baker in 1945 would have to make good the deficiency of $1,190 on 1944 income, and also pay a tentative tax of $1,322 on 1945 income based on an income of $7,500. Admittedly, it would be difficult to pay a total tax of $2,512 out of an income of $7,500. This difficulty could be partially met by a withholding tax on the $7,500 received in 1944; further, under the suggested relief provision, Baker would have the option of paying tax in 1944

[25] When the "new rates" are mentioned, reference is to the rates tentatively adopted by the Committee on Ways and Means.

on the income of that year rather than on the low income of the preceding year. Whatever difficulty exists pales before the prospect of his widow's having to pay a tax of $1,322 out of an income of possibly zero, if Baker dies toward the end of the year (tables IV and IV-A).

(C) Clark, a worker in a defense plant, earned $2,500 in 1941. In 1942 he will earn $4,000. Under existing law, and under the proposed plan as well, Clark in 1942 would pay $90. However, in 1943, whereas his payments under existing law at the new rates would be only $594, his payments under the proposed plan would be $663. This increase in tax will hurt less if it comes when Clark is earning $4,000 than if it comes when he dies or when he returns to his former income level of $2,500 (tables V and V-A).

(D) Daniel has a fixed annual income of $10,000. In 1942 he will pay under both existing law and the proposed plan $1,305. In 1943 he will pay $2,064 at the new rates under both the existing law and the proposed plan; this increase is due wholly to the increase in rates. Under the plan, however, his estate would be saved an income tax liability, assuming he died at the end of 1944, of $2,064. The net income tax saving would be equal to the tax on 1941 income plus the difference in the tax on 1942 income computed at the new rates and at the 1941 net rates; but if Daniel left a taxable estate, part of the saving would be offset by the increase in estate tax liability (table III).

(E) Edwards, an industrialist, has an income of $100,000 per year. He has a net estate for Federal estate tax purposes of $2,000,000. In 1942 he will pay $52,704. In 1943 he would, under the proposed plan, pay $63,072, the same amount that would be payable under the present system. If he died at the end of the year, the plan would save his estate an income-tax liability of $63,072, but the estate tax on his estate would be increased by $23,964. This assumes that Edwards will have spent only such part of his income as is left to him after taxes, and has left his capital intact. This, however, is a likely assumption (table VI).

APPENDIX

TABLE I.—*Effect of the plan assuming an increasing income*

MARRIED PERSON—NO DEPENDENTS [1]

	1941	1942	1943	1944	1945	Total 1942-45

[1] The tax liability on 1941 income is computed according to the 1941 act rates. The tax liability on 1942-45 income under the present system is computed according to the rates tentatively adopted by the Committee on Ways and Means; under the proposal the new rates (except for the alternative tax on capital gains and losses) would apply to income received beginning Jan. 1, 1943, and therefore the tax liability on 1942 income under the proposal is computed according to the 1941 act rates. It is assumed that there is no taxable income from Government obligations, and the maximum earned income credit is allowed. The tax liabilities in all of the tables are computed without reference to the relief provision suggested in III (D), except as noted in footnote 2.

[2] Assuming that at the end of the preceding year the taxpayer dies (or ceases to receive taxable income and certification is made under the relief provision that no income will be received during the current year).

[3] Tax on 1942 income at 1941 act rates.

[4] This total is the tentative tax payable under the proposal March to December plus or minus any deficiency to be paid or any excess to be refunded for the previous year.

The difference between item (*d*) and item (*g*) equals the tax on the 1941 income, plus the difference in tax on 1942 income computed according to the new rates and the 1941 act rates.

[5] Refunded March 1945.

[7] Under the present system, the liability of $1,322 on 1945 income would be paid in 1946, so that the total payments on 1941-45 income would be $3,678.

[8] Refunded.

[9] The difference between item (*d*) and item (*g*) of $462 plus the tax liability on 1945 income ($1,322) to be paid, under the present system, in 1946 (not shown in row (*d*) of the table) amounts to $860, which equals the tax on 1941 income, plus the difference in tax on 1942 income computed according to the new rates and the 1941 act rates.

[10] Under the present system, the liability of $219 on 1945 income would be paid in 1946, so that the total payments on 1941-45 income would be $1,536.

[11] Refunded March 1946.

[12] The difference between item (*d*) and item (*g*) of $126 plus the tax liability on 1945 income ($219) to be paid, under the present system, in 1946 (not shown in row (*d*) of the table) amounts to $345, which equals the tax on 1941 income, plus the difference in tax on 1942 income computed according to the new rates and the 1941 act rates.

TABLE VI.—*Increase in estate tax partially offsetting decrease in income tax: Net tax effect of plan*

MARRIED PERSON—NO DEPENDENTS [1]

Average net income (1)	Net estate before exemption [2] (2)	Decrease in income tax under plan (tax on (1) at 1942 act rates) [3] (3)	Increase in net estate under plan (tax on (1) at 1942 act rates) [4] (4)	Increase in estate tax under plan (estate tax on (4) at 1942 act rates) [5] (5)	Net tax effect of plan (3)−(5) (6)
$5,000	$10,000 (x)	−$708	$708	0	−$708.00
	100,000 (y)	−708	708	+$150.10	−557.90
$10,000	20,000 (x)	−2,064	2,064	0	−2,064.00
	200,000 (y)	−2,064	2,064	+586.18	−1,477.82
$25,000	50,000 (x)	−8,982	8,982	0	−8,982.00
	500,000 (y)	−8,982	8,982	+2,586.82	−6,395.18
$50,000	100,000 (x)	−24,840	24,840	+5,856.48	−18,983.52
	1,000,000 (y)	−24,840	24,840	+7,799.76	−17,040.24
$100,000	200,000 (x)	−63,072	63,072	+17,407.87	−45,664.13
	2,000,000 (y)	−63,072	63,072	+23,964.10	−39,107.90

[1] The following assumptions are made for the purposes of this table:

(*a*) Income is relatively stable, so that the income in 1941, the income tax on which is canceled under the plan, is of the same magnitude as income in the year of death, the tax on which measures the increase in the value of the net estate under the plan.

(*b*) Two assumptions are made as to the size of the net estate before exemption which corresponds to a given income level: If the income is entirely salary income, the net estate may be roughly equivalent to 2 years' income (assumption labeled "x"); if the income is entirely dividend income the net estate may be roughly equivalent to the income capitalized at 5 percent (assumption labeled "y"). (No adjustment has been made, however, for the earned income credit under the assumption that the income is entirely dividend income—the maximum earned income credit is allowed in the computation of the tax.)

[2] The net estate before exemption is assumed to be the net estate before exemption after deduction of the tax liability for the year of death (as under the present system).

[3] The decrease in income tax is equivalent to the tax on 1 year's income at the new rates; or, in other words, the tax on (1) at 1941 act rates, plus the difference between the tax on (1) at the new rates and at 1941 act rates.

[4] Under the proposed plan, the income tax on the income of the year of death would not be a liability of the estate as under the present system, but would have been paid in the year the income was received; the net estate would therefore be increased, under the plan, by the amount of the tax. The tax is computed according to the income tax rates tentatively adopted by the Committee on Ways and Means.

[5] This is the increase in the net federal tax, after allowance of the maximum credit for State death taxes. The tax is computed according to the 1941 act rates after allowing the estate tax exemption tentatively adopted by the Committee on Ways and Means.

TABLE VII.—*Simplified example of a return showing tentative tax for 1943 and deficiency tax for an underpayment in 1942*

MARRIED PERSON—NO DEPENDENTS

Income-tax return for calendar year 1943

INCOME FOR 1942		DEDUCTIONS IN 1942—continued	
Items 1–9 as on present return.		17. Total deductions in items 11 to 16	$400
10. Total income in items 1 to 9	$5,400		
DEDUCTIONS IN 1942		18. Net income (item 10 minus item 17))	5,000
Items 11–16 as on present return.			

Computation of tax payable in 1943

COMPUTATION OF TENTATIVE TAX FOR 1943 [1]		
19. Net income (item 18 above)		$5,000
20. Less: Personal exemption	$1,200	
21. Credit for dependents		
		1,200
22. Balance (surtax net income)		3,800
23. Less: Item 4 (a) above	$---	
24. Earned income credit	500	
		500
25. Balance subject to normal tax		3,300
26. Normal tax (6 percent of item 25)		198
27. Surtax on item 22		510
28. Total (item 26 plus item 27)		708
29. Total tax (item 28 or line 16, schedule F)		708
Items 30 and 31 as on present return.		
32. Balance of tentative tax (item 29 minus items 30 and 31)		708

COMPUTATION OF DEFICIENCY TAX OR CREDIT FOR 1942 [2]		
33. Net income (item 18 above)		$5,000
34. Less: Personal exemption	$1,500	
35. Credit for dependents		
		1,500

COMPUTATION OF DEFICIENCY TAX OR CREDIT FOR 1942 [2]—continued		
36. Balance (surtax net income)		$3,500
37. Less: Item 4 (a) above		
38 Earned income credit	$500	
		500

41. Surtax on item 36		255
42. Total (item 40 plus item 41)		375
43. Total tax (item 42 or line 16, schedule F) [3]		375
Items 44 and 45 comparable to items 30 and 31 on present return.		
46. Actual tax liability for 1942 (item 43 minus items 44 and 45)		375
47. Tentative tax reported for 1942 on 1942 return		[4] 312
48. Deficiency tax or credit for 1942 (item 46 minus item 47)		63
49. Total tax payable in 1943 (item 32 plus or minus item 48)		771

[1] Computed according to the 1942 act rates and exemptions. (The rates and exemptions used in this table are those adopted by the Committee on Ways and Means.)

[2] The actual tax liability for 1942 (item 46) is computed according to the 1941 act rates and exemptions.

[3] An additional schedule would have to be provided for the computation of the alternative tax.

[4] Assuming that 1941 income was $4,500.

Among the persons who have examined and approved the pay-as-you-go income-tax plan are the following:

Evans Clark, director, Twentieth Century Fund, New York, N. Y.
Linus Coggan, vice president, Corn Products Refining Co., New York, N. Y.
A. L. Cole, general manager, Reader's Digest Association, Inc., Pleasantville, N. Y.
Norris Darrell, partner, Sullivan & Cromwell, New York, N. Y.
V. A. Johnston, vice president, A. G. Becker & Co., New York, N. Y.
Clarence Manion, dean, Notre Dame Law School, South Bend, Ind.
Beardsley Ruml, treasurer, R. H. Macy & Co., New York, N. Y.
Victor H. Stempf, partner, Touche, Niven & Co., New York, N. Y.
W. B. Stokely, Jr., president, Stokely Bros. & Co., Indianapolis, Ind.

The CHAIRMAN. There are two other witnesses here.

The Senate will be in session at 12. We will have to ask those witnesses to come back at 2 o'clock this afternoon.

I would like the members of the committee to be on hand at 2 o'clock, so we may have an executive session.

(Whereupon, at 11:59 a. m., a recess was taken until 2 p. m. of the same day.)

AFTERNOON SESSION

(Pursuant to the adjournment for the noon recess, the hearing was resumed at 2 p. m.)

The CHAIRMAN. The committee will come to order.

We will, if possible, finish the list of witnesses for today before going into executive session.

Is Mr. Lapp in the room?

Mr. LAPP. Yes, sir.

The CHAIRMAN. You are Grover W. Lapp?

Mr. LAPP. Yes, sir.

STATEMENT OF GROVER W. LAPP, LE ROY, N. Y.

Mr. LAPP. I am appearing on the subject of paying for the war as we go by correct taxation and finance.

We know that wars are paid for, but this would enable us to pay as we go, continuously.

I would like to read this, if I may.

The CHAIRMAN. Do you wish to use the whole statement you have prepared?

Mr. LAPP. I would like to include it all, sir.

It is condensed on the front page and then is given in more detail in the body.

Now, this is, in general, so different a proposition that it needs a full explanation. In paying, our proposition contrasts with the present system of paying only about one-third of the National, State, and local requirements for this war with the proposal of paying entirely as we go.

It sounds fantastic, I know, to begin with; but my arguments, I think, are perfectly logical, and instead of writing off two-thirds as a deficit in financing, which will be practically ruinous, this proposes to take care of it through cash at the time.

Senator CONNALLY. All of it is sales tax?

Mr. LAPP. It is all by income tax, sir; not by sales tax.

The CHAIRMAN. All right, you may proceed.

Mr. LAPP. I will begin with my condensed statement or summarization, following the same with my more detailed statement to which it pertains.

PAYING FOR WAR AS WE GO BY CORRECT TAXATION AND FINANCE

The attached memorandum is the outcome of many years of analysis of traditional views and practices in the field of taxation and finance.

These critical times require a new, adequate, basic plan for handling the problem of financing the war without destroying civilian production.

The background cause of derangement in our economy is the unfairness of exchange among individuals, enterprises, and Government. Insolvency and unemployment result.

Unfairness and loss in exchange are due to erroneous handling of the two fundamental relations by which we serve each other.

The first continuing violation of our trade relations is the use in exchange of bank credit money that was never before received for delivering anything to anybody. If borrowers of new bank credit take, say, 1 percent of the values being bought, our market is 1 percent unfair, enough to throw a certain large number of marginal individuals and enterprises into a loss and failure and unemployment.

The second way we damage our economy is by taxation of property and savings. We should tax the net income from current production of solvent people. Taxation of the transactions of marginal concerns forces another large group to suspend production and discharge producing, self-supporting, taxpaying people, who then must be supported on relief by additional taxes.

At this time Government is confronted by a broken down exchange rigidified by price controls. We should have free prices controlling supply and demand, for all values in exchange including wages for labor.

The CHAIRMAN. That is something this committee has nothing to do with; are you going to lead through to a tax system, directly?

Mr. LAPP. Sir, the idea depends on that, somewhat; and I promise you that I will get right to it.

The CHAIRMAN. That is not within our jurisdiction, to deal with that subject matter.

Mr. LAPP. The next paragraph, I think, will show you what I mean, sir.

Two further calamities now threaten us, namely, general sales taxes and 40 billions of new bank credit. Resist these at all costs.

We can straighten out the situation by confining taxes to net income and stop using inflationary bank credit. Taxes should be collected currently as earned. When we expect taxes, taxation is statesmanship.

We can pay fully for war as we go, without bonds and bank credit. Nobody would be ruined by income taxes since cost of production and tax-free subsistence would always be exempted. Taxation spells wisdom.

Although the income tax is relatively recent, it can properly bear the entire burden. The beneficiaries of the regime have the greatest stake in its survival. They should be made to pay outright without

future compensation through bonds. After war, either bonds or prosperity.

This simple program is offered to the Government as a pattern for correct economic behavior. Political expediency will soon demand it.

I will now read to you the detailed memorandum to which I have referred in my introductory statement just given.

Physical supplies and services and men necessary to carry on in peace or in war are provided as we go. There is no putting off to the future the production of the things we actually use up. We pay cash for war, physically.

The problem is, how to pay cash financially. Everyone knows that it would be desirable to collect the taxes and pay immediately for any projects we vote to carry on. That is the realistic way to do for the individual or for the Nation.

Senator CONNALLY. May I ask a question?

Do you seek now to get other money by income taxes, net income?

Mr. LAPP. Yes, sir.

Senator CONNALLY. At what rate?

Mr. LAPP. At what wage rate?

Senator CONNALLY. Yes.

Mr. LAPP. What the rates are after the committee has taken out individual expenses and cost of production for enterprises. We can vote anything up to 100 percent.

Senator CONNALLY. The cost of production for enterprise—by that what do you mean?

Mr. LAPP. The cost of production for goods and services by business enterprises

Senator CONNALLY. You could then take 75 percent of the income, or 80 percent?

Mr. LAPP. Yes, sir; you see, of their net amount—that is, after the cost of production.

Senator CONNALLY. Yes?

Mr. LAPP. You can take anything up to 90 or 95 percent.

Senator CONNALLY. That is the gist of your plan?

Mr. LAPP. Yes, sir; but the reason follows.

Our Congress is given the privilege and responsibility of holding the purse strings. Congress also has the power and the duty to tax to keep something in the purse.

The puzzling question is how to collect taxes in the amounts required to pay currently for an all-out national effort. Most people including legislators are sure it can't be done. The outcome of this analysis is to prove that we can collect enough tax revenue without resorting either to bonds or to inflationary bank credit.

We can't get enough from taxes because we now try to collect in an impossible way.

The major source of taxes, National, State, and local, has always been a levy on savings and property, on transactions, sales, excises, and pay roll. In recent years taxes on net income have properly come to be the largest single item of revenue.

In this analysis it is found that the tax on net incomes only is the practical way to finance the war and to command the entire resources of our country. Following are the reasons for abandoning all forms

of sales, transactions, and property taxes and concentrating our attention on the net income tax.

All forms of sales and transactions taxes we may call sales taxes. A sales tax is a capital levy. It is literally a deduction from working capital taken before the ascertainment of loss or gain and taken from individuals or from enterprises even if they are insolvent or below the subsistence level. Legislators have a well-founded reluctance to the imposition of sales taxes. They should not yield to pressure in the direction of greater sales taxes and they would be able to resist if we can develop a practical taxation principle under which we can collect adequate revenue to command all the men and material that can possibly be devoted to Government activities.

The maximum effort that can be devoted to Government will occur if we have full employment of all people capable of productive work at such hours as to produce maximum product and then allow for each person a minimum for physical subsistence at full operating vigor.

All this can be brought about by the adoption of proper financial arrangements. That is, we must levy all taxes on current net income and we must maintain stable money. These two requirements comprise all the machinery by which we have any exchange relations between individuals and enterprises and Government. With rigidly stable money and with the taxation of net income only we can exact from each in extreme emergency everything above a bare subsistence without ruining anybody nor any business enterprise.

Senator CONNALLY. Mr. Chairman, I wonder if it would be possible for the witness to put the statement in the record?

Mr. LAPP. Gentlemen, I would like to make this statement——

The CHAIRMAN. I asked the witness in the beginning if that were possible.

Mr. LAPP. This is something that is different, and if you get hold of this idea, to whatever extent it is incorporated, the actual program will be helpfully benefited.

Senator CONNALLY. We understand that.

Mr. LAPP. Now, we are faced with a ruinous prospect——

Senator CONNALLY. The reason I made that suggestion is, you have given us the idea.

Mr. LAPP. I am afraid I have not, as yet, sir.

Mr. BARKLEY. You are afraid we do not have the idea?

Mr. LAPP. It has taken me 12 years of intensive study.

Senator CONNALLY. We do not have 12 years to give to it.

Mr. LAPP. I have it here, if you will bear with me.

The CHAIRMAN. If you will shorten it; if you will get down to your direct proposal, so far as the facts are concerned, then you can put in whatever you may wish in the record—you may put the complete statement in the record.

Mr. LAPP. Sir, it is not just in the form that I could pick it out like that. I think, considering the importance of the idea, it is extremely brief; and I would like to really go through it so that your minds could just hit on it in a moment or two.

We are rapidly approaching the time for all-out devotion to national purposes. The thing must be done through definite amounts of stable money by which all values are exchanged and precisely

measured. We have for a dozen years and more in a time of peace suffered a chaotic situation to grow worse because of our failure to establish these two indispensable conditions necessary for a peace or for a war economy.

On the crumbling base of a broken-down peace economy we now find ourselves face to face with the stark reality of carrying a national burden several times as heavy as the peacetime load that broke us down. We are witnessing the onrush of a host of large-scale problems.

It is not fair to charge our congressional committees with the responsibility of financing the war and arm them only with discredited methods. Collecting capital levies from insolvent people and enterprises through sales taxes helps to ruin and extinguish the tax sources even in peacetime and cannot provide adequate revenue for war. Responsible people on our finance committees do not dare to collect an important part of wartime revenue by sales taxes. This fact gives telling evidence of the destructive effects of all these transactions taxes that impede the process of production and exchange, ruin producers, and cause unemployment.

The necessity of selling bonds in an endeavor to entice further amounts from the holders of untapped liquid income indicates again that it is considered inexpedient economically as well as politically to collect the full amount of sales taxes. If we had a method of collecting adequate amounts of income we would not have to resort to giving part of our citizens through loans a creditor hold on the country in its time of peril.

We may collect from current income a maximum of $30,000,000,000 out of a $60,000,000,000 budget. This means we have agreed to forego the purchase of $30,000,000,000 worth of goods and services and let our Government buy that much with our earned money, the equivalent of which we have produced and have not consumed. This is presumably all we can be made to surrender by taxation and induced to contribute as savings by patriotism in return for bonds.

So far we have considered earned money that exists for which value has been delivered. So far we are fairly realistic and do only fractional damage to the lowest fringe of our economy.

But we still have 30 billions to collect from some place for which we shall take a second $30,000,000,000 worth of goods and services. All this after we have contributed all we thought we could. How shall we get this last 30 billions?

As a last resort we go to the credit bank for the deficit. It is a complete failure to finance our projects when we ask the bank to issue to our Treasury some 30 billions of promises to pay money in return for some more bonds. The sad effect of this practice is to inflate the bank-deposit money we use in exchange which raises prices in a time of active trade. The extra prices we all pay makes war costs jump up so the Government buys less with our hard-earned tax money.

The small income is to a large degree taken to pay sales taxes and economic ruin overtakes marginal producers. The terribly destructive results of inflationary credit should make us pause and find a more practical way to finance the war program.

These well-known dangers should scare us into a proper handling of our present threatening situation. We should support and im-

plement our fiscal agencies with an effective mechanism for financing our requirements, completely.

At this point I wish to make two serious proposals which will avoid the bad effects cited above, and provide a complete harness in which we can all pull together to win this war and the peace to follow.

The income tax.—The first proposal is to do away with all burdens to production and exchange in the form of sales taxes, transactions taxes, excise taxes, franchise taxes, tariffs, and pay-roll taxes. Even including taxes on property, they are all really deducted from working funds or capital of the taxpayers without regard to solvency and are taken from producing individuals and enterprises whether they have large or small net earnings. When large taxes are taken from those with no net income and from those actually operating at a loss the effects are particularly harmful to the taxpayer and to the Government or society. I shall try to make this point so clear as to leave no doubt about the facts.

Consider the effects of a general 10-percent sales or transaction tax on three types of producing enterprises:

First, a concern that earns 20 percent on its production cost would have paid 10 percent from its working-capital funds, leaving a net income of 10 percent after taxes on which an income tax of say 20 percent would be levied. Total tax, 12 percent, or 60 percent of its income.

Second, an enterprise whose net before taxes is 10 percent. A sales levy of 10 percent would reduce the net to zero which is equivalent to an income tax of 100 percent of the earned net. This reduces a good concern to the verge of loss.

Third, think of the marginal company having no net income or even operating at a loss. If we levy a 10-percent equivalent tax on the values bought or the cost, we cause such a serious loss as to make the enterprise fail and discharge a thousand employees.

Observe that the effect is equivalent to an income tax graduated, but graduated downward for higher earnings. When the net earnings are zero or negative an income tax would take nothing and save the enterprise, but a sales tax would take its 10-percent toll equivalent to an infinite tax, destroying the business.

The same principle of destructive capital levy applies to the home. Each year we levy this tax. The home owner must have current income to pay the capital levy or he suffers the loss of the home.

Now a full-size dilemma appears. We have destroyed a border-line industry producing the goods of life. As long as it operated, its employees were paying us a certain amount of income tax. By causing its extinction we stop the making of useful things by people who are supporting themselves. We transform its employees from self-supporting productive taxpayers to the status of nonproducing dependency and must now collect additional taxes to keep them from starving.

Such compounded dumbness must be a gift. It is too complete to have been acquired even if we studied special advanced courses in dumbness. Not only do we crush out the struggling victims at the bottom of the economic heap but we let the upper level beneficiaries commensurate with the benefits received. We can never make up by surtaxes, no matter how flagrant, for the damage done to the capital of those economically weak border-line individuals and enterprises

from which we are thoughtlessly taking away their essential equipment and substance. This is a species of economic cannibalism reducing producers who are satisfied to go on serving the community and employing individuals without compensation. We should recognize the social importance of an enterprise that maintains a group of producing individuals who are earning going rates for their labor and services and products delivered although the enterprise as a group is receiving no profit. We pounce upon this most vulnerable type of concern and knock it out with a sales tax although it is taking a bad licking in the form of reduced value of savings devoted to a profitless attempt to serve.

An enterprise employing a thousand people at regular rates devoted to serving the community on a no-profit basis is doing just as effective and far more heroic a job compared to a high-level group not beset by the problem of survival. In fact, the socially most important matter deserving our careful consideration is the survival of these same precarious groups. When they fail they carry people down with them into unemployment and cease making useful products.

Before any tax is levied we should allow a producer to get back the amount he has expended in his efforts to serve the community. The sales tax takes part of his savings or capital devoted to this endeavor.

It is a characteristic of highly productive people and nations that they have managed to save a large part of their income and devote it to the making of productive facilities. It is because of our large capital per capita or per worker and by the use of many horsepower that we have been able to produce such a high standard of living as we enjoy.

Sales taxes are a capital levy and result in a depletion of our capital equipment. Instead of taxing our substance we should take our public funds from the product of our work.

The proper source of revenue is the income tax. A feature of the sales tax that has had too little notice is its cumulative or repeating effect on the several stages of production.

Exchange is to a very minor degree a mechanism for delivering goods and services to a final consumer. Exchange is almost wholly a part of the production process, handling values time and again, with very small increment value per exchange.

In active years like 1928 and 1929 with a total net income and production of about $80,000,000,000 worth, the total volume of trade runs about 1,200 billions, or 15 times as much. This means that the typical transaction consists of buying $14 worth of values to which the enterprise adds $1 worth of further productive operations and sells the new product back to the market for $15.

Another effect of this large ratio of total trade to net product is that each percent of general sales or transactions tax is equivalent to 15 percent tax on net income. This is but another way of stating the fact that sales taxes repeat and accumulate as goods move from stage to stage in their progress toward completion. A general transactions tax of 10 percent would assume to take a fanciful 150 percent of our product.

Unfairness in exchange is caused by taxing transactions and by using in exchange credit money that never was earned by doing any-

thing. These burdens imposed by a deranged tax-hungry regime are themselves the cause of economic derangement and unemployment. The more you trade in such an unfair market the more tribute you pay. The vertical trust is a device to protect productive enterprises against an unfair market by minimizing the volume of money transactions. By the organization of five small sequence enterprises into departments of a large business, buying and selling through an unfair market is replaced by the passing of rising values from one department to the next. The artificial advantages enjoyed by the large company enable it to indulge in uneconomic practices and overorganization. To people unaware of the true nature of the advantage this has all the appearances of monopoly. When we learn the fact that trade really free from restrictions would be the basis for survival of multitude of submarginal producers and individuals we can have full employment. So-called monopolies will find themselves shrinking down to the economically justified size.

Free exchange, domestic free trade, is the basis for tranquility in a thriving economy. We have long suspected this fact. It should now be obvious. The same principle of free fair trade would afford the best approach to an international post-war program.

If we are to devote 60 percent of our national efforts to war, we must take from producers 60 percent of our national income. This may mean that we must take by income taxes a flat 90 percent of our net income after a most meager exemption allowance for mere subsistence. If we will do this and forego all forms of property and exchange taxes, two most stubborn problems will disappear. War profiteering by industry and wage profiteering by labor would cease. Unregulated prices for material and wages for labor would again afford a satisfactory basis for supply and demand.

Profits and wages will be taken almost wholly after cost of production and cost of subsistence are first allowed. An exemption of $500 might buy more without any sales tax deductions than $750 will now buy after all the accumulations of hidden taxes are paid. If we stick to this sternly realistic program of paying as we go from net income, every dollar will continue to buy a dollar's worth of food and a dollar's worth of war material and services as well. If we really desire to stabilize our money let us pay out new dollars through Government purchases to maintain a certain amount, say $400 per capita.

If we will but put our necks into the yoke of this rigid harness, we can pull the maximum possible load, all together. If we dodge around and try to save our precious necks, we may get them broken to a harder yoke.

It is only in time of emergency that we are sufficiently scared to submit ourselves to such a rigorous course. Let us quit our fanciful impractical attempts to support our national efforts by consuming our substance or working facilities and put the burden where it belongs—on the product. Let us ascertain the net income of each person and each enterprise, and add up local taxes, State taxes, and Federal taxes, assessing all net income at the same high flat rate. If the community or the State or the Nation added too much, it would lose producers.

Large profits and high wages and the regular supply and demand as determined by price can function as usual with very few exceptions. It will make little difference what the net income is if we take 90 percent

for the national cause. Even if high incomes are almost wholly contributed in taxes, the motivation to produce will not be absent. We will still seek out the lines of greatest usefulness and greatest safety as shown by areas of high wages and high profits. If we let prices rise, the bottlenecks will stick up like beacons automatically guiding us toward the things most urgently needed.

Let the high earnings be won. There can be great pride and satisfaction in being a tax collector if the rules are fair for everyone. In fact most people are coming to ask for just that chance to show their willingness to help if they are sure that no one can take unfair advantage.

We can pay cash as we go.

This, gentlemen, is quite different than anything put across on economics, after a considerable analysis of conventional procedures; and if we do not presume to pay for more than a third of the bill, the terror of writing up two-thirds of the requirements in bank credit will frighten us out.

The CHAIRMAN. We thank you very much, Mr. Lapp.

Is Mr. Klein in the room?

(No response.)

The CHAIRMAN. He does not seem to be here.

Thank you, again, Mr. Lapp.

I believe there is no other witness on this list who is scheduled to appear today.

The committee will go into executive session.

I will ask the Treasury Department representatives and the staff to remain with us.

(Whereupon, the committee went into executive session.)

REVENUE ACT OF 1942

TUESDAY, JULY 28, 1942

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will come to order.

Let us see what witnesses are here this morning.

Mr. William H. May, State Commissioner of Agriculture of Kentucky.

(No response.)

The CHAIRMAN. Mr. Mitchell B. Carroll.

Senator VANDENBERG. Mr. Chairman, before the witness starts I want to put one figure in the record based on an estimate which has been made by the Treasury Department.

The CHAIRMAN. Yes, Senator.

Senator VANDENBERG. Yesterday morning, when Mr. Seidman was testifying I raised the point that millions of people in the country seemed to feel if we cut back all personal incomes to $25,000, that that would be a very simple way of financing the war and that there would be nothing left that we would have to do. I think it is very important that the country should be disabused on that wholly fictitious notion, so I asked the Treasury Department to make an estimate, and this is the result: If every individual income in the United States was cut down to $25,000, and if in addition the present high House rates were then applied to what is left, we would get an increased revenue of $660,000,000, which, according to Mr. Morgenthau's estimates, would pay or war bills for just 4 days and 10 hours.

The CHAIRMAN. Did they give you the figures on how much we would get if we cut down without the applications of these high rates?

Senator VANDENBERG. No; but with everything off, after you have leveled all income up to $25,000 and then leave the high House rates in addition to that in the bill, it would only pay our war bill for 4 days and 10 hours.

The CHAIRMAN. All right, Senator. Thank you for putting it in the record.

Mr. Carroll.

STATEMENT OF MITCHELL B. CARROLL, REPRESENTING THE NATIONAL FOREIGN TRADE COUNCIL, INC., NEW YORK, N. Y.

Mr. CARROLL. Mr. Chairman and gentlemen, my name is Mitchell B. Carroll, representing the National Foreign Trade Council, Inc., 26 Beaver Street, New York.

The National Foreign Trade Council represents practically all the American enterprises that are still trying to carry on foreign trade in the face of the obvious difficulties of today, and, as you know, the field is practically limited to Latin America. Therefore, in my remarks I will consider primarily the position of our enterprises in Latin America, and I will direct my remarks to the maintenance of a certain device in the revenue act which was introduced in 1918 as a war measure and has been conserved in the act since that time, in order to place our enterprises more in the position of parity with those of Great Britain, France, Germany, and other countries that were engaged in trade in Latin America in those days. While some of the Axis-controlled companies are blacklisted today, nevertheless their representatives are still there and still trying to harm our trade as much as possible and to prepare for the stiff competition that will inevitably ensue when the war is over.

In 1918, you will perhaps recall, Mr. Chairman, a provision was incorporated in the revenue act to prevent international double taxation. It was realized that if an enterprise doing business in any foreign country and also in the United States had to pay taxes in both countries on the same income, the accumulation of the war levies would be so crushing that it would be almost impossible to continue. Consequently the Senate and the House in those days recognized that the country in which the income was produced should have the priority in taxing income, and that an offset should be allowed for the tax imposed in the foreign country against the tax imposed by the United States. However, that offset has been definitely limited, so that this relief from international double taxation can in nowise reduce the American tax on American income. Nevertheless, if the American rate is higher than the foreign rate the United States collects the difference between the American rate and the foreign rate on the income from abroad.

The legislators in 1918 naturally could not foresee all the trends in the world; they could not foresee, for example, the development of exchange restrictions. You doubtless heard of the difficulties that some of our people, who derive income in Brazil, Colombia, and Chile, particularly, have had in bringing their income back to the United States. As you know, because of the depletion of monetary resources, some of these countries which found themselves paying out more money than they had coming in put restrictions on the paying out of funds. Thus income is blocked. Sometimes it will remain blocked for a year or two or three. Now, if income is blocked it may, under a ruling of the Board of Tax Appeals, preclude the operation of the credit. That is to say, the credit for a foreign tax in Chile paid in 1942 has to be taken in the year when it is paid or accrued, namely, 1942. But if the income of that year is blocked and not released until 1943 or 1944, the operations of these limitations on the credit, which require that you

put into the numerator of limiting fractions the net income from the country, it would obviously preclude any credit because there is no net income brought to the United States. There is nothing to put into the numerator of the limiting fraction; consequently, there is no credit.

Therefore, we are asking that you merely provide in the law that the tax should follow the income, or if income is blocked and is not released until a later year, that the tax on that income can be deferred as a credit until the income is released and brought into the gross income. That is the first of our clarifying amendments.

The second one is intended to take care of a very serious trend in the development of tax legislation, primarily in Latin-American countries. As you have possibly been informed, our income tax is developed to a point of refinement far in excess of the income tax of any country in the world, even in Great Britain. In other words, we have a more exact concept of the nice determination of income than any other country. These countries to the south, which have started imposing income taxes in the last 10 or 15 years, for the most part are inclined to resort to empirical methods of taxation, especially where they are trying to impose a tax on foreign enterprises.

You can imagine yourself in the position of the tax administrator in Cuba, for example, who has there in Habana the branch of an enterprise manufacturing various articles in the United States, and selling them in Cuba. The Cuban tax administrator can easily verify the gross income of that enterprise, but the Cuban tax administrator has no way of verifying the expenses, most of which are incurred in the United States and in transporting the goods to Cuba. So Cuba resorted to a very simple empirical method of taxation. It was first resorted to in connection with shipping enterprises. The Cubans found it almost impossible, just as we did back in 1921, to determine the net income of a foreign shipping enterprise. They could tell how much was collected in the country, but there was always an interminable argument as to how much should be deducted from that income in arriving at net income. So the Cubans arrived at a very simple method of determination. They arbitrarily assumed that the expenses of the enterprise would be equal to about one-half of the gross income, but instead of reducing the gross income by one-half they simply cut the rate applicable to Cuban enterprises, namely, 6 percent to 3 percent, and provided in the income tax law that this rate be applied directly to the gross income of a foreign shipping company.

That worked so well that in 1932 they extended the same solution to apply to merchandising enterprises and communications enterprises. The rates have since changed, but today, where a Cuban corporation is subject to a tax of 10 percent to 20 percent on net income, an American corporation with a branch in Cuba is subject to a tax of 3 percent on the gross. In other words, they assume that the expenses are represented by this reduction in the rate that is applied to gross income. But under the rulings of the Bureau and the various courts it has been held that when a tax is imposed on gross income it is an excise tax and not a tax within the purview of section 131. We are asking that this doubt be removed, that a tax which is clearly imposed in substitution for a tax on net income should, nevertheless, be allowed as a credit.

There are other types of taxes that countries have resorted to when a foreign enterprise is operating in the country. Take the Guatemala tax administrator who is trying to determine the profits tax on fruit raised in Guatemala and sold in New York. The enterprise realizes no income until the sale is made in New York. The Guatemala tax administrator has no way of determining what part of that income is allocable to Guatemala, and in agreement with the enterprise it was stipulated and sanctioned in a special law that instead of paying the ordinary profits tax the enterprise would pay a tax of 1½ cents per stem of bananas, for example. That represented a fair determination of the tax attributable to the income in the country.

The most recent development in this field is in Haiti. The Haitians, as you know, have a background of French culture, and they have copied a French device in the law of May 2, 1942, to determine income on the following bases: First of all, they will determine a minimum income equal to five times the rental value of the premises occupied; then, if there is any profit made in addition to that, or in excess of that, the tax will be imposed on the excess income as well as this minimum basis. That saves the Haitians difficulty in arriving at some net basis for their tax. We are asking that these empirical taxes which are being resorted to be allowed as credit, subject to three conditions: In the first place, there must be an income tax that would be allowable anyway as a credit in the country itself. For example, in Cuba the taxes that I described have been imposed in lieu of a general tax on net income applicable to the enterprise of the country. Secondly, that the empirical tax must be definitely imposed in substitution for that tax. In other words, it must be a short-cut method to facilitate the determination of liability to the tax on net income. Thirdly—and this is the important thing from the viewpoint of the Treasury—that this allowance be made only if the taxpayer determines, in accordance with American concepts, the net income attributable to the country. As you know, we have in section 119 of the act, and the regulations relating to section 119, a clear-cut indication of sources in a foreign country and sources within the United States, so it is quite possible to determine, according to American concepts, the net income attributable to the country and the net income that is effectively subject to this empirical tax.

Senator TAFT. You mean that you can deduct a loss in one country from profits in other places?

Mr. CARROLL. The purport of this is to place the taxpayer in the same position that he would be if the foreign country adopted a pure type of tax on net income and applied it to foreign enterprises. In other words, the income is subjected to double taxation. As long as there is net income in the country it effectively bears this tax, and we are asking that this request be granted only if the taxpayer shows a net income which effectively bears the tax and which will have to go into the numerator of limiting fractions in section 131 (b). The taxpayer, of course, would have to submit all the proof required under section 131 (e).

There is another small point that has arisen. A number of our enterprises that are carrying on long-term contracts in various Latin-American countries were caught when the excess-profits tax was introduced in 1940. In view of the difficulties of determining net income,

these enterprises reported their earnings on a completion basis. Of course, as long as you had merely a normal tax it did not make any difference. There might be some increase in rate but the difference would not be so great, but when the excess-profits tax was introduced in 1940 it caught some enterprises. They were completing contracts in that year and reporting their income in that year on the basis of accounting approved by the Bureau of Internal Revenue, but the income was really attributable proportionately to prior years. Well, the Senate took cognizance of this fact, and in the report of the Senate Finance Committee on H. R. 10413, on page 41, there appears the following statement:

If it is determined that the net income received in the taxable year is attributable to years in the base period, the amount of such income so attributable to such years will have the effect of increasing the base period net income and thus the credit under the average earnings method.

That injunction of the Senate was lost in conference, and in the regulations, section 30.721–3 of regulation 103, there appears the following:

Section 721 has no effect upon the computation of base period net income or of earnings and profits, and therefore does not affect the computation of the excess-profits credit.

Clearly, that leaves some of these interprises in a very unfortunate situation now that our excess-profits-tax rates are going up to terrifically burdensome heights, and we are asking that the Senate resume its consideration of this question and have an amendment put in the act which carries out the intent expressed in 1940. In other words, it is very simple to provide that this income attributable to prior years be included in the base period net income, and then logically one should also make the adjustment that if the earnings have been reported on a completion basis in the base-period years a similar adjustment could be made in those years, so that in each of the years you have the income properly attributable thereto. I think that the idea may be simply expressed in language something like this:

For the purpose of excess-profits credit based on income, the amount of net abnormal income derived under a contract, the performance of which required more than 12 months, which is reported in any taxable year beginning after December 31, 1939, that is determined to be attributable to any taxable year or years in the base period shall be included in the excess-profits net income of such taxable year or years, and the excess-profits net income of each of the taxable years in the base period shall be adjusted so as to include only net income properly attributable to work performed during each of such years.

In other words, contractors who, with the approval of the Bureau, were reporting their income on a completion basis and were caught because of the introduction of the excess-profits tax, will be put in a position as if they had been reporting from year to year the net income attributable to those years.

Senator TAFT. That applies not only to foreign trade but to your domestic contractors?

Mr. CARROLL. That would apply to the domestic as well. The National Foreign Trade Council of course represents only the foreign contractors, but it should apply equally well to the domestic contractors who report on a completion basis.

The CHAIRMAN. Have you discussed these problems with the Treasury?

Mr. CARROLL. Yes; I have, sir.

The CHAIRMAN. All of the problems you have presented to us you have discussed with them?

Mr. CARROLL. Yes; I have, sir.

The CHAIRMAN. I think the Finance Committee in the 1941 act undertook to have the credit that was thrown back used as a basis of increasing the base credit, but the Treasury did not take that view of it.

Mr. CARROLL. I have discussed it with them. Of course, I cannot say what their attitude is, but it was suggested that I present the matter to the committee in any event.

The CHAIRMAN. Have you prepared amendments that would cover the specific point?

Mr. CARROLL. Yes; I have ventured here to draft something, sir, which is attached to my memorandum.

The CHAIRMAN. Have you a memorandum?

Mr. CARROLL. Yes, sir.

Senator WALSH. I suppose the interpretation put on this matter by the Treasury Department would preclude a favorable opinion, and that is why you are submitting it to the Finance Committee?

Mr. CARROLL. Well, it was at the suggestion of a Treasury official that I am doing it, sir. I think you will find them sympathetic to the change. I cannot speak for them, naturally. I think it is now recognized, in view of the exceedingly high excess-profits tax, that it is only fair to make this adjustment.

Senator WALSH. I suggest, Mr. Chairman, that these changes be submitted to the Treasury Department.

The CHAIRMAN. Yes.

Senator TAFT. Mr. Carroll, may I ask you, do you have any views on the repeal of section 116 (a)?

Mr. CARROLL. Yes; I could say much against its repeal in the case of citizens who are bona fide residents of a foreign country, but there are gentlemen coming up from Habana, Cuba, and other places that can give you first-hand information from those centers of American commerce abroad.

Senator TAFT. That point will be presented to us?

Mr. CARROLL. Yes. I believe it is scheduled for the 4th of August, sir.

The CHAIRMAN. Yes; we have witnesses on that question. They have already asked to be heard, and they have already been given assurance that they would be heard.

Are there any further questions from Mr. Carroll by members of the committee?

If not, we thank you very much, Mr. Carroll.

Mr. CARROLL. Thank you, Mr. Chairman.

(The memorandum submitted by Mr. Carroll is as follows:)

MEMORANDUM OF MITCHELL B. CARROLL, REPRESENTING THE NATIONAL FOREIGN TRADE COUNCIL, INC., NEW YORK, N. Y.

PROPOSED AMENDMENTS TO SECTION 131 I. R. C.

Mr. Chairman, gentlemen: In behalf of the members of the National Foreign Trade Council, Inc., I beg to submit some clarifying amendments to section 131 of the Internal Revenue Code which are intended to help conserve sources of income abroad, such as business establishments in Latin American countries, and encourage the flow to the United States of income from those sources. Such establishments are of vital importance in enabling the United States to maintain

its position in the markets of Latin America and other friendly countries, so as to be prepared after the war to get its full share of business in the face of intense competition of foreign enterprises which are at present enemies, as well as of enterprises of allied countries. The amendments are necessary to conserve the sources because if income from American establishments in other countries is subject to taxation both abroad and at home, the cumulative burden would be so great as to destroy the incentive for carrying the risks incident to foreign commerce and result in the abandoning of the establishments.

If section 131 is permitted to operate as intended, the domestic company will pay as much tax as if it operated only in the United States, but an obstacle will be removed to bringing home income and paying it out here for raw materials and supplies, or for salaries and wages, or as dividends. The wealth of the country is thereby increased and the basis for taxation broadened. The accomplishing of this objective would be facilitated by these amendments which tend to counteract the technically inescapable effect of exchange restrictions on tax liability and certain trends in foreign tax legislation which were not foreseen when Congress adopted in the Revenue Act of 1918 a measure to help our enterprises face the difficult circumstances arising out of the previous World War.

The basic reason for said measure was that, if our enterprises were to continue to compete abroad with foreign companies which were receiving tax exemptions and other kinds of aid from their respective governments, it would at least be necessary to allow a credit against the United States income tax for income taxes paid in foreign countries. The credit has justifiably been limited so that in no case may the offset reduce the United States tax on domestic income and, where the foreign rate is lower than the American rate, our Government collects the difference in rates on the foreign income.

An increasing number of countries have in recent years undertaken to arrest the depletion of their national monetary resources by adopting exchange restrictions, with the result that, in many cases, income which has been earned abroad by American enterprises is blocked and cannot be utilized. The question has arisen whether such income, which cannot actually be enjoyed by the American enterprise, should be treated as income for tax purposes here, and the Board of Tax Appeals has ruled that such blocked income need not be treated as income until it is unblocked or becomes convertible into dollars (*International Mortgage and Investment Corporation* v. *Commissioner*, 36 B. T. A. 187). However, the foreign tax on such income may be taken as a credit only in the year when said tax is paid or accrued and, if this unblocking takes place in a later year, there will probably be no income to place in the numerator of the limiting fractions in section 131 (b) and, consequently, no credit will be allowed for the tax paid abroad on such income.

Hence, we respectfully urge you to remove this unintended inequity by adopting our proposed amendment which, in substance, would treat the tax as following the income and would allow it to be taken as a credit in the taxable year when the income in question is brought into gross income.

This amendment presupposes that the Bureau will continue to apply liberally the Board decision mentioned above with regard to foreign income that is technically blocked.

The United States has undertaken to prevent international double taxation of income by the allowance of a credit for foreign income taxes, but the term "income taxes" in our law has been so narrowly construed as to preclude the credit for what Latin Americans consider to be income taxes. This is due primarily to the fact that, in this country, the concept of income tax has been developed to a very high point of refinement whereas, in numerous countries, the concept of income and of a tax on income is more elementary. Nevertheless, the latter type levy reduces just as effectively net income from sources in the foreign country. When such income is derived by American enterprises, it is subject to double taxation which the credit was designed to avoid. However, numerous decisions reflecting our advanced concept of an income tax have disallowed these foreign taxes as credits.

Such a disallowance might take place when a tax of the character of an income tax is imposed upon a base developed from gross income. For example, to obviate the difficulty in verifying deductions which may reduce gross income by one-half, Cuban law provides for levying in lieu of a tax of 6 percent on the net income which is applied in the case of domestic shipping companies, a tax of 3 percent on the gross incomes of foreign companies. Similarly, the same law which imposes a tax progressing from 10 to 20 percent on the net income of Cuban merchandising or communications companies, provides for subjecting foreign companies engaged in such business to a tax of 3 percent on gross income.

The credit might be denied when, to facilitate the imposition of income taxes on companies, the laws or decrees of the country prescribe a shortcut or empirical method of computing liability to the income tax, such as by multiplying each unit produced by the presumed net profit attributable thereto. In other cases a reduced rate is applied to the total number of units.

Perhaps the most recent example of an empirical method of determining tax liability is found in the Haitian income tax law of May 2, 1942, which imposes a tax with rates progressing from 3 to 15 percent on the basis of (1) a fixed income equal to five times the rental value of all the buildings and properties occupied by the taxpayer plus (2) the net profit, if any, in excess of the fixed amount described under (1). In other words, the taxpayer is arbitrarily assumed to have a net income equal to five times the rental value of the premises, which results in a minimum tax. This levy is modeled after the French law which provides for taxing foreigners residing in France on the basis of a presumed net income equal to five times the rental value of the dwelling place, unless they derive more income from French sources.

Although the determination of liability to the income tax by such methods is different from our own, this raises no insuperable difficulty to making a proper allowance under the credit provision. In numerous cases, if the corporation were to pay the ordinary tax on its net income attributable to the foreign country, the tax would be higher than the amount it pays on the special basis adopted. Nevertheless, the tax on net income under the ordinary rates would be granted a credit whereas the tax on the special basis which is intended to be the equivalent of the former would be disallowed.

As the limitations in the credit provisions require the determination of a net income attributable to the foreign country verified in accordance with our own concepts, and would in any event preclude the allowance for the foreign tax from reducing the United States tax on domestic income, we respectfully urge the adoption of an amendment containing a definition which will permit of a more liberal and realistic interpretation of the term "income tax" and thereby enable section 131 to operate more effectively.

More specifically we urge that—

(1) When a foreign country imposes an income tax that would be allowable as a credit under section 131, and

(2) Resorts to an empirical tax on gross income or on some other basis to obviate the difficulty of determining net income, that

(3) The credit shall be allowed for such empirical tax provided the taxpayer proves to the satisfaction of the Commissioner of Internal Revenue the amount of net income actually allocable to sources in the foreign country in accordance with the requirements already set forth in subsections (b) and (c) of section 131.

I beg leave to submit herewith a detailed discussion of these proposed amendments, and if it is considered opportune, I would appreciate receiving your permission to discuss the details with your technical staff.

Proposed amendment No. 1

To allow credit for foreign taxes on blocked income until release of income

The decision in the case of *International Mortgage and Investment Corporation* v. *Commissioner* (36 B. T. A. 187), to which the Commissioner has given his acquiescence, 1937-2CB15, permits the carrying forward for tax purposes of completely blocked income until it is released; and if this interpretation of the law is generally applied, it may result in the loss of the credit for foreign taxes in a growing number of cases. The credit for foreign taxes on blocked income may be assured, however, by a simple amendment which merely states a principle inherent in section 131 of the Internal Revenue Code.

In the above-mentioned case the petitioner realized gain by purchasing at less than their face value mortgages which were paid off at their full value. The Board of Tax Appeals observed that, measured in marks, the petitioner had income from its business in Germany, but that income for our Federal income-tax purposes is measured only in terms of dollars. The marks received after a certain date were blocked and they could not therefore be removed from Germany either physically or by way of a credit during the remainder of the taxable year, nor could the dollar equivalent of the marks be obtained. The petitioner did not have unrestricted use and enjoyment of the marks, and could not use them to retire its bonds as planned. It could not have any of these marks released until a number of years later. The marks were seriously restricted and in no sense the

equivalent of free marks. The Board therefore held it was improper to compute a gain to the petitioner from the repayment of the mortgages by translating the gain in marks received into dollars at the rate of exchange applicable to free marks.

However, the Board held that taxable gain had been realized in marks which were received previous to the time of the imposition of the exchange restriction and because these earlier funds had been freely negotiable, convertible, and transferable. They could have been removed from Germany when received but had been allowed to remain there until they were blocked.

There may be a great many situations in which an American taxpayer will receive foreign currency income in the forms of dividends, interest, royalties, trading profits, or otherwise, which is blocked, and only in a later year susceptible of conversion or of realization through use.

Although the International Mortgage & Investment Corporation decision involved only a very limited class of income, its basic reasoning may well apply in determining what shall be included in gross income in many other blocked currency situations. It would be very difficult to draft legislation to cover the facts of all these situations, and perhaps it may be best to leave to determination in audit whether, under the facts of each case, blocked foreign income should be regarded as realized in terms of dollars and included in gross income, or should be regarded as not realized until a later year. In the former case the amount of foreign taxes thereon would be converted into dollars at the same rate and taken as a credit under section 131. However, if foreign income were not included in gross income until a year or more after it arises abroad, then any foreign income taxes paid or accrued with respect to such income should be carried forward for the purposes of the credit for foreign taxes in section 131 until the foreign income is included in gross income.

Only such a procedure would be consistent with the underlying principle of the foreign tax credit. The law presupposes that foreign income will be subjected to the United States tax for the year in which it is realized and, under section 131 (a), only taxes paid or accrued during the taxable year to any foreign country or to any possession of the United States may be taken as a credit. Furthermore, under section 131 (b) (1), the credit for the taxes of any particular foreign country may not exceed the same proportion of the United States tax against which it is taken, which the income from such country bears to the entire net income, in the case of a taxpayer other than a corporation, or to the normal-tax net income, in the case of a corporation, for the same taxable year.

Strictly speaking, therefore, under the language of subsection (a), the foreign tax paid on blocked income can be credited only in the taxable year in which it is paid or accrued. If the taxpayer regularly takes credit on the accrual basis, and if the blocked income involved is not brought into gross income in the given year, no credit would be allowed in that year because the numerator of the limiting fraction would be zero. Situations might also arise where taxpayers could not take credit for the foreign tax on a paid basis for similar reasons. Furthermore, when, in a subsequent year the funds are freed for conversion into dollars or utilization, they would be subjected to the United States tax but ordinarily no credit could be taken against the United States tax for the foreign tax which was paid or accrued during an earlier taxable year. Hence, in such cases the income would be doubly taxed and the purpose of the credit for foreign taxes would be frustrated.

The original intent of section 131 could be realized if the section were amended so as to incorporate specifically the principle that the foreign tax on such blocked income would not be deemed to have been paid or accrued until the taxable year when the income is included in gross income.

This could be accomplished by adding as a new subsection to section 131 the following:

( ) DEFERRED INCOME.—*If, during any taxable year, income arises from sources in any foreign country or any possession of the United States which is not included in gross income under this chapter until a later taxable year, then any income, war-profits, or excess-profits taxes paid or accrued to such country or possession upon or with respect to such income shall be deemed to have been paid or accrued during the taxable year when the income upon or with respect to which they are imposed is included in gross income for purposes of the tax imposed by this chapter.*

The corresponding amendment to section 23 is printed in italics below:

(c) (1) (C) income, war-profits, and excess-profits taxes imposed by the authority of any foreign country or possession of the United States; but this deduction shall be allowed in the case of a taxpayer who does not signify in his return his desire to have to any extent the benefits of section 131 (relating to credit for taxes of foreign countries and possessions of the United States): *Provided, That, if during any taxable year income arises from sources in any such country or possession which is not included in gross income under this chapter until a later taxable year, then any such taxes imposed upon or with respect to such income shall be deemed to have been paid or accrued during the taxable year when the income upon or with respect to which they are imposed is included in gross income for purposes of the tax imposed by this chapter.*

Proposed amendment No. 2

To allow a credit for foreign taxes imposed in substitution of income taxes which are allowable as credits

Although domestic corporations are allowed a certain credit for income taxes paid to a foreign country, the credit has been disallowed in various cases where, under the law imposing the income tax or a law or decree relating thereto, tax is levied on the basis of gross income to obviate difficulties in computing the tax on net income. In other words, even though the tax on the latter basis is paid in satisfaction of liability to the tax on net income, the corporation is denied the relief from international double taxation provided in revenue legislation since 1918. This relief is of vital importance today as the piling of the crushing United States rates on top of foreign rates might result in a tax burden which would even exceed the amount of the income from abroad. Empirical levies of this kind have been resorted to in practice by the United States, and in practice if not with legislative sanction by Great Britain and all the leading countries of the world, to facilitate the taxation of foreign enterprises producing abroad and selling in the taxing country or producing in the taxing country and selling abroad.[1]

Moreover, the income-tax laws or decrees of various Latin-American countries provide for taxation on an arbitrary basis in lieu of the tax on net income. As the foreign commerce of our private enterprises is now virtually limited to the Western Hemisphere and is further limited by priorities and restrictions necessitated by the war effort, the assurance of the full relief from multiple taxation intended by Congress is all the more vitally important to the American corporations that are still in a position to carry on business abroad.

The United States has taken the lead in providing for the scientific taxation of international business by prescribing in its law and regulations principles and methods for determining income allocable to sources within and without its territory (sec. 119 I. R. C.; art. 19.119–1, et seq., reg. 103). Nevertheless, in computing the income taxable in the United States in the case of a foreign corporation producing or manufacturing abroad and selling in this country, the Bureau of Internal Revenue has encountered such difficulty in verifying the expenses deductible from the gross income realized on sales here, that it has applied to such income a percentage representing the average ratio of net income to gross realized by similar domestic enterprises. The tax at ordinary rates is then imposed on the net income so computed.

Furthermore, the Bureau of Internal Revenue has held that the tax imposed by the Brazilian income-tax law upon the income of a corporation computed by an optional method, consisting of applying coefficients (established by a technical committee) to gross receipts to arrive at "net income," was an income tax allowable as a credit under section 238 of the Revenue Act of 1926 (G. C. M. 803, V-2CB75).

The foregoing procedure involves the application of the ordinary income-tax rates to the empirically determined "net income." Cuba, however, took a short cut in computing tax liability by taking for granted that in the case of shipping enterprises allowable deductions ordinarily consume one-half of the gross income, and consequently provided in the general tax law for a tax at one-half the ordinary rate which is imposed directly on the gross income of the foreign corporation from defined Cuban sources. Thus, while national shipping companies are subject to a tax of 6 percent on their net profit, the law provides that

[1] League of Nations, Taxation of Foreign and National Enterprises, vol. IV, p. 54 et seq.

foreign shipping companies which are engaged in transporting freight and passengers between national and foreign ports shall be exempt from the tax on profits and shall in lieu thereof pay a tax of 3 percent of the gross income obtained for freight and passengers which they may ship in national ports. (Act III of Military Order No. 436 of 1900, as amended by Act XV, the law of July 6, 1928.) The tax imposed on this basis was held to be allowable as a credit in a decision of the Board of Tax Appeals promulgated May 6, 1942, in *Seatrain Lines, Inc.*, v. *Commissioner*, 46 B. T. A. 145, but the nonacquiescence of the Commissioner is possible.

This short-cut method of satisfying liability to income tax was found to be so practical that in 1932 Cuba applied it to other types of enterprises under a provision now found in article II (f) of Decree No. 1117 of May 15, 1939 (Official Gazette No. 352 of May 31, 1939), modifying the regulations governing the profits-tax law.[2]

Accordingly, American corporations are subject to a tax of 3 percent on gross income in place of the tax on net incomes paid by Cuban corporations which progresses from 10 percent on net income nor exceeding $100,000 up to 20 percent on the excess over $1,000,000.

This tax is authorized for three categories of foreign corporations:

(1) Those which sell their goods through branches, subsidiaries, or agents in Cuba. For such a company there are certain qualifications about applying this tax when the company is not able to present evidence justifying lack of profits but it is understood that this levy is applied generally as a minimum tax.

(2) Those which compensate their Cuban representatives by a percentage of the income obtained in Cuban territory for the sale, lease, exhibition, etc., of transmitted articles; and

(3) Those operating radiotelegraphic, cablegraphic, and radiotelephonic systems.

It is to be noted that the 3 percent tax is applicable without qualification to the gross income of the last two categories of companies. A provision for imposing such a tax on gross income in lieu of the tax on earnings has been incorporated in a decree confirming a concession agreement between the Cuban Government and an American company operating a telephone system in Habana.

With regard to shipping companies, the Board of Tax Appeals in the case of Seatrain Lines, Inc., recognized that: "The 3 percent by which the original 6 percent rate was reduced was apparently an approximation of the deductions allowed in arriving at net income and was adopted as a compromise measure in order to avoid the complex and vexatious allocation and calculation of the deductible items peculiar to the petitioner's business. Therefore, it appears that as to the petitioner's business the present 3 percent tax is but the successor of the 6 percent income tax, took its place in the tax structure of Cuba, and preserved its character as an income tax."

The foregoing lucid explanation applies equally well to the application of the 3 percent rate in the case of foreign merchandising and communications enterprises.

The Board proceeds to point out that in this country taxes imposed on gross income have been held to be income taxes, such as certain taxes imposed on the wages of individuals by section 1400 of chapter 9 (entitled "Employment taxes"), Internal Revenue Code, and the taxes paid by individuals under Form 1040A, based on a gross income of $3,000 and less. The Board might have added that the Federal income tax which is ordinarily imposed on net income is levied on the gross income from specified sources in the United States derived by nonresident aliens and foreign corporations not engaged in trade or business nor having an office or a place of business in the United States (secs. 211 (a) (1) (A) and 231 (a) (1), I. R. C.).

---

[2] A translation of this article prepared by the American Chamber of Commerce of Cuba reads as follows: "(f) A tax of 3 percent on gross incomes (in place of the tax on profits) shall be paid by all foreign companies operating in Cuba through branches, subsidiaries, legal representatives, or agents, which fix by contract, or any other means, the cost and sales price of the merchandise in which they trade and which are unable to present satisfactory proof of prices and evidence to the Government that the lack of profits is not due to price manipulations; and when they have contracted with foreign companies to receive a percentage of the income obtained in Cuban territory for the sale, lease, exhibition, etc., of transmitted articles; even when the companies are Cuban companies.

"Also subject to these provisions are radiotelegraphic, cablegraphic, and radiotelephonic companies."

The Board cites Treasury decisions holding that certain foreign taxes imposed on gross income are allowable as credits under section 131 I. R. C., including Canadian dividend taxes, Canadian copyright taxes, French rental value taxes, and Argentine dividend taxes, as well as a French tax based on an income presumed to be equal to seven times (later five times) the rental value of the dwelling occupied (*Herbert Ide Keen*, 15 B. T. A. 1243), and certain Cuban taxes (*Havana Electric Railway Light & Power Co.*, 34 B. T. A. 782).

Naturally, the allowance of the credit for such taxes is subject to the limitations under subsection (b) requiring the determination of the "net income" from sources in the foreign country, and to the submission of evidence of the income derived from the country in accordance with subsection (e), of section 131.

As such provisions absolutely limit the credit to the tax effectively imposed on the net income allocable to the foreign country; and preclude any reduction in the United States tax on income from sources in this country, there should be no reason to hesitate to adopt a clarifying amendment which would assure domestic corporations the protection against international double taxation which is intended by section 131, I. R. C.

The allowance of the credit is equally justified where the tax on net income is replaced by a tax imposed on an empirical basis in the base of foreign enterprises which produce or process goods in the country and sell them abroad. For example, when an American enterprise produces a certain raw material in a Latin-American country and sells it in the United States, obviously the local authorities (who have no jurisdiction over the place of sale) may find it difficult to determine the part of the net income realized at the place and time of sale abroad which is attributable to sources in their territory. If world-market prices exist for the product as of the time it leaves the country a local profit may be measured by assuming a sale was made at that price, but in other cases some form of empirical determination may have to be employed.

For example, Guatemala subjects foreign and domestic corporations to an income tax. The tax was originally imposed at the rate of 5 percent by act 17 of Decree No. 1543 of June 26, 1934.

Act 27 of the same decree exempts from this tax companies which have their taxes fixed by contract or law.

To simplify the determination of the profits tax, an American company which produces agricultural commodities in Guatemala and sells them in the United States agreed to pay to the Government of Guatemala, in addition to certain other levies, a profits tax (impuesto de utilidades) of 1½ cents per unit exported by it from the Republic (Law No. 1499 enacted by the Legislative Assembly of Guatemala on May 4, 1927, as amended by Law No. 2138 of 1930).

In view of the fact the company paid this special tax on profits, it was specifically exempted from the general income tax under Decree No. 1543 by an official communication from the Secretariat of Finance and Public Credit, No. 12416, of August 6, 1934.

Other empirical methods are frequently adopted with a view to obviating disputes as to the actual amount of profit attributable to production or processing with the taxing country. Tax administrators in practice as well as under the provisions of tax laws, decrees, and regulations have predetermined an average or arbitrary figure representing net profit per unit of product for specific industries and have applied this to said units (such as barrels or tons of oil processed, standard bags of coffee, sugar, etc.) in computing the base for the application of the income-tax rate. Such situations are a short cut to computing a tax in lieu of the tax on orthodox net income or the arbitrary fixing of the taxable net income itself.

There is no inherent difference in the various methods of determining tax liability cited, except that some involve only one computation whereas others involve two or more. The result is the same—a reasonably fair approximation of what the tax would be if computed at regular rates upon the net income attributable to activities within the country.

In all cases cited the following conditions are met:

1. There exists a general law imposing an income tax which would be allowable as a credit under section 131.

2. The empirical tax in question is specifically levied, under the same law or a decree relating to the general income-tax law, in lieu of the tax generally applicable.

3. To obtain the credit for the foreign tax under section 131 the taxpayer would have to determine the net income allocable to the foreign country in order to meet the requirements of subsections (b) and (e) of said section.

A draft of amendment to section 131 which would allow the credit when such requirements are met follows:

Draft amendment No. 2

SEC. 131 ( ). For the purposes of this section, the term "income, war-profits, and excess-profits taxes" shall include a tax imposed on gross income or on some other basis which is levied in subtitution for a tax on net income allowable as a credit under this section, provided the taxpayer proves to the satisfaction of the Commissioner the amount of net income allocable to sources within the foreign country in accordance with the requirements of subsections (b) and (e) of this section.

JULY 24, 1942.

ADDITIONAL MEMORANDUM OF MITCHELL B. CARROLL, REPRESENTING THE NATIONAL FOREIGN TRADE COUNCIL, INC., NEW YORK, N. Y.

PROPOSED AMENDMENT TO SECTION 721 I. R. C.

To permit, in the case of long-term contracts envisaged in section 721 (b), an adjustment of base period net income on the basis of actual earnings attributable to each year

In behalf of members of the council engaged in construction work in Latin America under long-term contracts, I wish to bring to your attention an application of the excess-profits tax which is contrary to the intent expressed by the Senate when it introduced section 721 in the Second Revenue Act of 1940 and which will result in a crushing burden of taxation for the enterprises in question, especially if the contemplated rates are to be imposed.

Because of the uncertainties in the costs of performing contracts involving operations over 1 year, and sometimes as many as 3 or 4 years, it has been customary for the contracting firm to determine the net income at the time of completion and to include it in the taxable income of that year. Recognizing that a serious hardship would result if all of such income were subjected to the excess-profits tax for the year of completion when it was grossly disproportionate to the amounts of such income received by the taxpayer in the 4 previous taxable years in the course of which the income was actually earned, the Senate envisaged the determination of the amount of such income attributable to any previous taxable year or years, in accordance with regulations prescribed by the Commissioner with the approval of the Secretary. The paragraph in the report of the Senate Finance Committee on H. R. 10413, at page 41, concluded with the following statement:

"If it is determined that the net income received in the taxable year is attributable to years in the base period, the amount of such income so attributable to such years will have the effect of increasing the base period net income and thus the credit under the average-earnings method."

However, section 30.721-3 of Regulation 103 states that:

"Section 721 has no effect upon the computation of base period net income or of earnings and profits and therefore does not affect the computation of the excess-profits credit."

Obviously, income properly attributable to years in the base period should be included in the net income of those years in order to arrive at the credit under the average-earnings method. This is especially true if, during these years, earnings were abnormally low or if not losses were suffered. If net income was reported in any of the base years on a completion basis, the part attributable to other base years or prior years should, of course, be apportioned thereto.

If such a correction is not made, the credit will not fairly reflect the real average earnings of the base period, and the taxpayer's income which bears the excess-profits tax will be unduly increased. If the proposed rates are then imposed on the mathematically increased income, the resulting burden on the taxpayer will be relatively heavier than that imposed on taxpayers who were in a position to keep their accounts on an annual basis.

The inequity of the law as it now stands may be shown by example. Let us assume that a construction contractor received a contract on January 1,

1938, which would take 3 years or more to complete, the work being done in South America and being actually completed in 1940; that this contract amounted to $2,000,000 and showed a profit of 15 percent or $300,000 and that the contractor, because of the impossibility of accurately determining profits until the work was completed had elected to file his tax reports on the completed contract basis. That this same contractor, through operations on both long- and short-term contracts during 1938, 1939, and 1940, did not make enough profit to show any taxable income in 1938 or 1939, but in 1940 he showed as taxable income the $300,000 made largely on a long-term contract. That the character of the work on the long-term contract was such that the work progressed in an orderly manner, one-third of the work being completed in 1938, one-third in 1939, and the balance in 1940 ,and that the payments received by the contractor were more or less equally divided over these 3 years.

Such a contractor would, under section 721, be able to apportion his income to the years in which the work was done, and if by so doing he had a taxable income, subject to the excess-profits tax in 1940, paying the 1940 rate only on the proportion of the profit attributable to that year. However, under the present law, if in 1942, the contractor completed a number of contracts which showed a total taxable profit of $300,000 the credit allowed him would be calculated on earnings during the base years which might show as follows:

1936	$200,000	1938	Deficit
1937	300,000	1939	Deficit

This, in spite of the fact that his real earnings during the base period, calculated on the percentage of completion basis might be as follows:

1936	$200,000	1938	$100,000
1937	300,000	1939	100,000

It seems manifestly unfair because of bookkeeping methods followed by the contractor, in accordance with the law which gave him the right to report on completion basis, to refuse him the right to show his real income on the percentage of completion basis, as unless he is permitted to do this, his credit to be applied to excess-profits tax is not based on his actual earnings but on a bookkeeping system, which does not properly represent actual earnings.

The suggested amendment should at least cover income received under contracts performed entirely outside the United States, especially in view of the fact that Congress has recognized the desirability of encouraging foreign trade by providing that domestic business corporations deriving 95 percent of their gross income from sources outside the United States are exempt from the excess-profits tax (sec. 757 (g), I. R. C.

Proposed amendment to section 721, Internal Revenue Code

SEC. 721. ABNORMALITIES IN INCOME IN TAXABLE PERIOD.—

* * * * * * *

(b) Amount attributable to other years.

(2) For the purpose of the excess-profits credit based on income, the amount of net abnormal income derived under a contract, the performance of which required more than 12 months, which is reported in any taxable year beginning after December 31, 1939, that is determined to be attributable to any taxable year or years in the base period shall be included in the excess-profits net income of such taxable year or years, and the excess-profits net income of each of the taxable years in the base period shall be adjusted so as to include only net income properly attributable to work performed during each of such years.

To implement the foregoing, the following might be added:

Where the taxpayer has kept its books and filed its income-tax returns in accordance with a completed contract method of accounting during any or all of the base period years, the taxpayer shall, for the purposes of this subsection, determine its average base period net income on the basis of the percentage of completion method of accounting, reflecting work actually performed during each of the base period years.

The CHAIRMAN. Mr. Byrne.

STATEMENT OF DAVID M. BROUDY, NEW YORK, N. Y., REPRESENTING THE BEAUTY AND BARBER SUPPLY INSTITUTE, INC.

Mr. BROUDY. Mr. Chairman, I shall appear for both Mr. Byrne and Mr. Schlesinger, whose name follows his, on behalf of the Beauty and Barber Supply Institute.

The CHAIRMAN. Is this Mr. Schlesinger?

Mr. BROUDY. I am David M. Broudy, of the office of Mr. Schlesinger, 17 East Forty-second Street, New York, counsel for the Beauty and Barber Supply Institute.

The CHAIRMAN. You appear for both Mr. Byrne and Mr. Schlessinger?

Mr. BROUDY. Yes. The Beauty and Barber Supply Institute is a trade association of some 500 dealers who supply beauty and barber supplies and equipment to beauty shops and barber shops throughout the United States.

Now, I should like to discuss the retailers' tax, excise tax, on toilet preparations contained in the Internal Revenue Code, sections 2402 (a) and 2402 (b).

The CHAIRMAN. Did the House bill deal with this matter?

Mr. BROUDY. It did, sir; and a brief submitted by counsel for the institute was considered by the committee and the contentions of the institute were rejected. However, I should like to present the objections to the existing law and a suggested change that is different from the contentions raised before the House Ways and Means Committee.

Now, in the first place, section 2402 provides for a tax imposed upon certain toilet articles, and under the regulations the tax attaches to the sale by the retailer of any preparation which is used or applied or intended to be used or applied for toilet purposes or used in connection with the bath or care of the body, or applied to the clothing, as a perfume to the body, as a toilet article.

Now, section 2402 (b) treats the dealer who supplies beauty and barber shops in quite a different fashion from the wholesaler supplier to drug stores, department stores, and cosmetic stores, and this notwithstanding the fact that the sale performs the same economic function. The difference is that the beauty shop, when it purchases from the wholesaler supplier, does not pay any tax whatsoever on the articles sold except as charged by the wholesale dealer. That is to say, the wholesale dealer is charged with the duty of paying the tax to the Government and the wholesale dealer passes this tax on to the beauty shop.

However, the commodities purchased by the beauty shop are of two sorts: Those purchased for use in the shop and those purchased for resale. In recent years the beauty shop has more and more gone into the business of reselling merchandise purchased from wholesale distributors. In this connection the beauty shop is in competition with the drug store. Inasmuch as the drug store under the act need not pay the tax until it is actually sold, because the drug store is a retailer and under the act the wholesale distributor is considered a retailer, there is an unfair advantage in favor of the drug store and also in favor of the wholesale distributor who distributes to the drug store.

Now, the beauty shops and barber shops throughout the United States employ some 750,000 people. There are some 85,000 beauty shops and 120,000 barber shops employing an average of 3 employees per shop. There are 4,200 combined beauty and barber shops averaging 8 employees, making a total of employees of some 750,000 people.

Now, as is well known, the beauty shops operate on a very small margin and part of their revenue has been gotten from the resale of these commodities, and so with the threatened unemployment through out the country the welfare of these shops is at stake.

The Beauty and Barber Supply Institute is very much interested in seeing to it that these beauty shops continue in business, and if they are forced to discontinue business, of course, it will be a very definite hardship to the dealers whom I represent.

There has been a discrimination in that the dealer must pay his tax, and consequently the beauty shop must pay the tax on the articles for resale before they actually sell them, whereas the drug store does not have to do that. It is this disadvantage as against the beauty shop which I should like to suggest be eliminated by a change in the existing law.

Now, that could be done by segregating the items which are sold for use and those items which are sold for resale. Now, the items which are sold for use are in a very different form from those sold for resale. In other words, those sold for use are in the so-called professional sizes and they are easily differentiated from those sold for resale. So when the beauty-shop supplier, the wholesaler sells these articles he could easily separate those sold for use and those sold for resale, and the tax would be payable immediately in respect to those sold for use in the beauty shop, whereas it would not be payable in respect to those sold for resale until actually sold by the beauty shop.

Senator BROWN. Your objection is that in one case the beauty shop is the consumer and in the other case it is the retailer?

Mr. BROUDY. That is right. Under the act the wholesale supplier is designated a retailer.

Now, on those articles which are sold at retail and upon which a tax has been paid under the act, the beauty-shop owner is permitted to obtain a credit for the tax already paid, but, of course, that entails the making out of two separate returns, and it is very difficult for a small businessman, such as a beauty-shop owner, to calculate and to make the separate returns. The method of computation is rather intricate, insofar as he is concerned.

Now, if I might say parenthetically, the beauty-shop owner, notwithstanding the fact he has made no sale whatever, must, nonetheless, make a return each month, whether he resold any items or not. Under Regulation 51, section 320.60, it is provided the return must be forwarded to the collector for each month whether or not any liability has been incurred for that month.

The argument has been made that if the tax continues as it has, namely, as against the wholesale supplier in all instances, there will be fewer returns. Well, that is not so, because a beauty-shop dealer has been and still is making those returns.

Senator CLARK. I understand that under the present law the distributor to beauty shops or barber shops is considered a retailer, but the distributor to the drug stores is considered a wholesaler.

Mr. BROUDY. That is right, sir.

Senator CLARK. That is the gist of your complaint?

Mr. BROUDY. That is it exactly, bringing on an unfair advantage.

Senator WALSH. As a matter of fact, does the beauty shop or barber shop have to pay more by reason of the taxes being paid at the source than the drug store, for the same articles?

Mr. BROUDY. No; as a matter of fact the beauty shop, because he buys in professional sizes and larger quantities, pays proportionately less for the same quantity.

Senator WALSH. For what he resells does he pay more?

Mr. BROUDY. For what he resells there is a larger tax, which is comparable to the drug-store tax.

Senator CLARK. But the goods sold by the beauty shop or the barber shop pays the same tax that the drug store pays? It is simply a matter of the responsibility of paying the tax?

Mr. BROUDY. It is not only that, but the beauty shop owner must pay his tax when he purchases.

Senator CLARK. In advance?

Mr. BROUDY. In advance, regardless of when he sells. Even if he never sells he must pay that tax.

Senator WALSH. To the wholesaler or to the Government?

Mr. BROUDY. To the wholesaler, who in turn is responsible for the tax to the Government.

Senator WALSH. The wholesaler does not have to pay the tax in advance?

Mr. BROUDY. No, he does not; only when he sells to the consumer.

Senator WALSH. As a matter of practice, is the tax added to the price of the goods that the beauty shop or the barber shop gets?

Mr. BROUDY. Yes; as a matter of fact it is.

Senator WALSH. And it is not charged to the drug store?

Mr. BROUDY. No. Now, there is another phase of this problem which has arisen as a matter of practice. Because of the fact that the wholesale distributor is a retailer the beauty shop owner in recent months has been manufacturing his own preparations and using them in his shop for application in treatments. Now, there is no tax obtainable by the Government on that. So there is a vast amount of tax being lost to the Government. Now, we propose that there be a tax exacted of the beauty shop owner for those preparations because it is unfair to the persons who supply those articles and it is a means of evading the tax.

Senator VANDENBERG. You are also interested in protecting competitively your own clients at that point?

Mr. BROUDY. Of course; yes.

The CHAIRMAN. What is your proposed amendment?

Mr. BROUDY. The proposed amendment is that section 2402 of the Internal Revenue Code be changed by adding to the section a provision to the effect that articles sold by wholesale suppliers for resale be deemed not retail sale but that when the same are actually resold

by the beauty shop owner, that they then be deemed to have been sold at retail, and that the tax be payable by the barber shop or beauty shop owner, and that the returns be made monthly, as now provided in the law and under the regulations. And, furthermore, that for the purposes of the act any article described in subsection (a) shall be subject to tax where such article is manufactured for use in the treatment of patrons by any person operating a beauty parlor, barber shop, or similar establishment, and the tax payable by such person upon the use of such article at the rates set forth in the act shall be based upon the cost to the taxpayer of the same or similar articles not manufactured by the beauty shop owner.

Now, of course, if those two suggestions are considered favorably by this committee and if they become law, the method of calculation on the part of the beauty-shop owner will be quite simple. All he has to do then is pay his tax each month on those articles purchased for use, and during the same months pay a tax on those articles actually resold.

I should like an opportunity to present a brief in connection with the point urged in my discussion before the committee.

The CHAIRMAN. Yes, sir; you may prepare it and give it to the clerk.

(The brief subsequently submitted by Mr. Schlesinger is as follows:)

BRIEF ON BEHALF OF BEAUTY AND BARBER SUPPLY INSTITUTE, OF NEW YORK, N. Y., AND INTERNATIONAL HAIRDRESSERS ASSOCIATION, WITH RELATION TO A PROPOSAL FOR THE AMENDMENT OF SECTION 2402 OF THE INTERNAL REVENUE CODE

To the Honorable Chairman and Gentlemen of the Senate Finance Committee of the United States:

I. PURPOSE OF THIS BRIEF

This brief is respectfully submitted in amplification and extension of the remarks of David M. Broudy, made before your committee on July 28, 1942, and recorded in hearings on H. R. 7378, unrevised, part IV, on page 219. No change is here proposed in the rate of tax or the substantive provisions of the existing law. The changes proposed are purely and simply of an administrative nature.

II. THE INDUSTRY

The toilet-preparations industry so far as the wholesalers are concerned is sharply divided into two groups, the first of which sells to drug and department stores, and the second of which sells to beauty and barber shops. It is this division within the industry which makes it necessary for a revision to be made in the present law taxing the sale of toilet preparations.

III. THE RETAIL EXCISE TAX ON TOILET PREPARATIONS

When, in 1941, Congress decided to abolish the manufacturers' excise tax on toilet preparations and substitute therefore a retailers' excise tax on toilet preparations, the House of Representatives enacted a bill which took into account this division in the industry discussed above. That bill failed to become law because the Bureau of Internal Revenue objected to the difficulties inherent in its administration.

In place of the original House bill, the present law was enacted imposing a 10 percent retailers' excise tax on the sale of toilet preparations, but failing to take into account the division of function within the industry.

The proposal here made is for an administrative change in the present law which will take that division of function into consideration, and yet avoid the objections to the 1941 House bill.

IV. NEED FOR ADMINISTRATIVE CHANGE

The present law creates a discrimination between those wholesalers in the industry who sell to the beauty and barber shops, and those wholesalers who sell to drug and department stores. Wholesalers in selling to drug and department stores are not required to report their sales and pay a tax to the Government because the sale to such retail organizations is not considered under the law a sale at retail. On the other hand a sale by wholesalers to beauty and barber shops is considered a sale at retail and hence taxable as such.

This discrimination between the two types of wholesalers is made more onerous to the industry by reason of the fact that the sale is taxable regardless of whether the goods are purchased by the beauty or barber shop for use in the shop or for resale in consumer packages to their customers.

V. HOME MANUFACTURED TOILET PREPARATIONS

Another objection to the present law which this proposal is designed to remedy is that the law fails to tax merchandise manufactured by the beauty and barber shop for its own use. This failure is an incentive to the manufacturer of "home brew" merchandise upon which no tax need be paid. Since the passage of the present law, the manufacture of this type of merchandise has been on the increase. We propose to amend section 2402 by adding thereto a new subsection, to wit, section 2402 (c), which will make taxable "home brew" merchandise in the same manner as merchandise purchased from suppliers.

VI. OPERATIONS OF BEAUTY AND BARBER SHOPS

Just as there is a division among wholesalers in the industry, so there is a separation of goods purchased by the beauty and barber shops. The beauty or barber shop purchasing toilet preparations purchases two types. One type is known as the professional size and the other type is known as the consumer size. Each size is purchased separately, comes in different containers, and is used for different purposes—the professional size being used within the shop in treatment of its patrons and the consumer size being resold by the shop to its customers.

The present law requires the beauty shop and barber shop as a matter of practice to pay in advance to the wholesaler the tax upon all goods purchased whether for consumption or resale and the goods purchased for resale may lie on the shelves of the shop for many months before resale. When they are finally sold the beauty shop or barber shop is then required to make a return to the Government and pay the tax upon the difference between 10 percent of the sale price to the consumer and the amount charged by the wholesaler for the tax on the original sale.

VII. CHANGE PROPOSED

The proposal here made is designed so to amend section 2402 (b) of the Internal Revenue Code as to do away with the inequitable features of the present law by accomplishing the following:

1. Prevent the sale by the wholesaler to the beauty or barber shop from being treated in any other way than a sale by a wholesaler to a drug or department store.

2. Avoid the necessity of having the beauty and barber shop pay in advance the retailers' excise tax upon goods which are purchased by the beauty shop for resale.

3. Avoid making it necessary for the beauty shop or barber shop having to file a separate return on goods on which it has long since paid the tax.

These objectives can be accomplished by a simple administrative change in the statute. Attached hereto and made a part hereof and marked "Exhibit A" is a statement of the proposed amendment which would accomplish these desirable objectives.

VIII. DISCUSSION

The first objective to be accomplished is to avoid discrimination between wholesalers selling to drug and department stores and wholesalers selling to beauty and barber shops. A sale by the former is not subject to tax because it is not considered a sale at retail, but a sale by the latter is subject to tax because under the express provisions of the present law it is considered a sale at retail regardless of whether the goods are purchased for use or resale. The very same items sold by the two groups of wholesalers are taxed differently even though the purpose of the purchase in each case is absolutely identical. To avoid this unnecessary discrimination, we propose that the return on sales made by beauty and barber shops shall be made by the beauty shop or barber shop just as they are made by the drug or department store.

The second objective is to permit the beauty or barber shop purchasing the goods for resale to pay the tax only when the retail sale is actually made and not, as under the present law, well in advance of such resale. To accomplish this, we propose that the beauty shop or barber shop purchasing goods for resale or for use within the shop be required to file a return reflecting both the goods purchased for use and the goods purchased for resale, and to include in that return those goods purchased for use during the particular month and those goods resold during the particular month, in this way making only one return necessary. The tax upon the goods purchased for use would, as now, be based upon the cost to the shop and the tax upon the goods resold would, as now, be based upon the resale price.

In this way, the third objective is accomplished, and, automatically, the beauty shop and barber shop would be relieved of having to file a separate return upon goods resold.

IX. ARGUMENTS

The arguments in favor of treating the two types of wholesalers in the same way is, of course, obvious. This is a discrimination which has no basis in law and in fact and should be abolished. But the discrimination works not only to the detriment of the wholesaler but to the detriment of the beauty shop and barber shop as well. By adopting the change here proposed, the beauty and barber shop will be relieved of having to pay the tax in advance. It would be necessary for the shop to make a return and report a tax once a month as under the present law, but the return will reflect only so much of the goods purchased for resale as were actually sold within that month and hence the shop will pay the tax to the Government only after receipt by it of the purchase price from the consumer, which is the only equitable and fair way in which the retail excise tax should operate.

Since it is obviously fair for the beauty shop and barber shop to pay the tax only upon receipt of the sales price for the resold merchandise, it will be no greater effort for the shop to include within that return the amount of goods purchased for professional use during that month, paying the tax on both at the same time.

In this way, the Bureau of Internal Revenue will not be forced, as it presently is, to examine two sets of returns, one from the beauty shop and one from the wholesaler. In addition, greater revenue will result to the Government because the resale of toilet preparations will thereby be encouraged.

The beauty shop and barber shop cannot afford at the present time to finance the tax in advance and therefore has, since the enactment of the present law, been largely discouraged from buying resale merchandise. Sales of such merchandise have fallen off considerably and it is the inevitable result of the present proposal to encourage these sales and thereby to yield greater revenue to the Government.

Furthermore, under the present law, the beauty shop and barber shop when reselling merchandise and making its separate return, is permitted to credit against the tax payable to the Government on such resale, the amount of tax already paid to the wholesaler on the original purchase. The shops are not equipped to do this job and are making inaccurate returns to the Government, either paying too much or too little. This, in turn, requires the Bureau of Internal Revenue to make extensive investigations and impose assessments and penalties which would in every case be avoided by the proposed enactment.

X. SUMMARY

The change in section 2402 (b) here proposed is an administrative change which would require the beauty and barber shops, rather than its supplier, to make the return and pay the tax directly to the Government, both with regard to professional and resale merchandise, for the following reasons:

1. Such a change will eliminate the discrimination presently existing between the two groups of wholesalers mentioned above.

2. The proposed change will eliminate the necessity for the beauty shop and barber shop having to pay its tax in advance of resale.

3. The proposed change will make it unnecessary for the beauty shop and barber shop to file a separate return as is now required under the law when goods purchased for resale are resold.

4. The proposed change will make it unnecessary for the Bureau of Internal Revenue to inspect two sets of returns, one by the wholesaler and one by the beauty and barber shops on the same merchandise, and will therefore make the process of administration less expensive.

5. The proposed change will yield greater revenues to the Government by giving an added incentive to the beauty and barber shop to purchase merchandise for resale.

The proposed addition to section 2402, to wit, section 2402 (c) taxing "home brew" merchandise in the same manner as merchandise purchased from regular suppliers will give increased revenue to the Government by taxing a source which is now tax free and also will stabilize the industry by avoiding a disruption in the industry which has been fostered by the present law.

XI. CONCLUSION

For the reasons urged above, we propose that section 2402 shall be amended as indicated in exhibit A hereto attached.

Respectfully submitted.

BEAUTY & BARBER SUPPLY INSTITUTE, INC.,
By JOSEPH BYRNE.
INTERNATIONAL HAIRDRESSERS ASSOCIATION,
By B. J. RUTKOE,
WALTER C. B. SCHLESINGER,
Counsel.

EXHIBIT A

SEC. 2402. TAX ON TOILET PREPARATIONS.—(a) TAX.—There is hereby imposed upon the following articles sold at retail a tax equivalent to 10 per centum of the price for which so sold: Perfumes, essences, extracts, toilet waters, cosmetics, petroleum jellies, hair oils, pomades, hair dressings, hair restoratives, hair dyes, aromatic cachous, toilet powders, and any similar substance, article, or preparation, by whatsoever name known or distinguished; any of the above which are used or applied or intended to be used or applied for toilet purposes.

(b) BEAUTY PARLORS, ETC.—For the purposes of subsection (a), the sale of any article described in subsection (a) to any person operating a barber shop, beauty parlor, or similar establishment shall not be considered a sale at retail; but the acquisition for use by the operator of such barber shop, beauty parlor, or similar establishment in the treatment of its patrons of any article described in subsection (a) shall be considered subject to tax and any person operating such barber shop, beauty parlor, or similar establishment shall pay a tax thereon at the rate set forth in subsection (a) based upon the purchase price thereof to such person: *Provided, however*, That in the case of such articles intended for resale after acquisition, no tax shall be payable until such articles are resold, and in the event of such resale, the tax shall be paid by the vendor based upon the resale price thereof.

(c) For the purposes of subsections (a) and (b), any article described in subsection (a) shall be subject to tax as in subsection (b) where such article is manufactured for use in the treatment of patrons by any person operating a beauty parlor, barber shop or similar establishment and the tax payable by such

person upon the use of such article at the rate set forth in subsection (a) shall be based upon the cost to the taxpayer of the same or similar articles not manufactured by himself.

The CHAIRMAN. All right, Mr. Marsh.

STATEMENT OF BENJAMIN C. MARSH, WASHINGTON, D. C., REPRESENTING THE PEOPLE'S LOBBY

Mr. MARSH. Mr. Chairman and members of the Finance Committee, I appear on behalf of the People's Lobby, with offices here in Washington. As I think most of you know, Bishop Francis J. McConnell, of the Methodist Church in New York, is president of the People's Lobby.

I want to make some suggestions which I hope will not run counter to the decisions of the committee as I inferred them from the story in the New York Times this morning, that you did not want to consider anything that is not in the bill, because I trust that you will not permit the House bill to pass. It will be such a shock to our boys in uniform that it will impair their morale.

We suggest that this war has got to be paid as you go, and I will say very frankly that I think if the Congress does not adopt the policy of pay as you go in the main, for this war, that you should right now create a commission to study the tactics and techniques of repudiation, because I believe, very frankly, that that is the only alternative.

Perhaps I should apologize for the fact that I am going to suggest taxes which are going to make practically all of our members—not quite all—pay a good deal more taxes, and you can sympathize with me when I tell you if you adopt my proposal we are going to lose some of our large contributors; so I hope you adopt it, because, after all, there is more involved than keeping some organizations going, however much they may be needed.

Since the increase in the national income this year and in 1943 over 1940 will be within about ten or twelve billion dollars of the actual expenditures for war, it is obvious that a war deficit of ten or twelve billion dollars is all that need be incurred in each of these years, and the balance should be raised by taxes.

I am going to list where you can raise $40,000,000,000. It is not up to me to pass the law. You can raise them from the individual income taxes, including tax on interest of exempt bonds, $11,000,000,000. Corporation income and excess-profits tax, $12,000,000,000. I want to go into detail on these a little later.

Corporation surplus and undivided profits, $12,500,000,000.

Excise tax on land values, $500,000,000.

General excise and tariff taxes, $2,300,000,000.

Estate, gift, capital-stock taxes, and so forth, $700,000,000.

Social security taxes, $1,000,000,000.

The New Deal has long practiced the art of living off the next generation, which is worse than living off his wife's folks, and an im-

perialist war could be won by so passing the bill to posterity—or perhaps you would put it: Passing the buck to Providence—but ending aggression and establishing three to five freedoms in the four corners of the earth by a global war cannot be achieved by our present methods of frenzied and fantastic finance.

I would say this, I would be perfectly willing to submit our tax program to the boys in uniform as compared to the sales tax, or leaving it for them to pay part of the cost, or most, when they get back. I think it would be public service if this committee would ask the Gallup poll to take a poll of the boys in uniform whether they would rather have us here at home pay for the war as we go, or leave it for them to do it in large part when they get back.

The Government determines how many soldiers and other war manpower it needs, and drafts that many: A democratic government would determine how much money the war will cost, ascertain where that money is, and then put property and income on a fiscal parity with draftees. I think that is good democracy—as was, when I knew Woodrow Wilson personally. I do not know how it comports with present concepts.

If the war continues into 1944, Congress will have to impose a progressive capital levy, with a moderate exemption.

On that point, I would like the permission of the committee to insert into the record a proposal for a graduated capital levy drafted by a former Member of this body, Senator Elmer A. Benson, of Minnesota, and also former Governor of that State. It is a short table.

The CHAIRMAN. You may put it in, Mr. Marsh.

(The table referred to is as follows:)

PROPOSAL FOR GRADUATED CAPITAL LEVY, BY HON. ELMER A. BENSON, APPLETON, MINN.

The proposed tax or capital levy would be in effect for 1 year and would be levied on the total value of all property owned by individuals at a graduated rate from 1 to 20 percent, and the tax would be payable in 18 monthly installments with a 6-percent discount for payment in advance. Married persons would be given a credit in paying the tax of $500 and single persons a credit of $300. A table for computing the tax and an example of the tax to be paid by a married person and a single person is attached.

Table for computing tax

Property taxable	Rate	Total tax	Property taxable	Rate	Total tax
	Pct.			*Pct.*	
Under $10,000	1	$100	$100,000 to $200,000	11	$16,500
$10,000 to $20,000	2	300	$200,000 to $300,000	12	28,500
$20,000 to $30,000	3	600	$300,000 to $400,000	13	41,500
$30,000 to $40,000	4	1,000	$400,000 to $500,000	14	55,500
$40,000 to $50,000	5	1,500	$500,000 to $600,000	15	70,500
$50,000 to $60,000	6	2,100	$600,000 to $700,000	16	86,500
$60,000 to $70,000	7	2,800	$700,000 to $800,000	17	103,500
$70,000 to $80,000	8	3,600	$800,000 to $900,000	18	121,500
$80,000 to $90,000	9	4,500	$900,000 to $1,000,000	19	140,500
$90,000 to $100,000	10	5,500	All over $1,000,000	20	

Examples:

PROPERTY VALUE, $30,000

Tax on first $10,000	$100
Tax on second $10,000	200
Tax on third $10,000	300
Total tax	600
Credit (married person)	500
Tax payable	100

PROPERTY VALUE, $30,000

Tax on first $10,000	$100
Tax on second $10,000	200
Tax on third $10,000	300
Total tax	600
Credit (single person)	300
Tax payable	300

Mr. MARSH. At the end of 1939 the surplus reserves and surplus and undivided profits of all corporations were about $58,000,000,000, of which 395 corporations, less than one-tenth of 1 percent of all, had nearly two-fifths. These are the last figures I could get, although the Treasury can get the figures on corporate incomes and assets for 1940 and possibly for 1941. These corporations held $27,300,000,000 of Government obligations, of which the 395 mammoth corporations held over three-fifths. The position of these great corporations has probably greatly improved since 1939, for they have received the major part of war orders, while the mortality rates among small concerns has been serious.

The Secretary of the Treasury, in his appearance before your committee, referred to the injustice of tax-exempt securities, and we agree. They total, I believe, some $20,000,000,000. That includes Government securities of all sorts. The Secretary failed, for some reason, to suggest that Congress, through an excise tax, tax the $60,000,000,000 of tax-free land values—with an exemption so the small home and farm owner will not be hit further. It is not our province to suggest the rates to yield the revenues we ask, but the Treasury has statisticians and experts who can do this in 2 or 3 weeks, and, of course, you can request them to do that.

I got in the mail this morning, from my friend, Congressman Woodruff, from the State of Michigan, a speech which he made that bears directly on this, and I would like to quote what he said. He said that Dr. Alvin H. Hansen, in an interview printed June 27 in the Chicago Journal of Commerce, made this statement as to the New Deal aims:

> Congress will surrender to the administration the power to tax, keeping to itself the right only to establish broad limits within which the administration may move. Congress will appropriate huge sums of money, will surrender its power of directing when and how the money shall be spent.

I am not quite sure whether this is historical or anticipatory. Continuing the quotation:

> Other extraordinary powers, such as for instance to effect wholesale social reforms, will be delegated to the administration which will retain most if not all of its present extraordinary wartime powers.

Those are the major suggestions.

Now, gentlemen of the committee, I do not think that statement is quite justified. I have noted that in the last few months the most searching, and, in my judgment, beneficial check-up on our war program has been made by committees of Congress. That, it seems to me, affords an argument for my conviction of the importance of retaining a legislative body. If we do not retain a legislative body with coordinate powers we are lost, but in this instance, as a tax measure, I am convinced that the Treasury is correct in its suggestion that we raise a good deal more than the House bill provides.

Frankly, as I stated earlier, I am desperately disappointed, and when the people of the country realize the profits that are being made and how little is being done, I think they will be rather furious.

I made a study recently, based largely on this one little page of statistics issued by the Department of Commerce. I never go to any foreign country to get my information on America. This is based upon this study of the Department of Commerce, and it shows this:

From 1932 to 1941 the national income increased 137 percent.

Salaries and wages increased 97.4 percent.

Income from ownership or control of property increased 273 percent.

That is all based upon these figures to which I have referred, from the Department of Commerce.

Personally, I do not see how you can prevent inflation as long as you have the present and prospective gap between the total income available for purchasing goods and the supply of goods.

I think I was correct when, 18 months ago, in a Nation-wide broadcast under the auspices of "Wake Up, America," I said that we should realize we cannot fight a war against totalitarian powers without a totalitarian organization. I think we are facing that.

Personally, I am unable to understand what advantage it is to labor to get extra wages when they have all got to be taken back in taxes, or most of them, in taxes and in bonds, or what advantage it is to farmers to have an income—what was it last year? About $13,760,000,000, an increase of 26 percent over the preceding year, when they are up against it, by rising prices. But the real issue is not the amount, but how it is distributed.

The Department of Agriculture gave me figures which were highly astounding, and I want to give you just two or three. In 1929, one-tenth of the farmers got 41 percent of the farm income; in 1939 they got 48 percent, and in 1941, nearly 50 percent or one-half.

I am always delighted to read my friend's—the Vice President's—talk about the century of the common man, and I hope he will have better luck with it than he did when he was Secretary of Agriculture, since the little farmer got less and the big farmer got more, but of course I do not know whether you want that to go into the record. It might be considered criticism, but I was brought up on the old-fashioned theory that the proof of the pudding is in the eating; not in the political talk about it.

Also you talk about sales taxes. Anybody in his right mind will not accuse the Gallup Poll of being an extremely radical institution,

but it issued, on the 19th of this month, results of a poll which the New York Times headlined: "War prosperity not evenly spread." That is no news, of course, but still fit to print.

This is what it shows—and this is for nonfarm families:

Seven percent of individuals in America earned under $10 a week. That reminded me at once of a squib I read in the Philadelphia Bulletin about 35 years ago. The question was: "Can a man be a Christian on $3 a week?" The answer was: "A man cannot be anything except a Christian on $3 a week."

Well, you may be a good Christian, but you cannot be very patriotic on an income of $10 a week, with the price of things going up. Of course, Leon Henderson is doing the best he can, with the wisdom God gave him and the appropriation Congress gave him, but you just cannot succeed with that kind of hit-or-miss price fixing.

Of course, you know our contention, and I think the record that Russia is making, justifies it, that you cannot get either wholehearted fighting nor adequate war production under the system of private profits.

I would like the permission of the committee to read several things in the record. I do not know what you are going to do on this bill. I sincerely hope the papers are not correct in reporting that you are going to wait until after election, not because I object to election, not because I want to see some of the prospective purgees licked, or anything of that sort, but I think folks ought to know in advance what they are going to have to pay. Personally, I do not object in the slightest to such rates of taxes as needed to pay as we go. I do not like a flat limit of a $25,000 income, but we would be put in the British or Canadian class if we had a system of taxes which would leave people a maximum of around $25,000—and I know several people who have such income, or a good deal over it. I do think that it is fair to give them a little advance notice.

If you will permit a little illustration, I was talking with a wealthy gentleman in New York when that story about income limitation came out. He said: "I have two boys in the British R. A. F." Their boys, I believe get $125 a month, and I think ours get about $350 or $400, and I do not begrudge them a cent of it, I want to pay more taxes to meet it. He said: "One of them brought down 19 German planes. I have another boy who just started. Both have families, with young children. I am giving each $10,000 a year to keep him going. I ought to have a little notice if I am going to be limited to $25,000." I said: "Of course, they can reduce their standard of living." I have lived on very much less than $10,000 very comfortably, merely 15 percent of it. I do not think you ought to pass a law without letting them know in advance what is going to happen as all of us have got to adjust our standards of living.

If we come to the end of this war with a $250,000,000 000 debt it is going to be repudiated or we are going to try to emulate Hitler to pay it off. I doubt if there is any choice between the two alternatives, not that we want to, but that is what we are going to be up against.

I have taken from the Treasury Department an analysis of the set-up of industrial corporations showing their surplus and undivided

profits, and then I made a case study of some of the big corporations, and I think it would be in order in view of the big story about General Motors this morning in the New York Times: "Income cut in half"—I think it is proper to call attention to this fact. These are the individual corporations. At the end of last year General Motors Corporation and its consolidated subsidiaries held $285,000,000 of Government securities. Now it looks to me as though they were scheming a grand trick not to pay taxes. You know more about business organizations than I do, although I have earned most of my living since I was 14 and that gives you a practical slant on life.

I think the Members of this Congress will agree as to the efficiency of General Motors in producing war material, and that is the one thing you and I are concerned in, to get the maximum production at a fair price for our boys in uniform, and to end the war victoriously for us as soon as possible.

Suppose you take $100,000,000 of $150,000,000 of those Government securities from General Motors, they would not go broke. They have have some rather funny financing. Let me give you a few figures. Suppose back in 1908 a man had invested $10,000 in 100 shares of General Motors at $100 each, by 1936, through a split-up in stock, he would have owned 25,095 shares of General Motors, and received on that investment 26 years earlier, an investment of $10,000, he would have received approximately $1,180,000 in dividends. I have a little stock, I don't know what is in it because somebody handles it for me, but such profits are scandalous.

It does seem to me it is about time that we recognized that all we have to do to understand dictatorships is to study democracies. We have got to face up with the facts.

This tax bill is before you for prompt action, but I do not see how you are going to get anywhere in the war effort much longer without Government taking over, or complete Government control of all industry. We have already incurred a huge debt, and I have a strong suspicion that the next generation is going to say: "Listen, you told us you fought the World War to end war, and, by golly, it was only 17 years afterward that the next World War started in Spain." Incidentally, we were on the wrong side there. They are not going to admit that this war is to save posterity, and pay it by 50- or 30- or 40-year bonds, even if the interest on it is subject to taxation. I hope that this committee will call upon the Treasury experts to give you the tax rates to pay as we go, and they can get them certainly within a month, because there are very able statisticians there, and fiscal experts and actuaries; and let us adopt some such program.

Incidentally, I think it would be a very great encouragement to our Allies, who are a little bit worried, some of them, people in the United Nations, and members of the United Nations, as to what we are doing.

If you think I have been extreme, I would like to read into the record this article from the Journal of Electrical Workers and Operators of April 1942. The caption reads: "Profits, profits, profits! profits, profits, profits!" and they give the figures.

Take one of the aviation companies. An increase in 1 year of 728 percent seems more than reasonable. Another aviation corporation,

an increase in profits of 2,677.7 percent! I would like to read those into the record so as to fortify the members of this committee, to get your conscience to the point which mine has reached, and the People's Lobby has reached, on this; and also this brief summary from the Internal Revenue Reports on Corporation Incomes for 1939, with a case study of these corporations, and you realize that United States Steel, Bethlehem Steel, and General Motors, covered, all have shared rather generously in Government contracts.

(The matter submitted is as follows:)

Data on industrial corporations for 1939, compiled from the 469,617 returns filed with the Treasury Department and reported by it

[In millions]

Major receipts taxable:		
Gross sales		$101,575.8
Gross receipts from operations		22,295.8
Interest		2,443.6
Rents and royalties		2,318.9
Net capital gain		211.9
Dividends from domestic corporations		1,005.9
Dividends from foreign corporations		250.1
Other receipts		997.7
Interest on Government obligations		763.4
Subject to excess-profits tax	$320,192	
Wholly tax-exempt	443,250	
Major deductions:		
Cost of goods sold		77,272.1
Cost of operations		11,128.0
Compensation of officers		2,697.5
Interest paid		2,796.5
Taxes paid		3,995.4
Depreciation		3,442.7
Other deductions		20,232.7
Income, profits, and taxes:		
Net income		6,734.6
Total tax		1,252.3
Net profit less total tax		5,945.6
Dividends paid, other than corporation's stock		5,746.7
Stock dividends		85.8

For 1939, 515,960 corporations filed returns.

Of these, 199,479 show a net income of $8,826,713,029; 270,138 reporting no net income, show a deficit of $2,092,147,535—while 46,343 inactive corporations have no income data.

Capital structure of corporations

Corporation with net income (compiled by Treasury Department from 187,920 balance sheets):	
Cash	$28,106.4
Notes and accounts receivable, less bad debts	31,487.7
Investments, Government obligations	17,236.3
Other investments	49,690.6
Net capital assets	61,734.3
Total assets	206,670.9
Capital stock preferred	12,678.3

Capital structure of corporations

Corporation with net income—Continued.		
Capital stock common		$53,969.4
Surplus reserves		5,940.9
Surplus and undivided profits		40,207.6
Less deficit defined as "negative amounts of 'paid-in' or capital surplus' and 'earned surplus and undivided profits' "		2,449.0
Nonbusiness receipts		
Partly and wholly tax-exempt interest		456.1
Subject of excess-profits tax	$258.9	
Wholly tax exempt	197.2	
Interest		1,347.3
Rents and royalties		1,124.2
Compiled net profit less total tax		7,668.4
Dividends paid exclusive of own stock		5,475.7
Corporations reporting no net incomes:		
For 1939, 224,839 corporations reporting no net income filed balance sheets showing—		
Cash		5,927.1
Notes and accounts receivable, less bad debts		7,962.8
Investments—Government obligations		10,116.2
Other investments		31,465.3
Net capital assets		38,491.8
Total assets		100,130.4
Capital stock preferred		4,577.0
Capital stock common		19,512.4
Surplus reserve		1,906.3
Surplus and undivided profits		11,094.3
Less deficit (defined as above)		10,573.4
Nonbusiness receipts:		
Partly and wholly tax-exempt interest		294.6
Subject to excess-profits tax	$54.5	
Wholly tax exempt	240.1	
Interest		1,058.0
Rents and royalties		1,083.0
Compiled net loss after taxes		1,669.7
Dividends paid, exclusive of own stock		163.0
Corporations with $100,000,000 and over total assets for 1930—395 corporations with $100,000,000 and over total assets, filed balance sheets showing:		
Cash		16,679.2
Notes and accounts receivable, less bad debts		12,819.0
Investments, Government obligations		17,160.2
Other investments		49,979.4
Net capital assets		40,866.3
Total assets		144,204.9
Capital stock prefererd		6,534.8
Capital stock common		29,517.3
Surplus reserves		3,719.8
Surplus and undivided profits		18,514.4
Less deficit (defined as above)		1,208.4
Nonbusiness receipts:		
Partly and wholly tax-exempt interest		446.3
Subject to excess-profits tax	$784.4	
Wholly tax exempt	263.9	
Interest		1,253.0
Rents and royalties		317.6
Compiled net profit less total tax		2,364.1
Dividends paid, exclusive of own stock		2,187.1

The mammoth corporations[1]

These Treasury statistics reveal:

The 395 corporations having in 1939 total assets of $100,000,000 and over, less than one-tenth of 1 percent of all corporations filing balance sheets had, that year—

1. Nearly half the cash.
2. Nearly one-third of all notes and accounts receivable, less bad debts.
3. Over three-fifths of all Government bonds.
4. Nearly five-eighths of all other investments.
5. Two-fifths of capital assets.
6. Nearly half of total assets.
7. Over one-third of value of preferred stock.
8. Nearly three-sevenths of value of common stock.
9. Nearly half of surplus reserves and surplus and undivided profits—after deducting "negative" surplus reserves, etc.
10. Nearly two-fifths of surplus reserves and undivided profits—before deducting such "negative" surplus reserves, etc.
11. Nearly three-fifths of interest on Government bonds subject to the surtax.
12. Over three-fifths of interest on Government bonds wholly tax-exempt.
13. Over half of interest collected.
14. One-seventh of rents and royalties collected.
15. Nearly two-fifths of net profit less total tax.
16. They paid nearly two-fifths of all dividends paid by corporations.

No net income corporations

1. Net capital assets of corporations reporting *no* net income were $38,491.8 million, nearly two-thirds as much as of those with net income.
2. Their surplus reserves and surplus and undivided profits were $13,000.6 million—over one-fourth of those of corporations, reporting net income—though they call their negative paid in or capital surplus—a deficit.
3. They held $10,116.2 million of Government obligations—nearly three-fifths as much as corporations reporting net income, and received in partly and wholly tax-exempt interest thereon $294.6 million, or $24 million more than three-fifths as much as net-income corporations.

Data given in annual reports for 1941

[000 omitted]

UNITED STATES STEEL CORPORATION

Cash in banks and on hand	$282,063
United States Treasury tax anticipation notes	69,080
Cash segregated for capital expenditures	60,000
Accounts and notes receivable, less reserves	140,600
Fixed assets:[2]	
Real estate	90,747
Plant, mineral, and manufacturing	1,900,506
Transportation—railroad, lake, and ocean steamers	404,077
Investment in mine stripping, etc	15,346
Total	2,410,675
Current liabilities	287,667

[1] The position of mammoth corporations has improved absolutely and relatively to other corporations, since 1939, because they have received the major part of Government war orders, and their expansion, conversion, and new construction for war production, has been almost entirely at Government expense—"riskless private enterprise."

Even at the end of 1939, however, the net capital assets of the 395 dominating corporations were about two-thirds of the present national debt, and their holdings of Government bonds with interest wholly or partly tax-exempt, were over a fourth of this debt.

Their surplus reserves, surplus and undivided profits, and cash, were nearly two-thirds of the present national debt—and are probably a much larger proportion now.

[2] The notation is made above fixed assets—"Less reserves for depletion, depreciation, amortization, and obsolescence $1,303,083" reducing alleged fixed assets to $1,106,992—but fixed assets at the end of 1941 were $64,759 more than the year before," also "Values are based upon determinations by the U. S. Bureau of Corporations as at the date of organization of the corporation adjusted for additions and disposals since that date."

Long-term debt	$181,238
Preferred stock (issued)	360,281
Common stock (issued)	652,744
Dividends paid	60,133
Surplus for the year	56,138
Capital surplus	38,403
Earned surplus	362,051
Inventories less reserves	291,651
State, local, and miscellaneous taxes	40,946

These figures show:

1. Capital and earned surplus exceed long-term debt by $219,276.
2. Net accounts and notes receivable and net inventories exceed current liabilities by $144,584.

BETHLEHEM STEEL CORPORATION

Cast demand and time deposits in banks		$80,248
U. S. Treasury notes		37,285
Accounts and notes receivable		111,012
Inventories		139,432
Receivable on facilities installed for U. S. Government		17,953
Fixed assets net		456,524
Buildings, machinery equipment	$391,244	
Minerals, including surface lands	34,739	
Other lands, mine stripping, etc	30,541	
Total current liabilities		176,330
Total funded debt		181,778
Preferred stock (7 percent cumulative)		93,389
Common stock		283,574
Surplus		106,902
Dividends paid		24,447
State and local taxes		12,258
Reserves—contingent and insurance		17,936

GENERAL MOTORS CORPORATION AND CONSOLIDATED SUBSIDIARIES

Cash		$196,231
U. S. Government securities		285,081
Short terms at cost	$19,997	
Tax notes at cost	265,084	
Sight drafts and C. O. D. items		3,114
Accounts receivable and trade acceptances less reserves		340,324
Investments		249,160
Miscellaneous assets		8,723
Real estate, plants, and equipment		851,707
Less reserve for depreciation	$441,833	
Net real estate, plants, and equipment		409,874
Goodwill patents, etc		50,323
Capital stock preferred no par value, common $10 par		622,537
Capital surplus		11,082
Earned surplus		493,883
Net sales		2,436,801
Total taxes		287,992
Net income		201,750
Common capital stock		435,000
Amount earned on common capital stock		192,474

Earned per share common stock (par value, $10), $4.44.

GENERAL FOODS CORPORATION AND WHOLLY OWNED SUBSIDIARY CORPORATIONS IN UNITED STATES AND CANADA

Cash		$7,500
Accounts and notes receivable less reserve		14,009
Inventories		57,231
Property accounts		58,532
Reserves for property accounts depreciation		25,864
Capital stock preferred and common [1]		63,403
Earned surplus		28,538
Profit before provision for contingencies		15,653
Provision for contingencies	$1,500,000	
Net profit carried to surplus		14,153
Net profit, after preferred dividends, per share of common stock no par value, $2.56.		
Dividend on common stock, $2 per share		10,503
Dividend on preferred stock, $4.50 per share		675

ARMOUR & CO. OF ILLINOIS AND SUBSIDIARIES

Cash		$18,282
Notes and accounts receivable less reserve		52,175
Inventories		118,999
Land, buildings, machinery, and fixed equipment (including land regarded as available for sale carried at approximately $7,200,000)	$192,147,691	
Reserve for depreciation	61,853,321	
Refrigerator cars, delivery equipment, etc	11,282,277	
Net fixed assets		141,577
Capital stock		77,000
Surplus		69,465
Capital and paid-in surplus	$38,442,494	
Appropriated earned surplus (preferred stock Armour & Co. of Delaware redeemed)	3,371,500	
Unappropriated earned surplus	22,730,054	
Dividends on stock Armour & Co. of Delaware		3,757
Balance transferred to surplus		11,354

[From the Journal of Electrical Workers and Operators, April 1942]

PROFITS, PROFITS, PROFITS!
PROFITS, PROFITS, PROFITS!

WHILE ASSAULTS ARE BEING MADE BY REACTIONARY BUSINESS INTERESTS ON LABOR'S STANDARD OF LIVING, PROFITS SOAR

Industry certainly is making hay while the sun shines. It is as though the hands of the clock had been turned back and the lustrous days of 1929 were here all over again.

The combined net profits for 629 large industrial corporations after the payment of all interest and other fixed charges and taxes (but before the payment of dividends) aggregated in 1941 a total of $2,181,000,000. This was an increase of 20 percent over their total $1,818,000,000 net profit in 1940. The March 1942 issue of the Federal Reserve Bulletin reports net industrial profits by major industrial groups. Oil, machinery, and durable goods production, all showed magnificent increases in profits during the past year.

RICH HAUL FOR RAILROADS

The Interstate Commerce Commission has recently announced the combined net operating income of 137 class I railroads for 1941 to be $999,502,906. Com-

pare this with the $682,543,218 net of 1941—an increase of $317,000,000, or 46 percent. Railroad net income after taxes as reported in the Federal Reserve Bulletin (March 1942) was $191,000,000 in 1940 and $502,000,000 in 1941, over two and one-half times greater than in 1940.

The great increase in 1941 railroad income was attributed to troop movements and freight for the national defense industries. Despite the fact that the recently-awarded increases in railroad wages will add $315,000,000 annually to railroad pay rolls plus $75,000,000 in back pay, prospects for 1942 are better for the railroad industry than at any time since 1929, when net income after taxes neared the $900,000,000 mark. Much of the added payroll load will be offset by the 10 percent increase in interstate passenger fares granted by the Interstate Commerce Commission on February 10, 1942, and the 6 percent boost in freight rates granted on March 2.

At the present time railroads are hauling 800,000 carloads of freight a week, or more than at this time last year. By midsummer the number is expected to reach 900,000 cars weekly, and when wheat begins to move in the fall it may approach 1,000,000.

PRODUCTION PEAKS IN STEEL

The steel industry of this country has a total capacity of about 84,000,000 tons a year. Seven companies own over three-quarters of it. The United States Steel Corporation has over one-third of the Nation's total capacity. Bethlehem Steel, the second largest, has a little under one-sixth. The third largest, Republic Steel, has less than one-tenth. Jones & Laughlin, National, Youngstown Sheet & Tube, and Inland following in that order. They are all considerably smaller than Republic.

The American Iron & Steel Institute has recently announced that with the exception of the output of steel rail and certain types of pipe, new production peaks were set in 1941 for practically all major classes of steel products.

The great increase in profits in the steel manufacturing industry came in the latter half of the year 1940. Since then the industry has been operating at nearly full productive capacity and earnings have been more or less stabilized, pending the completion of new productive capacity now under construction or a change in the steel price structure. Nevertheless, the combined net income, after payment of taxes and all other charges, for the seven chief companies, increased from $222,600,000 in 1940 to $238,800,000 in 1941, or 7.3 percent. The 1941 figure is 2.2 times the aggregate $108,100,000 net earnings of the seven companies for 1939.

Among the smaller and more specialized steel manufacturing companies profits for the year 1941 were also often spectacular.

In the tables below net profits for the past 2 years are presented for combined industrial groups and for specific steel, railroad, aircraft, oil, rubber, copper, machinery, and other representative companies. In all cases the net earnings shown are after allowances have been made for the proper payment of taxes.

Net profits of leading industries

Industrial group	Millions of dollars		Net increase, percent
	1941	1940	
Total net profits (629 large industrial corporations)	2,181	1,818	20.0
Iron and steel	322	278	15.8

Mr. MARSH. In conclusion, I do not know whether the attention of the committee has been called to this full-page ad in the Washington Post of the Bethlehem Steel, what they have done, and so forth. Well, they have done it; they started rather late, about a year or so. Of course, it is not quite so large in the Washington News, the reason being the Washington News is not so large. There are two paid ads, one from United States Steel and one from Bethlehem Steel, in the same issue. While I don't know, I presume these corporations paid for these advertisements. You do not want me to read them in the record probably, but I should like to put them before you here for the information of the committee, and request this very sincerely, that you will see to it that such advertising is not deducted in avoidance of taxes as legitimate business.

Let me say this: I hope my suggestion will not result in cutting the salaries of any of the boys or girls on the Post and News, because I like them, but at the same time, if corporations are going into this page advertising, generally, it runs up in the hundreds of millions, and the Government is going to have that much less to tax.

My final request is that you take this short article, based on Government figures, Department of Commerce figures, entitled "War Increases Property's Cut of National Income," and also the one about the $60,000,000,000 of tax-free land. I took the reports, as far as I could get them, from the assessors, of municipal land values, the assessed valuation, and the Department of Agriculture issued figures showing that from 1940 to 1941 the selling price of farm lands, exclusive of all improvement, increased nearly $2,000,000,000. That is a big increase, largely due to Government-guaranteed prices and high prices. If I may read those two articles in, and you gentlemen will accept our recommendations, I will feel we are a long way toward getting essential democracy in taxation.

(The matter referred to is as follows:)

[From People's Lobby Bulletin, July 1942]

WAR INCREASES PROPERTY'S CUT OF NATIONAL INCOME

In 1941, recent figures of the Department of Commerce show, total compensation of employees (salaries and wages) was only 68.6 percent of the national income, compared with 76.7 percent in 1932.

The national income in 1941 was $94,540,000,000 compared with $39,912,000,000 in 1932.

The national income, after 9 years of New Deal deficiteering, was 237 percent of the national income the year the New Deal was elected.

Total compensation of employees in 1941 was $64,801,000,000, compared with $31,610,000,000 in 1932, but in 1932 "supplements to salaries and wages" (work-relief wages, social-security contributions, railroad retirement, and unemployment compensation contributions, and private pension payments) were only $643,000,000 and in 1941 were $3,638,000,000, or nearly six times as much.

Salaries and wages alone were $30,967,000,000 in 1932 and $61,163,000,000 in 1941—an increase of $30,196,000,000, or 97.4 percent, compared with the 137-percent increase in the national income.

The record of profits, net interest, dividends, net rents, and royalties during the fateful 9 years from the birth of the New Deal to Pearl Harbor is different.

ECONOMIC ROYALISM GROWS

From 1932 to 1941:

Net income of incorporated business increased from a loss of $3,646,000,000 to $7,206,000,000, by $10,752,000,000.

Business savings increased from a loss of $6,373,000,000 to $2,557,000,000, by $8,930,000,000.

Net income of unincorporated business increased from $4,849,000,000 to $14,642,000,000, by $9,793,000,000, or 202 percent.

Of unincorporated business net income:

1. Agricultural business increased from $1,488,000,000 to $6,160,000,000, by $4,464,000,000, or 301.4 percent.

2. Other business increased from $3,361,000,000 to $8,482,000,000, by $5,121,000,000, or 152.4 percent.

Net interest decreased from $5,628,000,000 in 1932 to $5,261,000,000 in 1941, by $367,000,000, or 6.5 percent.

Net interest payments in 1941 were, however, $151,000,000, or 3 percent larger than in 1933.

(NOTE.—The reduction in net interest receipts since 1932 is due to the reduction in interest rates, debt moratoriums, etc. The current enormous increase in the national debt, because Congress refuses to tax adequately, will, if maintained, bring total interest payments to between $6,500,000,000 and $6,750,000,000 in 2 or 3 years.)

Net rents and royalties increased from $1,471,000,000 in 1932 to $2,630,000,000 in 1941, by $1,159,000,000, or 78.8 percent.

The increase in net rents and royalties in the 9-year period was over three times as much as the decrease in net interest payments.

This is a natural result of lower interest rates, designed to benefit America basic economic royalists—speculators in land and other natural resources.

During this 9-year period covering the rise and fall of the New Deal income from ownership and control of property, as rent, interest, dividends, royalties, business savings, and entrepreneurial withdrawals increased from $8,945,000,000 in 1932 to $33,375,000,000 in 1941, an increase of $24,430,000,000, or 273 percent.

PROOF OF PUDDING

Since it is still true that the proof of the economic pudding is in the eating, and that the depression was largely due to the disproportionate share of the national income going to property owners, the following showing of Government figures is important:

From 1932 to 1941:	*Percent*
The national income increased	137.0
Salaries and wages increased	97.4
Income from ownership or control of property increased	273.0

Al of these increases are chiefly due not to sound economic and fiscal policies, but to charging the major part of the bill for pump-priming to the next generation, in accordance with current Harvard hallucinations and hysteria.

The Nation's present unsound economic condition, well known to the rulers of every nation under the sun, point to a career of financial imperialism for America exceeding the world's past records.

Certain factors in the situation should be recorded:

1. At least 9,000,000 more people were employed in 1941 than in 1932.

2. There was only a small increase from 1932 to 1941 in the number of people getting income from ownership or control of property.

3. About 20,000 people received approximately one-third of the $4,640,000,000 of net dividends paid in 1941, as of all dividends paid, amounting for the 9 years since 1932 to $34,137,000,000.

4. Wage earners will have to pay a large part of the increase in their average wage in taxes or in purchase of war bonds, with no assurance of employment when the war program is over.

5. The wealthy with incomes from property, although all incomes over $25,000 (with allowance for dependents) be taken in taxes, will, at the end of the war, own sources of their unearned income. The surpluses, reserves, and undivided profits of corporations are now about $48,000,000,000.

6. Our experience during the past 3 years, since we started the defense and war programs, shows the futility of increasing wages and prices for farm products to provide higher dividends, rents, royalties, interest payments, and entrepreneurial withdrawals—even though half or three-quarters of these property returns be taken in taxes.

This policy increases war costs, inflation dangers, and aggravates post-war problems at home and abroad.

To solidify the cement which binds the United Nations, to loosen quickly the cement which ties the Axis Nations, to reassure the peoples of neutral nations, and to unite the United States, America must adopt policies which will give producers the full value of what they produce.

[From People's Lobby Bulletin, July 1942]

$60,000,000,000 OF TAX-FREE LAND

The People's Lobby has asked Congress to tax the nearly $60,000,000,000 of tax-free city and farm land, with a small exemption for little home and farm owners.

The following are reasons for such a tax.

The full assessed value of taxable land in 32 American cities with a population of over 300,000, is about $19,500,000,000, and the total selling price of taxable land in all incorporated cities, towns, and villages, is about $35,000,000,000.

This assessed value is the net rent above taxes, that is the tax-free selling price of land.

There is a marked concentration of ownership of valuable land in every major American city, and most smaller ones, with tax-free selling prices up to a rate of nearly $3,000,000 an acre, in New York, Washington, and Chicago.

The Census Bureau reports the value of farm lands, exclusive of all buildings, as $23,236,000,000 early in 1940.

With higher prices for farm products in 1941, and Government payments to farmers of $766,000,000 that year, farm-land values in 1941 must have been at least $23,500,000,000.

The Department of Agriculture reports "Farm real-estate values for the country as a whole rose about 7 percent during the 12 months ended March 1, 1942."

FARM-LANDS VALUE JUMPS TWO BILLIONS IN YEAR

The value of farm buildings decreased during 1941, with little new construction, so the increase in the selling price of land from 1941 to 1942 was at least 8½ percent, or $1,998,000,000. The Department of Agriculture reports total farm real-estate values increase 10 percent in 12 farm States.

This farm bonus of $2,000,000,000 did not go to the Okies and the Odell Wallers of agriculture, but to economic royalist landowners, and their creditors.

In 1941 Government payments to farmers were $585,700,000, of which Texas got $63,600,000. 10.85 percent, or nearly one-ninth of the total, and six States—Illinois, Iowa, North Dakota, Kansas, Arkansas, and Texas—got almost exactly $217,000,000, 37 percent, or close to two-fifths.

In 1929 one-tenth of the farms got 41 percent of farm income; in 1939 they got 48 percent; and in 1941 nearly 50 percent—one-half.

The Department of Agriculture reports that in 1941 farm income, including Government payments, was $11,244,000,000, an increase in a year of $2,089,000,000, or practically the same amount as the increase in the value of farm lands from 1941 to 1942.

The Commerce Department reports that for 1941 the net income of agricultural unincorporated business was $6,160,000,000, or $3,936,000,000, almost 180 percent more than in 1933.

Most of this went to a fraction of farmers.

The Federal Government cannot constitutionally tax land values directly, though it can subsidize landowners directly, and has done so to the tune of many billions of dollars.

The Federal Government can, however, impose an excise tax on the privilege of holding land, based on the value thereof—with or without an exemption.

In view of general State and local sales taxes and other consumption taxes, which fall most heavily on small income workers everywhere, an exemption of $500 to $750 should be made, so no small city or farm home owner would be taxed on the occupancy or use of his own home or farm.

A 1-percent excise tax should be levied by the Federal Government on every landowner, based on the total value of his land holdings, with a small exemption.

Such an excise tax would check inflation at its source, yield $300,000,000 to $350,000,000 in revenue, enable the Government to acquire land for housing, encampments, proving grounds and other public purposes—at a much lower price than it is now paying, and stop speculation in land.

The Federal Government last year acquired about 4,000,000 acres of land chiefly for military purposes; within 5 years it will probably have to acquire several times as much.

UNFREEZING URBAN LAND

The recent discussion of the urban land problem by the National Resources Planning Board, under the caption "Unfreezing urban land," recognizes the role of taxation of land values.

"We have not realized adequately the power of taxation as a tool for the refashioning of cities, apart from the raising of revenue.

"Competent estimates suggest present nonfarm housing needs of well over 4,000,000 units. * * * To come abreast of our needs by 1950, would call for an average annual production of over 1,100,000 dwelling units.

"We must make urban land fluid again.

"This basic planning concept will reveal the importance of freezing urban land from the burden of other fixed claims (mortgage burdens, etc.) against it, which in effect sterilize it. * * *

"A century of laissez faire has left us with claims against the land, which, if they are to be recognized as valid, will keep the land frozen, because they are based upon conceptions of the value (selling price) of land which no longer seem supportable."

Asserting "there is little hope that cities can recognize these claims and buy up the land for rebuilding without aid," the Board comments that if the Federal Government aids, the question will be asked—"Should we bail out the owners?"

"Following its questions—Is the owner of an obsolete structure to be paid values which should long since have been amortized when the structure as it stands may violate half a dozen laws?", and whether local or Federal taxpayers should foot the bill—the Board quotes Winston Churchill—"If we bring up the past to quarrel with the present, we may lose the future."

A more realistic view is—if we make exploitation in the past a burden upon the present and the future, neither is secure—even if we call it "private enterprise"!

Mr. MARSH. You realize I have not suggested any sales tax. I know you have got to have a withholding tax, I realize that, and that is part of the mechanism, it seems to me, of an income tax, but I believe you will agree since 7 percent of our workers gets less than $10 and another 7 percent gets between $10 and $20, that no kind of a sales tax can fail to hit those folks too hard. Do not put on the sales tax just because it is going to take courage to reduce the exemptions.

I thank you for your courtesy, and I am going to discuss this subject from here to the coast starting in a few weeks. Let me repeat, if you think that I am making any bizarre suggestions you can get Gallup to make a poll of the boys in uniform, the draftees and the boys that are about to be inducted. I am inclined to think they will

agree with the position I have taken. If there are any questions I would be glad to answer them.

The CHAIRMAN. Are there any questions?

(No response.)

Mr. MARSH. I appreciate this unanimous agreement.

(The ads referred to were filed with the clerk of the committee.)

The CHAIRMAN. Mr. Julian Goldman.

STATEMENT OF JULIAN GOLDMAN, PRESIDENT, GOLDMAN STORES CORPORATION, NEW YORK, N. Y.

Mr. GOLDMAN. Mr. Chairman and members of the committee, about a year ago I recognized that inflation could become as formidable an enemy to the interests of our Nation as Hitler and his colleagues, and since then I have devoted myself to a relentless campaign to arouse the public as well as the Government to the need of using every possible means to curb inflation. As a result, I was responsible last fall for the formation of the National Committee to Keep Prices Down, a nonprofit organization, and on whose advisory board were some very eminent economists teaching at important eastern universities.

We asked for membership of manufacturers, distributors, and retailers, all pledged to do their utmost to help keep prices down. Our statement of principles included most of the program that was outlined by the President on April 27, except that we also stressed the importance of compulsory saving.

It has been my firm belief from the very outset that unless compulsory saving is adopted, all that is being done to stem inflation will prove to be futile. I stated so in a message that I sent to the President a few days before he made his announcement on April 27. I spent 2 weeks during the early part of April visiting important and small cities throughout the Midwest, speaking to local groups and over local radio stations, urging their cooperation to stem inflation and asking especially for the adoption of compulsory saving, and explaining just what it would mean to them.

It was most amazing to me how quickly the people grasped the importance of siphoning off the surplus purchasing power of the consumers through the means of compulsory saving, and how many of them indicated a readiness and eagerness for the adoption of this plan.

So much has already been said about the dangers of inflation and how necessary it is for us to fight this war on the economic front as well as on the battle front, that I will refrain from any further comments on that score.

You gentlemen of the Finance Committee of the Senate are now faced with as great a responsibility as any group of men ever faced in the history of our Nation.

It was only 25 years ago that we fought a war to end all wars, and today we are engaged in a bloodier, more titanic struggle to prevent the enslavement of mankind and to preserve what we know as the American way of life. We are all agreed that given in sufficient quantity the tools of war, the men to use them and the brains to guide them, and a spirit dedicated to the Nation rather than to the individual, that we shall win this war.

The people, however, are also interested in learning that when the conqueror has been smashed and when free people everywhere have been liberated, will we then still have the privilege of living according to what we now know as the American way of life?

The Secretary of the Treasury in a statement made to this committee on July 23, stated:

> Inflation has been well described as "the ruthless process whereby sacrifice is imposed inequitably upon a people who have lacked the unity, the courage, and intelligence to impose that sacrifice equitably upon themselves." It is for us to show that we have the unity, the courage, and the intelligence to check inflation now.

If that is true, and I heartily agree with him, why does not the Secretary of the Treasury, and why should not this committee face the issue of inflation by recognizing that this present tax bill will not serve the purpose of stemming inflation, nor either does it outline any sound plan for financing the war.

Gathering from the figures as presented by the Secretary of the Treasury, he will have to borrow in excess of $50,000,000,000 for this fiscal year. The present program for the voluntary purchase of bonds, if successful, can only amount to about $12,000,000,000. In order to sell these bonds we practically have to go around with hat in hand, begging and imploring people to buy them, and there still remains a deficit in excess of $35,000,000,000. The Treasury contemplates solving this problem by selling this staggering amount of bonds to the banks.

Inasmuch as we fall short of the $12,000,000,000 that the Treasury claims will be sold to the public through the voluntary plan, so much greater will be the sum that the banks will have to take care of.

All indications point now to the fact that the voluntary campaign will not be fully successful, and that therefore much more than the $35,000,000,000 of bonds will in consequence be taken by the banks, who, of course, do not have to pay for them, but have only to write up a deposit on their books.

This is a positive step toward inflation. All that the Office of Price Administration will do, plus all of the efforts of the President, will not be able to stop inflation if you permit the Treasury Department to continue to sell this tremendous amount of bonds to the banks.

There is not much difference in the primary effect of selling such a volume of securities to the banks than in an outright printing of the money.

Notwithstanding the fact that with all the restrictions that have been placed, and the price ceilings that have been invoked, inflationary trends are appearing everywhere. "Black markets" are being created. It is only a matter of a short time when we will have the lawlessness in this country, unless something is done immediate to siphon off this extra purchasing power, that will be similar to what we experienced during the days of prohibition.

The American people love their country. I doubt if any group of people would fight more to preserve what America stands for than our people will. However, I am moved to wonder where selfishness stops and where patriotism begins. I am prompted to make that statement because of the hoarding that was done, not only by consumers but by manufacturers, distributors, and retailers throughout the past year in

order to serve their own selfish interests. War always produces human vultures. This war has proven to be no exception. Given the opportunity, there are always some people who trade on patriotism, on misery, even on death, to make a dollar. I am fearful that only when some huge catastrophe rocks their very foundations will these selfish people realize how serious the situation is, and how little, if anything, they are contributing toward saving our American way of life and preserving the freedom we so deeply love and cherish.

Therefore, I respectfully state it is your responsibility, as important members of our Government, to siphon off this extra purchasing power that the consumers have so they will not be tempted to hoard and they will be in no position to patronize "black markets."

Mr. Henderson states that he believes that sum should be about $17,000,000,000. I think his estimate is too conservative. The amount that should be siphoned off is about 25 to 30 billion dollars, and it can only be done through compulsory saving.

The present bill has a withholding tax providing for the impounding of 5 percent of all salaries commencing next January 1 as advance payment on income tax due in 1944.

There are certain facts that you gentlemen must seriously consider. Knowing how closely you are observing the industrial situation, you will recognize how true are the facts that I now present.

Millions of men have been thrown out of regular employment because of priorities. Some men who used to earn $100 a week are now compelled to take other jobs where their salaries are half of what they were formerly. On the other hand, men and women who were formerly out of work are now making large salaries, entirely out of proportion to their normal earning ability. I know of specific cases where men who earned $100 a week regularly find it difficult to obtain employment, while third- and fourth-class mechanics who never could find work are earning $100 per week and more.

In my opinion it is not equitable to increase the tax on this former group of employees and then to burden them additionally by withholding payment for advance taxes, while on the other hand the tax upon the workers who are now getting fat pay envelopes is not at all sufficient.

It is important in order to win this war to build up the morale of the people. I have encountered hundreds of men whose salaries have not been increased during the last few years, and who have had to meet the soaring cost of living with their same salaries, and now you want to tax them in the same manner that you tax the people who are benefiting by the extraordinary wages that are being earned in defense industries. I have been in towns where there are no defense plants; where there are vacant apartments; where a great percentage of the population have wandered off to defense towns; where many people are still out of work or earning as much or less than they did formerly.

Is it equitable to ask the people in these towns to pay the same tax created because of the war as you would those who have tremendously increased their earning power because of the war? We can straighten out these inequities through the means of compulsory saving. I strongly urge the withdrawal of the withholding tax from the present bill. Instead, let us use compulsory saving to siphon off more from those who are earning more and little or nothing at all from those who are earning less or not any more than they did previously.

If a person is earning $100 a week now and formerly earned only $30 and that increase was due only to defense work, why should not such an individual be compelled to apply $35 out of his weekly salary for the purchase of war bonds? It is not fair to add burdens to such families who are now living on a below-minimum standard, while others are on a spending orgy due to the fact that they are earning more money now than they ever did in their entire lives, and relatively will not feel the effects of the new proposed taxes.

Young lads and young girls are earning $40, $50, and $60 a week in defense plants, while married men in nondefense towns are earning $20 to $30 per week. I propose a plan of compulsory saving that will especially affect those people whose salaries have been increased because of the war, and also a plan for those whose salaries are sufficiently large to enable them to purchase bonds.

I would meet this situation by having a board of appeals set up the same as ration boards are now, to which persons could appeal to be given relief where compulsory saving would create a below-minimum standard of living for them. I would suggest that the individual be paid in scrip for that percentage of the salary and other income that should be utilized for compulsory saving, and then the scrip can be traded for the purchase of bonds which could not be cashed or liquidated until after the war.

By this plan we would be able to withdraw about 25 to 30 billion dollars of the national income for immediate use by civilians. We would, therefore, be postponing the spending of this huge sum until the war is over, at which time this buying power will be very helpful and most necessary to keep the wheels of industry turning during that difficult period of readjustment. When the war is over, the Government could then decide in what manner these bonds could be cashed and thus control their redemption and in that way properly guide the movement to build up industry again.

The use of compulsory saving is not only a great defense measure for controlling inflation, but it will give us added faith to look to the future, knowing that its use will be a cushion to absorb the shock during the uncertain post-war period.

I am in the retail business and have been all my life. My efforts to curb inflation have painfully hurt my own interests. The adoption of compulsory saving, withdrawing so much additional spending power from the consumer means that my own interests will be further affected. I have been told that it is unbelievable that a man would campaign against his own personal interests. Nevertheless, I am hurt because I am so strong in my conviction that there is nothing that I can do that will so much protect the interests of our people during this great crisis than to fight for the prevention of inflation, and the adoption of compulsory saving which can make that possible.

I conclude by reminding you that we give comfort to the enemy when we take complacent action in warding off the perils of inflation. Inflation is as insidious as saboteurs, spies, and fifth columnists. Once its poison has spread throughout our economic system, its ravages are hard to cure. Inflation causes national disunity and it lowers morale. Moreover, we owe it to our youth to maintain at home the very standards they are fighting for on battlefields the world over. Whoever of us seeks now to advance his own selfish interests, will be responsible for the senseless slaughter of our soldiers. Can we with any decency

ask the soldier to give the last full measure of devotion to the freedom, safety, and comfort of those of us who are not ready, nay eager, to make every sacrifice for the common cause?

It is with these words that I ask you gentlemen to meet the issues that confront you courageously and boldly.

I am informed that the Secretary of the Treasury stated before you gentlemen the other day that sales of War bonds must be left for the present on a voluntary basis certainly until the end of the year, adding that if he would change his mind he would come back to the committee and admit his error.

There are more than 5 months between now and the first of the year. Tremendous damage can be done during that period of time. The seeds of inflation will have sprouted during those 5 months. Gentlemen, this is no time for temporizing or pussyfooting. I doubt whether there is any competent economist, of whatever political attitude, who will not favor compulsory saving as requisite in this situation. It is not undemocratic to conscript the lives and the services of our young men for the Army, the Navy, and the Air Force. Why should it be undemocratic to conscript the dollars, or merely a loan of them, from the people, particularly those who are benefiting from this terrible catastrophe?

Thank you.

Senator VANDENBERG. Mr. Goldman, in dealing with that phase of your discussion, which I think very correctly emphasizes the disparity in earnings between different groups of our people, would not it partially meet your objective if we were to apply the principle of the excess-profits tax to individual incomes?

Mr. GOLDMAN. I think it would serve the purpose of removing that inequity, but that would not stem inflation.

Senator VANDENBERG. No, no.

Mr. GOLDMAN. I mean that would serve that purpose; yes. I am only submitting facts that are in my mind, or have been for the past year. There are these inequities that you gentlemen must consider, because I have been face to face with them. I have talked to men, men even in Federal service. I am a distributing agent for the Federal Government—I mean in selling bonds. In the General Electric at Schenectady they have a checking system whereby every check is stamped "Not over $100." You know they have to pay two checks to thousands of their employees because they are getting salaries over $100 a week, men who never made over $25 formerly. Such people have ample money today, and they are the people who could help us finance the war. It is through using the means that I suggest that you would help to stem inflation. Before the President made the statement on April 27th I sent him a message stating we would not stem inflation unless compulsory saving is adopted, even if you stopped the raising of wages, because you still will have a surplus of twenty-five to thirty billion dollars every year as long as the war lasts.

Senator TAFT. Mr. Goldman, I agree that the compulsory savings is better than taxes to take up this increase in wages from what a man had last year to this year, but what bothers me is how you are going to determine that increase, how difficult it is going to be to go back to last year's income. Of course, where a person has filed an income tax return last year and this year, it is fairly easy, but many of these people have come from the country where there was no record at all. Also,

of course, their expenses have in some cases increased. When they lived in the country, they had no expenses. Now, they go to town and they have fairly heavy living expenses. It is the machinery. I thoroughly agree with the principle of the thing. The thing that worries me is the machinery by which you will work that out. That, I think, is what worries the Treasury, as I got it the other day when the question was raised about a tax on this basis.

Mr. GOLDMAN. Senator Taft, I read in the papers the other day that you were in agreement on that plan, and I have given considerable thought to that very question. We seem to be able to solve the problems of gas rationing in the East which is a rather complicated problem.

The CHAIRMAN. I wouldn't say they were solved.

Mr. GOLDMAN. We are trying to solve them, anyway, and they are being solved.

The CHAIRMAN. You are a great optimist if you think they have been solved at all.

Mr. GOLDMAN. You would be amazed as to how many people are reconciled to the fact that if it has got to be done, they are going to do it. It isn't simple to do these things. They are rather revolutionary. The phase that Senator Taft brings up is important from that angle. When a man earns $35 a week and he now makes $100, and if you only siphon off $35, you are giving him enough money to take care of the extra expenses he has. If you are going to go into the withholding tax process, which is one of the most burdensome things that you have to encounter, and you also go into the income tax situation, you put people on their honor, where if you write the right kind of bill, they will try or they have got to be made to try to tell the truth and tell the facts. They know how much they made last year, and I believe there are hundreds of thousands of patriotic people in this country who would like to be on boards to supervise this work—just the same as you have draft boards and ration boards—who would love to have an opportunity to do some of that work in this country and which I think would meet the situation. I am sure, gentlemen, if we sat down around the table and gave this matter the thought and attention it needs, that we can solve this problem. I pledge my word to you now—and I have given this matter a year's thought—that unless you have compulsory savings, you will not stem inflation. I predict that. There is no man who loves his country any more than I do, and as I told you in the statement, it is prejudicial to my own interests and destructive to them, but I prefer to be destroyed because of a principle that I know means so much to our country. I went through 1921 and I saw what happened, and that is what we will go through again after this war is over. After we have fought and won, then what? At least we can try to salvage the situation to such an extent that when the war is over we will have something to look forward to.

Think of all the bonds accumulated because of compulsory saving that will be available in the future. Do you know what is going to happen, Senator George? If you don't have compulsory savings, here is what is going to happen to the $90,000,000,000 that is available for spending today. The people will use the $90,000,000,000 to buy $60,000,000,000 worth of goods and throw the $30,000,000,000 out of

the window. Why not use the $30,000,000,000 to beat the Axis? Why not save it for future buying power when the war is over?

You are not going to stop black markets; you know you can't. If people want things and their pockets are bulging with money, they are going to buy them.

I wonder where selfishness stops and where patriotism begins. You saw the hoarding that went on during the last year. You even saw manufacturers and distributors doing it, each one trying to serve their own selfish interests. I mean it may sound harsh for me to say that, but do you know that the newspapers refused to print that part of my statement as I went around the country, and the Milwaukee Journal was the first that had the courage to print that phase of it. They are facts, and we must meet them. You will not stop inflation, gentlemen, unless you siphon off that purchasing power, and you are not going to tax the people an additional $30,000,000,000 unless you do it as Senator Vandenberg says, by excess-profits taxes and take all their money back from them who have made this extra money, and then you will destroy initiative. Under compulsory saving the Government can decide when they should cash the bonds. They should control the cashing or liquidating of them and then let it help turn the wheels of industry when the war is over.

How many people are alarmed today, worrying about what is going to happen when the war is over, from the economic and industrial standpoint? This is the contribution we can make now, and the people who are benefiting from this catastrophe must do their share.

If I never do another thing in my life, I am glad of the opportunity to present these facts to you because I know how keenly interested you are in this particular subject.

The CHAIRMAN. Thank you very much, Mr. Goldman.

(Mr. Goldman submitted the following supplemental statement:)

SUPPLEMENTAL STATEMENT BY JULIAN GOLDMAN, PRESIDENT, GOLDMAN STORES CORPORATION, NEW YORK, N. Y.

Mr. Chairman and members of the Senate Finance Committee: I make this supplemental statement in addition to the one I made before you gentlemen on July 28 because I promised Senator George that I would make some specific recommendations in connection with my suggestion for the adoption of compulsory saving.

I have been reading with great interest the reports of the testimony that has been presented to the Senate Finance Committee during the past few weeks. Though everyone who has appeared before you seems to feel that the suggestions he presents is of utmost importance, I have no hesitancy in saying that there are really only two outstanding problems that confront you.

One is how to finance this war and the other is how to finance it so that it will prevent a run-away inflation. One depends upon the other, they are so correlated. If you have a run-away inflation, then the cost of the war will increase to the extent of the inflation. There is one fact that is certain. You cannot hope to finance this war without a specific plan. I am reluctant to make the following statement, but nevertheless it seems true. The Secretary of the Treasury has no specific plan for financing the war, or as yet has not presented one. I could almost characterize his attitude as one of "trusting to luck" that it will all come out all right.

The Office of War Information announced that $205,000,000,000 has been appropriated thus far for the war program" but although they have been long on appropriations, they have been perilously short on planning. There has been tremendous plant expansion and now we have too many factories for the moment, but not a sufficient amount of raw materials is available to operate these factories, on a full schedule. There may be an excuse for such unfortunate planning because it was all done hurriedly and under great

pressure, but there is no excuse for our not planning properly for the financing of the war, which is as important a task as supplying the tools of war. We may not be able to control our destiny on the high seas or on far-flung battlefields at the moment, although we have no doubt that eventually we will prevail, but we do have the opportunity of controlling the financing of this war, and, gentlemen, that is the responsibility that is confronting you now.

Never in the pages of history can we find where a Senate Finance Committee was confronted with such a titanic responsibility as is presented to you at the present time: $77,000,000,000 is the Federal Budget for this fiscal year. Whether this present revenue bill will raise six or eight billion dollars in tax is relatively unimportant, as compared to the main issue.

The Secretary of the Treasury has to borrow approximately $50,000,000,000 for the fiscal year. Presupposing that he does raise the $12,000,000,000 by the voluntary purchase of bonds, there is still in excess of $35,000,000,000 worth of bonds to be sold. Here are some important figures as they present themselves to me.

The net national income, after all taxes have been paid, available for spending purposes, will be about $90 000,000,000. The public will only be able to spend about $60,000,000,000 because the Government is taking the rest for war purposes. The public will thus have an excess buying power of approximately $30,000,000,000.

The task that confronts you, gentlemen, is to find the means to siphon off into the Treasury that share of private income which will take up this slack and reduce the buying power of the public to the amount of goods that is available to be bought. If this is done, the recipients of income will then have for expenditure no more and no less money than will cover the purchase of the goods available to them without any increase in prices. If this is not done (and the public must be acquainted with that fact) they will get no more goods, but instead they will "pay through the nose" for them.

Instead of saving the $30,000,000,000 and helping to finance the war, they will be squandering this sum, bidding against each other to purchase the goods that is available. Remember that although you have fixed prices nevertheless the people will squander this $30,000,000,000 by supporting black markets or because the price level will be forced upward. In other words, my plan is to postpone the consumption of $30,000,000,000 worth of commodities until after the war. The more we reduce the present consumption in this way, the larger will be the backlog of available purchasing power with which we can meet a post-war slump, and help start properly the wheels of industry at that time.

To meet this situation I recommend the following amendment to this proposed revenue act. That we tax, "as an emergency measure," 15 percent of every individual's taxable income of 1942, and permit the payment of that tax by the purchase of nonnegotiable War bonds which cannot be cashed or be used as collateral for loans during the duration of the war. They shall be subject to call by the Government after the war at such time as the Government would deem it advisable to do so. They shall carry the same rate of interest as regular War bonds.

In view of the fact that the tax return for 1942 will not be made until March 15 of next year, I therefore would incorporate in that amendment that in order to liquidate that tax, these special War bonds must be purchased before the end of this current year. In that manner we will immediately start to syphon off this surplus purchasing power, and awaken the people to the fact that they must, in a greater measure, help finance the cost of this war.

If we really had the courage, Congress should immediately legislate that 30 percent of all taxable income should be utilized for the purchase of these special bonds. There should be no let-down in the effort to sell the present War bonds because there will still be a substantial sum that will have to be sold to the banks.

Notwithstanding the adoption of this recommendation, we will still have a moderate form of inflation because this special tax will amount to about ten to fifteen billion dollars. Thus the Secretary of the Treasury will have to sell many billions of dollars of bonds to the banks, and the public will still be supplied with a surplus buying power. The intent is to get the people accustomed to the compulsory saving now, and the objective is that within the next year, the amount deducted from taxable income will be increased to such an

extent that eventually the entire surplus buying power will be syphoned off, and all of it will be utilized for financing the war, thus reducing to a very small amount the bonds that will be sold on the voluntary plan.

I urge the withdrawal of the present withholding tax from the bill and instead suggest that we depend more upon the increased amount of compulsory saving to finance the war than to further increase the tax burden for the present.

When I first appeared before you, I outlined the inequities that were existent in the earning power of the American people because of the war. I noted that Senator Taft was very sympathetic with the proposal for compulsory saving, and for the removal of such inequalities, if the machinery could be developed to accomplish that purpose. Senator George, you also indicated an interest in that direction. I believe that Senator Vandenberg feels likewise. I have been struggling with that problem since I have seen you, gentlemen, but my efforts have been futile.

The machinery to accomplish that purpose is too complicated, and I am convinced it would be unwise to invoke any regulations that require such complicated machinery at the present time. However, my conscience seems to be more at ease since I have gone deeply into that subject. I do not seem to be so much disturbed over the fact that some people are making so much more money because of the war, and others have had their income reduced. Possibly they are entitled to it. We cannot all have it sweet and to our liking all the time. Others who have been working part time and who have been out of work, are now enjoying prosperity, but they previously endured a long stretch of tough sledding.

I have also become convinced, and I am frank enough to say to you gentlemen present, that we must not indulge in frustration because of too high a regard for equity. There is, in any event, no equity in war, and it ill behooves any of us to complain of any taxes or of compulsory saving, when great numbers of us will be called upon to make the supreme sacrifice.

There is one fact that must be borne soundly in our minds. The human being has not reached the height where he can impose upon himself the sacrifices that are vitally essential for winning this war. To be utterly frank, I know that you, too, have met very few who really recognize how much of a sacrifice they should and must make in order to insure the winning of the war. The hoarding that was practiced during the past year most convincingly confirms that fact. It is therefore your responsibility, gentlemen, to impose those hardships upon the people that they will not impose upon themselves, and to do it in such a practical and sound manner as to insure the proper financing of this war, and to prevent simultaneously any substantial rising tide of inflation.

The recommendation that I make is a mild one in comparison with what is really needed. The people throughout the land are beginning to recognize that compulsory saving is the only proper medium for financing the war. If the people have a better understanding of what part they must play in financing this war, you would be agreeably surprised at the splendid cooperation that you will receive from them.

I lack words to impress upon you the urgency of your recognizing that compulsory saving is the only sound medium for financing this war. I realize that the Secretary of the Treasury is not enthused about it but, he too, will soon see the light.

It has been my great privilege to enjoy the friendship of our illustrious President for almost 20 years. I sent to him a copy of the first statement that I made to you gentlemen and I am also sending him a copy of this supplement. Knowing his unusual ability to read the people's minds, and in most instances to do the right thing, I am positive that he, too, will recognize the advisability of the adoption of compulsory saving for the financing of this war.

I noted in the newspapers the other day that Senator Connolly stated that preferred to sell $12,000,000,000 worth of bonds on a voluntary plan, than $12,000,000,000 worth on a compulsory plan. Senator, this is not a matter of preference or choice any longer. It is not what we would like to do, but what we must do. The Treasury is finding it difficult enough to sell $12,000,000,000 worth of bonds on a voluntary plan, but even if it succeeds, it does not solve our problem.

A festering wound needs radical treatment at the hands of a competent surgeon. To poultice such a wound is a dangerous treatment. A competent physician will advocate lancing it, no matter how painful the process may be. Inflation is a

dangerous festering wound, menacing the welfare of our entire economy, as well as our people, and needs radical treatment at the hands of competent men like yourselves.

I conclude by reminding you that we are fighting for our security. On battlefields and waters the world over, our men and boys, in company with sons of other free nations, are facing and meeting death so that our security will not be taken away from us.

What do we mean by "security"? Beyond those sacred principles inscribed in our Bill of Rights and the essence of the Four Freedoms affirmed not so long ago by our President, security means a job, a home, food, clothing, our entertainment, our savings accounts, our life insurance. In other words, to us security means peace of mind.

Will we have peace of mind—security—after we have made armless and harmless the Nazi, the Fascist, and the Jap?

Unless we curtail inflation now, there will be no security and there will be no peace of mind after we have won the war. Unless we battle with determination against it now, we shall be reduced to economic slavery when inflation engulfs the United States. Remember, above all, that our savings accounts and our life insurance, which every American family struggles to accumulate and protect, will practically become valueless unless we stop the runaway inflation that is confronting us. The adoption of compulsory saving is the solution!

The CHAIRMAN. Mr. Nixon.

(No response.)

The CHAIRMAN. Mr. Maurice Safley.

STATEMENT OF MAURICE SAFLEY, WILTON JUNCTION, IOWA

Mr. SAFLEY. Mr. Chairman, I wish to incorporate this in the record.

The CHAIRMAN. Is it a general statement, or is it dealing specifically with something?

Mr. SAFLEY. It is a banking bill turning the revenue over to the Government.

The CHAIRMAN. All right, sir, you may put it in the record.

(The following statement was submitted by Mr. Safley.)

Within the past decade there has been an increasing number of public-spirited citizens who have demanded a reversal of form in our monetary system. We cannot question the patriotism and sincerity of these good people. They are to be highly commended, not for what they may propose, but for the great interest shown in a problem that today is of utmost importance to everyone. Practically all of these monetary reformers are strongly opposed to that type of medium of exchange that consists of credit based upon debt—or just plain bank credit. Evidently these monetary reformers failed to realize that the only kind of medium of exchange that can be kept under control when issued in sufficient amounts to carry on normal trade is bank credit. Failure to keep our medium of exchange under control would cause this Nation to suffer its worst disaster in history. Not only is bank credit convenient and capable of being controlled, but it also possesses that essential characteristic of being elastic. Society would, no doubt, greatly benefit if this control could be made still stronger and the medium of exchange be made more elastic.

Practically everyone realizes by now that there is something radically wrong with our economic system. People are at a complete loss to understand why we have want in a land of plenty. It is highly impossible to solve our economic problems without first solving the problem of finance.

These monetary reformers, radical as they may be, are no more dangerous than the conservatives who merely murmur laissez-faire. Failure to solve our economic problems will in time have the same effect upon the Nation as an uncontrolled currency inflation. National bankruptcy may not be eminent, but it is very possible where there is a tremendous national debt combined with unemployment on a vast scale and exorbitant taxes on all earned incomes.

It has been repeatedly said that there are only about four or five people throughout the world who understand moneys and credits. I feel that I am

safe in saying there is no one. I have made a careful study of moneys and credits for the pst 15 years, and I frankly admit there is a lot I do not know. The more one studies this subject the more complicated the whole affair becomes. Perhaps the reason why we know so little about this all-important problem is because we have not only failed to inform our youth, but we have discouraged them as well. If one desires to discuss monetary reforms today, he is called a radical. It appears to be a rather poor policy on our part to deliberately keep our youth in the dark on this all-important issue when we know it is the young generation who has to face the mounting problems of tomorrow.

If we feel that the problem of moneys and credits is beyond our intelligence, then we are forced to admit a great weakness. The American people have performed almost miracles in most branches of learning. Whenever we encourage our youth to make an all-out study of finance, no doubt some great improvement will be performed along that line as well.

Before one contemplates making drastic changes in our financial structure it is highly essential that one is thoroughly familiar with various proven economic laws. Economics is a subject that is closely associated with moneys and credits. It is just as necessary for the financial adviser to abide by proven economic laws as it is for the engineer to abide by proven mathematical laws. Utter disregard for these fundamental laws will not only keep the Nation, but the whole world, in constant turmoil.

The oldest, simplest, and perhaps the most important economic law is the law of production. This law is so simple that one may gain the impression that it is not important. According to this law of production there cannot be a direct increase from a source that either cannot or does not produce directly. For instance, if one does not or cannot produce any service, he is not entitled to any direct increase in the form of wages. The four material elements of value that make up the universe are land, wealth, man's service, and moneys and credits. Rent is the direct increase from land. Profits are the direct increase from wealth. Salaries, wages, and commissions are the direct increase from man's service. Interest is the direct increase from moneys and credits.

Aristotle gave to the world a famous dictum that was law for almost 2,000 years. It was: "Money is barren and cannot increase at interest." Modern economics, however, contends that money is productive and can increase at interest. Aristotle based his law on the fact that one can neither eat nor wear money, and money possesses neither sex or seed. The economists advance the theory that with money one can purchase land and from land one can receive rent. Since one is justified in receiving rent, they are of the opinion that one is justified in receiving interest. Here we find we have two entirely different schools of thought. The former, however, is based upon facts while the latter is based on theory. We know that if a source is not barren it is either productive or indirectly productive. Money is not barren nor is it productive; therefore, it must be indirectly productive. So not only did Aristotle err by saying money is barren, but economists erred as well by saying that money is productive. The economists, being naturally quick to detect Aristotle's error, were able to set up their own theory contrary to a great law. Rent can be considered either the direct increase from land that is capable of producing directly or the indirect increase from money that it took to purchase the land. Money, being only capable of producing indirectly, can only enjoy an indirect increase in the form of rent or profit and no direct increase in the form of interest. Interest is fundamentally unsound as it is the direct increase from a source that cannot produce directly. By placing a direct increase upon a source that cannot produce directly, we are forced to deny certain members of society something that rightfully belongs to them.

I wish to quote Francis Bacon, a noted English economist, who said: "Interest is the means whereby the treasury of the realm soon congregates in the hands of a few." Anyone who has made a careful investigation of the financial ratings of some of our large insurance companies and credit institutions will have to agree with this great man's philosophy. Selden, a noted English statesman in the House of Parliament, made this famous statement: "If a stranger should come to this universe and find that the court upheld interest taking, and the pulpit denounced it, he would be at a great loss to understand." The early Romans looked upon interest taking to be as bad as murder. During the Middle Ages interest taking was absolutely forbidden.

We find that both the Old and the New Testaments bitterly denounce usury. According to the historians, the ancient word "usury" has within recent years

been changed to the modern word "interest," and all excessive interest is called "usury." There is no appreciative difference between the rate of interest of today over the rate of usury of ancient times. We cannot right an evil practice by merely changing the name. If this were possible, we could render the world a great service by changing the name of nazi-ism.

I have never condemned interest because of the direct effect it may have on the producer who operates on borrowed capital, but rather from the indirect effect it has on the consumer. Interest is considered a legitimate expense in the cost of production. This major expense in the cost of production greatly increases the cost of a finished product. The high cost of living can be credited to the high productive cost. By increasing the cost of living we, in turn, lower the standard of living. Interest is merely shifted on to the consumer by the marginal producer. It is to be remembered that interest does not grow on trees, nor does it drop from the heavens above. It originates from one source only—the hard-earned savings of the consumer. This hidden expense or indirect interest on all consumable goods accounts for the reason why the cost of living is out of line with the average family income.

Interest also comes in direct competition with labor, as interest must be paid before labor can be employed, or the products of labor consumed.

However, the main objection to interest is that capital prefers to invest its savings in interest-bearing bonds and mortgages rather than into productive enterprise where there is much competition, risk, toil, and taxes. By having capital refrain from engaging in productive enterprise, we produce less consumable goods and employ less labor. If capital could no longer receive interest, they would, if they desired an increase, have to invest their savings into productive enterprise. By having capital engage in productive enterprise, we would have more consumable goods to enjoy, and more employment.

Unemployment on a vast scale will prove disastrous for the marginal producer unless the Government, of course, intervenes. This costly intervention on the part of the Government can only temporarily serve to prolong the inevitable crash. If we are to retain our cherished capitalistic system, many private industries must spring forth to take care of the unemployment situation.

Let us consider interest from an international angle. Our high protective tariff has never been welcomed by the foreign nations. No nation of limited resources can maintain a high standard of living for its people when another nation, rich in resources, is in a position to impose a high tariff. Unfair trade relations is perhaps one of the best contributions we can make to the would-be dictators, as it gives them an opportunity to come into power. Many of our diplomats and economists favor the repeal of the tariff for the purpose of gaining the good will of our foreign neighbors. We must look upon the tariff as a result of a cause. The proper procedure is to eliminate the cause. Practically all of our producers who are protected by the tariff operate on borrowed money. On this borrowed money much interest is paid. We find that the cost of labor in this country is high because of the high cost of living. This interest—coupled with the high cost of labor—makes the tariff essential. To abolish the tariff without first abolishing the cause would be a great moral wrong committed against our honest producers. When we eliminate interest we can then eliminate the tariff without causing repercussions here at home.

The question arises as to why interest is paid to capital. Perhaps the best known reason is given by Richard E. Ely, a noted English economist. Mr. Ely states that capital will not depart with their savings unless they receive some compensation in the form of interest, due to risk and delay. Mr. Ely, we note, was very careful to stress the word "savings," but completely failed to mention manufactured bank credit. Certainly Mr. Ely was aware of the fact that the bulk of interest that goes to capital does not come from individual savings, but rather from manufactured bank credit. No doubt, Mr. Ely was of the opinion that only a few select members of society could enjoy this special privilege of manufactured bank credit. Mr. Ely evidently did not realize that society as a whole could install a banking system of its own, capable of completely eliminating capital from making loans. If capital were no longer called upon to depart with its savings and its bank credit that it has been allowed to manufacture, capital would no longer suffer from either risk or delay in making loans, thus interest to capital would no longer exist.

The economists of the school of Locke, Hume, and Adam Smith asserted that money is the fruit of labor, and that the possessors are entitled to compensation for its use. It is to be conceded that money is the fruit of labor, but that does not

necessarily mean that this fruit is productive. In fact, it is so easy to prove that money is not productive. These economists, like Mr. Ely, stress savings, but neglected to mention manufactured bank credit. Are we to consider manufactured bank credit a fruit of labor or a fruit of power? If we are to consider it to be a fruit of power, that fruit should no longer exist. It all simmers down to whether society as a whole or a few privileged members are to exercise the power of manufactured bank credit. If this power is vested in the hands of a few, then naturally society must compensate dearly for the use of this credit.

The general consensus of opinion among the modern economists is that interest is a just reward for saving. The only people who benefit from saving are those who do the actual saving. As a general rule, we receive a reward for services rendered to others and not to ourselves. From the time of the last depression to the present war the economists have gone all-out pleading with the people and the Government to spend. They were sincere in the belief that spending would serve as a means of recovery. Yet these same economists argue that interest is a just reward for not spending. Under no consideration should society and the Government allow itself to be dependent upon the savings and the created bank credit of a few financiers, for depending upon them means that we must amply reward them. What would one naturally think of a group of farmers heavily in debt, but highly capable, who make a practice of hiring some ambitious farmers to do all their work? Society heavily in debt, but highly capable, hires capital to manufacture all bank credit. There is just as much logic in the former as in the latter.

Today we have what is known as capitalistic banking, noncooperative and nonrepresentative, under Government insurance for capitalistic profit only. I see no special reason why society cannot enjoy what is known as people's cooperative and representative banking under Government endorsement free of all interest to capital.

Before an individual can grant a loan he must have within his possession cash to the full extent of the loan. An individual has no power of manufacturing a form of credit that can be used in making a loan. It is true that an individual can manufacture credit, but only banks can manufacture negotiable credit. The type of credit that the individual manufactures is the open charge account, and this type of credit, of course, is not transferable. Under our present banking system only a small amount of cash is used in making a loan. The balance that is used in making the loan is the credit that these commercial banks are capable of manufacturing. The law, however, requires that these commercial banks keep a considerable amount of cash on hand for the purpose of redeeming a certain percent of this credit that they are allowed to manufacture. Under people's banking there would not necessarily have to be any cash on hand in making a loan as the entire loan could be made from the credit that these cooperative banks are capable of manufacturing. Nor would there necessarily have to be any cash on reserve for the purpose of redeeming this Government endorsed bank credit that these cooperative banks are capable of manufacturing.

There are two definite reasons why the commercial banks cannot operate entirely on their manufactured credit. The first reason is that there is not complete unity among the various banks. Each bank is a separate institution working independently of other banks. None of these banks are compelled to honor each other's paper. During a depression the larger banks in many cases refuse the credit of smaller and weaker banks. The second reason is that there is a vast difference between the acceptability of cash and bank credit. Cash is a promise of the Government to pay, while bank credit is a promise of a particular bank to pay. The people, especially during a depression, prefer the promise of the Government to pay over the promise of a particular bank to pay. However, under people's banking, we find that there will be complete unity among the various banks. Each bank will serve as a separate link in the same endless chain. Each member bank will be compelled to honor the paper of other member banks. There also will be no difference between the acceptability of cash and Government endorsed bank credit. Both cash and Government endorsed bank credit will be a promise of the Government to pay. The only difference we can find between these two types of medium of exchange is that the credit is much easier controlled. It is to be remembered that cash is only acceptable as long as it is controllable. Shortly after World War No. 1 the German Government failed to keep their cash under control. Failure of the German Government in this respect led to the repudiation of the mark throughout the world. So we find that Government endorsed bank credit will not only

be as acceptable as cash, but much easier controlled, more convenient, and more elastic.

A careful summary shows that an individual in making a loan must use cash entirely. The commercial banks must use part cash in connection with the credit that they are allowed to manufacture while the cooperative banks could use credit entirely.

Since the commercial banks find it necessary to operate on considerable cash for the purpose of making the loan and redeeming the credit, the use of cash for this purpose is in demand. Since the use of cash is in demand for this purpose, interest must be paid for its use. Interest on time deposits under our present banking system is absolutely essential. If it were not essential I do not believe that banks would hesitate in the least in refusing to pay interest on deposits.

However, under people's banking, we find that cash would not be used either in making a loan or in redeeming a credit. Since cash would not be used for this purpose, the use of cash for this purpose would not be in demand. Since cash would not be in demand for this purpose, interest on deposits would be unnecessary. For these cooperative banks to pay interest on time deposits, where the loan completely creates the deposit, it would be sheer folly.

Now, we find that interest on both cash and bank deposits is not only fundamentally unsound, but under a revised banking system, absolutely unnecessary. Interest on bank loans is a different proposition entirely.

To eliminate interest on bank loans or even to reduce it to a mere handling charge would be too revolutionary. This highly revolutionary act would cause the Government to make more adjustments than would be advisable. A normal rate of interest must be paid on all bank loans. The question therefore arises as to who should receive the interest. It would not be necessary or advisable to pay any of this interest to bank depositors. No part of this interest would be paid to the stockholders for the simple reason that there would be no stockholders under this type of banking. These cooperative banks would have no special use for this interest, so the logical thing to do is to turn all this interest over to the Government in the form of a revenue for the desired purpose of balancing the Budget.

All Government bonds and other indebtedness could be liquidated in favor of non-interest-bearing Government endorsed bank credit. The saving of interest on the national debt plus the net income from banking would benefit the Government to the extent of approximately $7,000,000,000 a year. One can see that the Government could also finance the war through these cooperative banks without selling bonds or stamps to the public.

By liquidating all bonds, defense stamps, mortgages, preferred stocks, and bank credit in favor of Government-endorsed bank credit, there could be a serious effect upon a nation at war, unless proper legislation is immediately installed. Due to the fact that all this credit will be placed at the people's immediate disposal, the people would readily be enticed to spend freely. Needless spending is one of the things that the Government desires to hold in check during the war.

There are three good reasons for this: First, to conserve on vital material that could be used for the war effort; second, to halt inflation; and third, to build up a nest egg for the individual following the war.

Since the attack on Pearl Harbor, the Government has done a remarkable job informing the people of the necessity of buying bonds and stamps. Would it not be a good policy for the Government to go all out informing the people of the necessity of saving or of the danger of spending? There will be a large class of people who, upon finding they can no longer increase through interest, will spend less for the purpose of preserving their principal. We have a class of people who are spending their incomes as fast as they are earning them simply because they sense a collapse of our financial system following this war. When these people learn that the Treasury can be amply reimbursed, they will no longer harbor this fear. In case the majority of the people do not heed the sound advice of saving, the Government could resort to either rationing or freezing a percent of the credit and incomes. Selling bonds and defense stamps to the public is a means that the Government is using today in freezing credits and incomes. Under the people's banking, the Government would no longer have to bribe the people with interest on bonds and stamps in order to freeze credits and incomes.

Some people have been recently preaching the false doctrine that no matter how large our debt is, or how much interest is paid on that debt, society would not necessarily have to suffer any evil effects. These people point out that we do not owe this debt to any foreign nation but only to ourselves. To these people I wish to ask the question: "Would it be less difficult to pay organized capital hard-earned dollars, or pay some foreign nation with our surplus goods?"

These people have overlooked another important fact, and that is—a nation cannot exist half slave and half free. The bulk of this great debt will have to be paid by children yet unborn to the heirs of the rich. The greatest contribution that we can make to posterity is to pay off this debt as quickly and legitimately as possible. If we feel that we are justified in enslaving our own people, part of which are yet unborn, by interest on the national debt, what is to keep us from feeling justified in enslaving the people of foreign lands? United States, the richest and the most humane nation in the world, can no longer tolerate either enslavement here at home or abroad.

Even after reading this treatise, some people may be at a loss to understand where these cooperative banks will get the purchasing power to finance both the Government and the people. Perhaps the best way to answer this is to ask this question: "Where did all the money and credit come from in the first place?" Both money and credit were originally manufactured—cash by the Government and credit by the bankers. These cooperative banks could almost overnight manufacture enough credit to replace all credit now in existence. They could, if necessary, manufacture enough credit to replace all cash. So we find that it is not a problem for these cooperative banks to have purchasing power; it is purely a problem of being able to manufacture a purchasing power capable of replacing a purchasing power in existence.

Some people may have the opinion that people's banking is merely Government banking. This is far from being the case. The reason why this writer so strongly advocates people's banking is because he fears that our present banking system is slowly but surely giving way to either Government banking or communism.

Under Government banking there would be red tape, graft, corruption, politics, unfair partiality shown, and even interest to capital would predominate. Government banking would be operated directly from Washington, D. C., while people's banking would be operated by a board of directors elected by the people from each county. People's banking would be far more democratic than our present banking system as all the people would be given an equal voice. People's banking would function similar to our public schools, with the exception that all bank employees would be under civil service.

Ultraconservatives off-hand will stamp this type of banking as being communistic. Under communism the producers and nonproducers practically share alike, while under people's banking a premium is paid only to those who produce, or those who possess productive assets. Under our present form of banking, the producers are penalized so heavily through interest and taxes that their premium is reduced to a mere pittance, while we find that the nonproducers, such as the financiers, are highly rewarded. No, people's banking is not communistic. It is purely capitalistic with teeth in it. People's banking is designed to perfect the capitalistic system for the purpose of promoting essential social reforms.

This writer bears no malice toward capital. In fact, he rather admires capital. Furthermore, we have no right to condemn capital. We can only condemn the financial system we have fallen heir to. Capital is only commercializing off of a financial system that they themselves never installed. Capital, in financing the Nation, is merely performing a duty that society has needlessly neglected to do. If interest taking is considered a crime against society, I feel that capital is wholly unaware of it. Within the past year many small business concerns gave up their earned incomes willingly when the Government so demanded it. I have every reason to believe that the financiers will just as willingly give up their unearned incomes when the Government so desires. There is no question that capital, unless curbed, will destroy itself, but only after the great masses have suffered unnecessary hardships. The time is not far off when capital must decide whether to give up this unearned income or wait and assume the risk of losing the entire principal. This Nation, nor any

other nation, can expect its people to pay approximately $4,000,000,000 of interest annually on a national debt.

Some people with a small accumulated savings may feel that they should have this interest to live on during their old age. If any interest is paid to these people under this type of banking, we would have to look upon this interest as charity. As a rule, we give charity not to those with principal, but to those without. There is not a law that prohibits these people from engaging in a productive enterprise and thus receive an earned income. If these people do not desire to engage in productive enterprise they can, upon depleting their savings apply for an old-age pension. The Government, by receiving this interest, will be in a position to grant old-age pensions to those who are deserving. Both interest and old-age pensions are forms of charity—the only difference being that old-age pensions are paid to those in distress, while interest, of course, is paid to those who are not. Therefore it would be more logical to give old-age pensions to the needy than interest to those who have no want.

Naturally, insurance companies will have to make various adjustments under this type of banking. There is no reason why an insurance company should not be allowed to engage in productive enterprise the same as any other company. If an insurance company feels that it cannot operate without interest it will have to liquidate its holdings. No insurance company can expect society to practice a system that is fundamentally unsound just in order for them to operate. Since these insurance companies can no longer receive interest the person who is fortunate enough to own an insurance policy may find his premium somewhat higher. I do not believe that the average policyholder would object in having the Government receive this unearned income in order to balance the Budget. I actually believe that they feel that they are no more entitled to this unearned income than they are to the taxes that the Government is now levying on the public.

This writer's sympathies have always been with the under dog. I do not believe that the under dog would object to pay all this indirect interest on consumable goods as long as the Government received the entire revenue. To ask the under dog to pay all this indirect interest on consumable goods for the sole purpose of benefiting a large group of financiers appears to be neither fitting nor proper.

The main reason for people's banking is not merely to force capital to engage in productive enterprise and thus create more consumable goods and employment, nor is it to take away all this unearned income from capital and give it to the Government for the purpose of balancing the Budget and promoting social forms, but to set up in this country strong, sound credit institutions that will forever serve as a check to future inflations and depressions.

The loan value more or less determines the selling value. When the loan value is increased the selling value is also increased, and when the loan value is decreased the selling value is likewise decreased. Moneys and credits, besides serving as a medium of exchange, also serve as a measuring stick. All values are measured in moneys and credits. By increasing the amounts of moneys and credits in circulation values rise, and by decreasing the amounts of moneys and credits in circulation values drop. All credits increase or decrease in direct ratio to the amount of loans in existence. In other words, the more the loans the more the credit, and vice versa.

During World War No. 1 prices advanced on raw materials due to an increased demand. The bankers being of the impression that values would remain high, felt that they were secure in commercializing on the credit that they were allowed to manufacture. Bankers actually fell over themselves in making exorbitant loans to the public. These loans caused prices to skyrocket to such an extent that it inflicted great hardships on a great number of people. Now it is easy to understand how the noncooperative banks can, by making exorbitant loans, turn a mild boom into a wild credit inflation.

During the late 1920's values gradually declined because of a lack of consumption, due, of course, to various causes. The bankers being of the impression that values would even seek to lower levels, became panicky. The bankers not only refused to make new loans to carry on normal business but actually called in many perfectly good loans. This curtailment and liquidation of loans caused prices to slump to all-time lows. The financial condition of the Nation became

so acute that the Government found it necessary to declare moratorium, which led to the insuring of bank deposits. Here we find how easy it is for our banks to turn a slight recession into a severe depression by the curtailment and liquidation of loans.

Under people's banking, we find that only the Government will share in the profits and losses. Since only the Government will share in these profits and losses, there will be no excuse for greed shown during a boom or panic shown during a recession. During a boom, these cooperative banks will, of course, refuse to make exorbitant loans; and during a recession, these cooperative banks would under no consideration curtail and liquidate loans. I have every reason to believe that under a strong cooperative banking system we can attain stabilization of both prices and wages.

Perhaps over a long period of years the interest on loans could be gradually reduced to a mere handling charge. Whether this would be advisable or not I am in no position to say. By reducing interest to a mere handling charge it would be highly capitalistic; while allowing interest to remain on loans for the purpose of promoting social reforms would, of course, be socialistic. Perhaps by mixing a little socialism into our capitalistic system, our capitalistic system will be made immune to total socialism.

My purpose in writing this treatise is not just to sell the people on the type of banking that I advocate, but to impress them with the necessity of investigating our present financial system. I feel that after the people have once made a thorough investigation of our obsolete banking system, they will demand a change.

Whoever it was that originated banking may not have been a genius, but perhaps he did as much for civilization as any man who ever lived. I do not believe that it was this good man's intention for any prominent and ambitious people to receive a royalty. If it were his intention, how much longer will it be before this royalty expires?

I realize that people's banking is somewhat revolutionary, but if our Government is to balance the Budget, help war-torn Europe, and at the same time promote essential social reforms here at home, we must enact some legislation of a revolutionary nature.

A careful analysis of this plan will show that the Government will receive a tremendous revenue; yet we find that the burden will be so light upon the people that Congress might see fit to temporarily freeze a certain amount of credits to regulate spending during this emergency.

Within the past decade it appears that world events have been changing faster than the human mind. Our duty is to concentrate, sacrifice, and perhaps even to die if necessary to win this war. However, we must not overlook the fact that our Government is dangerously in debt. If we are to keep our Government solvent during the period of reconstruction following the war, we must act while our democracy is still intact—so help us God.

Consultant.

The CHAIRMAN. Mr. Martin Popper.

(No response.)

The CHAIRMAN. Are there any other witnesses here who have come down to appear before the committee?

We have 25 minutes that we could very well use. If there are any witnesses in the room whose names do not appear on the list this morning, if you have a statement to make to the committee or wish to appear on any question, we would be glad to hear from you now.

Mr. O'NEAL. I would be glad to appear before you, sir.

The CHAIRMAN. Yes, sir. Come right up. Are you listed on any other date?

Mr. O'NEAL. No, sir. I just went into the committee room but the secretary was out. I have no papers but my statement.

The CHAIRMAN. Give us your name.

Mr. O'NEAL. John R. O'Neal, 4420 Fourteenth Street NW. I am a retired farmer.

STATEMENT OF JOHN R. O'NEAL, WASHINGTON, D. C.

Mr. O'NEAL. Mr. Chairman and gentlemen of the committee, I am here to represent the poor people of this country. There are plenty of them here to represent the rich.

I was born on a rented farm in 1870. My father died when I was 12 years old. I worked on the farm for 25 cents a day for 2 years. When I was 14 years old I went into industry, and I worked in industry for 10 years, and I know what a man is up against in industry if he hasn't such men as Bill Green and John Lewis and Mr. Murray to back him. I didn't have them. I knew what I was up against.

After 10 years I rented a farm for a few years and then bought a farm, and I know what a farmer is up against when he has nothing to say about selling his crops, and I want to talk about that today.

This Mr. Goldman I heard talking said more here than I have heard said in months. What is to be done? I mean for compulsory savings. I couldn't hear him so well, so I don't know when he left off to make a man pay compulsory savings. If he wants to make a man pay compulsory savings when he is getting $40 or $50 a month or less, I can't agree to that; but if a man is getting enough to pay, I believe in making him pay compulsory savings.

A few years back in New York they investigated men up to 65 years, at the end of 65 years—what they were living on and what condition—and they found there was such a big percent of them had no income at all. They were living on charity or their children, and it is necessary, gentlemen, to have compulsory savings.

You made the best illustration of that yourself a few years ago. The greatest bill you ever passed in Congress—you passed the Social Security Act. That made compulsory savings. The one mistake that you made, gentlemen, when you gave the manufacturer or the employer all the credit of putting up that money for people to retire on. You gave them the credit for it, when the man that is earning it got credit only for a small part of it; and the greatest mistake you ever made, gentlemen, was when you didn't do your duty and follow it up to give social security to the farm employees, and that is what I want to talk about today.

You have never followed it up and given the farm hands social security, because the farm leaders have never asked it of you. Ed O'Neal and Tabor and Evers have never asked it. We have now a new man in the Farmers Union. I don't know what he has done, but if he has asked it, I never knew of it, and you Congressmen, as Congressmen, have fallen down flat on doing your duty to the farm hands. The reason you have not done it, gentlemen, is because the farmer didn't have Bill Green or John Lewis or Phil Murray to organize him and be back of him and make you gentlemen afraid of the farm-hand vote.

The President and Secretary Wickard have both advocated social security for farmers and their employees.

I am against a sales tax and, gentlemen, you will find the men that have come before this committee and men in Congress who are for this sales tax are the very men, gentlemen, when you had 10,000,000 to 15,000,000 men unemployed, were here fighting against the farmer or anybody else, getting anything. They talked against it. They get up

here and talk about when we had a debt of $40,000,000,000 in the United States; talk about balancing the Budget, economy, economy, balance the Budget. We are on the edge of bankruptcy, but now you have men to vote a hundred billion or two hundred billion or three hundred billion to lick Hitler and Mussolini and Japan, and I give them credit for it. I believe in licking them.

I was before the committee in 1940 and told you then, when the first war tax bill was passed, that I believe in taxing this country to lick Hitler. He has declared war on America and all democracy, and I accepted his challenge and I believe in going after him. It was in September 1940 I said, gentlemen, if I had my way I would go over and whip him on his own ground. That was before Pearl Harbor, gentlemen. I would go over and lick him on his own ground.

The CHAIRMAN. We will have to ask you to confine yourself to the question. If you have said all you want to say on that——

Mr. O'NEAL. Just a few days ago you saw in the paper that a bunch of milk dealers here and their employees agreed to a week's wage raise. They were getting $41 and they raised it $2.50 a week. I have no objection to it, and I am not complaining about the boys getting too much. They get $30 a week commission. That runs them to about $220 a month. Now, there are 1,350 men handling these 12 creameries.

Out on the farms between seven and eight thousand men are producing that milk, and the men on the farm, the hands, are drawing about 25 cents on a dollar of what these milk deliveries get the boys, and a man here in town making $220 a month can buy a $10,000 house and take 1 week's wages and pay for it in 20 years.

The man on the farm lives in a furnished house, but a man in town can pay for his home in 20 years and still have three times as much left as the farm hand, and if you pass a sales tax, Mr. Chairman, and put a sales tax on the farm hand, where is he with the wages he gets? Where is he? He is sunk. The farmer is sunk if you pass a sales tax, and I am against a sales tax of any form—retail or wholesale sales tax. It is not democratic, gentlemen, to tax a man that is getting little.

The CHAIRMAN. All right, Mr. O'Neal. Thank you, sir.

We have no witnesses scheduled for the afternoon, and so the committee will be in recess until tomorrow morning at 10 o'clock. We have full days beginning tomorrow and on all the other days of the week while the hearing is going on.

(Whereupon an adjournment was taken until Wednesday, July 9, 1942, at 10 a. m.)

REVENUE ACT OF 1942

WEDNESDAY, JULY 29, 1942

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will come to order, please. Mr. Davidson.

STATEMENT OF CLINTON DAVIDSON, REPRESENTING FIDUCIARY COUNSEL, INC., JERSEY CITY, N. J.

Mr. DAVIDSON. Mr. Chairman, my name is Clinton Davidson. I represent the Fiduciary Counsel of Jersey City, N. J., a financial research organization. Our company represents approximately 40 medium-size corporations, the Johnson Wax Co. being typical, but this morning, I have a personal, even selfish reason in appearing before you. I believe that neither capitalism, nor the American system of free enterprise can survive another long period of mass unemployment such as we had from 1930 to 1934. I was brought up in real poverty, probably greater than that experienced by any member of this committee, and the American system gave me an opportunity which I would not have had in any other country. I want to preserve it for my grandchildren. I wish to discuss a tax program which will avoid unemployment after the war and yield the largest possible revenue during the war.

Now, Mr. Chairman, I expect to use quite a number of figures, I have some charts here and if you please, I should like permission to use these charts.

The CHAIRMAN. Yes, sir; you may use them.

Mr. DAVIDSON. Thank you, sir.

As I said, we have a tax program which will stimulate postwar reemployment and recovery, and which will also, we believe, give the largest possible revenue during the war.

I would like first to present the problem of agriculture after the war as our organization sees it. I think most of you remember that during the last war the farm prices were raised and the farmers bought more land, mortgaging their property to do so, and then after the war farm prices were lower and the farmers were not able to pay the interest on their loans, and not able to meet the mortgages. We believe the same thing will happen again unless we plan otherwise, and one method, as I shall show, of planning otherwise, is for labor in this

country to be employed and to be paid sufficient wages so that they can buy the farm products, and for industry to operate at full force so it will be able to use the industrial farm products.

As an example, in 1937 the farmers produced 13,000,000,000 gallons of milk, and this year they are producing 15,000,000,000 gallons of milk. When the war is over and we return to peacetime, unless there are some definite plans made, the farmers will have a surplus of 2,000,000,000 gallons of milk which, with reduced prices, will be very hard on them.

One method of preparing to eliminate that difficulty is that if the laborers of this country are all employed at sufficient ways, they will be able to use quite a bit of that 2,000,000,000 gallons of milk. In addition to that, as you know, we use milk, skimmed milk, that is casein, in a great many industrial products, and if industry is operating at full force we will use a good deal of milk in casein products.

Senator VANDENBERG. We can use all the milk if Vice President Wallace achieves his ambition of giving everybody all over the earth a quart.

Senator DAVIS. We would have sufficient to go around to all of them.

Mr. DAVIDSON. The next illustration—I am using only a few of many that could be used—is soybeans. In 1937 the farmers produced $38,000,000 worth of soybeans, and this year $350,000,000, almost 10 times as much.

The farmers cannot keep up that production of soybeans, they will not be able to sell soybeans to that extent, unless industry is operating at full force.

I shall not go into detail on the next chart very much, but I think that a great many people are interested in the cotton problem after the war.

We have estimated that our pre-war normal export was about 6,000,000 bales. At the present time it is less than 2,000,000 bales.

The former importing countries are now producing satisfactory substitutes, and after the war the export will probably be the same as the present, that is, 2,000,000 bales.

Our probable production will be 14,000,000 bales, domestic consumption 6,000,000 bales, export, 2,000,000 bales, making 8,000,000 bales, and unless some plan be made there will probably be an annual carry-over of 6,000,000 bales of cotton after the war.

So we have to plan something for that.

Now, a great many people think the answer will be the export markets. Before we prepared these charts we discussed this subject with economists in practically every department of the Government, and I think, with only one exception, they agreed that unless we plan now, we would have tremendous difficulties after the war and there would be mass unemployment. One man, and only one said that we would have boom years for at least 10 years after the war, and maybe 20 years.

I said, "How could that be brought about?" He said that there would be a pent-up demand for our products from all over the world and that the supplying of this demand would result in a tremendous boom.

Well, we agreed with that, but we said, "How can those products be purchased? Where will the rest of the world get the money to buy the products?"

The reply was, "We will lend them the money on the lease-lend basis," and that is the only way they can be purchased.

Now, very few people realize that our products are sold largely in countries having a high standard of living. The things that we manufacture are not sold in darkest Africa and they are not sold in the jungles of South America; I really should have looked this up, but I believe that the little country of Belgium prior to the war, bought as much of our products as nearly all of South America. I do know, and I believe you know that the large, friendly country of China bought from us before the war only a fraction of what was purchased by the smaller, unfriendly Japanese. Forty percent of our export went to Europe and 15 to Canada, more than half of our export going to those two places.

We believe that Europe will not be in a position to buy anything like that much after the war, for these reasons: Prior to the war, Europe had billions invested in this country, in American investments, and the income from that, amounting to several hundred millions a year, was used by Europe to purchase our products, but we know that those investments have been sold and are being sold, and when the war is over they will not have the investment income to purchase our products.

We also know that most of the shipping was done in European ships, but they are being sunk very rapidly, and we are building ships so fast—we are building a much greater merchant marine than Britain ever had—that after the war Europe will not have that shipping income.

In addition, we purchased from the European colonies rubber and various other products to the extent of about $900,000,000, and at least that much money went from these colonies back to Europe and Europe had approximately $900,000,000 a year to use in buying our products, which they will not have after the war.

So, I shall say, instead of that being the answer to the problem, it is really one of our greatest problems. Our export markets will then be ex-markets.

I have discussed very briefly and most incompletely the effect on agriculture. Next I want to show the effect upon labor.

In the shipyards in 1937, our largest peacetime year, we had 62,000 workers. This year we will have 1,250,000 workers, and it was estimated, I believe, that next year there will be 1,500,000 workers.

When the war is over there is one thing that we will not need to do, and that is to build ships, and there will be practically no workers in the shipyards; so we will have more than a million men trained for the building of ships whom we will not be able to employ.

In 1937, our largest peacetime year, I believe, in the automobile industry we employed 562,000 workers. Next year, in that industry, we will have 1,500,000 workers—not building automobiles, of course, but building tanks and various weapons of war.

After the war is over it has been estimated that we will not be able to employ more than we had in our largest peacetime year, which

means that we will have at least a million idle men trained for the production of war machinery in the automobile industry for whom there will be no work.

I shall not take the time to discuss the various metals, but these columns will give you an illustration of the distribution for war purposes of our various metals.

Senator BROWN. Mr. Davidson, I agree with you up to the automobile business there, but don't you think the fact there will be a great shortage of new automobiles, at least for some time, will require a pretty heavy production in the automobile business?

Mr. DAVIDSON. We got the figures from, I believe the name is, the Automobile Chamber of Commerce, and we found, when we got figures from such organizations, if there was any fault they were too optimistic. They do not believe that there will be, counting the change-over in machinery, and all that sort of thing, they do not believe there will be a greater employment of labor there, the first year or two after the war than there was before.

Senator BROWN. There are, roughly, from 28 to 30 million automobiles in use in the United States in average times. If for a period of 3 or 4 years you stop producing 4 to 5 million automobiles per year, it does seem to me that there will be a pretty heavy latent demand for automobiles.

Mr. DAVIDSON. No doubt you are right, sir; but the industry seemed to think the actual number of employees would not be higher than in the previous peacetime years.

Senator BARKLEY. If anyone has money enough left to buy one.

Mr. DAVIDSON. Perhaps so.

Senator BROWN. You, perhaps, did not see the swell model he had.

Mr. DAVIDSON. In regard to the metals, we were talking last week to an executive of one of the largest drop-forge plants in the country, drop-forging steel for various airplane parts, and he stated that when the war is over their whole plant will have to be changed over, because there is going to be a demand not for the steel, but for the light metals.

We have had various people tell us that the increased use of magnesium and aluminum, in the lighter metals, will find new employment, but what it will do is merely take laborers who were formerly working in the heavy metals, and have them working in the light metals.

Here is the most unusual chart, I think. The largest peacetime year for the aviation industry resulted in 24,000 employees. By next year there will be 1,700,000 employees in the aviation industry, a greater number than we had in peacetime in steel, in automobiles, in textiles, or in any industry in existence.

Within just 2 or 3 years, the aviation industry jumps from one of the smallest, even lower than the shipyards, to larger than any industry we had in peacetime.

It has been estimated that when the war is over, if all first-class mail is carried by plane, if all Pullman passengers ride on planes, and if all ocean-going cabin passengers use planes, we will then be able to have 200,000 workers in the aviation industry, which will leave 1,500,000 looking for work.

Without taking your time to go into detail regarding all of the various industries, we secured, from the Office of Facts and Figures,

this figure, that when the war is over, there will be coming out of the war industries 20,000,000 workers, and according to General Hershey, 10,000,000 coming from the armed forces of this country, leaving 30,000,000 looking for work.

Some of those will be women, and they will go back home—we hope—and some of them will go back to the farms, and some of them will find employment readily, but we estimated that there would be at least 18,00,000 who will have great difficulty in finding work.

So we say that unemployment plus demobilization may equal demoralization.

As I said at the beginning, we discussed the subject with economists in the Government and with economists outside. I think we discussed it with some fifty-odd economists and alleged economists, and in every case we were told that capitalism, or the American system of free enterprise, cannot possibly survive another long period of mass unemployment such as we had in 1930 to 1934.

We mean by that that unless we plan to avoid unemployment and if we have those 18,000,000 people looking for work, there are going to be mobs, and we mean that the system to which we are accustomed will simply not survive.

So we say that it is extremely important, while we are fighting the war, to plan to put this sign in the various industrial plants when the war is over. The sign reads "Men at work."

Senator VANDENBERG. Your chart shows that sign up in Canada. I wish you would bring it down into the United States.

Mr. DAVIDSON. We will have to change that one.

Senator BROWN. I notice it ends up in a Republic State.

Mr. DAVIDSON. Occasionally we have been criticized for spending time and effort on the subject of post-war planning, but we believe that business should spend time and effort in post-war planning in order to work hand in hand with Government, which is spending a tremendous amount of time in post-war planning.

Almost every department of the Government has a post-war planning division. I think—at this time I do not know the exact number—there were as many as 300 men engaged in post-war planning in the Department of Agriculture.

The Department of Labor has a post-war planning department. I think they were granted an appropriation of $90,000 not long ago just to make one survey for their post-war planning purposes.

So, even in the Department of State, in every department of the Government practically, there is a post-war planning department. Of course, those plans are based upon what the Government will do after the war, and they are based upon money to be spent by the Government.

The President established the National Resources Planning Board, and the main job of that Board has been post-war planning, and this is the plan which they published, that when the war is over we will have to have several billion dollars spent each year for armed forces to police the world. I believe Mr. Sumner Welles made a speech not long ago and alluded to that subject. That it will be necessary to use several billion dollars for foreign loans to revive the markets for American goods.

My personal idea is that those loans will be paid just like the lend-lease loans, in whatever manner that might be.

Then, in addition to that, there has to be several billion dollars used in public works, such as W. P. A., C. C. C., and N. Y. A.

The plan stated that the total of these items would amount to $15,000,000,000 a year, and that that amount should be spent by the Government.

We think that if business will do its part it will not be necessary for the Government to spend so much.

We then say that Congress might hesitate to add $15,000,000,000 a year to this leaning tower of debt when the war ends. I do not know what the total debt will be because I do not know when the war will end.

The Tax Foundation estimated that the indebtedness would be $266,000,000,000. I believe over $200,000,000,000 has been appropriated for war, but, to be conservative, just suppose that this debt totals $200,000,000,000 when the war is over, the interest on that at 2½ percent will be $5,000,000,000 and will equal the total 1939 tax bill, which means that to pay that interest we would have to have one tax bill as large as the one in 1939 for that purpose alone, and then we will have to have another bill to pay your salaries and pay for the other expenses of running the Government, and we question whether Congress would pass a bill of $15,000,000,000 a year to help avoid unemployment after the war.

Now, here is the problem: We have to change from war economy over here [indicating] to normal peacetime economy, and the bridge that crosses is national income and national employment. The column that supports that bridge is investments.

We produce two kinds of goods—consumer goods and investment goods. When these goods are produced incomes are paid out to those who produce them. that part of incomes spent for consumption takes consumer goods off the market and enables their production to be continued. That part of incomes which people save must be spent for investment goods if full production is to be maintained. The more we save the more has to be spent on investment goods, to absorb these savings and keep men at work producing things that will be bought. If we save 10 percent of our incomes, then 10 percent of our total production must be in the form of investment goods. If we save 20 percent, then investment goods must account for one-fifth of total production. If we save 33 percent, investment goods must account for one-third of production. Once people get in the habit of saving a certain percentage of their income, they do not change their rate of savings substantially or quickly, but the amount invested in factories, machinery, public utilities, housing, and public works does change substantially and quickly regardless of what percentage of income people save. For this reason the amount of investment usually determines the size of the national income and the amount of employment.

In 1937 individuals saved 10 percent of their income. This meant that investment goods had to account for one-tenth of total production. Opportunities could be found to make investment outlays of only $7,000,000,000. As a result, the national income was only $70,000,000,000, and there was considerable unemployment, because $7,000,000,000 is one-tenth of $70,000,000,000. If $10,000,000,000 of investment opportunities could have been found the national income would have risen to $100,000,000,000, and there would have been very little

unemployment. If, after the war, people again save only 10 percent of their income, $10,000,000,000 of investment opportunities will enable us to produce near capacity with almost full employment. Under such conditions, the investment column would have to be only $10,000,000,000 high to support the bridge of prosperity above the chasm of depression.

In wartime the demand for investment goods is abnormally large, as we have demonstrated with the charts showing the abnormal expansion of metal production which provides the raw materials for investment goods. We are therefore forced by the war to save enough of our income to pay for this abnormally large production of investment goods. In 1943 we will have to save at least 30 percent of our income because of the war. If the habit of saving 30 percent should continue after the war, we would need $30,000,000,000 of investment opportunities to enable us to produce a national income of $100,000,000,000, because $30,000,000,000 is 30 percent of $100,000,000,000. We do not think the savings habit will continue as high as 30 percent, nor do we think it will fall to the pre-war rate of 10 percent. It is likely to be somewhere in between these two extremes, possibly 20 percent, in which case the investment column will have to be $20,000,000,000 high. It is interesting to note that the investment column was about $20,000,000,000 high in 1941, that the national income was $95,000,000,000 in that year, and that unemployment was relatively small but still larger than the irreducible minimum. Furthermore, $10,000,000,000 of investment in 1940 provided a national income of only $77,000,000,000, and unemployment in that year was about 7,000,000.

Some people think that we may save less after the war, because consumers will spend more of their income to buy automobiles and refrigerators which they could not buy during the war. In 1941 consumers did buy more of these durable goods than they normally would, because they knew they would not be able to buy them later. In spite of spending $10,000,000,000 for this purpose, one-tenth more than was spent in 1929, there still remained savings of $20,000,000,000 to be absorbed by investment outlays. For these reasons, we think the investment column after the war will have to be about $20,000,000,000 high to maintain full production and employment. If the post-war savings rate is 2 percent and we find investment opportunities of only $10,000,000,000, about the same as in 1940 and in 1929, our national income will be only $50,000,000,000, for $10,000,000,000 is one-fifth of $50,000,000,000. When adjustment is made for changes in the price level, this would be the same level of production and employment as in 1932.

The stones in the investment column represent the various uses to which investment goods can be put. In constructing the post-war investment column we have made the most optimistic estimates possible of the size of the various stones. It is our opinion that, unless special plans are made to stimulate various types of investment, these stones will be much smaller than they are shown in the chart.

The bottom stone represents net-capital expenditures, after depreciation, for all public utilities, including electric, telephone, and railroads. The figure $1,800,000,000 is the amount of net investment in 1929. In that year there was considerable gambling in the securities of railroads and especially electric-power and light companies. As a

consequence, these companies raised much more capital and spent much more for expansion than was normal. For some years thereafter this excessive expansion was balanced by a very low level of investment. A repetition of speculative investment in public utilities is not likely after the war, and it is probably more reasonable to assume that this stone will be only one-third as large, comparable to the $500,000,000 of investment in 1937.

The second stone represents commercial and miscellaneous construction, such as office buildings, stores, etc. The figure "$1,500,000,000" represents the amount of net investment in 1929 when we had a skyscraper-building spree. In view of the fact that many of the bonds sold to the public to provide the funds for constructing these office buildings in 1929 are now selling in the market at only 50 cents on the dollar, we are not likely to have another office-building spree after the war. This stone is more likely to approximate in size the $700,000,000 so invested in 1937.

The third stone represents net investment in new houses. By net investment we mean the amount spent for residential construction after subtracting the amount of depreciation on houses standing each year. This depreciation was $2,500,000,000 in 1929, and in recent years it has run about $1,800,000,000. The figure $4,000,000,000 shown in the chart is the most optimistic estimate that can be made and is almost four times as large as the $1,000,000,000 invested in 1929 and the $900,000,000 of net investment in 1941. The stone can be this large only if special steps are taken to reduce building costs or to subsidize house building. The development of prefabricated housing is the most hopeful step that could be taken along these lines.

Another stone that might be in the investment column would represent the capital expenditures of farmers for buildings and farm machinery. The reason why it is not shown in the chart is that annual depreciation of farm plant and equipment is about as large as gross investment in most years. It is true that such expenditures exceeded depreciation by $100,000,000 in 1929 and in 1937. That might happen again after the war if we take steps to achieve full employment at home, to feed Europe, and to maintain farm prices.

The three lowest stones shown in the chart add up to $7,300,000,000 if we make the most optimistic assumptions possible. This is not enough to build a column $10,000,000,000 high, which is the minimum that under any stretch of the imagination could sustain business activity at a prosperous level. To build a column that high at least $2,700,000,000 of other investment stones must be found. To build a column $20,000,000,000 high, which we think will be necessary, additional investment stones aggregating $12,700,000,000 must be found. Possible stones that we can use to construct this column high enough to support the prosperity bridge are (1) investment in manufacturing and mining plant and equipment; (2) Government deficit spending for public works and relief; (3) lending abroad to pay for a favorable balance of trade; and (4) additions to business inventories.

The fourth stone, investment in manufacturing and mining plant and equipment, is the one that everyone wants to be the largest stone in the column, because it represents expansion in our capacity to produce manufactured goods. The larger this stone is the smaller will the other stones have to be. Everyone wants the stones representing Government spending, lending abroad, and additions to inventories to

be as small as possible. The only people who advocate putting Government spending and lending abroad into the investment column are those who fear the column will not be high enough to sustain prosperous business activity if these stones are left out. I am sure they would want to discontinue Government spending if investment in manufacturing plant and equipment could become a large enough stone to take its place. How large could this stone possibly be if we do not take any special steps to make it grow? In 1929, when a stock market boom brought about more manufacturing expansion than most economists considered to be necessary at the time, net manufacturing investment was only $1,500,000,000. In 1937 we had another temporary boom in manufacturing expansion with a net investment of $1,000,000,000.

Let us assume that after the war businessmen will have as much confidence as they had in 1929 and that investment in manufacturing will again amount to $1,500,000,000. A stone of this size added to the three lowest stones, amounting to $7,300,000,000, would make a total column $8,800,000,000 high. This would not be high enough to support a bridge over the most shallow chasm that we can possibly conceive of. Such an investment column would be less than half as high as the $20,000,000,000 which we think will be necessary to support the post-war prosperity bridge. Yet we have made the most optimistic estimates possible in building up these four stones. More realistic estimates of the probable post-war size of these four stones would build a column only half as high as the one shown in the chart. It is difficult to see how we can maintain a high level of business activity and employment after the war unless Government deficit spending is tremendously large, perhaps $10,000,000,000 to $15,000,000,000, or unless we make specific plans now to stimulate the growth of the other stones in the post-war investment column.

Two of the stones have been placed at the side of the investment column in the chart and are called faulty stones. The reason is that they represent types of investment expenditures which cannot be continued year after year and which sometimes represent negative figures which reduce the size of the investment column. Everybody remembers that in the 1920's we were able to export more than we imported because we lent money abroad in order to provide foreigners with the dollars to pay for our excess of exports. We have been told by economists that foreigners could repay these loans only by exporting more goods to us than we exported to them. We were not willing to have our markets flooded with foreign goods, and consequently these loans have not been repaid. It is doubtful that private American citizens will throw good money after bad by making additional loans and investments abroad after this war. For this reason we do not see how we can have a favorable balance of trade after the war unless our Federal Government lends money abroad. We also fail to see how these loans could ever be repaid, and so they should be considered as a gift out of our generosity to needy foreigners. Obviously we are not likely to make such gifts year after year.

Additions to inventory are considered a faulty stone, because when inventories are built up above normal in 1 year they must be brought down to normal in a subsequent year by inventory liquidation. In 1929 we added $2,700,000,000 to business inventories. In the next 3

years inventories declined $5,500,000,000, an average of $1,800,000,000 per year. What goes up must come down. If we achieve prosperity by adding to inventories in 1 year, we thereby bring about depression in a subsequent year as these inventories are reduced to normal.

Mr. DAVIDSON. This is quite evident: If Uncle Sam after the war, has to carry the Federal debts, the foreign loans, and public works, it is only fair to say the billions required in industrial conversion and readjustment will be quite a burden if you are going to pass it along to those others.

Ever since the days that Joseph stored up grain in Egypt during the reign of Pharaoh, I believe business has endeavored, during the fat years, to build up reserves to take care of it during the lean years, and that was not difficult to do.

For instance, in 1929 the Federal taxes were only 11 percent. Of course, they did not say "only" in those days. That left 89 percent for expansion, for increased inventory, for the reserves for the lean years, and for dividends, and so it was perfectly possible to set aside reserves for lean years.

Under the proposed tax bill which you have before you, the rate for different corporations will be different according to what their excess-profits tax base is, but we figure in quite a number of cases the total tax rate will run as high as 87 percent. That will leave 13 percent for expansion, for increased inventory, for reserves for lean years, and for dividends.

Senator BARKLEY. Let me ask you something in regard to that figure in the left-hand corner. I understand you to say it was 11 percent of the total national income that was represented in taxes.

Mr. DAVIDSON. No, sir. This is the tax rate of the corporation. The corporation paid 11 percent on its income. This figure of 87 percent, of course, is theoretical. As a matter of fact, when you have an 87 percent theoretical general tax rate you have a much higher rate than that for many companies, and it has been proven that in some companies you have a rate of 107 percent, making it absolutely impossible for the corporations to lay aside the reserves for this readjustment after the war, such as the changing of machinery and working on new products, unless those reserves can be free from tax.

Senator TAFT. How does that 107 percent work? What is it that makes that possible?

Mr. DAVIDSON. Well, there are quite a number of items in that, Senator. There is a little booklet of about 6 or 8 pages written on the subject by Mr. Stam, that was printed and given to the Ways and Means Committee and to the press during their executive sessions, that is by far the best thing on the subject.

Mr. Stam, in his booklet, takes about eight pages to explain it. He shows why in England, for example, they found from actual experience that a theoretical rate of 80 percent in some cases meant a much higher rate.

I shall try to explain that very poorly. I should think, Mr. Chairman, it would be a good idea to have Mr. Stam's report on that subject included in the record here, if you are interested.

The CHAIRMAN. We will have it before us, Mr. Davidson.

Mr. DAVIDSON. If Mr. Henderson, Senator Taft, is successful in keeping the price rise down to only 10 percent—and I will certainly compliment him if he does that——

Senator BARKLEY. You mean from now on?

Mr. DAVIDSON. Yes.

Senator BARKLEY. It has already been 15 percent, since World War II began.

Mr. DAVIDSON. I mean from now on.

Senator BARKLEY. Yes.

Mr. DAVIDSON. Let us take the 90-percent rate; here is a corporation whose inventory prices are increasing at the rate of 10 percent a year. If its wages are increasing, it can deduct them from its taxable income, but its inventory increase cannot be deducted. Its replacement of machinery cost is also increasing 10 percent a year.

That goes along for several years and the war ends and we have deflation and prices come back to normal. Remember that at the close of each year when the corporation figures its profit, it does not figure profits on the basis of how much cash is left in the bank, but that the increase in inventory prices has resulted in a paper profit, and the corporation has to pay 90 percent of that paper profit out in taxes.

When the war is over and we come back to normal and the corporation needs that 10 percent, because prices went up and came down, they do not have it; 90 percent of this unrealized profit was paid out in cash, in taxes.

Also, many expenses, on an accounting basis, may not be deducted for tax purposes. This partially explains why the actual tax rate in many cases is higher than the rate stated in the law.

I believe that after the last war there was a commission or committee of Congress appointed to study the effects of the last war so we might be better prepared for the next time, and Mr. Arthur Ballantine testified before the committee that they had found 80 percent was the maximum rate that could be safely assessed against corporations, and gave reasons similar to those that I have just mentioned.

Here is how England solved the problem. The British Government admitted that when the excess-profits tax rate, or any rate exceeded 80 percent, it resulted in waste, inefficiency, extravagance, in reducing war production, and in losses for many corporations, and yet public opinion forced upon them a rate of 100 percent. So when they put the rate of 100 percent in effect, to satisfy public opinion, they at the same time, put into effect a post-war refund of 20 percent, because they knew that the corporations could not stand a higher rate than 80 percent (that was the way that they solved it); that 20 percent to come back after the war, believing that it will be used in stimulating business and resulting in avoiding unemployment.

For this purpose, the Treasury, when it first appeared before the Ways and Means Committee, suggested a credit to come back after the war equal to the excess over 80 percent, and, as they expressed it at that time, that whenever any dollar is taxed more than 80 percent that excess should be refunded after the war. Others who have studied the problem have recommended including not merely the excess profits over 80 percent, but also refunding a part of the income that is subject to normal tax of corporations, and also extending the post-war refund to individual income taxes.

Senator BARKLEY. Is not the net result of that, if the Government taxes 80 percent and then borrows all over that, if it is going to refund it, it is just a loan?

Mr. DAVIDSON. That is the net result. It is the same as if they paid 80 percent and then had bought non-interest-bearing bonds with the balance.

Yet it was the only solution that Great Britain could find, and, as you know, in England they have had about four times as much experience with excess-profits taxes as we have had. They have had quite a number of years of real experience.

Senator VANDENBERG. And experience with the war, also.

Mr. DAVIDSON. That is right.

Senator BROWN. Those bonds would not be payable or convertible until after the war?

Mr. DAVIDSON. Those bonds would not be payable or convertible until after the war.

As Senator Barkley said, it is the same as borrowing money until after the war, without interest.

In England, at the same time that they put into effect the 20-percent refund for corporations, that is 20 percent of the income subject to excess-profits tax, they also gave a similar provision to individuals, which meant borrowing money from individuals without interest, to be paid after the war.

We believe this; we believe that the memorandum prepared by Mr. Stam should be studied carefully. We believe the experience in Great Britain will indicate that if you have 90-percent taxes, such as in this present bill, without an adequate post-war reserve, that when the war is over and we have the deflation period, that corporations will die just like flies do at the end of summer.

Now, in endeavoring to find some automatic yardstick for determining which corporations would need most a reconversion fund, which corporations would have the greatest conversion problem, we found this interesting fact: The larger the percentage of a corporation's earnings that were subject to excess-profits tax, the greater that corporation's need for conversion after the war. That is not absolutely correct. Notice the aircraft industry, approximately 82 percent of its earnings are subject to excess-profits tax, more than any other industry, and we know that when the war is over the aircraft industry will have the greatest conversion problem.

As you come down here to the food, soft drink, and cigarette industries, those industries, when the war is over, will not have to throw out machinery, and put in new machinery, they will not have to change their plants, they will have an entirely different problem, and we find likewise that with them the percentage of income that is subject to excess-profits tax is much smaller.

So we found this, that on the English plan of having the refund based upon a percentage of the income that is subject to excess-profits tax, that that automatically provided—to a great extent—the largest fund for the corporations having the greatest conversion problem.

Gentlemen, it is not our desire or purpose to recommend any particular plan. We would like to point out some fundamentals which we believe are essential, and they are these:

First, we believe that the size of the fund should be at least a billion dollars a year. There are several ways of reaching that. The

14 percent, which was at one time in the House bill was sufficient, according to the Treasury, to produce $1,000,000,000 a year.

But that is not the only basis. A similar percentage, subject to excess-profits tax with a portion of the income subject to normal tax will also raise the same amount, and we think that $1,000,000,000 per year is the minimum if we really want to try to avoid unemployment when the war is over.

The second principle is that of certainty. Let me give you an example. The aviation companies will have the largest percentage of lay-off of labor of any industry, unless something is done about it. Some of these companies have blueprints on hand already for the production of flivver planes, and I think that when the war ends others will have similar blueprints. They will not have, however, the risk capital or venture capital required, and they will not have any place to get such risk or venture capital. They will be forced to let a large percentage of their men go; then they will probably produce a few samples and put the samples out and try to get orders, and when they get orders then they can borrow the money on those orders to produce the planes, probably a year or more after the hostilities cease.

If those companies have this post-war fund of risk capital or venture capital, then instead of letting their men go they can start producing those planes immediately and take a chance of their being able to sell them, and the chance is pretty good. They will have the capital that they could not get from banks or other places, and they can put their men to work immediately.

The point I am getting at is this: This certainly does not have any value if the corporations receive some kind of post-war certificate that they believe they can get money on after they have gone through about three courts. Under such conditions the plan would fail to carry out its purpose. That was why we suggested at the start, that at the time a corporation pays its tax, instead of after the war, at the time the corporation pays its tax, it should be given bonds, which are the same as any other United States bond, except that they are nonnegotiable and noninterest bearing.

By being nonnegotiable, you do not have to worry about the corporation spending the bonds before the war is over. They cannot spend them. By being noninterest bearing, the Government does not have to pay out any money during the war.

But if those bonds, when the war is over, automatically become negotiable or "assignable," as stated in the House bill, then they can be turned into cash. We think that they must have that element of certainty or else the plan is of no value whatsoever.

Now the next one is simplicity.

Senator TAFT. What about the end of the war? How do you know when that happens?

Mr. DAVIDSON. How do I know when the war ends?

Senator TAFT. Yes.

Mr. DAVIDSON. Senator, I was very much in hopes that that question would not be asked. There was an attempt, and I think a pretty good attempt made to draft such an explanation in the Ways and Means Committee bill when this provision was put in that measure.

Anyhow when that event as described in the bill happens then we want, from then on, the thing to be certain.

Senator VANDENBERG. When you talk about the end of the war, you mean when the armistice arises, you do not mean the ultimate peace that may come 3 years later?

Mr. DAVIDSON. Yes, sir; I think the wording given by the expert was "cessation of hostilities."

Senator VANDENBERG. That is quite different from the "end of the war" technically?

Mr. DAVIDSON. Yes; on this fundamental called "simplicity" I might mention that during the last war, when you had the excess-profits tax for the first time, we had a provision about invested capital. We have accounting rules that define "invested capital"; but, nevertheless, as you know, the courts have been trying ever since then to determine just what the invested capital of certain companies was.

Now, if we put a lot of restrictions around the use of these funds by the corporations, so that they have to go into court to find out whether the purposes they intend using them for will finally be upheld and they cannot use the funds as soon as the war is over, that would destroy the purpose.

Senator RADCLIFFE. Over on B, on the left-hand page, where you state, "Make bonds nonnegotiable until end of war," you suggest no limit on nonnegotiability.

Mr. DAVIDSON. None whatsoever. The idea being not only ours but of everybody in the various Government departments that after hostilities cease the sooner corporations start using these funds the better.

On this subject over here, in regard to the use of the funds after the war, the British Government decided there should be only one restriction, namely, they should not be paid out in dividends.

The American Federation of Labor—their official tax committee—wrote a letter to the various members of the Ways and Means Committee—and I have a copy of it here—and in this letter they suggested that with the exception of the money not being used for the payment of dividends, there should be no further restrictions, and in every case, it should be left to the discretion of the board of directors of each corporation. With your permission, I should like to have that letter inserted here.

The CHAIRMAN. Very well. It will be inserted.

(The letter referred to is as follows:)

AMERICAN FEDERATION OF LABOR,
Washington, D. C., May 19, 1942.

Hon. A. WILLIS ROBERTSON,
Member, Ways and Means Committee,
United States House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: We, the members of the committee on taxation of the American Federation of Labor, urge upon you and the other members of the Ways and Means Committee, that you include in the taxation program that you now have under consideration plans which will aid in alleviating suffering from mass unemployment at the close of the war. We believe that prevention and alleviation of mass unemployment is fundamental to the preservation of our democratic political institutions as well as to individual initiative in the economic field.

Because of our well-known interest in promoting full employment at all times and in the preservation of democracy, we are vitally interested in planning now for post-war recovery and reemployment.

As a means toward this end in England, the British Government has agreed to refund to corporations after the war, 20 percent of the income of these corporations that is now subject to excess-profits tax. Unless this 20 percent

used in expanding business, the effect is merely to postpone the effective date of taxation. This will create a pump-priming fund which can be used for any business purpose except the payment of dividends and is intended to provide employment for those who are no longer engaged in war activities.

When this war ends there will be millions of laborers in this country who will need to change from war to peacetime employment and the American Federation of Labor would like to see something similar to the above-mentioned plan included in the tax bill which you are now preparing.

While we are primarily interested in principles, rather than details, we would suggest that the income be taxed to the corporations at the time received or used and be taxed at the rates then in effect. The British proposal that the use of the funds be not restricted except that they may not be used to pay dividends, seems advisable to us.

We respectfully urge that your committee make every effort to provide insofar as it is possible, against the need of future Federal appropriations for the sole purpose of providing "make work" for the future inevitable conversion unemployment.

Respectfully yours, (Signed) MATTHEW WOLL,
Chairman, Committee on Taxation, American Federation of Labor.

Mr. DAVIDSON. In the Ways and Means Committee, when the post-war provisions were put into the bill, these restrictions [pointing to chart] were also entered, and I myself see no particular objection to them, that is, that the funds may not be used after the war for the payment of cash or stock dividends; for the payment of taxes or salary increases of executives; increases to reserves unless employed in business, and increases of securities.

The next element we suggest as being essential is immediate action; that is, if you start this now and you find later that your fund is growing too large you can easily stop it, but if you wait to start it, it may not be large enough.

I should like to insert, along with that letter, also a letter that is on this next chart, from the national legislative committee of the American Legion on the same subject.

The CHAIRMAN. Very well; it will be inserted.

(The letter referred to follows:)

THE AMERICAN LEGION,
Washington, D. C., June 4, 1942.

Hon. ROBERT L. DOUGHTON,
Chairman, Ways and Means Committee,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN DOUGHTON: As you know, for more than 20 years the American Legion has advocated a universal service plan, the purpose of this, of course, is to deprofitize war and it is our understanding the Ways and Means Committee is giving serious and studious consideration to this subject for inclusion in the forthcoming tax bill.

At the last meeting of our national executive committee an allied subject was considered—it is that some thought should be given to possible unemployment in the post-war years. It is our thought that prevention and alleviation of mass unemployment is fundamental to the preservation of our democratic political institutions.

It is our understanding that England, in planning now for post-war recovery and reemployment, has adopted a system of refunding to corporations, after the war, 20 percent of income of corporations, which income is subject to excess-profits tax. Unless this 20 percent is used in expanding business the effect is merely to postpone the effective date of taxation. This will create a pump-priming fund which can be used for any business purpose except the payment of dividends and is intended to provide employment for those who become unemployed in the transition from wartime to peacetime.

We respectfully urge that your committee give serious consideration to some plan whereby industry may be encouraged to prevent and alleviate mass unemployment in the post-war years.

Sincerely yours, (Signed) F. M. SULLIVAN,
Acting Director, National Legislative Committee.

Mr. DAVISON. Here is an unusual thing (pointing to chart). I was surprised when someone sent me this reprint from the Buffalo Federation of Labor Herald on June 19, because that reprint contains the chart which I have shown you, which was in a booklet we published and the written material was taken from that booklet.

I investigated and found, as stated in this advertisement that 20 local labor unions were enough interested in post-war recovery and reemployment to pay for a full-page advertisement in the newspapers.

Before this subject was discussed in any committee, Mr. Donald Nelson was speaking before the Naval Affairs Committee as a witness, and Mr. Nelson, being asked a question by Mr. Maas, said:

I do think there is going to be a tremendous cost of converting back from wartime to peacetime, and that somewhere there should be a reserve that will take care of that—perhaps in the shape of non-interest-bearing bonds of some kind which will mature when this thing is over.

Mr. Maas said:

Do you believe that industry would be perfectly willing to sacrifice any profit, especially if it was deferred until they needed it?

Mr. Nelson said: "I am sure of that, sir."

Now, I would like to explain right here that when I first discussed this subject in the Treasury, quite a long time ago, I said I did not believe that it would be possible to raise, through the tax bill, anything like the amount of revenue that this country needed during the war.

I do not believe that the tax bill, the tax provisions as recommended by the Treasury are anywhere near large enough. We also do not believe that this year the combination of revenue from your tax bill (when it is completed) plus the bonds that will be sold to individuals, will produce sufficient revenue.

In other words, we are afraid that the Government is going to be forced to sell more bonds to commercial banks than should be sold, if we wish to prevent inflation. Therefore we suggested about 6 months ago, that every effort should be made to secure, in revenue from corporations and from individuals, the largest possible amount.

Now we believe this, just as they did in England; if you have an excess-profit tax rate that is higher than corporations can stand and remain solvent and then you have a refund after the war through the means of these bonds, you can prevent that insolvency; you can prevent the difficulties and you can collect more revenue now.

Back in 1931 we were advisors to several banks and we said to those banks, "From now on until this thing is over just forget about making money. The question of making money is not important, the important thing for you is to remain solvent when this trouble is over, so that you can continue operating for many years thereafter."

And we have been saying recently to our client corporations, "Forget about making profits during the war. That is not important. The important thing to you, from a solvency standpoint, is to be in a solvent condition when this war is over, and be in a condition to continue to operate for many years thereafter."

Senator WALSH. Have some of them accepted your advice?

Mr. DAVIDSON. Yes, Senator. You might think I am joking or exaggerating, but we have also advised several of our clients to go

to the purchasing departments of the Government and voluntarily make refunds, and they have accepted that advice.

Senator WALSH. I have in mind the Du Pont Co. They have cut their dividends for that purpose.

Mr. DAVIDSON. I do not know about what the Du Pont Co. has done. Our corporations are the medium-size corporations. They are not listed on the stock exchange. They are corporations about the size of the Johnson Wax Co.—medium-sized corporations.

Senator WALSH. The same advice would apply to industrial companies that you recommended to the banks?

Mr. DAVIDSON. Yes, sir. We think while the war is on, corporations should not put first the making of profits. You may take away all of its war profits during the war, provided the corporation can have some reasonable assurance that when the war is over it will not be insolvent and that it can operate for many years thereafter.

Senator VANDENBERG. Does your advice regarding the elimination of profits go to the extent of eliminating normal dividends?

Mr. DAVIDSON. That would apply differently to different types of companies. Where the companies are owned by a family, such as most of the companies we represent are, and, as I say, we are advising the smaller, medium-size companies, we think even that could very well be done. If the company is owned by a family, the question of its dividends, we think, is not so important, while this country's like is at stake.

Regarding utility companies—and we do not have any connection with any utility companies—where such companies sold preferred stock to the widows and to trusts, and to all types of investment clients in their cities, sold them at 4 or 6 percent, and those people had reason to believe when they bought that preferred stock, that they were buying a sound investment security that would pay them dividends, that presents a different situation.

I lived in Louisville, Ky., for 30 years.

Senator BARKLEY. Why did you leave and come down here?

Mr. DAVIDSON. Well, Senator, I go back two or three times a year. I remember quite well when the Louisville Gas & Electric Co. sold its preferred stock—I think it was 6 percent—my mother was a widow, working for a living, and at that time she bought a little of that, about $200, I believe. I know other people of the same type all over the city who bought that class of security. They thought, as long as the people in Louisville used electricity or gas, either one or both, the stock, being preferred, was going to be good and would pay dividends.

Now, I should certainly hate to recommend that those companies should discontinue paying dividends at this time, but I think there are many closely held companies that could.

Senator TAFT. That ought to relate more to tax on normal profits than tax on excess profits.

Mr. DAVIDSON. That was the question that Senator Vandenberg asked.

Senator VANDENBERG. Yes.

Mr. DAVIDSON. Of course, every once in a while when we are told about some hardships in the tax laws, we are told that it is much worse over in England.

Well, you know, of course, that in Great Britain when the corporation pays out a dollar in dividends, it is relieved from paying normal tax on that amount and the war has not changed that at all.

Corporations in England are still able to pay out dividends on which they have paid no normal tax. We are not that fortunate.

Senator GERRY. That was true in the last war legislation, too. The normal tax was paid by the corporation.

Mr. DAVIDSON. In Great Britain?

Senator GERRY. Here.

Mr. DAVIDSON. Yes, sir.

Senator TAFT. You mean, in other words, we have a double tax on ordinary earnings, first on the corporation when it earns, and then when the common stockholder gets it?

Mr. DAVIDSON. That is right.

Senator TAFT. Whereas, in England there is at least some attempt to eliminate that duplication, to a limited extent, and we used to have such a plan, although it was different from the English, of course.

Mr. DAVIDSON. That is right.

Senator VANDENBERG. I just want to be sure I understood your statement.

You mean in forgetting excess profits you would not destroy the personal economy of this country by striking down the entire dividend policy in the normal operation of business on which millions of our people depend for their living?

Mr. DAVIDSON. You are certainly right, Senator.

I was thinking, when I answered, more of our problem.

When you get into publicly held corporations, let us say, those listed on the New York Stock Exchange, with their securities held widely, when you destroy the payment of those dividends, then you break down the economy of the country.

Although I am not any expert on that, in trying to answer your question I should say this: In taxing corporations we should take first, every dollar of the war profit. There is not any reason I know of why any corporation should say, "We are entitled to war profits," so I think you should first take all of the war profits before you make the normal tax so high that it places a real burden upon the existence of the corporation, after the payment of reasonable dividends.

But that is just my personal opinion.

Senator BARKLEY. Did you state, before I came in, the nature of the Fiduciary Counsel, Inc.? Is it a law firm that is incorporated?

Mr. DAVIDSON. I stated that, Senator, but I always love to tell what our business is. It is a financial research organization, Senator, furnishing financial and business advice to approximately 40 medium-sized corporations.

Mr. Ganson Purcell, Chairman of the S. E. C. last fall, before Pearl Harbor, along about September, made a speech a which he said:

> We cannot wait until all actual fighting is ended to take steps necessary to protect us from its after effects. The transition—from war production to peace production—will not just happen automatically.

That was several months before Pearl Harbor.

Now, we think that the problem is something like that of a snowball. There is a great difference between investment capital and risk capital. For example, the Johns-Manville Co., I understand,

during the last depression, spent all of its reserves plus $10,000,000 additional capital in risk ventures, in new products with the result that when the depression was over 85 percent of their sales came from products which were not in existence before the depression.

Now, as you men know, you cannot go to the banks and you cannot go to the investment houses and get that kind of capital. But we believe this, that any corporation that has these bonds when the war is over and uses this fund to increase its production, that means more jobs, that means more pay rolls, that means more purchasing power and that, in turn, means, of course increased production with more jobs, more pay rolls, more purchasing power.

So the snowball just rolls around and around. Just as soon as some of the new products become successful, the corporation will then be able to get all the investment capital that it needs for that operation.

Therefore, if we have over $5,000,000,000 in such a fund when the war is over to be used in new ventures, in risk propositions, that would magnify itself many, many times through investment capital, just as fast as those ventures become successful.

I have just two more charts and I will take only a minute on them. I want particularly to urge the importance of doing this now. In one department of the Government, when I talked on this subject, about 6 months ago, they said, "We agree with you that it has to be done, but there are so many things to be done this year that this does not have to be done this year."

This idea, of course, has been one of the great difficulties and one of the causes for the failures of the United Nations and this phrase describes it, "too little and too late." You remember what happened in Dunkirque, what happened in Greece, what happened in Crete, what happened in Yugoslavia, what happened in Singapore, Hongkong, and Manila. We remember those things, so we want to urge the importance of this thing being done this year and being done in this bill, so that we can get ready now to make the last shot of the war the starting gun for a post-war program.

I want to thank you very kindly for letting me have this time and attention.

The CHAIRMAN. Thank you very much, Mr. Davidson.

Senator TAFT. Mr. Davidson, may I ask one question about the reserves for inventory losses? Is there something in the bill now providing to take care of that situation, the profits that were not really profits because they represented inventory losses?

Mr. DAVIDSON. Senator, that is a very important subject. The Treasury made some recommendations on it and they can probably answer your question. I do not believe they had time to draft it and get it in the bill. I am not certain about that. I do not remember seeing it in the bill, but the Treasury can answer that, they have probably some representative here.

Senator TAFT. Some particular fund for refunding the 20 percent would not have any relation to that inventory question because some companies might have a big inventory and some companies have none at all.

Mr. DAVIDSON. That is a separate problem. There is another reserve which is essential, that is the wage-severance reserve, when em-

ployees are laid off. There are various reserves that are open for discussion, but I have discussed just one.

Senator DAVIS. Machines working 8 hours a day do not wear out as much as machines working 24 hours a day. Should not the amount of usage be considered in the determination of depreciation? Should this not be written into the law?

Mr. DAVIDSON. I am not an expert on the subject of depreciation but I think that consideration in the preparation of this tax bill could very profitably be given to the subject of increasing the rate of depreciation under the circumstances you mentioned. A similar problem exists where machinery formerly used for the production of civilian goods has been stored away in the hopes that it can be used for the same purpose after the war. Much of this machinery will then be obsolete.

Senator DAVIS. Many firms will be completely idle for the duration. Do we propose to tax them on their machines while they are idle and becoming obsolete?

Mr. DAVIDSON. I do not know that I understand your question completely. If the corporations are idle and not earning any profit, the only Federal tax which they will pay will be the capital-stock tax.

Senator DAVIS. If excess profits are to be taxed 100 percent, with a refund of 20 percent after the war is over, what is the base line for excess profits?

Mr. DAVIDSON. I assume that you are referring to the base which separates a so-called normal profit from excess profits. It is extremely important that the section of the law which controls this base shall not include in excess profits, profits which would have been made without any assistance from the war economy. The higher the excess-profits tax rate, the more important this is and and if Congress enacts a rate of 100 percent, the necessity for a fair and proper base is more essential than it would be under a 90-percent rate.

Senator DAVIS. Will each company be permitted to hold its reemployment reserves? Under what conditions?

Mr. DAVIDSON. It is absolutely essential that each corporation be permitted to hold its own reemployment reserves. When the war ends, the aviation industry, the machine-tool industry, and many other industries, will, without such reserves, begin operating in the red immediately. It is essential, therefore, that these companies make plans in advance for production which will result in continuing the jobs for their employees immediately after the cessation of hostilities. The plans will be of no value unless they also have at the same time the capital to enable them to carry out the plans.

We suggested that this could be accomplished best by giving the corporations bonds now which are nonnegotiable but which would automatically become negotiable, and in every other respect the same as all other United States bonds, immediately upon the cessation of hostilities.

Senator, I had some questions and answers which I gave the stenographer, which are the usual questions we are asked, and if I may, I would like to have them inserted in the record.

The CHAIRMAN. Yes, sir; they will be inserted in the record.

HOW ENGLAND SOLVES THE PROBLEM

TAXES ABOVE 80%—

—interfere with war production

—cause corporate casualties

SO BRITAIN BALANCES HIGH WAR TAXES WITH POST-WAR REFUND

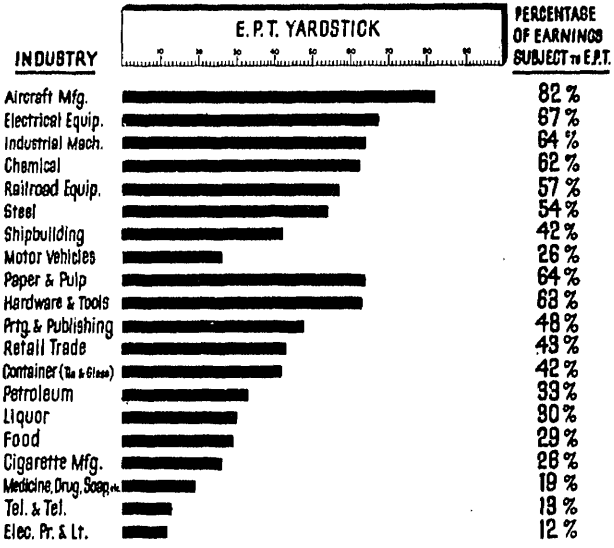
PUBLIC OPINION DEMANDS 100% EXCESS PROFITS TAX

ALL ABOVE 80% WILL BE REFUNDED TO CORPORATIONS FOR POST-WAR RECOVERY

MR. STAM'S printed memorandum demonstrated the logic of Britain's course.

"TOO LITTLE AND TOO LATE" applies as well to post-war plans

OTHER SUGGESTIONS:



Treasury recommended Post-War Recovery and Re-employment reserve for corporations, consisting of all Excess Profits Taxes they paid above 80%.

Others recommend including part of corporate normal tax in reserve – and extending the post-war refund to individual income taxes.

A 90% Tax without adequate reserve will cause corporations to die like flies in post-war period-spreading depression and unemployment.

"TOO LITTLE AND TOO LATE" applies as well to post-war plans

THE EXCESS PROFITS TAX IS TO SOME EXTENT A YARDSTICK OF POST-WAR CONVERSION NEEDS

Isn't this also the approximate order in which these industries are being forced into wartime overexpansion?

Isn't it a reasonable index of the relative need of these industries for post-war plant conversion to keep up employment?

"TOO LITTLE AND TOO LATE" applies as well to post-war plans

WE WILL BACK ANY POST-WAR PLAN

1. **SIZE.** At least $1 billion a year should go into Post-War Reserve...14% of E.P.T. will do it.

2. **CERTAINTY.** The moment war ends, Post-War Reserve should be in hands of corporations -ready tu go into action.

   A. Issue corporation Special U.S. Bonds now-based on revenue subject to E.P.T.*

   B. Make Bonds non-negotiable until end of war-thus keeping Reserve intact for Post-War job.

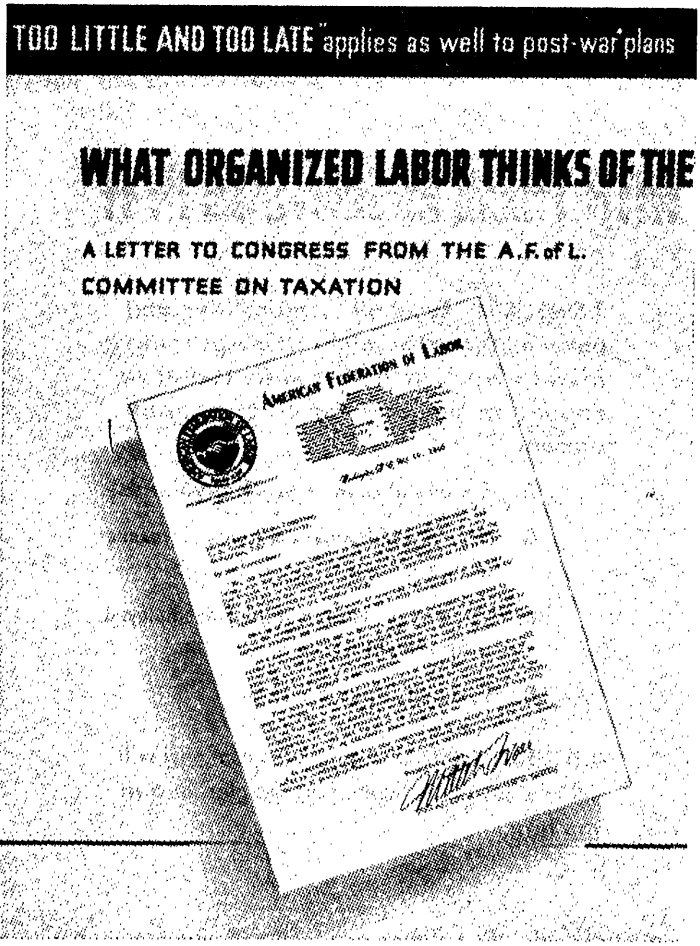
   C. Make Bonds non-interest-bearing until after War, so that Government will not pay out one cent now needed for Victory.

* Same plan can be extended to the normal tax income of corporations and to taxable income of individuals

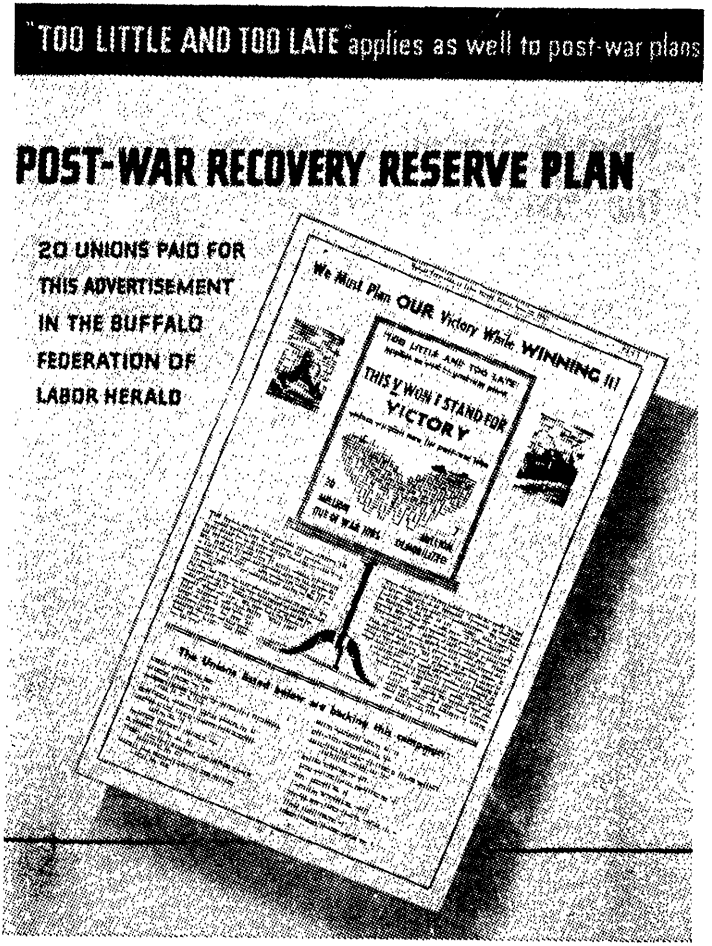
"TOO LITTLE AND TOO LATE" applies as well to post-war plans

WITH THESE ESSENTIALS IN IT

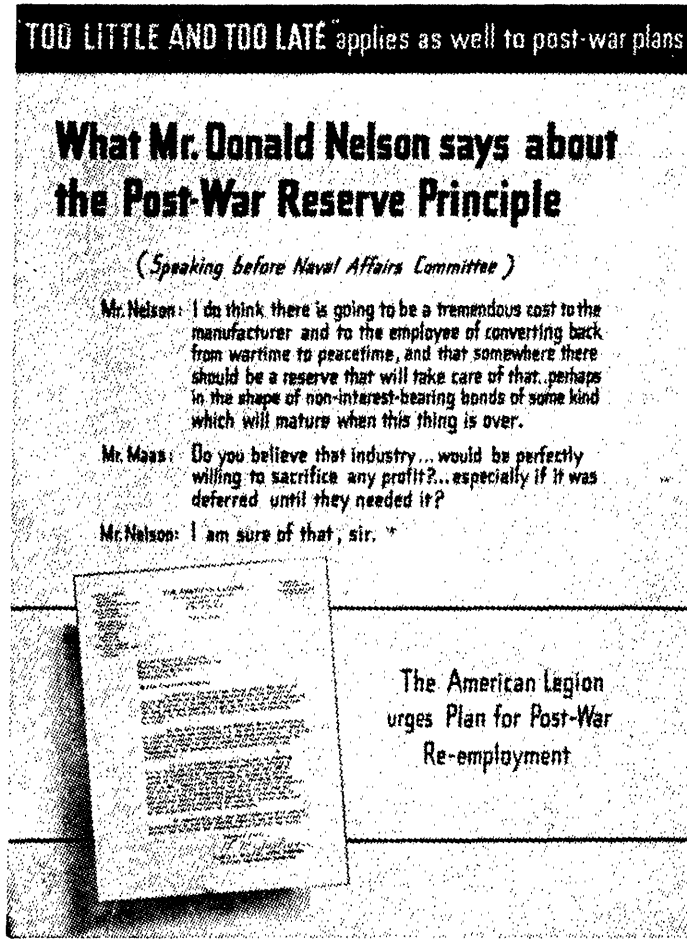
3. SIMPLICITY. Avoid all technicalities and uncertainties that might delay putting men to work after the war. Reserve should be available for all purposes except –



A. Payment of cash or stock dividends.



B. Payment of bonuses or salary increases to executives.



C. Increasing cash reserves, unless employed in the business.

D. Purchase of securities.

4. IMMEDIATE ACTION. A good program now will achieve far more than a perfect plan begun too late.

MR. GANSON PURCELL, Chairman of S.E.C., said:

"**WE CANNOT WAIT** until all actual fighting is ended to take steps necessary to protect us from its after effects. . . . The transition (from war production to peace production) will not just happen automatically."

BUT post-war recovery, once begun, can go forward and grow automatically - like a snowball rolling down hill. The job is to start the nucleus of our snowball - the Post War Reserve. Get it over the brink of the hill. Start it rolling! Start it growing! start it **NOW!**

"TOO LITTLE AND TOO LATE" applies as well to post-war plans
LET'S GET READY NOW TO MAKE THE LAST SHOT OF THE WAR THE STARTING GUN FOR A POST-WAR RECOVERY PROGRAM !

QUESTIONS AND ANSWERS

1. Will banks be able to lend on recovery bonds?

Yes; exactly as they would on any other Government bonds. When a bank makes such a loan, it simply sets up a deposit on its books for the borrower. The only limit on bank deposits is the law stating what proportion of cash banks must keep on hand in relation to deposits. Since 1936, this percentage has been exceedingly high. It would only be necessary, after the war, to return to the 1936 limitation in order to permit a $50,000,000,000 increase in bank lending power—many times more than the recovery bond total.

2. Will banks be able to buy the recovery bonds?

Yes. Here again, when a bank buys a bond, it simply enters a deposit on its books for the seller. In 1941, with business booming, and plenty of calls for bank funds, United States banks had no difficulty absorbing $2,000,000,000 in bonds. They should have even less difficulty after the war. However, in case of need we can instantly expand the available bank credits by $50,000,000,000 simply by returning to the cash requirement law of 1936. Furthermore, Federal Reserve banks can expand their bond purchases almost indefinitely.

3. Would private investors buy recovery bonds?

Yes. Private savers and investors provide a ready market for these bonds. We shall acquire very thrifty habits before this war is over; and we shall probably carry over a great deal of that thriftiness into the post-war period. Even in 1932, savers amassed $5,000,000,000. In 1941 they saved $15,000,000,000. It is reasonable to assume the post-war savings rate may be somewhere between the two. The problem will be to find enough investments able to attract these savings. In such a period of uncertainty, timid investors might hesitate to buy private bonds. But bonds with the taxing power of the Federal Government behind them always command a ready market among the most conservative. Recovery bonds should be especially attractive, since the money would be used to stimulate private business.

4. How can 18,000,000 jobless be forecast?

According to War Production Board figures, peace will end the jobs of 20,000,000 war workers. According to the Office of Facts and Figures, we shall have to demobilize at least 7,000,000 men from our armed forces. It is impossible to say now how many of these will find prompt employment. How many will go back to the farm. How many of the women will return to their homes. How many of the oldsters will return to the retirement from which war wages or patriotism drew them.

But there is another method of reaching a conservative estimate of post-war unemployment. All the economic omens indicate that, if business takes its previous "do nothing" attitude, production soon after the war will drop to below the 1932 level. In 1932, we had jobs for 28,000,000 in business and industry, and for 11,000,000 more on the farms. Total, 39,000,000.

Now, assume the war ends in 1945. By that time, our growing population will give us a labor supply of 57 million. Say the job supply is the same as in 1932, or 39 million. (An optimistic forecast, unless we plan more effectively than ever before.) We shall then have 18 million idle—50 percent more than in the blackest days of what we have hitherto called "the Great Depression."

5. Why won't this peace bring a buying boom, as in 1919?

We may have a temporary buying boom. But building up our war-depleted inventory of consumer goods would only delay depression. Moreover, consumers may lack the purchasing power for large scale buying. And they are also apt to be more wary of over-spending than in 1919. For example, the late 1930's brought no buying boom, even after depression had depleted our stock of consumer goods.

6. If the bonds are used soon after peace, won't they be wasted during the possible post-war buying boom? When this boom ends may not the bonds be gone?

It is hard to imagine a post-war buying boom of more than 18 months. By then, the plant investment and the new products made possible by recovery bonds will be producing their real effect. They may extend the buying boom into a long-term upswing, and thus bring true prosperity to the Nation.

7. Will the recovery bonds be enough to reverse the post-war downtrend?

Should the war end in 1945, these bonds will immediately place in the hands of management some $4,000,000,000 (beside normal depreciation reserves) to convert our war production machine and launch new products. Business had no such fund in the early 1920's. Yet, because business was bold and ingenious, it

created prosperity. Who would have supposed in the war boom year of 1915, that the rate of industrial investment would double by 1923, or triple a few years later? With recovery bonds to encourage management after its long experience of depression and war, we may yet see economic history repeated—with prosperity and full employment in post-war America.

The CHAIRMAN. Mr. Cowan.

STATEMENT OF NATHAN E. COWAN, REPRESENTING THE CONGRESS OF INDUSTRIAL ORGANIZATIONS

Mr. COWAN. Mr. Chairman and members of the committee: I just want to state I am appearing here this morning on behalf of Mr. Murray. He had originally intended to come. He asked me to read this statement.

The CHAIRMAN. Yes, sir.

Mr. COWAN. The tax bill now before your committee is the most important tax measure in our Nation's history. Our country is at war with a desperate and powerful enemy, whose offensive against ourselves and our Allies increases hourly the danger to everything our people cherish.

To meet this offensive, and to open offensive action of our own, we must mobilize every resource our Nation possesses; our economic and financial strength no less than our manpower and our industrial production. At the same time, we must see that the home front remains strong and secure, unweakened by inflation or other economic disasters.

The tax bill is a central part of this economic front for victory. It must be a tax bill that raises the amount of revenue our country needs. It must be a tax bill that strengthens the economic and financial fabric of the Nation. It must be a tax bill that draws revenue from those sources that can pay it without weakening their own war effort. It must be a tax bill written with one thought in mind—how best it can contribute to victory.

The President of the United States, in his seven-point message to the Nation, asked for such a tax bill as a keystone in gearing the country's economy to war. The United States Treasury laid down in detail the kind of tax bill that would meet those specifications. The 5,000,000 American men and women of the C. I. O. gave their full approval and support to the President and to the Treasury in their taxation proposals.

The United States Treasury called for taxes based on ability to pay, for an end to certain scandalous loopholes that permit the wealthy to evade their fair share of taxes, for certain increases in taxes on war profits and incomes, and for strict avoidance of the sales tax as a danger to the war effort.

The C. I. O. fully agreed with these proposals, adding only its opinion that the tax bill should seek to raise $10,000,000,000 rather than the 8.5 billion asked by the Treasury. In testimony before the House Ways and Means Committee and in repeated public statements, leaders and members of the C. I. O. have warned of the dangers to workers' health and living standards, and consequent cuts in war production, if the sales tax is adopted. I do not wish to present a detailed analysis of our opposition to the sales tax today. Briefly, it is this:

1. The sales tax is a menace to war production, since it cuts already meager living standards, increases the already steep cost of living, thus forcing production workers to reduce the amount of food and other basic necessities they consume and thereby reducing their health and efficiency.

2. It is the most unfair and undemocratic tax system that could be devised, since it takes the same tax from the budget of the poor as it takes from the budget of the rich.

3. It is invariably the result of a refusal on the part of those who draw tax legislation to do their duty in placing the tax burden where it belongs—on the shoulders of those best able to bear it.

The working men and women of America are willing to pay their fair share of the cost of victory through added taxes. They know how terrible would be the cost of defeat. They are already paying a large portion of their earnings in taxes, either direct or hidden. On an income of $1,500 a year, a married worker already pays $250 in taxes, the equivalent of 8 weeks' wages. Single workers pay more. The working men and women of this country are not trying to evade taxation. They are not seeking to perpetuate the shame of special privileges, of tax-exempt securities, of separate returns, and similar means of avoiding their patriotic duty. They have no special privileges to defend, and they ask for none.

When the workers appear before a congressional committee to urge support of the Treasury's proposals and to urge that the tax plank of the President's message be carried out, they come with clean hands and with sincere conviction. Their interest is in only one direction; to see that the 1942 tax bill becomes an instrument of victory for our cause.

Your committee has a great responsibility before it. It has also a great opportunity—the opportunity and the duty to repair the damage done to the Nation's economic front by the House Ways and Means Committee's version of the bill.

The bill as written by the Ways and Means Committee and passed by the House, under gag rule, fails miserably to carry out either the President's tax program or the reasonable and necessary proposals of the Treasury.

It is short close to 2.5 billions of the amount the Treasury asked for.

It fails to place taxes on the basis of ability to pay, following a soak-the-poor line throughout.

It fails to close the loopholes of tax-exempt securities, of separate returns.

It resolutely ignores the President's call for a $25,000 limit on net income, treating it as something that should not be mentioned in polite society, as though it were slightly indecent.

It utterly fails to carry out the principle of equality of sacrifice for victory, thus striking a serious blow at national unity and national morale.

It paves the way for a second tax bill this year, leaving the propagandists of the sales tax an excellent opening for renewing this anti-labor, anti-victory agitation.

It furnishes excellent material for subversive agents and other enemies of the war effort to use in divisive propaganda and anti-war agitation.

It does nothing to prevent inflation. Indeed, it helps promote inflation by leaving huge sums of money in the hands of the wealthy, who will thus be able to bid up prices on necessities and other goods.

In addition to its positive faults, the bill as passed by the House is a serious reflection upon the democratic process we are fighting to preserve. It does not represent the views of the House, since it was passed under a gag rule that prevented amendments and effective debate. It represents the views and personal interests of a handful of Congressmen dominating the Ways and Means Committee and their allies in the Rules Committee.

In this way, the voice of the people—who want an effective tax bill—was gagged, just as the 415 Congressmen outside the Ways and Means Committee were gagged.

Speaking for the C. I. O., whose 5,000,000 members I represent, I can assure you that the people of this country want a tax bill that will raise all the added revenue we need for victory, that will raise it in the quickest, most efficient way, and that will strengthen rather than weaken the economic front.

I urge your committee, therefore, to report out and to do its utmost to secure the adoption of a 1942 tax bill based on these principles:

1. Raising at least the amount of added revenue asked by the United States Treasury.
2. Ability to pay.
3. An end to loopholes that allow the wealthy to evade their duties to the Nation, particularly the loopholes of tax-exempt securities and separate income-tax returns.
4. Stiff taxes on war profits and high incomes, to a level at least of that proposed by the United States Treasury.
5. A limit of $25,000 on personal incomes.
6. No sales taxes of any kind.

Such a bill can be drawn up by this committee. In doing so, you will have made a major contribution to the victory that all our people desire above everything else.

The CHAIRMAN. Thank you very much, Mr. Cowan.

(The following statement was submitted by Mr. Murray:)

STATEMENT OF PHILIP MURRAY, PRESIDENT OF THE CONGRESS OF INDUSTRIAL ORGANIZATIONS, WITH RESPECT TO THE REVENUE BILL OF 1942 (H. R. 7378)

The President's seven-point anti-inflation program is in danger. The House tax bill has distorted and twisted beyond recognition plank No. 1, the tax plank, of the seven-point program. The tax bill endangers the entire anti-inflation front, for, as President Roosevelt has stated, "Each one of these points is dependent on the others if the whole program is to work."

Labor has accepted wage stabilization. Labor has called for all-out rationing and price ceilings. Labor has bought and is buying millions upon millions of dollars in war bonds. We accepted this program on the word of the President that it was necessary on the home front, and that it was "indivisible."

We now renew that acceptance. We challenge all who have not accepted it to follow our course. We propose that Congress enact plank No. 1 in the President's anti-inflation program.

To do so requires substantial modification in the tax bill adopted by the House, for that bill does not measure up to the standards of taxation enunciated by the President in his seven-point anti-inflation program. It does not "make the tax program an instrument of victory." Instead of forging a tax bill which would spread the burden with fairness and equality, the House has imposed a disproportionately large portion of the tax burden upon the lowest income groups in the country, while at the same time perpetuating loopholes and tax exemptions. The House bill constitutes a grave threat to the morale and physical well-being of the civilian soldiers producing the arsenal of democracy.

SUMMARY OF PRINCIPAL DEFECTS OF THE BILL

The House bill fails to meet the basic requirements of a revenue act for America at war:

(1) The House bill fails to provide adequate revenue. It falls nearly $2,500,000,000 short of the $8,700,000,000 additional revenue sought by the Treasury.

(2) The House bill fails to follow the democratic principle of taxation according to ability to pay. It reflects a soak-the-poor-spare-the-rich policy.

(3) The House bill fails to carry out the proposal made by President Roosevelt in his seven-point anti-inflation program that "No American citizen ought to have a net income, after he has paid his taxes, of more than $25,000 a year." It thereby allows 11,000 favored individuals and couples to retain $184,000,000 a year after taxes and after their $25,000 or $50,000 exemptions.

(4) The House bill fails to adopt the Treasury proposals for eliminating glaring loopholes and special privileges. It rejects Secretary Morgenthau's position that these loopholes are "Bad enough in time of peace" but they are "intolerable in time of war."

(5) The House bill fails to adopt the comparatively mild increases in estate- and gift-tax rates recommended by the Treasury. It thus allows inheritances and gifts to remain taxable at pre-Pearl Harbor rates.

CONGRESS FOR INDUSTRIAL ORGANIZATIONS' TAXATION FOR VICTORY PROGRAM

On June 3, 1942, the Congress for Industrial Organizations executive board adopted a resolution calling for a Federal tax program based upon ability to pay, to collect at least $10,000,000,000 additional revenue, from the following sources:

(1) $3,500,000,000 from corporate taxes by raising corporate income-tax rates to 50 percent, excess-profits rates to 94 percent, and by reducing excess-profits-tax credits.

(2) $4,500,000,000 from increased income-tax rates, especially in the middle and higher brackets, and based on 1941 exemptions, with a 25,000 ceiling on incomes after taxes, the plugging of loopholes, and the elimination of tax exemptions as recommended by the Treasury, by the adoption of mandatory joint returns, the taxation of income from State and local securities, and the elimination of unreasonable depletion allowances.

(3) The balance of the increased revenues from higher estate and gift taxes and from excises on selected loopholes.

The House bill falls far short of the Treasury's proposals, the Congress for Industrial Organizations' proposals, and the fundamental standards which should govern American wartime taxation, as follows:

INDIVIDUAL INCOME TAXES

In his appearance before the House Ways and Means Committee, the Secretary of the Treasury recommended additional individual income taxes designed to raise approximately $2,250,000,000 in new taxes. Surtax rates would be sharply increased and existing exemptions of $750 for single persons and $1,500 for married persons and family heads would be retained. The Secretary opposed a further lowering of personal exemptions, taking the position that it would be improper to tax single persons with incomes of less than $15 a week and married persons with incomes of less than $30 a week, who "already pay a disproportionate part of their little income in indirect taxes of all kinds." Subsequently, Secretary Morgenthau modified this position and proposed that personal income tax exemptions be reduced to $1,000 for married persons and heads of families and to $600 for single persons, and that the credit for dependents be reduced from $400 to $300.

The committee rejected the Treasury's schedule of proposed rates, substituted a schedule which hits the lowest income groups harder than the upper brackets (in comparison to the Treasury proposals), and lowered personal exemptions to $1,200 for married persons and family heads and to $500 for single persons. Under the committee's bill, adopted by the House, a single person earning more than $10 a week would be subject to income tax. A married man with no children would be subject to income tax if he earns $24 a week, and a married man with two children would be subject to income tax at $40 a week.

In comparison with the Treasury's original proposals, the House increases the tax paid by all married persons with incomes up to approximately $4,000 a year, but decreases the taxes payable by married persons with incomes in excess of approximately $4,000. For example, the Treasury originally proposed that a married man with two children who earns $2,400 pay an increased tax of $10. The House increased such a taxpayer's levy by an additional $40, while at the same time cutting $17 off the Treasury proposal with respect to such a taxpayer with an income of $5,000 and $77 off the Treasury proposal for such a taxpayer with an income of $6,000.

The following table shows strikingly how the House (by comparison with the Treasury's original proposals) lightened the burden of the higher income groups at the expense of the lower income groups.

Increases and decreases in tax resulting from the House changes in the Treasury's original proposals

Net income before personal exemption	Married, without dependents	Married, 2 dependents	Net income before personal exemption	Married, without dependents	Married, 2 dependents
$1,300	+$13		$10,000	−$283	−$283
$1,400	+30		$15,000	−483	−551
$1,500	+48		$20,000	−608	−593
$2,000	+60	+$13	$25,000	−710	−616
$2,500	+55	+18	$50,000	−1,817	−1,761
$3,000	+39	+51	$100,000	−1,905	−1,885
$4,000	−3	+23	$500,000	−14,935	−14,910
$5,000	−39	−17	$1,000,000	−21,935	−21,910
$6,000	−108	−77	$5,000,000	−104,935	−104,910
$8,000	−203	−189			

Such legislation is not designed to maintain the high morale of the American people, which is imperative to a victorious conclusion of the war. The low income taxpayer has already borne a large part of the financial sacrifice for war. Two million new taxpayers were added to the tax rolls through the lowering of personal exemptions by the Defense Tax Act of 1940, from $2,500 to $2,000 for married persons and family heads and from $1,000 to $800 for single persons. An additional two and one-fourth million taxpayers were subject to income tax through last year's revenue act, when personal exemptions were further lowered to $1,500 and $750. In addition, the large increases in sales and consumer taxes, effected by the tax laws since the beginning of the defense program, and the sharp increase in surtax rates in the lowest brackets have required substantial sacrifices of the average American.

As a result, the tax load borne by low-income groups in this country is far heavier than is commonly realized. Treasury studies have shown that a single person earning $750 a year not subject to Federal income tax, paid direct and indirect Federal, State, and local taxes of $130. This constituted 17.3 percent of his income and represented 8 weeks' pay. A married man, with no dependents, earning $1,500 a year, paid $250 in taxes, 16.7 percent of his income, and the equivalent of 8 weeks' work.

With the cost of living rising, the approximately 11½ million families with incomes under $1,500 are already engaged in a struggle to maintain the barest essentials of life. To lower personal income-tax exemptions below existing levels of $1,500 and $750 constitutes a threat to the health and well-being of more than a third of the American families. And at the same time to lighten the Treasury's originally proposed taxes on middle- and high-income groups at the expense of the lowest-income groups is to do violence to the principle of equality of sacrifice.

WAR TAXATION AND INFLATION

The House action in imposing a disproportionate burden of taxes on low-income groups cannot be justified as a measure required in the drive to stave off inflation. The estimated $17,000,000,000 inflationary gap between the goods and services available for civilian consumption during 1942 and the amount consumers will attempt to spend is a matter of greatest concern to all the American people and taxes have an important role to play in closing the gap. The gap must be closed by curtailing the incomes which threaten inflation and by dealing with the goods and services in which shortages exist, without at the same time jeopardizing the war effort by impairing the physical well-being or morale of the American people.

In resorting to the taxing power to curb inflation, we must not impair the stamina or morale of the soldiers of production, through excessive taxation of low-income groups. To do so would be to menace the entire home battlefront where the weapons of warfare are being produced. In addition, we must recognize that taxation is but one of a whole portfolio of instrumentalities available in the struggle against inflation. Taxation must be but one unit in an integrated program which utilizes price control, rationing, the purchase of war bonds and stamps, credit control, increase of production, effective use and conversion of productive capacity, raw materials, and manpower, etc.

The purchasing power which is responsible for the main inflationary pressures in the market place is not to be found in the pay envelope of the more than half of the American families with incomes under $2,000. It is to be found in the incomes of the middle and high bracket groups. However, to the extent that shortages and bottlenecks exist with respect to goods and services purchased by low-income groups, there are available effective instruments for dealing with the problem, without heavier taxation of low-income groups.

Rationing is the democratic method of dealing with consumers' shortages. Taxation of low-income groups is a crude and undemocratic method of attacking the problem. To cut down generally and willy-nilly the purchasing power of low-income groups because there are shortages in some consumers' goods is a form of social cruelty which cannot be tolerated. This would be a form of rationing of all consumers' goods in which a well-filled pocketbook would be the ration card. People with comfortable and large incomes would still be able to buy whatever is in the shops, despite rationing through taxation, but the low-income groups would have to cut down on their needs. Such policies do not fit in with the pattern of democracy.

The action of the committee, therefore, approved by the House under gag rule, in rejecting the Treasury's tax proposals so as to favor middle and high-income groups at the expense of the lowest income groups cannot be justified under the guise of the necessities of the fight against inflation.

TWENTY-FIVE THOUSAND DOLLAR CEILING ON INCOMES

In the first plank of his seven-point program to combat inflation, President Roosevelt urged that "we must tax heavily, and in that process keep personal and corporate profits at a reasonable rate, the word 'reasonable' being defined at a low level." As a specific measure to carry out plank No. 1, the President proposed the following:

"At the same time, while the number of individual Americans affected is small, discrepancies between low personal incomes and very high personal incomes should be lessened; and I therefore believe that in time of this grave national danger, when all excess incomes should go to win the war, no American citizen ought to have a net income, after he has paid his taxes, of more than $25,000 a year."

The Treasury subsequently submitted this proposal to limit incomes to $25,000 to the Ways and Means Committee, but it was rejected by the committee and the House. It was estimated that this tax would raise $184,000,000.

Every man, woman, and child in the Nation is being called upon to contribute his mite to the struggle against aggression. There are 11,000 single persons and married couples in this country who will have incomes in excess of $25,000 and $50,000, respectively, after paying the Federal taxes recommended by the committee, and after the 15-percent allowance for debts, insurance, Federal securities, etc. These 11,000 individuals and couples will thus have $184,000,000

in annual incomes to spend or save, after their $25,000 and $50,000 exemptions. Contrast these figures with the 17½ million families with incomes under $2,000, or the 75 percent of the American families with incomes under $3,000, both before taxes.

How can we make any pretense of applying the principle that the war tax burden should be distributed equitably in accordance with ability to pay without enacting the $25,000 ceiling? What is to happen to the morale of the millions of single people with incomes of $16 a week and married persons with incomes of $31 a week who are asked to pay income taxes at a rate of 19 percent, if the 11,000 favored persons and couples are allowed to retain an average of $320 a week after taxes and after their exemptions of $480 to $660 a week? How can we ask John Smith to spend 10 percent of his income for defense bonds or stamps, or to agree to stabilize his wages, while the 11,000 at the top of the American economic scale retain their excess $184,000,000 a year?

The unity of the Nation, the effectiveness of the President's seven point anti-inflation program and every principle of democratic sacrifice to win the war require the adoption of the $25,000 ceiling.

LOOPHOLES AND SPECIAL PRIVILEGES

The Treasury proposed the elimination of a series of loopholes and special privileges which enable small groups of taxpayers to escape their just share of the tax burden. All these proposals were rejected by the Ways and Means Committee, and of course, by the House.

(1) Mandatory joint-return laws allow a husband and wife to file separate tax returns, despite the fact that the ability of a husband and wife living together to pay taxes is measured by their joint incomes. This special privilege of filing separate returns is of advantage only to taxpayers with family incomes above $2,000 (under the Treasury's proposed rates) and the larger the income, the greater the benefit from the opportunity to file separate returns. In addition, in nine community property States, one-half the husband's earnings are automatically treated under the tax laws as belonging to the wife, with the result that there is a discrimination in the tax laws in favor of the taxpayers in the community property State. Thus, a married man, without dependents, living in the noncommunity property States of Colorado or New York and earning $5,000 per year, under the rate schedules proposed by the Treasury, would pay $115 more than the same man living in the community property States of California or Louisiana.

The privilege of filing separate returns has also resulted in tax avoidance through transfers by wealthy persons of securities or other property to their wives. As a result, the income is divided between the man and wife, and separate returns are filed in the payment of lower income taxes.

There is no justification for the continuation of the special privilege of filing separate returns if we are to make any pretense of taxing according to ability to pay. The Treasury's plan provides for a special allowance for earned income. The adoption of this proposal would result in additional revenues, under the Treasury's rate schedule, of $440,000,000.

(2) *Income from State and local securities.*—The Ways and Means Committee rejected the Treasury's recommendation that the interest from all outstanding and future issues of State and municipal securities should be subject to tax, which would produce an estimated yield of $275,000,000. High tax rates are utterly meaningless to the holders of tax exempt securities. As stated by Secretary Morgenthau:

"A tax system cannot be defended which in a time of grave national emergency calls upon the great mass of our taxpayers to shoulder the heavy burden of additional taxes and yet permits persons with large taxpaying ability to pay virtually nothing in taxes. The sacrifices necessary to win a war for the benefit of all of us should be shared by all of us—including the holders of tax exempt securities."

The continuation of the tax exemption of the interest from State and municipal securities is a haven for the wealthy taxpayer which is "bad enough in time of peace" and "intolerable in time of war." Tax exempts should be made taxable.

(3) *Percentage depletion.*—The privilege granted to owners of mines and oil wells to deduct percentage depletion long after they have recovered the cost of the property is a "special favoritism," whose abolition the Treasury recommended. Although the termination of this special privilege would bring an additional estimated $206,000,000 into the Treasury, the proposal was blocked by the Ways and Means Committee.

There is no warrant for allowing a taxpayer to obtain depletion deductions in excess of the cost of the property. The demands of the war make it imperative that this privilege be eliminated.

CORPORATION TAXES

The only feature of the committee's bill adopted by the House which even begins to measure up to sound wartime standards of taxation is its proposal that corporate income taxes be levied at 45 percent and excess-profits taxes at 87½ percent. The committee rejected the Treasury proposal that corporate income and surtax rates should be increased to a total of 55 percent (for corporations with incomes in excess of $25,000), and instead adopted a combined rate of 45 percent. It whittled down its own original plan to increase the excess-profits rate to 94 percent, finally proposing a rate of 87½ percent. As a result, the committee proposals for corporate taxes will yield only $2,420,000,000 by way of contrast with the Treasury's recommendations for $2,796,000,000 in increased corporate levies, a loss of approximately $375,000,000.

No basic change has been made in the provisions of the excess-profits tax law other than to reduce from 7 percent to 6 percent and 5 percent the invested capital credit on investments in excess of $10,000,000. Corporations are still permitted to elect either the invested-capital method or the average-earnings method of computing excess-profits taxes. The result is that corporations which are heavily overcapitalized or showed large earnings during the period 1936-39 are still in a position largely to escape their fair share of excess-profits taxes. The excess profits tax law still treats 50 percent of borrowed capital as invested capital. High rates are utterly meaningless to corporations with high excess-profits credits. These basic defects in the excess-profits tax law were responsible for the statement by the Assistant Secretary of the Treasury, John L. Sullivan, to the Ways and Means Committee in connection with the revenue revision of 1941 that "we now have on the statute books a tax which is called an excess-profits tax, and which the country believes is an excess-profits tax. The truth of the matter is that the law we call an excess-profits tax *does not tax excess profits at all.*" [Our emphasis.] These defects remain unremedied in the committee's bill adopted by the House.

The House's solicitude for corporations cannot be squared with the demands made upon the American people generally. While the average American has watched his tax bill soar, he has been called upon to make greater sacrifices. The workers have given up their right to strike for the duration. The President in his seven-point message to Congress dealing with inflation, on April 27, 1942, called for wage stabilization and for heavy taxation. Organized labor has responded splendidly and patriotically with all-out support for the wage-stabilization program. As to taxation, the President said:

"To keep the cost of living from spiraling upward we must tax heavily, and in that process keep personal and corporate profits at a reasonable rate, the word 'reasonable' being defined at a low level."

Corporations and their stockholders will not want to shirk their duty in fighting the war and in safeguarding the economy. The Treasury's proposal for a 55-percent combined normal and surtax rate for corporations with net incomes in excess of $25,000 is designed to help carry out the tax plank in the President's program and to allow the taxes paid by corporations with the sacrifices required of the average citizen. Inasmuch as corporations are expected to retain billions in profits after paying the taxes proposed by the Treasury, these rates are not unreasonable in the light of the standars of sacrifice dictated by the events since Pearl Harbor. As the President stated in his Budget message on January 7, 1942:

"When so many Americans are contributing all their energies and men their lives to the Nation's great task I am confident that all Americans will be proud to contribute their utmost in taxes."

Equality of sacrifice is essential to the maintenance of the morale of the American people at its present high level. If the average citizen is called upon to make heavy sacrifices, while corporations and their stockholders either profit from our great national crisis or make no commensurate sacrifices, the entire war effort, our national unity, and the morale of the people will be in jeopardy.

ESTATE AND GIFT TAXES

The Treasury suggested comparatively mild increases in estate and gift taxes and modifications in exemptions, which together would yield $309,000,000 in new revenues. The committee modified the exemptions, which would reduce estate and gift taxes by approximately $7,000,000, but rejected rate increases.

Under the bill as proposed by the Ways and Means Committee, an estate of $60,000 would pay no tax. The Treasury proposed that an estate of $100,000 pay $7,450, instead of the present tax of $7,400; that an estate of $2 0,000 pay $16,950 instead of the present tax of $35,700; that an estate of $1,000,000 pay $512,550 instead of the present tax of $307,200. These illustrations indicate the comparatively mild character, as measured by wartime standards, of the proposed estate tax rates. Comparable increases of gift tax rates were urged.

It is a sad commentary on the committee's work that personal exemptions should be lowered to $1,200 and $500 while a $60,000 estate goes tax free and estate and gift tax rates remain at pre-Pearl Harbor levels. The President did not exclude estates in excess of $60,000 when he urged every American to contribute his mite in the fight against aggression. What is needed is the adoption of an integrated estate and gift tax system with lowered exemptions and with a single set of drastically increased rates.

SALES TAX

The reactionary drive for a Federal sales tax. The committee's proposal and the House's adoption of a tax bill falling $2,500,000,000 short of the Treasury's request and $4,000,000,000 short of the Congress of Industrial Organizations' program of taxation for victory foreshadows a new tax bill during the current year. It lays the foundation for a renewed drive on the part of the advocates of the soak-the-poor-save-the-rich policy for a Federal sales tax. The National Association of Manufacturers, the United States Chamber of Commerce, and the spokesmen and satellites were defeated in their campaign before the Ways and Means Committee in their attempt to foist a Federal sales tax upon the American people. The drive is on again. The Secretary of the Treasury has forcefully presented to the Nation the vital reasons for opposition to a general sales tax.

1. "The general sales tax falls on scarce and plentiful commodities alike.

2. "It strikes necessaries and luxuries alike.

3. "As compared with the taxes proposed in this program it bears disproportionately on the low-income groups whose incomes are almost wholly spent on consumer goods. It is, therefore, regressive and encroaches harmfully upon the standard of living.

4. "It increases prices and makes price control more difficult. It stimulates demands for higher wages and adds to the parity prices of agricultural products.

5. "It is not, as many suppose, easily collected; on the contrary, its collection would require much additional administrative machinery at a time when manpower is limited."

Wage earners, salaried employees, and others in the low-income groups already face a hard struggle for existence because of rising prices and the increased living costs. A general sales tax would cut many meager incomes below subsistence requirements.

Labor has given all-out support to the President's anti-inflation program. It has agreed to wage stabilization; it has purchased millions of dollars of War Bonds; it has supported all-out rationing and price control. Labor will not sit by idly and see the President's tax plank in the anti-inflation program scuttled by a Federal sales tax. Such an unfair, inequitable, and regressive tax would foster national disunity and seriously hamper the war effort. The soldiers on the production front cannot produce guns, tanks, and airplanes without calories.

CONCLUSION

Taxation as usual can be as devastating to the war effort as business as usual. Labor vigorously opposes both. The Congress of Industrial Organizations agrees

with Secretary Morgenthau that the task "of enacting the 1942 Revenue Act is that of making the tax program an instrument of victory."

The Ways and Means Committee's bill, adopted by the House, fails the American people in their time of great need. The Treasury's original proposals, coupled with the $25,000 ceiling on incomes, is the very minimum required for a democratic war tax program. We urge the adoption of the Congress of Industrial Organization's tax program in order to forge out of the tax bill a powerful instrument for victory.

The CHAIRMAN. Mr. Robinson.

STATEMENT OF REID ROBINSON, PRESIDENT, INTERNATIONAL UNION OF MINE, MILL, AND SMELTER WORKERS, C. I. O.

Mr. ROBINSON. Mr. Chairman, I am appearing before this committee in behalf of the International Union of Mine, Mill, and Smelter Workers, as vice president of the C. I. O., and as a member of their national C. I. O. tax committee.

As has been pointed out in President Murray's statement, presented to your committee by Mr. Cowan, the 1942 tax bill is the most important tax bill that has ever been before Congress.

Our country is at war, facing the most desperate crisis that we have ever faced.

The test of strength between democracy and fascism is before us. The armies of Hitler are advancing. The valiant Red Army of the Soviet Union, which has held off the Hitler advance for more than a year, is in retreat before numerically superior Nazi forces. Our British allies are fighting desperately to stop the Axis advance through Libya and Egypt.

The United States and Great Britain face the gigantic military task of opening a second front against Hitler.

Our Commander in Chief, President Roosevelt, has joined with Churchill and Molotov in agreement that this second front will be opened in 1942. The people of our country, Britain, and the Soviet Union are united in endorsing this action—because they realize that victory can come only if the second front is opened without further delay.

Our second front must be backed up by an economic front at home, dedicated to the offensive and to victory. President Roosevelt's seven-point program must be carried out to make this home economic front secure.

In this program the President called for an adequate and fair tax bill. He said:

> To keep the cost of living from spiraling upward we must tax heavily, and in that process keep personal and corporate profits at a reasonable rate, the word "reasonable" being defined at a low level.

This is the tax program of President Roosevelt. It is the tax program that the United States Treasury Department urged on Congress. It is the tax program that the 5,000,000 workers of the C. I. O. have been demanding from their elected representatives. It is the tax program that the American people demand for victory. Such a tax program must be based on the following principles:

1. We must raise at least the 8½ billion dollars that the Treasury set forth as the minimum in added tax revenue required to carry out the war program.

2. This added revenue must be raised on the basis of ability to pay.
3. There must be a limit of $25,000 on net personal income.
4. Loopholes used by wealthy individuals and corporations to evade their patriotic duty to the Nation must be eliminated.
5. We must reject any proposal to raise revenue through sales taxes of any kind.

The House of Representatives has passed a tax bill. This bill, reported out by the House Ways and Means Committee and passed under a gag rule, does not measure up to the standards of an adequate and democratic war-tax bill.

The House bill falls short by close to 2½ billion dollars of the 8½ billion asked by the United States Treasury. The task before this committee is to report out a tax bill that will meet the financial requirements of our war program—and which, at the same time, will strengthen our economic front at home.

The additional 2½ billion dollars—left out of the House bill—must be raised by applying the principles set forth by the Treasury and listed above. To do this, we must first raise 4½ billion dollars from increased income taxes, levied on individuals in the middle and higher income brackets.

The bill passed by the House failed to meet this need.

In comparison with the Treasury's original proposals, the House increases the tax paid by all married persons with incomes up to approximately $4,000 a year, but decreases the taxes payable by married persons with incomes in excess of approximately $4,000.

For example, the Treasury originally proposed that a married man with two children who earns $2,400 pay an increased tax of $10. The House increased such a taxpayer's levy by an additional $16, while at the same time cutting $17 off the Treasury proposal with respect to such a taxpayer with an income of $5,000 and $77 off the Treasury proposal for such a taxpayer with an income of $6,000.

I am submitting a table, as an exhibit, which shows strikingly how the House lightened the burden of the higher-income groups at the expense of the lower-income groups—by comparison with the Treasury's original proposals.

In addition to the 4½ billion dollars to be raised from increased individual income taxes, this bill must raise 3½ billion dollars from corporate taxes—by raising corporate income tax rates to 50 percent, excess profits rates to 94 percent, and by reducing excess profits tax credits.

As the bill was passed by the House, the corporate income tax is 45 percent, and the excess-profits rate is 90 percent. As a result, corporate taxes will yield only $2,640,000,000 by way of contrast with the Treasury's recommendations for $2,796,000,000 in increased corporate levies—a loss of approximately $156,000,000.

President Roosevelt said in his seven-point message:

> No American citizen ought to have a net income after he has paid his taxes, of more than $25,000 a year.

We agree wholeheartedly with President Roosevelt that such an income is ample to live upon. The average income of 17⅓ million American families was under $2,000 in 1941. Seventy-five percent

of all American families had an annual income of less than $3,000 a year, before taxes were paid.

Some 11,000 families today enjoy an income above the $25,000 level. At the same time, we are proposing to tax a married worker with an income of $24 a week. To tax such families while permitting the very rich to keep incomes of $1,000 a week and over is a serious blow to national unity and morale.

Furthermore, this refusal to limit individual incomes to the comfortable figure of $25,000 a year will cost our war effort $184,000,000 a year in needed revenue.

One of the gravest defects in the House tax bill is the failure to stop up a series of loopholes which permit wealthy individuals to evade their patriotic duty to their country.

These loopholes include the failure to abolish the scandal of tax-exempt securities and the failure to abolish the scandal of separate returns. These exemptions cost the Nation hundreds of millions of dollars a year. They are available only to the rich. They should be abolished at once, not only to raise needed tax revenue but to build national unity and national morale for victory.

The tax bill as passed by the House falls short by two and one-half billion dollars of the amount of needed tax revenue called for by the United States Treasury and the C. I. O. This leaves open an avenue of approach that the antilabor, antivictory forces have been looking for—the avenue of approach to a sales tax. The opposition of the C. I. O. and labor and progressive forces to the sales tax has been stated many times.

To begin with, the sales tax is the most unfair and undemocratic method of taxation yet devised. It takes the same amount of money out of everyone, regardless of ability to pay. A worker with an income of $30 a week pays the same tax on his food and other family needs as a coupon clipper with $50,000 a year.

The man with the big income doesn't feel it. He doesn't eat very much more food than the $30-a-week worker. He can't wear very much more clothing. He's glad to pay a sales tax—particularly if it helps him escape stiff taxes on his income.

Takes a sales tax out of the worker's pocket and you are taking groceries out of his budget, actually taking food and other necessities out of his home. Ten percent or any percentage taken out in sales taxes means much less food and clothing and shelter.

Mr. Chairman, we present this program for a 1942 tax bill in the knowledge that our victory over Hitler's Axis will cost huge and hitherto unbelievable amounts of money.

We endorse the seven-point program of President Roosevelt for an offensive against Hitler, because we know that this is the only way to victory.

We are ready to pay the price of this offensive, because we realize that victory will come only through the opening of a second front against Hitler in Europe.

Your committee faces the grave responsibility of reporting out a tax bill that will strengthen our home front and support our Commander in Chief, President Roosevelt, in carrying out the final offensive against the Fascist Axis.

(The table referred to by Mr. Robinson is as follows:)

Increases and decreases in tax resulting from the House changes in the Treasury's original proposals

Net income before personal exemption	Married, without dependents	Married, two dependents	Net income before personal exemption	Married, without dependents	Married, two dependents
$1,300	+$13		$10,000	−$283	−$263
$1,400	+30		$15,000	−483	−451
$1,500	+48		$20,000	−608	−593
$2,000	+49	+$13	$25,000	−740	−618
$2,500	+55	+48	$50,000	−1,817	−1,761
$3,000	+39	+54	$100,000	−4,305	−4,305
$4,000	−3	+23	$500,000	−14,935	−14,919
$5,000	−39	−17	$1,000,000	−24,935	−24,919
$6,000	−108	−77	$5,000,000	−104,935	−104,919
$8,000	−203	−180			

The CHAIRMAN. Thank you, Mr. Robinson.

Mr. McDonald.

Mr. APPELBE. Mr. Chairman, Mr. McDonald was held up in the Little Steel negotiations in New York.

The CHAIRMAN. Mr. McDonald will not be here?

Mr. APPELBE. He will not be here. I have his paper here.

The CHAIRMAN. You have a statement for him?

Mr. APPELBE. I do.

The CHAIRMAN. Very well, you may read it.

STATEMENT OF CLARK APPELBE, ASSISTANT TO SECRETARY-TREASURER, UNITED STEELWORKERS OF AMERICA, CONGRESS OF INDUSTRIAL ORGANIZATIONS

Mr. APPELBE. Mr. Chairman and members of the committee: I want to state that I am appearing here this morning on behalf of Mr. McDonald, secretary-treasurer, United Steelworkers of America. He originally intended to appear but was unable to leave New York due to the "Little Steel" negotiations. Mr. McDonald's statement is as follows:

Yesterday the United Steelworkers of America, of which Philip Murray is president and of which I am secretary-treasurer, started a series of negotiations which, in the next 2 weeks will involve the 5 corporate organizations responsible for the production of more than 90 percent of this Nation's basic steel output. I have taken time out from these negotiations to prepare this statement for this committee, because the 600,000 steel workers of the organization which I represent recognize the vital significance of these hearings, not merely to themselves but to the Nation.

I wish only to lay before you certain hard, cold facts, facts within my own knowledge which should be of assistance to you in making your decisions. My remarks deal primarily with the steel workers of this country because these are the men whom I know personally, whose problems I have shared since the inception of their organization, whose lives and work I can describe to you from first-hand contact.

The history of the steelworkers of America ever since the inception of the present threat to our national existence has been one of constant and unstinting sacrifice and devotion to the cause of our Nation. The men working in our steel mills are drawn from a multitude of different national and racial sources. There is a large proportion of immigrants from many countries. There is a large proportion of first-generation Americans of many stocks.

Nevertheless, all these merged in one labor organization have been without exception also merged in one common effort to produce the maximum quantity of steel for victory over the Axis.

I do not know how many of the members of this committee have any personal familiarity with the nature of the work in the mills and with the lives of the men who do that work. It is grueling work. It is, in many instances, nasty work.

In many instances it is extremely dangerous work, as scared bodies and twisted limbs among the members of our organization will easily attest. It is work at which over the years men have been forced to bring up their families, undernourished, living in the shadow of the mills and slag heaps.

For several decades the men in these mills have struggled to achieve organization so that they might improve their working conditions and achieve a better standard of living for themselves and their wives and children. That dream was finally realized by the steelworkers in the last few years when they succeeded in organizing for the first time a stable and strong organization in a position to act for the workers in an overwhelming percentage of the entire industry.

Nevertheless, when in 1941 American labor undertook to forego for the duration any exercise of the strike weapon and to prevent any interference with continued production, the steelworkers' organization with its many racial groups, with its background of struggle, was nevertheless among the first to respond patriotically to the call to place its faith in the hands of the agency which the President then established. In taking their action these men of the mills were buoyed up by the realization that this was a war for freedom and for the maintenance of free institutions. They acted with the full faith and understanding that this was not a war in which any section of the population was to be permitted to secure special benefits, that this was not to be a war in which new millionaires were to be created, or in which existing millionaires were to be permitted to profiteer.

It was this reason that the steelworkers hailed the announcement of the President's seven-point program against inflation. They hailed a program which committed this Nation to the basic democratic principle of equality of sacrifice for victory.

Recently the steelworkers brought to the attention of the War Labor Board the fact that during the past year the cost of living had risen so sharply that a continuation of their current wages constituted a drastic threat to their health and welfare. The War Labor Board told the steelworkers that despite threats to health and welfare, they would have to return to living standards which would deprive them of benefits which they have achieved from their organization not merely this year, but last year. They were, in effect, asked to accept a substantial cut in their real wage levels. The War Labor Board

granted adjustments only to what amounted to preorganizational levels.

The steelworkers have already accepted that determination. They accepted it in the interests of continued and consistent production for victory. The principles of the decision affecting them may now be expected to apply to thousands of American workers.

It is important to note that in determining that principle the War Labor Board relied exclusively on the data relating to the cost of living as of recent months. In arriving at its decision the War Labor Board expressly assumed that the President's program would be effective to control the cost of living. The War Labor Board expressly decided to fix the income of the steelworkers with relation to that assumed cost of living. In accepting the War Labor Board decision the steelworkers carefully considered the entire national picture. They declared, and I am now simply conveying to this committee the words of the representatives of the steelworkers, that:

> The workers now look toward the President and Congress to carry through the remaining portions of the national economic program, such as an effective tax program and a real effective freezing of prices of food, rents, and other items of cost to the people.
>
> We shall watch this phase of the program most carefully. The workers are entitled to know whether their living costs are going to be stabilized, upon which principle the present award of the Board in the Little Steel case has been predicated.

In the tax bill now before this committee, the Treasury Department asked for some 2.5 billion more than the House has granted.

The House has cut out additional revenues which would be derived from acceptance of the corporate-tax levels and the income-tax levels which the Treasury urged, and has refused to eliminate certain loopholes in the present tax structure. Other speakers have addressed themselves and will no doubt address themselves to these features of the bill.

One of the most insidious features of the situation, however, is the suggestion that has been made at various times, that instead of raising the additional needed revenue in accordance with the manner proposed by the Treasury experts, the additional money be raised through a sales tax.

I say to you that anybody who attempts to impose at this time upon this Nation a Federal sales tax would be trifling with the national war effort and would be placing a keg of dynamite under the structure of our national morale.

The steelworkers, as I have pointed out, are engaged in an industry which perhaps more than any other is at the heart of our war-production machinery. They are giving of their sweat, blood, and tears not merely through their sons and brothers sent to the Army but in their daily gruelling work. It is work which cannot be carried on in impaired health or with inadequate nutrition.

Their standards have already been impaired but they have accepted the impairment as a necessity of the war effort. The extent of that impairment has been carefully gaged in the light of expanding living costs. A failure by this committee to adopt a program to raise the needed funds in accordance with the principles of the Treasury's proposals will on the one hand constitute an arrogant slap at the faith of

the workers in the Government's intention to carry through the President's seven-point program. More significant, the adoption of a sales tax would cut deeply into family budgets already slashed far below the danger point.

When I say these things to this committee I am not here simply to state my own views. The simple fact is that the 600,000 steel workers organized in the body which I am privileged to represent are fully aware of the issues placed before this committee. Those issues have been the subject of discussion throughout our membership, just as they have been the subject of comment and discussion throughout the organized labor movement. The problem before this committee is not merely one of dollars and cents. It is one of national faith and confidence. It is one of family budgets and workers' health.

As a problem of workers' health, it is a problem of national war production. An attempt to impose a sales tax will be a vital blow at national war production. An effective tax program which imposes equality of sacrifice with an eye to ability to pay will constitute a long step in the direction of military victory.

Thank you.

The CHAIRMAN. Thank you, Mr. Appelbe.

Mr. Haddock.

STATEMENT OF HOYT S. HADDOCK, REPRESENTING THE CONGRESS OF INDUSTRIAL ORGANIZATIONS MARITIME COMMITTEE

Mr. HADDOCK. The present tax bill, as proposed by the House, falls far short of the requirements of an adequate program in line with the President's seven-point program. As the present bill is constituted it is an open road for inflation and profiteering and negates all possibility of the complete realization of the President's program.

The Congress of Industrial Organizations unions are in the thick of the fight delivering the goods, and "keeping 'em sailing" though hundreds of seamen have lost their lives in so doing.

However, it is their feeling that their sacrifices must also be met with the cooperation and assistance of those at home. They are opposed to those who desire first of all to guarantee their profits and then to win the war. The C. I. O. maritime unions believe, as pointed out by Secretary of the Treasury Morgenthau, that taxation should combat inflation and contribute to national unity at a time when the country is in greater danger than ever before.

We believe that the bill passed by the House is inadequate to meet war needs. The special privilege features of the bill places the heaviest burden upon those least able to bear it. Since the bill does not provide a sufficient amount of money, it has left the way open for the proposal of a sales tax, to which we are unalterably opposed.

We should like to propose that the bill under consideration be strengthened to combat inflation by incorporating to the fullest extent the items of the President's seven-point program.

Securities which are at present tax-exempt should be taxable. We oppose the further lowering of the income tax-exemptions, which would increase the tax load upon the lower paid workers out of all proportion to that placed upon the higher income groups. Joint

income tax returns from husbands and wives should be made mandatory. The $25,000 ceiling on incomes, as proposed by the President, should be incorporated in the bill, as should the Treasury proposal for corporation taxes.

The C. I. O. maritime unions are in support of the C. I. O. tax proposals and urge this committee to adopt such proposals in order to further our war effort and provide a stable war economy in our Nation.

Thank you.

The CHAIRMAN. Thank you very much for your appearance.

Mr. Nixon.

STATEMENT OF RUSS NIXON, REPRESENTING THE UNITED ELECTRICAL, RADIO, AND MACHINE WORKERS OF AMERICA, CONGRESS OF INDUSTRIAL ORGANIZATIONS

Mr. NIXON. At the outset, I must indicate that I am appearing before you not as a tax expert, but rather to indicate the views of approximately 425,000 war workers in the electrical, radio and machine industry who also are not tax experts but who do have a vital interest in the tax bill. These workers, organized into the United Electrical, Radio and Machine Workers of the C. I. O., include the employees of such outstanding war production organizations as the General Electric Co., the Westinghouse Electric Co., the Electrical Divisions of the General Motors Corporation, R. C. A., Philco, Colt Fire Arms, and more than 800 other companies and plants. I am presenting this statement under the mandate of these workers which arises from action on the tax issue taken at our last annual convention, from the action taken by the general executive board of the international union and by resolutions adopted throughout the country in hundreds of U. E. local and district membership meetings.

The workers I represent are engaged in the manufacture of ship propulsion machinery, machine guns, propellers, shells, military radio equipment, bomb sights, bombs, antiaircraft guns, and so forth. They are expanding every energy to increase the production of these war items. Approximately 30,000 of our membership have laid down their tools and taken their place in the armed forces of the country. Better than 90 percent of the more than 200,000 U. E. workers in General Electric, Westinghouse, and General Motors are voluntarily checking off 10 percent of their weekly pay for the purchase of war bonds. This is true of practically our entire membership. The U. E. leads the country in the effective development of joint labor-management production councils, having had more than 50 of these councils in operation prior to Donald Nelson's request for their organization throughout the land. There has been virtually 100 percent compliance with the pledge of uninterrupted war production on the part of all these workers since Pearl Harbor. All the energies, thoughts, and efforts of this union are directed to the successful prosecution of an all-out war effort to defeat the Fascist enemies of the American people.

This is the background with which the U. E. approaches the problems of the 1942 revenue bill. The interest of these workers in the

tax issue is simply: How can we make the 1942 tax bill the strongest instrument for victory?

The tax bill must take its place as point No. 1 in the President's seven-point program—the national war economic policy. In this program, which is vital to the war effort, it is significant that the President placed as the first of the seven points the question of taxation. The President's conception of what is required of the tax bill is implied in his specific proposal that income tax schedules should be so increased that "no American citizen ought to have a net income after he had paid his taxes of more than $25,000 a year." An approach of similar degree is clearly indicated in the President's program insofar as corporation profits and tax loophole issues are concerned if the tax part of the President's seven-point program is to be carried out.

This union was the first large organization in the country to announce its unequivocal support of the President's seven-point program. We declared this support the day after the President's message to Congress. This union accepted the wage stabilization plank of the President's seven-point program. It urges complete price control and a thorough rationing program and is taking practical steps throughout the country to put these proposals into practice. The extensive practical cooperation of this union with the bond purchase program has already been indicated. Each of the points of the program has the active support of my union. We consider that as the President has said, this program is "indivisible"—that "each one of these points is dependent on the other if the whole program is to work."

Thus we feel that to play its proper, vital role in the President's seven-point program the provisions of the 1942 tax bill must keep step with the gigantic proportions of the world struggle in which we are engaged. I should like to indicate the views of the workers I represent on this question of how we can make the tax bill the strongest possible weapon for victory.

The first requirement is that the tax bill must raise a volume of revenue which is in proper proportion to the financial burden imposed by the war. Its adequacy must be measured in light of the fact that $77,000,000,000 will be spent for war purposes in the fiscal year covered by this bill. The increase in revenue raised by this measure must be evaluated with the knowledge that war expenditure in the ensuing fiscal year will increase $45,000,000,000, and that the proportion of the national income going to the war will increase from 14 percent in 1941 to 50 percent in 1943.

While the country plans increased expenditures of $45,000,000,000 the House Ways and Means Committee plans a tax bill that will increase the revenue by $6,300,000,000. For the year that we will spend $77,000,000,000, the House Ways and Means bill proposes to raise revenue approximating $24,000,000,000. The conclusion is inescapable that the increase in total revenue contemplated by the House Ways and Means bill is woefully inadequate. The Secretary of the Treasury has stated that the tax bill should increase revenue at least 2½ billion dollars more than is provided for by the House bill. We propose that the tax revenue should be increased at least $10,000,000,000,

giving a total revenue yield of at least $28,000,000,000 and increasing the revenue that would be raised by the House bill at least $4,000,000,000.

Failure to make such an increase in the tax bill will mean that our tax program is not in tune with our war program. It would create a weak link in the vital chain of all-out war economic policy.

Secondly, a tax bill that is truly an instrument for victory must be a most powerful weapon against inflation. The tax bill must be one of the principal means of diverting the swollen streams of income from exerting inflationary pressure upon dwindling consumer products which diminish in volume as 50 percent of our national income goes to the war. To do this job, taxation must be levied upon those categories of income receiving swollen war income.

Estimates of the Office of Price Administration have revealed that of the approximately $16,000,000,000 increase in consumer income in 1942, about $11,000,000,000 goes to families having—in the year—an income of between $2,500 and $10,000, while a $6,000,000,000 increase goes to families receiving $10,000 and over in 1942. According to these estimates, the income category of families receiving less than $2,500 in 1942 does not represent any of the $16,000,000,000 increase in consumer income, total income in this category actually being $1,000,000,000 less in 1942 than in 1941. The obvious conclusion to be drawn is that as an anti-inflationary measure the 1942 tax bill must place the principal burden upon family units receiving more than $2,500 a year.

Swollen incomes flow also into the coffers of American corporations. Great volumes of incomes, both corporate and private, escape the full effects of taxation through serious loopholes in the tax structure. If the tax bill is to play its full role in the President's program against inflation, the tax on incomes above $2,500 must be considerably increased above the provisions of the House bill, and the very serious loopholes ignored by the House measure must be closed by forthright action of the Senate.

A real victory tax measure must apportion the burdens of the war in such a way as to maintain to the fullest possible extent the full efficiency of America's working force engaged in the production of the weapons of war. In the interests of the war it is imperative that the full productive capacity of American workers not be reduced.

It should be clear that in making this point I am not referring to any question of equality of sacrifice. I am referring, rather, to the obvious fact that in a "war of production," the health and efficiency of war workers is a positive war asset.

It is conceivable that we might reach a national condition where it would be necessary to say to workers "The Nation cannot afford to give you enough to eat and an adequate place to live, even though this may hurt the war effort by reducing your output of guns, shells, bombs, etc." Obviously, such a circumstance could arise only as a last resort. In an all-out war effort, it would not come about unless there was an unavoidable over-all national shortage of the goods that make up a basic standard of living. More than that, in an all-out war effort such a disabling development would not be experienced by workers unless all other nonwar production citizens had already reduced their consumption.

To put it in another way, in an all-out war effort we would not say to a worker in a machine-gun factory, "You cannot have enough food to eat," unless we had already said to idle rich Mr. and Mrs. Gotrocks, "You must reduce your consumption of food to a level determined with reference to your contribution to the war effort."

I do not see how anyone supporting the all-out war effort can disagree with the above proposition. The tax program in conjunction with rationing and other points of the President's program must seek to distribute the burden of the war along the above lines.

The point just made implies some "minimum efficiency level" of income. While it is true that no one knows, to the last decimal for every community and every line of work, the exact figure for this level, sufficient data and sufficient practical experience is on the record to make possible a very good approximation. You may put it at $2,400 per year which is the so-called Heller committee budget for a workers' family of five, priced at January 1942 prices, or at about $2,000 per year which is the lowest and most conservative estimate we have been able to find by any nonunion authority, for a married couple with no children. Whatever basis you care to use, the level is going to be around $2,000–$2,200–$2,400 for the average family. For the single man without dependants, the same level runs perhaps $750 or perhaps a full $1,000 lower. It must be recognized that approximately 70 percent of the family units in the country will receive an income in 1942 that is below $2,500. It is well known by this committee that incomes below this level not only pay individual income taxes but also pay an unusually large proportion of their income in total direct and indirect taxes.

The above observations have obvious implications for a win-the-war tax program. They indicate first, that the tax levies, especially of the victory tax bill, must not fall upon worker families whose income is already scarcely adequate to maintain health and efficiency. Income taxes levied upon individuals receiving $500 a year or upon a man and wife whose income is $1,200, can have no other effect than to further depress already substandard living conditions. The very special impact of rising living costs and shortage of goods upon families in these low income levels must be recognized. For this reason the lowered exemptions provided for in the House bill should be abolished. Indeed, the logic of the situation calls for raising the exemptions above even the present provisions of the law.

The proper distribution of the war burden underscores the necessity of levying taxes according to the ability to pay. The imposition of the general sales tax violates this principle. The general sales tax would levy the tax burden in an inverse ratio to a person's wealth. Such tax completely ignores the necessity, in the interest of the war of maintaining the health efficiency—yes; even of increasing, in some cases, the health and efficiency of the American working force. It must be recognized, also, that there is no immediate revenue raising function to be played by the general sales tax which cannot be achieved by adjustment in individual income-tax rates. Today as never before, the productive capacity of the American workers is our greatest asset. The 1942 tax bill, if it would serve the war effort, must build, rather than undermine, this productive capacity.

If the 1942 tax bill is to be an instrument for victory in this war its provisions must be such as to establish the bona fides of a people's war. Our convictions that we are engaged in a people's war, that this is, in the words of the Vice President, "the century of the common man," are tested and find their true meaning in the actual results and deliberations such as yours on the tax bill, where actual decisions of policy are made. I refer not so much to the possible demoralizing effects of the failure to take proper action on the tax bill as to the positive opportunity presented to you to make a genuine contribution to the morale and enthusiasm of the people through a vigorous, enlightened progressive action on the issues of this measure.

In considering the 1942 tax bill the Congress must choose in a general way between a set of proposals supported by labor, consumer, and other progressive groups on the one hand and a set of proposals supported by great corporate and special interests, by the great agencies of big business such as the United States Chamber of Commerce and the National Association of Manufacturers. That you face such a general choice cannot be denied. The working people of the country recognize this great general issue involved in the tax deliberations. It must be clear to everyone that the choice you make is of utmost importance to the morale of the American common man in these days.

I am not here to request a sop for labor or to ask for a mere gesture which would stimulate morale. I would urge rather that this measure be approached with a full realization that the people of this country really believe this is a people's war and to them that means in terms of the tax bill that their elected representatives will not be swayed by the powerful lobbies of corporate interests but will move ahead to abolish the special privileges of the rich and make sure that individuals and corporations do not grow rich from the Nation's time of trouble and difficulty.

To the hundreds of thousands of war workers for whom I speak these are the methods by which the 1942 tax bill can be made an instrument for victory. Thus far I have not discussed detailed proposals. I have full confidence in the knowledge and ability of this distinguished committee to solve the complications and details of tax legislation required to meet provisions I have set forth. The experts in the United States Treasury, men who, with extensive research staffs, spend their full time studying tax legislation are available to you. Indeed, they have already proposed the specific means of substantially increasing the revenue of the bill and of correcting the intolerable loopholes contained in the Ways and Means Committee measure. I do not presume to be a substitute for their full and expert knowledge in this respect. I am sure that Mr. Randolph Paul could render upon request all the assistance necessary to formulate changes in the tax bill which would increase its revenue raising qualities $10,000,000,000 without adding a sales tax. Let me summarize, however, the specific lines upon which we base a proposition to revise the House bill.

1. Increases in individual income-tax rates, particularly at the range above $3,000 should be made. The House bill revised downward the levies proposed by the Treasury for incomes above $3,000. Not only should these rates be increased in the middle-income brackets even above the Treasury proposals, but in addition the income

tax rates should put into effect the President's proposal that no individual shall have an income after taxes, of greater than $25,000. In respect to this last point I would urge you to recognize that the workers of this country are particularly interested in this proposal. They all know about it, they all took it seriously. In a sense it is the touchstone of the common man's conception of the tax bill. It will be a most regrettable situation if this proposal of the President is utterly ignored by the Senate as it was by the House.

2. The definition of excess profits and the schedule of corporate taxes must be formulated so as to considerably increase the revenue from this source and so as to eliminate the high rate of return on invested capital employed in the production of war goods. The present definition of excess profits utterly fails to meet the requirement of eliminating war profiteering. It is entirely unjustifiable, even though the semimonopoly position of the General Motors Corporation may have allowed it to earn 20 percent on its investment in past years—that this corporation should be able to claim as normal profits $20 out of each $100 it receives from the Government for the manufacture of tanks, machine guns, propellers, and so forth. The base and surtax corporate rate should be increased to the original Treasury proposal of 55 percent, and a full 100-percent levy should be put on properly defined excess profits.

3. The protection of special privileges under the tax system through various loopholes should be ended. I refer to the well-known issues of the mandatory joint income-tax returns for husband and wife, of tax-exempt securities, and of percentage depletion allowances. I include the Treasury suggestions to increase estate and gift taxes. The Secretary of the Treasury and his experts have already discussed these matters with you at length. I am sure that the members of this committee have heard all of the arguments pro and con on each of these issues. I shall not burden the committee by repeating these arguments.

As a representative of labor, however, I would urge upon you the special significance of these issues at this time. In the first place proper action on these matters would increase the revenue of the tax bill by almost $1,200,000,000. This fact alone should lead you to search diligently for the ways and means of closing these loopholes and taking in this revenue.

I am aware that complications in each of those issues may be found. I am aware that with regard to each of these matters there are powerful groups which, feeling that their special advantage may be lost, have developed powerful lobbies with respect to each individual proposal. It is the considered judgment of my organization, however, that the situation demands a statesmanship in tax legislation which would not seek for rationalizations and reasons not to close these loopholes, but would rather proceed with the doubtless difficult task of adopting provisions to eliminate these special privileges and bring to the war effort the considerable added revenue which would result. The elimination of these special privileges looms above all other considerations, if this committee is to establish the bona fides of a people's war by making the 1942 revenue bill a true instrument for victory.

In conclusion, let me say I realize that much I have said to you is old stuff—you have heard it over and over again. There is a new element which should be considered this year, however. Today, as never before, the workers of this country are conscious of the issues presented by tax legislation. They are watching you as you deliberate over these matters. Their publications have discussed the tax bill for many months. Taxation has been a subject of discussion and resolutions throughout the entire labor movement, including the A. F. of L. and the Railroad Brotherhoods, as well as the C. I. O. While not being tax experts, the workers are watching your actions in regard to raising the needed revenue for the war, taxing large incomes of corporations and wealthy individuals, and closing loopholes. Your action of yesterday in refusing to close the loopholes provided by separate income tax returns and through ownership of tax-exempt securities will be discussed by, and become the knowledge of, 11,000,000 disappointed workers in the country.

I urge you to reconsider this action. I urge you to approach the other issues in this legislation along the lines I have indicated. Should you do so you may be sure millions of workers in this country will find gratification and encouragement in the knowledge that you have made the 1942 revenue bill a strong instrument for victory.

The CHAIRMAN. All right, Mr. Nixon, thank you for your appearance here.

We will hear one additional witness before recessing.

Miss Eleanor Fowler.

Mrs. KATZ. I am Mrs. Katz. I am appearing in Miss Fowler's place.

The CHAIRMAN. You are appearing for Miss Fowler?

Mrs. KATZ. Yes.

The CHAIRMAN. Very well, you may proceed.

STATEMENT OF MRS. JULIA KATZ, REPRESENTING THE CONGRESS OF INDUSTRIAL ORGANIZATIONS WOMEN'S AUXILIARY

Mrs. KATZ. I am appearing here as the national director of the Congress of Women's Auxiliary, C. I. O. We are the organization of the wives of C. I. O. members in all of the unions of the C. I. O. and in all of the industries in war production in almost all parts of the country. I came here this morning direct from Wheeling, W. Va., where I was attending the third annual conference of the West Virginia Council of Women's Auxiliaries. The women assembled there asked me to bring back to this committee the following message:

We miner's wives of West Virginia want to win the war. We are giving everything we have to help win the war. We are sending our boys into the Army and we tell them to fight hard and beat Hitler. We know that they are fighting hard. They are tough coal miners' sons, and they are afraid of no one. But they have got to have the guns and bullets and tanks and planes to fight with. We want the Congress of the United States to give them the materials they need to smash the Axis and the Japs. We want them to have all the materials they need, not just some of them. If you take two and one-half billion dollars off the tax bill, you take so many guns and bullets out of the hands of our sons on the battlefields.

We miners' wives see our husbands go down into the mines and they are working harder than ever digging coal for industry. In our State this year many miners were killed and our auxiliary sisters widowed by mine disasters while digging

coal to win the war. The Government nutrition program tells us we must feed them nutritious food to keep them strong to work for victory. Well, you cannot buy good nutrition in the company store on miners' pay now, and if you put a sales tax on, or put taxes on those who make too little now to get by on, you are going to have less coal, because our men will not have the strength to dig and haul it.

We try to keep our children so the war will not hurt them more than we can help. Our homes are not fit, we do not have money to feed and clothe and buy their books. We don't have money for doctors when they are sick. Our wages have to pay off old debts, too. If you put a sales tax on, you tax our children's health.

We miners' wives think that President Roosevelt is right. We know we could live pretty well on $25,000 a year. We think that those who have more and those who are making profits in this war should pay everything over what they need to live on, just as we are doing, to buy victory for our country. If Hitler wins their money will be lost; if we have to sacrifice our health and energy, we will not be able to produce for victory, and it will cost everybody the freedom and liberty for which our boys are dying today.

We miners' wives ask you to pass a tax bill that will give everything that America has to give to the war program and that will keep the workers strong enough to work and fight and give to victory.

This message comes from a group of women who, in spite of every obstacle to effective patriotism, are daily demonstrating their loyalty and self-sacrifice. We feel it warrants your most serious consideration. Their sentiments are shared and perhaps better expressed by similar groups of workers' wives related to unions in all the fields of war production. I thought that this particular statement would be most effective, because it comes from precisely that group of women who have given more under worse obstacles to the civilian defense effort, to the war effort, to the war relief effort in their community than almost any other group.

The Congress of Women's Auxiliaries of the C. I. O. to which these women are affiliated embraces the organized wives of C. I. O. members in every industry and in all parts of the country. As Americans and as women we have pledged our organization to the single aim of helping to win the war. In addition to all the tasks and sacrifices which we share with other women in the Nation, we have the additional responsibility of keeping our men strong enough to work, fight, and give to victory. In one month of this year—and this is the finding of the Gallup Poll—3,200,000 workdays were lost to war production because of absenteeism due to illness. In this length of time we could have built 3,200 light tanks, 448 medium bombers, or 2 heavy cruisers. Dr. Victor Heiser, who is the medical consultant to the National Manufacturers Association, states that only 10 percent of all absenteeism due to illness has its cause in industrial hazards. Ninety percent of the time lost in our war-production program results from a combination of factors, including poor housing, medical attention, and malnutrition. The President's Nutrition Conference held last May found that "malnutrition is more prevalent among families in low-income classes than those in high." It included in its recommendation for combatting widespread malnutrition, which threatens to create a production lag, that "as a defense against malnutrition the tax burden on the lower income groups should be decreased. No taxes should be levied on incomes insufficient to provide an adequate family diet. Sales and other excise taxes on food and other necessities of life should be eliminated."

Those are the findings of a conference called by the President of the United States in May 1941. Its 900 delegates consisted largely of

manufacturers' groups, of experts in various fields of health and nutrition, of representatives of Government services, and of industries concerned with the problem, and it does not represent labor's point of view unsupported by objective facts.

Recently a study made by the National Research Council warned that a serious production lag may occur because the means are lacking whereby workers in war production may replenish the energy expended in our present and ever-increasing production pace. Our national organization has enlisted the participation of our thousands of members throughout the country in the Government's battle against malnutrition. As workers' wives it is our most direct contribution to maintaining uninterrupted production. The enactment of increased taxation on low-income groups either by drastically lowered exemptions or by a sales tax will cripple our earnest efforts and will take its toll in increased absenteeism.

Mr. Morgenthau has asked for self-denial in the enactment of tax legislation. We assure you, gentlemen, that we are ready for all self-denial that is not also the denial of our strength and efforts toward winning the war.

The Congress of Women's Auxiliaries for these reasons gives its wholehearted endorsement to the tax program of the C. I. O. Included in that tax program is the provision for joint income-tax returns for married couples. Our organization has, since long before Pearl Harbor, enjoyed a program of unified effort with all other patriotic women's organizations in a program for victory. We cannot, however, agree with the contention that a joint income-tax requirement is in any way a violation of the rights of women. The absence of such a requirement now offers a special privilege to both husbands and wives in upper income brackets. Its enactment would restore to the Government money needed for the war effort, from both husbands and wives with high personal income. It would remove a discrepancy between the taxation of low income families and high-income families.

The CHAIRMAN. I thank you very much for your appearance.

The committee will recess until 2 o'clock. We will have a rather full afternoon, but I think we can finish this afternoon.

(Whereupon, at the hour of 12:10 p. m., the committee recessed to 2 p. m., of the same day.)

AFTERNOON SESSION

(Whereupon, at 2 p. m., the committee met, pursuant to recess.)

The CHAIRMAN. Mr. Royal Little.

Mr. LITTLE. Yes, sir.

The CHAIRMAN. You may take that chair, if you prefer to.

STATEMENT OF ROYAL LITTLE, PRESIDENT, ATLANTIC RAYON CORPORATION, PROVIDENCE, R. I.

Mr. LITTLE. My name is Royal Little, president, Atlantic Rayon Corporation, Providence, R. I.

I am making this appearance as an individual as well as a corporate taxpayer, and before making any general statements in regard to the House bill, I would like to make a few specific comments on some of the detailed provisions.

On section 108, the taxable period embracing years with different laws——

The CHAIRMAN. Do you prefer to stand?

Mr. LITTLE. Yes, sir.

The CHAIRMAN. You prefer to stand?

Mr. LITTLE. Yes, sir.

The CHAIRMAN. I hope you gentlemen will note these specific recommendations that are made.

Mr. LITTLE. If you analyze the effect of this provision you must agree that it is unfair and opportunistic in nature.

This change from fiscal to a calendar year basis will not, over a period of years, bring in 1 cent more revenue than the present basis. It merely brings taxes in sooner.

When the war is over and taxes are reduced, the fiscal year corporations will have to pay war rates for a longer period. In addition, these examples show how unfair this change would be to many companies. One company in which I am interested, we estimated early in our fiscal year, based on business booked and the tax rates in effect last year, that in our fiscal year ending in September 1942, we would have sufficient earnings after taxes to be safe in spending an extra $200,000 for productive equipment to increase our war production. It happens that this is a weaving mill. We bought the looms. They have been installed and now the bills are payable for these looms but under the new tax law we will be required to set aside an extra $150,000 in taxes.

In other words, it appears that we have spent our earnings twice. What can we do? What shall we use for money to pay these unplanned taxes? There is a mortgage already on the plant and equipment, and we cannot borrow more. Why should we be penalized for acting in good faith to expedite war production, and then have the rules changed retroactively?

In another company our fiscal year ended June 30. Our board declared dividends—approximately all of our earnings based on last year's tax bill. We have no additional surplus from which to declare dividends in excess——

The CHAIRMAN. Did you pay out the dividends?

Mr. LITTLE. We actually paid out the dividends.

The CHAIRMAN. You actually paid out the dividends?

Mr. LITTLE. But we had no surplus in addition from which to pay more than the current year's earnings. If we are forced to pay taxes on the new basis for the first 6 months of this year, our directors will have been guilty of declaring dividends out of capital—a direct violation of the law of the State in which we are incorporated. We, as directors, have acted in good faith. Why should you subject us to possible shareholder suits and fines by retroactively changing the rules after the game is over?

There must be thousands of other cases of corporations which have bona fide commitments to spend money made before the proposed change.

I suggest, therefore, to remedy this situation that section 108 be removed and the following provision be substituted:

Corporations shall not be permitted to change their fiscal year for tax purposes if by doing so, in the opinion of the Collector of Internal Revenue, such corporations' current or future rate of tax will be reduced.

I would like to reiterate on that point that if you follow that through, you can easily see that you will not, in the long run, get any more money in taxes by changing back to a calendar year. You only move forward the date that we have to pay our taxes, so long as you do not permit us to change our fiscal year basis.

The CHAIRMAN. Well, this is a nonrecurring gain, anyway, if there is a gain, to the Treasury. It only happens one time. It is not like a change in rate that runs right on through your tax. It is a nonrecurring gain or loss and, as you say, if you assume the taxpayer is going to remain in business and taxes are going to shift from year to year, it is practically as long as it is broad.

Mr. LITTLE. The taxpayer ultimately has to pay the tax.

The CHAIRMAN. The strongest reason, Mr. Little, that appeals to me in support of it is this: That earnings may be higher this year than in any subsequent year unless it should be next year, and that taxpayers simply will not have the money even if there is a gradual decline in the rates, they won't be earning the same, and the other one, there is a competitive advantage in favor of the fiscal year man where he has a large part of his fiscal year in 1941, he has this other competitive advantage over his competitor who is on a calendar year paying at the higher rates on maybe peak earnings.

Mr. LITTLE. That advantage will be taken away on the tail end of whatever we are in now.

The CHAIRMAN. That is true.

Mr. LITTLE. It will equalize.

The CHAIRMAN. That is true, if earnings remain high it would be washed out, I would say. The thing that appeals to me is that it is a nonrecurring loss or gain to the Treasury. It is a one-time transaction. My mind is open on it, and I want to hear from the joint staff on it.

Mr. LITTLE. It does work a great hardship in many cases, though, where we have already spent our money or used it somewhere else.

The CHAIRMAN. And I suppose you have never selected the fiscal year with any thought of taxes?

Mr. LITTLE. The corporation I have quoted here has always had this fiscal year. One of them has been in business for about 90 years.

The CHAIRMAN. So it couldn't have been selected with any purpose of avoiding taxes?

Mr. LITTLE. No. And my suggestion here at the tail end would prevent corporations in the future from moving ahead or back to gain a tax advantage.

The CHAIRMAN. In other words, putting the discretion in the Commission to allow or disallow the change from one year to another?

Mr. LITTLE. Yes.

The CHAIRMAN. Thank you very much on that point.

Mr. LITTLE. The next point—there has been some discussion, and I haven't had a chance to go through the bill on it to see whether there is anything in the bill, but I would like to get this across because I think it is important, on possible tax inducement to buy bonds which I understand has been discussed by the committee.

The CHAIRMAN. I want to say to you that there isn't anything in this bill now.

Mr. LITTLE. While I am here, could I state this much: To offer tax deductions to the extent of bond purchases would be most unfair. As examples: The large corporations who have millions in surplus cash available today, these companies may, under the new law, pay as much as 90 percent of their top earnings in taxes. If they could use surplus cash to buy war bonds and get tax deductions, they would, in effect, be buying United States bonds at 10 cents on the dollar, and if the bonds carried a 2-percent rate, the Government would be paying 20-percent interest for its money. This would be grossly unfair to companies using all their available funds for war purposes and being unable to put funds into bonds. Also I doubt if Uncle Sam's credit has yet sunk to the point of paying 20 percent for money.

Then my own case. I happen to have $10,000 in cash that I have saved up. If you put such a bond inducement idea in the law, I could buy them on a basis of 50 cents on the dollar, while the working people in my plants have to buy them at par. There are many cases where people who have got cash in hand could take advantage of that to the disadvantage of those who are paying it out of earnings.

The CHAIRMAN. There is no provision in the bill looking in that direction. The nearest approach to it is the suggestion that there be a post-war credit as against the high excess profits.

Mr. LITTLE. As far as the individual tax rates are concerned, I don't think they are high enough. I would like to take a couple of specific examples again.

The CHAIRMAN. Are you speaking of the individual——

Mr. LITTLE. The individual tax rates. We have a man—I will call him Bill—who works in our dyehouse. For 5 years before the war his average pay was $1,140. It happens that due to short time we have had to pay high rates to hold the men in those departments. His average hours had been 24 per week before the war. If you take that $1,140 base that he earned before and adjust it by 15 percent to increase it to a new base for a higher cost of living under present conditions, you get a figure of $1,320, but today, when we are busy working 48 hours a week at the same high rates, he will earn this year, at the rate we are going, $2,970 approximately. So, deducting from that the $1,320 adjusted 5-year basis, it leaves him $1,650 more than his 5-year average after adjusting for the higher cost of living. Under the tax proposals, he would only have to pay $260, or 15.7 percent of this clear excess income.

In my opinion many workers of this class could easily pay at least half of this excess income over what they had previously earned and what they had supported families on, and in his case, instead of paying $260, he would then pay $825, and still be better off than he had ever been before.

Another very interesting case is that of our chauffeur. When it looked as though we were going to have to prepare for even higher taxes than you now propose, my wife and myself decided that we

would let the chauffeur go and get him work in a war plant. We didn't like the idea of keeping a man just chauffeuring when he could be doing mechanical work.

We used to pay him $1,800 a year, buy his uniform, and pay his phone bill, and a lot of other expenses. He has two children and a wife, so he paid no income tax. He is a good mechanic, he is working long hours today. He is making from his new job at the rate of $4,525 a year. We also put our cars up, and we pay him a retainer of $1,200 a year to look out for our cars, so that he is getting $5,725 a year today. Now, if you make the same application there and add $270 for increase in the cost of living, bringing him up to $2,070, you still see that he is receiving at the rate of $3,655 more per year than he ever received before.

Under the new proposed bill he would be taxed $759.50. Again I don't think that is enough.

There must be at least 10,000,000 war workers whose true realized income after adjustments for higher cost of living is far greater than it has ever been before and under the proposed law the Government is not recapturing nearly enough of that excess.

For example, if there are 10,000,000 workers and if my contention is correct, and you could obtain, without hardship to them, an extra $500 apiece per year over and above the proposed rates, that would amount to $5,000,000,000 in the aggregate.

Senator VANDENBERG. How would you do that without penalizing the chap who hasn't had any such bonanza except as you applied the excess profits tax theory to individual incomes?

Mr. LITTLE. I admit that is going to be a hard one, except as there might be some increases in the white-collar man who has a standard of living that has not been so much distorted but there is a tremendous source of revenue that is being untapped right there that I don't think can be overlooked.

Senator VANDENBERG. If you applied the excess profits theory to individual incomes, you would achieve your purpose, wouldn't you?

Mr. LITTLE. That is correct. I would like to come back to myself again. My net income, taxable income this year, after deductions, will be something in excess of $20,000. Under the proposed tax law——

The CHAIRMAN. You are under the $25,000.

Mr. LITTLE. This is gross. Under the proposed tax law you only propose to take $7,000 of that. That is too damn little. I think I ought to pay nearer twice that amount, and I think I can. I think that there are probably pretty close to 150,000 people like me in the country.

Senator VANDENBERG. We ought to put a statue of you in the Statuary Hall.

The CHAIRMAN. What did you say your gross would be?

Mr. LITTLE. Well, the net taxable, subject to taxes, would be slightly over $20,000.

The CHAIRMAN. Slightly over $20,000?

Mr. LITTLE. Yes. Now, if you can get another $7,500 out of me and 150,000 people like me, there is another billion dollars for you.

The CHAIRMAN. If we can get it out of them whether they are like you or not, it would be fine.

Mr. LITTLE. I would just like to ask this hypothetical question: Why, under present conditions, should I be permitted to retain for myself more than, let's say, a colonel in the Army, who has approximately the same financial and personnel responsibilities that I have? If I left my job and went in the Army, I doubt, in the first place, if I could get a colonel's commission, but if I did, I don't see why running war plants, as I do, I should make substantially more than I would, and have left over for myself substantially more than if I were in the service.

Other industrialists may not agree.

Now, on the question of individual taxes, I would like to suggest much higher surtax rates throughout. In addition, I suggest stiff withholding taxes at the source. They should begin at low rates in nearby months and be stepped up monthly until by the end of 1943 the following maximum rates are reached: 10 percent gross income tax at source on all salaries, wages, commissions, professional income, entrepreneural withdrawals and other earned income, and 20 percent gross tax at the source on all dividends, interest, royalties and other return on invested capital.

The CHAIRMAN. That is, as an additional tax or to be credited against——

Mr. LITTLE. The simplest way is to take that off and only consider what you actually get as your income to report for tax purposes. It would save a tremendous amount of bookkeeping if it is done as a withholding tax which is paid over by the corporation and others who pay the money, as dividends or interest or wages or salaries are paid, have the deduction in bulk and have the individuals report only what they receive. Otherwise you get into tremendously complicated computations, and I see in the act there is a provision for a withholding tax which, in effect, is just an advance payment, and the way that is set up would probably take an extra hundred thousand people as bookkeepers that ought to be producing war goods. I think it is much too complicated.

The CHAIRMAN. Your suggestion would eliminate all that accounting on the part of the employee?

Mr. LITTLE. It wouldn't eliminate all of it, but it would greatly simplify it. The way it is worked out now, each corporation would have to be, in effect, a collector of internal revenue, and you would have to put everybody through the same questions to get them to determine their dependents and everything else.

Senator DAVIS. What additional cost would there be to the corporation that is collecting the taxes?

Mr. LITTLE. Do you mean if it were done on just a bulk basis?

Senator DAVIS. What would be the cost of collecting it at the source?

Mr. LITTLE. It would be infinitesimal in relation to the money collected. It is hard to express it in dollars and cents, but I doubt in our own case whether it would cost us more than two or three thousand dollars a year to collect what I have suggested than it does to handle it as at present, but under the proposal here, it is going to tie so many people up in nonproductive work and we need them to work. It is hard to find people to work and turn stuff out.

The CHAIRMAN. It looks like your suggestion on that point has a good deal of merit. I hope the staff representatives will note it so that we may give it further consideration.

Mr. LITTLE. I would also like to recommend a 10-percent retail sales tax on top of everything else. You will catch a lot more taxes there. Under present conditions, I don't think any source of revenue should be overlooked.

You probably wonder what the nigger in the wood pile is here, so now about corporation taxes.

The CHAIRMAN. We are waiting to see.

Mr. LITTLE. We must understand that corporation income as normally determined is not realized income. Corporation earnings are largely on inventory, receivables, equipment, and assets other than cash. It is for this reason that corporation taxes beyond a point are either uncollectible, or, if collected, will cause the forced liquidation of corporation assets and seriously restrict the company's volume of sales and ability to produce.

I believe that the rates of corporation taxes proposed in this bill will seriously jeopardize the war effort. It will hinder the rapid expansion of production and sales so urgently needed. Except in the case of the most wealthy corporations whose credit and facilities are approximately limitless, it will force the future concentration of Government contracts in these wealthy companies and reduce the work to be done by small concerns and by companies like my own where future credit cannot be obtained due to our inability, under proposed tax laws, to repay bank loans out of earnings.

In order to emphasize this condition, I am going to pass out copies, if I may, of our two companies' balance sheets. There is one small sheet inside—I will wait until those are passed out.

There is a large one which is the parent company—Atlantic Rayon Corporation—a small one which is a subsidiary, recently started to make parachutes, human escape chutes for the Air Corps.

The procurement requirements of the Air Corps have increased so tremendously on that particular item that we started a plant to make parachutes and the parent company put $100,000 into the Atlantic Parachute Co. in order to finance the purchase of the machinery required.

We have received a $3,000,000 subcontract from an established parachute manufacturer who is showing us how to make chutes, to make the human escape chutes for the Air Corps. After having installed our machinery, we spent nearly 2 months trying to finance this business.

As a subcontractor we were not eligible for Government advances, and most banks felt it too great a gamble for them to finance our inventory requirements and starting up losses in view of the proposed tax law.

If the corporation tax rate had not averaged over 50 percent of total earnings, we could have arranged financing in an hour, and we could have spent the balance of this 2 months producing chutes instead of trying to arrange credit.

Until our bank loans were finally arranged, the suppliers of over a million dollars' worth of parts and equipment which we have to use in making the chutes would not make shipments.

When we finally obtained bank credit, it was only on the basis of Atlantic Rayon Corporation, and all the officers of the parachute corporation subordinating all the salaries and administrative expenses of the parachute company to the banks.

In other words, the general manager of the plant who puts in 12 hours daily 6 days a week is not receiving one red cent in salary for running this job and cannot be paid until the loans are retired.

Fortunately, this man is patriotic enough to devote his full time to the job on this basis, and we are already shipping substantial quantities to the Air Corps, although the plant was not put into operation until May 1 of this year.

If we ever pay off our loans, I imagine the Federal tax collector may have something to say about getting his before our administrative expenses and salaries can be paid in cash.

In other words, with a new corporation of this sort going into a war industry, we are now in a position where I seriously doubt whether we will ever get even our original hundred thousand dollars back out of the company. We have gone into a new business which has required machinery which we cannot use after the war. We have lost, in the first 6 months, including our starting up expenses and training our people, $174,000. We have got to make that up first, and it just shows, under a proposed law of this sort, how impossible it is for anyone to be successful in a new undertaking on a war industry, and it also shows why practically no businessman today would dare risk new capital in a venture of this sort, because the chances of ever getting even his capital back are so slim.

I cannot emphasize too strongly to you that through the corporation-tax provisions of this bill, you are driving more and more war business into the control of wealthy corporations and making it practically impossible for small concerns to finance Government work, even if they are fortunate enough to get it.

You are all familiar with the fact that direct Government advances on war work are no longer made against new contracts. In its place are substituted so-called "V" loans under which the banks assume 10 percent of the risk, but even with that limited risk, the banks would rather earn a lower rate on a sure thing—meaning lending big companies at a lower rate—than to take a hundred to one shot on a small war contractor strangled with this tax bill.

I, therefore, suggest the following simplification of the corporate-tax structure to replace all types of proposed corporation taxes:

1. A flat 50-percent over-all rate on all corporate taxable net income. This rate would produce, in itself, large revenue.

2. Twenty-percent tax at source on all dividends, interest, and so forth, paid by corporations as previously proposed under the individual taxes. Obviously, if the earnings have come out into cash and are available for distribution to stockholders and bondholders, this tax would not jeopardize corporation credit.

3. Change section 102 for unjust accumulation of surplus. Make the effective rate 95 percent, and make the tax mandatory in cases where corporation earnings show up as increases in investments and other assets not required in the ordinary conduct of the business, increases in cash, cash surrender values, marketable securities, and prepaid expenses. In other words, going back to my theory that you are

now taxing unrealized profits at too high a rate, but in order to catch profits which are realized, you can supplement a reasonable high flat-rate tax with a tax on dividends and interest when paid and catch anybody who makes a lot of money and accumulates it in a corporation.

I claim that through these three taxes you would catch all of the true realized profits of all corporations, large and small, but would not jeopardize, through the taxation of unrealized profits as proposed in this bill, the credit of all corporations, except the wealthiest with excess cash reserves.

You see, under this bill, the corporation in the fortunate position of having several million dollars of surplus cash, as many large ones have. You can't destroy the credit of that corporation even if you taxed 100 percent of their earnings, and that is why most of the emphasis has been in trying to reach the corporations of that sort and drawing the tax provisions to reach those corporations, but in effect the more you try to hit them, the harder you hit the smaller ones, and those like my own which are using borrowed money to the greatest possible extent.

In summary, I wish to emphasize my general position regarding the current tax problem, believing that perhaps millions of other taxpayers in the country really feel as I do.

We are faced with Government expenditures of $77,000,000,000 during this fiscal year. Tax income may reach $24,000,000,000 under the proposed planned tax, leaving $53,000,000,000 to be raised through the sale of bonds. That is only 31 percent of our expenses in taxes, and it is not enough.

To be in line with England, Germany, and other warring countries, we should collect between forty and fifty billion dollars a year in Federal taxes annually. This can be done. We would still be paying less than 50 percent of our total national income in Federal, State, and local taxes.

What is the alternative? A staggering three hundred to four hundred billion dollar debt when the war is over, and certain repudiation.

Gentlemen, I am standing before you pleading that you be realistic and that you tax me and our fellow citizens two or three times as much as proposed under this tax bill. We are willing and eager to take it, but have you the courage to do it?

I thank you.

Senator DANAHER. May I ask Mr. Little to take a letter I have here and comment briefly, if he will, on it, from the standpoint of a practical manufacturer? Do you have such a schedule that would admit of his taking 5 minutes to do that?

Mr. LITTLE. I think I had better take it outside.

Senator DANAHER. I was addressing the chairman.

Mr. LITTLE. I am sorry.

The CHAIRMAN. How is that?

Senator DANAHER. I say: Do you have 5 minutes that we could permit Mr. Little to do that?

The CHAIRMAN. Yes. Go right ahead, Senator

Senator DANAHER. I would like you to do it, if you will, please, and if you will read it to the committee, it is pertinent and bears in general on what you have talked about.

The CHAIRMAN. Do you wish Mr. Little to do it now or look it over?

Senator DANAHER. If he chooses to, I think he could do it now.

Mr. LITTLE (reading):

Senator JOHN A. DANAHER,
Senate Finance Committee,
Washington, D. C.

My DEAR SENATOR: This company, for 70 years, has been making high-pressure compressors for oxygen, hydrogen, helium, welding, torpedo charging, and many other services.

We are building many of these compressors for the United States Navy and they are increasing their orders. Many of them have been shipped to Pearl Harbor, Dutch Harbor, Umalaska, and other outlying bases.

The following is a brief outline of the condition of our company as well as the future outlook:

Capital:	
Bond issue	$213,000
Stock issue (approximate)	20,000
1941:	
Business	523,000
Profits before taxes	58,000
Taxes	30,000
Profits after taxes	28,000

Expansion: All of this went to expansion to make more and better machines.

Profit left over: None at all.

Dividends: Stock has not paid any for about 20 years. All earnings have been plowed under.

Future taxes: If taxes are made higher than 1941 we will not and cannot expand, or make improvements.

1941 schedule: It is high as this company can stand and progress—even paying no dividends.

The United States operation: If the United States took this company over, expenses would increase. The United States Treasury would then get less out of it—not more.

Tax rate for 1942: It should not be higher for companies of this type than the 1941 schedule.

Borrowing money: We cannot borrow or raise capital for expansion, even under the 1941 tax rate. Until we see what the tax situation is, we cannot put money (past earnings) into anything charged as an asset. If we ordered extra machines and our profits were mostly taxed away, we would have no money to pay for them and would have to go into receivership.

Treasury tax plan: It will hold us back and the United States will lose—not gain.

Photographs: Enclosed are photos of:

1. Pearl Harbor compressor for torpedo charging.

2. The improved boring mill which took all our profits of 1941 (after taxes) while we paid only 4 percent on our bonds and nothing on our stock.

1941 tax rate: It should not be increased for companies like this with low capital. It is low because company failed twice and stock capital was wiped out.

Present financial situation: The cash to buy the above boring bill is still owed to the bank, secured by accounts we hope will be paid. We can scarcely get a small reserve, even with taxes like 1941.

Secretary Morgenthau's plan: He may extract a few more dollars the first year, but after that, much less. He would kill the "goose that lays the golden egg." He should be made to see it.

Sincerely yours.

Senator WALSH. What is the name of the company?

Mr. LITTLE. Norwalk Co., South Norwalk, Conn.

Senator WALSH. Is it a family company or is it generally owned?

Senator DANAHER. It is a small company but with general ownership, with local investment.

Senator WALSH. If it is a family company, it would cover the earnings by substantial salaries to members of the family. If it is a generally owned concern, that might not be possible.

Senator DANAHER. In view of the bond issue outstanding of some $213,000 on which 4 percent has been paid, it is apparent that whoever the bondholders are, whether banks or otherwise, are going to have something to say about that, but my point to you, sir, in asking you to comment on it: How you are going to relate the program you recommend to a low capital corporation of that character?

Mr. LITTLE. Well, I think in the first place, his tax rate would not exceed 50 percent of his earnings under my plan because he is paying no dividends. He would pay a small tax on his bonds, but that wouldn't come out of him. That would come out of the bondholder, and he obviously isn't guilty of unjust accumulation of surplus so that he wouldn't be subject to the 95 percent rate there.

I do think there has been a great misconception of the ease with which taxes can be pulled out of corporations. It looks like an easy place to—relatively few of them—and it is an easy place to go in and dig in, but under this proposed bill the results are going to be disastrous, and when the war is over you are going to have fewer corporations than ever and they will be the strong ones that have the cash reserve now and can go through if necessary without any earnings.

Senator DANAHER. If we take even the rates under this present bill, this company won't be able to expand even in war production, will they?

Mr. LITTLE. No; because no one will lend them the money.

Senator DANAHER. And yet that is an exact type of an instance where we ought to encourage in every way within our power, it seems to me, the expansion of the plant.

Mr. LITTLE. I would just like to reiterate again that the higher the corporation rates go the more it is going to favor the bigger corporations.

The CHAIRMAN. You mean the stronger corporations?

Mr. LITTLE. Yes; the ones with the big cash reserves that went into the war in very strong financial condition and who have the money to finance their own expansion, who have so much capital that they can easily obtain all the credit they need for expansion, but in our own case, if you will look at this statement—I didn't call attention to this long one here—we have reached the end of our rope already on expansion for war purposes.

As you can see, taking the current assets of a million-nine-something and the current liabilities of a million four, we only have in net working capital about a half million dollars, and the trouble is that on the war work which we do, the material which we use is so much more expensive per pound—we are using nylon, for instance, which runs $2.50 a pound as against rayon, our normal business product, at 50 cents a pound—that to fill our machines up and handle the volume of production that we can and should be doing, it takes five times the inventory that we normally run.

Now, you just can't get the banks to go on lending you millions and millions. There is a limit. And when our statement begins to get up here to about 1.1 to 1 ratio, the banks just tell us to shut down some machinery and not try to do so much war work.

I don't think that is constructive.

Senator WALSH. Is your contract with the Government a negotiated one?

Mr. LITTLE. The parachute company is a subcontract with a parachute manufacturer. That is a subcontract. The rayon company has Air Corps contracts to supply the materials that go into parachutes—the canopy cloth, shroud lines, sewing thread, and other materials.

Senator WALSH. Those are probably negotiated contracts.

Mr. LITTLE. Those are negotiated contracts.

Senator WALSH. And yours is with another contractor that is the main contractor?

Mr. LITTLE. These contracts are negotiated with the Air Corps direct, but that is a serious situation, gentlemen, where we have productive capacity that we can run but we can't get the money to run it full because of the additional cost of equipment here.

If we were allowed to make and retain for the repayment of loans a fair return, the banks would be willing to go ahead and lend money to companies like us to get us going, but it just is too much of a gamble.

You have got to lend companies on a thin margin like this, to lend them several million dollars as they would have to, to keep us running full, is taking a hell of a chance today. If we make any mistakes and don't deliver or deliver poor quality, the margin is gone. If we make some money on it, taxes take it, so the banks figure that they can't get paid out, they are not sure of getting paid out.

Senator DANAHER. First let me thank you for your attention to my previous inquiry. I wish to ask you one more: The name of the general manager of the Atlantic Parachute Co. is Mr. Royal Little?

Mr. LITTLE. No. Mr. Eliot Farley, who is the fellow that took on that job. He had retired from active work and I got him back in harness again, and he is the kind of fellow that doesn't give a damn whether he gets anything or not, but I don't think it is fair for him to work as hard as he is without some cash payment.

Senator DANAHER. I don't think he is any more of a patriot than you are.

Mr. LITTLE. I don't know about that.

The CHAIRMAN. Thank you very much.

Mr. Kellogg.

STATEMENT OF HOWARD KELLOGG, PRESIDENT, SPENCER KELLOGG & SONS, INC., BUFFALO, N. Y.

The CHAIRMAN. Mr. Kellogg, you are representing Spencer Kellogg & Sons?

Mr. KELLOGG. Yes. Shall I read from my statement?

The CHAIRMAN. Yes, sir.

Mr. KELLOGG. My name is Howard Kellogg. I am president of Spencer Kellogg & Sons, Inc., of Buffalo, New York. I have been with this company for 39 years.

We buy flaxseed and soybeans from farmers in this country, and some castor-oil beans from Brazil, crush them and sell the oils mainly for industrial purposes, but the soybean oil is sold largely for edible purposes. We pay the American farmers approximately $28,000,000 a year for flaxseed and over $10,000,000 for soybeans.

Our business is not a get-rich-quick business. We paid in dividends this year approximately 1.6 percent of our sales, and we reinvested in machinery and equipment another 1.6 percent, which used up all of our profits. Our profits, after taxes, this year were almost the same, just a little larger, than our profits after taxes in pre-war years.

Only a small percentage of our sales represent contracts with the Government—something around 2 percent, most of that being for lease-lend purposes. In addition to the oils for edible and industrial purposes, we also sell a meal from these seeds and beans to farmers for feeding dairy cattle and other livestock. You can see, therefore, that our business in regard to its use, its volume, or its profits, is in no sense a war baby.

We have received several staggering blows this year which I wish to explain to you, and then on top of them the Ways and Means Committee of the House has unwittingly dealt us another staggering blow by changing the fiscal year method of calculating the tax, which basis we have been on for all our history of nearly 50 years in Buffalo, 30 years of which has been in corporate form. Before designating the specific effects of this fiscal year change upon our business, I should like to tell you of the other disasters which have befallen us due to the war. In some respects they might be called war casualties.

Some years ago we invested approximately $150,000 in a plant in Hankow, China, for China wood oil. A pipe line runs from this plant to the water front so that the oil could be loaded on tankers or barges in the most efficient manner. The Japs now control Hankow and they have this plant. As you may surmise, they have not offered to pay us anything for it. We believe that the United States bombers in raiding the Hankow water front have destroyed the plant. We hope they have, as we hope that they will destroy everything which will help the Japs. But we have no hopes of American bombers paying us anything for this plant. It was in the French Concession in Hankow, and as we had reason to believe that the French might not be able to protect it, we had liquidated our inventory, so that our loss was limited to the plant.

Some years ago we also invested $850,000 in a plant in Manila, P. I., to produce coconut oil. Because of our faith in the strength of the United States, we felt that this plant would remain in United States territory, and when it was taken over by the Japs, we had an inventory of a million dollars of copra and a half million dollars of coconut oil. The Japs have not offered to pay us anything for that, either.

These losses were none too pleasant, but we took them with a smile, saying, "Such is war."

If we had not already suffered these losses we might not have worried so much about the change made by the Ways and Means Committee, with respect to corporations that would ordinarily report profits on a fiscal-year basis, which results in our having paid out in dividends approximately $710,000 more than we earned this year, after consideration of plant expenditures.

Taking all this together, however, we believe that we are being asked to carry more than our share of the worries and burdens.

I should like to take a few minutes now to say specifically how this change affects us.

Our fiscal years ends on the last Saturday in the month of August. Our year is divided into 13 periods of 4 weeks each. Our reason for closing our fiscal year in August is that it is the close of a complete cycle of operations. Our business consists of: First, buying raw materials from the farmers; second, converting it into oil and meal; and, third, selling these products. We buy our raw material from the farmers, beginning the latter part of August and continuing until the latter part of December.

The conversion and the sale continues and is completed about the middle of the next August. August to August, therefore, represents a complete cycle of 1 year's operations. If we closed our books on December 31, we would then have most of our raw material on hand. Also at that time we would be extremely heavy borrowers at the bank, these temporary loans being represented by our large inventory. It is absolutely essential that our fiscal year cover the periods just mentioned.

Our sales for this fiscal year are estimated at approximately $58,000,000.

Our earnings before taxes are estimated at	$4,000,000
Taxes estimated as per House bill	2,843,000
Earnings after taxes	1,157,000
Unusual capital expenditures, 11 periods	900,000

A sizable portion of this capital investment was made for a new plant in Decatur, Ill., to extract the largest possible amount of oil from each soybean. This investment was deemed so desirable by the Government that we were favored with a very high priority which enabled us to construct the plant this year.

The construction was started before this year, but it was finished this year. A portion was spent for special equipment to produce a substitute for China wood oil. All of this oil is sold under priorities and is needed for war use or war production. In other words, this capital investment may not be profitable but was done because war production and use demands this substitute. We do not have the amortization privilege which applies to the companies producing armament, airplanes and so forth.

This left us	$257,000
Our total dividend payments for the year were	967,504
This leaves us short	710,504

Last November we made a loan at the bank of $2,500,000, to be paid off at the rate of $420,000 per year. The purpose of the loan was to take care of our working capital requirements. We are paying the farmers higher prices for our raw material and we are also paying higher wages, each of which meant that we must have more working capital. The above shortage of $710,000 means that we will have that much more difficulty in paying off our working capital loan.

As previously stated, we have always been on the fiscal year basis. We have played the game according to the rules during our entire history. We believe that our business has been a distinct asset to

agricultural sections of our country. We have tried to operate at a profit but our profits have never been exorbitant, our dividends have never been large.

Ever since 1934 we have believed that your committee and the Congress did not favor going retroactively into previous years and materially increasing the tax rate.

Here is what our figures will be if you do not break this long-established precedent this year:

Estimated sales	$58,000,000
Estimated earnings before taxes	4,000,000
Estimated taxes	2,230,000
Estimated earnings after taxes	1,770,000
Unusual capital expenditures	900,000
Amount left	870,000
Dividends	967,504

Section 102 provides in substance that all money properly available in dividends must be distributed in dividends. We now find that we distributed $710,000 more than was available for dividends and plant expenditures, and we also have the job of trying to raise that much through additional loans. Since this $710,000 new burden caused by the House bill comes directly out of our working capital, it must be replaced by additional borrowing if our business is to be financed adequately.

If this change was made because you believe that some companies have changed from the calendar year to the fiscal year merely for the purpose of saving taxes, you can stop that without killing 50 sheep along with each wolf. If a company wishes to change to the fiscal year it can do so only with the permission of the Commissioner of Internal Revenue. If, when new corporations are formed, they also must secure the Commissioner's consent, you will then have ample protection against improper selection of the fiscal-year basis.

We have to keep our books on the present fiscal-year basis, and we would very much urge you not to change the fiscal year as requested by the Ways and Means Committee. In addition to the financial difficulties, it presents many bookkeeping and accounting difficulties.

If you believe that it is absolutely essential for the good of the United States to make this change we then ask that it shall not be done retroactively. We have already had two staggering blows this year, and we would like to ask that we be given a little breathing space by postponing this until next year.

We were not so surprised at losing Hankow. We were prepared for that loss, and lost only the land and buildings, but we have had to spend money in this country to manufacture a substitute oil.

The loss at Manila was heavier, and we were less prepared for it. We had depended upon the might of the United States to retain Manila. Being unprepared, we lost $1,500,000 in inventory, besides the loss of the buildings and equipment.

While we are not crying over this loss, and never have, we might say because we had depended upon the United States a million and a half of inventory was there and was lost, and because we depended upon the tax law of the United States affecting fiscal-year companies, which has been unchanged since 1934, and because we believed that it

would never be changed retroactively, we made our capital expenditures and paid our dividends in accordance with the above understanding and will now find ourselves out $710,000.

I trust, therefore, that you will see the reasonableness of our request when we ask that you at least give us a little breathing space and let this change begin next year instead of making it retroactive.

Senator BYRD. In connection with your losses in China and the Philippines: Isn't that, to some extent at least, in the case of inventories, deductible from your income?

Mr. KELLOGG. Yes; they are.

Senator BYRD. That would reduce the income you estimated here, wouldn't it?

Mr. KELLOGG. No, sir. That is all taken into consideration in the figures I have given in there.

Senator BYRD. I mean, deductible from the income tax.

Mr. KELLOGG. We have done that.

The CHAIRMAN. You have taken that into account in arriving at your tax?

Mr. KELLOGG. Yes; we have in our figures.

Senator BYRD. Then, as estimated in this bill, it would still be $2,843,000?

Mr. KELLOGG. Yes, sir. Still allowing for the fact that it is deductible.

Senator BROWN. You feel that the change should be effective in the tax year of 1943, and payable in March under the present system, in 1944?

Mr. KELLOGG. That is what I feel.

Senator BROWN. Would you have any objection to the change if it were so arranged?

Mr. KELLOGG. No; I wouldn't. I wouldn't object. If you gentlemen think it is best for the country, why, let's have it.

I am just saying, in this special case, that we did rely on the fact that you have never changed the tax laws retroactively.

Senator BROWN. I think there is a great deal of justice in your position, but I don't think it is unique in your business.

It is true in a great many businesses.

Mr. KELLOGG. I think it must be. Certainly we had no idea, and it came rather as a bombshell to us when we understood that there was a prospect of making this change. It is quite upsetting.

We can take it, naturally—I don't mean to say we can't—but it seems to me that we were justified in going along the way we did, feeling that the tax wouldn't be made retroactive.

The CHAIRMAN. Thank you very much, Mr. Kellogg.

Mr. Robert Miller.

STATEMENT OF ROBERT N. MILLER, WASHINGTON, D. C., CHAIRMAN, EXCESS PROFITS TAX COMMITTEE, SECTION OF TAXATION, AMERICAN BAR ASSOCIATION

Mr. MILLER. Robert N. Miller, Washington, D. C. I am chairman of one of the committees, section of taxation of the American Bar Association. My committee is the excess-profits tax committee, and what I say will have to do only with excess-profits taxes.

The American Bar Association has directed us to present five recommendations in this particular field. The first four can be disposed of quickly.

The first recommendation is completely met already by this House bill, in that it extends the growth principle of computing base period income to acquiring corporations as defined in the law.

The CHAIRMAN. That is taken care of?

Mr. MILLER. Taken care of.

The next one is practically taken care of. The American Bar Association recommended the declared value excess-profits tax, together with the capital-stock tax to be repealed. The House has not done that, but they have made every year a declaration year, which was our alternative request.

The CHAIRMAN. Giving you an annual declaration?

Mr. MILLER. Yes, sir. And the whole thing would have been done away with, no doubt, if the Government didn't need the money. We are well satisfied with that.

The third one of the recommendations—and it is not recognized in the new bill—favors repeal of section 734 of the Internal Revenue Code, dealing with adjustments to be made in cases where either the taxpayer or the Commissioner maintains a position inconsistent with prior income tax determinations.

I am not going deeply into that. I have a written statement I will file, and I think it can be presented in the record about as well as orally.

The CHAIRMAN. Yes, sir; you may file it.

Mr. MILLER. I need only say that we think that that section is bad for the Government as well as for the taxpayer, because it violates the principle of repose.

Under the existing provision the taxpayer may suffer prejudice by a so-called inconsistency that may be as stale as 1913; he may suffer that prejudice through the acts of persons over whom he has no control, and never did have, and the staler the inconsistency the greater the prejudice to the taxpayer.

Another recommendation of these five has to do with carrying over the unused excess-profits tax credit for years beginning in 1940. Our position is fully shown by a short memorandum which I will file.

That leaves us nothing but the last and the most important of the association's five recommendations.

This one is our recommendation presented to you last year about this time, under which excessive hardship due to abnormalities of income or invested capital, not expressly relieved somewhere in the law, may be relieved by the Commissioner of Internal Revenue, subject to review by the United States Board of Tax Appeals. The intention of our recommendation is that such relief shall apply to all the excess-profits tax years—1940, 1941, 1942, and the following. With reference to 1940 and 1941, while those are past years, I think this is important: The larger deficiency letters are still to be issued by the Bureau of Internal Revenue, so that even 1940 and 1941, while they are past in the calendar sense, are still very open years in the process of audit, especially with regard to the difficult and substantial cases. Since 1941 calendar-year returns were not due until March 15, 1942,

and extensions were granted in many of the more difficult cases, there has not yet been time to audit many of the important ones.

We are very glad to say that the bill as passed by the House gives to the Commissioner some new powers so far as the year 1942 and subsequent years are concerned which to a certain extent can be clearly depended on to remedy the serious defect to which our recommendation was addressed, but the bill does not, as it should, cover 1940 and 1941 now in process of audit.

It is also true that the provision contains some limiting phrases which might be construed as depriving the Commissioner of power to relieve, even as to 1942 taxes, certain cases which will need relief and which would have been relievable under the corresponding relief provisions of the 1917, 1918, and 1921 laws found in the statute books.

On the whole, considering the immense difficulties presented by this problem of general relief, we certainly appreciate the work done by the Ways and Means Committee, the joint committee, and the Treasury.

Without promising to agree with all that has been done, we should like to express our thanks for their constructive labors in dealing with this very difficult and certainly controversial phase of the tax law.

The definite suggestions that we make on this subject of general relief are two:

First, we strongly urge that the provisions of the existing bill be made to apply to those 2 years 1940 and 1941 which are still really to be fought out, so that the whole excess profits period will be governed by the same procedures.

Second, I want to mention in detail a few types of cases in which the terms of this bill, as passed by the House, might be construed as denying the Commissioner power to relieve in certain cases, even if he should consider that relief needs to be given.

First, as to the need of having this made to apply to 1940 and 1941. Suppose a taxpayer that wasn't in existence during the base period, organized brand new, with no supplement A background, on January 15, 1940. Being organized after the end of the base period the present law gives it no right to use base period income credit. Any credit it gets must be based on invested capital.

Now suppose that the business of the taxpayer is such that the invested capital provisions are wholly inapt. The current bill gives a list of situations in which the invested capital credit is inapt:

One of them, for instance, is that intangible assets—and I am quoting from this bill—"not includible in invested capital under section 718 make important contributions to income," or that "capital is not an important income-producing factor," and there is a list of similar situations in the bill.

Under the bill as passed in the House relief is allowed for 1942 and subsequent years, but no relief whatever is allowed for the years 1940 and 1941, in this case.

There is no sense in that, and the defect could be easily remedied by making the relief applicable to the years 1940 and 1941.

Another example of a company that was in existence during the base period: Suppose the taxpayer is entitled to use the base period

credit, but is subjected to an excessive tax burden for 1941, because of an abnormally low base period income.

Suppose this low base period income is due to the fact that the business of the taxpayer—and I use the very language of the present bill, so far as it applies to 1942—"was depressed in the base period because of temporary economic conditions peculiar to such taxpayer, or because it was a member of an industry which was depressed on account of temporary economic circumstances peculiar to such industry"—I will skip a number of other examples that I could mention, taken out of the bill. This bill very properly authorizes the Commissioner to make these adjustments if the hardship occurs in 1942 or a later year but omits to give that relief just as badly needed for 1940 and 1941.

The CHAIRMAN. Would that be true, Mr. Miller, in the case of a corporation on a fiscal-year basis?

Mr. MILLER. It would apply to some of the fiscal-year corporations.

The CHAIRMAN. It would?

Mr. MILLER. Yes, sir.

Now, it is true, as we all know, that the excess-profits-tax rates, in the present bill and in the act that is going to result, will be higher than the rates applicable in 1940 and 1941, but it is absolutely so that the excess-profits-tax rates for those 2 years 1940 and 1941 are themselves high enough so that in particular cases they can produce hardship so great as to need relief absolutely.

The experience of the Treasury itself so far, in auditing those years, shows, as does the Treasury experience in auditing the excess-profits taxes from the first World War, that relief is needed.

The fact is the Ways and Means Committee report fully recognizes that the new higher rates merely increase rather than create the already recognized need for broader relief provisions, and I quote briefly from the report, showing that apparently the Ways and Means Committee itself recognized that this relief ought to apply to 1940 and 1941:

> The need for this legislation was recognized when the excess profits tax was enacted in 1940, and in the excess-profits-tax amendments of 1941, as pointed out in the committee reports on those acts.
>
> It was there stated that equitable considerations demand that every reasonable precaution should be taken to prevent unfair application of the excess-profits tax in abnormal cases; that high rates on excess profits are thoroughly justifiable if the income subject to tax is clearly of the type intended to be reached.
>
> The rates now proposed increase the need for expanding the application of the relief section to cases that do not fall under the specific provisions in order to remove inequities and alleviate certain hardships. The amending provisions expanding the operation of the present section 722 are based on experience gained since its enactment.

In other words the experience is that they need these provisions for 1940 and 1941, and yet, for some reason or other, they didn't apply it to those years.

To deny needed relief to a corporation suffering hardship under its 72-percent tax on the ground that it would have been in worse trouble if the tax had been 82 percent or 90 percent, certainly is not sensible nor in the Government's interest.

The fact is that the main object of these relief provisions is not just to be nice to taxpayers that are exerting pressure to be relieved.

The main object, as our committee sees it, and as experience shows, is to make the law workable as a successful producer of revenue for the Government.

Although such provisions may operate for the benefit of this or that corporate taxpayer needing relief, their most important function is to relieve the Government from the serious consequences that follow when popular opinion becomes convinced that a tax law isn't workable, or produces unconscionable results. Further, the public is going to form its opinion as to the reasonableness of the excess-profits tax law largely by observing whether these first 2 years work out sensibly or not.

It is therefore very important that the best possible relief provisions be made applicable to the 2 earlier years. A fair relief provision in those early years is, in many ways, more important than later. First impressions are undoubtedly the most important, and the Government has a stake in making people realize that this tax law is fair.

The only other point to which we desire to call attention, for such action as your committee may decide upon, is that section 722 of the bill as passed by the House contains obscurely-worded limitations which might conceivably be construed as denying relief in certain cases where the Government's broader interest requires giving relief. I give one illustration of that:

A corporation may suffer undue hardship in the year 1942, because it happens to be one of those corporations enumerated in section 722 (c) of this bill, whose situation is such that the invested capital credit is inapt.

Further, we will say, this corporation changed its business on January 31, 1940. It changed it from snuff making to cigar making, an illustration already used in the report of the Ways and Means Committee.

Suppose it couldn't make any money at snuff and it could make profits at cigar making, and it made the change, not because of the war or anything to do with the war. It was just a sensible and ordinary moving over from a poor line of business to a good one.

Clearly, the technical base period can't give any relief at all, because, during the base period it was engaged in a different business in which it didn't make any money.

We find that this bill, in section 722, subdivision (b), has an express provision which would have given relief to that corporation if the change had occurred a month earlier, that is, during or immediately prior to the base period.

But there are no specific provisions as to changes after December 31, 1939. This corporation is just 31 days too late to come within that express provision.

To give relief in a case of this kind, where the Commissioner felt it ought to be given, the only subparagraph which is not clearly limited to this base period time is subparagraph 5.

But that subparagraph 5, after providing that the Commissioner may take into account any other factor affecting the taxpayer's business, which may reasonably be construed as resulting in an inadequate standard of normal earnings during the base period adds a vague limitation and its vagueness is all the more important, be-

cause there isn't any review of this by the courts. That limitation requires—

> the application of this section must not be inconsistent with the principles underlying the provisions of this subsection, and with the conditions and limitations enumerated therein.

Of course this raises the question: What are the "principles underlying?" They are not anywhere specifically stated.

There are just five directly stated subparagraphs there, with no suggestion as to a "principle," and it is hard to tell what that limitation is.

Now, further, in order to get relief for this obviously deserving case, one would have to construe also subdivision (a) of section 722, the last sentence of it. I will read that:

> In determining such constructive average base period net income, no regard shall be had to events or conditions affecting the taxpayer, the industry of which it is a member, or taxpayers generally occurring or existing after December 31, 1939.

There is a problem there as to just how much that limitation tends to prevent relief in such a case as I have given, where a change happened after December 31, 1939. If the Commissioner and the Board should by any chance feel bound to hold that these limitations deny the Commissioner power to relieve undue hardship in such a case as the one I have stated, it is clear that the relief provided by the section is available in fewer cases than the relief afforded by the Revenue Acts of 1917, 1918, or 1921, and found useful to the Government in administering those acts.

That is all we desire to say, except this: Notwithstanding these difficulties that I have just mentioned, it ought also to be said that the clearer parts of the relief provisions of the bill are such that very many types of meritorious cases not relievable under existing law could be very successfully dealt with by the tax authorities under section 722 as it is now in the bill if that is enacted. It at least goes a very considerable way toward curing the defects at which our recommendation was directed.

Thank you, sir.

The CHAIRMAN. Thank you, very much, Mr. Miller.

Mr. Miller, do you suggest any amendments?

Mr. MILLER. We have no specific suggestions. The criticisms that we have made hardly need drafting. They can so simply be changed.

The CHAIRMAN. I thought perhaps you had drafted some specific amendments.

Mr. MILLER. It would be so easy merely to provide for 1941 and 1940.

Senator CONNALLY. Would that apply to cases already settled?

Mr. MILLER. The cases which have already been settled, if it were made simply retroactive? It would depend somewhat on the phrasing of the words applying to 1940 and 1941.

I would say that if nothing were said except that this relief provision shall be effective for years beginning after December 31, 1939, it would have practically no effect on those closed cases.

Speaking for myself rather than for the association, I think the important cases, needing relief for 1940 and 1941, are not the closed ones, but those which the Government itself stirs up in the future, by issuing deficiency letters. If any such question came up as to the

retroactive character of it, I personally would think it sensible not to draw this so as to give rise to refunds with reference to 1940 and 1941.

Senator CONNALLY. I was wondering whether it would automatically result in reopening cases for further adjustment when they had already been settled.

Mr. MILLER. I think it could be so drawn as not to do that, and I don't think the Bar Associaton would feel that its recommendation had been flouted if that result were avoided in the drafting.

The main thing is the handling of the cases where the Government still, in the future, issues a deficiency letter asking for more money with respect to 1940 or 1941.

Senator WALSH. Did I understand you to say that the Government had issued no deficiency letters in 1939 and 1940 cases?

Mr. MILLER. The Government undoubtedly has issued a great many deficiency letters for 1940, but the problem of auditing a certain year is peculiar, in that you have a great flock of little no-account cases and of medium-sized cases, and a relatively few important and difficult cases, involving substantial sums. My impression of the facts there is that the Government has made very good progress, as fas as numbers of cases audited go, but that for the most part the deficiency letters in the real tough nuts are still to be worked out, and those are the ones that cause trouble.

The CHAIRMAN. All right. Thank you very much, Mr. Miller.

(Mr. Miller submitted the following supplementary statement:)

ADDITIONAL STATEMENT BY ROBERT N. MILLER, WASHINGTON, D. C., CHAIRMAN OF EXCESS PROFITS TAX COMMITTEE, TAXATION SECTION, AMERICAN BAR ASSOCIATION

A. CARRY-OVER OF EXCESS PROFITS TAX CREDIT

The association recommends to the Congress that the provisions as to carrying over the unused excess-profits credit for years beginning in 1940 be restored as such provisions were, prior to the recently enacted Revenue Act of 1941, and to this end recommends repeal of section 202 (c) of that act (adding to sec. 710 (c) (1) of the Internal Revenue Code the following sentence: "For such purpose the excess-profits credit and the excess-profits net income for any taxable year beginning in 1940 shall be computed under the law applicable to taxable years beginning in 1941.")

Reasons.—Section 710 (c), Internal Revenue Code, has been properly regarded as an important element in easing the strain on new businesses or on businesses in which the income is variable from year to year. Its effect was that a corporation which had a larger excess-profits credit for 1940 than it could use, would be permitted to carry over that credit to 1941; if still unused, to 1942.

Section 202 (c) of the Revenue Act of 1941 has the effect of denying, to a substantial extent, that carry-over. In effect it reduces the carry-over by an amount equal to the normal income taxes paid by the corporation for 1940. For example, suppose a corporation, under the Revenue Act of 1940, has an unused excess-profits tax credit of $50,000 (obtained by computing the difference between an excess-profits credit of $500,000 and an excess-profits net income of $450,000, which it wipes out). Under the Revenue Act of 1940, this could be carried over to increase the excess-profits-tax credit available for 1941, or, under certain circumstances, for 1942. Suppose one of the adjustments used under section 711 in computing the excess-profits net income for 1940 involved 1940 income taxes of $60,000; the effect of section 202 (c) is to increase the excess-profits net income for 1940, for no other purpose than the computation of 1941 taxes, by this sum of $60,000. The ultimate effect is to cut the carry-over down by that amount; on these figures there would be no carry-over.

Section 202 (c) does this by amending section 710 (c) (1) of the Internal Revenue Code, so that for the purpose of the carry-over but not for the purpose

of determining the tax liability for 1940, ("the excess-profits net income for any taxable year beginning in 1940 shall be computed under the law applicable to taxable years beginning in 1941."

Taxpayers who computed their excess-profit tax liability for the year 1940 did so on the reasonable assumption that the method of computing the excess-profits net income for 1940 would not be changed after March *5, 1941, the date on which calendar year corporations were required to file their 1940 returns.

A business entitled to a carry-over would be negligent if it did not take the carry-over into account in business operations. For instance, decisions during 1940 whether to hold or clear out a large inventory would naturally be influenced by the availability of a resulting loss. To be sure, a business would have to take into account the possibility that the whole principle of carry-over might be repealed, as regards 1941, but it does not seem good policy on the part of the Government to go out of its way, in September 1941, merely to change the method of computing the 1940 carry-over in such a way as to cut down the amount of it.

One reason why many taxpayers were reasonably content not to oppose enactment of the Revenue Act of 1940 was that it provided for this carry-over; to pass the bill on the basis of the carry-over and then to substantial extent withdraw the carry-over retroactively does not seem to be fair dealing.

As we have often pointed out, a Government needs the good will of its taxpayers just as a department store needs the goodwill of its customers; provisions like this, which tend to give the taxpayer an impression that the Federal Government is unreliable, are contrary to the interests of the tax system.

In considering this recommendation it should be borne in mind that the new provision results in no increase in 1940 tax, and that in the computation under the new provision there is a mitigating increase in base period income, since income taxes are no longer a deduction in the determination of that income.

B. ADJUSTMENT IN CASES OF INCONSISTENCIES

The association recommends repeal of the present section 734, Internal Revenue Code, entitled "Adjustment in case of position inconsistent with prior income-tax liability."

Reasons.—The Treasury Department issued on January 26, 1942, Treasury Decision No. 5112, amending sections 30.734-1 and 30.734-2 of Regulations 109. The issuance of this Treasury decision has been helpful in removing some important difficulties connected with section 734. The following discussion, giving the association's reasons why the continuance of section 734 is not in the interest of the United States, deals only with difficulties which have not been removed by the issuance of the Treasury decision.

The general effect of section 734 is that if in determining the excess-profits tax an item affecting the invested capital credit is treated (for purposes of the current excess-profits tax) in a manner "inconsistent with the treatment accorded such item in determining income-tax liability of the taxpayer or a predecessor of the taxpayer for a prior taxable year," and if the tax for such prior taxable year would be increased or decreased if computed in a manner consistent with the current determination, and if on the date of the determination of the excess-profits tax it is too late to change the liability for the earlier year, then adjustment of the current excess-profits tax is to be made under this section, as follows: If additional tax is indicated for the earlier year, the amount of such tax is computed, interest is added thereto for the whole intervening period, and the total is to be added to the current excess-profits tax otherwise computed.

The section provides that this adjustment shall be made "only if there is adopted * * * a position maintained by the Commissioner (in case the net effect of the adjustment would be a decrease in the income taxes previously determined for such year or years) or by the taxpayer with respect to whom the determination is made (in case the net effect of the adjustment would be an increase in the income taxes previously determined for such year or years) which position is inconsistent," etc.

To show how the section works in a case where the Commissioner invokes the section, suppose the taxpayer corporation took part, in 1918, in a transaction in which a number of individual "predecessors" conveyed certain corporate stocks to the corporation in exchange for stock of the corporation. The various transferors realized a million dollars of income in the transaction, but reported no

income for taxation because it was generally believed at that time—erroneously, as rulings go now—that no such action was required under the provisions of the law and regulations concerning "nonrecognizing" transactions. The Government, sharing the taxpayers' view of the law, permitted the statute of limitations to bar it from collecting from the individuals. In computing its invested capital credit for the year 1940, the corporation finds that its equity invested capital under section 718 of the Internal Revenue Code should include the million dollars, because under present interpretations of law the transaction was taxable, and it files its excess-profits tax return on that basis, wholly correct under section 718 which defines invested capital.

Upon the audit, the Commissioner admits that the computation of the invested-capital credit is correct and that the tax is computed correctly, but invokes section 734, saying that the predecessor individuals ought to have paid a tax for the year 1918, the view then prevailing as to the nontaxable nature of the transaction having in the interval of 22 years turned out to be wrong. Under that section, the taxpayer corporation cannot get the advantage of section 718 without being compelled to increase the tax shown to be due in respect of the year 1940 by an amount equivalent to what the predecessor individuals should have paid in respect to the year 1918, plus interest for 22 years at the rate of 6 percent. To compute this the taxpayer would have to know what tax brackets were applicable to the various individuals whose 1918 tax returns were involved and all the facts as to the various items of income and deductions, as to each of those individuals.

The taxpayer corporation, under the recent Treasury decision, is afforded the right, if it so chooses, to avoid the additions based on the 1918 computations by electing to give up, in computing the 1940 tax, the million dollars of invested capital to which it is entitled under section 718, of the code as added by the 1940 law, but the provision is unwise in the first place in that it violates the principle of repose, which has been found wise in centuries of legal experience. The Government, having allowed 22 years to go by, should not use its legislative power to resuscitate its own dead claim.

The taxpayer is thus placed at a serious tax disadvantage as compared with its competitors merely because of a circumstance which occurred 22 years before, and because of the conduct of people over whose conduct the taxpayer never had any control. It will be noted that the tax burden for 1918 would have been borne by the individuals, and that the amount of the tax would have been determined by various circumstances such as the amount of income, the amount of losses and other deductions, etc., having no connection at all with the corporation's business. The corporation is in effect denied privileges under section 718 which its competitors enjoy; and the taxpayer is thus penalized in respect of the year 1940 in a sum of money which may be very large, and which may include many years' interest.

There is no logical reason why one of two competitors should be subject to a high-rate tax because its predecessors, under a wholly different law, did something inconsistent. The provision not only violates the settled principle underlying statutes of limitation, but, because of the interest provisions arrives at the particularly distasteful result that the staler the "inconsistency" the more severe the penalty in respect to the year 1940; thus, the staler the inconsistency, the more interest appears in the addition to the 1940 tax; in the case above stated, the interest alone amounts to 132 percent. There will, of course, be many cases in which the predecessors were not relying on current practices, but even in those cases there is no reason for discriminating in 1940 between competitors merely because of an inconsistency many years old.

Other features of this peculiar provision are summarized below:

(1) *Lack of relation to general theory of the present excess-profits tax.*—This provision contemplates, in effect, an addition to a corporation's excess-profits tax, which has no relation at all to the general theory on which the present excess-profits tax is based.

(2) *Lack of relation to general policy of revenue system.*—The provision is out of line with the general policy of our whole revenue system. Under this system, ordinarily, the Commissioner is required by law to impose the excess-profits tax in accordance with the statute, without respect to the Commissioner's inclinations or to the taxpayer's inclinations. But under this provision the taxpayer's liability for the year 1940 may, obviously, depend in certain cases on whether or not the Commissioner decided to "maintain" a certain position, or, on the other hand, on whether or not the taxpayer "maintains" a certain position.

Such a deviation from general principles of tax administration is bound to cause unnecessary administrative difficulties.

(3) *Taxpayer prejudiced by predecessor's action over which it had no control and about which it might have no information.*—The action of predecessors in the case above referred to is what really subjects the taxpayer corporation to a competitive disadvantage in computing its excess-profits tax. This is not fair—the taxpayer never had any control over their actions, nor does the law afford the taxpayer any access to any returns which they may have filed in the Bureau of Internal Revenue. The taxpayer has no sure way of finding out the facts, having no legal access to them and being handicapped by the fact that the records of individuals are often hard to trace because of careless methods and of deaths, removals, and casualties. Thus, if the Government makes a "holding" that certain facts existed with respect to the tax liability of the predecessors for the year 1918, presumption in favor of the correctness of the Government's holding puts upon the taxpayer the often impossible burden of disproving the Commissioner's finding.

(4) *Provision is unnecessary if inconsistency involves any fraudulent intent.*—Where the predecessor was guilty of fraudulent concealment or fraudulent failure to report the proper amount of net income in 1918 or whatever earlier year is involved, the Government has now and has always had the privilege of going back and making correction without any restraint from a statute of limitations, because fraud cases are not subject to the statute of limitations. In other words, if there was bad faith in the earlier year, the Government has the right, without section 734, to go back and collect the tax and interest from the proper taxpayers, if it can find them. Therefore, there is no need of this provision if the inconsistency involves any fraudulent intent.

(5) *In many cases inconsistency is due to Government's earlier error, rather than taxpayer's.*—The question whether, under peculiar circumstances of sale or exchange, taxable income is realized and is to be recognized has been one as to which Government rulings have frequently changed and as to which experts may well differ. In a great many cases the failure of predecessors in earlier years, or of the corporation itself, to take the position which has later come to be recognized as the proper one, is due to the fact that the Government at that time was taking a different position from its present position—in some cases because the law was different than from what it is now, and in other cases merely because the Government was wrong as proved by the later decisions of courts. In effect, therefore, the advance result of the application of section 734 to a particular taxpayer as compared with competitors which are permitted to follow the provisions of section 718 in computing their invested-capital credit is due in many instances merely to the fact that the history of its invested capital involves a question as to which the Government was uncertain many years before.

(6) *Method inapplicable where determination in earlier years represented lump-sum compromise of many issues rather than individual adjudication of each.*—Since corporations must of necessity treat taxes as a practical matter of dollars to be paid, determination of a corporation's net tax liability for any year—for instance, one of the earlier years as to which an inconsistency is claimed—the chances are quite strong that when the taxpayer and the Government were discussing the determination for such earlier year the corporation did not treat each of the many issues involved as a separate issue to be fought to a conclusion on its merits, but instead continued its negotiations with the Government only until the total amount of tax demanded for the year involved was brought down to an amount in dollars which the corporation was willing to pay. In other words, the ordinary method of settling a tax controversy, involving perhaps a hundred or more identical points, does not involve a continued controversy as to each of the points, but, rather, a give-and-take dealing with the whole case. The predecessor, or the corporation, if the early settlement was made by it, was primarily interested in the number of dollars it had to pay; once the net determination was reduced to an acceptable dollar figure, the taxpayer, in general, lost interest in the method by which the Government reached the net result. In any case where the dollar result has been agreed upon with the taxpayer, the natural tendency of the Government auditors is to write up the case on whatever basis, as regards the various items involved, will involve the least controversy in the review process. Thus the "inconsistency" may be really an illusory one.

There is grave question, therefore, whether any provision based on the assumption that in a complicated case each one of the various doubtful points has been argued out and decided separately on its merits, can be successfully administered; such a conception of the settlement of important cases does not

square with the everyday administrative process which must be followed by the Bureau if there is to be a reasonably prompt disposition of tax disputes with a minimum of litigation.

(7) *As between the benefits of theoretical consistency and the disadvantage of upsetting long-settled controversies, the enforcement of consistency is the less important.*—Practical experience has long demonstrated that the theoretical advantage of consistency is often far outweighed by the practical advantage of a statute of repose. Every statute of limitations is a recognition of this; so is the principle of res adjudicata. The principle of public policy which underlies all limitation statutes is based, obviously, on the fact that as time passes witnesses die or become unavailable, records have been lost or destroyed, and human memories become unreliable. Section 734 makes very large amounts of current tax, under a new law, depend on "determinations" made years ago.

The overemphasis on "consistency" seems to be illustrated by the fact that under this provision a taxpayer may have to suffer severely for acts committed long ago by its "predecessor" (the word "predecessor" is now defined in T. D. 5112). When one remembers the fact that the Government itself has destroyed many of its earlier tax files, and that even when those files are still available to the Government, provisions of law render some of them inaccessible to a successor corporation, the unfair practical effects are clear.

STATEMENT OF H. CECIL KILPATRICK, WASHINGTON, D. C., CHAIRMAN, FEDERAL ESTATE AND GIFT TAX COMMITTEE, TAX SECTION, AMERICAN BAR ASSOCIATION

The CHAIRMAN. Mr. Kilpatrick.

Mr. KILPATRICK. Mr. Chairman, I am chairman of the Federal estate and gift tax committee of the American Bar Association's tax section, and I address myself only to matters relating to estate and gift taxes.

We made several recommendations at our appearance before the Ways and Means Committee, some of which have been adopted, and I shall not take this committee's time in discussing those recommendations.

Of the other recommendations, the first has to do with the simplification of the rate schedules for the estate tax.

I can probably state the situation better by using the language that the Ways and Means Committee itself used in its report on the 1938 act.

The committee said there:

> The basic estate tax imposed by the 1926 act has been supplemented by the additional estate tax imposed by the 1932 act as amended. These two taxes—the basic estate tax and the additional estate tax—differ in many respects: Namely in their rates, in the amount of the specific exemption allowed, in the credit provisions, and in the value of the gross estate requiring the filing of a return.
>
> These differences have occasioned much complexity in the determination and computation of the estate tax.

Now, in 1938 the Ways and Means Committee proposed to simplify the bill by providing a single rate schedule with a credit for State death taxes at a flat rate of 16½ percent. As the members of this committee well know, the reason for the two rate schedules is that the credit allowed for State death taxes is limited to 80 percent of the basic estate tax under the 1926 act.

You get no credit against your additional estate taxes.

Senator GERRY. Isn't what you are getting at there: That up to the 1926 act the States got a credit and since that 1926 act you haven't had the credit?

Mr. KILPATRICK. They do get a credit now, sir, but it is limited to 80 percent of the rates prescribed by the 1926 act.

Senator GERRY. That is what I am referring to. In other words, you simply continued what was in the 1926 act, and none of these subsequent acts have made any change, have they on that rate?

Mr. KILPATRICK. That is what we call the basic estate taxes—the 1926 rate—and the credit for State death taxes is 80 percent of the tax computed under that law.

Of course, your Federal estate tax is made up of that, and your additional estate taxes.

Senator GERRY. Your subsequent additions that were made to the estate tax get no credit?

Mr. KILPATRICK. No, sir.

Senator GERRY. That is what you are referring to?

Mr. KILPATRICK. Yes, sir.

We are not complaining of that at all, and our recommendation will not change the tax liability at all.

Senator GERRY. What you are suggesting is a combined rate of the two?

Mr. KILPATRICK. Yes, sir; with a graduated credit computation which will produce exactly the same result as existing law.

Senator GERRY. Yes; but when you do that you are getting into a different percentage basis. What you are doing is trying to average that, aren't you?

Mr. KILPATRICK. No, sir. What we did—and we have submitted to the staff of the Joint Committee on Internal Revenue Taxation and to the Ways and Means Committee a proposed amendment to reach it, and I have also talked with the draftsmen in the Treasury Department about it, and they stated to me informally that they believed the scheme which we had evolved would make no change whatever in the amount of credit for State death taxes.

Senator GERRY. They have had that proposition up in the committee, I know, because I have talked to some of the experts, and there is a percentage question. Have you got your amendment there?

Mr. KILPATRICK. Yes, sir.

This document which I have is considerably out of date, because it has a great many things in it that the House draft has taken care of.

Senator WALSH. Are your recommendations in the interests of simplicity?

Mr. KILPATRICK. Simply in the interests of simplicity. It would not change the amount of revenue one nickel.

Senator GERRY. There is a question, though, of how it would affect different estate rates in the amount of the tax. It isn't as simple as all that.

Mr. KILPATRICK. I think what you have in mind is this: When the House made its proposal of a flat rate of a 16⅔ percent credit, the State of New York and some of the other States came in and said, "Our State laws are geared to your 80 percent credit, and if you apply this we are going to lose money," and that was the reason the 16⅔ percent flat credit was rejected.

Senator GERRY. I think there are some more questions involved in that.

Mr. KIRKPATRICK. I am sorry I don't know what they are, sir, because we are fairly confident that the adoption of the graduated scale proposed by us would not affect the State's revenues at all.

Our second recommendation deals with a subject on which the House bill has taken some action, but with which we do not entirely agree: that is, the inclusion of life insurance proceeds in the taxable estate.

Since the 1918 act the law has provided for the inclusion of these proceeds in the case of policies to named beneficiaries—that is, over and beyond the specified exemption—under policies, the statute said, taken out by the decedent on his own life.

Now, that phrase "taken out by the decedent on his own life" has had four separate and inconsistent interpretations by the Treasury Department, and the Board of Tax Appeals and court decisions have been conflicting and confusing on just what insurance should be included and what should not.

The Treasury recognized the need for clarification, and they recommended to the House that that provision be clarified.

Their recommendation was adopted. The House bill provides that these proceeds are includible if either of two conditions exist: (1) If the decedent paid the premiums, or (2) if at the time of his death he had any property rights—what are called incidents of ownership—in the policy; that is, the right to borrow, turn it in for its cash value, the right to change the beneficiary.

Now, we are in entire agreement that that second test should be the test.

We do not believe that the test of payment of premiums alone should be, and we say that for two reasons: (1) That the estate tax is, in theory, a tax on the transfer of property by testamentary disposition, and if the decedent had no property rights, no control over the economic benefits of a policy, there was not actually a transfer resulting from his death, a transfer from the dead to the living; and (2) that that will lead to litigation, because the Supreme Court, by way of dictum, in the case of *Llewellyn* v. *Frick* (268 U. S.), indicated that the test of premium payments alone would be an invalid and unconstitutional test.

Senator GERRY. Will you put your amendment in? Have you got your amendment?

Mr. KILPATRICK. Yes, sir; I will hand it in right now.

Senator GERRY. Will you put it in with your remarks?

Mr. KILPATRICK. Yes, sir.

Senator GERRY. So we can see just what it is.

Mr. KILPATRICK. Would you prefer that I have that typed up and file it with the clerk, rather than present this whole document which covers other fields?

Senator GUFFEY. We don't want the whole document—just the amendment.

Mr. KILPATRICK. I will give it to the reporter.

Senator GERRY. When did you first suggest this amendment?

Mr. KILPATRICK. It was first presented to the Ways and Means Committee on this present bill.

Senator GERRY. So it is a new amendment?

Mr. KILPATRICK. Yes, sir; it is a new amendment. I had discussed it informally with members of the Joint Committee staff before we actually presented it.

I don't mean to say that it had their approval. I mean they had given it a friendly hearing anyway.

Senator WALSH. I don't think you finished the statement about the insurance, had you?

Mr. KILPATRICK. I believe I had. The only test, I think, that should be made, is the test of whether the decedent had any of the incidents of ownership, and we are satisfied with the House's definition of that term "incidents of ownership."

The CHAIRMAN. You think the provision regarding the payment of premiums should be eliminated?

Mr. KILPATRICK. Yes, sir.

The CHAIRMAN. For the sake of clarity and simplicity, and in order to avoid those questions arising?

Mr. KILPATRICK. The question of constitutionality arising.

The CHAIRMAN. All right, Mr. Kilpatrick.

Mr. KILPATRICK. We have only one other point that I wanted to call to the committee's attention.

This has to do with the credit allowed against the estate tax for gift taxes paid during the decedent's life.

The gift tax, in theory—or in part, at least—was designed to prevent avoidance of estate taxes through a man being able to give away, when he was approaching death, a large part of his property which would come in the higher brackets of the estate tax.

However, there are numerous gifts which are taxable, but the proceeds of which are includible in the estate for estate tax purposes—and I refer there not only to gifts in contemplation of death—but, if I buy a house with my money and take it in jointly with my wife in a tenancy by the entirety, or if I give a tenancy by the entirety, the entire value of that property is included in my estate.

Now, the theory of the law is that, when that happens, the property having paid a gift tax, there should be a credit on account of that, since it is now being subjected to the estate taxes.

In practice, however, the way that is worked out under the formula provided by the law, you don't get a credit for all of the gift tax paid; you only get a percentage of it which will depend upon the value—the ratio, I should say—of the value of the property given away to the rest of the estate, and the result is that very often the gift and estate taxes, after this credit, amount to substantially more than the estate tax would have been had the man continued to own the property until his death.

We feel that the credits in a case of that sort should be the entire gift tax paid on property which is includible in the estate, so that the Government will wind up collecting the same amount of estate taxes that it would—the same amount of total taxes, estate and gift—that it would if the ownership had continued in the decedent until the time of his death.

That is the theory, as I understand it, of the gift-tax credit, but in practice, because of that limitation, the estate doesn't get the benefit.

That concludes our recommendations.
The CHAIRMAN. Thank you very much, Mr. Kilpatrick.
(Mr. Kilpatrick submitted the following:)

ESTATE AND GIFT TAX RECOMMENDATIONS

Applicable to Internal Revenue Code, subtitle A, chapter 3

I. SIMPLIFICATION OF RATE SCHEDULES FOR ESTATE TAX AND CREDITS FOR GIFT AND STATE INHERITANCE TAXES

The Association recommends that the schedule of estate tax rates and the provisions for credit for gift taxes and credit for estate, succession, legacy, and inheritances taxes paid the states be simplified. The Association proposes that this result be achieved by changing the indicated sections of the Internal Revenue Code as follows: by amending section 810 to set forth a single schedule of rates and repealing section 935; by amending section 813 to make a single provision for credits for gift taxes, and repealing section 936 (b); by amending section 813 (b) to provide the credit for estate, succession, legacy, and inheritance taxes paid to the states, and repealing section 936 (a), all without any change in the amount of estate taxes or credits against such taxes. To this end the following changes are suggested (new wording is italicized in each case):

Amend section 810 to read:

"Section 810. Rate of Tax.

"A tax equal to the sum of the following percentages of the value of the net estate (determined as provided in section 812) shall be imposed on the transfer of the net estate of every decedent, citizen or resident of the United States, dying after the enactment of this title.

"Upon net estates not in excess of $10,000, 2 per centum; $200 upon net estates of $10,000 and upon net estates in excess of $10,000 and not in excess of $20,000, 4 per centum in addition of such excess;

(continue schedule of rates exactly as now provided in section 935 (b)).

Amend section 812 to read:

"Section 812. Net Estate.

"For the purpose of the tax the value of the net estate shall be determined in the case of a citizen or resident of the United States, by deducting from the value of the gross estate—

"(a) Exemption.—An exemption of $40,000; * * *"

Amend section 813 to read:

"Section 813. Credits Against Tax.

"(a) Gift Tax.—(1) If a tax has been *paid under chapter 4 or under Title III of the Revenue Act of 1932, 47 Stat. 245, or* under section 319 of the Revenue Act of 1924, 43 Stat. 313, as amended by section 324 of the Revenue Act of 1926, 44 Stat. 86, on a gift, and thereafter upon the death of the donor any amount *in respect of such gift* is required to be included *in the value of* the gross estate of the decedent *for the purposes of chapter 3*, then there shall be credited against *the tax imposed by section 810 or 860 the* amount *of the* tax paid *under chapter 4 or under Title III of the Revenue Act of 1932, 47 Stat. 245, or under section 319 of the Revenue Act of 1924, 43 Stat. 313, as amended by section 324 of the Revenue Act of 1926, 44 Stat. 86, with respect to so much of the property which constituted the gift as is included in the gross estate, except that the amount of such credit shall not exceed an amount which bears the same ratio to the tax imposed by section 810 or 860 as the value (at the time of the gift or at the time of the death, whichever is lower) and so much of the property which constituted the gift as is included in the gross estate, bears to the value of the gross estate.*

"(2) *For the purpose of paragraph (1), the amount of tax paid for any year under chapter 4 or under Title III of the Revenue Act of 1932, 47 Stat. 245, or under section 319 of the Revenue Act of 1924, 43 Stat. 313, as amended by section 324 of the Revenue Act of 1926, 44 Stat. 86, with respect to any property shall be an amount which bears the same ratio to the total tax paid for such year as the value of such property bears to the total amount of net gifts (computed without deduction of the specific exemption) for such year.*

"(b) *Estate, Succession, Legacy and Inheritance Taxes.*—

"(1) The tax imposed by section 810 or 860 shall be credited with the amount of any estate, inheritance, legacy or succession taxes actually paid to any State or Territory or the District of Columbia, or any possession of the United States, in respect of any property included in the gross estate (not including any such taxes paid with respect to the estate of a person other than the decedent).

"(2) *The credit allowed by this subsection shall not exceed the following amounts:*

"If the estate does not exceed $110,000, eight-tenths of 1 percent of the amount by which the net estate exceeds $60,000;

"If the net estate exceeds $110,000 and does not exceed $160,000, $800 plus 1.6 percent in addition of the excess over $110,000;

"If the net estate exceeds $160,000 and does not exceed $260,000, $1,200 plus 2.4 percent in addition of the excess over $160,000;

(continue this, using the brackets in the 1926 act and 80 percent of the 1926 rates).

"If the net estate exceeds $10,060,000, $1,068,400 plus 16 percent in addition of the excess over $10,060,000.

"(3) The credit allowed by this subsection shall include only such taxes as were actually paid and credit therefor claimed within four years after the filing of the return required by section 821 or section 864, except that—

"(A) If a petition for redetermination of a deficiency has been filed with the Board of Tax Appeals within the time prescribed in section 871, then within such 4-year period or before the expiration of 60 days after the decision of the Board becomes final.

"(B) If under section 822 (a) (2) or section 871 (b), an extension of time has been granted for payment of tax shown on the return or of a deficiency then within such four-year period or before the date of the expiration of the period of the extension.

"Refund based on the credit made (despite the provisions of sections 910 to 912, inclusive), shall be made if claim therefor is filed within the period above provided. Any such refund shall be made without interest."

Repeal sections 935, 936, and 937.

Explanation:

The proposal is designed to simplify the rate schedules of the federal estate tax by combining the present schedules of rates and by revising the provisions as to credits. The proposed amendments would make no change in the amount of tax due the United States nor would they make any change in the amount of the credit for state inheritance taxes. This is in line with the proposal of the Ways and Means Committee, embodied in sections 501 and 502 of the 1938 revenue bill (H. R. 9682, 75th Cong., 3d sess.), but which was stricken out by the Senate and the conferees.[1]

Many of the state inheritance tax laws are geared to the existing Federal law, in order to make the state tax equal exactly the maximum credit.

The present proposal is designed to meet the objection of the state taxing authorities that the proposal in the 1938 bill would reduce state revenues. This would be accomplished by using a *graduated* credit table. A study of state laws indicates that the proposal will not affect the results under present law as to: (a) the amount of Federal estate taxes, (b) the amount of the credit for state inheritance taxes, or (c) the revenues of 39 of the state jurisdictions under their existing laws.

The proposal would necessitate amendment of state laws in 14 jurisdictions,[2]

---

[1] The need for such provisions was stated in the committee's report on the 1938 revenue bill (H. R. Rep. 1860, p. 58):

"The basic estate tax imposed by section 201 (a) of the Revenue Act of 1926 has been supplemented by the additional estate tax imposed by section 401 of the Revenue Act of 1932, as amended. These two taxes, the basic estate tax and the additional estate tax, differ in many respects, namely, in their rates, in the amount of the specific exemption allowed, in the credit provisions, and in the value of the gross estate requiring the filing of a return. These differences have occasioned much complexity in the determination and computation of the estate tax. In the interest of simplicity of administration of the tax, the bill does away with the additional estate tax and substitutes its rate schedule for the original rate schedule fixed in the Revenue Act of 1926. This change will greatly lessen the complexities of determination of the estate tax."

The 1938 proposal was rejected because of opposition from State tax authorities who contended that the method proposed for computing the credit for State inheritance taxes (i. e., the allowance of a flat 10½ percent maximum credit, based on the new single rates proposed) would result in a substantial reduction of State revenues.

[2] Indiana, Kansas, Louisiana, Maine, Minnesota, Montana, Nebraska, New Hampshire, Ohio, Rhode Island, South Carolina, Texas, Vermont, and Wisconsin.

if those jurisdictions are to collect up to the full amount of the Federal credit, because their existing statutes refer specifically to the Revenue Act of 1926 and the credit provisions thereof. It hardly seems sensible, however, that the form of the Federal law should be frozen merely because the statutes of these states (which can readily be amended) were not drawn with a comprehension that future amendments of the Federal law were not only highly probable, but almost certain.

The CHAIRMAN. Mr. Fisher.

STATEMENT OF GEORGE MORRIS, WASHINGTON, D. C., CHAIRMAN, SECTION OF TAXATION, AMERICAN BAR ASSOCIATION

Mr. MORRIS. Mr. Chairman, my name is George Morris. I am from the District of Columbia, and I am the chairman of the section of taxation of the American Bar Association, of which these gentlemen who have just spoken are the chairmen of the committees.

Mr. Fisher is the chairman of the committee on income taxes. We were scheduled to appear here tomorrow morning, but to satisfy the program the clerk asked if we could get in this afternoon.

I got here, but Mr. Fisher couldn't get here.

The situation is that, with respect to the income taxes, we made seven recommendations to the Ways and Means Committee, which dealt with questions of clarification, simplification and administration and procedure.

All seven were, in whole or in part, adopted by the Ways and Means Committee, and put into the bill.

There are, however, some tag ends, some things we would like to talk over, with respect to the actual phraseology used, and if I have the chairman's permission we would prefer to present those to the staff of the Joint Committee on Internal Revenue Taxation and not take the time of the committee, because they are matters of considerable minutiae which I don't think it would profit the committee to hear.

If we may do that I have no further statement.

The CHAIRMAN. Very well. You may do that.

Mr. MORRIS. Thank you very much.

The CHAIRMAN. Mr. Fisher is not here?

Mr. MORRIS. He is not here. He will appear before the staff of the joint committee when the time is appropriate.

The CHAIRMAN. Very well. You may take it up with the staff or the Treasury.

Mr. MORRIS. Thank you.

The CHAIRMAN. Mr. Newell.

Mr. NEWELL. The point we have to bring up is a simple one and would only take a few minutes.

With your permission I would like to have it presented to the committee by the vice president of our company in charge of finance, Mr. G. V. Pach.

The CHAIRMAN. That is quite all right. Mr. Pach, you may come forward.

STATEMENT OF G. V. PACH, VICE PRESIDENT, BATH IRON WORKS CORPORATION, BATH, MAINE

Mr. PACH. This is a memorandum with respect to the base period credit for excess-profits taxes.

A long-term contractor—contracts covering a construction period of 12 months or more—has the option, for Federal income-tax purposes, of reporting his income at the time that the contract is closed out, and the profit is definitely determined, or of reporting the estimated profit annually, based on an estimate of earnings for that year—section 19.42-4, Regulations 103.

Under the regulations of the Commissioner of Internal Revenue, whichever of these two methods has been adopted can only be changed with the permission of the Commissioner. (Art. 41-2, Regulations 103.)

A taxpayer is granted certain credits to be used in calculating his excess-profits tax. These credits are based on the income of certain preceding years, namely, the 4 years 1936, 1937, 1938, and 1939, or the 2 years 1938 and 1939.

In the case of a long-term contractor who has reported his profits on a completed contract basis, his contracts may have been completed in base period or subsequent years, resulting in the reporting of profits in those years in which profits did not reflect the actual profits arising in each of the separate years.

As an example, we can take two companies, both in the same line of business and operating under the same conditions. Company A has reported its earnings on the completed contract basis, while company B had reported its earnings on the percentage of completion basis. Further, assuming that both companies have had contracts which took them approximately 3 years to complete, the average earnings basis for the two companies would be somewhat as follows:

Net earnings in—	Company A	Company B	Net earnings in—	Company A	Company B
1935		$200,000	1939		$100,000
1936		200,000	1940	$1,200,000	100,000
1937	200,000	200,000			
1938	400,000	100,000	Total	1,800,000	1,800,000

Thus while both companies have apparently earned the same profit during the years 1935 to 1940, applying the earnings to the base years 1936 to 1939, we find that company A has only an excess-profits credit of $150,000—$600,000 plus 4—while company B has an excess-profits credit of $400,000—the average earnings for 1939 and 1938.

Senator CONNALLY. Pardon me. It can take its earnings on invested capital in that event.

Mr. PACH. Assuming that they are not in either case as great as these.

Obviously the company which reported its earnings on the completed contract basis must pay a much larger tax than the company which reported on a percentage basis, although their gross earnings were identical.

This taxpayer believes that no figure other than the actual established earnings of the 4 years named in the act can properly be used to represent such earnings; if it happened that accounts were closed out during these 4 years representing earnings actually due to work done in previous years, the credit established on the basis of applying all of the earnings to the years in which the accounts happened to

have been closed out might well be far in excess of the credit to which the contractor was entitled; whereas if it happened that accounts were not closed out until years subsequent to the 4 years named for this purpose in the act, it might well happen that the credit would be far less than that due to the actual earnings of the 4 years in question. It seems entirely unfair and inequitable—both to the Government and to the contractor—to base credits on earnings that are determined by the "accident" of the year in which the accounts happened to be closed out, rather than on the actual earnings of each of the years that are required by the act to form the basis of such credit.

The report of the Senate Finance Committee on the Second Revenue Act of 1940 seems to bear out fully that the intent of the act was in agreement with the position taken above—that the actual earnings of each of the years should be used rather than arbitrary figures; any other interpretation appears contrary to reason, if not to the language.

The Senate Finance Committee, in its report on the Second Revenue Act of 1940, said:

> If it is determined that the income received in the taxable year is attributable to years in the base period, the amount of such income so attributable to such years will have the effect of increasing the base period net income and thus the credit under the average-earnings method.

Apparently the Ways and Means Committee of the House of Representatives is also desirous of preventing any unfair discrimination against any group of taxpayers, as is evidenced in their report which accompanied H. R. 7378, the revenue bill of 1942, in which the following statement appears under the caption of "General relief":

> Taxpayers may obtain relief by meeting one of the specific tests contained in section 722, but the inability to meet the specific tests will not necessarily exclude the taxpayer from the benefits of the section if it can satisfy the Commissioner or the relief court that its claim is consistent with the principles underlying the specific tests. If these are met, the tax will be determined on the basis of a constructive base period net income in lieu of the average base period net income determined under the specific provisions of subchapter E.
>
> In general, it will be necessary that the taxpayer establish—
>
> 1. That the tax computed under the specific provisions of subchapter E results in an excessive and discriminatory tax.
>
> 2. What would be a fair and just amount representing normal earnings to be used as a constructive base period net income for an excess-profits tax based upon a comparison of normal earnings and earnings during an excess-profits tax period.

In the proposed revenue bill of 1942 as reported by the Ways and Means Committee, there are several proposals intended to provide relief in certain cases where inequities would otherwise arise. However, none of those provisions furnish specific correction of the inequity which we believe exists in the case of certain long-term contractors. Rather than leave the possibilities of relief to those generalities we respectfully request remedial action to be clearly incorporated in the Revenue Act now under consideration.

This could be accomplished by a provision to the effect that the earnings of each of the base years (whose incomes determine the income credit for excess-profits tax purposes) be on the percentage of completion basis, namely, the actual earnings for such year in accordance with the progress of work advanced during the year.

Another method of correcting this situation would be to correct section 721 as follows:

(A) Section 721 (b) of the Internal Revenue Code is amended by inserting immediately after the second sentence thereof, the following:

"The amount of net abnormal income attributable to a taxable year in the base period shall be included in computing the taxpayer's average base period net income for purpose of the credit computed under section 713 in determining the tax under this subchapter for all taxable years."

(B) Section 721 (c) (1) and (2) is amended to read as follows:

"(1) The tax under this subchapter for such taxable years computed without the inclusion in gross income of the portion of the net abnormal income which is attributable to any other taxable years, and as if such portion had been included in the gross income for the taxable years to which attributable.

"(2) The aggregate of the increase in the tax under this subchapter which would have resulted for each previous taxable year to which any portion of such net abnormal income is attributable, computed as if such net abnormal income had been included in the gross income for the taxable year to which attributable."

In addition to this specific correction, we suggest that section 722, subparagraph (b) of H. R. 7378 be changed to read as follows:

"(5) of any other factors affecting the taxpayer's business or his method of reporting income during the base period which may reasonably be considered as resulting in an inadequate standard of normal earnings during the base period and the application of this section to the taxpayer would not be inconsistent with the principles underlying the provisions of this subsection, and with the conditions and limitations enumerated therein."

The CHAIRMAN. Any questions?

(No response.)

The CHAIRMAN. You are not sure that you would get adequate relief even under the provision as incorporated in the House bill?

Mr. PACH. We feel that it is still a little vague, and inasmuch as there were apparent directions to the collector in previous bills, that the collector is not now interpreting in the way we think they should be interpreted, we think that specific correction would be more certain.

The CHAIRMAN. It would be preferable anyway?

Mr. PACH. It would be preferable, from our standpoint; yes, sir.

The CHAIRMAN. From your point of view?

Mr. PACH. Yes, sir.

The CHAIRMAN. Thank you very much.

The CHAIRMAN. Mr. Parton is next. There were two other witnesses whose names were not on the list. I think we will have ample time to hear them. Mr. Atkinson and Mr. White, you may remain; we will hear you in just a few minutes.

All right, Mr. Parton.

STATEMENT OF GEORGE F. PARTON, NEW YORK, N. Y., PRESIDENT, NEW YORK STATE SAFE DEPOSIT ASSOCIATION; REPRESENTING THE NATIONAL SAFE DEPOSIT ADVISORY COUNCIL

Mr. PARTON. Mr. Chairman and gentlemen of the committee, my name is George F. Parton and my address is 25 Broad Street, New York City.

The CHAIRMAN. Are you having the same troubles as last year?

Mr. PARTON. They are a little different, Senator. Conditions are different today.

I am, however, still representing the National Safe Deposit Advisory Council and also the New York State Safe Deposit Association.

The CHAIRMAN. We will be glad to hear you.

Mr. PARTON. I should first apologize for not appearing yesterday as originally scheduled, but a most unusual storm dislocated all the suburban traffic, and I was unable to get to my office to complete this statement in time to get here.

I should also like to express my appreciation for the privilege of again appearing before your committee.

I am fully aware of the unprecedented conditions which are today facing the country, and I realize your stupendous task of raising, through taxation, every available dollar in order to help defray the cost of the war. The safe-deposit industry certainly wants to contribute its fair share in that effort.

Our tax problem is so relatively small compared with this whole picture that it may seem presumptuous for me to even discuss it under such unusual conditions.

Yet I believe that you are interested in all pertinent facts bearing upon any tax, however small it may be, and this alone is my justification for asking these few minutes of your valuable time.

I also believe that it is my duty to our industry, and to our 5,000,000 or so box renters, to report these facts which otherwise might be overlooked in the press of more important problems.

My purpose in appearing before you today is to present, on behalf of our industry, a plea that the present 20-percent tax rate on safe-deposit box rentals be reduced to 15 percent. This would mean a reduction of only 5 percent from the current rate and yet it would be an increase of 4 percent over that of a year ago.

I shall be very brief in presenting my reasons for this request.

I have prepared a summary of some figures which I recently assembled from a group of 165 safe-deposit companies scattered through 27 States of the Union.

These figures have a very definite bearing upon this tax problem of ours, but as they are self-explanatory I would ask your permission, sir, to place them in the record as a part of this statement, rather than to read or discuss them in detail.

The CHAIRMAN. You may do so.

(The tabulations referred to appear in this record following Mr. Parton's statement.)

Mr. PARTON. In general, this summary reveals some very pertinent and interesting information on two separate and distinct phases of the safe deposit business over the country:

(1) The much heavier loss of old business since October 1, 1941, when our tax rate was raised to 20 percent, as compared with the same period a year ago when the rate was 11 percent.

Senator CLARK. Lots of them haven't got anything to put in a safe-deposit box.

Mr. PARTON. Well, sir, I don't know about that. The business is booming right now.

(2) A very marked and unusual increase in new box rentals in the period just prior to and since the date when we entered the war, as compared with the more normal conditions in the same period a year ago.

But the point which I should like to bring out here, and particularly emphasize, is that while the net result of the two sets of figures shows up the safe deposit business in a favorable light at the present time, upon close analysis it does not indicate a true prosperity. On the contrary, it forebodes a really serious situation which our industry will have to face when the war is over.

I appreciate, of course, that many others may be confronted with similar difficulties after the war, but our industry is so small at best, one of the smallest in fact to which any excise tax has been applied, that it is a question to what extent it could withstand a severe setback and survive with any degree of stability.

It would be most unfortunate for such a situation to confront our industry which is dedicated to the protection of people's wealth and possessions.

By way of further explanation may I draw attention to the following facts. They are not based on prediction or guesswork, and I believe them to be unassailable.

I refer first to the business already lost. My summary of figures attached to this statement shows that 165 safe deposit companies lost 5,225 more boxes since the tax rate was raised to 20 percent than during the similar period last year under the 11-percent rate.

That represents a lot of business for us, and it is by no means the total for the entire country.

There can, therefore, be no question at all that there has been this definite loss of business, and it is equally certain that it is not going to return to the safe deposit companies so long as the rate remains at 20 percent. That I believe to be self-evident.

The second point, which relates to the gain in new business, is that all of the new "war scare" rentals which have come to the safe-deposit companies in recent months—business which has resulted from one thing only, a desire for special protection against bombings and air raids—will be canceled outright immediately the war ends. That also is self-evident. This particular type of new business, which also runs into very sizable figures, is admitted to be temporary; in fact it has been placed with the safe-deposit companies on that clear understanding.

Thirdly, there are a great many hundreds of boxes that have been rented in recent months to members of the armed forces at camps and war-industry centers, and many additional boxes have been rented to men who have already left our shores on war duty. For the most part these are small boxes, but in the aggregate they form a substantial portion of this new business surge.

Many of those boxes will without a question of doubt be closed out at the first opportunity just as soon as peace is declared.

A fourth point, which constitutes a very important phase of all this new business, is the thousands of little boxes rented since the War bond drive, which are being used for the specific purpose of protecting the newly purchased bonds.

If it is reasonable in this connection to be guided by the experience of the safe-deposit companies during the last war, with the boxes rented to take care of the Liberty and Victory bonds, a very large proportion of this newly acquired business will last only until the bonds can be disposed of, following the end of the war.

And again, judging from past experience, they will be disposed of at that time and the safe deposit boxes which held them will also be given up.

So, here are at least four clear-cut reasons to show that, instead of our industry enjoying a genuine prosperity, as might be the impression gained from current reports, it will be sure to face a severe setback when this war is over, unless something can be done to forestall it.

And this should be done now, rather than later. This is my main reason for so strongly urging a reduction at this time in our tax rate.

I believe this cut in the rate would be of material benefit because, if it were granted, it would immediately react as an incentive to many people to rerent those boxes which they closed out because of the 20-percent tax. They would do that for the reason that they have regarded the 20-percent rate as unfairly high, whereas 15 percent would, I am convinced, be considered much more reasonable in relation to other excise taxes. There is abundant proof to substantiate that belief. This return of old business would in itself be an extremely important offset to the war business which we expect to see withdrawn later on and it would aid materially in providing a cushion against this anticipated period of depression in our industry that I have spoken of.

In addition to this, a reduction in our tax from the 20-percent rate, which so many prospective purchasers of War bonds have objected to, would doubtless react as an incentive for further purchases. And surely anything that can be done to help along this worthy cause should be encouraged.

A reduction in the rate to 15 percent could not, I feel sure, be considered inconsistent with prevailing conditions, for even at that rate it would still be 4 percent higher than a year ago.

Nor could it be considered a discrimination in our favor, because at 15 percent it would still be at a higher level than many of the other excise taxes.

And, lastly, such a modest reduction would not cost the Government much of anything to speak of in the way of revenue.

I fully appreciate, Mr. Chairman, that it is most unusual, to say the least, for anyone to recommend or even suggest a reduction in an existing tax rate with conditions as they are today.

This proposal of ours would, however, involve such an insignificant sacrifice in revenue, whereas it would so importantly aid an entire industry, and at the same time afford relief to many millions of taxpayers, many of whom are in the country's armed forces, that I earnestly hope it will receive your most favorable consideration.

This concludes my statement, sir, and I thank you again for the privilege of presenting it.

The CHAIRMAN. Aren't you manufacturers protected by priorities?

Mr. PARTON. We are not manufacturers, Mr. Chairman. We rent or lease safe-deposit boxes.

The CHAIRMAN. Yes; but aren't the manufacturers so protected?

Mr. PARTON. Yes; they are subject to priorities, but we have so many boxes now that are unrented that there is no demand for more boxes.

The CHAIRMAN. You have a sufficient supply available?

Mr. PARTON. The industry is only about 50 percent rented today.

The CHAIRMAN. Thank you very much.

Senator RADCLIFFE. Do you consider that this volume of temporary war-scare business—I think that is what you called it——

Mr. PARTON (interposing). Yes, sir.

Senator RADCLIFFE (continuing). Would be materially modified by the fact that the rate is 20 percent rather than 15?

You suggested that you believe that a rate of 20 percent would have a deterring effect upon the old business coming back. Do you feel also that the difference in rate between 15 and 20 would affect materially this temporary business which is coming in, from the standpoint of volume?

Mr. PARTON. I don't think the rate would have anything to do with the war-scare business.

By "war-scare business" I mean business such as depositing with the safe-deposit companies of duplicate records, from one section of the city to another for example, customers' statements of accounts, minute books, and other important documents.

I feel that the firms who do that business would do it regardless of the rate, because they are invaluable records; they must be protected.

Senator RADCLIFFE. Then your objection to the 20-percent rate, as far as that particular class of business is concerned, is that it is just intrinsically too high?

Mr. PARTON. Yes, sir.

Senator RADCLIFFE. And not that it would affect the volume of business?

Mr. PARTON. I don't think it would affect that particular type of business at all.

Senator DANAHER. Mr. Parton, I was analyzing the summary of your figures that you submitted.

As far as I can make out, the rentals over the period that the 11-percent tax is in effect, October 1, 1940, to June 30, 1941, show an increase of 1,558 rentals, and over the 20-percent tax rate incidence, from October 1, 1941, to June 30, 1942, there is an increase of 23,845 rentals.

Mr. PARTON. I think you have understated it, sir. I think the statement shows an increase of 27,412 boxes, if you look at page 2 of the summary.

Senator DANAHER. They add up to 25,403. I don't know where the difference comes.

Mr. PARTON. They check with my statement. In any case, there has been an unusual increase in business. That I frankly admit, and it is general throughout the country, but my point is that most of that business—certainly a very large proportion of it—is temporary, and that it will go out as soon as the war is over, and I am trying to provide a cushion against this situation that we will have to face.

Senator WALSH. I suppose the reason that you didn't have the record from all the States is that you have been unable to get it.

Mr. PARTON. That is correct, sir. As a matter of fact, these figures do not even include four of the largest banks in the country. I couldn't get those figures in time to bring them here. The City Bank,

the Chase Bank, the Manufacturers Trust Co., and the Corn Exchange Bank, those 4 banks themselves with 225 branches would have materially swelled these figures, but I couldn't get them in time.

Senator DANAHER. Both in losses and in gains?

Mr. PART. N. Yes, sir. The trend, however, is the same with practically every bank.

The CHAIRMAN. We thank you very much, Mr. Parton.

Mr. PARTON. Thank you, sir.

(The following tabulations were submitted by Mr. Parton for incorporation in the record:)

SUMMARY AND ANALYSIS OF SURRENDERS AND RENTALS OF SAFE DEPOSIT BOXES

[Corrected to Aug. 6, 1942]

SUMMARY OF SURRENDERS

Number of boxes surrendered during the period from Oct. 1, 1940, to June 30, 1941 (11 percent tax rate), 380 safe deposit companies reporting from 36 States 78,416

Number of boxes surrendered during period from Oct. 1, 1941, to June 30, 1942 (20 percent tax rate), 380 safe deposit companies reporting from 36 States 94,094

Net increase in number of boxes surrendered during 20 percent tax period as compared with 11 percent tax period 15,678

SUMMARY OF RENTALS

Number of boxes rented during period from Oct. 1, 1940, to June 30, 1941, 380 safe deposit companies reporting from 36 States 116,319

Number of boxes rented during period from Oct. 1, 1941, to June 30, 1942, 380 safe deposit companies reporting from 36 States 191,074

Net increase in number of boxes rented, reflecting our entry in the war .. 74,755

The CHAIRMAN. Mr. Atkinson.

STATEMENT OF ARTHUR K. ATKINSON, VICE PRESIDENT IN CHARGE OF FINANCE, WABASH R. R. CO., ST. LOUIS, MO.

The CHAIRMAN. Will you give your name to the reporter, Mr. Atkinson?

Mr. ATKINSON. My name is Arthur K. Atkinson, and I am vice president in charge of finance, Wabash Railroad Co., with headquarters in St. Louis, Mo.

I appear for the purpose of submitting for your consideration a proposed amendment to section 1808 (e) of the Internal Revenue Code.

Beginning in October 1941, in company with other officers of the Wabash Railroad Co., we have been in informal discussions with representatives of the Treasury Department, namely Mr. John L. Sullivan, Assistant Secretary of the Treasury, and Mr. Thomas L. Tarleau the legislative counsel of the Department of the Treasury, and also the Honorable Colin F. Stam, who is chief of staff of the Joint Committee on Internal Revenue Taxation.

We have presented this proposed amendment, and in the hearings before the House Ways and Means Committee on April 1, 1941, I appeared in support of this proposed amendment.

My testimony appears on pages 1816 to 1818 of the unrevised printed record of those hearings—pages 1897 to 1901 of the revised printed record.

The House bill makes no provision with respect to this proposed amendment, although there are two amendments incorporated in that bill that have to do with the stamp tax section of the Internal Revenue Code.

Section 1808 (e) of the Internal Revenue Code, relating to stamp taxes, grants immunity in respect to the issuance, transfer, or exchange,

of securities to make effective any plan of reorganization confirmed under the provisions of section 77 of the National Bankruptcy Act.

Similar immunity is provided for in subsection (h) of section 77 of the National Bankruptcy Act.

In view of the provisions of section 1808 (e) of the Internal Revenue Code it would appear that subsection (h) of section 77 of the Bankruptcy Act is surplusage.

Attention is directed to the fact that this exemption does not apply to a railroad reorganization under the equity proceedings.

Senator CLARK. It does apply to an equity reorganization under section 77 (b)?

Mr. ATKINSON. Yes, sir. 77 (b) and 77—pertaining to railroads.

All railroad reorganizations, whether consummated in equity or under section 77 of the Bankruptcy Act are entitled to equality of treatment under the revenue laws of the United States.

Wabash Railway Co.—the predecessor of this new company Wabash Railroad Co.—went into equity receivership on December 1, 1931, more than 2 years prior to the passage of section 77 of the National Bankruptcy Act.

At the time of the passage of section 77 the Wabash receivers had already issued a substantial amount of receivers certificates, and when the possibility of transferring from equity to section 77 was considered there appeared to be serious complications; as to whether it was then possible to change the proceedings was a very doubtful question, but even if it were successfully attempted the time loss would have been serious.

The best estimate of the time required to reorganize under section 77 would be about 540 days from the filing of the petition, which, in effect, would be, for the Wabash, commencing de novo.

At the present time the Wabash reorganization is in the final stages.

The sale of the property at foreclosure sale under equity proceedings was held December 1, 1941, and at the present time we are now engaged in the distribution of the new securities. As the amount of indebtedness of the old corporation has been substantially reduced, and the income over and above the amount deductible for interest payments will be taxable at the new rates, the new company will pay a substantial Federal income tax and excess-profits tax for the year 1942, as against no payment of any Federal income taxes for the year 1941—the last year which the company was operated by the receivers.

We believe that these considerations——

Senator BROWN (interposing). How much is involved in taxes?

Mr. ATKINSON. In the stamp tax?

Senator BROWN. Yes—the Wabash Railroad.

Mr. ATKINSON. The Wabash reorganization involves an original issue tax of $150,000, and around $30,000 in transfer taxes—an aggregate of $180,000.

Our income taxes and excess-profits taxes payable this year are estimated between seven and nine million dollars.

Senator WALSH. Does the Wabash Railroad Co. have to pay that rather than the transferee?

Mr. ATKINSON. Yes, sir. We issue our securities and we pay the issuance tax, and there are certain taxes involved in the transfer of the securities from the old company to the new company.

It is proposed and respectfully recommended that section 1808–E of the Internal Revenue Code, which, as I have said, relates to stamp taxes, be amended by changing the phrase—and I quote—"or filing of conveyances" to read "or making or delivery of conveyances," which language is the language used in section 1808 (f), applicable to other corporate reorganizations under section 77 (b) of the Bankruptcy Act.

It is believed that the language of subsections (e) and (f) in this particular should be uniform, and the language now in subsection (f) is thought to be preferable.

The second part of this proposed amendment is a change in language which should follow immediately the last sentence of this section, and consists of the following: "or approved by any court of the United States in receivership proceedings in such court against a railroad corporation as defined in section 77 (m) of the National Bankruptcy Act."

The effect of that is to merely bring a railroad that is reorganized under the equity proceedings into the same category as a railroad that is reorganized in the bankruptcy court under section 77 proceedings.

If justification be needed for treating alike reorganizations under section 77 of the Bankruptcy Act and those consummated in equity proceedings, attention may be called to subsection (n) of section 77, which includes equity receivership proceedings, the same as it does the 77 cases, in granting priority to certain classes of claims.

Also, subsection (p) of section 77 imposes, in respect to solicitation of stockholders and creditors the same restriction in equity proceedings as therein provided in section 77 of the Bankruptcy Act.

Neither subsection (n) nor subsection (p) was in the original act.

Subsection (n) was amended by the act of August 11, 1939, to include equity receiverships, and subsection (p), which includes equity receiverships, was brought in, in entirety, by amendatory action of August 27, 1935.

If equity reorganizations are to be required, as in these subsections provided, to assume the burdens created by such section 77, it naturally follows as a corollary that they should be accorded its benefits and immunities. Such is the essence of equal protection under the law.

Senator CLARK. What your amendment proposes, in effect, would be simply to put the advantages of reorganization under equity procedure on the same footing with those under section 77?

Senator BROWN. Would you state briefly what objection you have to this?

Mr. ATKINSON. Everybody I have talked with agreed that it was an injustice and inadvertently overlooked. Everyone that we have talked to and discussed the problem with had that impression.

Yet we have not been able to secure the action we sought in the bill of the House Ways and Means Committee as reported out.

Senator WALSH. Are the taxes being held up?

Mr. ATKINSON. I am paying taxes under protest. I am buying stamps, I mean, to put on these things, but I have already filed a protest under it, and I hope that there is relief possible this year.

Of course, if it isn't done this year, we will probably not be able to do anything about it.

The CHAIRMAN. I wish the Treasury would make a special note of this, so that we can ask you about it later on in executive hearing.

Mr. ATKINSON. I would like to ask, if it is consistent, if I might file a short brief to supplement my remarks in the record.

The CHAIRMAN. You may do so.

Senator DANAHER. In such a memorandum, Mr. Atkinson, will you give us, if possible, the legislative history, as to why it wasn't in in the first place?

Mr. ATKINSON. I can't say why. I have heard so many say why it wasn't in and why it should go in, and so forth, that I can't say just what was the cause.

I might say that, in my reading of the reports and the history back of the Bankruptcy Act, and the amendment as incorporated in 1808 (e), that Congress had in mind to expedite these reorganizations, therefore they granted this immunity or this relief from this issuance tax, as a matter of relief, to help along these reorganizations.

Senator CLARK. Your reorganization has been a good deal more expeditious than most of those under section 77.

Mr. ATKINSON. I will leave that to you. I only know of one large road that has been organized under section 77. We are practically out, and if anybody needed the relief we needed it.

Senator CLARK. You are again becoming a large taxpayer for the first time in 8 or 10 years?

Mr. ATKINSON. Yes, sir. As I say, we are going to pay between seven and nine millions this year. We paid nothing last year.

The CHAIRMAN. Thank you very much.

(The following brief was submitted by Mr. Atkinson:)

BRIEF AMPLIFYING THE TESTIMONY OF ARTHUR K. ATKINSON, VICE PRESIDENT IN CHARGE OF FINANCE OF WABASH RAILROAD CO.

IN THE MATTER OF REVENUE REVISION OF 1942

The purpose of this brief is to bring before the Committee on Finance in concrete form the amendments proposed by Wabash Railroad Co. to section 1808 of the Internal Revenue Code.

For convenience, section 1808, subsections (e), (f), and (g) in their present form and the amendatory subsections proposed by the railroad company are set out below in parallel columns:

Section 1808 (e) of the Internal Revenue Code in its present form:	Section 1808 (e) of the Internal Revenue Code in its proposed amendatory form:
(e) REORGANIZATION OF RAILROADS ENGAGED IN INTERSTATE COMMERCE.—The provisions of sections 1801, 1802, and 1821 (b) of this chapter and sections 3481 and 3482 of chapter 31 shall not apply to the issuance, transfer(s), or exchange(s) of securities (or filing) of conveyances to make effective any plan of reorganization confirmed under the provisions of section 77 of the National Bankruptcy Act, as amended by section 1 of the act of March 3, 1933 (ch. 204, 47 Stat. 1474; U. S. C., title 11, sec. 205).	(e) REORGANIZATION OF RAILROADS UNDER NATIONAL BANKRUPTCY ACT.—The provisions of sections 1801, 1802, and 1821 (b) of this chapter and sections 3481 and 3482 of chapter 31 shall not apply to the issuance, transfer, or exchange of securities *or recking or delivery* of conveyances to make effective any plan of reorganization confirmed under the provisions of section 77 of the National Bankruptcy Act, as amended by section 1 of the act of March 3, 1933 (ch. 204, 47 Stat. 1474; U. S. C., title 11, sec. 205).

(f) CORPORATE REORGANIZATIONS.—The provisions of sections 1801, 1802, and 1821 (b) of this chapter and the provisions of sections 3481 and 3482 of chapter 31 shall not apply to the issuance, transfer(s), or exchange of securities or making or delivery of conveyances to make effective any plan of reorganization confirmed under section 77B of the National Bankruptcy Act, as amended by the act of June 7, 1934 (ch. 424, 48 Stat. 919; U. S. C., title 11, sec. 207).

(f) CORPORATE REORGANIZATIONS UNDER NATIONAL BANKRUPTCY ACT.—The provisions of sections 1801, 1802, and 1821 (b) of this chapter and the provisions of sections 3481 and 3482 of chapter 31 shall not apply to the issuance, transfer, or exchange of securities or making or delivery of conveyances to make effective any plan of reorganization confirmed under *chapter 10 of the National Bankruptcy Act, as amended by the act of June 22, 1938 (U. S. C., title 11, sec. 501, et seq.)*

New subsection proposed by Wabash Railroad Co.:

(g) REORGANIZATIONS IN EQUITY.—The provisions of sections 1801, 1802, and 1821 (b) of this chapter and the provisions of sections 3481 and 3482 of chapter 31 shall not apply to the issuance, transfer or exchange of securities or making or delivery of conveyances on or after January 1, 1942, to make effective any plan of reorganization approved by any court of the United States in receivership proceedings in such court against a railroad corporation (as defined in section 77 (m) of the National Bankruptcy Act) or in receivership proceedings in such court against a corporation entitled to reorganization under chapter 10 of the National Bankruptcy Act, as amended by the act of June 22, 1938 (U. S. C., title 11, section 501, *et seq.*) and any moneys paid for stamps affixed subsequent to December 31, 1941, with respect to such issuance, transfer or exchange of securities, or making or delivery of conveyances, shall be refunded if a claim for refund is filed prior to March 15, 1943.

New subsection proposed in H. R. 7378:

(h) TRANSACTIONS UNDER ORDERS OF THE SECURITIES AND EXCHANGE COMMISSION.—The provisions of sections 1801, 1802, and 1821 (b) of this chapter and the provisions of sections 3481 and 3482 of chapter 31 shall not apply to the issuance, transfer, or exchange of securities, or making or delivery of conveyances, to make effective any order of the Securities and Exchange Commission as defined in section 373 (a) of chapter 1: *Provided*, That (1) the order of the Securities and Exchange Commission in obedience to which such issuance, transfer, or exchange of securities, or conveyances are made recites that such issuance, transfer, or exchange, or conveyances are necessary or appropriate to effectuate the provisions

of section 11 (b) of the Public Utility Holding Company Act of 1935 (49 Stat. 820, U. S. C., title 15, sec. 79 (b)), (2) such order specifies and itemizes the securities and other property which are ordered to be issued, transferred, exchanged, or conveyed, and (3) such issuance, transfer, or exchange, or conveyance is made in obedience to such order.

(g) CROSS REFERENCE.—For exemption in case of playing cards exported to a foreign country, see section 1830.

(l) CROSS REFERENCE.—For exemption in case of playing cards exported to a foreign country, see section 1830.

It is proposed (in this respect following the mechanics set by the House of Representatives in the text of H. R. 7378—Union Calendar No. 845) that the above amendments be brought in as part of section 507 of H R 7378, as shown by a complete amendatory section 507 annexed hereto marked "Exhibit A."

The new language incorporated in the amendatory subsections (e) and (f) is shown by italics appearing in the right-hand column. The language in the present subsections (e) and (f) which is omitted in the amended subsections (e) and (f) is shown above my parentheses in the left-hand column.

Th amendatory subsections (g) and (h) are entirely new. Subsection (g) embodies the legislation asked by Wabash Railroad and subsection (h) is a reproduction of the proposed subsection (g) in section 507 of H. R. 7378.

Certain changes in the captions of the amendatory subsections are made in the interest of brevity and uniformity and are self-explanatory.

The first change in the text is to substitute in the present subsection (e) for the words "or filing," as shown in parentheses in the above left-hand column, the words "or making or delivery" so that the incidence of the tax will be upon the making or delivery of a conveyance necessary to make a plan of reorganization effective and not upon the filing of the conveyance. This change, it will be observed, conforms the language of subsection (e) to the language of subsection (f) relating by its terms to reorganizations under section 77B and is proposed in the belief that this part of the present subsection (e) might be inoperative should the filing of a conveyance under the recording acts not be necessary to carry out the plan. In any event, the language of subsections (e) and (f) in this respect should be uniform and the language of the present subsection (f) seems more nearly to fit the case.

As the committee is aware the present subsection (f) pertains to reorganizations under section 77B, whereas section 77B is no longer in effect, having been superseded by chapter 10 of the National Bankruptcy Act as amended by the act of June 22, 1938. Accordingly, the railroad company proposes that this subsection (f) be brought up to date by substituting for the words "section 77B of the National Bankruptcy Act, as amended by the act of June 7, 1934 (ch. 424, 48 Stat. 919, U. S. C., title 11, sec. 207)," being the language placed in parentheses in the present subsection (f) as set out above in the left-hand column, the following new language, being the language shown in italics in the amended subsection (f) as set out above in the right-hand column: "Chapter 10 of the National Bankruptcy Act as amended by the act of June 22, 1938 (U. S. C., title 11, sec. 501, et seq.)."

The new amendatory subsection (g) set out above in the right-hand column is the heart of the legislation desired by Wabash Railroad Co. in order to put upon a basis of equality under the tax laws all railroad reorganizations and corporate reorganizations whether consummated under the National Bankruptcy Act or under receivership proceedings in a court of the United States. There is no ground for discrimination as between these two procedural methods of attaining the same objective—an expeditious reorganization that will extinguish a debt-ridden corporation without taxable income and substitute therefor a new corporation upon which the Government may rely as a dependable taxpayer.

Congress did not attempt to make the National Bankruptcy Act the exclusive procedure for railroad reorganizations but on the contrary left the equity procedure unimpaired, and this seems also to be true as to ordinary corporate reorganizations which are embraced in chapter 10 of the Bankruptcy Act; Con-

gress recognized that in certain circumstances one of these methods of procedure might be preferable to the other and that in other circumstances the reverse might be the fact, and gave to the railroad companies already in equity receivership the right to transfer to the National Bankruptcy Act, without, however, requiring such transfer, and left both procedures open for future reorganizations. Accordingly, there should be no tax penalty that would destroy or limit the freedom of choice between alternative procedures equally sanctioned and authorized by law.

It may be noted in this connection and in justification, if such be needed, for treating alike reorganizations consummated under section 77 of the National Bankruptcy Act and those carried through in equity, that subsection (n) of section 77, which includes equity receivership proceedings, grants priorities to certain classes of creditors and also that subsection (p) of section 77 imposes in respect to solicitation of stockholders and creditors the same restrictions in equity receivership proceedings as are therein provided for proceedings under section 77 of the National Bankruptcy Act. Neither subsection (n) nor subsection (p) was in the original act. Subsection (n) was amended by the act of August 11, 1939, to include equity receiverships and subsection (p) which extends to equity receiverships, was brought in in its entirety by the amendatory act of August 27, 1935. If equity reorganizations are to be required, as in these subsections provided, to assume the burdens created by said section 77, it follows as a corollary that they should be accorded its benefits and immunities. Such is the essence of equal protection of the laws.

The proposed amendment has been the subject of discussion with representatives of the Treasury Department and of the Joint Committee on Internal Revenue Taxation and no objection has developed from either of these sources; on the contrary Wabash Railroad Company confidently anticipates complete cooperation on their part.

The enactment of the proposed amendment was urged by Arthur K. Atkinson on behalf of the receivers of Wabash Railway Co. at the hearings held on April 1, 1942, before the Committee on Ways and Means of the House of Representatives on revenue revision of 1942. Mr. Atkinson's statement first appeared on pages 1816–18 of the Ways and Means Committee's print of said hearings dated April 1, 1942, and is now set forth on pages 1897 and 1898 of the revised printed record thereof. The House bill, H. R. 7378, which has been reported out makes no provision for the proposed amendment. This bill, however, contains various amendments to prior revenue acts including an amendment to other subsections of section 1808 of the Internal Revenue Code; namely, subsections (g) and (h). The charges proposed by the House in these subsections are preserved in the annexed proposed Senate substitute for section 507 of H. R. 7378, but are relettered "(h)" and "(i)."

The Wabash reorganization is now in the final stages.

The sale at foreclosure of the properties of Wabash Railway Co. under equity procedure was held on December 1, 1941, and the securities of the new company, Wabash Railroad Co. are now in process of distribution. The railroad company has found it necessary to pay under protest substantial stamp taxes pursuant to the present section 1808 (e) in connection with the consummation of the reorganization.

It is vital therefore that in amending the Internal Revenue Act the right of Wabash Railroad Co. to a refund of such stamp taxes be given in clear and express language.

It is respectfully submitted that the setting up of the new subsections (e), (f), (g), and (h), amended as above indicated, will bring all of these sections into harmony and up to date and will place equity reorganizations and bankruptcy reorganizations on an equality, and will accomplish more completely the intent of Congress as indicated by the exemptions given under the National Bankruptcy Act.

For the foregoing reasons, the favorable consideration and action of the committee is urgently requested.

Respectfully submitted.

ARTHUR K. ATKINSON,

Vice President in Charge of Finance of Wabash Railroad Co.,
St. Louis, Mo.

Dated, AUGUST 10, 1942.

EXHIBIT A

PROPOSED SENATE SUBSTITUTE FOR SECTION 507 OF H. R. 7378, UNION CALLENDAR No. 845

SEC. 507. STAMP TAX IN CONNECTION WITH RAILROAD AND CORPORATE REORGANIZATIONS, AND WITH TRANSACTIONS UNDER ORDERS OF SECURITIES AND EXCHANGE COMMISSION

Section 1808 is amended by changing subsections (e) and (f) and by adding two new subsections designated as (g) and (h) and by changing the designation of the present subsection (g) to (i) so that subsections (e), (f), (g), and (h) of said section, as amended, will read as follows:

(e) *Reorganization of railroads under National Bankruptcy Act.*—The provisions of sections 1801, 1802, and 1821 (b) of this chapter and sections 3481 and 3482 of chapter 31 shall not apply to the issuance, transfer, or exchange of securities or making or delivery of conveyances to make effective any plan of reorganization confirmed under the provisions of section 77 of the National Bankruptcy Act, as amended by section 1 of the act of March 3, 1933 (ch. 204, 47 Stat. 1474; U. S. C., title 11, sec. 205).

(f) *Corporate reorganizations under National Bankruptcy Act.*—The provisions of sections 1801, 1802, and 1821 (b) of this chapter and the provisions of sections 3481 and 3482 of chapter 31 shall not apply to the issuance, transfer, or exchange of securities or making or delivery of conveyances to make effective any plan of reorganization confirmed under chapter 10 of the National Bankruptcy Act, as amended by the act of June 22, 1938 (U. S. C., Title 11, sec. 501 *et seq.*).

(g) *Reorganizations in equity.*—The provisions of sections 1801, 1802, and 1821 (b) of this chapter and the provisions of sections 3481 and 3482 of chapter 31 shall not apply to the issuance, transfer, or exchange of securities or making or delivery of conveyances on or after January 1, 1942, to make effective any plan of reorganization approved by any court of the United States in receivership proceedings in such court against a railroad corporation (as defined in section 77 (m) of the National Bankruptcy Act) or in receivership proceedings in such court against a corporation entitled to reorganization under chapter 10 of the National Bankruptcy Act, as amended by the act of June 22, 1938 (U. S. C., title 11, sec. 501, *et seq.*) and any moneys paid for stamps affixed subsequent to December 31, 1941, with respect to such issuance, transfer, or exchange of securities, or making or delivery of conveyances, shall be refunded if a claim for refund is filed prior to March 15, 1943.

(h) *Transactions under orders of the Securities and Exchange Commission.*—The provisions of sections 1801, 1802, and 1821 (b) of this chapter and the provisions of sections 3481 and 3482 of chapter 31 shall not apply to the issuance, transfer, or exchange of securities, or making or delivery of conveyances, to make effective any order of the Securities and Exchange Commission as defined in section 373 (a) of chapter 1: *Provided*, That (1) the order of the Securities and Exchange Commission in obedience to which such issuance, transfer, or exchange of securities, or conveyances are made recites that such issuance, transfer, or exchange, or conveyances are necessary or appropriate to effectuate the provisions of section 11 (b) of the Public Utility Holding Company Act of 1935 (49 Stat. 820, U. S. C., title 15, sec. 79 (b)), (2) such order specifies and itemizes the securities and other property which are ordered to be issued, transferred, exchanged, or conveyed, and (3) such issuance, transfer, or exchange, or conveyance is made in obedience to such order.

(i) *Cross reference.*—For exemption in case of playing cards exported to a foreign country, see section 1830.

STATEMENT OF JOHN C. WHITE, REPRESENTING SOUTHEASTERN COMPRESS & WAREHOUSE CO., ATLANTA, GA.

Mr. WHITE. My name is John C. White, and I am appearing as counsel for the Southeastern Compress & Warehouse Co.

The CHAIRMAN. You may proceed with your statement, Mr. White.

Mr. WHITE. We are asking for an amendment to section 752 (c) (2) of the Internal Revenue Code.

That section covers what is called the highest bracket amount of a transferee corporation after it had received certain property in exchange for issuance of its stock.

The result of it, so far as this company was concerned, is that its highest bracket amount was reduced from $500,000 to $1,440 as a result of having received from the parent company a small warehouse property which was worth a very small percentage of the total assets of the parent company. The section itself is extremely complicated, and almost impossible to understand on reading it, but in brief the point of it is as follows:

The transferee's highest bracket amount for any taxable year after the exchange shall be an amount which is a percentage of such transferor's highest bracket amount immediately preceding the exchange—

Well, the transferor here had $500,000 highest bracket amount immediately preceding the exchange and the section goes on to provide that there shall be a percentage of that amount—

equal to the percentage which the excess of the transferee's daily invested capital for the day after the exchange over its daily invested capital for the day of the exchange is of such transferor's daily invested capital for the day of the exchange.

We submitted this particular state of facts to the Bureau and they ruled that this meant that the highest bracket amount of the Southeastern Compress & Warehouse Co. was reduced from $500,000 to $1,440.

That means, in effect, that the rate it will pay is uniformly 60 percent for the past year, for the fiscal year ending this year, whereas if it had any highest bracket amount or had been able to keep its prior highest bracket amount, it would be able to pay its excess-profits tax at the graduated rates provided in section 710 (a).

It is plain, from the committee reports, that this section did not take into account transfers between existing corporations.

It was directed at corporate split-ups. In other words, it was intended that, if a corporation transferred some of its property to a new corporation, that then the highest bracket amount of the two companies should be the same as that of the single company before, but by failing to take into account necessary transfers of property between existing corporations and corporate groups, the result of this section is that a highest bracket amount can be entirely eliminated without the knowledge of the corporations involved, because of this very technical section.

That point isn't important for fiscal years ending after 1942, because the graduated excess-profits tax is out.

The CHAIRMAN. You have the flat rate?

Mr. WHITE. That is right. So that this is important primarily for the fiscal year ending 1942.

Now, I have drafted a suggested amendment which would read as follows. It would go to section 217 of H. R. 7378:

Section 752 (c) (2) is amended as of the date of its enactment by inserting at the end thereof the following new language:

"This paragraph shall not reduce the highest bracket amount of an existing transferee corporation, but the net income from the property transferred shall be taxed at the same rate at which it would have been taxed to the transferor corporation if that be higher."

Now, this amendment, I think, would avoid any transfers for the purpose of reducing taxes. It would not protect or cover those, but where a transfer of property was made for corporate purposes quite unrelated to tax problems, this would avoid what seems to us to be a rather inequitable provision, and a purely unintentional provision of the present section 752 (c) (2).

The CHAIRMAN. Have you submitted your suggestions to any member of the Treasury?

Mr. WHITE. That has been submitted to them in a memorandum in the last day or so, but I haven't had any reaction from them.

The CHAIRMAN. Any questions?

(No response.)

The CHAIRMAN. Thank you, Mr. White.

We will recess until 10 o'clock tomorrow morning.

(Whereupon, at 4:25 p. m., the hearing was recessed, to reconvene at 10 a. m., Thursday, July 30, 1942.)

REVENUE ACT OF 1942

THURSDAY, JULY 30, 1942

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in Room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will come to order, please. Mr. Spence.

Senator VANDENBERG. Mr. Chairman, before the witnesses start, I want to bring two matters to the attention of the Treasury for their study, very briefly, if you will permit me. The first point is that the United States Board of Tax Appeals handed down a decision on June 23, 1942, that—

payments received * * * by a naturalized citizen and resident of the United States, from the Canadian Government under its Pension Act as compensation for disabilities incurred from injuries received in 1918 while in active service as a member of its armed forces, are taxable income to the petitioner in the respective years when received.

In other words, although we exempt pensions to American citizens who fought in the World War No. 1 under our flag, we do not exempt pensions to American citizens who fought under the Canadian flag.

I think the situation is so obvious in its inequity that I would like to have it studied with a view to a possible correction of that situation.

The other matter arises in a letter from John L. Lovett, general manager of the Michigan Manufacturers' Association, who points out that when a war contract is renegotiated, even though contractors may have been previously paid on the basis of the original contract, there is no arrangement for a readjustment of the tax, as the result of the renegotiation of the contract, and it is suggested—and I think quite equitably—that something should be done about that.

I would like to have both of those matters referred to the Treasury staff for their study and recommendation.

The CHAIRMAN. On the latter point it will be necessary to do something, and it will also be necessary to take care of the situation where the Comptroller General may disallow the cost item in any plant-expansion program, which disallowance, of course, may come in some subsequent year even after the statute of limitations has applied; because of the volume of work thrown on the Comptroller's office, he may not be able to audit all those accounts and may discover something after the statute of limitations has applied. Some provision, in my judgment, must be put in the bill to take care of that situation.

Senator VANDENBERG. Well, that is precisely the same situation, in general, that I was speaking of.

The CHAIRMAN. Yes; that is true. I do not see any of the Treasury representatives here this morning. Is Mr. Spence in the room?

(No response.)

The CHAIRMAN. Mr. Satterlee.

STATEMENT OF HUGH SATTERLEE, NEW YORK, N. Y., CHAIRMAN, TAX COMMITTEE, NEW YORK COUNTY LAWYERS ASSOCIATION

Mr. SATTERLEE. Mr. Chairman, and gentlemen, my name is Hugh Satterlee. I am a New York lawyer and I appear partly as chairman of the committee on taxation of the New York County Lawyers Association and partly as an individual. I should like to have permission to file subsequently a written statement embodying several points, two or three which I shall mention briefly this morning. That statement will not consist of more than 10 or 15 pages, so I should like permission to file that and have it printed in the record.

The CHAIRMAN. Yes, sir; you may do so.

Mr. SATTERLEE. We all realize, of course, that high taxes are necessary and particularly excess-profits taxes in these times, but that makes it all the more essential that so far as possible, there should be equality of taxation and discriminations should be ironed out.

I have particularly in mind this morning two features of the excess-profits tax law which, it seems to me, call loudly for amendment and modification.

One relates to corporations which, through reorganization, succeed a corporation which at the time of the reorganization had an operating deficit.

Now just briefly, so you can better understand the point I have in mind, under the statute as it stands, of course the invested capital of a corporation consists generally of money and property paid in, plus accumulated earnings and profits, if any, less distributions which have been made otherwise than out of earnings and profits, in other words, distributions of capital.

Even though a corporation has suffered an operating net loss, nevertheless it is still entitled to the original invested capital paid in, which is fair and proper under the principles of the excess-profits tax law, because that is the investment in the business, and of course, corporations often, particularly in their early history, suffer operating losses which are afterward made up. But, at any rate, that is the law now and was the principle adhered to under the excess-profits tax of 1917, 1918, and 1921.

However, an unfortunate situation, unfortunate under the law as phrased today, arises where a corporation with an operating deficit reorganizes into another corporation. Under the statute as it now stands, if a corporation of Maryland, for example, decides that the Delaware law is more favorable and reorganizes under the law of Delaware, with the same stockholders and with the same capital stock, nevertheless, if that Maryland corporation, we will say, had a paid-in capital of $1,000,000 with an operating deficit of $200,000 and if it had continued as a corporation of Maryland without a change in the corporate jurisdiction, it would have been entitled to an invested capital of $1,000,000.

Nevertheless, if it reincorporates in another State, without other changes, its invested capital is reduced by the amount of its operating deficit to $800,000, in the case that I have cited.

Now the bill as passed by the House may, to some extent, remedy that situation. As a matter of fact, I say "may" because I have been studying the matter for the last week or two, and I took this particular question up with two of my partners, one of whom is the former chairman of the Board of Tax Appeals and the other man used to be in the chief counsel's office for a good many years and we reached three different conclusions as to the meaning of the statute.

So I am not very clear as to just what the statute was intended to do, but I think that it may have been intended to accomplish this result, that is to say, where one corporation owns—I am talking now about section 761 proposed to be added to the Internal Revenue Code by section 218 of the revenue bill of 1942—where a corporation owns the stock of another corporation and liquidates that other corporation or merges it or consolidates with it, as I read the statute I think there is a considerable ground for saying that the intention is that the corporation which succeeds to the other corporation by liquidation, merger, or consolidation, shall be entitled to include in its invested capital the invested capital of the corporation that has gone out of existence, without reduction of such invested capital by any operating deficit of the predecessor corporation.

That is fair and reasonable, because the successor corporation, by hypothesis, in that kind of reorganization or liquidation succeeds—steps in the shoes of the predecessor corporation.

However, if the reorganization is effected by a slightly different method as for example in the illustration I cited of a Maryland and Delaware corporation, the Maryland corporation transfers all of its property to the new Delaware corporation in exchange for all the stock of the Delaware corporation, and then the Maryland corporation dissolves and distributes the stock of the Delaware corporation to its stockholders so that the old stockholders of the Maryland corporation become stockholders of the Delaware corporation, and the same stock is outstanding and the same assets are in the enterprise except that there has been a new corporation changed from one State to another, in that event, under the statute as it stands and under the revenue bill as I read it, the new corporation has its invested capital reduced from the original investment by the amount of the operating deficit of its predecessor which is not fair and creates great discrimination between two enterprises which have exactly the same investment but one of which happens to have a change in the place of incorporation or other reorganization.

Now, there is a good deal of difference between a situation such as I have indicated, where the reorganization really becomes a continuance of the same business without substantial change, and the case where one corporation, for example, acquires by the issue of its stock, only part of the property of another corporation. In that case, it is perfectly fair that the corporation which acquires the property should include in its invested capital only the value of that property at the time it receives it, or the basis of the corporation which transferred it, which transferred the property because the corporation which transferred it, having other property, presumably continues in business.

So the corporation which acquires the property is not a true successor to the selling, transferring corporation.

Of course, also in the case of a recapitalization which, under the statute, means simply a change in the corporate structure, in the corporate capital, without reincorporation, in that case a deficit corporation's invested capital is not impaired by the amount of its operating deficit, and it seems utterly unfair and illogical to penalize a corporation which has merely reincorporated, for example, in another State or gone through another reorganization which effects no change in the enterprise, other than having a new corporation possibly in a different State.

So I think, in a case like that, whatever the proposed bill means, there certainly should be a clear provision in the bill to the effect that a true successor corporation—that is the corporation which, by any form of reorganization, stands in the shoes of its predecessor which had gone out of existence—the successor should be entitled to the same invested capital as the predecessor.

Let me give you one more illustration of the unfairness under the statute as it stands. Under the statute as it stands, a corporation succeeding to another by reorganization takes the assets of the other at their basis to the prior corporation and, of course, if there is an operating deficit in the prior corporation, the assets, at their basis to that corporation, add up to less than the original paid-in capital of that corporation.

However, those assets may, in fact, at the time the successor corporation takes them, be worth considerably more than their basis to the prior corporation, which is likely to be cost to the prior corporation.

Using the illustration I made of the corporation with the paid-in capital of $1,000,000, with an operating deficit of $200,000, if that corporation transfers to a new corporation, which becomes truly its successor, the basis to the new corporation and the invested capital is $800,000.

It makes no difference that those assets may be worth $1,500,000, so long as the basis to the old corporation is only $800,000.

So that the result is that the corporation is hornswoggled both ways. The new corporation is not entitled to the invested capital of its predecessor, and it is not even entitled to take the assets at their fair value at the time it receives them. But it seems to me clearly that where a reorganization results simply in a change of form without substantial change in the enterprise itself, that the new corporation should be entitled to the same invested capital as its predecessor corporation.

Senator DANAHER. Mr. Satterlee, may I interrupt you, please?

Mr. SATTERLEE. Surely.

Senator DANAHER. Do you have a copy of the bill at hand, sir?

If not, here is one.

Mr. SATTERLEE. I have a copy right over here.

Senator DANAHER. Directing your attention, please, to page 243, beginning in line 3 and running down through the end of that sentence, does not that take into account, or is not it contemplated to take into account, the situation you are describing?

Mr. SATTERLEE. It is. As I say, in certain situations at least I think it means that, although I am not clear but what the situations are limited. This is section 761?

Senator DANAHER. Yes, sir.

Mr. SATTERLEE. You see it defines, at the beginning of section 761 on page 241, the term "liquidating transaction" as—

the complete liquidation of another corporation under section 112 (b) (6) or the corresponding provision of a prior revenue law, or

The liquidation of another corporation, or a transaction having the effect of liquidating in whole or in part, some or all of the stock of another corporation.

Then having defined a liquidating corporation, it goes on, on page 242, and at the beginning of the subdivision to which you call my attention, subdivision (2) at the bottom of page 242—well, it refers, of course, to a liquidating transaction, and the liquidating transaction under (1) refers to receiving property on the liquidation of another corporation.

That, if apparently your view and mine are right, takes care of the situation where the receipt of the property is by liquidation of the other corporation, but in the instance which I cited, for example, it does not get the property strictly by liquidation.

Let me put to you two different situations. If corporation A acquires all the stock of corporation B by the issue of A stock to the stockholders of corporation B, then having acquired B stock it liquidates B, under this provision by liquidation it gets the assets of B, and my belief is that this was intended to give whatever invested capital it got through getting the property of B, it got the same invested capital as B had.

But, instead of going through that procedure A issues its stock to B for the properties of B, and then B, having received for its properties the stock of A, distributes such stock of A to its stockholders.

Although the result is the same in the two different transactions, simply the order of events is different, and the result in both cases is that the new corporation has the same stockholders and the same assets as the old.

Nevertheless, in fact A has not received the assets of B by liquidation but has received the assets of B by the issue of its stock to B and that is particularly the kind of situation which, it seems to me, should be remedied, because there is no difference, in substance; the only difference is in the form of the reorganization.

Senator TAFT. Is not this language pretty broad, "the liquidation of another corporation, or a transaction having the effect of liquidating in whole or in part, some or all of the stock of another corporation" in the event property is received by the taxpayer? It does not say "purchased." It says "received" in a liquidating transaction.

I should think either of the things you stated would be liquidating transactions. The language is broad enough.

Mr. SATTERLEE. If you go along to page 244, in the middle of the page, you will see—

In determining the amount of the adjustments under subsections (a) and (b), if a corporation owned stock in another corporation, and such corporations are merged or consolidated in a statutory merger or consolidation, or such cor-

porations are parties to a liquidating transaction which results in the liquidation of such stock in a manner similar to that resulting from a statutory merger or consolidation—

then the same result follows.

But it starts out with the condition that the corporation must own the stock in the other corporation.

Senator TAFT. Is this a new provision?

Mr. SATTERLEE. This is entirely new, yes; and, as a matter of fact, one member of the Treasury Department that I spoke to about it said that certainly in the case that I cited the new corporation would not have the benefit of the invested capital of the old, and he doubted if this provision, even in the cases strictly within it, was intended to have that effect.

That is why, it seems to me, in any event, there should be a clarification of these provisions, which nobody seems to have a perfectly clear idea about.

The second feature that I have in mind, the second principal feature, is in connection with section 734, which has been mentioned to you before, and which is still a great source of confusion and dissatisfaction. It cannot be said yet that it has had any serious effects, except as a threat, because it was only enacted about a little over a year ago, and the result of it could only become apparent after the excess-profits-tax returns had been reviewed and additional assessments made in connection with them.

But section 734, to refresh your recollection of it, in effect provides that if, in determining invested capital or net income for excess-profits-tax purposes, a position is taken which, although in conformity with the law as it is now held to be, is inconsistent with the position that was taken in some year back as far as 1913, because in some earlier year the construction of the law by both the taxpayer, the Treasury Department and even by the courts, lower courts, may have been different from what it is now, in that event, if the taxpayer complies with the law as it stands today, but takes that inconsistent position, the Treasury Department may recompute his taxes for any earlier year, and assess an additional income tax which, if less than the excess-profits tax under the present law, will be credited against that tax, and if greater than the excess-profits tax, the Treasury may collect it with interest.

Senator TAFT. That has not been changed in this law.

Mr. SATTERLEE. Nothing was done about it in the Ways and Means Committee. The first result of that statute is, of course, that so far as excess-profits taxes are concerned, it opens wide the whole period of limitation back to 1913 and just takes away the statute of limitations entirely, which we think is a bad enough result and an unnecessary result, and for that reason alone, the statute should be repealed in its entirety.

Of course, the statute of limitations is designed as a statute of repose. Sometimes it works in favor of the Government and sometimes in favor of the taxpayer, but it has always been regarded as beneficial to both in that old matters, once decided, should not be entitled to being reopened indefinitely for all years to come.

So that, it seems any advantages of the statute, if there are any, are more than offset by this fundamental defect, and as a result of that, the statute has the effect of penalizing a correct computation of the excise tax.

In other words, if a corporation computes its excess-profits tax in strict conformity with the law as it is held to be today, but that construction is different in respect to some item from the way the item was treated for income-tax purposes in an earlier year, why, its correct computation is at the price of having to pay an additional income tax for some earlier year.

The alternative is to make a false excess-profits tax return for the current year, which certainly does not seem to be desirable as a matter of policy.

I notice that Mr. Blodgett, of Boston, who appeared before you last August on this same point and who has studied the matter probably in greater detail than I, is on your list this morning and will undoubtedly present the matter fully to you.

But, there is one particular situation with respect to it that I should like to go into, and that is the reference in the statute to the predecessor.

If, to paraphrase the statute, some item has been treated in the past incorrectly for income-tax purposes, either by the taxpayer or by a predecessor, why then the taxpayer is charged, not only with its own income taxes, but also with the taxes of its predecessor, and a "predecessor" is not defined in the statute, and so far as I know, it is the first use of the term "predecessor" as a word of art in any income or excess-profits tax statute.

Originally the Treasury Department promulgated in its regulations a definition of "predecessor" which was wide open and created so much stir that by an amendment it limited the definition to some extent, but in a definition which still is difficult to understand and which is capable of various interpretations. It seems to me that there is some justification for including a predecessor corporation, as well as the taxpayer, if the statute is to stand at all, with certain drastic modifications, provided the predecessor is a true predecessor corporation in the sense that the taxpayer, as I indicated previously in connection with the discussion of the other point, is a true successor.

But, as the definition of "predecessor" stands in the Treasury regulations now, that is not so.

In other words, to take the example given in the regulations, if corporation A transferred some depreciable property to corporation B back, we will say, in 1924 at a time when corporation A was considered to be free from tax on that transaction, and corporation B under the same mistaken view of the law depreciated that property, not at the then value, which was greater than its base to corporation A, so that it took less depreciation than it was really entitled to, as it has since been held, if corporation B now, for excess-profits tax purposes, includes property in its invested capital at its actual value instead of its basis to A, under the regulations of the Treasury Department, it will be charged with the tax which A should have paid on the transfer back in 1924, although A may be still and probably is still in existence, and the only reason it is not charged with the tax is that the statute of limitations had run against it.

In that kind of situation, which is given as an illustration in the regulations of the way section 734 would apply, the successor corporation never benefited in the slightest degree in respect of the position taken by this so-called predecessor corporation.

As a matter of fact, in this very illustration, the fact that both B and its predecessor were mistaken in the view of the law back in 1924 has resulted in the successor or the transferee corporation—it is not a true successor—having received the benefit of less depreciation deductions than it was really entitled to, and yet now, if it takes a correct position for excess-profits tax purposes, it is to be charged with the tax which should have been paid by a seller corporation, a transferor corporation back in 1924.

Now that situation, as I say, certainly should be cured, whatever is done with the statute. On the other hand, it seems to me that there might be justification for taking the position that where the transferee corporation was a true successor to the transferor, as in the case of these organizations I was speaking of a few minutes ago, where the successor succeeded to all the property of the former corporation and had the same stockholders, there is some warrant for going back to the predecessor, because to the extent that the assets of the predecessor were not diminished by the tax which should have been paid, on the present understanding of the law, at the time of the reorganization the successor corporation was benefited because, by hypothesis, it took all the properties of the predecessor and not simply part of the assets.

In other words, both in the case of deficit corporations, of which I spoke somewhat, and in the case of section 734, if it is not to be repealed altogether, it seems to me that the line of demarcation should be whether, in connection with the reorganization the new corporation stands truly in the shoes of the old corporation, or whether it is simply, in effect, a purchaser of part of the assets of the old corporation.

But, I sincerely believe that both these features of the excess profits tax law will have to be and should be thoroughly reviewed and corrected, if there is not to be tremendous discrimination between different business enterprises with truly the same invested capital and the only difference being that some of them may have gone through, for one business reason or another, a form of reorganization.

I thank you, gentlemen.

The CHAIRMAN. Thank you, Mr. Satterlee.

(Mr. Satterlee presented the following supplemental statement:)

SUPPLEMENTAL STATEMENT SUBMITTED BY HUGH SATTERLEE, CHAIRMAN, COMMITTEE ON TAXATION, NEW YORK COUNTY LAWYERS' ASSOCIATION

AUGUST 5, 1942.

HON. WALTER F. GEORGE,
Chairman, Committee on Finance,
The Senate, Washington, D. C.

DEAR SIR: The committee on taxation of the New York County Lawyers' Association, pursuant to authority granted by the Board of Directors, respectfully submits the following recommendations regarding the revenue bill of 1942:

I. INVESTED CAPITAL OF SUCCESSOR TO DEFICIT CORPORATION

In general the equity invested capital of a corporation includes money and property paid in, plus accumulated earnings and profits, if any, less distributions to stockholders which were not out of earnings and profits (Internal Revenue Code, sec. 718). If a corporation has no earnings and profits, but a deficit, it is nevertheless entitled to an invested capital equal to the money and property paid in, the actual investment, provided the deficit is occasioned by operating losses

and not by distributions to stockholders. Of course, any subsequent earnings and profits must first be applied in reduction of the deficit to the amount thereof before they are effective to increase the invested capital over the amount of the cash and property paid in.

In the existing statute the situation of a successor corporation to a corporation with an operating deficit is unfortunate. Even though it stands in the shoes of its predecessor corporation, its invested capital is reduced by the amount of the operating deficit of its predecessor. If the predecessor had a paid-in capital of $1,000,000 and an operating deficit of $250,000, its invested capital was $1,000,000, but if for business reasons the predecessor was reorganized into a corporation of another State with precisely the same assets and shareholders, without interruption of the enterprise as a going concern, the successor corporation would be entitled to an initial invested capital of only $750,000.

Under the revenue bill of 1942 as passed by the House this lack of logic and equity may possibly have been remedied to a limited extent. In section 761, proposed to be added by section 218 of the bill, if a corporation having acquired the stock of another corporation in a transaction in which gain or loss was not recognized liquidates such corporation, or the two corporations are merged or consolidated in a statutory merger or consolidation, then there is included in the equity invested capital of the corporation continuing after the liquidation or merger or consolidation of the other corporation, in lieu of the amounts determined to be otherwise includible in the equity invested capital of such corporation with respect to the other corporation, the amount determined to be necessary to reflect the equity invested capital and the deficit in earnings and profits, if any, of the transferor. Apparently, therefore, if a corporation succeeds to the business and assets of another corporation by first acquiring its stock and then liquidating it, or merging or consolidating with it, the predecessor's invested capital is included in the invested capital of the successor corporation, unless the reference to any deficit in earnings and profits means that the invested capital is to be reduced thereby. Such inclusion is logical and proper because the original investment is continued in the successor corporation except for a change in form not recognized for income-tax purposes.

However, so far as may be inferred from the complex excess-profits-tax provisions of the code and of the revenue bill, if a corporation succeeds another corporation just as effectively and completely as by the methods above specified, but in a slightly different manner, it will not be entitled to the invested capital of its predecessor. If a corporation of Delaware, for example, by the issue of all of its stock acquires all of the assets of a corporation of Maryland which then distributes in liquidation to its shareholders the stock of the Delaware corporation in exchange for their old stock, the Delaware corporation becomes the successor to the Maryland corporation just as truly as though, reversing the order of events, the Delaware corporation had first issued its stock to the shareholders of the Maryland corporation and then acquired the properties of the Maryland corporation by liquidating it. (Cf. clause (C) of section 112 (g) (1) of Internal Revenue Code with clauses (A) and (B)). Nevertheless, in the case of the acquisition of the properties first, as distinguished from the case of the acquisition of the stock first, the result being identical, the successor corporation might have less invested capital than the corporation which succeeded another corporation by a slightly different method.

The acquisition by one corporation in exchange for its stock of only part of the assets of another corporation presents an entirely different situation. There the transferee corporation is not the successor to the business and properties of the transferor corporation, but is only the purchaser of specified assets, which properly should be included in the invested capital of the acquiring corporation at their cost to it or at their basis to the transferor corporation dependent upon whether or not gain or loss was recognized in the transaction. (Cf. sec. 112 (g) (1) (D) of Internal Revenue Code.) It is only where the continuing corporation is a true successor to the predecessor corporation, with substantially all the properties of the predecessor continuing in the ownership of the successor and all the shareholders of the predecessor continuing as shareholders of the successor, however, the reorganization be effected, that the successor should in accordance with the fundamental principles of the excess profits tax include in its invested capital the invested capital of its predecessor. (Cf. sec. 112 (g) (1) (F) of Internal Revenue Code.)

Of course, a mere recapitalization of a corporation without reincorporation and without the payment in for stock of additional capital or the distribution

of existing capital to shareholders does not change its invested capital. (Cf. sec. 112 (g) (1) (E) of Internal Revenue Code.) Equally no change in the investment occurs when a new corporation succeeds the old by a reorganization resulting in the continuance of the same business and assets and the same shareholders. The difference in the form of the reorganzation does not warrant radical differences in the treatment for excess profits tax purposes of the two enterprises.

If section 761 (b) (1) means that, if one corporation which has acquired all the stock of another corporation in a transaction in which gain or loss was not recognized liquidates the other corporation, the transferee corporation shall include in its invested capital the invested capital of the transferor corporation, then the discrimination pointed out above between reorganizations accomplishing the same result may be remedied by inserting a provision extending its benefits to a reorganization effected by the acquisition by one corporation in exchange for its stock of substantially all the properties of another corporation, followed by the distribution in liquidation by the transferor corporation to its shareholders of the stock of the transferee corporation.

On the other hand, if the section is intended to have a meaning different from that above ascribed to it, then the bill should be amended to provide that a true successor corporation shall be entitled to the invested capital of its predecessor corporation, with a definition of predecessor that shall restrict the term to a corporation which shall have been succeeded, however, the reorganization was effected, by another corporation continuing the same assets and the same shareholders. One method of accomplishing the desired result would be by providing that a taxpayer which is an "acquiring corporation" as defined in subdivision (a) of section 740, as amended by section 216 of the bill, shall include in its invested capital the invested capital of a "component corporation" as defined in subdivision (b) (1), (2), (3), and (4) of section 740 as amended. Another method would be to provide that a taxpayer shall be entitled to include in its invested capital the invested capital of a predecessor corporation, "predecessor" being defined substantially as follows:

"A predecessor means a corporation which was merged into the taxpayer, or a corporation which was consolidated with another corporation or other corporations to form the taxpayer, or a corporation which the taxpayer liquidated after acquiring substantially all of its stock, or a corporation which was liquidated in favor of its shareholders after transferring substantially all of its properties to the taxpayer, provided in each case no gain or loss was recognized in the transaction and the taxpayer gave no consideration other than its own stock, except that the assumption by the taxpayer of a liability of the other corporation, or by the fact that property acquired was subject to a liability, shall be disregarded."

(See discussion of "predecessor" under recommendation II relating to sec. 734.)

The need for a revision is emphasized by the present discrimination in favor of a successor to a corporation with accumulated earnings. By way of comparison, assume that corporation A with paid-in capital of $1,000,000 and earnings of $250,000 is reorganized into X, and that corporation B with paid-in capital of $1,000,000 and an operating deficit of $250,000 is reorganized into Y. Under existing law X would have an invested capital of $1,250,000, and even though it should suffer an operating loss of $250,000 in the first year after reorganization, it would still retain an invested capital of $1,250,000. If the reorganization had not taken place and the same operating loss had occurred, A's invested capital would have been reduced to $1,000,000. On the other hand, on the above hypothesis Y would have an invested capital of only $750,000. In short, under the present law it is more advantageous than not for a corporation with accumulated earnings to reorganize, because its earnings become frozen as paid-in captial, while it is disadvantageous for a corporation with an operating deficit to reorganize, because its paid-in capital is reduced by the amount of the deficit. In the case of corporations which several years ago for business reasons reorganized without thought of excess profits taxes, the result is unfair and discriminatory.

The foregoing inequity results from failing to give full effect for excess-profits tax purposes to the principles enunciated in the *Sansome case* (60 Fed. (2d) 931 (C. C. A., 2d Circuit), certiorary denied 287 U. S. 667) and fully accepted for income-tax purposes. There, where a new corporation by the issue of its stock acquired the assets of an old corporation, whose stockholders received the stock

of the new corporation, the court stated with reference to the reorganization provisions that it appeared extremely unlikely that what was not "recognized" as a sale for the purpose of fixing gain or loss should be "recognized" as changing accumulated profits into capital, and held that a corporate reorganization resulting in no gain or loss did not toll the company's life as a continued venture and that what were earnings of the original company remained earnings of the successor. As we have seen, by providing that a transferee has an invested capital equal to the income-tax basis of its predecessor, but without allocating such basis to capital and earnings as required by the Sansome decision, the paid-in invested capital of a successor to a transferor with accumulated earnings is unfairly increased to the detriment of a successor to a transferor with an operating deficit, the basis of whose assets is treated as the invested capital of the successor without allocating it betweeen paid-in capital and operating deficit. If the income-tax rule is to be followed to the extent of limiting a transferee to the basis of its predecessor, even though the value of the assets may be much greater, surely it should be applied to the extent of putting the successor in the same position as its transferor as regards accumulated earnings or operating deficit.

II. REPEAL OR LIMITATION OF SECTION 734 OF INTERNAL REVENUE CODE

Section 734 of the Internal Revenue Code, headed "Adjustment in case of position inconsistent with prior income-tax liability," was added by section 11 of the excess-profits-tax amendments of 1941, approved March 7, 1941, without any opportunity for a hearing on the desirability of its enactment.

In effect the section reopens the period of limitation on assessments and collections of income taxes as far back as the Revenue Act of 1913, not only in the case of the taxpayer, but also of its predecessors in title, by providing that where an item is treated for excess-profits-tax purposes inconsistently with the treatment of such item in the determination of the income-tax liability of the taxpayer, or a predecessor, for a prior year, then the tax liability of the taxpayer for the current year is to be increased by the amount of income tax due for the prior year on the basis of treating the item in the prior year in the same manner as for the current year. In other words, as the price of correctly stating its excess-profits-tax liability for the current year, the taxpayer is required to pay additional taxes for prior years barred by the statute of limitations, even though the difference of treatment in the prior year was in conformity with the law as then construed by the Treasury Department, as well as by the taxpayer, or by decisions of the Board of Tax Appeals and the courts. The purpose of statutes of limitation is defeated.

The section requires a taxpayer to review ancient history to ascertain at its peril whether or not in a previous year an item entering into its accumulated surplus account, for example, has been treated inconsistently, and it permits the Treasury Department to compel the taxpayer either to accept its views in the determination of excess-profits tax or to suffer redetermination of taxes for nearly 30 past years. Because of varying interpretations of the proper treatment of similar items over a long period, it is likely that any treatment of certain items for excess-profits-tax purposes may be inconsistent with the manner in which such items were regarded in some earlier year. The section invites a fishing expedition in waters long since supposed to have been fished out, as a result of which complicated calculations are necessitated, penalizing the taxpayer for past mistakes shared in by the Treasury Department.

The language of the section is intricate and its meaning is incapable of precise delimitation. Perhaps the most patent uncertainty is in the use of the term "predecessor," which is nowhere defined in the revenue acts. The confusion in the statute is reflected in the regulations attempting to apply the section. By Treasury Decision 5045, promulgated May 3, 1941, sections 30.734–1, 30.734–2, 30.734–3, and 30.734–4 assumed to interpret the meaning of the statutory language, including a definition of "predecessor." In consequence of the resulting doubt and dissatisfaction, however, by Treasury Decision 5112, promulgated January 26, 1942, the regulations were amended to formulate an entirely new definition of "predecessor" and to assure taxpayers that a taxpayer was not required to adopt a position inconsistent with the previous incorrect treatment of an item, but might continue the incorrect treatment for excess-profits tax purposes, if the Commissioner did not object, and that a taxpayer who had taken an inconsistent position might, upon notice to the Commissioner in writing, withdraw from

such position. In short, the taxpayer is faced with the alternative of perpetuation of error or penalty for ancient mistakes.

Section 734 is inconsistent with the policy which has existed for so many years of fixing a reasonable period of limitation for the assessment and collection of taxes, and it should be repealed in its entirety. If not repealed, the section should be radically revised and rewritten to limit its application to the accomplishment of such proper purpose, paramount to the established principle of repose, as may be determined to be vital.

Perhaps the most crying need of amendment is for the elimination of any reference to a "predecessor" or for a restricted statutory definition of such term. No one knows what that term was intended to mean, the Treasury Department having tried its hand at two different definitions. Certainly if a predecessor's treatment of an item is to be taken into account, a predecessor for the purpose of the section should be limited to a corporation to whose business and properties the taxpayer succeeded and whose liabilities it assumed. If corporation A reorganized in another State, for example, into corporation B, so that the business of corporation A was continued by corporation B except for a mere change in form, there may not be complaint if B is treated as standing in the shoes of A. But if corporation A merely transfers some of its assets to corporation B, an existing corporation, and both A and B continue in business, it is unfair and illogical to penalize B for a mistake of A and to collect from B a tax which A should have paid and which could still be enforced against it except for the possible expiration of the period of limitation.

Suppose corporation B in exchange for its stock acquires all the stock or all the assets of corporation A, which is thereupon liquidated, so that in either event corporation B continues with the assets and the shareholders of corporation A. Assuming no recognition of gain or loss in the transactions, A is a true predecessor to B, its successor. On the other hand, if corporation B by the issue of its stock acquires some of the assets of corporation A, which continues in business with its other assets, then by hypothesis B is not a true successor to A and A is not its predecessor. If A were so regarded, and A incorrectly treated an item of income, then under section 734 the treatment of such item correctly for excess-profits tax purposes by both A and B would result in charging the additional tax due to the correction against both A and B.

The test should be whether or not the treatment of the item by the transferor corporation benefited the taxpayer. If the taxpayer was a true successor, then any reduction in the tax liability of its transferor would redound to its benefit, but if it merely acquired part of the property of another corporation, any tax saving by its transferor would be a matter of indifference to it. Another criterion is whether or not the transferee has a liability at law or in equity for unpaid taxes or other debts of the transferor, as it would if it received all the assets of the transferor in exchange for the issue of stock or in liquidation, and as it would not if it merely acquired part of the assets of the transferor, whose remaining assets were sufficient to satisfy all its liabilities. Control of the transferee by the transferor, which would often exist where the transfer was only partial, is not significant.

There is already in the statute a definition which broadly describes a predecessor for any reasonable purpose intended. It is suggested, therefore, that at the very least section 734 be amended as of the date of enactment of the Excess Profits Tax Act of 1940 (the date as of which sec. 734 took effect) by adding a new paragraph to subdivision (a) thereof reading as follows:

"(4) The term 'predecessor' means a component corporation as defined in section 740 (b) (1), (2), (3), and (4)."

Another fair, but comprehensive, definition would be as follows:

"(4) The term 'predecessor' means a corporation which was merged into the taxpayer, or a corporation which was consolidated with another corporation or other corporations to form the taxpayer, or a corporation which the taxpayer liquidated after acquiring substantially all of its stock, or a corporation which was liquidated in favor of its shareholders after transferring substantially all of its properties to the taxpayer, provided in each case no gain or loss was recognized in the transaction and the taxpayer gave no consideration other than its own stock, except that the assumption by the taxpayer of a liability of the other corporation, or the fact that property acquired is subject to a liability, shall be disregarded."

These definitions are similar to those proposed under recommendation I relating to the invested capital of a successor to a deficit corporation. A successor corporation which is entitled to the invested capital of a true predecessor corporation, as it should be, is scarcely in a position to protest if it is identified with its predecessor for purposes of the application of section 734, but it would be badly treated if it were saddled with the sins of a transferor whose invested capital was not regarded as continued in a successor corporation.

Other amendments to section 734 which seem most needed are:

1. A provision expressly permitting a taxpayer at any period of a proceeding to alter its position with respect to any item if asserted to be inconsistent with the treatment of such item in a prior taxable year.

2. A provision imposing the burden of proof on the party asserting inconsistency in any proceeding before the Board of Tax Appeals or in the courts.

3. A provision that any adjustment for inconsistency shall not result in a tax greater than if no inconsistent position had been maintained.

4. In any event, a provision for the payment without interest of any excess tax due to an adjustment for inconsistency.

5. A limitation of adjustments for inconsistency to taxable years not earlier than 1932.

III. IMPROVEMENTS TO REAL PROPERTY BY LESSEE

The House has adopted a provision in section 113 of the bill, excluding improvements by a lessee as income to the lessor, to overcome the hardships resulting from the United States Supreme Court decision in *Helvering* v. *Bruun* (309 U. S. 461 (March 1940)), wherein it was held that improvements made by a lessee constituted income to a lessor at the time the lease is forfeited or otherwise terminated and the lessor secures control and possession of the property. Apparently the section was not made retroactive, although this is not altogether clear either from the bill or the House committee report. A history of the situation certainly warrants making the section retroactive to and including the tax year 1937.

Prior to the decision in the Circuit Court of Appeals for the Second Circuit in *Hewitt Realty Co.* v. *Commissioner*, 76 Fed. (2d) 880 (1935), the Treasury Department attempted to compel lessors to return as income the value of the improvements erected by lessees, in accordance with the then existing regulations (art. 48, regulations 62, 65, and 69). The *Hewitt case* indicated clearly that a lessor received no taxable income, by reason of improvements made by the lessee, prior to the sale of the property. This determination was followed generally by the Board and the courts. By and large, there were probably no returns of income under the old regulations made subsequent to the *Hewitt case*.

When the Bruun decision came down in March 1940 the Treasury Department immediately picked up those cases which were not outlawed by the statute of limitations (viz: 1937 and subsequent years) and made efforts to assess additional taxes based on income allegedly received under the Bruun decision. Probably many of the cases so involved are still unsettled. The House bill and committee report leave it rather vague as to what the situation is to be with respect to such cases. The committee report states that "if a lessor has paid in prior years tax upon income * * * attributable to the value of improvements made by the lessee, the amount of such income will be added to the basis of the property in order to provide a proper adjustment for the income so taxed." The new section itself, in subdivision (b) thereof (amending sec. 113 of the code), does not speak of payment of tax based on such income, but provides for cost basis adjustment "if an amount representing any part of the value of real property attributable to buildings erected * * * by a lessee in respect of such property was included in gross income of the lessor * * *."

The bill does not state whether the inclusion was by the taxpayer originally or by the Department on an audit. In addition, it would appear to be unfair to charge those cases which were picked up by the Department following the Bruun decision and prior to the taxable year beginning after December 31, 1941, with such income, while permitting others to follow along on the more equitable basis, as proposed by the new section. It is possible that what was intended in the House bill was to leave under the basis proposed in subdivision (c) of section 113 of the code those cases in which payment had been made under the old regulations and where claim for refund would now be barred by the statute of limitations, so that they would at least get the benefit of an increased cost basis,

which is fair enough. If that was the intention, we do not believe it is well indicated in the bill and therefore suggest the addition of a sentence to the new paragraph 10 (in sec. 22 (b)) reading as follows:

"The amendment made by this paragraph shall be applicable with respect to taxable years beginning after December 31, 1936."

The proposed subdivision (b) which adds a new subsection (c) to section 113 of the code, would then remain as it is and apply to those cases where the taxpayer included such income and paid a tax thereon and would now be barred from claiming a refund, except that the date "January 1, 1942," would be changed to January 1, 1937.

IV. LIQUIDATION OF HOLDING CORPORATION

Where a corporation has no assets except all or nearly all of the stock of another corporation, public policy and business convenience favor action to eliminate the holding corporation and vest the stock of the subsidiary corporation directly in the shareholders of the holding corporation. Since no change in the ownership of the individual shareholders in the ultimate assets is affected by such a transaction, except the change of an indirect into a more direct interest, there is no more reason why gain or loss should be recognized than in the case of any other corporate readjustment included within the scope of reorganizations specified in section 112 of the Internal Revenue Code. Where State corporation laws permit, a union of the two corporations may be accomplished without recognition of gain or loss by a statutory merger or consolidation, although the Treasury Department questions such procedure and the decided cases are not altogether satisfactory. (See *Anna V. Gilmore* v. *Commissioner*, 44 B. T. A. 881.)

It is suggested that the elimination of the holding corporation in such a situation should be made possible of accomplishment in the simplest possible manner, namely, by dissolution and liquidation, without recognition of gain or loss for tax purposes. An amendment to the Internal Revenue Code is accordingly proposed to the following effect:

"Section 112 of the Internal Revenue Code is hereby amended by inserting in subdivision (b) thereof a new paragraph (7) reading as follows:

"'(7) Property Received by Shareholders on Complete Liquidation of Holding Corporation.—No gain or loss shall be recognized upon the receipt by the shareholders of stock of a controlled corporation distributed in complete liquidation of a holding corporation. For the purposes of this paragraph a holding corporation shall be considered to be a corporation, substantially all the property of which consists of stock in another corporation of which the holding corporation is in control as defined in subdivision (h) of this section, and a distribution shall be considered to be in complete liquidation only if the distribution by the holding corporation is in complete cancellation or redemption of all of its stock and the transfer of all of its property occurs within its taxable year.'"

V. POWERS OF APPOINTMENT

The Federal estate-tax law now taxes, and since 1918 has taxed property passing under an exercised general power of appointment, that is, a power which can be exercised in favor of the person possessing it or in favor of his creditors or estate (Internal Revenue Code, sec. 811 (f)). The law never has taxed property subject to an unexercised general power, or property subject to an exercised or unexercised limited power; that is, one which cannot be exercised in favor of the person possessing it or for his benefit.

The revenue bill, as passed by the House (sec. 403), proposes to subject to estate tax all powers, general or limited, exercised or unexercised, except certain limited powers.

Section 403 (a) includes in a decedent's estate any propery "with respect to which the decedent has at the time of his death a power of appointment", which is defined to mean any power except powers to appoint (*a*) to the decedent's spouse, descendants of decedent or his spouse, spouses of descendants, and charitable donees, or (*b*) within a "restricted class" if decedent had or acquired no beneficial interest in the property.

Section 403 (c) provides that the executor of a decedent may recover from the person receiving the property by reason of the exercise or nonexercise of the power such portion of the estate tax as the value of the property bears to the net estate and the exemption.

Section 403 (d) provides that the amendments shall not be applicable to (*a*) limited powers released within 2 years after passage of the act; (*b*) limited powers exercised before the enactment of the act; and (*c*) powers released before the enactment of the act.

Section 452 subjects to gift tax the exercise or release of powers of the same character taxed under section 403, and makes the amendment inapplicable to the release or exercise of powers of the kinds and within the periods specified in section 403 (d).

These provisions contain features which seem illogical and unfair, some of which are discussed below.

1. The provisions of the bill apply retroactively to existing powers of appointment. If persons possessed of any such powers relinquish them in order to avoid the estate tax, they may be subjected to gift tax. It is provided that if a limited power is released within 2 years after enactment of the bill, such release will not be subject to gift tax and the power so released will not be subject to estate tax, but similar relief is not extended to existing general powers. An effort to avoid the retroactive operation of the new tax may be unavailing because there is some doubt, as to most of the existing powers which the bill would now tax for the first time, whether they can be released or relinquished under the laws of the various States under which such powers have been created. In many cases powers are vested in infants, who would not be able effectively to relinquish their power until they become of age, perhaps 15 or 20 years from now.

It would seem just that the bill should be modified so that it will not have any retroactive effect but will apply only to powers of appointment created after the enactment of the new law. At the very least the execution of an instrument purporting to relinquish a power should be sufficient to comply with the statute, irrespective of its effect under State law, and in the case of infants they should be permitted a reasonable opportunity after attaining their majority to execute a release. As regards the period within which release is permitted, the holders of general powers should have the same privilege as the holders of limited powers.

2. The distinction which the bill draws between taxable and nontaxable powers seems unsound since taxability depends on the class of persons to whom the property might be appointed, instead of the persons to whom it is actually appointed or to whom it goes because of the nonexercise of the power. The bill would impose the tax on the people who actually get the appointive property, or exempt such persons from tax, depending upon the relationship to the decedent of other persons who might have got it but did not get it. If a decedent had the power under his father's will to appoint property, in which he had a life estate, among his children, and in default of the exercise of the power the property would go to his brother's children, the power would be exempted from the new tax, irrespective of whether the decedent exercised the power and appointed the property to his children or refrained from exercising it and let the property go to his brother's children. However, if the decedent had had the power to appoint the property among all the issue of his father (including his own children and his brother's children), with a provision that in case of his failure to exercise the power the property would go to his own children, then the bill would tax the power, even if the decedent failed to exercise it and let the property go to his children, or even if he exercised it and appointed the property either to his own children or to his brother's children, or partly to both. In the case first put the decedent's nephews and nieces would be exempted from the tax if they acquired the property, while in the second case the decedent's children would be taxed if they acquired it. Yet, in both cases the decedent would have had precisely the same control over the property, the same choice between permitting the property to go to his own children or his brother's children.

The bill provides that the estate tax on a power of appointment may be collected out of the property subject to the power. Since, whenever a power is taxed, the additional tax will be paid by the persons who actually get the property, it would seem reasonable that the question of whether or not the power is to be taxed should depend on whether or not those persons are entitled to exemption. At least it is doubtful whether taxability of the power should be based on the test as to whether or not other persons who might have received, but did not receive, the property are entitled to exemption. If the provision be enacted, it

would seem desirable that it be changed so as to provide that the taxability or nontaxability of powers of appointment shall depend on the identity of the persons who actually get the property, whether by exercise of the power or in default of the exercise of the power, rather than on the identity of the persons to whom it might have been, but was not, appointed. The bill recognizes that spouses and descendants and educational, charitable, etc., institutions ought to be exempt from the new tax, and consequently it ought to provide that property subject to any power (except possibly a general power) which actually passes to such beneficiaries shall be exempt.

3. As regards the classes of powers to appoint which are exempt from tax, it is submitted that there should be included descendants of the donor of the power. Powers of appointment are commonly granted by parents or grandparents to a child or grandchild with the appointment limited to the descendants of the donor. The natural purpose of the creation of such a power is to prevent the property from being dissipated in the event that there should be no descendants of the donee, but should be descendants of the donor. If the execution of the power were limited to the descendants of the donee, the proper objective of the donor, which was not to benefit the donee, but to keep the property in the ownership of qualified members of the donor's family, might be defeated. If a testator gave a power to his two children to be exercised jointly in favor of members of a class comprising their descendants, it would appear that the power might be taxable to both of the donees.

VI. TRANSFERS FOR PUBLIC, CHARITABLE, AND RELIGIOUS USES

The predecessor sections of the internal revenue acts to subdivision (d) of section 812 of the Internal Revenue Code, dealing with the deduction of residuary charitable bequests in computing the net estate for estate-tax purposes, have undergone several changes. The Bureau originally held that only the amount actually received by the exempt legatee was the amount allowable as a deduction. Thus, if the residuary estate, after the payment of all charges but before the payment of the Federal estate tax was $50,000, and the Federal estate tax was $10,000, the Bureau held that the amount deductible was the balance of $40,000. The issue came before the United States Supreme Court in *Edwards* v. *Slocum* (264 U. S. 61), which overruled the Bureau's contention and held that the full amount was deductible without any reduction on account of the estate tax itself. The particular objection urged by the Supreme Court to the Bureau's theory was that it involved two mutually dependent indeterminates and that the solution required the use of an algebraic formula.

Thereupon the Bureau caused an amendment to the Revenue Act of 1924, which provided that where any charitable bequest was subject to any estate tax or inheritance tax, the amount deductible on account of such bequest should be the amount of the bequest reduced by the amount of the taxes. The amendment, however, proved so burdensome and the determination of the tax rendered so difficult on account of the interrelation of State and Federal taxes, that when the Revenue Act of 1926 was adopted a retroactive provision was inserted striking out the clause requiring the deduction of taxes from such charitable bequests as required by the 1924 act. The 1932 act, however, again restored the provisions of the 1924 act requiring the deduction of taxes, and as a result the tax services carry a six- or seven-page formula as the method of finally determining the tax.

It is recommended that the situation be remedied by eliminating the 1932 amendment, and it is therefore proposed that section 812 (d) of the Internal Revenue Code be amended by eliminating the second sentence reading as follows:

"If the tax imposed by section 810, or any estate, succession, legacy, or inheritance taxes, are, either by the terms of the will, by the law of the jurisdiction under which the estate is administered, or by the law of the jurisdiction imposing the particular tax, payable in whole or in part out of the bequests, legacies, or devises otherwise deductible under this paragraph, then the amount deductible under this paragraph shall be the amount of such bequests, legacies, or devises reduced by the amount of such taxes."

Respectfully submitted.

COMMITTEE OF TAXATION, NEW YORK COUNTY LAWYERS' ASSOCIATION.

By Hugh Satterlee, Chairman; Robert G. Burke, Mary H. Donlon, Wilbur H. Friedman, Jacob Mertens, Jr., Eugene L. Mullaney, David Oppenheim, Morton Pepper, Weston Vernon, Jr.

Senator VANDENBERG. Mr. Chairman, I presented two letters earlier in the day.

The CHAIRMAN. I wish the representatives of the Treasury would note the suggestions made by Senator Vandenberg earlier, to which he will call attention again.

Senator VANDENBERG. Earlier in the day I presented two suggestions which the Treasury will inquire into, and now hand them to you.

(The letters referred to by Senator Vandenberg are as follows:)

LAWRENCE SCUDDER & CO.,
Grand Rapids, Mich., July 28, 1942.

Senator ARTHUR H. VANDENBERG,
Senate Finance Committee, Washington, D. C.

SIR: The United States Board of Tax Appeals handed down a decision on June 23, 1942, in the case of *H. N. Henry* v. *Commissioner of Internal Revenue* (Docket No. 108258, 47 B. T. A. No. 24).

This decision covered the taxability of pensions received from the Canadian Government under its Pension Act as compensation for disability incurred during the last war by citizens or residents of the United States. The decision is as follows:

"Payments received in 1937 and 1939 by petitioner, a naturalized citizen and resident of the United States, from the Canadian Government under its Pension Act, as compensation for disabilities incurred from injuries received in 1918 while in active service as a member of its armed forces, are taxable income to petitioner in the respective years when received."

During the last World War, upward of 35,000 persons from the United States joined the Canadian Army before the United States entered that war. A number of these individuals were killed in action or died of disease while so serving. In fact, the Canadian Government, according to statistics, was paying pensions to 1,321 dependents resident in the United States, of those who were either killed in action or died of disease. The annual amount disbursed to those dependents was $757,225.

The number of those who joined the Canadian Army from the United States and sustained disabilities from wounds or disease, according to the 1936 statistics issued by the Canadian Government were 6,707 persons receiving disability pensions for a total amount of $2,235,574. The total disability and dependent pensions represented 8.25 percent of the total war pensions paid by the Canadian Government.

On account of the close proximity of the State of Michigan to the Dominion of Canada, a large number of those receiving pensions from the Canadian Government are resident of the State of Michigan. The pension received by many of these pensioners constitutes their entire means of support.

The amount of pension which they receive is not very large and provides a little more than a bare existence. To have it reduced by the payment of income tax coupled with the current increased cost of living, works a hardship on the pensioners, and in some cases at least, may cause them to become partial public charges which is undesirable.

The decision which the Board arrived at is the only one it could arrive at under the present income-tax law.

The acts providing for pensions and similar allowances to the United States veterans of the last war made special provision that these pensions would not be subject to income tax, accordingly, are not taxed. The award of pensions made to Americans and the dependents of Americans who joined the Canadian Army was made for the same reasons as the award of pensions which was made by the United States to its veterans. Although these Canadian veterans did not serve in the United States Army there is sufficient similarity of service to consider the possibility of exempting the pensions from taxation.

At the present time, section 22 (b) (5) excludes from gross income, compensation from injuries or sickness. A war veteran's pension can, in a measure, be considered as compensation for injuries or sickness.

The man is receiving a pension on account of a disability caused either through injury or disease while serving in the Army, but of course, the amount he receives is not from Health Insurance or Workmen's Compensation Acts, and the Board was compelled to rule that it was not exempt under this section. It would appear that a slight amplification of this section would be all that would be necessary to cover the situation.

I am bringing this matter to your attention in view of the fact that, at present, the Senate is considering this year's income tax act and if you consider the subject, favorable action could be taken at this session.

The same situation, of course, will arise out of the present war. It is a well-known fact that a large number of Americans have joined the Canadian Army.

I have the honor to remain,

Yours truly,

(Signed) DUNCAN RICE.

MICHIGAN MANUFACTURERS' ASSOCIATION,
Detroit, Mich., July 27, 1942.

HON. ARTHUR H. VANDENBERG,
Senate Office Building, Washington, D. C.

DEAR ARTHUR: Herewith is a copy of a letter I have received from Mr. C. H. Forrest, of the Falls Spring & Wire Co., Detroit, Mich., who raises some pertinent questions. I am also enclosing a copy of a letter Congressman Roy O. Woodruff sent me from Randolph E. Paul, Assistant to the Secretary of the Treasury Department, Washington, about the renegotiated contracts situation.

I would feel a lot better if there were a provision in the revenue act authorizing the Treasury Department and the Bureau of Internal Revenue to make such reviews and refunds after a contract has been renegotiated.

In other words, an industry has certain earnings on the face of its contract for the year 1942. Sometime early in 1943 this contract has been renegotiated and the company agrees to return to the Government a certain amount but it has already paid income and excess-profits tax.

My thought is that there should be some way of recovery of such excess payments to the Treasury Department because of refunds made on the contract to the particular branch of the armed forces.

This does seem to be very vital and you will find there will be thousands of cases where these returns will have to be kept open and adjustments made.

Mr. Paul indicates that might be done by administrative ruling. I would feel that there would be more protection if in the Revenue Act there was a clause authorizing the Treasury Department, upon request of the taxpayer, to reopen and review the return in the light of the effect the renegotiated contract would have on it.

I feel that unless something of that general nature were placed in the Revenue Act, that the Treasury might well take the position that Congress had not authorized it to take these renegotiated contracts into consideration.

I bring this to your attention because with the bill before you in the Senate, I think you could take care of this without much difficulty. Mr. Paul, I think, understands the problem, and I don't believe that he would have much objection.

Thanking you, I am

Sincerely yours,

(Signed) JOHN L. LOVETT,
General Manager.

(The communications referred to in Mr. Lovett's letter are as follows:)

FALLS SPRING & WIRE CO.,
Detroit, Mich., July 23, 1942.

NATIONAL ASSOCIATION OF MANUFACTURERS,
Detroit, Mich.

GENTLEMEN: I attended the tax meeting yesterday at the Hotel Statler which you held in conjunction with the Michigan Manufacturers' Association and wish to say that I enjoyed it very, very much.

However, it was unfortunate that Mr. Carlton did not happen to be looking my way inasmuch as I had two questions pertinent to the issue to put before the meeting and I would certainly like an expression from your Tax Committee on them.

I left the meeting at approximately 3:15 or slightly before, having overstayed my allotted time at that point. However, there were several digressions that consumed considerable time, questions that did not pertain to the tax meeting whatsoever. This is to be expected at a general meeting such as we had yesterday and interesting as the questions might have been, their discussion denied questions like my own from being answered.

The first question I wanted to put before the meeting was this.

Just what is going to be the position taken by the Bureau of Internal Revenue on depreciation of machinery and equipment used in your normal business but not used in the discharge of your war contracts? Are they going to allow 100 percent of your normal depreciation or have they indicated that this allowance will be reduced to say 50 percent or some other figure?

My second question is this and related to the first.

In renegotiating our contracts, will the Renegotiating Board auditing such contracts eliminate from their costs depreciation on the machinery and equipment used in our normal business but not used in discharge of our Government contracts?

To carry this thought further, if a company is occupying a leased building and using only a portion of that building in the discharge of their Government contracts, will that company be allowed to apply the cost of the entire building to the cost of the contract?

These two questions seem to be uppermost in our minds at the present time and if you have any solutions to these problems, we will appreciate it very much if you will forward them to us.

Very truly yours,

FALLS SPRING & WIRE CO.
(Signed) C. H. FORREST.

TREASURY DEPARTMENT,
Washington, D. C., July 21, 1942.

Hon. ROY O. WOODRUFF.
House of Representatives,
Washington, D. C.

MY DEAR MR. WOODRUFF: Reference is made to the letter received by you from John L. Lovett, Detroit, Mich., dated July 6, 1942, which you handed to me.

Mr. Lovett is interested in the problem of firms which have subcontracts with firms holding contracts from the Government and which are obligated to renegotiate such contracts if the prime contractor is required to renegotiate its contracts.

He suggests that some provision be made in pending legislation to allow such companies to file amended returns and recover back amounts paid in excess of the liability determined in the light of required adjustments.

The Bureau of Internal Revenue is presently working with the War Department on the tax problems arising out of the requirements for the renegotiation of contracts. Although this study has not yet been completed, it seems likely that the problem raised by Mr. Lovett can be handled administratively.

I would suggest that he advise the firm in which he is interested to submit to the Bureau of Internal Revenue detailed facts concerning its situation, in order to insure that the Bureau has that problem in mind in connection with its general study.

I am returning herewith the letter from Mr. Lovett.

Sincerely yours,

(Signed) RANDOLPH E. PAUL,
Assistant to the Secretary.

The CHAIRMAN. Mr. Priest.

STATEMENT OF BENJAMIN B. PRIEST, OF HALE, SANDERSON, BYRNES & MORTON, BOSTON, MASS.

Mr. PRIEST. Mr. Chairman, and gentlemen of the committee, my name is Benjamin B. Priest. I am an associate in the law firm of Hale, Sanderson, Byrnes & Morton, in Boston.

I am submitting a written memorandum concerning some suggestions that we have to make regarding the excess-profits tax. I would be perfectly content to rest on this memorandum except for the fact that, unfortunately, it was written and prepared before the act which has been passed by the House was available to us.

Consequently, you will find that the mathematical examples contained in the memorandum are now incorrect, and that the mechanical

suggestion we have for the relief will probably be altered because of the new method of imposing the income and excess-profits tax.

Our suggestion is limited to corporations in bankruptcy or that are insolvent and in receivership, and is further limited to those corporations in that situation which the court feels have an opportunity of working out of receivership or bankruptcy.

Our suggestion is based on two major premises: First of all, it is for the benefit of the Nation and the public to maintain as many corporations as possible in a going position, financial position, so that they are operating as a going concern, without deterring the war effort or the public policy.

I think there are several reasons for this. First of all, so that goods may be produced during the emergency and after the emergency as well, to supply civilian needs, so that after the war emergency is over, there may be employment for men who are now engaged in the war service, and, not the least important, so we may have a source of revenue, present and future.

Another reason is that with the excess-profits rate applied to the income of the corporation in bankruptcy or receivership, it will, in most instances, make it impossible for that corporation to continue and work itself out of its unsound financial condition, and it may result in a condition where the courts will refuse to allow a corporation to continue to do business in receivership because of the fact that they will have the alternative of long years before they would be able to pay off the claims of the creditors or, of liquidation, to protect the creditors.

Now, our suggestion is, very briefly, this, that we exclude from the high rate of the excess-profits tax, but not from the rate of regular income tax that amount which is used or irrevocably set aside to pay the claims of creditors which, of course, were incurred before bankruptcy or receivership.

Now, this can be done very simply. We suggested a new provision to be added to section 711 that this amount be treated as a deduction in determining the excess-profits net income.

Senator TAFT. Would not that make it rather desirable for a corporation to go into receivership, if it is near the edge?

Mr. PRIEST. If it were too close to the edge, it might, Senator Taft, but most corporations would prefer to keep their credit and also avoid the expense of receivership, which, in general instances, would be more than if they were running as a going concern.

Senator TAFT. If they could go into receivership and pay their debts instead of staying in business and not paying their debts, would not that be the case?

Mr. PRIEST. Our suggestion is limited for that very reason to corporations which are insolvent and in receivership or in bankruptcy, and as soon as they became solvent or relieved from the control of the court, then, at that point, of course, the exception would no longer apply. We would try to meet the Senator's suggestion in that way.

Senator DANAHER. Would not the petitioning creditors put it in receivership, whether the company liked it or not?

Mr. PRIEST. Yes; I think probably they would, Senator. Our suggestion here would be if it was so hopelessly insolvent that the court would declare it as insolvent, then it would have this relief only to the point where it would become solvent and relieved from the control of the court.

Now, the suggestion of deducting this amount in order to determine your excess-profits net income would not apply under the present revenue act, and, therefore, I suggest in order to accomplish the same result, if the committee wishes, this could be done, again in a very simple, mechanical way, by merely allowing an addition to the credit, to your excess-profits credit, of such amount as is used or irrevocably set aside to pay the claims of the creditors so long as the corporation remains insolvent and under the control of the court.

In making this exception to the application of the excess-profits tax, we do not feel we are in any way circumventing the purport of the act or decreasing the possibility of revenue. The purport of the act is to prevent people, as I understand it, from becoming enriched from profits resulting from the war emergency, and by exempting this amount, it would in no way enrich the stockholders, because the amount would go solely to creditors for value received and the stockholders would not receive any of the excess-profits over and above the average profit which might be incurred because of the war emergency.

As a matter of fact, as long as the corporation remained in receivership or bankruptcy, the stockholders would receive nothing from the income.

We tried to cover in detail in the brief, the argument with reference to that, and that applies regardless of the change in the law.

Now, as far as revenue is concerned, it may be true we would lose a small amount of present revenue. Comparatively, it would be an extremely small amount, but we feel it would benefit the country to perhaps take this small present loss, in view of the fact that, as soon as these corporations became solvent and came out of bankruptcy and receivership there would be additional revenue, and not only would they then become subject to the income tax and excess-profits tax without exception, but they would also become subject to the capital-stock tax, the declared-value excess-profits tax, and also, the unlawful withholding of a surplus from distribution for which a corporation in receivership or bankruptcy is not responsible.

Now, also in the memorandum are cited examples whereby similar relief has been given to the corporations in other taxes. I do not wish to take the time of the committee with reference to that. I merely wanted to point out the change that will have to be made with reference to our memorandum because of the new act which has been passed by the House.

Thank you very much, gentlemen, for your courtesy.

The CHAIRMAN. Thank you, Mr. Priest, for appearing here.

(The memorandum submitted by Mr. Priest is as follows:)

SUGGESTED RELIEF FROM EXCESS-PROFITS TAX TO CORPORATIONS IN BANKRUPTCY OR RECEIVERSHIP, SUBMITTED BY BENJAMIN B. PRIEST, OF HALE, SANDERSON, BYRNES & MORTON, BOSTON, MASS.

PROBLEM

Some corporations are so hopelessly insolvent that they are placed in bankruptcy or receivership for the sole purpose of liquidating the assets immediately. The excess-profits tax creates no great problem for these concerns. The businesses are doomed.

On the other hand, many corporations although overwhelmed with debts at the present are in such financial condition when they enter bankruptcy or receivership that the court may feel that it is justified in ordering the continuation of the businesses with the prospect that the creditors can be paid in full from the busi-

ness income, the businesses salvaged for the stockholders, and the public benefited by having them continued in existence through future tax revenue, production of materials, and employment of people. It is with reference to these corporations that a real problem is created by the excess-profits tax.

A receiver or trustee in bankruptcy who is conducting a business with a view to paying creditors and eventually returning a going concern to the stockholders has first to pay the current expenses of running the business and then from the profits pay off debts accrued in prior years of operation in receivership or bankruptcy, improve and perhaps expand the business facilities to place the business in a condition to compete with other businesses and thus insure some future income and then from the profits remaining, if any, retire indebtednesses incurred prior to bankruptcy or receivership. The primary purpose of his appointment was to pay the claims of the creditors and yet if the business income is taxed to the vanishing point he cannot do this and continue the business. The only alternative is to dissolve and liquidate the business. When the need during the present war emergency for materials and tax revenue and after the war not only for materials and revenue but also for the employment of people released from the war effort is considered, it is submitted that it is to the interest of this Nation to save and preserve all businesses that it can without deterring the war effort and weakening public policy.

There are so many variables involved in computing the excess-profits tax that it is difficult to determine any example which might be labeled as an average situation. Ignoring the possibility of a carry-over, if the excess-profits credit is zero the amount of annual income left after paying an excess-profits tax of 94 percent and an income tax of 40 percent would reach a minimum amount of 3.6 percent with which must be paid other taxes and the above mentioned debts and capital investments. It is obvious that as the amount of the excess-profits credit approaches the amount of annual income the amount of that tax approaches zero and the regular income tax approaches 40 percent of the income. The maximum amount which could be retained after paying these two taxes, again ignoring loss carry-overs, would be 60 percent of the net income.

The variables with which we are concerned are the amounts of the base period average income or the equity invested capital and the amount of the creditors' claims. Since the corporation is now in receivership it is fair to assume that its average net income during the base period from 1935 to 1940 would be comparatively small. Its excess-profits credit if computed on base-period income would, consequently, be small, and the amount of income left after taxes would be relatively close to the minimum of 3.6 percent of income. On this basis it would be practically impossible to work the corporation out of receivership.

The ratio which the amount of invested capital bears to the amount of annual income will determine the percentage of net income exempted from the excess-profits tax computed by the invested capital method. If the invested capital is zero only the minimum amount of income could be retained and as it approaches the ratio to income of 14 or 16 to 1 the amount of income which could be retained approaches the maximum. If invested capital and income were equal there would be remaining 7.15 percent of the income. If it were 3 times as much as the income the amount remaining would be 15.6 percent of the income. If it were 6 times as large, the percentage would be 27 percent of the income. If 10 times, the percentage would be approximately 48 percent.

The length of time required for the business to become financially sound would depend upon how long the good business cycle continued, how much would be available to pay the creditors and how much their claims amounted to. It has always been true that periods of depression alternate with periods of business activity. A corporation in receivership cannot count on continuance of enough income to liquidate past debts for more than a few years at a time. The amount of claims which a receivership must pay is not measurable in general average terms because of the vast difference in circumstances which lead to receivership. It is, however, reasonable to suppose that any corporation, when it is forced into receivership, has accumulated a very substantial amount of unpaid bills and has exhausted or nearly exhausted its credit. It is likely that the amount of such unpaid bills will amount to two or three times the average annual net income. If it is assumed that claims to be paid equal twice the net income, the taxes under the proposed program leave income available to liquidate only 2 percent of such claims per year at the worst and 20 percent per year at the best. Thus it would take at least 5 years and more likely something approaching 50 years to dissolve a receivership and at the same time avoid destruction of plant capacity

and organization and displacement of labor. The courts in general are not patient with receiverships which continue year after year. Some Government agencies have exerted their efforts to bring receiverships to a quick conclusion. If the alternative to immediate sale and liquidation is a long span of years in which debts are to be paid off at a small percent a year it is almost certain that courts and receivers will find it necessary to abandon thoughts of saving the organization and will be forced to sacrifice values and organization notwithstanding the loss to the public of a going, producing enterprise, the loss to labor of employment and the loss to the Government both in substantial bad debts charged off and in the loss of a potential taxpayer.

SUGGESTION

Amend section 711, Internal Revenue Code, by adding at the end of subsections (a) (1) and (a) (2) thereof a new paragraph containing the substance of the following:

"There shall be deducted from the normal-tax net income of domestic corporations which for any portion of the taxable year are in bankruptcy under the laws of the United States, or are insolvent and in receivership in any court of the United States or of any State, Territory, or the District of Columbia the amounts used or irrevocably set aside during said year to pay duly approved claims filed in bankruptcy or receivership and bona fide indebtednesses of said corporations incurred prior to bankruptcy or receivership, or renewals thereof."

Under the provisions of this subsection if money were actually paid as a dividend on the claims of the creditors during the year, or if the court approved a partial dividend during the year and for the sake of convenience ordered the money to be set aside and accumulated for payment in a subsequent year, the amounts so paid or set aside would not be subject to the excess-profits tax.

ARGUMENT

When a corporate business is being conducted and carried on in receivership or bankruptcy all control and management is ousted from the corporation and its stockholders and is vested in the receiver (subject to court order) or the trustee (*United States* v. *Whitridge*, 231 U. S. 144, 58 L. Ed. 159).

The income from the business passes into the hands of the receiver or trustee to be used, in brief, to pay the expenses of conducting the business and the court proceedings, and to pay the claims of creditors which accrued prior to receivership or bankruptcy, and which have been made unenforceable directly against the business assets by action of court and law.

All of this income is at present subject not only to the normal and surtax income taxes but also to the excess-profits tax. Under the proposed amendment all of the income would remain subject to the normal and surtax income taxes and all of the income except that used to pay the legal obligations of the corporation incurred prior to receivership or bankruptcy would be subject to the excess-profits tax. When the receivership or bankruptcy proceedings terminated, the exception would be no longer applicable.

The amendment is urged for the reason that the results accomplished thereby would not nullify or circumvent the purposes and principle of the excess-profits tax, are just and equitable, and would be for the best interests of the public and Government. Moreover, the relief suggested is similar to that given under other taxes to corporations overburdened with debt.

I. *The amendment would not nullify or circumvent the purposes and principle of the excess-profits tax*

A. *Purposes and principle of the excess-profits tax.*—One of the purposes of the excess-profits tax was, of course, to raise revenue, but another purpose just as strong, if not stronger, was to regulate the amount of profit which might be made in this period of war emergency so that it would not exceed the average annual profit for a certain period prior to the emergency or, in the alternative, a certain percentage of the capital invested in the corporation. The underlying principle of the tax is to prevent any person or persons from being enriched from business profits which were made because of the circumstance of war. The House Ways and Means Committee in submitting the first Revenue Act of 1940 stated in explaining the excess-profits tax feature of the act:

"It is the desire of this committee, which is favorably reporting a bill which will enable a larger proportion of our citizens to participate in the responsibility of providing an adequate national defense than has ever been the case before, that there shall not be an opportunity for the creation of new war millionaires or the further substantial enrichment of already wealthy persons because of the rearmament program" (1940-42 Cum. Bull., 508 (H. Rept. No. 2491, 76th Cong., 3d session, June 10, 1940)).

The same committee in its report numbered 2895 and dated August 28, 1940, which accompanied the second revenue bill of 1940, reaffirmed and approved the above statement of its purpose. (See 1940-2 Cum. Bull., 496.)

B. *The amendment would not result in the unjust enrichment of any person or persons.*—The income exempted from the excess-profits tax by the amendment would go only to creditors of the corporation who are prohibited by force of law from enforcing their claims against the corporation. They would not be enriched for they furnished full value in the past for what they would receive.

The stockholders of the corporation could not receive any of this income and if any of the other income was used by the receiver or trustee to improve or expand the business for the creditors' present and the stockholders' ultimate benefit, that income would have been subject to the excess-profits tax.

It may be argued from an economic point of view that the stockholders would gain financially to some extent because if income used to pay creditors' claims were exempted from the excess-profits tax, more money would be available to pay creditors and the corporation would approach solvency at an accelerated rate. As the time neared when the corporation could emerge from receivership or bankruptcy the corporation's stock would near the point when it would again have some pecuniary value. Thus it might be said that the amendment would serve to enrich the stockholders because it would hasten the time when the stock regained some monetary value or would accelerate the rate of increase in the value of the stock. It is submitted that such an enrichment would be extremely small, not within the purport of the excess-profits tax, and furthermore could be largely accounted for by the use of the income which was not used to retire the claims of creditors and on which the excess-profits tax was paid. Any gain in the value of the stock would of course be taxable when the stock was transferred.

C. *The amendment would cause no loss of revenue to the Government.*—Compared to the entire tax program, the amount of revenue which the Government might lose by the amendment would be infinitesimal. Moreover, a substantial part of the apparent revenue loss might be recouped in other ways. It is entirely probable that the creditors of the corporation in receivership or bankruptcy may have written off part or all of their claims as bad debts and taken deductions therefor in their tax returns. When the exempted income is applied to the payment of their claims, therefore, the creditors would be required to report it as income and pay a tax thereon. These income-tax collections would in part, and in some cases wholly, compensate for the loss of the excess-profits tax on the business income so used. Also, present and future creditors of corporations in bankruptcy and insolvency would not be able to claim successfully that the corporation's debts could be written off as bad in view of the provisions of the proposed amendment and consequently their income taxes would be higher because their deductions would be lessened. Even though there is some comparatively small loss of present revenue it is submitted that it would be more than offset by hastening the time when the Government would collect taxes from a going concern which would be in a sound financial condition and subject to more and larger taxes than it would have been in receivership or bankruptcy. Once the corporation recommended to conduct and carry on its business it would again be subject to the capital stock tax, the declared value excess-profits tax, and the tax on improperly accumulated surplus, and it is fair to assume that its taxable income would be as great, if not greater, than it was when the receiver or trustee was conducting the business.

II. *The amendment is fair and equitable and for the best interest of the public*

Generally, a business is carried on in receivership of bankruptcy for two reasons: First, to protect the creditors against further loss and pay them in full if possible; and, secondly, to salvage the business for the stockholders.

It is not equitable to jeopardize the creditors' chances to receive payment in full by imposing the high excess-profits tax on all income received by the business and

thus diminish any excess over the business and court expenses which would be applied to pay their claims. The purpose of the excess-profits tax is to keep this excess small so that stockholders will not receive unduly large income from the business. In this case, however, the excess would be used to pay creditors and would not enrich stockholders. It is submitted that the payments of these frozen claims of the creditors should be allowed as a deduction in determining the receiver's or trustee's net income subject to the excess-profits tax just as a trustee is allowed to deduct from the income of the trust for tax purposes all income which is distributable to the beneficiaries. In this way the excess-profits tax will apply only to that part of the business income which might enure to the stockholders' benefit and will not impede the payment of the creditors' claims which was the primary purpose of the receivership or bankruptcy proceedings. This is the result which the amendment seeks to accomplish. It would not allow a double tax deduction for these debts for, although they have previously been deducted from income for regular income-tax purposes, they have never been deducted in determining net income for an excess-profits tax and under the proposed amendment they would not now be deducted again for regular income-tax purposes.

The amendment is fair to the stockholders. It would allow the corporation to rid itself of its oppressive debt burden in shorter time and start business anew with the opportunity to replenish the capital investment of its stockholders and with the prospect of being able at some future date to pay them a reasonable return on their money invested in the corporation.

Moreover, it is submitted, the amendment would be for the best public interest. It will accelerate and assist the progress of a corporation in emerging from receivership or bankruptcy and when the court control is terminated the Nation will have acquired a financially sound corporation which will not only be required to furnish more revenue in the form of taxes but will be able to do so and which will be capable of continuing in business both during and after the war emergency manufacturing materials and employing people, rather than succumbing to liquidation in the hands of a receiver or trustee in bankruptcy.

III. *The relief given by the amendment to corporations overburdened with debt is similar to that granted them under other taxes*

A. *Undistributed profits tax.*—A surtax on undistributed corporate profits was established by the Revenue Act of 1936 and, although incorporated with the normal tax in the Revenue Act of 1938, the undistributed-profits feature was retained until repealed by the Revenue Act of 1939. (See 1936 Revenue Act, sec. 14; 1938 Revenue Act, sec. 13.)

Under both acts, corporations in bankruptcy or insolvent and in receivership were exempted from the undistributed-profits tax. (See 1936 Revenue Act, sec. 14 (d) (2); 1938 Revenue Act, sec. 13 (e).)

This tax was regulatory and was designed to force distribution of profits to the stockholders by means of taxable dividends. It was obviously unfair to apply its high rates to the income of corporations in bankruptcy or receivership for the law prevented the distribution of income to stockholders. The profits of the business which might ordinarily have been available for dividends were required by law to be used to pay the claims of creditors.

The situation under the excess-profits tax is very much the same. The tax is designed to regulate the income available to be distributed or accumulated for the stockholders, but if the corporation is in receivership of bankruptcy the income required to be used to pay creditors' claims cannot possibly be made available to stockholders and should not, therefore, be subject to the regulatory excess-profits tax.

Of particular interest is the Senate Finance Committee's discussion of the House committee's suggestion that a corporation should be exempt from the undistributed profits tax if it was in bankruptcy or receivership for only part of the taxable year. In acquiescing in this House proposal the committee said:

"This proposal is founded on the principle that if a corporation goes into bankruptcy or receivership after its taxable year has started, it is so weak that an undistributed profits surtax ought not to be or cannot be imposed upon it. Similarly if it comes out of bankruptcy or receivership during its taxable year, it should be allowed to operate free of such tax during the remainder of the year in order to recover its strength" (1939-2 Cum. Bull. 687 (S. Rept. No. 2156, June 1, 1936)).

The advisability of allowing an insolvent corporation an opportunity to regain its financial strength free from taxation of an extraordinary sort has thus been recognized by both branches of Congress.

B. *Personal holding companies—surtax on undistributed income.*—In determining the income taxable as undistributed under subchapter A, section 504 (b) of the Internal Revenue Code provides for a deduction from net income of—"amounts used or irrevocably set aside to pay or to retire indebtedness of any kind incurred prior to January 1, 1934, if such amounts are reasonable with reference to the size and terms of such indebtedness."

All corporations whether solvent or insolvent are given relief by this section from debts of long standing. Before they are forced under threat of penalty taxation to distribute their income they are permitted to retire long established debts and thus render their financial position more sound.

The same type of relief is also found in Internal Revenue Code, section 27 (a) (4) which is apparently no longer applicable to any particular tax.

C. *Miscellaneous.*—Some relief from regular taxes is also extended to financially unsound corporations by the following:

> Internal Revenue Code, section 22 (b) (9) (exclusion from gross income). Regulation 103, section 22 (a)-14.

For the above reasons we respectfully urge the adoption of an amendment similar to that suggested herein.

HALE, SANDERSON, BYRNES & MORTON.

BOSTON, MASS.

The CHAIRMAN. Mr. Blodgett.

STATEMENT OF GEORGE R. BLODGETT, OF HERRICK, SMITH, DONALD & FARLEY, BOSTON, MASS.

Mr. BLODGETT. My name is George R. Blodgett. I am an attorney, a member of the law firm of Herrick, Smith, Donald & Farley of Boston, and I do much corporate tax work.

I shall talk about section 734—the so-called inconsistency section, about which Mr. Satterlee has just spoken to you. I did not know he was going to speak this morning, and I think I can omit quite a little of my talk as the result of his excellent presentation.

I urge the repeal of the entire section, or if repeal is not accepted, its great revision. The American Bar Association and local bar associations have formally urged repeal of the entire section.

I appeared before you on this subject last August. I thought the members present felt that some action should be taken, but action was deferred with other technical matters which were to be included in a separate technical bill never adopted.

Section 734 makes provision for adjustments in cases of so-called inconsistent position. Its underlying purpose is apparently to prevent a taxpayer from reducing its excess-profits tax through unconscionably reversing a position which had been erroneously allowed to it in some income-tax matter of a prior year and which had reduced its tax for that prior year. But it goes beyond such a purpose and produces totally different and unfair results as I shall show by illustrations.

I will not stop to explain the wording of the section as Mr. Satterlee has just done this.

This provision has much greater scope than a statute merely waiving the statute of limitations back to 1913 because—

First, it permits the Government to reopen specific tax liabilities previously brought to a final court or board decision between the tax-

payer—or a "predecessor"—and the Government, even a decision of the Supreme Court of the United States in a case between the same parties on the same transaction.

Mr. Satterlee has pointed out that the term "predecessor" is not in any way defined in the law. It is not a technical term the meaning of which is established. The regulation on the subject is most un-understandable, and we can only be sure that it departs substantially from the statements made in the committee report when the section was adopted.

The second reason why the section has much greater scope than a statute merely waiving the statute of limitations back to 1913 is because it imposes on a taxpayer the unpaid tax liabilities of other independent taxpayers for which it may never have been liable under former law, and over which it never had any control.

It is not my purpose to discuss the philosophy underlying the section. I shall talk only about the hardships, resulting from the present wording, to taxpayers who are striving not to take inconsistent positions or to be otherwise unfair.

This section has no place in an excess-profits tax law. The purpose of the excess-profits tax credit is to exempt from the excess-profits tax a certain amount of current income, determined by earnings from 1936 to 1939 or by the investment and accumulated earnings. Mistakes made 20 years ago in determining the taxes of this taxpayer or of some so-called predecessor, have no bearing on the amount of current earnings to be deemed excessive.

Mr. Satterlee has told you that the term "predecessor" is entirely undefined, and the same may be said as to the term "maintaining a position." The regulations have attempted to define both terms, but they are to me, un-understandable and unsatisfactory in other respects. In any event, they are of very doubtful validity, unsupported by anything in the law, and they are subject to retroactive change by the Commissioner at any time.

Using an extremly simple example to illustrate some of the difficulties with section 734, assume that in 1924 a going corporation A, the buyer and the present taxpayer, issued substantial amounts of its stock and money to corporation B for property in a transaction which everyone has always correctly treated as fully taxable to B, the seller, but which nevertheless constituted a reorganization under the tax law which results in what is technically a substituted basis though actually the same amount as a cost basis. Many transactions are technically "reorganizations" although the full profit is taxed. The value of that stock when issued is material in computing corporation A's invested capital for excess-profits tax purposes in 1942 and its depreciation in intervening years. While the value of stock is always a matter of opinion, let us assume that $200 a share was the correct value and is the one which the corporation has consistently used and which the Bureau after investigation has always accepted. Nevertheless, if the 1924 taxes of the seller, corporation B, were determined by using a value of less than $200 a share, the buyer and the present taxpayer A will be liable for all the 1924 taxes of B thereby avoided plus 6 percent interest thereon since 1924.

The section has imposed on corporation A, the buyer, an entirely new liability to pay someone else's 1924 taxes for which it could never

have been liable under the 1924 law or under any other law until section 734 was enacted in 1941.

Corporation A, the buyer and taxpayer, might not have any 1942 current excess-profits tax even if the stock were valued at zero. If so, it is not doing anything, either fair or unfair, to reduce its excess-profits tax. Nevertheless section 734 applies; it has maintained an inconsistent position and must pay the seller's 1924 taxes. This seems to me to be a basic difficulty with section 734—it imposes a penalty which may be of staggering size and bear no relation to the excess-profits tax saving resulting from the change of position. Often a staggering penalty where there is no excess-profits tax on saving at all. Any such result is squarely contrary to the underlying purpose of the section to prevent reduction of excess-profits tax through unconscionable changes of position.

Further difficulties are encountered by corporation A, the buyer. It may be impossible, certainly it would be difficult, to find out what value the seller B put on the stock it received 17 years ago, as B may be out of existence or its records destroyed. Other practical difficulties are encountered, yet under established principles the burden of proving the various facts before the Bureau of Internal Revenue, the courts, or the Board of Tax Appeals is on the taxpayer.

Corporation A, the buyer, may choose to use $150 per share on its excess-profits tax return rather than the correct $200. If the Commissioner does not choose to attack the $150 figure, even though he knows it is wrong, the taxpayer is liable for additional taxes for every intervening year from 1924 to the present which result from reducing its annual depreciation allowance on the property because of this reduction in cost, as well as any 1924 deficiency in taxes of the sellers resulting from their having used a value of less than $150.

In short, A, the buyer and present taxpayer, has no choice but to take some inconsistent position and to pay some prior year penalty.

Senator DANAHER. Mr. Blodgett, if the language with reference to the liability of a predecessor were eliminated from section 734, would not that meet most of the objections that you raise with reference to it?

Mr. BLODGETT. That would meet many of the objections. I was planning later on to outline three or four additional things. I would be glad to do it now, if you wish.

Senator DANAHER. No; you may defer it.

Mr. BLODGETT. That would meet many of the difficulties of imposing on the taxpayer the liabilities of someone else over which it had no control.

Senator DANAHER. Thank you. Pardon the interruption.

Mr. BLODGETT. If it uses the higher correct value for the stock it issued it may be inconsistent with the seller's treatment in 1924 and may have to pay the seller's 1924 tax; if it uses a low value it is surely inconsistent with its depreciation treatment in the past and may have its taxes reopened for all the years back to 1924.

Many of the defects in the law are well illustrated by the only example of its operation given in the present regulations. The example I am giving is taken exactly from the regulations. It is the only example given there.

A taxpayer acquired depreciable property in 1934 from a so-called "predecessor" for stock in a transaction which was incorrectly treated

in 1934 by the predecessor as a nontaxable exchange. From 1934 to 1940 the taxpayer based its depreciation deductions on the predecessor's low cost, and thereby overpaid its income tax in all of those years. If the transaction had been correctly treated as taxable, it would have had a higher cost and have had higher depreciation and less tax in its preceding years. On its 1940 excess-profits-tax return the taxpayer claimed the correct higher basis of the property for invested capital purposes.

Under section 734 taxpayer's 1940 excess-profits tax is increased by the amount of the tax which the predecessor should have paid on the exchange, plus interest, less the taxes overpaid by the taxpayer, plus interest, because of its too small depreciation deductions.

In this example the acquiring corporation is forced solely by section 734 to bear the burden of the predecessor's 1934 taxes on the exchange, for apparently it would not have been otherwise liable therefor whether or not the statute of limitations had run. The two corporations were not in any way interconnected or with common stockholders, and the present taxpayer, the purchaser, had, so far as the regulation indicates, no control over or knowledge about the seller's taxes.

First, let us notice that the taxpayer is penalized, even though it had no current excess-profits-tax liability to pay, whichever position is taken about the taxability of the 1934 exchange. The example in the regulation gives no indication that, aside from this adjustment, the taxpayer had any excess-profits tax. It pays the penalty anyway.

Second, what could the successor corporation have done to avoid this penalty?

The 1934 transaction was probably one which was correctly treated under the then current decisions as a tax-free reorganization but which under the more recent court decisions should have been taxable.

May the taxpayer, in order to avoid the section 734 penalty of having to pay the predecessor's tax, maintain in its excess-profits tax return that the transaction was nontaxable? That is the way it was treated in 1934 but incorrectly. Such a consistent position would not only result in probably higher taxes for the intervening years but would also involve the filing of a return which was knowingly false in the light of recent Supreme Court decisions. If the taxpayer has the right to file such knowingly false returns, any such right should be very clearly stated in the law.

There is no suggestion anywhere in the law that it is anything except a criminal offense to file knowingly a false return.

An amendment to the regulations last January might, with some difficulty, be construed as a permission by the Commissioner to file such an incorrect return. If the Commissioner is willing that the taxpayer should file a knowingly incorrect, though consistent, return, the law should so state in unmistakable language and not leave it to an indirect implication contained in the regulations.

Third, in the example in the regulation, the predecessor corporation clearly should, in all fairness, bear the burden of the tax. There is nothing in the regulations to indicate that the predecessor corporation has gone out of existence or that it is without assets, or anything else about its present status. But no provision of the law or regulations permits either the Government or the successor, which pays that tax as a penalty under section 734, to recover the tax from the prede-

cessor, even though it is active and solvent and may have agreed with the successor to discharge all tax liabilities determined against it.

Fourth, the only reason why, even under the amended regulations, the successor corporation in the example which I have taken from the regulations is liable under section 734 is that the other corporation is made a "predecessor" solely because of the fact that the present taxpayer incorrectly used the other corporation's low basis of the assets for the purpose of depreciation in the years between 1934 and 1939. Of course, the effect of this error was to increase, rather than decrease, the present taxpayer's taxes for those years.

It might have been hoped that the penalty would be applied only in cases where the present taxpayer is making a manifestly unfair claim. But neither the law nor the regulations contain even an intimation to that effect, and I have not learned of any instructions by the Commissioner to his subordinates which indicate any discretion at all in the matter.

Taxpayers cannot hope that the Board of Tax Appeals or courts will apply the law any differently than they find it in the Internal Revenue Code.

While believing that the section should be entirely repealed, a group of people interested in this section have suggested amendments designed to:

(1) prevent this section from applying to very old transactions and to limit it to transactions in some recent period, such as the last decade;

(2) limit the definition of "predecessor" to corporations over whose prior year action the present taxpayer or its stockholders had control because of stock ownership, and so forth.

Senator DANAHER. Or knowledge, knowledge of what they had done.

Mr. BLODGETT. I should think not. When would the knowledge be acquired?

Senator DANAHER. I do not know, unless it would be actual knowledge, because they surely could have guarded against it, that is all.

Mr. BLODGETT. I have a number of cases, about six, going as far back as 1917, and I cannot find out anything now about the 1917 transaction, even if I travel all over the country. I cannot conceive how it could now be established whether or not my client had knowledge in 1917. Certainly I cannot find out anything now.

(3) give the taxpayer a right to maintain a consistent position.

There is no such permission in the law to maintain a consistent position which is necessarily an incorrect one.

(4) put the burden of proving any inconsistency upon whichever party, taxpayer or Treasury, is trying to profit by claiming the inconsistency;

(5) limit any penalty to the amount of the saving of the current excess-profits tax which results from maintaining the inconsistent position;

(6) eliminate the interest on the prior year deficiency.

I ask permission to include the text of the amendments prepared by these people as an addition to the record. These amendments were not drafted by me and they do not represent my ideas in all particulars. Nevertheless, I think they will be helpful.

(The text of the amendments referred to is as follows:)

SEC. 734. ADJUSTMENT IN CASE OF POSITION INCONSISTENT WITH PRIOR INCOME TAX LIABILITY (added by sec. 11, Excess Profits Tax Amendments of 1941).

(a) DEFINITIONS.—For the purposes of this section—

(1) Taxpayer.—The term "taxpayer" means any person subject to a tax under the applicable revenue Act.

(2) Income tax.—The term "income tax" means an income tax imposed by chapter 1 or chapter 2A of this title; Title I and Title IA of the Revenue Acts of 1938, 1936, and 1934; Title I of the Revenue Acts of 1932 ~~and 1928; Title~~ II ~~of the Revenue Acts of 1926 and 1924; Title II of the Revenue Acts of 1921 and 1918; Title I of the Revenue Act of 1917; Title I of the Revenue Act of 1916; or section II of the Act of October 3, 1913; a war profits or excess profits tax imposed by Title III of the Revenue Acts of 1921 and 1918;~~ or ~~Title II of the Revenue Act of 1917~~; or an income, war profits, or excess-profits tax imposed by any of the foregoing provisions, as amended or supplemented.

(3) Prior taxable year.—A taxable year beginning after December 31, 1939, shall not be considered a prior taxable year.

(4) Predecessor.—The term "predecessor" means a person (other than the taxpayer) who at a time when it controlled the taxpayer or was controlled by the taxpayer transferred property (i) which for income-tax purposes for any taxable year, has at any time been treated, or (ii) which is treated for excess-profits-tax purposes, under this subchapter, as having in the hands of the taxpayer a substituted basis (as defined in sec. 113 (b) (2)) determined directly or indirectly by reference to the basis in the hands of such person. The term "controlled" as here used has the same meaning as "control" under section 112 (h).

Adjustments for inconsistency relative to a predecessor shall be made only in those cases which have to do with the basis to the taxpayer of property transferred by a predecessor to the taxpayer and to the recognition or nonrecognition of gain or loss in connection with such transfer.

(b) CIRCUMSTANCES OF ADJUSTMENT.—(1) If—

(A) in determining at any time the tax of a taxpayer under this subchapter an item affecting the determination of the excess-profits credit is treated in a manner inconsistent with the treatment accorded such item in the determination of the income-tax liability of such taxpayer or a predecessor for a prior taxable year or years; and

(B) the treatment of such item in the prior taxable year or years consistently with the determination under this subchapter would effect an increase or decrease in the amount of the income taxes previously determined for such taxable year or years; and

(C) on the date of such determination of the tax under this subchapter correction of the effect of the inconsistent treatment in any one or more of the prior taxable years is prevented (except for the provisions of section 3801) by the operation of any law or rule of law (other than section 3761, relating to compromises),

then the correction shall be made by an adjustment under this section. If in a subsequent determination of the tax under this subchapter for such taxable year such inconsistent treatment is not adopted, then the correction shall not be made in connection with such subsequent determination.

(2) Such adjustment shall be made only if there is adopted in the determination a position maintained by the Commissioner (in case the net effect of the adjustment would be a decrease in the income taxes previously determined for such year or years) or by the taxpayer with respect to whom the determination is made (in case the net effect of the adjustment would be an increase in the income taxes previously determined for such year or years) which position is inconsistent with the treatment accorded such item in the prior taxable year or years which was not correct under the law applicable to such year.

In filing a return, or in any subsequent proceeding with respect to the determination of tax liability, no provisions of this subchapter shall be deemed to require a taxpayer to maintain a position with respect to any item which is inconsistent with the treatment accorded such item in the prior taxable year or years which was not correct under the law applicable to such year; and the Commissioner, the Board of Tax Appeals, and the courts shall, on demand of the taxpayer made at any time before entry of judgment, determine the tax liability by treating any such item in a manner which shall not be inconsistent

with the treatment accorded such item in the prior determination. In any proceeding before the Board of Tax Appeals or the courts the burden of proof in establishing that an inconsistent position has been taken, and the amount of the adjustment resulting therefrom, shall lie with the party asserting such inconsistency.

(c) METHOD AND EFFECT OF ADJUSTMENT.—(1) The adjustment authorized by subsection (b), in the amount ascertained as provided in subsection (d), if a net increase shall be added to, and if a net decrease shall be subtracted from, the tax otherwise computed under this subchapter for the taxable year with respect to which such inconsistent position is adopted.

(2) If more than one adjustment under this section is made because more than one inconsistent position is adopted with respect to one taxable year under this subchapter, the separate adjustments, each an amount ascertained as provided in subsection (d), shall be aggregated, and the aggregate net increase or decrease shall be added to or subtracted from the tax otherwise computed under this subchapter for the taxable year with respect to which such inconsistent positions are adopted.

~~(3) If all the adjustments under this section, made on account of the adoption of an inconsistent position or positions with respect to one taxable year under this subchapter, result in an aggregate net increase, the tax imposed by this subchapter shall in no case be less than the amount of such aggregate net increase.~~

(3) The amount of the adjustment under this section made on account of the maintenance of an inconsistent position or positions with respect to one taxable year under this subchapter shall in no event exceed the amount of the difference in excess-profits tax which results from the maintenance of the inconsistent position as compared with the amount of excess-profits tax which would have been payable if a consistent position had been maintained; and the aggregate amount of the adjustments under this section for all years shall in no event exceed the amount of the income taxes determined for prior years resulting solely from the incorrect treatment of such items in such prior years.

(d) ASCERTAINMENT OF AMOUNT OF ADJUSTMENT.—In computing the amount of an adjustment under this section there shall first be ascertained the amount of the income taxes previously determined for each of the prior taxable years for which correction is prevented. The amount of each such tax previously determined for each such taxable year shall be (1) the tax shown by the taxpayer, or by the predecessor, upon the return for such prior taxable year, increased by the amounts previously assessed (or collected without assessment) as deficiencies, and decreased by the amounts previously abated, credited, refunded, or otherwise repaid in respect of such tax; or (2) if no amount was shown as the tax by such taxpayer or such predecessor upon the return, or if no return was made by such taxpayer or such predecessor, then the amounts previously assessed (or collected without assessment) as deficiencies, but such amounts previously assessed, or collected without assessment, shall be decreased by the amounts previously abated, credited, refunded, or otherwise repaid in respect of such tax. There shall then be ascertained the increase or decrease in each such tax previously determined for each such year which results solely from the treatment of the item consistently with the treatment accorded such item in the determination of the tax liability under this subchapter. ~~To the increase or decrease so ascertained for each such tax for each such year there shall be added interest thereon computed as if the increase or decrease constituted a deficiency or an overpayment, as the case may be, for such prior taxable year.~~ There shall be ascertained the difference between the aggregate of such increases, ~~plus the interest attributable to each,~~ *without interest*, and the aggregate of such decreases, ~~plus the interest attributable to each,~~ *without interest*, and the net increase or decrease so ascertained shall be the amount of the adjustment under this section with respect to the inconsistent treatment of such item.

The CHAIRMAN. Did you appear before the Ways and Means Committee?

Mr. BLODGETT. I did; yes, sir.

The CHAIRMAN. The Ways and Means Committee did nothing?

Mr. BLODGETT. The Ways and Means Committee did nothing; but I believe there have been some discussions between the staff of the Joint Committee on Internal Revenue Taxation and the Treasury

Department, and perhaps it was in the light of those discussions that the Ways and Means Committee did nothing. I think there was some thought that amendments might be made later in this section.

The CHAIRMAN. The position of the Treasury Department has been it could be done by regulation which could prevent the unusual result which you point out, and which others have pointed out, I believe.

Your position is that the statute itself ought to be clarified.

Mr. BLODGETT. I think the statute should be clarified. The people with whom I talk find the amendments which the Treasury made as the result of recent clamor in the Ways and Means Committee appearance quite unsatisfactory and vague, if nothing else.

I doubt whether many of these points, such as waiving the 6-percent interest, and the permission to file knowingly false returns, can be taken care of by regulation.

The CHAIRMAN. Thank you very much, Mr. Blodgett.

Senator DANAHER. Mr. Chairman, before we conclude with him, I would like to ask one other question.

The CHAIRMAN. All right, Senator.

Senator DANAHER. You remember, Mr. Chairman, last year we were all very much impressed by the equity of the claim and we reserved action on this feature of the then bill before us, because we expected that administrative relief would come up in a bill that never did come up.

I would like to know if Mr. Blodgett is in a position to tell us how adversely the Treasury's position would be affected if section 734 were repealed entirely? Are you in a position to comment on what would be the effect on the Treasury were we to repeal section 734?

Mr. BLODGETT. I do not see how I could honestly make any estimate on the figures. I do not see that I can say anything beyond my feeling that the injustice far outweighs any benefit to the Treasury.

Senator DANAHER. I think it ought to be out of the bill entirely.

All right, thank you.

Senator WALSH. Are many taxpayers affected by this?

Mr. BLODGETT. Well, I have myself not 10 taxpayers, but 10 reorganizations, many of which go back to 1917. On most of them I cannot find a single fact. The old company has gone out of existence, its records are destroyed. Of course, the Bureau will not let me see the tax returns of an entirely independent taxpayer in 1917, even if the Bureau has them. I can find nothing. I have traveled around the country, trying to find something. If we move it up to some recent year, say 1932, it would not be so terrible, but to go back to 1913 is totally impractical.

The CHAIRMAN. Thank you very much, Mr. Blodgett.

Mr. Clapp.

STATEMENT OF A. W. CLAPP, VICE PRESIDENT, WEYERHAEUSER TIMBER CO., TACOMA, WASH.

Mr. CLAPP. Mr. Chairman and members of the committee, my name is A. W. Clapp. I am vice president of Weyerhaeuser Timber Co., Tacoma, Wash.

The statement I would like to make also relates to section 734, although it is a rather limited feature. After Mr. Satterlee's and

Mr. Blodgett's statements, I do not need to explain the general purposes of section 734 to this committee, but I think it would be helpful to give a specific illustration of an inconsistent position and how it results.

My company in 1927 sold to another wholly unrelated company a large block of timber under an installment contract.

In 1933, in the depths of the depression, and at a time when most of the installments remained unpaid, my company had to cancel the contract and retake the timber. The Internal Revenue Bureau had regulations providing for computation of profit or loss on the cancelation of such an installment contract.

In making its income-tax return for 1933, the company followed the Bureau's regulations and what at that time both it and the Commission believed to be the law.

Recently the courts have decided that the regulation was not in accordance with law and have laid down the correct rule for computing profit under the law in force in 1933 in cases of cancelations of installment contracts. The court's decision was followed by the Commissioner, who now has regulations which embody it. Under this correct rule we should have returned and paid for 1933 a tax on a profit of a very considerable amount more than we did. But the year 1933 was "closed" when the court decisions were made.

In making our 1940 excess-profits tax return, we included in our surplus account as part of invested capital the profit which, under the correct rule, we made in 1933.

But as that position is inconsistent with that taken by us in our original return for 1933 we were required under the provisions of section 734, and did, recompute our tax for 1933 and paid, as a part of our excess-profits tax, the deficiency in the 1933 tax, together with interest at the rate of 6 percent per annum from the date when it should have been paid.

There is no question of a predecessor company here, and if section 734 is to be retained, we make no objection. It may be fair that we should pay this deficiency and interest if we desire to include the previously untaxed profit in our invested capital.

But the law as now written, as we understand it, as interpreted by the regulations does not provide for deduction at any time of the interest which we have paid from our earnings.

Our position is that there should be a proper amendment to section 734 providing that the interest which is included with the deficiencies for prior year which the taxpayer must add to its excess-profits tax payment may be deducted from its earnings when paid, and conversely that interest included with overpayments for prior years which the taxpayer may deduct from its excess-profits tax otherwise payable must be included in its earnings when it receives such credit for that interest.

While the previous speakers have spoken of the inconsistent position taken by taxpayers, the committee, of course, realizes that when the Commission, in auditing the first excess-profits tax return of a taxpayer, maintains a position which is inconsistent with what was done in prior years, resulting in the lowering of the income in those prior years, the taxpayer is given credit in its excess-profits tax for what

should have been refunds in those closed years, a refund of the amount of the overpayment in the closed year, plus interest.

Senator VANDENBERG. In other words, you follow the inconsistency between the regulation of the Commissioner and a subsequent ruling of the court.

Mr. CLAPP. Yes; we followed the regulations of the Commissioner at the time we made our return.

This is the first instance, to my knowledge, that taxpayers have not been allowed a deduction for interest paid on income-tax deficiencies, and the first instance that interest upon refunds or credits for overpayments have not been required to be included in the taxpayer's gross income.

We believe that the failure to provide for the deduction of interest in case where the adjustment is for a deficiency in a prior closed year or for the inclusion in the gross income of a corporation of the interest for which it receives credit (in case where an adjustment made as a result of an inconsistent position maintained by the Commission there is disclosed an overpayment in a prior closed year) must have been an inadvertence.

Heretofore, under all revenue acts, interest on deficiencies has been a deductible item, and interest on refunds an addition to gross income. The principle of section 734 has, with respect to positions maintained by a taxpayer in a current income tax return (or by the Commissioner in auditing it) inconsistent with income tax returns (or determinations) for prior closed years, has been in the Internal Revenue Code for several years as section 3801.

Deficiencies or overpayments for years as far back as 1932 (but not prior), even though the years are "closed" so that the statute of limitations otherwise precludes additional assessments or refunds, may be determined under circumstances similar to those covered by section 734, and deficiencies for prior "closed" years assessed, with interest, or refunds made, with interest.

Interest on such deficiencies is deductible when paid, and interest on such refunds when paid or credited included in gross income.

Furthermore, adjustments under section 734 apply only to years which are "closed."

By a closed year, of course, we mean a year for which the statute of limitations has run, so there could be no deficiency assessed or refund made.

If a position maintained by a taxpayer in computing its excess profits tax is inconsistent with that taken in an income tax return for a year not "closed," section 734 does not apply. In that case the Commissioner will assess in the ordinary course, as additional income taxes, deficiencies for the prior year, the deficiency will be paid with interest and the taxpayer given a right to deduct the interest in computing its earnings in the year paid.

Conversely, if a position maintained by the Commissioner in determining a taxpayer's excess profits tax is inconsistent with the treatment of the item in determining the income tax for a prior year which is open (for refund), the taxpayer will be entitled to and in the ordinary course be paid a refund with interest and the taxpayer required to include that interest in its gross income for the year paid (or credited).

There is no reason or logic whatsoever in this different treatment of interest paid by the taxpayer on deficiencies or paid (or credited to the taxpayer) upon refunds for "closed" years and like interest paid or received on account of deficiencies and refunds for "open" years. That there was no real intention in section 734 to make such a distinction seems clear from the following language in clause (d) of the section [parentheses and italics supplied]:

> To the increase or decrease so ascertained for each such tax for each such (prior) year there shall be added interest thereon *computed as if the increase or decrease constituted a deficiency or an overpayment* as the case may be, for such prior taxable year.

There is, of course, no way in which we can tell whether the amendment suggested by us will produce more or less revenue. It would seem to me reasonable to suppose that the Commissioner may make more adjustments, thus entitling taxpayers to reduce their excess-profits taxes by the amount of overpayments disclosed for prior years with interest that taxpayers will make. If that is so, revenues would be increased by such an amendment.

I understand that there is no question of revenue involved. I think the Treasury will tell you the chances are with the amendment we suggest the revenues would not be affected.

Now, unquestionably, most adjustments made by taxpayers under section 734 were made in making their first excess-profits return for 1940, and most adjustments made by the Commissioner will be made in auditing those returns. In either event, interest on deficiencies will be paid and interest on overpayments credited in 1941.

Therefore, whatever amendment is adopted should be made retroactive so that it will have the same effect as if included in the original section 734. We have no fear but that this will be acceptable to the Treasury.

The subject which has so far been discussed was presented by me to this committee on August 15, 1941, when the Revenue Act of 1941 was under consideration. After my presentation the following occurred (record of hearings, pp. 560–561):

> The CHAIRMAN. On the face of it, it looks like your complaint is very well founded. I think the Treasury ought to make a special note of that——
> Mr. RAY.—

who was the representative of the Treasury then present—

> Yes, Senator George.
> The CHAIRMAN. And see how that may be remedied.
> Mr. RAY. The Treasury is considering this particular section with respect to that point and a number of other points. It is a very specialized problem, and we will look into it, sir.

During the same colloquy Senator Danaher said he thought I was right and asked the Treasury representative (Mr. Ray) "why they should permit deduction of interest paid on a deficiency for an open year and deny the deduction of interest paid on a deficiency for a closed year."

No report on the subject was made by the Treasury to the Finance Committee. Presumably the committee would have taken no action anyway because it decided that no "administrative" amendments, so-called, should be considered at that time.

The same subject was presented by me to the Ways and Means Committee in March 1942, during hearings on the bill now before

you. No action was taken by that committee, on section 734, at all.

I am reliably informed that the reason for this was that while the Treasury representatives and the legislative counsel for the Joint Committee on Internal Revenue Taxation agree that an amendment should be made curing the particular point which we have urged, there was some difficulty in agreeing upon other amendments to the same section (734) and in the rush to complete drafting of the bill for the Ways and Means Committee, revision of section 734 had to be postponed, presumably for presentation to this committee.

I have been informed that there will be amendments submitted to this committee on section 734, I mean, by the Treasury Department and the counsel for the joint committee.

We insist that there being no objection of any kind from anyone, but on the contrary a general agreement with our position, there should no longer be any delay in the adoption of a proper amendment. We assume that such an amendment will be drafted and submitted to the committee by the legislative drafting experts. If that is not done, we suggest that the following, if adopted, would be sufficient and proper:

(a) Subsection (d) of section 734 of the Internal Revenue Code is amended by adding at the end of said subsection the following:

"If the amount of the interest on increases which is included in the computation of such adjustment exceeds the amount of the interest on decreases which is included in the computation of such adjustment the amount of such excess shall be deductible from the gross income of the taxpayer in the year in which the adjusted excess-profits tax is payable; if the amount of the interest on decreases which is included in the computation of such adjustment exceeds the amount of the interest on increases which is included in the computation of such adjustment, the amount of such excess shall be added to the gross income of the taxpayer in the year in which the adjusted excess-profits tax is payable."

(b) The amendment made by subsection (a) shall be effective as of the date of the enactment of the law amended thereby.

The correction of this is a simple matter.

The CHAIRMAN. The suggested amendment deals only with this question?

Mr. CLAPP. This particular question that I have discussed so far.

The CHAIRMAN. The interest question?

Mr. CLAPP. The interest question, yes; that particular amendment.

I feel I must say something else about section 734. I add this because this is a matter that came up just before I left Tacoma, in fact the week before I left Tacoma.

It concerns, I would say, a threatened construction and application of section 734, which I think is so far inconsistent with the real intent and purpose of the section that I think it should be called to the attention of the committee.

It arose, by the way, in connection with a conference over the excess-profits tax return of my company for the year 1940, and this is what developed: We were told that, while the examining agent agreed with the position which we had taken in making our excess-profits tax return and certain adjustments under section 734, they had been advised or believed that the construction to be given in certain circumstances by the Treasury Department would be different, and I want, by illustration, to point out what that was.

Now, it may be, it seems to me as a lawyer, that the construction which is threatened would be wrong, but I think it should be called to

the attention of the committee, and I think the committee should ask the Treasury experts or representatives whether such construction could be or would be given by the Treasury. Now, the illustration is this, and this is an illustration which shows what our position was and the way the point came up before the internal-revenue agent in charge at Seattle.

A corporation had, and its return showed, a very serious net loss in 1933, say for the purpose of illustration of $100,000 net loss in 1933.

Its return was accepted by the Commission. Of course, there was no tax paid or payable, and no tax determined, except as the return showed that there was no tax.

In making its excess-profits tax return for 1940, the corporation treats an item in such a way that if it had been treated consistently in its return for 1933—I have already explained the kind of inconsistency—it would have added $125,000 to its gross income and resulted in a net income of $25,000 instead of a net loss of $100,000 for that year.

Now in this instance, the question is, what is the increase in such tax previously determined for such year which results solely from the treatment of the item of $125,000?

We have been informed—and this is what we fear—that the Treasury will hold that the increase would be a tax on $125,000 rather than a tax on $25,000.

Now that is in spite of the fact that if the taxpayer had properly treated, in accordance with the law, as it actually was, if the taxpayer had properly treated the item in his 1933 return, it would then have paid a tax upon only $25,000, because its other loss would have absorbed most of that profit.

We submit that such result could not have been in contemplation by Congress, and that far beyond causing an inequity to the taxpayer, it imposes upon him the grossest and most unpardonable inequity.

Now the trouble with section 734, if there is any trouble—I do not say that there is, but I think the committee should ask the Treasury whether a thing of this kind could be done—if there is any trouble with section 734 as at present worded, it deals only with the tax previously determined. Now the people at Seattle, while they haven't yet ruled this way, have said there cannot be any minus tax, therefore you have to start with zero and you compute the tax on whatever the adjustment is, the total amount of the adjustment. Although had you included that adjustment originally, it would have been offset by other deductions—by a loss.

Here again, we would have, if such a ruling is possible, an entirely different treatment of doing equity for a closed year than for an open year.

If, in the example given above, the year was 1939, no adjustment would be made under section 734, but the Commissioner would assess an extra tax for the year 1939 upon $25,000, not upon $125,000.

It seems to us that this demonstrates an obvious fault if any such construction, as we have been told may be made, should be made by the Treasury Department, and we ask that the committee ascertain from the Treasury Department whether such treatment is possible and, if it is, it should be corrected.

Very obviously, what was intended was when an adjustment is made to correctly reflect the law now, in its excess-profits-tax return

what it should do is to go back and see whatever deficiency there would be in the tax, and that deficiency of course should be computed by the determination made by its own return in computing its loss or gain, whichever it should be, and adding to that loss or gain the amount of the inconsistent item.

The CHAIRMAN. You may me laboring under a misapprehension, Mr. Clapp. The Treasury may not take that view.

Mr. CLAPP. That is true.

The CHAIRMAN. But suppose you take the case where the recognition of losses by the Department was exactly $125,000, and subsequently the Treasury found you should have, in computing your income tax, computed an omitted item of $125,000, certainly the Treasury would not then insist that they would take that separate item out of the related return in transactions for that year and tax you on the $125,000.

Mr. CLAPP. Well, I say they certainly should not.

The CHAIRMAN. No.

Mr. CLAPP. But you will note that the law itself speaks of determination of a tax. It makes no reference to the determination of the company's net income or the company's loss.

The CHAIRMAN. That would certainly be resorting to a technicality and would be an extremely harsh and inequitable rule. I do not think the Treasury would do that.

Mr. CLAPP. I do not think it would, but I do think it should be called to the attention of the committee. It is an illustration which has been called to our attention. It is, you might say, a threat that has been called to our attention.

The CHAIRMAN. It is an imminent danger.

Mr. CLAPP. It is an imminent danger.

The CHAIRMAN. Thank you, sir.

Mr. Brooks.

STATEMENT OF JOHN W. BROOKS, REPRESENTING PASS & SEYMOUR, INC., SYRACUSE, N. Y.

Mr. BROOKS. Mr. Chairman and members of the committee, my name is John W. Brooks.

I am vice president and treasurer of Pass & Seymour, Inc., located at Solvay Station, Syracuse, N. Y. We manufacture electrical lighting supplies essential to the war effort; employ approximately 625 people.

Our invested capital as of January 1, 1942, was approximately $1,600,000.

I am not proposing to take your time with our detailed historical figures, but rather to discuss some of the principles of the proposed corporation's normal, surtax, and excess-profits tax and the apparent effect on our corporation, our employees and others similarly situated.

I will ask for the privilege, Mr. Chairman, of filing a supplement, more lengthy memorandum.

The CHAIRMAN. Yes, sir; you may file a supplemental memorandum, if you desire to do so.

Mr. BROOKS. One hundred percent of our present output is classified as being necessary to the war effort. All expansion to convert

and produce has been financed by the company with their own capital, plus borrowing, from our local bank.

We fully recognize the need for higher taxes to finance the war. It is, however, necessary to determine how far smaller companies can go in paying taxes and at the same time have enough left to finance the jobs it is essential for them to do.

This is especially true in the durable goods industries, most of which are essential.

Reference to the data which you have will show that the durable goods industries, which are compelled to use the invested capital basis, because of small earnings in the base period, pay a much higher rate of tax than the nondurable group. The separation is very marked, running as high as 20 points and up; in other words, 50 to 60 percent of net in some instances before Federal tax as compared with over 80 percent in many durable goods industries.

I make that statement, Senator, on the basis of figures prepared for me by Standard Statistics.

Could these inequalities be leveled out by introduction of higher brackets for invested capital credits, below $5,000,000 level?

In other words, a percentage ration for the first million, again for the second and for the third, and finally reaching the present 8 percent at the $5,000,000 level.

I am concerned about the impact of the proposed taxes—normal, surtax and excess-profits tax, on our own company taking as it will over 83 percent because:

(*a*) Will make it difficult to finance needed equipment and inventory for the war effort;

(*b*) Distribution of tax does not appear to me to be fairly spread among all interests.

By that I mean in comparison with nondurable goods, mail-order houses, soft-drink manufacturers, and others of that type who, because of the nature of their business, enjoyed an earning record in the base years which is denied to the durable goods on the basis of their experience.

After all, the nondurable-goods companies who had good earnings in the base period should be just as much interested in financing the war.

(*c*) I am concerned about the possibility of carrying on after the war, providing employment for the hundreds of people who look to us to provide employment (as many have for over 50 years).

In closing, I fully recognize the most difficult task which confronts the committee. If the submission of any of our detailed data would help, you have but to ask.

Senator CONNALLY. Just one question.

You say nearly all of your products are regarded as necessary for the war?

Mr. BROOKS. That is right.

Senator CONNALLY. You are, therefore, getting a higher price, of course.

Mr. BROOKS. No; the same prices we had been getting.

Senator CONNALLY. The same prices you had been getting over a period of years?

Mr. BROOKS. Yes. Our prices are frozen by O. P. A.

Senator CONNALLY. Were your profits during the 4-year base period fairly satisfactory?

Mr. BROOKS. No, sir; they were not.

Senator CONNALLY. They were not?

Mr. BROOKS. They were very unsatisfactory. You will recall that during that base period, the building construction—and we are tied in with building construction in large part——

Senator CONNALLY. You prefer the alternative of an invested capital basis?

Mr. BROOKS. We are forced to use that, because the use of the average earnings base would be too expensive.

Senator CONNALLY. You advocate the raising of the percentages on all bases up to $5,000,000, is that right?

Mr. BROOKS. Yes, sir; that would help us if the percentages allowed on invested capital in those smaller brackets were adjustable.

Senator CONNALLY. That is your thought?

Mr. BROOKS. Yes; what we are suffering from is a lack of a suitable credit for excess profits as compared with most industries.

Senator CONNALLY. Of course, if you do not have any excess profits, you do not have to pay any excess-profits tax.

Mr. BROOKS. We have no excess profits in the true sense of an excess profit.

In other words, we are not making any excess profits out of the war. Our profit is entirely normal.

The CHAIRMAN. Your volume is increased, of course, on account of the war?

Mr. BROOKS. Yes.

The CHAIRMAN. Your profits ratio is lower?

Mr. BROOKS. Our profits ratio is lower.

Senator TAFT. What kind of stockholders do you have?

Mr. BROOKS. You would call it a close corporation.

Senator TAFT. What?

Mr. BROOKS. I think you would call it a close corporation.

Senator TAFT. You mean owned by a family, the members of a family?

Mr. BROOKS. Families or relatives, and many of the employees.

Senator TAFT. During the 4 base years presumably they got no dividends, practically?

Mr. BROOKS. That is right, they only had one.

Senator TAFT. They got on satisfactorily without the dividends? They are otherwise wealthy?

Mr. BROOKS. None would be called wealthy; a few are well off; most of them are not.

Senator CONNALLY. You mean to tell Senator George, though, that your volume is heavier now but you are making less money?

Mr. BROOKS. Yes, sir.

Senator CONNALLY. So the more business you do, the less well off you are?

Mr. BROOKS. We have had increases in material costs, we had many increases in labor costs, and our selling prices are the same.

Senator TAFT. You mean you would make less money after paying 83 percent in taxes?

Mr. BROOKS. We are making less money before taxes, and we are making substantially less after taxes.

Senator TAFT. If you makes less money before taxes, you haven't any excess profit to pay, I mean, more than in the base years.

Mr. BROOKS. Don't misunderstand me. I do not mean to say we are making less than in the 4 base years, I did not intend to say that.

Senator TAFT. Less than when?

Mr. BROOKS. Less than the year before, and the year before that; 1940 and 1941, definitely less than 1941 and 1940.

The CHAIRMAN. 1939 was one of your base years.

Mr. BROOKS. Yes, sir.

The CHAIRMAN. If your profits were going up during the last 2 years of the 2-base years you have some relief?

Mr. BROOKS. They are not adequate for our purposes.

The CHAIRMAN. It still leaves you in a position where you have no adequate credit against the excess profit.

Mr. BROOKS. Yes, sir.

The CHAIRMAN. And it puts a combined rate on everybody of 83 percent Federal taxes.

Mr. BROOKS. Yes, sir.

Senator TAFT. Of your invested capital, how much is new money that you put in since the war business developed?

Mr. BROOKS. We have not put in any additional capital since the war started.

Senator TAFT. I thought you said the expansion has been financed by the company with their own capital plus borrowing from local banks. You mean expansion during the recent years, that had nothing to do with the war?

Mr. BROOKS. No, no. It is a normal financing, without going out to get additional money, except by borrowing.

Senator TAFT. It occurs to me that the relief provisions in the bill might be applied. If your earnings in the base period for the industry was unduly depressed I should think maybe you could get relief from that.

Mr. BROOKS. I have not checked into that personally. I cannot answer that, because I am not familiar with that detail.

The CHAIRMAN. Thank you very much, Mr. Brooks.

Mr. BROOKS. Thank you, sir.

(A supplemental memorandum submitted by Mr. Brooks is on file with the clerk of the committee.)

The CHAIRMAN. Mr. Fisheles.

(No response.)

The CHAIRMAN. Mr. Hotchkiss.

STATEMENT OF C. F. HOTCHKISS, JR., PRESIDENT, STOW MANUFACTURING CO., BINGHAMTON, N. Y.

The CHAIRMAN. Mr. Hotchkiss, you represent the Stow Manufacturing Co., of Binghamton, N. Y.?

Mr. HOTCHKISS. Yes, sir. This is an amendment to a brief which we were too late to get before the House Ways and Means Committee, but we did hand it in at Mr. Stam's office.

My name is C. F. Hotchkiss, Jr. I am president of the Stow Manufacturing Co., of Binghamton, N. Y., incorporated under the laws of the State of New York.

I wish to present for your consideration certain facts concerning the excess-profits tax as it affects our corporation and other corporations in similar circumstances. I am also presenting a plan for correcting the inequities which will be explained later in this brief.

As I am not an accountant, I have brought with me Mr. W. E. Craw, assistant treasurer of our company, and Mr. J. J. Dawson, a New York certified public accountant, who acts as our accounting adviser. These gentlemen assisted in the preparation of this brief.

Would it be permissible for those gentlemen to come up here in case there are some questions that they know how to answer better than I?

The CHAIRMAN. Yes.

Mr. HOTCHKISS. Will you gentlemen step up, please?

The Stow Manufacturing Co. was established in 1875, and incorporated in 1895.

We manufacture flexible shafting and related products. Fundamentally, flexible shafting transmits portable rotary motion. It is used in portable tools, instruments on aircraft, automobiles, ships, and so forth, and remote control of valves and other devices. I have put a little sample in each copy of your brief, so you will get an idea of what we are talking about. Here is a larger size that we make for the Navy. I am not trying to sell flexible shafting, but I thought you would like to know what we are talking about.

Our customers include all types of manufacturers, practically all of whom are either prime or subcontractors to the Government. We also have a considerable volume of prime contracts with our Government, the Canadian, and Australian Governments.

Our peacetime products were mostly portable tools and speedometer core used in automobiles. This suffered greatly during the depression but we were making an orderly recovery during the base period of 1936 to 1939, although our profits during this period were very small.

Starting in 1938, we assisted the Ordnance Department in the development of a special flexible shafting for gun fire control. It was not until the year 1941 that any profit accrued from this development.

In the fall of 1941, at the request of the Navy Department, we developed a special flexible shaft for use on ships. By correcting a faulty condition on warships, we are not only saving many ships from disaster but we are saving the Government thousands of dollars on every ship that is built. The use of our product has speeded delivery of many ships to an appreciable extent.

The type of flexible shafting used for the Army and Navy has been made for many years by our company, by hand. Our production was very small, and entirely inadequate to meet the demand upon us by the Government. It was therefore necessary for us to invent and build special equipment to imitate the hand process formerly used. Frankly, we had to keep our fingers crossed for many months during the period when this equipment was being built and tested. However, this machinery was entirely satisfactory and at the present time it is turning out large quantities.

I might add, during that period we were being hounded by telephone and telegram by the Navy Department and other people for production. We were just making machines. I am happy to say it was worked out all right and we are working at full blast now.

Senator CONNALLY. You were helping yourselves when you invented that, as well as the Government; were you not?

Mr. HOTCHKISS. Yes, sir. We do not deny that. Our backlog of unfilled orders at the present moment is equivalent to 10 to 15 years of pre-war business. It is not unusual to receive orders representing 5 years of pre-war business in one mail. We got a little scared of those at first, but we are getting used to them now. Chart B, on page 12, if you care to pull that out, gives you an idea of our saleschart over the previous years. The expansion in sales you will notice is rather unusual, perhaps.

Naturally, this enormous expansion could not be accomplished without a tremendous increase in capital. Where were we to get this capital? We could not conscientiously seek outside investment because, due to the tax situation, dividends were out of the question. Also, we had an untried product, that is, for the purposes for which it was being sold, and we were asking considerably less for it. Advance payments on contracts were not practical because of the large number and variety of small contracts. In other words, we did not have one big contract, or we did not have all our products going to the same branch of the Government. There was not one prime contract, there were a great many subcontracts and prime contracts. So for us to try to get advance payments from the Government on the contracts we would have to hire 50 bookkeepers to keep the books straight, because you have to keep the costs separate for each contract. Also because of the haste in which deliveries were required. Deliveries are frequently made on basis of telephone instructions before official orders are even written. Under such conditions all available types of Government financing become impracticable.

After exhausting the resources of our local bank, we went to the R. F. C. for a loan which we obtained after pledging all contracts, control, and assets of the corporation. The amount of this loan is three times our invested capital. The loan was finally completed about 10 weeks after the start of negotiations

We will start paying off this loan in August at a rate of 20 percent of sales per month which is approximately our profit on sales before taxes. Since our taxes, under the proposed legislation, amount to 87 percent of our net income—I will explain that later—we can only pay off the loan by depleting cash which will be needed for taxes in March. Therefore, it will be necessary to negotiate new loans at that time. This condition will continue to pyramid until such a time as the demand for our products drops off, and if this should happen suddenly, we would find ourselves with enormous inventories, loans to pay off and a heavy tax liability, with no cash reserve. This constitutes an insolvent condition which might be further exaggerated by an honest difference in interpretation of the taxing statutes that would result in further assessments of taxes at a later date. Such an assessment could prove disastrous.

To illustrate that point on the difference of opinion, supposing, for instance, we just built an engineering department in an old building, we took a section of it that was not being used and fixed it up for engineers and we charged it to repairs: Now, the tax department might not agree with us on that. Later we might be assessed taxes at a time when we could not afford to pay them, and we might go bankrupt at that time. That particular thing

might not be enough, but if you had an accumulation of them it might. I do not mean to say we are taking a lot of liberties with exemptions, but such a thing might be possible when you are working on such a close margin.

To take care of our increased business it was necessary during 1941 and 1942 to spend about $80,000 on additional buildings and machinery, which, of course, are all capitalized. This was only enough to take care of actual expansion at the time the buildings were built. We would like to have built the buildings large enough to take care of our additional anticipated expansion. However, we were afraid that we might go bankrupt in the process, due to the heavy taxes.

It is true that there is a certain amount of relief to be obtained under a certificate of necessity, allowing new capital equipment to be depreciated over a 5-year period rather than the normal life of the equipment. Actually this is more figurative than literal, as these capital items are used or operated in most instances at three times their normal rate. Due to the pressure under which everyone is working, it is impossible to give these machines proper maintenance. They are pretty well shot probably by the end of the 5 years.

We realize that the proposed House bill contains provision for relief for which we might apply. However, these measures are not specific and are subject to the judgment of the reviewing body. Furthermore, much time would elapse in the review of our case and the probabilities of relief could not be used as collateral at a bank. The House bill proposes to allow the taxpayer to pay only 67 percent of the tax on which he is requestiong relief, but this does not relieve the taxpayer of any anxiety he may have over the possible results of his appeal, nor can he plan for the future with any assurance of having money with which to do business. We believe that the law should give clear-cut relief to corporations in similar circumstances to ours, thus removing a considerable group from asking relief, and giving the said group the opportunity of devoting its entire attention to operating, rather than survival.

I do not know just how these reviewing boards will be set up, but I presume there will be a great many companies asking for relief. Certainly practically all companies in the same circumstances as we are will ask for relief.

Senator CONNALLY. Let me ask you a question on that.

Mr. HOTCHKISS. Yes.

Senator CONNALLY. What proportion of your business has been taken over by the Army and Navy?

Mr. HOTCHKISS. Probably 99.8 percent.

Senator CONNALLY. 99.8 percent of your business is going to the Government?

Mr. HOTCHKISS. Yes, sir.

Senator CONNALLY. Do you make other things besides this shafting.

Mr. HOTCHKISS. It is all related to the shafting.

For your information, I have put a couple of pieces of our literature in the back, which gives you an idea of our products. I thought you might be interested.

Senator TAFT. Are the new products going to be produced after the war, in civil life?

Mr. HOTCHKISS. We hope so. We hope we can get the shipyards and other people sufficiently flexible-shaft minded so we can maintain a pay roll similar to our present pay roll after the war, although there certainly will be a year or two of readjustment, during which time we have got to watch our p's and q's or we will go broke.

Senator TAFT. I should think even if you could sell your new products the volume would be considerably smaller.

Mr. HOTCHKISS. Undoubtedly.

Senator TAFT. After all, there are not likely to be so many ships built.

Mr. HOTCHKISS. Undoubtedly.

Senator CONNALLY. Are you the principal maker of this product in the United States?

Mr. HOTCHKISS. We have a few competitors. As far as I know, we are the only ones capable of making this particular shafting.

Senator CONNALLY. Then your contracts with the War and Navy Departments are mostly negotiated?

Mr. HOTCHKISS. No, sir; they are all straight bid contracts.

Senator CONNALLY. If nobody else can make the product except you it does not present a question of competition in bidding, does it?

Mr. HOTCHKISS. No; we get our price. We are not complaining. As I mentioned before, we have been making a net profit, before taxes, of about 20 percent, on the present volume of sales. Naturally, our overhead has gone up, but it has not gone up as fast as sales.

Senator CONNALLY. You mean you have made a net profit of 20 percent?

Mr. HOTCHKISS. That is right.

Senator CONNALLY. That is pretty fair.

Mr. HOTCHKISS. We are not complaining about that. As a matter of fact that 20 percent is pretty near necessary in order to have money to do business with and maintain an enormous inventory, which we are asked to maintain.

Senator TAFT. Is it necessary to have a net profit of 20 percent to pay on the loan?

Mr. HOTCHKISS. That is true. We are paying 20-percent profits on our sales during the life of the loan. We have got to make another loan when this one is finished, and we are going to have to take all the profits to pay it back. During the same period we are increasing business. The darned business doubles every 2 or 3 days. We cannot keep track of it, hardly. All we are looking for is survival.

Senator CONNALLY. If they just let you alone you will be all right.

Mr. HOTCHKISS. Yes, sir. We have no definite statistics to show the number of concerns in similar circumstances to ours. We believe there may be a thousand firms in the entire country.

We are making a guess at about 1,000 firms. Possibly that is high and possibly that is low. We happen to have one customer that we know is just about in the same boat as we are. They buy flexible shafting from us and make a product that is used for drilling airplane parts, or drilling wings on airplanes, and so forth, and they have had about a similar condition to ours.

To define such corporations, they must be subject to the following three conditions:

1. The company must have very small capitalization.
2. The ratio of this capitalization to sales must be extremely low.
3. Base-period earnings must be so small as to render no relief for the present financial problem.

We submit, as schedule A, a calculation of our estimated taxes for 1942 based on the proposed tax legislation as passed by the House of Representatives.

That is, we are guessing at $2,000,000 sales. Twenty percent of it would be $400,000. We pay a total tax of $347,000, leaving us $52,924 to do business on.

Based on reasonably accurate available statistics, we find the following examples show our comparable position in relation to excess-profits taxes under the proposed law as compared to other businesses as illustrated in chart A. As illustrated in chart D—frankly, I stole that from Mr. Davidson; I tried to get his permission, but I could not get hold of him, so he can put me in jail if he sees fit—you will find we are able to retain 13 percent as against 18 percent for the aircraft industry, which is supposed to be the hardest hit, and so on down. I included that in the brief here.

1. Industries that might be classed as exclusively "war industries" range from 26 percent of total profits subject to excess-profits tax in the motor-vehicle industry, up to 82 percent subject to such tax in the aircraft-manufacturing group. This means that the motor-vehicle industry can retain 43.3 percent of its entire taxable income, while the aircraft-manufacturing group, which, however, is almost completely Government financed, may retain 18.1 percent of its entire taxable income.

2. Industries that might be readily classed as essential normal industries show percentages of total incomes subject to excess-profits taxes ranging from 12 percent in public utilities, up to 63 percent in pulp and paper. Which means that the public-utilities group may retain 50 percent of its entire taxable income, while the pulp and paper industry may retain 27 percent of its entire taxable income.

3. A fair weighted average of the first group, namely, the "war industries," would indicate that they may retain 32½ percent of their net taxable income, while the second group on a weighted-average basis would be permitted to retain approximately 35 percent of income.

4. Our business under the proposed tax legislation shows a percentage of earnings subject to excess-profits taxes of approximately 93 percent of the total taxable income, which means that we will be permitted to retain 13 percent of our entire income. That is compared with the 18.1 percent for the aircraft or 50 percent for utilities.

We have a plan which incorporates a theory of relief that is based on the following tax philosophy:

1. We believe it to be the thought of tax-devising agencies that no individual or corporation is entitled to become permanently enhanced in worth as the result of war income. We subscribe to this theory.

2. Industries such as ours represent a new tax-producing factor. Unless such factors are encouraged to continue in business as a continued source for taxable income, future taxing statutes will lose the benefit of such income.

3. Both the Treasury proposals and the Ways and Means Committee proposals for new tax legislation apparently have no intent of imposing on industry the prohibitive rates to which our corporation will be subjected.

We believe that the two alternate methods for excess-profits tax credit contained in the existing statute are sound for many corporations. Certainly, the investment method is sound where a normal

relation of capital to income exists, and likewise the earnings method is sound where going concerns have enjoyed reasonable normal and continued profits. We feel, however, that the two existing methods should be supplemented with a third method and the taxpayer be given the option of using that which would result in the least tax in his specific case. Therefore, we propose: That a blank exemption from excess-profits tax be established and that said blanket exemption be increased in a fixed sum for established increases in volume of sales over the sales during the basic period from 1936 to 1939, inclusive, and that such exemption be allowed as a third optional excess-profits tax credit.

We submit schedule B as a basis for such a blanket credit.

Based on estimated earnings for 1942, such a blanket credit would permit our corporation to retain 80 percent of its total net income as compared with 32½ percent to be retained by war industries under the present statute, and 35 percent for essential normal industries under the present statute.

This proposal will only affect corporations in similar circumstances to ours. And we present schedule C to substantiate this.

If we assume that a corporation has an invested capital of $5,000,000—understand I am interested in small corporations—and an average earning during the base period of $300,000, then the credit under the invested-capital method now in effect, 8 percent of $5,000,000, plus $10,000, would give them $410,000 exemption. By the average-earnings method they get $310,000, and by our suggested method they would only get $180,000. I do not think I have gone sufficiently into our schedule here. You notice we started out at 50 percent and allowed $10,000 additional exemption. Then, if they have increased their business 100 percent we allow them an additional $10,000, which gives them a total of $30,000 exemption. For 300 percent we allow an additional $18,000 exemption. In other words, we have got specific amounts of exemption, so it does not help the big fellow. In other words, if it were in percentages rather than fixed amounts, then you would find some of the big corporations would be able to benefit by it because their earnings would go up on a percentage basis instead of on a fixed-amount basis. In other words, in order for a large corporation, or for any corporation, to benefit from the proposed plan, the sales would have to increase 3,600 percent; that is, for this $5,000,000 corporation.

Since the above case is predicated on but 6 percent earnings on invested capital during the base period, said base period earnings would have to be 2.8 percent of capital or less before any benefit would accrue.

Should we increase the hypothetical earnings as to percentage of invested capital, then the earnings method credit would be greater and no advantage would result from the proposed plan.

In order for such a corporation to benefit from the proposed plan as against the invested capital method the invested capital would have to be $1,750,000 or less if sales increased 1,000 percent over the base period. A lower percentage of increase in sales over the base period would continue to make the invested capital method most beneficial.

After giving effect to our proposed schedules and using the same corporate figures used in schedule A, we submit schedule D, also chart

C, which shows our relative position under the proposed House bill and our plan. Have you any questions?

The CHAIRMAN. Are there any questions, Senator Connally?

Senator CONNALLY. No.

The CHAIRMAN. Do you desire to file your brief?

Mr. HOTCHKISS. Yes, sir.

The CHAIRMAN. You have followed it fairly closely, but you may file it.

Is there any additional statement that either of the gentlemen who are with you care to make?

Mr. HOTCHKISS. Mr. Dawson.

Mr. DAWSON. I haven't anything particularly of importance, except to explain the 20 percent. Mr. Hotchkiss mentioned 20 percent net before taxes and 13 percent after, which would mean 2.6 percent on sales is all the corporation would be able to retain. It is not enough to take care of the expansion. They paid no dividends over a period of years either.

Senator CONNALLY. That is before the tax was put on?

Mr. DAWSON. That is very true, but now they have to pay for the commitments that they made during the subsequent years. After all, they had to spend a lot of money to increase the capacity 1,400 percent.

Mr. HOTCHKISS. Incidentally, we have no anticipation of paying dividends at the present time.

Senator CONNALLY. You are accumulating in plant, though?

Mr. HOTCHKISS. I do not deny that our plant is in better shape. It needed quite a few repairs, and it has been able to get them. Nevertheless, we are doing exactly what they want us to do.

Senator CONNALLY. That is fine. I congratulate you.

Mr. HOTCHKISS. The more we expand the more we try to help on the war effort the further we are sticking our neck out, because our profits will all be represented in inventory and accounts receivable.

The CHAIRMAN. What is your loan with the R. F. C.?

Mr. HOTCHKISS. $300,000.

Senator CONNALLY. Thank you.

Mr. HOTCHKISS. Thank you, sir.

(The schedules and charts submitted by Mr. Hotchkiss are as follows:)

SCHEDULE A

Proposed House legislation

Estimated net income		$400,000
Investment method:[1]		
8 percent of $134,000	$10,720	
Average loans, $100,000	8,000	
Specific exemption	10,000	
Total exemption		28,720
Balance subject to excess-profits tax		371,280
Excess-profits tax, 90 percent of $371,280		334,152
Normal tax, 45 percent of $28,720		12,924
Total taxes		347,076
Net profit after taxes		52,924

[1] Earnings method results in lower credit.

SCHEDULE B

Proposed blanket exemption method

Increase in sales over base period 1936-39 (percent)	Additional exemption	Exemption	Increase in sales over base period 1936-39 (percent)	Additional exemption	Exemption
0	0	$10,000	600	$10,000	$100,000
50	$10,000	20,000	700	10,000	110,000
100	10,000	30,000	800	10,000	120,000
200	18,000	48,000	900	10,000	130,000
300	16,000	64,000	1,000	10,000	140,000
400	14,000	78,000	Above 1,000		[1] 10,000
500	12,000	90,000			

[1] Per 100 percent.

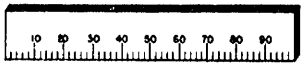
SCHEDULE C

Let us assume that a corporation has an invested capital of $5,000,000 and an average earning during the base period of $300,000—

Then:

Credit under invested capital method (now in effect) 8 percent of $5,000,000 plus $10,000	$410,000
Credit under earnings method (now in effect)	310,000
Credit under additional proposed method (assuming even that sales have increased 1,400 percent)	180,000

Such a corporation would exercise the option of using the invested capital method.



COMMENTS

1. In order for such a corporation to benefit from the proposed plan, sales would have to increase at least 3,600 percent over the base period sales.
2. Since the above case is predicated on but 6 percent earnings on invested capital during the base period, said base period earnings would have to be 2.8 percent of capital or less before any benefit would accrue.
3. Should we increase the hypothetical earnings as to percentage of invested capital, then the earnings method credit would be greater and no advantage would result from the proposed plan.
4. In order for such a corporation to benefit from the proposed plan as against the invested capital method the invested capital would have to be $1,750,000 or less if sales increased 1,000 percent over the base period. A lower percentage of increase in sales over the base period would continue to make the invested capital method most beneficial.

SCHEDULE D

Sales, base-period average		$144,000
Estimted sales 1942		2,000,000
Increase (percent)		1,400
Exemption proposed plan		180,000
Estimated net income	$400,000	400,000
Excess-profits tax credit	180,000	
Income subject to excess-profits tax	220,000	
Excess-profits tax	198,000	
Income subject to normal tax, $180,000.		
Normal tax, 45 percent	81,000	
Total normal and excess-profits taxes		279,000
Total net profit after taxes		121,000

CHART "D"

(The following supplementary brief and chart was submitted by Mr. Hotchkiss:)

SUPPLEMENTARY BRIEF OF C. F. HOTCHKISS, JR., PRESIDENT OF STOW MANUFACTURING CO., BINGHAMTON, N. Y.

In our original brief we established the necessity for a plan to relieve corporations such as ours from the disastrous effects of the excess-profits tax as passed by the House of Representatives. We offered a plan. We think the plan a good one and we believe it will work. However, our plan is restricted to relatively small corporations with recent abnormal growth.

Therefore, we present an alternative plan which we feel could be used as a simple over-all formula to protect all corporations from excessive and ruinous taxation.

ALTERNATIVE PLAN

Combined normal tax, surtax, and excess-profits tax on any corporation should be subject to a ceiling of not more than 70 percent of its taxable income.

The essence of our formula is simplicity.

We do not advocate a lower rate of excess-profits tax.

We do not advocate a lower normal or surtax rate.

We do advocate a limit to the amount of total taxes.

The small loss of revenue caused by the ceiling could be easily recovered by a very slight increase in the rates of either normal or excess-profits tax.

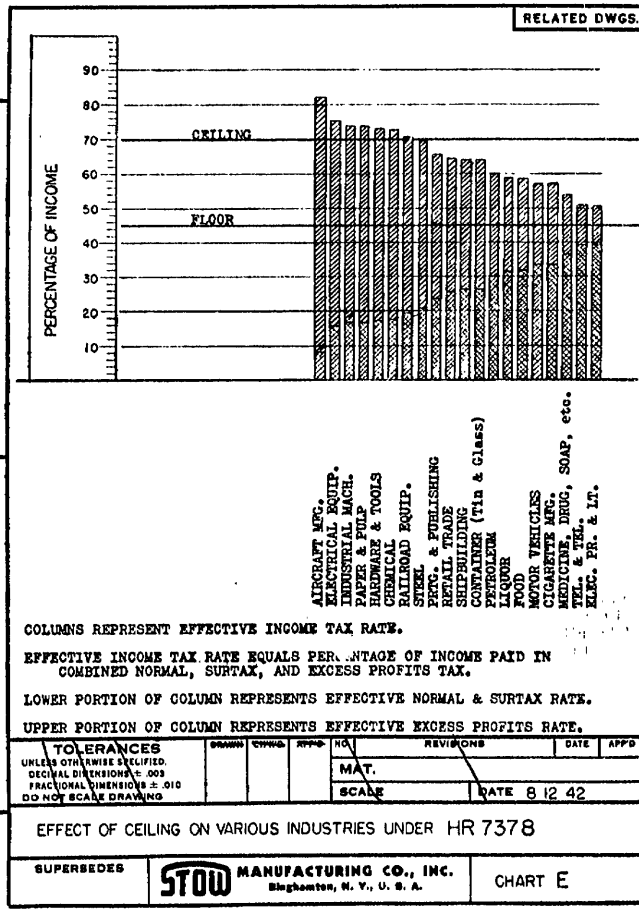
The ceiling idea is elastic. The ceiling may be raised or lowered as experience dictates.

The principle of a ceiling in taxation reduces the necessity of liquidating inventories and equipment, or borrowing to pay taxes. Practically all profits are represented by inventories rather than cash.

With a ceiling, the Congress need not be concerned about how high it made the tax rates.

Our plan makes the possibility of taxing corporations into bankruptcy remote.

The all-important job is to win the war. Taxation should not be a damper on war production.



Post-war relief is not the answer. Small corporations need help now to carry on war production to the fullest extent. Therefore, any plan of post-war relief would be too late to be of any help in winning the war. Post-war relief locks the barn after the horse has been stolen.

Patriotic concerns are more concerned with their ability to stay in business and continue the war effort than they are with pecuniary gain.

The attached chart illustrates our plan.

Respectfully submitted,

C. F. HOTCHKISS, Jr., *President.*

The CHAIRMAN. Mr. Robineau.

STATEMENT OF M. H. ROBINEAU, PRESIDENT, FRONTIER REFINING CO., CHEYENNE, WYO.

Mr. ROBINEAU. Mr. Chairman and gentlemen of the committee, I am the president and general manager of the Frontier Refining Co., a small corporation organized under the laws of Wyoming. We are in the business of operating a refinery; we make petroleum products at Cheyenne, Wyo., and operate a few service stations. We come in the class of a small corporation.

Senator GUFFEY. Do you produce your own oil, or buy oil?

Mr. ROBINEAU. We buy oil from the field.

I am also appearing here to speak for two other small oil companies, the Minnelusa Oil Corporation, of Denver, Colo., and the Perry Petroleum Co., of Denver.

I would like the committee to feel, while I am not authorized to speak for others, I do make my plea for the many small corporations with contractual obligations who I am sure will be affected all over the country by the proposed bill from the House Ways and Means Committee.

I would like to use our company as an example of what we feel works an undue hardship.

Our company was formed in June 1940. At that time we acquired part of the properties of a predecessor corporation. Those particular properties had a good earning record during the base period, but because of our method of acquiring, we are not permitted to use the average earnings base and we have to go on the invested-capital base.

Our invested-capital base, because we took the properties over at their book value, is low, approximately $100,000. This has worked an undue hardship on us. I have been reading the general relief provisions in the proposed bill. It is possible that we may be able to get some relief, we may be able to qualify for relief under this abnormally low invested-capital base, but the way these relief provisions are worded, there is no yardstick to determine whether we can or cannot get relief, or what the relief will be, and we are placed, you might say, at the mercy of the Commissioner, or the Board of Tax Appeals, and we might be involved in serious and expensive litigation for many years, and during that period, our contractual obligations must be paid on the due date.

In other words, companies in our situation might conceivably go broke while appealing for relief.

Our company, during the fiscal year—we operate on a fiscal-year basis, which ends May 31—during the fiscal year which has just ended, we made $180,000 net profit, before Federal income and excess-profits taxes.

Based on the existing law, our normal and surtax total approximates $35,000, and our excess-profits tax totals $68,000, or a total of $103,000. If the present retroactive clause for a fiscal corporation goes into effect in the final bill, that $103,000 will be raised to $121,000.

Based on $103,000, that still leaves us from $180,000, $77,000, which permits us to make our debt payments and still have something left

for plant improvements and to maintain our working capital position.

I might state, at this point, when we formed this company in 1940, the properties we took over were not a complete modern operating unit. At the time we formed the company, we knew we would have to add improvements, specifically, the addition of a cracking plant, thermal cracking unit which would cost us approximately $200,000.

In order to make these improvements, we borrowed $175,000 on 5-year serial bonds which mature at the rate of $35,000 during this present fiscal year and $40,000 a year thereafter.

Under the existing law, for last year we came out all right. We do not have anything left for dividends. We will not be able to pay any dividends, but at least we can pay our debt, and we can make the necessary plant improvements, which, in an operation of our size, has run during the last 2 years at approximately $40,000 to $45,000 a year.

Those are plant improvements which we cannot charge off to maintenance under the internal-revenue regulations.

Under this proposed law, assuming we can make $180,000 again in this coming year, which I do not think, in this particular year we can, because, in our business, in our oil business, we have ceilings on our selling prices and the consumption has gone down because of the tire situation and other reasons, yet the costs of our operation have gone up because we have had several wage increases, and we are probably faced with some further wage increases—assuming we did make $180,000 in the next year, under the present proposed law, our taxes, the normal surtax and excess-profits tax, as we figure it, will run $145,300.

Deducting that from $180,000 leaves us $34,700, which is barely enough to pay our debt maturity of $35,000. Even counting on the depreciation reserve we can set up, we cannot have enough cash left over to take care of normal plant improvements or to maintain our working-capital position.

In our particular instance, there may or may not be a sufficient cash reserve to carry us through for some period of time, but no company, no matter how large, can stand a continual drain on its cash. Therefore, unless we can get relief, we are quite likely to go broke.

Either one of two things could happen: We could be forced into the hands of a creditors' committee, or we would be forced to sell out to a large oil company. I do not think that either one of these alternatives are desirable to anyone. They are certainly not desirable to companies such as ours.

I do not believe they are desirable to the community, because I believe each of you gentlemen can think in your own communities of two or three companies similar to ours that are of value to that community. They have the opportunity to be of more value than the branch offices of large companies, because they are more interested in the community life; they have usually larger pay rolls in that particular area.

I am sure everyone in the community will suffer, either directly or indirectly, if a corporation such as ours is forced out of business. I am sure the Government will lose taxes if that happens.

I cannot conceive that companies operating under creditors' committees can pay as much taxes as we can pay, if maintained as a going concern.

I do not believe, if we were forced to sell out, or if companies like us were forced to sell out to larger oil companies, with branch-office operations in those particular communities, they would pay as large taxes, or the total entity would pay as large taxes, because the large corporations are well capitalized by the public, are capitalized on an earnings basis and can only expect to make 4 or 5 percent on their invested capital, and they usually have losses, or they have a large enough base so that they can absorb mergers, the companies bought such as ours and not pay the high percentage of tax that we will pay and are willing to pay if we are permitted to exist.

The CHAIRMAN. What do you propose?

Mr. ROBINEAU. I propose that there be some sort of provision for relief of contractual debt, a debt which is a bona fide debt, which was in existence way before January 1, 1942, when this current law was being enacted.

I realize that the Government must have some protection. This means a reduction of some revenue, although I do not think they would be major reductions. These are all small corporations.

We are talking about small money. While it may add up to two or three million dollars, yet, in proportion to the whole bill, it is not a major thing.

The Government would want certain restrictions. I am not a tax expert. I only know how I am hurt by this particular law.

I suggest you may have one limitation that could be put in, that exemptions under the excess-profits law should not exceed, say, the total sum of $100,000 a year or $50,000.

Senator DANAHER. How about a percentage of the outstanding debt?

Mr. ROBINEAU. Say not over one-fourth of the outstanding debt, something like that, or, in the alternative, it shall not be more than the actual contractual payment which is due in that year. In other words, because we had relief, we could not anticipate.

Senator CONNALLY. You would only get relief in the event you retired the debt.

Mr. ROBINEAU. That is right, only relief on actual payment of the debt.

The CHAIRMAN. You would have to have a percentage of your real income, that is, the percentage of your earnings used in computing your net income just the same.

Mr. ROBINEAU. It seems to me there would have to be some percentage.

Senator GUFFEY. Mr. Robineau, how many barrels a day do you refine?

Mr. ROBINEAU. We refine 1,500 barrels a day.

Senator GUFFEY. 365 days a year?

Mr. ROBINEAU. No. Our actual stream time may be probably 300 days a year.

Senator JOHNSON. As you add to your capital investment, are not you able to make investments?

Mr. ROBINEAU. Not in proportion to the earnings we made. We happen to have an abnormally low capital base.

Senator JOHNSON. You said because you purchased the company at its book value, you have a low capital base. Did you pay more than $100,000 for the company?

Mr. ROBINEAU. I would probably have to explain it, how we acquired the company, to show why this is an abnormally low invested capital base.

I was formerly an officer and stockholder in the predecessor company, from whom we acquired the properties as the result of a lawsuit, and in settlement of the various difficulties, these properties were divided, so I received the properties.

So, my invested base, or our invested base, because we have other stockholders besides myself, goes back to the original investment in the predecessor company, you see, back in 1924 or 1925, which was $100,000.

I did not get the benefit of the earnings that these particular properties made during the base period because we are not considered a tax-free reorganization.

The CHAIRMAN. I understand that.

You only had a tax base of $100,000 plus, of course, the amount of your borrowed money for capitalization purposes.

Mr. ROBINEAU. Yes; we have that.

The CHAIRMAN. I think we understand your situation.

Mr. ROBINEAU. I would like to also make this plea, that in your relief provisions, either they be clarified in some way so that companies, such as ours can be sure we can get relief, or some definite yardstick, or some definite statement of how the relief we can get will be worked into the bill, so we would not be in the position of trying to get relief based on our investment capital basis, being abnormally low, and we would be in the courts for years to get this relief.

Senator GUFFEY. What does your oil cost delivered to the refinery?

Mr. ROBINEAU. It costs us $1.37 per barrel.

Senator GUFFEY. You must have a very economic refinery or have a very good sales organization. According to your own figures, you make 40 cents a barrel.

Mr. ROBINEAU. We operate in what is known as a high differential area. We have the low cost of crude as compared to the sales price we receive for our merchandise.

The CHAIRMAN. Thank you, very much.

Mr. Spence.

STATEMENT OF PAULSEN SPENCE, REPRESENTING SPENCE ENGINEERING CO., INC., WALDEN, N. Y.

Mr. SPENCE. Mr. Chairman and members of the committee, in following these proceedings this morning, I have little to add to what has been said; for instance, by Mr. Hotchkiss and the other two gentlemen ahead of me, but it seems to me that the Congress, in general, in the procedings this morning, have overlooked the essential point.

Now, as far as I am personally concerned, I am not asking for any relief, because I have my statement here and it shows that I am sitting pretty, but I have a plant which is, at present, producing about $500,000 worth of essential war materials a year.

That plant is capable of turning out a million and a half dollars worth of essential war material. Now, under the proposed tax law, as

it now stands, I haven't got enough money to finance that much business, and it would seem to me that the essential point that you gentlemen should consider is: Do you want to collect taxes or do you want to get out war production?

Senator CONNALLY. I do not think we can get out war production without any taxes, do you?

Mr. SPENCE. Well, you can do both. There is an economic term that is known as the law of diminishing returns.

Senator CONNALLY. I have heard of that.

Mr. SPENCE. Now, if you tax me less so I could keep some of that money to use to finance this increased business, you would actually collect more dollars. That is the thing that you want to remember.

Now, the next thing to consider is that when the war is won, we still want to keep collecting taxes, and certainly, you do not want to put these small corporations in a position where they cannot keep on doing business.

Now, the cost of the war will have to be paid, and the cost of the war can only be paid by prosperous business. Now, my contention and what I suggest to the committee is this: On a small corporation—and I call a small corporation one that has an invested capital of less than a million dollars—I do not think you should try to collect more than 20 or 30 percent total taxes; if you do that, you are going to get more employment, and you will collect more taxes, not only from the corporations but from the stockholders and their employees.

So that the Treasury is going to get more dollars in the end, and we are going to have more income left to improve our companies with.

Senator CONNALLY. What do you make?

Mr. SPENCE. Pressure-reducing valves. They have to be installed before the plant will run.

One reason I wish to apologize for not having a prepared brief, I have been too busy trying to get a couple of war plants started to get to a stenographer.

I would like to be questioned, Senator, about the points that I have raised.

You have been questioning these other people, now you may question me.

Senator CONNALLY. All right. What are you in such a terrible hurry to get these two war plants started for, if you cannot make any money out of them?

Mr. SPENCE. Because I am patriotic. I happened to have been born and raised in Louisiana. If I went by dollars and cents only, the only thing for me to do is sell my plants and invest my money in municipal bonds and go back to Louisiana and cat-fishing. The only reason I do not do that is because I am patriotic.

Senator CONNALLY. We congratulate you.

Mr. SPENCE. We can do more if you let us, but if you will look at my statement here, and see how I am going to pay my taxes and finance the inventory that I have to carry in order to do business, well, then the cigar is on me.

Senator CONNALLY. How much mortgage do you have?

Mr. SPENCE. I have a small note at the bank to cover two turret lathes. If I have to operate under the proposed law, I will not have enough cash left to pay for the two turret lathes, but I happen to have some of my own and I am paying for them myself.

Senator JOHNSON. I thought you said a moment ago you were sitting pretty.

Mr. SPENCE. I am. Look at the statements.

Senator CONNALLY. How much profit did you have last year?

Mr. SPENCE. I have forgotten exactly the sum. About $20,000, I think.

Senator CONNALLY. That is 10 percent.

Mr. SPENCE. Yes; we ran about 10 or 12 percent.

Senator GUFFEY. Do you get a good salary?

Mr. SPENCE. Yes; I get a good salary.

Senator CONNALLY. The salary comes out before taxes.

Mr. SPENCE. Well, you have to pay taxes, too, on salary.

Senator CONNALLY. I know that. I pay on mine, just the same as you do on yours. You say you made about 10 percent last year. You have an estimated net income for 1942 of $50,500.

Mr. SPENCE. That is right.

Senator CONNALLY. And about $32,000 of that is war profits.

Mr. SPENCE. Maybe it is.

Senator CONNALLY. Do you think you should pay something on that?

Mr. SPENCE. I am not trying to get out of paying on income. Don't get me wrong.

Senator CONNALLY. You were asking us to ask you some questions, and I am asking you.

Mr. SPENCE. I personally believe——

Senator CONNALLY. Don't get too close. I don't want any personal difficulties.

Mr. SPENCE. I personally believe, if you ask me, that every person should pay one-third of their increased income.

Taking the average income for the years 1936 to 1939, inclusive, I think everybody should pay, in 1942, one-third of their increase for the individual, but that is not a corporation.

Why? Because people do business on a corporation basis which is perfectly legal and well recognized, why should they be stuck? If my business was a partnership, my taxes would not be anything like as high as they are.

On the basis of net corporate income for the year 1942 of $50,500, one of our stockholders, a widow who owns 7½ percent of the stock and has outside income of $1,200, would, in reality, pay a tax of $2,505.68 on her proportionate share of $3,787.50 of the corporate income, on the assumption that all income earned by the corporation above taxes was to be distributed.

On the other hand, if the same income, the same amount of income were to be earned, either as wages, profits from an individual proprietorship, or a partnership, the total tax to be paid thereon would amount to but $773.25.

Therefore, this stockholder must pay additional taxes amounting to $1,732.43, simply because her income was derived from the earnings of a corporation.

This is not in pursuance of section 8 of the Constitution of the United States.

The CHAIRMAN. Is there anything else that you wish to say at this time?

Mr. SPENCE. Well, sir; I wish to reiterate what I did say, that the tax law should be designed to help us get out production, and it also should give us some credit for being smart and knowing how to turn over our capital fast.

The CHAIRMAN. You get that in profits, if you succeed in making them.

Mr. SPENCE. Well, sir, I do not see how you can get that in profits when this year my taxes, my corporation's taxes, on earnings of $50,000, will be $32,000. I do not see how you can call that making money.

Here are the figures.

Senator CONNALLY. Now you said you had $200,000 invested?

Mr. SPENCE. Yes.

Senator CONNALLY. You figure this year you will make $50,500.

The CHAIRMAN. You mean you will make $50,000 after taxes?

Mr. SPENCE. No, sir; we are figuring on $50,500 net profit before taxes.

Our taxes will be $32,000.

Senator CONNALLY. That is 25 percent, is it not, $50,000 on $200,000?

Mr. SPENCE. That is 25 percent, yes; but take the taxes out, then what do you have?

Senator CONNALLY. That is what I am talking about. That is why I am talking about the taxes.

If you make 25 percent net profit before taxes, some of it ought to go in taxes, ought it not?

Mr. SPENCE. Senator, don't get me wrong. I am not saying we should not pay taxes, but the taxes should be such that it leaves us enough to keep on doing business and encourages us to do more business.

Senator CONALLY. I think it will.

Mr. SPENCE. Not that tax, the way it stands now.

Senator CONNALLY. If your profit jumps from $20,000 last year to $50,500 this year it seems somebody helped you to do that.

Mr. SPENCE. Senator, let us put it the other way. Just supposing I had not had my plant in a position to get out that much business——

Senator CONNALLY. You would not have gotten it, of course.

Mr. SPENCE. Do you think Mr. du Pont, Mr. General Electric, and Mr. Albert Kahn, and all those fellows would have the reducing valves required to operate their war plants?

Senator CONNALLY. That is a technical matter.

Mr. SPENCE. It is very technical. That is the whole situation.

The CHAIRMAN. Your point is, the rate is too high?

Mr. SPENCE. Entirely too high for a small corporation, especially a corporation having a low capital and a big turn-over of their capital.

The CHAIRMAN. We appreciate your statement. Thank you, sir.

Mr. SPENCE. Thank you.

(Mr. Spence submitted the following memorandum:)

MEMORANDUM SUBMITTED BY PAULSEN SPENCE, REPRESENTING SPENCE ENGINEERING CO., INC., WALDEN, N. Y.

For instance, a manufacturer with whom I am personally acquainted who operates under the corporate form of organization, has an invested capital of approximately $350,000. This concern has been in business continuously for the past 100 years and manufactures an article essential for the manufacture of paper but not even remotely connected with war production.

The business has been extremely well managed and has been consistently profitable except during the depression years.

This concern, because of war restrictions, is unable to purchase raw material although it has on hand a sufficient supply to enable it to continue manufacturing the remainder of this year.

Due to war conditions, the business of its customers has fallen off to such an extent that it has received a great many cancelations of orders during the first 6 months of this year,, although it continued to manufacture, placing a good part of its finished products in stock so that it now has on hand a sufficient supply of finished goods to supply its customers during the remainder of this year.

A statement prepared as of June 30 showed a net profit for the 6 months of approximately $50,000 on which the tax calculated at present rates, will amount to approximately $25,700.

The problems with which this manufacturer is faced are the following:

1. It can close down its plant, throw all of its employees out of work, reduce its overhead to a minimum, and at the end of the year will have about the same amount of profit and taxes as at June 30.

2. It can continue operations at a fairly normal rate, placing the goods manufactured in stock, in which case the reduction in sales volume and underabsorption of overhead will by the end of the year in all likelihood not only eliminate the profit earned for the first 6 months of the year, but result in a considerable loss besides.

If the excess-profits tax were less burdensome to the small businessman, it is likely that this manufacturer would make a desperate effort to partially curtail his operations for the remaining 6 months of the year so as to enable him to make a reasonable profit. As the tax now stands however, he has about decided to discontinue operations and to absorb the profits earned during the first 6 months of the year through overhead expenditures with the result that the corporation will show no profit and therefore pay no taxes for the year 1942.

If such small manufacturers of essential commercial products who find it impossible because of the nature of their plant and equipment to convert to war production are to be not only deprived of their source of raw materials but also to be subjected to what amounts to confiscatory taxes, it will only take a few years to eliminate such producers from the field entirely with the resultant loss of their capital and the employment it would supply.

Returning to the Spence Engineering Co., Inc., situation:

In order to increase the volume of business from $313,000 for the year 1041 to approximately $464,000 for the year 1942, it will be necessary to expand the corporation's current position by increasing its working capital from current income by at least $15,000 which amount added to the liquidation of pressing current obligations of approximately $9,000, will result in the application of $24,000 of the income of the year 1942, leaving approximately $31,000 cash available for the payment of taxes aggregating $32,000 provided all accounts are collected and no unusual losses sustained, which would leave the corporation with no cash balance whatever at the end of the year.

Assuming that in accordance with the foregoing, all profits resulting from the increase in volume of business were converted into cash and used for the liquidation of taxes the corporation would then have current assets of $133,000, represented by accounts receivable of $48,800 and inventory of $84,200 against which it would have current liabilities represented by notes and accounts payable of $61,100 so that in order to liquidate its current liabilities, it would be obliged to collect 100 percent of its acounts receivable and in addition thereto, reduce its inventory some twenty-odd-thousand dollars, which would be impossible if the corporation is to continue in business.

SPENCE ENGINEERING CO., INC.

Pro forma calculation of income and excess-profits taxes for the year 1942, based on net income of $50,500

	Based on invested capital of—		
	$200,000 (1)	$341,700 (2)	$473,500 (3)
Excess-profits tax			
Normal tax net income	$50,500	$50,500.00	$50,500.00
Excess-profits net income	50,500	50,500.00	50,500.00
Less excess-profits credit, 8 percent	16,000	27,336.00	37,880.00
Balance	34,500	23,164.00	12,620.00
Less specific exemption	10,000	10,000.00	10,000.00
Adjusted excess-profits net income	24,500	13,164.00	2,620.00
Excess-profits tax, 90 percent	22,050	11,847.60	2,358.00
Normal tax			
Normal tax net income	50,500	50,500.00	50,500.00
Less adjusted excess-profits tax net income	24,500	13,164.00	2,620.00
Normal tax base	26,000	37,336.00	47,880.00
Normal tax	4,560	8,074.16	11,342.80
Surtax			
Normal and surtax base net income	26,000	37,336.00	47,880.00
Surtax	2,820	6,447.52	9,821.60
Total excess profits, normal, and surtax	29,430	26,309.28	23,522.40

(1) Based on invested capital represented by cost of assets acquired in reorganization by the issue of preferred stock.
(2) Based on sound value of assets—cost new less depreciation—as of the taxable year.
(3) Based on appraised value of assets—before depreciation as of the taxable year.

NOTE.—The New York State tax will approximate $3,000 additional for each year.

(The following letter and statement was submitted by Mr. Spence:)

SPENCE ENGINEERING CO., INC.,
WALDEN, N. Y., *August 4, 1942.*

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

MY DEAR SENATOR: When I appeared before your honorable committee, Senator Connally questioned me regarding our earnings for the year 1941.

I did not have that information at my fingertips and the $20,000 I mentioned was that which was left after depreciation and Federal taxes.

I beg permission to add this letter and the attached profit and loss statement for the year 1941 to the record.

You will note that out of a profit of $36,070.20 we paid $10,660.35 Federal taxes, or approximately 30 percent.

We have the necessary machinery, the room, the engineering organization, drawings, tools, etc., required to turn out $928,682.64 worth of goods per year. This, based on our present operating conditions, would give us a net profit of $111,874.48.

If our total Federal tax were 30 percent (the same as 1941), we would not only double our production but would pay $33,562.34 in taxes which is more than we will pay this year.

This would leave us $78,312.14 which would be sufficient to finance the $928,682.64 business that we have the plant capacity to do.

For the information of your committee, I wish to state that I have already given orders that, unless the 1942 tax law is drastically modified, we are not to accept more than $30,000 worth of business per month, because that is all that I feel we can safely finance under the present tax program. If the Federal Government wishes to takes over our plant, it is welcome to do so.

It would seem to me, that at the present time when the all-important objective should be—win this war—and when we all know that the war cannot be won without greater production, it would be a tragic blunder to force small corporations, who have no means of securing necessary working capital except through earnings, by enacting an unconstitutional, confiscatory tax law, to reduce their production.

The situation would not be so bad if the law had a provision in it that, in case a taxpayer could not liquidate his inventory, the Federal Government would accept this inventory in lieu of taxes at its market value. In other words, in case business fell off to the point that we could not sell our inventory in order to pay taxes, we could load a truck with reducing valves and deliver them to the collector of internal revenue at Newburgh, N. Y. and say, "Here is your tax money."

I believe that the House of Representatives made a mistake when it placed all corporations in the same category. Large corporations have means of securing funds which are not open to small corporations.

Furthermore, the tax bill, in its present form, tends to accelerate the present trend toward concentrated economic control. Many thoughtful persons realize that it is this trend that is destroying our Constitutional Republic. If the Congress really believes in private enterprise, it should endeavor to halt this trend.

I, therefore, suggest:

1. That the combined normal corporation tax and surtax not exceed 30 percent.
2. That no excess-profits tax be levied on legitimate business corporations having a net worth up to $1,000,000, provided that no part of the excess profit is paid in dividends and that it be used for plant and business expansion or kept in reserve in the form of defense bonds.
3. That a graduated excess-profits tax be exacted on corporations having a net worth over $1,000,000 and up to $15,000,000.
4. That all corporations with a net worth of more than $15,000,000 pay the same excess-profits rate as were levied during 1941.

I wish to thank your honorable committee for the courteous attention accorded me.

Respectfully submitted.

SPENCE ENGINEERING CO., INC.,
PAULSEN SPENCE, *President.*

SPENCE ENGINEERING CO., INC.

SUMMARY OF INCOME (BEFORE DEPRECIATION AND FEDERAL TAXES) FOR THE YEAR ENDING DEC. 31, 1941

Net sales		$310,441.39
Cost of sales		174,566.91
Cross profit from sales		135,874.48
Taxes (social security, unemployment, franchise)	[1] $1,869.58	
Selling, administrative, and financial expense	98,866.73	
		100,736.31
Net profit from operations		35,138.17
Other income		932.03
Net income for the period		36,070.20
Taxes paid:		
Federal income tax		10,160.35
Capital stock tax		500.00

[1] Greater part of social security tax included in cost of sales—(shop).

The CHAIRMAN. I believe that exhausts the list of witnesses who were to appear, so the committee will recess until tomorrow morning at 10 o'clock.

(Whereupon, at the hour of 12:30 p. m., the committee recessed to 10 a. m., Friday, July 31, 1942.)

REVENUE ACT OF 1942

FRIDAY, JULY 31, 1942

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will come to order, please.

Mr. Bright.

Is Mr. Joseph E. Bright, of Buffalo, in the room?

(No response.)

The CHAIRMAN. Mr. Sturtevant.

STATEMENT OF RICHARD D. STURTEVANT, ASSISTANT SECRETARY, JEWEL TEA CO., INC., BARRINGTON, ILL.

The CHAIRMAN. Mr. Sturtevant, will you give your name and business connections and associations to the reporter?

Mr. STURTEVANT. My name is Richard D. Sturtevant, of Barrington, Ill.

I am assistant secretary of the Jewel Tea Co., and am also trustee or one of the trustees of the profits sharing and retirement program maintained by that company for its employees.

The CHAIRMAN. You are addressing your remarks, I believe, to the pension trusts?

Mr. STURTEVANT. The provisions of section 144 of the Revenue Act of 1942 as they deal with pensions and other employee benefit plans.

The CHAIRMAN. Yes, sir. All right, you may proceed with your statement.

Mr. STURTEVANT. In the interest of saving time, I will forego my inclination to spend some time with the details of the plan which we operate, but I wish to refer to the statement which I made before the House Ways and Means Committee in which those plans are described (see p. 2462, Hearings on Revenue Revision of 1942), and from time to time, as I cover certain points, will refer to our program and plans as illustrative of the points which I wish to make.

The CHAIRMAN. Yes, sir.

Mr. STURTEVANT. Then, if there are any questions about the details of the plan, of course, I will be glad to go into that, if there is time.

I plan to cover two things: First, to show why I believe that the provisions of section 144 as adopted by the House of Representatives, if enacted into law, will destroy incentive profit sharing, and second,

to tell you why I believe that it would be extremely detrimental to destroy those plans.

Senator VANDENBERG. You do not have to argue with me on either point.

Mr. STURTEVANT. That is encouraging, Senator Vandenberg. As a preliminary to the discussion of the first point, I think it might be well to point out that there are substantial and real differences between pension plans and profit-sharing plans, differences in objectives, differences in mechanics, differences which make it extremely difficult, if not impossible, to treat them in the same manner as has been attempted in this bill.

I think the result of the effort to treat them without distinction has been that here may be a fairly reasonable treatment, I believe, of pension plans, although there are undoubtedly objections from that standpoint, too, but from the standpoint of profit-sharing plans, the result is complete destruction of incentive profit sharing.

In speaking of profit sharing, I also ought to make it clear that I am speaking not of cash bonuses, which are, of course, not covered in this section, but speaking of plans which involve the use of retirement trusts, the placing of the money into a trust fund, as, of course, bonuses are not covered.

I think it might be well to also state that there are two types of profit-sharing plans of the deferred distribution type, one of which is broad in its coverage, and is primarily designed to provide a retirement fund for the greater percentage of the employees of an organization, somewhat comparable to the objectives of a pension plan but approaching it from the standpoint of making profits available for the building up of the fund; the second type is the one which I am more deeply concerned about and that I might designate as incentive profit sharing, the kind of profit sharing which depends for its effectiveness, upon the ability of the plan to incite the individual participants to greater effort and to greater efficiency, and to reward them for the accomplishment of the results which are over and above the normal standard of the work which is performed by those employees.

Senator BROWN. May I interrupt you there, sir?

Mr. STURTEVANT. Yes.

Senator BROWN. I think everybody agrees that the pension plan is a good thing.

Mr. STURTEVANT. I think so, too.

Senator BROWN. The Treasury's objection, I understand, and the thing that I would like to have you direct yourself to before you are through, is whether or not the pension plans may be used as a means of tax avoidance by people in the higher brackets.

Mr. STURTEVANT. I intend to deal with that.

Senator BROWN. That is the thing that concerns the Treasury and concerns the committee.

Mr. STURTEVANT. That, I am sure, is the major consideration, but I would like to give some of the background first, with your permission.

Turning then to the application of the provisions of this bill, or this measure, to profit-sharing plans, it is my belief that there are three major respects in which the bill makes it impossible for incentive profit sharing to continue.

The first is the requirement that 70 percent of the employees be covered. That is perfectly proper, I would say for the broad coverage type, but it is not designed to take care of the kind of profit sharing which I think is most effective in increasing the productiveness of this country.

It seems to me obvious that you cannot stimulate efficiency and increase productivity without granting individual rewards for the accomplishment of that objective, and you cannot do that on a broad basis for everybody. You can do it to some measure, of course, but what I am talking about now is the kind of profit sharing which fits the reward to the accomplishment, and the 70 percent just does not fit.

Senator VANDENBERG. I think you had better state precisely how your plan fits the reward to the accomplishment.

Mr. STURTEVANT. We have, Senator, two types of plans. We use both the broad coverage and incentive type in our organization. We have one trust which is adopted for all members of the organization, or for the benefit of all members of the organization, having 1 year or more of service, who voluntarily decide to join the plan.

That is what I call a broad coverage profit-sharing plan.

The CHAIRMAN. You have 70 percent of your people under that plan?

Mr. STURTEVANT. We have 70 percent of our people under that plan. The 70 percent coverage, I think, is proper for them.

But, we also have an incentive profit-sharing plan for those members of our organization, who are best able to influence the result of the organization, and that plan depends for its very success upon the ability to grant specific rewards for accomplishment.

Now, frankly, the 70 percent coverage provision probably will not hurt us individually because of the provision that the two trusts may be considered together for the purpose of coverage.

I do think, however, that as a matter of principle, it is not desirable to compel every company that wants to engage in profit sharing to go to the broad coverage type, because it does not always fit. There is much to be gained from the other kind of profit sharing.

Senator TAFT. What is the other kind?

Mr. STURTEVANT. The second kind of profit sharing, as I see it, is the kind of profit sharing which is applied to those people who are in the executive group, the mechanical genius who increases the effectiveness of the plant, the engineer, the chemist, those people who are in the key positions, and who are most able to influence profits. I believe it is extremely important to make it possible to continue to give an incentive to that group of people, whether or not it is possible also to do the other thing, which I say is very good, and which we believe in and do.

The CHAIRMAN. Well, I do not think anybody would disagree with you—anyone on this committee—that it is important to give encouragement to that particular group, but you do that in increased salaries, don't you?

Mr. STURTEVANT. Well, salaries are a means of reward.

The CHAIRMAN. I know. I want to make this suggestion right now: It seems to me the further you get away from a profit sharing or pension trust, which is truly a pension trust eligible to the masses of people in the industry, everybody in the industry, the more troubles you run

into, and the more some things, like some of the things in this bill that you do not like, would be creeping in.

Mr. STURTEVANT. Our experience is the most effective kind of profit sharing is the kind which stimulates individual activity over and above the normal activity of the people.

The CHAIRMAN. I agree with that.

You have got to consider that you are getting into certain types of benefits there. The further you travel away from the true concept of a pension trust the more difficulties you are bound to run into.

Mr. STURTEVANT. That is true, I believe, as applied to the pension objective. I do not think that is true as applied to the profit-sharing objective which, I might say, has been proven in our business, and I am sure it has been proven in hundreds of other businesses, that profit sharing is not merely a method of distributing profits which already exist but profit sharing is a method by which additional profits are created through the incentive which it creates, and thereby everyone gains.

Our experience along that line is rather striking, I believe, and I would like to refer, if I may, to the particular experience of our company on that point.

In 1924, our company first adopted a profit-sharing plan.

We have had experience continuously since that time. The first profit-sharing plan which we adopted was of the limited-coverage type. I think that is rather a standard. Most companies that even today have a broad-coverage type have evolved to that as we have.

The CHAIRMAN. I think you ought to evolve in that direction. I think you want to get away from the creation of special beneficial classes in the pension-trust system. I mean, I am using it in a broad general sense. I think, if you are properly advised, you should try to go in that general direction.

Mr. STURTEVANT. I think we have, Senator, but I believe there are so many values to the other kind that they ought not to be killed.

The CHAIRMAN. I know there are values to it, there is no question about that. You do not need to argue that point.

Mr. STURTEVANT. I would like to point out the results, taking and comparing the period from 1913, which was the date of incorporation of our company, through 1923, which I will designate as the pre-profit-sharing period against a period of 14 years following that period, during which we had an exclusively executive profit-sharing plan. The plan was set up first on the basis of rewards, after the company had earned a return which was considered a fair return to stockholders.

A base of $690,000 was set up, above which profits were to be shared. This base, by the way, was higher than had been the earned income for any one of the previous 5 years and compares to an average earnings for the period of 8 years of $74,000-odd.

The basis of the plan was individual reward for individual accomplishment during the profit-sharing period.

Senator CONNALLY. Was that for all of your employees, or just a few?

Mr. STURTEVANT. That was for a small group of employees, of people who, in the judgment——

Senator CONNALLY. The people who fixed the plan, who created the plan?

Mr. STURTEVANT. I must make it clear now, because you brought that up. That the plan was adopted by the board of directors, the majority of which do not participate in the plan.

It has been proven to the satisfaction of the board, which is responsible only to the stockholders, that the plan has been a good business proposition from the standpoint of the company, the stockholders and the Government, from the taxation standpoint of the Government of course. That is what I would like to point out.

The CHAIRMAN. Just tell us what you did, how you set it up.

Mr. STURTEVANT. We set it up, as I say, for the group which is, in the judgment of the board, the group which is most able to influence and increase productivity and profit.

Now, as a result of that, profits during the pre-profit-sharing period were $74,000 on the average. They increased in the following 14 years to an average of $1,320,000. In other words, the ratio of earnings to sales was about one-half of 1 percent in the first period as against 8¼ percent in the second.

Putting it in another way, out of each sales dollar during the pre-profit-sharing period this company was able to retain one-half cent as profit; during the second period of 14 years, under this particular plan, the company was able to retain 8¼ cents.

Now at the same time the Government was receiving an average of $74,000 in taxes during the pre-profit-sharing period as against $414,926 in the second period, and of course that only carries through 1938, and the taxes have greatly increased since that time under our more broad coverage plan.

It seems to me that that is particularly illustrative of the effectiveness of a plan of this kind and particularly so because we know that practically the entire difference between that very small profit in the early period as against the larger profit in the second period was due so much to the elimination of operating cost, something which was definitely within the control of the people who participated. It was not due to other factors. As I say, as the result of that, our board of directors, which cannot be charged with personal gain motives, is thoroughly satisfied that this plan has worked out to the benefit of stockholders—and I might say that nowadays, the Government is the biggest stockholder in every corporation that we have.

Profits which are earned are for the benefit of the Government as well as for the benefit of the stockholders, and plans which have proven their ability to accomplish that result, ought not to be killed.

Now, it seems to me that the report of the subcommittee of this Senate Finance Committee, as made a few years ago, is replete with illustrations of that kind, of profit-sharing plans which have produced profits way, far and above the cost. The result is that on the over-all effect, there is not any question at all in my mind, and I do not believe there would be a question in the minds of those who have thoroughly studied the report of the subcommittee that profit sharing on the whole has produced revenue for the Government, and has not resulted in any decrease in revenue.

Senator CONNALLY. Does the plan you now have include all the employees?

Mr. STURTEVANT. We have a broad plan which covers all employees with 1 or more years of service.

Now, a second feature of this bill, which is more destructive than the 70-percent-coverage provision, is the one which provides that the distributions of benefits which are provided under the trusts, or under all of the trusts, must not have the effect of discriminating in favor of any employee who receives compensation greater than any other employees.

Now, I do not know, frankly, just what is meant by "discrimination." I think there are tremendous problems involved in the interpretation of that section. It seems to me that it must mean one of two things: Either anything which produces a greater benefit is a discrimination, or we are going to have the situation where the courts are going to have to determine the merit of each individual participant, as to whether or not they have been treated fairly and reasonably within the plan. Either alternative, it seems to me, is impossible. The very heart of profit sharing is the right, or the ability to stimulate incentive and to reward it. You cannot reward it on a mass basis. Merely because the superintendent in the plant may develop a process by which the company saves substantial amounts of money does not mean that you should have to reward on the same basis every other employee of the whole organization.

Now that is all right if we are talking about general profit-sharing plans, if it is clear that there is an opportunity to grant rewards which have some ratio to accomplish, but that is not clear in this bill. I do not believe that we would be permitted under this bill, or our board of directors would not be permitted to continue even our broad profit-sharing plan under that section. There is not any question but that it would destroy incentive, that is profit sharing as such.

It is just an antithesis of the whole scheme of profit sharing.

Senator DANAHER. You would run into the prospect of officers voting themselves enormous salaries.

Mr. STURTEVANT. There are already adequate provisions against that sort of thing. The corporation is entitled to deduct from its expenses only the amounts which are adequate or reasonable compensation for services. Now, any amount put in a fund which, added to the amounts which have been received and are unreasonable, is clearly not deductible. In these days with excess-profits taxes and high corporate taxes, no corporation can possibly justify deducting any amount that cannot be sustained as reasonable compensation.

Senator DANAHER. How is the term "reasonable" to be defined and the term "discriminatory" against which you complain?

Mr. STURTEVANT. That is a test that has been applied to every kind of tax. It is the kind of thing which the courts have, over the years, created standards for. It seems to me it is adequate protection, but if it is not, if there is any question about that provision, it seems to me that it would be helpful to write into section 165, as applied to profit sharing, that express admonition, that the amounts put in trust when added to compensation otherwise secured or paid to those individuals cannot exceed the reasonable value of the services rendered.

Senator CONNALLY. Who is going to say what is reasonable? The Commissioner of Internal Revenue. When they do that you would kick like a bay steer, saying the Government interferes with profit business, going to socialism.

Mr. STURTEVANT. I would not object at all to that provision.

Senator CONNALLY. You would not, but all the rest of those in your fix will.

Mr. STURTEVANT. I do not believe so, Senator, because we know we have to sustain every business expense that we make as being a reasonable expense.

Senator CONNALLY. Just turn it over to the Commissioner of Internal Revenue to say what is reasonable or what is not reasonable; he might say too much or too little.

Mr. STURTEVANT. I believe the express writing into the bill of that provision would be a sufficient deterrent upon those who have abused that situation, in the way the Senators have suggested.

Senator CONNALLY. Of course, your original plan was nothing but a little bonus plan; it was not profit sharing at all.

Mr. STURTEVANT. It was based upon profits.

We have to earn a profit above a certain figure before we share, and then we share in a definite ascertainable percentage. That is profit sharing.

Senator CONNALLY. That is the original plan?

Mr. STURTEVANT. That is the original plan.

Senator CONNALLY. You have come out of it in recent years?

Mr. STURTEVANT. All of our plans have been based upon sharing a profit which is a definite percentage above a return which is a good, fair return.

Senator TAFT. How does the trust work? I understand, of course, the bonus, profit-sharing plan.

A man gets, we will say, $200. Where does the trust come in? Does the $200 go into a trust?

Where does he get it when he retires? Is it a pension plan?

Mr. STURTEVANT. It is a combination of profit-sharing and retirement benefits. It is not a real pension plan, inasmuch as a pension plan necessarily involves fixed obligations irrespective of profits.

It requires a certain actuarial computation in order to determine how much money would be produced for so many people on the basis of mortality tables, turn-over figures and so on, after a certain age, and consider how long people are expected to live, and so forth.

Now, in a profit-sharing plan, retirement funds are provided, but they are provided only if the corporation is able to earn profits.

Senator TAFT. But they are not paid to the man until he is 65 years of age, say.

Mr. STURTEVANT. That is the usual basis. In our particular fund, we have a graduated scale for payment. We feel 65 is pretty old to wait for everybody to get a retirement benefit, so we started out and say if a man stops working at any time, at the option of the company, after he is 50, he is retired with full benefits under the trust. If he quits of his own volition, then he gets full benefit at the age of 57.

There is a more-or-less mandatory retirement—automatic retirement at 65.

Senator DANAHER. One more question.

Mr. STURTEVANT. Yes.

Senator DANAHER. I do not see how you can ask that the words "found by the Commissioner not to be discriminatory" can have applied to them any other test than the test of reasonableness.

Mr. STURTEVANT. I have addressed myself to the following subdivision, primarily, rather than the one "found by the Commissioner."

That is an alternative to the 70-percent-coverage requirement, but the Commissioner is almost—in fact, I should say not almost but is absolutely required, in applying that test, to permit plans to qualify only if they are not for the benefit of shareholders, which is all right, and if it were for officers alone, that is all right, but it also mandatorily says that the Commissioner must exclude persons whose principal duties consist in supervising the work of their employees, and also must exclude people who are highly compensated.

Now, I submit that those who are highly compensated, those who are supervisory employees, are almost universally those who are most able to influence and produce profits, and that is established by many authorities. Textbook writers on the subject have said profit sharing is most effective when applied to that kind of group.

So, it excludes all but the very bottom group. I am not arguing against the bottom group, because I believe primarily that plans for them are to be encouraged, but I do not believe that because we want to encourage something which we all think is good, we ought to kill something else which is also good.

Senator TAFT. I suppose the term "discriminatory" would mean a man who makes twice as much should not get more than twice as big a percentage of profits?

Mr. STURTEVANT. That is one possible interpretation, Senator. I do not know whether that is sure enough so that we would be willing, for example, to agree if the company would be willing to deposit, as we did last year, over $200,000 in this trust for these broad employee groups, on the hope that that would be the interpretation adopted.

We cannot afford to make any payment which we are not going to be able to deduct, with rates what they are today. We have to earn tremendously increased amounts to pay any nondeductible expense.

I am afraid a board of directors which would make any payment of any kind which is not deductible in these days would be personally liable for a wastage of corporation funds.

Senator TAFT. You haven't anything against the 70-percent plan, have you? There is nothing discriminatory in it.

Mr. STURTEVANT. The benefits are measured in part, by salaries.

Senator TAFT. What other plan is there?

Mr. STURTEVANT. The amount which is deposited by the company is divided into two parts; one-half is distributed among the employees on the basis of the ratio of the individual's deposit in the fund to the deposit of the other employees.

It is a contributory fund. The employees may deposit from $1 to $4 a week. Actually, it is a combined contributory and profit-sharing program. We encourage and reward thrift with part of it, and then we divide the other part on the basis of salary.

That is all right. I think that is the only feasible, fair, and reasonable way to divide a general profit-sharing plan for all employees but I do not think that accomplishes the main objective of incentive profit sharing, which is to promote individual accomplishment.

We know that people respond to individual rewards. You are going to destroy that incentive because if the man down in the plant

who produces a valuable process is not going to get any more than someone else, it will destroy his incentive.

Senator GERRY. Would not you also get a reduction if it was a proper bonus?

Mr. STURTEVANT. If we paid cash bonuses?

Senator GERRY. If you gave a certain bonus on production?

Mr. STURTEVANT. Yes. I think, as a matter of fact, what will happen that plans which now provide for the payment of these moneys into trusts will probably be changed into the cash bonus system.

Senator GERRY. Suppose you paid the bonuses on the production, do not you get a reduction on them?

Mr. STURTEVANT. That might apply to a company which is engaged primarily in production. Now, our business is selling. We do pay our salesmen on a commission basis to stimulate that very thing; we also have other employees who are not on a commission basis. You cannot measure production definitely.

Now, it is impossible, it seems to me, to apply a production bonus to accomplishment of other types of workers, the office force, and so forth.

Senator GERRY. Why cannot you?

Mr. STURTEVANT. I do not know how to value my services on a production basis, and I am sure the board of directors does not. They know, in a general way.

Senator GERRY. How do you evaluate the services in the first proposition?

Mr. STURTEVANT. You have got to leave it to the discretion, as we do, of an impartial, nonparticipating committee of the board.

Senator GERRY. Why don't you do that in your bonus?

Mr. STURTEVANT. You have got to keep that group small enough so they can recognize and reward individual accomplishment.

Senator GERRY. You could reward individual accomplishment by a cash bonus, could you not?

Mr. STURTEVANT. You could. One of the other points I had in mind stressing, and I think that is exactly what the result of this would be, is that it is highly inflationary.

We know that the Government is greatly concerned about increasing purchasing power, and here we have a force which drains off purchasing power and holds it back, something we are striving for accomplishment, something which has the dual effect of instilling initiative and incentive and at the same time, draining off purchasing power.

Senator GUFFEY. How many officers are subject to the plan?

Mr. STURTEVANT. The senior plan, as we call it, the incentive plan covers approximately 80 persons in the organization.

Senator GERRY. How many stockholders have you?

Mr. STURTEVANT. About 6,000. We cover 44 States.

Another thing, as far as evaluating individual service is concerned, it is a little difficult to know exactly what everybody is doing all over the United States at every instant. We have a problem which you just cannot meet or reach with standard formulas.

Senator GUFFEY. There are other companies with the same plan?

Mr. STURTEVANT. There are millions of dollars in similar trusts. Definitely it is not our plan alone.

Senator TAFT. What do you invest your money in?

Mr. STURTEVANT. A very major portion goes into Government bonds.

Senator VANDENBERG. On the question of discrimination, Mr. Sturtevant, the report of the House Ways and Means Committee contains this sentence:

> Determination of benefits according to a fixed percentage of wages could not be considered discriminatory even though it results in larger benefits to highly paid employees.

Now that is the interpretation the House puts upon this language, yet it seems to me that it completely collides, precisely as you indicate, with the language of the bill which says benefits which do not have the effect of discriminating in favor of any employee whose compensation is greater than that of other employees.

In other words, the laws says everything must be equal, and the interpretation made by the House says that it does not have to be equal.

Mr. STURTEVANT. That is exactly the interpretation which might lead our board of directors to discontinue the plan rather than take the chance of making an undeductible expense for which they might be personally liable.

Senator CONNALLY. When you pay this money into this pension fund, this trust fund, does each individual get a vested interest in it, so when he quits or dies or leaves, he gets a certain percentage, or is it just sort of a fund to jockey with?

Mr. STURTEVANT. The amounts which are put in these trusts, both trusts are irrevocably paid, of course, to the beneficiaries of the trust.

Under no circumstances can they possibly revert to the company. They must be distributed to the employees.

Senator CONNALLY. I know, but does each individual have something that he can go to and say, "Now this is my money"?

Mr. STURTEVANT. I have to answer that in two ways, Senator.

Senator CONNALLY. Better answer it in one way.

Mr. STURTEVANT. I have to, because there are two different plans, and the result is different in the two plans.

The plan for the broad group of employees provides that if the employee leaves the service of the company during the first year following his joining the plan he gets his own deposit back, that is all, for the first year. After that there is a rather sharply graduated percentage of increase in the amount, or the percentage of the benefits in his account over and above his own deposit, which he would receive if he leaves. It goes sharply to 90 percent after 20 years and, of course, the full benefit after age 50.

The CHAIRMAN. Have you any other point that you wish to develop? You have taken considerable time and we have a long list of witnesses here.

Mr. STURTEVANT. Yes.

Senator TAFT. If he dies, do his descendants get anything?

Mr. STURTEVANT. That is one point I would like to make clear.

Each individual employee is entitled to designate a beneficiary, normally his wife or his children, who receive the benefit in the event he dies.

He gets the full benefits. It is my belief that the language of the bill as now drafted might prevent that, which I do not think was hardly intended, but the language of the bill, subsection (1) of section 165 as amended requires that the contributions be made to a trust under which the distributions are made to employees.

Now, it seems to me that that ought to be clarified to make it clear that the widows and children, and so on, of these people, can get benefits. I think that that was probably intended, but it is not clear.

I would like to make one other point and that is on this question of the deductibility of the amounts put in these trusts.

First, if the plan is a contributory plan and if it does not give nonforfeitable rights unless the plan qualifies under these standards, no part of the money deposited is deductible.

If, on the other hand, it gives nonforfeitable rights that amount is deductible, but the individual must take the amount deposited into income. Either one is impossible. It seems to me that my plan will have to qualify under section 165 or be discontinued.

Even if you qualify under section 165, the law has been drafted in such a way that all corporations are put on a cash basis on the payment to trusts. Now we put in 25 percent of our profit over and above $1.50 per common share. We cannot possibly determine what that figure will be during 1942. We cannot make any payment into the trust until about February of 1943. Thus, if this bill passes in its present form, it will be impossible for us to make any deduction for the amount deposited in 1942, which is a technical difficulty but a very real one, one which would have to be overcome in some way. We could not possibly justify making a payment which we cannot deduct against 1942 earnings.

I think that is a technical thing which can be corrected.

Furthermore, section 144 limits the amount to be deducted to 5 percent of compensation otherwise paid. It seems to me that is detrimental to the interest of the employees.

I think the 5 percent is bound to become a maximum, even though the balance may be distributed over the period of 5 years, because with the situation as it is today, I do not see how we could justify paying in any substantial sum which may be deducted 5 years from now, when we do not know whether we will have profits. The situation seems to me to be such that we cannot possibly pay more than 5 percent under this law. I do not see why we should limit the amount to be paid to these employees. You have to be able to deduct expenses in the year in which the expenses are incurred.

That is the fundamental principle of our tax law, which is being departed from here. I cannot see any reason for it.

I believe such abuses as may exist fall into two classes: First, and foremost, those situations where rather closely controlled corporations, with a majority of the stockholders on the board and a majority of stockholders who are the officers and participants in these plans, get together and vote themselves a bonus, because they do not want to take profits in dividends.

I think that is the most serious abuse, and we get 90 percent of the so-called abuses in that situation. That can be very easily corrected. You do not have to kill all incentive profit-sharing plans to correct that.

The second abuse is where a few top executives get all the amount and, as someone has suggested, the chances are good it might be an unreasonable amount. I think that can be cured by the limitation suggested.

You could write into the statute specific authority and direction to the revenue agents that they disallow any deduction which, when added to their compensation, is unreasonable, in view of the services of those men during that year.

Now, that seems to me to be the constructive program which should be followed by this committee, a program which will prevent at least 90 percent of any so-called abuses, and which will, at the same time, not interfere with the incentive value of these plans.

Now, I had occasion, within the past 2 days, to talk to a man who is in a very responsible position in the War Department. He told me that they are vitally concerned with doing everything they possibly can to cut down this wastage that is occurring in the production of materials for the Government, and here we have something which operates to do that, something which should be encouraged, fostered, not destroyed.

He expressed great concern with any program which would destroy the effectiveness of the profit-sharing motive in creating efficiency, cutting out waste. That is the biggest part. If you can induce a man to save a dollar so he can get 25 cents of it, it is going to be effective, but it is not going to be effective merely to say "If you save a dollar everybody in the whole organization is going to get half a cent added on their salary."

A broad coverage plan under which all share on the same ratio to salary just is not effective. It is valuable to some degree, but that is not the thing I am talking about, as far as the real incentive value of these plans is concerned.

I am taking a lot of time, I realize. I appreciate the opportunity of giving you my views. If there are any further questions, I will be glad to answer them.

The CHAIRMAN. We are very glad to hear from you. We have a great many witnesses this morning, and I presume they will cover generally the same question.

Mr. STURTEVANT. I am afraid most of them are concerned with pension plans. I would not have taken so much time except I believe I am the only profit-sharing witness here. I think the most important thing is to save profit-sharing plans which stimulate efficiency.

The CHAIRMAN. Have you in your brief the exact statement in regard to your own organization?

Mr. STURTEVANT. I do not have any written statement prepared.

The CHAIRMAN. Did you put it in the House proceedings?

Mr. STURTEVANT. I put it in the House proceedings in a written, prepared statement. It has the details of the plan very well set up.

The CHAIRMAN. That is in the House hearings?

Mr. STURTEVANT. That is in the House hearings; yes.

The CHAIRMAN. Thank you very much.

(The following statement was submitted by A. M. Christian, manager, Employees' Benefit Association, International Harvester Co.:)

STATEMENT SUBMITTED BY A. M. CHRISTIAN, MANAGER, INTERNATIONAL HARVESTER EMPLOYEES' BENEFIT ASSOCIATION

I. DESCRIPTION OF ASSOCIATION

The International Harvester Employees' Benefit Association (hereinafter called the E. B. A.) was established in 1908 as a voluntary unincorporated nonprofit association. It was organized to provide a fund for the payment of sickness, accident, and death benefits to employees of the Harvester Co. and affiliated companies. Membership in the E. B. A. is voluntary, but practically all the employees join. At the present time the E. B. A. has more than 60,000 members.

From the time the E. B. A. was organized in 1908 to the end of 1941 it had paid out to members $10,028,000 in death benefits and $10,422,000 in disability benefits.

The membership of the E. B. A. is composed of (1) those employees who join and (2) the Harvester Co. and its affiliated companies in this country and Canada. It is controlled by the board of trustees, half of whom are elected by the employee members, the other half being appointed by the company.

The funds of the E. B. A. are obtained from three sources: (1) Contributions by the employees, (2) contributions by the company, and (3) interest or dividends on the funds of the E. B. A. which are invested. Almost all the E. B. A.'s funds come from the first two sources, namely, the employees and the company; comparatively little is derived by way of investment income.

Prior to 1936 an employee member of the E. B. A. contributed 1½% of his weekly wages to the E. B. A. (but not to exceed 60 cents per week) and the company contributed a flat amount of $50,000 per year, which was designed to cover administrative costs. This arrangement continued until 1936.

In 1935 the trustees engaged a competent actuary to make a thorough study of the financial status of the E. B. A. As a result of that study, it was found that the E. B. A. had not been maintained on an actuarily sound basis. Two reasons were responsible for this condition: (1) The average age of the employee members had increased from about 30 years to nearly 38 years; and (2) there was greater stability in employment, with fewer people leaving the company. The result was that the E. B. A.'s reserves, which had been sufficient for a group averaging 30 years old with a large turn-over were not actuarily sufficient for a group almost 8 years older with a lower rate of turn-over.

To meet this situation it was decided to increase the contributions of the member, both the employees' and the company's. Accordingly, on May 22, 1936, the contributions for employee-members were raised from 1½ to 2¼ percent of the annual wages or salaries up to $2,080 annual income (i. e., a maximum of 90 cents per week). And the company, instead of furnishing a flat $50,000 per year, was to contribute an amount equal to 20 percent of the employees' contributions.

As a result, the company's payments increased to an average of approximately $420,000 for the years 1936 to 1941, exclusive. The increase, plus the higher payments made by the employees, was designed to restore the E. B. A. to a sound actuarial condition.

II. TAX STATUS OF ASSOCIATION

Prior to this change in the rate of contributions, the E. B. A. had considered itself exempt from taxation as a mutual benefit association under section 101 (16) of the applicable revenue act. That section provides that if 85 percent of the income of a mutual benefit association is received as contributions from members, the association is exempt from taxation. However, in 1940, the Bureau of Internal Revenue ruled that the contributions of the employer could not be considered as contributions of members and held that since on that construction less than 85 percent of the E. B. A.'s income consisted of amounts collected from members within the meaning of section 101 (16), the E. B. A. failed to qualify as an exempt mutual benefit association under that section. (G. C. M. 21323, 1940-1 C. B. 97.)

On the basis of that ruling the Bureau has proposed assessments against the association as an insurance company other than life or mutual, without giving it the benefit of any deduction of reserves. As a result of the Bureau's proposed

action, there is now a potential tax liability against the E. B. A. of about $1,600,000, plus interest for the 6 years 1935 to 1941, inclusive.[1]

III. POSITION OF THE E. B. A.

It is the position of the E. B. A. that the Bureau's construction of section 101 (16) is clearly unsound for the following reasons:

(1) The Bureau's construction conflicts with the obvious intent of Congress in enacting section 101 (16). The purpose of enacting the section was to encourage the formation of organizations which furnished low-cost insurance protection to employees by exempting their funds from taxation. A contribution by an employer clearly fosters such organizations, since it lowers the employee costs.

Moreover, when Congress, in 1928, enacted for the first time the provision corresponding to section 101 (16) it was well recognized that employers participated in and contributed to such organizations. As a matter of fact the enactment of the section was occasioned by the fact that several of such organizations, to which employers were contributing, had been subjected to tax because there was no specific provision exempting such organizations.[2] It is inconceivable, therefore, that Congress, in attempting to encourage such organizations by granting them tax-exempt status, should have intended to exclude those organizations which received substantial contributions from employers when it was a common practice for employers to make contributions to such organizations and when the organization could not have been operated economically without such employer contributions.

(2) The requirement in section 101 (16), that 85 percent of the income must be derived from members, was not enacted for the purpose of excluding employer contributions. The 85-percent requirement in section 101 (16) was taken over from a similar requirement in section 103 (10) of the 1928 act, relating to benevolent life insurance associations of a purely local character. When the latter section was adopted in the 1924 act, Congress indicated that it was adopting the 85-percent limitation in order to prevent otherwise exempt organizations from engaging in unrelated business activities. (See 65 Cong. Rec. 7128–7129.) Contributions by an employer can hardly be regarded as income from an unrelated business enterprise; and the Bureau has in effect recognized this in construing section 101 (10). (G. C. M. 5921, VIII-1 C. B. 179.) There is no basis for adopting a different position with respect to section 101 (16).

(3) Finally, the Bureau's construction of section 101 (16) is not only unwarranted under the statute, but also leads to an absurd result in the light of the cases and rulings under section 101 as a whole. For example, if the E. B. A. had received contributions solely from employees, there is no question but that it would be exempt under section 101 (16). Similarly, if the E. B. A. had received contributions solely from the employer-companies, it would be exempt under section 101 (6) of the applicable statute. (*Mutual Aid & Benefit Association of Forstmann & Huffmann Employees* v. *Commissioner*, 42 F. (2d) 619; and G. C. M. 19028, 1937-2 C. B. 125.) Moreover, if two separate organizations along the foregoing lines had been set up—one by the employees, receiving funds only from the employees; and the other by the employer, receiving funds only from the employer—and both organizations had cooperated in performing the identical functions for the benefit of the employees, both would be exempt. (*Gimbel* v. *Commissioner*, 54 F. (2d) 790.) But if these two otherwise exempt organizations are combined in a single organization to perform the identical functions and to receive the income from the identical sources—which is the situation with respect to the International Harvester Employees' Benefit Association—the organization loses its exemption under both section 101 (6) and 101 (16). The absurdity of such a result is obvious and indicates the fallacy of the Bureau's position.

---

[1] In view of the startling amount of tax liability to which the E. B. A. might be subjected on this basis, the trustees in 1941 decided to transfer the death risks of the E. B. A. to a life insurance company. This has now been done. However, this action will not dispose of the large liability asserted by the Bureau against the E. B. A. for past years. Moreover, the question still remains, both for past and future years, for all employee benefit associations of a similar nature who have not reinsured or will not be able to reinsure their life risks with an independent life insurance company.

[2] See, e. g., *Philadelphia & Reading Relief Association*, 4 B. T. A. 713; *Employees' Benefit Association of American Steel Foundries*, 14 B. T. A. 1160; *Pontiac Employees Mutual Benefit Association*, 15 B. T. A. 74; *Mutual Aid & Benefit Association of Forstmann & Huffmann Employees*, 17 B. T. A. 997; *Atlantic Coast Line Railroad Co.* v. *U. S.*, 60 Ct. Cl. 378; A. R. R. 477, 4 C. B. 264; I. T. 2117, III-2 C. B. 220; I. T. 2291, V-1 C. B. 82.

IV. NECESSITY FOR RELIEF

The result of the Bureau's position would be to defeat the very purpose for which such associations are organized. If the Bureau's position is allowed to stand, a mutual benefit association would have to make up the loss from curtailed employer contributions by putting heavier assessments on the employee members. This would make the employees' costs too high. Many members would drop out of the mutual benefit association. That, in turn, would again increase the cost to those who remain. Thus, the purpose for which such associations were organized—namely, to furnish low-cost insurance protection to employees—would be defeated.

No legislation taking effect as of the present time would save the E. B. A., since approximately $1,600,000 in taxes, plus interest, has already been asserted against the E. B. A. for the years 1935 to 1941, inclusive. Accordingly, it is respectfully urged that an amendment to section 101 (16) be adopted by which an employer's contributions on behalf of employees would be classed with the employees' contributions in determining the right to tax exemption. This amendment should be retroactive in order to afford existing mutual benefit associations adequate protection against the depletion of their funds by reason of the assertion of tax liabilities contrary to the underlying purpose of the section.

Respectfully submitted.

EMPLOYEES' BENEFIT ASSOCIATION OF INTERNATIONAL HARVESTER CO. AND AFFILIATED COMPANIES.

The CHAIRMAN. Is Mr. Bright here?

STATEMENT OF JOSEPH E. BRIGHT, ESTATE ANALYST, BUFFALO, N. Y.

The CHAIRMAN. Mr. Bright, you were called before, but you were not here, so we will take you now.

Mr. BRIGHT. The Pennsylvania Railroad was responsible for that.

The CHAIRMAN. Come around. We will see what we can do with the Pennsylvania Railroad a little later on.

Mr. BRIGHT. That is a rather long subject.

The CHAIRMAN. All right, Mr. Bright, you may proceed.

Give the reporter your name and business connections.

Mr. BRIGHT. Joseph E. Bright; estate analyst, 122 Pearl Street, Buffalo, N. Y.

The CHAIRMAN. All right, sir.

Mr. BRIGHT. These are some suggestions to this committee, based on some experiences I have had in the study of the subject for a combination of pension and profit-sharing plans. Now it occurs to me, and it has occurred to me for some time, that pension plans are, of course, well known to you gentlemen, and many corporations who now have them and many more who are putting them on, and profit-sharing plans are likewise well-known and have been adopted and are being used by many corporations.

I am concerned with this thought, that pension plans—speaking now strictly of pension plans—are set up for fundamental purposes. The best figures I can get on the subject, show that about 17 or 18 out of every 20 wage-earners who reach 65 years of age are poverty-stricken. Pensions as I see it, are designed to prevent that situation.

I think we all can very readily agree that pensions are only possible through profits. I think we can likewise agree we are going to face years of no profits.

When we experience years of no profits, then these pension plans, which are economically sound, are faced with discontinuance.

If they are going to be faced with discontinuance, it occurs to me it is quite possible that those who are responsible for these plans might be charged with not having thought the matter through.

Therefore, may I suggest that a combination of a pension and profit-sharing plan be made possible.

The profit-sharing plan would serve two purposes: First, to enable the employees in years of production, in years when profits can be made, to participate in these profits; and, secondly, to assume the continuance of the pension plan over years of no profits, on the theory that if these plans are discontinued why, there is going to be an eruption, and probably rightly so.

That can be prevented by having a profit-sharing plan which enables funds to be withheld for three basic purposes; one purpose, and the primary purpose would be to use a portion of these profits withheld to pay pension premiums in years in which there are no profits.

The second portion of the profit-sharing plan is to be used to increase pensions. For example, let me assume that the pension plan provides a pension of 40 percent of the employee's salary (with a reasonable ceiling for pensions for higher-paid executives)—the profit-sharing plan to increase these pensions to, let me say, 50 percent of the employee's salary, maintaining a ceiling on higher paid executives.

The third phase of the plan would be current distribution to employees.

Now, I would like to suggest that in this profit-sharing plan a reasonable ceiling be put on the profit-sharing plan. It should be put on for two reasons:

(1) That excessive deductions could not be made by corporations. There are probably some that might try it.

(2) That labor should not take more than its fair share or be put in a position of demanding more than its fair share, because when anyone, regardless of whether he is labor, capital, or management, demands more than his fair share, why, you are headed for trouble.

I think that, in a few words, expresses what I have to say unless there are some questions.

The CHAIRMAN. Are there any questions, gentlemen?

Senator CLARK. Mr. Bright, to what extent do these private pension plans still exist after the passage of the Social Security Act? How many still continue?

Mr. BRIGHT. I haven't any figures before me, but I would say they have been multiplied hundreds of times.

Senator CLARK. You mean private pension plans?

Mr. BRIGHT. I am saying pension plans; I am not saying anything about profit-sharing plans.

Senator CLARK. As distinguished from the public pension plans contained in the Social Security Act.

Mr. BRIGHT. I do not think I got your question exactly.

Senator CLARK. I say, to what extent do these private pension plans of companies attempting to pension their own employees exist in addition to the pension provided by the Social Security Act?

To what extent do they exist since the Social Security Act was passed?

Mr. BRIGHT. My opinion is that they have been multiplied tremendously, that they have been increased one hundredfold, that is, in Buffalo. My territory is confined to Buffalo.

Senator CLARK. Beyond the Government pension plan as contained in the Social Security Act?

Mr. BRIGHT. Definitely so.

Senator RADCLIFFE. Do you think the Social Security Act has facilitated that?

Mr. BRIGHT. I think the Social Security Act has facilitated it. Having been in the life-insurance business, I remember when the Government put on a life insurance for the soldiers in the last war of $10,000. It was just after that that people began to realize what little income $10,000 would produce and life insurance made its greatest strides after the general buying of insurance by the soldiers.

Whether it was coincidental or not I do not know.

Senator RADCLIFFE. Do you think that policy will continue?

Mr. BRIGHT. I do not think there is any question about it. Judging by my limited territory, I know interest in these plans is greater today than it was 6 months ago, and much greater than it was 2 years ago.

The CHAIRMAN. If there are no further questions, we thank you, Mr. Bright, for your appearance.

Mr. BRIGHT. Yes, sir.

(Mr. Bright submitted the following memorandum:)

THE FUNDAMENTALS OF A PROPOSAL TO AUTHORIZE THE COMBINATION OF PENSION AND PROFIT-SHARING PLANS, SUBMITTED BY JOSEPH E. BRIGHT, BUFFALO, N. Y.

To enable corporations to attract and retain desirable officers and employees and to equitably reward these officers and employees—thereby insuring permanence of sound and efficient management—the combination of a pension and profit-sharing plan is herewith submitted.

It is believed that a soundly devised and equitably distributed plan, providing for both pensions and profit sharing, is essential to the economic welfare of the United States.

It is further believed that these plans will produce and continue to produce "new frontiers" of the sources of wealth.

This combination will assure to labor, to management, and to capital, each: Their fair and equitable share of the fruits of their joint efforts.

PENSION PHASE

A pension plan guarantees to an employee a reasonable income upon his retirement.—Without attempting to concern ourselves with the reason why, it is a well-known fact that at least 17 out of every 20 wage earners are penniless when they reach retirement age.

Each and every year some 800,000 to 1,000,000 wage earners reach retirement age. At least 85 percent of these are poverty-stricken.

This vast army of poverty-stricken citizens is supported from public treasuries or by relatives or friends.

Their support, received from public treasuries, is obviously a drain on the Nation's income.

Industry should see to it that these individuals' improvidence cannot result in their being thrown on society when they are no longer able to work.

Support received from relatives or friends definitely restricts the purchasing power of these relatives or friends to the essentials of life. i. e., food, shelter, and clothing.

The purchasing power of our citizens is considerably broadened when, through pensions, they are relieved from the necessity of providing for their dependent old-age relatives or friends.

PROFIT-SHARING PHASE

The profit-sharing phase of a pension plan is definitely essential.—The profit-sharing plan to provide, for example, that 10 percent of all corporate profits will be held in a separate fund.

This will guarantee to all qualified employees an equitable share of the wealth which their labors have produced.

It is suggested that distribution of these profits will be as follows:

A. Pensions are only possible from profits. It is impractical for any corporation to expect to realize profits in each and every year. To avoid any reasonable probability of a pension plan being discontinued, it is suggested that funds sufficient to pay 5 years' of pension premiums be accumulated and held as a "backlog."

B. Another portion of the profit-sharing plan to be withheld for employees until their retirement—with suitable provisions for a reasonable ceiling for higher paid employees. This withheld portion to supplement pension and social-security benefits.

C. Any remaining funds under the profit-sharing plan to be currently distributed.

A SOUND DEMOCRACY IS BEST MAINTAINED WHEN ITS CITIZENS ARE ENABLED TO ACQUIRE PROPERTY AND PROPERTY RIGHTS

A combination of pension and profit-sharing plans will—

Assure the continuation of the pension plan throughout years of no profits.

Equitably reward labor, management, and capital in prosperous years.

SUGGESTIONS

It is suggested that a ceiling be placed on the percentage of profits allowable to a profit-sharing plan.

This ceiling would prevent—

(*a*) Excessive deductions by corporations.

(*b*) Demands from labor for more than its fair share.

It is likewise suggested that the profit-sharing plan must apply to any and all profits and not be limited to profits in excess of a certain amount.

It is further suggested that these plans be available to only those corporations pensioning all of their employees—granting reasonable exemptions for casual and part-time employees and for those employed less than a reasonable minimum period.

STATEMENT OF EUGENE M. KLEIN, OF EUGENE M. KLEIN ASSOCIATES, CLEVELAND, OHIO

The CHAIRMAN. Mr. Klein, you may give your name to the reporter.

Mr. KLEIN. Eugene M. Klein, of Eugene M. Klein Associates, pension consultants, 917 NBC Building, Cleveland, Ohio.

The CHAIRMAN. You may proceed, Mr. Klein.

Mr. KLEIN. May I say to the committee, first, that the old sections 165 and 23 (p) in the revenue act fairly well met the pension requirements as we saw them, but that there were a few points in there which allowed tax evasion, and that those were properly covered by the House bill as it exists today.

We believe that Mr. Randolph Paul covered the point very thoroughly.

Senator TAFT. Mr. Klein, what is your business?

Mr. KLEIN. Pension consultant.

Senator TAFT. In Cleveland, Ohio?

Mr. KLEIN. In Cleveland, Ohio; yes. We work all over the country, however.

Senator TAFT. How many clients do you have?

Mr. KLEIN. We have about 350 plans in operation now, which we are servicing from year to year. We have been 14 years now doing nothing but pension work.

There is only one thing that we object to in the House bill and that we believe will tend to destroy a great number of the plans now in operation and will also prevent the introduction of new pension plans.

I believe the committee is firmly convinced that pension plans are a necessity today to augment and supplement the Social Security Act. The Social Security Act takes care of the lower-price employees, those earning, say, under $1,500; it takes care of them adequately. It does not take care of those earnings more than that in an adequate manner.

Most of these plans that have been established have been honest plans installed with the idea of supplementing social security, so the men earning $3,000, $2,400, $4,800, or $5,000 would also benefit by a proper pension, so they might retire.

The fact is that under the Social Security Act only 280,000 men have been retired, and there are over 1,200,000 men, according to the 1940 census, who are beyond 65 and still in industry. That is taking out farm labor and taking out emergency Government work. There are altogether 4,500,000 men today of the age 55 or more, who will be a big problem, as we see it, to industry, and who will be ready for retirement as soon as the war effort ceases.

Now, the only objection that we have to the House bill is the section which proposes a deduction to the employer not to exceed 5 percent of the aggregate salaries of the men included in the plan. A survey of all our plans has shown that that 5 percent is entirely inadequate.

We have a chart here of a very worth-while concern, one who is known throughout the country for their relations with their employees. They have been written up probably more than any other cooncern, and that particular exhibit shows that the average cost to the employer for this plan, after the employee contribution has been made, is 11.8 percent.

That must be considered better than the average plan. We have taken other plans into consideration.

Senator VANDENBERG. What company is that?

Mr. KLEIN. That is the Doehler Die-Casting Co.

We have taken other plans. Some of these are 35 or 40 percent of salary as pension, with social security included. In other words, any employee in this group can get over 35 in some cases and 40 percent in others of their salary as pensions.

We believe a 40-percent pension is a proper pension, large enough for a man to live on as a decent American and small enough for the company to afford it.

We find these percentages shown. In the case of a Cleveland manufacturing company, 23.2 percent; in the case of a Buffalo chemical company, 16.6 percent.

In the case of a Buffalo rubber company, 23.2 percent.

In the case of a Toledo machine tool company, 18.6 percent.

In the case of a department store in Buffalo, 24 percent.

A blueprint-paper manufacturer and machine manufacturer in New York, 14.6 percent.

A spark-plug company in Toledo, 14.7 percent.

Senator TAFT. They start out with a pension that will retire the employees at 35 or 40 percent, or some percentage of their salary?

Mr. KLEIN. Yes.

Senator TAFT. And they figure perhaps they cannot take over 5 percent from the employees themselves?

Mr. KLEIN. That is right.

Senator TAFT. In order to reach that goal they have to put up these percentages; is that right?

Mr. KLEIN. Yes.

Senator TAFT. Would that be true of a sound actuarial plan starting right from the beginning, or is it because of the fact that they usually begin with men of all ages?

Mr. KLEIN. That is the reason for it. Those concerns putting in 24 percent and 18 percent are concerns where there are very old people, where the people are almost ready for retirement.

In order to inaugurate the plan, the payment, in the first few years of the plan, is higher than after that, in order to retire those men who are near retirement age or who are ready for immediate retirement.

Senator TAFT. In the normal course the percentages would come down?

Mr. KLEIN. That is right. It is my belief that a 10-percent ceiling, after the plan has been in operation for 10 years will be more than sufficient.

Now, here is a chart, exhibit B, which shows just what may be provided, and what pensions are provided. Under this 5-percent rule we would get it up where we would find as low as 7.9 percent is all the pension, including the social security, that may be provided for men 65 years of age, none of which reach the 40-percent limit.

There was nothing in Mr. Paul's report to the House Ways and Means Committee which asked for this 5 percent, and we believe that the 5 percent is not necessary to curb the abuses which we had under the old law. We believe the 70-percent provision will curb a great number of them. We believe the nondiscriminatory rule will curb others, and that altogether the law, as it stands today, will curb the abuses which were had under the old act. However, we believe that limiting the payments to 5 percent will destroy all these plans that are now in operation, and will prevent the induction of new plans.

Now, as an example of what this 5 percent does with these companies that I mentioned before, the first company deposits a total of $59,500. Under the 5 percent of pay roll they would be allowed to deduct $13,358.50 only. Under the excess provision over 5 percent they would be allowed to deduct an additional $9,228, or a total of $22,586.

Then the taxable amount in that year would be $36,913.20. Now that would be practically impossible to pay, if not deductible, because it would take, if they were in the 90-percent class, or way up in the excess-profits tax, it would take approximately the earnings of 10 times that $39,000, or $369,000 approximately, to pay that balance of tax.

Now that would be impossible with this concern, and with all the others that we know of.

Senator VANDENBERG. Why, the net result, I suppose, would be to cut the pension plan back.

Mr. KLEIN. To either stop it entirely or to limit the company's contribution to 5 percent, which would produce a pension which would not be satisfactory, and which would not retire the men, because no man could retire on 20 or 22 percent of his salary.

That is the reason 280,000 retired out of 1,500,000.

Here is a company that deposits $140,000, and the amount which they would have to pay taxes on, the amount which they would have to earn to pay taxes on would be $739,000, because of that 5-percent limitation.

Now, we have made four suggestions to the committee here which we think will carry out the plan. In the first place, if that 5 percent were changed to 15 percent and the company were not allowed to deposit over 15 percent of the aggregate salaries of those included in the plan, we think that would cover it.

A second solution set forth here is we allow him to take a full deduction of the amount which he put in the plan, making it actuarially correct, the way the old law did, and over and above the current pension liability that is allowed him to take his deduction for the current company's liability for that year, and all over that over the period of 5 years.

The third is to allow a deduction of, say, 5 percent up to age 40, then grade it, 10 percent, say, to 50; 15 percent to age 55, and so forth, so these men would be adequately taken care of and the company could continue its plan.

Senator DANAHER. Mr. Klein, is that actuarially computable, or is that arbitrary?

Mr. KLEIN. No; it was actuarially computable; it was under the old law entirely, under the law as it existed up to date.

Senator DANAHER. Thank you.

Mr. KLEIN. The fourth generation is the suggestion that Mr. Paul made, that is that you allow full deductibility for the current expenses and putting a ceiling on what any man may get. We believe Mr. Paul's suggestion of $7,500 might be a little bit low. Possibly it should be $10,000 or $12,000 as a ceiling.

I think Mr. Paul just said $7,500 as putting on some sort of ceiling.

I think that would cure all the defects of the present plan, to limit the actuarial deductions for current expenditures during the year, the current liability, and just a ceiling on it.

But the 5 percent definitely, without question, will destroy almost any and every plan that we have, because the companies will not be able to continue to pay great sums of money say about $40,000 or $50,000 of their net profits after all taxes have been paid.

I do know further that no new plan will be inaugurated, unless it is a haphazard plan, and such plan will not do the work that a pension plan should do, that is, provide income for the man upon retirement from which he can live as a decent American.

Senator BROWN. I think the illustration you give at the bottom of page 7 and top of page 8 is what the Doehler plant would have to earn in order to pay the amount of premium above the $37,000 should be given to the committee. That is a very vivid illustration.

Mr. KLEIN. Yes; we have that in the charts here, and the same on several other companies' systems.

Senator BROWN. In other words, in order to pay the $37,629, if Doehler is in the 90 percent excessive-profits classification, they would have to earn $376,000?

Mr. KLEIN. That is right. May I leave those charts?

The CHAIRMAN. Yes; you may leave those charts.

Are there any further questions from Mr. Klein?
Thank you very much, Mr. Klein.
(Mr. Klein submitted the following memorandum and charts.)

MEMORANDUM BY EUGENE M. KLEIN, CLEVELAND, OHIO

My purpose in appearing before this committee is to express my opinion regarding section 144 of the proposed revenue bill for 1942, which section relates to employees' trusts.

At the outset I want to state that the intent of Congress to weed out the narrow, discriminating, selfish type of pension and bonus plan which has cast suspicion over bona fide plans is an admirable objective, which we believe will be fully accomplished by the proposed section 165 (a). We believe also that with the exception of the proposed section 23 (p) (1) (A) and (C) (i) the rest of the section 144 is equitable. It is clear, and there should be no misunderstandings concerning the application of it.

My comment here is directed solely to that portion of the amended section which allows a tax deduction to the employer of amounts paid into a tax-exempt trust during the taxable year of not more than 5 percent of the compensation paid to his employees during that year, and also allows a deduction over a 5-year period for any amounts paid into such trust which are in excess of the 5 percent amounts so paid.

We believe that the injection of such a limited incentive for pension plans will seriously retard the establishment of new bona fide pension and annuity plans and hinder the maintenance of plans already established. There are many reasons why we believe that this section should be changed.

(1) *The sound social object of pension plans demands full Government cooperation.*—In the comprehensive Senate subcommittee report No. 610, which was a survey of experiences in profit sharing and the possibilities of incentive taxation, the following was stated on page 93:

"Nothing in all world history has equaled the production of wealth, and creation of the standard of living enjoyed by our people, the inventive genius, the material progress and prosperity of America. But there is one great vulnerable spot in our capitalistic economy. That is the fact that annually in America several million people * * * finish their lifetime of work in penury and want. The system will be the object of continuous, ever-increasing attack so long as this situation exists. In fact, the system cannot long endure with such a condition being the annual output of its operation."

"Therefore," the committee stated that, "object No. 1 of our recommended plan should be:

"1 Provision for the creation of an estate or retirement fund for the protection of old age."

It is evident that the objective of all bona fide retirement plans is directly related to the welfare of our economy. These are not merely words. Latest available census data indicate that in 1940, 2 years ago, with the exception of persons employed in public emergency work or on the farm, there were approximately 1,200,000 employees over age 65; 1,300,000 employees were between the ages of 60 to 64, inclusive; 2,000,000 employees were between the ages of 55 and 59, inclusive, making a total of slightly over 4,500,000 persons employed who were 55 years of age or more.

These employees constitute an enormous potential old-age problem. It is highly probable that this group of older employees has been considerably enlarged since the beginning of the war due to the urgent need for manpower in defense industries.

Enabling this older group of employees to retire within the next decade will not only relieve this serious problem, but it will enable millions of young employees who otherwise would be unemployed to find work.

The fact that only about 280,000 employees have already retired under the benefits of the Social Security Act, and that there are still over 1,000,000 persons employed who are 65 years of age or more indicates the unwillingness of employees to retire under the bare minimum of retirement security provided under the social security system. Retirement plans are needed to fill the gap in the social security program.

The distribution of the ages of our population has been constantly changing. People are living longer, and we are finding, and we are going to continue to

find, an increasing number of persons growing old who are facing problems of economic security. It is highly significant that the total number of persons over age 65 in 1940 was 30 percent higher than that which prevailed under the 1930 census. It should appear important that any company which is interested in providing economic security for this older group of employees should be given the fullest cooperation.

The preservation and maintenance of our present economy will be largely dependent upon the Government's attitude with respect to company-sponsored retirement plans. Any inducement by Congress which effectively tends to make the employer solve the problems of poverty in old age is fundamentally sound. In effect it relieves the Government of a weighty problem which it would otherwise have to bear. It is a serious problem as the statistics indicate.

While it is with us at a time when we are fighting for our system of living, it is directly tied in with our war effort; it is vitally important that the viewpoint of employees in defense industries should not be distorted by thoughts of insecurity; and a retirement plan goes a long way in relieving the anxiety, the fear, and the worry that accompanies old age. It is becoming increasingly difficult for employees to provide for their own economic security. Higher individual taxes, lower exemptions, and a higher standard of living have all contributed to the employee's inability to meet his individual security problems.

To meet this increasing problem of old age and to some extent future unemployment, the initiative must be taken now, and the incentive must be allowed now toward that objective. Retirement-plan financing is a long-term project, and waiting, delaying and procrastinating will simply and finally evoke a tragic economic situation accompanied by the unavailing, depressing expression—"too late."

On the basis of sound social reasons, therefore, Congress should fully cooperate with employers who are operating bona fide retirement plans.

(2) The proposed deduction to the employer in a taxable year of an amount not in excess of 5 percent of an employee's compensation during that year is unnecessary and detrimental because—

(*a*) It extends much beyond the point needed to curb undesirable pension practices, and

(*b*) It will tend to deprive employees of adequate security and thereby jeopardize the over-all social objective of retirement plans.

Before elaborating upon these two points, it is well to review the prevailing practices relating to the financing of retirement plans.

Up to the present there have been two principal methods of financing pension plans.

First, an employer could purchase annuities directly from an insurance company. Ordinarily he gave pension credits to his employees for future and past service. The cost of future service pensions he paid off from year to year. The cost of past service pensions were paid off either in a lump sum or over a very few years. The Internal Revenue Department rules that such payment were fully deductible for tax purposes in the current year in which the payment actually was made.

As a second method of setting up a pension plan, an employer could set up a trust in accordance with section 165. By virtue of section 23 (a) the employer was allowed to deduct in the taxable year his contributions which covered his pension liability which accrued during that year. If the employer deposited an amount in excess of his pension liability which accrued during that year, for the purpose of financing past service credits, then, by virtue of section 23 (p) the employer had to apportion his tax deduction over a period of 10 years.

Most employers who could afford depositing large sums of money during 1 year deposited hundreds of thousands and even millions of dollars directly with an insurance company during a single year to cover past service liabilities and secured a full tax deduction in the year of deposit. Some companies carried these practices to unorthodox ends. For example, if an employer established a trust which met the requirements of section 165, he would deposit only that amount of money into the trust which necessary to cover his current pension liabilities, and in order to avoid apportioning his past service liability over a period of 10 consecutive years, would pay the cost of such past services directly to an insurance company, and thereby secure a full tax deduction in the year of deposit of whatever payments he made.

The sole objection which has prevailed against retirement plan financing has revolved around this widespread single deposit practice for past service. The

objection has never extended to future service deposits under group annuity plans, or to current pension deposits under pension trust plans. These latter deposits have never been considered as undesirable practices. The charging to expenses in 1 year of the amount of pension liability which accrued only during that year was a normal and expected procedure. Since deposits for current pension liabilities have an actuarial basis, the amounts deposited to cover that liability are definite and not subject to arbitrary manipulation by the employer as is possible with past service deposits.

The undesirable practice of making enormous deposits in 1 year and taking a full deduction in that 1 year is adequately curbed under the proposed section which requires such payments to be spread over a 5-year period. However, since the allowance to the employer in a taxable year of an amount not in excess of 5 percent of the emp'oyee's compensation is not nearly sufficient to meet the cost of current liabilities under most pension plans, the 5-percent limitation extends much beyond what was intended to be curbed.

As an example of this point that the 5 percent limitation does not meet current liabilities, let us take a practical case as an illustration. The Doehler Die Casting Co.—a company which has been given widespread publicity for its generous dealings with its employees—maintains a retirement plan for all salaried employees earning $1,560 or more a year, who are 40 years of age or over. Here we have a chart (exhibit A) which shows approximately what it costs that company to operate its plan. The costs are shown for each age and are expressed as a percentage of the total compensation of each employee at such age up to a maximum of $12,000 a year to any employee (the maximum salary upon which pensions are based). Pensions are approximately 40 percent of salary including social security. The retirement age for employees who enter the plan up to age 55 is 65, and for employees who enter the plan beyond that age, retirement ages are staggered.

It is evident from a study of this chart that the percentage of an employee's salary which the employer must deposit to meet a single year's pension liability to provide an adequate pension, including social security, is above the 5 percent-of-salary line for all employees participating, and is well above it where the retirement problem is greatest. The 5 percent-of-salary allowance clearly does not meet the current pension liability requirements of this company. This case is not unusual—it is typical.

I repeat—the 5 percent limitation extends much beyond what was intended to be curbed.

This leads us to the second point that a 5 percent limitation will tend to deprive employees of adequate security and thereby jeopardize the over-all social objective of retirement plans.

There never were many companies which were able to deposit enormous sums of money in a single year. Most of the companies which did so represented the very large industrial organizations. Those companies which could not afford to make huge deposits in a single year allocated their costs over a period of years, depositing amounts sufficient to meet current liabilities, and in many cases only made payments when they were able to do so. Since there are so many employers who are only able to maintain pension plans because they obtain a full tax deduction in the year of deposit for current liabilities, and since the 5-percent limitation does not cover current liabilities, it will be virtually impossible for the ordinary employer to risk making payments in excess of 5 percent of an employee's compensation, and take deductions over a period of years in which there may be no net income.

Let us refer back to the Doehler case to illustrate this point. Doehler current pension liability is $81,838.08 a year. Their pay roll for the eligible employees amounts to $690,022 a year, 5 percent of which is $34,801.10. They are entitled to deduct from expenses this $34,801.10 plus $9,407.40, which represents 2 percent of the excess over 5 percent, or a total of $44,208.50. This leaves $37,629.58 of current liability cost which the company must take a deduction for over the next 4 years. In order to be able to pay this $37,629.58, if Doehler is in the 90-percent-excess-profits classification, they must have a gross earning which amounts to at least $376,295.80.

This type of condition will spell the death warrant for many existing retirement plans, and will prevent the establishment of new plans. The average company will be unable to make deposits in excess of the 5 percent, and will be compelled to discontinue their plan or adopt or operate a limited type of pension plan—possibly to the extent of 5 percent of an employee's compen-

sation. The maintenance of limited pension plans will deprive many employees of much-needed economic security.

This next exhibit (exhibit B) illustrates what percentage of salary could be provided for an employee beginning at age 65 by a 5-percent-of-salary deposit by the employer, a graduated scale of employees' deposits, and Social Security. It is apparent that employees who enter the plan at lower ages are satisfactorily taken care of by such contributions. But it is also apparent that the older the employee and the higher his salary at the time he enters the plan, the less security provided for him. A person earning $1,500 a year who enters the plan at age 60 would secure a pension of $120 a year. This is clearly inadequate. As salaries increase, these percentages and amounts progressively decrease. They are inadequate and would not permit an employee to live decently in the American way after retirement.

We are interested today primarily in the retirement problem which will develop during the course of the next decade. We are interested in these older employees whose economic security will be jeopardized by the limitations of the proposed section. For a retirement plan to be effective at all, it must provide proper security; a failure to provide this adequacy defeats the object of the entire plan, and thereby prevents the solution of a vital social problem.

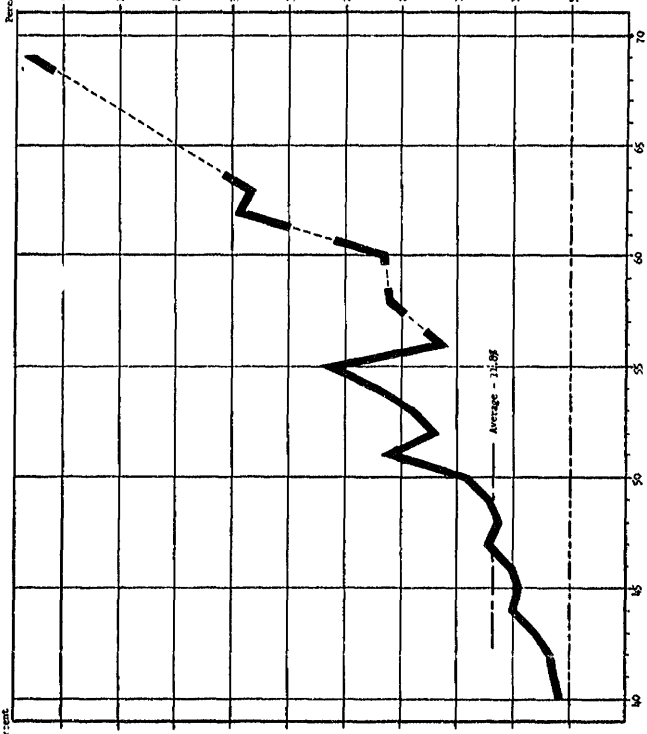
I might add here that my remarks are directed solely to pension and annuity plans and are not intended to apply to stock bonus or profit-sharing plans. I believe that these latter two plans should be treated on a different basis.

(3) It is unfortunate that the proposed tax deduction to the employer will have the effect of penalizing those socially minded companies which were unable to deposit hundreds of thousands and even millions of dollars into pension plans in 1 year to pay for past service, and had to spread the cost of their pension plan over the remaining years of an employee's working lifetime. Large companies which deposited millions of dollars for past service credits will be in a favorable position because their future service deposits will be relatively low. However, the smaller companies are penalized, because, being unable to deposit millions of dollars in the 1 year, they distributed their costs over the employee's working lifetime, with the result that their annual costs are higher than they would have been had they been financially able to make deposits in a single year.

In conclusion we ask the committee to consider the following methods of changing the proposed section 23 (p) (A) and (C) (1):

The following methods apply to an employer who contributes to a trust which is exempt from taxes under the proposed section 165 (a), or under a plan of deferred payment which would be exempt from taxes under section 165 (a) if it constituted a trust instead of a plan for the purchase of annuity contracts.

(1) Allow the employer a full tax deduction on his contributions which cover his pension liability accruing during the year, and allow him to take a tax deduction on amounts in excess of such current pension liability over a period of 5 consecutive years, or



(2) Allow the employer a full tax deduction in the year of taxation of amounts not in excess of 15 percent of the aggregate compensation paid to participating employees during the taxable year, and allow him to take a tax deduction on amounts in excess of such 15 percent over a period of 5 consecutive years, or

(3) Allow the employer a full tax deduction in the taxable year of amounts not in excess of 5 percent of the aggregate compensation of employees who enter the plan under age 40, or not in excess of a certain percentage graduated according to the age of the employee at the time of his entry to the plan, if he is then age 40 or over. The excess over such percentages should be deductible over a period of 5 consecutive years, or

(4) Allow the employer a full tax deduction on his contributions which cover his pension liability accruing during the year, and allow him to take a tax deduction on amounts in excess of such current pension liability over a period of 5 consecutive years, but if the pension benefits of an employee exceed let us say $7,500 or $10,000 a year, such employee should include in income currently his pro-rata share of his employer's contribution to the trust and the earnings of the trust. (Mr. Randolph Paul's original suggestion.)

We believe that any one of these methods will go a long way toward assuring a continuance of proper employee security under present and future retirement plans.

EXHIBIT A.—TYPICAL EMPLOYER'S COST EXPRESSED AS A PERCENTAGE OF AGGREGATE EMPLOYEE COMPENSATION AT EACH AGE

SPECIFICATIONS OF PLAN

(1) Based on the use of individual level premium annuity contracts.

(2) Provides a pension of approximately 40 percent of employee's salary including social security.

(3) Employees contribute 2 percent of first $3,000, and 5 percent of excess over $3,000.

(4) Employer pays balance of cost, and at least equals employee's deposit.

(5) Employees retire as follows:

Age at entry to—	*Retirement Age*
55	65
56	66
57	67
58	68
59	69
60–64	70
65 and over	75

EXHIBIT B

Amount of annual pension provided, including social security beginning at age 65, by an annual payment by employer of 5 percent of an employee's annual salary and a graduated scale of employee contributions, expressed as a percentage of annual salary.

[The scale of annual employee contributions is graduated according to age at entry as follows: to age 34, 2 percent; 35–44, 3 percent; 45–54, 4 percent; 55 and over, 5 percent]

Annual salary	Age at entry							
	25	30	35	40	45	50	55	60
$1,500	75.7	66.0	61.4	52.9	47.7	40.0	34.4	28.6
$2,400	69.1	59.7	55.2	47.0	42.0	34.6	29.2	23.6
$3,000	66.9	57.5	53.2	45.0	40.1	32.8	27.5	21.9
$5,000	57.6	48.5	44.5	36.7	32.0	25.0	20.0	14.8
$10,000	50.6	41.8	38.0	30.4	26.0	19.2	14.5	7.9

EXHIBIT C

Analysis of tax status of certain retirement plans under proposed Revenue Act of 1942

Company	Pension provided	Annual pay roll of participants	Annual cost to employer		Composition of amounts fully deductible in year of deposit			Taxable amount in year of deposit	Gross amount company would have to earn, if in the 90-percent excess-profits-tax class, to deposit amount specified in column 9
			Amount	Expressed as percentage of pay roll	5 percent of pay roll	20 percent of excess over 5 percent	Total		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
				Percent					
Dill Manufacturing Co	40 percent with social security	$267,170	$59,500	22.3	$13,358.50	$9,228.30	$22,586.80	$36,913.20	$369,132.00
Buffalo Electro Chemical	30 percent, no social security	208,140	34,500	16.6	10,407.00	4,818.60	15,225.60	19,274.40	192,744.00
Hewitt Rubber Corporation	do	210,820	49,000	23.2	10,541.00	7,691.80	18,232.80	30,767.20	307,672.00
Baker Brothers	40 percent with social security	107,636	20,000	18.6	5,381.80	2,923.64	8,305.44	11,694.56	116,945.60
Startler's, Inc	40 percent, no social security	187,300	45,000	24.0	9,365.00	7,127.00	16,492.00	28,508.00	285,080.00
Chas. Bruning, Inc	30 percent, no social security	99,600	14,500	14.6	4,980.00	1,904.00	6,884.00	7,616.00	76,160.00
Champion Spark Plug Co	35 percent with social security	952,280	140,030	14.7	47,614.00	18,477.20	66,091.20	73,908.80	739,088.00
Doehler Die Casting Co		696,000	81,840	11.8	34,800.00	9,403.00	44,203.00	37,552.00	376,320.00

The CHAIRMAN. Mr. Beers.

STATEMENT OF HENRY S. BEERS, HARTFORD, CONN., REPRESENTING THE ASSOCIATION OF LIFE INSURANCE PRESIDENTS

The CHAIRMAN. Mr. Beers, will you give the reporter your name and your business connections?

Mr. BEERS. Henry S. Beers. I represent the Association of Life Insurance Presidents, which consists of most of the life insurance companies in the country, and I am the chairman of a special committee particularly on behalf of those members of the Life Insurance President's Association which do a group annuity business to provide pension plans for employers.

I am also chairman of the Group Association, which includes most of the companies doing a group annuity business. My business connection is the Aetna Life Insurance Co., of which I am vice president in charge of the group department.

I am speaking particularly and only from the point of view of group annuity contracts which provide pension plans for employers.

As far as general principles go, we are in favor of the bill if read in connection with pages 51 and 104 of the House Ways and Means Committee report on the bill, if we understand the meaning of that report. However, we feel it of vital importance that greater assurance be given in the text of the law that pension plans which we think the Commissioner of Internal Revenue intends to approve were intended by Congress to be approved under section 165 (a).

Pension plans, of course, cost a lot of money, and you should endeavor to make it possible for an employer, with an approvable plan, to read the text of the law and see that it is approvable. If he can do that, it will save the Bureau of Internal Revenue a lot of inquiries about specific plans. It will avoid litigation, and it will avoid the unnecessary discontinuance or suspension of perfectly sound plans by companies which do not dare take a chance on the ultimate deductibility of their pension contributions.

Of course, we realize that it is impossible to set up in a bill exhaustive standards by which you can judge every possible pension plan that may come along, because there are so many different types of pension plans. We suggest, however, that you indicate in the text of the law a very few general standards, thinking that this should serve, by comparison, to validate immediately and clearly the great majority of acceptable plans, leaving only a minority of border-line plans for special study by the Bureau of Internal Revenue. Now, we have a specific suggestion to this effect but, unfortunately, it is now only half drafted and I should like permission to write you, giving you our specific suggestions in writing. But this suggestion will probably run to the effect that "a stock bonus, pension, or profit-sharing plan shall not be considered discriminatory within the meaning of the requirements of section 165 (a) merely because the benefits to employees are substantially in proportion to their rates of compensation." That is stated in the House report, but it is not stated in the bill itself. Nor merely because it is designed to exclude employees none of whose remuneration is excluded from "wages" by section 1426 (a) (1), the Social Security Act old-age tax provision.

That is to say, plans may exclude employees earning less than $3,000 per year who are covered by the Social Security Act. They can, as stated by the House Ways and Means Committee report, be acceptable, but we feel it should be stated in the law itself.

"Nor merely because the benefits to employees based on that part of the employees' remuneration which is excluded by those taxing provisions differ from the benefits based on remuneration not so excluded." That is to say, a plan which provides a lower percentage of salary on the first $3,000 than the percentage of salary allowed on the excess over $3,000 should be validated in the law.

I think it was the intention of the drafters of the bill to allow such a plan, because if you get a certain social-security pension on your first $3 000, it is quite proper and reasonable that your pension from the private plan should be, for example, 1 percent of the first $3,000 of your salary times years of service, and on the excess over $3,000, 2 percent of salary times years of service.

Thus the low-paid employees would be paid 1 percent plus social security, and the high-paid employees would get on the first $3,000, 1 percent of their salary times years of service, and on the balance 2 percent of their salary times years of service.

Senator CLARK. On that matter, for instance, I saw in the paper the other day where Mr. Grace, of Bethlehem Steel Co., drew salaries of $600 000 last year or a little less than $600,000. Do you think he ought to be included in such a plan?

Mr. BEERS. I do not want to take a gratuitous slam against the remuneration of Mr. Grace.

Senator CLARK. I thought of that as an example, because I saw it in the paper last week.

Mr. BEERS. I personally do not go along with the inclusion of a salary of that kind for pension purposes.

Senator CLARK. I have nothing against Mr. Grace personally, simply because I happened to see it in the paper.

Mr. BEERS. If there should be some kind of limit in this bill, I do not think I should take an exception to it, sir.

I want to say there are a great many plans which have been adopted in the last few years which give a higher percentage on salary over $3,000 than on the salary under $3,000, and those plans seem reasonable to me and I think they were intended to be included in this legislation. If they were intended to be included, it should be so stated, because I am afraid otherwise it would be impossible for any employer to feel that he could prove they were included, in which case he would be scared to death to pay out any money for fear that it would not be deductible. As pointed out by the last speaker, it is pretty hard to find money to pay nondeductible expenses in these days, and pension plans, particularly group annuity plans, are very expensive to employers.

Senator VANDENBERG. You are sustained by the sentence which I read a moment ago from the House Ways and Means Committee report, which I will read:

> Determination of benefits according to a fixed percentage of wages should not be considered discriminatory even though it results in larger benefits to highly paid employees.

Mr. BEERS. Even that sentence, sir, does not seem to me to go far enough to cover the plan I am talking about.

Senator TAFT. You mean, if the pension plan plus what they get from social security is in proportion to the salary, then that shall not be considered discriminatory?

Mr. BEERS. Yes, sir. I think the law should provide the test which you have just stated, and that it ought to be provided in the law and not merely in a committee report or reports, because my legal friends tell me you cannot read the committee report unless the law is vague, or something like that.

The CHAIRMAN. You will have these suggestions written out?

Mr. BEERS. We will ask permission to write you, and if you wish, you can put them in your record, or do whatever is proper.

The CHAIRMAN. We will be very glad to put them in the record. We will be very glad to have them by the time we reach the executive session stage.

Mr. BEERE. I will get them to you, I hope, in the next few days.

The CHAIRMAN. You will have time.

Mr. BEERS. The next point I want to bring up is about the two sections of this bill about discrimination: Section 165 (a) contains two different kinds of discrimination. One is discrimination in favor of officers, shareholders, supervisory employees, highly compensated employees. That is section 165 (a) (3) (B), and the next subsection is (4), which subsection says that the discrimination shall not be in favor of any employee whose compensation is greater than that of other employees.

We have not been able to find any very good reason for these two different kinds of discrimination. We suggest it may lead to a great deal of difficulty and hairsplitting, and so forth. We suggest you use the same kind of discrimination in both subsections; namely, that you declare against discrimination in favor of officers, shareholders, employees whose principal duties are the supervising of other employees, and highly compensated employees.

I have not intended to change the language of section 165 (a) (3) (B). I am quoting from memory.

Senator DANAHER. That is substantially correct.

Mr. BEERS. Thank you, Senator.

Now, my third point is this: Section 165 (a) (3) says that the plan must be offered to 70 percent of all employees of over 5 years' service, or to a certain class of employees approved by the Commissioner.

A good many plans are contributory, and there is always a minority of employees who will not accept the benefit of a plan for any contribution whatsoever, so they stay out, and we suggest and ask that you change the language there to read that the plan must be offered to at least 70 percent of the employees, and so forth, instead of that the plan must benefit 70 percent of the employees.

I do not think it was the intention of the drafters to require that 70 percent be covered, but only that 70 percent be offered coverage, and if that was the intention, I think it should be made clear in the bill.

Senator VANDENBERG. Or 70 percent of eligible employees.

Mr. BEERS. Yes, sir. "Eligible" is a good word.

Now my fourth point—and I am getting to the end of these notes—is that section 165 (a) (2), which says that the trust fund must not be

diverted to purposes other than the exclusive benefit of the employees, the wording of that section does not seem to fit the requirements of a good many group annuity contracts which we believe your committee would feel to be acceptable.

It is a rather technical point, and we ask permission to file our specific suggestions in writing with respect to this and also with respect to a few other minor points.

It now looks as if, from a drafting standpoint, we may make the suggestion that the rules applying to group annuity contracts be stated separately, but if we do, that would merely be for drafting reasons and to assist rather than to confuse your drafters in their work of making such changes as your committee decides upon.

Senator VANDENBERG. Could that language be construed to exclude death benefits to the family of an employee?

Mr. BEERS. I have not thought of that, sir. In general, group annuity contracts provide only that employees' contributions to the plan will be returned, usually with interest, sometimes without, to the employee's beneficiary. There is usually no benefit from the employer's contribution to the employee's family. I haven't got any point along that line, and I think probably from a group annuity standpoint the bill is all right in that respect.

Senator RADCLIFFE. You suggest that the benefits must be offered to at least 70 percent?

Mr. BEERS. Yes.

Senator RADCLIFFE. Would you fix any minimum limit as to what percentage you should expect to set up?

Mr. BEERS. It would not be objectionable to us, I think, except for this reason: There might be a time when a plan covering the minimum limit you state fell below that minimum limit. There might be a new campaign, as we call it, and the percentage of employees might be improved, but then we could not say that that plan met the test throughout the whole of the taxable year, and we would be in trouble again.

Senator RADCLIFFE. What about if only 20 percent subscribed to the plan?

Mr. BEERS. If only 20 percent, or 5 percent, or something, subscribed to the plan, I suspect, sir, you would find that the scheme of contributions was discriminatory in favor of a limited class, so the plan would be thrown out anyway.

Senator RADCLIFFE. You would not suggest an arbitrary minimum?

Mr. BEERS. I should not suggest an arbitrary minimum; I should say once you had what is a reasonable minimum it does not seem unreasonable.

Senator DANAHER. Please do not depart from section 165 (a) (2) for a moment. You said your possible suggestion with reference to it is highly technical and you would like later to submit a further memorandum with reference to it, but in order that we may test your suggestion when you submit it, will you now elaborate on your comment as to why you imply a criticism of the language of section 165 (a) (2)?

Mr. BEERS. Yes, sir. Group annuity contracts generally provide, as far as I know always provide, that if an employee, under certain circumstances, leaves the employment before he has completed certain vesting requirements, if the employee is in good health at that time, the employer is entitled to have the money he paid for that employee's

benefits reapplied it to purchase benefits for other employees. Or to state it in more ordinary language, he gets a refund which he has to apply against his current premiums. However, it is conceivable in any case that the refunds due at that time might exceed any premiums payable then or in the near future.

That happened to us in one case where a lot of employees withdrew all at once. The employer did wait a long while before he got all that refund, and in the meantime he did not pay any premiums. Under our contracts, therefore, in such a case the employer has the option of drawing out in cash usually 95 percent of the amount he could have received as a credit. Under the present law if he did that he would, of course, have to show what he drew out as being income at that time. But such a plan would not meet the strict test that no part of the corpus or interest could be applied other than for the benefit of the employee.

Senator TAFT. It seems to me it would be distinctly prohibited by this section.

Mr. BEERS. You are right, sir.

Senator TAFT. It is not a technical question; it seems to me to be a question of principle whether once an employer has paid this in, he should be able to get it back in any way or not. The Treasury says not, I take it. They say under such plan you have to change your plan. Hereafter that money would have to be added, I take it, to the corpus of the fund for the benefit of other employees, and they would have to go ahead and pay a premium besides, I should think.

Mr. BEERS. If the return is used to pay part of the employer's premium in the year in which the return comes due, or in some subsequent year, I do not think that you could say that that money was not being used for the exclusive benefit of the employees, although some of us feel that the law ought to make that clear.

Senator TAFT. Take the ordinary fund in which the insurance company is involved, the fund gradually accumulates a reserve perhaps because of the fact that employees have withdrawn, or because of other facts, and that reserve I suppose has to stay there under this rule for the benefit of the other employees who are in the fund.

Mr. BEERS. That is right.

Senator TAFT. On the other hand, I suppose the employer might reduce his payments thereafter and still comply with the provisions of the fund.

Mr. BEERS. That is right.

Senator TAFT. It seems to me subsection (2) requires a clarification as to just what we are trying to do. If that is permitted, I think it ought to be clearly stated.

Mr. BEERS. I think it is arguable whether, under any circumstances whatever, a net return could be made to an employer. I am not sure that the intention of the present bill is not a correct one. On the other hand, group annuity contracts differ from a good many pension trust funds in that under a group annuity contract the employer buys the full benefit for each person employed, without discounting his payments by reason of the probability that a number of his present employees will leave service between now and retirement. Well, in a great many pension trust funds he discounts his payment by reason of probable future withdrawals. Therefore, you would be, in a sense, discriminating against group annuity contracts, if you apply the same

rule to both. I am not sure you will not decide to do that—I think, in any event, some clarification of language is going to be needed.

Senator TAFT. We have had called to our attention here a fund in which the employee makes no contribution.

Mr. BEERS. Yes, sir.

Senator TAFT. The employer has paid, for years, 1 percent. It has been the custom when the employee leaves the service, if he does leave it voluntarily to withdraw the money that he put in there for that employee, where he put it all in himself.

Mr. BEERS. Yes, sir.

Senator TAFT. I suppose that would be prohibited by this section (2), also.

Mr. BEERS. Does not that depend on whether the withdrawal is less than this year's net payment?

Senator TAFT. If that is the case, subsection (2) ought to say it.

Mr. BEERS. I think it ought to say so; that is, if the employer uses a credit to pay part of this year's premium he is certainly using the credit for the benefit of the employees. On the other hand, somebody else might take the other attitude.

Senator DANAHER. Mr. Chairman, may I ask the witness a question that is collateral to this subject?

The CHAIRMAN. Yes, Senator.

Senator DANAHER. Are you, by any chance, familiar with the system of the Bell Telephone Co. with reference to its employees?

Mr. BEERS. I am very sorry; I have only a very general familiarity which does not go into details, sir.

The CHAIRMAN. All right.

Mr. BEERS. The next point I want to make is that on page 113, the first five lines, it is stated that an employee is taxed on past employer contributions if his benefits change from a forfeitable to a nonforfeitable status. I believe that this should be restricted to employer contributions made in a taxable year beginning after December 31, 1941, or otherwise you would tax the employee in the future on payments made by the employer a long time ago, when the tax situation was different. I do not think that is a proper retroactive feature, and I think you will find my suggestion will remove it, but that again is a matter of detail.

I have one more specific point, namely, that many group annuity contracts are going to require minor changes to conform to the new requirements. This will present a drafting problem. We have to get the contract amendments approved by the employers' lawyers and our lawyers, and sometimes the insurance department, and even stockholders' approval will have to be obtained. Under the present bill I think all this will have to be done before December 31. We should like to ask that at least 1 year after the date of enactment be given to make those changes because of all the things that have to be done and the steps to be gone through. I do not think it will change the net tax collections at all if you do that.

My comments go into matters of detail rather than matters of broad, general principle. My excuse for asking permission to address you this morning is that it seems to me very clear that the present bill, section 165 (a), looks to be a lot more restrictive than it was intended to be, that it is possible to change that situation, and that if it is not corrected a lot of harm may be done to many thousands

of employees through the discontinuance of the pension plans by which they are now covered, which, in realty, are perfectly sound from every point of view, but which the employer will not dare take a chance on on account of the very high tax rate that he would have to pay if his contributions were not deductible.

Senator DANAHER. Mr. Chairman, I would like to ask Mr. Beers to look at two paragraphs of a letter that I have here, which bear specifically on the problem before us, and I will ask him if he would read them for the information of the committee, so that we might have the benefit of his actuarial views with reference to that. Could we spare him another 2 minutes on that account?

The CHAIRMAN. Yes, sir.

Mr. BEERS. Senator Danaher used the word "actuarial." I am a fellow of the Actuarial Society of America. The paragraphs read:

> I have read in a summary of the Treasury Department's recent tax proposals that tax exemption will not be accorded to pension trust unless the rights of employees thereunder are fully vested. The Southern New England Telephone Co., with its 5,200 employees, has had a pension plan with a trust fund based on actuarial principles for more than 15 years. Under the terms of this plan, pensions are determined by the application of a common formula to officers and employees alike. Employees make no payments, but the trust fund, built up by annual contributions of the company, is irrevocably dedicated to service pensions.
>
> If the Treasury's proposal becomes law, one of the actuarial bases of the pension plan will be destroyed for the fund will be depleted every time an employee leaves the company. Our studies indicate that the cost of any attempt to make up this depletion or the expense if the pension trust fund does not continue tax exempt, would, in either case, be so prohibitive that the company would have no alternative but to terminate the entire pension plan.

This is a letter from the Southern New England Telephone Co., dated March 19, 1942, to the Honorable John A. Danaher, from Mr. E. L. Simonds, vice president.

Senator DANAHER. That is correct. Would you choose to comment on his criticism of this language? It ties in with what I think you are criticizing at the top of page 113.

Senator TAFT. Why would the fund be depleted when an employee retires?

Mr. BEERS. Under the Bell system pension plan, the pension benefits are contingent on an employee staying with the company until he achieves pension status. That is, I think he has to reach age 65 after 20 years of service, or age 60 after 25 years of service, or age 50 after 30 years of service, or something of that sort. If he leaves before that time, say at the age of 40, after 15 years of service, he is entitled to no benefits. The original proposal being studied by the House at the time that letter was written was that such an employee must be allowed to take away with him a pension credit, so when he reached age 65 he would be entitled to that money under the Bell system.

The CHAIRMAN. That was not included in the bill?

Mr. BEERS. That was not included in the bill.

The CHAIRMAN. It was evidently based upon the original recommendation of the Treasury.

Mr. BEERS. Yes; that is right, sir.

(Senator Danaher referred to p. 113 of the bill, H. R. 7378, as passed by the House.)

Senator DANAHER. The first five lines.

Mr. BEERS. The present bill says that if a plan does not meet the test of section 165 (a) and does not vest immediately, the employer gets no

deduction, but when the benefits do vest the employee has to pay a tax, the employer still gets no deduction. The vesting idea is that the employer's contributions may change from a forfeitable to a nonforfeitable status. The original proposal discussed by that letter is not, I think, in this bill at all.

Senator DANAHER. All right. Thank you very much.

The CHAIRMAN. Thank you very much, Mr. Beers.

Mr. BEERS. Thank you.

The CHAIRMAN. Mr. Forster.

(The following letter was submitted by Mr. Beers:)

AETNA LIFE INSURANCE CO.,
Hartford, Conn., August 5, 1942.

THE SENATE COMMITTEE ON FINANCE,
United States Senate, Washington, D. C.

Re Section 144 of the Revenue Bill of 1942, H. R. 7378.

GENTLEMEN: At the hearing held before your committee on July 31 in regard to section 141 of the revenue bill of 1942, relating to employees' trusts and annuity plans, I appeared on behalf of a special committee of the Association of Life Insurance Presidents which had been appointed to consider this section of the new bill. You kindly granted us permission to file later in writing our suggestions as to changes which it might be desirable to make in section 144 of the bill. This letter is written pursuant to that permission.

This committee, as stated at the hearing, only undertakes to speak for life insurance companies which provide pension plans for employers and employees through group annuity contracts and in the particular interest of those employers who have heretofore purchased such contracts and are making retirement provision for their employees thereunder. Such contracts now have been issued to more than 1,000 employers, large and small, covering some 800,000 employees.

We have no objection to the objectives represented by the House bill. We are, however, solicitous that no undue hardship be worked by new legislation upon employers who have heretofore in good faith and in the light of then existing tax legislation made provision by means of group annuity plans for the retirement of their employees, nor upon the employees covered by such plans. This committee, as suggested at the hearing, believes that to avoid the possibility of any such hardship, clarification of the House bill in several respects, as outlined herein, is desirable.

The following changes should, in the opinion of our committee, be made in section 144.

(1) Section 165 (a) (3) now states that one of the requirements to qualify a plan under that section is that the plan shall "benefit" either (*a*) 70 percent or more of all employees with certain stated exceptions or (*b*) such employees as qualify under certain tests. Group annuity contracts are usually written on a contributory basis, under which the cost is paid in part by the employer and in part by the employees for whose benefit the contract is made. Some employees may not choose to make or to continue to make the contributions which are required in order to avail themselves of the benefits of the plan. We believe that a plan which makes the benefits available to 70 percent or more of all the employees of an employer, subject to the exclusions mentioned in section 165 (a) (3) (A), and which meets the requirements of section 165 (a) (4) should be considered a qualified plan, even though the percentage of employees actually subscribing may fall somewhat below 70 percent. We therefore suggest that the word "benefit" in line 15 on page 111 of the House bill be changed to "offer benefits to".

However, if the Senate committee concludes that the test should be based on the percentage of employees who actually subscribe to the plan, rather than on the percentage of employees to whom its benefits are made available, then we suggest that "70 per centum" be changed to "50 per centum." We believe that a plan which actually covers at least 50 percent of permanent employees with more than 5 years' service and which meets the test of section 165 (a) (4) should be considered a qualified plan without its having to be specially passed upon by the Commissioner. As between these two suggestions, however, we would prefer the first.

(2) Section 165 (a) (3) (B) requires that a plan qualify under a classification set up by the employer and found by the Commissioner not to be discriminatory in favor of employees who are officers, shareholders, persons whose principal duties consist in supervising the work of other employees, or highly compensated employees. This provision relates to the classification of employees to whom benefits are offered. Section 165 (a) (4) relates to the contributions and benefits under the plan and requires that such contributions or benefits do not have the effect of discriminating in favor of any employee whose compensation is greater than that of other employees. We do not know why one test for discrimination is set up in section 165 (a) (3) (B) and another test in section 165 (a) (4). We believe that this will unnecessarily complicate the administration of the act. We further believe that the test set up in section 165 (a) (4) would be apt to prevent plans from being considered qualified which should be considered qualified. As an example, an employer may have a pension plan under the terms of which all employees who are on a salary basis will be provided with pensions strictly in proportion to salary, but employees who are working on an hourly basis or who are paid by commission may be provided with a pension based entirely on the number of years of service or on some other basis different from that used in determining the pensions of salaried employees. It should not be hard to determine whether such a plan is discriminatory in favor of employees who are officers, shareholders, supervisory employees, or highly compensated employees, but it might be very difficult to determine whether the plan, as between the salaried employees and other classes of employees, discriminates in favor of any employee whose compensation is greater than that of other employees. We therefore suggest that the same test be made applicable to contributions and benefits as is applicable to eligibility, which can be done by eliminating the words "have the effect of discriminating in favor of any employee whose compensation is greater than that of other employees" in lines 11 to 13 on page 112 of the House bill and inserting in place thereof the words "discriminate in favor of employees who are officers, shareholders, persons whose principal duties consist in supervising the work of other employees, or highly compensated employees."

(3) The House committee report on the bill indicates that it is not the intention of the bill to outlaw pension plans which make the pensions proportionate to the compensation of the employees covered under the plan nor which supplement the benefits payable under the Social Security Act or the Carriers Taxing Act of 1937. While this intention seems clear from the report of the House committee, we do not feel that it is made clear in the bill itself. It is our understanding that committee reports and comment on the floor of the legislative body during debate are not necessarily binding in the construction of an act after it is passed, even though they may be admissible to show the intent of the legislative body where the bill is ambiguous. We feel that it would be much more desirable to have the intent of Congress on these points expressed in the bill itself. We therefore suggest the insertion at the end of section 165 (a), which would be between lines 13 and 14 on page 112 of the House bill, of a sentence reading as follows:

"A pension plan shall not be considered discriminatory within the meaning of either of the foregoing requirements merely because the benefits for the employees or for qualified classes of employees bear a uniform relationship to their rates of compensation; nor merely because it is designed to exclude employees none of whose remuneration is excluded from 'wages' by section 1426 (a) (1); nor merely because the benefits (or benefits and corresponding contributions) based on that part of an employee's remuneration which is excluded from 'wages' by section 1426 (a) (1) differ from the benefits (or benefits and corresponding contributions) based on employees' remuneration not so excluded, or differ because of any retirement benefits available to employees under any retirement plan created or authorized under State or Federal law."

(4) The heading of section 23 (p) of the Internal Revenue Code as amended by the bill reads: "(p) Compensation paid for personal services under a trust, annuity, or deferred payment plan." Section 23 (p) relates to deductions allowed the employer. It is the contributions of the employer to the trust, annuity, or deferred payment plan with which section 23 (p) deals. These contributions may be held in trust and accumulated for the employees or they may be applied to purchase annuity or other benefits for the employees. Such contributions have not been treated as compensation under the Internal Revenue Code nor under various other existing Federal laws. We believe that the intent of the subsection would be clearer if the words "compensation paid for personal serv-

fees" in its heading (p. 113, line 9, of the House bill) were struck out and the words "employer's contributions" substituted therefor. This will require corresponding changes in the wording of this subsection on pages 113, 114, and 115 of the House bill. For instance, the first sentence (p. 113, line 12 ff) might be made to read:

"Employer's contributions paid or accrued on account of his employees under a stock-bonus, pension, profit-sharing, or annuity plan, or similar plan shall not be deductible, etc."

(5) An employer who enters into a group annuity contract with an insurance company in order to provide pensions for his employees frequently purchases past service annuities (say, 1 percent of salary for each year of past service) in addition to the annuities provided with respect to current service. Both employer and employees usually contribute to the cost of the current service annuities but almost invariably the employer pays the entire cost of the past service annuities, which are frequently on a lower basis, expressed in terms of percentage of salary and length of service, than the current service annuities. The payment for the past service annuities may be a single payment made at the time the annuity contract is issued. One of the reasons for the limitation on the deductibility of an employer's contributions from income which is proposed to be made by section 23 (p) (1) (A) of the bill is to prevent an employer from taking the entire cost of the past service annuities as a deduction in 1 or 2 years. With that intention our committee is in sympathy. We are not making any recommendation as to the percentage of compensation which an employer should be allowed to deduct in a single year, as that point has been fully covered by other witnesses who appeared before the Senate Committee on Finance at the hearing on July 31. We do, however, believe that the restriction in the House bill is too drastic and trust that the Senate Committee on Finance will give careful consideration to the views on this point expressed by Mr. Forster and some of the other witnesses at the hearing who spoke in regard to it.

(6) The cost of annuities varies, of course, in accordance with the age of the annuitant at the time the contract is purchased and at the age at which retirement will occur. Obviously, if a pension plan contemplates that all annuities will start at age 65 and will all be based on the same percentage of the respective salaries of employees for whom they are purchased, the employer is going to have to pay a much larger sum to purchase an annuity for an employee who is 63 at the time the contract is made than for an employee who is then 43. We believe that it is the intent of the House bill that the employer shall be allowed a deduction not in excess of 5 percent of the aggregate compensation to all the persons who are included in the plan, and not that the limitation shall be applied with respect to the compensation of each individual. In order that this may be made entirely clear we suggest that the words "any employee" in line 14 on page 113 be changed to "his employees" (see par. 4, supra) and that line 24 on page 113 and lines 1 to 4, inclusive, on page 114 of the House bill be changed to read:

"* * * of ____ per centum of the aggregate compensation otherwise paid or accrued during the taxable year to all the persons who are beneficiaries of the trust. The excess of the employer's contributions in such taxable year over such ____ per centum shall be deductible in equal * * *."

If this change is made, then the same change should be made in lines 11 to 17, inclusive, on page 115 of the House bill.

Of course, if the suggestions made by other witnesses at the hearing that the employer be allowed to deduct the full amount of current service annuity cost plus a percentage of the cost of past service annuities in any one taxable year should be adopted, the language we are suggesting would not be appropriate. In any event, we feel that the percentage of deduction allowed should be related to the aggregate compensation of all employees covered under the plan rather than to the compensation of each individual. There is no danger in this from the standpoint of discrimination among the individual employees, since that point will be taken care of by section 165 (a).

(7) The House bill proposes to add a provision relating to the taxation of employees' annuities to section 22 (b) (2) of the Internal Revenue Code (see pp. 117 and 118 of the House bill). This new provision requires that if an annuity contract is purchased by an employer for an employee not in accordance with a plan which would meet the requirements of section 165 (a), and if the employee's right under the contract is nonforfeitable except for failure to pay future pre-

miums, the amount paid by the employer for such annuity contract shall be included in the income of the employee in the year in which the amount is paid. It also provides that if the employee's right changes from forfeitable to nonforfeitable, the amount paid by the employer shall be included in the income of the employee in the year in which the change occurs.

It is not improbable that some employers now have pension plans in effect which they will be unable or unwilling to bring within the requirements of section 165 (a). The employer may therefore drop the plan entirely. The rights of the employees may thereupon become fixed or unforfeitable. It is not unusual for a group annuity contract to provide that an employee's right to that portion of the annuity purchased by an employer's contributions will terminate upon termination of employment while the contract is being continued, but that the employee's right to the annuity purchased by employer's contributions becomes fixed on discontinuance of the contract by the employer. Many contracts also provide that the employee's right becomes fixed irrespective of the continuation of employment after he has been covered under the plan for a certain number of years. If for any reason a plan including provisions such as those just described was not eligible under section 165 (a), and if the employer decided that he could not change the plan so as to make it eligible, it appears to us that section 22 (b) (2) (B) of the bill would make the employees covered under the plan subject to income tax for 1942 or some subsequent year on all the payments theretofore made by the employer on their behalf. This would, we believe, be true, notwithstanding subsection (d) of section 144 of the bill, which states that the amendments shall be applicable only with respect to taxable years beginning after December 31, 1941, because it would be in 1942 or thereafter that the employee's rights become nonforfeitable. The inclusion in the 1942 income of an employee of the accumulated payments made by the employer over a period of years might easily result in his financial ruin, and we feel sure that this was not a result intended by the draftsman of the House bill. To avoid this result, we suggest adding at the end of subparagraph 22 (b) (2) (B) the following new sentence, "The two preceding sentences shall apply only to amounts paid by the employer after the date of enactment of this act."

(8) Subsection (d) of section 144 of the House bill (pp. 118 and 119 of the bill) provides that a plan in existence on the date of enactment of the act shall be considered as satisfying the requirements of section 165 (a) for the first taxable year to which that subsection as amended is applicable if the plan satisfied such requirements by the last day of such taxable year. This apparently applies to the taxable status of both employer and employees. It is probable that the revenue bill of 1942 will not be finally enacted until some time in the fall, which would give a very limited time for a nonconforming plan to be brought into conformity with section 165 (a), as amended. In order to bring many nonconforming plans within the requirements of section 165 (a) it will be necessary to have changes approved not only by the directors of an employer corporation but by the stockholders, and in some instances by regulatory bodies. The consent of the individuals covered under the plan will in some instances have to be obtained in order for the required changes to be effective. New contracts or trust agreements will have to be prepared or existing ones amended. It will be difficult, if not impossible, for an insurance company, which might have to work simultaneously on a great many contracts purchased from it by different employers, to make the necessary changes within the time required by the House bill. Moreover, many such amended plans will require the approval of the Commissioner of Internal Revenue as to compliance. We therefore strongly recommend that the words "for the first taxable year" in lines 2 and 3 on page 119 of the House bill be changed to read "for the whole of the first two taxable years" and that the words "forming a part of the plan by the last day of such first taxable year satisfy such requirements" by changed to read "forming a part of the plan satisfy such requirements by the last day of such first taxable year or within 1 year after enactment of this act, whichever is later."

There are two more points with which our committee is concerned. The first of these is whether sections 165 (a) (1) and (2) are intended to apply to group annuity contracts. We feel they are not, but if they are we believe clarification of the language is necessary. The other is with respect to clarification of the meaning of the words "forfeitable" and "nonforfeitable" where they occur in several places in section 144 of the bill. We trust both these matters will have the careful consideration of your committee and that we may have permission, should we find it desirable, to submit specific suggestions with respect to them.

If the subcommittee of the Senate Finance Committee which has been appointed to give consideration to Section 144 of the House bill desires further discussion of any of the points mentioned in this letter, or of any other point in connection with the application of that section to group annuity plans, I and other members of our committee will be glad to furnish any assistance within our power and to come to Washington for further discussion, if that is desired.

Respectfully yours,

HENRY S. BEERS,

Chairman, Special Committee of the Association of Life Insurance Presidents.

STATEMENT OF H. WALTER FORSTER, PRESIDENT OF TOWERS, PERRIN, FORSTER & CROSBY, INC., PHILADELPHIA, PA.

The CHAIRMAN. Mr. Forster, you may give your name and business connections to the reporter.

Mr. FORSTER. I am H. Walter Forster, president of Towers, Perrin, Forster & Crosby, Inc., of Philadelphia, one of whose divisions has acted in a consulting capacity in relation to pension, profit-sharing, and employee insurance plans for over 25 years. We have helped scores of corporations establish such plans, covering several hundred thousand employees. These plans vary greatly in character, and cover, I believe, about every type which is socially and economically sound.

The revenue bill of 1942, section 144, changes substantially the provisions of law governing the tax treatment of pension, stock bonus, and profit-sharing plans. I would like to raise four specific objections to those provisions of the bill, viz:

(1) The limitations on the amount deductible by the employer are unsound.

(2) The employer is denied the right provided for under the present law to recover any portion of his contributions in excess of all liabilities under the plan.

(3) The bill does not provide adequate time within which to conform existing plans to the proposed requirements.

(4) Stock bonus and profit-sharing plans must under the bill comply with the standards prescribed for pension plans, although they are radically different in character.

I shall now take up each of these points.

1. *Limitation of employer deductions.*—Under the provisions of the House bill, the employer's deduction for contributions to a pension plan or trust is limited to 5 percent of the eligible employees' compensation; any payment in excess of such 5 percent must be spread over 5 years. This is a wholly arbitrary limitation which is contrary to sound pension practice and is not necessary in the interest of the revenue.

Under existing law, the contributions made by an employer to a pension trust attributable to current services are deductible in full in the year made; contributions made to such a trust to cover past services are deductible over a 10-year period. Where the employer purchases annuities for the employees directly from an insurance company, the amounts paid by the employer both for past and current services are deductible in the year paid.

Obviously, annuity plans at present have an advantage over pension trusts, since the past service contributions are deductible in full in the

case of an annuity plan while such contributions have to be spread over 10 years in the case of a pension trust.

The Treasury proposal of March 23, 1942, was designed to equalize the treatment between these two types of plans by providing that, whether an annuity plan or a pension trust was involved, the employer should get a current deduction for the amount actuarially required to meet his current liabilities, and that any excess was to be deducted over a 5-year period. A 5-percent limitation was suggested merely as a "rule of thumb," and represented the amount which would be allowed in any case as a current deduction without having the employer prove the necessity for it by actuarial computations.

However, the House bill adopted the 5-percent limitation without also adopting the Treasury proposal permitting the taxpayer to deduct the full amount of his proved current liabilities. Thus, as the bill now stands, an artificial limitation has been imposed, which has absolutely no significance taxwise or from a pension standpoint.

Moreover, a limitation of 5 percent, or any other fixed percentage, will discriminate against many plans. Some plans cost more than others, (*a*) because the industry involved—as airlines—requires a younger retirement age, (*b*) because the average age of the employees involved is higher, or (*c*) because there is a greater proportion of women than men. Under many plans, therefore, the employer's current cost is substantially in excess of 5 percent of the eligible employees' compensation. For these and similar reasons there is no percentage which can be fixed as a proper maximum deduction for all situations, and adopting an arbitrary limitation may result in such a hardship as to necessitate reducing benefits or even discontinuing plans.

The requirement of a 5-year spread of any contribution in excess of 5 percent will also discourage companies from adopting plans or continuing existing plans. For example, assume an employer has to pay into his plan in 1942 for current services 10 percent of his pay roll, or $100,000. Based on the 5-percent limitation, he would be permitted to deduct $50,000 of that amount in that year. Based on the rule requiring a 5-year spread, he is permitted to have an additional deduction in that year of $10,000 (being one-fifth of the excess $50,000). On the $40,000 not allowed as a deduction, this year, the employer will have to pay a tax of approximately $36,000 (assuming a 90-percent rate). This means that the employer must spend $136,000 this year in order to put $100,000 into a pension plan for the exclusive benefit of his employees. It is obvious what the effect of such a limitation will be upon the creation of new plans and the continuation of existing plans.

Furthermore, an employer will be reluctant to pay out money now and have the deduction for some portion of that deferred for as much as 4 years in the future, when there is no assurance that he will have profits in such future years against which to take the deduction.

For these reasons, I suggest that the provisions of the House bill be modified so that, first, the employer will be entitled to a deduction in the current year for the full amount contributed to take care of his liability for current services, which is permitted under existing law, and has not given rise to any difficulties, and that, second, the employer be allowed in addition to charge off in full in any year an

amount not in excess of one-fifth of his total liability for past services.

2. *Recovery of unnecessary reserves.*—Section 165 of the Internal Revenue Code gives a trust tax deferred status if—

> * * * it is impossible, at any time prior to the satisfaction of all liabilities with respect to employees under the trust, for any part of the corpus or income to be (within the taxable year or thereafter) used for, or diverted to, purposes other than for the exclusive benefit of his employees, * * *

Under this provision, the employer could recover any reserves if a plan is terminated and if its assets are in excess of those required to satisfy all liabilities under it. Of course the employer, having been allowed a tax credit on the money paid in, would have to pay a tax on the money recovered.

The present bill eliminates the provision permitting the employer to recover any portion of the funds in excess of his liability under the plan. This change is highly undesirable. It is impossible on sound pension plan financing to avoid the possibility of excess reserves. This is true whether a plan is insured, or its assets are invested by a trustee. Such financing must always be made against future contingencies. Employees may die faster than anticipated. They may leave service more rapidly than assumed. Capital gains and interest may increase the assets beyond those required.

There is no social disadvantage of tax impropriety in continuing the present provision permitting the recovery of unnecessary reserves (*a*) so long as the contributions are limited to reasonable actuarial requirements for promised benefits, (*b*) so long as the only amount which can be recovered is that which is in excess of the liabilities under the plan, and (*c*) so long as the recovery will be subject to tax in the hands of the employer.

3. *Time to conform to requirements.*—This bill gives an employer until the end of his first taxable year under the Revenue Act of 1942, within which to conform existing plans to the requirements of the new bill. This will not give many employers sufficient time in which to make the necessary changes. For example, this bill will probably not become law until September. If the taxpayer is on the calendar-year basis, he will have 3 months in which to conform his plan. But many plans will require amendments of irrevocable trust instruments which will necessitate securing the consents of thousands of employees and possibly invoking the jurisdiction of local courts. Others will necessitate the revision of highly intricate annuity contracts, again with the consent of the participants in the plan as well as the insurance companies. Action by the board of directors, and approval by stockholders, will have to be obtained in most instances. All this could not be done within the time allowed.

The 1938 Revenue Act allowed the taxpayer until the end of 1939 to conform to the irrevocability requirements in section 165. This was later extended to the end of 1940. Yet that was a relatively simple matter compared to the changes the new law will require of many existing plans. Accordingly, I suggest that the taxpayer be given more time and have until the end of 1943 to qualify under the 1942 law.

4. *Stock-bonus and profit-sharing plans.*—While the eligibility and nondiscrimination provisions of the House bill are generally workable for pension plans, the same type of limitation is wholly inappli-

cable to stock-bonus and profit-sharing plans, since such plans serve a basically different purpose. Pension plans are intended primarily to clear the pay roll of old and inefficient employees. Stock-bonus and profit-sharing plans, on the other hand, are designed to provide employees, particularly those who are in a position to influence profits, with a substantial incentive to introduce original ideas and improvements and to resist competitive offers of employment which, today, is a very important matter. In effect, such plans may be said to adjust the compensation of employees whose true value to the business is not accurately determinable in advance of the appearance of the results of the year's operations.

To distribute the amounts credited to each employee under a profit-sharing plan entirely in cash is highly undesirable——

Senator TAFT (interposing). He will not get much if he raises his salary.

Mr. FORSTER. That is true, particularly those in the higher wage brackets. I feel that vigorously.

To distribute the amounts credited to each employee under a profit-sharing plan entirely in cash is highly undesirable, because this encourages gearing the employees' standard of living to extraordinary distributions rather than to fixed salary, and because such cash payments have an inflationary effect. These disadvantages are eliminated if such contributions are put into a trust which defers the benefits. Thus instead of receiving the very irregular income which would arise from the cash distributions, the eligible employees are enabled to enjoy a comparatively stable income during their working years, and at the same time to make some provision for income after their earnings decline or disappear.

To conform with the eligibility and nondiscrimination requirements of the House bill would prevent profit-sharing plans from serving the purposes for which they are intended; which Mr. Sturtevant covered in a very excellent manner. On the other hand, if such plans do not conform to the requirements of section 165, they cannot be continued because the employees would be taxed currently on payments, the receipt of which is deferred. Employees would have to pay out of their regular earnings income tax upon the deferred benefits, which is impractical at present rates.

Moreover, the application of the 5-percent limitation to profit-sharing plans is obviously impractical. A profit-sharing plan is adopted in many instances by companies which have fluctuating earnings; thus distributions are made only in good years. To require such a company to carry over any portion of an amount in excess of 5 percent conflicts with the purpose of adopting such a plan, since it will require postponing the deduction for profits earned in good years to years when profits are low or nonexistent.

My suggestion therefore is (*a*) that the present provisions regarding eligibility and nondiscrimination be restricted to pension plans and trusts; (*b*) that a new section be written covering stock bonus and profit-sharing plans, in which appropriate restrictions can be inserted preventing the distribution of dividends to stockholders through the guise of a profit-sharing plan; and (*c*) that the existing provisions of section 23 (a), limiting the deduction to reasonable compensation, be used to prevent excessive distributions to officers or other highly compensated employees in connection with profit-sharing plans.

Conclusions.—My conclusions may be summarized as follows:

(1) Taxpayers should be permitted to deduct in full the amount contributed by them each year to a pension plan or trust to cover current services. This is permitted under existing law and was included in the Treasury's proposal of March 23. No sound reason exists for its elimination in the House bill. Taxpayers should also be allowed to charge off in any one year an amount not in excess of one-fifth of their total liability for past services. As suggested by the Treasury, this should be applicable to both pension trusts and annuity plans.

(2) Taxpayers should be permitted to recover amounts contributed to a plan or trust which prove in excess of the actuarial requirements under the plan. This is the provision of existing law, and sufficient safeguards exist to prevent the use of this provision for tax-avoidance purposes.

(3) Taxpayers should have until the end of 1943 within which to conform existing plans and trusts to the requirements of the new law.

(4) Finally, unless this committee wishes to see the elimination of, or a substantial reduction in the benefits under, profit-sharing plans, such plans should not be subjected to the wholly unrelated criteria established for pension plans.

Thank you very much for this opportunity to be heard.

The CHAIRMAN. Thank you, sir.

Mr. FORSTER. Are there any questions that I can answer, sir?

The CHAIRMAN. No questions by any member of the committee. Thank you.

Mr. Hansen.

STATEMENT OF ARTHUR S. HANSEN, CONSULTING ACTUARY, CHICAGO, ILL.

Mr. HANSEN. Mr. Chairman, my name is Arthur S. Hansen, of Chicago, Ill., conulting actuary specializing in employee benefit plans. I do not sell insurance or investments. For the past 15 years, except for teaching, as professor of economics, I have been doing research and professional work on the subject of pension and profit-sharing plans. The work included group and individual plans, insured and trusteed plans, plans for different types of concerns, e. g., railroads, banks, retail, and so on. I had the privilege of being the actuary for the subcommittee of this committee some years ago on profit sharing. I had access to all the data of the many hundreds of plans submitted at that time.

I appear in my own behalf, and in the interest generally of my clients, and I would hope that I can supply some information in view of the experience I have had with these particular plans.

The Treasury has a stated objective to reduce the possibilities of tax avoidance and abuse. This seems to be the main reason for the consideration of this subject at this time.

The present bill is somewhat different from the proposals of the Treasury. It has some desirable features and does, to some extent,

accomplish the stated desires of the Treasury. There are many problems yet to be solved, however, in the proposed language. For my purposes the problems fall into two categories: First, those affecting the typical pension plan, and, secondly, those affecting the incentive profit-sharing plan.

The subject is involved and technical. I shall now cover only the major policy problems. If you wish, later I can submit additional material on the details, rather than taking the time here, except by way of answering questions.

As a little preamble, it might be a good idea to clearly distinguish between the types of plans. There is a hybrid between the pension and profit-sharing plan which makes it confusing and difficult to separate the two types of plans.

There are two possible types of objectives: One is security of the employee in old age, or upon the happening of certain contingencies; the other objective is one of incentive for production or accomplishment. A pension plan basically has for its objective security, and the contributions are usually fixed either in amount or by the benefits promised by the plan in order to accomplish the security objective.

We have in recent years acquired a hybrid which we might call a profit-sharing pension plan, namely, a plan where the objective is still security of the employee after retirement, or other contingencies, but in which the contributions are based upon the profits of the company rather than becoming fixed obligations. That type of plan is, of course, particularly desirable for companies having fluctuating earnings, that are not in a position to obligate themselves to fixed charges, but yet who wish to provide for the security of employees. That plan, incidentally, is sometimes called a pension plan and sometimes called a profit-sharing plan, depending on whether you are looking at the benefits or the mode in which the contributions are made.

Then we have what might properly be called a profit-sharing plan. That is the one having for its objective the incentive of production, or cost savings, and of course the source of contributions in such case would always be profits.

The limited study that we have been able to make in the time we have had since the bill has been out has indicated the following problems: I have listed here nine specific items, some of which have been previously covered by other speakers. I will discuss each one briefly, so as to get into the record the particular items with which we are concerned. The discussion will be abbreviated as much as possible. These nine items affect the pension plans only.

First, we have discrimination. As Mr. Beers has already said, discrimination appears in two places, first in eligibility and, second, in amount. The language differs from the proposal of the Treasury, and from the language in the report. In one of these instances it appears as though the language as it now stands does not, in language, indicate what was intended by the report or even by the Treasury. It is very necessary to have some particular definition of what "discrimination" is.

Now, that involves two things: First, the language, and, second, the matter of policy, as to how far discrimination should be permitted.

The question was raised by the Senator as to what is the difference between "discrimination" and "reasonable." The difference, as I see it, is that discrimination, as used in this bill, is a new word that has never occurred in this connection before in any legislation. "Reasonable" is a word which has been in the revenue laws for many years and has an entire body of rules, regulations, and law behind it. Now, if we could get "discrimination" defined, as well as "reasonableness," it would be satisfactory, but as it stands there are all kinds of possibilities as to what is meant by discrimination.

Provision is also made for having two trusts as part of one plan. The question of discrimination, the application of discrimination, rises immediately. If you have two plans there must be some discrimination, otherwise there would be no necessity for having two plans. So, we have, in one sense, a contradiction in that the law provides for two trusts in one plan and yet it says there should be no discrimination.

There are a host of other things, such as: In one plan we may bring to retirement one group of employees at 60 and another at 65. They may both receive the same dollar benefits, they may both receive the same percentage of salary, but the values of such benefits will be greatly different. Is that discrimination, because the values of the benefits are different? Or if we had the other case where the values of the benefits were the same, would it be discrimination if the amounts were different?

We have, of course, the next problem, the second item, which is forfeiture and nonforfeiture. We have two additional words that are brought in here. We have the same type of situation in that we must have some concise information as to what is meant by forfeiture and nonforfeiture. I think Mr. Beers covered that subject very well. He said, in general, that we should have at least some general standards. I think that is absolutely necessary, in order for any person confronted with this bill to be able to interpret the intention or the policy of the legislature.

The third item is that of recapture. This has also been covered by previous speakers. The present language would require an amendment of practically all of the existing plans. This would require time. In all of the plans having fixed benefits it will be necessary to make actuarial forecasts. It is impossible to know exactly what amounts will be required. In the event of liquidation, change, or termination, if we have this provision it would be necessary to distribute small surpluses that might remain, as a technical result of actuarial estimates, to all of the participants, whereas with the recapture clause it would eliminate such necessity and simply provide for reversion to some one place.

The fourth item is time for adjustment. That has also been discussed before. In order to just accomplish the change in this recapture clause it may be necessary for stockholders to approve, it may be necessary for the court to approve. That takes time, and I think consideration should be given to the extension of time allowed for compliance.

At this moment I am discussing types of problems involved, rather than suggesting means or policies which might be used for taking care of them.

The fifth item would be the division into parts. If a company has more than one plan, as was generally interpreted from the discussions in the House, they would be considered as a whole. The language of this bill, however, is such that only parts which are of the pension type can be considered together, and only parts which are of the profit-sharing type can be considered together. In other words, if the company had a pension plan for a large group of employees and a profit-sharing plan for a small group, they could not be considered together because they are two different types. That may be simply an oversight, but it is something which is very important and must be taken into consideration.

We also, at this point, collide again with the discrimination. It is practically impossible to have more than one plan if we are not to have discrimination.

The sixth item is the 5-percent limitation. That has been discussed by several previous speakers. Apparently it looks like an oversight in the drafting. They left out the provision providing for an amount in excess of 5 percent if the actuarial requirements indicate it is needed.

As it stands now, it is 5 percent. This was intended as a minimum, to eliminate work to prove the right to a deduction, but would become the maximum, because no one would feel that they wished to contribute more than 5 percent if it might be subject to a tax.

The seventh item is one which has not been discussed before, and that is it might be possible under this language to have duplicate taxation. If a plan meets section 165, there seems to be no problem. If the plan does not meet section 165, there is a problem. If the benefits are nonforfeitable, which we still have not interpreted, then there would be no tax to the employer but the employee would be taxed.

Then we have the third category where we have a forfeitable plan which does not qualify. Under that the employer would be taxed apparently in the year in which the contribution was made, but in one of the other provisions the employee would also be taxed when he received a nonforfeitable right. That is another technicality which, of course, must be straightened out.

The eighth point is a problem which has been raised before. That is the matter of beneficiaries. The language should be broadened to include the possibility of payments to beneficiaries as well as to employees without jeopardizing the possibility of qualifying.

The ninth point is one which was discussed in the House, but seemed to have gotten lost somewhere. That is the attempt to eliminate the discrimination between the different types of carriers handling these problems. At the present time the language appears to have eliminated, as Mr. Forster said, the difference between insured and trustee plans, but there is another type of organization known as the mutual benefit association that has not been considered. At the present time there are discriminations against employees' mutual benefit associations. In other words, under a trust or an insured contract the employer receives a tax advantage which is not available to these mutual benefit associations. A very simple addition to section 101 (16) would take care of that. I think it is important that this subject also be brought in, so that we have a uniform treatment of all plans.

These mutual benefit associations generally are made up of employees. They do not have officers who receive salaries and traveling expenses to come down here and appear before you and, as a result, very little has been heard from them.

Senator TAFT. Just how do they work?

Mr. HANSEN. Ordinarily a group of employees of a particular employer form an association, not for profit but for the purpose of providing benefits for themselves in the event of death or disability. Sometimes they carry a cash value, sometimes retirement or unemployment, and so forth.

Senator CONNALLY. Under the statute are not some of those mutual benefit associations exempted?

Mr. HANSEN. Under the statute they are exempted provided 85 percent of the contributions come from the employees. In other words if an employer had an insurance contract to give disability benefits to the employees, where the employer paid 100 percent, it would be a taxable deduction. If, however, the employer pays even 15 percent for the same purposes into one of these associations, the association becomes taxable. That section of the law should be amended.

Senator CONNALLY. That is not confined to the really mutual company?

Mr. HANSEN. Originally, I think that was the intention; but I think in view of these other things and the attempt to equalize between types of carriers, that we can still maintain the mutuality and still not discriminate against that particular form. As it stands now, the answer is, these associations will eventually be forced out of existence, because they cannot take any contributions from the employer because of the tax situation. A very simple two-word insertion would amend the present law and would make the tax basis comparable with that of other types of plan.

These foregoing nine points apply to pension and security plans. The profit-sharing plans require a different consideration. I have a number of comments here which I will submit for the consideration of the committee.

It seems as though the Treasury has not had time to consider the profit-sharing aspect of this problem. Section 165 originally covered profit-sharing and pension plans. The abuses which have arisen have apparently been mostly in pension plans. As the result, the Treasury has devoted most of its time to the consideration of that type of plan. There has been relatively little consideration given to profit sharing. We do have, of course, the results of the profit-sharing survey of this subcommittee in 1939. Without going into all the conclusions, I will simply give a few of the current problems with which we are faced on this particular bill. If any of you have questions on the survey I will try to answer them.

The objectives of the profit-sharing plan are to produce efficiency, to reduce costs, as distinguished from the objective of a pension plan which is security. The payments in a profit-sharing plan must be discriminatory if they are to accomplish the objectives of a profit-sharing plan. The only criteria which we have been able to find up to the present time, which seem to be applicable to profit-sharing plans, would be a reasonableness of the total amount paid to the

individual; that is, adding the actual cash salary to the amount all the rules which the Internal Revenue Bureau now must use, and has been using for years, we have a test which will stand.

The next portion of the test will be that the percentage of the total which is allowed to be deferred should be limited. In other words, it should not be made possible for a person to defer 90 percent of his salary.

Then the third provision which might be added is some specific limitation to take care of the disguised dividend. In other words, some specific limitation to officers who might normally participate in an incentive plan based upon their stockholding, so there is no possibility of concealing a dividend.

Those tests, I say, would be sufficient to take care of an adequate profit-sharing plan. The proposed bill would require practically a liquidation of all incentive profit-sharing plans. They could not qualify under the eligibility, under the discrimination, under the 5-percent provision and several others. Employers could not afford to make nondeductible disbursements in high-tax years. The present bill practically would result in a complete liquidation of that type of plan.

The result of that liquidation, or the result of the prevention of new plans, would be, first, the lack of incentive when today particularly it is so badly needed for our war production; and, secondly, it would result in cash bonuses as distinguished from deferred payments, which would lead to inflation and all the necessary things that follow.

At the present time, as has been previously stated, the United States is probably the most important stockholder in the country. It receives most of the profits. If we look at the United States then as a manager of the business, since it is a participant, good business principles would at least require the consideration of the matter of incentives. In other words, you are the board of directors, in effect, of the large corporation. It is the business of the United States. As such a board you should, as each one of these individual boards would do, look into the possibilities of incentive taxation.

As I said, there are three types of plans before us. I am talking only about this third incentive plan now. As I have said, it would be ruled out. The tax savings, by ruling out this particular type of plan, would be negligible in proportion to the benefits which the employer, in this case the United States, would receive. In other words, we might save a few dollars in taxes by eliminating this type of plan, but in doing that we might increase cost of operation, we might decrease efficiency of operation to such an extent that the cost would rise; we would have more inflation possibilities; the materials that we need for war would be delayed; the costs which the Government would have to pay for these materials would be increased. You can see that the possibilities there are many times the possibilities of the few dollars of tax savings which might be obtained.

This is a matter of policy which you, as the board of directors of the business of the United States, have to decide. I am merely presenting the problems which are facing you.

An individual with a possible anticipation of increased profits from his own effort is more than likely to respond and produce. That has

been, in a sense, the basis of our economy in this country since we started. We have progressed beyond other countries because we have permitted individual initiative to be provided for. Now, if we are to squelch that, particularly at this time, we may have a very serious effect on our war production.

There are, of course, numerous examples of the savings of pennies and loss of dollars. I think the Jewel Tea Co. had specific figures for you this morning. There are many others that could be brought out. At the present time, we have a very definite demand for incentive. We have had the illustration this morning of the War Production Board asking for increased efficiency. Perhaps the incentive plan might increase efficiency many thousandfold over the tax savings that might be obtained, by not ruling out the few dollars which a few people might get under the plan.

The profit-sharing advantages, I might say, are advantages in a depression as well as at the present time. The results of the profit-sharing survey were printed in 1939. The survey started in 1937. The information applied particularly in the years 1934, 1935, and 1936. We had at that time conditions completely reversed, in a sense, to those existing now. We were then trying to get more people back to work, we were trying to make jobs. At the present time we have the reverse situation, and yet the conclusions at that time were that profit sharing was desirable just as it is now.

In view of our production problems at the present time, it seems to me that profit-sharing plans are doubly desirable. A profit-sharing plan is not something which is merely a temporary war measure, although it will presumably help, but it is also satisfactory in the depression period afterward. We need a tendency, as has been previously stated, to level out, to give the people in the years when we need their extra effort the incentive to produce and to allow them to carry some of the gains over to depression years when they are needed.

The profit-sharing survey arrived at two conclusions. They were both very positive. The first was exemption from all income taxes of payments to employees from accumulated profit-sharing retirement funds. That is even beyond what is being considered here for qualifying pension plans. The second was the issue and sale of the United States Government profit-sharing bonds available only for profit-sharing funds when used for the protection of profit-sharing fund investments. The substance being that these bonds were to have a somewhat higher yield than the average, which, in a sense, would be a subsidy to industry for creating such a plan.

Senator BROWN. How large a committee was that?

Mr. HANSEN. The subcommittee consisted of the chairman, Senator Herring, and Senators Vandenberg and Johnson.

Senator DANAHER. Is it a Senate document?

Mr. HANSEN. It is a Senate resolution, Seventy-sixth Congress. This is the committee print—610 is the number.

Senator BROWN. About 2 or 3 years ago?

Mr. HANSEN. 1939.

In conclusion we have recommendations of the Treasury which are, of course, attempting to accomplish an objective. In so doing they affect other things which they had not completely studied. Here we have, in a sense, the only report on the subject which, up to

now, has received practically no consideration. We spent practically 2 months in hearings right in this very room, listening to people like Gerard Swope, Edsel Ford, and men of that type, discussing this matter. All the industry of the country at that time was brought in. We have the facts and the conclusions in these reports. At the present time we have a situation where there is practically no recognition given to those conclusions. The conclusions at the present time, which are not specific but which inherently involve the same result, are absolutely diametrically opposed to the conclusions of all of that work, and even if you modify the conclusions which are very specific, you still have a situation completely different from the result which you will get under the present bill.

At the present time, there is no other statute on the books which will encourage efficiency of production. Every other statute is bringing down the production of individuals. Everybody is worrying about the tax that he is going to have to pay. They say: "What is the use of working any harder, because we get nothing out of it anyway."

Here is one place where, if we could continue profit sharing, we would have something that these people could say is worth working for. Patriotism is fine, but we need, in addition to that, these personal incentives. If you provide such incentives, the loss of revenue will be negligible; the results in increased production should be well worth any loss in revenue.

In conclusion, considering the two types of problems, it seems to me that we have the problem of fixing the language and the details in regard to a pension plan; and, secondly, we have the problem of the necessity of making a special provision for profit-sharing plans. As I have indicated before, I think a test of reasonableness, with a limitation on the percentage deferred, and a limitation to stockholders, would be satisfactory requirements for profit-sharing plans. Such plans are desirable and should not be eliminated as they provide the incentive which we so badly need now, and will leave satisfactory plans after the inflation of the war.

The CHAIRMAN. Thank you very much, Mr. Hansen.

Mr. Goldstein.

STATEMENT OF MEYER M. GOLDSTEIN, DIRECTOR, PENSION PLANNING CO., NEW YORK, N. Y.

Mr. GOLDSTEIN. Mr. Chairman, I will make this very brief. I am Meyer M. Goldstein. I am director of the Pension Planning Co., but I am here as a member of the law and legislation committee of the National Association of Life Underwriters, which consists of life-insurance underwriters throughout the United States, in all the cities and States.

The proposed 5 percent provision is the sole one to which I will confine my remarks.

Having worked for many months with the Treasury Department, and having appeared before the Ways and Means Committee, we felt that a magnificent job had been done in developing the highly technical subject of pension plans, and therefore we want to address ourselves to this 5 percent and 5-year provision.

I might also say that Mr. Beers, representing as he did this morning the group-annuity companies, has covered that. I can delete from my testimony that portion which would deal with group annuities, which also interests our members, since they sell both group annuities and individual policy pension trusts. I shall confine my remarks just to the individual policy pension trusts.

That is the type of plan whereby individual policies are put into a trust, the same type of policies that you or I might buy from the same insurance company, except that in this instance the employer makes a contribution toward the plan.

Now, then, taking that type of plan and considering it, we find that it represents a different aspect in the financing of it as compared to the typical group annuity plan. So the proposal of the House bill has introduced two new principles. The first one is that there is no longer any distinction between future and past services in the financing of a plan, it has all been merged into one. You take your 5 percent, no matter how you figure it, and then the excess you prorate over 5 years.

The second deviation from the principle is that an arbitrary figure of 5 percent has been introduced, and then some excess prorated over a 5-year period.

Now, ever since the beginning of the pension trust provisions, this distinction between future services and past services has been in the statute, repeatedly kept in there, repeatedly administered by the Revenue Department. To the best of my knowledge, no claims arose to the effect that this was such a terribly difficult administrative job. So that from the viewpoint of the Treasury we had this distinction between past and future services: From the point of view of the employer it represented a perfectly natural distinction, because at the time you establish a new plan you have two problems: One is to start a process so that you will not repeat the mistakes of the past in not having had a plan. So you say you are going to deposit enough money between the time a man enters the plan and the normal retirement age to finance his retirement benefit. In other words, if he is 45 years of age and he retires at 65, over 20 years you deposit the actuarial sum required. That is your future service and current service cost.

Then the employer, when he starts the plan, has a group of employees who served the company faithfully for many years. He has one man aged 64, another man aged 60, another man aged 59, another 53, and so on down the line, so unless you establish some benefit in recognition of past services you get the effect where you are failing to reward and recognize the value and faithfulness of those employees who have contributed to bring the business to the very point where it is possible to establish a pension plan, and you would not be able to get the people off the pay roll because you would not have any money to do it with unless you set up the special fund.

Now, the major source of tax loss to the Revenue Department has been a perfectly legal tax avoidance whereby under the laws as they have existed up to now the group annuity, for example, could measure the total accrued liability for past services and deduct it all in 1 year. So if it ran into a million dollars they could deduct the million dollars, and if it would be $2,000,000 they could deduct the $2,000,000.

Then having financed their total past service accrued liability at the time they installed the plan, from that time on all they would have to treat with would be the future service cost. So the Treasury Department said: "We cannot afford to allow that any more, because that comes off the high corporate brackets. We want to spread it out over 5 years." That viewpoint the National Association of Life Underwriters is in perfect agreement with, because it was a form of favoritism to the life-insurance type of contract as distinguished from the self-administered pension trust of the Bell Telephone type that one of the gentlemen mentioned. So now they are doing this on a uniform basis, and we are in complete agreement with that principle.

Senator TAFT. The difficulty of it, as I see it, you say everything over 5 percent has to be spread over 5 years, but it may take 10 percent all the time from now until 50 years from now, or 30 years from now, in order to make up this back stuff. It seems to me you ought to be allowed to deduct what you actually pay this year. I agree you ought not to have to pay this year to make up all the back stuff, but what you pay this year, the whole 10 percent, it seems to me, ought to be deducted.

Mr. GOLDSTEIN. That is positively right, sir. That is the way we think about it.

Senator TAFT. It does not say the 5 percent is for past services spread over 5 years, it says you have got to take the 5 percent extra and figure that over 5 years, but next year you are going to pay 10 percent again. I do not see the reason for the wording relating to one-fifth.

Mr. GOLDSTEIN. My opinion is that the reason is an administrative one, and my opinion seems to be backed up by a quotation from the report itself. It says, in the amendment to section 23 (p), "It has been decided that in the interest of clarification and administration of the tax laws no deductions should be allowable," and then they describe this 5 percent and 5 years. Our point is that that is not at all necessary or wise, to introduce this arbitrary 5 percent and the arbitrary 5 years.

First dealing with the 5 percent as related to current costs, 5 percent is worse than arbitrary. It is not adequate. Other speakers have demonstrated the same thing. We have made some studies, which we will not bore you with, but it is common sense that you get differences in various types of businesses. Some have an older age group, and having an older age group they automatically have to get rid of that unusual burden.

The important thing is the past service liability is nonrecurring. Once you fund your past service liability you are through with it. A company that in 1936 established a group annuity plan might have paid all of their past service liability in full in the year 1936, or they might have paid it over the 5 years through 1941 and then they are through, for never will they have that problem coming up again, because from that point on every time a new employee becomes eligible they begin to fund his benefits. So all you would have to have is something that we have always had, for 20 years in the law; that is, we would have a fair actuarial basis to fund the future costs that would be fully deductible this year.

As to the past services, the old principle was to pay it in 1 year, but the new principle is a 5-year spread, which we are in complete favor of, with one exception, we feel that in the interest of small and medium size business units, anything that is deductible, within limits that are desirable from the Government standpoint, should be deductible in full in the year of deposit. Let me give you an example. If the past service accrued liability were $100,000, $20,000 would be the maximum that would be deductible in any one year, so if that company were in a position to deposit $20,000, they would get the deduction for $20,000. And another year, when they are able to deposit another $20,000 they would get that deduction. Of course, if they only deposited $15,000, they would only get a deduction for $15,000. So they whittled away that $100,000 accrued liability for past services as fast as they could, consistent with the ceiling that we recommend, that should not be more than 20 percent deductible for any one year, 20 percent of this accrued liability for past services.

From the standpoint of social good we ought to be very grateful in this country that we have the type of tax law that we have had for the past 20 years, because having it we have a more impregnable position for the three or four million people who are now covered by pension plans. In other words, all of these companies that have established these plans, and have set up the funds to take care of the accrued liability for past services, those companies' pension plans have all been made financially stronger. Those employees are fully protected now because that past-service money is in there and they are covered from this point on. All they have to do is meet the current costs.

Now, what we want in the tax system is a plan, it seems to us, which will continue to encourage employers to pay up their past service liability as quickly as possible, to make the plan impregnable in bad times. The only limit we are putting in is a practical one, that we do not want them to take it off their top brackets all in 1 year. The new revenue act would say, "You can put in as much as you want, but we will only allow you a deduction not to exceed one-fifth of the accrued liability for past services in any one year. In addition to that, we allow you full deduction for the future service liability."

Senator DANAHER. That is a new slant on pensions. It's too bad we didn't have some explanation like that when the pension for Congress was up.

Mr. GOLDSTEIN. Well, sir, there was never anything that was more misunderstood than that was.

I believe that is sufficient for my testimony. Thank you, gentlemen.

The CHAIRMAN. Thank you, Mr. Goldstein.

Mr. Maduro.

STATEMENT OF DENIS B. MADURO, NEW YORK, N. Y., COUNSEL FOR NATIONAL ASSOCIATION OF LIFE INSURANCE UNDERWRITERS

Mr. MADURO. My name is Denis B. Maduro. I am an attorney at law in New York City. I am here today in my capacity as counsel for the National Association of Life Insurance Underwriters, which is an organization of approximately 33,000 life underwriters in the

country. I do not in any way, in my views, represent any of the views of the life-insurance companies. This is the agency force.

The only point that I will discuss this morning will be the point on the 5-percent limitation contained in the pension statute. The reason why I will discuss only that one point is because, in my opinion, if that is not cured the rest of the amendments regarding pension trusts become academic. They become academic because it would be absolutely impossible for many pension trusts in existence today to continue, or for many future pension trusts to be inaugurated.

I think the limitation of 5 percent is quite unreasonable, and the effect which has been discussed by the other witnesses this morning has been the effect upon the employer.

As a representative of the National Association of Life Insurance Underwriters, I would like to point out the effect upon the employee beneficiary of the pension plans and their respective beneficiaries, or their appointees who benefit by those plans. They represent some two or three or four million of employees in the country plus their beneficiaries.

The first effect of this small limitation would be to prevent the inclusion in pension plans of employee benefits which are socially and economically desirable and limit them, if they are continued, to inaugurating the smallest types of benefits.

The second effect upon the employee beneficiaries would be to cause a great many existing plans either to terminate or to eliminate these desirable employee benefits.

The third effect upon the employee beneficiaries would be to force the employees to contribute to those plans to which they are not now contributing, or to make additional contributions to those plans to which they are now contributing, and to force employees to make contributions to it under present circumstances and conditions at a time when they are least able to afford any more deductions from their pay.

The fourth effect upon the employee beneficiaries of this 5-percent limitation would be to limit pensions to the employees of those companies which have a large working capital, and to deprive the employees of companies with a small working capital from the benefit of pension plans which, in my opinion, is an unfair discrimination.

Some of the witnesses have stated that the 5-percent provision is too small. Well, why is it too small? What will 5 percent of the pay roll purchase today? After all, if 5 percent of the pay roll will purchase 100-percent benefit to employees it is not too small. So our inquiry directly is: What will 5 percent of the pay roll purchase in pension benefits? Well, the cost of pension benefits depends entirely upon the age of the participant involved, the exact benefits to be given to him, and the type of investment to be obtained to accomplish those benefits.

Let us assume the most limited benefit plan from the point of view of the employee beneficiaries. That is a plan where the employee upon retirement if he lives to retirement and if he is with the company at the age of retirement will receive his pension only for the period of time for which he lives. If he dies before retirement his beneficiaries will receive nothing. If he dies after his retirement his beneficiaries receive nothing. If he severs employment with the corporation after 15 or 20 or 25 years of service he receives nothing.

Assuming the most limited type of pension benefit, the one benefit of life income only in the event of retirement, and taking the average weighted age of most of the plans, we find 5 percent of pay roll can purchase approximately 7½ percent of salary as a retirement pension. Remember that will be 7½ percent of salary as a retirement pension on the most limited type of benefit. No death benefit in the event of death before retirement; no death benefit in the event of death after retirement, whether it is one month or two months after retirement; no benefits whatsoever in the event the employee, after many, many years of service, terminates employment with the company before the age of retirement, but on the most limited type of pension benefits, 5 percent of salary under the average weighted age of most plans will purchase approximately 7½ percent of salary as a pension at age 65.

The answer may be, "Well, why not make the employee contribute more?" As I have stated in one of my statements on the effect upon employees, today your employees are not in a position to contribute more money from pay roll for any purposes. They are having deductions from pay roll necessarily for the purpose of their war bonds; they have deductions, or will have deductions probably, for future income taxes; they are having deductions for social-security benefits and unemployment; they have various amounts of deductions and those deductions may run anywhere from 20 to 30 or 40 percent or more.

If corporations cannot deduct the full current liability of their costs or their contributions to pension plans and then necessarily they are either going to discontinue them or they are going to reduce the benefits to the smallest amount of benefits, or they are going to force employee contributions.

The reduction of benefits in the plan to the most limited benefit type of plan will not result in all the benefits that the other witnesses spoke about, in regard to the economic relations between employer and employee. If it is attempted to give the employee certain incentives for the purpose of creating good will, extra work, if those incentives are not brought about then the contrary result is obtained, as far as his efficiency is concerned.

If the amount of the current liability of the corporation or employer for a pension contribution is not deductible in full, then, in my opinion, there may be objections to it, even if the corporation wants to continue the plan in existence. There may be objections from stockholders, there may be objections from the employees themselves, and there certainly will be objections from those who stand in a creditor position, not in the case where there is insolvency, but from those organizations which advanced credit to an organization of this type.

One thing that I would like to comment on, which has been brought out by the testimony of some of the other witnesses, is their figures as to the actual percentage of pay roll that companies are now paying for their contributions to the pension plan. They were limiting themselves to the contributory plan; they were not discussing the noncontributory plan where the corporation bears the entire cost. So that those figures that refer to the contributory plan should be doubled for the many cases of pension plans where the employer is paying the entire cost, and undoubtedly in view of the present status of the employees' pay roll, the noncontributory plan has

got to be the plan from now on and into the future. Many corporations wanting to adopt a plan today cannot ask their employees to make contributions, they have got to make contributions in their entirety. There are already in existence a tremendous number of the noncontributory plans. So the figures cited as to what the present corporations contribute, the ratio of that to the pay roll, does not apply in the cases of those corporations which have the noncontributory plans. They practically should be doubled.

In closing, my alternative for the provisions regarding the 5-percent limitation is that the only fair provision is to allow a corporation to deduct its current liability under the pension plan. That current liability, under the pension plan, in my opinion, does not depend upon how much is there for past services, or how much is there for future services. The current liability is the obligation of the corporation under the plan to make a certain amount of contributions to accomplish the benefits of the plan. I do not care whether past-service or future-service formulas are used, or whether they are merged or not. There is an easy calculation to determine that current liability under the plan, the amount that you should pay this year in order to have a certain amount of money at a future time to provide benefits under that plan.

Senator CONNALLY. Would there be any of them saying: "Well, we will make a lot of profits this year so we will pay a lot this year, and then we will slow down; we will pay so much"?

Mr. MADURO. That will be impossible, sir; because of the fact that the current liability will be set forth and limit current deductions.

Senator CONNALLY. There has to be some time limitation as to when that plan is adopted. They might adopt a new plan.

Mr. MADURO. That would not make any difference.

Senator CONNALLY. A plan adopted prior to January 1, 1942, or 1941?

Mr. MADURO. Yes. I personally do not think it makes any difference when the plan is adopted.

Senator TAFT. You would not want to permit the company to make up its back liability in 1 year.

Mr. MADURO. No, no; that is not a very desirable feature. But deposits for a reserve would be desirable.

Senator TAFT. I do not think you can let them make up the whole back payment in 1 year.

Mr. MADURO. No.

Senator TAFT. You will have to spread that over 5 years, as suggested.

Mr. MADURO. I think spread over 5 years would be absolutely fair and reasonable, sir, for a general reserve in excess of current liability.

My last comment on this suggestion of mine: There is no possibility of having such a provision as allowing a full deduction for the current liability result in any tax avoidance, because of the fact that the previous part of the bill already contains provisions which limit pension plans to only those which are sound and desirable pension plans. I do not believe that any pension plan can qualify under the qualifications of the bill except that which is sound and is a reasonable pension plan, and having established the fact that it is a sound and reasonable one then, in my opinion, the corporation should be allowed a deduction

for its contribution equal to its current obligation or liability under the plan.

Thank you, sir.

The CHAIRMAN. Thank you.

Mr. Duhig.

STATEMENT OF STANLEY W. DUHIG, VICE PRESIDENT AND TREASURER, SHELL UNION OIL CORPORATION, NEW YORK, N. Y.

Mr. DUHIG. My name is Stanley W. Duhig. I am vice president and treasurer of the Shell Union Oil Corporation. It seems to me that the committee might be interested in hearing the experience of one individual taxpayer under these proposals in this new bill.

The Shell Union Oil Corporation and affiliated companies constitute an employer group which maintains an employees' pension plan and a savings fund covering several thousand members. The Shell companies are deeply concerned over some of the proposals which are contained in the present printing of the 1942 revenue bill, H. R. 7378. We believe that the Senate Finance Committee will be interested in some practical examples of how these revenue act proposals would affect the employee pension and thrift plans maintained by the Shell companies.

The Shell provident fund is an employee savings plan which has been successfully operated in this country for 28 years and now has a membership of approximately 9,000 employees. The present trust was organized in September 1939 to include only employees in the United States. Membership is offered to a class of employees consisting of clerical or salaried employees as distinguished from employees paid on an hourly wage basis. Ninety-two percent of the members, which includes the management, earn less than $5,000 per annum. The employee contributes to this savings plan a percentage, usually 10 percent, of his pay and the employing company matches that contribution. The employee has a vested interest in the company's contribution after he has had 5 years of service.

The Shell pension plan became effective January 1, 1938, and covers all of the employees in the United States and Canada, numbering about 27,000. The employees make no contribution. The employing companies at present contribute 5.6 percent of pay roll to the pension trust, which is administered by a board of trustees. Individual employees do not have a vested interest until reaching retirement age. Full pension amounts to 40 percent of pay, subject to some offsets for social-security and provident-fund contributions, and is payable at age 55 for women and age 60 for men.

Senator CONNALLY. Is there a requirement for a certain minimum period of employment?

Mr. DUHIG. Yes, sir; 20 years.

Senator CONNALLY. You have a pension for any man age 60?

Mr. DUHIG. What we call a partial pension, if he has been with us 15 years, provided he is 60 years old.

Both of these funds qualify under section 165 of the present revenue act as employee funds whose earnings are not subject to tax.

If we have correctly interpreted the tax proposals they would permit the companies to deduct from taxable income 5 percent of the pay

rolls for persons who are members of these two employee groups. The contribution in excess of 5 percent could be deducted from taxable income, if any, over a period of 60 months. The Shell situation at the present time is, in round figures, as follows:

Ten-percent contributions to the provident fund, approximately $2,500,000 per annum; and the 5.6 percent to the pension fund approximately $3,500,000 per annum. Total contributions deductible under the present tax law, $6,000,000 per annum.

On a total pay roll of approximately $60,000,000 per annum, the present aggregate contribution is about 10 percent and the new law would permit the following allowable deductions in the present year:

Pension contribution—5 percent of pay roll, $3,000,000; one-fifth of additional pension contribution, $100,000; one-fifth of provident fund contribution, $500,000; allowable deduction for 1942, $3,600,000. $3,600,000 subtracted from $6,000,000 gives us a remainder to be spread over succeeding 4 years of $2,400,000.

Thus only 60 percent of the companies' contribution would be allowable as a deduction this year. The remaining 40 percent, which would be disallowed, would amount to $2,400,000, and while, of the eight or nine companies in the group, some will be in excess-profits-tax brackets and others will not, it may safely be assumed that it will cost the companies additional taxes this year at the rate of 50 percent, or a tax of $1,200,000 in 1942. It is doubtful whether some of these companies will ever be in a position to take deduction for their share of the expense. It is more than possible that all of them will run into loss years, which will deprive them of this legitimate deduction of an expense which is being incurred at the present time solely for the benefit of these employees.

We submit that the 5-percent limit on deductibility is purely arbitrary. It discourages the setting up of sound plans.

The Shell pension plan is economically operated and has suffered no investment losses, yet on careful actuarial analysis it requires 5.6 percent contribution even on the assumption that its investments will earn 3 percent per annum, which is not a conservative assumption at the present time. Two other reasons why it can operate on a contribution of as little as 5.6 percent in the United States are that there is in the plan provision for (*a*) offsetting against the pension the amount of Federal old-age benefit—our plan calls for 8.2 percent in Canada, where the Social Security Act does not apply—and (*b*) reducing the pension by a percentage of the amount contributed by the companies to the provident fund. Thus it would not be sufficient for the Shell companies to cut out the contribution to the provident fund—which is under serious discussion—because the pension fund cost would then jump to nearly 10 percent and we would be faced with drastic reduction in pensions or abandoning the plan altogether.

Senator TAFT. If you abandoned the plan, would not you be faced probably by an immediate 10 percent increase in wages to make up for it, current wages?

Mr. DUHIG. Yes, sir.

Senator TAFT. The War Labor Board would give it to them.

Mr. DUHIG. Possibly; which would be quite inflationary, of course. At the present time the man contributes 10 percent of his own pay, which means he only gets 90 percent pay on his pay check. If we did

what you suggest, abandon the plan and put the 10 percent for contributions on his check, he would have not 10 percent but 20 percent increase to spend. A man at the present time making $300 a month gets $270, because he is contributing 10 percent. If we did add 10 percent to his pay, instead of contributing to the savings fund, he would get a check for $330 instead of $270, which, of course, is an inflationary item, as you suggest.

Now, the 5-year spread of the excess over 5 percent is also a purely arbitrary period of time. Its only excuse can be that it provides more immediate revenue to the Treasury by pushing off some of the deduction on a pyramiding scale over 5 years time. This is unsound because unfair to the taxpayer in not permitting him current deduction for current expense, and very likely it can be unfair to the Treasury if tax rates continue to rise during the next few years.

It should certainly be possible to deal more realistically with regular, permanent, and legitimate employee plans. To cause the taxpayer to abandon such plans is not only a disservice to the thousands of wage earners but also removes an important antiinflationary medium. As an illustration of this, the Shell trusts have to invest, including the employees' provident-fund contributions, over $8,000,000 per annum. This has been and will continue to be very largely invested in United States Treasury securities.

That is my brief statement, Mr. Chairman. If you have any questions, I would be glad to answer them.

The CHAIRMAN. Are there any questions?

Thank you very much for appearing.

(The following communications were ordered inserted in the record:)

MASSACHUSETTS MUTUAL LIFE INSURANCE CO.,
Detroit, Mich., July 29, 1942.

Hon. WALTER F. GEORGE,
Chairman, Finance Committee, United States Senate,
Washington, D. C.

Re amendment to section 23 (p) as contained in proposed revenue bill of 1942.

MY DEAR SENATOR: I wish to call your attention to the amendment to section 23 (p) as proposed in H. R. 7378 relating to deductions for contributions made by an employer to a pension trust.

Under the present law, contributions made by an employer to a pension trust qualifying under section 165 are covered under section 23 (a) and section 23 (p), as follows:

Contributions covering the current year's pension liability, and which, together with other compensation, do not constitute unreasonable compensation, are deductible in the year paid into the trust, as a regular and normal business expense, under section 23 (a).

Contributions in excess of the current year's pension laibility are deductible over a period of 10 consecutive years under section 23 (p).

The action of the House Ways and Means Committee in changing this 10-year period to five years and applying it to all deferred compensation plans, including direct purchases of annuities by the employer, etc., seems to be well taken and, I believe, meets with the approval of all who are interested in bona fide pension plans which are set up for the benefit of employees and not for the purpose of obtaining special tax exemptions.

The amendment, however, eliminates any deduction by the employer under section 23 (a) and provides that all such deductions be made under the provisions of section 23 (p), as amended.

The amendment to section 23 (p) provides that amounts paid into a trust that is exempt under section 165 (a) shall be deductible "only in the year

when paid into the trust, and in an amount not in excess of 5 percent of the compensation otherwise paid or accrued during the taxable year to the beneficiaries of the trust. The excess over 5 percent of the amounts so paid is deductible in equal parts over a period of 60 consecutive months beginning with the first month of the year in which such payment is made."

Thus the House bill arbitrarily fixes the "current year's pension liability" which is now deductible under section 23 (a), at 5 percent of the compensation otherwise paid.

Specific objection.—The fixing of the "current year's pension liability" is an actuarial computation based upon (1) employee's age, (2) age at which pension is to begin, (3) amount of pension.

It has been the expressed desire of the Congress to encourage private pension plans for employees, plans which are bona fide and not set up for purposes of evading taxes. The provisions of section 165 are such as to properly eliminate any tax advantages where such plans do not qualify as bona fide. Therefore, it is my contention that an employer who sets up a bona fide plan should be permitted to deduct the current cost of such a plan in the year in which the cost is actually incurred and the "current year's pension liability" is just as much a business expense of that year as a proper charge for depreciation on machinery.

Roughly speaking, 5 percent of an employee's salary will provide a monthly retirement benefit at age 65 of—

37 percent if he enters the plan at age 20.
24 percent if he enters the plan at age 30.
14 percent if he enters the plan at age 40.
7 percent if he enters the plan at age 50.

With employees being confronted with social security taxes, increased income taxes, bond purchases, etc., the tendency is definitely toward larger contributions by employers and smaller contributions by employees. In an increasing number of cases the employer feels that the entire pension cost should be paid by him and considered a business expense as would be the case if no plan were adopted but employees were simply pensioned at a certain percentage of their salary when reaching retirement age. Any amendment to the law which discourages employer contributions to plans which have qualified as being within the spirit and letter of section 165 would seem to be contrary to the desire of the Congress and the administration in otherwise encouraging bona fide pension plans.

Therefore, may I express to you my well-considered conviction that—

(1) the "current year's pension liability" not be replaced by an arbitrary and untrue amount of 5 percent of compensation.

or

(2) If, in the interests of clarification and simplicity of administration of the law, a fixed percentage of compensation be desirable, that the percentage be raised to at least 10 percent, which, on an average basis, would provide approximately a 28 percent pension at age 65 if the average age of employees entering the plan was 40.

I am also writing to Senator Arthur H. Vandenberg and Senator Prentiss M. Brown in this connection as I feel that the inclusion of this amendment as it now stands is not in the interest of the employer, the employees, or the Treasury Department. Your consideration of the matter will be greatly appreciated by those who have the true interests of all three at heart.

Sincerely,

E. LEIGH JONES,
Manager, Pension Trust Department,
George E. Lackey Agency.

OAKLAND, CALIF.,
July 30, 1942.

SENATE FINANCE COMMITTEE,
Washington, D. C.

GENTLEMAN: Enclosed is a plan which I am submitting as a substitute for national compulsory savings now being discussed. I have arbitrarily computed the special tax, if any, due on salaries of different amounts of both single and

married persons. Item 1 could be broadened to also include net incomes from business or professions, dividends, interest, and other miscellaneous income.

This plan may have already been conceived of by our tax experts; however, I have not heard or read of a similar plan and request that you give it your fullest consideration.

It is imperative that the sale of war bonds be on as near a pro rata basis as possible and that this war be financed as much as can be by the sale of bonds to individuals and not by demands on banks for loans to the Government.

This special tax is, of course, in addition to the regular tax and should be incorporated in the 1942 income-tax forms. It should solve compulsory savings plan which is considered absolutely essential for the duration of the war and will act as a very effective curb on inflation as well as financing the war to a great extent.

Everyone I have shown this plan to has agreed that it is a fair and equitable one. Even persons who admitted that they haven't purchased any war bonds and state that they should have were very much in favor of such an addition to the new tax bill. Personally I will have to purchase additional bonds to avoid the payment of this special tax.

I know of only one large defense plant in the San Francisco Bay area that is making a regular deduction from employees' pay checks for the purchase of war bonds. Many of the defense workers in other plants are buying their share of war bonds, but the majority is not.

Due to the uncertainties ahead of us the purchase of war bonds must be on a pro rata basis. It is definitely out of alinement at the present time. The enclosed plan will remedy this and furnish the Treasury Department and Congress data on which to base future tax laws.

The importance of such a measure is so great I know you will give this your sincere consideration. I will appreciate it very much if you will please acknowledge receipt of this letter.

Sincerely yours,

ROBERT E. PEYTON.

cc. Hon. Henry Morgenthau, Jr.
cc. Senator Sheridan Downey.

Special tax as a substitute for compulsory savings

SINGLE PERSON

Item						
1	Salaries and other compensation for personal services	$1,500	$3,000	$10,000	$17,500	$30,000
2	Taxable income 10 percent	150	300	1,000	1,750	3,000
3	Less:					
	Personal exemption	$75	$50			
	War bonds purchased	75	250	$1,000	$1,500	$2,500
		150	300	1,000	1,500	2,500
4	Balance subject to tax				250	500
5	Tax (50 percent of item 4)				125	250

MARRIED PERSON

Item						
1	Salaries and other compensation for personal services		$3,000	$10,000	$17,500	$30,000
2	Taxable income 10 percent		300	1,000	1,750	3,000
3	Less:					
	Personal exemption		$150	$150	$300	$750
	Credit for dependents			50		100
	War bonds purchased		150	750	1,500	2,000
			300	950	1,800	2,850
4	Balance subject to tax			50		150
5	Tax (50 percent of item 4)			25		75

EXEMPTIONS

	Amount of exemption
Single person, earnings:	
To $3,000	$75
$3,001 to $5,000	50
Over $5,000	None
Married person, earnings:	
To $10,000	150
$10,001 to $15,000	250
$15,001 to $20,000	300
$20,001 to $25,000	500
Over $25,000	750

Any person (single or married) purchasing war bonds totaling $15,000 or more is exempt from this special tax. Service men, with the exception of commissioned officers, are exempt from this tax.

Mr. Conboy.

STATEMENT OF MARTIN CONBOY, OF CONBOY, HEWITT, O'BRIEN & BOARDMAN, NEW YORK, N. Y.

The CHAIRMAN. All right, Mr. Conboy, you may proceed.

Mr. CONBOY. So far as my appearance is concerned, I presume you want, first of all, for me to give my name and representation.

The CHAIRMAN. Yes.

Mr. CONBOY. My name is Martin Conboy, 39 Broadway, New York City; attorney and counselor at law, representing four corporations—the Joy Manufacturing Co., of Franklin, Pa.; the American Sumatra Tobacco Co., of New York City; the United States Plywood Co.; and the Reliance Electric Co., of Cleveland, Ohio. These companies are on what is known as the fiscal-year basis.

My appearance here is in opposition to section 129 of the proposed law which will make fiscal-year companies taxable at the 1942 rates for part of their 1941–42 fiscal year.

The justification for the fiscal-year basis with respect to corporations has been admirably expressed by Mr. Kellogg who appeared before the committee day before yesterday, and there is nothing I think need be added in that respect, with regard to the reason why corporations operate on a fiscal-year basis. The objections to section 129 which contains the proposed changes in the existing law are stated in the memorandum which we have distributed among the members of the committee.

The method of taxing fiscal-year corporations upon an apportionment basis was tried in 1932 and was discarded in 1934 by the Ways and Means Committee because of the complications and difficulties that it created. Those complications and difficulties are indicated in our memorandum and are instanced by cases which are set forth by our authoritative authorities. In addition to the difficulties and complications inherent in such a method, it is unjust and unfair to change the rate by which a corporation is taxed during the tax year itself.

Senator RADCLIFFE. Will you speak a little louder?

Mr. CONBOY. It is manifestly unjust to raise the rate of taxation of a corporation during the year in which the corporation is being taxed, especially where there was no reason to anticipate an increase. The present tax law was passed on September 20, 1941. It contains no suggestion at all that corporations which are being taxed on the

fiscal-year basis were going to have their taxes increased again within the fiscal year. Therefore they went ahead with their business activities and conducted them on the assumption that their taxes would remain at the rate fixed by the 1941 tax law and would not be increased during the period of the fiscal year constituting the tax year. They made their contracts, entered into commitments, borrowed money from banks, and paid out dividends to their stockholders on the assumption that they were going to pay just so much in the way of taxes.

If they did not distribute their surplus in dividends, they were subject to the penalty described by section 102 of the act, and would have to pay an additional amount of tax because of the fact that they accumulated a surplus. They had to make the distribution. Having made the distribution, the stockholders have received the dividends and will be taxed upon the income thus received from the corporation. The Treasury has not lost the taxes on the corporation income, at least to the extent that taxes are received from the stockholders on dividends. If the stockholders received the dividends in the year 1942, they will have to include them in their return for that year and will be taxed at the 1942 rate. Of course, if dividends were received in 1941, they will be taxed as income to the stockholders at the 1941 rate. To treat the corporation's revenue as lost to the Treasury for taxable purposes is not accurate. The Treasury has not lost the chance to tax it.

Senator VANDENBERG. I notice you say on page 3 of your prepared statement that—

> The reasons for the abandonment of the apportionment method are set forth in detail in Paul and Mertens, Law of Federal Income Taxation.

Is that, by any chance, Mr. Randolph Paul?

Mr. CONBOY. That is, by every chance, Mr. Randolph Paul.

Senator VANDENBERG. Well, it is excellent authority.

Mr. CONBOY. That is why it is the bible of the law on Federal income taxation. I appeal to the men who read the bible if that is not so.

As I say, we have fortified our statement with the expression contained in the report of the Committee on Ways and Means, that the complicated rule had to be eliminated for the reasons stated with respect to the 1934 act, and also fortified it by a number of instances justifying the change that the committee made. Now, the committee having made the change, and the change having persisted through the legislation since 1934, corporations were justified in assuming that they could go ahead on that basis for their 1941–42 fiscal year and being so justified, as I say, they made their commitments and have been consistent in doing what they have done.

It may very well be that some corporations have been liquidated after having distributed their surpluses, after having made proper reserves for taxes, on the basis of the 1941 rates. Under the proposed change in the law the stockholders would probably be subjected to an obligation to repay what they have received. But so far as the Treasury is concerned, the Treasury has not lost the opportunity to tax what the corporations have paid out, because, as I have explained, the stockholders have to make their payments on their income-tax returns upon the basis of the rates that are in effect at the time they receive the distributions.

There seems to be very little reason why I should take up more of the time of the committee, in view of the fact that we have set forth our objections in detail in the memorandum which we have submitted.

I have noted it is the appropriate thing for a witness to ask if there are any questions. May I ask that through the chairman?

The CHAIRMAN. Are there any questions by the members of the committee?

Senator CLARK. You do not think it is a fair proposition to change the rules in the middle of the game.

Mr. CONBOY. That certainly is my position. It should not be done, especially when you have led the corporations into acting on the assumption that you are not going to change the rules. It would be unfair to change the rules after you have implicitly represented to the corporations that you are not going to change the rules. You did change them once, but you should not change them again. It seems to me that would be the limit of unfairness.

The CHAIRMAN. Are there any other questions?

Thank you very much.

Senator VANDENBERG. I would like to have a copy of the book.

Mr. CONBOY. If you want all the volumes, I can probably get them for you. I am only quoting from the fourth volume, sir.

(The memorandum submitted by Mr. Conboy is as follows:)

MEMORANDUM SUBMITTED BY MARTIN CONBOY, NEW YORK, N. Y.

THE PROPOSED REVENUE ACT OF 1942, SECTION 129, FISCAL-YEAR TAXPAYERS

The proposal that taxes at the 1941 and the 1942 rates be levied upon the incomes of taxpayers reporting on a fiscal-year basis for a fiscal year beginning in 1941 and ending in 1942 was first submitted to the Ways and Means Committee of the House of Representatives on June 23, 1942. The provision was incorporated in section 129 of the proposed act. No public hearings were held thereon.

THE PRESENT REVENUE ACT

Under the Internal Revenue Code and the revenue act now in effect (sec. 118, Revenue Act of 1941) and the prior revenue acts of 1940, 1939, 1938, 1936, and 1934, corporations filing returns on a fiscal-year basis have been taxed at the rates applicable to the calendar year in which the fiscal year began.

THE HISTORY OF APPORTIONMENT FOR FISCAL YEARS

Having enacted an income-tax law in 1913, Congress recognized that any change in rates of taxes would raise problems for taxpayers who were reporting on a fiscal-year basis, and inserted in the 1916 act a provision for an apportionment in such a case (1916 act, sec. 10). Subsequently, Congress made similar provisions for apportionment in levying excess-profits taxes. Such provisions were included in the 1918 and subsequent acts, which required all taxpayers to file returns on a fiscal-year basis if their books were kept on that basis.

The method prescribed for the computation of taxes for a fiscal year included in 2 different calendar years has been essentially the same under the subsequent acts to and including the 1932 act. The tax was computed on the total net income for the fiscal year under each act separately, just as though the entire amount of income had been earned under each act. Then the tax computed under each act was allocated to the fiscal year on the basis of the portion of the fiscal year covered by the law under which the particular computation was made. The sum of the two amounts allocated to the particular fiscal year was the tax for that fiscal year.

This method abandoned for the reasons hereinafter stated is revived in the proposed bill.

Under the proposed act of 1942 the tax on the net income of a corporation with a fiscal year beginning in 1941 and ending in 1942, will be pro rated under the 1941 law and the 1942 law as provided therein, in accordance with the number of months of the fiscal year included in each of the calendar years.

We shall consider first the practical objections to the apportionment method and then the effect of its proposed retroactive application to the fiscal year 1941–42.

I. THE OBJECTIONS TO THE APPORTIONMENT METHOD FOR FISCAL-YEAR TAXPAYERS

After a trial of the apportionment method for a number of years substantially as incorporated the Revenue Acts from 1916 to 1932, inclusive, the House Ways and Means Committee in drafting the Revenue Act of 1934, abandoned it.

Reasons for abandonment of the apportionment method, after previous trial.—The Committee on Ways and Means in its report accompanying the proposed 1934 bill stated:

"Under sections 14 and 105 of the Revenue Act of 1932, the tax on such returns was first computed under the provisions and rates of the Revenue Act of 1928 and then under the provisions and rates of the Revenue Act of 1932. The final tax imposed for a fiscal year of 12 months was then found by taking the sum of (1) the same proportion of the tax computed under the Revenue Act of 1928 as the number of months falling in 1931 was to 12 months, and (2) the same proportion of the tax computed under the Revenue Act of 1932 as the number of months falling in 1932 was to 12 months. This complicated rule has been eliminated in the proposed bill for the purpose of simplicity and ease of administration."

The reasons for the abandonment of the apportionment method are set forth in detail in Paul and Mertens, Law of Federal Income Taxation (vol. 4, pp. 621–630).

They show that under the apportionment method, changes in tax rates and administrative procedure presented many perplexing problems for taxpayers reporting on a fiscal-year basis, and cite a number of examples, including complications arising from varying provisions of the different laws governing the taxability of certain transactions, the amounts of credits and exemptions allowed, and the treatment of depletion in the computation of profit or loss.

They discuss a complicated question arising with respect to the filing of a consolidated return by an affiliated group.

A more difficult problem in that respect may be presented by the proposed 1942 act. For example, fiscal-year corporations in an affiliated group have already filed final returns for 1941–42. Each necessarily reported its normal income tax and surtax on a separate return. They will now be required to file new returns for the entire fiscal year. A portion of the tax for the entire period must be first determined "under the law applicable to the first taxable year," that is, the 1941 act. Accordingly it would seem that they must again report their normal income tax and surtax on an individual basis while they may again report their excess-profits tax on a consolidated basis. The other portion of the tax is to be "determined under the law applicable to the second taxable year" except as otherwise provided therein, that is, the 1942 act.

Under section 142 of the new act amending section 141 of the Internal Revenue Code, the members of the affiliated group in making a report for determination "under the law applicable to the second taxable year," will apparently be compelled to file a return on a consolidated basis for normal income tax and surtax in order to continue their previous practice of filing a consolidated excess-profits tax return. It is not clear how the separately determined normal income tax and surtax for each individual company under the law applicable to the first taxable year are to be apportioned with the consolidated normal income tax and surtax of the affiliated group for the second year.

This is merely one indication of the nature of the problems which seem to be inherent in the apportionment method.

While an attempt has been made by the draftsman of the bill to eliminate some of the complications which arose in the administration of the apportionment provision under prior acts, others continue to exist. The many exceptions contained in the new sections 16 and 108 of the Internal Revenue Code will of themselves present difficulties both in preparation of returns by taxpayers and in administration by the Commissioner.

Corporations of moderate size throughout the country which are on a fiscal-year basis will experience great difficulties in preparing their returns, and their

difficulties will be substantially increased by the present shortage of accountants.

While imposing the above-stated hardships upon fiscal-year corporations for the taxable year 1941–42, the proposed act denies to them the benefits of certain of the ameliorating sections designed for the relief of taxpayers, viz: Section 113, which excludes from the income of a taxpayer income representing improvements made by a lessee prior to the expiration of a lease; section 120, with respect to amortizable bond premiums; and section 136, with reference to capital gains and losses.

Paul and Mertens' Law of Federal Income Taxation said of the abandonment of the apportionment method in the 1934 act:

"The difficulty encountered by taxpayers in the computation of taxes for a fiscal year covered by two different laws has been obviated for fiscal years ending during 1934 by the change in the treatment of fiscal-year returns adopted by the 1934 act."

The difficulty so obviated is about to be revived.

II. THE OBJECTIONS TO THE PROPOSED RETROACTIVE EFFECT OF SECTION 129

Reasons for a fiscal year.—Corporations have adopted a fiscal-year basis for various reasons peculiar to the particular industry in which they are engaged. Perhaps one of the most frequent reasons is that they may end their business years and take their inventories in the least active period of their business. Many have fiscal years by reason of the historical accident of the date of their origin. The propriety of doing so has been recognized by Congress in income-tax legislation in the past, and we do not understand that the desirability or propriety thereof is questioned now or that there is any desire or intent to discourage or prohibit the use of the fiscal-year basis or that the proposed section 129 has any such purpose.

The effect of the proposal to make the apportionment retroactive.—The proposal that corporations with a fiscal year beginning in 1941 might be taxed for a portion of that fiscal year at the 1942 calendar-year rates was not even suggested until June 23, 1942, as heretofore stated.

Fiscal-year corporations without reason to expect that the provisions of the 1942 act would be retroactive to fiscal years already ended during the first 5 months of 1942, have prepared and filed Federal returns and paid income taxes and excess-profits taxes for such fiscal years. Both the filing of the returns and the payment of the taxes were required by the existing provisions of the Internal Revenue Code. This action was required to be taken weeks or months prior to the date on which the suggestion that the 1942 act should be retroactive was first suggested (June 22, 1942).

As a result of the retroactive feature of the bill such corporations will be required to file amended returns on an entirely new basis since the 1942 act will also apply to them, imposing an arduous burden both on the taxpayers and on the Treasury Department and resulting in upsetting the calculations which such corporations have made when they closed their books for their fiscal years.

A properly operated corporation must prepare a budget for its coming fiscal year; it must plan its course of action for the year; in doing so its officers must carefully consider and weigh its prospective income against prospective expenditures and taxes. Its proposed course of conduct is weighed in the scale of human wisdom. Corporate officers may naturally be charged with only the probabilities that experience demonstrates should readily be foreseen. The corporate officers naturally forecast the future in the light of their knowledge of the past.

In planning the financial policy for the fiscal year beginning in 1941 and ending in 1942, what could have been reasonably expected with respect to taxation of corporate income

It was perhaps possible that Congress would pass an act before the close of 1941 increasing income and excess profits taxes applicable during the fiscal year. This the corporation, perhaps, should have anticipated. Congress passed the Revenue Act of 1941 on September 20, 1941, increasing the taxes applicable to the corporations' fiscal year ending during 1942.

The corporation might also reasonably have anticipated that during 1942 Congress might make further increases in taxes to be effective for the corporation's fiscal year 1942–43. Its desirable cash position should probably have been determined with that possibility in view. But insofar as the corporate officers might act rationally in relying upon congressional theories and action regulating taxation in the past, the officers would not have had to consider a probability that during 1942 Congress might pass another taxing act further increasing (for

the second time) its income taxes for the fiscal year ending March 31, 1942. The proposed retroactive feature does not impose the duty upon an officer of a corporation with a calendar year of anticipating an increase twice during that tax year. That Congress had in the preceding revenue acts refrained from doing. The congressional conception of just taxation, as heretofore expressed, had not intimated any such possibility which would affect the rest of the fiscal year ending in 1942. There was no conceivable basis for assuming that Congress might do so, even affecting the tax for the uncompleted fiscal year. Here a tax is imposed increasing the taxes for such fiscal year upon many corporations after the fiscal year had been completely closed. With all of the discussions of proposed increase in taxation under the 1942 bill, there had been no intimation that Congress would change its policy in this respect or would adopt a method of apportionment which it had heretofore condemned and discontinued because of administrative difficulties. Valid retroactive taxation had always been of a nature which might have been readily anticipated where not imposed as a deterrent or punishment.

Retroactive taxation has heretofore been retroactive only in the sense that the details had not been determined or the final adoption effected prior to the retroactive period. But such retroactive taxation had always been a matter of consideration and reasonable expectation during the entire time it was to be made effective.

In this instance there has been no intimation, no suggestion, no statement to place corporate officers on notice. The Treasury Department had apparently not considered the proposed retroactive feature desirable. A duty to have anticipated it months ago should not now be imposed upon corporate officers. The suggestion comes as a complete surprise and is not the readily anticipated retroactive taxation which has heretofore been sustained by the courts.

Corporate officers busy with other matters should not be under a duty to imagine and anticipate new or unusual methods of taxation and prepare therefore in advance. This is particularly true at a time when all their efforts should be directed to increasing efficiency and production.

What action have corporate officers naturally taken without reason to expect such retroactive increased taxation for the 1941-42 fiscal year?

1. Fiscal-year corporations have prepared their budgets for the fiscal year 1941-42. They necessarily had to anticipate their income and expenditures for that year. We have seen that they have been under the necessity of anticipating an increase in taxes during the fiscal year, which became an actuality when Congress passed the 1941 Revenue Act on September 20, 1941. We have also seen that they had no reason to have anticipated the present proposed act.

2. Fiscal-year corporations have, accordingly, entered into contracts for purchase of raw materials, made agreements for the sale of manufactured products, completed arrangements for financing their transactions for the year, made promises to repay bank loans during the year, invested money in plant and equipment, all based upon the taxation that they could reasonably be held to have anticipated. Many have begun expansion of their plants which they will have to abandon.

3. Fiscal-year corporations have filed earnings statements of their income with banks and have borrowed money upon the statements of actual income and expenses for part of the fiscal year and anticipated for the remainder. They likewise made their commitments to repay their loans, based upon the estimated net operating income for the year and cash available therefrom, none of which they will be able to meet if the money intended for the repayment of the loans is suddenly and unexpectedly required to pay the unanticipated increase in taxes. The corporation may have repaid the loan and have no cash left with which to pay the taxes.

4. Many fiscal-year corporations after the completion of the fiscal year in 1942, have computed and paid additional incentive compensation to employees upon the net income after taxes, all of which will have been rendered incorrect by the proposed retroactive tax legislation.

These workers will have been substantially overpaid if the Revenue Act of 1942 is made retroactive. The corporation may have no alternative except to bring suits against all such employees to recover the overage or to deduct the same from their wages during this year in which their individual income taxes also will have been increased. It is doubtful if the directors after the expiration of the fiscal year could legally change an additional incentive compensation plan so as to allow the employees to retain that which they received when lawful but now rendered unlawful by congressional act.

5. Pursuant to the requirements of the Securities and Exchange Commission, corporations have filed reports for their fiscal year already ended during 1942, or filed interim reports on the existing tax basis, and the public may have been influenced to purchase their securities on stock exchanges in reliance thereon, all of which reports, although accurately prepared and filed pursuant to congressional requirement, will be made false by the proposed new tax law being made effective in such a retroactive manner.

6. Such corporations have closed their fiscal years, made their final reports pursuant to the Securities and Exchange Commission's requirements in accordance with the congressional intent, and sold new securities to the public on the basis of the reports submitted to the Securities and Exchange Commission but subsequently to be rendered false by the proposed new internal revenue bill.

7. Fiscal-year corporations may have paid three or possibly four quarterly dividends to stockholders out of the net cash remaining from the year's net income without notice or reason to believe that the Government would claim the whole or a part of such cash.

8. Corporations with fiscal years ending on or prior to June 1, 1942, have prepared their 1942–43 budgets anticipating an increase in taxes for the latter fiscal year but without reason to anticipate that they would be deprived of their 1941–42 income by subsequent legislation. They have borrowed money from the banks in reliance upon the year-end statement, about to be rendered false by congressional legislation without notice. They have agreed to repay bank loans during 1942–43, having made such arrangements after anticipating the increase of taxes for the new fiscal year. Many will now be rendered unable to meet their obligations as they mature, because they have paid out their income for the completed fiscal year 1941–42, without any suggestion or reason to believe that Congress would not only reverse its policy enunciated in 1934 but would make said reversal retroactive, even as to those, who upon the completion of a fiscal year, had distributed their income to stockholders pursuant to the policy established by Congress, as evidenced by section 102 of the Internal Revenue Code. They are precisely in the same position in this respect that the calendar year corporations would be if the bill were made retroactive for 1941.

9. These dividends, properly paid out of earnings pursuant to congressional mandate by reason of such unexpected increase in the proposed retroactive taxes may now, as a matter of law, have been paid out of capital, rendering the directors who acted in good faith and without negligence liable to creditors of the corporation for the amounts paid to stockholders. (See *Randall as Trustee of Bush Terminal Co.* v. *Bailey* (decided by Court of Appeals, under sec. 58, New York Stock Corporation Law, New York Law Journal, July 7, 1942).)

10. Corporations by reason of payment of said dividends and the increased income taxes may even be rendered insolvent and unable to carry on the activities of war work or otherwise.

11. Corporations may have been liquidated and, after setting up what then appeared to be proper reserves for taxes, may have distributed their remaining assets to the stockholders.

12. The stockholders although receiving the dividends paid to them pursuant to the congressional mandate contained in section 102 of the Internal Revenue Code in good faith, and having paid to the State and Federal Governments perhaps 30 or 50 percent or more thereof in income taxes on March 15, 1942, may now be compelled to return the whole distribution to the corporation rendered insolvent by the unanticipated increase in the income taxes. (See *United States* v. *McHatton* (266 Fed. 602).)

THE PROPOSED RETROACTIVE FEATURE IS OF AT LEAST DOUBTFUL CONSTITUTIONALITY

The proposed retroactive provision has none of the justifications which have caused some retroactive taxation to be sustained in the past. It has none of the features which were urged to sustain the Silver Purchase Act, in which Government counsel stated in their brief that "The Government recognizes that, even though adopted to make its monetary measures effective, the retroactive act is subject to the limitations of the fifth amendment."

The proposed tax does not fall within the most favorable classification of statutes which have been sustained when contested.

In *United States* v. *Hudson* (299 U. S. 498, 500), the court sustained the Silver Purchase Act for the reasons that "as respects income-tax statutes, it long has been the practice of Congress to make them retroactive for relatively short

periods so as to include profits from transactions consummated while the statute was in the process of enactment or within so much of the calendar year as preceded the enactment."

Neither reason justifies the present proposal. As heretofore seen, it has not been proposed or discussed so as to have been within the contemplation of taxpayers and it has not been limited to the period during which the retroactive feature was in the process of enactment. The retroactive feature does not even impose a tax on the actual income of the portion of the calendar year of the enactment. For companies having fiscal years ending in the first few months of 1942 for the purpose of using the inactive season as a most convenient opportunity for an inventory, their income will have been substantially and may have been entirely earned during 1941. The new tax is not on the portion earned in 1942 but on a fractional proportion for the entire fiscal year.

The proposed provision does not fall within the test suggested as a justification by Mr. Justice Stone, now Chief Justice Stone, in *Milliken* v. *United States* (283 U. S. 15, 20), wherein he said:

"This court has held the taxation of gifts made, and completely vested beyond recall, before the passage of any statute taxing them, to be so palpably arbitrary and unreasonable as to infringe the due-process clause."

And continued, referring to the case of *Nichols* v. *Coolidge* (274 U. S. 531), and *Untermeyer* v. *Anderson* (276 U. S. 440):

"In both the point was stressed, as the basis of decision, that the nature and amount of the tax burden imposed could not have been understood and foreseen by the taxpayer at the time of the particular voluntary act which was made the occasion of the tax."

As we have seen, that is practically the situation here.

And then, in distinguishing the act which he was sustaining, he held (p. 23):

"Not only was the decedent left in no uncertainty that the gift he was then making was subject to the provisions of the existing statute, but in view of its well understood purpose he should be regarded as taking his chances of any increase in the tax burden which might result from carrying out the established policy of taxation * * *."

Thus, it is indicated that the retroactive law to be anticipated is one carrying out an established policy, not a law reversing such a policy.

Not only the majority opinion in *Untermeyer* v. *Anderson* (287 U. S. 440), but the dissenting opinion recognized the necessity of justifying a tax made retroactive, and, referring to the majority opinion, Mr. Justice Brandeis said (p. 447):

"It holds the act void because the action of the lawmaking body is in its opinion unreasonable. Tested by the standard of reasonableness commonly adopted by man—use and wont—that action appears to be reasonable."

And again (at p. 449):

"The need of the Government for revenue has hitherto been deemed a sufficient justification for making a tax measure retroactive whenever the imposition seemed consonant with justice and the conditions were not such as would ordinarily involve hardship."

And finally (at p. 451):

"The problem of preventing loss of revenue by transactions intervening between the date when legislation is introduced and its final enactment, is not a new one; * * *."

Subjected to that test of reasonableness, "use and wont," the present retroactive feature is unfair, unreasonable, and without justification.

The original decision sustaining retroactive taxation *Stockdale* v. *Insurance Company* (20 Wallace 323), was, in effect, based upon the fact that the retroactive feature was only carrying out the congressional intent of a prior tax statute which had been frustrated by a decision of the court.

The proposed retroactive feature is even less justifiable as a social policy. The desirability of legislating retroactively with respect to taxes, for the intervening period between the date of the recommendation and the date of the final effectiveness of the act, does not justify the proposed bill. The value of imposing the tax over the period to prevent unfair speculation after the taxing policy has been announced and before it can be made effective is wholly absent in this case. The necessity of providing revenue between the time that Congress has decided upon a certain policy and the time that it can make that policy effective cannot justify the proposed provision which embraces no such limitations. The principle of retroactive application of an increase in income taxes in accordance with the long-established governmental policy, does not justify the proposed retroactive feature, departing therefrom.

The necessity of taxpayers assuming to a limited extent the increase in the tax during the period of its preparation and which results in carrying out a long-established policy does not justify the necessity of assuming additional increased taxes, resulting from a reversal of such policy and the imposing of unexpected and unanticipated retroactive taxation. Here, as we have seen, the taxpayers had no reason to believe that there would be another increase in income taxes applicable to the fiscal year that had been wholly or substantially concluded. The established policy of the Government had been to the contrary.

In the case of the calendar year corporations, they have been forewarned that the new tax law, although it might not be enacted until late in 1942 will apply to the 1942 earnings and, consequently, there has been an opportunity to set up proper reserves in anticipation thereof, reports have been rendered to stockholders, dividends have been paid, borrowings incurred, contracts made, taxes accrued, and debts amortized, with the full knowledge of the possibility of increased taxes for this year. In other words, they are subjected only to the retroactive features ordinarily to be anticipated, as was the 1941 act for the fiscal year 1941–42 of fiscal-year corporations.

Respectfully submitted.

CONBOY, HEWITT, O'BRIEN & BOARDMAN.

The CHAIRMAN. I have received the following telegram addressed to this committee. The reason for reading it into the record will appear at the end of the message. This telegram is as follows:

LOS ANGELES, CALIF., *July 30, 1942.*

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee, Washington, D. C.:

This association represents over 100 aircraft parts processing companies employing 50,000, all engaged in war production. Many of these companies cannot survive and production suffers if proposed excess-profits taxation accepted. Typical company produces 10 times invested capital important aircraft production each year. Base period experience clause useless to many who are losing money, that period developing products which now are essential. Under these circumstances, intelligent management will earn the $10,000 exemption plus 8 percent capital within first month. If profits from remaining millions of production are taxed 90 percent excess, 40 percent normal, plus State and local, with inherent risk in any such business, it would be necessary profit 50 percent gross on sales or 100 percent on cost to result less than 3 percent net on sales. Where will business and capital come from under these conditions? We are speaking now of small business, particularly subcontractors who definitely are not Government financed. Would appreciate this being read to committee for consideration as small business rarely is represented in Washington.

AIRCRAFT PARTS MANUFACTURERS ASSOCIATION,
JACK FROST, *Executive Secretary.*

I think there should be a subcommittee appointed on the subject that has been under discussion this morning. The Treasury is giving further consideration to amendments to the pension trust provision contained in the House bill, and there are certain things that must necessarily be done, and if it is agreeable to the committee I would suggest that a subcommittee of three or four be appointed to confer with the Treasury, and also to represent the viewpoint of the committee in making certain necessary changes in the pension trust provision. If that is agreeable I will be pleased to appoint Senator Brown, Senator Radcliffe, Senator Taft, and Senator Vandenberg, if you will serve, Senator, because you did excellent service on the incentive taxation provision some years ago. I suggest that you gentlemen might confer with the Treasury staff, because the matter is under consideration and there are certain amendments to these sections that undoubtedly will be recommended by the Treasury itself. There may be, and will be, suggestions that the subcommittee will wish to make in behalf of the general committee, because this is an important question.

Senator CONNALLY. Mr. Chairman, I have a statement here prepared by Mr. Robert Ash, a local lawyer, about some tax matter that he has requested that I have inserted in the record. I do not sponsor it, because I do not know much about it, but if agreeable I will put it in the record.

The CHAIRMAN. Yes; if there is no objection, it may be put in the record.

(The statement referred to is as follows:)

STATEMENT SUBMITTED BY ROBERT ASH, WASHINGTON, D. C., ATTORNEY FOR J. E. RILEY INVESTMENT CO.

In the statement made by the Secretary of the Treasury to the Committee on Ways and Means on March 3, 1942, he proposed, as has the Congress itself, that at this session of Congress an attempt be made to eliminate hardships so that the tax laws will cast their burden equitably on all taxpayers. In line with this proposal attention should be directed to one provision of the law which, through misunderstanding of its terms and intent, has imposed hardships on a number of small mining enterprises which, unlike the large mining corporations, did not have adequate legal and tax advisers to protect their interests. The provision in question is section 114 (b) (4) of the Internal Revenue Code providing for percentage depletion.

The Revenue Act of 1932 provided that a taxpayer making a return for 1933 should state whether he elected to have a depletion allowance "for succeeding taxable years" computed with or without percentage depletion.

The 1934 Revenue Act also provided for percentage depletion in respect of mines and specified that a taxpayer making his "first return" thereunder should state whether he elected to take percentage depletion. It was believed by at least some taxpayers (based partly on language in House and Senate committee reports) that this gave a new election to those who had failed to exercise their option under the 1932 act, but that an election made under the 1932 act "for succeeding taxable years" carried through without the necessity for a further election.

The 1936 act continued the percentage depletion provisions of the 1934 act, but gave no new election wherever the 1934 act would have given none.

The difficulties and hardships experienced by some of the small mining companies may be summarized as follows:

(1) Election having been made under the 1932 act to take percentage depletion for 1933 and for succeeding taxable years, certain taxpayers believed they had specifically declared their program and were not obligated again to declare their election under the 1934 act. But it has been held otherwise. (See *C. H. Mead Co.* v. *Commissioner*, 106 F. (2d) 388 (C. C. A. 4), and *Mother Lode Coalition Mines Co.* v. *Commissioner*, 125 F. (2d) —— (C. C. A. 2), decided by Second Circuit February 5, 1942, 1942 Prentice-Hall Tax Service, ¶62,451.)

(2) A taxpayer having no unit depletion basis available and therefore having no choice of methods, attempted to take percentage depletion on the assumption that there being no basis for an election, percentage depletion would be allowed. This was denied on the ground that the taxpayer had a duty to make a declaration. (See *Dorothy Glenn Coal Mining Co.* v. *Commissioner*, 38 B. T. A. 1154; *Tonopah Mining Co.* v. *Commissioner*, 126 F. (2d) —— (C. C. A. 3), decided March 17, 1942, Prentice-Hall Tax Service, ¶62,554).

(3) In another case the taxpayer in a remote part of Alaska did not receive a copy of law or regulations or return forms, and thus had no knowledge of its right to elect percentage depletion for the year 1934. Its return for 1934 was made on the 1933 form and no election was made. Two years later the revenue agent brought the percentage depletion privilege to the taxpayer's attention. The courts denied percentage depletion on the ground that no election was made therefor as required by the statute. (See *J. E. Riley Investment Co.* v. *Commissioner*, 110 F. (2d) 655 (C. C. A. 9), decided March 16, 1940, affirmed 311 U. S. 55 (November 12, 1940)).

(4) The president of the taxpayer, a small coal-mining company, undertook the preparation of the company's 1934 return and sought advice from and relied upon the Deputy Collector of Internal Revenue in preparing and filing the return which included no election of percentage depletion. The Board of Tax Appeals disallowed the percentage depletion deduction because of the taxpayer's failure to

make the new election. *Midvale Coal Co.* v. *Commissioner*, B. T. A. Memo. Op., Docket No. 91729, decision entered July 20, 1939.

(5) The taxpayer had a loss in 1934 and since percentage depletion could only be computed if there was a profit no percentage depletion was claimed. One circuit court denied percentage depletion for 1935 (*Mother Lode Coalition Mines Co.* v. *Commissioner*, 125 F. (2d) 657 (C. C. A. 2), decided February 5, 1942, 1942 Prentice-Hall Tax Service, ¶62,451), on the ground that no election was specified in 1934; and another circuit court allowed depletion for 1935. (*Pittston-Duryee Coal Co.* v. *Commissioner*, 117 F. (2d) 426 (C. C. A. 3)), decided January 24, 1941, on the ground that no election was required in 1934, since none could be computed in a loss year.

The committee knows that Congress in passing the 1934 act did not intend to deprive any mine owner of the right to percentage depletion, but to extend the privilege to those who had failed to avail themselves of it under the 1932 act. (See H. Rept. No. 704, 73d Cong., 2d sess., p. 29; S. Rept. No. 558, 73d Cong., 2d sess., p. 36; and explanation on House floor, 73d Congressional Record 2922.) Certain it is that the provision was never intended to be a trap for unwary and uninformed small mine owners.

The hardship in these cases arises not so much from the denial of depletion for the year involved in the litigation as from the fact that either (*a*) through misunderstanding of the law by the small taxpayer—which is understandable in so technical a problem—or (*b*) misconception of the law by the Board and courts, or (*c*) in the *Riley case*, through failure for physical reasons to be in position to have any knowledge of the law involved, these relatively small mining companies have been denied percentage depletion for their entire existence after 1934, unless there is remedial legislation. The situations presented by these cases and other similar ones represent an inequity which it appears should be cured—in fact the Supreme Court in its decision in the *Riley Co. case*, cit. supra, recognized the hardship or "strictness" of the provision and suggested that the cure for the hardship was a legislative (not a judicial) function. At page 59 the Court said:

"Petitioner urges that this result will produce a hardship here. It stresses the fact that it had no actual knowledge of the new opportunity afforded it by section 114 (b) (4) of the 1934 act and that equitable considerations should therefore govern. That may be the basis for an appeal to Congress in amelioration of the strictness of that section. But it is no ground for relief by the courts from the rigors of the statutory choice which Congress has provided."

It is hoped the committee will enact the needed relief legislation.

Attached hereto is section 114 (b) (4), with proposed amendments printed in italics, which, if enacted into law, will effectuate the original purpose and intent of Congress and eliminate the present inequity and hardship to small mining companies.

SECTION 114. BASIS FOR DEPRECIATION AND DEPLETION

(b) BASIS FOR DEPLETION.—

* * * * * * *

(4) PERCENTAGE DEPLETION FOR COAL AND METAL MINES AND SULFUR.—The allowance for depletion under section 23 (m) shall be, in the case of coal mines, 5 percent, in the case of metal mines, 15 percent, and, in the case of sulfur mines or deposits, 23 percent, of the gross income from the property during the taxable year, excluding from such gross income the amount equal to any rents or royalties paid or incurred by the taxpayer in respect of the property. Such allowance shall not exceed 50 percent of the net income of the taxpayer (computed without allowance for such depletion) from the property. A taxpayer making his first return under this chapter [in respect of a property][1] *in which depletion is claimed in respect of a property for a taxable year beginning after December 31, 1941 (whether or not a return in respect of such property was made for any taxable year beginning prior to January 1, 1942)* shall state whether he elects to have the depletion allowance for such property for the taxable year for which the return is made computed with or without regard to percentage depletion, and the depletion allowance in respect of such property for such year shall be computed according to the election thus made. If the taxpayer fails to make such statement in the return, the depletion allowance for such property for such year shall be computed without reference to percentage depletion *unless*

[1] Omit words in brackets, proposed amendments printed in italics.

percentage depletion shall have been claimed by a taxpayer in his return in respect of the property for a taxable year beginning after December 31, 1933, and before January 1, 1942, and if so claimed percentage depletion shall be allowed for such year or years in which claimed. The method, determined as above, of computing the depletion allowance shall be applied in the case of the property for all taxable years in which it is in the hands of such taxpayer, or of any person if the basis of the property (for determining gain) in his hands is, under section 113, determined by reference to the basis in the hands of such taxpayer, either directly or through one or more substituted bases, as defined in that section. The above right of election shall be subject to the qualification that this paragraph shall, for the purpose of determining whether the method of computing the depletion allowance follows the property, be considered a continuation of section 114 (b) (4) of the Revenue Act of 1934, 48 Stat. 710, and the Revenue Act of 1936, 49 Stat. 1686, and the Revenue Act of 1938, 52 Stat. 494, and as giving no new election in cases where either of such sections would, if applied, give no new election *but a claim for percentage depletion in a return for any taxable year after December 31, 1933, and before January 1, 1942, as hereinabove specified shall be held to have been a proper election.*

The CHAIRMAN. Senator Danaher, if you wish to offer for the record the brief which you submtited to me earlier in the morning, this would be the time for it.

Senator DANAHER. I would like very much to do so, Mr. Chairman, and with that an accompanying letter from Mr. Samuel Ferguson, president of the Hartford Electric Light Co., dated July 24, 1942.

The CHAIRMAN. I have looked at the brief, and I think it warrants reading by every member of the committee, because Mr. Ferguson has made some suggestions—he is not merely content with some criticisms of existing law—and the letter and the brief will be entered in the record.

(The matter referred to is as follows:)

THE HARTFORD ELECTRIC LIGHT CO.,
Hartford, Conn., July 24, 1942.

The Honorable JOHN A. DANAHER,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR DANAHER: Your attention, as a member of the Senate Finance Committee, is called to the attached memo which treats of a disastrous oversight of the House Ways and Means Committee in not differentiating between regulated corporations having a slow capital turn-over and unregulated industrial corporations having a quick turn-over. In the slow category are such corporations as render telephone, gas, electric, and other services[1] where the investment is large and the annual sales amount to only 20 or 25 percent of the capital investment, in contrast to the annual sales of the average industrial which equal or exceed their capital.

For such slow turn-over corporation, the tax bill as recommended by the Ways and Means Committee fails lamentably to meet the specifications of Mr. Morgenthau, when he stated—

"A substantial share of the increased corporation tax should fall on excess profits. Taxes paid from such profits have less disrupting effects on business than taxes which are generally applicable to all corporate earnings irrespective of the rate of return. A tax which absorbs excess profits, still leaves the corporate taxpayer with a sufficient margin of income for dividends and safety.

"On the other hand, a tax which dips too deeply into the incomes of low-earning corporations may seriously affect their debt-paying capacity, if not their very existence.

"* * * At a time like this, I am confident that incorporated business will willingly pay additional taxes which will, after all, leave it in the aggregate about the same amount of income after taxes as during the years before 1940."

In the memo, certain sections cover the questions in general as affecting the

[1] Such as railroads, etc.

electric industry—and in other sections the effect on the electric light company; in section V are various possible suggestions for correction.

Very truly yours,

S. FERGUSON, *President.*

Enclosure.

SECTION I. GENERAL—TAX EFFECT ON THE INDUSTRY

Corporation war taxes as proposed create a most critical situation for utility corporations in contrast to the effect on the ordinary industrial corporation.

The earnings of utility corporations have for years been subject to regulation which has aimed with greater or less success to limit them to an amount not substantially greater than required to attract capital.

With few exceptions the earnings to be found to exist in such of these corporations as are able to pay dividends consequently range from 4 to 8 percent on the cost of the property—plus working capital.

These corporations have a very slow capital turn-over amounting to once in 4 or 5 years in contrast to the much more rapid turn-over of the industrial corporations.

With a 5-year turn-over the net profit, after taxes, must therefore be 30 percent of the gross receipts to equal a 6 percent annual return—five times as large a percent of gross than is required for the same return for a 1 year turn-over industrial. Under the 1941 tax law the net earnings and percent return were reduced from pre-war levels in spite of an increase in gross of 10 to 20 percent. This tended to impair the ability to raise new money even of the senior variety—but the bill now before Congress goes much further and very materially further reduces the return so that a company formerly carrying into the net 30 percent of the gross, now finds itself with only 15 percent or less; or a 3-percent instead of a 6-percent return; this is below that necessary to attract capital where the requirement for a prosperous company is 3 percent interest plus 2 percent sinking fund (total 5 percent) and is, therefore, hopelessly inadequate generally.

If it were not for the constant need of new capital, this reduction in earnings would only constitute a hardship to the investors in the business without harming the general public or the industry's ability to serve war industries; but if the earnings are brought down to below the point which will attract capital it will not be possible to expand to meet the essential and constantly increasing needs of the public. Inasmuch as the public must be served, the only possible means of furnishing such service under such conditions will be by governmental agencies with taxpayers' money. This means that the industry will be taxed out of existance as a private undertaking.

It is futile to think of raising rates to meet the situation as practically all added gross revenue from such a process goes to taxes rather than to net from such increased revenue—first, by the excess-profits tax at a 90 percent rate, and next the deduction of 45 percent of what is left. Any raise in rates of sufficient size to appreciably affect the net profit after taxes must be so high as to defeat its own objective through the diminution of sales to be caused thereby according to the law of diminishing returns.

Example

Assume increase in rates		$100.00
Then—Increase in net before taxes		100.00
Less excess-profits tax	$90.00	
Less income tax	4.50	
		94.50
Then gain in net after taxes		5.50

or differently expressed the customer must be asked to pay $18.25 for each added dollar carried into the net profit after taxes.

A restoration of the excess-profits tax to its former and logical place as a final tax after all other taxes and expenses have been deducted would materially help though not fully rectify the situation. Such shift would increase the credit of 1936-39 earnings since the tax of those years was at a lower level. In the case of The Hartford Electric Light Company, it would furnish earn-

ings sufficient for normal dividends but nothing extra to plow back into the property. In the case of other companies, it will be necessary, generally, to reduce the normal tax as well—either directly or by the allowance of debt-reduction payments and preferred dividends as an expense or by other methods.

SECTION II. GENERAL—TAX EFFECT ON THE INDIVIDUAL

It is common to consider that equity requires the same or greater tax reduction in the income of prosperous corporations than taxes make in the income of individual citizens. This fallacy would seem to come from forgetting the fact that a corporation is only a legal fiction covering a group of individuals.

Congress has carefully determined what shall be the rate of taxation on individuals of each income level. This tax rate is (with slight modification in favor of earned income) fixed as a fair assessment according to the total amount of the income of the individual regardless of its source.

If then the income of the individual is reduced by the failure (on account of taxation) of a corporation to pay dividends, the result is that that part of his income is taxed at 100 percent and only the remaining portion at the statutory rate.

The equity securities of the industry are very widely spread and are favorites among people of small and moderate means for whom Congress has fixed as equitable tax rates of less than 25 percent. The average holding of utility stock in the hands of the public does not exceed a market value of $3,000.

The receipts of any portion of the income of an individual from dividends of corporations is recognized to be attended with the business risk inherent to equity securities but this is no reason for adding the penalty of 100 percent tax on the whole or part of same.

This thought is recognized in Mr. Morgenthau's recommendation to the Ways and Means Committee when he said—

"A substantial share of the increased corporation tax should fall on excess profits. Taxes paid from such profits have less disrupting effects on business than taxes which are generally applicable to all corporate earnings irrespective of the rate of return. A tax which absorbs excess profits still leaves the corporate taxpayer with a sufficient margin of income for dividends and safety."

"On the other hand, a tax which dips too deeply into the incomes of low-earning corporations may seriously affect their debt-paying capacity, if not their very existence.

"* * * At a time like this, I am confident that incorporated business will willingly pay additional taxes, which will, after all, leave it in the aggregate about the same amount of income after taxes as during the years before 1940."

It is to be hoped that the Senate in the interest of the individual utility stockholder will give consideration to the fundamental difference inherent in a regulated slow turn-over corporation as compared to one of quick turn-over and not subject to regulation of earnings, and will save him from the imposition of 100-percent tax on a portion of his income which he would not incur if an equal amount of his income had been derived from bond interest or dividends from unregulated corporations with rapid turn-over.

SECTION III. TAX EFFECT ON THE HARTFORD ELECTRIC LIGHT CO.

The Hartford Electric Light Co.'s earning statement for 1942 is estimated to be as follows:

Receipts		$12,001,485
Less:		
Operating expenses	$5,548,180	
Depreciation expense	768,537	
Taxes (exclusive income and excess-profits tax)	1,017,802	
		7,334,519
Operating income		4,666,966
Other income		157,930
Gross income before Federal taxes		4,824,896
Less interest and depreciation appropriation from surplus		306,000
Available for income and excess-profits taxes and dividend		4,518,896

Less:		
Excess-profits tax (90 percent)	$1,470,723	
Normal income tax (45 percent)	1,168,405	
		$2,639,128
Available for dividend		1,879,768
Less dividend requirements ($2.75 per share)		2,303,000
Deficit		423,232

It will be noted that earnings fail to meet normal dividends by $423,000.

That the normal dividends of $2,303,000 do not represent excessive earnings is obvious from the fact that cost of plant and necessary working capital is in excess of $40,000,000.

This normal dividend has been regularly paid for more than 10 years past and many stockholders will suffer great hardship if curtailment is forced through excessive corporate taxation.

There are 12,109 stockholders with an average holding of 69 shares each upon which they receive a total of $190 annually in dividends.

The great bulk of these stockholders are in the moderate-income class where Congress has determined that rates of 25 percent or less are equitable. Any reduction of their income caused by tax forced dividend reduction means a tax of 100 percent on that portion of their income instead of at the rate fixed by Congress as equitable.

Compare the situation with that outlined by Mr. Morgenthau when he recommended:

"* * * At a time like this, I am confident that incorporated business will willingly pay additional taxes which will, after all, leave it in the aggregate about the same amount of income after taxes as during the years before 1940."

The above undesired result would seem to be caused by the failure of the House committee to recognize the need for special treatment of corporations with slow capital turn-over. Certain possible remedies are outlined in section V. These should receive careful consideration.

I believe that Congress is interested in preserving the health and morale of the Nation. This is sure to suffer if dividend rates of long standing and by which, in part, the individuals' standard of living has been governed are forced down by excessive corporate taxation superimposed upon his individual taxation.

The legal fiction of the corporation as an entity does not suffer but rather it is the individual investor on whom Congress has supposedly placed such rate of taxation in accordance with his total amount of income as has been determined to be equitable.

It is not claimed in the case of this company that new capital cannot be attained (see sec. I) even with the proposed taxation since there is, at the present time, sufficient equity capital to support considerable additional senior securities. It must be remembered however that this company is practically unique in the industry with respect to its freedom from any material amount of debt.

SECTION IV. PROPOSED POST-WAR REFUND

The proposal that the corporate taxpayer be given special bonds to the extent of some part of its excess-profits tax as was at one time approved by the House Ways and Means Committee will not, if subject to restrictions as to use, be of any help as to earnings. In the form previously approved it was not a reduction of tax which thereby increased the distributable earnings but was only a contribution to capital.

The conversion into cash will furnish funds for a later plant rehabilition or extension but unless completely free from conditions or restrictions cannot ever appear as earned surplus. The bond (or later as its cash or property equivalent) will appear on the books as an asset but there will be a balancing item on the liability side of a "contribution." Inasmuch as the Federal Government is usually a customer through service to the post office, the item is covered in the prescribed utility accounting under the caption of "Customer contributions to capital."

In the case of a public utility, the plant built from the proceeds of these bonds will not even have future earning power as any regulatory commission would deduct this Federal contribution from the cost of the plant in determining a rate base.

The proposal must, therefore, not be considered in any way to relieve a utility from the proposed tax burden.

SECTION V. SUGGESTED REMEDIES

1. To return normal and excess profits to their proper and logical sequence. The equity of an excess-profits tax lies in ability to pay—and ability to pay cannot be evaluated except by a consideration of such earnings as belong to the stockholders after all obligations for expenses and other taxes have been met.

2. To treat as an expense in 1942 and subsequent tax returns such sinking fund payments as are made in accordance with the terms of the bonds outstanding as of July 1942; but not so to treat such payments in reviewing the earnings of the base years 1936, 1937, 1938, 1939 when determining the amount of income subject to excess-profits tax; thus equalizing the "invested capital" and the "comparative earning" method in respect to this allowance.

3. Lay a graduated tax on income subject to excess-profits tax. The blocks of the graduation should not be measured by any arbitrary number of dollars as was done in the past but on a number of dollars to be determined as a percentage of the earning credit allowed in the determination of the amount of income subject to this tax. In this way only a moderate assessment would be laid on a slight overrun, but the assessment would approach 100 percent in event of large overruns of the allowable credit—

For example:

First block, 10 percent of base credit earnings at 25 percent.
Next block, (?) percent of base credit earnings at 50 percent.
Next block, (?) percent of base credit earnings at 75 percent.
All excess at 100 percent.

The reason that blocking the tax has fallen down in the past is due to the blocking being done by absolute dollars rather than by percentage over normal earnings.

4. In any determination of invested capital to recognize as invested capital all money spent for plant regardless of whether financed by money provided by stock issues, bond issues, or from surplus earnings. Under the present law only 50 percent of bond money is recognized. This is probably with the thought that bond money is cheap money. This, however, is not the case as in contrast to equity money the principle must be repaid. Interest and sinking fund payments together amount to about 6 percent which is comparable to an equity return.

5. Recognize the need for added earnings in cases of plant expansion whether financed by stock or bond when using the comparative basis for determining income subject to excess-profits tax. The Hartford Electric Light Co. needs more earnings than that of the base years wherewith to pay interest and sinking fund on $7,000,000, put into plant expansion to care for war industries, which amount was financed by bonds.

The above methods of relief apply to all varieties of corporations. It will probably be desirable to recognize the slowness of turn-over by a specific consideration. The following will not benefit war industries in the slightest as their annual sales in all cases exceed "invested capital."

6. To reduce the excess-profits tax as otherwise determined according to the ratio of annual sales to invested capital, as defined elsewhere, in all cases where this ratio is less than unity.

The CHAIRMAN. The committee will recess until Monday at 10 o'clock.

(Whereupon, at the hour of 1:10 p. m., a recess was taken until 10 a. m., Monday, August 3, 1942.)

REVENUE ACT OF 1942

MONDAY, AUGUST 3, 1942

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to adjournment, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

The CHAIRMAN. The committee will please come to order. Senator John Thomas of Idaho is submitting a brief in opposition to the 5-percent freight tax in the tax bill now before us, and asks that it be inserted in the record. If there is no objection, Senator Thomas' brief will be included in the record.

(The brief referred to is as follows:)

BRIEF SUBMITTED BY SENATOR JOHN THOMAS OF IDAHO IN OPPOSITION TO PROPOSED TAX ON FREIGHT TRAFFIC

I desire to make a protest on behalf of agricultural and business organizations and citizens of the State of Idaho against the proposed tax on freight and express traffic in the revenue bill as passed by the House of Representatives.

The tax would be grossly discriminatory against the farm, forest, and mineral products of my State and would give an advantage to competing products from States located closer to the central markets.

The effect of the 5-percent tax on freight and express charges would be to add very greatly to the cost of shipment of Idaho products to the markets while increasing by a much smaller amount the cost of shipments from less distant points.

Obviously, there can be no justification for a tax which tends to injure producers in one geographical area and simultaneously places competitors in another area in a relatively more favorable position.

Idaho producers have no desire to avoid their fair share of taxation. They have good reason to protest, however, when a tax is so manifestly unfair.

Specific examples of the effect of the proposed tax are given in letters from various organizations and individuals which I offer for the record of the committee's hearings.

Idaho has a higher average freight rate than any other State on perishable commodities shipped to the leading markets of the country. The average freight rate on Idaho potatoes, for example, is 75 cents per hundred pounds, as against an average on Maine potatoes of 50 cents and on Wisconsin potatoes of 25 cents. The 5-percent tax would bear 200 percent more heavily on Idaho potatoes than on Wisconsin potatoes and 50 percent more heavily on Idaho potatoes than on Maine potatoes.

The tax on livestock shipped from Idaho to the Chicago market would be 10 times as great as on animals shipped from Illinois, Wisconsin, and Michigan. Grain growers in Idaho would pay a tax 3 times as great as would be applied to grain shipped to Chicago from Kansas. On lumber shipped from Idaho to Chicago the tax would be twice as great as on competing Southern pine from Mississippi.

If a tax on freight and express traffic is to be imposed it would be less discriminatory if the basis were changed in such a way as to eliminate the

element of distance. Thus the House Ways and Means Committee amended the original proposal by changing the tax on coal from a percentage to a tonnage basis. I realize, however, that a uniform tax based on weight or volume of freight probably would yield a much smaller amount of revenue than a tax on the cost of shipments. A very large volume of traffic at present is for the account of the Government and would be exempt from the tax.

Instead of trying to modify the proposal, the committee should, I believe, eliminate it entirely. Such action would be in accord with the recommending of the Secretary of the Treasury who in his appearance before this committee asserted that the tax would directly threaten the stability of prices. The Price Administrator has taken a similar position. There can be no question but that a percentage tax on all freight and express charges would contribute very greatly to an inflationary increase in costs of living. It is a tax whose injurious effects would far outweigh any advantage to the Treasury.

I also desire to have incorporated in the record of the hearings a letter from Mr. H. W. Morrison, president of the Morrison-Knudson Co., of Boise, Idaho, with respect to administrative difficulties of employers, especially contractors, in connection with the proposed deduction of income taxes at the source. Mr. Morrison does not oppose such a deduction but suggests a simplified procedure which would be less burdensome to large employers whose turn-over of labor is very great. Mr. Morrison's firm is doing construction work on a number of important Government projects in the West.

IDAHO FARM BUREAU FEDERATION,
Pocatello, Idaho, July 22, 1942.

Senator JOHN THOMAS,
Washington, D. C.

DEAR SENATOR: The people of Idaho and other Western and Southern States, situated long distances from their markets, will be required to pay several times the amount of tax required of people in States close to their markets, if a tax measure now before Congress becomes law. The measure would, I am informed, impose a 5-percent tax on freight rates.

The tax required of Idaho sheep and hog growers, under this measure, would be approximately 10 times as much as that required of sheep and hog growers from Illinois, eastern Michigan, and Wisconsin.

The freight rate on sheep and hogs, double deck, from central Idaho to Chicago is $1.08 per hundred pounds, as compared with 10 cents from Illinois, eastern Michigan, and Wisconsin. Therefore 5-percent tax on Idaho rate, would amount to 5 cents, as compared with one-half cent on the rate of Illinois, eastern Michigan, and Wisconsin.

Idaho potato growers would have to pay approximately 3½ times as much as potato growers in Wisconsin, on shipments to Chicago. Grain growers in Idaho would have to pay approximately three times as much tax, as Kansas grain growers, on shipments to Chicago. A similar inequality would exist as to merchandise and manufactured articles of all kinds, shipped from the manufacturing centers.

I am in favor of any necessary tax for war, so long as it is equitable and is not prejudicial to the people of Idaho, or of other States. I feel that you should do all in your power to defeat this measure.

Very truly yours,

ALFRED C. CORDON,
Legal Advisor, Idaho Farm Bureau Federation.

IDAHO TRAFFIC ASSOCIATION, INC.,
Idaho Falls, Idaho, July 22, 1942.

Hon. JOHN THOMAS, *Member of of Congress,*
Hon. D. WORTH CLARK, *Member of Congress,*
Washington, D. C.

DEAR SENATORS: In re the 5-percent tax on freight bills will say that we note this matter is now before the United States Senate for consideration. This tax is so manifestly unfair and unworkable that we sincerely hope that you will be able to succeed in having the same either eliminated or changed to a flat tax

of so much per ton on all commodities shipped or sold, whether the same moves by rail, common-carrier truck, or by private truck.

Owing to the fact that Idaho has the highest average freight rate on perishable commodities this tax would be unjust and unreasonable. As an illustration: Our average freight on potatoes is 75 cents per hundredweight, while the average out of Maine would be 50 cents per hundredweight, and out of Wisconsin about 25 cents per hundredweight, so you can readily see how much more taxes the producer in Idaho would be called upon to pay than would the producer in either Maine or Wisconsin. This also applies to livestock and all other commodities that are produced and shipped from the State. Also, owing to the fact that Idaho has a very limited population and home consumption, practically everything we produce must be shipped. This is not true in a great many States, such as Pennsylvania, Ohio, Indiana, Michigan, New York, and others, where a lot of the commodities move direct from the farm to the market via the farmer's own truck, on which there would be no tax.

Besides being unjust and unreasonable, the tax would be unworkable, for the reason that the final destination and the total amount of the tax on each freight bill would not be known at the time the commodity was shipped. As an example: I might sell a car of potatoes to a receiver in Chicago and, so far as I am concerned, it would be a complete sale; however, this car would not necessarily be unloaded in Chicago, but might be sold by the Chicago receiver and diverted into New York City where there would be an additional freight charge and an additional tax and it would be impossible for anyone to know how many revenue stamps, or the amount of taxes, which should be paid on any car at the time it was loaded.

This is also true in regard to livestock, particularly lambs from Idaho, which may be first offered for sale at Ogden or Denver and sold, as far as the Idaho producer is concerned, and that would end his freight bill. However, the same lambs might move to Omaha, Chicago, or even to Buffalo, N. Y., before they were slaughtered, and, under the present proposed law, someone would have to pay additional taxes.

It appears to us that the sensible tax would be a very nominal charge per ton on all commodities. They have made a reasonable charge of 5 cents per ton on coal and surely 10 cents per ton on all other commodities, particularly perishables, would be a sufficient tax to meet the present situation. With such a tax every shipper or every producer would know what to do at the time he sold his commodities.

Hoping that you may be able to get the law changed in this matter, I beg to remain,

Yours very truly,

C. L. DELONG, *Counsel.*

ALFRED CORDON,
Legal Adviser, Idaho Farm Bureau Federation,
Pocatello, Idaho.

GENTLEMEN: Congress proposes to enact into law a 5-percent tax on freight rates. I have information that the Ways and Means Committee of the House of Representatives has approved the measure with the exception that coal would be taxed 5 cents per ton instead of 5 percent.

In my opinion this measure is inequitable and is prejudicial to the farmers of the West and the South. It will create a condition whereby people located long distances from their markets will pay the bulk of the amount which the Government will collect on this tax. As an example, our rate on sheep and hogs, double deck, from central Idaho to Chicago, the packing center of the Nation, is $1 08 per hundred pounds. Our tax would be 5 cents per hundred. A farmer shipping livestock in Illinois or eastern Wisconsin and Michigan to Chicago might have a rate of 10 cents per hundred pounds and under this measure would pay one-half cent per hundred pounds tax. The processor of livestock will not absorb this tax. It will be charged to the producer and will probably be paid by the packing company who, in turn, will deduct the tax from the return which they make to the livestock producer.

Every product of agriculture and of the range will be affected in the same manner and it is my belief that the farm organizations of the Nation should immediately ask the Congress to defeat this measure. It is my information that the measure will reach the floor of the House of Representatives under the so-called closed rule, which means that there will be no debate. Hence, it is important that Members of Congress be made aware of the burden which will be imposed on the West and the South if this measure prevails. Idaho is not opposed to any tax for the war effort in which we will bear an equal burden with the residents of other States.

This commission is hopeful that the great national associations representing the farmers of this Nation will do something to defeat this measure.

Very truly yours,

PUBLIC UTILITIES COMMISSION OF IDAHO,
J. G. BRUCE, *Chief of Transportation.*

[Telegram]

BOISE, IDAHO, *July 15, 1942.*

Senator JOHN THOMAS,
Senate Office Building, Washington, D. C.:

Please advise if we can assist in any way in opposing proposed 5 percent freight tax which penalizes our long-haul shippers in competition with those areas close to consuming centers. Practically every phase of our agricultural and commercial life is adversely affected.

IDAHO STATE CHAMBER OF COMMERCE.

BOISE CHAMBER OF COMMERCE,
Boise, Idaho, July 14, 1942.

The Honorable JOHN THOMAS,
United States Senator,
Senate Building, Washington, D. C.

DEAR SENATOR THOMAS: We know you fully realize how unfairly any 5 percent or 10 percent tax on freight would affect us in Idaho, as we hear the House Ways and Means Committee has included in its 1943 revenue bill.

If it is necessary in the war program to tax freight shipments to raise money, why not add 50 cents or $1, or whatever the amount, to each freight shipment and make this charge uniform throughout the country?

We hope you will watch this item in the tax bill as we read that no amendments will be made from the floor of the House when the bill is reported there.

Sincerely,

BOISE CHAMBER OF COMMERCE,
E. G. HARLAN, *Manager.*

[Telegram]

PAYETTE, IDAHO, *July 15, 1942.*

Senator JOHN THOMAS,
Washington, D. C.:

Informed that revenue bill provides 5 percent freight charges. Would be severe penalty on account our high freight rates to eastern markets. Also our high

incoming freight rates on supplies. We wish enter our protest against said bill on agricultural products and on supplies used in agriculture.

F. H. HOGUE,
J C PALUMBO,
FRANK B. ARATA.

POTLATCH FORESTS, INC.,
Lewiston, Idaho, July 7, 1942.

Hon. JOHN THOMAS,
United States Senate, Washington, D. C.

DEAR SENATOR: I know that you will believe I am reluctant to write you on a controversial tax measure at a time like this and yet I feel it my duty to do so.

The proposal to raise revenue by a flat percentage tax on freight charges would be, if enacted in law, a most inequitable measure. The lumber industry of Idaho and the west generally now labors under a very considerable freight charge handicap as compared to the south particularly and to the less important lumber-producing regions in the east and north. A percentage increase on freight charges would obviously increase this differential and we believe the needed revenue should be raised in some other way.

I do not mean that freight charges should be eliminated as a taxable source of additional revenue but believe that, even in this field, there must surely be a more equitable manner of framing or assessing a freight charge tax. One such method might be to impose a flat tax per ton on all freight shipments. A second method might be to have a graded tax per ton on a few rough classifications such as coal, ore, grain, building materials, food products, and other manufactured products.

I hope you can find time to give this matter some thought and that if you agree with me, you will be able to present your views. Surely some method of applying a freight charge tax can be devised which will not disrupt competitive conditions inside an industry.

Very truly yours,

POTLATCH FORESTS, INC.,
C. L. BILLINGS,
Vice President.

CRAIG MOUNTAIN LUMBER CO.,

Subject: Effect of 5 percent transportation tax on our rate structure.

Senator JOHN THOMAS,
Washington, D. C.

MY DEAR MR. THOMAS: The House Ways and Means Committee last week completed its work on the new revenue bill and turned its recommendations over to drafting experts for whipping into final shape so the bill may be presented to Congress. We understand the bill will be presented on the House floor next week.

The tentative draft of the bill, as approved by the House committee, places a 5-percent tax on all freight and express shipments moving by any type of common or contract carrier. It also increases the tax on passenger transportation from 5 to 10 percent.

The proposed tax will increase the spread in lumber rates by 2 or more cents over southern pine. For example:

	To Chicago		
	June 24, 1918	Present	Proposed 5 percent tax
From west coast	55	80	84
From Hattiesburg, Miss.	26½	42	44
Spread in rates	28½	38	40

Chicago is typical of the general situation and serves to illustrate the difficulty west coast lumbermen experience in marketing their products in long-haul competitive territory.

It is obvious to everyone that a percentage tax levied upon freight charges has exactly the same effect upon our rate structure as a percentage increase in freight rates. We stood a 6-percent rate increase during March this year (I. C. C. exparte 123). Piling up these percentage increases in transportation charges will greatly handicap our long-haul traffic and act to the benefit of the short-haul traffic. Southern pine will benefit from this tax particularly after the Government withdraws from the lumber market. The point which should be kept in mind is that in the highly competitive market of the post-war period every item which increases our delivered price will be handicap.

Lumber alone is not the only commodity affected, but all long-haul traffic including farm products.

We request that you give this bill thorough study and oppose its passage. Please advise your reactions as it is serious.

Yours very truly,

CRAIG MOUNTAIN LUMBER CO.,
W. C. GEDDES, *President.*

MORRISON-KNUDSON CO., INC.,
BOISE, IDAHO, *July 23, 1942.*

Re: Pending tax bill.

Hon. JOHN THOMAS,
Washington, D. C.

DEAR SENATOR THOMAS: The current revenue bill which was recently approved by the House and which is now under consideration by the Senate Finance Committee, contains a provision requiring pay-roll deductions. We understand this to provide for the deduction of certain sums from earnings of employees and the deduction is to be made by the employer and remitted to the Government. Under the proposed plan as contemplated, we understand that the employer is made responsible for determining the status of dependency of each of his employees and is required to make the proposed deduction under a very complicated formula.

We believe that those originating this proposed method for making these deductions, have failed to give consideration to the tremendous problems involved in the handling of same insofar as the construction industry is concerned. It must be understood that the number of employees on pay rolls of operators such as ourselves, vary several thousand in a single month. Some of the defense projects we are handling are presumed to be started and completed in as little as 45 days' time. Such projects may involve the recruiting and employing of two to three thousand men. Others employ up to 10,000 men over a period of 4 to 5 months. Obviously, this proposed method of making these deductions would require such a tremendous accounting organization as to make the cost unduly burdensome to the employer.

We request your consideration of this matter in an effort to provide that such deductions as are made, should be made on a flat percentage basis of the employee's income, and if the employee has been overcharged through these deductions, same should be refunded by the Treasury Department or subsequent credits allowed.

We are not opposing the principle of pay-roll deductions for tax purposes, but do believe in the interests of reasonable efficiency that consideration of the method for accomplishing this objective as it applies to the construction business, should be given consideration.

Yours sincerely,

H. W. MORRISON,
President and General Manager.

Senator DAVIS. Somebody made a statement here as to the amount of joint tax returns. How much did they say it would bring in revenue to the Government?

The CHAIRMAN. The Treasury estimated $420,000,000. Community property is only $85,000,000. That is the Treasury estimate.

Governor Hobby. Governor Hobby is scheduled here as the first witness this morning. He does not seem to be present.

Mr. Tobin.

STATEMENT OF AUSTIN J. TOBIN, NEW YORK, N. Y., SECRETARY, CONFERENCE ON STATE DEFENSE

The CHAIRMAN. Before you proceed, Mr. Tobin, we have a long list of witnesses here on State and municipal bonds. Is it desired to have them all appear and make statements?

Mr. TOBIN. Well, Senator, since the issue of future issues is to be considered by the committee, we had outlined a rather brief presentation of about five witnesses and then the United States Conference of Mayors and the American Municipal Association felt that they wanted to be personally represented here, Mayor Jeffries, of Detroit and Mayor LaGuardia, of New York, decided they wished to come on behalf of those organizations.

The CHAIRMAN. Of curse, we will be glad to hear from all witnesses that desire really to present anything on the tax bill. This is not a wholly new subject to this committee, and, of course, it is not new to anyone in the country. We have not put any time limitation yet on witnesses, but it is going to become necessary this week, in view of the unusual number of requests that are now coming in to the committee, to put such a time limitation on.

We will ask you to be as brief as you can, in handling this particular subject.

Mr. TOBIN. We have tried to do that, Senator.

We are quite aware of the fact that this matter has been thoroughly aired before Senator Brown's special committee.

The CHAIRMAN. This committee is more or less familiar with the general proposal. Of course, we desire to hear from you. I do make that suggestion in the interest of time.

It is going to be necessary during the week, I am quite satisfied now, to actually limit witnesses who appear here in order to expedite the hearing.

Mr. TOBIN. Senator, what we had in mind was, I would attempt to place in the record an outline of the points in opposition, which will be very sketchy, but since it is an outline of a very important subject, it will take some time.

Then Professor Lutz and Professor Fairchild will give you their views on the fiscal and economic state, and Mayor Jeffries on its effect on the smaller communities in particular, and then Solicitor General Epstein will sum up the law.

How much he has condensed it may be illustrated by the fact that his summation of the law will take about 7 minutes.

The CHAIRMAN. You may proceed, Mr. Tobin.

Mr. TOBIN. Mr. Chairman and members of the committee, every time this proposal for the Federal taxation of future issues of State and municipal securities has been placed before Congress, you have stood shoulder to shoulder with your local officials in rejecting it.

In 1918 and in 1924 it was beaten on the floor of the House. In 1940 it was beaten on the floor of the Senate. In each of the last 4 years the Ways and Means Committee has refused to report the pro-

posal, after holding extensive hearings in 1939 and in March of this year.

Indeed, Congress has gone further; since 1913 you have insisted upon your own positive recognition of the immunity of local bonds by reenacting the statutory exemption in every revenue act. On the face of this record it is clear that Congress harbors no illusions as to the real meaning of this recommendation, and that you fully appreciate its destructive political consequences.

There are three points in the recommendation of the Secretary of the Treasury for Federal taxation of future issues of State and municipal bonds that I would like to meet immediately:

First, Federal taxation of future issues would produce practically no Federal revenues for the next 10 years, and no substantial revenues for the next 20 to 30 years. This is admitted by the Treasury. It is implicit in Mr. Morgenthau's estimate of a total revenue of only 200 million a year even if all outstanding municipal bonds were taxed now. In 1939 Under Secretary of the Treasury John Hanes described the anticipated revenues from this proposal as "unimportant." How unimportant they would be is indicated by the fact that all the revenues that might be anticipated from the taxation of future issues of State and municipal bonds during the first 6 months of this year would be sufficient only to finance the war for about 30 minutes.

On the other hand, cities with urgent refunding programs, such as Detroit and Philadelphia, would feel the impact of a tax on future issues immediately, and cities which are loyally cooperating in the war effort to provide the roads, the sewers, the water supply, and the schools required immediately by expanding war industries, such as Norfolk, San Diego, Wichita, and Cleveland, would feel the heavy burden of increased borrowing costs at once.

Second, the so-called evil of the exempt security has been grossly exaggerated. The overwhelming majority of our State and municipal bonds are to be found in public trust funds, sinking funds, bank reserves, insurance companies, and other depositaries which are not affected by high personal surtaxes.

Only a relatively small proportion of State and municipal securities are in the hands of persons of wealth. Studies of the Treasury's own estate tax records throughout the period 1926 to 1939, inclusive, show that only 6 percent of the capital in all estates over $50,000 has been invested in State and local bonds. And the Treasury's estate tax figures for 1940 show a further and sharp decline in the holdings of these securities in large estates.

Indeed, one of the Treasury's own witnesses before the special Senate committee, Prof. Kossuth M. Williamson, has recently written that "the extent of evasion by the rich, through tax exemption, has been exaggerated * * *."

In all events, the evil consequences of this proposal so far outweigh the controversial issues as to how large a loophole may be involved that, as has frequently been said, it amounts to a recommendation for the burning down of the barn to catch a few mice.

Third, this is not a bondholder's fight. You have already rejected the recommendation to tax outstanding local issues. We fight rather to protect the fiscal independence of the American State and the American city for the future.

The 9,000 cities represented in the American Municipal Association are opposed to this proposal. The United States Conference of Mayors has expressed its "unanimous and implacable opposition."

State leagues of municipalities throughout the country are unanimous in their opposition. The Municipal Finance Officers Association, composed of local officials who have the duty and responsibility of the sound administration of the fiscal affairs of the municipalities, have repeatedly condemned its destructive consequences. They are joined in their opposition here today by the American Federation of Labor, the National Education Association, and the American Bar Association.

As Senators Warren Austin and Edward R. Burke said in 1940:

> We have not here the partisan testimony of persons interested in pecuniary gain for themselves, or in the accomplishment of some ulterior objective. These witnesses were public officials charged with the duty of protecting the interests of their communities. They had no personal axe to grind. Anyone who sat through the hearings must have been impressed with their sincerity and their conviction that it would jeopardize the financial welfare of their communities and that it was their duty to oppose it.

We submit that much of the misunderstanding of this proposal arises because the Treasury discusses it simply as a problem in taxation or in alleged tax evasion. But this is not a problem in abstract economics. The answer is not to be found by adding up possible Federal tax revenues on the one hand, increased interest costs to local government on the other, and then subtracting the two totals. The real nature of this problem is one of the preservation of independent local government, of the continuance of true federalism under our constitution. It is a problem that reaches into the very nature and quality of the democratic process itself. As Senator Bailey has well said:

> The really great issue here is not one of revenue. The really great issue here is the power of one sovereignty to tax another, and the wisdom of it, even conceding that the Federal Government has the right to tax the credit of my State, for that is what it all amounts to.

We do not think there is any competent authority who does not admit this proposal would substantially increase the cost of local financing. And there would seem to be general agreement that that increase would probably be about 1 percent in the interest rate, or an increase in State and local borrowing costs of 33 percent on a 3 percent municipal bond.

Thus, Professor Lutz and Professor Fairchild who will discuss this consequence of the proposal in greater detail, both agree upon the prediction of an increase of about 1 percent.

The Reconstruction Finance Corporation has indicated an estimated increase of three-fourths of 1 percent, the Comptroller of the city of New York has foreseen the increase at 1¼ percent in the rate on New York City bonds, and the late Morris Tremaine, comptroller of the State of New York, estimated the increase at three-fourths of 1 percent.

The committee may recall the collapse of the municipal market on January 26 last, immediately following Mr. Morgenthau's Cleveland speech on this issue. And the charts and tables submitted by the Secretary of the Treasury to the House Ways and Means Committee (pp. 75 and 76 of the Hearings on Revenue Revision of 1942) indicate

an average differential for the year 1941 of 86 basis points between high-grade corporate securities and high-grade municipals.

This is very close to the differential of nine-tenths of 1 percent predicted by Dr. Lutz and the differential of 1 percent in the interest rate predicted by Dr. Fairchild. According to the same figures of the Secretary of the Treasury, high-grade municipals have been selling for the past year below a 2-percent basis. Hence an increase of even eight-tenths of 1 percent on a 2-percent security would represent an increase of 40 percent in the cost of new municipal financing over what the cities have been able to do on the present basis,

Such differentials in cost would indicate that the states and cities might ultimately face an annual increase of $175,000,000 in their borrowing costs as a result of this proposal. And this at a time when the States are faced with an annual loss of over $500,000,000 a year in motor vehicle taxes and revenues.

But the consequences are even more alarming. In many cases and in many times, a Federal tax on municipal bonds would make it impossible for the local governments to exercise their borrowing powers at all, and would mark the dividing line between success and failure in the financing and refunding operations of thousands of communities. This is emphasized in the telegraphic appeal which Mayor Voller, of Springfield, Ohio, has just sent to Senator Taft:

> Permit me as mayor of one small city and on behalf of the millions of small local taxpayers throughout the Nation to implore you to vote against taxing future municipal bond issues. Your Finance Committee is to be commended for its vote against taxation of outstanding municipal issues. While we are mindful of the dire Federal need we are also impressed with the fact that as between the equity of taxing income in the hands of the limited few holders of municipals, the greater equity lies with the millions of local taxpayers who would have their already high taxes increased to pay the higher rate of interest on their municipal bonds. In my opinion a Federal tax on municipal bonds will pretty nearly wreck the finances of many American cities, including Springfield, Ohio.

Many of our local obligations for schools, hospitals, water supplies, sewers, roads, and other purposes have been issued at, or close to, the maximum rate at which they could be sold and at which the local community could reasonably support its debt service. Thus, as the representative of the Municipal Finance Officers Association, Mr. Chatters, will demonstrate to you, during the 7 years 1919–22 and 1932–34, $1,219,000,000 of State and municipal bonds were sold at interest rates of 5¾ percent or higher.

It is one thing for a municipality to promise to pay a higher interest rate as the direct result of a Federal tax on its bonds; it is another thing to be able to pay it. If, in the judgment of the money market, a State or city cannot meet that rate over the life of the security, its power to carry on local government has been effectively destroyed. And, in many cases, the increased interest rate will exceed the limitations placed upon local government by State constitutions. In the recent words of the Supreme Court, the doctrine of immunity—

> recognizes the direct effect of a tax which would operate on the power to borrow before it is exercised and which would directly affect the Government's obligation as a continuing security.

Nor is this partial paralysis of the power of local government to finance itself, and so to carry on its functions, confined to the smaller or to the weaker units of local government. Mayor LaGuardia told

the House Committee in 1939 that if the bonds of the City of New York were subject to the Federal taxing powers it would have been impossible for the city of New York to take over its transit systems or to have gone forward with other vitally needed metropolitan improvements.

If the functioning of local government is vital to our liberties in times of peace, it is vital to our national existence in times of war. And this is particularly true in a war that is being fought in and by the cities themselves.

When, therefore, the advocates of this attack on local financing come forward with the plea that the war effort requires this tax and refer to a "pre-Pearl Harbor exemption" we think that it demonstrates a cynical opportunism which is not usually the hallmark of a good cause. It is just as much the fact now as it was before Pearl Harbor that a Federal tax on future issues of local securities would produce no substantial revenues for the next 10 or 20 years. And for the same reason taxation of future issues could have no bearing on the alleged aggravation of tax evasion by reason of mounting tax rates.

National defense calls for the fullest cooperation of States and municipalities in the maintenance and construction of municipal services and facilities vital to the war effort. It requires the strengthening of their credit standing and the utmost efficiency in the administration of their local affairs. The cities are loyally meeting these proper demands enlisting local government "for the duration." Nothing would prove of greater injury to this unity of purpose and effort than for the Federal Government to attempt to tax municipal securities, to increase our local interest costs and to move, at this time, toward the disestablishment of that federalism which is the real strength of these 48 United States.

The power to tax always carries with it the power to exempt and to classify the subjects of taxation. Thus, any future administration controlling the Federal Government could, through the power to tax our securities, and through the power to exempt and to classify within the activities of local government, control every operation of the States and cities.

An example of this is at hand today. While one department seeks to establish a Federal power to tax State and municipal bonds, another is insisting upon the complete exemption of local housing bonds from all present and future Federal taxes. Thus, if complete Federal power to tax the operations of local government is once established, the entire social and economic program of the States and cities can be similarly controlled and directed.

Very recently the Governor of the Federal Reserve System said that we must look upon the power of taxation not simply from the aspect of raising revenue but as an instrument for the attainment of social and economic objectives. If that is the objective of the Federal power of taxation in these changing times, then the immunity of our State governments from what the Department of Justice calls the supreme taxing power of the Federal Government is a more urgent battle for the preservation of our Federal system than it has ever been before.

For then the Federal power to tax is clearly the power to impose the social and economic objectives of the central Government upon

every State and city in the country; then every concept of a Federal system under our present Constitution is wiped out; and we have an omnipotent national state.

The other day the High Court of Australia practically wiped out the fiscal power of the Australian States. As reported in the New York Times of July 26, former Prime Minister Menzies commented that the decision—

> marked the end of the Federal era in the constitutional relations of commonwealth states and the beginning of a new era in which the Government of Australia must be regarded as much more a unitary government and much less a Federal system than it was previously thought to be.

And the Times report noted that—

> The Unificationists consequently welcome the judgment as a first step toward great constitutional changes that will rapidly reduce the States to a subordinate position resembling that of the Provinces of South Africa.

When our own Treasury Department refers, as it does, to the "supreme taxing power of the Federal Government" I presume it has the same objectives in mind.

Last week, before this committee, the Treasury's representative agreed with Senator Clark that in order to test the constitutionality of the Treasury proposal, it would be necessary to insert a provision in the current revenue bill taxing these bonds. Yet, in March 1941, the Treasury commenced test actions against bondholders of the Port of New York Authority and the Triborough Bridge Authority.

These test cases are now pending trial in the Board of Tax Appeals. The Treasury's press release, issued when these actions were commenced, stated that they were "intended ultimately to prove in the courts that the Federal Government has the right" under the Constitution to tax the income from all State and municipal securities. In effect, the Treasury now asks the Congress to take a definite position on a highly controversial constitutional question which the Treasury itself has started on its way to the Supreme Court.

When the Court decides the pending cases Congress will have a direct and firm ruling on the constitutional question raised by the proposed statute. It would seem to be the prudent and orderly course to await that decision. Indeed, it would seem to be the course which the Treasury itself set in initiating those cases.

The destructive character of the claims for the legality of this proposal is indicated by the language which the Treasury and Department of Justice have used in outlining their new conceptions of the supremacy of the Federal taxing power with respect to the functions of local government. They urge that while the Federal Government may not be taxed by the States the States are in the future to be completely subject to the taxing power of the Federal Government. Thus, in the study submitted to the Special Senate Committee in 1939, the Department suggested—

> that the principle of immunity protected the Federal Government against taxation by the States, but did not necessarily shield the States from the exercise of the delegated and supreme taxing power of the Central Government.

And the Chief Counsel of the Bureau of Internal Revenue in further developing this destructive thesis, has argued flatly that the National

Government has power to tax the institutions of the State. These sweeping assertions of power are inherent in and inseparable from the proposal at issue here.

It would be one thing if the gun which the Treasury seeks to put in your hands was gaged to hit only the bondholder, but what they press upon you here shoots canister and grape into our whole political system.

When we appeared before the special Senate committee in 1939, the Treasury assured that committee that it had absolutely no intention of taxing outstanding issues.

On the basis of those assurances, Senator Brown deprecated our predictions at that time that outstanding bonds would be next on the list, saying that—

while we may be a pretty bad outfit, and not stand by our word, I am inclined to think the temptation in this case is not very great.

Yet, the Treasury has, as we predicted, already moved on to this objective. And on the basis of the same supreme power to tax the States which is here asserted, they have gone on to proclaim Federal power to tax not only the price we pay for our municipal borrowing, but the principal of the bonds themselves, the pay rolls of the States and cities, and, indeed the very revenues of State agencies. As the report submitted to you in 1940 by Senators Austin and Burke said:

It is difficult to believe that those who support this measure really appreciate the shocking political consequences of the method by which it is proposed to tax these securities.

The Supreme Court has never deviated from, or even questioned, the constitutional premise that the taxing power of the Federal Government does not extend to the income from State and municipal bonds. This was conceded by the Department of Justice when this issue was before the special Senate committee in 1939. They argued rather that the Court has always been in error and that it would shortly reverse itself. There has been no evidence since that the Court would do so. On the contrary, the attorneys general of the States are still in accord with the views submitted to the special Senate committee in 1939 by the staff of your Joint Committee on Internal Revenue Taxation that—

it cannot be established that subsequent decisions have weakened the holding of the *Pollock case* that the Federal Government has no power to tax the income from State or local bonds.

Senator CONNALLY. Let me ask you there, if you will permit a question.

Mr. TOBIN. It is perfectly all right.

Senator CONNALLY. You recognize, do you not, that even in the case of State bonds there must be a governmental function?

Is not there a line of demarkation there as to what is strictly a governmental function?

Mr. TOBIN. That line has been drawn in the *South Carolina case* and in succeeding cases.

Senator CONNALLY. Take North Dakota for instance. They engage in all sorts of State socialistic plans. It is their business, if they want to do that. They have State grain elevators, warehouses, and

all that. Would you extend this doctrine that far, or would you limit it strictly to governmental functions like schools, jails, and roads?

Mr. TOBIN. When you get to the question of issuing bonds for this purpose, where those bonds are issued by the States themselves, I think that that is one of the primary functions of the State government.

Senator CONNALLY. I am with you on your general proposition. I do not want to be maneuvered into a ridiculous position in saying the Federal Government could not tax a bond issue by the States when it was not issued for such purposes.

Mr. TOBIN. They have certainly gone a long way with you in making that proprietary distinction all along the road through salaries, and even excise taxes, and other functions, where they held that the tax did not affect the State in the execution of a primary purpose. They have so held, yet on the question of issuing bonds, I think the question of issuing bonds, where the State is exercising its primary fiscal power in borrowing, is still doubtful. I think you may well argue that the Court will follow this proprietary line there.

Senator CONNALLY. Of course, you are weakening your defense. It would be your original position that they just cannot touch the State law itself.

Mr. TOBIN. You let the Supreme Court decide that question.

Senator CONNALLY. There are several questions about my consent.

Mr. TOBIN. Nevertheless, Senator, it is the only Supreme Court we have.

The CHAIRMAN. All right, Mr. Tobin.

Mr. TOBIN. That was also the conclusion of the report submitted to the Senate in 1940 by two of its outstanding experts in constitutional law, and it was apparently the conclusion which the Senate came to itself in defeating this proposal, after 3 days of debate, on September 19, 1940.

That is 3 days of debate. More recently, that was the unanimous view of the American Bar Association which, on March 17, 1941, took the position that only by constitutional amendment could the Federal Government validly exercise the power which the Treasury here asserts. And the American Bar Association considers the method which is here recommended so serious a threat to our constitutional system that they have asked me to insert here in the record the memorandum which the Honorable Murray Seasongood, of Cincinnati, submitted last March to the Ways and Means Committee on behalf of the bar association.

The Treasury has professed to see great portents for the reversal of the established doctrine of immunity in the so-called independent contractor cases, *James* v. *Dravo Contracting Co.* (302 U. S. 134), and *Alabama* v. *King & Boozer* (86 L. Ed. Adv. Ops. 1 (decided Nov. 10, 1941)).

But in the *Dravo case*, which is twice referred to with evident approval in the Alabama decision, the Court went out of its way to reaffirm the doctrine of the *Pollock case*.

It stated in careful and definite language that these independent contractor cases were clearly distinguishable from the case of State and municipal bond interest, that no logical or legal analogy could

properly be drawn between the two and the immunity of our local bonds from the Federal taxing power was still the law of the land.

The language written by Chief Justice Hughes and concurred in by Justices Stone, Brandeis, Cardozo, and Black could not be more definite.

> There is no ineluctable logic which makes the doctrine of immunity with respect to Government bonds applicable to the earnings of an independent contractor rendering service to the Government. That doctrine recognizes the direct effect of a tax which "would operate on the power to borrow before it is exercised" * * * and which would directly affect the Government's obligations as a continuing security. Vital considerations are there involved respecting the permanent relations of the Government to investors in its securities and its ability to maintain its credit—considerations which are not found in connection with contracts made from time to time for the services of independent contractors.

The real issue here should be very clear. It is an issue that transcends the field of taxation or the field of mere fiscal argument. It rises beyond the niceties of legal debate and distinctions.

If Congress has the power by simple statute to tax State and municipal bonds, it has inevitably the power to control State and municipal financing.

Without control of its own financing no government can continue as a free and independent state. And local government is the entire basis of political democracy.

That is why the States and cities believe that this is the chosen battleground upon which they must make their stand for the preservation of local government and all that it means under our constitutional system.

Under that system democracy itself is completely dependent on the continued freedom of the States to carry on the functions of local government without Federal interference. So long as such a system is to be maintained, tax interference by one government with the functions of the other can only be prevented by reciprocal constitutional immunity.

In the words of the memorandum in opposition which the American Federation of Labor submitted in March to the Ways and Means Committee of the House:

> * * * to preserve the sovereignty to our several and separate State governments, and the home rule of our cities, the credit and borrowing capacity of our several States and political subdivisions should be taxable only by the respective States, thus reserving to the States exclusively this field of taxations, preventing the coercion of the States by the Federal Government and preserving local self-government.

The courageous and able men who gave us the American Constitution had learned the lesson of history. They knew that democracy could only survive in the little governments of the people. Above all things, they dedicated that Constitution to the preservation of these little governments. That is the real issue raised by this Treasury recommendation and this renewal of the attack on State and municipal financing.

The States and cities are confident that this committee will concur in the action of the Ways and Means Committee of the House and that you will once again reject this recommendation.

The CHAIRMAN. Thank you, Mr. Tobin.

(The following statement was submitted by Mr. Tobin:)

STATEMENT OF HENRY F. LONG, COMMISSIONER OF CORPORATIONS AND TAXATION, STATE OF MASSACHUSETTS; ALSO REPRESENTING THE GOVERNORS OF MAINE, NEW HAMPSHIRE, VERMONT, AND MASSACHUSETTS

As the representative of the Governors of Maine, New Hampshire, Vermont, and Massachusetts, I urgently request this committee to oppose the taxation of future issues of municipal bonds. We in New England are solidly against the proposal and feel that its enactment will be of present and permanent disadvantage to us. We believe it is a violation of the accepted relations long continued as between the States and local governments and the Federal Government.

In Massachusetts, as well as in the other New England States, where cities and towns attempt to supply every type of service that can be supplied for the well being of their citizens, high tax rates and a substantial debt have naturally resulted. However, the debt picture is not at all bad, for the policy adopted some years ago has been followed consistently and, as a result, New England's municipal securities have been sold at very attractive rates. These securities are attractive for two reasons:

(1) They are exempt from taxation;

(2) The policies followed make them 100 percent secure and there is no likelihood of any default either on principal or interest.

The past 10 years have been very trying due to unemployment and the resulting increase in the relief load, so that many millions of dollars have been borrowed for the purpose of spreading a portion of this load, particularly for Work Projects Administration projects.

At the present time, there is a suspension of borrowing, for New England in her usual way is looking ahead to the future. We are now chiefly concerned with winning the war and lending every possible aid to the Federal Government by lightening the tax burden wherever possible, by postponing all capital improvements, and by reducing or eliminating entirely many public services which we have come to believe essential for a prosperous and contented community, in order that the taxpayer may be in a better position to subscribe more generously to war bonds and thus help the Federal Government. Massachusetts, as an example of the attitude of the New England States, has enacted special legislation permitting municipalities to appropriate and raise by taxation money to buy Defense bonds to be held until after the close of the war. If the bonds are sold at that time, the proceeds can be used only for such purposes as the city or town could borrow for a period of 10 or more years under the provisions of the general laws. By building up a reserve and reducing our debt at this time, we are preparing the way to enter into an extensive program of public works which will furnish employment to many when they are no longer in military service or employed in defense industry.

Any tax which in any way reduces the attractiveness of New England municipal securities will seriously affect its post-war work, prevent employment, and the rebuilding of neglected municipal properties and service. Those of us in the New England section where our industries are completely engaged in defense work realize that our cities and towns are faced with a problem which affects generations. While we are preparing to meet this problem to the best of our ability, it must be apparent to all that we must be in a position to finance much of the work by pledging the credit of our communities by borrowing. If municipal bonds are taxed, they lose whatever attractiveness they possess, and it would then be harder for a city or town to provide employment at a time when it will be sorely needed. A tax on municipal bonds will not only affect their salability but also add to the cost of the service for which they are issued and is likely to cause a reduction in service, for the loans lose in salable value although it may not mean too much in dollars and cents. We submit as a part of New England's opposition a complete endorsement of the testimony by Austin J. Tobin, Dr. Harley L. Lutz, Prof. Fred Fairchilds, and the others representing the States and cities here today.

The CHAIRMAN. Professor Lutz, come around, please, sir. I have been requested to call the witnesses in the following order:

Professor Lutz, second; Professor Fairchild, third; Mr. Jeffries, fourth; and Mr. Epstein, fifth. I suppose that is agreeable.

All right, Professor.

STATEMENT OF HARLEY L. LUTZ, PROFESSOR OF PUBLIC FINANCE, PRINCETON UNIVERSITY

Mr. LUTZ. Mr. Chairman, and gentlemen of the committee: I think it is very unfortunate that you must take time from the very serious problems of war taxation and war finance that confronts you to deal with a subject which has no bearing on those problems.

I feel that I should apologize for having to be a part of this diversion of your energy.

As you know, for more than 3 years the Treasury has been seeking to extend Federal domination over the States by taxing their bonds. Now, after all other arguments have failed, the red, white, and blue herring of war finance has been dragged across the trail. I am sure this is as unconvincing to you as it is to me. You are aware, as Mr. Tobin has pointed out, that the revenue problem before you is one which requires that the Government provide, by means of additional tax, moneys this year and next year, and you are also aware that the proposal to tax future issues of State and local bonds cannot possibly provide any revenue for the duration of the war, or at least I hope for the duration of the war.

Further, the question of getting revenue by taxing State and local bonds is a process of robbing Peter to pay Paul. In this case Peter is the citizen who must pay the heavier local taxes in order to provide the increased debt service on taxable bonds.

Senator VANDENBERG. Don't you think that rule works both ways? Don't you think Paul ought to ask Peter not to pay so many of his local bills, too?

Mr. LUTZ. I have always been in favor of that, Senator Vandenberg.

Senator CONNALLY. Peter does not have to pay the local bills. We have been doing it. He does not have to pay them unless he wants to.

Mr. LUTZ. You mean the cities and States did not have to come to the Federal Treasury?

Senator CONNALLY. No.

Mr. LUTZ. I will agree to that, but, Senator, if we get into the question of bonds——

Senator CONNALLY. Don't argue with me. I am for you. Don't change my mind.

Mr. LUTZ. No, no; I am not trying to change your mind. We will go on from there. With respect to robbing Peter to pay Paul, there is appended to my statement, which I have handed to the clerk, a chart showing the spread between taxable and exempt Treasury notes.

You remember that a year and a half ago, or a little more, we began the practice of issuing Treasury notes at three-fourths percent interest, and subject to Federal taxes, and we have a very interesting demonstration of the effect of those taxes in the market quotations of the two types of issues, the exempt and taxable issues selling concurrently in the market, and the record of that spread shows that the taxable issues were selling never above the exempt issues, or selling on a yield basis sufficient beyond that, so that the Treasury, in effect, provided the banks with the additional income which they, in turn, paid back

to the Treasury. In other words, the sole effect the issuing of taxable Treasury notes had, the three-fourths percent, was to take some additional money out of the pockets of the general Federal taxpayer and turn it over to the purchasers of these notes, who, in turn, handed it back to the Treasury.

As the New York Times said editorially when this policy was inaugurated, it is perfectly clear that a Treasury note could have been sold at one-half percent exempt from taxes on the same terms in which they sold the three-fourths percent note taxable.

So all we have succeeded in doing, with respect to that particular experiment in taxing Federal securities, is to rob Peter to pay Paul.

We took some money out of the pockets of the general Federal taxpayer and handed it on to the investor who, in turn, paid it back into the Treasury.

Senator RADCLIFFE. Professor Lutz, following out your thought, as you mentioned it a little while ago, would you say that the difference in the interest yield between the taxable and nontaxable is about commensurate to what would be the rate of taxation, or what is the relation between the two? Have you hit upon any basis of a relation between the taxable rate and the difference in yield of the taxable and nontaxable securities?

Mr. LUTZ. You are speaking of the Treasury notes, Senator?

Senator RADCLIFFE. I really did not have any public securites in mind. I was not necessarily taking Treasury notes. Have you worked out a theory on the relative proportion between the two?

Mr. LUTZ. Yes; I was coming to that, if you will permit me.

Senator RADCLIFFE. I am sorry to interrupt you.

Mr. LUTZ. Now continuing with the point I was intending to make when the Senator asked his question, I must point out that all of our discussion and all of our speculation with respect to the effect of the tax is something which requires us to look far ahead. The only way we have of reading this future is by considering the present, and in attempting to approach the present specifically in that connection, we must attempt to estimate the effect of a Federal tax upon the price and yield of State and local bonds in the light of what we can observe to be happening now with respect to those securities in comparison with private securities.

This will answer your question directly, sir.

I have concluded, simply on the basis of the current spread between private taxable securities and exempt public securities—I mean State and local securities—that the effect of the present burden of Federal tax is equivalent to a spread of from 90 to 100 basis points, in other words, from 0.9 to 1 percent in the interest rate. In other words, a city which could borrow today at 3 percent would be obliged to pay 4 percent if its bonds were taxed. If its credit is good enough to let it borrow at 2½ percent today, it would be 3½ percent if the bonds were taxable. The evidence of that is in the spread and changing the spread between the yields of taxable and exempt securities. The support for that spread is found in the comparison between average bond yields as quoted by Moody's Investor Service.

That is the spread between the yields of municipal bonds and of industrial and public-utility bonds.

Senator TAFT. How can you compare those?

Mr. LUTZ. Beg pardon?

Senator TAFT. You mean you are comparing city bonds that are not a general obligation with industrial bonds?

Mr. LUTZ. Well, these municipal bonds which are selected by Moody's for the purpose, I presume, are general obligation bonds.

Senator TAFT. How can you compare the bonds of the city of Cincinnati with the bonds of the Cincinnati Street Railway Co.?

Mr. LUTZ. I do not know that Moody has chosen those in particular. The underlying basis, Senator Taft, is the rate. A triple-A bond, municipal or industrial, is presumed to be more or less on the same investment basis, so far as investors are concerned.

You might make an argument that a triple-A municipal bond is better for many reasons than a triple-A industrial, and, in some cases you could get away with it, but in other cases, there might be some question in the minds of investors.

Senator TAFT. I do not see how you could compare them.

Mr. LUTZ. I am not attempting to make any specific comparison of particular issues.

Senator TAFT. How do you account for the fact that any funds that are tax exempt still invest in municipal bonds?

Mr. LUTZ. I do not believe I got the point of your question.

Senator TAFT. The charitable funds that are exempt, the income is still invested in municipal bonds.

Mr. LUTZ. You mean rather than in industrial bonds?

Senator TAFT. I mean is invested in municipal bonds rather than in industrial bonds.

Mr. LUTZ. In some cases—take the savings banks, the trust funds, the sinking funds, and other investment funds, there are some statutory limitations on the character of the investment that they may make.

Senator CONNALLY. Right there may I suggest a good comparison would be the Federal Government's own security following the World War at which time there were 3½-percent tax-free issues and 4¼ and 4½ taxable bonds. If you invested in those bonds, you would find that the 4¼ tax bonds were selling below par and it took three-fourths percent additional interest to get them sold. The 3½ tax-free bonds were selling way above par. I do not care to take up any more of your time.

Senator TAFT. They became rare. There was a great scarcity of 3½-percent bonds and the totally exempt Federal bonds. They were very scarce and there was a tremendous demand for them.

Senator CONNALLY. I suggest that in answer to your question.

Senator TAFT. That would be a fair basis.

Senator CONNALLY. There was an exact security of the same governmental unit. That is the only kind of exact comparison you could make.

Mr. LUTZ. You would have, in that case, bonds that were identical in every other respect.

Senator CONNALLY. That is right.

Mr. LUTZ. The point Senator Taft is making is that presumably, there are points of difference between municipal obligations and private obligations.

Senator CONNALLY. There certainly are. Of course, these foundations buy these municipal bonds because they consider them better

security, even though the interest may be lower, whereas the private company may go into the hands of the receiver, may go busted.

Mr. LUTZ. Yes.

In the case of the municipality, the burden of local taxation may rise to a level at which the municipality is obliged to default on a substantial part of its current debt service. We have seen that thing happen in years past.

Senator CONNALLY. That is possible, of course.

The CHAIRMAN. All right, Professor.

Mr. LUTZ. Well, taking this reported average yield of industrial and utility bonds on the one hand and municipal bonds on the other, we get for 1941 a differential in yields which will range from 93 basis points in the case of industrial over municipal to 111 basis points in the case of public utility over municipal.

I have used, for the purpose of being extremely conservative, 90 points. I think it might be as much as 100 points difference. I have made no attempt to revise that estimate in the light of the proposed additional tax rate in the pending bill, but obviously if levels of taxation such as are there proposed go into effect, the spread will undoubtedly be much more than that.

We then face the question of how this differential is likely to affect the cities, and there we have to speculate a little about the course of the rate of interest in the future.

As you know, we have had for 10 years a very cheap money market. It has been, to some extent, a manipulated market. It is likely to continue to be a manipulated market. It is not a normal capital market.

There have been various forces and influences which have tended to keep the interest rate low.

As to the future, we face two possibilities: First, will that cheap money market continue indefinitely, or will the controls presently either be relaxed or will they fail?

In that case we will go back to an interest-rate level more nearly approximating that of the First World War and the period immediately following. In either case, I think the burden of the cities eventually is going to be very much the same, but it will operate in different ways. First, if we assume that a 2½-percent market is going to prevail indefinitely, then the cities are going to be burdened negatively by the tax, because if their new bonds and their refunding bonds are made taxable, they will be barred from taking advantage of a 2½-percent market in the new issues and in the refunding issues.

So you can think of their burden then as a lost opportunity burden. If they cannot come in with new borrowing at levels of interest to which they would be entitled on the basis of their security, in view of the general market, because of the tax, then they are just out of luck by that much.

If, however, the interest controls are ineffective or are removed and we get back to a 4 percent level for Federal money, then we may expect the taxable municipal bond instead of being secured at 4 percent to go on up to 5 percent.

So I think we must face the prospect of an additional burden upon the cities regardless of the course of interest rate in the future. Obviously, if we consider the 100 basis points additional cost to States and cities, the over-all cost is going to be that addition multiplied by the amount of taxable bonds that they will sometimes have outstanding.

While we know nothing now about the volume of debt which the cities and States are likely to have in the future, if we should estimate a time when they have an outstanding taxable debt equivalent to the present volume of exempt debt which is roughly 19½ billion dollars, you can see readily that at 1 percent the added annual cost of carrying such a debt would be something like $195,000,000. If we take 90 basis points as the minimum addition to that, it will be something like $175,000,000 added interest burden to the State and cities.

Senator VANDENBERG. And will the heavily increased loads of taxation, on the other hand, substantially increase the value of the exemption privilege?

Mr. LUTZ. You mean as the Federal tax rates go on up?

Senator VANDENBERG. Yes.

Mr. LUTZ. It would tend to increase the value of that exemption privilege on outstanding bonds, as long as there are outstanding exempt bonds.

Senator VANDENBERG. Yes.

Mr. LUTZ. That, of course, is a mere matter of mathematics. It is perfectly obvious that would be the case.

Senator BROWN. Why would not it affect the interest rate on bonds to be hereafter issued? Going back to Senator Vandenberg's point on the 1939 rates, which of course were very different from the 1942 and 1943 contemplated rates, a man with a $100,000 income on the 3 percent State of Oklahoma bonds would have to get an industrial security bearing 7.32 percent interest to get the same net result, after consideration of taxes. If he had $1,000,000 net income or a net yield of 3 percent on State or local securities, that is the equivalent of an industrial security yielding 12.5 percent.

A 4 percent State bond yields just as much as 16.68 percent taxable security. Of course, if that was true in 1939 that condition is certainly greatly aggravated by our present rate or future rate. I agree with my colleague. I do not see but what that will have some effect toward lowering the interest rate on future issues of the local governments.

Mr. LUTZ. Well, that might be true if you had enough people with million-dollar incomes, who were putting all of their money into that kind of security. The difficulty with that kind of demonstration is that it is a demonstration on paper, which does not have a very close connection with reality, because there are only about 50 or 60 people in the United States, perhaps less than that now, who have million-dollar incomes.

Senator BROWN. It is pretty conclusively demonstrated by the estate-tax figures in 1938. On estate taxes of $5,000,000 and over 44 percent of all the property was in the shape of totally tax-exempt securities.

Mr. LUTZ. How many of those were there in that?

Senator BROWN. I do not know how many, but there were a substantial number. Likewise, as you go down the list half a million and up over 10 percent was in the form of totally tax-exempt securities. I readily grant that there are a large number of holders of these bonds that are not in those brackets.

Mr. LUTZ. Yes.

Senator BROWN. I do not think you can entirely eliminate that factor on the point you are making.

Senator GERRY. Is not there a question involved in that for the reason that those estates are trying to be liquid? They are investing in securities that they can turn over quickly and not to have securities, the value of which is hard to determine because the tax is so high?

It may be more than 100 percent. I think that comes into your estate-tax question.

Mr. LUTZ. You may be right. I cannot tell you what the motives are by which anyone with a large estate buys this, that, or the other security.

I think we are in danger, however, Senator Brown, of exaggerating the significance of these securities in the large estates.

As you know, we made a pretty careful analysis of that estate-tax matter.

Senator CONNALLY. They are not exempt from the estate tax.

Mr. LUTZ. No; they are not exempt from the estate tax. The point that is so often made is that rich people invest large amounts of their assets in State and municipal bonds for the purpose of securing exemptions from income tax.

The figures do not bear that out. I will concede, because the evidence is clear on the point, that there are cases of such conversion, but to say that it is wholesale conversion, or to say that there are large numbers of large estates which have been converted into tax-exempt securities, is certainly not true on the basis of the evidence from the estate-tax records.

The best way to look at that is to look at the over-all picture. One statistic does not prove a point. When you take the whole story of the estate-tax records since 1926 and look at all of the estates subject to Federal or State estate taxes, you will find that only about 6 percent of the gross estates out of 120,000 estates that have gone through the Federal revenue mill since 1926 have invested in State and local bonds, and more than 50 percent of their gross estate has been invested in the stock, common and preferred stocks of American business.

I am content to rest the argument, so far as the estate tax is concerned, on that showing. I think, by and large, it is a minor matter. I am not denying. I would not attempt to deny that there are individual cases in which there has been extensive conversion, but, looking at the whole picture, I think it is relatively insignificant by comparison with other aspects of the subject.

Senator VANDENBERG. I agree completely with the fundamental philosophy presented by all the witnesses, but the point that bothers me is the one that Senator Brown has so well illustrated. It seems to me, with these tremendously increased tax burdens, we are creating a new value for this immunity, which was never enjoyed before, never contemplated, an immunity which grows out of the war effort. It just does not seem quite fair to me that that portion of the immunity which grows definitely out of the war effort should not well be geared to the war effort in the tax bill.

That is the only problem that there is, so far as I am concerned.

Mr. LUTZ. Let us see what the situation is with respect to that. As I take it, your view is that with the growing of Federal taxes, the people who seek this immunity from those taxes will insist on pushing the interest rate down, and down, until the outcome which I

anticipated, namely, of the heavier borrowing cost to the States and cities will not result.

Have I stated your difficulty?

Senator VANDENBERG. Putting it the other way round, I mean, if you continue to have your total immunity under the impact of these extraordinary war taxes, your immunity acquires an artificial extra value which is the direct result of war conditions.

You get your money so much cheaper than ever before, there would be no comparison between the cost normally and the cheaper cost thereafter.

Mr. LUTZ. But is not the value of that immunity, with which you are concerned, limited really to a comparatively small number of persons?

Senator VANDENBERG. I do not know. I am perfectly willing to hear you on the subject, but that is the issue, as far as I am concerned.

Mr. LUTZ. As a matter of fact, we do not have precise knowledge as to the distribution of the holdings of State and municipal bonds. We do know that upwards of two-thirds of the amount now outstanding, and perhaps fully two-thirds, is held by financial corporations of various types, banks, savings banks, insurance companies, and other financial institutions, and also by various trust and investment funds, and that would leave, at the most, not more than one-third of the outstanding total to be owned by individuals.

Senator BROWN. What do you figure to be the total amount? About 17 billion?

Mr. LUTZ. No; the total amount of State and local bonds would be in the neighborhood of 19½ billion.

Senator BROWN. 19½ billion?

Mr. LUTZ. Yes. The largest figure that I have seen, whether by the Treasury or by anyone else, would place not more than 7 billions in the hands of individuals. And, I think Mr. Jeffries will insist, from his point of view and the studies he has made that that figure is probably too high as representing the proportion owned by individuals. It is pretty clear, from the evidence of the estate-tax records, that not all of that is owned by persons with very large incomes.

Consequently, I am forced myself to the view that the range of persons or investors for whom the immunity would acquire greatly increased value is rather small, both as to the number of such persons and as to the proportion of the total debt that would be affected thereby.

Senator TAFT. But, Professor Lutz, does not that disturb this interest rate again? If two-thirds are held by people to whom it makes very little difference whether they have municipal bonds or anything else, then are not they going to take some amount of municipals, whether they are nontaxable or whether they are taxable?

Mr. LUTZ. No.

Senator TAFT. It seems to me if there is not this large tax exemption, then there is no reason for the difference in rate.

Mr. LUTZ. On that basis you may argue, Senator, that a Government trust fund, or a Government sinking fund which buys these bonds could afford to neglect the tax in the price they pay. Or you might say that a mutual savings bank, which under present law is exempt from taxation, could ignore the tax in buying these bonds and could afford to price them regardless of the tax.

Now, that is not true unless, and only unless, it is their firm intention to hold those bonds to maturity at the time they acquire them, because if they ever later consider the possibilities of selling those bonds on the market, then they come up against a purchaser who must take account of the tax, and the seller has no option but to resell the bond and take the loss in the price adjustment that the purchaser will insist upon because of the tax.

I do not think any of these exempt or nontaxable institutions or anybody else who is unaffected by the tax presently, can afford to ignore that market situation.

Senator TAFT. They do not ignore it, of course. The fact they are willing to buy them even though they are nontaxable and pay the higher price brought about by that fact, it seems to me would indicate your estimate of one-half of 1 percent is high.

Mr. LUTZ. Let us take the situation in 1941, Senator. When you had the Federal taxes at that time, you had not yet gotten into the war effort. As a matter of fact, the actual spread between industrial bonds of comparable grade according to Moody's rating and municipal bonds, triple A, double A, and A bonds, according to figures which the Secretary of the Treasury himself inserted in the hearings before the Ways and Means Committee, the average spread in the year was 0.86; in other words, 86 points.

Senator TAFT. I do not want to dispute the fundamental basis of that. I do not see how you can compare the municipal bonds with industrial bonds. Just because some rates on both are considered triple A, I do not see what difference that makes.

Mr. LUTZ. I will put it as the average of triple A, double A, and A, however that might be. One might dispute the inferences from the evidence, but I do not think one can dispute the evidence, because the evidence is apparently a matter of record, compiled by agencies whose concern it is to report the facts.

The fact is that the average spread was about 86 points for the year.

Senator RADCLIFFE. Professor Lutz, in accounting for the spread of 1 percent, how far does the element of uncertainty as to what the rate of taxation is going to be enter into it as a fact? Of course, if you know the tax is going to be a certain amount, you can easily figure the difference to you between the taxable and nontaxable security, but if you must estimate, you are going to have to go on the fact that the rate of taxation is going up, in regard to the amount.

It seems to me that element of uncertainty would enter somewhere there in helping to increase the factor of spread.

Mr. LUTZ. It might. But, of course, Senator, you must bear in mind that investors are buying all the time, every day; they are buying private securities which are taxable, and the general effect of the market forces produces a certain level yield of the taxable securities. At the same time, they are buying the other bonds, the municipal securities which are not taxable, and they are establishing, as a matter of record, a certain differential.

Now, Senator Taft insists that other factors than the tax enter into that. That may be. The determination of the part which the tax plays and the part which other factors in the minds of investors

play is one which I do not think anybody can sort out, except in a very rough and haphazard way.

What we do know is, given the actual course of the market, you get these differentials. On that basis, if we assume that the conduct and attitude of investors is going to be more or less uniform in the future with what it has been in the past, I think we may anticipate a continuance of differentials which are, to some extent, certainly influenced by the course of the tax.

Therefore, it is perfectly obvious that if we do impose the tax, we are certain to deprive the cities of the opportunity to borrow on more favorable terms by at least the amount of the market differential which you now have, whether that is produced entirely by the tax or by the tax and other considerations. Therefore, with the added burden upon the local taxpayers, it can only be approximated by dimensions which are indicated by the present spread. That, at any rate, is the best manner of approaching this subject that I have been able to devise.

Senator RADCLIFFE. If you buy a tax-free security, you know definitely what your income is going to be. If you buy a bond that is taxable, you have to speculate.

Mr. LUTZ. That is true.

Senator RADCLIFFE. As long as you have to speculate, then, it seems to me that element of speculation may come into the matter of either depressing or increasing what you are going to pay.

If you have an optimistic frame of mind, you hope the tax will be lower, but if you are a pessimist, you would likely base it on an increased tax.

Mr. LUTZ. There are both pessimists and optimists on that subject.

Senator RADCLIFFE. I think the element of uncertainty would, in some way, figure in it to help account for the spread. I do not know how much, but it is reasonable to assume that is an element somewhere.

Mr. LUTZ. Yes; I think that is true. Is there anything further? Shall I go on?

The CHAIRMAN. Yes.

Senator BROWN. I would like to add one figure there, Senator.

I asked the Treasury to tell me what the effect on Federal securities was of the elimination of the tax-exempt feature.

Of course, it is very difficult to arrive at a figure, because there are so many factors in the picture, principally the factor of the growing scarcity of the wholly tax-exempt Federals, but their spread is 39 points, based upon the same basis that you based your 90 points.

The Treasury's estimate before our committee was around 25 to 30 points; the difference between you and them is some 60 points.

The actual experience in the Federal picture, they tell me, is 39 points.

Mr. LUTZ. What securities are you referring to?

Senator BROWN. Those are all securities. That is the issue of September 15, 1944.

Mr. LUTZ. You mean it is a Treasury note?

Senator BROWN. Yes.

Mr. LUTZ. Bearing three-fourths percent interest?

Senator BROWN. Yes.

Mr. LUTZ. I am amazed that it is as much as 39 points or a three-fourths percent rate of interest.

Senator BROWN. The figures they have given to me show taxables 91, the yield on tax-exempt 52, making a difference of 39.

Mr. LUTZ. That is a coupon rate of three-fourths percent.

Senator BROWN. That, of course, is partially due to the growing scarcity of tax-exempts.

Mr. LUTZ. If you blow that up to 2½ percent interest, you get a spread of about 1 percent.

Senator TAFT. The table attached to your notes shows 5 points difference between taxable and tax-exempt Treasury notes.

Mr. LUTZ. What table is that, Senator, what page?

Senator TAFT. On the last page.

Mr. LUTZ. No; the spread is shown in the line at the bottom, the average. We took two issues there and averaged them, and you will see that it ranges from 20 to something more than 30 points.

Then, in the cross-hatched line is the amount of tax that would be payable on a three-fourths percent coupon at the corporation rates prevailing during that period.

Senator TAFT. Yes; but up above you have two lines comparing the taxable and tax-exempt securities.

Mr. LUTZ. Those relate to two issues, two of which are taxable, and two others of which are exempt.

Senator TAFT. So the difference there is 15 points.

Mr. LUTZ. The difference is shown in the curve at the bottom part of the page labeled "basis points."

That is the spread. We average the two taxable issues, and two exempt issues as to price and then take the difference between those prices, and that gives you the curve at the bottom of the page which ranges, as you see, starting at 20 points differential in December and goes up to more than 30 points in March and April, and then sags again, and in November 1941 it sags a little below, almost back to 20 again.

Senator TAFT. It is also true that spread is determined by considerations given by the banks, not by private investors.

Mr. LUTZ. That is true.

This is simply a matter of the corporations, the taxes that investor corporations have to pay.

The CHAIRMAN. All right, Mr. Lutz. You may proceed.

Mr. LUTZ. I have one other point, Mr. Chairman. The question of the estimated Federal revenue which might be expected. I have laid down the assumption that the cost to the States and cities would range from 175 millions to 195 millions, according to the differential and the income which the Federal Government might expect to obtain at 1941 rates would range from 158 millions, if we assume the continuance of the low interest yield, and therefore small interest payments, up to some 193 millions.

It is likely therefore, that the Federal revenue would approximate the additional cost to the taxpayers. In other words, we would be taking from Peter to pay Paul, and we would take from Peter about as much as we would pay to Paul.

Since I have taken so much time, I want to read just one final paragraph here.

Senator VANDENBERG. You are not talking about Mr. Randolph Paul on this subject?

Mr. LUTZ. I thought of that myself, Senator, but I decided not to mention it.

I think your point is interesting.

It must be noted, also that the burden of the Federal tax on State and local bonds would be laid on the local taxpayers at a time when they are to be subjected to heavier Federal taxes which are levied directly upon their incomes, their businesses and their consumption; further, it should be pointed out that the conditions produced by the war will tend to dry up certain sources of revenue formerly available to States and cities, thereby bringing out an added concentration of the State and local tax load.

The decline of gasoline tax and of motor-vehicle licenses is illustrative. As these, and possibly other revenues shrink, the States and cities face a curtailment of essential services, or a further increase of taxes on property.

In some cases, a revival of State-wide levies on property may become necessary. The net effect of the Treasury proposal is to cause a substantial increase in local taxation, falling chiefly upon the property taxes, at a time when property owners face the prospect of assuming a larger share of State and local government costs.

Senator TAFT. There will be practically no municipal bonds issued during the war, or very little probably, so there will be very little additional cost during the war.

Mr. LUTZ. That is true, but earlier in the statement I made the point that the present levels of present taxation and possibly still higher levels will continue for a fairly long time after the war. How soon gasoline revenues will come back nobody knows, and the same is true as to some of these other sources of State revenue.

Therefore, you are facing the prospect of imposing a heavier burden on local taxpayers merely as a means of the roundabout collection of the tax at a time when they are subject to a very much heavier burden.

In conclusion, Mr. Chairman, the Treasury proposal, as a fiscal measure, comes to this: It will increase local taxation by about as much as it increases the Federal revenue. The real effect of such a tax is not to be measured by the amounts that may be collected from the several bondholders, but by the amounts to be collected from local taxpayers.

In an effort to apply progressive taxation to a minor fraction of the interest paid on State and local bonds, the proposal will really result in greater regressiveness in the local taxes and particularly the property tax.

The CHAIRMAN. All right. Thank you very much, Professor.

Senator DANAHER. One question, please.

The CHAIRMAN. All right, Senator.

Senator DANAHER. Professor Lutz, is there any other source of income to the individual or corporate holder, that is a corporation subject to tax, which is tax exempt?

Mr. LUTZ. Other than these municipal bonds, and other than the partially exempt Federal bonds, offhand, I think of none other.

Senator DANAHER. The whole question turns then on the public policy.

Mr. LUTZ. It is a matter of public policy.

I certainly agree with what Mr. Tobin said, that the fundamental issue in this whole matter is not the revenue, and it is not the question of what happens to a few individual investors; it is the question of what is going to happen to the States and cities.

That, after all, I think, is the crux of the whole issue. If we sacrifice the freedom and independence of State and local government, we shall be doing ourselves a very great disservice.

The CHAIRMAN. All right, thank you very much.

(The following brief was submitted by Mr. Lutz:)

BRIEF BY HARLEY L. LUTZ, PROFESSOR OF PUBLIC FINANCE, PRINCETON UNIVERSITY

In 1939 I presented to the Special Senate Committee on Intergovernmental Taxation the result of a detailed study of the fiscal and economic aspects of the taxation of interest on public securities. That testimony is a matter of record, and if the members of this committee would like to have that detailed study made available, I can supply additional copies. At this time, however, I propose to review the earlier arguments in the light of the changes which have occurred since 1939 and to summarize briefly the findings and conclusions as they emerge from this current study of the situation.

The economic issues are the same today as they were 3 years ago. They are:

(1) The extent to which the tax on State and local bonds would be shifted to the debtor governments.

(2) The effect of such shifting upon the exercise of the borrowing power of State and local governments.

In approaching these issues, attention must be given to the following significant changes since 1939:

(1) The Federal income taxes upon both individuals and corporations are much heavier than in 1939.

(2) The prospect is for their further increase, and we can hardly hope for lighter taxes during the next generation than we are now paying.

(3) The long-range prospect of heavy Federal taxes means that the ordinary financing of State and local government will involve a greater burden than was anticipated in 1939.

(4) Therefore it is necessary to consider most carefully any proposal that is likely to add to this burden.

An estimate of the extent to which the tax on State and local bonds will be shifted to the debtor governments requires consideration of the reaction of the holders, or the prospective purchasers, of such securities once they have been made taxable. As prudent and sensible men, they would make every effort to protect the yield on their investments.

Obviously, they will demand a higher yield from municipal securities, and the leverage which they can use to secure that higher yield is the return that can be obtained from private bonds. As a result of these decisions by investors, the investment yield on all bonds of a given grade, both public and private, would approach a fairly uniform level; that is, instead of buying municipal bonds on a tax-exempt basis to yield 1.75 percent (the average yield of municipal bonds rated by Moody as Aaa, Aa, and A, in 1941), the investor would do one or the other of the following:

(1) He would tend to price municipals on a yield basis in the neighborhood of 2.71 percent (the average yield of industrial bonds rated by Moody as Aaa, Aa, and A in 1941); or

(2) He would turn to the private bonds which, at a yield of 2.71 percent for industrials or 2.78 percent for utility bonds, would leave him a larger return after taxes than he would have from municipals bought on any lower-yield basis.

I submit for the record a table showing the annual averages of bond yields, 1937–41, as reported by Moody's Investor Service, with the differentials between the yields of industrial and public-utility bonds, on one hand, and of municipals on the other. It may be noted, incidentally, that the average differential between municipals and industrials and public-utility bonds in the years 1937–39 confirms my earlier estimate of a minimum-yield spread of 0.60 point under the tax rates of that period.

Annual average of bond yields, 1937–41, with the differentials between the yields of municipal bonds and industrial and public utility bonds, respectively[1]

[Data supplied by Moody's Investors Service]

Year	Yields				Differentials in yields		
	Municipal	Industrial	Public utility	Average of industrial and public utility	Industrial over municipal	Public utility over municipal	Average of industrial and public utility over municipal
1937	2.80	3.31	3.55	3.43	0.51	0.75	0.63
1938	2.59	3.17	3.40	3.28	.58	.81	.69
1939	2.41	2.98	3.14	3.06	.57	.73	.65
1940	2.13	2.76	2.97	2.86	.63	.84	.73
1941	1.75	2.71	2.86	2.78	.96	1.11	1.03

[1] Averages of bonds with ratings of Aaa, Aa, and A.

This table reveals the downward movement of all bond yields in recent years, regardless of their taxable status. This movement is a product of various influences. It is well known that the broad program of Government financing for a considerable time to come involves the maintenance of low interest rates, and it is also well known that the Treasury and the Federal Reserve banks possess ample powers to assure the continuance of this condition. I shall show presently that this has a significant bearing on the problem.

The rise in the average yield differential between private and municipal bonds of comparable rating from an average of 66 basis points for the years 1937–39, inclusive, to 73 basis points in 1940, and 103 basis points in 1941 reflects the effect of the increasing taxes during this time. In view of the present and the probable future Federal tax situation, and in view also of the yield differential which the market has established in response to that tax situation as it has developed, I conclude that the added cost of State and municipal borrowing, under present tax conditions, would be of the magnitude of 90 to 100 basis points, and for the purpose of a conservative estimate of the aggregate added burden I have used 90 points, or 0.9 percent. During the recent hearings before the Ways and Means Committee Mr. Paul stated that Treasury studies indicated a spread of interest rates between taxable and nontaxable bonds of one-quarter to one-half percent.[1]

This was the Treasury position in 1939, and, as I have shown, the market record for the years 1937–39 revealed an average spread of 66 points, or 0.66 percent. It was my position then that the Treasury experts were underestimating the effects at that time. Surely, we have a strong case for a still greater spread today in view of the tax changes which have occurred in the last 3 years.

Indeed, the Secretary of the Treasury has provided such a case in data which he submitted to the Ways and Means Committee on March 3. I refer to a comparison of the yields of high-grade corporate and municipal bonds, on page 70 of the hearings on the Revenue Act of 1942. There the spread between the yields of municipal and corporate bonds was shown to range, in 1941, from 0.63 to 1.01, and the average for the year was 0.86 percent.

The transfer of the tax to the debtor government is well demonstrated by the record of the price and yield differential between taxable and exempt Treasury notes. This record is graphically shown in the accompanying chart. It establishes the truth of the following comment made by the New York Times of December 11, 1940:

"If the new notes had been issued tax-free as usual, the rate necessary would have been one-half percent, the taxable feature making for the difference of one-quarter percent in annual interest."

The measure of the added interest cost involved in carrying a taxable debt equal to that now outstanding is the face amount of State and local debt multiplied by the rise in the cost of borrowing each dollar of that debt. The total increase in cost on this basis is shown in the following table.

[1] Hearings before the Ways and Means Committee on Revenue Revision of 1942, p. 69.

Estimated increase in the cost of State and local debt, resulting from the removal of tax immunity on the basis of an average increase of 90 points in long-term yield basis

Debtor division	Outstanding debt, 1940 (millions)	Increased interest cost (thousands)
States	$3,273.2	$29,459
Counties	2,036.2	18,326
Municipalities [1]	9,511.0	85,599
Townships	279.7	2,517
School districts	1,698.6	15,287
Other subdivisions	2,530.8	22,777
Total	19,329.5	173,965
Territorial and insular	153.0	1,377
Grand total	19,482.5	175,342

[1] Includes cities, towns, boroughs, and villages. Debt totals by debtor divisions from Bureau of Census, State and Local Government Special Study No. 13, State and Local Government Debt, 1940, p. 26. In addition to the interest-bearing debt, a total of $355,206,000 of non-interest-bearing debt was reported for 1940. Of this total, $249,000,000 consisted of contractual obligations of western irrigation districts of the U. S. Bureau of Reclamation. Much of the remainder consisted of matured debt not yet presented for payment on the date for which the statistics were compiled.

It should be emphasized that this estimate is based on the assumption that future issues only are to be taxed. The complete demoralization of the municipal bond market that would be produced by subjecting outstanding issues to tax would undoubtedly cause a much greater differential for a considerable time, and would therefore cause a substantial increase in this cost.

This demoralization would be the natural result of subjecting to tax a great mass of securities which had established a market price and yield basis without regard to the tax. Inevitably there would be heavy selling of municipals, both by institutional investors and by individuals. Because of the circumstances which gave rise to this selling, namely, the imposition of the current Federal taxes and the prospect of such further increases in the Federal taxes as may be enacted, it is very doubtful if adequate support for the municipal bond market would develop until the prices had declined to levels which represented some discounting of the future tax trend.

It is necessary to recognize two different ways in which the States and cities may be affected by this increase in cost. I have referred to the prospects of a long-continued easy or cheap money market, and to the stake which the Government has in perpetuating low-cost money. Time alone can show whether interest rates will be held at their present levels or will be allowed to rise. We have, therefore, alternative ways of looking at the situation from the standpoint of States and cities. These are:

(1) If the present low-interest rate level is perpetuated, then the effect of the tax would be to prevent the States and cities from taking full advantage of the cheap money in their refunding and new borrowing. In this case the cost of the tax could be described as a "lost opportunity cost." Instead of borrowing or refunding at rates consistent with the low prices of money, they would be obliged to pay an additional ⅛ to 1 percent because of the tax. That is, they would be denied the opportunity of saving money in the low-rate market.

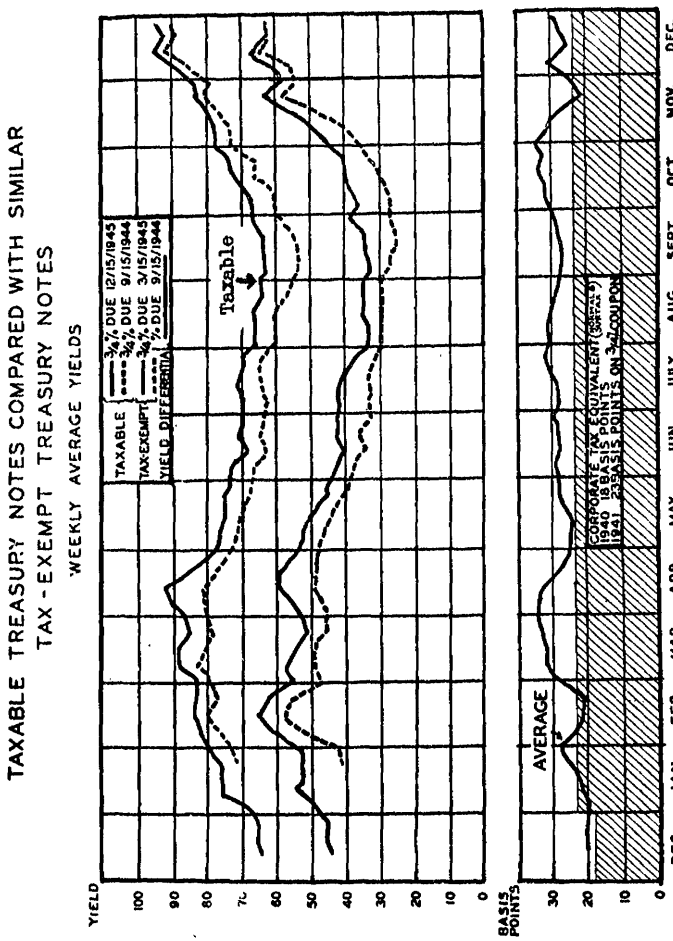
(2) On the other hand, if the cheap money controls are not effective, or if they are relaxed, and if the general interest level rises, then the effect of the tax would be to compel States and cities to increase their bond coupon rates. In either case the effect of the tax will be to increase the cost of borrowing by as much as ⅛ to 1 percent, but under one assumed condition, it will mean the inability to effect a saving in interest costs, while in the other it will mean an increase in the actual dollars of interest paid.

My present estimates of Federal revenue yield take into account these two extremes with respect to the future of the interest rate. Under the first condition, the Federal revenue would be $158,700,000 at the 1941 rates, and under the second, it would be $193,400,000. If interest rates actually should take a middle course between the current low level and that which prevailed

during and after the first World War, the Federal revenue would be between these outside estimates, an average of which is $176,000,000. In short, it seems likely that the Federal gain will about equal the local taxpayers' loss, and that the proposal to tax State and local bonds will result in collecting, by way of the bondholders, an additional tax of this amount on the State and local taxpayers.

I pass, finally, to brief consideration of the effects upon the borrowing power of the States and cities. The character of the State and local long-term debt is shown in the following table:

Character of long-term debt	Amount [1] June 30, 1940	Estimated annual increase of interest caused by an additional 99 points in the cost of borrowing [2]
General obligations	$16,672.0	$150,048
Revenue bonds	1,778.0	16,002
Special assessment	879.9	7,919
Total	19,329.9	173,969



[1] In millions.
[2] In thousands.

From this classification it appears that about $150,000,000 of the annual increased cost will fall upon the general taxpayers who support State and local government, while some $24,000,000 will fall upon the users of special services or upon property owners in higher costs of local improvements to property.[3] Obviously, the ability to borrow on the security of revenue bonds will be severely curtailed by a substantial increase in the cost of capital funds. Therefore, the freedom of States and cities to enter upon self-liquidating projects, in which the prospective revenues must service the debt, will be greatly curtailed. Insofar as the provision of services of this character is a proper and legitimate function of State or local government, the inability to do so because of the added cost of capital financing, caused by the Federal tax, constitutes an impairment or local government function.

With respect to the effect of the part of the tax which will be borne by general taxpayers, it is apparent that the increase in the cost of funds which I have indicated will restrain many governmental units in their discharge of general services or functions involving the exercise of the borrowing power. It is not the function of either the Congress or the Treasury to determine, for any State or city, that local services which may require the aid of borrowed funds may not henceforth be undertaken, or if done, that the cost to the citizens shall be increased inordinately beyond the terms that would be available to a free government in the market.

At the same time, there is growing pressure upon States and cities to make greater provision for the aid and protection of the people during the war. This will lead to larger cash expenditures, first, to expand local service facilities such as sewers, streets, police and fire protection, and other services for the war industries and their employees; second to do their share for civilian defense. They are expected to be amply prepared to deal with fires that may be caused by incendiary bombs; their police must be ready to maintain order during the turmoil of air raids; they must safeguard water supplies, provide air raid shelters, and arrange for civilian evacuation, emergency feeding, first aid, and many other things. A substantial part of this cost must fall on local budgets, and thus, finally, on local taxpayers.

[3] The debt supported, actually or nominally, by the revenue from public-service enterprises is greater than the $1,778,000,000 of revenue bonds shown in the above table, but all such debt for which general funds are contingently liable is classified by the Census Bureau as a general obligation.

The CHAIRMAN. Professor Fairchild.

Mr. TOBIN. May we ask your indulgence to break the order again and put on at this time Mayor LaGuardia and Mayor Jeffries of Detroit?

I think it is satisfactory to the other witnesses.

The CHAIRMAN. All right, Mr. Tobin. The only thing is we are not progressing very rapidly here on the subject. I am afraid you are going to get us confused rather than help us very much.

Come around, Mayor LaGuardia. We will be glad to hear you, sir.

STATEMENT OF HON. FIORELLO LaGUARDIA, MAYOR OF THE CITY OF NEW YORK

The CHAIRMAN. Mayor, how are you, sir?

Mayor LaGUARDIA. A little worried and harassed.

The CHAIRMAN. All right, Mayor, you may proceed.

Mayor LaGUARDIA. I appear as president of the United States Conference of Mayors. Mr. Chairman and gentlemen, we have appeared on this subject so often that I fear some of us have become a little stale on it.

Misery likes company, and I have never felt so much relieved as I have since I have been reading the tax bill before you. I have been struggling to raise about $680,000,000 a year to run my town, and I thought I had troubles; but, gentlemen, I sympathize with you in the tax that you are now grappling with.

This taxation of municipal bonds has been kicking around for many years. It started shortly after the last World War, and its origin was entirely different then than it is now. I will tell you how it started. Just before the World War, municipalities were going into the acquisition of their own water supply, power, and transportation, and this baby is that of the utilities. That is how it came to the House shortly after the war, on a constitutional amendment—you were there, Senator [referring to Senator Connally]—and then Representative Ogden Mills, who sponsored the constitutional amendment, took the baby with him over into the Treasury Department, and it has been there ever since.

Senator BROWN. It has grown quite a little since.

Mayor LaGUARDIA. Yes; but no one will admit its paternity now.

Senator BROWN. I am glad to have the information.

Mayor LaGUARDIA. Every Member of the present Senate who was a Member of the House then, voted against it.

Now, when we first attacked this, we did it on constitutional grounds. Now that is kind of shoved aside, and the Treasury raised the fiscal reasons for it.

Professor Lutz testified that there are about $19,000,000,000 outstanding of State and municipal bonds, in answer to a query.

I have about $2,400,000,000 of that amount in New York City. Of course, we have property back of it.

The whole matter, gentlemen, is very simple, unless the semicolon boys of the Treasury Department seek to involve it.

There is no gain for the Federal Government if you tax these securities. There is disaster for the municipalities if you do.

Now, let us have no illusions about it. We get nothing for nothing. If these securities are taxed, we pay for them. The taxpayers of the municipalities pay for them, not the rich guy that these youngsters from the Treasury Department seek to use as a climax to a speech.

We have heard them all. We have heard all of these youngsters from the Treasury Department, and they just do not know.

Municipalities do not issue bonds for the fun of issuing them. We do not like to issue bonds, but we do sell bonds when we are required to do so for capital outlay. Some municipalities have been compelled to issue bonds for the care of the unemployed in recent

years. In many States, municipalities cannot issue bonds for current expenses; they can only issue bonds for capital outlay. I am referring, of course, to long-term indebtedness and not certificates issued in anticipation of tax collections.

I took some part, when a Member of the House, in the consideration of and passage of tax bills. I never defended the big-income group.

This idea that all the municipal and State securities flow into the portfolios of the coupon cutter is again incorrect. The individuals in the higher group have their interest. They are in oil; they are in steel; they are in automobiles; they are in industry. They do not dump their own investments in business of their own, just to buy municipal or State securities.

Mr. Lutz, in one of his statements before the several hearings we have had on this subject, pointed out very accurately that the estates that have been closed or probated upon which taxes have been paid, indicated the small percentage of outstanding State and municipal securities were in their portfolios.

The Senator from Ohio pressed the question as to the difference between a high-grade industrial and a State or municipal bond, and the answer to that, Senator, is, I think, very simple. Given an equal credit standing, the municipal is preferable for the simple reason that the faith and credit of the municipality is back of it. In other words, when New York City issues a bond for its subway construction or its water supply system, it is not only that property back of it, but the faith and credit of the city, and the taxing power of the municipality and the debt service is over and above any constitutional tax rate that may be allowed to the municipalities.

Therefore, it is almost a guaranteed return, unless the whole municipality blows up, as we may unless our problem is understood by you gentlemen in Congress.

Gentlemen, there is not a city in this country that is not skating on very thin financial ice. The cost of municipal government has increased. You gentlemen see that in your own appropriation bills. New functions are thrown upon municipal government. Our main source of income is our tax on real estate, and you all know how that has depreciated.

So we are just all up against it for revenue. Now, you slap an additional expense in the debt service, which reflects on the tax rate.

Gentlemen, remember this: That the interest, the amortization on our bonds is not within the tax rate limitations provided in State constitutions. It is over and above and every cent of Federal taxes imposed upon the income of the bonds will reflect in the interest rate which we must pay, which, in turn, reflects itself in the tax rate on real estate which is now overburdened.

Heretofore; we were making a constitutional argument, but when we are on the verge of a financial break it is a matter of municipal life or death with us. How long we can continue to run our cities depends on how far we can put additional burdens on the taxpayers of the cities.

Now, if there is any fun, if anybody gets any pleasure in seeking to add additional burdens on an already overburdened real estate and such limited other sources of revenue that a city has, well, let him make the best of it, but we, as mayors, do not and cannot print

money; you do not permit us to. We haven't unlimited credit. Our credit is limited by the State constitution to a certain percentage of the assessed valuation of taxpaying property within the city.

So we are in a limited confine as to revenue.

In answer to your question, Senator Connally, as to what is a government function, well, we had all sorts of tests on that. There were those who contended that water supply was not a government function, and we had to go to the Supreme Court on that question. Is a bridge, is a tunnel a government function? A bridge is no longer a luxury. Where you have a city of 7½ million people, such as we have in New York City, the transporting of those people every day from home to work and from work to home is a matter of life itself, and we must provide the transportation.

Is light, is heat a function of government? Very often municipalities are compelled to go into these activities because of local conditions.

Is a swimming pool a municipal function? Our health authorities say that it is. Is housing a municipal function? Now markets: We must have municipal markets, we must have them for the proper distribution of food and for providing a proper price scale in the retail cost of food.

My city is no different from other cities in that respect. All these new activities are coming up on us with the trend of the times.

May I refer to another subject in the bill which affects the cities?

The CHAIRMAN. Yes; you may, Mayor.

Mayor LAGUARDIA. I want to point out this, gentlemen, on the collection at the source:

We have 165,000 employees in New York City. That is going to throw an additional cost on us for the administration of collecting the tax at the source, and it is no small item.

If it is to be deducted at the source, I hope you gentlemen will bear that in mind. It is not just a question of deducting it and letting it go at that. And, if I might say so, it is an additional cost to all employers. We are all now overburdened with paper work. There is the liability compensation; there is unemployment insurance; there is the social security—all this requires a great deal of clerical work, and if New York City has to assume this with 165,000 employees, it is going to cost a great deal of money.

First, it is going to cost $200,000 to make the mechanical changes on our check machines; then I figure it will cost us about $150,000 to $200,000, maybe more, a year to make this deduction.

I just wanted to point that out at this time.

Now, if I may refer for just a moment to another thing; I assume, of course, that the future economy of the country has been considered in the presentation of this bill. Just what that economy will be, I do not know, because my job now is to clean the streets of New York, remove the sewage, and that kind of thing.

But I do want to point out this, that with the rate here—and I am not opposing it—I see very little possibility of continuing to put 10 percent of one's income in savings, in War stamps or War bonds. When you get into these schedules here and the tax is taken out of the salary, it just is not there to invest in bonds.

Now, if I may suggest, I think perhaps the rate might be increased a little bit, perhaps 1 percent and 25 percent of the amount paid

returned to the taxpayer in a nontaxable, nontransferrable, nonattachable, and nonassignable certificate, payable say a year or a year and a half after the war.

Otherwise, we will find ourselves in a position with millions of men unemployed, with no income, the revenue will diminish and no reserve.

We must pay for the war, of course, but we must be thinking also of what is going to happen after this war is over. There is going to be a condition here that is more frightful to me than the war itself.

We all know we are going to win the war. It is going to take longer than some people believe. It is going to cost more in lives and blood than most people hope now, but, eventually, we will win it.

Then, after that is over, here is a problem that requires very careful consideration, and if we are going to use all of our resources at this time without making any provision for the future, without giving the opportunity to the average wage earner in this country to set aside something for those days that are coming, when employment will be scarce in this readjustment period, coming back to normal production from war production, we are going to have a very difficult time. That is why I urge this committee to give very serious consideration in providing some reserve through this very medium that you have before you, in first getting a certain amount which we need for the war without interest charges, and at the same time providing that reserve that we necessarily must have, because none of these groups, until you get to the very high income, will be able to provide any reserve or any saving under these rates.

Senator VANDENBERG. That would especially hit small business very hard, would it not?

Mayor LAGUARDIA. I do not know what is going to happen to small business, gentlemen.

To be perfectly frank about it, the situation is very critical. First we have that group of small business that depends upon consumers' goods, the manufacturing of these consumers' goods and selling these consumers' goods, that cannot manufacture them, everybody knows that, because you cannot get the raw material. So they are up against it.

Then you have the others that might do something, that because of the necessity of speed and urgency in getting war production, are now sort of crowded out. The Congress has provided the Small War Corporations Act, which will take time to get started.

There will not be very many small manufacturing plants or shops if the war continues 3 or 4 years. No one today would say it is going to be over in 1943, if he knows what he is talking about.

We have that situation. We have the industrial situation; we have the trade and business; then we have transportation, and that is all Government now.

The railroads are getting a shot in the arm, because it is all war transportation at this time.

It is just like making coffee with the same grounds over and over again. The time comes when you do not get much coffee out of the grounds. If all we have now is being kept alive with Government money because of war requirements, then the time is going to come when we will be just absolutely flat.

Anyone having any relation at all with government knows the necessity for it, that this after-the-war problem should be given a great deal of consideration.

To come right back to the taxing of municipal and State securities, if we are going to be burdened with that additional cost, every penny will come from the taxpayers of the city and that one source of revenue, because that is our main source of revenue, the real-estate tax.

We have license fees and other taxes which go into the general fund, but the main source is from that one, the real-estate tax.

Senator CONNALLY. May I ask you a question there? How has your sales tax worked in New York? Is it a pretty good revenue producer?

Mayor LAGUARDIA. Yes; it is just as good locally as I said it would be bad nationally when I opposed it in the House.

Senator CONNALLY. I am speaking not about the national sales but of the city sales tax.

Mayor LAGUARDIA. You see, I enacted the sales tax when I got the power from the legislature for additional funds. The revenue was earmarked for relief.

We went as high, Senator, as $72,000,000 or $73,000,000 a year for relief. That was our share, gentlemen, in addition to W. P. A.

It ran along there for a while from $72,000,000 to $74,000,000.

Senator HERRING. What percent is that?

Mayor LAGUARDIA. 2 percent sales tax.

Senator HERRING. I was speaking of the whole, the percentage that you put up and the W. P. A. put up; about 4 percent, was it not?

Mayor LAGUARDIA. No, no. You see, in addition to W. P. A. we had families on home relief that we provided for.

Senator HERRING. We all did.

Mayor LAGUARDIA. We all did. We contributed it entirely. We got 40 percent from the State. We are on the 20-percent basis contribution in the W. P. A.

Senator HERRING. That is 45 or 50 percent in some of the other States.

Mayor LAGUARDIA. Did you have home relief?

Senator HERRING. No; we did it ourselves.

Mayor LAGUARDIA. So did we. We collected, Senator, on the 2-percent basis about $45,000,000 or $50,000,000 on the sales tax.

Then we had the utility tax, then we had the cigarette tax, and then we had the business tax. The State took the cigarette tax away from us so that is gone. And we reduced the 2-percent sales tax to 1 percent.

It was originally earmarked for 8 years for relief. Now we must provide relief in the annual budget, and that revenue goes into the general fund.

Senator DAVIS. What is the number of persons unemployed in New York now, Mayor?

Mayor LAGUARDIA. I think in New York we have now about 350,000 heads of families who are unemployed, and the sad part of it is that a large number of these unemployed are skilled workers in the building trades and in manufacturing trades.

You see, we are a very large light manufacturing center, and that is just killed now and we are up against it pretty hard.

The CHAIRMAN. Anything else, Mr. Mayor?

Mayor LaGuardia. No; I haven't anything else; unless there are more questions.

The Chairman. Any questions of the mayor?

Mayor, I might say that I am agreed 100 percent with your statement about the necessity for reserves. I do not think we can afford to lose sight of the post-war problem here that we will face. We can go as far as we can in raising current revenue, but we cannot destroy the future.

Mayor LaGuardia. We should not.

The Chairman. No.

Mayor LaGuardia. Don't destroy the future of the cities, gentlemen, I beg of you. I hope I will not have to appear on this subject again.

The Chairman. Thank you very much for your appearance.

Mayor Jeffries?

STATEMENT OF HON. EDWARD J. JEFFRIES, MAYOR OF DETROIT, MICH.

Mayor Jeffries. Mr. Chairman and gentlemen, I am here in a dual capacity. I represent the American Municipal Association, which is an association of State municipal leagues.

There are 42 States in the Union that have municipal leagues and they have—I suppose you might call it—a chamber of commerce of municipal leagues called the American Municipal Association.

Each of these State municipal leagues has gone on record unanimously in opposition to the taxing of either presently existing or outstanding municipal and State bonds, and also future issues of State and municipal bonds.

I have here about 10 sample resolutions. As I say, each one of the State municipal leagues has passed a resolution to that effect, and I will leave them with the clerk when I leave.

In addition to that, of course, I represent the city of Detroit, which is fundamentally and tremendously affected by this program.

In the first place, I have listened to the gentlemen who have testified before, and the thought seemed to occur to me, at least, that so much is said about the theoretical side of this proposition and so little has been said about the actual, practical side of the operation of these cities, that perhaps I can bring another phase to the attention of you gentlemen.

Senator Vandenberg and Senator Brown both questioned Dr. Lutz about whether or not this was not an unusual exemption to give to States and municipalities at this particular time, because to continue the tax exemption would be even more important to investors, and I suppose inferentially to the municipality because of the rising Federal taxes, and for that matter, the rising of State and municipal taxes.

I think that we would get an increased benefit because the scarcer and fewer tax-exempt securities there are, the more valuable they become to the holder, and therefore we have a right to expect that we would get an even lower interest rate than we have.

Now, it has not worked out universally that way to date. I think it is common knowledge that the interest rate for State and municipal securities is probably, practically speaking, at an all-time low.

Let me give you a practical illustration of what it has meant to the city of Detroit.

All of you gentlemen remember we ran completely out of money back in 1933, primarily because our debt service charge was so great that the city could not possibly meet it. We refunded and the bulk of our refund went to callable bonds, due for the most part, in 1962 and 1963.

We have been, practically speaking, ever since refunding the so-called refunding bonds. To date we have saved by refunding at lower interest rates than we received at the time, more or less as a result of a shotgun refunding upward of $80,000,000, which over the space of time involved means an actual reduced operating cost to the city of Detroit of about $4,000,000 annually.

That has been a marvelous thing to Detroit, because it has actually reduced its operating cost by that amount of money, made it possible to raise money easier, and in addition to that, has contributed no end to right our financial picture.

We, of course, needless to say, would like to continue that. The fact of the matter is, our only regret is instead of saving $4,000,000 we do not save $5,000,000 or $6,000,000 a year because today, with a large-scale refunding program behind us, with some odds and ends yet to do, but the bulk of it completed, we find that 20 percent of the cost of our operation actually is a debt service charge, and in spite of the fact that we have had all sorts of unusual burdens placed upon us in the operation of our city.

Let me name some of the things, Senator, that will offset——

Senator BROWN. Mayor Jeffries, may I interrupt you a moment?

Mayor JEFFRIES. Yes.

Senator BROWN. I wanted you and the committee to know that in the report of the special committee in 1939, submitted to the Senate, we came to this conclusion with respect to this refunding:

> Where an issue now outstanding may be refunded at a lower interest rate because of the present low money market, we would permit the refunding of any tax exemptions now permitted of existing issues, limited as to final maturity date as were the original bonds.

That was the recommendation of the committee.

Mayor JEFFRIES. Yes, Senator Brown. I had read about that in the newspapers, and I just read it in the report, but that does not seem to me to be all of the answer. It seems just as important to me that future issues be tax exempt as that refunding issues be exempt, because it all goes to the cost of the operation of local government.

Let me call the attention of you gentlemen to a local picture. I talk best about the thing that I know the best. That is about the operation of the city of Detroit. While it is just a segment of the whole country, it is a fair example.

This war effort has made it necessary for us to have a great deal more police protection. The Army hesitates none to call up and say, "We have got to have more people here, we have got to have more people there; we have got to have more people here," and because we are as interested as anybody else in seeing that that protection is granted we have to supply that. That is true of fire, that is true of housing, that is true of welfare, that is true of civilian defense, that is true of health and recreation, in fact, all of those activities are at a

tempo that we have never maintained before due almost exclusively to the war effort.

In addition to that, we find that the Federal Government, on their cost-plus contracts, their subsidation of private industry, their tax exemption of the local war industries in the community have so tremendously increased the cost of wages, the cost of everything that goes into the war picture, that we are in competition with it, and we find ourselves whipsawed in between the fact that you folks are going to raise, on the one hand, our cost of operation by eliminating a privilege that we have enjoyed—well ever since the beginning of the country——

Senator TAFT. Mayor Jeffries, I do not quite understand the "war" argument because I do not think you are going to issue any new bonds other than refund bonds. I do not think they will let you do it.

Mayor JEFFRIES. That is the reason I am so scared of you gentlemen.

Senator TAFT. As a post-war picture I think it is a legitimate argument, but as far as the extra war expense is concerned I do not see how anything we do here is going to increase the expenses of the city of Detroit during the next 2 or 3 years, or if so, at least in a negligible way.

Mayor JEFFRIES. Senator Taft, I agree with what you say. That is what scares us so much of you gentlemen. Are you like the Fuller brush man trying to get your foot in the door this time?

Senator TAFT. You are making the argument that because of the war expense now, we should not be burdening you.

I am just questioning the validity of your argument about increasing the municipal expenses. This bill is not going to increase your present municipal expenses.

Mayor JEFFRIES. It will, sir; because it is not possible for us to operate our Government without borrowing money at some time during the year.

Senator TAFT. But that borrowing will be very limited. You can issue bonds only for capital improvements. That is true with us and I suppose that is true with you.

Mayor JEFFRIES. Senator, we are just like the Federal Government. We set up a tax bill and we bill the general public for it. If we have any additional expenditures—and I do not imagine any Government agencies are able to go through a fiscal year, in the last few years and I presume the next years to come would be able to estimate in advance a year to a year and a half in advance, all of the expenses they are going to have to meet, and therefore there are unusual expenditures each year that we have not appropriated for; plus the fact that taxpayers do not pay exactly on the date the tax is due, and therefore we have to meet operating expenses every year that were not anticipated.

I think every year in the history of the city of Detroit—I cannot go too far, of course, but every year for the last 20 years, it has been necessary for us to borrow money at some period during the year, what is called in the trade, short-term borrowing.

Senator TAFT. You borrow that from the banks, do you not?

Mayor JEFFRIES. Yes, sir; we do that.

Senator TAFT. I do not think it would cost any more.

Mayor JEFFRIES. Well, I am quite sure it would, because were not there figures quoted here just a moment ago on that—on what the Federal Government had to pay on their short notes?

Do they pay the same now as they did?

I also want to say the difference between the Federal Government and the city government is that the Federal Government has its own Federal Reserve System which literally controls the interest rate. We have to go out in the open market.

We are victims of the circumstance, as has been said here, of the Federal Reserve System.

Senator TAFT. We neither borrow money for current expenses, nor do we borrow short-term money, but the amount, in your case, would be negligible. The difference in interest in dollars would be nothing.

As far as taxing present bonds is concerned, it would be a long time before it is in effect.

I think your argument should be directed to post-war conditions in cities, not to the fact that you have extra policemen now.

Senator RADCLIFFE. Will you have much refunding?

Mayor JEFFRIES. In the future?

Senator RADCLIFFE. In the immediate future.

Mayor JEFFRIES. Not much, sir. Most of it has been completed; in fact the great bulk of it. We just have some tag ends to take care of now.

Incidentally, we refunded about $200,000,000 worth of bonds in the last 6 years, maybe 7 years. Most of that has been completed. As far as that is concerned, we are not nearly as worried about that particular phase of it as we were last year, and the year before.

Senator TAFT. What is the total debt?

Mayor JEFFRIES. About $350,000,000. Let me say, Senator, that I am one individual who is diametrically opposed to the Federal Government taxing municipal securities.

Detroit is a city that has enjoyed home rule for about 100 years. We feel that it is a privilege that is most enjoyable.

I am still naive enough to believe in democracy, that all of the things we tie onto our present war effort are based fundamentally on the right of municipalities to enjoy a certain amount of home rule, and with the invasion from each of the four corners of the Federal Government and State governments into the realm of municipalities, it does not seem to me that we are doing well in the continual fight to maintain the theory and philosophy of home rule. As I say, the thing that discourages me and worries me more about the attitude of Congress in relation to the taxation of municipal securities in the future that is perhaps it is like the Fuller brush man, that they are trying to get their foot in the door so that at a later session, it is quite simple to tax existing bonds.

As a practical fact, it would not increase the cost of the operation of municipal government a whit if the municipal bonds that were already outstanding were taxed, because insofar as we are concerned, that is water over the dam.

The real thing that worries us is the taxing of the future municipal securities.

The city of Detroit, for instance, as I said, went very broke in 1933, and has been literally living, for the last 10 years, with a tightened belt. We had to postpone many capital improvements that we would like to enjoy. We had to postpone many major maintenance items that perhaps might be described as penny-wise and pound foolish, but we had to do it because, as a practical fact, we did not have the money to do it.

We are just getting to the state, in fact, we are just now at the state, if it was not for the fact that we could not get material and supplies, where we can do many things that have been postponed for the last 10 years.

To increase the cost of financing, however, in the future, as I presume this war will not last indefinitely, does not seem to me to be the thing to do, because, as Mayor LaGuardia said—and it is more true in Detroit than in any other community—that, by any away, the bulk of the revenue that the municipality receives comes from the real estate tax, and the attitude of the Treasury Department worries me no end.

We were the particular victims of the proposed treaty that was gotten up by the Treasury Department to exempt from taxation the British Purchasing Commission. We have a very large plant in Detroit that is manufacturing Rolls Royce motors. We have been trying for the last 2 years plus, to collect taxes from them.

The Treasury Department is so anxious, with one hand, to eliminate exemptions; while on the other hand, they are promulgating, attempting to have passed a treaty which would actually exempt from all local taxation, a local industry, if you please.

It is true that part of the motors were going to England, but at the same time, it was supplanting an economy that we had for these many years, been subsisting on.

Senator VANDENBERG. Did it encourage you a little that they did not get far with it?

Mayor JEFFRIES. No end, Senator. Let me bring you down to date on the story.

It is true that the treaty did not pass, but it is equally true that the Packard Motor Co. have gone through their factory and tagged every bit of machinery and every bit of produce in there that belongs to the Packard people under their label and labeled each one under the label of the British Purchasing Commission, every bit of machinery and produce that goes to them, and we are not able to collect the tax.

The fact of the matter is the British Purchasing Commission has simply taken the attitude it was not worthy of appeal. They just do not pay—period. We get no reaction from them. They do not pay, and by now they owe us a million dollars in taxes, in spite of the fact that the contract that was written between the British Purchasing Agency and the Packard Motor Co. called for a fluctuation according to the cost of material, the cost of labor, and the cost of taxes.

I guess they think that must have just been put in as a standard form that was used some other place, because they apparently do not pay taxes.

This whole attitude scares the life out of Detroit as a municipality because it seems to us as though there is a gradual plan to squeeze us right out of business, and at the present trend, the only logical culmination is that we are out of business.

We are suffering, and we will suffer no end from the absorption of the taxing field by the Federal Government and limiting in every way the field of the municipal organization, and these added burdens are continually being placed upon us.

We have taken the pitcher to the well too often and sooner or later, our main source of supply will break down. It did in 1932, 1933, and 1934. It has revived, and currently, we are doing all right, but we are maybe doing a little bit of crying now before we are out of business, because then it would be too late; however, we are afraid to cry too loudly.

We would like to have you gentlemen appreciate that the practical problem of raising the cost of operations of the municipalities is often more difficult than it is, it seems to me, to raise money for the operation of the Federal Government. At the same time, I do not want you gentlemen to misunderstand us. We pay to the Federal Government now 2 to 3, to 4 times as much in the way of taxation as we do to our municipal government, and I do not know of anybody that is complaining overly much about it, but it does seem to us that the taxation and the raising of revenue by the Federal Government on our municipal securities is like raising yourself over the fence by your own bootstraps, because it will be the same people who pay the taxes, by and large, and it will increase the cost of the local operations.

Now, everybody knows that the Federal Government is charged with the responsibility of maintaining this country at the best level possible; that is, the best possible level to the rest of the world, and what the people of this country want, and it would seem to me that the thing to do is direct to the public and tax them, rather than go for taxes to the people and make them, in turn, go to the same people that the Federal Government goes to, because it will be our citizenry in Detroit that will have to pay this additional load.

The people that you use, as an example, the wealthy man who purchases municipal securities, or any other kind of securities, does not buy them on the coupon rates, he buys the securities on the net yield to the investor and if they are taxable, then he is interested, I repeat, only in the net yield, and we, in effect pay the tax, and we, in effect, spread that tax upon our local citizens, and it comes back to the old, old story, and in our particular case, it goes to the real-estate owner. I do not know what the future holds. We may, at some later date, have to have another source of revenue, we probably will, at least, that will be my guess.

Senator BROWN. Your problem is fundamentally more difficult than the Federal problem, because your bonds have definite constitutional limitations.

Major JEFFRIES. Senator, I agree with the fact that the Congress, the Federal Government controls our economy. They have the Federal Reserve System, they control the banks, they can set any interest rate they desire. We have to go out on the open market. It would seem to me that the Federal Government security is still the prime security in the country and that States and municipalities are still secondary to the Federal Government.

Senator BROWN. And you do have constititutional limitations.

Mayor JEFFRIES. Yes; except they can be changed. It may be impractical, and it is certainly highly difficult, except that could be changed, and I presume if the situation got black enough some change would have to be made, except that we always are secondary to the Federal Government.

It seems to me like you are picking on a cripple when you pick on the municipality or the State, because you are the supreme governmental authority in the country, and you do have all the machinery in order to be able to raise money. We are subservient to the financial picture that you folks set here. That is why we are so anxious that you do not set one that will take an undue advantage of us. I do not mean undue advantage of us because we do have, in the same way as anyone else has, we have a privilege that it literally traceable, in dollars and cents, to the advantage of the operation of the States and municipalities.

The financing cost of one of these cities is an important fundamental part of the cost of the operation, and whatever you do to it, will raise the cost.

Gentlemen, I have watched the municipal money market like a hawk here for the last 2 or 3 years because of the fact that we were in a huge refunding program, and, believe me, when I say every time the Senate Finance Committee, or any committee of Congress, or any important member of the Federal Government had anything to say about the taxation of municipal securities, it just plays them up and down like you would a piano or an organ, and we, the cities, are the recipients of it. When Mr. Morgenthau made a speech in Cleveland our bonds dropped off a quarter point. We were just about to come in with a refunding issue. I am not sure that we will ever regain the position that we were in last fall before Mr. Morgenthau started to talk so strongly about the taxation of municipal securities. It does translate itself directly into the cost of the operation of our government.

Senator RADCLIFFE. What percentage of your municipal securities are owned in Detroit, do you imagine?

Mayor JEFFRIES. I am not sure, sir. As a practical fact, I did a little proselyting throughout the country in trying to sell our refunding issue.

I suppose the majority of them are held perhaps in the East. A couple of times a refunding issue was underwritten by Chicago. The fact of the matter is one issue was participated in by some west coast banks, bond brokers, or peddlers. It was hailed as the first time in the history of the city that the west coast gentlemen participated in it.

So I would presume, by and large, they are held around in our area and in the East. Mr. Tobin tells us that our comptroller issued a statement not long ago that the best estimate we can make is about 8 percent of our bonds are more or less locally held.

Senator RADCLIFFE. Insofar as they are not held there, then you would not say you would get back by way of taxation anything to offset the increased interest rates you would pay?

Mayor JEFFRIES. We would not get it anyway, because it goes into the Federal coffers.

Senator RADCLIFFE. You would not have any local taxation at all, then?

Mayor JEFFRIES. We would get no proceeds from the local tax, and we would have to stand the full 100 percent burden locally of the increased financing charge as the result of the decrease in the net return.

Senator RADCLIFFE. Insofar as the Federal tax is concerned, you would not get anything back.

Mayor JEFFRIES. No.

Senator RADCLIFFE. If you imposed a system of local taxation you would only get back, insofar as the proceeds on your own securities are concerned, you would only get back that part of it which would be a small part of the total?

Mayor JEFFRIES. That is about as broad as it is long. The reason the Federal Government is interested, from the point of view of revenue, is because these are not their bonds. The fact of the matter is when they put a tax on their securities the interest rate went up.

I am not sure whether their tax was as much as the increased cost or not, so one about washes out the other, except insofar as the Federal Government is concerned, there is no washout. We, the municipalities, pay the increase, and they, the Federal Government, get the full return.

Senator RADCLIFFE. If you taxed them, it would be only partially washed out?

Mayor JEFFRIES. Yes; it would be only partially washed out. Even so, it would be washed out equally as well for the net yield as for the increased tax.

The CHAIRMAN. Are there any questions? Is there anything else, Mr. Jeffries?

Mayor JEFFRIES. I cannot think of anything, Mr. Chairman. I hope I have covered it. I would like to add this—that we have this other problem that is becoming alarmingly important, and that is the tax exemption of Government and war industry facilities in our area. It seems to us that it has increased manyfold, and that in the immediate future, along about our next tax year, it is going to have a tremendous effect upon us. While this is a little off this picture, yet it is all wrapped up in the same picture, and I certainly would like to urge you gentlemen's earnest attention to the problem of eliminating the source of income of cities and the increase in our cost of operation. Sooner or later that margin will become so narrow that we are going to have some sort of break down.

I will leave with the clerk the resolutions from the State municipal leagues.

Senator DANAHER. What facilities, local facilities, have we exempted, Mr. Mayor, from local taxation?

Mayor JEFFRIES. Your War Industries Corporation and the various agencies you set up for the prosecution of the war in order to protect themselves have written into their contracts the fact that the property immediately passes to the Government upon delivery.

That immediately removes from the tax roll the facilities and the raw materials, and those things that go into the war industry.

Senator DANAHER. We haven't done that.

Mayor JEFFRIES. Well, sir, Congress has. Maybe the Senate Finance Committee has not, but the Congress has, and I presume you gentlemen have voted on it from time to time.

Senator DANAHER. How extensive is it in Detroit?

Mayor JEFFRIES. Well, a lot of it is yet on paper. That is, the contracts have been entered into but a lot of the stuff has not yet been delivered. For this taxing year we were a step ahead of you; in other words, our due date came before this country got into the all-out effort, and therefore, anything that we can show now is an estimate as to the future, but we feel it will be quite extensive.

You see, we were substituting a war economy for civilian economy and because we have been so highly industrialized that means about 70 percent of our economy is switched into the war effort.

The Government, apparently, makes three types of contract:

(1) A plain contract where the producer keeps his independence and his business as usual, insofar as he is concerned and does business as usual so far as the city and that producer are concerned.

(2) Then they have the cost-plus feature basis. So far as I am able to determine, that has been limited, by and large, in our area to Ford, General Motors, and Chrysler. There have been some additional small contracts but, by and large, the bulk of those are with those three organizations.

(3) Then there is the subsidized industry where the defense plant corporation is the main agency, I think that finances it. In order to protect themselves against other producers, they have written this phraseology into the contract which exempts them, in effect, for all products, machinery, raw materials, so on and so forth. Of course, the Defense Plant Corporation acts specifically, makes liable for taxation the real estate, but the machinery and equipment and raw material, things like that that go in, are specifically exempt, on the theory that they belong to the Federal Government, and as a result, we are unable to tax them.

Senator DANAHER. That is in relation to contracts between the Defense Plant Corporation and local industries that take contracts?

Mayor JEFFRIES. That is just like the Packard Motor Co. They are making the same old stuff, except they are using it for airplanes, and now they are exempt, according to the British Purchasing Agency.

It just puts a hole in our revenue. The industry might as well not have been there.

Mayor LAGUARDIA. That was an amendment to the R. F. C. Act of 1941. We would like to submit a statement on that. It specifically exempts personal property from taxation. They first sought to exempt the sales tax, and the *Alabama case* has held adversely to the Federal Government.

There is a bill now in the Committee on Rules in the House.

Senator DANAHER. That is the Cochran bill. That is the one I thought the gentleman was talking about.

Mayor LAGUARDIA. On page 20 I would like to suggest an amendment, and that is this provision:

> No amendment made by this title shall apply in any case where its application will be contrary to any treaty obligation of the United States.

And, I would like to suggest, "duly ratified by the Senate."

I will tell you why. A treaty has been negotiated between Great Britain and the United States and they may call that an agreement, and to go into court, that costs us a lot of money.

Detroit is involved in this. So, if you simply add here "duly ratified by the United States Senate" that would dispose of that treaty that the Senate has not ratified.

Mayor JEFFRIES. Senator, I might be able to clear that up in your mind. The Cochran bill in its original form, would have eliminated

the possibility of our taxing any war industry within the city of Detroit.

It would have just ruined us, I think.

Senator DANAHER. I know it could have been the House Ways and Means Committee. I thought you were laboring under the misapprehension that we had passed it.

Mayor JEFFRIES. No.

Senator DANAHER. Thank you.

Mayor JEFFRIES. There is this other phase under the present set-up that is not nearly as far-reaching as the original Cochran bill, except it is gradually growing and growing.

That is, we are running into the picture that we cannot even get the break-down between what is civilian economy and what is war work.

Senator VANDENBERG. You mean the British Purchasing Commission is operating on the theory that this treaty has been ratified and is duly in effect?

Mayor JEFFRIES. No, sir; they are operating now on the theory that under international law no government can tax the property of another.

The attorney general of the State of California ruled that they were taxable, and then he changed his ruling on the ground of international law.

Now, they keep citing to us the position taken by the California attorney general. Of course, we just don't agree with the position taken by the California attorney general.

Senator VANDENBERG. In that case, why did they make the treaty?

Mayor JEFFRIES. They wanted to sew it up. I imagine they wanted to leave nothing to the element of chance.

Senator DANAHER. They just do not do anything.

Mayor JEFFRIES. We have gotten to the position where we cannot get any answers from them.

Senator DANAHER. But they just do not pay?

Mayor JEFFRIES. That is correct.

Senator VANDENBERG. That is an international custom.

The CHAIRMAN. Thank you.

(The resolutions referred to are as follows:)

RESOLUTION ADOPTED BY THE AMERICAN MUNICIPAL ASSOCIATION IN CONVENTION ASSEMBLED AT CHICAGO, ILL., ON THE 24TH DAY OF OCTOBER, 1941

Whereas the United States Treasury Department is again proposing the Federal taxation on income of municipal securities on the ground of national-defense need, in spite of thorough consideration and disapproval having been given this matter by the Congress; and

Whereas the practical effect of such a proposal would not provide substantial Federal funds for the defense emergency, because little revenue could be realized from such taxation for a number of years but would, on the other hand, hamper vital municipal services and limit the ability of the municipalities to cooperate in the national defense; and

Whereas the proposal would still further subordinate State and local government to Federal control and destroy municipal autonomy; Be it

Resolved, That the American Municipal Association reiterate its opposition to the proposed Federal taxation on income of municipal securities and urge the State leagues of municipalities to continue their vigilance in the matter.

RESOLUTION BY ARIZONA MUNICIPAL LEAGUE, PHOENIX, ARIZ., ON TAXATION OF MUNICIPAL SECURITIES

Whereas Federal taxation of municipal bonds is unsound in principle and if carried out would be extremely detrimental to the credit and money-raising ability of municipalities in that municipal bonds would be rendered undesirable from an investment standpoint and therefore in many instances unsalable: Now, therefore, be it

Resolved, That the Municipal League of Arizona earnestly endorses the efforts of the Conference on State Defense and all other organizations who are endeavoring to dissuade the Congress of the United States from rendering such bonds subject to Federal taxation.

NOVEMBER 1941.

RESOLUTION BY IDAHO MUNICIPAL FINANCE OFFICERS' ASSOCIATION, EMMETT, IDAHO, ON TAXATION OF MUNICIPAL SECURITIES

Be it resolved, That the Idaho Municipal Officers' Association in convention assembled at Boise, Idaho, on December 13 and 14, 1940, is opposed to the removal of the exemptions on the bonds and securities of States and municipalities, and their agencies, whether now outstanding or hereafter to be by them, or either of any of them, issued, except by their consent, and unless such removal is done by amendment to the Constitution of the United States, and provided that the States, municipalities, and their agencies shall be granted the power to tax Federal securities for revenue sufficient to provide revenue to offset such increased municipal costs, it does now reaffirm its resolution adopted in convention on December 7 and 8, 1938, except insofar as said last-mentioned resolution pertains to the collection of income taxes on the salaries of officers and employees of States and municipalities; be it further

Resolved, That a copy of the above resolution, together with the resolution adopted on December 7 and 8, 1938, be forwarded to Senators John Thomas and D. Worth Clark, to Representatives Henry Dworshak and Compton I. White, to Governor-elect Chase Clark and Attorney General-elect Bert Miller, and to the Conference on State Defense.

RESOLUTION ADOPTED BY THE LEAGUE OF TEXAS MUNICIPALITIES IN CONVENTION ASSEMBLED AT TEMPLE, TEX., ON THE 7TH DAY OF NOVEMBER 1941 OPPOSING THE FEDERAL TAXATION OF THE INCOME FROM MUNICIPAL SECURITIES

Whereas the Congress may again consider the proposition of taxing the income from municipal securities: Now, therefore, be it

Resolved, That the League of Texas Municipalities hereby affirms its opposition to the taxation of State and municipal securities or revenues derived therefrom by the Federal Government; be it further

Resolved, That the League of Texas Municipalities hereby approves the program and objectives of the Conference of State Defense; and be it further

Resolved, That copies of this resolution be sent to the Treasury Department of the United States, to the chairman of the Senate Finance Committee, to the chairman of the House Ways and Means Committee, and to the members of the Texas delegation in Congress.

Passed and approved this the 7th day of November A. D. 1941, in Temple, Tex.

RESOLUTION BY THE LEAGUE OF MINNESOTA MUNICIPALITIES, MINNEAPOLIS, MINN., ON FEDERAL TAXATION OF MUNICIPAL BONDS AND SECURITIES

Resolved, by the League of Minnesota Municipalities, That we deem it in the best interests of the cities and villages of this State and of their citizens and taxpayers to express opposition to the enactment by the Congress of the United States of legislation having for its object the Federal taxation of the bonds or

certificates of indebtedness of cities and villages, or of income derived therefrom, since the taxation thereof can result only in increasing the rate of interest on such bonds and certificates, thereby increasing the tax burden of such residents and taxpayers; and

Resolved further, that the League of Minnesota Municipalities hereby requests the Minnesota delegation in the Congress of the United States to exercise its best endeavors to oppose and defeat the passage of legislation designed to place any Federal tax upon municipal bonds or certificates of indebtedness or upon the income derived therefrom. (Proposed by the League Revenues Committee.)

JUNE 1940.

RESOLUTION ADOPTED BY THE NEW JERSEY STATE LEAGUE OF MUNICIPALITIES IN CONVENTION ASSEMBLED AT TRENTON, N. J., ON THE 14TH DAY OF NOVEMBER 1941

Whereas the Treasury Department has again resumed its campaign of publicity as a prelude to the introduction of a bill at the present session of the United States Congress that will assert the right of the Federal Government to tax income from municipal and State bonds; and

Whereas the imposition of such a tax would cost the taxpayers of our State approximately $7,970,000, and

Whereas the delegation of power to the Federal Government to tax income from municipal and State bonds is an invasion of the sovereign rights of the State: Now, therefore be it

Resolved, by the delegates of the New Jersey States League of Municipalities in convention assembled:

1. That we are representatives of the municipalities of the State of New Jersey oppose any legislation to tax the interest on municipal and State bonds by act of Congress. The imposition of such a tax we maintain to be a violation of the sovereign rights of the States and should be submitted to the States in proper form for consideration of a constitutional amendment.

2. That the executive secretary of the league is hereby directed to forward copies of this resolution to each Senator and Congressman from New Jersey requesting that they oppose any and all attempts to raise Federal revenue through taxation of the income of municipal and of State bonds.

RESOLUTION ADOPTED BY THE LEAGUE OF OREGON CITIES IN CONVENTION ASSEMBLED AT EUGENE, OREG., ON THE 2D DAY OF MARCH 1942

Whereas the American Municipal Association, comprising the federation of 42 State leagues of municipalities, is convinced that the proposal to tax the income of municipal securities constitutes a serious threat to the fiscal solvency of the constituent members, and at the meeting of the said American Municipal Association on November 3, 1939, a resolution was proposed and duly adopted in opposition to such taxation; and

Whereas on May 24, 1940, the League of Oregon Cities at its convention in Seaside, Oreg., approved a resolution to the same effect; and

Whereas national defense calls for a strengthening of local credit, inasmuch as State and local governments are being called on to provide additional police and fire protection, safeguard their water supplies, build additional roads, and undertake other activities for which they must borrow money, and such tax would result in an increase in the interest rate paid by municipalities; and

Whereas the increase in interest rates resulting from Federal taxation of State and local securities would merely impose another burden on the already overburdened property taxpayers; and

Whereas the continued efforts of the Federal Government to enact legislation imposing such a tax on municipal securities jeopardizes local financing of capital improvements and threatens the entire basis of sound municipal policy; now, therefore, be it

Resolved, That the executive committee of the League of Oregon Cities feels that the proposed Federal taxation of municipal securities is unsound and opposed to the best interest of local self-government and as such should not be enacted; and be it further

Resolved, to the end that this view may receive proper attention we recommend that copies of this resolution be forwarded to the members of the Oregon delegation in Congress and the members of the House Ways and Means Committee and the Senate Finance Committee of the Federal Congress.

RESOLUTION BY THE PENNSYLVANIA ASSOCIATION OF BOROUGHS, HANOVER, PA., ON TAXATION OF MUNICIPAL SECURITIES, JUNE 26, 1942

Whereas the Federal Treasury Department is still urging upon the Congress of the United States the imposition of a tax on the income from State and municipal bonds; and

Whereas this association has heretofore gone on record in opposition thereto; now, therefore, be it

Resolved, That the opposition of this association to such proposal be reaffirmed; be it further

Resolved, That the officers of the association be instructed to continue to actively oppose all such proposals.

RESOLUTION AGAINST FEDERAL TAXATION OF STATE AND MUNICIPAL INDEBTEDNESS ADOPTED BY THE PENNSYLVANIA STATE ASSOCIATION OF BOROUGHS AT ITS ANNUAL CONVENTION, HELD IN HARRISBURG, FEBRUARY 27, 28, AND MARCH 1, 1941

Whereas the Treasury Department of the Government of the United States has heretofore expressed to and urged upon the Congress of the United States its recommendation that the evidences of State and municipal indebtedness be subjected to Federal taxation; and

Whereas during the year 1940 the aforesaid recommendation was inquired into and it admittedly became apparent that the burden of any such taxation must necessarily resolve upon the municipalities and State issuing such evidences of indebtedness, and thus add to the burden of real-estate taxation; and

Whereas admittedly real estate is presently overburdened and the taxation upon real estate should be relieved and not added to; and

Whereas such proposal would be contrary to all of our established concepts of constitutional division of powers and independence of functions between the several units of government; and

Whereas the inevitable consequence of any such proposal would be to subject municipalities to the financial domination and ultimate control of the Federal Government, thus tending to destroy the fundamental safeguard of democratic government, the independence of home rule; and

Whereas during the year 1940 committees of the House of Representatives of the Congress of the United States and of the Senate of the Congress of the United States conducted inquiries into the feasibility of such proposal, as a result whereof, in September 1940, the said recited proposal of the Treasury Department of the United States was decisively rejected by the Senate of the United States; and

Whereas notwithstanding such rejection, the Treasury Department of the United States has again urged upon the Congress of the United States its desires for the imposition of said recited tax, this time upon the theory that such tax would be in aid of the defense program of the Government of the United States; and

Whereas the said recited proposal of the Treasury Department bears no proper relation to the defense program of the United States and any increased revenue to the Government of the United States would be diminimous and any such proposal would inevitably tend to destroy the independence of the governmental units designated as local government and would thereby tend to destroy the cornerstone of the democratic principles which it is the avowed purpose of the Government of the United States to defend: Therefore be it

Resolved, and it is hereby firmly and highly resolved by the Pennsylvania State Association of Boroughs in Convention Assembled, That it is the unalterable consensus of opinion of this convention that the position of the Pennsylvania State Association of Boroughs as heretofore expressed in opposition to said recited proposal of the Treasury Department of the Government of the United States be reaffirmed; and be it further

Resolved, That the officers of the State Association of Boroughs be and they are hereby directed to use their best efforts in opposition to said recited proposal; and be it further

Resolved, That a copy of this resolution be transmitted to each and every one of the Members of the House of Representatives and the Senate of the United States representing therein the Commonwealth of Pennsylvania.

(This resolution, on motion of Mr. Julian Barnard, chairman of the resolution committee, was carried unanimously by the 970 delegates of the convention.)

RESOLUTION BY THE LEAGUE OF VIRGINIA MUNICIPALITIES, RICHMOND, VA., ON FEDERAL TAXATION OF MUNICIPAL SECURITIES

Whereas at the first session of the Seventy-sixth Congress an effort was made to impose the Federal income tax on the income received from interest on municipal obligations to be issued in the future; and

Whereas it is conceded by fiscal authorities and public officials that this tax would impose a serious burden upon municipalities by increasing interest rates, thus adding to municipal costs which must be borne largely by real-estate taxes; and

Whereas such a measure by interfering with the operation of agencies of the States would be of doubtful constitutionality; and

Whereas a committee of Congress has been created to study the whole problem of tax revision, including the proposal to abolish the exemption on income from municipal obligations, and will prepare a bill on this subject: Now, therefore, be it

Resolved, That the League of Virginia Municipalities in convention assembled goes on record as opposing the extension of the Federal income tax to the income from interest upon municipal obligations, or the income of municipalities or their agencies by act of Congress or by regulation of the Department of Internal Revenue or by any other method;

Resolved further, That the League of Virginia Municipalities advise the Congressional Tax Revision Committee of its position on this proposal, take active steps during the coming year to protect the interests of the municipalities of Virginia, and send copies of this resolution to the chairman of the Committee on Tax Revision, to the United States Senators and Members of the House of Representatives in Congress from the State of Virginia and to the American Municipal Association, the National Federation of State Leagues of Municipalities.

RESOLUTION BY THE ALABAMA LEAGUE OF MUNICIPALITIES, MONTGOMERY, ALA., ON THE FEDERAL TAXATION OF MUNICIPAL SECURITIES

Whereas the Department of Justice now interprets the decision of the United States Supreme Court in *Helvering* v. *Gerhardt* as holding that the Federal Government has the supreme power to tax all State and municipal employees, and

Whereas all State and municipal employees now face the imminent danger of paying income taxes upon all salaries earned since 1026, and

Whereas the Federal Government now claims to have the supreme power to tax future and outstanding State and municipal securities, as well as the revenues of State and municipal agencies: Now, therefore, be it

Resolved by the Alabama League of Municipalities, acting by its executive and legislative committees in session assembled at Montgomery, Ala., on the 28th day of December 1938, That congressional legislation should be passed at the next session of Congress limiting any taxation of State and municipal officers and employees to salaries which they receive in the future; and be it further

Resolved, That the Alabama League of Municipalities is opposed to the taxation of State and municipal securities by the Federal Government, unless the consent of the States is first obtained through a constitutional amendment permitting the reciprocal taxation of Federal securities, and prohibiting absolutely any Federal taxation of State and municipal revenues, or the revenues of State and municipal agencies; and be it further

Resolved, That the Alabama League of Municipalities hereby opposes the proposed plan of the Federal Government to tax State and municipal securities except by a constitutional amendment and to obtain legislation prohibiting the retroactive taxation of the salaries of State and municipal employees, and to

obtain an absolute prohibition against the Federal Government's taxing the revenues of the States, their municipalities or their agencies; and be it further

Resolved, That certified copies of this resolution be sent to the Attorney General of the United States, to the chairman of the Senate Finance Committee, to the chairman of the House Ways and Means Committee, and to the Members of the Alabama congressional delegation as soon as may be.

The CHAIRMAN. We might be able to proceed with another witness. I am advised nothing has been taken up on the floor, and nobody has asked for any time. We might call Professor Fairchild next.

Before you begin, Mayor LaGuardia has asked for insertion into the record of resolutions from various cities, beginning with the resolution from the city of Philadelphia, and letters from various other cities and individuals, in opposition to this tax on outstanding or future issues.

These will be entered into the record.

(The resolutions referred to are as follows:)

CLERK'S OFFICE, CITY COUNCIL,
Philadelphia, February 26, 1942.

SIR: This is to certify that the following is a true and correct copy of the original resolution passed by city council and approved by the acting mayor on the 26th day of February 1942.

RESOLUTION

Recording the opposition of the city of Philadelphia to the imposition of a Federal income tax on income from municipal securities; and directing the presentation of this resolution to the Mayor for his approval or disapproval.

Whereas, the Secretary of the Treasury of the United States has submitted a proposal to impose a tax on the income from municipal securities; and

Whereas the imposition of such a tax would increase the cost to the city of the refinancing of outstanding securities, and the cost of new securities now authorized or which may be authorized for essential and necessary municipal improvements; and

Whereas any such increase in cost would result in an increase in municipal taxation and would impose an additional burden upon the taxpayers of the city; and

Whereas the increase in cost may be so prohibitive as to prevent entirely the refinancing of existing securities or the raising of new money to finance necessary municipal improvements; and

Whereas the imposition of a tax on the income of municipal securities is, in actual fact, the imposition of a tax on the municipality which issues the securities; therefore

Resolved, by the Council of the City of Philadelphia, That the city of Philadelphia declares its opposition to any proposal to impose a Federal tax upon the income from municipal securities.

Resolved, That the mayor be authorized to send copies of this resolution to the Senators and Members of the House of Representatives from Pennsylvania, and to the members of the House Ways and Means Committee and the Senate Finance Committee.

Resolved, That the clerk of council be and is hereby directed to present this resolution to the mayor for his approval or disapproval.

Attest:

WILLIAM W. FELTON,
Clerk of City Council.

A RESOLUTION BY THE CITY COUNCIL OF THE CITY OF CINCINNATI, OHIO

Disapproving any legislation by the Congress of the United States providing for the subjection of the instrumentalities of State and local governments to Federal taxation.

Whereas council of the city of Cincinnati has been advised that renewed efforts are contemplated to submit legislation before the Congress of the United

States, providing for the Federal taxation of municipal bonds and other instrumentalities of State and local governments; and

Whereas the Supreme Court of the United States has for the period of more than 100 years, consistently ruled that the Constitution of the United States prohibits States from taxing essential governmental instrumentalities of the United States Government and the Federal Government from taxing essential governmental instrumentalities of State and local governments; and

Whereas the operation of said constitutional restriction has been to the financial advantage of both Federal and State Governments; and

Whereas the adoption of the proposed legislation would not only be a violation of constitutional principles, but would be grossly unfair unless Congress at the same time provided for the subjection of the instrumentalities of the Federal Government to State and local taxation; and

Whereas, in particular, in the city of Cincinnati, the Federal Government has refused to recognize its obligation to pay a benefit assessment of $69,091 assessed against its property for the widening and improvement of East Fifth Street or to pay its equitable share of the street-lighting costs along its property, and has obtained an order in the Federal court setting aside and canceling said assessment as being unconstitutional and beyond the power of a subdivision of the State of Ohio to levy; and

Whereas the taxation of municipal bonds would tend to increase the interest rates on such bonds from 0.60 to 1 percent, which increase will be directly borne by the local taxpayers and amount to many millions of dollars more than the revenues which would accrue to the Federal Government; and

Whereas in this time of grave national crisis, the fullest cooperation between the Federal and local government of the United States is essential to the successful prosecution of our common war effort: Now, therefore, be it

Resolved by the Council of the City of Cincinati, State of Ohio:

SECTION 1. That this council disapprove the enactment of any legislation by the Congress of the United States providing for the taxation of essential governmental instrumentalities of State and local governments contrary to the constitutional provisions laid down and maintained by the United States Supreme Court for more than 100 years.

SEC. 2. That the clerk of council be and he is authorized and directed to transmit certified copies of this resolution to the following Members of Congress: Hon. Walter F. George, chairman of the Senate Finance Committee, United States Senate; Hon. Robert A. Taft, United States Senate; Hon. Harold H. Burton, United States Senate; Hon. Robert L. Doughton, chairman of the House Ways and Means Committee, United States House of Representatives; Hon. Thomas A. Jenkins, United States House of Representatives; Hon. William E. Hess, United States House of Representatives; Hon. Charles H. Elston, United States House of Representatives.

Passed, February 18, A. D. 1942.

JAMES G. STEWART, *Mayor.*

Attest:

AL. J. BECHTOLD, *Clerk.*

RESOLUTION BY THE CITY COUNCIL OF BOSTON, MASS.

Whereas it is essential in this grave national emergency that municipalities be permitted the utmost freedom to adapt themselves to the changes in the economy of their citizens consequent upon the war effort of the United States; and

Whereas any additional imposition upon the borrowing capacity of municipalities will curtail such freedom in many important directions; and

Whereas the city council of the city of Boston has been informed that the Secretary of the Treasury has indicated in a public speech the purpose of his Department to attempt to extend to the interest on municipal bonds the provisions of the Federal income tax laws; and

Whereas any such amendment of such laws would increase the burden already borne by the city of Boston and might well result in temporary destruction of its borrowing capacity; and

Whereas the said city council is informed that the advantage to the United States from such a change is not to any degree commensurate to the disadvantage to the city of Boston or to the other municipalities of the country;

Now, therefore, the city council of the city of Boston protests against any amendment to the Federal income tax laws subjecting the interest upon its bonds to such taxation, and hereby requests the Representatives in Congress of the citizens of Boston to oppose the enactment of any such legislation.

Adopted unanimously.

RESOLUTION No. 22104 OF THE COUNCIL OF THE CITY OF PORTLAND, OREG.

Whereas there is indication that certain agencies of the Federal Government are renewing their efforts to attain passage by Congress of legislation which would impose a tax burden upon State and municipal securities, including the imposition of a tax upon such securities which are now outstanding, even though the imposition of such a tax would impose tremendous financial burden upon those taxpayers who are called upon to support units of local government, and particularly in a community such as the city of Portland, Oreg., where the bulk of taxes levied for municipal purposes is a direct charge upon the realty and imposes a very definite burden upon the owner thereof; and

Whereas this increased burden upon local financing can only be reflected by an increase in the interest rates which local taxpayers will be called upon to pay; and

Whereas even if reciprocal tax authority is granted to the States for the purposes of taxing Federal securities, the same would be of no benefit to political subdivisions of the State, including municipalities, and would benefit the States only to the extent to which Federal securities are held within their boundaries and would, as a matter of fact, be of particular benefit only to those States in the eastern part of the United States where the bulk of Federal securities are held as investments; and

Whereas repeated efforts in the past to obtain passage by Congress of legislation which would burden State and municipal securities with a Federal tax have met with failure as a result of the Members of Congress realizing that such a tax would be an unfair burden upon the taxpayers of the States and political subdivisions thereof; and

Whereas the Council of the City of Portland, by motion regularly adopted December 26, 1940, has gone on record as being opposed to such a program by the Federal Congress, and

Whereas copy of such motion has heretofore been forwarded to the Oregon delegation in Congress and the members of the House Ways and Means Committee and the Senate Finance Committee: Now, therefore, be it

Resolved, That the Council of the City of Portland, in regular session assembled, does by this resolution reiterate its opposition as voiced by the motion adopted December 26, 1940, to a program of Federal taxation of State and municipal securities as it appears is now contemplated, and does by this resolution renew such opposition particularly in the light of the present emergency and the burden imposed upon units of local government carrying on their civil-defense program and in their many activities conducted in conjunction with the national-defense program for which the local unit of government obtains no compensation; and be it further

Resolved, That a copy of this resolution be entered upon the minutes of the council and copies be sent to the Oregon delegation in Congress and to the officers of the United States Conference of Mayors (Paul V. Betters, executive director), National Institute of Municipal Law Officers (Charles S. Rhyne, executive director), both of 730 Jackson Place NW., Washington, D. C., and to the members of the House Ways and Means Committee and the Senate Finance Committee of the Federal Congress.

Adopted by the council, February 5, 1942.

WILL E. GIBSON,
Auditor of the City of Portland, Oreg.

RESOLUTION OF THE COMMISSION OF THE CITY OF BIRMINGHAM, ALA.

Whereas it is obvious that the economic effect of Federal taxation of the income from municipal bonds would be the exaction by bondholders of interest rates upon future issues of municipal bonds sufficiently high to exonerate them from the burden of such taxation, and to cast such burden upon the general revenues of the issuing municipalities; and

Whereas such Federal taxation would amount to no more than disguised Federal taxation of the tax revenues of municipalities, and would be but another step toward destruction of the sovereignty of the States and their instrumentalities; and

Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatsoever at this time, and no appreciable amount of revenue for a very long time to come, but would immediately very substantially increase the cost of necessary municipal borrowing; and

Whereas Secretary Morgenthau's proposal to also tax income from local Government bonds now outstanding would clearly be on the part of the Federal Government a violation of implied contract rights on the part of the purchaser and holder of those bonds, and which implied rights have been recognized for many years by the Federal Government; and,

Whereas such a breach of good faith on the part of the Federal Government, would be one of dishonor, and would serve to impair the confidence of the people in their Government's pledges: Therefore be it

Resolved by the commission of the city of Birmingham as follows:

1. That this commission do, and it does, hereby, express its determined opposition to any proposal for Federal taxation of the income from municipal bonds, either those to be later issued or those already issued.

2. That the city clerk be, and she hereby is, instructed to send a certified copy of this resolution to each member of the Senate and House of Representatives from Alabama, and to each member of the Senate Finance Committee and the House Ways and Means Committee.

STATE OF ALABAMA,
Jefferson County:

I, Eunice S. Hewes, city clerk of the city of Birmingham, do hereby certify that the above is a true and correct copy of a resolution duly adopted by the commission of the city of Birmingham at its meeting held February 10, 1942, and as same appears of record in minute book A-26, of said city.

Given under my hand and corporate seal of the city of Birmingham, this the 10th day of February 1942.

[SEAL] EUNICE S. HEWES, *City Clerk.*

RESOLUTION NO. 643 OF THE COUNCIL OF THE CITY OF SCHENECTADY, N. Y.

Whereas Mayor Mills Ten Eyck, of the city of Schenectady, has been informed through a communication received from the United States Conference of Mayors, dated January 28, 1942, that efforts will again be made in the present session of Congress to enact legislation subjecting municipal bonds to Federal taxation, and

Whereas at the recent annual conference of the United States Conference of Mayors a resolution was adopted on January 14, 1942, reiterating a determined opposition to the continued attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree, to impose a Federal tax on State and municipal bonds, and

Whereas this council and the administrative officers of the city of Schenectady, N. Y., are convinced that the Federal taxation of municipal bonds will bring about an increase in the cost of all future municipal bonds, which will have to be absorbed by the imposition of additional burdens on city real estate, which is the present main source of municipal revenues, and

Whereas there is no compensating revenue for the cities, and the taxation of municipal and State bonds will tend to break down the entire constitutional theory of State and municipal sovereignty, and should the Federal Government be permitted to tax future bonds, it is likely to result in the Government's taxation of all outstanding bonds, and the possibility exists that once the Federal Government obtains such right that it may also resort in the taxation of municipal revenues: Now, therefore, be it

Resolved, That this council is in full accord with the action taken on January 14, 1942, at the annual conference of the United States Conference of Mayors, and further expresses its disapproval of any proposed legislation or attempt, in whatever form it may take, which has for its purpose the taxation of municipal bonds by the Federal Government; and be it further

Resolved, That a copy of this resolution be immediately sent to Senator Robert F. Wagner, Senator James M. Mead, Congressman Frank Crowther, the House

Ways and Means Committee, Senate Finance Committee, and Paul V. Betters, executive director of the United States Conference of Mayors.

CITY CLERK'S OFFICE, *City of Schenectady, ss:*
CITY AND COUNTY OF SCHENECTADY, *State of New York, ss:*

I, Simon Etkin, city clerk of the city of Schenectady, N. Y., do hereby certify that the resolution of which the foregoing is a true copy, was duly adopted by the Council of the City of Schenectady, N. Y., at a meeting thereof, held in the city hall in the city of Schenectady, N. Y., on the 2d day of February 1942.

Witness my hand at Schenectady, N. Y., the 5th day of February 1942.

SIMON ETKIN,
City Clerk of Schenectady, N. Y.

A RESOLUTION OF THE COUNCIL OF THE CITY OF NORFOLK, VA., REGARDING FEDERAL TAXATION OF MUNICIPAL BONDS

Whereas the Council of the City of Norfolk is advised that in all probability efforts will be directed, during the approaching session of the Congress of the United States, toward the enactment of legislation subjecting municipal bonds to Federal taxation: Now, therefore, be it

Resolved:

SECTION 1. That the Council of the City of Norfolk desires to record its strenuous and determined opposition to any proposed legislation by the Congress of the United States which seeks to subject municipal securities to Federal taxation, believing that such legislation, if enacted, would not only seriously handicap municipal finances but would tend to break down the whole constitutional theory of State and municipal sovereignty.

SEC. 2. That the city clerk be, and he is hereby, authorized and instructed to forward certified copies of this resolution to the Representatives in Congress of the State of Virginia.

Adopted by the council January 7, 1941.

A true copy.

Teste:

JNO. D. CORBELL, *City Clerk.*

A RESOLUTION BY THE CITY COUNCIL OF HOUSTON TEX., OPPOSING ATTEMPTS OF THE TREASURY DEPARTMENT TO IMPOSE A FEDERAL TAX ON STATE AND MUNICIPAL BONDS; DIRECTING THE MAYOR TO FORWARD A COPY OF THIS RESOLUTION TO THE CONGRESS, THE PRESIDENT OF THE UNITED STATES, AND THE SECRETARY OF THE TREASURY; AND DECLARING AN EMERGENCY

Whereas the United States Conference of Mayors as repeatedly and unanimously expressed its implacable opposition to Treasury attempts to impose a Federal tax on the income from State and municipal bonds; and

Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal Governments of the United States is essential to the successful prosecution of our war effort; and

Whereas despite this grave national emergency and the need for complete unity of purpose and good will between the separate branches of our Government, the Treasury Department persists in its efforts to impose a Federal tax upon the income from State and municipal bonds and thus needlessly resurrects this highly controversial and irritating domestic issue; and

Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatsoever at this time and yet would substantially increase the cost of municipal borrowing; Now, therefore, it is hereby

Resolved by the City Council of the City of Houston:

SECTION 1. That we hereby reiterate the determined opposition of the United States Conference of Mayors to the continued attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree, to impose a Federal tax on State and municipal bonds; and

SEC. 2. That this most controversial domestic issue should not at this time be permitted to irritate and disturb that wholehearted cooperation in our American war effort which is the objective and purpose of the cities of America; and

SEC. 3. That the mayor of the city of Houston be, and he hereby is, directed to forward a copy of this resolution to the Congress, the President of the United States, and the Secretary of the Treasury.

SEC. 4. The fact that the attempt to impose a Federal tax on the income from municipal bonds will materially increase costs on municipal borrowings now contemplated by the city of Houston constitutes a public emergency requiring that this resolution be passed finally on the date of its introduction, and the mayor having in writing declared the existence of such emergency and requested such passage, this resolution shall be passed finally on the date of its introduction, this 3d day of March A. D. 1942, and shall take effect immediately upon its passage and approval by the mayor.

Passed this 3d day of March A. D. 1942.

Approved this 3d day of March A. D. 1942.

C. A. PICKETT,
Mayor of the City of Houston.

A RESOLUTION BY THE BOARD OF COMMISSIONERS OF MOBILE, ALA., PROTESTING THE EFFORT OF THE SECRETARY OF THE TREASURY OF THE UNITED STATES TO TAX THE INCOME FROM MUNICIPAL SECURITIES

Whereas it has been called to the attention of the members of this board that the Secretary of the Treasury of the United States plans to again present to the Congress and to urge the enactment of a bill which would make the income from municipal securities subject to the Federal income tax law, whether the securities be outstanding or whether they are to be issued in the future, using as a pretense the claim that the extension of the tax to include such securities is necessary for the national defense; and

Whereas from a study of the question this board is of the opinion that the extension of the tax to include the income from such securities would place the finances and the control of local self-government in the hands of the Federal Government, thereby tending to destroy one of the fundamental principles upon which our system of government was founded, and making dual sovereignty and local self-government exist only in name; and this board is further of the opinion from a study of the question that the increase in revenues gained by the Federal Government by such taxation will be offset many times over by the loss in revenues and by the inability to carry on public services by the municipalities, if such tax extension is made effective; and this board is also of the belief that such action will amount to a breach of faith with the present holders of municipal bonds and obligations; Now therefore, be it

Resolved by the Board of Commissioners of the City of Mobile, That the proposal of the Secretary of the Treasury of the United States to extend the application of the Federal income tax law to the income derived from municipal securities be, and the same hereby is, declared to be unwise, unsound, unjust, and to be destructive of the fundamental tenet of dual sovereignty and local self-government which has been one of the main bulwarks of the freedom of the individual in a Nation which has grown great largely through the freedom of the individual; and be it further

Resolved, That it is the belief of this board that control over its means of obtaining funds to carry on the functions of the government of the city of Mobile should not be tampered with or encumbered by any Federal tax which will prevent the sale of municipal securities at the best price obtainable and which will, in many instances, prevent their sale altogether by the inability to obtain legally acceptable bids; and be it further

Resolved, That the action proposed has already created a feeling of resentment on the part of municipal authorities and their organizations through unsuccessful attempts in the past to create such extension of taxation and control over municipal affairs, and it is deplored that the Treasury Department should, at this time, when a need for unified effort is paramount, create discord and confusion and use a pretense of the need for national defense to impose control from a central authority, when it is apparent that the effort to extend such Federal taxation and control was made when there was no apparent and urgent defense need; and be it further

Resolved, That the city clerk be, and he hereby is, authorized and directed to send copies of this resolution to the United States Conference of Mayors, to the National Institute of Municipal Law Officers, to each member of the House Ways and Means Committee, to each member of the Senate Finance Committee, and to each member of the Alabama delegation to Congress.

Adopted February 10, 1942.

S. H. HENDRIX, *City Clerk.*

RESOLUTION BY THE COUNCIL OF THE CITY OF SAGINAW, MICH.

Whereas the city of Saginaw, Mich., has expressed its opposition to Treasury attempts to impose a Federal tax on the income from State and municipal bonds, and

Whereas in this time of grave national crisis, the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war efforts, and

Whereas despite this grave national emergency and the need for complete unity of purpose and good will between the separate branches of our Government, the Treasury persists in its disturbing efforts to impose a Federal tax upon the income from State and municipal bonds and thus needlessly resurrects this highly controversial and irritating domestic issue, and

Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatever at this time and yet would substantially increase the cost of municipal borrowing, now, therefore, it is hereby resolved,

(1) that the city of Saginaw- Mich., is hereby determined to oppose the continued attempts of the Treasury Department to impose a Federal tax on State and municipal bonds;

(2) That this controversial domestic issue should not at this time be permitted to irritate and disturb the wholehearted cooperation in our American war effort which is the objective and purpose of the cities of America; and

(3) That the clerk of the city of Saginaw be, and he is hereby directed to forward a certified copy of this resolution to the United States Senators of the State of Michigan, to each Congressman from each district of the State of Michigan, to each member of the House of Representatives Ways and Means Committee, and to each member of the Finance Committee of the United States Senate.

Adopted by the following vote:

Ayes: Councilmen Boutell, Boyd, Brogger, Marxer, Symons, and Mayor Brydges.

Nays: None.

STATE OF MICHIGAN,
County of Saginaw, ss:

I, Frank B. Niederstadt, clerk of the city of Saginaw, county and State aforesaid, do hereby certify, that I have compared the annexed copy of excerpt of council proceedings of the regular meeting of the Council of the City of Saginaw held February 2, 1942, with reference to a resolution adopted by said council, with the original on file in this office, and that it is a true and correct transcript therefrom and of the whole of such original.

In witness whereof, I have hereunto set my hand and affixed the corporate seal of the city of at Saginaw, Mich., this 5th day of February 1942.

Passed February 2, 1942.

Attest:

[SEAL] FRANK B. NIEDERSTADT, *City Clerk.*

RESOLUTION BY THE COUNCIL OF THE CITY OF SAVANNAH, GA.

By the committee of the whole:

Whereas legislation is now pending in the National Congress to tax municipal bonds; and

Whereas such a tax on municipal bonds would render them less saleable and, at the same time, adversely affect the value of said bonds; and

Whereas the mayor and aldermen of the city of Savannah are opposed to such a tax on municipal bonds; and

Whereas the mayor and aldermen of the city of Savannah have issued a half million dollars of National Defense bonds and such a tax would adversely affect the sale of these bonds: Therefore, be it

Resolved by the mayor and aldermen of the city of Savannah in council assembled and it is hereby enacted by the authority aforesaid, That the mayor of the mayor and aldermen be and he is hereby authorized and directed to register the opposition of the mayor and aldermen of the city of Savannah to

such a tax proposal by communicating with the two Senators from the State of Georgia and with the Congressman of the First Congressional District of Georgia, expressing the opposition of the mayor and aldermen of the city of Savannah to such tax proposal.

I, P. J. McNamara, clerk of council, do hereby certify that the above is a true and correct copy of resolution adopted by the mayor and aldermen of the city of Savannah in council assembled, February 11, 1942.

[SEAL] P. J. MCNAMARA, *Clerk of Council.*

A RESOLUTION BY THE CITY COUNCIL OF YOUNGSTOWN, OHIO

Expressing the opposition of members of the Council of the City of Youngstown to contemplated congressional action looking to the imposition of a Federal tax on State and municipal bonds; authorizing the forwarding of copies of this resolution to various members of Congress; and providing that this resolution shall be an emergency measure

Whereas because of the unusually increased need for additional funds by the Government of the United States in the prosecution of the war and to meet the expenses incident to same, it is now, and has long been contemplated that Congress enact laws imposing a Federal tax upon State and municipal bonds for the purpose of realizing some of the needed money and to remove tax-free bonds from the markets of the country; and

Whereas the need for additional money by municipalities and States is also of prime importance and necessary in the conditions now confronting our country and its subdivisions and the markets for the sale of bonds of such subdivision; and

Whereas no apparent benefit can be pointed out as being realized through the imposition of such tax by the Federal Government upon bonds of States and municipalities other than a slight amount of revenue out of all proportions to the burden of additional cost and interest in the sale of said bonds that would be placed upon the citizens of the States and municipalities, which additional expenses to the States and municipalities would be in excess of the revenue return which might or could be secured by the Federal Government by the imposition of such tax; and further, because of the grave doubt which exists in the minds of constitutional authorities as to the constitutionality of the enactment of such law by Congress; Now, therefore, be it

Resolved by the Council of the City of Youngstown, State of Ohio, three-fourths of all its members elected thereto concurring—

SECTION 1. That we as the legislature of the city of Youngstown, duly elected to the council thereof, express herein our oppositions to the continued attempts of the Treasury Department of the United States, either by statute, administrative rulings or by judicial decree, to impose a Federal tax on State and municipal bonds for the reasons that such tax will, in the judgment of the members of this council, increase the costs covering the sale of such bonds, limit the market for same and impose an increased cost of interest charges to be able to dispose of such bonds in any bond market, which increased costs will be out of all proportions to the small return which might be able to be secured through taxation by the Federal Government, and for the reason of grave doubt as to the constitutionality of such enactment.

SEC. 2. That the clerk of council be and hereby is directed and ordered to forward copies of the above resolution to the chairman of the Ways and Means Committee of the House of Representatives, to the chairman of the Finance Committee of the United States Senate, to both Senators of the State of Ohio and to the Congressman of the Nineteenth Congressional District of the State of Ohio.

SEC. 3. That this resolution is hereby declared to be an emergency measure necessary for the immediate preservation of the public peace, welfare, and safety, the emergency being the necessity of immediately calling to the attention of the Congress of the United States the danger which would arise to States and municipalities throughout the country through the enactment of any legislation by Congress of the United States looking to the Federal taxation of municipal bonds,

and as such this resolution shall take effect and be in force immediately upon its passage and approval by the mayor.

Passed in council this 9th day of February 1942.

ARTHUR GUNDRY,
President of Council.

Attest:

JNO. H. LEMON,
Clerk.

Approved this 10th day of February 1942.

WILLIAM B. SPAGNOLA,
Mayor.

RESOLUTION BY THE CITY COUNCIL OF CHARLOTTE, N. C., CONDEMNING FEDERAL TAXATION OF MUNICIPAL BONDS

Whereas a proposal is being sponsored by certain Federal officials for the taxation of the securities of States and their subdivisions and agencies and, whereas, the Federal taxation of municipal bonds would be reflected in either an increased interest rate or a lower sale price, which would mean an increased burden upon city taxpayers and, whereas, all sources of city taxation are rapidly being curtailed except the field of ad valorem taxation of real and personal property, which are already overburdened with taxation and, whereas, the Federal taxation of local bonds would vest in the Federal authorities a means of controlling local affairs not contemplated by the Federal Constitution: Now therefore be it

Resolved, by the city council of the city of Charlotte, this 11th day of February 1942: (1) That the city of Charlotte opposes any attempt to add to the cost of State and municipal governments by the Federal taxation of the securities of States, their subdivisions and agencies.

(2) That the city of Charlotte opposes this proposal regardless of whether or not the reciprocal right is granted to States and cities to tax Federal securities because Federal securities are so scantily held within the State of North Carolina as that such reciprocal right would not produce revenue sufficient to offset the loss which the State and its subdivisions and agencies would lose by the proposal.

(3) That the city of Charlotte urges all Members of both Houses of Congress to support legislation in Congress at the 1942 session designed to prevent the taxing of outstanding bonds, or future issues, of the States, municipalities, and their instrumentalities.

(4) That the city of Charlotte endorses the objectives of the Conference on State Defense and the United States Conference of Mayors so far as same are consistent with this resolution and states its willingness to cooperate with State organizations in furthering said objectives.

(5) That a copy of this resolution be sent to all Members of both Houses of Congress from the State of North Carolina, to the members of the House Ways and Means Committee, to the members of the Senate Finance Committee, and the North Carolina League of Municipalities, and to the attorney general of the State of North Carolina.

RESOLUTION BY THE CITY COUNCIL OF LANSING, MICH.

I, Bertha Ray, clerk of the city of Lansing, Mich., do hereby certify that I have compared the annexed copy of resolution passed by the City Council of the City of Lansing on March 9, 1942, relative to taxing State and municipal bond incomes with the original now on file in my office, and that it is a correct copy thereof, and of the whole of such original.

"By Ways and Means Committee:

"Whereas the Treasury Department has again brought up the subject of Federal tax on the income from State and municipal bonds; and

"Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war effort; and

"Whereas despite this grave national emergency and the need for complete unity of purpose and good will between the separate branches of our Government, the Treasury Department persists in its disturbing efforts to impose a Federal tax upon the income from State and municipal bonds, and thus needlessly resurrects this highly controversial and irritating domestic issue; and

"Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatsoever at this time and yet would substantially increase the cost of municipal borrowing: Now, therefore, be it

"*Resolved by the City Council of the City of Lansing, Mich,* That we are definitely opposed to the attempts of the Treasury Department either by statute, administrative rulings, or by judicial decree to impose a Federal tax on State and municipal bonds; and further

"That the Treasurer and Congress should keep in mind what the Supreme Court has said: 'The Power to Tax Involves the Power to Destroy'; and further

"That copies of this resolution be sent to the members of the House Ways and Means Committee and the Senate Finance Committee as per attached list and to our Michigan Senators, Hon. Prentiss M. Brown and Hon. Arthur H. Vandenberg; also Representative Blackney of this district and to Paul V. Betters, Director, the United States Conference of Mayors, 730 Jackson Place NW., Washington, D. C.

"Adopted by the following vote:

"Yeas—Aldermen Bassett, Coller, Crego, Dell, Graham, Hungerford, Letherman, LeClear, Niles, Russell, C. A. Smith, L. J. Smith, W. R. C. Smith, Snyder, Starkweather, Stoppel; 16.

"Nays—None."

Passed March 9, 1942.

In witness whereof I have hereunto set my hand and affixed the corporate seal of said city, this 13th day of March A. D. 1942.

Attest:

[SEAL] BERTHA RAY, *City Clerk.*

A RESOLUTION BY THE BOARD OF COMMISSIONERS OF WICHITA, KANS., PROTESTING THE TAXING OF MUNICIPAL SECURITIES

Whereas in the past municipal securities have been sold by the city of Wichita, Kans., at a favorable interest rate, so as to maintain a reasonably low tax levy, and low cost of municipal financing in the city of Wichita; and

Whereas according to the best opinion available a Federal tax on the interest from municipal securities would increase the interest rate thereon, by from 1½ to 2½ percent above present interest rates, which increase would necessarily have to be raised by local taxation; and

Whereas the city of Wichita, Kans., and other municipalities are already raising by local taxation, and expending large sums of money in defense activities that are essential to a successful prosecution of the war; and

Whereas the great bulk of local taxes in the city of Wichita are raised by levies on real estate, and any increase in the tax levy would place a direct burden on thousands of small home owners in the city of Wichita: Now, therefore, be it

Resolved by the Board of Commissioners of the city of Wichita, Kans., That we hereby protest the taxing of municipal securities, and hereby record our opposition to any proposal to impose a Federal tax on the interest from municipal securities; be it further

Resolved, That the city clerk be, and he is hereby, directed to forward certified copies of this resolution to members of the House Ways and Means Committee, to members of the Senate Finance Committee, and to the United States Senators from Kansas, and to the Congressman from this district.

Adopted at Wichita, Kans., this 16th day of February 1942.

JOHN I. DODSON, *Mayor.*

Attest:

[SEAL] C. C. ELLIS,
City Clerk.

STATE OF KANSAS,
Sedgwick County, City of Wichita, ss:

I, C. C. Ellis, city clerk of the city of Wichita, Kans., do hereby certify that the above resolution entitled "A Resolution by the Board of Commissioners of

Wichita, Kans., Protesting the Taxing of Municipal Securities," is a true, correct, and compared copy of the original resolution adopted by the Board of Commissioners of the City of Wichita, Kans., on February 16, 1942, and on file in this office.

Witness my hand and the seal of the city of Wichita, Kans., this 17th day of February 1942.

[SEAL]

C. C. ELLIS,
City Clerk.

RESOLUTION BY THE CITY COUNCIL OF DURHAM, N. C., RECORDING OPPOSITION TO PROPOSAL THAT INCOME FROM MUNICIPAL AND STATE BONDS BE TAXED BY FEDERAL GOVERNMENT

Whereas it has come to the attention of this council that the Congress will be requested to pass, and will consider, legislation providing for the Federal taxation of the income from State and municipal bonds; and

Whereas the proposal is not only that the income from future issues of State and municipal bonds be taxed, but also that the income from such bonds which have already been issued and sold be taxed; and

Whereas, a Federal tax on the interest from municipal bonds would greatly increase the cost of financing for the city of Durham, and it is estimated would bring about an increase of from three-fifths to 1 percent on all future municipal borrowings; and

Whereas had such a tax been in effect when the city of Durham bonds now outstanding were issued, the additional interest cost to the city of Durham as of the fiscal year which ended June 30, 1941, would have been between $15,000 and $75,000, which would represent an increase in the tax rate of this city of between 5 and 8½ cents on the $100 valuation of the total assessed property within the city of Durham; and

Whereas the city of Durham cannot levy any tax upon the interest derived from bonds issued by the Federal or State Governments; and

Whereas the bonds heretofore issued by this city were purchased upon the at least implied understanding that the income to be derived therefrom would not be subject to taxation, and the rate of interest at which the city became thereby obligated to pay upon said bonds to their maturities was accordingly made lower; and the city and its taxpayers have already received the benefits of such lower rate of interest and will continue to receive these benefits until the bonds are retired at their several maturities; and

Whereas the municipal bond market has already been upset by this proposal of the Treasury Department; and

Whereas local governments form the backbone of our democratic form of government which we are all endeavoring to protect and defend from the assaults of the Axis Nations, and a Federal tax upon the income from the bonds of States and municipalities will tend to weaken and undermine the sovereignty of local government and the principles of democracy upon which the theory of dual sovereignty rests; and

Whereas it is the considered opinion of this council that our theory of dual sovereignty be maintained, especially in these times of emergency when the governing body of this city has already been called upon and will continue to be called upon for greatly increased efforts in behalf of national defense and security; and

Whereas it is the opinion of this council that the imposition of a Federal tax on the income from State and municipal bonds cannot be justified upon the theory that such action is necessary in the interest of national defense, especially when the entire picture projected by such proposal is considered: Now, therefore be it

Resolved by the city council of the city of Durham:

SECTION 1. That this council, as the governing body of the city of Durham, is unalterably opposed to any legislation which will permit the Federal Government to tax the income from State and municipal bonds which have already been issued and those which may be issued in the future.

SEC. 2. That the city manager be, and he is hereby, directed to convey the sentiment of this council to the Congress by forwarding certified copies of this resolution to Hon. Robert L. Doughton, chairman of the House Ways and Means Committee; Hon. Walter F. George, chairman of the Senate Finance Com-

mittee; Senator Josiah W. Bailey, Senator Robert R. Reynolds, and Congressman Carl Durham, and by requesting these gentlemen to use their influence and votes against the passage of such proposed legislation.

I, C. B. Alston, city clerk of the city of Durham, do hereby certify that the foregoing is a true and correct copy of a resolution adopted by the city council in regular session held February 16, 1942.

[SEAL] C. B. ALSTON, *City Clerk.*

RESOLUTION BY THE CITY COUNCIL OF ELIZABETH, N. J.

Whereas in this time of grave national crisis the fullest cooperation between the Federal Government and municipal governments of the United States is essential to the successful prosecution of our war efforts; and

Whereas despite this grave national emergency and the need for complete unity of purpose between the separate branches of our Government, the Treasury Department persists in its disturbing efforts to impose a Federal tax upon the income from State and municipal bonds and thus needlessly resurrect this highly controversial issue; and

Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatsoever at this time and it would substantially increase the cost of municipal borrowing: Now, therefore, be it

Resolved by the mayor and City Council of the City of Elizabeth:

1. That we, as the duly elected representatives of the citizens of the city of Elizabeth hereby express our opposition to the continued attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decrees, to impose a Federal tax on State and municipal bonds; and

2. That the mayor of the city of Elizabeth be and he is hereby directed to forward a copy of this resolution to the Members of the United States Senate from the State of New Jersey, to the Members of the House of Representatives from this district, and to the members of the House Ways and Means Committee.

Dated: February 5, 1942.

Approved:

JAMES T. KIRK, *Mayor.*

Dated: FEBRUARY 9, 1942.

RESOLUTION BY THE CITY COUNCIL OF QUINCY, ILL.

Whereas the City Council of the City of Quincy, Ill., is advised that the Treasury Department intends to present to Congress a proposed law providing for taxation of the income of all State and municipal bonds and securities, giving as a reason therefor the need to raise money for the defense of this Nation and the prosecution of the war in which the United States of America is now engaged; and

Whereas prior to the present emergency resulting from said war, similar proposals have been defeated on grounds of legal precedent and sound governmental practice; and

Whereas the additional revenue which might be realized by such taxation would, by comparison with other sources of governmental income, be so trivial that such taxation cannot be justified as a defense measure; and

Whereas although national income would be but little augmented by such a tax, the cost of municipal government would be greatly increased because of the high rates of interest on municipal bonds and securities which would directly and immediately result from such action; and

Whereas under the operation of fundamental economic laws, the major portion of such increased costs would not be borne by the holders of municipal bonds but would be passed on to local property owners, with the result that in our case most of the increased tax burden would be placed squarely upon the shoulders of the citizens of Quincy in the form of higher personal-property and real-estate taxes and increased rentals and living expenses; and

Whereas the increased interest rates which would result from the proposed law would seriously restrict and in many cases entirely prevent needed municipal financing, thereby impairing the efficiency of local government and the service which it is able to render to the people; and

Whereas for the reasons hereinabove enumerated, such a tax would tend to cripple local self government, with a resultant trend toward complete centralization of power in Washington, contrary to the spirit of the Constitution and to sound democratic principles: Now, therefore, be it

Resolved by the City Council of the City of Quincy, Ill.:

1. That the city council does hereby declare its uncompromising opposition to any legislation which will permit a tax to be levied upon the income of state and municipal bonds and securities.

2. That it is the consensus of this council that this dangerous and widely opposed tax proposal should not at this time, and under the false cloak of patriotism and national defense, be permitted to disturb or hinder that wholehearted cooperation and unity of purpose in which Quincy and all other American cities are uniting to bring the United States of America safely and victoriously through the war.

3. That copies of this resolution be forwarded to the President of the United States, to the Secretary of the Treasury, to the Representatives of this district in the Senate and House of Representatives and to the chairmen of the appropriate congressional committees.

By order of the city council, Quincy, Ill.

FEBRUARY 9, 1942.

RESOLUTION NO. C-8413, OF THE CITY COUNCIL OF LONG BEACH, CALIF.

A resolution of the City Council of the city of Long Beach protesting against attempts of the Treasury Department of the United States of America to impose a Federal tax upon State and municipal bonds

Whereas, in this time of grave national crisis, the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war effort; and

Whereas despite this grave national emergency and the need for complete unity of purpose and goodwill between the separate branches of our Government, the Treasury Department persists in its efforts to impose a Federal tax upon the income from State and municipal bonds and thereby needlessly resurrects this highly controversial and irritating domestic issue; and

Whereas a tax on future issues of State and municipal bonds would provide practically no revenues whatsoever at this time for the Federal Government and yet would substantially increase immediately the cost of municipal borrowing, and thereby constitute a grave crisis in the conduct of municipal activities throughout the United States,

Now, therefore, the City Council of the City of Long Beach resolves as follows:

SECTION 1. That said city council, for and on its own behalf, and on behalf of all of the citizens of the city of Long Beach, hereby protests against attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree, to impose a Federal tax on State and municipal bonds.

SEC. 2. That this most controversial domestic issue should not at this time, under the false pretense of national defense, be permitted to irritate and disturb the wholehearted cooperation in our American war effort, which is the present objective and purpose of the cities of America.

SEC. 3. That the city clerk be and he is hereby authorized and directed to transmit, without delay, a copy of this resolution to the two California Senators and the Congressman representing the Eighteenth Congressional District, to the chairman of the House Ways and Means Committee, and the chairman of the Senate Finance Committee.

SEC. 4. The city clerk shall certify to the passage of this resolution by the City Council of the City of Long Beach, and cause the same to be posted in three conspicuous places in said city of Long Beach, and it shall thereupon take effect.

I hereby certify that the foregoing resolution was adopted by the City Council of the City of Long Beach, at its meeting of February 17, 1942, by the following vote:

Ayes: Councilmen Brunton, Clark, Klocksiem, Freeman, Fletcher, Ford, Moxley, Carroll, Gentry.

Noes: None.

Absent: None.

[SEAL] FRANK J. BEGGS, *City Clerk.*

COUNCIL RESOLUTION NO. 3764 OF THE CITY COUNCIL OF BUTTE, MONT.

A resolution declaring the policy of the city of Butte with relation to and concerning the imposition of a Federal tax on State and municipal bonds, and directing the placing of copies of this resolution with the President of the United States, the Secretary of the Treasury of the United States, and the United States Senators and Members of the House of Representatives of the United States from the State of Montana

Whereas it has come to the attention of the City Council of the City of Butte that there is in existence a proposed movement for the levy of a Federal tax upon and against future and outstanding bond issues of State and municipal bonds; and

Whereas the imposing of a Federal tax upon the income from State and municipal bonds of either existing or future issues would raise practically no revenues for the Federal Government, but would substantially increase the cost of proper and necessary municipal borrowing: Now, therefore, be it

Resolved by the City Council of the City of Butte:

SECTION 1. That it is the settled sense and policy of the city of Butte to oppose and it does hereby oppose the levying or attempting to levy, either by statute, administrative ruling, or judicial decree, the imposition of a Federal tax on State and municipal bonds.

SEC. 2. That such a proposal at this time cannot and will not do otherwise than disturb domestic tranquility and detract from the immediately present necessity for united effort of the people of the United States to single-mindedly carry on the successful prosecution of this country's war effort.

SEC. 3. That a copy of this resolution be forwarded to the President of the United States, to the Secretary of the Treasury of the United States, and to the Senators and Members of the House of Representatives in Congress from the State of Montana.

Passed this 18th day of February 1942.

Approved this 18th day of February 1942.

BERYL WILSON, *City Clerk.*

RESOLUTION BY THE BOARD OF CITY COMMISSIONERS OF FARGO, N. DAK.

Whereas the big majority of municipalities throughout the country have from time to time expressed their objection to Treasury attempts to impose a Federal tax on the income from State and municipal bonds; and

Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war efforts; and

Whereas despite this grave national emergency and the need for complete cooperation and good will between Federal, State, and municipal governments, efforts are being made to impose a Federal tax upon income from State and municipal bonds; and

Whereas the tax on issues of State and municipal bonds would raise but very little revenue and yet would substantially increase the cost of municipal borrowing: Now, therefore, be it

Resolved, by the Board of City Commissioners of the city of Fargo:

1. That we hereby express vigorous objection to the imposing of a Federal tax on State and municipal bonds.

2. That we deplore the fact that this most controversial issue should at this time, under the pretense of national defense, be again brought to the front with its consequent disturbance of wholehearted cooperation in the American war effort which is the objective of the cities of America.

3. That the auditor be and he is hereby directed to forward a copy of this resolution to North Dakota Senators and Representatives in Congress and to the chairman of the House Ways and Means Committee and the Senate Finance Committee, and respectfully request that our objections be presented to the respective committees and to the Senate and House of Representatives.

RESOLUTION OF THE CITY COUNCIL OF EAST ORANGE, N. J.

The following resolution, adopted by the city council on February 24, was approved by the mayor on February 26, 1942:

"Whereas it appears from the public press that the United States Treasury Department is advocating legislation in the Congress to impose a tax on the income from State and municipal bonds; and

"Whereas such legislation would substantially increase the cost of municipal borrowing, and such costs would have to be absorbed principally by taxes on real estate at a time when real estate is overburdened with taxes levied to meet the costs of essential municipal services, plus the cost of financing local defense: Be it

"*Resolved*, That it is the judgment of the City Council of the City of East Orange that it would be unwise for the Congress to adopt legislation to impose taxes on State and municipal bonds, and the city council does respectfully urge the United States Senators from New Jersey and the Congressmen from this district to oppose any such plan; and be it further

"*Resolved*, That a copy of this resolution be forwarded to the Hon. William H. Smathers, Hon. Albert L. Vreeland, Hon. W. Warren Barbour, and Mr. Paul V. Betters, executive director of the United States Conference of Mayors."

Attest:

ALICE I. WEBSTER, *City Clerk*.

FEBRUARY 26, 1942.

RESOLUTION BY THE COMMON COUNCIL OF THE CITY OF EAST LANSING, MICH.

Whereas it has come to the attention of the Common Council of the City of East Lansing that the Treasury Department of the United States has suggested the possibility of attempting to tax the income from municipal bonds; and

Whereas the said council feels that any such income is not subject to the taxing jurisdiction of the Federal Government, and, if imposed, would be greatly detrimental to the municipality: Now, therefore, be it

Resolved by the Common Council of the City of East Lansing, That we are opposed to the attempt of any Federal body to impose a Federal tax on municipal bonds by statute, administrative ruling, or by judicial decree; be it further

Resolved, That copies of this resolution be sent to the proper committees and representatives in Washington, D. C., of the citizens of this community.

Suported by Alderman Mitchell.

Carried.

Yeas: Barnhart, Lyman, and Mitchell.

RESOLUTION BY THE CITY COUNCIL OF CUMBERLAND, MD.

Whereas the mayor and City Council of Cumberland, Md., has repeatedly and unanimously expressed its implacable opposition to Treasury attempts to impose a Federal tax on the income from State and municipal bonds; and

Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal Governments of the United States is essential to the successful prosecution of our war effort; and

Whereas despite this grave national emergency and the need for complete unity of purpose and good will between the separate branches of our Government, the Treasury Department persists in its disturbing efforts to impose a Federal tax upon the income from State and municipal bonds and thus needlessly resurrects this highly controversial and irritating domestic issue; and

Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatsoever at this time and yet would substantially increase the cost of municipal borrowing; now, therefore, it is hereby

Resolved by the mayor and City Council of Cumberland, That we hereby reiterate the determined opposition of the mayor and the City Council of Cumberland to the continued attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree, to impose a Federal tax on State and municipal bonds; and

That we express that this most controversial domestic issue should not at this time, and under the false pretense of national defense, be permitted to irritate and disturb that wholehearted cooperation in our American war effort which is the objective and purpose of the cities of America; and

That the finance commissioner of Cumberland be and he hereby is directed to forward a copy of this resolution to the United States Senators from Maryland, the Congresswoman of the Sixth District, and the chairman of the Ways and Means Committee of the House.

MAYOR AND CITY COUNCIL OF CUMBERLAND,

AGNES G. KILLION, *Secretary.*

FEBRUARY 9, 1942.

RESOLUTION BY THE COMMON COUNCIL OF BUFFALO, N. Y., RE FEDERAL TAXATION OF THE INCOME FROM STATE AND MUNICIPAL BONDS

Whereas Federal taxation of the income of State and municipal bonds would impose a new burden on every municipality and would be a direct violation of the principle of State and local self-government: Therefore be it, and it is hereby

Resolved, That the common council of the city of Buffalo hereby expresses its disapproval of any intention or effort on the part of Federal authorities to exact such a tax, whether on existing or future issues; and be it further

Resolved, That a copy of this resolution duly certified by the city clerk be forwarded to each Representative from the city of Buffalo and to the United States Senators of the State of New York, and to the members of the House Ways and Means Committee and to the members of the United States Senate Finance Committee.

RESOLUTION BY THE BOARD OF COMMISSIONERS OF IRVINGTON, N. J., OPPOSING FEDERAL TAXATION OF MUNICIPAL AND STATE BONDS

Whereas certain departments of the Federal Government are preparing to introduce into the present session of the United States Congress a bill that asserts the right of the Federal Government to tax the income from municipal and State bonds; and

Whereas it is estimated that such a tax would cost the taxpayers of our State approximately several million dollars through the increased cost of municipal financing: Now, therefore, be it

Resolved by the Board of Commissioners of the Town of Irvington, county of Essex, State of New Jersey, assembled in regular session on February 10, 1942, Hereby record themselves as opposing any such legislation as set forth above respecting taxation of the income on municipal and State bonds, adopted at a regular meeting of the board of commissioners held on the above date; and be it further

Resolved, That the town clerk be and he is hereby authorized and directed to mail copies of such resolution to the Congressmen, President of the United

States, and the Secretary of the Treasury, Senators and Members of the House of the State of New Jersey.

Approved:

EDWARD D. BALENTINE,
J. EDWARD JACOBI,
PERCY A. MILLER, JR.,
HARRY E. STANLEY,
HERBERT KRUTTSCHNITT,
Board of Commissioners.

I hereby certify that the above is a true and correct copy of a resolution duly adopted at a regular meeting of the board of commissioners held on the 10th day of February 1942.

[SEAL] W. H. JAMOUNEAU, *Town Clerk.*

RESOLUTION No. 2890 BY THE COUNCIL OF THE CITY OF JOHNSTOWN, PA.

Whereas it has been brought to the attention of council that an effort will be made in the present session of Congress to enact legislation imposing a tax on outstanding, as well as future, issues of municipal bonds, and

Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war effort, and

Whereas a tax on future issues of municipal bonds would raise practically no revenue whatsoever at this time and yet would substantially increase the cost of municipal borrowing: Now therefore be it

Resolved by the Council of the City of Johnstown, Pa., and it is hereby resolved by the authority of the same, That we hereby declare our determined opposition to the attempt of the Treasury Department, either by statute, administrative ruling or judicial decree, to impose a Federal tax on municipal bonds; and

That we express the hope that this most controversial domestic issue should not at this time, and under the false pretense of national defense, be permitted to irritate and disturb the wholehearted cooperation in our war effort which is the objective and purpose of the cities of the United States.

And further, that the city clerk is hereby authorized and directed to send a copy of this resolution to our representatives in the Congress of the United States, to Secretary of the Treasury Morganthau, and to Paul V. Betters, executive director of the United States Conference of Mayors of the United States of America.

Adopted February 3, 1942.

JOHN A. CONWAY, *Mayor.*

Attest:

JOHN J. CULLEN, *City Clerk.*

I do hereby certify that the foregoing is a true and correct copy of Resolution No. 2890 as same was adopted by council and signed by the mayor of the city of Johnstown, Pa.

[SEAL] JOHN J. CULLEN, *City Clerk.*

RESOLUTION BY THE COMMON COUNCIL OF WHITE PLAINS, N. Y., OPPOSING FEDERAL TAXATION OF MUNICIPAL BONDS

Whereas it appears that efforts are being made in the present session of the Congress to enact legislation which would permit the Federal Government to tax the income from bonds issued by municipalities; and

Whereas the United States Conference of Mayors on the 14th day of January 1942 adopted a resolution reiterating its opposition to such taxation; and

Whereas it is deemed that such taxation would impose an unfair and unwarranted increase in municipal taxes on real estate; it is, therefore

Resolved, That the Common Council of the City of White Plains does hereby concur in and does hereby approve the resolution adopted by the United States

Conference of Mayors on January 14, 1942, opposing Federal taxation of municipal bonds; and, it is further

Resolved, That the United States Senators from New York and the member of the House of Representatives from the Twenty-fifth New York District be and they hereby are requested to use all honorable methods to accomplish the defeat of any legislation which has for its purpose and intent the taxation of municipal bonds; and, it is further

Resolved, That the city clerk be and he hereby is directed to send a certified copy of this resolution to Senator Robert F. Wagner, to Senator James M. Mead, to Representative Ralph A. Gamble and to each member of the United States Senate Finance and the House of Representatives Ways and Means Committees.

STATE OF NEW YORK,
County of Westchester, City of White Plains, ss.:

I, the undersigned, city clerk of the city of White Plains, N. Y., do hereby certify that I have compared the preceding with the original resolution adopted by the Common Council of the city of White Plains, N. Y., by the affirmative vote of a majority of the members of the council at a stated meeting thereof, held the 2d day of March 1942, and I do hereby certify the same to be a correct transcript therefrom and of the whole of said original.

In witness whereof, I have hereunto set my hand and affixed the corporate seal of said the city of White Plains, N. Y., this 20th day of March 1942.

City Clerk of the City of White Plains, N. Y.

RESOLUTION BY THE COMMON COUNCIL OF EAST CHICAGO, IND.

Whereas the Treasury Department of the United States is attempting to impose a Federal tax upon income from municipal and State bonds upon the pretext of war necessities, and

Whereas such a tax upon future issues would increase the cost of municipal borrowing and would raise practically no revenue at this time; now therefore, be it

Resolved, by the Common Council of the City of East Chicago, Ind., That we are opposed to a Federal tax on municipal and State bonds however attempted; be it further

Resolved, That copies of this resolution be sent to our Senators and Congressman.

Adopted this 5th day of February, 1942.

CHARLES J. KOTZAN,
Presiding Officer.

Attest:

NORWOOD R. MARKEY,
City Clerk.

Presented by me to the mayor of the city of East Chicago, Ind., this 6th day of February 1942.

NORWOOD R. MARKEY,
City Clerk.

Approved and signed by me this 6th day of February 1942.

FRANK NUGAS, *Mayor.*

RESOLUTION NO. 2720 BY THE COUNCIL OF THE CITY OF ALAMEDA, CALIF.

Expressing city of Alameda's opposition to Federal taxation of municipal bonds.

Whereas this council is advised that the Treasury Department of the United States proposes to continue its efforts to impose a Federal tax upon the income from State and municipal bonds; and

Whereas a tax on municipal bonds would substantially increase the cost of municipal financing and would place an unnecessary and onerous burden and impediment on all future municipal borrowing; and

Whereas this city's main source of municipal revenue is derived from taxes on real estate and such increase in the cost of municipal financing would have

to be absorbed by additional burdens on real-estate taxes; Now, therefore, be it

Resolved by the Council of the City of Alameda in regular meeting assembled, That this council hereby expresses its opposition to the imposition, either by statute or by administrative ruling or by judicial decree, of a Federal tax on municipal bonds; and be it further

Resolved, That the city clerk of the city of Alameda is hereby directed to forward a certified copy of this resolution to the Secretary of the Treasury, the Senators from the State of California, the Representative in Congress of this district, to each of the Members of the United States Senate Finance Committee, and to each of the members of the Ways and Means Committee of the United States House of Representatives.

I, the undersigned, hereby certify that the foregoing resolution was duly and regularly introduced and adopted by the Council of the City of Alameda in adjourned regular meeting assembled on the 10th day of February 1942, by the following vote, to wit:

Ayes: Councilmen Brausceld, Howe, Jones, and Vice President Maurer (4).

Noes: None.

Absent: President Godfrey (1).

In witness whereof, I have hereunto set my hand and affixed the official seal of said city this 11th day of February 1942.

LOREME R. BEATIE,
City Clerk of the City of Alameda.

RESOLUTION BY THE CITY COUNCIL OF BROCKTON, MASS.

Whereas the Secretary of the Treasury has proposed taxation of future issues of city and State bonds and also to tax outstanding bonds of cities and States; and

Whereas such a measure would bring an increase of three-fifths to 1 percent on all future municipal borrowings and would have to be absorbed by additional burdens on the already overtaxed real estate of the various cities: Therefore be it

Resolved, That the mayor and City Council of the City of Brockton, Mass., does hereby go on record as opposed to any proposal to tax municipal bonds; and be it ordered

That the city clerk be directed to forward a copy of these resolutions to Senators David I. Walsh and Henry Cabot Lodge and to Congressmen Richard B. Wigglesworth and Arthur D. Healey.

In city council, February 9, 1942.

RESOLUTION BY THE CITY COMMISSION OF THE CITY OF MUSKEGON, MICH.

Whereas it has come to the attention of the City Commission of the City of Muskegon that the Secretary of the Treasury of the United States contemplates proposing a tax on State and municipal bonds; and

Whereas the City Commission of the City of Muskegon believes such tax will be detrimental to the welfare of the various States and municipalities, and various States and municipalities have heretofore protested such tax; Therefore be it

Resolved, That the City Commission of the City of Muskegon, Mich., does hereby protest the taxing of any State or municipal bonds issued or to be issued by any State or municipality;

Resolved further, That a copy of this resolution be sent to Senators Vandenberg and Brown, and Congressman Engel. Also to the executive director of the United Conference of Mayors and the National Municipal League, calling their

attention to such proposed tax and notifying them of the objection to the same.
Dated February 10, 1942.

(Signed) W. W. RICHARDS, *Commissioner.*

Supported by Commissioner Jensen.
Adopted by the following vote, viz: Ayes—Commissioners Albers, Jensen, Lundborg, Richards, and Romans. Nays—None.

STATE OF MICHIGAN,
County of Muskegon, ss:

This is to certify that the above is a true and correct copy of a resolution adopted by the City Commission of the City of Muskegon at its regular meeting held February 10, 1942, relative to a proposed tax on State and municipal bonds.
Dated this 11th day of February 1942.
[SEAL] R. F. COOPER, *City Clerk.*

RESOLUTION BY THE CITY COUNCIL OF CHEYENNE, WYO.

Entitled: "Protesting Federal legislation taxing municipal bonds either outstanding or future issues"

Whereas the United States Conference of Mayors has repeatedly and unanimously expressed its implacable opposition to Treasury attempts to impose a Federal tax on the income from State and municipal bonds; and
Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war effort; and
Whereas despite this grave national emergency and the need for complete unity of purpose and good will between the separate branches of our Government, the Treasury Department persists in its disturbing efforts to impose a Federal tax upon the income from State and municipal bonds and thus needlessly resurrects this highly controversial and irritating domestic issue; and
Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatsoever at this time and yet would substantially increase the cost of municipal borrowing; Now, therefore, it is hereby
Resolved by the United States Conference of Mayors in annual conference assembled:
1. That we hereby reiterate the determined opposition of the United States Conference of Mayors to the continued attempts of the Treasury Department, either by statute, administrative rulings or by judicial decree, to impose a Federal tax on State and municipal bonds; and
2. That we express the sense of the 1942 conference that this most controversial domestic issue should not at this time, and under the false pretense of national defense, be permitted to irritate and disturb that wholehearted cooperation in our American war effort which is the objective and purpose of the cities of America; and
3. That the President of the United States Conference of Mayors be and he hereby is directed to forward a copy of this resolution to the Congress, the President of the United States, and the Secretary of the Treasury.
Presented, read, adopted, and passed this 16th day of February 1942.

Given under my hand and the official seal of said city this 17th day of February, A. D. 1942.
[SEAL] J. K. STODDARD, *City Clerk.*

RESOLUTION BY THE CITY COUNCIL OF BURLINGTON, VT., RELATING TO FEDERAL TAXATION OF MUNICIPAL BONDS AND STATE TAXATION OF FEDERAL SECURITIES

Whereas it is the considered and unalterable conviction of the members of this council that:

1. A Federal tax on the interest from municipal securities would greatly increase the cost of municipal financing; and

2. Such increase would make the price of municipal financing so costly that many of our municipalities today would be unable to issue their securities for new and vital municipal improvements; and

3. Would result in an increase in municipal taxation and thereby impose a double burden upon local taxpayers and customers of municipally owned utilities; and

Whereas it would increase the cost of necessary refinancing of present city obligations; and

Whereas the taxation of the securities of the United States by local authorities would greatly increase the interest rates which the Federal Government would have to pay, thus bringing about a very undesirable condition in times of national emergency; and

Whereas it is, in the opinion of the members of this Council, vitally necessary that our theory of dual sovereignty be maintained especially in times of emergency when local government may be called upon for greatly increased efforts in behalf of national defense, particularly in time of war or invasion; and

Whereas it is necessary that the sovereignty and credit of the local communities be preserved; and

Whereas it is not necessary for either the local or Federal Government to impose taxes upon the securities of the other as adequate funds can be raised by other means of taxation without impairing the credit of either the local or the Federal Government; and

Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war effort; and

Whereas despite this grave national emergency and the need for complete unity of purpose and good will between the separate branches of our government, the Treasury Department persists in its disturbing efforts to impose a Federal tax upon the income from State and municipal bonds and thus needlessly resurrects this highly controversial and irritating domestic issue; and

Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatsoever at this time: Now, therefore, it is hereby

Resolved by the City Council of the City of Burlington, Vt.:

1. That we hereby record the determined opposition of this council to the continued attempts of the Treasury Department, either by statute, administrative rulings or by judicial decree, to impose a Federal tax on State and municipal bonds; and

2. That we express the conviction of this council that this most controversial domestic issue should not at this time, and under the false pretense of national defense, be permitted to irritate and disturb that wholehearted cooperation in our American war effort which is the objective and purpose of the cities of America; and

3. That this council hereby records its determined opposition to any proposal to impose Federal taxes upon the income from State and municipal securities or upon any function of Sate or municipal government, and its like opposition to any proposal by State or municipal governments to impose any local taxes upon the securities of the Federal Government and hereby pledges itself to join in all efforts to prevent the imposition of all such taxes.

4. That the city clerk be, and he is hereby, authorized and directed to forward a copy of this resolution to the President of the United States, the Secretary of the United States Treasury, to each of the United States Senators from Vermont, to the Representative in Congress from Vermont, and to each member of the Ways and Means Committee of the House of Representatives and each member of the Finance Committee of the United States Senate at Washington.

RESOLUTION BY THE CITY COUNCIL OF NIAGARA FALLS, N. Y.

Whereas the City Council of the City of Niagara Falls is opposed to United States Treasury attempts to impose a Federal tax on the income from State and municipal bonds; and

Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war effort; and

Whereas despite this grave national emergency and the need for complete unity of purpose and good will between the separate branches of our Government, the Treasury Department persists in its disturbing efforts to impose a Federal tax upon the income from State and municipal bonds and thus needlessly resurrects this highly controversial and irritating domestic issue; and

Whereas a tax on future issues of State and municipal bonds would raise practically no revenue whatsoever at this time and yet would substantially increase the cost of municipal borrowing: Now, therefore, it is hereby

Resolved: 1. That the City Council of the City of Niagara Falls hereby reiterates its determined opposition to the continued attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree, to impose a Federal tax on State and municipal bonds; and

2. That it is the feeling of this city council that this most controversial domestic issue should not at this time, and under the pretense of national defense, be permitted to irritate and disturb that wholehearted cooperation in our American war effort which is the objective and purpose of the cities of America; and

3. That the city clerk be and he hereby is directed to forward a copy of this resolution to United States Senators James Mead and Robert F. Wagner, and Representative Walter G. Andrews and the Ways and Means Committee of the House of Representatives and the Senate Finance Committee.

Witness my hand and seal this 3d day of February 1942.

[SEAL] GEO. J. RICHERT, *City Clerk.*

RESOLUTION BY THE COUNCIL OF THE CITY OF YORK, PA.

Whereas the Council of the City of York, Pa., has unanimously expressed its opposition to Treasury attempts to impose a Federal tax on the income from State and municipal bonds; and

Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war effort; and

Whereas, despite this grave national emergency and the need for complete unity of purpose and good will between the separate branches of our Government, the Treasury Department persists in its disturbing efforts to impose a Federal tax upon the income from State and municipal bonds and thus needlessly resurrects this highly controversial and irritating domestic issue; and

Whereas a tax on future issues of State and municipal bonds would rise practically no revenues whatsoever at this time and yet would substantially increase the cost of municipal borrowing; Now, therefore, it is hereby

Resolved by the Council of the City of York, Pa.:

1. That we are opposed to the continued attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree, to impose a Federal tax on State and municipal bonds;

2. That the city clerk be and he is hereby directed to forward a copy of this resolution to the United States Senators Joseph A. Guffey and James J. Davis.

Passed finally, February 6, 1942, by the following vote: Yeas, 5; nays, 0.

Attest:

Mayor.

HENRY BUTLER,
City Clerk.

RESOLUTION BY THE COUNCIL OF THE CITY OF NEW ROCHELLE, N. Y.

Resolution opposing proposition to tax income from municipal and State bonds by the Federal Government

Whereas, by Resolution No. 89 of March 17, 1941, this council opposed a plan by the Federal Government to tax the income from municipal and State bonds; and

Whereas information has been received by this city that a similar plan is again under consideration by the Treasury Department and a committee of Congress: Now, therefore, be it

Resolved, That this council of the city of New Rochelle again expresses its opposition to any proposition to tax income of future or present bonds of municipalities as a measure which is not justified from the revenue it will produce and the hardships it will place on municipalities, as well as its inequitable distribution of the tax burden upon real estate which has in recent years been called upon to meet more and more of governmental expense not connected or commensurate with the service it has received therefrom; and be it further

Resolved, That the city clerk is hereby directed to forthwith transmit copies of this resolution to the Representatives of New York State in Congress.

Authenticated and certified this 2d day of February 1942.

STANLEY W. CHURCH,
Mayor.

CHARLES U. COMBES,
City Clerk.

RESOLUTION BY BOARD OF COMMISSIONERS OF TULSA, OKLA.

A resolution requesting the United States Congress to defeat pending legislation seeking to subject municipal bonds to Federal taxation; and declaring an emergency

Whereas legislation has again been introduced in the Congress of the United States seeking to subject municipal bonds to taxation by the United States of America; and

Whereas such proposed action by the Congress will subject all municipalities in the United States who contemplate the issuance of bonds to an added burden of taxation now pressing so heavily upon all owners of real property; and

Whereas such proposed taxation would bring about an increase of three-fifths to 1 percent on all future municipal borrowings, and would be particularly burdensome upon the city of Tulsa in its effort to advance national defense: Now, therefore, be it

Resolved by the Board of Commissioners of the City of Tulsa, Okla., as follows:

SECTION 1. That the Congress of the United States be and it is hereby respectfully requested to defeat that portion of the bill now pending before it which seeks to subject bonds of municipalities to Federal taxation, for the reasons above expressed and for the further reason that such taxation will reduce the income of municipalities from real-estate taxes at a time when such income is desperately needed by all cities.

SEC. 2. That the enactment of such taxation legislation will yield only a very small fraction of the money sought and will effectively hamstring future efforts of municipalities in the effort to finance themselves.

SEC. 3. That a copy of this resolution be forwarded to the Honorables Elmer Thomas and Josh Lee, United States Senators from Oklahoma; and to the Hon. Wesley E. Disney, Representative in Congress from the First District of Oklahoma, requesting that this resolution be brought to the attention of the members of the Ways and Means Committee of the House of Representatives and the Finance Committee of the United States Senate.

SEC. 4. That an emergency exists for the preservation of the public peace, health, safety, and finances of the city of Tulsa by reason whereof this resolution shall take effect from and after its passage and approval.

Passed, and the emergency clause ruled upon separately and unanimously approved this 3d day of February 1942.

Resolved, That by the adoption of this resolution the city council of the city of Rockford joins with the cities of the United States in protesting against Treasury Department proposals to impose a Federal tax on State and municipal bonds;

Resolved, That copies of this resolution be sent to the Illinois Senators, Brooks and Lucas, and Congressman Mason of this district, as well as the chairman of the Senate Finance Committee and the chairman of the House Ways and Means Committee.

FEBRUARY 2, 1942.

RESOLUTION NO. 29 BY THE COUNCIL OF THE CITY OF READING, PA.

Whereas the United States Treasury Department has for some years persistently advocated taxing, for Federal purposes, income received from State and municipal bonds; and

Whereas in a recent public address the Secretary of the Treasury, Hon. Henry Morgenthau, recommended extending the provisions of the Federal income-tax law to all presently outstanding and future issues of State and municipal bonds; and

Whereas it is the considered judgment of this body that such action on the part of the Federal Government would not only impose a hardship upon the States and municipalities but would be detrimental to the Nation as a whole: Now therefore,

The council of the city of Reading hereby resolves as follows:

That the city of Reading, Pa., in cooperation with the United States Conference of Mayors, join with her sister cities of the Nation in opposing such proposed taxation for the following reasons:

(*a*) Federal taxation of municipal bonds would bring about an increase of from three-fifths to 1 percent on all future municipal borrowings which increased cost would have to be borne by the chief source of municipal income, viz, real estate, thereby adversely affecting every holder of such property including the small home owner.

(*b*) Such proposed taxation of municipal bonds breaks down the whole theory of State and municipal sovereignty. If the Congress can tax outstanding and future bond issues by the passage of a statute, it can also tax the revenues of municipal utilities, such as waterworks, etc.

In a recent address the solicitor general of the State of New York said, "The very tax revenues of the States and municipalities themselves are income, and therefore taxable," if the proposed tax on municipal bonds can be sustained.

"The power to tax involves the power to destroy," said Chief Justice John Marshall.

(*c*) There is in the attempt of the Federal Government to impose such taxes the latent possibility of serious danger to the traditional American institution

of State and municipal home rule and the threat of a possible concentrated nationalism.

(*d*) The added cost due to increased interest rates would amount to millions of dollars more than the revenues which would be received. Be it further *Resolved* That copies of this resolution be forwarded to Senators James J. Davis and Joseph F. Guffey, Congressman Guy L. Moser, the members of the Ways and Means Committee of the United States House of Representatives, the Finance Committee of the United States Senate, and Paul V. Betters, executive director of the United States Conference of Mayors.

Passed council February 4, 1942.

HARRY F. MENGES, *Mayor.*

Attest:

DANIEL F. MCKENNA,
City Clerk.

RESOLUTION NO. 7237 BY THE COUNCIL OF THE CITY OF ROANOKE, VA.

A resolution condemning proposed legislation imposing taxes on incomes derived from State and municipal securities, and requesting Senators Carter Glass and Harry F. Byrd and Representatives Clifton A. Woodrum to oppose such proposed legislation

Whereas it appears that in spite of the fact that during the 1940 session of Congress proposed legislation to subject municipal bonds to Federal taxation was overwhelmingly defeated, a move will again be made during this session of Congress to subject to taxation incomes from future issues of State and municipal securities; and

Whereas such a Federal tax would be reflected in higher interest rates upon bonds issued by the States and their municipalities, and this increase in interest rates would result in increasing the tax burden of the citizens of the States and municipalities issuing bonds; and

Whereas such legislation would tend to make the States and their instrumentalities of government completely subordinate to the United States and thereby do violence to the fundamental concepts upon which the Federal Government was founded: Therefore be it

Resolved by the Council of the City of Roanoke, Va., That it is the sense of this body that no legislaton should be enacted by the Congress of the United States taxing incomes derived from future issues of State and municipal securities; be it further

Resolved, That this council's opposition to such legislation be made known to Senators Carter Glass and Harry F. Byrd and to Representative Clifton A. Woodrum; and they are hereby requested to vigorously oppose any bill providing for such taxation; be it further

Resolved, That the city clerk be and he is hereby directed to mail a copy hereof to said Senators and Representative.

A true copy.

A RESOLUTION OF THE CITY COMMISSION OF BEAUMONT, TEX.

Whereas it has been called to the attention of the City Commission of the city of Beaumont that another effort will be made at this session of Congress to impose a tax on municipal bonds, notwithstanding the overwhelming defeat of such a measure by the last Congress; and

Whereas it is the sense and judgment of this body that such legislation will be inimical to the best interests of this city in that such legislation will greatly add to the financial burden of municipal governments throughout the country; and

Whereas the result of such legislation would be to make the interest rate on municipal bonds considerably higher and would also make the sale of such bonds more difficult; and

Whereas the rate of interest the city government would be required to pay on its bonded indebtedness would depend on the amount of taxes imposed by the Federal Government on such securities, and in view of the fact that the Supreme Court of the United States has said "the power to tax involves the power to destroy," it is plain that such legislation would make the city government dependent on the Federal Government; and

Whereas such a situation is not in accord with the principles upon which this Nation was founded—namely, that the Federal Government should be supreme in certain fields while local governments should be supreme and sovereign within their jurisdiction, and to grant to the Federal Government the power to tax the bonds and revenue of the municipal governments destroys the independence of municipal government: Now, therefore, be it

Resolved by the City Commission of the City of Beaumont, That the City Commission of the City of Beaumont go on record as being unalterably opposed to the said proposed legislation and that the sentiment of this body be made known to our Representatives in Congress to the end that we may have their continued cooperation in opposing this measure, and the city clerk be, and he is hereby, directed to mail a certified copy of this resolution to United States Senators Morris Sheppard and Tom Connally and one copy to each Member of the lower House of Congress from the State of Texas.

Passed by the affirmative vote of all members of the city commission January A. D. 1941.

GEO. MORGAN, *Mayor.*

HUGH BLEVINS, *City Clerk.*

RESOLUTION BY THE CITY COMMISSION OF GRAND RAPIDS, MICH.

Your committee on finance recommends the adoption of the following resolution:

Whereas the Treasury Department of the United States is attempting to have a Federal tax imposed upon the income from State and municipal bonds; and

Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatsoever at this time and yet would substantially increase the cost of municipal borrowing when the municipality can least stand an increased cost in municipal borrowing, as all funds are needed for national-defense work; and

Whereas in the time of this grave national crisis the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war effort and no disturbing elements should be introduced therein: Now, therefore, be it

Resolved, That the City Commission of the City of Grand Rapids does hereby reiterate its determined opposition to the attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree, to impose Federal tax on State and municipal bonds, and that copies of this resolution be forwarded by the city clerk to our Representative in Congress and in the Senate of the United States.

Adopted.

Yeas: Commissioners Borgman, Greene, Kozak, Leonard, Quinlan, Wagemaker, the mayor—7. Nays: None.

I hereby certify that the foregoing is a true transcript of the action of the City Commission of the City of Grand Rapids, Mich., in public session held February 2, 1942.

JACOB VAN WINGEN, *City Clerk.*

Copies mailed to Senators Brown and Vandenberg and Congressman Jonkman.

RESOLUTION BY THE COUNCIL OF THE CITY OF CHESTER, PA.

Whereas the Treasury Department of the United States persists in its efforts to impose a Federal tax upon the income of municipal bonds; and

Whereas a tax on municipal bonds would greatly increase the costs of all future municipal borrowing; and

Whereas an increase in the cost of municipal borrowing will greatly burden the already heavily taxed owner of real estate in the city: Therefore the council of the city of Chester does

Resolve, That the council of the city of Chester does hereby reiterate its determined opposition to the continued attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree, to impose a Federal tax on State and municipal bonds; and

That the mayor of the city of Chester be and he is hereby directed to forward a copy of this resolution to the United States Senators representing Pennsylvania and the Member of the House from the Ninth Congressional District, and to the members of the House Ways and Means Committee and the Senate Finance Committee.

We hereby certify that this resolution passed council this 5th day of February A. D. 1942.

[SEAL] C. H. PEOPLES, *Mayor.*

[SEAL] BENJAMIN NEWSOME, *City Clerk.*

RESOLUTION BY THE CITY COUNCIL OF THE CITY OF PEORIA, ILL.

Whereas in spite of the fact that in September, 1940, the United States Senate overwhelmingly defeated legislation subjecting municipal bonds to Fed-

eral taxation, efforts are being made in Congress to enact legislation to impose Federal taxation on municipal bonds; and

Whereas Federal taxation of municipal bonds would bring about an increase of three-fifths to 1 percent on all future municipal borrowings that would have to be absorbed by additional burdens on city real estate taxes: Therefore it is hereby

Resolved, That the city council of Peoria oppose legislation subjecting municipal bonds to Federal taxation.

I do hereby certify that the above is a true and correct copy of a resolution passed by the city council of the city of Peoria on February 3, 1942. Dated at Peoria, Ill., this 4th day of February 1942.

J. EDWARD RADLEY, *Corporation Counsel.*

RESOLUTION BY THE CITY COUNCIL OF GREEN BAY, WIS.

By the Mayor and Council of the City of Green Bay:

Resolved, That whereas the United States Conference of Mayors did at their 1942 conference pass a resolution reiterating their determined opposition to the continued attempts of the Treasury Department of the United States to impose a Federal tax on State and municipal bonds, and

Whereas in this time of grave national crisis the fullest cooperation should exist between the Federal and municipal governments in order to successfully prosecute all of our war efforts, and

Whereas it is imperative that additional burdensome taxes be imposed upon all of the citizens of the United States to successfully maintain all of our war efforts, and

Whereas these taxes have already been imposed and we are notified that further additional personal taxes will be imposed, and

Whereas despite the need for complete unity of purpose and good will between the Treasury Department and the service branches of our municipal government, the said Treasury Department persists in its efforts to impose a Federal tax upon the income from State and municipal bonds and thus does needlessly resurrect this higher controversial issue, and

Whereas under the present existing laws, the city of Green Bay and other municipal corporations have been able to dispose of their bonds at an exceedingly low rate of interest and a consequent great saving to its taxpayers, and any change in the present existing laws relative to this kind of bonds would increase the interest rate and subject the taxpayers of our city to an increased tax rate which is unfair and unjust to the taxpayers as individuals and the city of Green Bay as a municipal corporation: Now, therefore, it is hereby

Resolved by the mayor and Council of the City of Green Bay, That said council is definitely opposed to the continued attempts of the Treasury Department,

1. Either by statute, administrative rulings, or by judicial decree, to impose a Federal tax on State and municipal bonds.

2. That this question should not at this time and under any guise be permitted to irritate and disturb that wholehearted cooperation in our American war effort which is the object and purpose of the cities of America and which would result in a loss of faith by former reliable purchasers of these bonds and disrupt and disorganize the bond market. And be it further

3. *Resolved*, That the council does exhort its honorable Senators, to wit: Hon. Robert M. La Follette, Jr.; Hon. Alexander Wiley; and also their congressional representative, the Honorable Joshua L. Johns, to use every honorable means to prevent any department of our Federal Government from in any way interfering with or disturbing the present laws relative to municipal bonds, or any move that will in any way disturb the spirit of cooperation now existing between the municipalities, the citizens, and the various departments of our Federal Government. And be it further

Resolved, That the city council be instructed to send a copy of this resolution to Senators La Follette, Wiley, and Congressman Johns.

LEO G. SCHULTZ, *Chairman of Finance Committee.*

FEBRUARY 3, 1942.

RESOLUTION BY THE COUNCIL OF THE CITY OF ST. PAUL, MINN.

Whereas from time to time there have been proposals before the Congress of the United States wherein it is sought to have Federal income taxes levied on the interest derived from municipal bonds; and

Whereas in the opinion of the Council of the City of St. Paul the adoption of such legislation would be improper, unwise and unfair and would cause an additional burden on the finances of said city; and

Whereas such tax on issues of State and municipal bonds would raise practically no revenue whatsoever at this time and yet would substantially increase the cost of municipal borrowing: Therefore be it

Resolved by the Council of the City of St. Paul, That it hereby expresses its determined opposition to the adoption of any such legislation, and urges the Senators and Representatives in Congress from the State of Minnesota to oppose the adoption of any such legislation of that nature; be it further

Resolved, That copies of this resolution be forwarded to the Senators and Representatives from Minnesota in the Congress of the United States, and also to the Senators composing the Senate Finance Committee and to the members of the House Ways and Means Committee of Congress.

Adopted unanimously by the council February 5, 1942.

Approved February 5, 1942.

JOHN J. MCDONOUGH, *Mayor.*

RESOLUTION NO. 4808 BY THE CITY COUNCIL OF EVERETT, WASH.

Whereas the United States Conference of Mayors and the City Council of Everett, Wash. have repeatedly and unanimously expressed its implacable opposition to Treasury attempts to impose a Federal tax on the income from municipal bonds; and

Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war effort; and

Whereas despite this grave national emergency and the need for complete unity of purpose and good will between the separate branches of our Governmen , the Treasury Department persists in its disturbing efforts to impose a Federal tax upon the income from municipal bonds and thus needlessly resurrects this highly controversial and irritating domestic issue; and

Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatsoever at this time and yet would substantially increase the cost of municipal borrowing: Now, therefore, it is hereby

Resolved by the City Council of the City of Everett, Wash.:

1. That we hereby reiterate the determined opposition of the United States Conference of Mayors to the continued attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree, to impose a Federal tax on municipal bonds; and

2. That we express the sense of the 1942 conference that this most controversial domestic issue should not at this time, and under the false pretense of national defense, be permitted to irritate and disturb that wholehearted cooperation in our American war effort which is the objective and purpose of the cities of America.

S. F. SPENCER,
Councilman Introducing Resolution.

Passed the city council the 2d day of February 1942.

Approved this 2d day of February 1942.

S. F. SPENCER, *Mayor.*

RESOLUTION ADOPTED BY THE COMMON COUNCIL OF THE CITY OF BRIDGEPORT, CONN.

Whereas the United States Conference of Mayors has repeatedly and unanimously expressed its implacable opposition to Treasury attempts to impose a Federal tax on the income from State and municipal bonds; and

Whereas in this time of grave national crisis the fullest cooperation between the Federal and municipal governments of the United States is essential to the successful prosecution of our war effort; and

Whereas despite this grave national emergency and the need for complete unity of purpose and good will between the separate branches of our government, the Treasury Department persists in its disturbing efforts to impose a Federal tax upon the income from State and municipal bonds and thus needlessly resurrects this highly controversial domestic issue; and

Whereas a tax on future issues of State and municipal bonds would raise only the most negligible revenues at this time and yet would substantially increase the cost of municipal borrowing, which increased costs would have to be absorbed by additional burdens on taxpayers already overburdened with added State and National taxes and increased costs of living due to the war emergency: Now, therefore, it is hereby

Resolved by the Common Council of the City of Bridgeport, Conn.:

1. That it hereby expresses the determined opposition of the Common Council of the City of Bridgeport, Conn., to the continued attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree, to impose a Federal tax on State and municipal bonds; and

2. That it expresses the sense of the said common council that this most controversial domestic issue should not at this time and under the pretense of national defense, be permitted to irritate and disturb that wholehearted cooperation in our American war effort which is the objective and purpose of Bridgeport in common with all the cities of America; and

3. That any such Federal tax on State and municipal bonds, by increasing the cost of borrowing, would throw additional financial burdens on the citizens of Bridgeport, who are already making very substantial sacrifices, both directly and indirectly, by way of added State and Federal taxes and through the mounting cost of living; and

4. That the city clerk be, and he hereby is, directed to forward a copy of this resolution to the Secretary of the Treasury, to the Senators and Congressmen from Connecticut, and to the members of the Ways and Means Committee of the United States House of Representatives and the members of the Finance Committee of the United States Senate.

Dated at Bridgeport, Conn., this 2d day of February 1942.

RESOLUTION BY THE COUNCIL OF THE CITY OF HAMTRAMCK, MICH.

Whereas in September 1940 the United States Senate overwhelmingly defeated legislation subjecting municipal bonds to Federal taxation; and

Whereas the city of Hamtramck is opposed to the Treasury attempts to impose a Federal tax on the income from State and municipal bonds; and

Whereas a tax on future issues of State and municipal bonds would raise practically no revenues whatsoever at this time and yet would substantially increase the cost of municipal borrowing: Now, therefore, be it

Resolved, That this Council of the City of Hamtramck does hereby go on record as being opposed to any legislation subjecting municipal bonds to Federal taxation; be it further

Resolved, That copies of this resolution be forwarded to the United States Conference of Mayors, Congress, the President of the United States, and the Secretary of the Treasury.

Supported by Councilman Banish.

Carried by the following vote: Yeas, Councilman Tenerowicz, Zajac, Banish, and Leach; nays, none; absent, Councilman Sawicki.

I hereby certify that the above and foregoing is a full, true, and complete copy of a resolution adopted by the Common Council of the City of Hamtramck at a regular meeting of said council held in the council chamber at 8521 Joseph Campau Avenue, upon Tuesday, the 3d day of February 1942, at 8 o'clock p. m.

ALBERT J. ZAK, *City Clerk.*

CITY OF MINNEAPOLIS, MINN.,
March 4, 1942.

THE UNITED STATES CONFERENCE OF MAYORS,
Washington, D. C.

GENTLEMEN: Attached you will find copy of action of the City Council of the City of Minneapolis, Minn., at a meeting held February 27, 1942, notifying

your association that the city council on March 31, 1939, memorialized Congress to defeat any legislation designed to tax public securities either by levying a tax on the income thereof, or otherwise, and reaffirming the position taken on said date.

Very truly yours,

CHAS. G. SWANSON, *City Clerk.*

Ways and Means.—Your committee recommends:

That the city clerk be directed to communicate to the League of Minnesota Municipalities, the United States Conference of Mayors, and the Conference on State Defense, the information that the city council on March 31, 1939, memorialized Congress to defeat any legislation designed to tax public securities either by levying a tax on the income thereof or otherwise, and reaffirms the position taken on said date.

Henry H. Bank, C. L. Swanson, Stanley Anderson, N. C. Irgens, Walter J. Murphy, committee.

Adopted: Yeas, 24; nays, 2, as follows:

Yeas: Aldermen Blosky, Kauth, Van Cleve, Meagher, Bank, Riley, Fruen, Christensen, Murphy, Bastis, Hendricks, Stratton, Hoppe, Carle, Pratt, Swanson, Anderson, Lund, Nelson, Irgens, Hudson, Robb, Burgum, President Wallace—24.

Nays: Aldermen Höyer, Finseth—2.

OAKLAND, CALIF., *February 11, 1942.*

Senator HIRAM W. JOHNSON,
Capitol Building, Washington, D. C.

MY DEAR SENATOR: The city of Oakland joins the United States Conference of Mayors and the Conference on State Defense in unalterable opposition to the attempts by the Treasury Department to impose a Federal tax on the income from State and and municipal bonds.

It is apparent from studies made by these two organizations, as well as the League of California Cities, that the imposition of such a tax would yield little or nothing to the Federal Government, but instead would impose a rather heavy burden upon the municipalities and other political subdivisions of the several States, would result in increased municipal taxation, and would impose a double burden upon local taxpayers.

We are firmly convinced that the imposition of such a tax will be but a stepping stone to, and will inevitably result in, taxation levied upon municipal revenues from such sources as municipally owned ports, water and light plants, etc., and will result in a break-down of the whole constitutional theory of State and municipal sovereignty upon which the federation of the United States of America has existed since the Federal Constitution was adopted.

We, therefore, respectfully urge that you use your good offices to prevent such an unwarranted encroachment upon the rights of the several States and their political subdivisions.

Very truly yours,

J. F. SLAVICH,
Mayor.
J. F. HASSLER,
City Manager.

MADISON, WIS., *March 16, 1942.*

Senator ROBERT M. LA FOLLETTE,
United States Senate, Washington, D. C.

DEAR BOB: I noticed that the proposal to tax State and local bonds will again be before the Congress. I have your letter of February 18 in which you state you have constantly favored the removal of all exemptions on income from Government bonds.

I agreed wholeheartedly that everybody, whether they were in any branch of the Government service or in private industry, should pay income taxes to the Government, but I am very much opposed to the taxation on interest derived from local bonds because I see in this tax an increase in the cost of local government.

I am a great believer in home ownership. This is inherent in my family. When my grandfather came to Madison 85 years ago, one of the first things he

did was to buy a little home in the 800 block of West Dayton Street. That property is still owned by my aunt. My father was a home owner from the time I was 5 years old. All my brothers, although they are working people with low incomes, own their little homes. Four of them are building mechanics and I am very proud of the fact that through the depths of the present depression, with construction work at its lowest ebb, at no time did they have to appeal for relief of any kind. The fact that they owned their little homes was a great help to them in maintaining such a record. I am confident that a survey would show this to be true on a Nation-wide basis. I feel home ownership and farm ownership makes a better, more loyal citizen.

The Federal Government recognizes that it is difficult for people to own their own homes by the fact that they sponsor United States Housing Authority projects. Here again the low cost is secured principally by the waving of taxes on these properties and spreading the cost of this over a period of time for those who, like my brothers, are making the effort to carry their own little homes.

I have been here almost 10 years now and I constantly see the higher levels of government gradually loading more and more upon the home owner. Feeling as I do, you can readily see how I am disappointed in this procedure. I have discussed this with your brother Phil many times. People who have studied the problem admit it is true. At a meeting in the White House in 1935 where I was present, the President admitted it was true and yet no one seems to take the trouble to do anything about it.

I simply want you to know that my letters to you on the matter of taxation are simply my effort to stop any further encroachment and I am very sorry we cannot see eye to eye on it. However, some day I am hoping that the time will come when a constructive method will be found where the low-income groups of this country will be able to own their homes without having to bear such an enormous portion of governmental expenses. There are more modern methods nowadays of taxation than the present old-fashioned ad valorem tax where everything seems to be dumped under the hit-and-miss taxation system.

As always.

Very truly yours,

JAMES R. LAW, *Mayor.*

SPRINGFIELD, MASS., *February 6, 1942.*

DEAR SENATOR WALSH: Forty years of constant contact with, and study of, municipal finances shou'd permit me to speak with some degree of authority on the subject of taxing municipal bonds.

That my knowledge of municipal borrowing is based on sound precepts may be gaged by the fact that last year I borrowed $2,000,000 at an interest rate of four one-hundredths of 1 percent. I believe this is the lowest rate obtained by any city in the United States on a comparable loan, costing just over $1 a day for a million-dollar loan.

It is with amazement that I read the statements of Secretary of the Treasury Morgenthau in a recent Cleveland speech. His proposal to tax outstanding city and State bonds leads one to ask if he has forgotten that our present national business foundation is based largely on honor and integrity. Are we to place the honor of the United States on the same scale with Germany where Hitler has made a scrap of paper of all honorable dealings? What the Secretary proposes is that we do the same thing already done by Hitler's thugs—scrap all business ethics. It makes one wonder just what we are fighting for.

I mentioned borrowing $2,000,000 at four one-hundredths of 1 percent. What would the Federal Government get by taxing such a transaction? The tax collected would not pay for the cost of collection and the funds raised would simply melt away in waste. It would, however, raise the cost to the taxpayers of the city, many hundred per cent. This case is extreme but still a real case and it would follow in lesser degree in all other municipal borrowings.

The impression given by statements that the owners of tax-exempt bonds pay no tax is absolutely false even if the statement itself is based on fact. In effect, the purchaser of municipal bonds by accepting a minimum rate of interest pays a tax at the time of purchase.

Good industrial short-term bonds now yield 2 percent and pay a tax. Comparable tax-exempt municipal bonds yield three-fourths of 1 percent. Not having to raise that 1¼ percent is just as good to the municipal government as if it paid 2 percent and raised $1.25 by taxes. There is little sense in a city paying $1.25 extra so the Federal Government can levy a tax of from 50 cents to $1

dependent on the total income of the taxpayer. We can also consider the cost of collection and leaks, always present in any taxation.

You will do well to remember that any and all taxation comes from the total public income and when taken by any one authority reduces the ability of the public to pay another agency. Any part of a tax that is wasted increases the total tax to be collected and so decreases the purchasing power of the public.

You do not need to be an expert to clearly see that this is so. Just pick up your daily paper and check the return of 6 to 10 percent on seasoned investments like American Telephone, American Can, etc. See the bonds that pay 2 to 3½ percent—sound, conservative investments. Then look at the good grade of State and municipal bonds returning ½, 1, and 1½ percent. You do not need any expert to tell you that when these municipal bonds were sold there was a tremendous saving to the taxpayers who have to raise that interest as it is paid. You do not need to be told there are no salaries of collectors, investigators, clerks, and officials and that there are no loopholes that can prevent the whole saving. You do not need to be told that when you place a tax on municipal bonds they will lose much of their appeal to the investor and he will buy only when their interest rate is high enough to pay the Federal taxes and leave a balance for him.

There is no mystery here. It is only a case of one branch of the government collecting at the expense of another branch of the government with much of the money wasted in costs by the transaction.

There are, however, other consequences of even a graver nature. It is quite certain that many of those agitating for a tax on municipal bonds know these facts to be true and continue only to form a precedent whereby the Federal Government may open an entirely new line of revenue.

Once established, this need for Federal taxes will grow and the burden coming down through the State as well as the city will come to rest on real estate that is already taxed close to the breaking point.

My reason for writing at some length is that I feel the present effort to tax municipal bonds is the most detrimental change cities have been faced with for many years and it could do irreparable harm at the very foundation of our democracy.

I hope you, too, will feel this proposal is of sufficient importance for you to exert your full influence as well as vote against the measure. A growing and vigorous opposition could put an effective stop to the continuance year after year of this short-sighted, unsound proposal which is now extremely harmful to, and, if passed, would be disastrous to, all municipal finance.

Yours very truly,

G. W. RICE, *City Treasurer.*

SPRINGFIELD, MASS., *February 5, 1942.*

HON. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: It is my understanding that there is a strong movement to have Congress enact legislation subjecting outstanding and future municipal bond issues to Federal taxation. Inasmuch as the success of this movement constitutes a serious threat to the financial structure of local government, I desire to register a most vigorous protest against the enactment of the proposed legislation.

This proposal of the Treasury Department is not a new one, so undoubtedly you are familiar with the arguments for and against the proposal, and consequently I will not enumerate the arguments against such legislation except to state that in my opinion Federal taxation of municipal bonds will bring about seems to me that the added burden on real estate is alone a very pertinent borrowings. This increase in municipal costs would have to be absorbed by additional burdens on real estate which is the main source of municipal revenue.

There are other arguments against the suggested legislation. However, it seems to me that the added burden on real estate is alone a very important reason for opposing such legislation. I am sure you will consider the proposed legislation most carefully.

I trust that the arguments against the proposal will carry sufficient weight to cause you to oppose most vigorously the Treasury Department's effort to tax municipal bonds.

Very truly yours,

A. E. NEALE, *City Auditor.*

FITCHBURG, MASS., *February 5, 1942.*

UNITED STATES CONFERENCE OF MAYORS,
Washington, D. C.

GENTLEMEN: At a regular meeting of the city council of the city of Fitchburg, held on Tuesday, February 3, the city council of the city of Fitchburg unanimously voted that you and their Congressmen from this district be notified that they are opposed to any Federal taxation of municipal bonds, and that they will appreciate any effort on your part to oppose such Federal taxation.

EVERETT H. DUDLEY,
City Solicitor.

[Telegram]

DURHAM, N. C., *February 5, 1942.*

Hon. ROBERT L. DOUGHTON,
Chairman, House Ways and Means Committee,
Washington, D. C.:

Please strenuously oppose destructive proposal to tax State and municipal bond interest on bonds now outstanding or future issues. Treasury hiding behind defense program. Overestimating revenue from this source. Dealing morale a severe blow. Wrecking municipal financing without corresponding benefit to Federal Government. Placing burden on local governments beyond their ability to carry. Piling additional tax on overburdened real estate.

D. H. UMSTEAD,
City Auditor, Durham, N. C.

PORTLAND, MAINE, *February 12, 1942.*

Two years ago our city council unanimously adopted a resolution condemning an attempt to grant power to the Federal Government to tax the income from municipal bonds. Since the recent speech of Secretary Morgenthau advocating the Federal taxing of municipal bonds, the city council has directed me to reaffirm the opposition expressed in the resolution.

Such a power in the Federal Government does not exist under the Constitution and it would extend its control into the finances of municipalities and thereby threaten their autonomous existence. To tax outstanding municipal bond issues is dishonest. A tax on future issues is not a tax on the bond purchaser, but rather forces the municipality to pay a higher interest rate and that, in the analysis, is an additional tax on local real estate. Such an additional tax on real estate is unwarranted, as such taxes are already almost confiscatory.

If future and refunding issues only are taxed, it would take 30 years or more before they would all theoretically become taxable. The cold fact even now, however, is that Nation-wide about 85 percent of these bonds are held by trust funds, sinking funds, insurance companies, etc., where they are not subject to individual income taxes. How unreasonable it would be, therefore, to make cities pay increased interest rates on 100 percent of their future issues in order to allow the Federal Government to obtain a limited revenue on 15 percent of the total outstanding.

If municipals were taxed, the situation outlined above would be even more unfavorable to the Federal Government, as the portion held by private individuals would be sharply reduced below the 15 percent and hence the contemplated Federal revenue would become even more inconsequential. It seems to us an unwise procedure to impose upon millions of home owners an additional real-estate tax in order to drive a few rich people out of investment in municipals.

The foregoing makes one strongly suspect that the proposed tax is really a shrewdly timed move to take advantage of the war psychology to gain central financial control over all the States and cities of the country.

For the Secretary of the Treasury to urge such a dishonest policy of taxing outstanding municipal bonds is in my judgment unpatriotic, although perhaps thoughtlessly so. He is faced with the absolute necessity of selling huge amounts of Government bonds to finance the war. I knew of no action he could take that would more definitely hurt the sale of such bonds. They are nothing but a moral obligation, and if he can force the repudiation of a moral Government obligation in one case, he can do so in another. Under such circumstances, who could feel

safe in buying or urging others to buy Federal bonds? To restore confidence, the only safe policy for Congress is to unanimously vote his recommendation down and thus establish the sanctity of governmental obligations.

For the expected post-war depression, the Federal Government is already laying the foundation for the issuance of bonds by the cities for public improvements to provide employment. The proposed taxation will discourage this, and it thus furnishes a typical example of different branches of the Federal Government working at cross purposes.

We do not wish to burden you with constitutional and other prolonged and familiar arguments. Hence we merely respectfully urge that you, as a member of the Maine delegation, oppose such legislation.

Very truly yours,

JAMES E. BARLOW, *City Manager.*

KOKOMO, IND., *February 2, 1942.*

I have been informed that there has been considerable agitation on the part of Secretary Morgenthau and certain other parties to place a tax on municipal bonds, both of past and future issues. May I ask your consideration of the following points before you decide either to support or reject this proposal?

1. Federal taxation of municipal bonds would bring about an increase of three-fifths of 1 percent to 1 percent on all future municipal borrowings. This increase in municipal costs would have to be absorbed by additional burdens on city real-estate taxes, the main source of municipal revenues. One city estimates that taxing municipal bonds would cost the city $2,000,000 annually. Another states that the taxing of municipal bonds would prevent any effective refunding of its debt.

2. Even though the States may be given the privilege of taking Federal bonds, there is no compensating revenue for cities. The cities do not impose income taxes and very little of the State revenue is shared with the cities in the States where there are income taxes.

3. Taxation of municipal and State bonds breaks down the whole constitutional theory of State and municipal sovereignty. If the Federal Government can tax future bonds by passage of a "simple statute," it can tax outstanding bonds. It can also tax municipal revenues and certainly the revenues of municipal utilities such as water plants, etc. The Supreme Court has said, "The power to tax involves the power to destroy."

4. The added costs due to increased interest rates would amount to millions of dollars more than the revenues which would be received.

I cannot conceive of a condition arising in our country in which the Federal Government would add so materially to the burdens of our local government by compelling said municipalities to levy a tax to pay a tax on borrowed money. In fact, in some cities in our State, this would place the bonded indebtedness above the legal limits.

There would certainly be some very treacherous results of such legislation. Municipal bonds would be sold with more difficulty and a higher interest rate would have to be paid on said bonds.

Please give these points your very serious consideration.

Very truly yours,

H. G. FREELAND, *Mayor.*

WORCESTER, MASS., *February 2, 1942.*

With efforts apparently about to be made in the present session of Congress to enact legislation subjecting municipal bonds to Federal taxation, I wish to convey to you my belief that such legislation would be unwise.

Among the many unwholesome phases of the problem it is clear that the added costs resulting from increased interest rates would amount to millions of dollars more than the revenues which would be received.

I hope you assist in preventing any such damaging legislation.

Sincerely yours,

WILLIAM A. BENNETT, *Mayor.*

OSHKOSH, WIS., *February 2, 1942.*

Hon. FRANK B. KEEFE,
Member of Congress, Sixth District,
Washington, D. C.

HONORABLE SIR: As mayor of the city of Oshkosh I protest against any measure introduced into Congress that would be in any way increase the tax burdens of the home owner such as would be in fact true if a tax is to be imposed upon municipal bonds by certain Treasury officials.

I, therefore, take my stand with other mayors and hereby reiterate the determined opposition of the United States Conference of Mayors to the continued attempts of the Treasury Department, either by statute, administrative rulings, or by judicial decree to impose a Federal tax on State and municipal bonds.

Respectfully submitted.

GEORGE F. OAKS, *Mayor.*

POUGHKEEPSIE, N. Y., *January 30, 1942.*

Senator ROBERT F. WAGNER,
Washington, D. C.

MY DEAR SENATOR WAGNER: Secretary of the Treasury Morgenthau, in a speech at Cleveland, again brought forth the plan to propose taxing the income on municipal bonds and I believe that he went even further and advocated the taxing of the income on outstanding bonds as well as future issues.

I, as well as other municipal officials, have been of the opinion that this fight had been lost in the Senate last year but "hope springs eternal." This apparently innocuous legislation is a direct frontal attack upon the rights and sovereignties of municipalities. I feel that the issue goes far deeper than the mere dollars and cents considerations, and it is a direct encroachment by the Federal Government upon the democratic process which is to allot to the various divisions of government their own particular spheres.

It seems to me that the taxing of outstanding bonds is a direct violation of contract and its advocacy is a complete overriding of the Secretary's previous expressions on the matter.

To tax the future issues of municipal bonds is to put a terrific burden upon the small municipalities. It means undoubtedly a raise in the interest rate and you must consider that a raise in the interest rate is not something which is transitory but is something which remains frozen for the life of the issue, 20 or 30 years.

The cities are urged by the Public Works Resources Board to create a pool which might be drawn on at the cessation of the present emergency. I presume that at that time it will be necessary for the communities to raise the necessary funds by bond issues and it will be raising the funds under the proposed set-up at a premium.

I think I have stated my case as far as it applies to the city of Poughkeepsie, as well as I can possibly do, and I urge upon you the complete and unceasing opposition to this encroachment upon our democratic ideals and upon the domain of the small communities by the Federal Government.

Sincerely yours,

WILLIAM H. SCHRAUTH,
Mayor.

WILMINGTON, DEL., *February 2, 1942.*

House Ways and Means Committee,
Washington, D. C.

DEAR MR. COOPER: We understand that efforts will be made at the present session of Congress to enact legislation subjecting municipal bonds to vital taxation.

Inasmuch as this would bring about an increase on all future municipal borrowings, and undoubtedly seriously affect municipal revenues, the city of Wilmington is opposed to such legislation.

Your favorable consideration to our position in this respect will be greatly appreciated.

Very truly yours,

ALBERT W. JAMES, *Mayor.*

DULUTH, MINN., *February 5, 1942.*

Hon. JOSEPH H. BALL,
Senate Building, Washington, D. C.

DEAR SENATOR: We, the undersigned mayor and commissioners, respectively, of the city of Duluth, Minn., respectfully beg leave to advise you that we have always been, and still are, unalterably opposed to any legislation, whether now pending or hereafter to be proposed, having for its object conferring of authority upon the United States of America to impose a tax upon the bonds of the State of Minnesota or of the city of Duluth issued in the past, or to be issued at any future date.

We expreses our opposition to any Federal legislation which will make it possible for the Federal Government to tax securities of the State of Minnesota or of the city of Duluth for the reason, among others, that such a tax cannot materially help finance the present or future program of national defense and can only result in imposing upon the State and the city of an additional burden upon already overburdened real estate within our State and city.

For the reasons above stated, and for many other reasons heretofore urged by the city council of the city of Duluth in formal resolutions adopted for such purpose, we feel that we are justified in requesting your assistance and cooperation in exerting your endeavors to defeat any form of Federal legislation which will impose a tax upon municipal securities, thereby making it difficult, if not impossible, for the city either to refund outstanding bonds or to issue new bonds when and if post-war reconstruction programs may impose the necessity upon the city to issue bonds.

Respectfully and sincerely yours,

For the city of Duluth:

E. H. HATCH,
Mayor.
E. A. BODIN,
Commissioner of Public Utilities.
F. C. DAUGHERTY,
Commissioner of Public Works.
E. W. LUND,
Commissioner of Finance.
R. F. PETERSON,
Commissioner of Public Safety.

[Telegram]

FRESNO, CALIF., *February 5, 1942.*

Hon. SHERIDAN DOWNEY,
United States Senator, Washington, D. C.

I am authorized by resolution of the commission of the city of Fresno, Calif., by the unanimous vote of its members, to urge you to unequivocally oppose legislation subjecting municipal bonds to federal taxation and particularly to oppose any taxation of outstanding city bonds. Any such taxation of outstanding city bonds would undoubtedly subject cities to suits by bondholders to recover all such taxes. You are also urged to give favorable consideration to S. 2208, second war powers act, and urge its passage as soon as possible.

Z. S. LEYMEL,
Mayor of Fresno, Calif.

WICHITA, KANS., *February 18, 1942.*

Hon. ROBERT L. DOUGHTON,
Chairman, Senate Finance Committee,
White House, Washington, D. C.

DEAR SENATOR DOUGHTON: I enclose herewith certified copy of a resolution protesting the taxing of municipal securities, which was adopted by the Board of Commissioners of the city of Wichita, Kans., on February 16, 1942.

Certified copies of this resolution are also being sent to Senators Arthur Capper and Clyde M. Reed, of Kansas; Hon. John M. Houston, of Kansas Congressional District No. 5; and to Hon. Pat Harrison, chairman of the House Ways and Means Committee.

Yours very truly,

C. C. ELLIS, *City Clerk.*

CAMDEN, N. J., *February 16, 1942.*

HON. WILLIAM H. SMATHERS,
Senate Office Building, Washington, D. C.

DEAR SENATOR: In spite of the fact that in September of 1940 the United States Senate overwhelmingly defeated legislation subjecting municipal bonds to Federal taxation, it is clear that efforts will be made in the present session of Congress to enact legislation on this subject. In view of the importance of this matter to all cities, I am again calling to your attention that the United States Conference of Mayors, assembled in session in Washington on January 12, 13, and 14, unanimously opposed Federal taxation on municipal bonds.

The whole question simmers down to the following:

1. Federal taxation of municipal bonds would bring about an increase of three-fifths to 1 percent on all future municipal borrowings. This increase in municipal costs would have to be absorbed by additional burdens on city real estate taxes—the main source of municipal revenues. The taxing of municipal bonds would prevent any effective refunding of its debt.

2. Even though the States may be given the privilege of taxing Federal bonds, there is no compensating revenue for the cities. For the cities do not impose income taxes, and, in the States where there are income taxes in effect, very little of the State revenues are shared with the cities.

3. Taxation of municipal and State bonds breaks down the whole constitutional theory of State and municipal sovereignty. If the Federal Government can tax future bonds by passage of a "simple statute," it can tax outstanding bonds. It can also tax municipal revenues, and certainly the revenue of municipal utilities such as water plants, et cetera. The Supreme Court has said: "The power to tax involves the power to destroy."

4. The added costs due to increased rates would amount to millions of dollars more than the revenue which would be received.

Therefore, I again appeal to you to use your influence in behalf of our local community, of which you are a part, by urging strongly on this matter and opposing any such legislation.

Thanking you for your cooperation, I remain,

Very truly yours,

GEORGE E. BRUNNER, *Mayor.*

CITY OF SCRANTON, PA., *February 13, 1942.*

United States Senators JOSEPH GUFFEY and JAMES DAVIS,
and Congressman PATRICK BOLAND,
Washington, D. C.

GENTLEMEN: At a meeting of council held on the above date, a motion by Mr. Druck, seconded by Mr. Rodham, was duly adopted:

That United States Senators Guffey and Davis, members of the Senate Finance Committee, and Congressman Boland, member of the House Ways and Means Committee, be notified that the Council of the City of Scranton strongly opposes any form of legislation that would subject municipal bonds to Federal taxation.

Yours very truly,

SAMUEL H. BEVAN, *City Clerk.*

CITY OF LOS ANGELES, CALIF., *February 10, 1492.*

HON. HIRAM W. JOHNSON,
The United States Senate, Washington, D. C.

MY DEAR SENATOR: This letter is being written in protest to a proposal of the Treasury Department for the enactment of legislation by the Congress to subject new issues of municipal bonds to Federal taxation, which would materially increase the coupon rate of interest on such bonds, and, in all probability, a proposal by the Treasury Department to impose a tax on outstanding city and State bonds, thereby decreasing the marketability of this class of bonds.

It has no doubt been called to your attention on numerous occasions the disastrous effect such legislation would have on municipal financing, with little or no additional revenue accruing to the Federal Treasury. While it is conceded and concurred in that every method must be utilized for the increasing of Federal revenues at this time, it must be borne in mind that municipalities, which have a very limited taxing field, are, in the final analysis, the backbone of our governmental structure and have certain fundamental functions to perform, with an

added burden necessitated by civilian defense. Municipal revenues are derived principally from taxes on real property. These same taxpayers are also the ones who are meeting, for the most part, the taxation for Federal purposes, and to place upon them an additional burden would be eminently unfair.

I sincerely trust that you will vote against such a destructive proposal.

Very truly yours,

L. V. McCARDLE, *Treasurer.*

NEWARK, N. J., *February 3, 1942.*

HON. WALTER F. GEORGE,
Chairman, Senate Finance Committee, Washington, D. C.

MY DEAR SENATOR: I am informed that there is now under consideration the passage or preparation of legislation to impose a tax upon municipal bonds.

You are undoubtedly aware that most, if not all, municipalities have opposed this type of legislation and are continuing to oppose it because of the added burden that such legislation would impose upon municipal taxpayers.

Federal taxation of municipal bonds would cause a marked increase in the cost of all future municipal borrowing. It has been roughly estimated that for Newark alone, it would result in an increase in our tax rate of as much as 100 points, or, in other words, $1 on each $100 ratables. This additional burden would undoubtedly be the straw that would break the camel's back in many of our municipalities and result in the bankruptcy of most municipalities. Federal taxation of municipal bonds would, of course, result in increased revenue to the Federal Government but would not result in any increased revenue to municipalities to overcome the additional costs entailed.

As you know, cities do not impose income taxes, and even in States where income taxes are imposed, evry little of the revenue from such taxes find their way back to the cities. It is furthermore entirely clear that the increased interest costs to municipalities would exceed, in large measure, the revenue which would be received by the Federal Government.

I feel it is unnecessary for me to point out to you the underlying constitutional dispute which has existed since the adoption of our Constitution relating to State and municipal sovereignty. While there are two schools of thought upon this subject, it is unnecessary to consider the subject in its ultimate detail because the practical effect of the taxation of municipal bonds would be so detrimental to the municipalities throughout our country as to render any discussion of the theoretical viewpoint unimportant.

May I, therefore, as mayor of the city of Newark, urgently request that you oppose any plan to tax municipal bonds?

Very truly yours,

VINCENT J. MURPHY, *Mayor.*

STOCKTON, CALIF., *February 6, 1942.*

HON. FRANK H. BUCK, M. C.,
Washington, D. C.

DEAR CONGRESSMAN BUCK: I wrote you quite sometime ago regarding the Federal Government's proposal to tax municipal bonds.

I believe you know my views on this matter. It is my recollection that you are not in accord with the same. However, be that as it may, I am still of the opinion that it would be wrong for the Congress of the United States to levy a tax on the income derived from municipal securities. To me it seems to break down the whole constitutional theory of State and municipal sovereignty. If the Federal Government can tax future bonds by the passage of a simple statute it can tax outstanding bonds, also municipal revenues derived from public utilities of various kinds.

I appreciate the fact that the United States Government must have the revenue with which to finance the war in which we are now engaged, but it is my opinion that the taxing of municipal bonds is the wrong procedure. As you know, it will greatly increase the costs of local government, which are already burdensome in many cities, for the reason that the Federal Government and the State governments have retained and taken sources of revenues which were formerly enjoyed by the cities, thereby leaving the cities' principal source of revenue the

ad valorem tax on real property and improvements. You, no doubt, as a land owner, have a keen appreciation of this fact. Will you please write me again as to your views on this matter.

I am sorry that I did not have the opportunity of seeing you when you were in California recently.

With kindest personal regards, I am,

Yours very truly,

W. B. HOGAN, *City Manager.*

CITY OF JACKSON, MISS., *February 2, 1942.*

Hon. DAN R. MCGEHEE,
Washington, D. C.

DEAR DAN: On behalf of the city of Jackson I wish to file an official protest against any legislation taxing city bonds.

The United States Conference of Mayors, of which this city is a member, has repeatedly gone on record opposing the passage of such legislation. It is proven beyond a doubt that the Federal Government will not for many years be able to collect any appreciable amount of revenue from this source of taxation.

Furthermore, if such legislation is enacted it will bring about an increase of three-fifths to 1 percent on future municipal borrowings. Such legislation as taxing municipal and State bonds, breaks down the whole system of State and municipal government.

There is already too much centralizing of governments in Washington and in the capitols of the various States. The Government should be kept closer to the people and under the control of the people through local government.

I sincerely request that you use every effort to help defeat this legislation for the above reason and the further reason that it is not a national defense necessity.

Yours very truly,

WALTER A. SCOTT, *Mayor.*

BETHLEHEM, PA., *March 10, 1942.*

Hon. CHARLES L. GERLACH,
House of Representatives, Washington, D. C.

HONORABLE SIR: City council has instructed me to write to you and request you to use your influence to defeat any proposed legislation which would subject municipal bonds to Federal taxation. We feel that the Federal taxing of municipal bonds will only increase the burden upon municipal governments for the reason that it will be reflected in the interest rate at which municipalities can issue their bonds. In many cases it would only mean that cities would have to increase their tax rate to produce the revenue to pay the tax on these bonds.

As representatives of the citizens and taxpayers of the city of Bethlehem, council is opposed to this legislation and asks that you, who also represent the citizens and taxpayers of Bethlehem as well as of other communities in Pennsylvania, also oppose any such legislation.

Very truly yours,

BERTRAM L. NAGLE, *City Clerk.*

EVANSTON, ILL., *February 10, 1942.*

Evanston City Council opposed to proposal taxing municipal bonds.

L. J. KNAPP, *City Comptroller.*

TUCSON, ARIZ., *February 5, 1942.*

Hon. Senator CARL HAYDEN,
Washington, D. C.

DEAR SENATOR HAYDEN: On my recent visit to Washington I mentioned to you, and I also had a discussion with your secretary regarding the taxing of municipal bonds by the United States Government.

As far as Tucson is concerned it would make very little difference whether municipal bonds were taxed or not because most of our outstanding bonds will

be retired in the next 3 years. I want to protest vigorously against such measures because I am firmly convinced that this procedure is fundamentally wrong. Municipal and State bonds were sold with the solemn promise and assurance of immunity from taxes and for that reason a lower rate of interest was obtained by the borrowers.

We can absolutely not afford to let these promises be just a scrap of paper, and if I have the correct information the Supreme Court of the United States has upheld immunity of the State in no less than 34 decisions extending to and including the most recent decision. These 34 cases are listed in the brief submitted to Congress by the attorneys general of the States, entitled "The Constitutional Immunity of State and Municipal Securities; A Legal Defense of the Continued Integrity of the Fiscal Powers of the State" (pp. 60-62).

Also, to quote Henry Epstein, the general solicitor for the State of New York: "Secretary of the Treasury Morgenthau has finally dropped the mask which has so far concealed the real objective of the Treasury toward the outstanding securities of the States and municipalities." He says further, "That this statement, coming as it does from the first fiscal officer of the United States Government, is not only shocking, but it probably will do more to destroy the confidence of the people of this country in the promises and good faith of their own Government than anything that I can recall to this time."

Congress should not pass this under guise of a defense measure as it strikes at the root of our governmental integrity, a principle that we cannot afford to give up without a fight to the last ditch.

All members of the council join me in asking you to defeat this measure.

Respectfully,

HENRY JAASTAD,
Mayor of Tucson, Ariz.

PASADENA, CALIF., *February 6, 1942.*

Hon. CARL HINSHAW,
New House Building, Washington, D. C.

DEAR CARL: Recent press reports indicate that the United States Treasury Department is again urging the imposition of a Federal tax upon the interest from outstanding State and local securities as well as upon future issues.

The Board of Directors of the City of Pasadena has many times enacted the opposition of the city of Pasadena to the taxation of State and municipal obligations by the Federal Government, whether such taxation be on future issues or outstanding issues, and heretofore I have written you voicing the views of the city's legislative body on this matter.

Now that the Treasury has abandoned its previous announced determination not to tax outstanding issues and is actually sponsoring such taxation under the guise of a war emergency, I am writing to again call to your attention the views of the city of Pasadena and to request that you use all your efforts to prevent the enactment of legislation which would have for its purpose the taxation of State or municipal obligations by the United States. Such taxation would increase local taxation by municipal governments, thus adding to the total tax burden of the country a great many more millions of dollars than those that will find their way to the United States Treasury.

Such taxation by the Federal Government is an initial step in a program to further expand the taxing power and break down a long-standing sovereignty of State and municipal governments, for if the Federal Government can tax obligations of local governments and the interest on such obligations, it can and no doubt will tax revenues of local governments. Thus would the constitutional safeguard against interference by the Federal Government with the State and local governments be entirely emasculated.

May I urge you, therefore, to do all possible to prevent such legislation?

Sincerely yours,

HAROLD S. HULS,
City Attorney.

NEW BEDFORD, MASS., *February 7, 1942.*

Hon. DAVID I. WALSH,
United States Senate, Washington, D. C.

DEAR SIR: I am using this means as a method of definitely asserting my opposition to the proposed legislation subjecting municipal bonds to Federal taxation.

New Bedford has been faced with serious finance problems over a period of approximately 15 years, and it is comforting to note that, at the present time, we are regaining some of our financial stability. The proposed legislation above referred to would set us back to such an extent that the future of our city would be placed in financial jeopardy.

The suggestions made in speeches by certain members of the official family in Washington has caused me great concern, and it is with this thought in mind that I am asking your concentrated effort in defeating any legislation carrying any form of municipal taxation which tends to destroy. As this matter no doubt has been brought to your attention, in previous instances, I feel certain that you are aware of its seriousness and confidently anticipate your favorable action.

Yours sincerely,

MATTHEW A. GLYNN, *Mayor.*

CHELSEA, MASS., *February 5, 1942.*

UNITED STATES CONFERENCE OF MAYORS,
Washington, D. C.

DEAR SIRS: I, Bernard L. Sullivan, mayor of the city of Chelsea, most vigorously protest the plan of Secretary of the Treasury, Mr. Morgenthau, to tax outstanding State and municipal bond issues.

In the city of Chelsea, Mass., we have outstanding approximately $2,000,000 in municipal bonds. I feel that this proposed tax would constitute a breach of trust with the investors, who rightfully anticipated that these bonds would be tax exempt. The income to be derived from this proposed tax does not warrant such unorthodox procedure.

The proposed tax levy on future municipal bond issues is not going to enhance the possibilities of borrowing needed funds in this fashion, thus resulting in an additional load being placed upon the already overburdened real-estate owners.

I, therefore, wish to be recorded and respectfully request that you likewise be recorded as very definitely opposed to this proposed tax legislation.

Yours very truly,

BERNARD L. SULLIVAN, *Mayor.*

WATERTOWN, N. Y., *February 3, 1942.*

UNITED STATES CONFERENCE OF MAYORS,
Washington, D. C.

DEAR SIRS: Our attention has been called to the fact that the Congress may consider ways and means of subjecting municipal bonds to Federal taxation. Most cities in the United States are opposed to any such action for various reasons.

Such legislation would substantially increase the cost of all future municipal borrowings and would affect refunding of such debts whenever it is necessary to do so. A decided jump in interest rates would result which would have to be absorbed by additional burdens on city real-estate taxes, the principal source of municipal revenues.

Cities are still struggling under the heavy debt load incurred during the past 12 years and should be allowed some relief from future debt service. The next few years will hardly permit most municipalities an opportunity to liquidate bonds in sufficient amount to face the next depression with any assurance of weathering the storm unaided.

If you consent to the enactment of a plan to impose a Federal tax on State and municipal bonds, it must create a very disturbing effect on such financing at a time when there should be fullest cooperation between Federal and municipal government in this grave national crisis. More aid is due municipalities at the present time rather than increased expense due to manipulations by the Federal Government of the issue in question.

Suffice it to say that the city of Watertown urges you to weigh this matter carefully and oppose the enactment of legislation which will affect the existing status of municipal bonds. A resolution covering this situation was passed by the city council, as follows:

"Whereas it has been proposed by the Secretary of the Treasury to remove immunity from Federal taxation of income from municipal bonds; and

"Whereas such proposal was defeated by the Senate of the United States by a vote of 44 to 30 on September 19, 1940, but will probably be offered in the Congress for adoption: Now, therefore be it

"Resolved by the Council of the City of Watertown, N. Y., That it is the sense of this council that removal of such tax immunity would result in great harm to municipal finances; would increase the tax burden of our municipal taxpayers, and that legislation removing this tax immunity should not be passed by Congress; and be it further

"Resolved, That the city clerk by and hereby is instructed to forward a certified copy of this resolution to the Honorable Francis D. Culkin, Representative and the Honorable Robert F. Wagner, and the Honorable James M. Mead, United States Senators for their consideration."

Thanking you for any efforts you may make in our behalf, I am

Very truly yours,

C. LELAND WOOD,
City Manager.

NEWTON, MASS., *February 3, 1942.*

Representative ALLAN T. TREADWAY,
House Ways and Means Committee,
House of Representatives, Washington, D. C.

DEAR MR. TREADWAY: From the farther end of your State, in representing the city of Newton, I ask that you use all endeavors possible to defeat any program of legislation looking toward the taxation of municipal bonds.

I have had a rather worth-while experience in municipal finance and I think I know something of the effect of such legislation upon city finances and the resulting effect of such taxation on real-estate holders in particular. I was for 3 years chairman of the emergency finance commission here in Massachusetts in 1933 to 1936, as I recall it. Under the jurisdiction of that commission came the financial situation as to all cities in the Commonwealth whose credit had been impaired by the expensive unemployment situation. We had to give O. K.'s on their borrowings. We had to study their finances in order to do so.

My experience as city solicitor of the city of Newton for over 20 years, and the experience I have just spoken of, leads me to be very much opposed to proposed legislation looking toward taxation of municipal bonds. I wish you would give my city and other Massachusetts cities your best efforts in endeavoring to defeat this proposed legislation.

Yours truly,

JOSEPH W. BARTLETT,
City Solicitor.

STAMFORD, CONN., *February 2, 1942.*

Hon. JOSEPH E. TALBOT,
Congressman, Fifth District, Connecticut,
Washington, D. C.

DEAR CONGRESSMAN: I wish to bring to your attention a matter that is vital to all municipalities throughout the country. It is the Federal taxation of State and municipal bonds.

This question has been proposed in the past and from quotations printed in the daily papers on the speech delivered by Secretary of Treasury Morgenthau in Cleveland on Saturday, January 24, it appears that the Treasury Department will again endeavor to impose such a tax on municipal and State bonds, both on future and outstanding issues.

I respectfully request that you oppose any attempt to impose a tax on these bonds. The taxation of municipal bonds would bring additional expense upon towns and cities by increasing the interest rate on bonds which would mean an added burden on all property and home owners, who, I believe you will agree, are carrying more than their share of the tax load at this time.

Enclosed herewith is a copy of a resolution on the matter passed by the United States Conference of Mayors in which this city holds membership.

Trusting you will keep a watchful eye on this matter and register your opposition at the proper time, I am

Very sincerely,

EDWARD A. GONNOUD, *Mayor.*

WORCESTER, MASS., *February 5, 1942.*

Hon. DAVID I. WALSH,
Senate Finance Committee, United States Senate,
Washington, D. C.

DEAR SENATOR: The question of taxing the income on State and municipal bonds is very disturbing to financial officers of municipalities and will cost cities such as Worcester hundreds of thousands of dollars without any adequate direct or indirect return or offset.

It will mean a definite increase in the burden to be borne particularly by owners of real estate now overburdened.

Will you please do all in your power to defeat any move that may be made to tax municipal securities already issued and also those that may be issued in the future.

Respectfully yours,

H. J. TUNISON,
Treasurer and Collector of Taxes.

JACKSONVILLE, FLA., *February 5, 1942.*

Hon. CHARLES A. ANDREWS,
Washington, D. C.

MY DEAR SENATOR: I am amazed to note Secretary Morgenthau has again suggested the taxation of future issues of city bonds.

During the emergency this city has suspended practically all improvements, has frozen funds appropriated for repairs to streets, sewers, etc., in order to conserve the amounts for national defense. I am confident the same conditions exist all over our Nation.

Furthermore, we have voted large amounts in bonds for defense purposes, we have matched Federal funds to aid the unemployed to such an extent that many improvements our citizens have a right to demand have been denied.

Jacksonville, and, I imagine, every other American city, has done these things willingly and freely, feeling that it is a real contribution to the national defense effort.

When peace comes, however, new demands are going to be made upon us which can only be met by the issuance of new bonds. We must provide work for more unemployed than we had 3 years ago, when war industries close down. We must make the municipal improvements we did without in order to aid the war effort. To tax these bonds and future issues to aid the Federal Treasury will close our last door to procuring funds to continue such functions as I have outlined.

In conclusion, I sincerely hope your good judgment will warrant your opposition to the suggestion of our honorable Secretary.

With kindest regards,

Respectfully yours,

C. W. HENDLEY, *Treasurer.*

CANTON, OHIO.

DEAR SIR: The council of the city of Canton, Ohio, at its meeting of Monday, February 2, unanimously adopted the following report which we are forwarding to you as per its provisions. We believe no further word is necessary.

"Inasmuch as there is action pending before Congress to tax municipal and State bonds, your committee on finance begs to recommend that this council go on record as very strongly protesting any taxation of any municipal and State bonds. This taxation would cripple the operation of municipalities due to the increased premium on bonds and high rate of interest required.

"It is further recommended that a copy of this report be forwarded to the chairman of the Ways and Means Committee of the House of Representatives, the chairman of the Finance Committee of the Senate, and to Senators Taft and Burton, Congressmen at Large George Bender and Stephen Young, and to William R. Thom, Representative from the sixteenth district."

Respectfully,

HAZEL SHEAFFER,
City Clerk.

QUINCY, ILL., *February 4, 1942.*

Hon. SCOTT LUCAS,
Senator from Illinois,
Washington, D. C.

DEAR SENATOR: It has been brought to my attention that the Treasury Department is again proposing to bring our municipal securities within the scope of the taxing powers of the Federal Government for the purpose of raising defense revenues. Such action would certainly seriously cripple local government and so have a tendency to swing the pendulum farther than ever toward centralized control of all local governing units by the Federal Government, which I believe is absolutely contrary to the spirit of the Constitution and to sound democratic policies.
