The remedy that our outside commission salesman who are not covered have by filing a formal complaint with the Bureau of Internal Revenue on form S–8 is not adequate, and the only logical solution of our problem we can see is for Congress, on the recommendation of your committee, to spell out social-security coverage for commission salesmen selling at wholesale to retailers for resale.

Thank you, Senator.

Senator MILLIKIN. Mr. Chairman, may I ask Mr. Cohen a question?

The CHAIRMAN. Certainly, Senator.

Senator MILLIKIN. What is the theory, Mr. Cohen, of asking these salesmen who are not covered by their employers, or whatever you want to call them for the purposes before us, to put in their own returns?

Mr. COHEN. Well, that has been based, I would say, Senator, on the actual experience that unless we get the actual factual information concerning the conditions of employment we are not in a position to determine in the individual case whether there really is control.

Senator MILLIKIN. Do you agree that this particular type of salesman we are talking about is covered by what we might term a fairly uniform contract? Or are there wide variations?

Mr. COHEN. Well, the kind of cases we get usually, I suppose, accentuate the differences rather than the similarities, because usually the kind of case where this form has to be used is a case where the employer, probably on the advice of his counsel, has said that they are not covered, and the employee comes in and says he thinks he is. Then, of course, we try to look at the facts in that situation.

Senator MILLIKIN. How are most of those cases resolved?

Mr. COHEN. Well, I could not say right now what the preponderance has been on the basis of those forms. I wouldn't know offhand. But I do know that we have included some on the basis of those form 8's, because the facts as determined after an investigation are somewhat different than those stated when the employer felt that he wanted tax exemption.

Senator MILLIKIN. Mr. Chairman, I would like to ask if these gentlemen would be in position to give us an assortment of sample contracts covering the employment of this type of salesman.

Mr. WENCK. We can do that.

Mr. MANTLER. Do you mean verbally, now? Or to submit them to you later?

Senator MILLIKIN. To supply us with the form of contract.

Mr. WENCK. Senator, I think this might bring it out. There are many of the salesmen who do not sign a contract at all. In other words, originally these men go out to represent a line. They pay their own expenses, and they have monthly settlements, although they are still subject to the rules prescribed for other salesmen.

Senator MILLIKIN. But they do have a written contract?

Mr. WENCK. No, sir.

Senator MILLIKIN. In no case? A gentleman has testified otherwise.

Mr. WENCK. There are some salesmen, though, that don't have written contracts.

Senator MILLIKIN. But where there are written contracts; could you not get a sampling of those?

Mr. WENCK. Yes, sir.

The CHAIRMAN. We understand that the commission would vary according to the merchandise, the products that you are selling, and according to the salesmen, according to the territory, and according to various things that may enter into it. We are not so much interested, as I apprehend, Senator Millikan, whether they get 5 percent or 4 percent or 10 percent, but the general form of the contract, showing the nature, really, of the relationship.

Mr. MANTLER. I might have a copy in my brief case.

The CHAIRMAN. You may supply that later, with several of those types if there are varying types.

Mr. FEDERLINE. May I add one word to that, Senator?

The CHAIRMAN. Yes, sir.

Mr. FEDERLINE. I doubt that the type of contracts that can be submitted would reveal all the factors of control that the Social Security Agency might wish to consider in a case.

The CHAIRMAN. Well, naturally, because they have borderline cases; there are some cases that fall within, and some without, as Mr. Cohen has indicated, in the Agency.

Mr. Cohen, generally speaking, the type of salesman here represented is regarded in the Bureau as coming under present law, within the act, is he not?

Mr. COHEN. That was our feeling in the early period, that many of them were employees, even under the original law, and even at the present time; but it really has become a real administrative problem of determining that in every individual case. It cannot be just a blanket determination.

The CHAIRMAN. I see.

Thank you, gentlemen, for your appearance.

Mr. MANTLER. Thank you, Senator.

The CHAIRMAN. Mr. Pillen? Mr. Herbert G. Pillen?

Did you have somebody with you, Mr. Pillen?

STATEMENT OF HERBERT G. PILLEN, PRESIDENT, CONTROLLED-CIRCULATION NEWSPAPERS OF AMERICA, INC., WASHINGTON, D. C.

Mr. PILLEN. No, I am by myself, and I need only about 5 minutes.

My name is Herbert G. Pillen. I am president of the Controlled-Circulation Newspapers of America, Inc., and appear here in behalf of what we call the carrier-boy amendment to the act. Our association has about 151 members and a circulation in excess of 5,000,000 a week.

Senator MILLIKIN. Mr. Chairman, may I ask: What do you mean by a controlled-circulation newspaper?

Mr. PILLEN. A controlled-circulation newspaper, Senator, is a newspaper that is delivered to every home owner in a community regardless of whether there is a paid subscription or not.

Senator KERR. You call it a throw-away, do you not?

Mr. PILLEN. No, sir; we do not call it a throw-away.

Senator MILLIKIN. Is it a throw-away?

Mr. PILLEN. I have here, for instance, a copy of the Observer, of St. Louis. It has everything in it that any other newspaper has, except that it is restricted to a community, and advertisers pay for it because it is so restricted. For instance, in Chicago, where you have quite a large population, you have a number of these area papers, which carry the news of that area. It is a community within a community. And they limit their coverage to that, and an advertiser, of course, is more concerned with his own people than the millions who live——

Senator MILLIKIN. It is controlled in that it is limited to a definite geographical area?

Mr. PILLEN. That is right, Senator, and gives complete coverage. This, for instance, is a community newspaper in St. Louis. Well, you can see that while it has a good deal of arvertising in it, it has just as much news as any other paper. But it is restricted to its own community.

As I say, we have a circulation of about 5,000,000.

In 1939 your committee wrote into the Social Security Act a provision exempting from the term "employment," the services rendered by a schoolboy in the delivery or distribution of newspapers and shopping news. That provision is presently in the law, and was retained in the legislation as it passed the House.

I would have assumed that this provision would remain undisturbed if it were not for the fact that the bill as originally introduced in the House and which was reported to be the administration proposal, carried a provision to discontinue this exemption, to delete it.

The provision to which I have reference is embodied in paragraph 16 (A) of H. R. 6000 and appears on pages 42 and 144 of that bill. It provides that "employment" does not include "service performed by an individual under the age of 18 in the delivery or distribution of newspapers or shopping news, not including delivery or distribution to any point for subsequent delivery or distribution."

These carrier boys are not engaged in full-time employment. It is true the present exemption runs to carrier boys whether in full-time or part-time employment, but the fact is that the overwhelming majority of them are part-time employees who work an hour or two after school, and if, therefore, the committee feels that carrier boys under 18 years of age who make their living in this business should be included within the act, as distinguished from those boys who do it as an after-school occupation, then I would suggest an amendment to include, after the number "18," in line 2, the words "whose principal occupation is a student actually attending a regular daytime public or private school."

It appears that these carrier boys can receive no benefit from the law anyway, and it would seem that if they cannot benefit from the law they ought not to be taxed under it.

As I have heretofore stated, this exemption runs only to boys under 18 years of age. Section 214—page 62 of the bill—limits eligibility to coverage to the years after 21, in these words:

> (1) He had not less than a quarter of coverage for each four of the quarters elapsing after 1936 or after the quarter in which he attained the age of 21, whichever is later.

So that these carrier boys will not be given old-age benefits based on their service prior to age 21.

What about survivors' benefits, if he should die while employed? It would appear that the only persons who could conceivably be beneficiaries are his parents, since it is unlikely that he will have a wife or children. Now, the bill, in determining whether a parent may be a beneficiary, states as a condition that that parent must have attained retirement age; which would mean that if the boy were under 18, he must have been born to a father who was 47 years of age or over, or a mother who was 42 years of age or over, which would appreciably reduce the number of eligibles. Further more, the proposed act would provide that such a parent must have received at least one-half of the amount of his support from the individual at the time of the individual's death. Certainly a boy working after school for 2 or 3 hours a week could not possibly provide one-half of his parents' support from that income.

As to the payment of disability benefits, Mr. Altmeyer stated in his outline of the act that:

> The strict quailfying requirements for insured status will limit benefits to those whose work record shows both recent and regular attachment to the labor force.

Of course, if these boys are injured while they are actually serving as carrier boys, they would be covered by the workmen's compensation acts in the various States. If they are injured, however, while at play, it would seem that they ought not to have benefits as an employee, since their primary occupation is going to school, and other school children injured at play are not given benefits.

Another factor which I should like the committee to consider is how much of a nuisance and problem it would be for the employer to get social-security cards for each one of his carrier boys, some of whom will be employed for one delivery only because the regular carrier failed to show up. Under the act, a social-security card would have to be secured before the boy is employed. I do not have statistics on all our members, but I think the report which comes to me from Cleveland is representative. It shows that there are 1,090 carrier boys on the current pay roll, that during the last 6 months there has been a turnover of an average of 172 boys per month, which means an average of 15.8 percent per month of new boys added. On this same basis, it would mean an average of 189.6 percent turn-over per year, or practically two complete turn-overs a year.

I am sure you will realize that there are many times when boys do not show up for delivery. It then becomes necessary for the employer to hire another boy on the spot, and get him a social-security card. If these boys should be covered into the act, it would be necessary for an employer to secure a social-security card on each of the boys and arrange for deductions. Now, on the basis of 189.6 percent turn-over per year on these boys, the records which the employer would be required to keep would be a tremendous nuisance and considerable expense, and I presume it would cost the Government as much or more than the employer to keep its records, records which in a sense are useless.

As to the amount of money earned by carrier boys, I find they are paid an average of $1.10 per delivery. Since the publishers whom I represent are publishers of weeklies or semiweeklies, it will readily be seen that the income is under $50 per quarter; and, as you know, one of the factors used in determining coverage is that the employee earn at least $50 a quarter.

On this showing it is earnestly to be hoped that the present exemption running to carrier boys may be continued. Of course, as you know, it runs to all carrier boys, whether they are our type of publishers or not. It so happens that I was the one who appeared here in 1939 to urge the exemption originally; that is why I am still carrying the ball on it.

That is all I want to say on the subject, Mr. Chairman.

The CHAIRMAN. Any questions?

Thank you very much, Mr. Pillen, for your appearance.

Mr. PILLEN. Thank you.

The CHAIRMAN. I would like to insert in the record at this time the statement of Mr. Millard Reese, of Brunswick, Ga., which is in opposi-

tion to the definition of "employee" as provided in the House-passed bill H. R. 6000. Mr. Reese is known personally to the chairman and is one of the most prominent professional and business men in southeast Georgia. He was unable to appear personally and present his views but submits this fine brief for the record.

(The brief referred to is as follows:)

MEMORANDUM IN OPPOSITION TO CERTAIN PROVISIONS OF H. R. NO. 6000

(Prepared and submitted by Millard Reese, of Brunswick, Ga.)

This memorandum will deal particularly with the amendments proposed to section 1426 (d) of the Internal Revenue Code found in section 206 (a) of the bill.

I

The original Federal Social Security Act of August 14, 1935, expressly provided that the term "employee" did not include "(1) any individual who, under the usual common-law rules applicable in determining the employer-employee relationship has the status of an independent contractor. * * *" (I. R. C., title 26, sec. 1426 (d).)

The amendments proposed by the pending bill to the section of the Internal Revenue Code cited are drastic and far-reaching, and it is believed they would result not only in severe hardships upon many employers whose own employees fall within the operation of the act but in great confusion and uncertainty as well.

It will be recalled that the original act created the Social Security Board as the agency charged with the primary duty of administering the law. It is our information that soon after its organization this Board had prepared a uniform law which it recommended or submitted for adoption by the respective States desiring to claim the rights offered the States in connection with participation in the tax imposed by the Federal law and the administration of the law.

It is our understanding that the Georgia act of 1937 (Georgia Laws of 1937, p. 806) followed quite closely the uniform act recommended by the Social Security Board, though no doubt inconsequential changes were made. That act (as amended in immaterial respects for the purposes of this memorandum) now appears in title 54 of the 1947 Cumulative Pocket Park of the Code of Georgia Annotated. Section 54–657 (f) of the Code Supplement mentioned contains the following paragraph:

"Whenever any employing unit contracts with or has under it any contractor or subcontractor for any work, which is part of its usual trade, occupation, profession, or business, unless the employing unit as well as each such contractor or subcontractor is an employer by reason of subsection (g) of this section or section 54-623 paragraph (c), the employing unit shall for all the purposes of this chapter be deemed to employ each individual in the employ of each such contractor or subcontractor for each day during which such individual is engaged in performing such work; except that each such contractor or subcontractor who is an employer by reason of subsection (g) of this section or section 54–623, paragraph (c), shall be liable for the employer's contributions measured by wages payable to individuals in his employ, and except that any employing unit who shall become liable for and pay contribution with respect to individuals in the employ of any such contractor or subcontractor who is not an employer by reason of subsection (g) of this section or section 54–623, paragraph (c), may recover the same from such contractor or subcontractor."

This matter is codified from section 19 (f) of the Georgia act, at page 841, of Georgia Laws of 1937.

This language or substantially the same language appears in the qualifying acts adopted by at least 11 States, as shown by Prentice-Hall Social Security Tax Service. These States are listed below, the number following each referring to paragraph numbering of the Prentice-Hall service mentioned.

Georgia 26080, Iowa, 26073, Louisiana 26080, Maine 26014, New Mexico 26073, New Jersey 26078, North Dakota 26012, Oklahoma 26071, Rhode Island 26014, South Carolina 26077, Tennessee 26007.

The qualifying acts of other States contain provisions framed in different language but designed to accomplish the same end as those quoted above from the Georgia act. These States, with the paragraphs of the Prentice-Hall service

mentioned dealing with them respectively, are as follows: Connecticut 26009, New Hampshire 26010, Virginia 26013, Wisconsin 26007, New York 26057, Nebraska 26018.

II

The provisions quoted above from the Georgia act have been before the appellate courts of the State, and have been construed by these courts. The leading Georgia case on the subject is *Jeffreys-McElrath Manufacturing Company* v. *Huiet* (196 Ga. 710, 27 S. E. 2d, 385, 150 A. L. R., 1200). In that case it was held in effect that the liability imposed upon employer X for the tax on the earnings of employees of a contractor or subcontractor with whom X had dealt is the liability of a surety. The court said that X "is not the party ultimately liable for the tax or contribution, and is hardly more than a collecting agency for the State." It also was held that where X paid taxes or contributions under section 19 (f) of the Georgia act, he would have the right to recover against the party ultimately liable, i. e. against his contractor or subcontractor who was in fact the real or actual employer of the employees involved.

It is submitted that this is as far as any amendment to the Federal act should go in an effort to enlarge the coverage of the Federal law by imposing liability for the tax upon one who is not liable to the employee for his wages and hence is not the real or actual employer.

In the Jeffreys-McElrath case, supra, the supreme court of Georgia sustained the provisions of section 19 (f) of the Georgia act against constitutional attacks based upon the due-process provisions of the State and Federal Constitutions and the principle of uniformity of taxation found in the State Constitution. It would be no idle matter for Congress at this time to adopt an amendment to the Federal law, presumably seeking to serve the same purpose as the provisions of section 19 (f) of the Georgia law, but so different in phraseology as to reopen the question of constitutionality under the Federal Constitution and under the respective State Constitutions in the event States should rewrite or amend their existing laws to conform with the proposed amendment to the Federal law.

An annotation appearing in 150 A. L. R. commencing at page 1214, follows the report of the Jeffreys-McElrath decision and the decision of the Connecticut Supreme Court of Errors in the case of *Elizabeth Bourn* v. *Waterbury Battery Co.* (129 Conn. 44, 26 Atl. (2d) 467), which was a workmen's compensation case. Hence the annotation not only covers cases arising under unemployment compensation acts but under workmen's compensation laws containing provisions analogous to section 19 (f) of the Georgia Unemployment Compensation Act. The annotation itself covers 38 pages. It appeared in a volume published in 1945. Later annotations bearing upon various phases of the questions discussed appear in 158 A. L. R. 915, and again at page 1237; in 160 A. L. R. 713; in 161 A. L. R. 842; and in 164 A. L. R. 1411.

It is believed that even a casual review of these valuable annotations will convince members of the committee that the law as it exists has been sympathetically considered and construed by the courts of last resort and now stands as well settled in many of the States. This is valuable to the agencies administering these laws as well as to employers and others who have to observe them.

III

It is suggested that under the peculiar provisions of the Federal act permitting the qualifying States to exercise the enumerated rights and powers permitted under the Federal law, a very different situation may be presented where the provisions of the Federal law enlarge or might be construed to enlarge the coverage of the laws of the given State, as compared with the situation which has existed at least with respect to the 17 States above enumerated, where the coverage of the laws of the respective States enlarged the coverage of the Federal law. To make clearer the point attempted to be set out in the preceding sentence, let it be stated this way:

The laws of the 17 States enumerated above extended coverage in stated circumstances to employees of independent contractors or subcontractors not covered by the Federal law. That was all right, because first the Social Security Board and later the Federal Security Administrator had to approve and certify a State as qualified under the Federal law. Naturally no valid objection might be made to a State law enlarging the coverage provided by the Federal act.

But if an amendment to the Federal act should be enacted into law which enlarges the coverage afforded by the laws of the respective States, what will the situation be?

It is believed that the definition of "employee" found in the proposed new paragraph (4) of section 1426 (d) of the Internal Revenue Code is intended to extend and does extend the coverage of the Federal act to groups not covered by any of the acts of the respective States.

If such provisions should be enacted into law, what would be the effect upon the State laws?

IV

The new paragraph (4) added to section 1426 (b) of the I. R. Code by section 206 (a) of the bill as passed by the House gives a new and remarkable definition of "employee." The proposed definition is not definitive. It is vague, indefinite, and uncertain and might be held to support almost any construction an administrative officer or a court might desire to give it. The minority report of the House Ways and Means Committee states vigorously and emphatically very real and substantial objections to the proposed definition. (See House Ways and Means Committee report, pp. 162–3).

A fundamental conception of Anglo-Saxon law which has made that law great, and has enabled it to serve well the numerous civilizations living under it, is that a statute should be so expressed in words as to enable those who are affected by it to know what the statute means; to determine, with reasonable certainty at least, what the law requires and what it prohibits, and to act accordingly.

It should be remembered that the bill under discussion, in part at least, is a taxing statute. In the Jeffreys-McElrath case, supra, Chief Justice Bell of the Georgia supreme court made a significant and an illuminating observation when he said (p. 118):

"The Unemployment Compensation Act is quite lengthy, and it may be that some of its provisions should be construed strictly as a taxing statute, and that others should be interpreted according to some more liberal rule. * * * Thus section 19 (f) should perhaps be construed in part as a taxing statute, since it may under some conditions either create or increase a tax liability as against someone; but even so, the paramount rule in all cases is to ascertain the intention of the legislature, looking to the statute as a whole, and keeping in view at all times the old law, the evil, and the remedy."

Where the law requires an employer to deduct taxes owing by the employee from his earnings and imposes taxes upon the employer himself based upon the earnings of the employee, the employer can comply with such requirements where the true or contractual employer-employee relation exists and the wages earned by the employee are paid by the employer. Even this method requires the employer to keep many records and to make numerous remittances and reports an employer would be relieved of keeping and making if he were not required to be a collecting agent for the Government.

But where, as in the bill under consideration, business concern X is made the "statutory" employer of earner Y, who actually works for Z, and the contract of employment is between Z and Y, with Z paying the wages earned by Y, it would be fearfully unfair and unreasonable to impose upon X the burdens and obligations contemplated by the bill.

CONCLUSION

The author's interest in the pending legislation is primarily because the largest source of natural wealth in his section of Georgia is timber, and most of the industrial plants of the area are dependent upon trees in one form or another as raw materials. For instance there are creosoting plants at Savannah, Brunswick, and Jacksonville. There are paper or pulp mills at all of these places as well as at St. Mary's, Ga., and Fernandina, Fla. There are plywood plants at Savannah and Brunswick and perhaps elsewhere in this immediate section. Sawmills and planing mills are numerous.

Some of these plants own timbered lands, but the author knows not one which relies upon timber procured by its own lands as the sole source of its supply of raw material. To procure poles and piling meeting required specifications means that cutting frequently will have to be done over a large area of land. A pole must be straight, must be of a certain diameter at the butt and must taper gradually to a diameter not less than a specified size at the small end.

No creosoting company doing a substantial business in poles could hope to procure all the poles it needs from its own lands. In order to stay in business such companies have to deal with contractors. The procuring of poles has grown to be almost as distinct a business from the treatment and distribution of poles as the growing of cotton is from the manufacture of cotton into yarns and fabrics.

Similarly the procuring of pulpwood is a distinct business from the manufacture of that wood into paper or paper pulp. The mills generally much prefer to deal with contractors to furnish pulpwood, even where the pulpwood may be taken from lands owned by the mill itself. The same contractor may deal today with one mill, tomorrow with another, or he may deal with more than one mill at the same time. Unless there should be a controlling reason to the contrary, it would be foolish for a contractor to deliver pulpwood to a mill more than 100 miles from where wood may be located when another mill within 50 miles would be willing to take the wood at the same delivered price.

There are many ramifications to the pending bill which those who are advocating it probably knew nothing about and did not foresee. These should be considered carefully before making such drastic changes in the law.

The CHAIRMAN. Dr. Benson? Dr. George S. Benson?
You may be seated, Doctor. We will be very glad to hear you.

STATEMENT OF DR. GEORGE S. BENSON, PRESIDENT, HARDING COLLEGE, SEARCY, ARK.

Dr. BENSON. Thank you, Senator George, and members of the committee. I do not have a formal written statement. I would like to present an oral statement from brief notes, with your permission, and I would like to file later a written statement which will include the things I am prepared to say at this time.

The CHAIRMAN. You may do so, Doctor.

Dr. BENSON. Thank you.

As an educator, I am deeply interested in the present generation of Americans and in future generations, and I certainly appreciate your kindness in giving me a few minutes to appear before your committee this morning.

I would like to take just a little bit of that time to express my very deep appreciation to this committee and the men on the committee. For a good many years, I have watched with much admiration the unselfish work of a number of the men on this committee. Your responsibilities are very heavy, and at a time when the financial policies of this Nation are very important I appreciate the fact that you are giving several weeks to hearings on H. R. 6000. That is only an indication of your sincere desire to do the best that can be done for this Nation. And I speak the sentiments of many Arkansas people when I express deep appreciation for your public service.

Now, in beginning testimony on H. R. 6000, I would like to recite a series of connected incidents in the history of France, which I think are very pertinent at this point.

In 1786, Mr. Necker was the able Minister of Finance in France. He was a wizard at finding ways of getting money to meet the growing needs of the Government. But as the task grew harder and harder, he finally came forth with an idea of selling to the people guaranteed annuities at 8 or 10 percent interest. The savings of the people were freely loaned in exchange for Government promises. But in 1789, when the resourceful Necker could no longer finance the payments on the annuities, he was removed from office. Then the people

suddenly realized that the State was in bankruptcy and that the annuities were worthless. The people raged, and in a few months the French Revolution was on, and heads rolled.

Well, I am just indicating how serious it is when a country oversteps its ability to meet its financial obligations.

Necker said:

> The most dangerous of expedients is that of raising loans without having secured payments of interest thereon.

Now, I note that people have testified on the apparently desirable features of H. R. 6000 with scarcely a word about how the payments will be met in 20, 30, or 40 years from now, when the burden would be heaviest. People now 20, 30, and 40 and 50 years old will qualify ultimately for insurance and pensions. In 1990, the burden of payments would be staggering. The present number of 11,500,000 who are at the ages of 65, it is estimated by Arthur J. Altmeyer, would be 19,000,000 by 1975. What might it be by 1990? We don't know. The longevity is constantly increasing, so it is impossible to estimate what the burdens and responsibilities under H. R. 6000 would actually be 20 or 30 or 40 or 50 years from now. The United States News estimates that if we had hundred-dollar pensions for only 30,000,000 people, and we secured them by adequate reserves, it would require about $375,000,000,000 in reserves. But H. R. 6000 looks forward to twice that many coming under hundred-dollar pensions or more. So that would, if entirely secured by reserves, require $750,000,000,000. That runs several times our present national income annually, or our present national debt. And, of course, we recognize that it would be virtually impossible to create such reserves and it probably would be imprudent even to attempt to create them. We wouldn't know what to do with the reserves if we had them. We wouldn't know how to invest the money. So the matter of creating the reserves seems to be a problem we naturally try to avoid.

But there is another very important factor. If we do not create the reserves—and we wouldn't—we would be collecting money year by year on the incomes of the people. But we wouldn't be saving the money to meet those obligations when they arrive. On the contrary, our custom is to spend that money. So this in reality becomes a tax bill, whereby we raise revenue and spend it as we go, year by year. Then we would have to look forward to our children and our children's children being able to meet these obligations when they came due.

I notice the testimony of one person here recently, Miss Marjorie Shearon, editor and legislative consultant, refers to the funds of the OASI. Their statement shows assets of $10,000,000,000. But far over 90 percent of it is in Government securities. In other words, IOU's, Government bonds, seem to replace pretty rapidly the cash that accumulates in these funds. And then it means when it is replaced it must be done by taxes collected at the time it is to be replaced. So our children would have to have the obligation of the payments.

The Brookings Institution is probably as reliable as any fact-finding group that we might look to, and they have undertaken to estimate the cost of old-age and survivors benefits, compulsory health insurance, public assistance, and veterans' benefits. That is more than is covered by H. R. 6000, but it includes much that is in H. R. 6000. But the Brookings Institution estimates that by 1970 just those things I

have mentioned, old-age and survivors benefits, compulsory health insurance, public assistance, and veterans' benefits, would run somewhere between 26 and 41 billions. They give a low of 26 and a high of 41. It would probably fall somewhere between those figures. They estimate by 1990 the cost would be between 33 and 55 billions. That would mean approximately doubling our present budget. Our tax load is now, according to former President Hoover, about 30 percent of our total national income, including local, State, and National taxes. Some have stated 26 percent, but a recent statement by Hoover was 30 percent. However, taking either figure it would mean that by 1975 or 1980 or 1990, we would be paying probably 45 percent of our national income in taxes if we were to meet the load that would, according to H. R. 6000, be saddled on our country.

Senator MILLIKIN. Does the Brookings Institution extrapolate what is assumed to be a rising income in the United States? Or is that on the assumption of maintenance of present income?

Dr. BENSON. No; it is on the assumption of maintenance of present income. They also discuss the possibility of a higher income, which would mean inflation, and which probably wouldn't simplify the problem; because benefits would become less in value. But they have set these figures on present income.

Senator MILLIKIN. It might not necessarily be inflation. It could mean inflation, but it might not necessarily mean inflation.

Dr. BENSON. If we could come to a tax load of 45 percent of our national income, which these benefits would probably entail, it would be a tax load that no nation as yet has been able to carry and continue to prosper. England, at the present time, is paying 40 percent of its national income in taxes, but she can't carry her own weight. They have had nearly seven billions of aid from this continent since the end of the war, and they still can't get on their feet. The smaller countries of western Europe have been able to restore their productivity, and I assume if it weren't for fear of Russia we would withdraw all aid immediately, but we couldn't do so with regard to England. They would collapse at once. With a tax burden of 40 percent, they can't get going. Well, I think we would be unable to carry our weight and pay 45 percent or more of our income in taxes. Yet that is the burden we would be saddling on our children. Accordingly, I think we have no moral right to saddle such a load on our children and our children's children. It would be immoral to allow people to make payments now expecting to get certain pensions, and then not pay them, and it is equally immoral to collect that money and spend it as we go along and then expect our children to meet the payments, when we realize it would put upon them a burden the like of which no people yet have been able to carry.

Senator MILLIKIN. Mr. Chairman, may I suggest to the witness that when you add local and State taxes to our Federal taxes, you are beyond the 30 percent point right now. And the State and local expenditures are rising rapidly. Even if our expenditures did not continue to rise rapidly, you will be close to the 40 percent you are talking about before very long in this country.

Dr. BENSON. Thank you for adding that information. But it only emphasizes, as I see it, the danger of increasing our social-security load, as H. R. 6000 would increase it.

Senator KERR. As I understood the witness, he stated that the estimate by ex-President Hoover was based upon the total tax load, State and local as well as national, and the entire load amounted to approximately 30 percent of the national income.

Dr. BENSON. Yes. That is the figure Hoover recently used, as to our total taxes, State, local, and national.

Senator KERR. And I think it was fairly recently that he made that statement.

Dr. BENSON. That is right.

Senator KERR. You do not know of anything in the meantime that has increased that by 23 or 24 billion dollars, do you, that would take it up from 30 to 40 percent of the national income?

Dr. BENSON. I don't.

Senator MILLIKIN. I was not suggesting it is 40. I was saying that if you make allowance for the rising expenditures in the States and local governments, and the rising expenditures of the Federal Government, it will probably be not long until it is 40 percent.

Senator KERR. I understood you, Senator, to say that that did not contemplate the amount being paid by State and local government at this time.

Senator MILLIKIN. No; I started out by saying that it is now perhaps 20 percent Federal, and when you add your State and local you are probably in the neighborhood of 30. And since the whole thing is on a rising curve, it probably will not be long until it is 40. That is all I was saying.

Senator KERR. I misunderstood you, Senator.

Dr. BENSON. Consequently, I would like to urge that the increased benefit under H. R. 6000 not be adopted. I would like to urge that any additional benefits by on a pay-as-you-go basis, for these reasons. In the first place, we would not then be recreating obligations the magnitude of which we can't really measure, and second, we would not be placing on our children obligations that we seem to lack the courage to meet ourselves. If we want these various benefits, why not pay for them as we go, instead of projecting a load on our children.

In the third place, it would tend, I think, to keep our taxes where, if we wanted to decreased these benefits, we could do so. If we allow payments now to be made for 10, 15, 20, or 30 years, with the understanding that a person is then to be qualified for a certain pension, and then we find the load too heavy, we have really an immoral situation if we begin to welch on it, while if we create a pay-as-you-go basis, then any time it gets too heavy the people can cut down on it without creating any immoral situation, without creating a kind of situation of the type which Necker created in France.

There is another danger, as I see it. Right now of all times is a time when our Nation should be building its internal strength. We forsee, I think, a serious test in the next few years ahead of us, and if we overobligate ourselves financially it will be extremely dangerous. You probably remember Lenin's statement when he was formulating a policy to communize the whole world, and he said: "We shall force the United States to spend itself into bankruptcy."

Roushenbusch, the rather well-known Socialist writer in the New Leader, insisted that probably it would be found impossible to create a revolution in America, because we didn't have a hunger situation and we don't have class strife and hatred. Consequently, he recom-

mended that America be socialized a little bit at a time. William Z. Foster, a student of Lenin, has urged that pensions and insurance be worked out on a full wage basis.

Senator MILLIKIN. Mr. Chairman, if I may suggest to the distinguished witness: That was the Fabian policy in England, of socializing a little at a time.

Dr. BENSON. That is right. And it seems to me we have already taken a good many small steps in that direction, and we are being urged to look on each as an objective within itself; whereas, when we look at them as a whole, it seems to me they fall into a rather definite pattern calculated for the socialization of our Nation, which would add to our financial burden obligations we wouldn't be able to meet, and which would stand the possibility of wrecking our financial structure, and should that happen we would have a different form of government and one which I am inclined to think we wouldn't like. So as the future of our children is at stake, and the future of our Nation, I think we should measure very carefully our obligations, and any added obligations should be on a pay-as-you-go basis. That constitutes the burden of what I wanted to say this morning.

The CHAIRMAN. Any questions?

Senator BYRD. No questions.

I would like to thank the doctor for his statement.

The CHAIRMAN. Doctor, you estimated the pensions at $100 a month under H. R. 6000. That is rather high, is it not? The old-age insurance benefits would average less than $55 a month under H. R. 6000, would they not?

Dr. BENSON. I understand it is a little bit high.

The CHAIRMAN. The wage base, of course, is raised from $3,000 to $3,600 a year, and that would make it possible for a maximum pension or benefit to go as high as some eighty-od-dollars for certain beneficiaries, of course.

Dr. BENSON. There is an urging for it, though, to go higher. And in industry, pensions have started at $100 a month, and 2 days ago at Detroit, Walter Reuther promised they were going to see within 7 years that pensions go up to $200. So the tendency is to increase them. And I am looking, here, at what I think is a tendency.

The CHAIRMAN. Yes; undoubtedly that is the tendency. There is no question about that. And I think there can be little doubt but what the total tax burden upon the total production, when it gets as high as 40 percent, is going to stymie us as a competitor in world affairs. It has always been my view that you could not put the total tax take as high as 40 percent and retain a fair competitive position in the modern world. And the single illustration of that, which I think you very properly present, is Great Britain at the present time. With a total tax there of 40 percent they are not able to make their way. I do not like to be a prophet of doom, but I doubt if they will be able to make their way if their rate of taxation remains at that level. It simply takes too much out of production. And while under the modern theory, that theory that we are overusing, I think, much of the tax take by Government goes back into productive enterprise, after all it goes back there not in the hands of the man who made the money and therefore had the capacity to make and save, but it goes back in the hands of the politicians. While politics is a very honor-

able profession, at the same time it must be said that it has not had altogether a glorious history in the field of business.

Thank you very much, Doctor.

Senator MILLIKIN. Mr. Chairman, if I might burden the committee with an observation: As an offset to some of the things you have said, Doctor, it has been asserted that we are going to continue to raise our national income. I am thoroughly convinced that we can raise it. We can raise it almost limitlessly, on an honest productive basis. But the question is whether it will be raised that way, or whether it will be raised by inflation.

There is another thing to be kept in mind. This is not the only "deduct" that we are talking about. There are several others in the offing. It is not to be assumed that our expenditures will remain static over the next 20 or 30 years; for even if we increase our national income we will be increasing all of our expenditures and will be adding other "deducts" as time goes on. I merely mention that, because those have been stated as offsets and counter offsets to some of your testimony.

Senator KERR. Mr. Chairman, I was quite interested in the remarks of the witness with reference to the proposal to pay as we go. I did not understand what the doctor said as to how much, if any, expanded coverage he was recommending.

Dr. BENSON. Personally, I would not be too much concerned with added coverage if it was on a pay-as-you-go basis, because then we would know what our burden is as we go. We probably would not increase it too much. And we could honorably decrease it if we wanted to at any time.

Senator KERR. Well, would you finance such a program by an added tax in the form of a pay-roll tax, or would you attempt to raise the revenue on the one hand and disburse it from the general fund on the other?

Dr. BENSON. I do not consider myself an expert on taxation. I am not recommending how it be done. I am recommending the principle that we pay as we go, if we increase our benefits, for the two reasons that I gave.

Senator KERR. Well, what would your thought be about expanding the coverage on the one hand and then, in the future, in case of difficulty of payment, being able to lessen it?

Dr. BENSON. If it were on a pay-as-you-go basis, and people were conscious of what they were paying, it could be done; otherwise it could not. I think it is rather striking in England that Churchill did not promise to roll back a single step that had been taken in the direction of nationalization and socialization. All he could promise was: We will stop where we are. I think there is no rolling back. That is why I am saying here: Let what we have got alone, but before we add more let us study very carefully what its costs would be, and do it on a pay-as-you-go basis, so that people will know what they are paying and what it is costing them and can determine from time to time whether they want to continue it or not. But when we adopt legislation that is as far-reaching as this, you cannot stop it without seeing our financial structure crack.

The CHAIRMAN. Doctor, as I understand it, your recommendation is that arrangements be made to take care of the increased benefits

or increased cost of the social-security system on the pay-as-you-go basis?

Dr. BENSON. That is right.

I appreciated, too, your remarks about England. As a student of history I used to watch with much interest the rise and fall of civilizations. I thought that was something that belonged to antiquity. Yet now we see, here in our own day, a nation which we can remember as one of the great nations of the world moving down the western slope; and to see that they haven't got what it takes to come back brings the challenge pretty close to home. I don't think England will stage a comeback. After twice studying conditions on the field, I am not convinced that England will come back. I think we will see them move on down the western slope, as did Rome and other nations. It should be a sobering lesson to us, because we are following pretty closely so far the policies of England. We are doing it with regard to social security.

The CHAIRMAN. Thank you very much, Doctor.

Dr. BENSON. Thank you, sir.

STATEMENT OF OLGA S. ROSS, EXECUTIVE DIRECTOR, NATIONAL COUNCIL OF SALESMEN'S ORGANIZATIONS, INC., NEW YORK, N. Y.—Resumed

Mrs. Ross. Mr. Chairman, if I may, I would like to add one thing.

In reference to the discussion that came up regarding testimony this morning on the salesmen's contract, I would like to add to the statement of the National Council of Salesmen's Organizations that to our best knowledge 90 percent of the wholesale and commission salesmen work without a written contract.

While the testimony of the witness, Mr. Marshall Mantler, was to the effect that he could produce contracts in his own particular industries, the National Council takes in a wider range, a cross-section, of trades and industries, and in our experience the majority of salesmen are without written contractual agreements with their employers.

We have found on numerous occasions employers seeking to evade their tax liability, requiring their salesmen to sign statements saying that they were independent contractors, regardless of the fact that these salesmen worked under exactly the same supervision and control as salesmen who were actually covered by the Social Security Act.

That is all, Mr. Chairman.

The CHAIRMAN. Thank you.

That completes the call of the witnesses for the morning and we will recess until Monday morning.

(The following statements were submitted for the record:)

ABILENE, TEX., *January 19, 1950.*

Hon. PAT MCCARRAN,
Senate Office Building, Washington, D. C.

DEAR SENATOR MCCARRAN: It has come to my attention through newspaper articles and trade publications that Congress is considering an act to broaden the

coverage of the Social Security Act. The House of Representatives has already passed a bill, H. R. 6000. I am not interested in most of the provisions of this bill—many of them seem to be desirable. There is one provision in this proposed bill, however, that may affect me personally in such a way as to practically destroy my oil business. This provision is one which, I understand, will broaden the definition of "employee" so as to include me in the type of operation I conduct.

I am, and have been for 15 years, an independent businessman. I lease a bulk station from the Gulf Oil Co., and in addition, have a supply agreement with the Gulf whereby they consign me gasoline, motor oils, and other petroleum products. I also purchase automotive accessories, tires, etc., from them, as well as other people, direct. My lease agreement, as well as the supply contract, is for a firm period of 1 year at a time. The arrangement I have has been entirely satisfactory, and very profitable to me during the past year, and I surely want to continue my status as an independent merchant. I engage in other enterprises other than my oil business, such as being Pontiac automobile dealer and have interest in radio stations both in Abilene and Odessa. I devote as much time to my oil business as I feel is necessary, of course dividing my time among my other enterprises. I hire and fire my own help in all of these businesses, fix their wages, and determine the hours they shall work. My employees are under my direction alone, and the Gulf Co. has nothing whatsoever to do with the number of employees, the wages they are paid, the work they perform, or the hours they work. I pay social-security tax on all of my employees. All of my employees are used interchangeably in my oil business and such other enterprises in which I may be engaged. I have in the past, and hope to be able to do so in the future, conducted my oil business without interference from anyone. I have a considerable investment in this business and have built up good will in the territory which I operate. I maintain my own bookkeeping system. My interpretation of this bill in its present form is that it will probably put me out of the oil business. Its effect will undoubtedly deprive me of my status as an independent businessman. If I and my own employees are to be considered employees of the major oil company within the meaning of this proposed bill then I would have to surrender to that corporation all of the benefits, advantages, and freedom I have enjoyed over the years in the conduct of my business.

If this bill is passed in its present form so as to include me within its coverage, and I am permitted to continue to operate my oil business under the present arrangement, considerable hardship and confusion will result. This is illustrated very graphically when a few years ago the Commissioner of Internal Revenue ruled that, under the present Social Security Act, I and my employees were employees of Gulf Oil Corp. within the meaning of this act. Under the Commissioner's ruling Gulf Oil Corp., in an effort to comply therewith, requested me to supply them with a list of my employees and the wages they were paid. Since the corporation knew nothing about the internal affairs of my business they necessarily had to rely on the information I supplied them. Until the courts ruled that I and my employees were not employees within the meaning of the present act, this haphazard and unsatisfactory condition continued to exist. If the proposed definition of "employee" is passed in its present form it will be necessary to again report these facts to the corporation in order that they may comply with the provisions of the new act. Frankly, it is none of the Gulf Co.'s business the internal functions of my business, and I do not intend to tell them what my costs of operations are, or how I operate.

I am very much opposed to being deprived of my status as an independent businessman, and would surely like to see the definition of "employee," as contained in the proposed bill, be revised so as to exclude me therefrom.

I realize that I, as an individual, have very little weight in speaking to the lawmakers in Washington, and, knowing that you are acquainted with all of the men in Washington who are members of the Senate Finance Committee, I would certainly appreciate your interceding on my behalf.

This condition applies to oil petroleum distributors all over the United States and effect those in Nevada also.

With kindest personal regards, I am,

Sincerely yours,

W. P. WRIGHT.

AMERICAN FEDERATION OF LABOR,
Washington, D. C., March 24, 1950.

HON. WALTER F. GEORGE,
Chairman, Senate Committee on Finance,
Senate Office Building, Washington 25, D. C.

DEAR SENATOR GEORGE: When on March 1 President Green, Mr. James A. Brownlow, and I appeared before your committee in support of H. R. 6000, our statements were confined largely to support of the proposals contained in that measure, together with amendments which we offered with a view to further liberalizing the bill.

Since that time, a number of witnesses have appeared testifying with respect to the provisions in this bill relating to the definition of "employee." In view of the circumstances, I should like to ask that this communication be brought to the attention of the other members of the committee and included in the record of the hearings on H. R. 6000 as a supplement to our previous testimony.

We are particularly concerned with the provisions of the bill which would extend the protection of social security to hundreds of thousands of working people who are members of unions affiliated with the American Federation of Labor who throughout the past years have been denied this protection because of their classification as "agent drivers." These victimized workers are found in the provision and meat industries in all fields, such as processed foods, laundry, milk, bakery, soft and alcoholic beverages, petroleum products—in short, virtually every industry in which delivery is an element. They are employees, yet they are denied the benefits of social security.

The classification of agent-driver was invented by employers upon the enactment of the Federal Social Security Act and the various State unemployment insurance laws. It was designed as a clever subterfuge by which employers could avoid payment of Federal and State taxes required under this social legislation. And because of the Government's apparent willingness to condone such a ruse, the plan has worked splendidly.

For employers, the process of converting some or all of their regular route salesmen into the hybrid agent-driver bracket was simply a matter of taking the driver off the pay roll and putting his income solely on a commission basis. Some employers went further and required the driver to purchase his own truck; others did not. In all cases, the new method was to sell merchandise directly to the driver, letting him keep as his commission the difference between that price and the price at which he sold the goods. Most companies kept a small staff of delivery salesmen on a regular basic salary, while at the same time retaining a number of these so-called independent, or agent-drivers.

Defenders of the system might argue that the agent-drivers like it that way. They don't, for as it works out in actual practice, the agent-drivers' earning capacity is no greater—and often a good deal less—than that of salaried salesmen who perform the same duties.

The agent-driver's truck, whether owned by himself or his employer, is usually emblazoned with the company's or the product's name. Having bought merchandise from his boss, who may paint a rosy picture of the huge profits that lie ahead, he finds that, quite logically, the competition of regular drivers has made it impossible for him to earn more than, at the very best, a commission of roughly 6 percent. In the provision industry, he is lucky if he clears $65 at the end of a week's work. The regular driver-salesman, meanwhile, has delivered his merchandise at a flat 3-percent commission, to which is added a basic salary of some $45. His take-home pay averages $75 a week or better, and conditions in other industries follow the same pattern.

Both men, remember, do exactly the same type of work. Yet, if the regular driver loses his job, he draws unemployment compensation. The agent-driver in similar straits finds himself without protection, and when the regular driver reaches the age of 65, he collects social-security payments. The agent, on the other hand, is ineligible. Very often he becomes a public charge, dependent upon charities for his very survival.

Every day, more and more salesmen on fixed salaries are being reclassified into this unfair work category. How can they then be called independent businessmen? Does this reclassification make their livelihood any less dependent upon the company whose products they sell? They are employees in every practical sense of the word.

They are, indeed, victimized—by employers who have used them as tools for tax evasion and by a Government that has apparently closed its eyes to their plight.

And the employer who uses this agent-driver delivery system runs a constant risk in that he relinquishes all responsibility for his product upon selling it to the driver. It would seem, then, that from the standpoint of management as well as labor, deliveries by salaried salesmen are necessary as insurance that business will be kept on a sound and healthy basis.

Through the years, various State courts have recognized these men as employees for purposes of collective-bargaining agreements, and a few States, Georgia for instance, have gone further and included agent laundry drivers under State unemployment compensation laws (*Brewster* v. *Hewitt*, 69 Ga. App. 593, 26 S. E. (2d) 198).

In some instances, test cases have been made for individual agent-drivers before the social-security agencies, but this has required so much litigation through the various courts, that most of the cases have eventually been dropped by the claimant for lack of funds. Even in the few instances where such a claim has been recognized and the inequity corrected, the ruling has benefited only the individual involved.

Finally, in various decisions, the United States Supreme Court has ruled that agent-drivers are employees (*Milk Wagon-Drivers' Union, Local No. 753* v. *Lake Valley Farm Products, Inc.*, 311 U. S. 91, 98).

This was also the court's decision in the case regarding newsboys (*Chronicle Publishing Co.* v. *United States D. C. U. S., No. Dist. of Calif.*, 70 Fed. Supp. 666, aff. per curiam June 23, 1948), but the Eightieth Congress reversed that stand with the passage of Public Law No. 492, the so-called news vendors bill (H. R. 5052), which has denied them social-security coverage.

H. R. 6000 recognizes the economic realities affecting these so-called agent-drivers and other commission salesmen and seeks to eliminate the ambiguities and correct the deficiencies contained in the original Social Security Act. This purpose is clearly set forth on page 81 of the majority report of the House Ways and Means Committee, which states:

"Your committee believes that the usual common law rules for determining the employer-employee relationship fall short of covering certain individuals who should be taxed at the employee rate under the old-age, survivors, and disability insurance program. The statutory provisions set forth in paragraphs (3) and (4) (sec. 210 (k)) are designed to correct this deficiency in existing law by extending the definition to include those individuals, who, although not employees under the usual common law rules, occupy the same status as those who are employees under such rules."

This was elaborated on by Representative Walter A. Lynch, a member of the Ways and Means Committee, on the floor of the House. Representative Lynch stated:

"It is our intention to bring under coverage those who were callously thrown out of social security by the Gearhart Act and *likewise to circumvent unscrupulous employers who believe that, by entering into contracts with agent-drivers, and commission driver salesmen, and similarly situated salesmen stating that they were independent contractors, they can go behind the intenttion of the Social Security Act.*" [Emphasis supplied.]

The American Federation of Labor is convinced that it is of the utmost importance to clear up any ambiguity in the Social Security Act which might deprive these hundreds of thousands of workers protection afforded wage earners doing precisely the same kind of work. We urge therefore that most careful and favorable consideration be given to the amendments to clarify these provisions of the social-security program.

Sincerely and respectfully yours,

NELSON H. CRUIKSHANK,
Director, Social Insurance Activities.

TINTIC SMALL MINE OPERATORS,
LEASERS, AND PROSPECTORS ASSOCIATION,
TINTIC MINING DISTRICT.
Eureka, Utah, January 27, 1950.

Senator WALTER GEORGE,
Chairman, Finance Committee,
United States Senate, Washington, D. C.

DEAR SIR: We are a small organization without the resources to send a man to Washington to testify before your committee on H. R. 6000. We have a membership over 200 and represent all of the leasers in the Tintic district. Tintic

is the second largest nonferrous metal producing district in the State of Utah which is the second largest State in the country in order of production.

Our resolution is self-explanatory and we hope that you will give careful consideration to our problem. Many people think that defining leasers as "self-employed" will change their status under present State workmen's compensation laws. This is not true.

If our organization can help your committee with further information we will be glad to furnish any details. Since this subject has been a thorn in the side of leasing operations since 1940 we are well qualified to speak.

Yours very truly,

JAMES QUIGLEY, *Chairman.*

RESOLUTION ADOPTED BY THE TINTIC SMALL MINE OPERATORS, LEASERS, AND PROSPECTORS ASSOCIATION

Whereas the membership of the Tintic Small Mine Operators, Leasers, and Prospectors Association is composed of companies and men, either directly or indirectly concerned with mine leasing, and that it is fully aware of the vital part mine leasing holds in the economy of the West and in particular in the economy of the Tintic mining district, where for many years this system of a joint partnership of mine operators and experienced miners, freely entered into on both sides, has contributed greatly to the production of mining wealth and to the economic stability of a great mining district; and

Whereas it is recognized that certain provisions of H. R. 6000 will very likely be interpreted in such manner that mine leasers will be classified as "employees" by the Social Security Board, and that such action would lead eventually to the Wage and Hour Division also classifying mine leasers as "employees" in connection with the administration of the provisions relating to "minimum wages"; and

Whereas it is fully recognized by both the mine operators and the leasers that such classification would carry such implied penalties that mining companies would no longer be in a position to enter freely into the usual form of lease agreements, and that existing leases would be canceled at the first opportunity, thus losing to the industry the skill and experience of many men, some too old or too incapacitated to hold regular employment in the industry, and that a large number of the leasers thus affected would be forced into the ranks of the permanently unemployed; and

Whereas the membership fully appreciated the advantages of coverage under the Social Security Act and wishes to enjoy the benefits to be derived from it: Therefore be it

Resolved, That the Tintic Small Mine Operators, Leasers, and Prospectors Association, by the unanimous action of its assembled members, proposes that H. R. 6000 be so revised and written that mine leasers be definitely classed as "self-employed" with full provision that they may enjoy the benefits of the Social Security Act by making direct contributions as provided in the case of other "self-employed" groups; and be it further

Resolved, That copies of this resolution be forwarded to Utah's congressional delegation, chairman of the Senate Committee on Finance, and any other individuals or groups who may later be determined.

R. E. WATT, *Secretary.*

JANUARY 17, 1950.

GENERAL CARD CO.,
Chicago, Ill., January 20, 1950.

Hon. WALTER GEORGE,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: The proposed "Social Security Act Amendment of 1949" as embodied in H. R. 6000 can have such a serious effect on our business and on other business of similar nature, as to make it impossible to continue to operate.

We are publishers of greeting cards and our sales are made by individuals who act as independent dealers over whom we have no control whatsoever. While we suggest a retail selling price, we do not know whether these dealers sell at that price, or more or less, or they may even sell some merchandise at a loss in the event they are overstocked. We give no exclusive territory, and a sales kit sent to one party may be turned over to another party, so we do not even know in advance of actual sales, the names of people buying from us.

We employ up to a peak of 600 people in our plant and sales distribution is

handled through some 65,000 independent dealers. Our orders amount to from 33 cents up, with the average amount for the past season from $40 to $45 at our regularly established wholesale prices on cash-with-order basis. We received approximately 180,000 individual orders this past season plus payment for 33,000 sample orders sent on approval.

Paragraph 4, page 51, of the amendment is so broadly written that it could be subject to interpretations later which would be so detrimental to this business and all other business of similar nature, as to actually put us out of business and deprive thousands of persons of making a small Christmas earning.

We are not protesting against the extension of social-security coverage but we do contend that our independent dealers are self-employed and that such independent dealers should be excluded from coverage and the proposed act should be so written as to explain this. Thus eliminating the hazard of having them ruled otherwise later.

We state again that it would be impossible for us to continue in business if these independent agents were termed employees because:

1. We have no control over these people. We only know that on the average they buy from $40 to $45 worth of merchandise from us. We are not sure at what price they sell, so we cannot even estimate their profit. We cannot withhold tax as they collect their own money.

2. Many of these independent dealers sell other items of merchandise.

3. If these independent dealers were termed "employees," we would have the problem of withholding income tax which would, also, be impossible.

4. Since many of these independent dealers sell for more than one company, think of the complications which would be caused by duplication of unemployment claims, etc.

In conclusion, we would like to state that these people are independent dealers; they work intermittently (90 percent of them sell Christmas cards during the month of September, October, and November) and they are trying to make a little extra money for the holidays. We exercise no control over them; we give them no territory; we ask no reports from them: they also sell any other merchandise they care to.

From this you can see that any tax that might be forthcoming from this vast number of people doing, individually, such a small amount of business, would be insignificant compared to the cost of collecting the tax which cost could be excessive enough to cause many concerns to go out of business.

The proposed amendment should, therefore, properly classify these people independent dealers, self-employed persons who would thus be covered under the self-employment provisions of the Social Security Act.

We hope that you will be guided by the above facts in considering this very important legislation.

Very truly yours,

GENERAL CARD CO.
L. A. SOLBERG, *Secretary.*

NATIONAL RETAIL LUMBER DEALERS ASSOCIATION,
Washington, D. C., March 9, 1950.

Subject: Definition of employee, H. R. 6000.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance, Washington, D. C.

DEAR MR. CHAIRMAN: The association which I represent is spokesman for the 25,000 retail lumber and building supply dealers in the United States. Over half of the 25,000 dealers are in communities having a population of less than 2,500 people and three-fourths of them are in communities having a population of 25,000 or less.

In these small communities and in the rural areas the lumber dealer is more than a distributor of building materials. He must arrange for the financing of the homes, finance the carpenter-contractor, provide the plans and in a very general way supervise the construction. These are services rendered to the consumer in order to create a market for the dealer's products and for which the dealer receives no direct remuneration.

The carpenter-contractors engaged in the actual construction are not employees of the dealer, are not on the dealer's pay roll and are neither hired nor discharged by the dealer. On the other hand, the dealer being interested in sound construction and the proper application of materials maintains a remote super-

vision to the same extent that an architect maintains supervision in order that his plans and specifications are carried out.

The vague formula contained in section 210 (k) (4) of the bill (H. R. 6000) for determining who is an employee would result in uncertainty in our industry. That subsection provides that an individual who is not an employee under the common-law test or not specifically enumerated in subparagraphs 1 and 3 shall be deemed an employee by the combined effect of the following factors.

(*a*) Control of the individual;
(*b*) Permanency of relationship;
(*c*) Regularities and frequency of the performance of the service;
(*d*) Integration of the individual's work in the business of which he renders service;
(*e*) Lack of skill required of the individual;
(*f*) Lack of investment by the individual in facilities for work; and
(*g*) Lack of opportunities of the individual for profit or loss.

It is to be assumed that either the Administrator of the Social Security Act or the Secretary of the Treasury or both would have the function of determining when an individual, who is not in fact an employee, would become a "statutory employee" under this formula. The bill is silent as to how much weight should be given to any one of the determining factors. To cite a few examples of the thousands of questions that may arise under these tests, in our industry, I would like to propound some questions:

1. Must the "control over the individual" be direct and immediate or may it be indirect or remote?
2. Does the "control of the individual" relate to the employment, discharge, hours of work, or the application of his skill, time, and type of work?
3. If a carpenter-contractor happens to work on several projects to which the dealer supplies material is this to be considered "permanency of relationship"?
4. If a carpenter-contractor is employed on a series of projects to which the dealer supplies materials can it be said that "there is regularity and frequency of performance of the service"?
5. If a carpenter-contractor works on a series of projects to which the dealer supplies material can it be said that there is an "integration of the individual's work in the business to which he renders service"?
6. Could it be said that a carpenter-contractor, having no special skill in any particular trade would be classified as an employee when all other factors are equal?

The obvious purpose of this section is to make certain businessmen the collector and payer of taxes in those situations where the Treasury Department feels it may be difficult to enforce the collection of this particular tax.

The carpenter-contractor in the smaller communities is a self-employed person who receives financial assistance and technical aid from the building-supply dealer. It is distortion, however, to claim that there is an employer-employee relationship between the two or that there is any integration between their activities. The carpenter-contractor's chance of loss or profit is clearly independent of the building-supply dealer's chance of loss or profit. Working in close harmony with him, however, the building-supply dealer promotes a market for his product and the carpenter-contractor creates an opportunity for self-employment. It is no different than the cooperation that exists between financial institutions and the dealer or between the manufacturer of building products and the dealer.

Congress in 1948 enacted the so-called Gearhart amendment clarifying the uncertainty created by previous Treasury rulings. We trust that Congress now will not reverse this situation. Since the bill (H. R. 6000) covers self-employed individuals there appears to be absolutely no justification for changing the present law governing the test of employer-employee relationship.

For commerce and trade to thrive there must be a high degree of certainty in the law and this is especially true where the small-business man is involved. The small-business man does not have the financial resources to gamble on uncertainty or to be continually resorting to legal advice.

It was the uncertainty in the wage-and-hour law that threatened thousands of small-business men with bankruptcy. The enactment of this proposal would not only create uncertainty but an almost impossible task from the standpoint of the lumber dealer in computing the amount of tax due, let alone collecting the "statutory employee's" contribution.

We, therefore, recommend that subparagraph 210 (k) (4) be deleted from the bill.

Respectfully,

H. R. NORTHUP,
Executive Vice President.

THE W. T. RAWLEIGH CO.,
Minneapolis, Minn., March 1, 1950.

Representative WALTER H. JUDD,
Washington, D. C.

DEAR SIR: I understand that the Federal social-security bill—H. R. 6000—will soon be up for consideration again.

I especially wish to call your attention to subsection (4)—that part of the bill defining "employee." I am strongly opposed to this part of the bill, as it would change the usual common-law rule as the yardstick to determine whether or not a person was an independent operator or contractor, or an employee.

As the bill is now written, it would include independent contractors—men who are in business for themselves—engaged in direct selling. Our company, as well as hundreds of others engaged in direct selling, has no control over the hours or production activities of our customers. They are independent operators in the full sense of the word—they can work 1 hour or 10 hours daily—2 days or 6 days a week—whatever hours they themselves want to devote to it, with no control on our part. They own and operate their own businesses. Their profits are determined solely by their own initiative, industry, and capacity.

We have no objection to social security and the broadening of its scope soundly. And we believe the new bill contains provisions for self-employed persons. But they should be covered as such.

Therefore, I respectfully request and urge you to use your influence to have subsection (4) changed so there will be no confusion in business relationships, so that it will be determined by the common-law rule, and thus no employer will be liable for social-security taxes on a person who is not in truth and fact his employee.

Respectfully yours,

THE W. T. RAWLEIGH CO.,
By F. A. WICKS,
Manager, Minneapolis Branch.

(Whereupon, at 11:40 a. m., the committee recessed to reconvene Monday, March 13, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

MONDAY, MARCH 13, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Hon. Walter F. George, chairman, presiding.

Present: Senators George, Byrd, Hoey, Kerr, Millikin, Brewster, and Martin.

Also present: Senator Thye, Representative Frank W. Boykin, First District, Alabama; Mrs. Elizabeth B. Springer, Chief Clerk; and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

Mr. Canfield is the first witness. You may come around and have a seat.

STATEMENT OF ROBERT E. CANFIELD, NEW YORK, N. Y., REPRESENTING AMERICAN PULPWOOD ASSOCIATION

Mr. CANFIELD. My name is Robert E. Canfield. The address is 122 East Forty-second Street, New York City.

I am appearing for American Pulpwood Association in opposition to the proposed amendment of the definition of "employee" in the Social Security Act and the Internal Revenue Code, which proposal is set forth in sections 206 (a) and 104 (a) of H. R. 6000.

The American Pulpwood Association represents the pulpwood industry; that is, dealers in and producers and consumers of pulpwood throughout the United States. Pulpwood is the basic raw material from which nearly all paper and paperboard is made, and paper and paperboard, of course, are the basic commodities without which no other industry, no government, no school, no form of written communication can exist, without which freedom of the press is a meaningless phrase, without which, in fact, civilization as we know it would be impossible. There is, therefore, public interest and concern aplenty in what concerns the paper and paperboard industry, and the industry which supplies its basic raw material.

The pulpwood industry is opposed to the inclusion of the definition of "employee" in H. R. 6000 as proposed in the sections 104 (a) and 206 (a) because it knows that that definition, if made law, would not accomplish what some think it is intended to do, and indeed would accomplish little if anything desirable. On the contrary, it would cause a major upheaval of the industry and a complete change in the methods of wood procurement in common use for many years by most consumers of pulpwood, necessarily involving the destruction

of thousands of small businesses. This is something which the industry certainly does not desire, and which it can hardly believe Congress would be happy about.

Let us take these points up one at a time, and in the order stated:

(1) The objectionable definition would not add one single solitary person to the social-security rolls. All of the persons to whom the seven "slithering criteria" (to use Senator Millikin's expression of a year or so ago) could possibly be applied are either employees of someone, and as such covered by the present act, and the proposed act, or are self-employed, and as such would be covered by the provisions of H. R. 6000 providing for social-security coverage of self-employed persons.

(8) Whether this definition is in the law or not, it would not affect by one penny the amount of the benefits to be paid under the law to any person. This is so because H. R. 6000 provides that despite different tax rates for employees and self-employed persons, the benefits payable to each are identical.

These two basic facts being true, it is clear that any of you, Democrat or Republican, can, with a perfectly clear conscience as far as party commitments are concerned, vote against the inclusion of all parts of the proposed definition that seek to include other than common-law employees as "employees" for the purpose of the act. The platforms of both parties may call for broader coverage and greater benefits, but both objectives are accomplished by H. R. 6000 in identical degree, whether or not any new definition of "employee" is included in it. The platforms of neither party called for disruption of existing business relationships, the creation of a wholly new class of persons which for want of a better description, might be called administrative law employees, or the delegation by Congress to an administrative officer of its power and obligation to determine tax liability.

If paragraph 4 of the definition will not give coverage to anyone and will not improve anyone's benefits, what will it do that might possibly seem desirable? I have stretched my imagination to come up with this list:

First, it would save a self-employed person who was held to be an employee some money.

To be exact the amount he would save at the maximum would be 52 cents a week in 1950 and an average of 81.3 cents per week over the next 20 years.

I doubt if either Congress or the self-employed person would think of putting such a small price tag on the loss of independence and of the opportunity to start a small business which might, as so many have in America, become big.

Second, it would increase the Treasury's take by the same amount.

This, of course, results from the fact that under H. R. 6000 the tax paid by a self-employed person would be 75 percent of that paid by and for the account of an employed person—a difference for which no actuarial basis has been demonstrated by anyone, and which Dr. Altmeyer in his own words admits is "merely a compromise" and without attempt "to make any exact estimate."

Third, it would also increase the Treasury's take by improving the "track breakage."

I do not suppose the Treasury Department will be very pleased with my use of terminology deriving from the parimutuel betting on the horses.

Senator KERR. Do you think they will know anything about that?

Mr. CANFIELD. The Treasury Department? They should.

Senator KERR. Maybe they have not had the benefit of the experience that the witness has had.

Mr. CANFIELD. That is quite possible.

Senator MILLIKIN. They collect quite a lot of revenue from them.

Mr. CANFIELD. That is why I think they should know about it.

But I can think of no more apt description for the curious quirk in the law which provides that where a person is employed by two or more employees, each shall withhold and each shall pay full social-security taxes, the excess withheld being recoverable by the employee, but the excess paid by the employers being recoverable by no one but retained in the Treasury as pure windfall.

Fourth, it will make the Treasury's collection job and perhaps its bookkeeping somewhat easier.

No doubt it is easier to deal with a few big business units rather than with many small ones. This hardly appears, to me at least, a valid reason for forcing small-business men out of business. Parenthetically, it might be noted that it will not simplify the bookkeeping of the Social Security Agency, since all of their records are individual records.

Fifth, and last, and also (despite the fact that I am a lawyer) in my opinion least desirable, it will make lots of work for lawyers.

The creation of a whole new concept of relationship between persons who perform services and persons for whom they are performed, with accompanying tax liabilities, under the best circumstances would be bound to give rise to a great deal of litigation. When this is due to a definition so broad and so nebulous as to make it impossible for anyone to say in advance when the relationship may be deemed to exist, it can hardly be regarded as under the best of circumstances, and the amount of litigation is bound to be even greater.

We have, therefore, two things that the proposed definition will not do which may be thought to be socially desirable, but which have been done by other means, and five things which it will do, none of which as any social significance, and all of which add up to virtually no value. Against this must be measured the unquestioned major result of the use of that definition of "employee" which I would like now and for the balance of my statement to analyze and discuss.

Like most other manufacturing industries, the pulp and paper industry has depended upon others for the bulk of its raw materials. It is not integrated from tree to finished product. Over a period of many years, and since long before any wage and hour act, social security act, or even workmen's compensation acts were passed, it was clearly brought home to these companies that they could not go out in the immediate vicinity of their mills and cut pulpwood to supply all their needs. They had to obtain their requirements from scattered sources and from areas where it was more practical to arrange for local cutting and transportation of the wood than it would be to do it themselves.

The pulp and paper industry obtains this most important raw material generally from five sources:

1. By purchase from dealers, who in turn purchase the pulpwood from producers or farmers.

2. By purchase from producers who cut pulpwood from their own lands, or lands upon which they have acquired stumpage rights.

3. By making arrangements with contractors to cut pulpwood from the pulp and paper companies' own lands.

4. By purchase from farmers who cut wood from their own woodlots, and

5. By cutting from their own lands with their own employees.

The third of those, making arrangements with contracts to cut pulpwood from the pulp and paper companies' own lands is what the trade calls contract logging. That differs from the use of contract loggers in section 3 of the paragraph of definition. I think you will probably hear more about it, and there might be confusion because the trade term talks about contractors who may have large amounts of equipment and big crews, and section 3 talks of contract loggers only as the individual who works all by himself.

These arrangements take a great variety of forms. Sometimes it is contemplated that the dealers, producers, farmers, or contractors will deliver the wood at the mill with their own employees and their own trucks. Sometimes it is contemplated that the transportation work, or various other phases of the work, will be subcontracted. Sometimes it is contemplated that the plup and paper companies themselves will arrange for the transportation of the wood, either with their own employees and equipment or by contracts with motor carriers or barge carriers or railroads.

The persons who actually cut and transport pulpwood are employees of someone under the present act and would be such under paragraph 1 and 2 of the definition of "employee" in the proposed act. They are employees either of dealers, or producers, or contractors, or of the pulp and paper companies. Farmers cutting wood in their own wood lots are the exception. As farmers they are not covered by either the existing law or by H. R. 6000.

I think I am wrong about that. Apparently H. R. 6000 has a provision where if a person works during any pay period for more than 50 percent of his time at a covered employment, he can be an employee, and that means a lot of farmers with hired hands who do some woodcutting will suddenly find they have employees covered by social security where they did not imagine so before.

The dealers, producers, and contractors are not covered under the existing act, but would be covered as self-employed under the proposed bill. It is these latter independent contractors who are the people that the majority of the Ways and Means Committee repeatedly says "should be covered as employees." What possible reason for these particular self-employed persons being covered differently than other self-employed persons and what difference it makes whether a person is covered as an employee, or covered in some other manner, is never made clear, or hinted at for that matter, and I, for one, cannot guess. If a person is covered, he is covered, and the purposes of the Social Security Act are carried out. Whether his coverage is as an employee or as a self-employed person makes no possible difference as far as the purpose of the act is concerned.

If these people are to be declared to be employees of the pulp and paper companies, presumably their employees would also become the

employees of the pulp and paper companies. The obligation of an employer under the social-security law is to pay a stated percent of the wages paid to each employee and to withhold a similar amount from the wages paid each employee at the time they are paid, and to pay over those amounts quarterly to the Government. Performance of that obligation is simple enough in the case of actual employees. It is completely impossible in the case of independent contractors and their employees, arbitrarily determined to have the status of employees of pulp and paper companies by the application of paragraph 4 of the definition of employee in H. R. 6000.

What is the "wage" paid to an independent contractor? Obviously it is not the full price paid him for the performance of his contract. The only thing comparable to wages is his profit, and the provisions of H. R. 6000 with reference to the base for social-security tax in the case of self-employed persons would indicate that this is the measure to be taken. How do you withhold from profit at the time of payment? When do you pay a profit? How do you go about determining the profit of somebody over whom you have no control? Is it not at least conceivable that an independent businessman has no desire to disclose and will refuse to tell persons with whom he deals what his profit is? How much of his profit is attributable to wood produced for or sold to one company, and how much is attributable to wood produced for or sold to another company? How much work he did producing naval stores or railroad ties or all of the other things that people operate in? Merely to ask those questions is to demonstrate the utter impossibility of complying with the law if someone tells you that a person, who is in fact an independent contractor, is to be deemed an employee for purposes of the social-security law.

How about the contractor's employees? On the present basis of doing business, the pulp and paper companies do not know who they are, how many there are, or what they are paid, and have absolutely no method of finding out except from the contractor. Is it not just possible that the contractor would refuse to tell them about it? Assuming that he would tell the pulp and paper mills whom he employed and how much he paid them, how can the companies withhold from wages which they do not pay? Again, merely to ask the question is to demonstrate the impossibility of compliance with the law.

The answer to the dilemma is perfectly clear. If one is to be charged with the obligations imposed by the Social Security Act on an employer, he must in fact be an employer. There is no other way to handle it.

That is what must, and inevitably will happen if paragraph 4 of the definition is applied and independent contractors and their employees are held to have the status of employees of pulp and paper mills. They will have to become employees in fact so that the employer may be able to discharge his legal obligations. Maybe it will not make much difference to an employee of a contractor that he now becomes an employee of someone else, but it certainly will make a difference to the contractor that he has been forced out of business, has lost his independence, his opportunity to make a profit, his pride in creating a small business which some day might become big. Personally, I think it might make a great deal of difference to the employee, too. There is a lot more comfort and security in working for

someone you know and who knows you, someone who lives in the same community you live in, than there is in working for a remote corporation.

You might think it would not make much difference to the pulp and paper companies, that they might even save money by cutting out the profit of the middleman. I can assure you that no pulp and paper company will be happy about it. There are a variety of reasons for this. From the purely material point of view, the companies know it will cost, not save, them money.

Please do not misunderstand me. I am not talking about added cost due to paying social-security taxes. I am talking about the added expenses of procuring wood in an impractical manner. If it would save money for the companies to make pulpwood entirely with their own employees, that is the way they would be doing it. Cost of wood is the basic cost of paper, and every mill in the country is accordingly striving to keep that cost down by efficiency in its production. To the best of my knowledge, and I think my knowledge is entirely complete on this subject, there is not a single mill in the whole country which does not buy wood from independent dealers, or producers, or contractors or farmers. That is more than significant. To any reasonable man it would be proof beyond any question that pulpwood production through independent contractors, at least in part, is the most efficient and economic method of procurement. Supervision by paid employees of the paper companies in the case of these scattered operations was not economically sound 50 years ago and it is not economically sound today. This is the most important reason why the paper companies have avoided integrating pulpwood procurement operations to their own operations. This lack of supervision is the reason that the law for centuries has concluded that such relationship should not be considered that of an employer and employee.

There are reasons other than those purely materialistic. No pulp and paper company is going to be happy to be the instrumentality by which an agency of the Government in Washington forces small-business men out of business. No pulp and paper company is going to be happy to be forced into undesired and uneconomical vertical integration, and it will not assuage its unhappiness in the least to know, as everyone does, that the same Government in Washington sometimes seems to believe that vertically integrated companies are guilty of illegal and monopolistic concentration. It will not make any pulp and paper company happy to become a forced participant in such concentration of economic power. The industry is at present one of the least concentrated of all.

A recent outhoritative tabulation shows that out of 452 industries, the paper and pulp industry was near the bottom of the list in degree of economic concentration; its ranking was 396. The same tabulation shows that only one of 42 industries, with an average plant as large as the pulp and paper industry, is less concentrated—that of big industries, billion dollar or more, only 7 of 38 are less concentrated.

Considering all the heat that seems to be developing here in Washington about concentration of economic power, it is not surprising that the pulp and paper industry is pleased with its position and will not be pleased with anything which forces it away from that position.

The next logical question is: Even if paragraph 4 is included in the act, will it be applied to the pulpwood industry? To this question there

is no answer. I do not know and you do not know and the industry does not know. It depends upon the judgment of the Treasury Department and the Administrator. More accurately, because of the indefiniteness of the factors set forth in paragraph 4, the whim of the Treasury Department and the Administrator, rather than their judgment, would control. It might be pointed out that judgments or whims of the Treasury Department and the Administrator of the Social Security Act may differ. They have in the past.

The result of such a situation of uncertainty is identical with the result of an affirmative answer to the question. If you do not know, but have to guess what the ruling will be in any given situation, you simply cannot afford to continue these situations; not when the penalty for guessing wrong is, as it is here, heavy fines, possible imprisonment, and interest on debts you did not know you had, at a rate about three times as high as you can earn money put out at interest.

Senator MILLIKIN. In the Government we have what is called calculated risk against yourself. As a witness, you do not know about that.

Mr. CANFIELD. The difficulty here, Senator, is that no one is capable of making the calculation.

Senator MILLIKIN. Of course, you can make a guess and call it a calculation.

Mr. CANFIELD. And what happens when you guess wrong?

Senator MILLIKEN. It is bad for the country.

Mr. CANFIELD. It is not good for the company.

Senator MILLIKIN. Some day somebody will start calculating safety for the country. Would that not be a novelty?

Mr. CANFIELD. It certainly would; rather an interesting one, too.

If the application of paragraph 4 is as uncertain as I have said it is, then, not daring to run the risk of accumulated interest, fines, and imprisonment, and not caring to be branded a felon any more than you would care to be, companies are simply not going to take the chance. They will have to, and will, change their method of pulpwood procurement in such a way as to eliminate dealing with the small-business men they now do business with. They will have to, and will concentrate their pulpwood procurement into one of two channels, or perhaps both; production by their own employees, or procurement from independent suppliers who are so large, who have so much capital invested, who deal with so many companies, that even the most whimsical Administrator would not care to call them employees.

Is the application of paragraph 4 as uncertain as I have said it is? Let us analyze it and see.

A majority of the members of the House Ways and Means Committee said:

> In this paragraph of the definition your committee has attempted to chart a more definite course than that laid down by the Supreme Court * * *. Your committee has prescribed the factors which it believes should be considered in paragraph 4 of the definition in determining the existence of an employer-employee relationship for social security purposes * * *. The combined effect of all the factors will control the determination under this paragraph of the definition.

Having stated that there was intended to be laid down a definite course to be followed, they immediately found it necessary to add almost seven pages of explanation, and examples of how they thought

those factors should and would be applied. At the same time, 10 members of the same committee, commenting on the same paragraph, said:

> A mere cursory glance at the wording of the above definition will show that at any time the Internal Revenue Bureau, or the Federal Security Agency, or the Court wants to make a person an "employee" rather than a self-employed person, or vice versa, it can do so * * * paragraph 4 serves no social purpose. Instead, it leaves the status of millions of our citizens to the almost unbridled exercise of administrative discretion * * *.

When two groups of representatives of the people who have studied the matter in detail can come no closer to agreement than this, is it any wonder that businessmen think there is something less than definiteness in the definition.

In the process of explaining for several pages what this allegedly definite set of factors means, which of course would have been wholly unnecessary if they were in fact definite, the majority of the House Ways and Means Committee cited an example having to do with woods operations.

In that example, they said that when a contractor, having sufficient capital, including equipment to carry out certain operations, contracted with a company to cut trees on the lands of that company according to certain specifications stated in the contract—including the completion of the work within a definite period, although there were successive similar contracts—and hired others to work for him, kept his own records and was paid the contract price periodically, "the combined effect of all of the factors clearly shows that—the contractor—is pursuing a business of his own and is accordingly not an employee under paragraph 4 of the definition."

That is what the majority of the House Ways and Means Committee said.

Some months later the Administrator of the Wage and Hour Act published an interpretation of the word "employee" as used in that act in connection with certain types of forestry work. His interpretation of the word "employee" followed the familiar pattern heretofore used: First, by the National Labor Relations Board and then in the dicta of the Supreme Court, until Congress specifically ordered otherwise, then proposed to be used by the Administrator of the Social Security Act and the Treasury Department until Congress again specifically ordered otherwise, and now proposed to be included in the new Social Security Act, H. R. 6000.

Although in slightly different words, the criteria stated by the Administrator of the Fair Labor Standards Act are, for all practical purposes, identical with those contained in the definition in H. R. 6000. In discussing his interpretation, Mr. McComb, the Administrator, said that the total situation in each individual case would have to be considered in order to decide whether or not a person was an employee. He then went on to say:

> At least, in one situation it is possible to be specific; where a sawmill or concentration yard to which the products are delivered owns the land, or the appropriation rights to the timber or other forestry products, the crew boss has no very substantial investment in tools or machinery used, and the crew does not transfer its relationship as a unit from one sawmill or concentration yard to another——

Senator MILLIKIN. I do not understand that.

Mr. CANFIELD. I think they mean that they work on successive contracts for the same mill, rather than hopping around from A company to B company to C company.

The CHAIRMAN. Where he takes over this whole crew and puts them on another job.

Mr. CANFIELD. He says unless they do that.

—the crew boss and the employees working under him, will be considered employees of the sawmill or concentration yard. * * * Where all of these three criteria are present, it will make no difference if the crew boss receives the entire compensation for the production from the sawmill or concentration yard and distributes it in any way he chooses to the crew members. Similarly, it will make no difference if the hiring, firing, and supervising of the crew members is left in the hands of the crew boss.

You will note that the example cited by the majority of the Ways and Means Committee, and the example cited by the Administrator of the Wage and Hour Division, are identical. The only apparent difference is that the Ways and Means Committee's operator had "adequate capital" and the Administrator's operator, while he presumably must have had adequate capital, had "no very substantial investment in tools or machinery used." Yet, the members of the Ways and Means Committee and the Administrator come to directly opposite conclusions. In the face of this, is it any wonder that businessmen feel that there is something short of certainty in the definition?

A week ago Senator Taft asked a question here of a witness as to whether his fears about the definition could be justified in the light of the Ways and Means Committee example, indicating that timber operators were not employees. I do not think he got a clear answer then. I think the clear answer lies in the example of administrative interpretation I have just cited. There, without any shred of authority, an Administrator interpreted the law directly contrary to the clearest possible congressional language.

While you sit here considering whether or not to make this definition law, an Administrator has effectively written it into another law where Congress never even considered including it. Why? I do not know why. But I know what they are doing with it.

The Wage-Hour inspectors in the field are using that interpretation to keep people from utilization of the 12-man forestry exemption the Congress thought they gave them. Our fears about the definition are justified by experience. We have been administered before. And to put it mildly, not always in accordance with what Congress intended.

Three weeks ago the Pulp Wood Association made a formal written protest to the Administrator of the Wages and Hours Act, pointing out his total lack of authority from Congress for his actions. The result to date, not even an acknowledgment. It looks as though there might be needed another joint resolution of Congress to point out to another Administrator that when Congress says "employee," it means "employee."

The trouble with the definition is that the factors listed constitute no criteria at all. They are simply things to be taken into account which, in themselves, are intangible and indefinite in every particular, and when taken into account—intangible and indefinite to begin with—are to produce an equally indefinite "combined effect" without any statement of the weighting to be given any single factor. The Admin-

istrator and the Treasury Department are given no clue, let alone direction, as to what to do with these factors. Consider them one by one.

1. Control over the individual: How much control? There is always a scintilla of control. Is that enough? H. R. 6000 does not say.

Senator MILLIKIN. If a man makes a loan from a bank, he is under a certain amount of control.

Mr. CANFIELD. I have always felt that way myself.

Senator MILLIKIN. Yes. Any corner grocery store who has an account with a jobber to a certain amount of control.

Mr. CANFIELD. I would think so. That is what I had in mind when I said there is always a scintilla of control.

Senator MILLIKIN. Maybe more than a scintilla, and yet you could not say that the corner grocery man is an employee of the jobber.

Mr. CANFIELD. I could not, but the Administrator could.

Senator MILLIKIN. Yes, and would, probably.

Mr. CANFIELD. Undoubtedly.

The CHAIRMAN. You think there is a difference between a debtor and creditor and employee and employer?

Mr. CANFIELD. If there is not, I will have to go back to law school.

2. Permanency of the relationship: What does permanency mean? If you do something only once, of course, it is not permanent. If you do it twice, is it or is it not? If you do it 10 times, is it permanent? Who knows? H. R. 6000 does not say.

3. Regularity and frequency of performance of the service: If you perform the service every day, 5 days a week, 52 weeks a year, for several years, it would be regular and frequent. If you did it 1 day a week every third week for a year, it would be regular, but would it be frequent? If you did it 5 days one week, did nothing for the next 2 weeks, then performed again three consecutive weeks, 5 days a week, it would be frequent, but would it be regular? Who knows what the phrase means? H. R. 6000 does not say.

4. Integration of the individual's work in the business to which he renders service: Nobody hires anybody to do work that is not necessary in connection with his business. Does that mean that a hired worker is always integrated in the business of the hirer? If it does not mean this, then what degree of integration or essentiality to the business is necessary? I do not know, nor do you, nor does the Administrator. H. R. 6000 does not say.

5. Lack of skill required of the individual. How much skill, or how little? What kind of skill? The clumsiest man in the world might be a good businessman. The most skillful axman in the world, despite his skill, is almost certain to be an employee, not a businessman. What conceivable relationship has skill as such to the question of whether or not somebody is an employee? Nobody knows. H. R. 6000 does not say.

6. Lack of investment by the individual in facilities for work: Does that mean total lack of investment? Cannot a man even own an ax or a bucksaw and still be an employee? Or does it mean that if he does not have, to use Mr. McComb's language "very substantial investment in tools or machinery used," he is an employee.

Senator MILLIKIN. I think Senator Kerr knows even more about this than I do; out in the oil country, very frequently it happens that

a contract is made for a fellow to drill a well. I have known many cases where he did not even have a hammer or a saw or a wrench, but by a process of what they optimistically call "borrowing," which means going out over the countryside and borrowing pipe and rigs and other things that you find around with the best intention in the world of returning it, lo and behold that contractor assembles enough material to drill a well, and if he follows that practice long enough, he is apt to become very wealthy as a contractor. You understand I am saying borrowing, because he intends fully to return the material: of course, after you get pipe in the well and it produces, it is very hard to return the material.

Mr. CANFIELD. I should think it might be.

Senator MILLIKIN. He might not have a penny when he started out, and drill a successful well and become very successful. I have never been able to see this factor or any of these factors singly or in combination, so far as that goes, as affording any certain basis for a sound definition.

Senator Kerr, can you add any enlightenment to that wholesome practice?

Senator KERR. The Senator does not need to define the word "borrowing" to any man who has been a contractor in the oil country.

Senator BREWSTER. The proper phrase would be osmosis.

Senator MARTIN. I might add, if it comes in a gusher, then there is no trouble, but if it is a dry hole, there is a lot of trouble and many folks lose.

Senator KERR. If it comes in a producer, the contractor is present and troubles are absent. If it comes in a dry hole, troubles are present and the contractor is absent.

Mr. CANFIELD. If that is so, is the converse true, that unless someone has a very great investment, he cannot possibly be an independent businessman. Who knows? H. R. 6000 does not say.

7. Lack of opportunities of the individual for profit or loss: What does that mean? How much opportunity? If a man has a cost-plus contract, is he an employee merely because there is no opportunity for loss? Suppose the only capital he needs is to carry pay rolls. He needs nothing for machinery, tools, or equipment. Does he still have an opportunity for profit or loss? Mr. McComb apparently thinks not, and he is an Administrator using substantially the same words that the Ways and Means Committee uses when it thinks yes. Who knows the answer? H. R. 6000 does not say.

Suppose the Administrator finds that the particular work being performed is 100 percent integrated in the business to which he renders service. The production of pulpwood is: you cannot run a pulp mill without pulpwood. If there ever was integration, that is it. Does that mean that in the entire absence of all the other six factors the man could be held to be an employee? Who knows? H. R. 6000 does not say.

Suppose the Administrator finds a situation where the factors pointing toward independent business exist to a substantial extent, while the factors pointing toward employee relationship exist only to a minor extent? May he still hold the person to be an employee by saying that in his mind the weighting to be given the factors pointing toward an employee relationship should be 10 times the weighting

given those factors pointing to independent business? Who knows? H. R. 6000 does not say he cannot. And I will guess he would.

Paragraph 4 is supposed to be a definition of "employee," and the seven factors I have been discussing are supposed to constitute the criteria to be used in arriving at the definition. Webster's new International Dictionary defines the word "define" as "to fix, decide or prescribe clearly and with authority," and it defines the word "criterion" as "a standard of judging; a rule or test, by which facts * * * are tried in forming a correct judgment respecting them." I submit that no one with a straight face can claim that those seven factors form any standard or rule, the application of which to any given set of facts, will result in any single judgment, let alone a correct one. I submit that no one with intellectual honesty can claim that paragraph 4 of the definition of "employee" decides clearly who is and who is not an employee. Clearly it is no definition at all.

Everyone knows that Congress, and Congress alone, has the power to tax. It is well understood that Congress has the right to delegate detail work under stated criteria the application of which will assure the carrying out of the congressional intent. Presumably it is the intent of paragraph 4 to delegate to an Administrator the detail of determining who is an employee for purposes of imposing taxes within the intendment of Congress. Considering the vague nature of the so-called definition set forth in that paragraph, can you wonder that the minority of the House Ways and Means Committee, in their report on H. R. 6000, said, "Its adoption is a shameful departure from the constitutional division of powers among the three branches of government, and marks the surrender by Congress of its prerogative and duty to define tax liability."

The Senate of the United States has the opportunity to prevent a virtual unconditional surrender by Congress of its taxing power and duty. We are asking you to prevent just that so that a large number of small-business men will not be put out of business as a result of the inability of other businessmen to determine what their tax liabilities are.

The CHAIRMAN. Are there any further questions by the Senators?

Mr. Canfield. I have observed before during the hearings here, I wish to observe again, I do not think that it is fully appreciated that this definition really would do with respect to the independent operator, who is carrying on his own business, converting him into an employee.

You said in the course of your statement that there were good reasons why your business, that is, this business had been built up along lines it has been built, and there are very good reasons. I sometimes think it is advantageous to live in a small town where you have the oil business, your wood business, pulpwood business, and various other lines of business all carried on by small men, small independent contractors, and the difference between the independent contractor and an ordinary employee is this, that the independent contractor will get up at all times of the night to further his business, to improve it, to add to its volume, and the ordinary employee will work only during business hours. That is a very important and significant fact to the community. And it is just the difference between the employee and the other businessman who is doing the same thing.

Mr. CANFIELD. It is the difference between a self-contained, living community, and a wholly factory town.

The CHAIRMAN. Exactly that. So that all of the social advantages and all of the social force is really against the conversion into an employee of a self-employed person—a man engaged in his own business. He may be a good man, no doubt he would be, in either capacity, but he is simply in two different capacities.

Mr. CANFIELD. I agree with you. I would dislike terribly to see a law which would force changes in that situation, and this law would do it, not by mandate, but by economic pressure.

The CHAIRMAN. If it were given that kind of construction, of course.

Mr. CANFIELD. It is being given that kind of construction today in the woods, every day.

The CHAIRMAN. I have looked at this section 4 and it looks to me that it comes very nearly down to the question of saying that an employee is a person who in the discretion of the Administrator is an employee.

Mr. CANFIELD. Yes.

The CHAIRMAN. It is very largely a simple discretion that is vested in him.

Mr. CANFIELD. It is almost exactly that.

Senator MARTIN. Do you have any, Mr. Canfield, any estimate of the number of small so-called business concerns that are employed in the production of pulpwood for the paper and pulpwood industry?

Mr. CANFIELD. Not exactly. I think some of the other witnesses have some estimates of that. I would say it was at least 10,000 in the South alone. That is my own guess. But I am just a lawyer, you know, and the men that do the work know more about that; there are many listed to testify this morning.

Senator MARTIN. I think it would be rather important, Mr. Chairman, to get that in the record.

The CHAIRMAN. I imagine we will get that.

Senator MARTIN. I know in my own State of Pennsylvania, I think we have thousands who are preparing wood for the paper mills, and for the chemical mills and pit props for mines, and it is a matter of a great deal of profit, and it is a thing that means something to certain small communities. If they did not have that, there would not be very much employment for the people of that locality. Pennsylvania's timberland has been cut over and now one-half of the State of Pennsylvania is in what we call second growth timber. It is very profitable. It maintains a great number of families and communities.

Mr. CANFIELD. If after all of the witnesses are through, you want further information, I would be glad to get the association to try and make an over-all estimate.

Senator MARTIN. I think it ought to be in the record.

The CHAIRMAN. I think it will probably be developed. If not, we might get the industry to give us an over-all picture.

Senator MARTIN. I think it would be very helpful if we had that broken down for this industry. The statistics show that there are 3½ million small-business concerns in America controlled by an average of 2½ people, and they employ two-thirds of the people of the United States, which is the most important thing in our economy.

Mr. CANFIELD. The pulpwood producers are a big chunk of that.

Senator MARTIN. Yes; that is true.

The CHAIRMAN. We thank you very much, Mr. Canfield, for your appearance.

Senator MILLIKIN. I would like to congratulate Mr. Canfield on his remarks to the committee. He has appeared before, as the chairman knows, and he illuminates any subject he discusses.

Mr. CANFIELD. Thank you, Senator.

The CHAIRMAN. We will call Mr. Robertson next, Senator Thye, and get to Mr. Johnson.

Senator HOEY. I would like to say that Mr. Robertson comes from North Carolina, and represents the Champion Paper & Fibre Co., which has a very extensive plant at Canton in my State. They employ about 3,000 men at their plant. His company also has a parent plant over at Hamilton, Ohio, and then another plant at Houston, Tex.

I would like to say that Mr. Robertson and his company are very important in the industrial life of North Carolina, and we of course are very much interested in the things that concern the company. I am glad the committee will have the opportunity to hear him.

Senator MILLIKIN. I have a piece of this witness. I was born and raised at Hamilton, Ohio.

Senator HOEY. That is the parent company. That is the home office, and later it came down to North Carolina, and then later to Houston, Tex.

The CHAIRMAN. We will be glad to hear you.

STATEMENT OF REUBEN B. ROBERTSON, JR., EXECUTIVE VICE PRESIDENT, CHAMPION PAPER & FIBRE CO., CANTON, N. C.

Mr. ROBERTSON. My name is Reuben B. Robertson, Jr. I am executive vice president of the Champion Paper & Fibre Co.

Our company has been engaged in the procurement of wood for conversion into pulp at Canton, N. C., for a period of more than 40 years, and at Houston, Tex., for a period of more than 13 years. We have also operated paper mills at Hamilton, Ohio, for more than 50 years.

The pulpwood procurement area for the North Carolina mill includes portions of North Carolina, South Carolina, Georgia, and Tennessee. The Texas mill's wood supply comes entirely from within that State. No pulp is manufactured at the Ohio plant, its operation being confined to converting pulp into paper.

In the discussion of our pulpwood procurement program in relation to paragraph 4 of the definition of "employee" in H. R. 6000, I shall describe the methods employed at the North Carolina mill, where our experience has extended over a very long period. They are typical of methods generally employed throughout the South. The North Carolina plant consumes pulpwood at a rate of slightly more than one-half million cords per year. This wood is made of approximately two-thirds pine and one-third hardwood. Our expenditures for pulpwood at the North Carolina plant are approximately $8,000,000 annually, $6,000,000 of which is represented by the purchase price of wood and $2,000,000 of which is paid to the railroads for freight.

The production of this quantity of pulpwood would require the full-time services of approximately 1,600 men. Actually there are probably more than 4,000 individuals involved in part-time activity.

The sources of pulpwood are timberlands or stumpage owned by our company and timberlands in alien ownership, including thousands of

farm wood lots. More than 90 percent of the North Carolina mill's requirements is obtained from the farm wood lot. This same ratio exists in Texas.

Senator MARTIN. That is owned in fee by somebody else than your company?

Mr. ROBERTSON. Yes. Included in that are lumber companies, small lumber companies, and the farmer group.

The methods of obtaining the pulpwood include:

1. Purchases of manufacturing wood direct from dealers, who obtain the wood from independent producers.

2. Purchases direct from producers under contract. The contract specifies quality of wood and rate of shipments over specified periods, and, in some instances, the trees to be cut. That is in the interest of conservation.

3. Spot purchases from individual sellers who deliver wood direct to our mill woodyard by truck.

4. Purchases from individuals, in carload lots, of wood which the individual has assembled by truckload purchases from others.

Of these four methods the first two account for by far the largest percentage of total volume of wood received at the mill. However, regardless of which method is employed, the actual production of the wood in the last analysis in practically all instances involves an individual who owns a truck and employs labor and is paid on the basis of number of cords of pulpwood produced and/or delivered. He has always been considered an independent contractor in that no control whatsoever is exercised over his method of operation. The principal with whom he contracts merely prescribes the character of the wood, the quantity and rate of delivery, the price, and, in some instances, the trees to be cut. Success of the operation is entirely in the hands of the contractor, who is free to work, however——

Senator MARTIN. Who controls the trees to be cut?

Mr. ROBERTSON. That is varied, depending on the nature of the individual deal that that dealer or contractor makes with the owner of that land. Often it may be tied to a deal that includes cutting for a small sawmill.

Senator MARTIN. Would the forestry department of the State have anything to do with that?

Mr. ROBERTSON. No; that is individual, between the owner and the other. There are efforts to guide, in the interest of constructive forestry, that type of cutting, but in the last analysis he cuts whenever he chooses, and employs whatever number of helpers he chooses, and uses whatever type of logging, loading, hauling, or other equipment he may elect.

It is estimated that in the North Carolina mill's wood-procurement territory there are at least 500 contractors making wood for eventual shipment to our company. Throughout the South there are probably more than 10,000. That is a rather vague figure: some estimate it as six, eight, or ten thousand. It is rather difficult to tell exactly.

These individuals are enjoying the advantage of the entrepreneur. They are independent businessmen deriving the satisfaction of being their own bosses and of planning their organization and work according to their own judgment.

It is my understanding that in the event that paragraph 4 of the definition should become law an indeterminate number of these contractors would be considered to be our employees for whom we would have to assume the obligation imposed upon an employer under the provisions of the Social Security Act. That would mean that we would have to exercise control over them with respect to their pay rolls; and this degree of control would place these same contractors in the status of employees under the Wage and Hour Act, Workmen's Compensation Acts, tort liability, income-tax withholding, and the National Labor Relations Act. Under such circumstances we would be forced to make them employees in fact, because of the confusion which would result from their being in a hybrid status, part free and part hireling.

Such a development would be highly undesirable. From the standpoint of the dealer or producer, he would be eliminated as an independent businessman in the only field of activity for which his location or capabilities fit him. From the standpoint of our company, we would be encumbered by the requirements of a greatly expanded organization to supervise the large increase in the number of widely scattered employees. It would practically double our number of employees. And from the standpoint of our forest economy, one very important phase of its development would be hampered. Today the most pressing problem in our over-all program of forest conservation is to obtain the interest of the millions of owners of farm wood lots in the practice of forestry. An essential factor is the availability of profitable markets for small and poorly formed trees, removal of which constitutes a necessary operation in the improvement of the remaining forest. It is widely recognized by conservationists that the greatest single stimulus to the practice of forestry on wood lots throughout the South has been the markets for pulpwood provided by the pulp mills. In the event that these mills should find it necessary, because of having to handle large working groups, to concentrate them in large areas susceptible of close supervision, the market for the farmer would be tremendously reduced, if not entirely eliminated.

Another objection to concentration of wood procurement in relatively large operations, with all producers actual employees of the pulp company, is that the type of individual—in the South particularly—who is attracted to woods work, is somewhat allergic to formalized work programs; also in most instances he is a part-time worker in the woods, having other interests in connection with farming or other activities, to which he is accustomed to devote his energies during certain periods of the year. This would mean a very heavy turn-over of employees.

In the wood-procurment territories of many pulp mills, including our North Carolina mill, timberlands are scattered in relatively small blocks. This would limit the opportunity to establish pulpwood operations on a scale large enough for most economical supervision and administration by a pulp company. In such instances it would then become necessary for the pulp company to organize its woods employees as mobile units, with resultant penalty of high-cost operations and elimination of opportunity for local farmers to apply their labor in the operation of neighborhood timber.

It is my considered opinion that any legislation which would result in interference with the independent contractor system as it has developed in the field of pulpwood production would lead to endless confusion and litigation and would be a disadvantage to the rural economy of a large section of our country, as well as to our industry.

The CHAIRMAN. Are there any questions of Mr. Robertson?

Senator MILLIKIN. I am just curious. This is not of interest to the committee.

Does all of that stuff come into Hamilton from all of these points in the South?

Mr. ROBERTSON. Senator Millikin, the amount of pulp necessary to run the Ohio mill, which is about 400 tons a day, does come from the two southern mills, a third from the North Carolina mill and two-thirds from the Texas mill.

Senator MILLIKIN. It is ground up down in the South before it comes to Hamilton?

Mr. ROBERTSON. Chemically cooked and bleached.

The CHAIRMAN. There is no connection between the wood cutters for pulp and the contract logger that is described here in another portion of the bill itself; the contractor logger is a different person altogether?

Mr. ROBERTSON. Yes; that contrast logger is a term and a technique that is used more, as I understand it, in the sawmill logging game. The contractor, as we speak of it here, is the man who undertakes to go on a piece of property and cut the pulpwood, cut it up into short lengths, load it and accumulate a carload. I think that is a quite different term.

The CHAIRMAN. I understand that.

Senator HOEY. About how many cords of pulpwood do you use?

Mr. ROBERTSON. About 500,000 a year.

Senator HOEY. You have about how many employees in the Canton plant?

Mr. ROBERTSON. We have just under 3,000 directly there in Canton.

Senator HOEY. And this plant has been operated there for 40 years?

Mr. ROBERTSON. Yes, sir; over 40 years, and these techniques have been used almost during the entire period.

Senator BREWSTER. You do not import any pulp?

Mr. ROBERTSON. Yes; we do. We import some of a specialty nature. We are importing some from several companies in Sweden and Norway.

Senator BREWSTER. Has that materially changed in the last year, the imports?

Mr. ROBERTSON. Actually the pulp situation at the moment is rather tight, and there has come, the imports have come up from about 120,000 tons in 1949 to a rate of approximately 550,000 tons currently. It is expected to go to between five and six hundred thousand tons this year.

Senator BREWSTER. Would that affect your procurement in the South?

Mr. ROBERTSON. At the moment we do not think so. We think that is about a healthy balance, as long as there is a full operating industry.

Senator BREWSTER. Your figures are for the over-all?

Mr. ROBERTSON. That includes all chemical pulps, unbleached kraft.

Senator BREWSTER. Not your company alone?

Mr. ROBERTSON. I was speaking Nation-wide. Imports constitute less than 1 percent of our flow.

Senator BREWSTER. In the country as a whole?

Mr. ROBERTSON. In the country as a whole, the importation of chemical pulps is running at the rate currently of about 3½ percent.

Senator HOEY. What is the particular character of these imports, what sorts of woods are the imports?

Mr. ROBERTSON. That was pulp, not pulpwood. Some wood comes in from Canada. There is none coming from Sandinavia at the present time that I know of. That is finished pulp, and mostly specialty pulp, although there is a lot of unbleached kraft and unbleached sulfite.

Senator MARTIN. What do you mean by specialty pulp?

Mr. ROBERTSON. I mean pulps that lend themselves to very high qualities, superior qualities, very fancy coated papers, or paper for greeting cards, such things as that.

Senator MARTIN. Is it necessary to secure that from abroad or do we have any here?

Mr. ROBERTSON. We do have a great deal in this country, but there is a shortage of that particular type of pulp and therefore it is being imported.

Senator MARTIN Do you have an estimate of the number of men that would be, on the average, employed by the mill in North Carolina to secure for you the pulpwood?

Mr. ROBERTSON. We estimate if there were full-time employees that it would take about 1,600. We also estimate about 4,000 actual, because of this part-time feature.

Senator MARTIN. Of course, if it is in North Carolina like it is in Pennsylvania, there are many of these men that might work a day, a week, or certain seasons of the year with us, which makes a very valuable addition to their income.

Mr. ROBERTSON. Yes, very much so. I think that is pretty generally true all over the South.

Senator BREWSTER. Is it a seasonal operation or does it run right through the year?

Mr. ROBERTSON. We try to level out the flow, I am speaking in the South, just as much as possible, but it is necessary to accumulate usually treble the amount of your consumption for the four bad months—December, January, February, and March, and that applies almost over the South, because in the wet season, it is very difficult to get it out. The farmers and these operators are able to balance that load against their other farming operations, and maybe sawmill operations, or whatever it may be.

The CHAIRMAN. Mr. Robertson, did you know Dr. Herty?

Mr. ROBERTSON. Yes.

The CHAIRMAN. Does the Herty process succeed in getting the resin out of pine to a degree that makes it usable and serviceable for fine paper purposes?

Mr. ROBERTSON. May I attempt to answer that in this way: The use of pine wood for papers is divided into two basic categories, the chemically cooked and prepared, and the mechanically ground. When Dr. Herty was earlier working in Savannah, Champion was even then bleaching the chemically cooked wood, pine wood, into white paper for such uses as bond or tablets or things of that sort. His work, the major contribution of his work was the ability to grind that wood in these mechanical power-driven grinders, and so control the pitch in that method that it would make it possible to use the ground wood for printing papers. That is being done on a large scale at Southland, the Southland Paper Co. at Herty, Tex., very successfully, and the techniques developed, there through the control, the acidification, and the control of the H in that grinding operation has been the key to its use.

We have subsequently applied that technique to the manufacture of such paper as for Life magazine in our Houston plant, and are now making or just starting this week high quality papers out of that process.

The CHAIRMAN. Thank you very much.

Mr. ROBERTSON. It has been a constructive development.

The CHAIRMAN. Thank you very much. We appreciate your appearance here.

Senator Thye, we will call Mr. Melvin Johnson. I believe you have other committee assignments?

Senator THYE. I do have other assignments; yes.

Senator George, if I may be permitted to make just about a 1-minute comment and recommendation concerning this legislation, H. R. 6000, before I introduce Melvin Johnson of Minnesota?

The CHAIRMAN. We will be glad to hear you.

STATEMENT OF HON. EDWARD J. THYE, A UNITED STATES SENATOR FROM THE STATE OF MINNESOTA

Senator THYE. Chairman George, this legislation has the keenest of interest and concern in my State, the State of Minnesota. I have received a great number of letters, and I would like to file this letter in order that all may see this letter from the Blandin Paper Co., northern Minnesota. Mr. Blandin is one of the senior members of the wood or paper operations in Minnesota, and one of the very grandest men that I have had the privilege to meet while serving in public life. Mr. Blandin's letter is practically comparable to all of the letters that I have received from those that are engaged either in the processing of pulpwood or in the making of paper, and I think it would be helpful if this letter was permitted to go into the record.

The CHAIRMAN. We will be glad to incorporate it.

(The letter referred to follows:)

BLANDIN PAPER CO.,
St. Paul, Minn., December 31, 1949.

Senator EDWARD J. THYE,
United States Senate, Washington, D. C.

DEAR SENATOR THYE: My attention has been called to paragraph 4 of subsection K of section 210, H. R. 6000, and paragraph 4, subsection (a) of section 206, H. R. 6000.

I am interested in this as a manufacturer of paper who buys pulpwood from small and large contract loggers and I believe the Senate should eliminate the paragraphs mentioned because they lack clarity of wording and intent. They carry with them an indefinite delegation of the powers of Congress to a group who do not know the desires of the people who elect men and women to Congress to represent them.

My principal opposition to the parts of sections 206 and 210 referred to is two-fold. First, neither employees nor employers can be sure as to who is an employee and who is an independent businessman or contractor, and second, there is the danger that some bureau would interpret the law in such a way to to be disadvantageous to the timber producer and detrimental to the timber user.

As to the first, I need only quote from House of Representatives Report No. 1300 which on page 158, paragraph 4 under Summary of Recommendations, of the minority, says as follows:

"4. *Elimination of the authority of the Treasury to extend definition of 'employee.'*—Paragraph 4 of the definition of 'employee,' gives to the Treasury Department virtually unlimited discretion, through authority to extend the definition of "employee," to determine where the impact of the social-security, taxes will fall. As a result of this authority, large numbers of persons will have no way of knowing their social-security tax liability until the Treasury determines it for them."

Now, if a substantial number of lawmakers themselves do not know the impact of the law until the Treasury Department makes its decisions then how is the taxpayer to know what they mean and what he should do to make his actions conform to the law?

As to the second part of my objection—if the Treasury Department with virtually unlimited discretion should decide that the timber user (in my case a paper mill using pulpwood) has the responsibility of collecting social-security taxes from small timber producers we would have only one choice. We would have to buy from the large pulpwood contractor where there would be no question of the limits of our responsibility to the Treasury Department.

This would have the effect of eliminating the small operator as a free enterpriser and thus work to his disadvantage.

To make matters worse, timber producers both large and small may furnish products to more than one user or converter—such as pulpwood to paper mills, poles to electric or telephone companies, ties to one or more railroads, etc. Who would be the employer if the department should decide the producer is not self-employed?

It would not be good for the timber industry because the cause of timber growing, conservation and proper and timely use is much better served if a large number of small operators are interested than if a small number of large contractors reap the benefit from cutting the timber.

Businessmen, large and small, as well as taxpayers in general, already carry a heavy burden of Government supervision and dictation. Each additional regulation carries with it the danger of being the straw that breaks the camel's back. I hope it can be avoided.

Yours very truly,

BLANDIN PAPER CO.,
C. K. BLANDIN, *President.*

Senator THYE. You will notice Mr. Johnson is not an old gentlemen, yet he has blazed quite a number of trails of achievement into the northern part of Minnesota, or what we might term the wilderness of Minnesota. I have known Mr. Johnson for the past 15 years, and I have known him in the manner that he serves his section of the State and serves the public, and he does serve and has served on several State committees.

He was asked to come down here representing the small pulpwood operators or small loggers from our section of the United States, from northern Minnesota.

Mr. Johnson commenced many years ago as a small what you might call a stump farmer or cut-over area farmer, and he recognized that he would have to supplement his farming operations in order to make

a go of it, and it was then when he turned toward logging operations in the wintertime. That is what I mean when I said he has blazed a few trails up in that wilderness area. He proved so definitely to the M. & O. Paper Co., and other paper manufacturers that this was the type of logging operation that assured them a constant flow of pulp logs or a constant flow of raw materials coming to the mill, and this manner of logging operations has permitted going out and catching the small tracts of timber that otherwise were left standing there to deteriorate, because it was getting overripe, and because it was not profitable for the big operator to go in and to establish cutting operations.

So I say that with Mr. Johnson opening up this type of logging operations, he showed a way of making the litle farmer not only able to make a profit out of his winter months, but a way to supplement his farm operations.

So I was particularly anxious that Mr. Johnson would have an opportunity to come and appear before this committee because, as I say, he is yet a young man, but he has certainly proven not only his ability to do things, but he has been leaned on by the M. & O. Paper Co. to go out and to convey the message to the loggers in the northern part of the State of Minnesota during those war years, that not only inspired the little operator to greater activities in the woods and brought forth the necessary pulpwood that kept our mills in operation every single month throughout the war years, and we have often spoken not only about men like Melvin Johnson, what they did in the contribution to the war effort, but they inspired other men to do greater things by their own enthusiasm.

I know that he will bring an excellent message to you and will prove conclusively that there is a grave concern, not only on his part, but on the part of his associates and the processor of pulpwood in our section of the United States.

I thank you, Mr. Chairman.

The CHAIRMAN. Thank you, Senator Thye. We will be glad to hear Mr. Johnson.

STATEMENT OF MELVIN JOHNSON, CONTRACT LOGGER AND FARMER, LITTLEFORK, MINN.

Mr. JOHNSON. I thought it over when I was asked to come down before this committee. This work has been in my heart for many years, and I am going to read my script, which is very brief. I could have written a book on it.

How will social-security bill 6000 affect me and hundreds of other small independent timber operators like myself? This question is bothering me and the many other contractors in our area and I would like to have the bill clarified so that I know whether or not I am going to be able to continue logging as a small independent operator or will be classified as an employee of a large timber-using industry.

Most small contract loggers in my area started out as employees in large logging camps but as the larger camps were closed and more of the wood cut by contract, we were able to start our own operations on a small scale and became independent contractors. We like our independence but we are afraid that this bill will force the large

companies to go back to the larger camps for their production. The reason we think this is true is because obviously no one can afford to guess wrong as to who are his employees and the proposed definition makes it all guesswork. Under such circumstances the only safe thing to do is operate with your own employees instead of contractors. As an example of how many of the small contractors got started and now operate, I would like to talk about my own operation.

I bought a piece of cut-over land in northern Minnesota in 1934 and with a lot of hard work have developed a nice modern farm. In the summertime I work on the farm and in the winter I have been able to do contract logging. In this way I have full time employment because the logging jobs are close to home and I can work a few hours a day in the woods and still take care of farm chores. With the woods work in the winter and farm work in the summer we really have two crops and only by working the two together could I have developed the nice farm which we now have.

When World War II came, industry and our Government wanted more forest production, so I set up social-security and other records so I would be able to increase production. Prior to this time my contracts were for about 200 cords per year or just what I could handle myself. Now I produce about 1,000 cords per year and employ 5 or 7 of my neighbors.

I lay out my own job, keep my own records, sometimes rent horses for skidding, snow plow the roads, supervise the job, and do my own financing. It is sometimes necessary to use the company's heavy equipment on roads, and I get this on a rental basis. My contract calls for so much a cord delivered at the mill.

Some of the timber which I cut I buy myself, but some of it is owned by the company that I contract for. They have their own lands, but they also buy State and county timber that I contract to log. The timber has to be cut according to good forestry practices; but the road lay-out, how the timber is cut, skidded, and hauled is up to me.

Senator MILLIKIN. What kind of wood do you have there?

Mr. JOHNSON. We have the aspen, we have the spruce, the tamarack, cedar, we have different varieties of wood that is native to our north country.

Senator KERR. Is there any fixed proportion that you have to supply of softwood on the one hand and hardwood on the other?

Mr. JOHNSON. We have little hardwood. My contract generally calls for this: If I have three or four different species, I have so many cords of popular, so many of spruce, or so many poles of cedar, or so many posts of cedar. Some of it may be sawlogs that I may purchase back from the company that they do not use in pulpwood and prabably make a deal, and sell them to some little sawmill, wherever I can make my best deal out of it.

Senator KERR. What is the average price for this pulpwood per cord?

Mr. JOHNSON. Pulpwood will average in price according to the market, as much as anything else. We have a market and a demand. Some years the demand is stronger, which makes a stronger market. Sometimes on a contract basis, if it is on company timber, I am interested in this thing if I can go in there and log with the ability that I

have learned in logging and can come out with a profit. That is what I am interested in. If it is their timber, I get so much a cord delivered at mill.

Senator THYE. How much is that a cord? I think that was the question.

Mr. JOHNSON. How many dollars per cord?

Senator KERR. How much is the average?

Mr. JOHNSON. About $18 on spruce, that is the black spruce, the long-fiber wood that is a high-grade wood. Poplar is $1.50 on the present purchase program.

Some years I make pretty good on my logging contract but other years I do not make very much. In spite of the bad year I want to continue as an independent contractor because I could not have done nearly as good as an employee of any company as there would not have been the same opportunities for work or for profit.

There are a lot of other small contract loggers besides farmers in northern Minnesota. Some of these have other businesses and work in the woods during slack periods and some make a nice substantial living on timber alone.

Most of these contractors operate about as I do. That is, they either own or buy a little of their own timber and log it for one of the companies in the area, or they contract to log timber owned by one of the companies. In many cases they require financial assistance in the form of advances on their production and they sometimes rent the company's road and snow-plowing equipment. As myself, most of these contractors have a substantial investment of their own in cutting tools, skidding drays, horses or tractors, jammer loaders, and trucks. The amount, of course, varies with the size of the contractor.

These men consider themselves independent contractors and they want to continue that way. They determine where the roads should go, whether the timber is to be cut by the piece or by the hour, whether it is to be skidded by the hour or by contract and whether it is to be hauled with their own trucks or by contract haulers. They buy their own supplies, employ their own men, and make the best contract they can. For these reasons it seems that they are just as independent, if not more so, than any other type of contractor.

As previously mentioned, I am afraid this bill may not only cause us to lose our independence but also to force us out of the timber business by encouraging the company to go into larger camps again. That will not only hurt the small contractor, but it will hurt the timber resource.

We have had better cooperation in forest-fire prevention since the small contract logger could operate on his own. The small operator can do a better job in selective cutting and in all-around forest management and the forests which we have left will have to be given the best management if we are going to have timber for future generations.

This is a serious matter where I come from and I think it would be a serious mistake to change the status of the contract logger.

The CHAIRMAN. Are there any questions?

Senator BREWSTER. You cut about 200 cords when you operated alone; did you do that personally or with your hired man?

Mr. JOHNSON. If it is on the farm, we might cut it at odd times throughout the year. If it would be a rainy day, such as that. Most of the time it was done in the wintertime.

Senator BREWSTER. How much can a man cut out there a day?

Mr. JOHNSON. If we are in good timber, I have men out there cutting about 60 cord a month.

Senator BREWSTER. Something over 2 cords a day.

Mr. JOHNSON. Yes. I have had men cut up to 4 cords per day.

In closing, I would like to give just one example.

Senator MARTIN. Do you pay the man so much a cord or so much a day?

Mr. JOHNSON. My men are paid sometimes on the stick rate, so much per stick, and sometimes they are paid an hourly rate. It depends on our timber stands and the condition of the timber stands we work in.

Senator BREWSTER. When you say per stick, what do you mean?

Mr. JOHNSON. Of course, we do not set that. The CIO sets that for us, by the way. I have nothing to do with that. That is one thing that I have no control over. They come out and we have to sign a union contract up there, and an 8-foot stick with a 4-inch top is $7\frac{1}{4}$, 7-inch top, 8 feet long is $12\frac{3}{4}$, and a 10 inch is 21 cents. That is as big as they get in the black spruce. And in poplar, we have a schedule much the same.

In closing I am going to sum up why I was scared of this bill. In 1947, I was called on the telephone and somebody said, "Mr. Johnson, are you going to be home this afternoon?" I said, "Yes." "We want to come down and go over your logging records." It was the unemployment man.

Every spring I used to go up, when I got done with the logging contract, and see if I had employed over 8 men twenty consecutive weeks in any calendar year, as to whether I would or would not be liable for the unemployment tax. They would say, "You are not liable, if you send in the money, they will just send it back."

One day an administrator decided differently. I had to go back to 1942 just because somebody said I was all right and another man said I was not. It cost me a little over $700 to pay back the unemployment insurance. Those are some of the things that I was scared of in this bill. We might think we are all right, maybe going along for 3 years, and then some administrator says, "I guess we better make you an employee." That is what I was scared of. And there are a good many of us the same way.

I also have with me here some petitions signed by independent operators in the northern part of the State that asked me if I could file them in the record of this committee.

The CHAIRMAN. We will be glad to have you file them as part of the record.

(The petitions referred to follow:)

PETITION

We, the undersigned do hereby petition the Senate Finance Committee to eliminate from the Social Security bill, H. R. 6000, paragraph 4 of subsection (k) of section 210 and paragraph 4 of subsection (a) of section 206. We are opposed to the change in the common-law concept of employer-employee relations; to the elimination of opportunity for small contract-loggers to start on

a small scale with limited capital and to the monopoly which would develop in the timber industry if the new tests contained in paragraph 4 are allowed to become law.

(Signed:) Arthur Derfler, Hill City; Clayton Rollins, Pine River; T. M. Long, Brainerd; M. E Long, Brainerd; John Van Rassegham, Onamia; M. John Watson, Wahkon; W. J. Hodgdon, Wahkon; Melvin Conley, Redtop; Henry Witnauer, McGrath; Oscar Bakke, Redtop; Arthur E. Strom, Hili City; H. Rossin, Hill City; Nick Rossin, Hill City; R. F. Corell, Big Falls; Hjalmar Lofgren, Big Falls; Bennie Brooks, Hines; Senator Bushnell, Tamarack; Tilmon P. Gregg, Akeley; Jaemera Kuka, Sebeka; Richard B. Jamme, Hill City; Gordon Bolewan, Hill City; Paul Becker, Grand Rapids; L. J. Wilson, Minneapolis; Gordon Newgard, Hill City; Donald Lipsey, Hill City; Pat Sackett, Lamberton; H. B. Christensen, Hill City; George Gaylord, Hill City; W. R. Schmechel, Hill City; Dix's Hwy Store, Mrs. Glen Dix, Hill City; Wilbur Coe, Hill City; Frank W. Kammermeyer, Hill City; Ralph H. Wallace, Hill City; E. M. Saylor, Hill City; Ed. S Mimm, Hill City; O. K. Stone, Hill City; Chester E. Foster, Hill City; James Parker, Hill City; Clarence W. Flynn, Hill City, Gaylord Parker, Hill City; H. E. Eichhorn, Hill City; Bruce R. Eichhorn, Hill City; James Ryan, Narthome; Borgerding Timber Co. (by N. Borgerding, Pt.), Bagley; Eimo Johnson, Tower; Kirk Minnesota Co. (by G. Thorkon), Duluth; Paul M. Hedrick, Duluth; Robert J. Hofer, Grand Rapids; Chas. W. Latvala, Nashwauk; Frank A. Kelly, Cloquet; W. G. Wey, Cloquet; R. M. Hagman, Duluth; T. Howell, Duluth; Carl J. Dahlberg, Effie; L. R. Dickinson, Dickinson Lumber Co., Bemidji; Andrew T. Giffen, Federal Dam; George Biondish, International Falls; Taish M. Laeoja, Grand Marais; A. G. Kalfrener, Cloquet; K. J. Wood, Cloquet; Bernard LePak, Duluth.

Senator KERR. I would like to ask Mr. Johnson a question, if I may. you and your neighbors have been operating as independents up there for many years?

Mr. JOHNSON. Yes, sir.

Senator KERR. You developed your business on that basis?

Mr. JOHNSON. Yes, sir.

Senator KERR. You think it would be destructive if a Federal agency in Washington were given the discretion to determine that today you were an independent and tomorrow an employee or vice versa?

Mr. JOHNSON. That is correct. I am going to cite one more example.

Through the war we had the wage-and-hour men come up. We met with them at the courthouse at International Falls and I was asking some questions, the questions that I could not interpret on the law as written. As I asked them some questions, he pointed his finger at me and said, "I want you to see how you are going to get under this law." "That is not bothering me," I said, "I am just wondering how I am going to stay within it. I have three questions I would like to ask you. They have been bothering me and I have not been able to answer them." This was an attorney for four States. I asked him these three questions, and he said, "Well, I don't know." He says, "I am going back. I will get Mr. Fleming" or whoever was the Administrator in Washington, "to let me know." So I said, "If you don't know, how do you expect us lumberjacks to know or do you expect us to get along without knowing these laws?"

Those are some of the things that are bothering us independent contractors that are not trying to get into the public welfare. We want to make our own. If this thing continues, I do not know what we will be.

The CHAIRMAN. Thank you.

Mr. JOHNSON. Thank you.

The CHAIRMAN. Mr. Thomas B. Farwell. You may identify yourself.

STATEMENT OF THOMAS FARWELL, PRESIDENT AND GENERAL MANAGER, RYEGATE PAPER CO., EAST RYEGATE, VT.

Mr. FARWELL. My name is Thomas Farwell. I am president and general manager of the Ryegate Paper Co. of East Ryegate. Vt. We have a comparatively small company employing about 100 people in the manufacture of pulp and paper. We draw our supplies of pulpwood largely within a radius of 40 miles. Some of this comes from Vermont and some from New Hampshire. Our requirements are approximately 1,000 cords per year.

Our own holdings of forest lands are negligible—providing a growth of only about 2 percent of our annual requirements. There are no really large blocks of timberland in our area—much of the timber is on what we term farm-forest land. Northern Vermont farms are traditionally divided into tillage, pasture, and forest land. Since 1906 when we started in business we have had satisfactory experience in buying our pulpwood from producers or jobbers who cut from farm forests and privately owned forest land and deliver the pulpwood to our mill at so much per cord. By cooperating in the encouragement of good forest practices we believe that we have had some influence in protecting a permanent source of forest products.

I am appearing here for the single purpose of explaining to you how the provisions of paragraph 4, subsection (k) of section 210, H. R. 6000, as it now stands, would be unduly burdensome to us and to the many, many small forest industries in the Northeast that generally operate as we do. If the definition of this subsection should become law, I cannot for the life of me figure how we could practically carry along the traditional relationship with our producers who are, and always have been, considered "independent contractors."

Pulpwood production is a seasonal operation. The people with whom we contract are not working on our supply the year around. They generally are not large operators. The comparatively small amount of pulpwood we purchased in 1949 came from 53 different contractors, and in 1948 from 98. The contract arrangements vary greatly, dependent upon the circumstances in particular cases. Who owns the stumpage? What are the cutting specifications? Is the wood to be delivered to the mill or is it purchased at roadside? Is it necessary to advance money as the operation proceeds? These, and many other factors, have to be taken into account to determine the terms of our contracts with producers.

But, all of those contracts have this in common—they all are purchase and sale contracts under which we undertake to buy a specific number of cords of pulpwood and the producers undertake to sell them to us. There is nothing obscure about them; they are not subterfuge to get around some law or other. They are an exact reflection of the way we have been doing businesss for a great many years. We must have pulpwood. We have found it satisfactory to buy it rather than produce it ourselves, so we buy it from people who have it to sell. It is as simple as that.

The payments we make to contractors cover the many elements of their cost. We pay them so many dollars per cord. This covers elements of labor, such as cutting, peeling, yarding and trucking; elements of equipment, such as saws, tractors, and trucks; elements of expense, such as camps and woods roads; the elements of overhead, such as depreciation, insurance, and supervision; the element of depletion of stumpage, and the important element of profit which keeps these people in business. These payments are not wages by any stretch of the imagination.

These people we buy from consider themselves as independent contractors. They are small business. It would be a blow to their self respect to sudenly find that by legislation, or by interpretation of legislation by an Administrator, they had suddenly become "employees." During the course of a year they may contract with a number of users of forest products. Everyone has always considered them as independent contractors. Under the provisions of H. R. 6000, which we are considering, what would they be? I do not know. Some might be considered "employees" and some as "independent contractors." A producer might be an independent contractor some of the time, and then the situation might change so that he would become an employee. A change in interpretation of the act, if passed as now written, might change the status overnight. We certainly would not be smart enough to be right in our judgment all of the time.

If a contractor suddenly becomes our employee, what about his employees? I do not know how many he has, who they are, or what he pays them. What are the wages of this contractor who has become an employee? As Mr. Canfield said earlier, I suppose it would have to be his profit, but I do not know that any more than I know the profit made by the haberdasher from whom I buy my shirts. Actually, of course, not even the contractor can know his profit from quarter to quarter as would be necessary for social-security purposes.

I am supposed to withhold social-security taxes from wages when they are paid. When is the profit paid? Our small office force certainly is not geared to the mechanics of this problem. Somebody asked me how many it would add, and the best estimate I could make was about 50 percent that it would add to our small clerical force.

It all adds up to the fact that we could not operate practically with some of our pulpwood suppliers being ruled as our "employees" and others as "independent contractors"—with their status changing from time to time—with our never knowing whether we were right or wrong. There would seem no course open except for us to change the whole economy of pulpwood purchasing and operate ourselves from the timberland to the mill. This would be most difficult with the widely scattered sources of supply. This would wipe out a respected element of our local economy.

We used about 8,000 cords per year, and Mr. Robertson said they used about half a million in one mill alone. I would like to emphasize that relatively this problem is just as important to us as it is to a big company.

Senator MILLIKIN. You are like the Swede railroad fellow that had a short logging road who went to Jim Hill and asked him for a pass because he was the chairman of a railroad, and Jim Hill said, "Why, your railroad is only 8 miles long. I can't give you a pass for that."

He said, "Mr. Hill, my railroad may not be as long as yours, but it is as wide as yours."

Mr. FARWELL. And probably just as important to him, too.

I am not officially authorized to represent anyone except the Rye-gate Paper Co. in this matter. I can report, however, that I have talked with a lot of people in our area—other users of forest products, and independent contractors—and without a single exception there has been grave concern when they understood the provisions of this legislation.

I am not here, gentlemen, to argue in any way against the extension in coverage on social security. I am here solely to request that in extending this coverage, if desirable, you do not do it in a manner that will be highly impractical and which will tend to destroy the long satisfactory relationship between purchaser and independent contractor in our industry.

Senator MILLIKIN. If my history is incorrect, will you correct me? As I recall it, before Vermont became independent, the King had the right to select the best trees in every wood lot for making spars for the King's Navy. May I adopt the general conclusion that you would like to have the King keep his nose out of your business?

Mr. FARWELL. That is right.

The CHAIRMAN. Are there any other questions?

Thank you very much.

Mr. FARWELL. Thank you.

The CHAIRMAN. Next is Mr. Russell Watson.

Please identify yourself for the record.

STATEMENT OF RUSSELL WATSON, COMMERCIAL FORESTRY, MANISTIQUE, MICH.

Mr. WATSON. My name is Russell Watson. Forestry is my business, and has been all my life. My location is in northern Michigan, where I am an owner and operator of timberlands, and a buyer and seller of forest products which I obtain from many small producers and resell to pulp and paper plants, sawmills, excelsior mills, and so forth. My territory is typical of most of northern Wisconsin and Michigan, in that the greater part of the original heavy stands of virgin timber have been cut, and a vast amount of second growth is now arising with intermingled small pieces of merchantable forests.

The day of the large lumber camp, with railroad logging, is going, and the bulk of the timber supplies, especially of pulpwood, fence posts, railroad ties, handle bolts, and the dozens of other wood products come from many small-woods operators. Our local pulp and paper mill, for example, usually has a hundred or more separate contracts for deliveries of pulpwood by small producers. Each one may be modest in size, but in the aggregate they bulk large.

As the owner of a considerable acreage of such forested land, I find oftentimes that for many reasons it is most satisfactory to contract with local enterprising fellows to cut the timber and to skid and deliver the wood on a contract basis. I have been doing this for many years, and am thoroughly acquainted with the procedure. The man engaged uses his own simple tools and employs his neighbors to work with him. He is likely to be a local farmer who has little else to do

during the winter months from October to the break-up of winter in March. His tools are those he has about the place, namely, saws, axes, drays, horses or small tractors, a hired man or two, and likely a grown son home from the Army, just married and eager to work. His outlay for equipment is small, and much of it, such as drays or small barns or sleeping shacks, he himself constructs and repairs at odd hours or as needed. He pays the local men whom he employs such wages as he knows from experience they deserve and will get the work done best. Being his own boss, he works as many hours as he pleases and being a contractor, he has the vital incentive of the rewards of hard work, skillful planning, and honest endeavor. I have engaged many such fellows over the years who have enlarged their sphere of activities until they, too, became owners and in turn let out jobs to local contract loggers. Our north-woods operations are in large part done by such men who rose from humble beginnings.

The method has many advantages. From my point of view, as a forest owner, I am relieved of the detail of the administration of many small jobs, which enables me to place my emphasis on sales of products and the multitude of duties which crowd upon us during the rush hours of the winter season when we are the busiest. It is a systematic delegation of duties to trusted men, and the savings of overhead costs and expenses can be shared with the contractor.

From the point of view of the contractor, it enables him to use his men and equipment during the season when work otherwise might be slack on the farm. His horses, for example, might be "eating their heads off," as the saying goes, doing nothing, if it were not for winter woods work. It brings him in cash payments, and many a farmer in our north country makes more money from his winter's woods operations than he does from his summer's farming. The two operations, farming and forestry, supplement one another splendidly; it is almost an ideal arrangement, and has been built up over the years into a smooth-working performance. I would very much dislike to see it broken up by a law which would insist that these small contractors become my employees.

If such becomes the fact, I shall not be able to deal with these men at all, except as actual individual laborers on a piece-work or a day-wage basis. The reason I will not be able to deal with them as in the past is that I would have to know how much profit they make in order to withhold social-security contributions and to pay social-security taxes for their account. I would assume that if these contractors are deemed to be my employees, then their employees would also be deemed to be mine. In that case, I would also have to take over payment of wages to their employees so that proper withholding and payment of taxes could be made. There is no possible way for me to do either of these things unless the men are actually my employees. If you make this proposed definition the law, then I shall have to make presently independent businessmen my hired hands, or else refuse to do business with them. This, such men definitely will not enjoy. They are independent by nature. They do not wish to work at the beck and call of a foreman; they work best when they are self-employed. Their compensation is directly commensurate with their initiative and hustle, their pay is proportionate to their accomplishment.

From my experience, I would say that the difficulties which wer first experienced of getting such small employers (or contractors) t take good care of social-security payments and withholding taxes o the men they employed, are rapidly passing. The entire social security set-up came upon us suddenly and we all went through period of sharp pains until we caught on how to handle it and unti prices of our products rose enough to cover the added expense o administration and payments. Some of us, with a more bookkeepin turn of mind who handle paper work easily, had little difficulty learn ing the routine; others, such as are many of these independent sma contractors, who are normally rebellious of any governmental inte ference in their activities, were longer coming to it. But over the year gradually the difficulties and dissensions have been overcome and i my neighborhood, at least, I doubt that the auditors from the co lector of internal revenue have much fault to find. Also, the em ployees of the contractors are themselves quick to exert pressure upo their employers if their social-security contributions and deduction are not made promptly and properly, and if their withholding-ta returns are not correctly computed.

Such contractors, because of the possibilities of continual work int the future, readily adopt programs which have to do with forest cor trol. They know that fire prevention, better silviculture and trespa control, is part of their business, and they take a deep and abidin interest in such matters. A program of sustained yield, for exampl from a forest area, is more important to such a resident contracto than to anyone else. The local economies of the situation come ver close to his fortunes; he visualizes good forest management in term of his own gain.

It may be felt that an independent contractor should be consid ered an employee in order that he might look forward with satisfa tion to receiving social-security benefits when he reaches the age o 65. Perhaps some do, and they will or can obtain old-age coverag under other provisions of the bill without becoming employees an surrendering their independence. But I believe that most of thes small contractors think of their security in terms of income from thei own place, and they wisely prefer to invest their savings into develo ment of it rather than to entrust it into the hands of a distant gover ment. They have confidence in their ability to provide for thei old age through their own foresight and hard work. Many of the know, as men close to the soil everywhere know, that the finest an best old-age security is that of the resources of your own farm, larg or small, where one can take full advantage of the gifts of goo growing weather, warm sun, and gentle rains on well-kept soil.

Such men are a strong leavening influence in our whole north-wood social structure. They wish to advance. They should by all mean be encouraged, not discouraged. They should be given every oppo tunity to remain free and independent, and not bound into an employe relationship. Leave them alone.

The CHAIRMAN. Are there any questions?

If there are no questions, we thank you very much, Mr. Watson.

Mr. WATSON. Thank you.

The CHAIRMAN. Next is Mr. John E. Johnston, of Port Leyde N. Y.

STATEMENT OF JOHN E. JOHNSTON, CONTRACT LOGGER, PORT LEYDEN, N. Y.

Mr. JOHNSTON. I am a contract logger, and represent the contract loggers of the Northeast. We take our contracts from half a dozen paper mills in our vicinity and for the last 16 years have operated almost exclusively on their lands. That does not mean that I individually do all the work I contract for and therefore would be deemed an employee under paragraph 3 of sections 104 (a) and 206 (a) of H. R. 6000. With paragraph 3 as it stands, I have no personal nor particular complaint except that it is unnecessary, but if you were by any chance to drop that general qualification covering individual work, I would be concerned with it as much, and for the same reasons, as I am concerned with paragraph 4 of those sections of the act as they now stand.

I object to the provisions contained in paragraph 4 of sections 104 (a) and 206 (a) of H. R. 6000. When I say that I object, I am perfectly certain that I reflect the thinking of every independent contractor in the logging business who is aware of what Congress is threatening to do to him. So from now on, I am going to say "we" instead of "I."

We object to the provisions contained in sections 104 (a) and 206 (a) of H. R. 6000, and particularly to paragraph 5 describing an "employee," because in our opinion they will destroy our status as independent contractors and make us employees.

Ever since logging started in the Northeast generations ago, it has been largely carried on by contractor loggers, large and small, as independent contractors. Frequently large contractors sublet some of their work to smaller contractors and, since the advent of trucks, practically all of us let our trucking to independent contracting truckers, sometimes owner-drivers, and sometimes driven by hired drivers. All of these contractors carry their own public-liability and property-damage insurance, and if they have help, pay social-security and unemployment taxes on them.

We are not talking about piece workers. We understand their status as employees.

Many successful operators have started as lumberjacks, accumulated a little money, become independent contractors in a small way, been successful, and grown and accumulated equipment, and eventually became large contractors in the true American manner. The removal of the incentive to become independent contractors, and the possibility of becoming employees, would be detrimental to the morale of many of the better woodsmen. It would be a blow at small business. It would eliminate the opportunity for more woodsmen and truckers to become independent businessmen and would be another step in the process of causing America to cease being a land of opportunity.

If we are forced to pay social-security taxes on our subcontractors and their employees, then our subcontractors and their employees must actually become our employees; otherwise we could not do it. And if they are our employees, then we must carry compensation insurance on them, and deduct withholding taxes and pay unemployment taxes, and we are responsible for their adherence to the wage-and-hour law, and we must inspect their records and supervise their bookkeeping. What they make or lose on their contracts with us is not our

affair and we have no right to know it, and what we make or lose o the contracts that we take from our principals is none of their co cern, and they have no right to ask us.

Seven or eight years ago, the Public Service Commission of Ne York State announced that they were going to regulate the trucke hauling forest products within the State. They held hearings lastin for weeks in Utica, Watertown, and several other cities convenientl located, and called in not only representatives of paper mills but th logging contractors and the truckers themselves. After sever months of weighing the evidence, the public service commission an nounced that the trucking of forest products within New York Stat could not be regulated, because the truckers were independent co tractors, and would in any event continue to truck what they wishe where they wished, and when they wished. Any attempt to gathe these independent contractors into one fold and make the parties fo whom they operate contribute social-security taxes for them will mee with the same results. The confusion and the violations will b unlimited.

Logging, whether saw timber or pulpwood, is seasonal and inte mittent. There is no control over the contractor, except inspectio There is no necessary regularity. Skill and experience are require Investment in trucks and their equipment is necessary. In all case profit is probable. But who knows or can even guess what weigh the Administrator will give to these facts. As a matter of economi reality an independent logging contractor is no more dependent upo the person from whom he takes a contract than any other contracto in any other line of business. They can take the contracts or leav them.

We are listed in the group which may or may not be included a employees. If we have to pay social-security taxes as self-employe we would much prefer to pay taxes 1½ times that paid by the em ployee rather than be classed as employees and lose our independence We do not want our books and records inspected by the several com panies from whom we take contracts, and we want to continue to be i position to take, and to let, such contracts as we choose, from any com pany that we choose, and as many as we choose.

Under the proposed law, our status would be too uncertain. W would never know when some Administrator might rule us employee and the risk of getting innocently into trouble would be great. W consider this bill just another step toward regimentation and social ization, and we have already taken too many steps in that direction

We feel that we and our subcontractors simply cannot properly b classed as employees because in fact we are not but are independen small-business men. The present administration has said much abou helping small business. Accordingly, we respectfully request that th Senate eliminate from the bill paragraphs 3 and 4 which are include for the sole purpose of making possible the forcing of independen businessmen out of business and into the category of dependen employees.

The CHAIRMAN. Are there any questions?

If not, we thank you very much, Mr. Johnston. We appreciat your being here.

Mr. JOHNSTON. Thank you.

The CHAIRMAN. Mr. C. S. Crosby, of Farmington, Maine.

STATEMENT OF C. S. CROSBY, FARMINGTON, MAINE

Mr. CROSBY. Mr. Chairman and members of the Senate Finance Committee, I am a small producer and buyer of wood, handling from 5,000 to 8,000 cords of pulpwood for the Brown Co. of Berlin, N. H., and 500 to 1,000 cords of veneer-grade hardwood for the Foster Manufacturing Co. of Strong, Maine. This wood is procured from 75 to 100 individuals as over 50 percent of all forest products produced for the consuming mills are produced by the small operator. The larger part of these 75 or more individuals is the farmer who lumbers a part of the season.

I, as a small producer, am very much concerned with the definition of "employee" contained in the Social Security Act amendments of 1949 (H. R. 6000). Subsection 4 of section 104 (a) of the act is a very broad definition of "employee." There are very few small producers of pulpwood but what three or four of the factors mentioned in subsection 4 would apply to them in some degree. The bearing of these several factors relative to the status of the individual is left entirely to the discretion of the Administrator. I believe that the definition should be clarified so that the individual can determine whether he is self-employed or an employee without taking the chances of being penalized because of some ruling made by the Administrator of the act with which the producer is not familiar.

I would like to take just a moment to tell you how we operate as I believe that will give you a better understanding of our problem.

Using my own case as an example, I take a contract from the consuming mill for a certain number of cords of different species of wood, then in turn buy small lots of 10 to 50 cords and subcontract for larger lots. The wood is contracted for at a price delivered roadside in some cases and in other cases priced delivered to the mill. It is rarely that I know the laborers on these various jobs as I see the wood only when it is piled on the roadside and ready for shipping; in fact, it would be impossible to visit 75 to 100 operations each week and keep track of the wages paid in each individual case. If these men are to be considered employees of mine, I could only purchase wood from the producer who had 500 or more cords per year, because I could not possibly check up on wages paid and profits made by a much larger number of smaller operators in order to make the necessary withholdings and tax payments.

This would leave the small-business man who employs from four to eight men without any market for his lumber. There are thousands of those men in the State of Maine and other New England States, and it would be a great hardship upon them. I believe that the mills would not purchase pulpwood from any of us as they would not take the risk of having us classed as their employees under this act, and because of the added expense of checking on the small operators which is estimated to cost at least $1 per cord, or 10 percent of the present cost of pulpwood on roadside. Therefore, these mills would produce their pulpwood with their own crews and generally on their own land or large tracts of land where they can purchase the stumpage. This will also leave the owner of small tracts of land without any chance of selling his stumpage.

The small-business man who employs four to eight men is very proud of his station in life and is usually the backbone of the rural

community in which he lives. Yet this act would appear to do away with him and the opportunity for a young man to go into business for himself except in some field that is exempt from the Social Security Act, such as the retail field.

I hope the common law definition that we now have for employees will remain as the definition to be used, thereby preserving the status of these small-businessmen.

There would be little difference in the amount of taxes received, as those who are not employees will be self-employed and as such will pay the social security tax.

Senator KERR. Do you think that it would be wise to include this group under the act, but classified as self-employed.

Mr. CROSBY. If you and the people want additional coverage of social security, I see no reason why self-employed should not pay the social security tax. Our main worry is the fact that we will lose our independence of being self-employed.

Senator KERR. I understand, and I share your concern in that, but I was interested to know what your opinion is with reference to the advisability of extending it to this group but with the classification of self-employed.

Mr. CROSBY. I think that that is all right.

Senator KERR. Thank you.

Mr. CROSBY. It will make more work for the Internal Revenue Department to handle the larger number of accounts, but I believe it is worth that added expense to preserve what I consider the backbone of the country, the small-business man.

There is an exemption clause to the wage-hour law for the producer of forest products who uses less than 12 men. But with the definition of "employee" in the Social Security Act, there would be no small operators, so it would appear that where the small-business man is to receive help on one hand, one the other he would lose everything and will have to try to find employment with the large mills. In many of our small communities a large percentage of the population is employed by the small-business men, employing less than 12 men, so it will mean these men will have to leave their families and go where the large concerns are operating or remain with their families and depend upon the Government for aid in getting a living. Either way is not pleasant for some people.

I know you gentlemen are going to give the Social Security Act in its entirely a great deal of thought for it is one of the most important pieces of legislation you will have to consider this session, and I hope that I have been able to give you a better idea of what the act means to the small fellow in the rural community.

I thank you gentlemen for your time.

Are there any questions?

The small-business men are paying the social security taxes on their employees. I think the most of us have little objection on the additional coverage of the act, but we do urge you gentlemen to preserve the status of the independent contractor and the opportunities for the small-business man.

Senator BREWSTER. These people you speak of, these 75 or 100, are mostly farmers who have some other activities as well?

Mr. CROSBY. Probably 95 percent of those people are farmers who lumber a part of the year. That is their way of maintaining a steady income throughout the year.

Senator BREWSTER. How is the cutting going on now?

Mr. CROSBY. At this present time it is improving. They are getting a fairly good cut at this time, and it would appear to continue good until summer.

Senator KERR. Do you think it would be a tragedy for a Federal agency to have the power to change your status from that of an independent operator that you have achieved for yourself, and automatically make you an employee which would put you under a situation that you neither asked for nor could survive under?

Mr. CROSBY. I do. I do not think that the mills can use all of us as employees. They have to concentrate their operations within an area where they have individual supervision.

Senator KERR. You do not want to be their employee?

Mr. CROSBY. I do not want to be, no, sir, and I do not intend to be.

The CHAIRMAN. Thank you very much.

Mr. CROSBY. Thank you.

The CHAIRMAN. Next we will hear from Mr. William S. Mundy, Jr., Lynchburg, Va.

STATEMENT OF WILLIAM S. MUNDY, JR., PRESIDENT, MUNDY & CO., INC., LYNCHBURG, VA.

Mr. MUNDY. I am William S. Mundy, Jr., of Lynchburg, Va. I am president of Mundy & Co., Inc., a very small corporation. As a matter of fact, in addition to its officers, it has only two employees. I am also an attorney at law, practicing in Lynchburg, and as such am familiar with the problems of a great many small-business men and different kinds of businesses. The kinds of small-business men who I think are the subject of so many benevolent general comments in the process of enacting legislation, but whose burdens resulting from the legislation actually enacted seem for some reason daily to increase more and more.

My remarks on the subject of this bill are not to be construed as reflecting a generally negative attitude. On the contrary, I am very much in favor of most of the objects of this legislation, and, in fact, I think that the coverage of the act should be extended even further than it is extended by the House bill.

I am opposing only the definition of the word "employee" as contained in these two subsections 104 (a) and 306 (a) of the bill. The opposition does not include or imply opposition to coverage for any single person. The issue of the propriety of extending social security coverage does not relate whatever in any way to the issue of the propriety of extending it by means of this definition.

These sections of the bill would enact a definition of the word "employee" different from its definition by the present law, and different from the definition of the word for the purposes of other laws. It would be a special definition for the sole and exclusive purpose of the Social Security Act. The employer-employee relation is a common and ordinary relation. It is a relation that exists on the one hand between large corporations and their numerous employees, and on

the other hand, it exists between many small employers who hav only one or two employees.

At one extreme, it is the relation to which a great corporation wit a large legal staff is a party, and at the other extreme there are man employers in this country, millions of them, who have no suc resources. There are quite a few employers in this country who ca neither read nor write.

Any uncertainty as to the meaning of the definition of the employe employee relationship will cause innumerable difficulties, econom consequences, causes of litigation and possibly, indeed probably, sul stantial penalties to be incurred by many persons who have acted i good faith and used their best efforts to comply with the requirement of the law.

The courts of the United States and of the United Kingdom hav taken several centuries, taking up one case at a time, studying it an listing it, considering its consequences, to evolve by processes of inclu sion and exclusion the common-law tests to determine whether or n a person is an employer or an employee. I would be less than fran to say that sometimes the application of the common-law tests t a particular factual situation is difficult. The reason is that th economic relations which may exist between two persons, particularl in the case of small businesses, vary in different patterns, so numerou as to frustrate all efforts to classify them completely. The difficult inherent in applying any test or definition of the employer-employe relation to the facts results from the variety of these patterns in th actually existing facts, and this difficulty will exist whether the te or definition to be applied is the common-law definition or a statutor definition as is attempted in this bill.

One of the principal objections to any statutory definition of th word "employee," be it good or bad, differing from the common-la definition, is the fact that the common-law definition has been applie by the courts in thousands of cases which now constitute precedent for determination of questions that arise. So many cases have bee decided under the common-law definition that the average small-bus ness man has a general understanding as to who is and who is n his employee, although he may at the same time have some difficult in applying this definition to an unusual or difficult set of facts.

There perhaps would be some justification for a statutory definitio of the relation if the statutory definition were in terms more definit and certain in application than the common-law definition. But th is not true of the definition in these two subsections. As a matter fact, to paraphrase a well-known quotation, it is as if to make uncer tainty doubly uncertain.

The language of the two sections is more vague and uncertain tha the terms of the common-law definition. The elements mentioned i this statutory definition are in a large measure the same often referre to by the courts in discussing and applying the common-law definitio But presumably these elements were intended to have a different mea ing or effect in the statutory definition. The courts could hardly a sume that the elements of this statutory definition are to be given th same meaning and effect as in the common-law definition, for if thi were the correct construction there would be no legislative purpose i enacting the definition.

If these elements of the statutory definition are to have a different meaning and effect from their meaning and effect in discussion of the common-law definition, what is that meaning? The definition provides that the relation is to be determined—

> * * * by the combined effects of—
> (A) control over the individual,
> (B) permanency of the relationship,
> (C) regularity and frequency of performance of the service,
> (D) integration of the individual's work in the business to which he renders service,
> (E) lack of skill required of the individual,
> (F) lack of investment by the individual in facilities for work, and
> (G) lack of opportunities of the individual for profit or loss.

Assuming that these elements must be given some meaning or effect other than their meaning and effect when in discussion of the common-law definition, what meaning and effect do they have? I seriously doubt that the draftsmen of these sections themselves could tell us what it is. How often is frequent? How long is permanent? How much lack of skill is involved? In this definition there are untold opportunities for the Supreme Court to divide 5 to 4 and with every justification for doing so.

If the elements of this defintion are to be given meaning and effect different from the definition at common law, it will take many years of litigation to make the new statutory definition attain the degree of certainty already attained by the common-law definition. The average small-business man cannot afford to litigate such matters with his Government. The cost of litigation apparently means little to a Government department or agency determined to settle an issue in the courts, but pulpwood dealers, producers and other small-business men cannot generally afford to engage in such litigation. The uncertainties created by the statutory definition will in effect leave such small-business men at the mercy of enforcement officers. If legislation is enacted with such vagueness and uncertainty, imposing substantial penalties, and operating retroactively after judicial interpretation, the average small-business man will have no choice except to settle for as little as possible, if a claim is made against him.

Let us assume for a moment that the statutory definition is enacted and is finally clarified by judicial interpretation to the point at which it is possible to determine who constitutes the presently unknown class of persons not included in the common-law definition, but included in the statutory definition.

Let us assume this class includes a pulpwood producer from whom another has been buying pulpwood over a period of years at a price per cord. How is anyone to determine the amount of remuneration or compensation on which the tax is to be paid? Presumably the tax relates only to compensation or remuneration for personal services and not to the gross sales price which includes cost of the timber and production and delivery costs. Where the trade is conducted on the basis of sale at a price, that is per unit, the purchaser has no record of the costs and expenses of the seller, even though the statutory definition may have made the seller an employee for purposes of the tax.

If this definition is enacted and so construed, there seems to be no means of ascertaining the facts necessary to compute the tax unless

the buyer terminates the independent character of the seller's operation and puts the seller on his pay roll.

The possibility that the independence and opportunity of many small operators may be terminated in this manner is causing grave concern among pulpwood dealers, producers, and truckers.

In addition to the inherent unsoundness of this particular statutory definition, the small-business man will be gravely affected by the legislative policy involved in the defining of a common and ordinary relation, such as employer and employee, in one way for the purpose, for one purpose, and in another way for the purposes of other statutes.

If the Social Security Act is to have a definition of this relation for the separate purposes, the same policy would permit different definitions of the same relation for various other acts. If the policy is pursued in other legislation, two persons attempting to ascertain the relation between them could find that one is an employee for the purposes of the Social Security Act, but not for the purpose of the Fair Labor Standards Act, that he is an employee for the purposes of the withholding provisions of the Internal Revenue Code, but that he is not for the purposes of the National Labor Relations Act, and that he is an employee for one purpose but not for another, and so on ad infinitum, and at the same time for the purposes of contract and tort liabilities, and for provisions of adequate insurance coverage, the standards for determination of their relation could be entirely different from any of those in the cases mentioned.

It is impractical to expect even the most astute businessman to say nothing of the average operator of a small business to know from day to day who his employees are and who are not and to perform his duties as required by law if the statutes are to define employee in one way for one purpose and in other ways for other purposes.

It is obvious that if laws are to be observed, they must first be laws which will allow the people a reasonable opportunity to learn and to know what their duties and obligations are. The people cannot as a practical matter have this opportunity if Federal legislation is to be further and unnecessarily complicated by defining a common ordinary relation, such as employer and employee, in numerous different ways for numerous different purposes.

None of these considerations implies opposition to social-security coverage for any person who would be included in the definition of employee as contained in the House bill, but who would not be included as an employee by common-law standards. The issue is not whether such a person should be covered by the Social Security Act, but is whether he should be covered as a self-employed person or as the employee of another.

If it is regarded as desirable to bring such persons within the coverage of the act, they should be covered as self-employed persons and not by any illogical and impractical corruption of the definition of a common and ordinary relation, to the further confusion and burden of those who are attempting to do business under our already complicated laws.

If the Congress, contrary to our expectations and belief, should be willing to impose further burdens and uncertainties upon small-business men for no greater purpose than is involved in this definition, it would be not difficult to foresee the day when the truly small-busines

man is completely bound by governmental regulations, gagged with administrative rulings, weighted down with official forms, and drowned in the muck of bureaucracy.

The CHAIRMAN. Thank you very much.

Mr. MUNDY. Thank you.

The CHAIRMAN. Mr. Cloyd Taylor. Identify yourself for the record.

STATEMENT OF I. CLOYD TAYLOR, SHADE GAP, PA.

Mr. TAYLOR. My name is Cloyd Taylor of Shade Gap, Pa. I have prepared a short statement that is along the lines of the other statements you have already heard. I am not going to read it. I just want to say that I am in the lumber business.

The CHAIRMAN. You may put your statement in the record if you wish.

Mr. TAYLOR. Thank you.

(The statement referred to follows:)

STATEMENT OF I. CLOYD TAYLOR, SHADE GAP, PA.

My name is I. Cloyd Taylor. I live up in the mountains of Pennsylvania and speak for the group of interested pulpwood dealers, producers, and small-business men operating in southern tier counties of that State. I am in the lumber business, oversee the operation of a farm, and have been a supplier of pulpwood for the past 25 years. Ninety percent of our pulpwood comes from farms, manufactured and delivered to the mill by farmers, their sons, or labor employed on the farm. We have, of course, independent truckers who haul a small percentage of the wood to the mill and occasionally bring back a load of coal or other products. This might be fertilizer, lime, feed, etc. These same truckers haul lumber to the coal fields and wood to the several wood-consuming companies. Under the proposed definition of "employee" it would be difficult to ascertain who is the employee and employer.

Under the new definition of "employee," he could be employed by all these people. Many of the small lumber producers purchase stumpage from the farmers and, in turn, the farmer might even cut the logs. Does this make the farmer an employe of the sawmill operator? Of course, it doesn't in fact, but with the proposed definition, the Administrator could say it does.

Under the present law, the definition of "employee" for social-security purposes is especially important in determining who is and who is not covered, but this problem is eliminated by the provisions of H. R. 6000 by extending coverage to self-employed, as well as to employees. It would appear that the purpose of defining "employee" as proposed is to cause payment of a higher tax. It certainly won't add a single person to the benefit rolls.

It seems to me the Congressmen were right when they said on page 162 of the report:

"Paragraph (4) serves no social purpose. Instead it leaves the status of millions of our citizens to the almost unbridled exercise of administrative descretion and does so just at a time when they must for the first time determine at their peril whether they are to be covered as employees or as self-employed. It will result in the unsettling of many established business practices and produce endless costly litigation. Its adoption is a shameful departure from the constitutional division of powers among the three branches of government and marks the surrender by the Congress of its prerogative and duty to define tax liability."

The statement that the definition will result in the unsettling of many established business practices means, when you get right down to cases, that I am out of business. Nobody can afford to do business without any idea of what his tax liabilities are, so buyers of wood just won't do business with people like me. In order to know where they stand, and not be in position to get stuck years later with taxes, fines, and penalties for guessing wrong, they will have to produce their wood with their own employees. That means that a lot of people who are now small independent businessmen working for themselves and liking it,

are going to have to go to work for somebody else and not like it. They are going to like it any better than you would.

If the definition of "employee" now appearing in H. R. 6000 is retained, it v greatly retard the growing and conservation of timber in the North by sm landowners in that they will have less opportunity to dispose of their timl growth at a reasonable profit.

I sincerely believe that there would be so much confusion under the propo definition of "employee" that small-business men would not know what to do.

Mr. TAYLOR. I just want to say that I am in the lumber busine and oversee the operations of a farm, and have been a supplier pulpwood for the past 25 years.

Ninety percent of our wood comes from farms, manufactured a delivered to the mill by farmers. Their sons labor and are employ on the farm. We have independent truckers who haul a small pe centage of this to the mill and occasionally bring back a load of co or other products. It might be fertilizer, lime, feed, and so forth. T same trucks haul lumber to the coal fields, and wood to several woo consuming mills. Under the proposed definition of "employee" this bill, H. R. 6000, it would be difficult to ascertain who is the e ployee and the employer.

I am greatly concerned as to the effect and outcome of our busin if this proposed definition were to be retained and become law.

That is all I have, Mr. Chairman.

The CHAIRMAN. Thank you very much, sir.

Mr. TAYLOR. Thank you, sir.

Senator MARTIN. Do you have any idea how many men are co ducting businesses in Pennsylvania similar to your own?

Mr. TAYLOR. In Pennsylvania. I would have to make a guess. would say 75. You mean pulpwood suppliers?

Senator MARTIN. I am getting at the ones that supply pulpwoo wood for chemical plants and pit posts for the mines, and things that kind, if you have knowledge of that.

Mr. TAYLOR. We are out of the chemical section, and we have fe pit posts, but very few, and most of the products there are used f lumber and pulpwood in our section. Our operations, I might sa are all small, from one to three men operations. We do not have a large ones.

Senator MARTIN. A great number of you also operate small farm

Mr. TAYLOR. Yes.

Senator MARTIN. You are primarily farmers and then you do th cutting of pulpwood and things of that kind to supplement your far work?

Mr. TAYLOR. That is correct. I think 90 percent, as I mentione here, is a conservative figure of the wood that they get comes off t farm. I would rather think it would reach 95 percent.

The CHAIRMAN. Thank you very much for your appearance.

Mr. TAYLOR. Thank you.

The CHAIRMAN. We will next hear from Mr. Stallworth.

Representative BOYKIN. I would like to tell you a word or two abo this gentleman who will speak to you now. He and I were born a raised in the same little town, Fairfood, Ala. His father gave m my first job at 35 cents a day. That is a long time ago, before he w born. I was in this business, and his father was, too, and he h come right along on it. He is one of the finest human beings I ha

ever known in my life. He understands this bill, and he tells me unless we get some relief, they will be absolutely out of business. They run a tremendous business, little ones and big ones, not only in the pulpwood business, but they are in the turpentine business, and you know more about that than anybody, because your State has 54 percent of all that produced in this country. They have two automobile businesses. They have a splendid pulpwood business. We used to have to throw away our pulpwood. We had not place for it to go, just the top of the trees. He does business with all the pulpwood people in that country. I just wanted you really to truly know about this particular boy. He is a man, but to me he is just a boy. I appreciate any consideration you may give.

The CHAIRMAN. We are very glad to hear him.

STATEMENT OF M. C. STALLWORTH, JR., VINEGAR BEND, ALA.

Mr. STALLWORTH. My name is M. C. Stallworth, Jr. My business includes the buying of pulpwood, generally from producers or farmers, and the selling of this pulpwood to paper mills. As such I guess I would be considered a dealer in pulpwood. I live in Washington County, Ala. This county until recently did not have an incorporated town within its boundaries. A few years back it was estimated that this county was supported 90 percent by forest products and 10 percent by annual agriculture and livestock.

I started here as an individual, and after it was known that I was coming, I was contacted either personally or by mail by some 75 other producers and dealers who asked me to represent them at this hearing.

The CHAIRMAN. All engaged in this work?

Mr. STALLWORTH. All engaged in the production of pulpwood either as dealers, producers, or contractors.

I am not an economist. I am not familiar with the national social-security problems that your committee is working on. I do not know how much is collected each year in social-security taxes. I do not know whether enough is collected or can be collected to carry out the program of benefits that is now being urged. I do not know whether it is wise to collect social-security taxes based upon the wages of workers for the old-age benefit of these workers when these taxes are really paid for in the price paid by consumers of the paper or other finished products finally produced. It may well be that the buyer of the paper who indirectly pays those taxes is the one who should be given the social-security benefits. Presumably, one reason that the buyers of the finished products are not asked to pay these taxes directly is because they are not in a position to know the number of workers or amount of wages upon which the taxes are based. I believe that we dealers would have a similar problem if the proposed new definition of employee contained in H. R. 6000 is adopted.

As I understand the bill which you are now considering it is intended to collect social-security taxes from various groups of persons.

The self-employed person is to pay social-security taxes out of his earnings for his old-age benefits. The common law employee and his employer are to pay social-security taxes at rates based upon the earnings of the employee for the old-age benefit of the employee. In each

of these situations the taxes are to be paid by persons who know number of employees involved and the amount of wages paid. Th is consequently no uncertainty as to who is the taxpayer and as to amount of tax to be paid with respect to these groups. My conc is with that indefinite, vague, and uncertain group of persons ot than common-law employees which subdivisions of section 104 (a) a section 206 (a) of the bill seek to classify as employees.

As I understand the bill, these persons would be considered s employed and covered, as such, under the bill if the bill did not ar trarily treat them as employees under the proposed new definition employee. By arbitrarily including them as employees they then excluded from the self-employed group. The exclusion of th persons from the self-employed group after having classified th as employees is provided for by the proposed amended section 211 of the Social Security Act and the proposed amended section 1641 of the Internal Revenue Code.

I do not urge that these persons be excluded from coverage. I o urge that if they are to be covered they be covered as self-emplo persons in cases where they are not, in fact, employees of any one

The reasons why so many of the pulpwood dealers like myself persons in cases where they are not, in fact, employees of anyo lowing:

First, the bill makes the employer of this uncertain and indefi class of persons responsible for withholding, making returns, a paying taxes. In making the definition of employee so uncertain, bill necessarily makes it uncertain as to who is the taxpayer. Th have been many cases, I would like to add, where the man in the wo who has no opportunity to keep up with these rulings has b pounced on by changed rulings by uncouth field men and penali in various ways, and we have no way as laymen out in the wo of keeping up with all of these changed rulings. We just are l at their mercy to find out later, after we have violated some law, as whether or not we were on the right track.

There are probably well over 60,000 persons employed in the pu wood industry in the South. We dealers ordinarily acquire pu wood from producers and farmers. There are probably some five seven thousand producers in the South each of whom has his o crews and supplies the pulpwood to one or more dealers. We deal in turn sell the pulpwood to one or more paper companies.

We pulpwood dealers will not know until such time as the Treas Department, the Social Security Administrator, and the courts t us whether we are employers for the purposes of social-security ta of all or some of these five to seven thousand producers and th 60,000 or more employees, contractors, and subcontractors. The ministrative agencies and the courts will have to determine whet our relationship in each particular case is of such a permanent natu or has such regularity, or whether the business of these producers so integrated with our business, or these producers are so lacking skill or investment or opportunity for profit and loss, as to ma us the employers for the purposes of social-security taxes.

Second, the final ruling with respect to each particular situati will depend upon the vague factors set forth in the proposed definiti The enforcement agencies can under the proposed definition probat

assert liability for social security taxes, in some situations at least, against a paper company, a dealer, a producer, a contractor, or a subcontractor. This leaves us all in a situation that is certainly not to be desired. This is particularly true when the failure of any of these people to guess what the final conclusion of the enforcement agencies may be can cause these people to incur not only large fines, but perhaps even jail sentences.

Third, it might be urged that we should play safe. Even if we dealers could withhold and pay social security taxes against the earnings of the producers and the wages of the workers, it may well be that the producer will later be found to be an employer and himself a self-employed person. He would then not have been paying the proper amount of taxes or filing the proper returns. We would presumably then be required to reimburse him for the taxes withheld and turned over by us to the Government.

Fourth, if dealers are to be considered the employers of the producers, their contractors and subcontractors, and the employees of each of them for the purposes of social security taxes, I do not see how we could make up the necessary tax returns.

I have tried to figure out how this could possibly be done. In many cases we have no contract with the producer until he and his crew have cut the wood. At the time it is cut, the producer may not know where he is going to sell it. He may ultimately sell part of it to one dealer and part to another. Even if he were supposed to advice us of the amount of his earnings, the wages of his employees, the earnings of his contractors and subcontractors, and the wages of their employees, the date for our filing of returns may have passed by the time we decided to purchase the wood, and furthermore, he certainly cannot tell us which persons worked upon that part of the wood he purchased, and which persons worker on that part of the wood he sold to other dealers.

Fifth, if the mills are to be made the employers of the dealers, producers, contractors, subcontractors, and of the workers employed by each of them, I have an even more serious objection to the proposal. If such is the case, I will have lost my business and the chance to carry on the kind of work I have spent my life learning. The reason I chose to be a pulpwood dealer of all of the professions or the occupations that I have followed is because I could work as a free American citizen where I wanted to and when I wanted to and as long as I wanted to, and not have to punch a clock and be directed and redirected by some large corporation or some employer who I did not want to work for.

I chose this method to better my condition. My father only went to the fourth grade in school, and he progressed rapidly. He is still living. I think you know him, Senator George.

The CHAIRMAN. Yes, I do.

Mr. STALLWORTH. I have followed with him, and we have followed that pursuit all of our lives, and I do not intend to become the employee of the paper mill or any other concern, because if it comes to that, then that means that I get out.

Sixth, to the extent that the mills are required under this proposed definition of employee to recognize dealers, producers, contractors, subcontractors, and the workers under them as employees of the mills

for the purposes of social security taxes, it is my considered judgm that they could not take on this responsibility without making th persons their employees for all other purposes. They could not und take the social security tax responsibilities without sooner or la taking the responsibility for wages and hours, workmen's compen tion, labor relations, unemployment insurance, income tax withho ing and tort liability.

I have no official information but I have rather direct informati that a case in Florida was decided by a jury because a dealer w keeping up with the social security taxes, as a matter of accommodati to one of his producers who was not qualified in an educational w to do it. They proved he had been keeping it up and paying it him. It was a deciding point of judgment against this dealer-opera for a tort liability. And that is just carrying out some of these fe that I have.

In such a picture, we dealers and the producers would have no pla Operations carried on by mills are generally mass-production affa Small lots are passed by. The farmer's wood lot and the tree farm comparatively small stand of pulpwood, now playing such an i portant part in the aggregate in the reforestation program in t South, will lose a great deal of their attraction. The mills will n be as anxious to acquire this wood either directly or indirectly throu dealers and producers as they are now. Neither the mill nor t dealers can afford to take this pulpwood if along with the wood th must purchase some uncertain possible liability for social secur taxes upon some unknown and indefinite workers.

My only request to this committee is that if it decides that all these persons now covered by the bill, either as self-employed or as t comon-law employees, are to be covered, the committee cover them their true categories and not by arbitrarily defining them to be son thing that they are not. The changed definition set forth in the b now pending before you does not extend coverage to persons not ready covered by other portions of the bill. It is my firm belief th the proposed definition will (1) create confusion, expensive litigati and possibly unfair and exhorbitant penalties; (2) change tradition relationships and methods of harvesting pulpwood in the South; (have a detrimental effect upon the presently expanding reforestati program being developed with considerable success on small tree far in the South; (4) drive many small independent businessmen out business; and (5) place in the hands of administrative agencies opportunity to use such wide discretion in administering the law as constitute the surrender by Congress of its true legislative authority administrative agencies.

I would like to add one thing there, Mr. Chairman, if you plea I am, as Congressman Boykin said, in the naval stores business. am on the board of directors of the American Turpentine Farme Association and work very closely with Judge Lansdale and M Newton and Mr. Broughton. I have heard nothing concerning th from them. I assume that the reason is because the producing, ha vesting, and gathering of naval stores products does not come und coverage, so they have enough to do without looking for somethin But upon reading this, and studying it, knowing the methods procuring gum for our central stills, and the methods of procuri

pulpwood for the paper mills, there is a vast similarity of conditions in many cases and if these definitions should stand, the Administrator could make us dealers and producers employees of the paper mill. There are many cases of naval stores producers who could be in my opinion made employees of the central stills. Where you would get with an employee in an uncovered field being the employee of an employer in a covered field, I do not know.

The CHAIRMAN. I had some misgivings myself, Mr. Stallworth, that under the system now of distilling turpentine and resin through your central stills, it might be quite possible that this definition could be extended to the operator who is not under social security, who is expressly taken out because he is classified as a farmer. But of course the central still is under social security, under wage-hour, and nearly all gum turpentine now is handled through the central stills, is it not?

Mr. STALLWORTH. A very large percentage of it.

Mr. STALLWORTH. A very large percentage of it.

The CHAIRMAN. The old-fashioned individual still by the operator has gone out, and he carries his products many long miles to the central still, is that not correct?

Mr. STALLWORTH. Yes, sir.

The CHAIRMAN. I am not sure that you are correct in that, but I do think that there is some basis for apprehension that you might have that very awkward situation of bringing in employees of operators who themselves are not under social security, because they are exempted for other reasons, and yet if they could be held to the employees of the central still to whom they delivered the gum—they get their pay from them, right there by the unit that they carry in, do they not?

Mr. STALLWORTH. Yes, sir; that is right.

The CHAIRMAN. That is a situation that would destroy the whole naval-stores business as we now operate it.

Mr. STALLWORTH. Yes, sir.

The CHAIRMAN. We are certainly very glad to have you here before the committee.

Are there any questions?

If not, we thank you very much.

Mr. STALLWORTH. Thank you.

The CHAIRMAN. We have only three other witnesses. I do not think their testimony is very long, and we may finish soon. Mr. E. C. Wall, of Conway, S. C.

STATEMENT OF E. C. WALL, PRESIDENT, CANAL WOOD CORP., CONWAY, S. C., READ BY N. W. COX

Mr. COX. Mr. Chairman, I would like to say that my name is N. W. Cox from Conway, S. C., and I am here on behalf of Mr. Wall because of illness.

The CHAIRMAN. You are substituting for him?

Mr. COX. We are associated in the same business. He has asked that I present his statement before the committee.

The CHAIRMAN. Very well. You wish to read it or have it incorporated in the record?

Mr. COX. I wish to read it.

My name is E. C. Wall of Conway, S. C., representing several companies dealing in forest products. We operate in the Carolinas and are primarily engaged in buying and selling pulpwood.

During the year 1949 we bought over 324,000 cords of pulpwood from 392 different producers, who directly employed about 3,100 workers. Our product was sold to seven different paper mills located in Virginia, North Carolina, South Carolina, and Georgia.

Many of these individual producers depend entirely on the sale of pulpwood for their sole income. Under this business arrangement, that of individual proprietorship, these men have become successful, small, independent businessmen, enjoying basic American rights with opportunity and the incentive to own and conduct their own business for profit. A typical example is an operator who owns one 2-ton truck, employing 6 workers besides himself, and producing about 1,500 cords of wood annually from trees on his own land, or buying the timber from his neighbors and others. From the proceeds of the sale of this wood, he pays for timber, stumpage, truck operation, and depreciation, labor, social security, unemployment, and other taxes, leaving him a net return of from $2,500 to $3,000 a year. Any legislation or interpretation thereof tending to eliminate or interfere with this little fellow's business structure would serve to undermine our country's basic economy.

The social-security bill, H. R. 6000, as passed by the House of Representatives and now before your honorable committee contains a definition of "employee" which, if approved by Congress, would serve to entirely destroy thousands of these small businesses dealing in forest products, as well as deprive many landowners from disposing of their timber profitably.

We have the following objections to this H. R. 6000 as now written:

1. Under current various legal interpretations and by the authority of court rulings a citizen has a reasonably clear understanding as to who is an employee under existing social-security laws. The new definition would create widespread confusion and indefiniteness and leave too much discretion to the administrator of a Government agency.

2. It would be inequitable to require a forest products dealer to collect and pay social-security taxes on unknown individuals, naming the amount of wages received, or even the basis of employment. Meticulous records would be required concerning persons having no relationship to a company according to logical standards. In the case of the group of dealer companies I represent, after first having computed in some unexplained manner the portion of the money paid by us to each producer, that is, in fact, remuneration to the producer for his services and not reimbursement of his expenses, this would require that we collect and pay social-security taxes upon 392 producers. We would then be required in some unexplained manner to determine the amount of wages paid by the producers to each of the estimated 3,100 workers.

3. The injustices and hardships resulting from adoption of the bill would become apparent when the dealers, or even the eventual consumer, would be required to consider as an employee about every person who even touched the product. The control and meticulous checking of the producers' records by dealers and eventually consumers that

would necessarily be required for social-security-tax purposes, if the proposed new definition of "empiloyee" is adopted, can hardly help but lead to an employer-employee relationship between dealers or consumers on the one hand, and producers and their employees on the other under wage-and-hour, workmen's compensation, national-labor-relations and income-tax laws. Finally, my company or the ultimate consumer would be held liable for all accidents occurring to every worker, as well as being legally responsible for acts of negligence on his part. In many cases it may not, at the time of the accident, even be known whether my company is going to purchase and sell the wood being produced, or to what consumer it is ultimately going to be sold.

Such situations illustrate the absurdities to which the proposed new definition can lead. Like thousands of other firms in the United States, we have grown from a small unit into a successful enterprise with substantial investments in timber and equipment, under the assurance as citizens we would continue as independent operators. We do not choose to liquidate at a tremendous sacrifice which we consider would inevitably follow if the proposed definition of an employee be retained. We are afraid that big industries would take over the function of firms such as ours or they would exercise such control over the details of our business that we could no longer feel or act independently. They would not do it because they want to, but because as a practical matter you made them. How in the world do you think any company can withhold wages from someone to whom they pay no wages? How can any company make a tax return on wages paid by somebody else to hundreds, or even thousands, of people it never heard of? Obviously, if you are going to hang the responsibility of an employer on someone, he must in fact became an employer, and his new employees will be little-business men you people in Congress put out of business.

We sincerely urge your committee to retain the interpretation of "employee" as defined in Public Law 642 under which we now carry on our business.

The CHAIRMAN. We thank you, sir, very much.

Representative BOYKIN. Judge Ben Turner is here, and he has some time tomorrow and so does Mr. Smith, from South Carolina, but they want to give it over to Mr. Wilcox, knowing that all of these people have some things that they want to get in the record, and I imagine you will let anybody that wants to put their statements in the record.

These two men would like to get out of the way and let the other ones have it, if it would suit you all, because it is so important that Mr. Wilcox speak, because they figure his is very important.

The CHAIRMAN. We will do so, and will put any statement in the record, any brief that is desired. Thank you very much.

Next is Mr. Turnell of Madison, Ga.

STATEMENT OF R. M. TURNELL, FARMER AND PULPWOOD DEALER, MADISON, GA.

Mr. TURNELL. My name is R. M. Turnell. I am a farmer and pulpwood dealer operating in the middle Piedmont section of Georgia.

In our locality during the past 5 years, the Soil Conservation Service, the Extension Service, and the Forestry Department have put

on an intensive campaign to replant pine trees on all of our submarginal lands in order to replace the timber which has been and is being cut. Small property owners and farmers have taken advantage of this program to plant their own wood lots so that they might timber-farm as a diversification measure and at the same time utilize the parts of their land which have hitherto been nonproductive.

During this same period, conservation-cutting and fire-control methods have been practiced so that at the present time a large portion of all pulpwood produced in this section is furnished to dealers, such as myself, from small timber owners and farmers who would not otherwise have a market for their product. These farmers produce with their own labor and market pulpwood through myself and a number of independent dealers who operate in the territory.

In a growing number of instances, the property owners are salvaging tops from the sale of saw timber and working it up into pulpwood. This wood would otherwise be waste.

We independent wood dealers, generally, are residents and property owners of the communities which produce this wood and have taken an active part in the furtherance of the above programs. We feel that we are much better prepared to carry on this practice as independent dealers than as direct employees of the industry to whom we in turn sell the wood.

It is our belief that our market for these products would be cut off if the provisions of House bill 6000 governing employees are passed. The mills to whom we sell would not know our status. We would not know our status. The small wood-lot owners and farmers would not know their own status under the bill, and in all probability would be unable to sell their wood. If the mills were made responsible for social-security taxes with respect to us dealers, the wood-lot owners and farmers and their employees, they would be unwilling to accept the responsibility without supervising the work and thus becoming employers for all other purposes. The costs of such supervision would not warrant their harvesting from these small areas. We certainly cannot deal in the wood if the mills cannot buy it without buying a possible liability for social-security taxes.

I do not, and I do not believe that a great many others, oppose the extended Social Security Act, as such, but the definition of "employee," as proposed is such that it is entirely possible that anyone who works in the industry in any capacity, may be classified for social-security purposes as an employee for the final consuming mill. If this is done, the amount of wood produced from the small landowner and farmer will necessarily have to be curtailed, as the mills will secure the supplies of raw material from their own timberlands and from larger tracts and with employees over whom they have direct control.

It is only in the past few years that landowners and farmers, and by that I mean small-acreage owners, have realized the necessity of diversification and conservation. The wood business has grown up in the South over a period of the past 20 years and has done much to supplement the income of farmers and others who are actively engaged in the business.

We ask that you gentlemen protect us by placing a definite and simple definition of "employee" in the bill so that we might preserve our status as independent businessmen.

The CHAIRMAN. Mr. Turnell, has it not been your observation in Georgia, at least, that these independent businessmen who do have the crew of hands working under them or who themselves buy from others who are operating, have been the primary force in the state that has induced our people to replant their lands, reforest their acreage suitable for pine production and other wood production?

Mr. TURNELL. I certainly do believe that.

The CHAIRMAN. In other words, without their active participation our forestry in the State would have been very much further back than it is at this time, is not that true?

Mr. TURNELL. There is no doubt about that.

The CHAIRMAN. And as you and I know from our own experience and observation, if the dealer is to become, for instance, the employee of Union Paper Bag or any other paper mill, why, the mill must of necessity simply change the status of the dealer into that of a straight employee in order to protect itself. It could not do it otherwise, could it?

Mr. TURNELL. That is correct.

The CHAIRMAN. Our programs could not, our business could not be carried on otherwise, and would not be carried on otherwise.

Are there any further questions?

Senator MARTIN. As I understand it, it would just result in the big corporations taking the whole thing over and then they would go to large centers where there is an enormous acreage of timber, and it would absolutely wipe out these others.

The CHAIRMAN. It would wipe out the small dealer now who operates on small tracts, small acreage, wood lots, so to speak, of the farmer, because if the Union Bag or any others, I am simply using that name as an illustration, if they had to convert you and many of your neighbors in middle George, or through the southern end of the State, and even in north Georgia, into employees, even if you were willing to accept that employment, why, they could not profitably carry on except on big operations and big concentrations where they could reduce the number of employees that they would have to take over if they carried on the same operation that is now carried on; that is correct, is it not?

Mr. TURNELL. That is correct, sir.

The CHAIRMAN. Mr. Turnell, we are very glad to have you, sir, very glad to have your contribution.

Now, Mr. Wilcox.

Mr. TURNER. There was confusion. What Mr. Wilcox would prefer to do is to go over to tomorrow. He really has a rather long and comprehensive statement.

The CHAIRMAN. We will have some ahead of him tomorrow, but we will be glad to get to him tomorrow; is that all right?

Mr. TURNER. That is all right.

The CHAIRMAN. I believe that completes the list for today. We will carry Mr. Wilcox over to tomorrow.

(At 1:10 p. m., the committee recessed, to reconvene Tuesday, March 14, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

TUESDAY, MARCH 14, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Hon. Walter F. George (chairman) presiding.

Present: Senators George, Lucas, Hoey, Kerr, Myers, Millikin, Butler, and Martin.

Present also: Senator Stennis, Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

Mr. Reporter, please insert this letter in the hearings of the morning, by Senator Burnet R. Maybank, of South Carolina, who expresses an interest in the appearance made here by witnesses from his State, and also an amendment to section 4 of subsection 210 of H. R. 6000.

(The letter referred to follows:)

UNITED STATES SENATE,
March 13, 1950.

Hon. WALTER GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR: Last January I discussed with you a certain section of House bill 6000 and again today.

I have a large number of constituents in South Carolina whose business will be adversely affected if section 4 of subsection 210, page 51, becomes a law. It will adversely affect, as I am reliably told, many small industries.

You have been good enough to hear these witnesses and I am merely writing you this letter to express my feelings.

With kindest regards, I am

Sincerely yours,

BURNET R. MAYBANK.

Senator STENNIS. Mr. Chairman, may I just say a word because I am going to have to leave.

The CHAIRMAN. Of course, Senator.

Senator STENNIS. Mr. Chairman, I am not appearing before your subcommittee this morning, but I am intensely interested in H. R. 6000 and the problems that it presents in connection with industries from my area. I am very glad to be here this morning with two of your witnesses, Mr. Wilcox, of Laurel, Miss., and Mr. A. K. Dexter, president of the Mississippi Forestry and Chemurgic Association, Inc., Jackson, Miss.

I wish I could stay in order that I may hear these gentlemen, but I feel they will have a fine contribution to make to your committee.

60805—50—pt. 3——43

The CHAIRMAN. Senator Stennis, we are glad to have your appearance. Mr. Wilcox and Mr. Dexter are both listed for the morning, and I am sure that they will be heard either this morning or at some time during the day.

Senator STENNIS. Thank you, Mr. Chairman. I might add that I am going to hear some of the testimony myself.

The CHAIRMAN. Thank you very much, Senator.

Congressman Morris, you may proceed now if you are ready.

STATEMENT OF HON. TOBY MORRIS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OKLAHOMA

Representative MORRIS. Mr. Chairman and gentlemen of the committee, the clerk advised me that I might have about 10 minutes' time this morning, and I think I can present this statement in about that time.

My name is Toby Morris, Congressman from Oklahoma.

I am deeply interested in the subject of social security and old-age pensions. It is, therefore, a great pleasure to me to know that your honorable committee is giving time for thorough consideration of this subject. It is also a pleasure to present to you some observations I have made to the House of Representatives and also publicly with regard to this matter generally, and to the matter of better security for our aged citizens particularly.

My interest in this subject goes back even much further than my tenure as a Member of Congress. For many years, the great need for an adequate and dependable income for aged people, and what it would mean to all citizens, has impressed my mind and heart. I am also of the opinion that an adequate, regular, dependable income to our retired elder citizens will constitute a well distributed buying power in this segment of our population that will be a factor in maintaining our high level of national income which is so important to our national economy. If it is possible for our citizens to retire on a reasonable pension at retirement age, job opportunities will be open to younger people, the responsibility of supporting parents on the part of children will be obviated, and the entire population will benefit.

While our present legislation, in effect, is not adequately meeting the great needs of our people, the provisions that have been made, are truly a great help. Much good has been accomplished. In many cases, dire suffering and want has been alleviated. Perhaps the dollars that the Congress has made available through old-age assistance have gone as far toward meeting dire needs of many helpless and deserving citizens, as any appropriations that have been made. I want to be understood as in no way attacking or decrying the good work that has been accomplished in this field.

Our present legislation falls far short of taking care of the great needs for adequate security for our elder citizens. Many who badly need regular incomes, and who are of retirement age, are not included. Neither is it possible for them to qualify under our present laws. Great inequities exist in the operation of our present system. Different, and in fact, greatly varying payments are being made to recipients in our States. Hardly do we find the same payments, month by month, in any two of our States. Moreover, we also find that the

payments may vary in different parts of the same State. These inequalities should have our careful consideration. I wonder if Members of the Congress have stopped to consider the actual conditions with regard to the operations of our present system. Let me illustrate:

Under our present Federal laws, and under "Old-age assistance," as shown by the report of the Federal Security Agency, for the month of October 1949, which is the last report that I have before me, I am taking figures for just two of our large States in population, and also two of our smaller States. I am comparing the payments on the following points:

1. Number of beneficiaries.
2. Amount of monthly payment to each beneficiary.
3. Total amount of payments for the month in each State.

These comparisons show clearly what I mean by inequalities. Here they are:

State	Number of recipients	Monthly payment	Total amount paid for month
California	264,672	$70.74	$18,723,603
Pennsylvania	90,681	39.94	3,621,989

Does it not seem strange that the number of recipients should be so much greater in the one State than in the other, when the States are not far from equal in population? Again note the average payment to the individual.

Senator MILLIKIN. Are they equal, Congressman, in age brackets? Would you say that there are more elderly people per thousand population in California than in Pennsylvania?

Representative MORRIS. I think that accounts for it, to some extent, sir, but not entirely. I think it is the liberality of the law and the administration of the law that also accounts for a large part of it. Your point is well taken and is correct in part. I mean, the point is well taken and it partly explains it.

In one State it is over $70 while in the other it is less than $40. Then, look carefully at the total amount received during the month by the recipients. In one State it is over $18,000,000 while in the other State it is only over $3,000,000. Certainly these facts deserve careful consideration.

Now, let us look at the figures from two States of small population. Let us look at Virginia as compared with Colorado. Let us remember, also, that Virginia has a population of more than double that of Colorado. Please keep this fact in mind and then study the figures. Here they are:

State	Number of recipients	Average monthly payment	Total amount paid for month
Colorado	48,592	$75.01	$3,644,839
Virginia	18,568	20.77	385,650

When we look at these figures, certain very important facts are inescapable. Virginia, with more than twice the population, has less than half as many beneficiaries. The old folks in Colorado received over $75 per person for the month of October; while in Virginia, they received less than $21. The total benefits in dollars paid to recipients for the month was almost 10 times in Colorado what it was in Virginia, notwithstanding the fact that in population Virginia is almost twice that of Colorado.

I believe these simple comparisons illustrate clearly what I mean by inequality of our present system among the various States. I shall, however, file with the committee the entire report showing the figures from all the States, from which these figures are taken. I suggest also, that each Member of Congress might watch these monthly reports and study them carefully as they are issued month by month by the Federal Security Agency.

A bipartisan group in the House of Representatives, led by my colleague, Representative Van Zandt, of Pennsylvania, representing the minority, and myself, for the majority, have been giving serious study to this problem. We have united with us, in this effort, now more than 130 Members of the House. We have our individual opinions as to many details concerning remedial legislation, and each Member is, of course, entitled to his own opinion. However, we do find that there is a definite field of agreement, and there are positive points of agreement, on which we seem to be united. Among these points are the following:

1. We should enact a Federal pension to take the place of "old-age assistance" under the Social Security Act.

2. The pension should be paid uniformly in all the States without regard to what the States pay.

3. Eligibility of recipients should be liberalized. A property owner should be considered as well as those who have no property.

4. Many of us believe the amount of the Federal pension should be $100 per month, but the figure on which we have agreed is "at least $60 per month."

I introduced a bill in the House, H. R. 2620, embodying these features and will file a copy of it along with my remarks, with the committee. I hope it will have the careful and full consideration of the committee, and that when your report is made to the floor of the Senate, you will have seen fit to recommend a decided improvement in our provisions for those citizens who are now of retirement age.

I am deeply interested in the future of America. It shall be my pleasure to give full and complete attention to the future problems of security for those who are now actively engaged in production. I am anxious, insofar as we can, that we shall anticipate the needs of all of our active workers, and plan for their security, once they are old enough to retire. However, as important as this appears, it is not an emergency that must be met at this moment. Young people, those who are the workers of today, will not need retirement until they retire. For this reason, I do trust that we will put first things first in this matter. I am thinking first of those who have served so well, in peacetime and in war, and have brought us to the proud place we now occupy as the leading Nation, in many ways, in all the world. I am very deeply concerned about those who are now old to the point

where there is no hope for them in labor, business, professions, or in industry. They are in need of old-age security now. Young people may be able to wait at least a little while. But unless we do something for those who are now old, we are missing a vital opportunity.

If we fail, Mr. Chairman, to meet our obligation to this important segment of our population, I am speaking of those who are now too old to earn it will be disastrous. Many of them are in dire need. I certainly see no depression coming but the specter of unemployment is casting its menacing shadow across our land. We are looking for markets to keep our farms, mines, mills, and factories going. We are facing the problem of keeping money in circulation. Let us consider the matter of American old-age pensions in this light. It will be a very efficient and equitable way to keep money circulating in every section of the land. Should we see that our elder citizens can have just a reasonable cash amount each month, giving the employment they now have to younger people, it should benefit business and strengthen our economy. It will aid in maintaining or increasing our national income. This is very important to our future growth and prosperity. In addition to that, it will perhaps accomplish more in genuine happiness and well-being among those deserving security than any other like amount of money which the Congress will appropriate. Should we fail—then I shall dread to contemplate the position in which we have left the deserving fathers and mothers of our country.

Of these facts, Mr. Chairman, I feel sure:

1. America can well afford a reasonable uniform pension to all citizens of retirement age.

2. There is a great and crying need for such a pension.

3. The pension money being spent in our markets month by month, would go a long way toward compensating our economy for the burden of any added tax.

4. While security for our young people, when they become old, is important, it can well wait until the present crying needs of our deserving elder citizens have been provided for.

I know of no action that this Congress can take, short of that which deals with our national security, that will yield as much in happiness and general good, as to provide a genuine American pension for our deserving retired American citizens. I trust, and I pray that this Congress will give the matter full and complete consideration; that we may have such a pension enacted as early as possible this year. Most certainly an old-age pension is better than old-age assistance.

In conclusion, may I say that the bill I introduced, H. R. 2620, provides, in substance, that every citizen of the United States who is 60 years of age, or older, and who does not have an income sufficient to require him or her, as the case may be, to file a Federal income-tax return, and who applies for same, is entitled to a Federal pension at the rate of $60 per month. I think that this is a simple, moderate, and workable plan. I would do away with the present case-worker system and with much of the administrative cost. It would not be necessary to set up any new boards or bureaus as the question of income tax could be determined under the present law and rules and regulations of the Bureau of Internal Revenue.

A number of groups in our society now have retirement benefits, such as coal miners, steel workers, Government officials, and employees.

Why should not all of our citizens enjoy retirement benefits whe they reach the proper age? It is sometime pointed out that the grou just mentioned pay into their retirement fund. The real truth the matter is, as I see it, that society generally pays into these fun and not the individual beneficiaries, for the reason that salaries a wages are raised either by fiat of law or by employers, so that sa groups may have sufficient money to pay into their fund. Whe salaries and wages are raised, the increased tax and the increased co of production, such as coal and steel, is passed to the public. So, truth and in fact, the public pays the bill. If the public pays the bi for these groups, why shouldn't it pay it for all groups and tre them all alike. I certainly do not complain that the groups mentione have retirement funds—I am glad that they do have them—but n desire is that all groups have the same, or similar, privileges, to wh they have.

If the Congress does not think it wise, at this time, to replace t old-age assistance section of the Social Security Act with an old-a pension program, then I respectfully request that it give considerati to the following formula in the old-age assistance title of H. R. 600 to wit:

That the Federal Government by five-sixths of the first $30 of t average payment, per recipient, plus one-half of the balance up to maximum on individual monthly payment of $60. In substance, t net effect of this proposal is to provide an additional $10 in Feder funds, per month.

I am truly grateful to the committee for having given me th opportunity to present my views in regard to this most importa matter.

The CHAIRMAN. Thank you very much, Congressman.

Representative MORRIS. Thank you, sir. It is a real pleasure to here, Mr. Chairman, and I appreciate it very much.

The CHAIRMAN. You are quite welcome, sir. We are very glad have you.

At this point in the record the bill introduced by Congressma Morris, H. R. 2620, and the advance release of statistics of publ assistance for October 1949 referred to by the Congressman in h statement will be inserted in the record.

(The material referred to follows:)

[H. R. 2620, 81st Cong., 1st sess.]

A BILL Providing a direct Federal old-age pension at the rate of $60 per month to certa citizens sixty years of age or over.

Be it enacted by the Senate and House of Representatives of the United Stat of America in Congress assembled, That (a) the Federal Security Administr tor (hereinafter called the "Administrator") shall pay, out of any funds her after appropriated for such purpose, an old-age pension to qualified individua at the rate of $60 per month.

(b) For the purpose of this Act an individual shall be deemed to be a qualifi individual—

(1) if he is sixty years of age or over, is a citizen of the United Stat and has been a citizen of the United States for not less than ten years;

(2) if he resides in the United States and has been a resident of t United States for not less than ten years;

(3) if his gross income is less than the minimum amount with respe to which a Federal income-tax return is required to be filed; and

(4) if he has made application for the benefits of this Act.

(c) Payments to qualified individuals shall be made monthly.

SEC. 2. Any individual making application for the benefits of this Act shall furnish such evidence of age, citizenship, and residence as the Administrator may by regulation prescribe. Whether a Federal income tax with respect to the income of any individual were payable for any taxable year shall, for the purposes of this Act, be established from records and data in the possession of the Secretary of the Treasury. The Secretary of the Treasury shall upon request furnish to the Administrator any documents, records, or information which he may have relating to whether a Federal income tax were payable for any taxable year with respect to the income of any applicant for the benefits of this Act.

SEC. 3. No payment to any State under title I of the Social Security Act, as amended, shall be made for any quarter beginning on or after the date of enactment of this Act.

SEC. 4. The Administrator shall prescribe such rules and regulations as may be necessary to carry out the provisions of this Act.

SEC. 5. As used in paragraph (2) of subsection (b) of the first section of this Act, the term "United States" means the States, Alaska, Hawaii, and the District of Columbia.

Old-age assistance: Recipients and payments to recipients, by State, October 1949 [1]

State	Number of recipients	Payments to recipients		Percentage change from—			
		Total amount	Average	September 1949 in—		October 1948 in—	
				Number	Amount	Number	Amount

[1] For definition of terms see the Bulletin, January 1948, pp. 24–26. All data subject to revision.
[2] Includes 15,855 recipients under 65 years of age in California and 3,269 in Colorado and payments to t recipients for which Federal participation is not available.
[3] Increase of less than 0.05 percent.
[4] Represents approximate amount of fiscal month authorizations; in some counties only 1 check was is in the change from monthly to semimonthly payments.

The CHAIRMAN. Congressman Wheeler, was it your desire to ma a statement?

STATEMENT OF HON. W. M. (DON) WHEELER, A REPRESENTATI IN CONGRESS FROM THE STATE OF GEORGIA

Representative WHEELER. Mr. Chairman, I would like to just sa word in the way of introduction of Mr. Oettmeier. I do not prop to speak for the Forest Farmers Association, which he represents which he is president, but I would like to say to the committee th there is no man in the Southeast who can better speak in the inter of people who are interested in the forestry industry than Bill Oe meier of Fargo and Valdosta, Ga. I know Bill Oettmeir by repu tion and personnally. There is no finer man, and there is no man the Southeast who has the interest of that section of the country a his nation at heart more than does Bill Oettmeier. You can do w to listen as he presents his case to you, gentlemen.

Mr. OETTMEIER. Thank you, sir.

The CHAIRMAN. We are very glad to hear from you, sir.

STATEMENT OF WILLIAM M. OETTMEIER, PRESIDENT, FORES FARMERS ASSOCIATION, FARGO, GA.

Mr. OETTMEIER. Senator George and gentlemen of the committ as mentioned by Congressman Wheeler, my name is William Oettmeier, and I am president of the Forest Farmers Association Valdosta, Ga.

I make my living managing 208,000 acres of forest land, known Suwannee Forest, owned by Superior Pine Products Co.

In qualifying myself for what I am going to say, I might add th for 24 years I have been connected with ferestry in the South, both managing a large tract and in cooperating and operating with sm timberland owners. In our presentation here, we are mostly interes in the term "employee" as defined in H. R. 6000, presently before y

We think it is almost disastrous to the forest industry of the South, or the Nation as a whole, when one considers that for the past 25 or 30 years the Federal agencies and the State agencies have been working extremely hard with what we call the small timberland owner. He is the man to whom, I think, President Roosevelt referred when he said that the South was the No. 1 economic forestry problem.

In the South, as you know, we burned our lands over years ago, and continued to burn them until an era which started about 20 years ago. All during this time the small owner has been the man who was the cause of all the trouble. The man who owned the large tract of land could well afford fire protection. He had enough education and knowledge to know that he benefited more and the Nation benfited more by good forestry management and good fire protection.

I should like to point out that 76 percent of the privately owned forest land in the United States is owned by four and a quarter million people, the average of which is 62 acres, and the balance of the privately owned forest land—the other 24 percent—is owned by 3,600 people, the latter being in tracts of over 5,000 acres of commercial forest land. In other words, of the total number of people represented, the small owner represents 99.9 percent of the owners; that is, by forest land ownership. So it is important from the point of view of what I am saying that we take this into consideration before we upset a precedent we set 20 years or more ago—to get this small timberland owner in line.

Those of us who work in associations, and so forth, promised the small timberland owner that if he practiced good forestry and fire protection we would get the pulp industry in the South and grow more timber, and that his life in the future would be more livable. In other words, he would have income from this forest land.

As I interpret this term of "employee" in the present Social Security Act, there is an awful risk, and a great risk involved. I have been informed by people who interpret these things better than I that the consumer of the raw materials, that is, the manufacturer thereof, is liable to be responsible not only for social security but by amendment to the Internal Revenue Act may be liable to the wage-and-hour law. This proposed change goes so far down that while the paper mill and big sawmill operator has no actual control over these men, he may be liable for their social security, their wage-and-hour law, and maybe other actions of employees who are not actually his employees but employees of others. In that connection, we run an awful risk of putting the sawmills and these paper mills in the position of having to go out and produce their own pulpwood and their own saw logs.

Today that work is mostly farmed out to small operators, to people known as contractors, who in turn employ producers. While there may be 500 or 1,000 trucks (for each mill) delivering wood to railroad sidings and to paper mills, those 500 or 1,000 trucks may be in the ownership of 300 or 400 or 500 small producers. The man who owns one or two trucks can afford to go out to one of these average 62-acre places—or even if it is 500 or 1,000 acres—make a contract, cut the man's sawlogs or cross ties or pulpwood, and deliver to the mills. If the paper mill or the sawmill has to produce its own wood, it first puts out of employment, naturally, the contractor; and then he puts out of employment these hundreds and hundreds of small producers, and the paper-mill people can tell you better than I how many there are.

Further than that, gentlemen—and this is the greatest disadvant to our forestry in the South—is the fact that when the paper-mill erator goes out, or the big sawmill operator goes out, he cannot aff to stop at a 100-acre tract or a 500-acre tract. In order to produce volume, he has to have 5, 10, or 20 or more trucks, a large crew of n and he has to go to a big place and operate on his own land; where the small producers or contractors operate all over on tracts as sn as 5 acres.

I should say that right today the majority of the pulpwood in South is produced from small ownership.

Now, what happens if they forget the small men? Those of who agitated this forestry program years ago told the small own that if they practiced good forestry, they would have a good mar for their crops; but if this bill is passed as is, and if the small ow is bypassed, we will all have to go back to where we started 20 ye ago.

Senator MILLIKIN. I wonder if you could tell me how long it ta the kind of a tree that you are referring to, to mature in the Sou

Mr. OETTMEIER. In our section of the South, Senator, it depends what you are growing it for.

Senator MILLIKIN. Let us assume it is for the purpose of pulpwo

Mr. OETTMEIER. It takes about 10 to 12 years for that purpose, S ator. That is, under certain conditions; if it is done under pro management. If it is under poor management, it takes longer.

Senator MILLIKIN. Let us assume it is for the purpose of fence p or railroad ties or something like that.

Mr. OETTMEIER. Senator, fence posts is a small operation in South. It is either dead wood, or from trees cut in thinnings wh are creosoted; it just involves small saplings, not over 5 or 6 years

Senator MILLIKIN. Now take a railroad tie.

Mr. OETTMEIER. Railroad ties are usually from farily well mautu trees, from 20 to 40 years old, depending on whether or not they in the turpentine area, that is whether they have been grown as su The sawlogs run from 25 to 40 or more years.

Senator MILLIKIN. What are the different types of trees that y have in mind?

Mr. OETTMEIER. In our particular section of the South, through what we call the naval stores belt, it is practically slash and long-l pine. In that area, we also have the various short-leaf pines such loblolly. Cypress is practically gone, from the commercial standpo

Senator MILLIKIN. I am probably asking a very stupid questi but I should like to know what you mean by the expression "na stores."

Mr. OETTMEIER. That is turpentine and rosin, Senator. I have f gotten that some of the folks are not used to our terminology in t South. Naval stores means the manufacture of turpentine and ro from the pine tree. In other words, you collect the crude gum fr the living pine tree and that crude gum is distilled into turpenti and rosin.

Senator MILLIKIN. What does that have to do with "naval store

Mr. OETTMEIER. The term dates way back to the early days of t country, Senator, in the days of the wooden ships when they used t tar and pitch to calk the vessels. They obtained naval stores—I th

they started in North Carolina—and carried them back to England and used them for calking.

Senator MILLIKIN. Thank you very much, and pardon the interruption.

Mr. OETTMEIER. That is about all, gentlemen. I do not want to take any more of your time. I hope you will consider that very important phase of this bill; that is, the definition of an "employee" as it is listed in H. R. 6000, because under present circumstances I am quite certain that the large operators why buys the timber, who manufactures the timber into lumber or into paper, is going to be extremely handicapped in buying from the small timberland owner. I might add, Mr. Chairman and gentlemen of the committee, that the organization of which I am president, represents throughout the South practically 200,000,000 acres, and again using that same figure of 76 percent of the ownership in the hands of small owners, that is, below 5,000 acres, whose acreage averages 62, that is a lot of people who are dependent upon the forest for a livelihood. But further than that, the Nation is depending on the man who ownes the forest to grow a better crop of timber.

As has been repeated here on numerous occasions in the past, it has been claimed that we have been depleting the forest faster than we are growing the timber. We have a good start toward solving that problem.

I think we made more progress in the South in the last 20 years than has been made anywhere else in the Nation as far as timber-growing is concerned. We have gone from practically no forestry program, from burned over forestry land, where you could see a cow for 2 miles, to the point where today you could not see a cow over 50 or 100 feet off the road, due to heavy stands of timber.

Gentlemen, we have made progress in the South in the forestry program, and we do not want to run the risk of any legislation like this upsetting that. I think we should go back to the original bill, the common-law practice of who is an employer and who is an employee, and I think that will serve the purpose.

The CHAIRMAN. Thank you very much, Mr. Oettmeier.

Mr. OETTMEIER. Thank you, Mr. Chairman.

The CHAIRMAN. The next witness will be Mr. P. M. Harbert. We are glad to have you with us, sir. Will you kindly identify yourself for the record?

STATEMENT OF P. M. HARBERT, SAVANNAH, TENN., DIRECTOR, FOREST FARMERS ASSOCIATION

Mr. HARBERT. Mr. Chairman and gentlemen of the committee: I am P. M. Harbert from Savannah, Tenn.—not Georgia. I am the Tennessee director for the Forest Farmers Association. It has only one director and it happens to be myself.

I have been asked to come before this committee to represent the small landowners; that is, the individual landowners of this association; that 76 percent of which Mr. Oettmeier spoke. I live in the northern edge of what is called the short-leaf pine. It comes out of Alabama and Mississippi up into Tennessee only a short distance. Much of our land there is hardwood, but short-leaf pine grows there readily. I am right at the corner of Alabama and Mississippi on the

Tennessee River. That river is said to be the leading cross-tie market of the world. As to that, I cannot say, but we do produce a great many railroad cross ties in that community. We have quite a few sawmills and planers. Many of our sawmills are what we term the "peckerwood sawmills"—small ones in the country?

The CHAIRMAN. The ones you move about?

Mr. HARBERT. Yes, sir. And we have poles—that is, telephone poles—or piling, there is great abundance.

I own about 20,000 acres myself. It is my land, and I do not represent any corporation or association.

I might add, Mr. Chairman and gentlemen of the committee, I am a country lawyer. I accumulated that land throughout a period of 30 or 40 years when I could see this land selling and timber going at practically for nothing. I thought there was a future in it. I spent all I could in accumulating these acres and I have learned to think a great deal of it. It is growing me a good living. In fact, better than my law practice.

I have on my farms or places—I have some farm lands—about 10 to 15 families. Of course, I know of others, and I am taking myself as an example. However, I represent more acres than the average man. Most of our farmers have only possibly 50 acres or 100 acres, or as high as 1,000 or more acres, perhaps. I feel that I am fairly well acquainted with the problems confronting the small timberland owners, and I think I am equally as well versed with the problems confronting the employees, or the men that actually pull the cross ties out of the woods. I have come to speak in behalf of both these classes of people.

I have come to the conclusion that to extend the provisions of this Social Security Act to the timber workers and the timber owners would be very unwise, unless possibly this coverage would include a man that is self-employed. I say that for several reasons. The main reason I have, is this tendency to drive the little man out of business, as I see it. You take a man, for instance, with, I will say, 300 acres of land; he will have 100 acres for pasturage or tillage and 200 acres of timber. In the off-season of farming, he can go in there and work his own timber and put it on the market. He can use his own hands. He can go work it when he pleases. He may not work over a week in a year in some years. He may work more in some years than others. He is not working that timber all the time. He works at it spasmodically, I might say. In other words, he can go and work that timber when he pleases. It is not like a highly industrialized area.

When he goes there to work that timber, he has to keep up with it largely and he has enough education generally to know whether he is making money or not. But if and when he comes to have to make these reports, as required, keeping up with the social-security numbers, and making quarterly reports and annual reports, as would be required, and when the Government man comes around checking up on him, he may find that he has missed some, and he gets jittery; he gets dubious of his own ability to keep his books and proper reports. He is afraid of being involved with the law. He either comes to one conclusion or the other; that is, he is going to sell his holdings to a bigger concern, or he is going to be driven to possibly employing clerical assistance to keep his books. If he selects to hire the clerical

assistance, he may find out that it is an expensive proposition. That kind of employment costs him a great deal more than his common laborers do. He will soon see that his profits are being depleted, and to recoup this, he will have to cut down on what he pays his employees; or, if he can, he will hike the price of his products, and that, of course, tends toward inflation.

He may work that way for a while, but he is soon driven to the conclusion that he will have to sell out. Nine out of ten will sell all they have to the big timber man and let him handle it.

Senator MILLIKIN. May I suggest that he might not even find a purchaser in the big timber fellow because the big timber fellow would be inclined to consolidate his holdings in order that he may work them in a consolidated and integrated way. Without pretending to know anything about your business, except what I have heard here, it seems very unlikely that the big company would be buying small tracts in scattered areas. It seems like a very impractical operation.

Mr. HARBERT. Yes, Senator. Another way that I see it is that it is like a "squeeze." The big purchaser would like to own his lands. He is not inclined to lend very much effort to the little man because he would like to own that himself. I do not think he gets very much sympathy from the man who owns a million acres of land. He may get some assistance, but he is caught in a squeeze so he cannot compete with the big man.

Now, I might illustrate the point I was making before. If you were to get on a highway 20 miles from town and your automobile were to stall—there being something the matter with it—you may not know what to touch to start it. Now, you are lost there just like the timberland owner is lost in making out his reports. You may think it is simple, but those reports are annoying to a timberland owner. It may be simple, and it is simple to a man who gets onto it: but he is lost with that just like you would be lost with your automobile stalled.

Senator MILLIKIN. Like we were lost a couple of days ago when we made our income-tax returns.

Mr. HARBERT. Yes, sir.

I find it is not satisfying to the employee either. He fels that he is being deprived of the present use of what he actually earns and what is really his. He is continuously thinking about it. He devises ways and means whereby he can withdraw or bring back those funds which have been paid out and which he feels are rightfully his. He hears of a man under social security drawing a lot of pay, more than he paid in, and he feels, and is driven to feel, "that man is drawing part of the pay that belongs to me." And he does not appreciate funds being taken from him. Besides that, he is very hard pressed and he can hardly spare those funds to be put in a general fund for a while.

Then, too, he feels that he is restricted in his freedom of action. He feels that he knows better than the Government or any agent as to what he should do with his money. He feels that he can invest that money in Government bonds. He can buy a farm on the installment plan. He can loan that money, that is, what surplus he has. If he is very wise—and he usually is—he will come to the inevitable conclusion that an investment in this maner is far better in the way of income than the uncertainty of social security.

By telling a man how to act and how to spend his earnings deprives him, I think, largely of his initiative. "Let somebody else do your thinking for you" I do not think is a good plan.

I read an interesting article not long ago to the effect that a man that is able to make a decision, make it readily, even though he makes it erroneously is the man that gets along.

I might summarize by saying that I do not think the members of this committee have ever grown up on social security. You never had a plum held out before you many years ago. All in all, I think these dole systems lead to socialism and eventually to communism, and I do not think it is good for America. It is not the stuff our forefathers were built up on.

When our forefathers started to colonize the West, they did not fill their pockets full of social-security cards.

That is my statement, gentlemen.

The CHAIRMAN. Are there any questions of Mr. Harbert?

If not, thank you very much, sir.

Mr. HARBERT. Thank you, Mr. Chairman.

The CHAIRMAN. Our next witness will be Mr. Paul W. Schoen, the executive secretary of the Forest Farmers Association of Valdosta, Ga.

STATEMENT OF PAUL W. SCHOEN, EXECUTIVE SECRETARY, FOREST FARMERS ASSOCIATION, VALDOSTA, GA.

Mr. SCHOEN. Mr. Chairman and members of the committee, my name is Paul W. Schoen, and I am executive secretary of the Forest Farmers Association of Valdosta, Ga.

The CHAIRMAN. You are located where, now?

Mr. SCHOEN. My headquarters office is located at Valdosta, Ga., sir.

The CHAIRMAN. For the information of the committee, that is very close to the Florida line, about 10 miles away, I believe.

Mr. SCHOEN. About 10 miles on a direct line, Mr. Chairman; about 15 by road.

The CHAIRMAN. And you are in the Florida-Georgia timber area?

Mr. SCHOEN. That is correct, sir.

Senator KERR. How far is that from the Suwanee River?

Mr. SCHOEN. Mr. Oettmeier, our president, informs me it is 40 miles. He has the Suwanee River on his property, so the information should be very accurate.

As Mr. Oettmeier has indicated, in his testimony, our organization is composed of timberland owners and while our headquarters office is in Valdosta, Ga., we represent the group of timberland owners throughout the 12 southern States from Virginia south, and westward to Texas and Oklahoma. Mr. Oettmeier also indicated that there are about four and a quarter million of these timberland owners in the United States. In the South alone, we have about 1,600,000 of these small land ownerships, who are or should be carrying on a forestry program in one degree or another.

We, as timberland owners, are very much interested and concerned by the definition in H. R. 6000, in sections 104 (a) and 206 (a) which give a new interpretation to the employer-employee relationship, and leave to the discretion and the whim of the administrator as to what

that relationship may be. This will affect the future forestry practices by our members and other timberland owners.

In the Eightieth Congress, you gentlemen very definitely indicated through Public Law 642 that it was the right of Congress and not of any administrator to decide who is an employee. We believe that H. R. 6000 will both nullify and repeal that particular section and give the dictatorial power to the administrator. It also introduces a large measure of vagueness and uncertainty which is going to affect not only industry but the timber grower upon whom industry depends for the raw product.

This committee has heard from industry as to their reaction to H. R. 6000, and what we are trying to present to you this morning is the reaction of this man who is growing the timber.

It has been stated that the market will be closed to this small man, and it is not because industry wishes to close that market. It is a matter of pure economy to industry. It is a matter of practical business operation that they cannot afford to go out to all of these small owners and pick up their small lots of timber, no matter whether it is for pulpwood, sawlogs, poles, piling, or whatever it may be, if it is going to be necessary for them to assume that risk of having the man that is supplying the timber being considered as one of their employees.

It also puts the seller in a rather peculiar position. Let us take, for example, a man that is harvesting his timber under good forest management. We do not recommend, from a forestry standpoint, that a man cut his timber all for pulpwood, or that he cut it all for sawlogs. Under good forestry practice, we are going to have an integrated operation. He is going to cut a certain percentage in thinnings for pulpwood; then he is going in and take out his best and straightest trees for poles and piling. He is going to take out his sawlogs. Perhaps he is going to cut a certain amount of fuel wood, ties, or posts which he is going to sell. He may do the cutting himself on a contract basis, alone, using his farm help or neighbors. He and his help under H. R. 6000 may be classed as "employees."

Now, let us suppose you give this new definition to the "employee." Here is a man that is selling or cutting for perhaps four or five different products. Who is going to be responsible for his social security? Of whom will he be an employee? Will he be responsible to any of those companies? Will any of those companies wish to assume the responsibility for his full cutting or will his work be divided among all purchasers with separate accounting for each? If we do discourage him in his forestry work and say, "Now, because you are classed as an employee, you will have to sell everything for pulpwood, or everything for sawlogs," we are going to defeat the whole program of conservation for which our association and other groups have been working over a period of many years.

As Mr. Oettmeier indicated in his testimony, the progress of forestry in the South has been remarkable. I have not been there quite as long as Mr. Oettmeier. I mentioned in a conversation with Senator Martin yesterday, that I was a native of Pennsylvania. So I claim both the North and the South, because I have been in the South long enough to feel that is also home. Therefore, from my experience throughout the eastern section of the United States, I recognize the great progress we have made, and the need which there is to help the

small timberland owner to continue along the lines that he has started with respect to his forest land development. We should take no steps to set him back. We certainly hope, without repeating many of the things that you gentlemen of the committee have heard over and over in reference to this definition that you will redefine it; that you will stand by the Gearhart amendment which you insisted upon in the Eightieth Congress, and that you will continue to insist it be clear and certain as to the exact status of the employee.

I thank you.

The CHAIRMAN. Mr. Schoen, the small-landowner, with a portion of the land in timber, thinks of himself as a dealer in wood, does he not?

Mr. SCHOEN. Absolutely, Senator. It is a part of his business as a farmer and farm woodland owner.

The CHAIRMAN. And as a manager of his own business in developing his wood so he may sell it for either ties, or sawlogs, or pulp, and handle it himself?

Mr. SCHOEN. Yes, sir.

The CHAIRMAN. He does not visualize himself at all as an employee of the mill to which he makes a sale. That is correct, is it not?

Mr. SCHOEN. Absolutely, Senator; and the time he begins to be an employee, I am afraid of the effect it will have on him.

The CHAIRMAN. Then you are afraid he will lose his interest in the forestation work and the growth of the timber?

Mr. SCHOEN. I think we all appreciate, when we speak of the small owner, the fact that very often that timberland is just part of the whole farm operation. He has other lands. I think there is no segment of our population that is more independent or takes more pride in that independence than does the farm group. If we begin to subject him to the fact that before he does anything he has to be considered an employee of somebody else, we are disturbing what is fundamental in our democracy; that is, the right of private enterprise and the right to do for yourself. I do not think it would be harmful in other occupations nearly as much as it would with this timber land owning group, or the farm group, when we curtail their independence of action and way of living.

The CHAIRMAN. Are there any questions, gentlemen?

If not, thank you very much.

Mr. SCHOEN. Thank you for the privilege of being here, Mr. Chairman and gentlemen of the committee.

The CHAIRMAN. The next witness will be Mr. Breckenridge.

STATEMENT OF PEYTON D. BRECKENRIDGE, COLUMBUS, GA., REPRESENTING THE SOUTHERN PULPWOOD DEALERS CONSERVATION ASSOCIATION

Mr. BRECKENRIDGE. Mr. Chairman and gentlemen of the committee: I should like to present to you Mr. B. E. Pelham of Ellaville, Ga., and Mr. Dewey Williams, from Augusta, Ga.

The CHAIRMAN. Will you gentlemen please take seats.

Mr. BRECKENBRIDGE. It was the desire of my organization to make available to you gentlemen a large fund of general knowledge and a greater scope of experience than I could possibly give you in case you had questions concerning something that was not specifically cov-

ered in our statement, and that is the reason these gentlemen are here with me.

The CHAIRMAN. Sir, we are glad to have them and glad to have you, Mr. Breckenridge.

Mr. BRECKENRIDGE. Thank you, sir. You have heard from the landowner and you have heard from corporations. We are small-business men.

We represent the Southern Pulpwood Dealers Conservation Association. We have direct authorization to speak for 144 pulpwood dealers in the Southeastern States and their 1,584 producers. Each of these men has donated a few dollars from his pocket that we may represent him before the Senate of the United States and acquaint you gentlemen with his convictions concerning the proposed social-security legislation, H. R. 6000.

We feel that, since opinion amongst our own membership is so unanimous, we are also speaking for the entire southern pulpwood industry consisting of approximately 600 dealers and 6,000 producers, and employing approximately 60,000 persons. Therefore, assuming each worker to have an average family of four, the number of persons directly affected by this proposed legislation, in our industry alone, would approach the quarter-million mark.

A pulpwood dealer is an individual engaged in the buying and selling of pulpwood. The paper mills scattered throughout the South are his markets. He purchases his wood from several sources. Producers, individuals who harvest and load timber, are his main source of wood. The dealer often purchases large tracts of timber for future harvest, contracting with the producers to cut it. In addition, he purchases from part-time operators, from farmers who utilize farm labor during the winter months in cutting their own lands, from right-of-way, crews, and so forth.

In studying the proposed redefinition of the employer-employee relationship in paragraph (4), we find that its most vicious aspect is the lack of concrete definition of the terms. Neither we, nor our legal counsel can determine our exact status under the definition. That determination, apparently, will be the function of the Administrator. The whole future of our businesses will depend upon the whim of an individual. Until he has made up his mind, the paper mills, we dealers, and our producers must, with a guess and a prayer, determine what we think our status to be under a statute involving not only financial, but criminal penalties.

Senator KERR. May I ask the witness a question, Mr. Chairman?

The CHAIRMAN. Yes.

Senator KERR. You are just as anxious that the group you represent not be defined or designated as "employees" as you are that the definition itself be clarified?

Mr. BRECKENRIDGE. Very definitely. And I think that it will be brought out to a greater extent as we go on with the statement that we have prepared here, Senator. However, if when I finish the statement, we have not made it clear, I would certainly welcome the question again.

For instance, we as dealers, have established ourselves over a period of years to supply wood to paper mills. We hope to continue shipping wood to these mills. It requires a good deal of experience to select and

buy timber, and to correctly estimate future markets and prices. We have an opportunity for profit and loss in the purchase and resale of this wood. We have a good many thousands of dollars tied up in our businesses, some of which is borrowed from the paper companies, some from our local banks, and some of which is our own working capital. We supply wood to several different mills concurrently.

We have always considered ourselves independent businessmen, and we are extremely proud of our position as such. Through our own initiative, ability, and endeavor we have succeeded in establishing ourselves as integral parts of our national economy. I state this case not as an individual, but because it will bring home to you gentlemen, in a personal way, the case of each of the 600 dealers I speak for here today.

Yet, under the proposed legislation what do we find? The paper companies exercise at least a degree of control in orders they issue, naming the number of cars we ship them each week, and the weeks during which they purchase no wood from us. Our relationship certainly has a degree of permanency. Our sales to the mills could be regarded as service which is performed regularly and frequently, and is integrated in the work of the mill. What amount of personal capital invested will satisfy the requirements of section (F)? What weight will in fact be given to any one of the seven factors involved? This will have to be determined by the Administrator and the future of our businesses hangs in the balance. Gentlemen, we want no "high commissioner" of industry.

If it is determined that we, as dealers, are employees of the paper mill for social security purposes, it will be necessary that we submit to these mills all of our records, including our pay rolls and our profit and loss figures, immediately. What if we are selling pulpwood to two different mills at the same time? It would then be necessary that our pay rolls be so prepared as to show, separately, the time our employees consumed in the production of pulpwood for each of the said mills. These are items which we consider are our own business. And, considered in the light of past events, it will be but a matter of time until we become employees for purposes of unemployment insurance, workmen's compensation, withholding taxes, National Labor Management Relations Act, minimum wage and hour law, and eventually, liability in tort.

It is obvious that no organization consuming pulpwood could accept this tremendous liability without also assuming the necessary authority and control necessary to protect itself. If we, as producers and dealers are declared to be employees, our business would be wiped out, we would be forced to liquidate our assets at forced-sale prices suffering severe losses, and the hours of work, planning and worry which we have spent in the establishment and development of our businesses would have gone for naught. We believe that if this happens, we are legislated out of business by a Congress which claims to be primarily interested in the small-business man.

The effects of this bill, gentlemen, would be even more far-reaching than that. The furtherance of the concentration of economic power in this country would be tremendous. We dealers and producers placed in circulation in the Southeastern States an estimated $135,125,000 in 1948. I personally believe that is a conservative estimate.

Figures are not yet available for 1949 but will probably prove to be very similar. This money was spent in our local communities for trucks, saws, chains, timber, tires, gasoline, salaries, and the myriad other supplies used in the harvesting of pulpwood. It is logical to assume that, with the mills harvesting their own wood, economy would dictate large operations, held by their very size to large tracts of land, and the purchase of all supplies in wholesale lots, directly from the manufacturer, and bypassing the local merchant.

In the same way the dealer-producer relationship is left in doubt. If the dealer is the employee of the mill, the producer and his common-law employees are also employees of the mill. If the dealer is not an employee of the mill, the same seven vague and indeterminate factors would be used by the Administrator to determine whether or not the producers are employees of the dealers. Should they be so determined, the dealer would be saddled with such additional bookkeeping personnel as to put a severe strain on the profit margin of a small business. The extension of the definition, to include such items as torlt liability, would force us to take personal charge of our own operations, thus forcing our producers out of business, or to drop out ourselves, which would have the same effect. We certainly could no longer purchase wod from part-time operators such as farmers and small wood-lot owners, who would lose a market for their forest products, an additional income, and such investment as they have made, often at the behest of public agencies, in planting and improving forest land.

And all of this is to attain an end which is obscure to us. The stated purpose of this section of the bill is to increase coverage of social security. It does not do so. The common-law employees of the producers, by far the largest group numerically, are already covered by existing legislation. As self-employed individuals, whether we desire it or not, producers and dealers will be covered even without the redefining of "employee." Therefore, it is method of coverage rather than degree of coverage which is involved. As self-employed persons we would be required to put out a larger sum from our own pockets to purchase the same amount of insurance than we would as employees. Evidently the proponents of this legislation fear to tell us frankly what this coverage is costing, and do not give us credit for enough intelligence to realize that we must eventually foot the bill no matter what the manner of payment is. If, however, the additional payment from our pockets is a tax levied on our independence, that is one tax we will gladly pay.

If the purpose of the legislation is to make collection less of an administrative burden on the Treasury Department, we feel that the welfare of thousands of small businesses which would be seriously affected should be of far greater importance to the Congress than the covering of the shortcomings of this Agency.

We feel that it is the duty of you gentlemen, who are our elected representatives, the Congress of the United States to definitely define our tax liability, in words which we can read and understand beyond a shadow of doubt. We ask that you strike out the proposed definition of "employee" and substitute the Gearhart resolution definition which is now in effect and which leaves our status definite. We believe paragraph (1) and (2) of the proposed definition to be

essentially a restatement of existing law. We do not like paragraph (3) but feel that it is the prerogative of the Congress to spell out who is and who is not liable under tax legislation. Since paragraph (3) goes no further than that, we can only object to it on the grounds that it will work a hardship on many individuals. Paragraph (4), however, while serving no legitimate purpose, will have catastrophic effects on our business, our communities, and our lives. We ask you to shoulder your responsibility in defining tax liability and strike this paragraph from the law.

The CHAIRMAN. Are there any questions, gentlemen?

Senator MYERS. Mr. Chairman, may I ask one question, please?

In the second paragraph of your statement, you refer to 60,000 persons that these dealers and producers employ.

Mr. BRECKENRIDGE. Yes, sir.

Senator MYERS. Are those 60,000 persons covered under the present law?

Mr. BRECKENRIDGE. Yes, sir; they are covered under the present law. And the dealers and producers themselves under the self-employed provisions of the new law would be covered.

Senator MYERS. I am only referring to the 60,000 persons indicated in your statement.

Mr. BRECKENRIDGE. The existing legislation covers those.

Senator MYERS. That is all, Mr. Chairman.

The CHAIRMAN. Are there any further questions?

If not, thank you very much, sir.

Mr. BRECKENRIDGE. Thank you very much, Mr. Chairman.

The CHAIRMAN. Mr. Clippert, will you come forward, please, and have a seat?

STATEMENT OF GEORGE H. CLIPPERT, CAMDEN, ARK., REPRESENTING SOUTHERN PULPWOOD CO., INC.

Mr. CLIPPERT. Mr. Chairman and members of the committee, my statement is quite similar to many heard here and I will tell you how it affects us out in Arkansas.

The CHAIRMAN. Will you please identify yourself for the record?

Mr. CLIPPERT. My name is George H. Clippert, and I represent the Southern Pulpwood Co., Inc., of Camden, Ark.

Our company is a pulpwood dealer buying pulpwood from producers and selling it to two paper companies. We buy pulpwood from approximately 60 producers operating in an area which extends almost 100 miles from east to west and about 60 miles from north to south. The producers from whom we purchase pulpwood are individual small contractors or producers who run their own business as they best see fit to do.

Our company and its producers are very much concerned about the effect that the pending social-security bill, H. R. 6000, could have upon our operations if it became law. We are concerned over the definition of "employee" as it appears in this bill and how it could be interpreted. If such a bill were to become law as it is now written, we feel that we would be unable to continue operating not knowing until some later date who is or is not an employee when it would be decided by an administrator or court. If we continued to operate under such a law, we would risk having heavy penalties levied against us at a later date

when a man that we have never known or have never seen, or to whom we have never paid wages, might be declared to be one of our employees.

At present, the social-security and withholding taxes are collected and paid by the producer who actually knows each man that works for him and to whom he pays wages. Under the proposed law, it would appear that dealers like our company, or even the paper companies to whom we sell the pulpwood, might be expected to collect taxes from these men with whom we have no contact. If these men were determined to be employees for tax-collection purposes, we feel that they could easily be considered to be our employees subject to other Federal and State legislation. Also, it might be determined that we were liable for the actions of these many men and their equipment operating in a remote and widespread area and over whom we have no control.

We are also concerned that such a bill could be passed by the House of Representatives which contains a definition of "employee" that would make the destinies of millions of American people dependent upon the interpretation that an administrator could give. An administrator could decide that every man who has anything to do with a load of pulpwood, from the time that it is cut until it is loaded on a car for shipment or delivered directly to a paper mill, is an employee of the dealer who buys the wood or of the paper companies themselves. If such a decision were made, thousands of small-business men who are now known as contractors, vendors, producers, or subcontractors, would be forced out of business and lose their status as independent small-business men.

In trying to determine who might be declared an employee of our company under the proposed law, we are confused by the definition as it now stands. Under the following sections:

(A) Control over the individual: Would we be exercising control by telling a producer how many cords of wood we can buy from him in a given week as determined by our orders from the paper companies, or by telling him what size to cut the wood and whether it should be gum or pine wood?

(B) Permanency of the relationship: Would a man who has produced pulpwood for me or my company for a number of years, even though he is free to sell his pulpwood to other dealers, be considered our employee?

(C) Regularity and frequency of performance of service: What would be the status of the men who are full-time pulpwood producers?

(D) Integration of the individual's work in the business to which he renders service: It would certainly be determined that the production of pulpwood is essential to the manufacture of paper.

(E) Lack of skill required of the individual: We cannot see what this would have to do with determining who is or is not an employee, nor tend to show whose employee he is.

(F) Lack of investment by the individual in facilities for work: Would the individual be our employee if we lend him money to buy timber, or a tire for his truck, or to have his truck motor overhauled? The Administrator could say he was.

(G) Lack of oportunities of the individual for profit or loss: It would appear that the Administrator could interpret this in whatever manner he desired and thus make him an employee.

There is one additional question I would like to ask. I stated in m opening paragraph that my company sells pulpwood to two paper com panies. Let us assume that the Administrator should decide in th future that I am not an independent businessman, but for purposes o social-security taxation, am really the employee of the paper mills t whom I sell pulpwood. Since I am, in fact, serving two paper com panies in selling them pulpwood; which paper company would b responsible for the collection of my employee's share of the social security taxes and which one would be responsible for the employer' portion of the tax?

In recent years we have become convinced of the value of the forest conservation practices advanced by the various Federal, State, an private organizations.

One of the chief aims of these conservation programs has been th development of interest in the small landowner and the farmer to prac tice good forestry and to conserve and grow timber in ever-increasin amounts on the small timber tracts owned by these individuals; t treat their timber as a crop in the same manner as they treat thei cotton, corn, or similar crops. There are thousands of these smal timber tracts in widely scattered areas of the South, and the results o this concentration of good conservation teachings has been to raise an enlarge upon our total supply of forest growth.

If the production of pulpwod had to be controlled by large opera tors or the paper mills, the economic necessity of operating large-scal cutting jobs on large tracts of timber would give little opportunity t the small farmer or timber owner to sell the few cords that might b selectively cut for the benefit of his timber.

It would not be economically sound for these large-scale operator to fool with the small, widely scattered forest plots above referred to Instead they would have to concentrate their cutting operations on th large tracts of timber, just as is done in the Pacific Northwest. This then, would eliminate the small timber owner from consideration; i would not permit a small farmer in practicing good forestry to thi and sell his own timber in his off season and would thus deny to th fast-growing conservation program here in the South the fruitfu field of development presently shown in the small landowner and th farmer.

We believe that the present Public Law 642 gives an adequate an clear definition of an employee which protects both employers an employees, and we feel that there is no need for changing this defini tion under the proposed law. As the law is now written, every intel ligent person has a fairly clear conception of who is and who is no an employee. We believe that if you will carefully consider thi matter, you will find that the definition of employee now embodie in Public Law 642 is fair, equitable, and just. We beg you not t inflict upon us the burdens which would be imposed by the fourth paragraph in the presently proposed definition of employee. It would leave us at the mercy of an administrator and so confuse our statu that we would not know who our employees were nor whose taxe we would be required to pay.

The CHAIRMAN. Are there any questions by any member of the committee?

If not, we thank you very much, Mr. Clippert, for your appearance.

Mr. CLIPPERT. Thank you, sir.

The CHAIRMAN. Mr. Wilcox, will you identify yourself for the record, please, sir?

STATEMENT OF R. D. WILCOX, HARRIS-WILCOX TIMBER CO., LAUREL, MISS.

Mr. WILCOX. Mr. Chairman and gentlemen of the committee, my name is R. D. Wilcox, of the Harris-Wilcox Timber Co., Laurel, Miss., pulpwood dealer.

The CHAIRMAN. You are a dealer?

Mr. WILCOX. Yes, sir.

Mr. Chairman, my statement is a little bit lengthy. You gentlemen have been very kind and patient, and a number of my points will have been covered very thoroughly, I think. I would like to file my entire statement for the record and then forego reading part of it and take up some points that I might enlarge upon a little.

The CHAIRMAN. You may do so. Your statement will be entered in the record as a whole, and you can discuss whatever features of it if you wish.

Mr. WILCOX. On page 2 of my statement, I state there: "If the proposed definition should be retained as it now appears in the House bill, it is our conviction that the following results would prevail, and I enumerate by number there."

I would like to turn, then, to the bottom of page 6, point No. 8: "If the definition of employee now appearing in H. R. 6000 is retained, it will greatly retard the growing and conservation of timber in the South by small landowners in that they will have less opportunity to dispose of their timber growth at a reasonable profit."

To enlarge upon this conclusion, I direct your attention to the fact that about three-fourths of the timberland acreage in the South is owned by small-land owners. This small-land ownership is scattered to the extent that every farm owner has some type of wood lot on his ownership. As an illustration, in Mississippi there are 16,500,000 acres of timberland; of this amount about 11,700,000 acres are owned by small-land owners, about 3,000,000 are owned by what is termed large owners or companies, and about 1,800,000 acres are owned by the public (Federal and State).

The public lands are well handled from the standpoint of good forestry practices and the acreage is fast being brought back to full production under the conservation program initiated by the Federal and State agencies in charge. The acreage owned by the large-land owners is about the same as the acreage owned by the State and Federal Governments. These large owners have put into operation their own forestry programs under skilled leadership and are bringing their lands back to full production in a sound and orderly manner.

The CHAIRMAN. Mr. Wilcox, you refer to 1,800,000 acres owned by the public; that is, Federal and State. Is that a forest reservation?

Mr. WILCOX. Yes, sir.

The CHAIRMAN. Yes, I supposed it was.

Senator MARTIN. Has that land been cut over one time, and is this now what we might term second growth?

Mr. WILCOX. All of our timberland in the State of Mississippi is second growth. The acreage that was acquired by both the Federal and State Governments was——

The CHAIRMAN. Cut-over lands?

Mr. WILCOX. Yes, sir; and completely denuded in many instances.

Senator MARTIN. How long does it take to regrow those forests?

Mr. WILCOX. That depends, to a very large extent, of course, upon the type of management, Senator. Under the Federal and State program, where they do have good management, they can bring that timber back to merchantable pulpwood timber in a period of from 10 to 15 years. Of course, larger timber and sawlog timber takes longer.

Senator MARTIN. With respect to these large owners that you refer to, the 3,000,000 acres, who owns that?

Mr. WILCOX. That is large individuals and mostly companies; that is, wood-using and log-using companies.

Senator MARTIN. Are they developing it into what you call sawlog timber?

Mr. WILCOX. Yes. The pulpwood interest, of course, is in developing pulpwood. But in growing pulpwood, you have to grow some saw timber. It just develops into saw timber. The sawman has to raise some pulp to raise saw timber, and the pulp man has to raise some saw timber to raise pulpwood.

Senator BUTLER. The small farmers grow mostly pulpwood?

Mr. WILCOX. Yes, sir, it is mostly the second growth. They usually market that primarily for pulpwood.

With the examples set by the Federal and State Governments and the large owners of timberlands, plus the leadership furnished by them, the small timberland owner is fast coming into his own as a tree farmer. Many States have discontinued ad valorem tax on standing timber and have passed severance tax laws where a tax is paid at the time of severance. This has encouraged all types of timberland owners, especially the small owners, to raise more timber. Some States have passed harvesting laws which require that certain timber be left on areas at the time of cutting. Skilled personnel, free of cost to the small owner, is furnished him to help solve his growing and harvesting problems. This service is available from both Federal and State agencies, various forestry organizations and associations, and from the larger consumers of forest products. Forestry courses and textbooks have been introduced in many of the schools, free conservation schools for boys and girls are arranged each year, and many forestry demonstrations are held each year. All of this has brought conservation to the attention of both young and old throughout the South, and utilization as well as conservation of all our resources, together with our timberland resources, is far ahead of what it has ever been before.

Senator MILLIKIN. Down in your country, are you bothered with the fire hazard with respect to your trees?

Mr. WILCOX. That is our No. 1 problem in the South.

If the proposed definition of an employee is enacted into law, there seems to be little doubt but that an administration could and would put into effect a chain reaction whereby each person in the process will be linked to the next one up the ladder as an employee, which would in the final analysis link the ultimate consumer to the tree farmer or the cutter in an employer-employee relationship.

As to whether the ultimate consumer, large or small, can live in such a position with the exposure involved, I am unable to say. But with

such a development that certainly would be no place for the independent dealer as producer in the industry. The consumer would be forced to produce his own pulpwood on such a mechanized basis he would, through necessity, operate on only the larger timberland holdings as such, and operation could not thrive on the small wood lots and fence corner areas.

Senator MARTIN. What do you mean by "fence corner areas"?

Mr. WILCOX. That is strictly an expression that is adapted to our area, Senator. That is the small land holdings around the field termed a "fence corner" operation. Maybe a man would have timber in a small area at the edge of his field that would not exceed 1 or 3 acres. It is a very small operation.

The CHAIRMAN. Around the branches?

Mr. WILCOX. Yes, sir. That terminology issued in our area.

Senator MARTIN. I had never heard it before. Thank you.

Mr. WILCOX. The consumer-type operation could not give each landowner or a farmer a job, therefore the market for the small timberland owner's timber would be greatly reduced and the prospect of selling his own labor with his own timber would be greatly impaired. Without a good competitive market for his timber, the incentive to carry out a good conservation program is greatly weakened.

The thousands of pulpwood dealers and producers in the South have substantial investments in equipment and timber which they have acquired in contemplation of continuing in business as independent contractors, dealers, and producers. If this definition is retained, we will be forced to liquidate our businesses at a serious sacrifice as we could not hope to continue under the proposed definition.

In conclusion, we respectfully direct your attention to Public Law 642, which is now in effect, and which defines "employee" under existing social security law. This definition follows the common law concept and is ample to protect the interest of employers and employees alike. The attempt to depart from Public Law 642, as manifested by the proposed definition now appearing in the House version of H. R. 6000, would result in a confusing situation and in grave injustices to the small-business men of the country who are, and hope to continue to be, classified as independent contractors or vendors.

The present law was passed in order to prevent the Treasury Department from promulgating and enforcing a rule or regulation which contained in it the same measure of injustice which is contained in the presently proposed definition. We, therefore, urge your honorable committee to reject the definition of "employee" now appearing in the House version of this bill and substitute therefor the definition as set forth in Public Law 642, which carries forward the common law concepts of the master and servant relationship.

If the committee is not convinced of the sensibility and fairness of our position, then we do urge that you strike from the presently proposed definition the fourth paragraph thereof and spell out, in understandable language, those who you believe should be employees and thus avoid a complete and unjustifiable surrender of the prerogatives of the Congress to an administrator.

Mr. Chairman, may I close with this further statement of just a few words. I am just as much out of place here in Washington and before this committee as a person could possibly be, and I realize it.

I am a country boy from a country town and my dealings are with country people. When I get out of my surroundings, I am naturally ill at ease and sometimes I feel maybe I should have stayed at home.

Senator MARTIN. Mr. Chairman, may I observe that some of us feel the same way at times.

Mr. WILCOX. You gentlemen have been very kind.

The CHAIRMAN. You have no occasion to be in the slightest embarrassed.

Senator MARTIN. No, indeed; you are in America.

Mr. WILCOX. That is the point I want to make. But this thing, as I see it, means so much to me and my family, which is small, and I would say thousands of families like mine, that I had to come forward and represent myself and try to protect my business and retain what happiness I might have at this time. It is great that a fellow of my limited capacity and ability can come to you as leaders of our Nation and Congress and represent myself, like these other gentlemen have done before me, and some who will follow.

My humble plea is "Let us keep it that way." Do not turn us over to an administrator. Then we would be governed or controlled by rule and regulation rather than by law. I have stated here in my statement that if you could not do anything else for us that you rewrite and spell out in understandable language this paragraph 4 so we would know where we stood and if you do that, then if we cannot comply, we can get out of business. I know I cannot do it. I cannot write it out, I could not spell it out; and I doubt seriously if Congress could write it out and spell it out. I certainly doubt an administrator could write it out or spell it out. But if this definition goes through as proposed, the administrator will have to spell it out. But he is going to spell it out in his language and I am afraid that it probably will be language that we will not understand. It is of very little importance whether my little business stays alive or not; that is, very little importance to anyone except myself. But I think it is important, and it is important to a great number of people that my little business has an opportunity to stay alive.

That is my message, and I appreciate your consideration.

The CHAIRMAN. Are there any questions?

If not, thank you very much, Mr. Wilcox, for your appearance. We are very glad to have you here.

Mr. WILCOX. Thank you, Mr. Chairman and gentlemen.

(The full statement of Mr. Wilcox is as follows:)

STATEMENT OF R. D. WILCOX, HARRIS-WILCOX TIMBER CO., LAUREL, MISS.

My name is R. D. Wilcox. I am what is generally termed a small-business man, being one of approximately 600 pulpwood dealers securing wood from an estimated 6,000 wood producers in the Southern States. This industry works about 60,000 persons. These pulpwood workers have, on the average, families of from four to five and it will thus be seen that there are in excess of 250,000 persons who are directly or indirectly dependent on our industry for their livelihood, to say nothing of the many thousands of merchants, and persons similarly situated who also enjoy benefits from the industry.

The vastness of this industry may best be visualized by referring to statistics which show that 11,500,000 cords of pulpwood were produced in the South in 1948. While no figures are presently available for 1949, it is our thought that the figures would be approximately the same.

A large volume of the pulpwood produced in the South is produced by part-time workers who are farmers or public workers, who produce some pulpwood at ir-

regular intervals as a means of supplementing their income. In such instances the producer will cut and haul his wood to the nearest rail or barge siding or concentration yard and sell it the same as he would sell his farm produce. In many cases this irregular sale of wood gives a small farmer the cash money he needs to finance his farming operations during the growing season. In such cases the wood dealers have no knowledge of the wood being produced until the wood shows up at the delivery point. The wood dealer does not know the people involved in producing the wood, the ways and means employed or the regularity of the operation, even though the same producer might repeat this action a number of times.

I represent or speak for a group of pulpwood dealers and producers who play an important part in this industry and who are vitally concerned about what the proposed social-security law (H. R. 6000) will do to the industry if it becomes a law.

The definition of employee now appearing in the pending bill (H. R. 6000), passed by the House of Representatives and now before this committee, is an entire departure from existing law. This new definition is so written as to seriously affect all independent dealers and producers of pulpwood and other timber products.

If the proposed definition should be retained as it now appears in the House bill, it is our conviction that the following results would prevail:

1. It would be impossible for those who deal in pulpwood or other forest products to know who their employees are until such time as the administrator, and in some instances the courts, have decided that question. In the meantime, the determination of who is or who is not an employee would not be decided by law but by an administrator, who is given unlimited power of interpretation.

2. By the time the Administrator has determined whether a named person is or is not an employee, and whose employee he is, many penalties may have been imposed, and in excessive amounts, against dealers because they failed to guess what the administrator would hold in regard to particular subcontracts and their status. This is a risk that the average dealer or producer cannot afford to take, as a mistake in this respect could force him out of business.

3. It will make tax-collection agencies out of forest-products dealers and possibly consumers of forest products, and require them to pay social-security taxes on people they do not know and to whom they do not pay wages or any remuneration, nor will they know the amount of wages upon which the tax should be based.

4. If a forest-products dealer or consumer is required to pay social-security taxes on any person, it will follow that such person will ultimately be classed and considered as the employee of said dealer or consumer for all purposes, and, sooner or later, said dealer or consumer will be required to recognize him as an employee under the wage-and-hour law, the Workmen's Compensation Act, the National Labor Management Relations Act, and income-tax law, the Unemployment Compensation Act and finally be held liable for all of his acts of negligence. For instance, if such an employee so classified cuts a tree down on the lands of another, or has an accident injuring another crew worker, or any outsider, the person required to pay social-security taxes on this person could be held responsible to pay all the resulting damages.

5. The definition of "employee" now appearing in the House version of H. R. 6000 is not a definition of employee in the language of any congressional declaration, but leaves the status of many people to the full exercise of administrative discretion.

We agree with the statement appearing on page 162 of the minority report as it appears in Report No. 1300 accompanying this bill, wherein it is said: "Paragraph (4) serves no social purpose. Instead it leaves the status of millions of our citizens to the almost unbridled exercise of administrative discretion and does so just at a time when they must for the first time determine at their peril whether they are to be covered as 'employees' or as self-employed. It will result in the unsettling of many established business practices and produce endless costly litigation. Its adoption would be a shameful departure from the constitutional division of powers among the three branches of Government and marks the surrender by the Congress of its prerogative and duty to define tax liability."

6. The proposed definition would eliminate independent contractors and tend to make employees out of many small-business men who are now classed as contractors or subcontractors, and who are enjoying the privileges of working out their own destiny in the American way of life. These men do not want to surrender their hard-won privileges of working for themselves in pursuits or businesses which they have elected to enter, and they would seriously object to being converted into employees rather than independent businessmen.

7. Paragraph 4 of the definition supposedly constitutes a formula by which the Administrator, the Treasury Department, or ultimately the courts, may determine whether a person is or is not an employee, provided he is not made an employee under paragraphs 1, 2, or 3 of the definition and is not self-employed. It is provided that employment be determined by the combined effect of seven factors. If it is the will of Congress that such an issue be determined by the combined effect of these seven factors, then Congress should further prescribe the effect of the absence or presence of each of said factors. While the definition itself does not so provide, the committee report shows that some of the factors are to be considered as proving that one is an employee, while other factors are to be considered as proving that one is not an employee. We refer to page 85 of Report No. 1300, Union Calendar No. 536, and to page 193 of the same report. No one can know what the Administrator would hold under any given statement of facts. One becomes more confused when, after reading the language of the definition, he reads the conflicting explanations which appear in the committee's report. To dissect the definition, we might ask what is meant by "(A) Control over the individual." The word as here used admittedly means a lesser degree of control than is required under the common law, otherwise it serves no purpose in this paragraph.

It is impossible to conceive the lack of some element of control, such as is referred to by the committee's report, in any relationship where one sets about at the request of another to accomplish a designated purpose or task in the performance of a service; therefore, in every case the Administrator could find some element of control, indicating an employee status under the definition.

What is meant by "(B) Permanency of the relationship"? Under the definition, only the Administrator or the Treasury or the courts can say. It does not seem reasonable to say that a relation of subcontractor can be transferred to a relation of an employee, merely because of the length of time during which the service continues. The same criticism applies to the phrase, "(C) Regularity and frequency of performance of service." Again what sense could there be in saying a man is a contractor today, but becomes an employee tomorrow because he is engaged to repeat a stipulated type of service?

What is meant by "(D) Integration of the individual's work in the business to which he renders service"? In the majority report to the committee, appearing on page 85 thereof, it is stated in part, "integration in particular cases may be evidenced by one or more of a variety of circumstances, such as the fact that the service is essential to the business." The growing of trees is certainly essential to the production of pulp and paper and to all other forest-products industries. The production of pulpwood is certainly essential to the manufacture of pulp and paper. The sawing and transportation of logs is certainly essential to the production of lumber. Therefore, since under the definition, the Administrator is left to determine the relative value of the several factors, pulpwood producers, logging contractors, and tree farmers could be declared arbitrarily by the Administrator to be employees of the business to which they render service.

One of the factors is "(E) Lack of skill required of the individual." The vagueness of this requirement makes the factor very confusing, because as individuals, we all have human limitations. The folly of this requirement can best be shown by a reference to the statements concerning this factor, appearing in the committee's report on page 193 and page 85, to which statements reference is here made. As read in the light of the statements there appearing, the phrase becomes vague and meaningless. Evidently the phrase is brought into this definition simply to confuse the terms of the definition and add to the arbitrary powers of the Administrator.

The next factor is "(F) Lack of investment by the individual in facilities for work." It is safe to say the vast majority of businesses from the largest to the smallest, on down to the individual, operates on some borrowed capital. In fact our economic system is a credit system. No standards are set up in the definition showing the amount of the investment required to qualify under this factor, and again it is left to the unlimited discretion of the Administrator to determine the force and effect of this factor. One fact that would enter into this definition is whether or not a pulpwood dealer has advanced money to a producer from whom he buys pulpwood to enable him to purchase equipment or stumpage. If such advancements were made, the Administrator could, and in all probability would, hold that the investment by the individual in facilities was reduced to such an extent that the Administrator would not recognize the investment as

being sufficient to prevent the individual from being an employee under the provisions of this paragraph.

The last factor relates to "(G) Lack of opportunities of the individual for profit or loss." This factor is quite similar to factor (F) above quoted. The Administrator is not controlled in any degree whatever in the application of this factor, and in each separate transaction it would be left to the Administrator to determine whether there was an opportunity of the individual to make a profit or sustain a loss under the existing circumstances.

It seems such discretion as is allowed the Administrator under section 4 of the proposed definition represents a failure on the part of Congress to assume its just responsibilities, and amounts to government by rule and regulation rather than by law.

8 If the definition of "employee" now appearing in H. R. 6000 is retained, it will greatly retard the growing and conservation of timber in the South by small landowners in that they will have less opportunity to dispose of their timber growth at a reasonable profit.

To enlarge upon this conclusion, I direct your attention to the fact that about three-fourths of the timberland acreage in the South is owned by small landowners. This small landownership is scattered to the extent that every farm owner has some type of wood lot on his ownership. As an illustration, in Mississippi there are 16,500,000 acres of timberland; of this amount about 11,700,000 acres are owned by small landowners, about 3,000,000 are owned by what is termed large owners or companies, and about 1,800,000 acres are owned by the public (Federal and State).

The public lands are well handled from the standpoint of good forestry practices and the acreage is fast being brought back to full production under the conservation programs initiated by the Federal and State agencies in charge. The acreage owned by the large landowners is about the same as the acreage owned by the State and Federal Governments. These large owners have put into operation their own forestry programs under skilled leadership and are bringing their lands back to full production in a sound and orderly manner.

With the examples set by the Federal and State Governments and the large owners of timberlands, plus the leadership furnished by them, the small timberland owner is fast coming into his own as a tree farmer. Many States have discontinued ad valorem tax on standing timber and have passed severance tax laws where a tax is paid at the time of severance. This has encouraged all types of timberland owners, especially the small owners, to raise more timber. Some States have passed harvesting laws which require that certain timber be left on areas at the time of cutting. Skilled personnel, free of cost to the small owner, is furnished him to help solve his growing and harvesting problems. This service is available from both Federal and State agencies, various forestry organizations and associations, and from the larger consumers of forest products. Forestry courses and textbooks have been introduced in many of the schools, free conservation schools for boys and girls are arranged each year, and many forestry demonstrations are held each year. All of this has brought conservation to the attention of both young and old throughout the South and utilization as well as conservation of all our resources, together with our timberland resources, is far ahead of what it has ever been before.

If the proposed definition of an employee is enacted into law there seems to be little doubt that an administrator could and would put into effect a chain reaction whereby each person in the process will be linked to the next one up the ladder as an employee, which would in the final analysis link the ultimate consumer to the tree farmer or the cutter in an employer-employee relationship.

As to whether the ultimate consumer, large or small, can live in such a position with the exposure involved, I am unable to say. But with such a development there certainly would be no place for the independent dealer as producer in the industry. The consumer would be forced to produce his own pulpwood on such a mechanized basis he would, through necessity, operate on only the larger timberland holdings as such and operation could not thrive on the small woodlots and fence-corner areas. The consumer-type operation could not give each landowner or farmer a job, therefore the market for the small timberland-owner's timber would be greatly reduced and the prospect of selling his own labor with his own timber would be greatly impaired. Without a good competitive market for his timber, the incentive to carry out a good conservation program is greatly weakened.

9. The thousands of pulpwood dealers and producers in the South have substantial investments in equipment and timber which they have acquired in contemplation of continuing in business as independent contractors, dealers, and producers. If this definition is retained, we will be forced to liquidate our businesses at a serious sacrifice as we could not hope to continue under the proposed definition.

In conclusion, we respectfully direct your attention to Public Law 642, which is now in effect, and which defines "employee" under existing social-security law. This definition follows the common-law concept and is ample to protect the interest of employers and employees alike. The attempt to depart from Public Law 642, as manifested by the proposed definition now appearing in the House version of H. R. 6000, would result in a confusing situation and in grave injustices to the small-business men of the country who are, and hope to continue to be, classified as independent contractors or vendors. The present law was passed in order to prevent the Treasury Department from promulgating and enforcing a rule or regulation which contained in it the same measure of injustice which is contained in the presently proposed definition. We, therefore, urge your honorable committee to reject the definition of "employee" now appearing in the House version of this bill and substitute therefor the definition as set forth in Public Law 642, which carries forward the common-law concepts of the master-and-servant relationship.

If the committee is not convinced of the sensibility and fairness of our position, then we do urge that you strike from the presently proposed definition the fourth paragraph thereof and spell out, in understandable language, those who you believe should be employees and thus avoid a complete and unjustifiable surrender of the prerogatives of the Congress to an administrator.

The CHAIRMAN. Our next witness will be Mr. Adams.

STATEMENT OF S. M. ADAMS, PRESIDENT, S. M. ADAMS, INC., MOBILE, ALA.

Mr. ADAMS. Mr. Chairman and gentlemen of the committee, my name is S. M. Adams and I am president of S. M. Adams, Inc., a corporation, of Mobile, Ala., a dealer in pulpwood and timber products.

We buy and sell standing timber and manufactured pulpwood. The bulk of our business is the buying and selling of manufactured pulpwood. We sell in excess of 100,000 net cords per year to one large mill and lesser amounts to other mills. This wood is bought from some 120 producers who in turn employ approximately 500 woods laborers. They own their equipment consisting of trucks, tractors, power saws, axes, and numerous other accessories necessary to their work. Their investment will run from $2,000 for the smaller producers to $10,000 for the larger and will average about $3,500 each.

After reading and studying the provisions of paragraph 4 of H. R. 6000 (Federal social-security legislation) the fear has arisen in my mind that an organization such as we have perfected would be destroyed should we be made responsible for the collection of social-security taxes from men whose earnings we do not know and, in some cases, have never seen. It would necessitate the employment of clerical help and field men to collect and tabulate the amounts involved. It would also cost us the current employers' percentage on approximately $600,000 per year. The total added expense as of the current year to my company is estimated at approximately $17,000 per year. This would exceed the corporation's net profits, after taxes, for the years 1948 and 1949.

Our business touches the interest of a great number of people who regard us as responsible and trustworthy. In this belief they entrust the cutting and sale of their standing timber to us and we must in turn

enforce such cutting methods and restrictions upon our pulpwood producers as will insure proper conservation cutting and proper payment to timber owners for timber removed. This, under A, paragraph 4, could be considered "control over the individual."

We have contract producers who have been with us for several years. This, under B, paragraph 4, could be termed "permanency of the relationship."

The location of the work performed changes frequently. The agreed price per unit of work changes frequently. Otherwise the producer performs the same function as his equipment is fitted for. This could, under C, paragraph 4, be considered "regularity and frequency of performance of the service."

If the Administrator desired to do so, he could probably hold that sections D, E, F, and G of paragraph 4 do not convert pulpwood producers into employees of the dealers but under the definition he is certainly given the power to arbitrarily classify the employees of the producer as employees of the dealer. There is simply no necessity for so framing the definition that pulpwood dealers and dealers in other timber products would be burdened with the duty of keeping the records for those who actually do the employing and paying and in ultimately having to pay taxes on such employees.

In view of the above facts as set out, I respectfully ask that paragraph 4 be deleted from H. R. 6000 and that the common-law version of employer-employee or Public Law 642 be the means of determining who is an employer and who is an employee.

Gentlemen, you have heard from men who are dealers like myself who have other business connections. I would like to put in the record that this is strictly a pulpwood dealer. That is all we are. We are engaged in no other form of business. Therefore, if we were put out of business, we would have nothing to fall back on.

The CHAIRMAN. How long have you been engaged in that business?

Mr. ADAMS. Twenty years. I built it up over a period of 20 years.

Senator MILLIKIN. Mr. Chairman, may I invite the witness's attention to the fact that in connection with these tests from which they determine you are or are not an employee, when the matter was before us a couple of years ago, the Department in connection with proposed regulations on the same subject, roughly the same test, said:

> Just as the above listed factors cannot be taken as all-inclusive so too the statement of facts or elements set forth in [an amplifying] paragraph * * * cannot be considered complete. The absence of mention of any factor, fact, or element in these regulations * * * should be given no significance.

So you have seven, plus anything else that anyone might imagine.

Mr. ADAMS. Well, my limited intelligence prevents me from interpreting any of them. Whether there is anybody smart enough to do it, I don't know. But all of us would have to continue in business with that threat hanging over our heads. If an adverse decision was handed down against us, we would be subject to penalties and fines, and the result would be that we could not go on.

The CHAIRMAN. Are there any further questions?

If not, thank you very much, Mr. Adams, for your appearance.

Mr. ADAMS. Thank you, Mr. Chairman.

The CHAIRMAN. The next witness will be Mr. Carr Gibson.

STATEMENT OF CARR GIBSON, CAPE FEAR WOOD CORP., ELIZABETHTOWN, N. C.

Mr. GIBSON. Mr. Chairman and gentlemen of this honorable committee, my name is Carr Gibson of the Cape Fear Wood Corp., located at Elizabethtown, N. C., and is doing business as a pulpwood dealer. We buy pulpwood from those who produce it and we then sell it to the paper mills. The pulpwood industry is much concerned about the proposed definition of "employee" as it appears in H. R. 6000, recently passed by the House of Representatives and now pending before this honorable committee, the Senate Finance Committee.

Pulpwood producers and dealers are relatively small-business men or corporations located throughout the country and especially in the Carolinas and other Southern and Southwestern States. Some idea of the volume of pulpwood operations may be found in a statement made by H. J. Malsberger, general manager, Southern Pulpwood Conservation Association, at a recent meeting in Atlanta, in which he said:

> The pulp and paper industry provides about a $200,000,000 annual pay roll to the economy of the South by using no more wood than is now wasted through fire and its disastrous after effects.

Gentlemen, I would like to expand on that just a little. In other words, according to this statement made by Mr. Malsberger, who is in a position to know from data he has gotten from various sources, the pulp industry does not use any more wood from the forests than is destroyed by fire in the South each year. That is our defense to some people who have the erroneous conception that pulpwood is destroying the South. It is not doing it at all, in my opinion and Mr. Malsberger's opinion.

While this statement was directed toward conservation of timber and timber products, it does clearly indicate the volume of the pulpwood business. Those who are engaged in the production and sale of pulpwood, as producers or dealers, have made considerable headway in teaching and applying the principles of conservation in preserving and increasing the growth of timber. Under the present law, every farmer who conserves and wisely disposes of his timber growth is greatly benefited through the methods now available to him for handling of his forest products and the sale thereof produces an income greatly needed in the future development of his farming operations.

As a pulpwood dealer, I have carefully considered what would likely happen to producers and dealers in the South if this committee approves the definition now appearing in the House version of the bill. I have discussed this possible effect with others and all of us who are engaged in the pulpwood business and who know and understand the problems of the business feel that it would be very disastrous to the industry if the present definition is retained. We, therefore, appeal to you gentlemen to come to the rescue of these small-business men to the end that a definition of employee which is not destructive of their business may be substituted in the pending bill. Our objections to the proposed definition, briefly stated, are:

1. It will deprive us of our independence as small-business men and force us either to quit business or become employees of the paper

companies to which we sell our products. We do not want to go out of business because, by hard work and intelligent planning, we are making a living out of this business. We do not want to be forced out of business because we have considerable investments in timber, timber rights, and equipment; and if we are forced out of business, we will never be able to dispose of our equipment without suffering a heavy loss.

2. The pulpwood producers who pay wages to men employed by them in the production of pulpwood are required under the law to report these men for social-security tax purposes and to pay social-security taxes on these employees. The producers know who the men are. They know how much money or other remuneration is paid to them and, therefore, the amount of tax which they are required to pay. Why is it deemed necessary to confuse the employer-employee relationship by bringing into the proposed definition several factors which do not determine the true relationship but which, in fact, mystify and becloud it? Other than for the convenience of those charged with the collection of social-security taxes, why should it be the desire of the sponsors of this definition to require people to pay social-security taxes on men they do not know and with whom they have no contacts?

3. As drafted, the proposed definition is a radical departure from the concept of the employer-employee relationship as we have known it for years. Every sensible person in business now has a clear understanding as to who his employees are. If the new definition is adopted, all of the principles by which the employer-employee relationship has been determined will be discarded and the entire matter will be left in the hands of an administrator to determine who is and who is not an employee and whose employee he is. The formula set up by paragraph 4 of the proposed definition serves no purpose but to leave it in the hands of an administrative bureau to determine who is and who is not an employee and whose employee he is.

4. The establishment of such a definition would result in hopeless confusion in the pulpwood industry and would subject dealers and producers, and possibly the paper mills, to severe penalties because of decisions made by the administrator long after the so-called employee had severed his relations with the industry which he served.

5. The definition, if adopted, would foster a feeling of unrest and fear in the minds of small-business men because of the continuing fear of penalties which might be imposed.

6. The responsibility of defining the employer-employee relationship is with Congress and ought not to be passed onto an administrator for determination. It seems to be true that those charged with the administration of such a law would be anxious to broaden its scope and bring everybody under it that it possible to bring. With this thought, we do not seriously contend; however, we do object to any law which would permit the administrator to so construe the definition as to put the burden of paying the taxes upon those who have no contact with the employees involved, merely to make the collection of the tax easier for those charged with the enforcement of the act.

7. We respectfully submit that if the fourth paragraph of the present definition is adopted by your committee and the Senate, that there

is abundant evidence that the present, or any future administrator of the law would find in its language an opportunity to extend its meaning far beyond that which Congress intended it to have. To illustrate this point, I call your attention to the fact that under the present Fair Labor Standards Act, an employee is defined as "'employee' includes any individual employed by an employer."

Notwithstanding this simple definition, the Administrator, Wages and Hours Division, recently issued an interpretation relating to forestry or logging operations, in which not more than 12 employees are employed. This bulletin directly relates to section 13 (a) (15) of the Fair Labor Standards Amendments of 1949. I am attaching hereto a copy of this bulletin, and I direct your attention to paragraph (b) appearing on page 4 of the bulletin wherein, notwithstanding the simple definition of employee above quoted, the Administrator arbitrarily rules that whether or not one is an employee or independent contractor must be determined by practically the same factors which appear in the presently proposed definition of employee in H. R. 6000.

(The bulletin referred to follows:)

TITLE 29—LABOR

CHAPTER V.—WAGE AND HOUR DIVISION, DEPARTMENT OF LABOR

SUBCHAPTER B—STATEMENTS OF GENERAL POLICY OR INTERPRETATION NOT DIRECTLY RELATED TO REGULATIONS

PART 788—FORESTRY OR LOGGING OPERATIONS IN WHICH NOT MORE THAN TWELVE EMPLOYEES ARE EMPLOYED

Sec.
788.1 Statutory provisions considered.
788.2 Introductory statement.
788.3 "Planting or tending trees, cruising, surveying, or felling timber (and) preparing or transporting logs."
788.4 "Preparing * * * other forestry products."
788.5 "Transporting (such) products to the mill, processing plant, railroad, or other transportation terminal."
788.6 Counting the twelve employees.
788.7 Employees employed in both exempt and nonexempt work.

AUTHORITY: Sections 788.1 to 788.7 issued under 52 Stat. 1060, as amended; 29 U. S. C., and Sup., 201 et seq.

SEC. 788.1. *Statutory provisions considered.* The Fair Labor Standards Amendments of 1949[1] amend the Fair Labor Standards Act of 1938[2] by providing, among other things, a new exemption, section 13 (a) (15), from the minimum wage provisions of section 6 and the maximum hours provisions of section 7, as follows:

The provisions of sections 6 and 7 shall not apply with respect to * * * any employee employed in planting or tending trees, cruising, surveying, or felling timber, or in preparing or transporting logs or other forestry products to the mill, processing plant, railroad, or other transportation terminal, if the number of employees employed by his employer in such forestry or lumbering operations does not exceed twelve.

This exemption need not be considered unless the employee is "engaged in commerce or the production of goods for commerce" as those words are defined in the act so as to come within the general scope of sections 6 and 7. That problem is considered in Part 776 of this chapter and the discussion will not be repeated in this part. Neither does this part discuss the exemption provided in section 13 (a) (6) and defined in section 3 (f) to include forestry or lumbering operations incident to or in conjunction with certain farming operations. That problem is considered in Subpart B of Part 780 of this chapter.

[1] 63 Stat. 910, effective January 25, 1950
[2] 29 U. S. C. 201 et seq.

SEC. 788.2 *Introductory statement.* The purpose of this part is to make available in one place the general interpretations of the Administrator which will provide "a practical guide to employers and employees as to how the office representing the public interest in enforcement of the law will seek to apply it."[3] The interpretations contained in this part indicate, with respect to section 13 (a) (15) of the act which refers to forestry or logging operations, the construction of the law which the Administrator believes to be correct and which will guide him in the performance of his administrative duties under the act unless and until he is otherwise directed by authoritative decisions of the courts or concludes, upon reexamination of an interpretation, that it is incorrect. Under the Portal-to-Portal Act of 1947,[4] interpretations of the Administrator may, under certain circumstances, be controlling in determining the rights and liabilities of employers and employees. The interpretations contained in this part are interpretations on which reliance may be placed as provided in section 10 of the Portal-to-Portal Act, so long as they remain effective and are not modified, rescinded, or determined by judicial authority to be incorrect. However, the omission to discuss a particular problem in this part or in the interpretations supplementing it should not be taken to indicate the adoption of any position by the Administrator with respect to such problem or to constitute an administrative interpretation or practice or enforcement policy.

SEC. 788.3 "*Planting or tending trees, cruising, surveying, or felling timber (and) preparing or transporting logs.*" By its terms, the exemption is limited to those employed in the named operations. These are terms of ordinary speech and mean what they mean in ordinary intercourse in this context. These operations include the incidental activities normally performed by persons employed in them but do not include mill operations. Thus employees employed in "planting or tending trees" include those engaged in seeding, planting seedlings, pruning, weeding, preparing firebreaks, removing rot or rusts, spraying, and similar operations when the object is to bring about, protect, or foster the growth of trees. Employees engaged in "cruising * * * timber" include all those members of a field crew whose purpose is to estimate and report on the volume of marketable timber. Employees engaged in "surveying * * * timber" include the customary members of a crew accomplishing that function such as the chainmen, the transit men, the rodmen, and the axmen who clear the ground of brush or trees in order that the transit men may obtain a clear sight. Similarly, the usual members of a crew which goes to the woods for the purpose of felling timber and preparing and transporting logs are engaged in operations described in the exemption. Typically included, when members of such a crew, are fellers, limbers, skidders, buckers, loaders, swampers, scalers, and log truck drivers.

Preparing logs includes, where appropriate, removing the limbs and top, cutting them into lengths, removing the bark, and splitting or facing them when done at the felling site, but does not include such operations when done at a mill. Employees engaged in sawmill, tie mill, and other operations in connection with the processing of logs, such as the production of lumber, are not exempt.

SEC. 788.4 "*Preparing * * * other forestry products.*" As used in this section, "other forestry products" means plants of the forest and the natural properties or substances of such plants and trees. Included among these are decorative greens such as holly, ferns, and Christmas trees, roots, stems, leaves, Spanish moss, wild fruit, and brush. Gathering and preparing such forestry products as well as transporting them to the mill, processing plant, railroad, or other transportation terminal are among the described operations. Preparing such forestry products does not include operations which change the natural physical or chemical condition of the products or which amount to extracting as distinguished from gathering, such as shelling nuts, or mashing berries to obtain juices.

SEC. 788.5 "*Transporting (such) products to the mill, processing plant, railroad, or other transportation terminal.*" The transportation or movement of logs or other forestry products to a "mill, processing plant, railroad, or other transportation terminal" is among the described operations. *Loading and unloading, when performed by employees employed in the named operations, are included as exempt operations.* Loading logs or other forestry products onto railroad cars or other transportation facilities for further shipment if performed as part

---

[3] *Skidmore v. Swift & Co.* (320 U. S. 134).
[4] 61 Stat. 84.

of the exempt transportation will be considered a step in the exempt transportation. However, any other loading transportation, or other activities performed in connection with the logs or other forestry products after they have been unloaded at one of the described destinations is not exempt. "Other transportation terminal" refers to any place where there are established facilities or equipment for the shipment or transportation of logs or other forestry products. Motor carrier yards, docks, wharves, or similar facilities are examples of other transportation terminals, but the place where logs are picked up by contact motor carriers or haulers at the site of the woods operations for transportation to the mill, processing plant, or railroad is not such a terminal.

SEC. 788.6 *Counting the twelve employees.* Regardless of his duties, no employee is exempt under section 13 (a) (15) unless, "the number of employees employed by his employer in such forestry or lumbering operations does not exceed twelve."

(a) The determination of the number of employees employed in the named operations is to be made on an occupational and a workweek basis. Thus the exemption will be available in one workweek when twelve or less employees are employed in the exempt operations and not in another workweek when more than that number are so employed. For a discussion of the term "workweek" see Part 778 of this chapter. The exemption will not be defeated, however, if one or more of the twelve employees so engaged is replaced during the workweek, for example, by reason of illness. But if additional employees are employed during the workweek in the named operation, even if they work on a different shift, the exemption would no longer be available if the total number exceeds twelve. Similarly, all of an employer's employees employed in any workweek in the named operations must be counted in the twelve regardless of where the work is performed or how it is divided. Thus if an employer employs six employees in felling timber and preparing logs at one location and seven at another location in those operations, the exemption would not be available. Similarly, if he employs ten employees in such operations and three other employees in transportation work as discussed in section 788.5, the exemption could not apply. Under such circumstances he would be employing more than twelve employees in the named operations. The fact that some of these employees may not be engaged in commerce or the production of goods for commerce will not affect these conclusions. Except for replacements, therefore, all of an employer's employees employed in the named operations in a workweek must be counted, regardless of where they perform their work or in which of the named operations or combinations of such operations they are employed. The length of time an employee is employed in the named operations during a workweek is also immaterial for the purpose of applying the numerical limitation. Thus, even if an employee would not himself be exempt because he is engaged substantially in nonexempt work (see section 788.7), nevertheless, if, as a regular part of his duties, he is also engaged in the operations named in the exemption he must be counted in determining whether the twelve employee limitation is satisfied. The exemption is available to an employer, however, even if he has a total of thirteen or more employees, if only twelve of them or less are employed in the named operations. Thus if such an employer employs only twelve employees in the named operations and others in operations not named in the exemption, such as sawmill operations, the exemption is not defeated because of the fact that he employs more than twelve employees altogether. It will not apply, however, to those engaged in the operations not named in the exemption.

(b) In many cases an employer who operates a sawmill or concentration yard will be supplied with logs or other forestry products by several crews of persons who are engaged in the named operations. Frequently some or all of such crews, separately considered, do not employ more than twelve persons, but the total number of such employees is in excess of twelve. Whether the exemption will apply to the members of the individual crews which do not exceed twelve will depend on whether they are employees of the sawmill or concentration yard to which the logs or other forestry products are delivered or whether each such crew is a truly independently owned and operated business. If the number of employees in such a truly and independently owned and operated business does not exceed twelve, the exemption will apply. On the other hand, the Administrator will assume that the courts will be reluctant to approve as bona fide a plan by which an employer of a large number of woods employees splits his employees into several allegedly "independent businesses" in order to take advantage of the exemption.

The Supreme Court [5] has made it clear that there is no single rule or test for determining whether an individual is an employee or an independent contractor, but that the "total situation controls." In general an employee, as distinguished from a person who is engaged in a business of his own, is one who "follows the usual path of an employee" and is dependent on the business which he serves. As an aid in assessing the total situation the Court mentioned some of the characteristics of the two classifications which should be considered. Among these are: The extent to which the services rendered are an integral part of the principal's business, the permanency of the relationship, the opportunities for profit or loss, the initiative, judgment, or foresight exercised by the one who performs the services, the amount of investment, and the degree of control which the principal has in the situation. The Court specifically rejected the degree of control retained by the principal as the sole criterion to be applied.

At least in one situation it is possible to be specific: Where the sawmill or concentration yard to which the products are delivered owns the land or the appropriation rights to the timber or other forestry products, the crew boss has no very substantial investment in tools or machinery used, and the crew does not transfer its relationship as a unit from one sawmill or concentration yard to another, the crew boss and the employees working under him will be considered employees of the sawmill or concentration yard. Other situations, where one or more of these three factors are not present, will be considered by the Administrator as they arise on the basis of the criteria mentioned in the preceding paragraph. Where all of these three criteria are present, however, it will make no difference if the crew boss receives the entire compensation for the production from the sawmill or concentration yard and distributes it in any way he chooses to the crew members. Similarly, it will make no difference if the hiring, firing, and supervising of the crew members is left in the hands of the crew boss.

SEC. 788.7 *Employees employed in both exempt and nonexempt work.*—The exemption for an employee employed in exempt work will be defeated in any workweek in which he performs a substantial amount of nonexempt work. For enforcement purposes nonexempt work will be considered substantial in amount if more than 20 percent of the time worked by the employee in a given workweek is devoted to such work. Where the two types of work cannot be segregated, however, so as to permit separate measurement of the time spent in each, the employee will not be exempt.

Signed at Washington, D. C., this 25th day of January 1950.

WM. R. MCCOMB,
Administrator, Wage and Hour Division.

(F. R. Doc. 50–817; Filed, Jan. 27, 1950; 8:53 a. m.)

Mr. GIBSON. My reason for reference to this bulletin is to illustrate that Congress ought not to pass the responsibility of determining a matter which is so vital to the interest of the small-business man of this country over to an administrator. Such procedure is not justified by any existing emergency and is wholly unfair to those who are and want to continue to be independent contractors and operators.

Senator MILLIKIN. Did you hear what I read from the proposed regulation of a couple of years ago, which resulted in the law which Congress passed stopping the whole business? Did you hear me read that a few minutes ago?

Mr. GIBSON. Yes, sir.

Senator MILLIKIN. With reference to that and several things of the same effect, this committee, in its report on that legislation, said:

> But the fatal error of the Treasury's proposed regulation is that this end-point determination of the existence or absence of control under the usual common-law rule as required by the act, as is correctly interpreted by existing regulations and by the legislative history of the act, has been subordinated and diluted and reduced to possibly inconsequential effect by making it into only one (No. 6) of the specified, numbered, but completely unweighted factors, and into only one of an unlimited number of unspecified and unweighted factors which may be invented by the administrators to satisfy the exigencies of their future decisions.

---

[5] *Rutherford Food Corp.* v. *McComb* (331 U. S. 722); *United States* v. *Silk* (331 U. S. 704); *Harrison* v. *Greyvan Lines* (331 U. S. 704); *Bartels* v. *Birmingham* (332 U. S. 126).

I read that to you because it may give you gentlemen a little hope. I would not venture to predict what this present committee is going to do, but I hope the chairman will not think I am impertinent in saying that I believe that he agrees with you, and when you have him, you have a regiment.

Mr. GIBSON. Thank you very much for reading that quotation again.

In closing, may I respectfully urge you gentlemen to consider the trend of our times and then determine whether you will depart from some of the principles which have enabled us to reach this milestone in our existence or whether you will inflict upon us the reign, control, and domination of bureaucracy by adopting the presently proposed definition. I feel that the present law is fair to employer, employee, and Government and that the adoption of the new definition will not in any way advance social security but will seriously injure the small-business man of the Nation.

Gentlemen, may I expand just a little bit here. It has been mentioned by several who have been up before me here about the large companies in the event that this law goes into effect; that is, they will of necessity have to put on large operations, thereby cutting out the small landowner and principally the farmer who has timber for sale. During the war, some of the larger companies did just that. They, of necessity, had to start their own company operations. They could not get their pulpwood from the public, because they were either in the service or defense factories, and so forth. So out of this necessity they put in several operations of their own, employing their own men, trucks, and equipment. They therefore could not and did not go on to the small landowners' land because they could not possibly do it.

The case is a little different there, and it was a war emergency. However, I think that well illustrates the point that several have brought out of what would happen. This actually did happen, as many of us in the pulpwood industry knew. However, I was in the Army; but it was continued until shortly after the war to close out these large operations.

Frankly, gentlemen, I am very confident that this committee and the Congress will never permit this bill to go through, because I think you agree it is basically not economically sound. It is going to hurt us in a small business way or in a small big business way—meaning that no business remains the same. You might start out small with nothing, as we did, and you advance along with the time and different ones coming into the business. I just will not think, and I have reasonable assurance to know that this will not go through. It is just not the thing—absolutely not.

With that, I do appreciate very much and consider it a distinct honor to appear before you gentlemen.

The CHAIRMAN. Thank you very much for your appearance.

Mr. GIBSON. Thank you, Mr. Chairman.

The CHAIRMAN. Our next witness will be Mr. F. P. Ellis.

You are listed here from Atlanta, Tex.

STATEMENT OF F. P. ELLIS, HANNER & ELLIS, ATLANTA, TEX.

Mr. ELLIS. Yes, sir.

The CHAIRMAN. I did not know there was an Atlanta, Tex.

Mr. ELLIS. Well, like a lot of other things, they have overlooked the little places.

Senator BUTLER. We have an Atlanta, Nebr., Mr. Chairman.

The CHAIRMAN. I knew there was an Atlanta, Nebr., but I have not heard of Atlanta, Tex.

Mr. ELLIS. My name is F. P. Ellis and I am a member of the firm of Hamner & Ellis, a partnership having its place of business at Atlanta, Tex. We are pulpwood dealers and producers, and produce, buy, and sell pulpwood. We buy pulpwood from about 12 different independent producers and through them obtain 85 percent of the pulpwood which we sell. We produce about 15 percent of the pulpwood we sell.

As pulpwood dealers, we are very much disturbed about the definition of "employee" which now appears in the social-security bill. It seems to us that if this definition is adopted by the Senate, it will mean the imposition of intolerable conditions upon those of us who are engaged in the production and sale of forest products and that it will mean the end of our independence as small-business men. Although it attempts to enlarge upon the meaning of "employee" for purposes of social-security taxation, the proposed definition would not extend coverage to a single person or group not covered under other provisions of H. R. 6000. It is not right for Congress to delegate to an administrator to determine for us who our employees are and in some instances whose employees we are.

I have carefully read the statement filed with your committee by R. D. Wilcox of Harris-Wilcox Timber Co., Laurel, Miss. In his statement he very clearly points out the evils of this proposed definition and how it will affect the pulpwood business in the South. The objections which he makes will apply with equal force to pulpwood operations in Texas. In order not to unduly extend the record, I endorse the Wilcox statement and respectfully urge you gentlemen to consider it as applicable to our problems.

I sincerely hope that your honorable committee will reject the proposed definition of employee now appearing in the pending bill and that you will define employee in sensible and understandable terms.

I would like to add that this is a serious proposition to us small-business men in Texas. We are in this profession primarily to make money and because we like it, and we certainly want to stay independent businessmen. If the proposed definition of "employee" goes through, it will not only affect my particular business, but it will affect other businesses connected with forestry products in my particular area of Texas, such as the tie producers, and the pulp producers, and the sawmills. I am afraid that it would definitely hinder the whole economic procedure in our particular part of Texas that is based primarily on forestry products.

I feel, like Mr. Wilcox, that I would be better off at home rather than appear before this committee, but it is that great American way of life—where we do have a right to come before a group of men and plead our cause rather than plead our cause to what I would term one administrator.

So, gentlemen, please define "employee" in such terms that we can stay in business.

The CHAIRMAN. Thank you very, very much, Mr. Ellis. You think you would rather take your chances before the committee than come up the year after next and go before the Administrator?

Mr. ELLIS. Yes; I sure would. They say that several heads are better than one, and I certainly agree with it in this instance.

Mr. Chairman, I also have a statement here from Mr. J. N. Shoptaw, who is a pulpwood dealer in Texarkana, Ark.—in my neighborhood—who was not able to attend.

The CHAIRMAN. That may be inserted in the record at this point.

(The statement referred to follows:)

STATEMENT OF J. N. SHOPTAW, PULPWOOD DEALER, TEXARKANA, ARK., IN OPPOSITION TO H. R. 6000

I wish to say that the definition of employee now appearing in the pending social-security bill, H. R. 6000, is so written as to seriously affect my pulpwood business, and other dealers in timber products, in the following ways:

1. It could, and probably would, make a tax-collection agency out of me and other timber-products dealers and require us to pay social-security taxes on people we do not even know and never saw.

2. It could, and probably would, be so construed as to make us employers of all the subshippers, their subshippers, and their employees to the lowest timber marker or checker we have. Therefore, we might be responsible for all the wages under the wage and hour law, the Workman's Compensation Act, the income-tax law, the Unemployment Compensation Act, and finally be held liable for all the acts of negligence of every and everybody's employee involved.

3. It would eliminate independent contractors, such as myself, and my subcontractors, who are enjoying the privileges of being in businesses of their own.

4. It would retard the growing and conservation of timber in the South by small landowners and farmers who receive a reasonable profit by producing pulpwood from their woodlands.

5. I feel that it would force me to liquidate my business at a great sacrifice because I could not operate under the new law.

I respectfully ask this honorable committee to reject the proposed definition of employee and to return to a sound, reasonable, and fair definition of this term.

The CHAIRMAN. The next witness is Mr. C. D. Utsey.

STATEMENT OF C. D. UTSEY, PULPWOOD DEALER AND LUMBER MANUFACTURER, HARLEYVILLE, S. C.

Mr. UTSEY. Mr. Chairman and members of the committee, my name is C. D. Utsey and I reside at Harleyville, S. C. I am a pulpwood dealer and purchase pulpwood from approximately 40 producers who operate in several counties in lower South Carolina. Each of the producers from whom I purchase pulpwood employs approximately five men, and these producers collect and pay social-security taxes on the men whom they employ. I also own and operate a small saw mill, a farm, and a cotton gin.

I am very much concerned about the definition of "employee" now appearing in H. R. 6000, which has passed the House of Representatives and is now under consideration by you gentlemen, the Senate Finance Committee. The definition is a radical departure from existing law and its adoption would result in widespread confusion and injustice. It could be so interpreted as to eventually extinguish and put out of business many small-business men who are now operating and own businesses. It does not undertake to say who an employee is but leaves it to an administrator and the Treasury Department to determine this all-important question.

I am, therefore, opposed to this definition, and in opposition to its adoption, I urge upon you the following:

1. The definition could be so interpreted as to require the various companies to whom I sell my pulpwood and lumber to collect social-security taxes on those producing the pulpwood and lumber, notwithstanding the fact that the companies purchasing the pulpwood and lumber have no record of the wages paid to those who produced it. In like manner, it could be so interpreted as to require me, as a buyer of pulpwood, to pay social-security taxes on those who actually produce it, even though I did not know who produced it nor the amount of wages paid to them by their actual employer. If this definition is adopted for social security purposes, it would most certainly be extended to other legislation, such as unemployment and workmen's compensation, where coverage is now limited to employees in fact, as determined by the application of common-law rules and precedence. Its enforcement would be a physical impossibility and would result in great hardships on the small-business men of the country.

2. If the new definition remains in the social-security law, it will destroy small contractors and producers and result in the large companies taking over the business now conducted by several independent operators. Such a result would strike deeply at private enterprise. If the large companies took over pulpwood dealers, their producers would be declared employees, rather than self-employed, thus destroying their individuality and independence. Its adoption would tend to put in the hands of a few the operations now being conducted by many men who know themselves as independent contractors.

3. According to the act the definition of an employee now appearing in the House version, H. R. 6000, is not a precise definition of an employee. It leaves the status of many people to be determined by the administrative opinion whether or not they are an employee or self-employed.

4. I would like to state here, as an independent dealer in pulpwood and lumber for the past 14 years, buying pulpwood where I found it for sale, and selling it to various mills in the South, under the present system under which we are now permitted to operate, those who make their living by dealing in these forest products have greatly prospered. They have nice homes, automobiles, and live on improved farms upon which they pay taxes. If they are forced to abandon this status and become employees of the larger companies, they will lose their incentive for the forward drive.

Finally, it is the belief of all small-business men that they should be permitted to continue the operation of the pulpwood and lumber industry in the manner in which it is now operated; that Congress, and not an administrator, should determine who is and who is not an employee, and that their destinies should not be surrendered by Congress to any such agency. I sincerely believe that the present definition of employee as set forth in Public Law 642 is sound, fair, and reasonable, and that there should be no departure therefrom.

I am a lot like Mr. Adams, Mr. Chairman; you shook the bushes pretty hard to get us fellows up here. Of course, it is of so much importance to us that we feel that we had to come before you gentlemen.

The CHAIRMAN. Where is Harleyville, sir?

Mr. UTSEY. It is about 40 miles from Charleston. It is between Charleston and Columbia.

The CHAIRMAN. You are not right in on the coast?

Mr. UTSEY. No, Mr. Chairman; about 40 miles out.

The CHAIRMAN. Thank you very much for coming.
Are there any questions? If not, thank you, sir.
Mr. UTSEY. Thank you, too, sir.
The CHAIRMAN. The next witness is Mr. Dexter. Will you identify yourself for the record, please, sir?

STATEMENT OF A. K. DEXTER, PRESIDENT, MISSISSIPPI FORESTRY AND CHEMURGIC ASSOCIATION, INC., JACKSON, MISS.

Mr. DEXTER. Mr. Chairman and gentlemen of the committee: I am A. K. Dexter, a resident of Canton, Miss., and president of the Mississippi Forestry and Chemurgic Association, which is a nonprofit organization of Mississippi landowners, and others, who are making an effort to improve the forests of the State of Mississippi. This group includes large and small landowners, wood-using industries, farmers, civic clubs, businessmen of all categories, and other citizens of our State.

This organization functions chiefly in the field of education and information to acquaint the general public with the need of protecting, conserving, and improving the forests. The purpose of this effort is, in the end, to advance the welfare of the citizens of the State and to encourage the conservation of its natural resources. The Association is therefore vitally interested in any phase of the growth, conservation, and use of forest products.

The association, after studying paragraph 4 of H. R. 6000 has determined that the Administrator would have the power to interpret the term "employee" in such a manner as to place undue responsibility upon the small timber growers, independent producers of forest products, and others engaged in small forest products businesses.

According to the best figures available there are 35,000 places for full-time employment for woodworkers in the forests of Mississippi. However, most of this work is part-time employment so that a conservative estimate places the number of persons, part or full time, employed in such industry at approximately 100,000. The prevailing system used in removing the forest products is 90 percent carried out by contract operators. These contractors employ, in some instances, only one person and in other instances employ several hundred in their operations. In some instances the contractor is a farmer himself, cutting and delivering his own forestry products to market.

Under the present definition of the "employer" and "employee" relationship under existing law, all parties know their responsibility concerning social security. The proposed definition would be confusing and would practically eliminate the small operators. As interpreted by the Administrator, it would undoubtedly affect every type of forest operations such as sawmill operations, the paper-wood dealer, crosstie maker, veneer and plywood logger, poles and piling, and even the cutting of forest products for fuel.

After careful study by the directors of the Mississippi Forestry and Chemurgic Association it is their opinion that the suggested change in the definition of "employee," as appears in H. R. 6000, would completely paralyze this great industry in our State and would be a severe hardship on the small operators, independent contractors and businessmen, now engaged in the forest products industry, and they have au-

thorized and directed me to file this statement registering their protest against the proposed definition.

The association does not oppose social security. Its only concern is the suggested change in the "employer" and "employee" relationship. We therefore respectfully urge that you reject the proposed definition in H. R. 6000 and retain the present definition of the relationship.

The CHAIRMAN. Are there any questions, gentlemen?

If not, thank you very much, Mr. Dexter.

Mr. DEXTER. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. W. L. Rhodes of Estill, S. C., has requested that his statement be filed for the record, and without objection, that will be done at this point.

(The statement of W. L. Rhodes, Estill, S. C., follows:)

STATEMENT OF W. L. RHODES, ESTILL, S. C.

My name is W. L. Rhodes, and I am a pulpwood dealer residing in Estill, S. C. I have been engaged in various forms of the timber business for more than 40 years, and have operated in Florida, Georgia, and South Carolina. I am vitally concerned with and will be seriously affected by the pending social-security bill, H. R. 6000. I sincerely feel that if the bill is made into law in its present form that it will necessitate my going out of the business, as the hazards, increased expense, and uncertainty that will be produced by such a law will not warrant the required risk of capital involved in such business. The industry is at the present time thriving. This statement embraces both the producers and their employees. A complete harmony now exists between the dealer, producer, and laborer. The present order of things has proven itself mutually profitable to all three of these groups. I am sure that none of these groups are actually demanding any change such as that proposed by this bill. The change has probably originated with some person or groups of persons who have no conception of the pulpwood industry or its needs and, even if they can understand the bill as written, they have not the slightest idea of the practical impact and effect which it will work upon the pulpwood industry. There are a great many people today who mistake any change for progress. They are unwilling to permit an harassed businessman to understand and apply one set of governmental regulations before they promulgate an entirely new and different set of regulations. The time-tested and essential principle of "stability in business" is apparently alien to their thinking. The result is that businessmen and their employees are kept in a constant mental attitude of anxiety, unrest, and turmoil.

The following are some specific objections which I have to the proposed legislation as it affects my small business.

(1) To begin with, I am unable after reading several times the definition of "employee" as contained in the bill, to even vaguely understand it or to know what its practical application would be. This is probably not surprising in view of the fact that I am a mere businessman and no lawyer. However, I have handed a copy of this bill to a very competent and experienced attorney, and he tells me, after studying it, that he is just about as confused by the legal hodgepodge as am I. Is it possible that Congress would pass legislation that is this ambiguous?

(2) From the above paragraph it is apparent that those of us who would be embraced within this proposed legislation would have no idea of how to interpret it. It means that we would possibly and probably place an interpretation upon the legislation different from the Administrator. We would not know of this "wrong guess" of ours until some bureaucrat advised us of it. In the meantime we would probably have incurred severe penalties for noncompliance. With the staggering toll which taxes already take from our business, it would quite possibly mean that we would have to go out of business rather than try to operate under a system where the bureaucratic referee makes the rule as the game is being played.

(3) The producer is very unhappy over the proposed legislation. At present he is an individual operating his own little business. He is free to exercise his own judgment and initiative. He is justly proud of his independence. The

dealer does not even know who the producer employs, the manner in which he produces, or any other part of the operation of his business. As I understand it, this legislation could mean that the dealer would be held responsible for paying social security on the employees of the producer and, of course, would ultimately, if not immediately, mean that the dealer would be held liable in tort for injuries sustained by the employees of the producer while at work. Thus, the dealer would have no recourse but, if he stayed in business, to eliminate entirely the role of the producer, of which there are thousands in the South. Would this result be fair to this hard-working, free-enterprising producer? Would this be in keeping with our so-called free enterprise system?

(4) The pulpwood industry has been a godsend to the economy of the South. This year the section of South Carolina in which I live, which is principally an agricultural area, experienced the worst crop failure in recent history. It has been designated as a "distress area" by the Department of Agriculture. The economic salvation to these small farmers this year has been the fact that they have been able to sell pulpwood from their farms and provide food and clothing for their families. Should we discourage and hamper an industry which is operating satisfactorily to all concerned and which is so vital a part of the economy of the South?

I have not undertaken to discuss the technical and legal aspects of the proposed legislation as I am not qualified to do so. I have attempted to briefly state how the small dealer, such as myself, feels about this bill. I sincerely and earnestly hope that the good sense and judgment of the men in our Senate will assert itself to prevent the enactment into law of this impractical legislation.

The CHAIRMAN. That completes the hearing for the morning.

We will recess until 10 o'clock tomorrow morning.

(Whereupon, at 12:10 p. m., the committee recessed to reconvene Wednesday, March 15, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

WEDNESDAY, MARCH 15, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Hon. Walter F. George (chairman) presiding.

Present: Senators George, Byrd, Lucas, Hoey, Kerr, Myers, Millikin, Butler, and Martin.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order, please.

Senator Millikin, will you please take over until I can finish a conference with a gentleman from my State?

I think Mr. Reuther is the first witness this morning.

Senator MILLIKIN (presiding). The first witness is Mr. Reuther. Will you come forward, please?

STATEMENT OF WALTER REUTHER, PRESIDENT, UNITED AUTO WORKERS, CONGRESS OF INDUSTRIAL ORGANIZATIONS, DETROIT, MICH.

Mr. REUTHER. My name is Walter P. Reuther. I am appearing here as the president of the United Automobile Workers Union, representing more than a million wage earners in the automobile, aircraft, and agricultural implements industries.

I appreciate this opportunity to appear before the committee to testify on the legislation now before your committee. I would like to submit to the committee a prepared statement, and in addition to that an appendix describing a tentative approach to an American standard family budget that we have been working on. We have put into this budget about 4 months of very careful research, and I think it represents one of the most comprehensive jobs that has been done to date.

We would like very much to include both my prepared statement and this tentative approach to the American standard budget for an elderly couple into the record.

Senator MILLIKIN. It will be put into the record at this point.

(The statement and budget referred to follow:)

STATEMENT PRESENTED TO THE SENATE FINANCE COMMITTEE IN HEARINGS ON H. R. 6000 BY WALTER P. REUTHER, PRESIDENT, UAW-CIO

At the UAW–CIO 1949 convention, a large mural across the convention hall had three panels. One panel was a photograph of an aged worker and his wife. The second was of a disabled worker in a hospital. The third and principal

panel was of a group of happy children. Across the top was a pledge: "For These We Fight." Since then, copies of this mural have been installed in many of our local union halls.

In the statement presented to you today, we begin with a recommendation that Congress provide adequate coverage and benefits under the old age and survivors insurance title of the Social Security Act. We propose the addition of disability insurance and we ask that, at an appropriate time, we may appear in support of a national system of medical-care insurance. We conclude with a plea for the health and welfare of our children, all children, the hope of tomorrow even in this age of A-bombs and H-bombs and want in the midst of man-made surpluses.

We have come here to keep our convention pledge. To keep that pledge, 89,000 Chrysler workers have been on strike for 7 weeks. Democratically elected representatives of a quarter of a million GM workers will shortly begin negotiations with the $3,000,000,000 General Motors Corp. They, too, will keep that pledge.

We shall keep that pledge until we win the security we seek, not just for ourselves, but, we hope, for all Americans.

I. RETIREMENT BENEFITS MUST BE ADEQUATE AND CAN BE BEST HANDLED BY UNITED STATES GOVERNMNT

The members of the UAW-CIO and, I believe, American wage earners generally, are determined to do away with the immoral, uneconomic, and indefensible double standard in pensions.

When corporation executives paid as much as $300,000 a year are too old to work and too young to die, they are assured of noncontributory pensions of $25,000, $50,000 and up a year for the rest of their lives.

The same corporations' employees, who have invested their lives in production for wages of $3,000 a year and less, can look forward to getting the disgraceful sums of $130 to $540 a year when they are too old to work and too young to die.

In the past year, some workers, by collective bargaining, have more than doubled these amounts. But $1,200 a year is not enough for an aged worker nor is the preesnt top of $1,460 enough for an aged couple to live on.

[Four months ago the Congress recognized the facts of living costs when it raised the statutory minimum wage to 75 cents an hour, or $1,500 a year, assuming steady employment for 50 weeks a year. And that is not enough for a family or an aged couple to live on.]

Adequate Federal program is best way to meet the need.

We believe that the conscience and good sense of the American people reject such wide differentials in pensions as we have mentioned. They demand—and the American economy will be strengthened by providing—pensions large enough for aged workers to live on at a level above that needed to resist disease, isolation, and despair. They believe such pensions can best be provided by a Federal program giving maximum coverage at the least cost and without penalizing mobility of workers and employers.

Because we are committed to the proposition that progress is made with the community and not at the expense of the community, we urge that coverage be as close to universal as is practical. We particularly urge the inclusion of farm operators and hired farm labor so that all farm people may share the security in old age that industrial workers are determined to obtain. As purchasing power for aged farm people is assured, levels of living in rural areas will be raised and the entire economy will be benefited.

Adequate United States program will aid cause of democracy in world

Anxiety about the expenses of the cold war against aggressive Communist totalitarianism, the plea that today we cannot "afford" it—none of these should postpone action on this issue. We shall strengthen ourselves within our borders and in the cold war by being able to say that now in the United States of America, in the midyear of the twentieth century, a democratically elected Congress implemented a policy adopted 15 years earlier assuring workers security in old age.

That is the most effective of all propaganda; it is the propaganda of the deed. This and other policies and implementation of the Fair Deal program together offer the best hope of victory in the global contest between democracy and totalitarianism, perhaps without the cold war becoming a hot war. If war should be precipitated as an act of desperation, such recognition of the value of individual human lives will give us more to fight for. It will give other peoples a sample of the kind of democracy that is at stake and for which their help will be asked.

The minimum satisfactory solution: enough to live on decently

The present double standard in pensions cannot be satisfactorily improved by even a doubling of average primary benefits to $624 a year.

The minimum satisfactory solution would be to provide in the Federal program for incomes upon retirement that are large enough to buy a living at standards of decency for the aged worker and his wife.

For an aged couple, this should be a minimum based upon the Federal Security Agency's Budget for an Elderly Couple, adjusted for certain increases and additional items essential to an American standard of living.

In section II and the appendix of our statement we offer an adjusted budget which we propose as an approach to an adequate standard of living for retired American workers. We challenge anyone to point out to the American people any item in that budget that should be reduced or cut out. We challenge anyone to show why any retired American worker should have less than this budget provides.

Deficits left by various proposals

Measured against this budget, which comes to $2,089 a year or $174 a month, the level of benefits in the present Federal program leaves a deficit of $96 to $106 a month for an aged couple in the $200-to-$300-a-month earnings bracket and with 30 years in covered employment.

The level provided in H. R. 6000 as passed by the House leaves a deficit of $53 to $70 a month for such an aged couple.

The level proposed in the bill when introduced as H. R. 2893 would leave a deficit of $35 to $64 for such an aged couple.

The level proposed in Commissioner Altmeyer's recommendations to this committee would leave a deficit of $18 to $47 for such an aged couple.

Wide range of benefits caused by wage differentials

The ratio of benefits to past earnings proposed by CIO, which we endorse and support, would provide monthly payments of from $136.50 to $175.50 to aged couples with average earnings of $200 to $300 a month during the best 5 years in 30 years of covered employment. This would leave deficits of as much as $37.50 for those who had earned $200 a month and even greater deficits for those whose earnings had been lower.

We deplore the fact that millions of Americans during their working lives receive such low wages that relating benefits to earnings results in pensions that are substantially less than the amount necessary to support an aged couple at a level of decency. This brutal and uneconomic class and geographic stratification is part of our wage jungle. As unions and Government raise prevailing and minimum wage levels in the most depressed areas and industries, pension benefits can be raised until every aged worker and his wife can look forward to retirement, not as a sentence to worse poverty, but as a modest reward for a life of hard work.

Auto workers should not be penalized twice for management's failures

The pattern of irregular employment in the automotive industry before the war makes necessary a refinement of the benefit formula so as to provide that average wages in the highest quarters of the base years—the five consecutive best years—shall be used in computing the monthly benefit amounts.

Auto workers willing and able to work have not had steady employment and have suffered income loss through no fault of their own. Now, unless the highest quarters in each of the base years are used, auto workers will be penalized again; they will be punished twice for the same offense—the inability or refusal of management to provide the same steady income for production workers that it provides for itself and, particularly in the auto industry, for stockholders. More about stockholders later.

Irregular employment threatens to return because industry has kept prices and profits high and wages down, thereby reducing purchasing power.

Auto industry management, paying itself by the year and providing itself with pensions up to $25,000 a year, may yet restore the prewar pattern of yearly cycles of boom-and-bust within its own industry. We submit that auto workers should not take a double beating because of management's irresponsibility or worse.

Until needs are met, private plans must supplement Federal benefits

If the Congress in this session were to amend the old-age and survivors insurance title of the Social Security Act to provide adequate incomes for workers

insured under the system, the minimum needs of our members, as of now, would be met.

Until the Congress satisfies the human needs of American workers for a decent level of living in their old age, organized labor must continue to look upon the Federal program as a subminimum, to which must be added supplemental pension arrangements reached by collective bargaining with employers.

We are not as pessimistic as General Motors President C. E. Wilson about the possibility that Congress will step up to do the job. Last November, speaking to some soft-drink manufacturers, he predicted some increase in Federal benefit levels and more private pension plans to supplement the Federal program which, he assumed, would continue to be inadequate. Since Mr. Wilson has an income of more than $300,000 a year and can look forward to a pension of $25,000 a year, his standards of adequacy may be higher than those who, like Members of Congress, look forward to pensions substantially less than $25,000 a year.

We prefer a Federal program for the whole job, provided it is adequate

We prefer to hope that this Congress, or a future Congress, will do the whole job. When that is done, we can have one integrated Federal program that will meet human needs and, of almost equal importance, the needs of our economy. We are going to keep working on the basis of that hope and that belief.

Let me say that we recognized the value of a Federal system in all our 1949 negotiations when we provided for integration with the Federal system of pension agreements reached by collective bargaining.

Again and again, we have stated every shortcoming of private systems and we did so long before the same points were raised by others who, for 14 years, did little or nothing about bringing the Federal system up to a minimum level of decency.

At this point I present for the record excerpts from an editorial in the October 1949 issue of the Auto Worker that sets forth our position with respect to Federal programs, with particular reference to the Ford pension plan provided for in a contract between the UAW-CIO and the Ford Motor Co., dated September 29, 1949. This editorial was widely distributed with the statement that it represents official UAW-CIO policy. I believe copies of it and of the Ford agreement were sent to members of your committee last year.

"In winning a pension plan for themselves, the Ford workers have performed a service that will benefit millions of their fellow citizens throughout the Nation.

"As a result of the Ford pension program and similar efforts being made to win pension plans throughout American industry, Federal Social Security benefits are going to be increased and they are going to be extended to cover many millions of Americans who need this protection but who are presently excluded from social-security coverage.

"This is the most important result of the Ford workers' victory.

* * * * * * *

"Today, those who blocked expansion of social security are singing a different tune. With the prospect before them that industry will have to pay old-age retirement programs won in collective bargaining, industrialists and reactionary Congressmen are suddenly 'discovering' virtues they never before saw in liberalized Federal social-security legislation.

"BREECH SOUNDED KEYNOTE

"The night before the Ford agreement was finally reached, Ernest Breech, Ford executive vice president, stated in a speech in Youngstown, Ohio, that the most satisfactory method of providing old-age security was through Federal legislation. He acknowledged, however, that present benefits are inadequate and something had to be done to increase them.

"The UAW-CIO and labor generally have always maintained that the most satisfactory way of providing old-age security is through Federal Social Security legislation. More people are covered through that system and an individual worker is free to move from one job to another without losing his pension rights. However, Ford workers and other UAW-CIO members, as well as steel and other industrial workers, could not afford to wait any longer for congressional action. It was necessary for us to move in the collective-bargaining field. If that move prompts Congress to action and removes a major portion of the opposition in the past to increased social-security benefits, so much the better. We prefer it that way. In the meantime, until social-security benefits are

increased to a decent level, we will fight to supplement them through collective bargaining.

* * * * * * *

"As improvements are made in Federal social security, a larger portion of the company's 8¾ cents' contribution will be used to retire past service credits. As increased Federal benefits make it possible to pay off past service credits at a faster rate, the road will be cleared for the union through collective bargaining to win additional company-financed benefits in pensions and hospital and medical programs.

"PROGRESS FOR ALL

"The tying together of our pension fight through collective bargaining with the fight to increase Federal old-age security is another practical demonstration of the UAW-CIO philosophy that we can only make progress with the community and not at the expense of the community.

"That will be the greatest victory of all—not just for the Ford workers or just for UAW-CIO members but for the whole Nation."

Arguments against private plans are arguments for adequate United States plan

Every argument that has been made against private pension plans is now submitted by us as an argument to you for the enactment of amendments to the old-age and survivors insurance title of the Social Security Act that will do the job that must be done in the field of pensions for aged workers.

When that level of adequacy is reached, it will be time to talk about relaxing our efforts to obtain supplemental pensions by collective bargaining with employers.

Until that time comes, by action either of this Congress or a future Congress, we propose to press on with all the strength of our organization to break down the existing double standard. Under that standard, those who have high incomes out of which they can save for their old age are amply provided in addition with pensions in their old age; those who receive incomes so small that they cannot save for their old age are offered so-called pensions that, in many States, are less than half as much as can be obtained in relief from State and county-welfare agencies. Many who receive these pensions are compelled to apply for supplemental aid, which they get after—and only after—they have qualified by liquidating all the little equities and small possessions they have managed to accumulate in a lifetime of hard work and search for work during periods of involuntary unemployment.

Inadequate benefits do not make good economic sense

Not only is the present and growing spread between pensions for the high-income few and pensions for the low-income many humanly and morally indefensible, it is against economic good sense. It is economically debilitating to us as a people and as a Nation. It weakens our national strength, stability, and security.

One of the greatest needs of our economy today is for such a distribution of the national income as will sustain mass purchasing power instead of weakening it, as at present. The people must be able to buy, year in and year out, the potential plenty of food, fibers, and manufactured goods and services that our farms, factories and other industries, businesses, and professions are capable of producing.

Under the trickle-down theory of prosperity, this potential abundance continually threatens us with so-called overproduction caused by the unhealthy coagulation of profits, dividends, and savings at the top and, everywhere else, shrinking purchasing power, shrinking markets, and accelerating spasms of fear.

This results in top-heavy inventories, cut-backs in production to prop up prices, and in lay-offs of millions of workers.

We then have the onset of depression and long-term chronic mass unemployment, an economic sickness that requires drastic and costly measures to check and remedy.

Autoworkers remember past depressions' cause—Lack of purchasing power

Like most Americans, the auto workers remember this out of our experience in 1929–39. In those years the American people lost more than 200 billion dollars in production; a whole generation was scarred; our appearance of weakness encouraged Hitler and Stalin to attempt the conquest of the world. In those 11 years, our democratically elected Government spent and invested 16.3 billion dol-

lars more than it took in; we launched some public works and should have launched many more TVA's. We mitigated unemployment; we did not solve the problem of unemployment.

That problem, which is the unfinished business of the twentieth century, had a magnitude of more than 8 million persons out of work as late as 1940. It was "solved" temporarily by the pick-up of defense and, later, war production.

Today, that problem is being held off and minimized temporarily by extraordinary expenditures and production required by 15 billion dollars in national defense, 3.5 billion dollars for ECA, and 1.5 billion dollars for arms aid to other nations.

Prewar stagnation, unemployment setting in

Even with these stimulants temporarily sustaining our economy, consumer debt is increasing at a rapid rate, as shown by the following table:

Total consumer credit in United States, August 1945 to October 1949

Date	Billions of dollars	Date	Billions of dollars
August 1945	5.6	December 1947	13.7
December 1945	6.6	December 1948	16.3
December 1946	10.2	November 1949	17.8

Simultaneously, profits and savings by the high-income few run ahead of capital investment for plant and inventories. Cash and bonds continue to accumulate and become stagnant in corporate tills.

Neither extraordinary investment in new plant and equipment nor generous dividend payments have been sufficient to soak up the fantastic profits industry has been extracting from its workers and its customers. According to the Federal Trade and Securities and Exchange Commissions, cash and securities held by United States manufacturing corporations amounted to 16.8 billion dollars at the end of the first quarter of 1947. Two and a half years later, by the end of the third quarter of 1949, such holdings had increased by more than 25 percent to 21.1 billion dollars.

The automobile and parts corporations, during the same period, increased their cash and Government security holdings by over 160 percent, from 1.1 billion dollars to 2.9 billion dollars.

General Motors alone held 960 million dollars in cash and Government bonds as of September 30, 1949, compared to 278 million dollars at the end of 1945, shortly after the war had ended. During the same period, Chrysler's holdings rose from 137 million dollars to 310 million dollars.

These accumulations will, at best, be paid out in dividends to stockholders while a large part of the population is drawing unemployment insurance and relief.

We see beginning already the simultaneous increase of unemployment and dividend payments that characterized the beginning of the 1929 depression.

Corporate dividend payments rose from 7 billion dollars in 1947; to 7.9 billion dollars in 1948; to 8.4 billion dollars in 1949.

Meanwhile in February 1950, unemployment rose to about 4.8 million including those temporarily unemployed and waiting to report on new jobs. Another 8.9 million were working part time—less than 35 hours per week—including 2 million who either worked less than regularly scheduled full-time hours for economic reasons or who accepted part-time jobs because they could not find full-time work. With 800,000 or more to be added to the labor force this year, unemployment is almost certain to be above 5 million by next fall. Last year, 1.5 million exhausted their unemployment-insurance credits in one or more quarters.

These facts indicate economic stagnation, a drift back to prewar conditions.

Although the lines of workers are already lengthening before the unemployment-insurance offices, profits in the auto industry are higher than ever before in history. To give just two examples:

General Motors profits in 1949 amounted to more than 1.1 billion dollars before taxes and over 600 million dollars after taxes.

Chrysler profits in 1949 amounted to 213 million dollars before taxes and 132 million dollars after taxes.

In both corporations profits after taxes were well in excess of 33 percent of net worth. It will take less than 3 years of such profits to earn the stockholders a return equal to their total investment.

Profits of this size throw interesting light on the allegedly crushing burden of adequate pensions. According to the actuaries, all the benefits provided under the various insurance titles of H. R. 6000 would cost 1.3 billion dollars in 1950, if the bill were already in effect. The 1949 profits before taxes of only two corporations, General Motors and Chrysler, were more than sufficient to cover the costs of these benefits.

Adequate pensions will help sustain purchasing power and prosperity

Incomes of minimum adequacy assured to aged workers will not be hoarded; they will be spent quickly, currently, as received. They will not be spent for mink coats, platinum watches, and orchids. They will be spent at the grocery, the meat market, the fuel dealers, the dry goods store, with the doctor and the druggist and the hospital.

Every dollar of this money will have high velocity, to use the economists' term for money in rapid circulation, creating business, employment, and profits as it moves. Whatever the expense of providing adequate pensions, we should not look upon it as an added "cost," but as a partial solution of the problem of promoting a healthy distribution of the national income. It will be good for business, good for farmers, good for labor, good for the Nation as a whole. It will promote healthy consumption by the American people, including the aged who, for the simple reason that during their working lives they did not get a saving wage, do not have the funds with which to maintain the remainder of their lives at even a minimum level of decency.

II. HOW HIGH SHOULD PENSIONS BE?

We have already indicated that we will continue to rely upon private pension plans obtained by collective bargaining only until there is a Federal program in existence that is paying benefits sufficient in amount to enable the aged to maintain themselves on an American standard of living.

If it were possible, we would name a figure today. We would like nothing better than to be able to tell you that, when our retired members start receiving pension checks in the amount of *X* dollars per month, there will be no further need for our private pension plans.

Why no satisfactory budget figure is available

Through no fault of ours, that *X* must, for the time being, remain an unknown quantity. Our lack of a satisfactory measure of the needs of the aged can be traced back to certain developments in the course of the Bureau of Labor Statistics' work on the preparation of family budgets.

The Bureau undertook this work at the request of Congress. In the Spring of 1945, the Labor and Federal Security Subcommittee of the Committee on Appropriations of the House of Representatives directed the Bureau "to find out what it costs a worker's family to live in the large cities of the United States." In the absence of a clear directive as to the level of living which Congress had in mind, the Bureau, at first, prepared to work up the cost of living at two distinct levels. One was to be a "minimum cost" level. The other was to represent the American standard of living.

At this point, within the technical advisory committee assisting the Bureau of Labor Statistics an attempt was made to strip the minimum budget, transferring items to the American standard budget.

This would have made the "minimum" budget dangerous and the American standard budget meaningless for practical purposes.

On the excuse that there was to be an American standard budget, it was sought to strip the minimum-cost budget of all amenities and comforts. These, it was argued, belonged in the American standard budget. This attempt went so far as to propose the omission from the minimum-cost budget of such a common possession of even our poorest families as a radio. Members of the committee perceived the very real danger that the emaciated minimum budget would become the guide for collective bargaining and legislation while the American standard budget would be treated as a fanciful projection to which no serious attention would be paid.

Why the "budget for an elderly couple" is not adequate

To block these maneuverings, the technical committee and the Bureau felt impelled to abandon the project for an American standard budget and to con-

centrate on preparation of a meaningful minimum-cost budget. (See the appendix for details of this discussion and its settlement.)

The minimum-cost budget, published in December 1947 under the title "City Workers' Family Budget," later became the basis for development of the so-called budget for an elderly couple prepared by the Federal Security Administration in cooperation with the Bureau of Labor Statistics.

The budget for an elderly couple is the only official measure presently available of the needs of a retired worker and his wife. It is emphatically not, however, an adequate measure of America's obligations to its retired citizens.

The budget for an elderly couple is not and does not purport to be a budget representing the American standard of living.

In fact it represents a last-ditch-resistance level of living.

It represents a level which families will struggle desperately to maintain through dissipation of savings, debt, and charity, no matter how much income shrinks.

It is the level below which families lose self-respect and social status.

It is officially described as a "necessary minimum" budget which, translated, means that it is, at best, on the border line of inadequacy.

Food allowance is at the public relief level

The food allowance in this budget is at the public relief level. It provides a monotonous diet consisting in large part of stews, hamburgers, frankfurters, and fish. It allows for turkey or some good cut of meat only three times a year—on Christmas, Thanksgiving, and New Year's Day, according to the Commissioner of Labor Statistics.

Clothing allowance is below relief level

The sum allowed for clothing is less than the amounts paid to recipients of public relief in several important cities. Allowances for some clothing items are so small as to be ridiculous if they were not so hard upon couples forced to live within them.

Medical care allowance is obviously insufficient

Although no allowance is made for saving against illness and other hazards, the medical-care component of the budget is obviously insufficient to meet the needs of a couple actually confronted with the type of serious illness to which the aged are particularly subject. The budget's medical allowances are based on "average" needs, apparently on the implicit assumption that those who suffer illness above the average will somehow manage to borrow from those who escape with less than the average. The medical allowance is inadequate to purchase even the limited protection offered by the Blue Cross and Blue Shield plans, where those are available to the aged, after provision is made for other medical and dental essentials not covered by those plans.

No allowance for car upkeep and operation

The automobile is the recognized symbol of the American standard of living throughout the world. A third of all elderly couples own at least a used automobile. Yet, by an admittedly arbitrary decision, the cost of upkeep and operation of an automobile was excluded from the budget for an elderly couple.

Budget is 25 percent below average per capita consumption for U. S. A.

The total dollar amounts allowed to each member of the couple are 25 percent below average per capita consumption for the population as a whole, depressed though that average is by the poverty incomes of millions of Americans. Taking into account the fact that the consumption expenditures of adults tend to be higher than those of children, the gap between the budget's allowances and the average per capita expenditure by adults must be greater than 25 percent.

The budget sells America short

The budget standard falls far short of the level of consumption needed to sustain a full-employment economy in the United States. In budgeting for a dull, monotonous, and poverty-haunted old age, it sells America short.

It first assumes that America cannot afford a decent old age for its people.

It then sets levels of expenditures for them that will prevent the absorption of enough goods and services to keep the economy going at full-production and full-employment levels. If the consumption of the aged is, in practice, limited to the budget level, then the budget will justify itself. For with production geared to that level, America will not be able to afford a decent living for its elderly citizens.

Pensions present and proposed are below the pitifully inadequate budget

Measured even by the meager standards of the budget for an Elderly Couple, pensions presently paid and those proposed in H. R. 6000 are disgracefully inadequate.

According to the latest official figures, it would cost $1,720 a year or $143 a month for an elderly couple living in Detroit to sustain life at the miserably low level of the Budget for an Elderly Couple.

Grossly insufficient though the budget is, its cost is nevertheless more than 3½ times the average pension currently being paid to such a couple under the Federal program.

It is substantially more than double the average payment which would result from enactment of H. R. 6000.

A better budget is needed to maintain living standards

We start from the premise that all Americans willing to pull their weight in the productive process are entitled to an American standard of living both while they work and after age has made it impossible for them to continue actively to participate in the Nation's work.

We reject the notion that because a man has made his full lifetime contribution to the American standard of living he is no longer entitled to live at that standard.

Pensions should provide a living that is a reward for work well done, not a penalty for inability to continue at work. Pensions are a matter of right and not of charity. Pension amounts must therefore satisfy in full the retired worker's legitimate claim to an equitable share in the fruits of the economy to which he has devoted his working years.

For this purpose we need a measure of that claim. The budget for an elderly couple is obviously not a satisfactory measure. It would be appropriate for your committee, perhaps in cooperation with the Joint Committee on the Economic Report and the Senate Labor and Public Welfare Committee, to call upon the statistical agencies of the Government to develop a proper measure of the cost of maintaining an elderly couple at the American standard of living. We urge that you do so.

A tentative approach to an American standard

Meanwhile, the aged are with us and growing more numerous with each day that passes. Their need is in the present. They cannot wait until we calculate the cost of meeting our obligations to them.

We need some tentative measure now that will serve as a guide in taking at least the first steps in fulfillment of that obligation.

We have attempted to prepare such a guide. You will find it spelled out in detail in the appendix.

We have prepared it with full awareness of the limitations of our statistical resources in the face of a task of this magnitude. Because of those limitations we have been forced to fall back, for items involving nearly half of our final cost figure, on the allowances specified in the inadequate Budget for an Elderly Couple. Such revisions as we have made are based in their entirety on recognized Government authority. The sources upon which we drew for these revisions do not purport, in presenting their own data, to reflect the American standard of living.

For these reasons it is clear that even the revised budget represents a level of living substantially lower than the American standard.

The dollar cost figures reduce the level still further because, in pricing the quantities of the various items, we have relied almost entirely on prices collected by the Bureau of Labor Statistics in connection with its Consumers' Price Index. These prices are for goods of the relatively low quality purchased by wage and salaried workers' families with average incomes of $1,524 in the years 1934–36.

It must be understood therefore that, in terms of both the quantities and the qualities of the goods included in the revised budget, it falls far short of the level of living which retired American workers may claim as their right.

What the budget allows

We invite the committee's careful examination and analysis of this revised budget and the appendix in which the details of its composition are set forth.

In presenting this adjusted but still woefully inadequate budget, we challenge anyone to point to a single item for which our allowances are too generous. Even after our revisions, the budget allowances are pitifully small, as may be seen from an examination of some of the quantities and qualities provided.

The budget allows no steak better than round steak.

The budget allows one-eighth of a pound of butter per person per week. This is 6½ pounds per year while last year 11.4 pounds of butter were produced for every man, woman, and child in the United States.

The allowances for clothing and house furnishings were taken directly from the Budget for an Elderly Couple. Items in these two categories that are made of cotton are the equivalent of 15 pounds of raw cotton per person per year. This times 11,000,000 aged equals 165,000,000 pounds or 330,000 bales. Cotton consumption by the elderly would have to be considerably above this level to have any noticeable impact on the size of our cotton surplus.

The male member of the couple may have 2⅓ shirts per year of which one must be a work shirt.

He may buy 1⅓ union suits per year plus two-fifths each of an undershirt and a pair of underdrawers—in other words, the equivalent of less than two sets of underwear per year.

For housework, his wife is allowed one house dress every year and one apron every 2½ years.

The man is allowed one overcoat every 8 years.

He is allowed no umbrella, but he gets one raincoat every 25 years and a combination of rubbers, arctics, and boots that works out to one pair every 4 years.

His wife gets no raincoat, but she is permitted one umbrella every 20 years and the equivalent of one pair of rubbers or galoshes every 10 years.

The wife is allowed eighty-five one-hundredths of a handkerchief a year, or one every year and 9 weeks. Her husband does slightly better. He gets ninety-two one-hundredths of a handkerchief every year, or one every year and five weeks.

The wife is allowed 4½ pairs of stockings a year of which 1⅓ are cotton and 2½ are rayon. She is permitted to buy a pair of nylons once every year and a half. Her husband is allowed 4¼ pairs of socks a year of which 3¼ are cotton.

The man is allowed one wool suit every 4 years plus one cotton or tropical worsted suit every 16 years.

We have revised the transportation budget upward to provide 2,200 miles a year, or 42.3 miles a week, of automobile travel for the one-third of the couples assumed to have cars.

The dental-care allowance, which was taken from the Budget for an Elderly Couple, allows the woman one dental examination and prophylaxis every 25 years and the man one every 30 years.

In the recreation budget, which we have taken intact from the budget for an elderly couple, one would expect that ample provision would be made for a worker and his wife who are no longer occupied by work. However, the budget allows them to indulge in the American family's favorite form of recreation—attendance at the movies—11 times a year or less than once a month. This budget will not help Hollywood out of its current doldrums.

Is there anyone who will say that allowances of the kind recited above are too liberal for those who have served our economy for a lifetime? Is there anyone who will say that it is morally wrong for the aged to expect more than this from a Nation that has, at least in principle, acknowledged an economic responsibility to its retired citizens?

This still inadequate budget costs about $2,100 a year or $174 a month

Our revised budget, with allowances for many items as inadequate as those we have listed, would cost $2,089.49 a year or about $174 a month in the city of Detroit with prices at the November 1949 level.

This is $323 a year more than the estimated $1,766 Detroit cost of the budget for an elderly couple as of the same month.

This difference of over 18 percent arises out of changes which we have made affecting only the food, transportation, and medical-care allowances of the budget for an elderly couple. These categories account in the aggregate for less than half the cost of that budget.

While it is unsafe to jump to conclusions in technical matters of this kind, it is certainly within the realm of possibility that, had reliable data been available for complete adjustment of all the categories, for both quantity and quality, the cost of a completely revised budget consistent with a truly American standard of living might have been computed at a figure 40 to 50 percent higher than the cost of the budget for an elderly couple. In that event, the cost would be in the neighborhood of from $2,475 to $2,650. As noted in the appendix, there are indications that the figure should be even higher.

Acceptable information not being available for such a thoroughgoing revision, we have had to content ourselves with adjustments confined to three major categories of the budget. We present below a table showing the cost differences by categories between the revised budget and the budget for an elderly couple.

Since there is no detailed break-down for the BFEC for any month later than June 1947, the table shows the official figures for that month and our estimates for November 1949.

Better food, a car, more adequate medical care

The committee and the public, which has an important stake in these hearings, are entitled to an explanation of the nature of the revisions which increased the cost so greatly. For the details, see the appendix.

In general terms, we provided a tastier and more varied diet; we allowed one third of the couples a car; and we made it possible for them to pay for the hospital and surgical care available under the Blue Cross and Blue Shield plans.

Summary comparison of cost of revised budget in Detroit, November 1949, with cost of budget for an elderly couple in same city, June 1947 and November 1949

	Budget for an elderly couple		Revised budget,[3] November 1949	Percent revised budget higher than BFEC, November 1949[4]
	June 1947[1]	November 1949[2]		
Total	[5] $1,635	$1,766	$2,089	18.3
Food, total	540	559	758	35.7
Family food at home	489	506	686	35.7
Guest meals served	28	29	40	35.7
Meals purchased (net additional cost)	23	24	32	35.7
Housing, total	656	724	724	0
Rent, heat and utilities	508	571	571	0
Household operations	103	107	107	0
Household furnishings	45	46	46	0
Clothing, total	104	115	115	0
Man	53	60	60	0
Woman	51	56	56	0
Other, total	335	368	492	33.8
Medical care	[5] 106	115	183	59.5
Personal care	34	34	34	0
Recreation and reading	71	76	76	0
Tobacco	22	25	25	0
Transportation	54	67	113	69.1
Gifts and contributions	48	51	61	18.3

[1] Federal Security Agency, Social Security Administration, Division of Research and Statistics, release headed "Cost of Budget for an Elderly Couple in Selected Cities," May 16, 1949, p. 3

[2] See appendix for methods of computing cost of separate categories. Differences in quality specifications as between the items priced for the budget in June 1947 and those priced for CPI in November 1949 may make for some small incomparabilities as between the figures shown for those 2 months.

[3] See appendix for detailed explanation of content and cost computation with respect to food, medical care, and transportation allowances.

[4] Percentages computed before rounding off dollar figures.

[5] Given by FSA (see footnote 1) for Detroit as $8 higher as result of error in computing allowance for medical care. Correct figures shown in this table are from letter from FSA dated February 17, 1950.

NOTE.—Items do not necessarily add correctly because of rounding.

The food allowance provides what the United States Department of Agriculture calls its "moderate cost" food plan. The foods provided under this plan are described by the Department as "the amounts purchased by families having an income approximating the average family income for the United States" with "slight adjustments" for "nutritional adequacy."

Studies have shown that about one-third of all elderly couples own cars, and we have made allowance for that proportion to operate and maintain them. Those in this one-third have been assumed to use their cars to the extent of 2,200 miles per year. Their allowances for transportation in public conveyances have been reduced drastically on the assumption that most of their travel would be by

automobile. The allowance for replacement of the car is figured on the same inadequate basis as in the city workers' family budget—that is, they are allowed an annual sum based on the cost of a used car at prices that prevailed in 1941.

In adjusting the medical-care allowance, we were guided by the statement of the Federal Security Administration that "the necessary minimum of medical care varies widely from family to family and from year to year, and hence those categories cannot be budgeted in the same sense as can other segments of family spending." We were therefore faced with the choice of allowing substantial savings to provide against the need for hospitalization or surgery, or to reduce the allowance for the individual couple by amalgamating its risks with those of other families through membership in the Blue Cross and Blue Shield plans. (Both these plans happen to be open to the aged in Detroit, although they are not in all cities.) Allowances for items covered by these plans which had been separately provided in the budget for an elderly couple were, of course, deleted from the revised budget.

Be it noted in passing that the cost of providing adequate pensions would be lower by something like $183 a year per couple if the medical, surgical, and hospitalization needs of the aged were provided for under a comprehensive national health program of the kind our union and CIO have long advocated.

One last revision of the budget flows from the three described above. The amount allowed for gifts and contributions in the budget for an elderly couple is calculated at 3 percent of the cost of all the other items. Even a slightly higher standard of living assumes greater participation in community and family life and we have therefore retained the same ratio.

This is the sum total of all the adjustments we have made in the budget for an elderly couple.

It would be interesting to know whether there is anyone, here or elsewhere, who thinks we have gone too far in this careful and conservative effort to approach more nearly the cost of providing an American standard of living for our retired workers.

An American standard will be achieved

We refuse to reconcile ourselves to anything less than the American standard of living for those who have spent their working years in productive effort. We propose to win that standard as a matter of right.

We prefer that it be achieved and enjoyed through an integrated Nation-wide plan covering every member of the labor force no matter where he works.

Until such a program is in full operation, however, we shall consider it our moral and economic responsibility to continue to press through collective bargaining for pensions to supplement the Federal program.

Measured against the cost of the revised budget, average pensions presently paid to an elderly couple are short by more than $130 a month. Average pensions payments called for by H. R. 6000 would be short by more than $100 a month.

These deficiencies would be greater if measured against the cost of a budget that reflected the full cost of maintaining an American standard of living.

More adequate pensions for aged widows

In developing the revised budget we encountered one problem which deserves the most serious consideration by your committee and by the Congress.

We found that the average wife is younger than her husband and, age for age, has a life expectancy greater than his.

In other words, the average widow may expect to live 10 to 15 years beyond the date of her husband's death if it occurs after age 65.

The present law provides, and H. R. 6000 proposes, pensions for a surviving aged widow equal to one-half of the pension paid the couple while the husband lives.

Available studies indicate, however, that maintenance of a given standard of living costs a single person at least two-thirds as much as a two-person family.

This raises another grave question as to the adequacy of one aspect of the Federal pension system. We believe Congress should rectify the hardships now imposed upon the aged widow upon the death of her husband.

One method of doing this would be to provide a pension rate for the retired couple sufficiently large to permit the wife to save enough so that, together with her survivor's benefit, she would be able to continue living on an American standard to the end of her days.

Added to the cost of the revised budget, this would require total pension payments for the couple very substantially in excess of $2,100 per year.

The disadvantage of this method is that it is based on the average situation. It will provide more savings than are needed for widows dying shortly after their husbands and not enough for others who survive for longer than 10 or 15 years.

Another, and in our view, the preferable approach would require an increase in the pension rate for surviving aged widows to at least two-thirds of the pension paid the couple.

III. THE ECONOMIC POSITION OF THE AGED

Having developed a budget which shows that an elderly couple needs more than $2,089.49 a year, or $174 a month, to maintain an American standard of living, let us turn now to what the aged actually have. The contrast between what they should have and what they do have is shocking.

Income

Eleven million of our population (not counting those in institutions) are 65 years of age or older.

Of these, 3½ million had no cash income whatsoever in 1948.

Of the remaining 7½ million, 4½ million had incomes of less than $1,000 for the year.

The median income for the entire 7½ million who did have some income was $808 for the year.

The difficulties which the aged encounter in attempting to support themselves are evident from the fact that in the next-lowest age group, 55 to 64, median income amounted to $1,898 or considerably more than double the median for those who have reached retirement age.

Income and family status

Age does not always mean the end of family responsibilities. Because of the low incomes of the aged, families headed by older persons live on a drastically lower economic plane than do those headed by younger persons.

Of the 38,530,000 families in the United States in 1948, nearly one in eight, or 4,720,000 families in all, were headed by persons 65 years of age or older.

In families of all sizes, the incomes of families headed by aged individuals were strikingly lower than those headed by younger persons.

In two-person families, for example, 37.2 percent of those headed by men or women 65 years of age or older had incomes of less than $1,000 for the year, as contrasted with only 11.9 percent of those headed by younger individuals.

Only 19.2 percent of the two-person families headed by aged persons had incomes of $3,000 or over, while 51.8 percent of the families with younger heads had incomes in that bracket.

Median income for the year was $1,436 for the two-person families with older heads or less than half the median of $3,000 for the others.

Almost two-thirds of the two-person families headed by aged individuals had incomes of less than $2,000 in 1948.

Facts in the census report on 1948 family income and the report on low-income families prepared for the Joint Committee on the Economic Report show how individuals and families tend to sink economically after the family head passes the 65-year mark.

Income	Percent of all individuals not in families with heads aged—		Percent of 2-person families with heads aged—	
	25 to 64	65 and over	21 to 64	65 and over
Under $1,000	57.9	73.2	11.9	37.2
$1,000 to $2,000	24.7	17.0	15.3	29.2
$2,000 to $3,000	20.2	5.2	21.0	14.4
$3,000 and over	17.2	4.6	51.8	19.2
Median	$1,447	$697	(1)	$1,436

[1] Over $3,000 but cannot be computed exactly.

The low incomes of the aged might be cause for less concern if it were possible for them to live out their last years on farms. However, only about one out of six of all single individuals over 65 and families headed by persons that old

or over actually do live on farms. The remainder, who must face the higher costs of off-farm living, had median incomes of $1,472 in 1948. Nonfarm two-person families with aged heads had a median income of $1,546.

Incomes of aged beneficiaries

Our Federal pension system was designed, in theory at least, to relieve the aged of the economic pressure to make what are often fruitless efforts to support themselves. With pension payments at present levels, it fails miserably to accomplish that purpose.

The Federal Security Agency has compiled data on the total annual income from all sources, including Federal insurance payments, of all aged beneficiaries on the OASI roster in 1948–49. (These beneficiaries include, in addition to those drawing primary and wife's benefits under the pension program, recipients of aged widows' and parents' benefits as well as a negligible number who had dependent children drawing benefits.)

Of the 1,270,000 aged couples and nonmarried persons drawing benefits, the Agency calculates that 37 percent, or 470,000, had total annual incomes of less than $500.

Incomes of another 37 percent were between $500 and $999.

Thus the total incomes of nearly three-fourths of all aged couples and nonmarried persons who were beneficiaries of our Federal insurance system were less than $1,000. Only 5 percent had incomes of $2,000 or more.

More than half of all aged persons drawing old age and survivors' insurance benefits, 864,000 in number, were married and living with their spouses.

Dependency

Freedom from dependency for the aged and freedom of the young from the often impossible burden of supporting aged relatives are certainly among the major purposes of any pension program.

These purposes, too, our Federal program has failed signally to accomplish because of the inadequacy of its benefit structure.

Of the 1,270,000 aged couples and non-married persons drawing OASI benefits, 630,000 or slightly less than half, are living by themselves. Comparison of their incomes with those of the entire group of aged beneficiaries suggests that a little difference in income goes a long way in avoiding dependency.

Analysis of the Federal Security Agency's data on the aged beneficiaries shows that only 39 percent of those with incomes of less than $500 live by themselves as compared with 84 percent of those with incomes from $2,000 to $2,500.

Those who live by themselves are to a high degree independent, even though some may be receiving part of their support from children or charitable agencies. Living with others suggests, although it does not necessarily coincide with, dependency. These qualifications must be kept in mind in examining the available figures on the proportions of the aged in the two groups. Nevertheless, the facts seem to indicate that the large numbers of our elder citizens who live in a state of dependency could win independence if their incomes were increased by relatively small amounts.

The following figures, computed from data in the report on low income families prepared for the Joint Committee on the Economic Report point to a close relationship between income size and dependency.

Annual income 1948–49	All aged OASI beneficiaries	Aged beneficiaries living by themselves	Percent in income class living by themselves
Less than $500	470,000	183,000	39
$500 to $999	470,000	252,000	54
$1,000 to $1,499	190,000	101,000	53
$1,500 to $1,999	76,000	50,000	66
$2,000 to $2,499	38,000	32,000	84

NOTE.—The original percentage figures for incomes $2,500 and up are too small to permit carrying the calculations above that point without distortion resulting from rounding off.

Aged Americans have no savings to speak of

Americans reach retirement age with no savings to speak of. Because of the inadequacy of their incomes during their working years, they cannot possibly hope to accumulate enough savings to provide for their old age.

To provide a single man aged 65 with a life income of only $100 a month for the 14.4 years he may expect to live (according to the 1937 Standard Annuity Table) would require $17,280.

As against this need, 70 percent of all American spending units having incomes of less than $3,000 in 1948 had less than $500 in liquid assets as of early 1949.

Liquid assets were less than $500 for 54 percent of those with incomes of $3,000 to $5,000 and even for 22 percent of those with incomes of $5,000 or over.

In the absence of an aequate Federal pension plan the vast majority of the aged are economically submerged and are forced to become dependents of relatives or public or private charity.

This is not security in old age.

IV. COVERAGE AND BENEFITS FOR OLD AGE AND DISABILITY

The revisions of the Social Security Act contained in H. R. 6000 as passed by the House are a definite step forward. However, we believe many more constructive amendments are necessary if the Federal social security program is to provide adequately for retired and disabled workers and their dependents.

Our proposals, which are in line with the CIO recommendations previously presented to this committee, go further than the recommendations of the Federal Security Administration, the essentials of which are in H. R. 2893.

Previous experience suggests that the bill passed by this Congress may stand for some time without further adjustment of benefits, eligibility and coverage to meet the human needs of the American people and to strengthen our economy. For this additional reason, we urge the committee to give careful consideration to our proposals for amendments to the bill before you.

What you and the Congress finally do with this bill may determine the degree of security that aged workers and their dependents can expect from their Government for some years to come.

It will have an impact upon the future content of collective bargaining.

Coverage should be practically universal, including farmers and hired farm labor

In proposing a more nearly adequate measure of security for old age and disability, we want nothing for ourselves that we are not willing and eager to share with all the American people, including farmers, hired farm labor, self-employed business and professional persons.

The facts regarding farm operators' equities and savings, presented to you by Mr. Altmeyer, show the need for extending the insurance system to them, along with other self-employed persons.

Hired farm workers have been and are today the almost forgotten men and women in our society and in our economy. They have been excluded from all labor and social legislation during the past 15 years. But the Nation has drafted their sons for war service. Both their sons and daughters have done the hard work in planting, cultivating and harvesting the abundant farm production of the past 10 years. Millions went into factories to turn out the war production that shortened the war and made it less costly in lives and money; many have returned to the farm labor market; others alternate between uncovered farm and covered factory employment, taking work where they can find it.

As a group, hired farm workers are the lowest paid, the most irregularly employed, the least organized and the least secure during their working lives. Handicapped by natural forces governing farming and their own Government's discrimination against them during their working lives, their lack of security in old age is a personal and family calamity. They should be admitted to coverage under the bill before you, so that they may have some income in their old age, inadequate though it will be because of their low and irregular wages during their working lives.

Mr. Altmeyer's statement that it is administratively feasible to cover farmers, other self-employed and hired farm labor has not been controverted, though it may be disputed for other reasons.

Evidence of growing support for such extension of coverage, coming from many groups, including the State and National farm organizations, and the recommendation of this committee's own Advisory Council, suggest that you should go all the way in extending coverage, excepting only members of religious orders and, for constitutional reasons, State and local government employees for whom coverage can be optional.

Making the monthly benefit amount a proportion of the worker's monthly wage

The purpose of a benefit formula should be to provide monthly benefit payments that, based upon the insured worker's monthly wage, will provide him with a decent living in his retirement during old age or disability. As will be shown in a later section of this statement, funds to pay these benefits can be supplied by a combination of pay roll contributions and general funds.

It seems to us misleading to talk of monthly benefits related to average monthly earnings and then to average the insured worker's earnings out over his entire working life. In nearly all cases, this means spreading earnings over periods in which, through no fault of his own and in spite of his best efforts to find work, he was unemployed and without wages or other income, or was employed short time at reduced weekly and monthly wages.

H. R. 6000 lessens the injustice by excluding years of unemployment (less than $200 to $400 in earnings.)

The pattern of irregular employment which was prevalent in, but not peculiar to, the automotive industry before the war is built into the wage records of our members. The future holds the threat of a return of that pattern of irregularity so long as the industry persists in its present price and production policies. This makes it necessary for us to urge upon you the adoption of a benefit formula that, carrying forward the motive of H. R. 6000, attains the objective by relating benefit payments to wages earned in the highest quarters of the five best consecutive years.

Unless such a relationship governs the computation and payment of benefits, aged and disabled workers who have studied statistical tables of average earnings and monthly benefits are going to be disillusioned and resentful when, on receiving the benefit payments, they find that their earnings, nearly always irregular, have been ironed thin to cover periods of low or no earnings, and an average taken as the base for surprisingly small monthly benefits. Like other people, retired workers and their dependents do not live on statistical averages; they live from day to day, from one meal to the next, and from one income payment to the next.

Other changes in the benefit formula to provide for higher monthly payments

In part I we have given the deficits that would be left by the benefit provisions of the present law and various proposed amendments.

To provide benefit payments approaching the standards of minimum adequacy we have described in parts I and II, the following additional amendments to H. R. 6000 are necessary and we strongly support the CIO recommendation that they be adopted:

1. The wage base should be increased to $4,800 from the present $3,000, which the House Ways and Means Committee raised to only $3,600, despite your Advisory Council's recommendation that it be raised to $4,200.

The proportion of workers whose full time earnings were covered by the $3,000 ceiling when first set was greater than the proportion that would be so covered by $4,800 now. (See chart, p. 102, pt. I, Senate Finance Committee Hearings on H. R. 6000.) Moreover, more of the costs of the system will be met by a lower rate of contribution if the taxable wage base is increased to $4,800.

2. Benefits should be related to the length of coverage as well as to past wages. The 1 percent annual increment in the present law should replace the one-half percent in H. R. 6000.

3. In addition to using 50 percent of the first $100 of the average monthly wage, the percentage of the remainder of the monthly wage should be increased from 10 to 20 percent. Using 10 percent of wages over $100 flattens the differential which the retired worker had during his working life under the wage "structure," so-called. As logic and justice are introduced into the present wage jungle, wages and benefits must be leveled up, not down.

4. The use of the high quarters which we have urged earlier is essential if benefits are not to be a distorted caricature of what the insured worker actually earned while working.

Of course, the above proposals to have full meaning require the removal of the $150 a month benefit ceiling contained in H. R. 6000. Such a ceiling would deprive retired workers of dependents' allowances. We urge the CIO recommendation that there be no dollar ceiling, but that the maximum for combined primary and family benefits be 80 percent of the base average monthly wage.

Together, these amendments would result in benefit payments approximating what an insured worker, reading the various benefit formula tables, assumes he is entitled by law to receive.

Larger benefits for widows and other dependents are recommended

For the reasons stated in section III, we endorse the CIO recomendation that the widow of an insured worker be paid two-thirds of the benefits paid the couple, or 100 percent of the primary benefit.

We also endorse the CIO recomendation that the allowance for the first child or dependent parent of a deceased worker be increased to 75 percent, as proposed in H. R. 6000.

We support the CIO recommendation for a minimum of $50 a month for all insured workers and the CIO endorsement of H. R. 6000's present allowance for outside earnings up to $50 a month.

We support the CIO recommendation that liberal wage credits be allowed veterans for their period of service, the cost to be met from the general revenues.

V. THE NEED FOR, AND THE FEASIBILITY OF, PERMANENT AND TEMPORARY DISABILITY INSURANCE AND REHABILITATION

The worker who, because of permanent or temporary disability, is unable to work and earn wages, can become just as broke, hungry, cold, dispossessed, and depressed as either (a) the unemployed brother or sister who is able and willing to work but is unemployed through no fault of his or her own, or (b) the aged worker who has chosen or been forced to retire.

The Social Security Act for 15 years has provided some measure of security to the able unemployed and to the aged worker. But it has provided nothing for the worker who, however willing he may be, is temporarily or permanently disabled and incapable of working.

Often, if not always, it costs more to be unemployed and disabled by sickness or accident than to be simply unemployed but well and able to work. Fees for doctors, nurses, other personal services, hospital care, medicines, sick-room equipment and therapeutic and prosthetic devices are all extra. They are piled on top of the normal living expenses, tending to drive the disabled worker and his family into debt and to create all the family and social stresses and strains that accompany such a descent into hardship.

Normal family life and development of the children may be disrupted, even wrecked by the catastrophe of unemployment plus disability plus extra expense plus total lack of income.

Normal recovery and rehabilitation of the disabled breadwinner are often delayed or prevented by this drying up of funds and credit and accompanying anxiety.

This anxiety and the actual deprivation suffered by him and his dependents are not dispelled so long as his only recourse is to charity or relief. No program which involves a means test can be considered to offer security to the worker and his family.

Disability insurance in H. R. 6000 is a historic first step—but too limited

Now, in H. R. 6000, the House has made a start toward filling in this tragic and costly gap in the Social Security Act. It proposes to insure and make eligible for total and permanent disability benefits all those persons to be covered by the amended OASI title of the act. Though unnecessarily limited and inadequate, this is a historic first step in the direction of providing security against a hazard faced daily by everyone in both industrial and farm communities.

Disability, either for a temporary period or permanently, is not confined to old age. All workers of all ages are subject to accidental injuries and diseases that may impair or destroy working capacity.

The incidence and frequency of permanent and total incapacity per thousand workers has been found to be approximately as follows: [1]

Number becoming permanently and totally disabled, per 1,000 workers

Age of workers	Number	Age of workers	Number
20 years	2	50 years	7
30 years	2	60 years	28
40 years	3		

[1] Tabular rate of disability derived from third actuarial valuation, under the Railroad Retirement Act (1946).

For younger workers, the rate of permanent and total disability is very small. The cost of providing disability retirement benefits for them is not very great. But, whether or not a particular individual becomes incapacitated, all workers are exposed to the hazard of becoming incapacitated. This type of insurance affords valuable protection for all against early curtailment of working capacity.

As workers advance in age the need for disability benefits increases and the cost becomes higher. However, their claim for benefits based upon longer service has also become greater.

Provision for retirement on grounds of incapacity due to disability has as great a claim as a retirement benefit program as the attainment of old age. Without protection against loss of income due to disability the program is incomplete.

Fear of administrative difficulty—meaning malingering—is answered

The need for disability benefits cannot be evaded; it must be met somewhere. The alternatives to providing for incapacity retirement are to make the disabled workers dependent on relatives or to abandon them to public relief or charity. The Advisory Council on Social Security found that:

"In a high percentage of the total cases (of permanent and total disability), however, the disabled worker exhausts his own resources and becomes dependent on public assistance. Few persons, even those receiving moderately high salaries, can accumulate enough to support their families during prolonged periods of income loss" (reports of the Advisory Council on Social Security to the Senate Committee on Finance, Washington, 1949).

It is universally conceded that permanent disability benefits are needed and are desirable. The only objection is administrative difficulty. The claim is sometimes made that conditions of disability are difficult to evaluate. The charge is made that the programs are subject to abuse by malingering workers.

These claims and charges were answered by Mr. Altmeyer in his testimony before the Committee on Ways and Means of the House of Representatives. He stated:

"Disability insurance is part of the social-insurance systems in practically all countries and its administrative feasibility has been proved beyond question. In the United States we have had considerable experience with disability programs. The various special public retirement systems, the program for railroad wrokers, the veterans' program, workmen's compensation, the State cash sickness insurance programs and commercial insurance have provided valuable sources of information and experience in planning a * * * program of disability insurance."

The early experience of insurance companies in this field, often cited against the feasibility of disability insurance, is irrelevant as is shown by their present eagerness to sell group-life plicies with permanent and total disability riders.

After full consideration, the Advisory Council on Social Security also concluded that insurance against permanent and total disability is feasible if proper safeguards are instituted.

The pessimistic prophecies that had been made about difficulties in administration did not materialize under the railroad retirement program. The vast majority of employees who claimed total and permanent incapacity were able to present objective evidence on which satisfactory findings could be based.

Eligibility requirements should be moderated

The severe eligibility requirements for permanent and total disability proposed in H. R. 6000 should be moderated. An individual should be considered insured for purposes of disability insurance benefits if he had not less than four quarters of coverage during the eight quarters ending with the quarter in which his disability determination had occurred; or if the individual has no recent connection with the work force, because of some physical disability which develops into a permanent and total disability, he should be considered insured for purposes of disability insurance if he had not less than four quarters of coverage during the eight quarters which preceded his termination of employment.

Benefits should be same as for aged workers and dependents

A person considered fully insured for old-age pension should also be considered insured for the permanent disability insurance benefit, with the same primary and dependents' benefits we have recommended in section IV. Dependents' benefits are as important in a permanent and total disability program as they are in an old-age retirement program. The loss of income that is suffered with permanent and total disability puts the family in a destitute position, having to rely upon general assistance programs on a means test basis.

Temporary disability insurance is also needed

In addition to a permanent and total disability benefit, it is necessary that workers have protection against wage loss during periods of temporary disability. We support the CIO recommendation that you restore to H. R. 6000 the administration proposal for a national system of temporary disability insurance that was included in H. R. 2893 and provided maximum primary benefits of $30 a week and $45 for a worker with three or more dependents for a maximum duration of 26 weeks.

We are not willing to leave to chance the question of whether or not a worker has protection during such periods.

Although four States have taken action in this field, we remember too well the 38 years that elapsed before all States enacted workmen's compensation laws. We are not content to wait another such period for State action in the field of nonoccupational disability protection. Even if the period could be shortened by some Federal-State device workers do not desire the inadequate, inequitable, patchwork programs that inevitably result from a State-by-State approach.

A major step in meeting the problem of insecurity is inclusion of a coordinated program of protection against losses of income arising from sickness and accident for temporary as well as permanent losses—within the framework of national social security legislation.

Thorough rehabilitation program should be provided

An adequate rehabilitation program which will maximize the individual's earning power is an essential element in an integrated approach to disability. H. R. 6000 adopts a negative approach. It provides only for the disqualification of workers who do not take rehabilitation training. A positive approach is required. The present rehabilitation program must be renovated, reoriented and strengthened. An adequate educational program, coupled with research facilities, and administered by efficient and well-trained personnel will in the long run more than pay for itself in higher morale, greater restoration of the individual's ability to support himself and his family, and decreased public welfare expense.

We strongly support the CIO recommendation that H. R. 6000 be amended to include temporary disability and provision through this bill and other legislation for a real program of rehabilitation research, education and training to restore lost or impaired ability or to make compensating adjustments that will enable the disabled worker to resume work and earnings.

VI. COST AND FINANCING

Arguments against adequate pensions are not new

The arguments advanced against provision of adequate pensions for our aging citizens are the same in their essence as those put forward since the birth of the industrial system against every proposal to make life better and more secure for the masses of people.

Every age has its men of little vision who deem it their duty to oppose the next steps forward.

Their stock argument, used against every new proposal, is that it costs too much, would place an intolerable burden on the economy, and lead ultimately to catastrophe.

Traditionally, they know the cost of everything and the value of nothing that tends to make life richer and freer from care and worry for the majority of the people. Again and again, what they have fought as a danger to their own profits has protected and even increased those profits.

Happily, our people have never paid too much heed to those who, like the leprechaun in Finian's Rainbow, cry "gloom and doom" at every opportunity. The doubters and the fearful have been able to impede and delay but not permanently to block our progress. And because we have made progress, we have shown in practice over and over again, how false their arguments are. Their dark foreboding, of economic catastrophe resulting from the fantastically exaggerated cost estimates with which they frighten themselves and their followers have never come to pass. Economic collapse has come periodically, because of and not despite them. It has come when we have let them persuade us to do too little and too late what urgently needed to be done.

After the measures which they oppose become firmly rooted in our way of life, the intellectual descendants of these men of small hopes and little heart point with pride to those very measures as symbols of the progress the Nation has made. We have all heard them boast, for example, of our free public-education

system which early American trade unions won against the bitter opposition of the forbears of today's doubters and viewers-with-alarm.

These confirmed opponents of everything new take too much pride in progress made yesterday and pay no attention at all to the needs of today and tomorrow. They ask us to rest smug and satisfied with what we have achieved over the fierce resistance of their grandfathers. Absorbed in rapt contemplation of what has been accomplished already, they cannot see the new goals challenging our Nation on the road ahead. They drive down the road to the future in a car that has a rear-view mirror where the windshield belongs.

These lessons from history have direct bearing on the arguments we now hear about the future economic consequences of the cost of adequate pensions.

The cost is already with us

We are told that we have an aging population. We are warned that, even if pensions remain at present levels, the increased number of pensioners will add substantially to cost. Frightful pictures are painted of the crushing economic burden which increased pensions will place on our younger citizens in the years ahead.

All this, of course, measures tomorrow's costs against today's possibilities.

Even measured against the present situation, the prospect is not nearly as menacing as some would have us believe.

One member of your committee has stated that provision of $100 a month pensions for all over 65 would cost $12,000,000,000 a year.

Looked at by itself, the figure seems imposing. Seen in perspective, it dwindles into insignificance.

While precise figures are not available, it is entirely possible that we are spending that much now to support the aged by a crazy-quilt system of public and private charity and pensions, to say nothing of the economically unwise and socially undesirable sacrifices wrung from willing but themselves impoverished relatives.

According to Fortune magazine, which omitted some of the components in the present cost of pensions, the bill for 1950 under our existing chaotic programs is already $9,000,000,000.

"The discernible components of this prodigious tab" says Fortune "include $3,000,000,000 of social security pay-roll taxes, over $250,000,000 of interest accruing to the social security fund, Federal and State old-age assistance payments above $1,300,000,000, the railroad retirement fund's $700,000,000 income, service pensions, civil-service retirement pay, and veterans pensions of $2,000,000,000 a year, and private pension-plan payments of something like $1,500,000,000."

These figures neglect, among other things, the cost of public and private homes for the aged, fraternal society benefits to aged members, church pension funds, support provided by private welfare agencies, and similar means of caring for those who can no longer support themselves.

The real question: How best to meet the cost?

The burdens thrust on relatives of the aged, including the sacrifices often imposed on the young children of such relatives, have long-run social consequences which cannot be measured in dollars.

These costs will continue as long as our legislative provisions for the aged remain haphazard, partial, and inadequate. As the aged grow to a larger proportion of our total population, these hidden but real costs would rise just as surely as the cost of an orderly, logical, and adequate pension system covering practically all our working citizens.

American workers are not satisfied with the present patchwork system of provision for the aged, the ill, and their dependents. They have expressed their determination to win something better. They have begun to make that determination effective in collective bargaining and, when necessary, on picket lines. They will continue to do it that way as long as they have to.

The choice no longer lies between incurring or avoiding the costs of adequate social security. The only choice today is this: How shall these costs be met?

We in the trade-union movement, if we are left no alternative, can press on year after year to improve and expand the private pension and health security programs which we have started to establish, despite their inherent defects and limitations.

This method will cost more and provide less than an adequate and comprehensive Federal program. And it will leave out millions of people whose need

for security is at least as urgent as the needs of our members but who lack our organized strength.

Our constitutionally elected Federal Government can do the job better and at less cost; and we would prefer to free ourselves and management from the responsibility for doing what Government properly should do.

These facts should be borne in mind by those who are so busy counting the cost of social security that they have lost sight of its inevitability in one form or another.

We should plan today for a better tomorrow

The cost of providing security will grow with the years. But so will our economy grow in size and output.

The cost of adequate pensions must be measured against the potentialities of our expanding economy to pay for them as and when they come due. Regardless of how we finance pensions—whether we pay as we go or build up reserves now against the future—those in retirement at any time will consume out of the production then current. Pensions paid in 1980 will be used to buy goods produced in or around that year, not in 1950.

The cost of protecting our citizens against certain contingencies is now accepted in principle by the great majority of the American people as one of the inescapable costs of conducting our economic affairs. The fact-finding board established for the steel industry last year simply gave expression to the moral sentiments of the community as a whole when it noted that the cost of human wear and tear is as proper a charge on production as the wear and tear of machinery.

A glance backward at the recent history of our economy emphasizes both the inevitability of the costs and the ease with which we shall bear them when they come due.

In today's prices we may estimate roughly that our total national product a half-century ago, in the year 1900, was worth $50,000,000,000. Taking Fortune's figures on the current cost of supporting the aged, we are now devoting the equivalent of 18 percent of the 1900 product to that purpose alone.

It is not difficult to imagine the protests of the opposition had a proposal been made in 1900 to adopt a social welfare and insurance program of that magnitude. Yet there is practically universal agreement today that our present provisions for the aged are inadequate and must be improved.

Today's $9,000,000,000, that is equal to 18 percent of the total national product of 50 years ago, is equal to less than 4 percent of our current output. The cost of what we propose today will, by the same token, look much smaller to the next generation than it does to us.

Using fear of the future to paralyze action now

The prophets of doom can find no support for their fears in the immediate impact of H. R. 6000 upon our economy. The actuaries estimate that the combined cost of the benefits provided under all the insurance titles of the bill would come to about 1.3 billion dollars this year, one-half of 1 percent of our total national output. A program twice as liberal would cause no alarm.

So the opponents of an improved social security add up costs 30 and 50 years hence. They appear to hope the public eye will not be quick enough to detect the sleight-of-hand involved in this implicit comparison of tomorrow's costs with today's ability to pay.

The Council of Economic Advisers, however, has spoiled the game by pointing out that: "* * * if enactment of legislation now involves the commitment that *X* number of people who will not be working 30 years from now will receive *Y* number of dollars of old-age benefits per month, the real test of whether the Nation can afford such a program is not *XY* dollars per month measured against the *current* size of the economy by *XY* dollars per month measured against the productivity of the economy *30 years from now*. [Emphasis in original.]

Adequate pensions can help consumption keep pace with full production

History establishes the fact that our output per hour per worker has multiplied itself several times over since this Nation was founded. That trend continues with undiminished and probably growing force.

The decision now before you and the Nation involves the distribution of a small part of our future abundance. Out of each dollar added to our wealth, how much shall we use to assure the people who work to create that wealth that their incomes will be maintained when, for certain specified reasons, they or their breadwinners are unable to work?

In the years ahead, the American people can, should, and will have a reasonable measure of security together with, and not at the expense of, greatly improved living standards. In fact, the advances in social security which we seek will contribute materially, by improving the health and efficiency of our people, to the increase in the national wealth out of which the cost of security will be paid.

Cost of program proposed by CIO may be 6.3 billion dollars in 1955

We support the CIO program, which in terms of benefits, is considerably more liberal than H. R. 6000, although because of the need to reckon with the wage jungle to which reference has been made, and the political realities of the moment, it also will not yield for all retired workers an income sufficient to maintain an American standard of living.

We are fully conscious of the fact that more adequate benefits mean greater cost. We are convinced that much of the discussion of cost is for propaganda effect. Nevertheless, we are prepared to meet on their own ground those who profess to balk at the costs.

The assumptions behind our cost estimates are essentially the same as those made by the actuaries for the Federal Security Agency and your committee, with the following adjustments:

1. We have substituted the CIO sponsored coverage, eligibility, and benefit provisions for those provided in the insurance titles of H. R. 2893 and H. R. 6000.

2. We have assumed the wage levels will rise at a somewhat faster rate than the increase in the total national product.

The second assumption is made for two reasons. First, it is necessary to facilitate the comparison with the Nation's total output which we shall make later. Secondly, unless wages rise, the economy will be clogged with unsalable goods and the increases in total output to which we look forward will not be realized. We refuse to accept a future of economic defeat and chronic mass unemployment.

We go no further than 1955 in our cost projections because experience during the short life of our social-security program has shown that the actuaries tend to overshoot the mark on costs and that their projected estimates diverge increasingly from reality as time goes on.

On the assumptions stated, it appears that the program recommended by the CIO will cost 6.3 billion dollars in 1955.

This is one-tenth of the increase in our total output which we may expect to have attained by 1955. This 6.3 billion dollars is less than 2 percent of the total national product we can expect in that year.

Is old-age and disability security worth 10 cents of every dollar in new wealth?

We do not believe that the American people will see anything wrong with devoting 10 cents out of every dollar added to their wealth to provision for the aged, the widowed, the orphaned, the permanently and totally disabled, and their dependents.

On the contrary, we maintain that enactment of the program we propose is, at least to the extent of 10 cents of every dollar of new wealth, a solution to the problem of avoiding disaster by a better distribution of the abundance that now threatens all of us with surpluses and depression.

Cost of quarterly wage base can and should be negligible

Most of the changes which we propose in H. R. 6000 will add to the cost of the program. We urge them because they are needed and because we are convinced that the American people will receive full value for every last cent of the cost.

There is one important change, however, that can and should involve only negligible cost. We refer to the computation of pensions based on averages of quarterly rather than of annual wages.

The difference in cost as between an annual and a quarterly wage base could be insignificant or great depending upon our success or the lack of it in achieving stable full employment.

If workers are assured of steady employment the year around, year after year, it will make no difference whether we calculate their average wages on a quarterly or an annual basis.

We in CIO are committed to the achievement of steady employment for our members and for all American workers and we propose to make good on that commitment within the measurable future. The Nation, in fact, has made the

same commitment in the Employment Act of 1946 which sets maximum employment as the goal of Government economic policy.

While the quarterly wage base undoubtedly means some increase in costs during the interim period, it can and should make only a negligible difference in cost over the long run.

Those who would oppose this change on grounds of cost, implicitly admit that they have no faith in the Nation's ability to iron out the economic fluctuations which are far more costly than the change in the computation formula which we urge.

Meeting the cost—a mixed system of financing

Pay-roll taxes as the exclusive source of our social insurance funds have been justified because of the restricted coverage of the original and present acts. With large sections of the working population excluded from benefits, it would have been inequitable to require them to share in the cost. Discriminatory exclusion has been given as the reason for a regressive tax.

We concur in the view expressed by the Council of Economic Advisers that "as coverage becomes more general, a larger part of social-security receipts should be obtained from general revenues rather than pay-roll taxes."

We in CIO now propose that coverage be made practically universal. On that basis, there is no reason, in principle, why the entire cost should not be borne out of general revenues raised through progressive taxation. Social insurance remains insurance regardless of whether the insured pay for their protection through pay-roll taxes or general taxation. Any argument to the contrary is nothing more than a bookkeeping quibble.

Nor is the principle of insurance negated when amounts paid into the insurance fund by any person bear no direct relationship to the cost of providing him, as an individual, with the protection specified. Group life insurance is unquestionably insurance despite the fact that wide variations in the relationships between total premium payments and benefits received are actuarially predictable for participants of widely differing ages and physical condition.

Pay-roll taxation of the employee is without question regressive and economically unsound. The same is true, although to a lesser degree, of pay-roll taxation on the employer. The employer will pass on the pay-roll tax whenever conditions permit and resultant higher prices may fall ultimately on those consumers whose ability to pay is smallest.

For these reasons we believe that the cost of social insurance should ultimately be financed as most other social costs are—through general taxation. And we support the CIO position that general taxation should be progressive.

Nevertheless, we do not propose that the pay-roll tax be eliminated immediately. The principle of social security is still new in America and there are still those who live in the past to such an extent that they hope, through direct or devious means, to abolish it.

We therefore accept, at this time, limited pay-roll taxes on employees so that no question can be raised as to their right to receive the benefits.

The harmful effects of such regressive taxes must be minimized by setting a ceiling on the tax rates. We propose that the tax on employees be limited to 2 percent of covered wages.

The major part of the cost should be paid out of the general revenue raised by progressive taxation. This is clearly the only fair and logical way to meet the accrued liabilities of the social insurance system resulting from the fact that the system is so new that contributions on behalf of many covered workers have been made during only part of their working lives.

Acceptance of the principle of meeting at least part of the cost of the program through general taxation has bearing on the question of reserves.

We propose that provision be made for reserves, but that the reserves be limited, at any time, to an amount sufficient to meet costs anticipated over the next 4 or 5 years. The purpose of such reserves would be solely to assure the payment of benefits despite temporary, unforeseen contingencies.

We propose limiting the size of the reserves because it makes sense to meet increased future costs out of an enlarged future income which will make those costs less burdensome. Government, unlike private corporations, must be presumed to be immortal and responsible to its citizens and possess unlimited constitutional power to levy on the total wealth of the Nation. There is no reason, therefore, to fear pay-as-you-go financing in connection with a governmental social insurance program.

VII. PUBLIC ASSISTANCE

The need for Federal aid in public assistance is not a permanent and inevitably growing problem. It is so big today because the coverage and benefits under the social-insurance titles of the Social Security Act are so small. Its magnitude is a measure of the failure of the basic social-security system to accomplish its proper purpose.

Within 5 minutes after these hearings opened January 17, it was established in the record (at p. 23 of pt. I) that—

1. More than 5,000,000 persons are receiving some form of public assistance;

2. Half that number are receiving assistance to piece out old-age and survivors insurance benefits;

3. Public assistance expenditure, Federal, State, and local, exceed $2,000,000,000.

4. Old-age and survivors insurance benefit payments are only about one-third this amount;

5. Old-age assistance expenditures—Federal, State, and local—are increasing at the rate of more than $1,000,000 a month and, at this rate, will exceed an annual rate of $1,500,000,000 by the end of 1950. Of this sum, the Federal Government is to pay $900,000,000 and the States and local communities $600,000,000.

The witness, Mr. Altmeyer, pointed out that the public assistance cost had steadily increased because of the inadequacies of the social-security system. He endorsed the statement of the House Ways and Means Committee, made in favorably reporting H. R. 6000, that: "The bill is designed to speed the day when most of the aged and of the Nation's dependent families will look to the insurance program for protection and when the role of public assistance can be drastically curtailed."

Public assistance needs will drop as insurance system improves

But H. R. 6000 does not go far enough fast enough to do that job. Even if this committee and Congress should go the whole distance in accepting our proposals, the need for public assistance would not be "drastically curtailed" at once. It is likely to continue for years. It will taper off as we—

Enact a comprehensive, adequate national social-insurance system including old-age and survivors, unemployment, disability and medical-care insurance;

Attain stable full employment by implementing the purposes of the Employment Act of 1946.

At best, this will take time. Renovation of the Federal-State system of unemployment insurance is complicated by vested interests in the present merit-rating provisions of State laws and their incentives to make benefits harder for the unemployed to get.

Meantime, unemployment tends to increase, as we have shown in earlier sections. More unemployment insurance benefit rights are exhausted, wartime savings and equities are liquidated, local communities and States find themselves unable to meet the demands being made upon them.

Variable grants needed to aid poorer States

Poorer States, in terms of per capita income, are hardest hit. Their people generally have fewer resources and more quickly reach destitution when adversity strikes; local communities and the State itself have fewer resources with which to meet the proportionately greater need.

In prosperity, the poorest States have per capita income about one-half of that of the richest States; in depression, the spread is wider. Although the poorer States generally make a relatively greater effort than the wealthier States to aid their needy, the amounts paid to the individual are smaller, too small for the individual's needs, too small to promote directly and indirectly the restoration of the individual to productive work.

In public assistance, as in wages and the social insurances, we should work toward putting uniformly higher values on human welfare throughout the Nation. Many articles of commerce made and sold throughout the Nation, including automobiles, farm implements, and planes, have one price; the people who make them should not be discriminated against in wages paid them while employed, in benefits payed when unemployed, disabled, or retired, or in assistance paid them because they have exhausted their insurance rights or, due to their Government's decision or their own misfortune, they were never eligible for such bene-

fits. Because the wage jungle does exist, it is not possible to attain this goal immediately. But we should make a start in that direction in public assistance, as in the social insurances and as unions are doing in the field of wages themselves.

Public assistance grants-in-aid to States should be authorized on a variable basis, related to need and to the State's ability or inability to meet that need. This will make possible some comparability in assistance and in quality of administration among the States. This method has worked successfully in the hospital survey and construction program, the school lunch program, and under the National Mental Health Act. It has been used, in modified form, in the allocation of Federal funds for maternal and child health, for crippled children, for child-welfare services, and for public-health services in the original Social Security Act.

What shall we do about our own displaced persons?

Many persons fall in the cracks between what the experts call the categorical assistance programs. They are not blind, they are not children, they are not mothers of dependent children; they are simply in need.

In many instances, they have moved about the country in search of work; they are not residents of the States in which they find themselves; they do not have money to get back to their place of residence; were they to return, they might find difficulty in getting aid because they have been away for years, in some instances since the beginning of World War II. They are, in effect, our own American displaced persons.

We should provide at least as well for these persons—and there are hundreds of thousands of them—as our Government has provided for the displaced persons of other countries. In saying this, we intend no reflection on what has been done on the international DP problem; we favor amendment to remove the discriminatory features of the present DP law. We are saying that we should also do at home what we advocate and do abroad.

Federal funds and standards needed for public assistance

The last depression showed us that only the Federal Government can meet the cost and set the uniform standards necessary for a general public assistance program that will meet the needs of individuals and serve the welfare, strength, and security of the Nation. Specifically:

1. State "residency" requirements should be eased.
2. Persons not qualifying under existing "categories" but in need should be given public assistance by expanding Federal matching grants to meet all types of need.
3. Matching provisions should be liberalized.
4. Limitations on Federal funds per individual should be adjusted to permit adequate allocation to high-cost areas.
5. Simpler and more liberal definitions of need should be substituted for definitions which, in some States, are used to save money and squander people.
6. Federal standards should promote liberalization and more uniformity in State lien laws.

This committee and Congress can improve the administration of old age assistance programs in the States by raising the Federal law's standards for such administration. Political favoritism can be reduced, if not completely eliminated, by strengthening civil-service requirements. Federal grants-in-aid should be approved not only for cash payments to the needy aged but also for the improvement of State and county facilities for institutional care of the aged.

In making these recommendations, we say again that the best way to deal with the public assistance program is to do away with the need for it and its accompanying means test and administrative difficulties. Build as quickly as possible a universal social-insurance system that will provide adequate protection to the individual against the hazards with which, in our modern society, he cannot cope single-handed. As discussed in section VI, on cost and financing, the cost of meeting human needs must be met one way or another; the best way is to meet it by a comprehensive social-insurance program.

Aid to dependent children should be increased, eligibility broadened

We urge removal of limitations and inequities in the dependent children program by amendment of the Social Security Act to—

1. Take off the present maximum Federal allocation (three-fourths of the first $12 of the State's average monthly payment per child, one-half of the re-

mainder up to $27 for the first child and up to $18 for each additional child i a family). In operation, poorer States have limited their expenditures to matc ing Federal funds; richer States have contributed more than required to mat Federal funds. Result: dependent children in poorer States are handicapped i comparison with dependent children in richer States.

2. Make eligible under Federal and State laws—

Children living with persons other than the relatives now specified in th act;

Children aged 16 and 17 who are not attending school;

Children who are in want because of the parent's unemployment.

Monthly average monthly payments to the blind should be increased; rehabil tation aided

We urge the raising of the present limitation on Federal funds per individua blind person. As in all assistance programs, the budget estimates of need ar obviously too low. The Federal share of cash payments now averages about $2 a month.

As much as anything except the necessities of bare living, blind persons nee and the Federal Government should furnish adequate educational and rehabili tation services that will enable them to provide for themselves.

Under the imperatives of wartime full employment, many of the blind wer trained and placed in productive jobs to the benefit of their own incomes an well-being and a lightening of the assistance load. What we did in war, we shoul have the intelligence and cooperativeness to do in peace.

VIII. CHILDREN'S SERVICES

Current interest in providing more nearly adequate pensions and assistanc for the aged and disabled must not result in neglect of responsibilities for legis lative action to strengthen and improve Federal services to children.

"Children are the hope of tomorrow; children are a symbol of man's immorta faith and hope."

These phrases come easily. But services to make children tomorrow's hopefu do not come easily. Children do not vote, even when they are old enough t fight for their country; children cannot formulate and present their needs i ways that make legislative action easy. To date, in all discussions on th Nation's needs in social security, the group most neglected, with the exceptio of farmers and hired farm labor, has been the children.

The very smallness of the funds needed to provide substantial public socia and medical services for our children perhaps contributes to the general for getfulness.

H. R. 6000 adds only 3.5 million dollars to the 3.5 million dollars appropriate for children under the existing law. This is only for the extension of child welfare services, that is, social services for children who need help with thei personality problems and whose parents need help in meeting the problems of a child whose behavior suggests possible development of a delinquency patter or who is delinquent. Certainly this is a major and urgent need.

But it is not the only children's need.

Provision should be made in this bill for preventive social services for chil dren in need of mental hygiene and other forms of treatment. Such service given now will mean not only happier and more useful lives for such children but also less expenditure tomorrow for custodial care in our penal institution and mental hospitals.

If we are to provide for the adult population who need institutional and hospital care and treatment and if we are to prevent the increase of need for these public services, we will be wise to do two things at once. As we provide for those persons already socially and mentally ill, we will at the same time provide for the children who live under the conditions and have the kinds of problems that make for mental and social illnesses in adults. We urge the Congress to increase the funds for child welfare services from 7 million dollars now in H. R. 6000 to at least 12 million dollars a year.

We urge that authorization for grants to the States under title V for maternal and child health services and for medical and other services for our crippled or otherwise physically handicapped children be increased from the present 18.5 million dollars to at least 50 million dollars a year. This amount should later be increased as personnel and facilities are available. As it stands, H. R. 6000 has no provision for any increase whatever for these services.

Since passage of the Social Security Act in 1935, much has been learned through administrative experience and research about the needs and treatment of maternal and child health problems. In that time, Congress has enacted public health measures of various types to improve services to adults. But only 18.5 mililon dollars, or about 40 cents a year are provided for such services for our 46 million children.

Maternal and child health clinics and services, as integral parts of community health and medical services, should be expanded in every city and in our rural areas. Present grants for these purposes are pitifully inadequate.

Crippled children's services need expansion. Thousands of children are on the waiting lists in the States, denied their best chance of restoration. Lack of funds denies many children new treatments for the mentally and physically handicapped. Every children's hospital in the Nation needs funds to provide care for handicapped children whose parents cannot pay for such care, often long, slow, and expensive even for families of fairly good income. Most hospitals lack specialized staff and facilities for such care.

APPENDIX

A TENTATIVE APPROACH TO AN AMERICAN STANDARD BUDGET FOR AN ELDERLY COUPLE

1. THE INADEQUACIES OF EXISTING BUDGETS

With the passage of the Social Security Act in 1935, the United States as a Nation abandoned, in principle, the notion that those too old to work and too young to die should properly be relegated to dependence on children or charity, or sent over the hill to the poorhouse. We have come a long way, in principle, from the Indian tribes who sent their aged out to die in the "bad lands."

But practice did not conform to principle. Amounts allowed for pensions under the Social Security Act were no more than token acknowledgment of the new responsibility the public had assumed for the aged. As living costs rose while pensions remained frozen, the gap between principle and practice grew even wider and more intolerable.

In order to close that gap, it became necessary to measure it. As a result, recent years have seen a number of attempts to calculate the cost of maintaining elderly couples who have earned the right to retirement by lifetime service as producers.

The budget for an elderly couple

The cost has been computed by setting up quantity budgets of goods and services and pricing the quantities allowed. A number of such budgets were developed on various bases. The quantities in some represented the informed judgment of experts. Others reflected a search for more objective measures. All of them examined preliminary to preparation of this statement, however, came up with results that represented something considerably less than what would be considered a truly American standard of living. They reflected minimum requirements (with "minimum," of course, variously defined) rather than what the typical American citizen would consider a genuinely adequate standard.

It is not our purpose to review all these budgets in detail, although it will be necessary to refer at times to several of them. For purposes of simplifying the presentation, this discussion will take as its starting point the so-called Budget for an Elderly Couple (BFEC),[1] prepared by the Federal Security Administration in cooperation with the Bureau of Labor Statistics. This budget has won more acceptance as a measure of the needs of the elderly than any other thus far issued.

The techniques and concepts developed by the Bureau in the so-called City Worker's Family Budget (CWFB)[2] published in December 1947 were applied in the Budget for an Elderly Couple. It will therefore be necessary first to examine the former.

The City Worker's Family Budget

All attempts to prepare family budgets face many grave difficulties which need not be elaborated here. One of the most serious is determination of the

level of living which the budget is designed to represent. The City Worker's Family Budget marked a great step forward in that it represented the first attempt to settle on a level of living and to fix the corresponding quantities of goods and service on an objective basis.[3]

Examination of the descriptions of the City Worker's Family Budget written by those responsible for developing it reveals conclusively that it does not by any means represent an American standard of living. It was not, in fact, intended to represent such a standard. It is a minimum standard and not a standard which all Americans can and should have as a matter of right. It is not the kind of standard that American workers would or should be willing to accept in satisfaction of their claims to an equitable share in the fruits of their toil. It is a standard that falls far short of the level of consumption needed to sustain a full employment economy in the United States.

It is true that the phrase "American standard" is used in connection with the budget, but the reference is to "American standard of what is required,"[4] not of what is reasonable and right. According to the official description—

"The budget therefore should represent the *necessary minimum* with respect to items included and their quantities as determined by prevailing standards of what is *needed* for health, efficiency and nurture of children, social participation, and the maintenance of self-respect and the respect of others."[5] [Emphasis supplied.]

It is significant that those who developed the CWFB at one time considered the preparation of two separate budgets.

On September 28, 1945, the Technical Advisory Committee, established to consult with the Bureau of Labor Statistics on the preparation of the budget requested by Congress, adopted a formal motion stating:

"The Committee recommends that the BLS, in addition to preparation and pricing a minimum cost adequate budget, start preliminary work on an estimate of the average quantities of various products and services which constitute the American standard of living and which will be available to families under conditions of full and efficient employment. * * * ."[6]

The idea of an American standard budget provided the occasion for one member of the Committee to propose evisceration of the minimum cost budget. He went so far as to suggest the deletion of radios, an item commonly owned even by the poorest families.[7] As one member of the Committee put it:

"The minimum budget is in danger of being stripped of amenities and comforts because it will be said that these can be put in the 'American' budget, but it is only the minimum budget which will figure in legislation and collective bargaining."[8]

Fearful of this result, the Committee decided to limit its work to the minimum budget. The American standard budget had to be abandoned.

According to the record of the meeting of December 8, 1945:

"Miss Kyrk asked Mr. Myers to comment on his letter to Mr. Hinrichs, in which he raised a question whether the Committee might wish to change its position on some of the decisions reached on the minimum adequate budget (budget A), since the Committee had recommended that the Bureau construct two budgets. Budget B was to be based on standards of living possible under conditions of full and efficient employment. Mr. Myers stated that he considered budget A, as presently constructed, to be higher than minimum adequacy. Mr. Jacobs offered a motion that the Committee advise the Bureau that it had no further interest in budget B, and that any further work done on it would be on the Bureau's own initiative and not on the Committee's recommendation. Mr. Keller seconded the motion and it was carried (Mr. Myers voted against)."[9]

---

[3] The food allowances in some earlier budgets were based on more or less objective nutrition standards but the City Worker's Family Budget was the first to seek objective bases for the allowances of items other than food.

[7] Mr. Howard B. Myers, of the Committee for Economic Development, quoted in memorandum of A. F. Hinrichs, Acting Commissioner of Labor Statistics, to members of Technical Advisory Committee dated October 17, 1945.

[8] Broadus Mitchell, quoted in memorandum from Mr. Hinrichs to committee members dated November 1, 1945.

[9] Summary of December 8, 1945, meeting, Technical Advisory Committee on Standard Budgets, p. 3. Mr. Jacobs, it should be noted, was one of the original proponents of an American standard budget but felt impelled to make his motion in order to protect the minimum cost budget from being stripped of all but subsistence items.

The budget finally prepared represented the concepts of standard budget A which was clearly distinguished in the minds of the Bureau's staff and the members of its Advisory Committee from an American standard budget.

The Committee was quite clear that its budget does not represent an American standard of living. What it actually does represent is made clear in the following series of tentative definitions:

"The least that anyone, in terms of what the economy can provide, ought to be asked to live on, or that the country ought to tolerate anyone living on." [10]

"The Committee has tentatively defined the standard budget as the one necessary to health and efficiency. Hence, it is the least that anyone ought to live on or that the country ought to tolerate anyone living on." [11]

"The Committee has tentatively defined this minimum adequate standard budget as being one providing the minimum adequacy neceessary to health and efficiency, making possible an active participation in the social life of the typical American community. A lower level, therefore, by definition represents inadequacy." [12]

As the Committee visualized it, the City Workers' Family Budget represents a level of living on the borderline of inadequacy. Anything less was regarded as intolerable from both an individual and a social standpoint.

Quantity standards

This view of the budget was directly translated into the quantities of goods and services allowed.

With the exception of food, housing, medical care, and some items of relatively minor monetary importance, the quantity allowances were based on examination of the relationships revealed by surveys of consumer expenditures, between quantities purchased and income. Moving down the income scale, it was found that there was a point where quantities purchased tended to level off. There was a point, in other words, below which even the poorest families would not, if they could possibly help it, reduce their purchases.

It was this point on the income-expenditure scale which the Bureau took as the basis for determination of the quantities allowed in the City Workers' Family Budget. In the Bureau's own words: "The budget must be sets of goods and services regarded as so necessary that families would go into debt or reduce their level of savings to maintain consumption at that level when, for example, prices in general were increased." [13]

Far from representing an American standard of living, it is clear that the quantity allowances in this budget represent what might be called a "last ditch resistance level." Families would tend to strain every resource of credit, charity, and ingenuity to avoid falling below the level represented by the budget.

The phrase "resistance point" was, in fact used by the Commissioner of Labor Statistics in describing the method by which the quantity allowances were determined.

"If the income goes down families economize by buying fewer clothes, shoes, furnishings, etc. This decrease in purchases continues with declining income until a certain point is reached. This we might call the '*resistance point*,' since below this point further decreases in family purchases are not as great as decreases in income. Thus, even with lower income the families keep on trying to buy what they regard as an *essential number* of shoes, dresses, furnishings, etc., although they do try to buy these at lower prices.

"It may be asked how families could continue to make these *minimum* purchases with incomes cut down. The answer is that they *buy on credit*, go *into debt and use up savings.*

"We have selected this point on the scale of buying as our standard for groups of clothing and for most other items in the budget other than food and rent." [14] [Emphasis supplied.]

Quality standards

The "resistance point" was determined in terms of quantities alone, although purchases rise in terms of both quality and quantity in income levels above those which the Bureau took as the basis for determining the allowances in the City Workers' Family Budget. The qualities priced for determining the

[14] Statement of Mr. Ewan Clague before Western Subcommittee of the Joint Committee on the Economic Report, December 16, 1947, p. 5.

dollar cost of the budget were "determined by reference to the prices paid by families at the budget level in 1941." [15]

In the case of food, for example, the budget quality standards can, by no stretch of the imagination, be said to conform to the quailty called for by the American standard of living. According to the Commissioner of Labor Statistics:

"About three-fifths of the budget for meats is made up of what is ordinarily fairly low-cost meat—stews, hamburger, frankfurters, and fish, for example. About one-fourth of the meat allowance provides for roast, round steaks, or pork chops which might be classed as medium-priced meats. When it comes to steak, higher priced chops, poultry, and other typically high-cost meats, only 33 pounds a year is provided. This means that *there is just about enough for a turkey or some good cut of meat for Thanksgiving, Christmas, and New Year's Day.*" [Emphasis supplied.] [16]

The scaled-down food allowance provided in the budget for an elderly couple, of course, conforms to the same quality standards as the City Workers' Family Budget. Those who would use the former as the measure of the Nation's obligation to its aged citizens must contend either (*a*) that three good meals a year are consistent with an American standard of living, or (*b*) that retired workers and their wives have no right to live at levels that conform more closely to generally accepted notions of the American standard.

Effects of poor quality

Low quality standards aggravate the consequences of the inadequate quantity allowances provided in both the City Workers' Family Budget and the Budget for an Elderly Couple.

It must be borne in mind that the quantities allowed in the budget for a large range of items (durable and semidurable goods) are essentially replacement quantities intended to maintain the families' inventories of those goods after earlier purchases have worn out. Since quality in such goods is often practically synonymous with durability, poor quality will require more frequent replacement than good quality. Replacement quantity allowances that might be satisfactory if purchases of good quality were permitted, would turn out to be sorely inadequate on the basis of poorer quality.

The size of the allowances in the budget must therefore be gaged not only in terms of the obvious inadequacy of the quantities provided, but also in the light of the probability that deficiencies in quality will necessitate relatively frequent replacement. The fact that the quality standards provided in these budgets approximate the cheapest levels is indisputable. The former Acting Commissioner of Labor Statistics has noted that: "Below this (the budget) levels * * * people find it harder and harder to economize, being unable to shift extensively to cheaper commodities and therefore forced to do without." [17]

The city worker's family budget and actual levels of living

The levels of well-being at which American families actually live are, of course, limited by their incomes. The average level of living in the Nation is, in turn, influenced by the millions of families living at poverty levels. The influence of these families upon the average is not wholly offset by the countervailing influence of the relatively small number of families who live in luxury or in the upper ranges of the comfort scale.[18]

It is relevant, therefore, to test the level of living represented by the city workers' family budget for conformity to the American standard of living by comparing that budget with the actual incomes and expenditures of American consumers.

[15] U. S. Bureau of Labor Statistics, Bulletin 927, supra, p. 19.

[16] Statement of Mr. Clague, supra, p. 3.

[17] U. S. Bureau of Labor Statistics, Bull. 927, supra, p. 1.

[18] It may be argued that this fact makes any standard higher than current or recent average consumption an unrealistic one. That argument is false because it overlooks a number of important factors. Consumption in the postwar period has been limited by diversion of an abnormally high proportion of our economic resources to military purposes and to investment at a rate which we cannot expect to sustain for any prolonged period. Indeed, investment is already declining sharply. With less spending for military purposes and with investment proceeding at a rate that could be maintained on a stable basis, total (and therefore average) consumption could be raised sharply. Moreover, postwar investment has been maldirected in important degree neglecting some of the bottlenecks that impede the raising of consumption levels. The very limited expansion of steel capacity is an example. With this and similar monopolistic hindrances removed, with resources development work such as the proposed Missouri, Columbia, and Central Valley developments, and with the various other proposals often made to improve the efficiency of the economy, there is no doubt but that average consumption could be raised substantially and quickly. There is room for considerable improvement even within the limitations imposed by the present military program.

By this test also, it is apparent that the CWFB and the related budget for an elderly couple fall far short of the American standard.

Comparison for three cities

The Bureau of Labor Statistics, from time to time, makes detailed studies of consumer income and expenditures in various cities. Its most recently published study of this type is for the year 1948 and for the cities of Detroit, Denver, and Houston. The report on this latest study, unlike the earlier ones, shows income and expenditure data by family size thus making possible direct comparison between the allowances provided for four-person families in the city workers' budget and the actual incomes and expenditures of families of that size.

The data show with startling clarity that the CWFB represents a level of living suffered only by a depressed minority of our population. It is not only far below the American standard but significantly lower than average consumption.

The cost of the budget level of living in the three cities is from 25 to 32 percent below the actual average incomes of four-person families in the same cities.[19]

Only a fifth to a fourth of all such families had incomes which would require living below that level.

Comparison of incomes of 4-person families with cost of city workers' family budget, Detroit, Denver, and Houston, 1948

	Cost of CWFB [1]	Average income of 4-person families [2]	Percent budget cost below average income	Percent of families with income lower than budget cost [3]
Detroit	$3,335	$4,442	24 9	23 7
Denver	3,189	4,714	32.4	18 0
Houston	3,036	4,245	28 5	28 4

[1] Average of monthly or quarterly estimates made by Bureau of National Affairs and published in its Daily Labor Report. While the method used to make these estimates is open to question, it is the same method recommended by the Federal Security Agency, Bureau of Research and Statistics, in A Budget for an Elderly Couple, Bureau Memorandum No 67, pp. 18-20.

[2] U. S. Bureau of Labor Statistics, Monthly Labor Review, December 1949, p. 633. The averages include only families with incomes below $10,000.

[3] Taken from cumulative curve plotted on basis of data in Monthly Labor Review, December 1949, p 630.

The bulk of the four-person city families living below the budget level, of course, are families headed by industrial workers. It is significant that Denver, where the proportion of industrial workers to total population is relatively small,[20] also shows the smallest percentage of families below the budget level.

This is to be expected, since the budget was designed to find the cost of "minimum adequacy" for a worker's family and all too many workers still live below that level.

However, no one will contend that there is more than one American standard—one for workers and others for more favored groups in the population. Living by industrial work may necessitate some variations in expenses from those incurred by other groups—e. g., the purchase of work clothing. But, aside from these occupationally related differences, there is but one American standard to which all families may legitimately aspire as a minimum regardless of their function in the productive process.

Expenditure studies emphasize inadequacies of BFEC

In the section II of this statement it is suggested that a truly American standard of living for an elderly couple might cost from $2,475 to $2,650 per year.

The expenditure studies indicate that this rough estimate may be unduly conservative. In fact, the studies point to the probability that a higher income may be necessary to an elderly couple simply in order to maintain themselves at the level of living actually achieved by the average family during the working years of its breadwinner.

---

[19] The averages include only families with incomes below $10,000.

[20] The number of production workers in Detroit manufacturing establishments shown in the 1947 Census of Manufactures equaled 10.4 percent of the city's total population in that year as estimated by the Census Bureau. The corresponding proportion for Denver was 5.1 percent. No official 1947 population estimate was found for Houston.

Incomes of four-person families may be used as the basis for estimating th average achieved standard, since almost half of all families pass through th four-member stage at one time or another.[21]

As of the year 1948, such families in Detroit had average incomes of $4,442, a shown above.

It has been found that two-person families require 65 or 66 percent as muc income as four-person families in order to maintain the same standard of living Applying this percentage to 1948 incomes of four-person Detroit families, would therefore appear that a couple would have needed about $2,900 per yea to maintain the average standard of living actually prevailing in Detro in that year.

Even after allowance is made for the lesser needs of an elderly couple i some categories of consumption (e. g., expenditures related to work, additiona food consumed by persons engaged in work, etc.) it is probable that considerabl more than $2,650 per year would be needed to enable an elderly couple to liv at existing average standards.

More, of course, would be needed to meet the American standard of livin

The CWFB is below average consumer expenditures

Starting again from the premise that average consumption falls short of th American standard, the CWFB may also be tested by comparing its allowance with the amounts of various goods and services actually purchased by the ave age American consumer.

The Commissioner of Labor Statistics emphasized the inadequacies of th CWFB from this standpoint in his presentation of the food allowances for four-person family.

"You will realize that this is, in fact, a fairly modest food budget, when I te you that it provides for 6 loaves of bread a week for the family, 12 quarts o milk, or about 3 per person per week, about 20 eggs a week, and about a poun and a half of butter or margarine. *These quantities are below the average pe capita consumption for the United States as a whole.*

"When it comes to meat, these families can buy about 9 pounds of all kinds o meat per week or a little over 2 pounds per person. *This is about two-thirds o the average per capita consumption of meat in the United States* in 1946, whic was 185 pounds." [Italics supplied.] [23]

The food allowances in the BEFC are, of course, on the same level as those i the CWFB.

It is worth more than passing note that families living on the food allowance described can hardly be considered as contributing their share to the prosperit of our agricultural population.

The BFEC is below average consumer expenditures

The budget for a elderly couple may also be compared, category by categor with the average per capita expenditures of American consumers in general a shown by Department of Commerce data.[24]

[21] U. S. Bureau of Labor Statistics, Bull. 927, supra, foreword, p. iii.
[22] Ibid., p. 51.
[23] Statement of Mr. Clague, supra, p. 3.
[24] Similar comparisons between average consumer spending and the actual consumptio of farm families are made in U. S. Department of Agriculture Miscellaneous Publication N 653, How Families Use Their Incomes. (See for example, charts on pp. 30, 41, and 4 and related tables following p. 53.) The comparisons are subject to some degree of erro because the Department of Commerce treats differently expenditures made directly b individuals and those made through nonprofit institutions.

Per capital consumption expenditure by categories, United States 1947 compared with per person dollar allowances in budget for an elderly couple, Detroit, June 1947

Consumption category	Per capita expenditure [1]	Budget allowance per person [2]	Budget allowance as percent of per capita expenditure
Food	$462	$270	76
Housing and household operation (including house furnishings)	258	328	127.1
Clothing	159	52	32.7
Medical care	53	57	107.6
Transportation	109	27	24.8
Recreation	68	36	52.9
Personal care	16	17	106.3
Tobacco	27	11	40.7
Religious and welfare activities, gifts	[3] 11	[3] 24	(4)
Subtotal	1,103	822	74.5
Private education and research	8	(5)	----
Personal business	43	(5)	----
Foreign travel	5	(5)	----
Total	1,159	822	70.9

[1] U. S. Department of Commerce, Survey of Current Business, July 1949, pp. 23-24, for total personal consumption expenditures in each category which were divided by population estimate for July 1, 1947 (144,024,000) given in U. S. Census Bureau Release Series P-25, No. 34, Dec. 23, 1949.

[2] Federal Security Agency, Social Security Administration, Division of Research and Statistics, release Leader Cost of Budget for an Elderly Couple in Selected Cities, May 16, 1949, p. 3. Figures for Detroit were divided by 2 to obtain per person allowances.

[3] The budget allows $48 to the couple for "gifts and contributions" without separating the amounts allowed for each. The personal consumption expenditure data category "religious and welfare activities" corresponds to the "contributions" component of the budget allowance but expenditures for "gifts" would be scattered through several of the other categories.

[4] Not comparable.

[5] The budget provides no allowances for any of these categories.

It appears from the table that the BFEC allows but 75 percent of the average per capita expenditures of all consumers for the combined list of categories directly compared, and 71 percent of the per capita average for all consumer expenditures.[25]

It should be noted that, in computing per capita expenditures, children are given equal weight with adults, despite the fact that by and large the consumption of the former is lower. For example, per capita expenditures for tobacco would be considerably higher if total expenditures had been divided by adults only rather than by the entire population. Were it possible to adjust the per capita expenditure figures in terms of adult-equivalents, the gaps between the budget allowances and average consumption would be somewhat greater in many of the categories.

On the other hand, account must also be taken of the fact that the elderly couple would have less need for some of the items included in the various categories than would younger persons. For example, assuming the elderly couple is retired, there would be little need for the purchase of work clothing (the BFEC, however, does allow overalls for the man). For this reason we have omitted entirely expenditures for education and personal business.

While it has not been possible to segregate out from each category expenditures for those items not likely to be purchased by the aged, it can nevertheless be stated with assurance that, on balance, the table understates rather than overstates the gap between the budget allowances and average per capita purchases by adults.

Medical care, housing, and personal care costs

Medical care, housing, and personal care are the only categories shown in the table for which the budget allowances approximate or exceed average per capita consumption expenditures. There are several fairly obvious reasons for these exceptions to the general situation.

[25] The budget allows $24 per capita for gifts and contributions. The Department of Commerce category "religious and welfare" activities shows per capita expenditures of $11. Assuming the couple contributed at the Department of Commerce rate, there would be $13 a year available to each for gifts. This sum cannot be ditributed among the various consumption categories shown in the table.

The medical care allowance in the budget, inadequate though it is, was developed on the basis of substantially more generous criteria than were used elsewhere in the budget.[26] The need for medical attention is considerably greater among the aged than among younger people. Thirdly, the medical care expenditures shown by the Department of Commerce do not by any means account for the total outlay for such services on behalf of the population as a whole.

Aside from direct consumer outlays for medical services and supplies, millions of our citizens rely on public institutions in whole or in part for their medical care needs. According to the Hoover Commission, the Federal Government alone, "is attempting to give varying degrees of direct medical care to 24,000,000 beneficiaries—about one-sixth of the Nation." [27] As of 1946, Government hospitals (State and local as well as Federal) accounted for almost three-fourths of all hospital beds and for more than three-fourths of the average number of persons in hospitals during the year.[28]

While services of certain publicly financed institutions are, of course, available to the aged on a means test or charity basis, no budget can be considered adequate which would require resort to charity.[29] Similarly the fact that some of the aged have access to the public institutions as a matter of right, does not help the others to meet the cost of required medical and hospital services.

The reasons for a budget housing allowance in excess of per capita expenditures are somewhat similar to those affecting the medical care comparison. The budget housing standards, like those for medical care, were determined on the basis of criteria more liberal than those applied to most of the other budget categories.[30] Secondly, housing expenditures on a national scale are influenced downward by the fact that on a per capita basis the rental value of farm houses is little more than one-third as great as that of nonfarm dwellings.[31] Thirdly, housing costs vary more from one community to another than the cost of any other single major category of consumer expenditures and Detroit, the city selected for comparison, is a relatively high-rent city.[32]

The close correspondence between per capita personal care expenditures and the budget allowance in this category is undoubtedly due in important part to the fact that, in computing the former, no adjustment was made for the relatively smaller consumption of children as compared with adults. For example, toilet articles and preparations, which account for approximately half of all personal care expenditures,[33] undoubtedly consist in large part of cosmetics rather than of absolutely essential cleaning items of the kind allowed in the BEFC. Very young girls, obviously, consume smaller quantities of cosmetics than adult women including elderly women. The same is true of beauty parlor services which account for more than a fourth of total expenditures for personal care.[34]

Rest of budget short of average by from 47 to 75 percent

For all categories other than medical care, housing and personal care, the BFEC dollar allowances fall short of average per capita expenditures by from 47 to 75 percent.

In the case of such an essential as food, the budget allowance is 33 percent lower than average expenditures. The clothing allowance is less than a third as great as the average amount spent; transportation, a fourth; tobacco, less than half, even though no adjustment is made for nonconsumption by children

The budget allowance for recreation, which should be expected to take into the account the exceptional needs of a couple whose time is no longer occupied with work, is actually little more than half of average per capita expenditures.

[27] Committee on Organization of the Executive Branch of the Government, Medical Activities, a report to the Congress, March 1949, p. 3.

[28] U. S. Department of Commerce, Statistical Abstract of the United States, 1948, p. 84.

[29] An adequate national medical-care program would meet the needs of the aged as well as of the rest of the population. Until such a program is in effect, however, budgeting for living standards above the charity level must take realistic account of the actual cost of medical care.

[30] FSA, Bureau Memorandum No. 67, supra, pp. 2, 3, and 5.

[31] U. S. Department of Commerce, Survey of Current Business, July 1949, p. 23, for rental value figure and Census farm and nonfarm population data from Statistical Abstract of the United States, 1948, p. 15.

[32] Out of the 34 cities priced for the CWFB, however, 13 show higher housing costs than Detroit (Bull. 927, supra, p. 23). If Congress were to support the Senate Appropriation Committee's judgment that rent controls should be ended now, rents would rise sharply and inflict added hardships on aged persons, no less than others.

[33] U. S. Department of Commerce, Survey of Current Business, July 1949, p. 23.

[34] Ibid.

Conclusion—BFEC is far below acceptable standard

It thus clearly appears that the BFEC level of living is far below actual present average living levels, low though that average is as a result of the inadequate incomes of substantial segments of our population.

No budget representing a level of living lower than the average actually prevailing in the United States can be considered as even approaching an acceptable American standard. The BFEC must therefore be rejected as a measure of America's obligation to its aged workers.

2. THE BFEC AND FULL EMPLOYMENT

There is yet another compelling reason why the budget for an elderly couple must be rejected as a measure of the pensions which America should provide. If we are to have a full employment, full production economy, the aged, too, must be able to make their full contribution to consumer spending. Our currently growing problem of unemployment is witness to the fact that current average consumption is far less than what we need to sustain such an economy. And the budget for an elderly couple represents a level of living far lower than the average.

Pensions geared to that budget would not presently enable the aged to make their full contribution to the maintenance of prosperity. When measured by the needs of the future—and it must be borne in mind that when we consider pensions we plan far into the future—it falls even further short of the needs of the economy. The Council of Economic Advisers estimates, for example, that an increase of 8 percent in per capita food consumption is required by 1954 if we are to have a prosperous farm population.[35] Yet the budget for an elderly couple allows the aged to consume 33 percent less than 1947 average consumption, measured in dollar terms.

The same essential point is valid for the rest of the economy. The Council of Economic Advisers has estimated that total consumption must be raised somewhere between 18 and 26 percent by 1954 to sustain full employment.[36] In per capita terms, this means raising the present average by 13 to 21 percent.[37] Pensions based on the budget for an elderly couple would be woefully inadequate measured against this need for increased consumption.[38]

No matter what the test of an American standard of living, it is apparent that the budget for an elderly couple does not provide such a standard. Those who would use that budget as a measure of pension needs must therefore assume the burden of proving that the retired worker is not entitled to live at the American standard. Everyone reluctant to take on that difficult and unpleasant task must seek another more generous measure of the needs of the aged.

As a result of the maneuvering described in part II and earlier in this appendix there is at present no such measure. An American standard family budget which could have been adapted for an elderly couple, as was the city workers' family budget, was never developed by the Bureau of Labor Statistics.

3. THE ADJUSTMENTS MADE—WHY AND HOW

It is not the purpose of this memorandum to set forth an American standard. The research resources of the trade-union movement are at present totally inadequate for such an endeavor. It took the Bureau of Labor Statistics, with the largest staff available for the purpose anywhere in the Nation, more than $2\frac{1}{2}$ years to work up the city workers' family budget. No trade-union research staff could hope to complete a comparable task in several times the period required by the Bureau.

The purpose of this study was much less ambitious. It was proposed simply to assemble from available authoritative data a more generous scale of quantity allowances to be presented, on a highly tentative basis, as approaching, more

[38] Under the best of circumstances, the nature of averages makes it certain that some will consume less than the average. However, from a social standpoint, it is imperative that the average be raised from present levels by improving the living standards of those now consuming substantially less than the average. This means that the subaverage groups must be raised much more sharply percentagewise than the projected rise in the over-all average. As a group, the aged fit into the subaverage category.

nearly than the budget for an elderly couple, the requisites of an American standard of living for the aged.

Because the problems of budget making are so complicated and controversial, the tentative standard developed here is based in its entirety on accepted authority.

The major objective was to find, within the limited time and resources available, a sound basis for allowances more consistent with an American standard of living than those provided in the BFEC. For this purpose, budgets from many other sources, public and private, were assembled. The complete budgets and the various major components like food, clothing, etc., were rigorously examined. While quite a few were found that provided substantially more liberal quantities than the BFEC, it was difficult, in practically all cases, to determine the basis upon which the item by item allowances had been set.

It was decided not to use any budget or any component of a budget unless it was unquestionably both authoritative and reasonable. They were considered authoritative only if: (1) they were compiled by agencies or individuals generally acknowledged as authorities in the field; and/or (2) they were used by responsible agencies, public or private, for administrative purposes involving the expenditure of funds. Data which passed the foregoing tests were then analyzed in detail to make sure (1) that the quantities allowed for any item were in no sense excessive, and (2) that the separate quantity allowances appeared to be in balanced relation to each other.

A number of budgets were found that were both considerably more liberal in their allowances and authoritative. In some cases this greater liberality extended to all or practically all major categories; in other cases only some of the major components were more generous than the BFEC allowances.

Certain of these budgets are used as the basis of calculation of payments to the clients of public-relief agencies. It was felt that it was dangerous to use these. In every community, reactionary organizations are ever on the watch for opportunities and excuses to depress still further the miserably low payments made to the helpless clients of the public-welfare agencies. Attracting attention to relief payments better than the allowances of the BFEC might furnish the occasion for new drives for economy at the expense of those who can least afford it. It was decided therefore not to base any revision on public-relief allowances even where the latter were substantially greater than those in the BFEC.

The item allowances provided in the remaining budgets, when compared against each other, revealed a picture of such confusion as to raise questions about the validity of all of them, though not about parts of some of them.

The revisions in general

In the final analysis it was found possible to revise with assurance only the food, medical care, and transportation categories and the dollar allowance for gifts and contributions which was computed, as in the BFEC, as a percentage of the total cost of all the other items. (The details of the adjustments appear in later sections.)

The food allowances were taken bodily from the Department of Agriculture's moderate-cost food plan. This plan does not purport to represent an American standard of living. Neither can the revised medical care and transportation allowances be considered high enough to be consistent with such a standard. The remaining categories were taken intact from the BFEC which is admittedly a budget designed to include only the "necessary minimum."

Obviously, therefore, the final result of the revision falls short of an American standard, although by a lesser degree than does the BFEC.

Since this is true for all components, it is not particularly important that the allowances for the separate broad categories may, to some degree, be unbalanced as among themselves (i. e., that, given incomes equal to the cost of the budget, elderly couples might, for example, devote more than is allowed here here to clothing and less to food).[39] This problem would become significant only if it could be demonstrated that allowances in one or more of the categories are excessive. In the absence of such a demonstration, the fact that the typical couple with an income equal to the total cost of the budget would spend more on clothing and less on food than the budget allows would indicate only that the clothing allowances were more seriously deficient than the allowance for food—

[39] In this respect, the revised budget, like the BFEC, may may be said to be "a composite of average rates of spending at different income levels." Memorandum No. 67, supra, p. 12.

that the need for more clothing was more urgent than the need for more or better food.

Pricing

Once quantity allowances had been determined, it became necessary to price the quantities to arrive at cost. Properly, in line with the basic objective, prices should have been obtained for goods of a quality consistent with maintenance of an American standard of living. It has previously been noted that quality rises as well as quantity in the higher-income levels. In fact, improvement in quality tends to become more important than quantitative increases in higher-income brackets, as the Bureau of Labor Statistics noted in connection with the CWFB:

"The quantities of goods and services purchased in each of the other consumption categories—clothing, household furnishings and equipment, transportation, recreation, medical care, and miscellaneous—increase systematically from the lowest-income bracket to the highest. At the lower end of this scale of purchases the differences between the successive levels are primarily in quantity, the housewife buys more dresses and the husband more suits; at the upper end of the scale the differences are primarily in quality, wives and husbands buy more expensive dresses and more expensive suits." [40]

Inadequate resources made it impossible to determine the appropriate quality standards and to price goods conforming to them. It was necessary, therefore, to fall back on prices for goods of lower quality than is contemplated by the objectives of the budget. This, obviously, resulted in understatement of the cost of the budget—a budget which, to begin with, understated the quantities required for an American standard of living.

Thus there is a double bias on the conservative side.

Mainly BLS prices

In pricing the budget, as in developing the quantity allowances, every effort was made to secure the most authoritative and reliable data obtainable. In the main, the prices used were those collected by the Bureau of Labor Statistics in connection with its Consumers' Price Index. The level of quality represented by these prices is made clear by the official explanation of the index.

"The choice of quality of articles to be priced was made on the basis of the articles most frequently purchased by families in the wage-earner and clerical group." [41]

"The incomes of the group covered by the index ranged from $500 up, and averaged $1,524" in the years 1934–36.[42] The families included in computing the income of $1,524—the equivalent of roughly $2,600 in 1950 prices—numbered 3.6 persons, on the average. It is apparent that the qualities purchased by such families must have left much to be desired. This is evident from the example provided by the Bureau of the prices paid by these families for men's heavy wool suits. In 1934–36, more than five out of eight purchases of such suits by these families (63.7 percent, to be exact) involved suits selling for less than $27.50. Just about a third—33.2 percent—involved suits selling for less than $22.50.[43]

Conditions under which other than BLS prices used

The prices obtained by the Bureau for its index do not cover the full range of items represented either in the budget presented here or in the budget for an elderly couple. It was therefore necessary to obtain certain prices from other sources. For some items for which there is only a single seller (e. g., telephone and utility service, Blue Cross and Blue Shield) the price was obtained directly from that seller. Prices of most other items were obtained from authoritative public or private agencies. Certain food prices collected by a private organization were used only after a check was made for comparability of its prices with Bureau prices for such items as were priced by both. It was found that there was a high correspondence between the two sets of prices.

In the case of a few items, no authoritative up-to-date price was available from any source. For such items, the latest authoritative price obtainable was brought up to date by adjusting it by the percentage change in the price of the item in the Consumers' Price Index to which the Bureau "imputes" (assigns the weight of) the price changes of the unpriced item.

---

[40] U. S. Bureau of Labor Statistics, Bull. 927, supra, p. 13.
[41] U. S. Bureau of Labor Statistics, Bull. 699, Changes in Cost of Living in Large Cities in the United States, 1913–41, p. 7.
[42] Ibid., p. 3.
[43] Ibid., p. 7.

In most cases the "imputation" process involved applying to a June 1947 pric obtained by the Bureau the percentage change between June 1947 and Novembe 1949 in the Bureau's prices for the related item or items. In a number of case it was found that the Bureau's specifications for the related items had change so that this process was impossible. In those cases the Bureau's national index for the related item or items was used. Since item indexes are published onl quarterly, it was necessary to use the December 1949 index numbers for suc items rather than a November figure.

In some instances, particularly those involving seasonal merchandise or item for which the Bureau's specifications have changed, no June 1947 index numbe was available. Where possible, the last preceding and first subsequent figure were averaged to obtain an estimated June 1947 index number. Where no figur for any month prior to June 1947 was available, the September 1947 index numbe was used as the basis for imputation. Use of the September 1947 index probabl results in understatement of the cost of the budget in November 1949 since ther were significant increases in all major categories of the CPI between June an September 1947.

By and large, the specifications of items priced for the budget for an elderl couple were found to be identical with the specifications of items priced for th Consumers' Price Index. However, substitute specifications had come into us for some items since the last official pricing of the budget for an elderly coupl in June 1947. The price of the currently used CPI item was used in such cases This meant prices higher than those for goods conforming to the old specificatio in some instances, and lower prices in others. All the specifications, howeve presumably are within the range of quality purchased by families of the typ whose expenditures are represented by the CPI (average income of $1,524 i the years 1934–36).

Since the Bureau will not permit the publication of average prices for individua items other than foods, it has been necessary to show total costs for categorie of individual items. (Detailed prices will be released if and when the Burea of Labor Statistics permits.) Wherever possible, however, individual item price are given. Prices, in all cases, represent costs in Detroit as of November 194 except where use of the item index numbers for imputation purposes yield estimates of December 1949 prices.

The cost of the budget was calculated only for Detroit because it was im possible with limited time and staff to compute the cost for more than one city Detroit was selected, first, because it is the city where UAW-CIO membership i most highly concentrated and, secondly, because it is a fairly typical industria city whose costs are not out of line with other similar cities.[45]

Cost of the revised budget

The cost of the basic budget came to $2,089.49 in Detroit as of November 1949 distributed among the major categories as follows:

Total	$2,089.49
Food, total	758.46
Family food at home	686.40
Guest meals served	39.81
Meals purchased (net additional cost)	32.25
Housing, total	723.81
Rent, heat, and utilities	570.60
Household operations	106.87
Household furnishings	46.34
Clothing, total	115.4
Man	59.6
Woman	55.8
Other, total	491.8
Medical care	183.3
Personal care	37.8
Recreation and reading	75.5
Tobacco	24.7
Transportation	113.4
Gifts and contributions	60.8

No savings allowed

It should be noted that the revised budget, like the BFEC, makes no allowanc for savings although there are at least two important contingencies against

[44] Published in indexes of retail prices of apparel, house furnishings, and services an miscellaneous goods to moderate income families in large cities of the United States (vari ous dates).

[45] In June 1947 the cost of the CWFB was within 5 percent of the Detroit cost in all bu 5 of the 34 cities in which the budget was priced.

which no provision is made in either budget. The first is the likelihood, especially strong among the aged, that one or both members of the couple may suffer serious illness involving costs not covered by the Blue Cross and Blue Shield plans, membership in which is allowed under the revised budget. The second, is the probability that the wife will survive her husband by a number of years. As noted in the main body of this statement, the OASI benefit currently provided the surviving aged widow will not enable her to maintain the standard of living possible for the couple on the basis of the combined primary plus aged wife's pension.

Provision against these contingencies would add very substantially to the total cost of the budget and it is doubtful whether adequate provision could be made in any case sufficient to meet the cost of serious illness for those couples actually faced with such costs.

It is our position that it would be preferable by far to deal with these contingencies by other means. The cost of illness should be covered by a comprehensive national medical-care program, in which case the entire medical component could be dropped out of the budget. The needs of the surviving widow should be met by increasing the ratio of her benefit from the present 50 percent of the aged couple's combined benefit to at least 66 percent.

Until these things are done, however, aged couples will be under strong pressure to save out of their pensions so that even pension payments geared to the current cost of an American standard of living will not, in practice, yield such a standard to the recipients.

4. THE BUDGET QUANTITIES

The food budget

The revised budget provides an annual allowance for food for an elderly couple in Detroit of $758.46 at November 1949 prices, consisting of the following:

Allowance for food at home	$686.40
Net additional allowance for food purchased away from home	32.25
Guest meals served	39.81
Total allowance for food	758.46

The food quantities, and the cost of purchasing them

Instead of the food quantities contained in the BFEC, the quantities allowed in this revised budget are those recommended by the United States Department of Agriculture for the planning of food budgets at moderate cost.[46] The items needed for this food plan, the respective quantities required for a man and a woman each over 60, and the cost of these foods in Detroit are shown in table A–1.

TABLE A–1.—*Cost of weekly allowance for food at home for an elderly couple, Detroit, November 1949*

Food item [1]	Unit [1]	Quantity			Cost per equivalent unit [2]	Cost of food item
		Man [1]	Woman [1]	Total		
Cereals and bakery products	Pounds	2.500	1.7500	4.2500	$0.2377	$1.010
Dairy products	Quarts	5.500	5.5000	11.0000	.1882	2.070
Meats	Pounds	2.750	2.5000	5.2500	.6328	3.322
Eggs	Dozens	.500	.5000	1.0000	.7060	.706
Potatoes and sweetpotatoes	Pounds	2.750	2.0000	4.7500	.0602	.286
Dried beans, peas, nuts	do	.125	.0625	.1875	.1900	.037
Tomatoes, citrus fruits	do	2.750	2.7500	5.5000	.1171	.644
Leafy, green and yellow vegetables	do	3.500	3.5000	7.0000	.1675	1.173
Other vegetables and fruits	do	3.000	3.0000	6.0000	.1240	.744
Fats and oils	do	.750	.5000	1.2500	.4358	.545
Sugar and sweets	do	.750	.6250	1.3750	.1257	.173
Accessories:						
Beverages	do	.350	.3500	.7000	.2092	.146
Other accessories	Dollars	.071	.0710	.1420		.142
Total cost per week						11.00
Adjusted for 2-person families [3]						13.20
Annual cost						686.40

[1] U. S. Department of Agriculture, Helping Families Plan Food Budgets, Miscellaneous Publication No. 662, December 1948.

[2] See table A–III, Computation of Cost of Food Budget at Detroit Prices, November 1949. Cost per equivalent unit is the weighted cost of 1 pound, or quart, or dozen of the individual food items that make up the allowances within a particular food category.

[3] See text for explanation of this adjustment.

[46] U. S. Department of Agriculture, Miscellaneous Publication No. 662 Helping Families Plan Food Budgets.

The Department of Agriculture food plans

To help families plan their food purchases so that the nutritional needs of the family may be adequately met, the United States Department of Agriculture has prepared two lists of foods which meet the dietary requirements established by the food and nutrition board of the National Research Council.[47] One of these lists of foods makes possible meeting the family's nutritional needs at low cost; the other list provides the same nutritional content in a more attractive diet at a somewhat higher, though "moderate," cost. The food quantities contained in these lists have been modified by the Department to make it possible to plan nutritious meals for people in different age groups, and to meet the varied needs of people engaged in greater or lesser activity.

In describing these food plans, the Department of Agriculture says: "The average quantities of food in each group purchased by low-income families—as shown by dietary studies—were used as a starting point * * * These quantities were checked for nutritional adequacy * * * the quantities were adjusted to allow more milk, cereals, dry beans, and peas, and potatoes. The leafy, green, and yellow vegetables and citrus fruits and tomatoes were increased. Other vegetables and fruits, meats, and eggs were reduced."[48]

"For the moderate-cost plan, *the amounts purchased by families having an income approximating the average family income for the United States was used* * * * Only slight adjustments were made for the moderate cost plan—chiefly an increase in milk and vegetables other than potatoes." [Emphasis supplied.][49]

Both food plans were then modified to fit the needs of individuals differing in age, sex, and activity.

Why the moderate-cost food plan was selected for this budget

In preparing this budget, there were thus three food plans to be considered—the food allowances set forth in the budget for an elderly couple, the low-cost-food plan of the Department of Agriculture, and the moderate-cost food plan of the Department. The moderate-cost food plan was chosen because the other two, closely similar in cost, are clearly plans of the kind used to compute food allotments to the clients of welfare agencies. The latter have no place in an American standard budget.

A comparison between the food quantities allowed in the budget for an elderly couple and those allowed by the Department of Agriculture at the two levels of cost is contained in Table A–2 which follows.

TABLE A–2.—*Food quantities allowed per year in the budget for an elderly couple, compared with quantities allowed in Department of Agriculture food plans at 2 levels of cost*

Food items	Unit	Budget for elderly couple	Department of Agriculture		Difference	
			Low cost	Moderate cost	Column 2 less column 1	Column 3 less column 1
		(1)	(2)	(3)	(4)	(5)
Cereals and bakery products	Pounds	336.3	286.0	221.0	−50.3	−115.3
Dairy products	Quarts	416.0	520.0	572.0	+104.0	+156.0
Meats	Pounds	208.0	208.0	273.0	.....	+65.0
Eggs	Dozens	43.3	34.7	52.0	−8.6	+8.7
Potatoes and sweetpotatoes	Pounds	268.4	299.0	247.0	+30.6	−21.4

[47] The following description of the make-up and program of the National Research Council is quoted from the presentation of the city worker's family budget, Monthly Labor Review, February 1948, p. 141: "This Council was established in 1916 by the National Academy of Sciences to assist the Government in organizing the scientific resources of the country. Its membership is composed of about 220 representatives of scientific and technical societies, research organizations, Government scientific bureaus, and a few members at large. It has eight major divisions, one of which is the Division of Biology and Agriculture. The Food and Nutrition Board is one of the technical groups established within this Division. Its work is carried on through committees assigned to special subjects. The Committee on Dietary Allowances, composed of scientists with special competence in the field of human nutrition, was set up to review and evaluate all available evidences and to formulate nutrient allowances for use in evaluating foods consumed by persons and families and in planning adequate diets. The first recommended allowances were issued in 1941; they were revised in 1945, and will undergo further revision as needed."

Other miscellaneous	Pounds	3 4				

[1] Tabulation by U. S. Department of Agriculture, BHNHE; supplied by letter of Mar. 2, 1950.

The table shows that both of the Department of Agriculture plans provide less cereals, less fats and oils, less sweets than the BFEC.[50] The Department allowances, however, emphasize citrus fruits and tomatoes and milk and other dairy products at both levels of cost. In the moderate-cost food allowance, there is greater allowance of vegetables and fruits than in the BFEC, with a sharp decrease in the allowance for potatoes and for cereal products.

Thus, in the moderate-cost food plan, the family is allowed about 156 quarts more of milk and its food equivalents. An outstanding improvement in this food plan as compared with the BFEC is the addition of about 59½ pounds more of citrus fruits and tomatoes and about 128 pounds more of other fruits and vegetables. However, the moderate-cost plan allows for 115 pounds less of flour and cereal products and 21½ pounds less of potatoes and sweetpotatoes. It provides, also, for smaller purchases of fats and oils and of sugar and other sweets.

The BFEC food allowance is at the relief level

That the low-cost food plan is a welfare-level plan is shown by its acceptance by many relief and welfare agencies as the basis for making welfare grants to families on relief. Yet the cost of this relief food budget is as high as the cost of the food allowance in the budget for an elderly couple.

The cost of the food portion of the budget for an elderly couple in Detroit in June 1947 is given by the Federal Security Administration as $540. When this figure is adjusted for the change in prices to November 1949, it becomes $559.[51]

In response to telephone and telegraph inquiries addressed to public-welfare agencies of 12 large cities, 6 of these agencies reported that their dollar allowances for food for an elderly couple approximate or exceed the alowance for food in the budget for an elderly couple at November 1949 Detroit prices. The amounts allowed in these cities are:[52]

---

[50] The dietary standards of the National Research Council were revised in 1948, after the BFEC was drawn up. The Department of Agriculture food plans conform to the new standards. At least in part, the differences between the BFEC food quantities and those in the low-cost food plan are due to this revision.

[51] The method used in making the adjustment, which probably understates the increase in the cost of the food allowance, is the one suggested by the Federal Security Agency, as follows:

"The Bureau of Labor Statistics is attempting to develop a special price index which can be used in bringing the dollar cost figures for the budgets up to date over short periods of time. * * * Until such an index is available, if current costs are needed for administrative or other purposes, an estimate might be derived by deflating the percent change in the Consumers' Price Index from June 1947 to the current month proportionally to the difference between the percent increase in the Consumers' Price Index from March 1946 to June 1947 and the percent increase in the cost of the budget from March 1946 to June 1947. The deflation factor as well as the percent increase in the Consumers' Price Index from June 1947 should, of course, be computed separately for each city. A similar procedure can be followed for the food and clothing segments of the budget and the index." (Federal Security Agency, Bureau Memorandum No. 67, supra, p. 18.)

[52] In the comparisons made with relief budgets, above and in the section on clothing, it should be borne in mind that individual components of the relief budgets may not be in balance with other components of the same budgets. This problem was noted earlier in connection with the revised budget presented here and with the BFEC.

Food allowance for an elderly couple

City:		City—Continued	
A	$660.00	D	$520.44
B	559.20	E	502.80
C	555.60	F	492.00

The welfare allowances for food, shown above, are in many cases based on the Department of Agriculture's low-cost food plan. In view of the way this plan was drawn up, no public agency can possibly justify allowing less than the cost of the food quantities provided in that plan.

Low-cost and BFEC allowances assume expert knowledge

Even if the food allowance in the budget for an elderly couple were in all cases no lower than the cost of the low-cost food plan, neither that allowance nor the low-cost plan could be adopted as the basis for the budget presented herewith. America's retired families should not be asked to live the rest of their lives on an unappetizing diet based on the food purchases of America's lowest-income families. Nor should they be asked to struggle along on food expenditures which will yield adequate nutrition only if the housewife is equipped to apply the technical knowledge of a nutrition expert.[53]

Under the moderate-cost food plan, the pressure to scrimp and save would be eased somewhat. That it would not be entirely eliminated can be seen from the fact that this plan—with only minor modification—represents the experience of families having average incomes. The failure of these incomes to meet real standards of adequacy and comfort is too well known to need elaboration here. Specifically, the Department of Agriculture points out that neither of the two food plans permits much waste, though the moderate-cost plan has slightly more leeway.

The Department of Agriculture also points out that—

"Menus made from the quantities suggested in the low-cost plan will be simple. They will include foods requiring a considerable amount of home preparation and will call for skill in cooking and to make varied and appetizing meals * * * On the other hand, the moderate cost plan will allow for menus with greater variety, some frills and less home preparations. * * *

"The moderate-cost plan allows for larger quantities from the more expensive food groups, such as meat and eggs. It also allows for some of the higher-priced cuts of meat, a few out-of-season foods." [54]

The moderate-cost food plan is clearly the only one of the two which can be considered for purposes of this tentative budget. However, examination of this food plan from the point of view of its acceptability as a plan for living reveals many serious inadequacies which will require that adjustments be made if and when a definite attempt is made to develop an American standard budget.

For example, the phrase "higher-priced cuts of meat," quoted above, means that some round steak is provided, but no higher-priced steak appears in the budget.

The allowance for guest meals

The allowance for food discussed so far makes no provision for serving meals to guests. However, the BFEC makes it clear that elderly couples like to entertain their children and grandchildren—as well as their friends—at an occasional meal. Since the family gathering at the home of the grandparents is an American custom which none would propose abandoning, we have included the same number of individual meals to be served to guests that the BFEC provides, without the little extras that are almost invariably served when company comes

Computing the cost of the food allowance

The food quantities and instructions for using them in planning family budgets are set forth by the Department of Agriculture in its publication called Helping

---

[53] In this connection, the following comment from the City Workers' Family Budget (Monthly Labor Review, February 1948, p. 142) is appropriate:

"* * * the method used in many low-cost food plans is to start with the customary food habits of low-income families and to reduce the quantities of some foods and to increase the quantity of others in order to have an adequate diet at low cost. This type of food plan has merits in teaching low-income families how to get adequate diets with little or no increase in the cost of food. As a basis for measuring the cost of an adequate diet it has been criticized on the basis that it is developed by people thoroughly familiar with the scientific values of foods in relation to their costs—a condition which applies to few housewives."

[54] Department of Agriculture, Miscellaneous Publication No. 662, supra, p. 3.

Families Plan Food Budgets, referred to above. The form for making the actual cost computations is published by the Department.[55]

The cost of each of the categories of food items contained in the allowance has already been shown in table A–1. The computation of this cost figure, following the procedure and the form referred to above, is shown in the following table:

TABLE A–3.—*Computation of cost of food budget at Detroit prices, November 1949*

Food item [1]	Unit [2]	Weight [2]	BLS price [3]	FBC-adjusted price [4]	Cost
1. Cereals and bakery products:					
Cereals:

[1] U. S. Department of Agriculture, Helping Families Plan Food Budgets, Miscellaneous Publicati No. 662, December 1948.
[2] U. S. Department of Agriculture, Pricing Diet Plans, BHNHE No. 354, revised Sept. 15, 1948.
[3] BLS average prices for food in Detroit in November 1949.
[4] Prices shown in this column are for items not priced by the BLS. The prices were gathered by t Family Budget Council of Detroit in October 1949, and adjusted by the Consumers' Price Index as plained in the text. Michigan State sales tax was alao added to make the prices comparable with Bl prices. (See text for measure of comparability of these prices.)
[5] 11 ounces.
[6] 20 ounces.
[7] No weight given for this item in Department of Agriculture moderate-cost food plan.

The cost of the food quantities listed by the United States Department of Agr culture for the moderate cost food plan was computed, using the quantity weigh set up by the Department of Agriculture and the average prices for food iten obtained by the Bureau of Labor Statistics in Detroit in November 1949

connection with the latter's Consumers' Price Index. For food items not priced by the Bureau of Labor Statistics, October 1949 prices were obtained from the Family Budget Council of Detroit.[56]

The comparability of the prices supplied by the Family Budget Council with those of the Bureau of Labor Statistics was established by computing the cost of that part of the food allowance for which prices were supplied by both agencies. Since the aggregate weighted cost of the items priced by both agencies was approximately the same, it was concluded that the Family Budget Council prices could be used for items not priced by the Bureau of Labor Statistics.

Comparison of the two sets of prices yielded the following results:

Cost of the partial list, at BLS prices		$10.42
Cost of the same food items, at Family Budget Council prices		$10.57
Difference	percent	1.4
Cost of complete list, at Family Budget Council prices		$13.50
Proportion of total FBC cost covered by partial list	percent	78.3

The figures given above have been adjusted for a two-person family and, in the case of the FBC data, for the Michigan State sales tax. The cost at Family Budget Council prices has also been adjusted for the increase of 1.6 percent in the Consumers' Price Index for food in Detroit between October and November 1949.

The individual prices supplied by the Family Budget Council for October 1949 were adjusted for changes in prices in Detroit between October and November 1949, using the "imputation patterns" of the Consumers' Price Index[57] and the Bureau of Labor Statistics prices for October and November in Detroit.[58]

Adjustment for size of family

As shown in table A–1, the allowance for food at home, based on the moderate cost food plan of the Department of Agriculture, for an elderly couple was $13.20 per week at Detroit, November 1949 prices. This includes the adjustment for the size of the family, which is necessary, as the Department of Agriculture points out, because "small families usually cannot buy and prepare their food as economically as large families."[59]

The Department of Agriculture gives the reasons for making the adjustment, and the adjustment to be made, as follows:[60]

"For very small or very large families it may be desirable to make some adjustments in consideration of small or large quantity purchasing. The cost figures given here are based on buying practices of four or five members. To insure meals of equal variety as well as nutritive value for families of other sizes, additions of 35 percent may well be made to the amount computed for one-person families; 20 percent for two-person families; and 10 percent for three-person families. Not more than 5 percent, if any, should be deducted from the food allowances of families of more than seven members."

---

[56] The Family Budget Council of Detroit is an agency belonging to the Council of Social Agencies of Detroit. Its chairman, the director of the Visiting Housekeepers Association, also a member agency of the Council of Social Agencies. The organizations which constitute the Family Budget Council are as follows: Wayne University, home economics department; Harper Hospital, out patient department; Wayne County Bureau of Social Aid; Visiting Housekeeper Association; Detroit Department of Health; Wayne County Department of Social Welfare; American Red Cross, Detroit chapter; Wayne County Health Department; Detroit Department of Welfare; Visiting Nurse Association; and Merrill Palmer School. The member agencies are represented on the Family Budget Council by the individuals who are in charge of home economics activities within their respective agencies.

[57] U. S. Department of Labor, Bulletin No. 699, Changes in the Cost of Living in Large Cities in the United States, 1913–41, pp. 82–87.

[58] For example, "veal roast" is listed among the food items in the moderate cost food plan, but it is not priced by the Bureau of Labor Statistics. According to the imputation procedure of the Bureau of Labor Statistics, changes in the price of this item are measured by the changes in the price of "veal cutlets," which is priced for the Consumers' Price Index. According to the Bureau of Labor Statistics "Retail Food Prices by Cities—October 15, 1949," and to a list of November prices furnished by the Bureau of Labor Statistics, the price of veal cutlets rose from 98 cents per pound in October to $1.004 per pound in November, an increase of 2.5 percent. The price of veal roast, as given by the Family Budget Council for October was therefore increased by 2.5 percent, from 74 cents to 75.8 cents per pound. The Michigan sales tax of 3 percent was added, making the price per pound of the veal roast 78.1 cents per pound. This price was used in computing the allowance for meat in the moderate cost food plan.

[59] Department of Agriculture, Miscellaneous Publication No. 662, supra, p. 6.

[60] U. S. Department of Agriculture, Instructions for Estimating the Cost of Food Budgets, p. 3.

In accordance with these instructions, and with the practice followed by welfare agencies when computing the cost of the Department of Agriculture food plans, the allowance for food in the revised budget was adjusted by adding 20 percent to the cost.

Allowance for guest meals served

The Budget for an Elderly Couple provides an allowance for meals served to guests. The Federal Security Agency comments:

"Older Couples, perhaps because they do not travel or move about very much apparently have their children, grandchildren, and friends as guests more frequently than they eat out as guests." [61]

The Budget for an Elderly Couple, therefore, allows for 127 guest meals per year, at an average cost equal to the per meal cost of family meals at home This is the equivalent of 5.8 percent of the annual cost of the family food at home. The BFEC does not take notice of the fact that meals served to guests are almost invariably a little better and a little more expensive than those normally prepared for the immediate family. In an adequate budget, allowance would be made for this difference in the cost of food served to guests. However, computing the cost of the 127 meals as the BFEC does, by using the average cost per meal of the food at home, yields $39.81 per year on the basis of the revised food allowance

The net additional allowance for meals purchased away from home

The computation of the allowance for meals purchased away from home in this revised budget follows the computation of the same item in the BFEC.

The BFEC allows for 49.6 individual meals to be purchased away from home Since the average cost of a meal consumed at home in Detroit is 22.3 cents at June 1947 prices, the purchase of this food away from home represents a saving in home food consumption of $11.07.

The BFEC allowed an additional $23 in June 1947 for the purchase of meals away from home, or a total of $34.07. In other words, the average meal eaten at home cost 32.49 percent as much as the average meal purchased and eaten outside of the home.

In the revised budget, the average cost of a meal consumed at home is approximately 31.3 cents. The purchase of 49.6 individual meals away from home represents a saving in home consumption of $15.52.

If the BFEC ratio between cost of meals at home and cost of meals purchased away from home is applied, the total cost of meals purchased away from home comes to $47.92. The net additional allowance necessary to make possible the purchase of these meals is $32.35.

THE MEDICAL AND DENTAL CARE BUDGET

The revised budget provides an annual allowance of $183.35 for medical and dental care for an elderly couple in Detroit at November 1949 prices. The allowances provided in the budget and the cost of these allowances are shown in table B–2.

---

[1] BLS prices, except as indicated. BLS prices for individual items withheld from publication at the request of the Bureau.

[2] Combined to avoid disclosure of BLS prices for individual item.

[3] BFEC allowance, of $7.60 at June 1947 prices, supplied by BLS by letter of Feb. 17, 1950, adjusted to November 1949 by BLS index for medical care and drug index in accordance with the Bureau's imputation pattern.

[4] Obtained from a local representative of Blue Cross and Blue Shield.

[5] This figure is to be compared with the corrected BFEC allowance of $106.23, instead of the erroneously reported figure of $114. Corrected figure received from BLS by letter of Feb. 17, 1950.

Content of the revised budget

The commodities and services provided in this revised budget are identical with those in the budget for an elderly couple, augmented by allowing for the hospital, surgical, and the limited medical care [62] insurance provided under the Blue Cross and Blue Shield Plans on a ward-care basis. To the extent that these insurance plans include some of the services already provided in the Budget for an Elderly Couple, the latter were dropped from the list, and then covered in the revised budget through the insurance programs.

The services eliminated from the budget for an elderly couple list, and covered by insurance instead of by direct allowances, are all operations, anaesthesia, medical X-ray, physiotherapy, and laboratory charges.

All other services provided in the budget for an elderly couple were carried over, with adjustments for price changes.

The insurance plans provide the elderly couple with a limited protection against the financial catastrophes resulting from surgery and hospitalization and the doctor's bill while in the hospital on a somewhat more adequate basis than the budget for an elderly couple allows.

In computing the cost of the City Worker's Family Budget, "The cost of group hospitalization insurance plans were used in those cities in which such plans were generally accepted and were providing comprehensive service." [63]

---

[62] The plan allowed includes a medical care benefit of $5 for each of the first 2 days of hospitalization, and $3 per day for the next 118 days.

[63] U. S. Department of Labor, City Worker's Family Budget, Monthly Labor Review, February 1948, p. 151.

In developing the Budget for an Elderly Couple from the CFWB, the insurance protection was dropped, and specific allowances were made for some of the services that would otherwise be provided by insurance. This action was apparently deemed necessary because the Blue Cross and the Blue Shield organizations in some cities do not insure people over 65. However, since the Michigan organizations—as well as a number of others—do insure elderly people, there is no reason for denying this protection to elderly couples in this revised budget.[64]

By adding the insurance programs to the budget for an elderly couple allowances, the revised budget provides a degree of basic protection against financial hardships arising from the need for surgery and hospitalization.

Inadequacies in the allowance for medical and dental care

The allowance in the Budget for an Elderly Couple would make charity the only recourse for couples confronted with the need for hospitalization or surgery

How allusory the protection provided in the Budget for an Elderly Couple really is becomes apparent when the allowances for hospital care in that budget are analyzed. The total allowance for hospital items in the budget for an elderly couple is $14.81 per year. This sum is arrived at by the statistical device of computing the percentage of people who may be expected to incur the cost of each of the services such as X-rays, anaesthesia, and certain operations, and allowing for each individual his proportionate share of the costs likely to be faced by all elderly persons as a group.

Thus, in the Budget for an Elderly Couple, the amount provided per family to cover the cost of X-ray, laboratory, and physiotherapy is $2.35.

Obviously, the total allowed in the Budget for an Elderly Couple for any single type of hospital treatment is inadequate to purchase that treatment. The November 1949 Bureau of Labor Statistics price for anaesthesia, for example, was 16 times as great as the Budget for an Elderly Couple allowance for anaesthesia for the woman, and 17 times as great as the allowance for the man. Anaesthesia usually accounts for only a small fraction of the total hospital bill.

The shortcomings of this method of budgeting medical care were recognized by the FSA, which points out that "The necessary minimum of medical care and dental care varies from family to family and year to year between very wide extremes, and hence these categories cannot be budgeted for in the same sense as can other segments of family spending." [65]

The Federal Security Agency suggests that the allowance in the budget be regarded as a sum to be "prorated over a considerable number of years or a large group of families to equalize the burden on a family between years of light and heavy medical and dental expenses".[66]

The self-insurance scheme suggested in this comment is impossible to achieve in practice. Inclusion of the Blue Cross and Blue Shield plans in the budget helps to accomplish what self-insurance cannot.

Medical care, outside a limited amount in hospitals, is not provided for in these plans. Costs of a major illness at home, of the kind to which the aged are especially subject, would have to be met out of the other allowances in the revised medical and dental care budget which are obviously inadequate for the purpose

The costs to the individual and to the society of the failure to send for the doctor or to visit the dentist until further delay is no longer possible are too clear to need exposition here. Yet the allowances in the budget for an elderly couple would inevitably result in reluctance to call professional help until a minor ailment had developed into a major emergency.

Clear illustration of the fact that the individual will be under pressure to refrain from getting help when he needs it is given by the allowance for dental examinations and prophylaxis. In spite of universal recognition that at least annual visits to the dentist are required for this purpose, the budget allows 35 visits per year per thousand men, and 40 visits per year per thousand women, roughly one visit every 30 years for the man and one every 25 years for the woman. Assuming a charge of $4 per examination and prophylaxis, a typical fee in Detroit, the budget for an elderly couple (and the revised budget, for want of authority on which to base the necessary correction) allows 30 cents per elderly couple for this purpose. If the man and his wife both visited the dentist

---

[64] The UAW-CIO social-security department studied Blue Cross hospital plans in 84 cities. In 55 of these cities, people over 65 were eligible for insurance under these plans. 37 out of 58 Blue Shield plans studied insured people over 65.

[65] Federal Security Agency, Bureau memorandum No. 67, supra, p. 8.

[66] Ibid.

for the recommended annual examination, each would have left out of the total dental care allowance little more than $1.50 to pay for all other dental care needs for the year.

Visits to and by the doctor may be of doubtful value if the elderly couple must adhere to the budget for an elderly couple allowance for prescriptions. While the budget recognizes the need for over five doctor's visits per year per man, and almost seven visits per year per woman (including both home and office visits) less than one prescription per year is allowed for both together. In money terms the allowance per prescription is less than $1.

The budget makes no allowance at all for the purchase and maintenance of hearing aids and prosthetic devices. Since a great many elderly people need this equipment which is available only at high prices, the omission of an allowance for these items means reliance on charity or sacrifice of other essentials by those who need them.

THE TRANSPORTATION BUDGET

The revised budget provides an annual allowance of $113.43 for transportation for an elderly couple in Detroit at November 1949 prices. The allowances provided in the budget and the cost of these allowances are shown in table C–1.

TABE C–1.—*Transportation allowances, and cost in Detroit at November 1949 prices* [1]

COUPLES OWNING CARS

Item	Unit	Quantity per year	Price [1]	Cost in Detroit November 1949
Car expense:				
Gasoline	Gallons	159.500		
Oil	Quarts	16.000		
Tires	Each	.433		
Tubes	do	.172		
Insurance	Annual policy	.450		
Cost of gasoline, oil, tires, tubes, and insurance.				$67.89
Registration	Annual	1.000	[2] $9.800	9.80
Inspection [3]				
Operator's permit		[4] .500	1.250	.63
Repairs and replacement	Dollar allowance			[5] 10.86
Parking and garage rent	6.5 percent of cost of above			5.80
Tolls, fines, damages, accessories, and association dues.	1 percent of cost of above			.89
Automobile purchase	Dollar allowance			106.75
Total, car expense				202.62
Local rides by public transportation		[6] 26	.125	3.25
Total allowance for car-owning couple				205.87

COUPLES NOT OWNING CARS

Item	Unit	Allowance in BFEC	Price	Cost in Detroit November 1949
Local rides, public transportation	Each	485	0.1250	$60.63
Trips out of the city, public transportation	Miles	100	.0345	3.45
Taxi	Dollar allowance			3.00
Total allowance for couple not owning a car.				67.08

[1] BLS prices except as indicated. BLS prices for individual items withheld at request of Bureau.
[2] Michigan State registration fee for a car weighing 2,800 pounds.
[3] Not required in Michigan.
[4] Based on the assumption that in all car-owning families, 1 member has an operator's permit, and that in one-half of the families the other member also has a permit. The fee for a permit in Detroit is $1.25; permits are issued for a 3-year period.
[5] See explanation in text.
[6] Allowed in the revised budget because of the assumption that both members have operator's permits in only half the car-owning couples.

COMPUTATION OF ALLOWANCE FOR ALL COUPLES

Allowance for couples that own cars	$205 87
Allowance for couples that do not own cars, multiplied by two	134 16
Total	340 03
Divide by three to get weighted average allowance per couple; equals	113 43

The allowance for car ownership

The transportation budget presented here is based on the transportation allowance set forth in the BFEC. However, one serious omission from that budget is corrected. In the revised budget, an allowance is made for the fact that a very significant proportion of the older couples own cars, and will continue to drive them after they retire.

The BFEC states: "Although one-third of the elderly couples included in the expenditure sample and one-third of those in the $1,000–$1,500 income group were automobile owners, an arbitrary decision was made not to include provision for automobile ownership in the budget."[67]

This frequency of car ownership among elderly couples was confirmed by the Federal Reserve Board, which reported that 33 percent of the spending units whose heads were 65 years of age and over owned one or more cars in 1948.[68]

As income rises, the incidence of car ownership rises among elderly couples just as among the population as a whole. The United States Department of Agriculture study of family spending, based on the WPA consumer purchases study in 1935–36, showed that among elderly couples in small cities and villages the proportion owning cars increased markedly with higher income.

Car ownership among families without children in which the wife was 60 years of age or older, in 1935–36 was as follows:[69]

Family income:	*Percent of families owning cars*
$500 to $999	46
$1,000 to $1,499	54
$1,500 to $1,999	83

These figures strongly suggest that the proportion of the elderly owning cars would rise sharply above the present one-third if incomes were more adequate.

Adjustment of the BFEC to allow the one-third presently owning cars enough to operate and maintain them, therefore, still falls short of the requirements of an American standard of living.

Allowances for car-owning couples

The BFEC assumed that a couple which depended on public transportation would make about 485 local trips per year. According to the Detroit Department of Street Railways, which operates Detroit's public transportation system, it was learned that the average ride per streetcar and coach rider was approximately 3.5 miles per trip.[70] Thus, 485 trips would be the equivalent of about 1,700 miles of travel per year.

According to the Department of Agriculture study, older couples owning cars actually traveled considerably more than 1,700 miles per year. Couples without children in the income group $500–$999, in which the wife was 60 years of age or older, covered 3,142 car miles per year in family driving, exclusive of any driving for business purposes. Couples in the $1,500–$1,999 group drove 4,167 miles per year.

The number of miles of local travel allowed for in the revised budget is therefore higher than the 1,700 which might be assumed from the BFEC allowances. It was increased conservatively to 2,000 miles of local travel.

It is reasonable to expect that while many of the trips taken by the car-owning couple would be made together, there would be some occasions when only one person used the car. Therefore, the total number of miles traveled would not be cut in half by car travel, even if no increase in travel took place as a result of

[67] Federal Security Agency, supra, p. 4.

[68] Federal Reserve Board of Governors, Federal Reserve Bulletin, 1949 Survey of Consumer Finances; Pt. VI, Ownership of Automobiles, Stocks, and Bonds and Other Nonliquid Assets, October 1949, p. 1188, table 5.

[69] U. S. Department of Agriculture, Family Spending and Saving, p. 42. While these dates apply to smaller cities and towns, the same tendency of car ownership to rise with income is undoubtedly present in larger communities.

[70] Figure obtained by telephone inquiry to the information department of the department of street railways.

having a car. Availability of a car would certainly mean an increase in the amount of traveling done by the average couple.

It should be emphasized that even the higher allowance of 2,000 car-miles of local travel per year provides less than 40 miles per week, an amount easily used up in trips to the store, visits to children and to friends, and the many other uses to which a car is normally put.

Trips out of town are allowed in the BFEC at the rate of 100 miles per couple per year. In this budget, the allowance for a car-owning family has been increased to 200 miles per year, on the assumption that possession of a car would make for more travel.

The total number of miles of travel by car in the revised budget, for those couples owning cars, is therefore 2,200 miles per year.

The allowances for expenditures related to automobile travel in this revised budget are based on those in the city worker's family budget.

Those allowances which are incurred on a per-mile basis—the cost of gasoline, oil, tires, and tubes—were reduced from the quantities allowed in the CWFB, proportionate to the reduction in mileage from the 6,000 miles per year allowed in that budget to the 2,200 miles allowed in the revised budget.

An additional allowance was made in the revised budget for local travel by public transportation of one round trip fare every 4 weeks. This follows from the assumption that one member of the couple in every other couple would not have an operator's permit, and would occasionally make a trip by public transportation.

Allowances which are fixed on an annual or similar basis—like insurance, registration, and the operator's permit—were carried into the revised budget from the CWFB, except that the cost of the operator's permit was modified to conform to Michigan State fees. Instead of the two permits per couple provided for in the CWFB, this budget provides for 1½ permits per couple.

The allowance in the CWFB for car inspection was not carried into the revised budget, despite the fact that safety would seem to require one, because Michigan law does not make inspection mandatory.

The CWFB set the allowance for repairs and replacements in dollar terms. Part of the cost of repairs and replacements arises normally out of the aging of the car. Part of it is the result of wear. Since the lower mileage allowance for travel by an elderly couple should reduce that part of the repair cost due to wear, the allowance for such repairs was reduced. In the absence of specific measures of how much reduction should be made for this purpose, it was decided to reduce the total allowance for repairs and replacements by one-third.

The city worker's family budget made an allowance of $106.75 per year for car purchase. The obvious inadequacy of this allowance is underlined by BLS Commissioner Ewan Clague in the following statement:

"Typically, the cars owned by these families at the budget level are about 8 years old and cost about $350 (after trade-in allowances) in 1941. At that time, cheap second-hand automobiles were available. This budget does not allow for the replacement of automobiles at the current high prices. It makes an allowance of only $107 a year toward purchase of a car. If inexpensive cars do not return to the market as current inventories are scrapped the budget pattern will necessarily be changed in the near future toward a lower percentage of automobile owners, with related changes in all the other segments of the budget." [7]

Despite its obvious inadequacy, the CWFB car-purchase allowance was carried into the revised budget without change.

The comparison between the allowances made in the city worker's family budget, and the allowances in this revised budget are shown in table C–2.

---

[7] Statement of BLS Commissioner Ewan Clague on the city worker's family budget before the western subcommittee of the Joint Committee in the Economic Report, December 16, 1947, p. 7. Why the budget should not be changed, instead, by a higher allowance for car replacement is not entirely clear.

TABLE C–2.—*Automobile transportation allowances in city worker's family budget and in revised budget for an elderly couple*

Item	Unit	Allowance in CWFB[1]	Allowance in revised budget
Gasoline	Gallon	435.000	159.500.
Oil	Quart	43.500	16.000.
Tires	Each	1.180	0.433.
Tubes	do	0.470	0.172.
Insurance	Annual policy	0.450	0.450.
Registration	Each	1.000	1.000.
Operator's permit, renewal	Number	2.000	0.500.
Repairs and replacement	Dollar allowance	$15.140	$10.860.
Parking and garage rent		6.5 percent of cost of above.	6.5 percent of cost o above.
Tolls, fines, etc		1 percent of cost of above.	1 percent of cost o above.
Allowance for automobile purchase	Dollar allowance	$106.75	$106.75.

[1] U. S. Department of Labor, City Worker's Family Budget, Monthly Labor Review, February 19 p. 168.

Cost for car-owning couples

With three exceptions, prices used in computing costs were obtained from BLS. The registration fee shown in the revised budget is the fee collected by the State of Michigan (35 cents per hundred pounds of weight) on a car weighing 2,800 pounds, which is the weight typical of 1939 low-priced cars. Operator's permit fees were obtained from the State and city departments which issue permits. For local transportation, the four-trip ticket rate, the lowest charged by the Detroit Department of Street Railways, was used.

The allowance for repairs in the city worker's family budget was $15.14 at June 1947 prices. Using prices obtained by BLS for its Consumers' Price Index the allowance was adjusted to November 1949 by computing the weighted price of the repair services priced by BLS in both June 1947 and November 1949 using BLS weights and prices. The increase in the weighted price, 7.6 percent was applied to the allowance for repairs and replacements in June 1947, and a cost of $16.29 at November 1949 prices was thus obtained. For the reasons explained above, this amount was reduced by one-third to $10.86 per year.

The total allowance per year for travel by an elderly couple owning a car is $205.87.

Computing the cost for non-car-owning couples

The budget for an elderly couple allows 485 local rides and 100 miles of out-of-town travel by public transportation. In addition, it allows $3 for taxi travel per year.

The allowance for local rides by public transportation was computed at the four-trip fare of 12½ cents charged by the Detroit Department of Street Railways, which operates the public transportation system. The price used in the computation is the price per ride if tickets are purchased; the cash fare is higher. The allowance per mile of railroad travel is at the price collected by the BLS in Detroit for November 1949.

Since there has been no increase in taxi fares in Detroit since June 1947 the budget for an elderly couple allowance of $3 for taxi fare is also allowed in this budget—enough for perhaps one emergency round trip per year.

The total allowance per year for travel by an elderly couple not owning a car is $67.08.

Average cost per couple

Since it was assumed that there are two couples without cars for each couple owning one, the allowance for travel by the former was multiplied by two and added to the allowance for a car-owning couple, and the total thus obtained divided by three to get the weighted average allowance per couple. This conforms to the procedure followed in connection with the city worker's family budget.

The weighted average allowance for travel per elderly couple is $113.43.

RENT, FUEL, AND UTILITIES BUDGET

The revised budget provides an annual allowance of $579.60 for rent, fuel, utilities, and refrigerator purchase for an elderly couple in Detroit at November 1949 price.

The allowances provided for in the budget are identical with those allowed in the budget for an elderly couple, adjusted for price changes to November 1949.

The allowances and the cost of these allowances in Detroit in November 1949, are shown in table D–1.

TABLE D–1.—*Rent, fuel, and utilities allowances; and cost in Detroit at November 1949 prices* [1]

Item	Unit	Quantity per year	Cost in Detroit November 1949	Annual cost per couple	Percent of couples paying for	Budget cost in Detroit November 1949
Rent	Monthly	12.0	[2] 45.82	$549.84	100.0	$549.84
Fuel, utilities, and refrigerator purchased.						
Coal	Tons	4.050			8.9	
Gas	Therms	1,272	[3] 1.34	16.08	33.0	5.31
Water	Cubic feet	4,800,000	[4] 2.04	8.16	2.0	0.16
Electricity	Kilowatt-hours.	300.000	[5] 2.78	16.68	31.7	5.79

Total fuel, utilities and refrigerator purchase.						$20.76
Total rent, fuel, utilities, and refrigerator purchase.						$570.60

[1] BLS prices, except as indicated. BLS prices for individual items withheld from publication at the request of the Bureau.
[2] June 1947 allowance, adjusted by BLS rent index for Detroit.
[3] Monthly bill, at Detroit rates, from Michigan Consolidated Gas Co.
[4] Quarterly bill, at Detroit rates, from city of Detroit, water department.
[5] Bimonthly bill, at Detroit rates, from Detroit Edison Co.

How the allowance was computed

The budget for an elderly couple allowance for rent in Detroit in June 1947 is the rent reported by the Bureau of Labor Statistics. This allowance was adjusted to the November 1949 level by the Bureau of Labor Statistics rent index for Detroit.

The budget for an elderly couple used the cost of coal to represent heating costs in Detroit. The price of coal used for computing costs in Detroit in November 1949 is the price collected by the Bureau of Labor Statistics for its Consumers' Price Index. The annual coal allowance in the budget for an elderly couple is 4.05 tons of Pocahontas stove coal. Because only 8.9 percent of the elderly couples in Detroit pay for heat in addition to rent, that percentage of the total cost of the coal allowance is provided for heat in the revised budget.

Gas and electricity allowances were determined by computing the cost of the quantity allowed in the budget for an elderly couple at rates charged by the local utility companies, adjusted as in the case of coal, for the proportion of the couples paying separately for these utilites. It is noteworthy however that in both cases the quantity allowed in the budget for an elderly couple is significantly lower than the per capita consumption reported by the local utility companies.

The allowance for water was determined by computing the cost of the quantity allowed in the budget for an elderly couple at the rate charged by the Detroit City Water Department for that proportion of the families paying separately for water. In this case, the quantity allowed by the budget for an elderly couple is apparently higher than per capita consumption in Detroit. Since no adjustments were made in the case of the other utilities, the quantity allowed for water was also carried over into this budget.

The budget for an elderly couple allowance for refrigerator purchase was carried over into the revised budget, in spite of the fact that it was derived by the "resitance point" technique and is therefore below the requirements of an American standard of living.

The level of living provided in the budget

The housing allowance in the budget for an elderly couple was determined on the basis of rent costs obtained by the Bureau of Labor Statistics for rental housing conforming to standards derived by the Bureau from those set by the

committee on hygiene of housing of the American Public Health Association and the Federal Housing Authority. The Bureau of Labor Statistics priced two- or three-room unfurnished housekeeping units that met these standards with respect to construction, repair, and location.

Thus the method of determining the housing allowance (exclusive of gas, electricity, and refrigerator purchase) was not the same as that used in most of the other sections of the budget for an elderly couple. The allowance for rent is set somewhat above the "resistance point." This allowance, therefore, probably approximates the American standard of living more nearly than do other sections of the budget.[72]

While the housing allowance is computed on the basis of rents paid, a large number of the elderly couples own their own homes. The Federal Reserve Board reports that in 1949, 60 percent of the nonfarm families whose heads were 65 or over owned their homes.[73] An American standard of living would probably involve as high or higher a proportion of home ownership.

The Federal Security Agency recognized the fact of home ownership, and the difference in what is paid for housing by home owners and renters, in the following statement:

"Current costs of home ownership cover items not now included in any retail price series, and represent cost elements not easily included. Hence it was decided for the present not to give recognition to the fact that a relatively high proportion of elderly couples live in owned homes. For the house-owning couples expenditure records show average yearly out-of-pocket costs for housing below those for renters at the same level, although the difference would undoubtedly be much less or even nonexistent if interest on the owner's equity and depreciation were taken into account."[74]

It thus appears that, even if allowance were made for the proportion of home ownership consistent with an American standard, real housing costs would probably not be affected one way or another for dwellings conforming to any given standards.

THE HOUSEHOLD OPERATIONS BUDGET

The revised budget provides an annual allowance of $106.87 for household operations for an elderly couple in Detroit at November 1949 prices.

The items and the quantities allowed in the revised budget are identical with those allowed in the budget for an elderly couple, adjusted for price changes to November 1949.

The allowances and the cost of these allowances in Detroit at November 1949 prices are shown in table E–1.

---

[72] In fact, dwelling units significantly superior to the standard were included in the sample from which average rental costs were computed. The FSA estimated that this may have increased the rental allowance by approximately $2 per month for the cities other than Washington, D. C. (Federal Security Agency, Memorandum No. 67, supra, p. 14)

Total, commodities			17.17
Services:			
Paid help	Dollar allowance		[4] 35 36
Laundry sent out	do		[5] 20 16
Telephone	Minimum service	$0 45	[6] 34 18
Total, services			89 70
Total, household operations			106. 87

[1] BLS prices, except as indicated. BLS prices for individual items withheld from publication at the request of the Bureau.

[2] Estimated by imputing to allowance for the stationery component of this category the increase in the BLS price for toilet paper, in accordance with BLS imputation pattern.

[3] Estimated by applying BLS index for household operation to the BFEC allowance of $3.97 at June 1947 prices.

[4] Estimated by applying the BLS index for domestic help to the BFEC allowance of $34.94 at June 1947 prices.

[5] Estimated by applying the increase in the weighted average of laundry services priced by BLS to the BFEC allowance of $17.89 at June 1947 prices.

[6] Type of service, and quantity allowed is carried over from BFEC. Rate used in the computation is rate in Detroit for telephone service of type specified in BFEC. See text for discussion of this allowance.

Cost computations

The prices of the soap items listed in the budget for an elderly couple and the cost of telephone services were obtained from the Bureau of Labor Statistics which includes these items in gathering prices for its Consumers' Price Index.

The BFEC allowances for miscellaneous household operations and for paid help in June 1947 were adjusted by applying the Bureau of Labor Statistics indexes for household operations and for domestic help, respectively.

The BFEC allowance for stationery and postage is $3.43. In adjusting the allowance for stationery, it was necessary to estimate the proportion of this $3.426 allowance which covered each of the two items. The estimate was based on the relationship between stationery and postage in the CWFB, in which 39.1 percent of the allowance for stationery and postage is the allowance for stationery. This indicates that 39.1 percent of the $3.426 allowed for this category in the budget for an elderly couple—the sum of $1.34—represents the cost of stationery in the budget for an elderly couple, and the balance of $2.086 covers the postage.[76] The estimated BFEC stationery allowance was increased by the BLS imputation procedure which relates price changes in all paper items to the price of toilet paper. The resultant amount was added to the estimated BFEC allowance for postage to arrive at the cost of stationery and postage combined.

The bases of the other cost figures appear in the footnotes to table E–1.

[76] Actual allowances in the CWFB are: 65 stamps at 3 cents each, and $1.25 for writing supplies at 1947 prices.

Inadequacies

According to the Federal Security Agency, the allowances for household operation were derived by the "resistance point" method.[76]

The inadequacies of the allowances obtained by this method have been discussed. They can be illustrated again by translating certain of the dollar allowances for household operations into the actual amounts of service that the allowance will provide.

The allowance for paid help—essential if the elderly woman is to be spared the most arduous housekeeping tasks—permits a maximum of 4 hours per month at current wages for household help in Detroit.[77]

The allowance for laundry permits the elderly woman to send out an average of one 20-pound bundle every 7 weeks if the laundry is done rough dry; if it is to be done family finish, a bundle could be sent out only once in every 16 weeks.

The impossibility of following such schedule is too clear to need exposition. Since the cost of laundry would rise markedly if sent out more frequently in less-than-20-pound bundles, since the budget allows no washing machine or ironer, and since the allowance for paid help is inadequate, the laundry allowance in the budget would require an elderly woman to do most of the washing and ironing, as well as the other heavy housework, under the most difficult conditions.

The telephone allowance in the BFEC is stated to provide for minimum service to 45 percent of the couples. The dollar allowance, however, is sufficient to purchase private line, unlimited service, the most expensive available.

It was nevertheless decided not to correct for this error in the BFEC. Telephone service belongs in an American standard of living on a 100-percent basis—that is, every couple should be allowed such service. It was considered especially important that the elderly have telephone service available for ready communication with physicians or relatives in case of illness or other emergency. If one member of the couple took ill suddenly or fell victim to a household accident, for example, the other would have to remain in the home to provide whatever immediate care might be necessary. A telephone is the only means by which help might be summoned under such circumstances, and the availability of one would contribute materially to the couple's sense of security.

Substitution of the lowest-cost service available in Detroit—two-party line 30 calls per month—for all elderly couples (in place of the service actually allowed by the BFEC for 45 percent of the couples) would have changed the annual telephone allowance from $34.18 to $34.56. Since the difference is insignificant, the BFEC allowance was left unchanged.

THE HOUSEHOLD FURNISHINGS AND EQUIPMENT BUDGET

The revised budget provides an annual allowance of $46.34 for household furnishings and equipment for an elderly couple in Detroit at November 1949 prices consisting of the following:

Household textiles		$13.28
Furniture and equipment:		
Furniture and floor coverings	$13.69	
Durable household equipment	17.78	
Miscellaneous household equipment	1.59	
Total furniture and equipment		33.06
Total allowance for household furnishings and equipment		46.34

The furnishings and the equipment included in the revised budget, and the quantities allowed per year, are shown in table F–1.

---

[76] "Household operation was divided into two parts, one covering services, and one covering miscellaneous housekeeping supplies, such as soap, other cleaning supplies, paper, matches, etc. The two parts were derived separately, by the same method as used for clothing, etc." (Federal Security Agency, Bureau Memorandum No. 67, supra, p. 67).

[77] The Bureau of Labor Statistics does not price domestic help in Detroit. Wage rates in Detroit were obtained from the Michigan Unemployment Compensation Commission. For an 8-hour day, the Detroit rate is $6 plus lunch and carfare, or 75 cents per hour.

TABLE F–1.—*Household furnishings and equipment allowances and cost in Detroit at November 1949 prices* [1]

Item	Unit	Quantity per year	Cost in Detroit November 1949
Household textiles:			
Sheet	Number	1.50

[1] BLS prices, except as indicated. BLS prices for individual items withheld at the request of the Bureau.
[2] Derived from BFEC June 1947 price by imputation.
[3] Derived from June 1947 BFEC allowance by applying BLS index for individual items.
[4] Allowance is 5 percent of total cost of preceding items.
[5] Dollar allowance at June 1947 prices
[6] See accompanying text for explanation of computation of these figures.

The household textile items, and the quantities of each, allowed in this budget are the same as those provided in the budget for an elderly couple. For the other categories of this section of the budget, the BFEC lists only dollar allowances, not items and quantities. These allowances were carried over into this revised budget after adjustment for price changes.

Cost computations

November 1949 prices collected by the Bureau of Labor Statistics for its Consumers' Price Index were used for the household textile items included in this budget wherever such prices were available. However, some of the household textiles provided in this budget are not priced regularly by the Bureau of Labor Statistics, and prices for these items in Detroit in November 1949 are not available.

In these cases, the June 1947 prices of these items, gathered by the Bureau of Labor Statistics when the original city worker's family budget was being prepared, were adjusted to November 1949 by the imputation method.

Furniture and equipment

The budget for an elderly couple does not itemize the furniture and equipment provided. It was not possible, therefore, to reprice the items covered by this allowance. Instead, the amount allowed was adjusted to November 1949, using BLS weights and prices. The allowance was broken down into its three components.[78] The allowance for each component was adjusted by constructing an index which would show the increase in prices for that component and applying the percentage change to the BFEC June 1947 dollar allowance.[79] Michigan sales tax was added.

[78] According to information supplied by BLS, furniture and floor coverings accounted for 39.7 percent of the total, durable household equipment for 55.5 percent, and miscellaneous household equipment for 4.8 percent.

[79] The Bureau of Labor Statistics indexes for individual items were used to adjust the dollar allowances for furniture and equipment. Since the indexes are issued quarterly, and no indexes are available for November 1949, the December 1949 indexes were used.

For example, to adjust the allowance for "furniture and floor coverings," the June 1947 and the December 1949 indexes for the individual furniture and floor-coverings items priced by BLS were weighted by their relative importance in the index for this component of the Consumers' Price Index. The percentage of difference between the total weighted index for June 1947 and for December 1949 was computed. This difference was applied to the allowance for June 1947.

The same method but different indexes was used for durable household equipment and for miscellaneous household equipment.

Allowances inadequate

Use of the "resistance point" method to derive the household furnishings and equipment budget made, inevitably, for allowances that are far from adequate when measured against the requirements of an American standard of living.

In the case of items other than household textiles, inadequacies were aggravated by ruling out larger expenditures from among those analyzed to determine the "resistance point." As the Federal Security Agency explains: "* * * available expenditure records did not yield data adequate for the derivation of satisfactory allowances for the individual items. Accordingly, these data were used as a basis for determining a flat dollar allowance. Total amounts spent for such items by all families in the sample were arrayed, expenditures at the extremes of the array ($100 and over) were omitted, and for each such item, the largest outlay of less than $100 was substituted, and an adjusted average computed." [80]

The meager allowances for house furnishings apparently reflect the restricted incomes of the prewar elderly, rather than their requirements.[81]

Allowances lower than earlier budget

Comparison of the allowances in the BFEC with those in an earlier budget for aged people underlines the inadequacy of the allowance for household furnishings and equipment.[82]

The money allowances for household furnishings and equipment in this earlier budget were roughly adjusted for price changes for purposes of comparison with the BFEC. It appeared that the cost of all house furnishings and equipment allowed in the earlier budget exceeded those in the BFEC by about 15 percent The allowance for household textiles in the earlier budget appeared to be more than 20 percent higher than in the BFEC.

Nevertheless, the BFEC allowances were carried over into the revised budget because it was not possible to check the validity of those provided in the earlier budget.

THE CLOTHING BUDGET

The revised budget provides an annual allowance of $115.42 for clothing for an elderly couple in Detroit at November 1949 prices, consisting of the following:

Clothing allowance, elderly woman:	
Allowance for clothing purchase	$53.92
Allowance for cleaning, repairs, and miscellaneous accessories	1.89
Total, woman	55.81
Clothing allowance, elderly man:	
Allowance for clothing purchase	$54.94
Allowance for cleaning, repairs, and miscellaneous accessories	4.67
Total, man	59.61
Total clothing allowance, elderly couple	115.42

The clothing quantities, and the cost of purchasing them

The items, and the quantities of each allowed in this budget are the same as those provided in the budget for an elderly couple despite their obvious inadequacies. These allowances, and their cost in Detroit in November 1949 are shown in table G–1.

[1] Prices collected by BLS for the Consumers' Price Index were used to compute the cost of the clothing-allowances in November 1949, except as indicated below. Prices for individual items withheld from publication at the request of the Bureau.

[2] Estimated by imputation, using percentage change in appropriate BLS item applied to June 1947 BFEC prices.

[3] Estimated by applying BLS item index to June 1947 BFEC prices; adjusted by index for June 1947 and December 1949.

[4] Combined to avoid disclosure of BLS price for individual items.

[5] Estimated by applying BLS item index to June 1947 BFEC prices; adjusted by index for June 1947 and June 1949.

[6] Estimated by applying BLS item index to June 1947 BFEC prices; adjusted by average of indexes for March and September 1947, and December 1949.

[7] Estimated by applying BLS item index to June 1947 BFEC prices; adjusted by average of indexes for February and September 1947 and December 1949.

[7] Estimated by applying BLS item index to June 1947 BFEC prices; adjusted by index for September 1947 and December 1949.

How the prices for November 1949 were computed

The November 1949 costs shown in table G–1 were computed from prices obtained from BLS, or were brought up to date from the BFEC figures by using data and methods the same as, or similar to, those used by the BLS for the purpose of measuring price changes.

Prices collected by BLS for its Consumers' Price Index were used wherever such prices were available for items included in the budget. Some clothing items in the budget are not priced regularly by BLS, and prices for these items in Detroit in November 1949 were therefore not available. In these cases the June 1947 prices of these items, gathered when the original budget was being prepared, were obtained from BLS and were adjusted to November 1949 either by the imputation method or by applying the changes in the BLS indexes for specific items to the June 1947 price.

The following examples show how these methods were applied:

Imputation: BLS did not price women's rayon blouses in November 1949. For purposes of its index, the Bureau assumes that changes in the price of women's rayon blouses are the same as changes in the price of women's rayon dresses.[83] According to the prices collected by BLS, rayon dresses cost 15.5 percent more in November 1949 than in June 1947. The price of a rayon blouse in June 1947 was accordingly increased by 15.5 percent, and this latter price was used in computing the allowance for rayon blouses in the revised budget.

Where the specifications of the priced items had changed between June 1947 and November 1949, use of the percentage change between the price of the new and the old item would have yielded results of questionable validity if used for imputation purposes. In these cases, the BLS price was used in computing the budget cost for the priced item, but the price change was not imputed to other items in the budget. Where the imputation pattern could not be applied, the June 1947 BFEC price was adjusted by the BLS index for the individual item for which no price was available.

Adjusting by the index for individual items: Price changes in men's wool sweaters are imputed, according to BLS procedures, to changes in the price of women's wool sweaters. However, the specifications of the men's wool sweaters priced by BLS had changed between June 1947 and November 1949. The sweater now priced cost 39 percent less in November 1949 than the June 1947 price of the sweater priced in that month. Instead of applying this decrease of 39 percent to the price of women's wool sweaters, the change in the price was computed by applying the decease in the index for men's wool sweaters to the June 1947 price of women's wool sweaters.

In this instance, as in others indicated in table G–1, there was no June 1947 index available. The index for February 1947 and the index for September 1947 were averaged, and the change from this base to December 1949 (the nearest quarterly index available) was computed and applied to the June 1947 price.

What level of living does the clothing budget permit?

The clothing allowances in the budget were determined by the resistance-point method and are actually at public relief levels. They are carried over from the BFEC into the revised budget only because no other clothing budget was found whose validity seemed beyond question.

The inadequacies of the BFEC allowances become strikingly apparent when item by item comparison is made with allowances for the younger adults whose needs the CWFB attempted to reflect. Younger and more active people may have greater need for certain clothing items than other individuals leading more sedentary lives, but it hardly seems likely that the differences can be as great as those indicated by comparison of the two budgets.

As compared with the allowances for the younger man in the CWFB, the allowances for the elderly man in the BFEC were cut from—

Approximately 4 pair per year to less than 2 pair, in the case of unionsuits or their equivalent in underdrawers and undershirts.

From 0.76 per year to 0.51 per year, in the case of felt hats.

Approximately one every 3 years to one every 8 years, in the case of sweaters.

Approximately 0.77 per year to 0.26 per year, in the case of suits, including light and heavy suits.

From slightly over 3 per year to approximately 2⅓ per year, in the case of shirts.

From 13½ pair per year to less than 4½ pair per year, in the case of socks (on the basis of the combined weights for all types).

From 1.23 pair per year to less than 1 pair each 2 years, in the case of shoes.

Approximately 6½ handkerchiefs per year to less than 1 each year.

From three per year to one per year, in the case of ties.

[83] U. S. Department of Labor, Bull. No. 699, supra, p. 94.

As compared with the allowance for the younger woman in the CWFB, the allowances for clothing for the elderly woman were cut from—

Over one per year to less than one each 2 years, in the case of felt hats.

One every 2 years to one every 5 years, in the case of the combined allowance for all coats.

From 4.17 dresses per year of all kinds to 1½ each year, the allowance for skirts was eliminated, and the allowance for blouses was cut from 1 every 2 years to 1 every 5 years.

From 2.18 per year to less than 1 per year in the case of shoes, and from 0.46 per year to 0.21 per year in the case of house slippers.

The differences are explained by use of the resistance point method which inevitably results in reflection of the inadequate incomes of those in the group whose expenditures are analyzed.

According to one of the outstanding authorities in the field, the basis for smaller allowances for the aged seems to be disappearing:

"As a result of my current research on family consumption and savings, I reached the tentative conclusion that the age differentials in the standards of clothing and house-furnishings have been rapidly disappearing since 1941. The result of some regular and assured income, although very small, has been apparently to allow the grandparents the aesthetic and social values that prior to the war they were denied by customs that were determined by the uncertainties of their incomes. If the same methods were used with current data, I believe that the up-to-date BFEC would show a considerable increase in the quantity budgets for clothing and house-furnishings." [84]

Allowances at relief level

The fact that welfare grants for clothing for elderly couples often approximate or exceed those provided in the BFEC is further evidence of the inadequacies of the latter.

The Federal Security Administration points out that the clothing allowance made by the Massachusetts State Department of Welfare for old-age assistance to an elderly couple was $143 in September 1947. The allowance for clothing in BFEC at June 1947 prices in Boston was $95.[85]

The Federal Security Agency also called attention to the fact that the clothing and personal care allowance for an elderly couple in the minimum adequate budget set up by the Council of Social Agencies of the District of Columbia amounted to $142 at December 1946 prices, while the allowance in the BFEC for clothing and personal care cost $120 at prices of March 1946 and $141 at prices of June 1947.[86]

Following are the clothing allowances currently being made by a number of relief agencies, or the cost of the clothing items being issued by those agencies, for an elderly couple. (In order to achieve comparability, the figures exclude cleaning, repairs, and miscellaneous accessories).

Clothing allowance

Agency: [1]		Agency: [1]	
A	$101.79	E	$132.00
B	127.00	F	130.00
C	124.02	Allowance in revised budget	110.64
D	99.07		

[1] Information supplied by the agencies in response to inquiries from UAW CIO. 2 of the agencies are municipal government welfare bodies; 2 are State government agencies; 2 are community social agencies to which are affiliated leading private charity organizations in their respective communities. All of the allowances shown are used for actual provision of clothing to aged relief or charity clients.

The inadequacy of the clothing allowance in this budget becomes even more obvious when the allowances for specific items are examined.[87] Such examina-

---

[84] Dr. Dorothy S. Brady, professor of economics, University of Illinois in letter, dated February 20, 1950, addressed to Nat Weinberg of the UAW-CIO. Dr. Brady was formerly with BLS where she played an important part in developing the CWFB.

[85] Federal Security Agency, A Budget for an Elderly Couple, Social Security Bulletin, February 1948, p. 11.

[86] Ibid.

[87] Some examples of these inadequacies have already been given in sec. II.

tion shows that the BFEC allowances are even lower in many instances than those made by the welfare agencies.[88]

In the allowance for clothing for the woman, the budget provides $3.30 per year for underwear. Among the welfare agencies studied for this purpose, the lowest allowance made is $4.92. For nightwear, this budget assumes an expenditure of $1 per year. Yet none of the agencies allows less than $2.39.

The allowance for rubbers and galoshes is lower in the BFEC than in any of the agency allowances.

The BFEC does allow for the purchase of $2.17 worth of yard goods a year for home sewing, for which none of the relief agencies provide.

The inadequacy of the clothing allowance for men is indicated by the fact that all of the welfare agencies studied made a bigger allowance for buying each of the following items than does this budget: Underwear, socks, handkerchiefs, nightwear, sweaters.

Not included in this list are items for which one of the welfare or charity agencies provides a lower allowance while all the other agencies provide more than this budget. An example is rubbers; one agency provides less than does the revised budget for this item, but all the others are significantly higher.

Nevertheless, no substitutions or increases in the BFEC allowances were made in computing the cost of this revised budget.

THE PERSONAL CARE BUDGET

The revised budget provides an annual allowance of $33.88 for personal care for an elderly couple in Detroit at November 1949 prices. The services and commodities provided in the budget, and the cost of these services and commodities is shown in table H–1.

TABLE H–1.—*Personal care allowances, and cost in Detroit at November 1949 prices* [1]

Item	Unit	Quantity per year	Cost in Detroit November 1949
Services.			
Haircut, man	Each	14.50	
Shampoo, woman	do	4.17	
Permanent waves	do	.37	
Total, services			$27.31
Commodities			
Toilet soap	Cake	40.00	
Cosmetics	Dollar allowance		[2] 1.65
Shaving cream	5-ounce tube	3.00	[3]
Total, soap, cosmetics, and shaving cream			5.56
Tooth paste	3-ounce tube	5.00	
Tooth powder	4.5-ounce can	1.00	[3]
Total, tooth paste and tooth powder			.79
Miscellaneous toilet articles and preparations	Dollar allowance		[4] 2.22
Total, commodities			8.57
Total allowance for personal care			33.88

[1] BLS prices, except as indicated. BLS prices for individual items withheld at the request of the Bureau.
[2] BFEC allowance of $1.58 at June 1947 prices, adjusted to November 1949 by the BLS index for personal care.
[3] Estimated from BFEC price by imputation from the change in the price of tooth paste.
[4] Allowance is 7 percent of the total cost of all personal care items.

The services and commodities provided in the revised budget are identical with those in the budget for an elderly couple, adjusted for changes in prices to November 1949.

[88] The items used in making comparisons between budgets are those which cannot be interchanged with others that are allowed in the budget. For this reason, the allowances for women's dresses, blouses, suits, and coats are not compared with each other, and the allowances for men's suits, trousers, and jackets are also excluded.

A comparison between the allowances for commodities and services in the budget for an elderly couple with those made by welfare agencies confirms the judgment that the budget for an elderly couple allowances, set by the "resistance point" method, are at a very low level. For example, the budget for an elderly couple allowance for cosmetics for the elderly woman is $1.65 per year. The welfare department of one State, which supervises the distribution of welfare funds throughout the State, makes an allowance for this purpose of $2.31.[89] The budget for an elderly couple allowance for miscellaneous toilet articles is $2.22; the same State welfare department allows $5.30.[90] The welfare allowance for these two items, which make up only 10 percent of the total personal care allowance in the budget for an elderly couple, is $3.74 less than the welfare allowance.

READING, RECREATION, AND TOBACCO BUDGET

The revised budget provides an annual allowance of $100.28 for reading, recreation, and tobacco for an elderly couple in Detroit at November 1949 prices. The allowances in the budget, and the cost of these allowances, are shown in table I–1.

TABLE I–1.—*Reading, recreation, and tobacco allowances, and cost in Detroit at November 1949 prices* [1]

Item	Unit	Quantity per year	Cost in Detroit, November 1949
Reading:			
Newspapers	Number	365.00	
Magazines	do	52.00	
Total, reading			$31.20
Recreation:			
Movies	Number	22.00	
Radio purchase	do	.11	
Radio upkeep	Dollar allowance		(2)
Total, movies and radio			16.58
Social dues	Dollar allowance		[3] 6.94
Other recreation	do		[4] 20.82
Total, social dues, movies, and other recreation			27.76
Total, recreation			44.34
Tobacco:			
Cigarettes	Pack	52	
Cigars	Number	56	
Total, cigarettes and cigars			15.40
Pipe tobacco	1 ounce	[5] 78	
Other, including supplies	Dollar allowance		[6] 3.41
Total, pipe tobacco and other tobacco, including supplies			9.34
Total, tobacco			24.74
Total, reading, recreation, and tobacco			100.28

[1] BLS prices. Prices for individual items are withheld at the request of the Bureau.
[2] Allowance is 25 percent of the annual cost of radio purchase.
[3] Allowance is 14.7 percent of the annual cost of movies, radio purchase, and reading.
[4] Allowance is 44.1 percent of the annual cost of movies, radio purchase, and reading.
[5] As published by FSA, quantity reads 78 tins of 1¾ ounces each per year. Information from BLS is that the correct allowance is 78 ounces per year.
[6] Allowance is 16 percent of the annual cost of cigarettes, cigars, and pipe tobacco.

[89] Yearly allowance: 1 large jar deodorant, 1 large jar hand lotion, 1 medium box face powder, 2 packages hair pins, 1 large lipstick, 1 medium box rouge.
[90] Yearly allowance: 2 combs, 1.3 hairbrushes, 4 tooth brushes, 1 shaving brush, 0.5 razor 10 packages razor blades.

Allowances in the revised budget are identical with those in the budget for an elderly couple, adjusted for changes in prices to November 1949. Costs, in all cases, are based on prices collected by BLS for its Consumers' Price Index.

Recreational opportunities

For the retired couple, the activities classified as "recreation" are not a supplement to a full day's occupation with job and family; they are in large part the major activities of the day. Unless adequate opportunity and means for recreation are available, the freedom from work which retirement brings is likely to result in mental and physical decay with each member of the couple taking out his or her frustration on the other.

If the elderly couple is to maintain the position in the community and to find the pleasure in old age which the American standard calls for, the allowance for recreational activity would have to be much larger than the allowance actually made in the budget for an elderly couple. The test of the adequacy of the budget lies not alone in the statistical measurement of the frequency with which the elderly couple can take part in particular activities; it lies also in the sense of opportunity which the allowance permits.

On both of these tests, the allowance in the budget for an elderly couple fails.

For all reading and recreation, except for tobacco, the allowance in the budget is approximately $75 per year, less than a dollar and a half a week per couple. Faced by the necessity of planning recreation and reading on that amount, no elderly couple would find that old age provided sufficient opportunity for relaxation and creative enjoyment.

The budget allowance provides for one newspaper a day and for one magazine per week. Since the magazine may be purchased each week only if a 15-cent publication is chosen, the choice of publications will be seriously limited. The highly popular weekly magazines in the 20-cent class would be eliminated from consideration, as would all the monthly magazines. While public library service is available in most areas, some families will want to buy an occasional book. However, the allowance provides nothing for this purpose, even on a statistical basis of so much per thousand couples.

The allowance for movies provides for 11 per year per person. This allowance will provide for attendance only at neighborhood movies, and those less than once a month.

The allowance for radio purchase and radio repairs is inadequate in view of the fact that nearly all families now can be expected to have at least one radio. The allowance would permit replacement of the radio once every 9 or 10 years, an average life for the radio hard to achieve, since the total allowance per year for this purpose is less than the price of one tube. One bill for service, particularly if it included parts replacement, would absorb the amount allowed for service for many years.

The allowance for "other recreation," $20.82, looms large until it is appraised in terms of the wide range of recreational activities which normally interest an American family and for which no specific allowance has been made in the recreation budget. Among these would be attendance at ball games and other sports, fishing, and the purchase of the games that come into vogue from time to time for home use.

The affects of inadequate income would tend to be reflected sooner in expenditures for recreation than in most if not all other categories. Use of the resistance-point method in analyzing recreation expenditures is likely, therefore, to have particularly serious effects on the adequacy of the recreation allowance.

GIFTS AND CONTRIBUTIONS

The BFEC provides an allowance for gifts and contributions on a flat percentage basis. This allowance, which is equal to 3 percent of the total cost of the other items in the budget, covers "gifts and contributions and irregular and infrequent outlays such as legal fees, bank charges, or fees for the maintenance of cemetery lots." [91]

Increased participation in community and family affairs is a concomitant of a rise in the standard of living. In all probability, expenditures related to such participation rise more than proportionately with increased income and relaxation of the pressure to channel all available funds into purchase of basic living essentials.

---

[91] Federal Security Agency, Bureau Memorandum No. 67, supra, p. 9.

Nevertheless, the 3-percent factor in the BFEC was carried over into the revised budget. The increase in the dollar amount allowed for "gifts and contributions" is therefore proportionate to the increase in the cost of all the remaining components of the revised budget as compared with the BFEC. For the reasons stated, the allowance is probably less than what would be required by an American standard of living.

The total allowance for all items included in the "gifts and contributions" category is $60.86 per year in the revised budget.

Mr. REUTHER. Thank you.

Senator MILLIKIN. Proceed, please.

Mr. REUTHER. The question of providing adequate security for old people in America is, we believe, one of the most pressing problems on democracy's agenda of unfinished business. The question of security is not only a matter of justice to the old people themselves; it is a matter of, we think, economic necessity, if we are going to achieve the kind of economic balance we need in our economy.

The old people need a decent, adequate family budget to give them the security and the dignity to which they are entitled. Aside from the human considerations, you have a very practical economic consideration, as long as millions of American families who are well along in life are denied the purchasing power to sustain a decent standard of living, the money that they lack is not being pumped into the American economy. Therefore, giving old people in America a decent, adequate income to provide security and dignity in their old age is an important economic factor, if we are going to try to achieve and maintain a full employment, full production, and full distribution economy.

There is a third consideration which certainly is very compelling at this hour of democracy's greatest crisis. That is the fact that if we can demonstrate in America that we are prepared to step up to the obligation that we have to our old people, and give them the kind of security and dignity to which they are entitled in their old age, that will strengthen us greatly in our struggle against the forces of totalitarianism in the cold war.

I think we all realize that the cold war, essentially, is a struggle for men's minds and their hearts and their loyalties. We have the practical problem in America of meeting the challenge of the Cominform, not by pious slogans about democracy's virtues, but by proving in a practical and tangible way that American democracy does have the moral strength and the practical, economic, and political know-how to come to grips with, and solve, the basic problems of the great mass of people.

I just returned in December from a conference in London where I had the opportunity of sitting down for a period of 10 days with 250 delegates representing the Free Trade Union Movement throughout the world. They represented about 48,000,000 organized workers. I met with these people in conference, I met with them as individuals, had breakfast with them, talked with them in the evening. They said to me repeatedly, people from all over the world, that the hope of the world was America, that if democracy could be made to work and to meet these practical problems of life, America would have to find the way.

These people that I met with are the people who occupy the front line trenches in the cold war. Some of them are from behind the

iron curtain, because there were delegates there from Berlin. Some of them are right up against the iron curtain, and they know what the basic problem is in fighting the forces of totalitarianism. And they said to me repeatedly, "Our biggest problem is answering the propaganda of the Cominform, not at a high political level, at a conference of foreign ministers, but at the shop level and at the neighborhood level, where people talk as people. The Communists raise two basic questions, and it is the answers to these questions," they said, "that concern us most as to what is happening in America, and where you people are going in America."

They said, first, "We are worried about growing unemployment in America." They said that the Communists are carrying on a continuous barrage of propaganda to the effect that democracy does not have the will or the know-how to solve the problem of unemployment.

Senator MILLIKIN. What is your own organization's figure on unemployment, may I ask, at the present time?

Mr. REUTHER. Our figure is that it is somewhere around 4,800,000 at the moment, but when you add to that millions of workers who are partially employed, it is greater. In the city of Muskegon, which is a city in which we have a sizable membership—the basic industry is foundries—one in every four adults is completely unemployed, and 25 percent of the employed workers are only partially employed. They are working 3 and 4 days a week. So that to our figure of 4,800,000 of people who are completely unemployed, we must add millions of workers who are working only part time.

Senator MILLIKIN. Do you have a rough view on the relation of part-time unemployed to full-time unemployed? Would you say there are twice as many part-time workers?

Mr. REUTHER. I am only guessing on this, but based upon our industry, I would say that there are probably 20 percent of the workers in our industry who are partially employed, that is, they are working, but not on a full week's basis. Our industry is in a more favorable position. The auto industry is, of course, as you know, booming; we produced more than 6,000,000 cars last year, and at the present time we are going at a rate of almost 7,000,000 cars. If you get into other industries that are not as healthy economicwise as the auto industry, you would find a higher ratio.

In the electrical industry, in the appliance industry in particular, they are experiencing a great deal of partial unemployment, as they are in some of the other consumer goods industries.

These people I talked with in London said to me, "There are two problems that we have to answer, every day, in factories where the Communists are agitating and trying to win the loyalty of workers, in the neighborhoods, in the communities. After all, we know and the people of the world know that the two symbols of the kinds of ways of life that people have got to choose between is the thing that America symbolizes in the world, and on the other hand, the totalitarianism of Russian communism. These workers keep saying, 'What about unemployment in America?'

"And the other question is, 'What about the security of a worker in America, whether he works in the factory, or on a farm or in an office, or in a store, what about that worker's security in his old age? Sure, as long as he is working he is earning relatively high wages, he has

a fairly good standard of living, but what happens when he is no longer able to work?' "

These people said to us, "If you people in America could really do something with respect to unemployment, and with respect to questions like the security of workers in their old age, you would take away from the Communists their most potent weapons in the cold war, and we could win allies and we could build the kind of loyalties that democracy needs if it is going to win the cold war."

Senator MILLIKIN. We were talking about unemployment. I notice there is a statement on that in your text.

Mr. REUTHER. In the prepared statement, we say about 8.9 million are working less than full time. Two million of these were able and wanted to work full time.

These people that I met in London are the people who have been tested as to their loyalty to democratic values. A large percentage of these peope were in the concentration camps under Hitler because they fought against that kind of totalitarianism. And it is their kind of people where the iron curtain has moved in to cover a larger territory who go to jail and go to prison and stand before the firing squad. Because these men and women have proven that they believe in democracy and these values, I believe that their evaluation of the world situation and the forces at work in the cold war give us a true picture.

They said to us that the American economy in this cold war is freedom's greatest asset, and what we do with it can be the decisive factor as to whether we are going to win. And they said that, "The world is going to judge you people in America not by your technology—we know you can split the atom, we know you can make pursuit ships faster than sound, we know you have built the tallest buildings—we are going to judge America not by your technological progress, but by the ability of American democracy to translate technical progress into human progress, into human happiness and dignity."

Really, that is what we are talking about here when we talk about old-age security. We are talking about finding a way to take the tremendous progress that we have made in the physical sciences and to reflect that progress in terms of human progress, in terms of people.

Senator MILLIKIN. I think that is a very good way to put it.

Mr. REUTHER. You see, we in America—nobody questions, even the Communists do not question this—we know how to do things with materials. I spent a year in Russia; I worked there in an automobile factory. They made model A Fords there. So I went over there as a technician since I had worked as a technician at the Ford Motor Co.

Senator MYERS. When was that?

Mr. REUTHER. That was back in 1934. The Russians marveled at American technology. They said, "You people can do such wonderful things with materials."

We have to prove now that we cannot only do things with materials, but we can also do things in terms of people. That is the key to the whole question of the cold war.

And this question of old-age security brings into sharp focus this whole question. It is fundamentally a moral question: Do we have the moral strength to find a way to translate technical progress into human progress?

I say if we succeed, we will give our allies a potent weapon with which to fight the Communists. If we fail, we will give the Communists a potent weapon with which to fight against us. I think that, in the kind of cold war in which we are involved, psychological weapons are just as important as H-bombs.

Senator MYERS. It has been said by some folks that since we are spending so much on the Marshall plan to fight the cold war and to build military might here, in order to protect us from sudden attack, that while we are spending those sums, it is rather impossible to keep a stable economy and expend further moneys to increase benefits such as you have just addressed yourself to.

Mr. REUTHER. I am going to get into the question of the costs of these things later on. If it is agreeable I would like to hold that, but I think that is an unsound argument.

Senator MYERS. You will comment on that later?

Mr. REUTHER. I will comment on that in detail.

Senator MYERS. I will withhold the question.

Mr. REUTHER. I say that in the cold war we have got to mobilize moral forces in the world that are stronger than the H-bomb, or we cannot win. That means you have got to win people's loyalty, you have got to get people to fight your battle with you. And that is what the Marshall plan is all about, that is what we are really trying to do. We are trying to win democratic allies in the world, because we cannot win alone. We have to have these other people with us.

At the last convention of our union we had 2,300 delegates. Those 2,300 delegates voted unanimously that they were going to devote their time and their energy and their strength to the No. 1 fight in America, and that was to win a measure of security for workers when they are too old to work but too young to die. They pledged that that should be the No. 1 objective of our union during the next year or two.

They took the position that we make no distinction, we want security for all workers, whether in the factory or the mine or the mill or the farm or the store or the office. The worker on the farm who has worked hard all of his life is entitled to the same consideration, the same security, and the same dignity in his old age as a worker in a factory. And the delegates to our convention said, "We believe that when a worker has given the best years of his life to productive effort in the American economy, as an economic right and as a moral right he ought to be able to look forward to spending the last years of his old age on this good earth of ours with an element of security and happiness and dignity, and have a little bit of sunshine in his old age." They said that old age should not be looked forward to with fear and uncertainty, with a dark cloud over your life; it ought to be looked forward to as a period of sunshine in which you really are able to enjoy the good things of life, have a little bit of fun with your grandchildren—and always you have more fun with your grandchildren than you do your own, because you have all of the fun without the responsibility. I see that in my own family.

Senator MYERS. They are not your grandchildren?

Mr. REUTHER. No, they are not. My father-in-law and mother-in-law come over and they have a lot of fun with my children, and when all of the work is to be done, they go home and we have the

responsibility. That is what I mean. And that is as it should be.

I say that giving people these things is not a matter of charity; it is a matter of right, economic and moral, and we believe that America has got to step up to this problem with courage and without hesitation.

In our industry, as in many other industries, we had a situation that we called the double standard. We had a situation in American industry where corporation executives—and we do not begrudge what they get paid—were getting two and three and five hundred thousand dollars a year who had provisions for pensions when they were too old to work and too young to die that ranged from $25,000 up to $75,000 a year. We had in our industry a situation where one executive made $516,000 a year, and based upon a 40-hour week, a 50-week year, he made $258 per hour. When the board of directors of that company got together, they said that this fellow had been a loyal employee, he had worked hard, but they figured that he could not save anything out of $258 per hour, so they made provision to give him a $25,000 a year pension, when he was too old to work and too young to die.

That same company a couple of years ago when we talked about this problem would not agree to give a $1.50 an hour worker a pension because they said, "Let him save for his old age. Why should we take the responsibility of providing for his old age?"

We said, "Well, if you gave a $258 per hour executive $25,000, then certainly it is economically stupid and morally wrong to deny a worker who gets $1.50 per hour some pension security in his old age."

Well, they said to us, "Don't talk to us about pensions. Go down to Washington. Pensions are bigger than collective bargaining. They are bigger than the workers in our factory. They are bigger than the whole automobile industry. The problem of old-age security is as big as America."

And we said, "You know, we agree with that. We have no difference of opinion whatsoever."

They said, "Why don't you go to Washington and get some laws passed to broaden social security in its coverage, increase the benefits?"

We said, "Fine."

And we came down here, but unfortunately we found the same people down here a couple of years ago blocking the increase in Federal social security.

We said, "We prefer to do it in Washington because we are not interested in dividing America into those citizens who have security and those citizens who lack security."

We have a powerful union. We have the biggest union in America. We have more than a million dues-paying members. We have more strength to fight to get these things for our people than most people have. But we are not going to use that strength to fight just for our people. We take the position that we can solve our problems in America not if we say, "Let us get security for this small group at the expense of everybody else." We take the position that we can make progress only if the whole community makes progress. We can get security only if all of America gets security.

And so we said, "We will go to Washington, and we will fight to try to get an increase in Federal social security both with respect to benefits and the scope of the coverage."

As I say, they came down here and they blocked that.

As we all know, for 12 years there has been no real improvement in the Federal social-security laws.

So we came down here, and we found that we could get nowhere, and our workers said, "Well, if you can't make progress in Washington, progress that will reflect security for all of America, then we have got to work with the tools of collective bargaining."

So we began then to fight on the collective bargaining front for pension plans.

We fought for a noncontributory pension plan in industry because we knew that that was the key to getting action at the Federal Government level. We said, "If we can fight to establish pension plans in private industry through collective bargaining on the principle that the employer must pay the total cost of such private pension plans, then the employer will have an incentive to go down to Washington and fight with us to get the Government to meet this problem because in a Federal program the employee pays part of the cost."

In the Ford contract, which was the first major contract in which we established that principle, we were fortunate in getting that established without a strike. That is the way we prefer to settle collective bargaining matters. That is the way they ought to be settled. As we have been saying, settlements should be based upon economic facts, not upon economic power.

In the steel industry they had to fight a costly strike and that strike was over the question of the noncontributory principle; that is, that the industry would pay the total cost of the private plan.

And because we made that fight, almost overnight industry's basic attitude changed, and they began to say, "The Federal approach is the proper approach," although the same people opposed it in the past.

We think that they were converted not through the mind or the conscience. This was conversion through the pocketbook, because they realized that if we had to get the pension plan on the private plan basis, and they had to pay the toal cost, that would cost them more than if it was done through the Federal Government, where they had to pay only a portion of the total cost.

I want to make it very clear that, although we have been very successful in negotiating private pension plans, and we hope to continue our efforts in that respect, we are committed as an organization without qualification to fight with everything we have and to use all of our influence for the passage of an adequate Federal program, both with respect to benefits and coverage. We believe that that is the way it ought to be done. Then all of America can get the security that we think the American people are entitled to. We do not want security for our members alone: we want security for everyone in America.

Senator MYERS. Is that the issue in the Chrysler strike?

Mr. REUTHER. In the Chrysler strike we are fighting to apply the principles that we have negotiated in other contracts with Chrysler's competitors; to establish a sound pension fund on the basis of an actuarially sound trust fund. That is the basic question in the Chrysler strike.

We take the position that the Federal approach is the sound approach. It covers everyone, and it will cost less in the long run, and it also gives workers mobility. A private plan freezes workers to their jobs, and we in America are proud of the fact that we con-

sider America a land of opportunity, and we think a worker should not be compelled to sacrifice security in his old age if somewhere in his middle age or his youth he has a chance to shift to a better job. That shift should not penalize him in terms of loss of security in his old age. Only a Federal plan can provide security and maximum mobility, and therefore maximum job opportunity.

While we have been very successful in our private plans, we are willing to fight to get the Federal social security up because we consider our private plans as supplementary plans to the Federal program. To the extent that we can increase the Federal program and get it up to where it is adequate, to that extent we will deemphasize our private plans and minimize their importance, and ultimately wipe them out completely. If we can get security at the Federal level for everybody, including our own people, there will be no need for the private plans. I want to make that very clear. We are committed to fight for security for all of America, not just the people who pay dues into our organization.

Senator MYERS. Might I interrupt you again?

Mr. REUTHER. Yes.

Senator MYERS. I notice on the first page you are about to begin negotiations with the General Motors Corp. shortly.

Mr. REUTHER. That is right. There again we are asking for the establishment of the pension plan integrated with Federal social security. And we tie in with Federal social security because that gives the company an incentive to come down here and fight for increased Federal social security for all of the people of America, since the two plans are tied together.

Senator MYERS. Will that be one of the basic fundamental issues?

Mr. REUTHER. That is correct, that will be one of the basic issues there. In the Ford plan, for example, the present plan, the Ford Motor Co. will pay approximately from $68 to $70 in order to make the $100 monthly pension, and the balance will come out of Federal social security, $30 to $32, that the average Ford worker would be getting. When Federal social security goes up, it means the company will have to make a smaller payment toward the $100.

That is why the Ford Motor Co. is interested in seeing that Federal social security is increased. When that is done, Ford's can retire their obligation in terms of past service credits quicker, because they are paying less toward the total $100.

It was not just an incident of collective bargaining, we deliberately and willfully went in to fight to integrate our private plans with the Federal plans, because we are committed to fight for security for all of the people. We are willing to use the strength and the power that goes into our collective-bargaining negotiations to try to facilitate and expedite the achievement of security for all of the people of America, because we think security, like freedom in the world, is indivisible. You cannot have security for a million members of our union in an insecure world. We will get security to the extent that we, along with our fellow citizens, can get security for everybody. Justice and peace and security and freedom, all of these things are indivisible in the kind of world in which we live. So we are committed to that kind of program.

We believe that H. R. 6000, while it represents an improvement over the existing Federal legislation, does not meet, either with respect to coverage or benefits, the real needs of the American people. We endorse the amendments that have been proposed by the national CIO in the testimony that was given here earlier by Emil Rieve, president of the Textile Workers Union and chairman of the CIO social-security committee.

The Federal Security Agency in cooperation with the Bureau of Labor Statistics made an attempt to try to get together the statistical basis of what ought to constitute a family budget for an elderly couple. That was done some time back. Their budget is more than twice what payments under H. R. 6000 would be, and about 3½ times as high as the current Federal social-security payments. But even the standards of this budget are not adequate.

In Detroit, if you take this budget for an elderly couple as gotten up by the Federal Security Agency, based upon the living costs there, it would require $1,720 per year, or $143 per month to give an elderly couple the standards of living provided for in that budget. That budget, as I say, is inadequate, even though it is a little more than twice as much, as what H. R. 6000 provides, and 3½ times the current social-security benefits. That budget in our opinion is inadequate because the food allowance is at the level of public relief. We do not think an edlerly couple ought to get just what a family on relief gets. We think they are entitled to more than that.

The clothing allowance is below the clothing allowance given in public-relief budgets.

The medical-care allowance is wholly inadequate.

The budget as an over-all proposition is on a level 25 percent below the annual per capita average of consumption.

Obviously, a budget that is 25 percent below the average per capita consumption is not an adequate budget. We believe that old-age security is more than just material things, although material things are important. An aged couple in America ought to have enough of material well-being and security to enjoy the dignity and the spiritual values in their old age to which they are entitled. It is not just a matter of keeping body and soul together physically—I suppose that this budget will keep you alive—but we want people to be alive with dignity so that they can enjoy the spiritual values. That is the thing that makes us different from the common animals, in that we are spiritual beings in addition to physical beings.

Mr. C. E. Wilson—and it is not often that I quote him before senatorial committees in support of my arguments—had something to say on this. I am referring to C. E. Wilson who is president of General Motors Corp. There are a number of C. E. Wilsons in high executive positions in America. Mr. Wilson, of General Motors, said before the Executive Club of Chicago on January 6, 1950: "In our prosperous Nation men and women who have been gainfully employed and have had a standard of living much beyond a subsistence level are not satisfied in their old age to drop down to a mere subsistence level."

That is the thing. When a fellow retires, when he gets too old to work, too young to die, he should not suddenly have his standard of living drop down 25 or 30 percent. He ought to go on and he ought to enjoy those last years of his life in sunshine and dignity and security, and that is exactly why we think this budget is inadequate.

We are proposing in this long document that I have asked to be incorporated in the record the elements that would reflect a decent approach to an American standard of living for an aged couple. It is not everything that we think it ought to be, but we think it is an approach to that kind of standard of living. The budget that we propose would provide a $2,089 per year income, or $174 per month. I hope that the members of this committee and anyone else who reads the record will examine our full statement and the appendix in which we describe the assembly of the adjusted budget.

I would like just to hit a few of the high spots in this budget. When you look at a budget, you should not look at the total cost of it because you might think that it looks kind of high. People do not eat the money they get. The aged worker and his wife do not eat the $2,100. They live on the things that $2,100 will buy.

That is why we have been saying in our union for a long time that the number of dollars you take home is unimportant; it is what you can buy with the dollars you take home. When we fought for wage increases, we said we wanted those wage increases not out of higher prices; we wanted those out of the fact that industry was more efficient, and that the money was there to pay them without taking it out of the consumer's pocket. If you get a wage increase today and there is a higher price tomorrow, you do not make any progress at all. You just accelerate the speed of the economic merry-go-round where wages chase prices but never catch up.

So the important thing is not how much money does an aged couple get in a year; the important thing is what they can buy with the money they get. When you look at the items in this budget on that basis, you begin to see that this budget that we are proposing is a modest budget. These people will not move into a penthouse. There are no mink coats in this budget and there are no diamond rings. This is a simple budget to keep people in the kind of economic situation that we think they are entitled to.

I will just hit a couple of the items.

The budget allows one-eighth of a pound of butter per person per week. That is 6½ pounds per year, while last year 11.4 pounds of butter were produced for every man, woman, and child in the United States. When the farmers are worrying about oleomargarine, we ought to get their support, they ought to say, "Look, this budget is too low. You ought to give these people more butter than one-eighth of a pound per week, because that is going to leave tremendous butter surpluses. We are making 11.4 pounds per woman, man, and child in America every year."

The allowances for clothing and house furnishings are taken directly from the budget for an elderly couple. We took exactly what that budget proposed. The items in these two categories that are made of cotton are equivalent to 15 pounds of raw coton per person per year. This times 11,000,000 aged couples equals 165,000,000 pounds, or 330,000 bales.

I am sure that Senator George would agree that will not eat up the cotton surplus in America. If every family in America consumed only that much cotton, the cotton farmers would have a more serious problem than they now have, and they now have a serious cotton surplus.

The male member of the couple may have 2⅓ shirts per year, one of which must be a work shirt. He may buy 1⅓ union suits per year, plus two-fifths of each of an undershirt and a pair of underdrawers, which is an equivalent of less than two sets of underwear per year.

A housewife may have for housework one house dress every year and one apron every 2½ years. It is not going to take much cotton, Senator George, to produce those few house dresses, and one apron every 2½ years. They had better be pretty strong, because I am sure they will not last that long.

The man is allowed one overcoat every 8 years.

The wife is allowed eighty-five one-hundredths of a handkerchief a year, or one handkerchief every year and nine weeks.

The husband does slightly better. He gets ninety-two one-hundredths of a handkerchief every year, one handkerchief every year and five weeks. That is how fine this budget has been cut.

The man is allowed one wool suit every 4 years, and one cotton or tropical worsted every 16 years.

These items are typical of the budget that we are proposing as an approach to an American standard for an aged couple. No American—I do not care what his political affiliation might be, I do not care what his economic status might be—no American in 1950 can say that an American couple having worked productively all of their lives in the year of the H-bomb, in the year of the wonders of modern technology, are not entitled to that minimum budget of decency and dignity. We think that that represents the minimum of what we ought to have in terms of a family budget for an elderly couple.

The question always arises in America—it is true in government, it is true in industry, it is true in agriculture, it is true in life, when you talk about doing things, people always say—"How much is it going to cost?"

That is a perfectly logical, legitimate question that we have to ask ourselves. Since there is no economic Santa Claus, somebody somewhere, somehow, must pay for all of these things we are talking about.

According to the studies we have been able to find and work on ourselves—and we have worked at this thing for a long time, and I think we have competent technicians—H. R. 6000 as it now is proposed would cost in its first year of operation about 1.3 billion dollars.

Our program, the CIO program, the program that is reflected by this budget, discussed in detail in my prepared statement and highlighted verbally here today, would cost, not today, but in the year of 1955, 5 years from now, 6.3 billion dollars.

One of the problems, and one of the mistakes that are made too often, sometimes unknowingly, and I think sometimes knowingly, is that people attempt to measure the cost of old-age-security programs in terms of current production, in terms of current national income. In measuring the cost of old-age security, which is a long-range program, you have to measure the cost in 1955, not by the productivity in 1930, and not by the productivity of the American economy in 1950. You must measure the cost of the old-age-security program in 1955 by the productivity and the total national product of the American economy in 1955. Then you are measuring cost based upon the ability to pay that cost at the time the cost occurs.

I think that the Council of Economic Advisers made this point very clear when it stated:

> If enactment of legislation now involves the commitment that X number of people who will not be working 30 years from now receive Y number of dollars of old-age benefits per month, the real test of whether the Nation can afford such a program is not XY dollars per month measured against the current size of the economy, but XY dollars per month measured against the productivity of the economy 30 years from now.

That is the point that we have to keep in mind.

In 1955, the national productivity of the American economy, based upon the normal technological trends—and that does not get into the question of the application of atomic know-how to mass production, this is just measuring the normal trend of technological progress—in 1955 our national production will be more than $300,000,000,000.

Taking the cost of our proposed budgets in 1955, it represents less than 2 percent of the total wealth that will be created in that year. The cost of this budget would mean that we would be putting aside less than 2 percent of the total national production of our economy in 1955 to give people security in their old age. That represents approximately 10 percent of the increased wealth that we will create.

In other words, it is 10 percent of the wealth that will be produced in addition to the wealth that we are currently producing. That is what we are talking about.

There is another good way I think to measure this thing—and this again is related to the positive fight to save freedom and democracy in the world. Tragically, history shows we have done this many, many times over; when we are faced with the physical threat of war, we are willing to do anything to meet that threat. In the last war when we project the cost of the last war into the future, and after all veterans' benefits and all of the other things that go into the cost of war are part of the cost of war, let's see what it cost. Mr. Paul Hoffman, in testifying before the Senate Foreign Relations Committee, I think, spelled this thing out in very clear and dramatic terms. He said that when you project the cost of the last war into its ultimate cost in terms of material and money values—not to talk about the cost in human values, which cannot be measured in dollars and cents—"the last war cost us or will cost us when we finally pay for it in dollars and cents 1,300 billion dollars." It lasted 44 months. It cost us 29½ billion dollars a month; it cost us $985,000,000 per day; it cost us $41,000,000 per hour.

Now, taking our budget, this budget that gives a housewife a house dress every year, that budget would represent less than the cost of the war for 1 week.

Senator MILLIKIN. Is your budget based on one person or a couple?

Mr. REUTHER. A couple; it is for a couple.

Senator MILLIKIN. How much per month per couple?

Mr. REUTHER. $174, or approximately $2,100 a year. That would just give you these very minimum things that I have listed here. Pensions geared to that budget, as I say, would represent less than 1 week's cost of the war. And I just ask any American—I do not care whether he is a Senator or a corporation executive or a dirt farmer or a worker with grease under his fingernails—can America do less for its old people than to spend in the year 1955 an amount of money

for the total year to provide security and dignity for its old people in an amount less than the cost of 1 week of waging the war?

That is a very important political problem. It is a very important economic problem. It is a very important moral problem, because it gets right to the guts of what we are really fighting to try to do in America. We are trying to advance the basic morale and dignity of man, and this is how we have to do it.

We have the problem of finding a way in America to mobilize abundance for peace and for people. If we can spend billions for bombs and destruction in war, then we have to find a way to spend money for people in peace. That is the challenge. The trouble in America is that we have been dividing up economic scarcity so long we are afraid of abundance.

I have been saying for a long time that the trouble in America is that we need a fifth basic freedom, which I call freedom from the fear of abundance. We are afraid to let go in America, to create the abundance for peace and for people that we did in wartime. We are just afraid of abundance, because we have been dividing up scarcity so long. We are afraid that, if we get abundance, we will not know what to do with it. Yet it is the key. It is the key to our economic problems. If we have full employment, we can afford all of these things, because based upon the productivity of a full-employment economy in America, the cost of these things is relatively small. But if we keep figuring the cost in terms of scarcity, in terms of unemployment, in terms of our failure to utilize the productive potential of the American economy, then we get into trouble.

General Bradley, who I think is not only a great military leader but I think a great American and statesman, has a sense of understanding of the moral factors that are involved in the cold war and are just as important as are the political factors. He has pointed out that we cannot defeat the Russians by turning America into a kind of garrison state, and building up statistical supremacy in terms of bombs and airplanes and tanks and men under arms. He said we have got to do more than that in America. And I would like to quote what he said at the CIO convention in 1949, in the fall. I quote General Bradley:

> The difficulty of our decision—

talking about this whole question of the cold war—

> stems from the problem of distributing our abundance according to the needs of those sharing it. American resources are not unlimited. American production must be increased.

That is the idea. It is mobilizing abundance and increasing production in peace.

> American production must be increased if we and the world are to enjoy the full benefits. Throughout our struggle, however, decision must be in favor of expansion and sharing, rather than reduction and selfishness.

In other words, instead of getting into this old concept of dividing up economic scarcity so that one fellow can get his share only if the other fellow is denied his share, we have got to abandon that antiquated, obsolete concept, and we have to take this whole new bold concept of mobilizing our wealth.

Just look at the wealth that our 4½ million unemployed could create; if they were working, they could pay for all of these things. But they are unemployed. We are wasting their labor. We are wast-

ing the production that they could be creating if they were working. They were working in war. Why, we talk about how a fellow gets a job today. At the employment gates in Detroit, during the war, they would just feel them, if they were still warm they would hire them, anybody that came along.

We have got to make up our minds in America. Isn't there something wrong with a country and with a world that can mobilize people, get people working and sacrificing and fighting together for the negative end of war, and then fail to get them working together for the positive end of peace? If people can work and fight and sacrifice together because they share hatred and fear in war, why can't they get together and work together because they share hopes and aspirations in peace? It can be done. The people want to do it.

We have got to give them the leadership. We in positions of responsibility in government and industry and labor and agriculture, religion, and education, we have got to accept the challenge that peace presents us with. We have got to find and show a way to find full employment, to give people a chance to work just as hard for the good things of life as they work for the negative things in war.

The people want to do it, and that is what General Bradley is talking about—expanding our economy, creating abundance, and sharing that abundance based upon the needs of people.

Get the last census, taken in 1940. It is a little out of date, but not too much. You will find there that 21 percent of the American homes do not have electric lighting; 58 percent do not have central heating. Almost 50 percent do not have the kind of private bath facilities we need. Why, if America met these needs and we put every factory, every worker to work on the full-week basis, in 20 years we could not meet the needs—in 20 years. We do not have to go to Asia for markets. We do not have to worry about developing new spheres of economic influence in other parts of the world. We have got the biggest unfilled market in the world in our own back yard.

Senator MILLIKIN. Amen.

Mr. REUTHER. But the trouble is that we are trying to do this thing on the basis of scarcity, here and abroad, and every time we measure these cost factors in terms of scarcity, we get frightened. But measure them in terms of the abundance that we can create. Four and one-half million people back at work can pay for all of these things, and we are wasting that. That is the point that General Bradley was making.

Senator MILLIKIN. May I ask, Mr. Reuther, whether we are increasing our productivity per man?

Mr. REUTHER. Yes.

Senator MILLIKIN. Have you statistics on that? I have been trying to get that.

Mr. REUTHER. The figures on that are very hard to nail down. They are hard to measure. For example, in the General Motors contract, we had the escalator clause, and we still have it. The General Motors Corp. recognizes that there is a natural improvement in technology that is reflected in higher production and we have that in our wage agreement where every year there is a productivity-increase improvement in the wage structure.

Productivity varies by industry, depending upon the total impact of technology in a given industry. You might have a chemical plant

that has 500 workers and some new chemical process may come along, they build a new plant, and they will cut that down so that 50 workers can run that same plant and turn out the same production.

Yesterday I was in Boston. I had breakfast with a scientist, Prof. Norbert Wiener, of the Massachusetts Institute of Technology, and we talked. I have been in contact with him and working with him on the problem of where are we going with technology. He is the fellow working with another group of scientists on this machine that can think, play a game of chess or checkers, beat the average fellow. It can actually think through a movement on a chess board. The thing that is bothering him, bothering me, and the thing that ought to be bothering all of the people of America is that here are these new machines.

He says it is not beyond the realm of possibility in 10 or 20 years to have an automobile-assembly line completely mechanized, just with a fellow sitting in a nice little booth with a control panel pressing buttons. He says that, technically, we are capable now of doing that kind of a job. In the chemical industry it has moved much faster than in some other industries. But in terms of the auto industry, it is conceivable within 10 to 20 years to have a completely mechanized assembly line.

The question arises, Are these new machines, is this new technology, going to help us create security and dignity in the building of a brave new world for people, or is it going to dig our economic graves?

That depends upon what we do. If we have the courage to take the bold approach to the mobilization of abundance, then it will build that brave new world. If we continue to adhere to the old obsolete concepts of economic scarcity, it will dig our economic grave, because the machines will not buy cotton textile goods, for instance.

I want to read some figures about apples and I wish Senator Byrd were here. In 1931, you know we thought we could solve the problem of the American economy by everybody going into business for themselves. You recall one unemployed worker was trying to sell another one a bright shiny red apple. But it did not work. And the figures indicate what happened to the price of apples in 1931. They were 64 cents a bushel. In 1937, when the boys who got so worried about economizing—"we cannot afford this, we cannot afford that" – that they cut expenditures, we went back down that road toward economic scarcity. The price of apples went down to 64 cents a bushel again, because you cannot solve the problem that way.

Senator MARTIN. I would like to press Senator Millikin's question, because I think it means so much, and I think we have got a witness that is in a position to give us information on how the productivity of the individual has increased. We had the railroad expansion in the sixties, and it expanded until we had a break. Then we had the great steel expansion of the early 1900's, then the automobile. What I am getting at there is this. I think probably your organization and the industrial organizations meeting together can give us figures that we could depend upon, because I think it means a lot to us. What you are saying about these fine machines, I am not worried so much about that, because there has never yet been a machine made that you do not have to have an individual with the know-how to keep that machine operating. Take in my own State in the coal business. We

have made marvelous improvements there, you know, by machinery. It has increased production. I think it has been fine for everybody concerned. But we have to have men that know those complicated machines. That means that the workmen have to be more skilled, and I think that has greatly increased their productivity per hour, but I believe that you are in a position, through what I think would be good for our country, to have men like yourself sit with the president of General Motors and others, and then you delegate this job to somebody, because I feel this committee ought to have that information.

Mr. REUTHER. I would like nothing better, and I certainly would like to cooperate in every way possible in trying to achieve, in trying to achieve, I repeat, the facts on these basic questions, because I think certainly we cannot know where we are going unless we know what the facts on productivity are. I would be willing to participate with any group trying to get those facts.

Let me give you a specific example. In the steel industry, if you went through an old steel mill where they had the old processes of the doublers and rollers, and so forth, and then went through a modern continuous-strip mill, where the ingot goes in the first set of rolls and the sheet steel comes out and is sheared off at the other end, you would get the change. In the auto industry, you can get the change in terms of specific machines, where they bring in a machine that consolidates five or six operations, where they had five workers before, and with the new model, they have one worker. They stick in a casting and it comes out on the other end with five operations in one.

That sort of thing goes on every day in our industry. Every day in our industry there are new machines coming in that consolidate five and six operations.

Senator MARTIN. Does it not require a man with greater productivity per hour to keep that machine operating? You take a Joy coal-operating machine in soft coal that takes some real men to keep that thing in operation.

Mr. REUTHER. That is right.

Senator MARTIN. You know I could not do it, neither could you, because we do not have the know-how. It takes a very skilled workman. And to my mind that is going to mean production of more coal per hour, but I do think we ought to have the information as to how we stand in productivity now from we will say 20 years ago.

Mr. REUTHER. I think maybe the Government ought to try to initiate steps to get labor and industry and everybody else together who could throw some light on it and get out these facts.

Senator MARTIN. I would like to see you, and we will say the big men in the motor industry together, because I would feel better satisfied with the answers from you than I would from Government because you have been through the mill. You have got the responsibility for the employment of hundreds of thousands of people, and these men in Government do not have that.

Senator MILLIKIN. We should get these figures. Obviously in projecting costs, you have to project productivity and we have not had a dependable set of figures from anyone in this hearing.

Mr. REUTHER. That is right.

Senator MARTIN. That is why I was pressing that. You are in a position to give us wonderful information because you represent such a great industry.

Mr. REUTHER. Let me give you a specific example. In the Oldsmobile plant in Lansing, Mich., they have built a new plant there, and it is the last word in automobile-engine plants. They have got into that all of the new gadgets and the new plant lay-outs and so forth. We are told by the efficiency engineers and people who go into laying out plants and the like that the Oldsmobile plant is about five times as efficient in terms of manpower and production as is the normal prewar type of automobile-engine plant.

Senator MARTIN. What is their employment now? What proportion of the men in the old plant do they now employ in this new and most modern plant that they have?

Mr. REUTHER. In this situation on the actual production line, it would be a ratio of 5 to 1. They may have to increase slightly their maintenance crew where you get more mechanization, but on the whole what you find is that the number of maintenance men does not increase you merely get more highly skilled maintenance people. As it becomes more complicated, you get a higher skilled maintenance worker, not more workers, but a more skilled worker doing the maintenance work.

I personally think that you are absolutely correct in terms of trying to measure cost, you have to find out where you are going in terms of productivity. I would be willing to join with General Motors or any other company in a joint development of these basic productivity factors because, as I said earlier, you have to base economic decisions on facts, not power, and these are the basic facts.

Senator MYERS. Is it your view, then, that the cost to the consumer should come down, the automobiles produced in this more modern plant should cost less?

Mr. REUTHER. We have been advocating lower car prices for a long time. We have said that the car market would greatly expand in America and the steel industry and the textile industry and every other industry, the rubber industry, would get the benefit of expanded automobile production, if they brought the price of cars down. And they can afford to bring the price of cars down. They can afford it. Take General Motors, for example.

Senator MYERS. Before you get to that, you say in this new Oldsmobile plant that the personnel can be reduced, that it would take five men to run the assembly line in the old plant and that one now could take the place of those five in the new plant.

Mr. REUTHER. That is right.

Senator MYERS. Did I understand you to say that?

Mr. REUTHER. Five to one ratio, supposed to be. That is just on the engine operation, not the whole car.

Senator MYERS. The labor costs are materially reduced, which, of course, is reflected in the price of the car to the public?

Mr. REUTHER. You have to look at GM profits, and then you realize that they have reduced the cost of building the car and have made a number of token reductions in the prices. General Motors last year made almost $100,000,000 profit per month. They made over $1,100,000,000 for the year before taxes; and since the labor costs are figured before taxes, it comes out of that figure. There is no question about

it that they can afford to cut the price of cars, and they ought to cut the price of cars. Our philosophy is that the important thing is to get consumer prices down so that the people in America can buy the things they need.

Senator LUCAS. It seems to me as this mechanization develops, as you have developed it here, and told this committee, the real question is what to do with these four people we throw out of the jobs as a result of this ratio being increased from 5 to 1. Is that not really the basic thing that we have to consider?

Mr. REUTHER. That is the key. That is right. As technology increases the productivity per worker, one worker can then create as much as two workers formerly created. Then you have the problem of finding something else for that other worker to do.

Now, that is the whole key to the question. How do you find a balance between mass purchasing power and mass productive power? You have to create enough demand so that the other worker can be used in the same job where they can double production. There are many industries in America where we could double the production and still not meet the needs of the American people. And the other thing is that there are always new products coming into the market that people need that this other fellow could be employed in producing. That is why we got into very serious trouble in 1929. People were buying things on the installment plan. They were spending future income yet unearned. We kept our economy going in high gear because people were spending in 1929 money that they had not earned yet in 1930, and this whole thing got serious. People were doing that. This problem was pointed out by Mr. C. F. Hughes in the New York Times the other day. He pointed out that we were getting into serious trouble on what he calls deficit spending. Most of the discussion you hear about deficit spending involves the Government. Every time you say deficit spending they think of Washington. He points out the most serious part of the deficit spending. He says—and I quote:

> There is not only deficit financing by the Government, but also deficit financing by a major portion of the population of America.

What does that mean? That means that people are spending income not yet earned and paid, just as the Government spends money it has not collected when it has deficit financing.

That is what got us in trouble in 1929, because finally it got so inflated, this installment buying, the deficit financing on the individual's part, that they began to foreclose, people could not meet the payments, and then the thing snowballed. They laid people off, they curtailed production. Every time they laid off another thousand workers there was less purchasing power. They had to lay off some more, and we got the whole thing going downhill.

We propose to reverse that process on the upswing, instead of curtailing production, increase production. You absorb these 4½ million unemployed, get them to work, and they will earn wages, they will buy commodities, create markets for others, and it builds up.

It is that positive instead of the negative approach based on scarcity which is the question. If we could get the productivity figures, there is no question but that the productivity increase would be found to be greater than industry is willing to admit, because this is always a col-

lective-bargaining problem. If we go to General Motors and say, "Why, the increase in productivity has been 10 percent since the last contract, we want a slice of that, we want our slice, and the consumer ought to get his slice by lower prices, and the stockholder ought to get his fair return on his investment," "Oh," they say, "but the increase in productivity was not 10 percent; it was only 3 percent."

They minimize it because that strengthens their bargaining position. We would like to get the actual figures, because we do not want to be kidding ourselves. When we go in to argue for a bunch of workers, we do not kid them. We do not say, "Why, we are great labor leaders; we are going to pull a rabbit out of the hat for you." We tell them they will get exactly what the industry can support. There is no Santa Claus involved here.

We would like the figures, and we would be willing to cooperate with you, with anybody else. If we could get General Motors and Chrysler and Ford and all of the other companies to sit down publicly and discuss these things, we are prepared to meet tomorrow morning at 9 o'clock, any place. We have been trying to get them to do that for a long time, and if you can use your good influence to help get them to be willing to do that, why, we shall be forever grateful.

Deficit financing would not be so bad if you knew you were going to keep working. It is bad when you get laid off. Then it all piles up and comes home. Then your chickens come home to roost, because the fellow you bought the television set from, and the new washing machine, knocks on your door and says, "Your next installment is due," and you cannot say, "I am sorry; I got laid off. You put all of these installment payments in the deep freeze and keep them there until I go back to work. Will you do that?" He says, "If you do not have the payment by the end of the month, we will have to take this stuff back." And that is the thing we have to avoid getting back to.

That is the reverse. That is the downhill plunge. That is what we cannot afford.

The thing here, it seems to me, is that we have to avoid getting into the kind of psychological atmosphere, the kind of environment where we are afraid to do these things because we are afraid we cannot afford them. We could not make a greater contribution to the achievement of full employment in America than to raise the old-age security to the level of the budget we propose. I think it was Senator Millikin who coined a very good phrase, "dynamic spending"; that is the key to this thing. Dynamic spending means you have to keep money going into the economy, money that creates jobs, money that creates demand, that creates opportunity.

Every dollar paid to an old couple represents the highest velocity dollars in the economy. A young fellow may save, but the person who is getting down the road in his life will not save for his old age. He is spending in his old age. They will spend that money to live on then.

In other words, every dollar given to an aged couple will get right back into the economy in terms of consumer demand, in terms of creating a market for products, and creating employment opportunities for the younger people. So that this is the best way to do this job, and to do it effectively.

Senator LUCAS. In other words, what you are saying is that if we increase the budget for the aged couple to $174 as you are suggesting in the social security bill, it would mean that those people would spend that money, and therefore aid in keeping this economy of ours moving to the end that these four people that might lose a job in that plant that you were talking about a while ago might find a job some place else.

Mr. REUTHER. Exactly that.

Senator LUCAS. As a result of the money that these people would spend through the plan that you have outlined here. That is one factor that would help do it?

Mr. REUTHER. That is right. Every dollar given to an aged couple under the program that we are suggesting would be a high-velocity dollar, would reflect dynamic spending, would create demand for goods, pull into the labor market these 4½ million unemployed, and they would create more wealth, and this whole thing begins to supplement and build; and that is a key to the future of the American economy. The money spent on old-age security will give you more results quicker and more directly than money spent any place else, because the old couples are going to spend it. They will not save it for their old age.

Senator LUCAS. The velocity of the dollar turns over quicker in the old-age group than any other.

Mr. REUTHER. That is right.

The CHAIRMAN. You are suggesting, however, that the emphasis be placed on the old-age and survivors insurance in the act, rather than direct grants to the States?

Mr. REUTHER. I think that you have got to build this thing. I think that people are entitled to this as a right and you have to strengthen the old-age security coverage at this level and minimize the relief and assistance under the State regulations as much as possible, because I think that they are wrong, and I think that is the proper way to do it.

We think that in addition to the old people, you have the problem of people who are disabled permanently and totally or temporarily. They are really in the same kind of situation.

In the meantime you do have to give the States money to bridge the transition period until we get this kind of a program really going. But the emphasis has to be placed here, we believe, instead of at the State level.

The CHAIRMAN. On a universal coverage.

Mr. REUTHER. That is right.

Senator MILLIKIN. Might I pursue the chairman's question? You favor universal coverage in the sense of covering everyone, regardless of whether he is an employee or not, everyone?

Mr. REUTHER. That is right. I think you ought to cover every American and then you know that you have done the job.

Senator KERR. You mean in the OASI program?

Mr. REUTHER. That is right.

Now, history was not of our own choosing. I think America would have been very happy and contented to go along living its own life and not getting involved in all of the commitments and complications of this troubled world of ours. But history has made us the

custodian of freedom in the world. I mean if we do not make it secure, it will not be made secure any place.

It seems to me that we have the practical challenge of proving to the world that American democracy can mobilize its power in peacetime. The Communists offer not economic security, they offer the promise of economic security at the price of spiritual and political enslavement. We have to prove that it is possible for people to achieve economic security and material well being without sacrificing their political freedom or their spiritual freedom, and that is really what we are trying to do in America.

We have tools of abundance to work with. We have all of the material resources. We have the technology, we have the ability to produce industrial products, and our farmers know how to raise all of the things that we need. We have all of the material things. We have the human need to conquer poverty and insecurity. We have to prove to the world that we have the courage, the courage and the will and know-how to do this job in peacetime.

And I say that old-age security is on the top of the agenda of democracy's unfinished business. There is no other place where the gap is so large and so serious between what democracy promises and what it performs, what it preaches and what it practices, as in this field of old-age security.

I urge the members of your committee to give this every consideration as I know you will. Let us really answer the Cominform and the Politburo in the Kremlin not by slogans about democracy's virtues, but by tangible down-to-earth practical achievements, by saying "O. K. in the year 1950 America in its greatness accepts the moral and human responsibilities that go with that greatness, and we are going to take the steps to give every worker in America, whether he works in the farm or the factory, or the mine, or the mill, every American, every American couple when they are too old to work and too young to die, we are going to give them security and dignity in their old age, so that they can live as Americans ought to live, and have sunshine and happiness in the last years of their life."

Thank you.

The CHAIRMAN. Thank you very much, Mr. Reuther.

Are there any other questions from any member of the committee? Thank you very much.

Mr. REUTHER. I appreciate this opportunity to come here.

Senator MILLIKIN. At various times I have asked this question, and I am particularly anxious to get an observation from you, because I think you have the problem in the most intense form.

To get this productivity we are talking about, it seems to me that we ought to afford opportunities for elderly people, if they want to and are able to work, and without deduction of the benefits that you are talking about, the opportunity to work. You have young people pretty much in your business. What is the answer? How in the automobile business, for example, can you keep the elderly persons working who are able to work?

Mr. REUTHER. I have given that problem a great deal of thought because I think it is a real problem. I am opposed to compulsory retirement. I think that if a fellow is physically able to work, and he is able to perform a job, he ought to be given the opportunity of

making the decision when he quits his job. I think that labor and management ought to try to work out ways to facilitate meeting that kind of problem, and our attitude in our union has been one of complete willingness to cooperate on that sort of thing.

The other fact is that if you have a full employment economy, where the struggle and the competition for job opportunity is not so keen, then you will not have management so willing to squeeze the old fellow out of the plant, and there will not be the pressure there to squeeze him out.

But if there are five hundred young fellows loose and lined up who just graduated from the high-school football team with a gleam in their eye, waiting outside, and a fellow gets up there where he has not got the pep he used to have, then the company is going to try to squeeze him out to get that young fellow with the gleam in his eye in that older fellow's place. If everybody had a job, there would not be that pressure.

Senator MILLIKIN. Is it not the duty of industrial statesmanship among the larger outfits, anyhow, to give a lot of attention to that and see if they cannot keep people working as long as they are able and willing to work?

Mr. REUTHER. That is one of the many problems that ought to challenge industrial statesmanship. I quite agree on that. It is a real problem. All of these things are human problems. If a fellow is able to work and willing to work, I think that he gets a sense of satisfaction out of being able to work. You know, the average fellow—there are exceptions—but the average fellow wants an opportunity to earn a decent living, to live in security, have a little bit of fun, give his kids a little better chance than he had in life. He is not looking for something for nothing, and if he can work and he is able to work, he wants to work.

Senator MILLIKIN. Is there a field in the automobile business where a fellow could work on a slowed-down basis?

Mr. REUTHER. Only if you could isolate the job.

Senator MILLIKIN. Am I talking about something that is not practical?

Mr. REUTHER. In the automobile industry that is not practical unless you could isolate the job. In any plant that is synchronized, where you have a flow of production from one operation to the other, every worker regulates the speed of the next worker, because it is a flow of material operation. You cannot do the thing you are suggesting on that kind of an operation. You would have to get what we call an isolated free motion job. In other words, where the worker has no relationship to the flow of production to any other worker; he works out of a stock pile or something where he has nothing to do with what the next fellow does. Otherwise, if you had a fellow on the line who was only doing 80 percent, the whole line would have to do 80 percent, and that is not practical, obviously.

I think, however, there are many things that could be done that have not been done as yet.

Senator MILLIKIN. Would it be practical in that kind of a business to have, let us call it a subsidiary operation of some kind that would not directly affect the assembly line but create a business, if necessary, where you could put elderly people to work?

Mr. REUTHER. I am not in position to give you specific details, but I think that much could be done in that direction if there was a will to do it.

Senator MILLIKIN. The thing that touched me off on this is that I saw a picture of a plant in England where they built up a kind of subsidiary business where they provided the older fellows with opportunity to work and they worked 3 and 4 hours a day, worked as long as they wanted to. I do not suppose they made any great money out of it, either the worker or the employer, but at least it gave elderly people a chance to work who wanted to work. It has a great morale factor.

Mr. REUTHER. We have some jobs like that in our industry and they are now being done in many cases by the older people. In the olden days these fellows would already have been thrown on the industrial scrap heap, with no seniority in our industry, they would have thrown these fellows out at the end when they were 50 years of age, and hired the young fellows with the sparkle in their eye. But the seniority protections that we have now compel the company to keep them, and they have to find these other jobs. There are limits to the number of such jobs in the plant, but I believe that if there was a real will to find the answer to this problem, that much real progress could be made in solving the problem that concerns us.

Senator MILLIKIN. If we toss a man out at 50 or 55, and if we have a retirement age of 65, he may have a very bleak, dreary period of waiting for benefits.

Mr. REUTHER. That is right. I quite agree.

Senator MYERS. I have on brief question. You mentioned earlier, Mr. Reuther, that in conferences a few years back with the management of the automotive industry, you were told to come to Washington, that this was the place to consider pensions and old-age benefits.

Mr. REUTHER. That is right.

Senator MYERS. Did those of management indicate any opinion at that time that social-security benefits should be increased by the Congress?

Mr. REUTHER. Yes: in the discussion we had when we asked for pension plans through collective bargaining, they made it very clear that they thought this was a problem broader than just their own employees. It was as big as the community and the Nation, and they said, "You ought to go to Washington." We said, "The benefits down there are too small. Let us go down to Washington." They said, "Get the Congress to pass the law increasing the benefits."

Senator MYERS. Have they recently indicated any opinion as to whether we should increase the benefits?

Mr. REUTHER. Mr. C. E. Wilson has made a number of speeches in which he said that both the coverage and the benefits ought to be increased.

Senator MYERS. That is the president of General Motors?

Mr. REUTHER. Yes. Mr. Ernest Breech is the executive vice president of the Ford Motor Co. and has made public statements to the effect that old-age security legislation was the soundest approach, and the Government ought to increase the coverage and the benefits here. I do not know that either one of those have put a specific price on it, but both have indicated that the coverage and amounts of benefits ought to be increased.

Senator MYERS. I was going to borrow a phrase from Senator Millikin and congratulate Mr. Reuther, and say his testimony has been indeed dynamic here this morning.

Mr. REUTHER. Thank you, sir.

The CHAIRMAN. Before you could lift out of collective bargaining the demand for supplemental retirement benefits, we would have to lift the basic security very much higher than in the House bill, would we not?

Mr. REUTHER. That is correct.

The CHAIRMAN. And you have indicated what you think is an absolute minimum?

Mr. REUTHER. That budget we have outlined we consider absolutely the minimum for human decency.

Senator MILLIKIN. In our State we pay on a needs basis, we pay $150 per couple per month. Your figures are not particularly terrifying to me. The needs test does not quite meet all of the specifications for dignity.

Mr. REUTHER. I appreciate this opportunity, Mr. Chairman.

The CHAIRMAN. Thank you very much. We appreciate having you here.

Mr. REUTHER. Thank you.

The CHAIRMAN. Mr. Warren Irons. You may have a seat.

Will you identify yourself for the record.

STATEMENT OF WARREN B. IRONS, CHIEF, RETIREMENT DIVISION, UNITED STATES CIVIL SERVICE COMMISSION, WASHINGTON, D. C.

Mr. IRONS. Mr. Chairman, my name is Warren B. Irons. I am chief of the Retirement Division of the United States Civil Service Commission. I think, gentlemen, you will find my remarks rather prosaic after that inspirational testimony by Mr. Reuther.

I want to direct my testimony this morning to pages 37 and 38 of H. R. 6000, particularly clauses (c), (d), and (h). A part of the objective of section 210 (a) was to include under the coverage of social security those Federal employees who are not subject to a retirement system established by law. Primarily that means that temporary employees of the Federal Government would be included under the coverage of social security.

The Civil Service Commission concurs in this objective. This section 210 (a), however, contains important exclusions. It includes under the coverage of social security temporary employees of the Federal Government, except those employed in the field service of the Post Office Department, except those temporary employees in the Bureau of the Census and except those temporary employees who are appointed pending the establishment of a civil-service register.

By these exclusions that leaves for inclusion under social security only those temporary employees of short duration in all other Government agencies; normally the employee who is hired for 30, 60, or 90 days or less than a year. It creates a rather odd situation.

The general objective of section 210 is to include temporaries but by specific exclusions in that section the three largest groups of temporaries are not covered by social security.

The CHAIRMAN. How many, Mr. Irons, were estimated to be brough under this particular section?

Mr. IRONS. As I understand it, Mr. Chairman, there are 120,000 temporary employees of the field service of the Post Office to be excluded.

The CHAIRMAN. They would be excluded.

Mr. IRONS. Excluded.

The CHAIRMAN. They would be embraced in that excluded group.

Mr. IRONS. All of the temporary employees in the field service o the Post Office Department, carriers, clerks, acting postmasters, and what have you. There also would be excluded by this section 105,000 temporary employees who are employed by other agencies of government pending establishment of a civil-service register.

The CHAIRMAN. None of these are included under the Federal retirement system?

Mr. IRONS. None are included under the civil-service retirement system. They have no coverage whatsoever.

The CHAIRMAN. They are out unless they are taken in under social security?

Mr. IRONS. That is correct, sir. The exclusions of section 210 include the Bureau of the Census for those employees temporarily for taking of the census. I understand that it is anticipated that the Bureau of the Census will engage in the neighborhood of 150,000 people for short and long periods of time, and all of those people will be without the coverage of civil-service retirement, and they will be excluded under the terms of this act from the coverage of social security.

Senator MILLIKIN. That would be truly temporary employment and relatively short.

Mr. IRONS. Some would be employed for 30 days and some as long as possibly 3 or 4 or 5 years. The employees engaged in the tabulating and analytical operations would be there much longer than the enumerators.

Senator MILLIKIN. Would that exceed 10 percent of the total force?

Mr. IRONS. I do not know, but I would think probably less than that. It would be a very small proportion.

The net effect of it is that there are left for inclusion under social security, speaking now strictly of temporary employees, roughly thirty to thirty-five thousand short-term employees. Section 210 of this bill excludes specifically temporary employees of the Post Office Department, those in the field service of that Department, temporary employees of the Bureau of the Census, temporary employees engaged anywhere in the Federal Government, if they are temporary pending the establishment of a civil-service register. Those groups total probably in the neighborhood of 350,000 people.

Senator KERR. If and when there is any change in the status to that of a continuing employment, do they not automatically come under the other retirement?

Mr. IRONS. Those individuals who are hired pending the establishment of a civil-service register, that is quite correct. Undoubtedly a substantial portion of those will ultimately pass an examination, be appointed and automatically become subject to the civil service retirement system. That is not true of the other groups.

Senator KERR. Are not the others just as definitely moving toward an early separation from their employment?

Mr. IRONS. Moving toward an early separation from the Federal Government. They are not moving toward becoming permanent employees of the Federal Government, and therefore subject to civil-service retirement.

Senator KERR. What is the thesis of your recommendation to the committee?

Mr. IRONS. I think that the exclusions excluded in H. R. 6000, those having reference to the field service of the Post Office Department, and those with reference to the Bureau of the Census, those exclusions should be eliminated, and those temporary employees should be included under the coverage of social security retirement system. There seems to be no reason that I can see as to why they should be excluded.

Senator KERR. Do you have information as to their average age?

Mr. IRONS. I have not; but I would guess in the neighborhood of 27, 28.

Senator KERR. Do you have an estimate as to the average time they will be employed?

Mr. IRONS. No; again I would estimate on the average somewhere between 6 months and a year on the average. It is because of their short duration of employment that I do not recommend that they be included under civil-service retirement. But for these people, the very fact that it is short duration employment means that if they are employable people and we must presume a good portion of them are, that this work period for the Federal Government is merely a short period in a total-work history.

Senator KERR. Do you think that the group employed by the field division of the Census Bureau will average 27 or 26 years of age?

Mr. IRONS. Of age?

Senator KERR. Yes.

Mr. IRONS. I would think so.

Senator KERR. You do not think it would be nearer 47 or 46?

Mr. IRONS. I would not think so, sir; no. I see no reason why they should be of that age.

Senator MILLIKIN. Is it not likely that they were probably excluded because of the administrative difficulty of taking care of people for such short periods?

Mr. IRONS. That is the only logical reason I could think of as to why they would be excluded, the matter of administrative expediency, the fact that if they are included under social security, the management of the post office, Bureau of the Census, would have to arrange to see that those individuals had social-security account numbers, and wage records were established for them. They would have to collect the taxes and account for the taxes, report the wages to the Social Security Administration, and such matters as that. But in the whole consideration of social-security coverage, we have not thought of the administrative expediency with regard to an industrial unit. We require all industrial units that are covered by social security to include all employees of that industry, whether they happen to be employed for 1 day, 1 year, or a lifetime.

Senator MILLIKIN. I have a note here which suggests Ways and Means Committee excluded the post-office and census employees because of the great number employed at Christmastime in the post

offices, and for census taking, many of whom are not regular membe of the labor force. That was the reason the House Ways and Mea excluded them.

Mr. IRONS. I could understand that fully. At the same time, durin the Christmas rush period, Woodward & Lothrop hire extra peopl They are subject to social security if they are only hired for Christma Eve.

The CHAIRMAN. In other words, you cannot think of any good re son to tell this committee why they should be excluded any more tha temporary employees in any other thing.

Mr. IRONS. That is exactly it. It seems to me that they are in t same category.

The CHAIRMAN. Does the postmaster himself or someone in eac post office remit the social security for people who are not under t retirement system?

Mr. IRONS. There are no people of that nature employed at all i the Federal Government now.

The CHAIRMAN. At this time?

Mr. IRONS. At this time.

That concludes, Mr. Chairman, the only remarks I had to make thi morning, to urge the inclusion of these excluded groups, particular the temporary employees of the Bureau of the Census, and in the fiel service of the Post Office Department.

The CHAIRMAN. Presumably those temporary employees find othe employment when they leave the Government employ.

Mr. IRONS. I would think they would be individuals who have t work for a living.

The CHAIRMAN. And they ought not to have this enforced brea in their social-security history, should they?

Mr. IRONS. That is the position of the administration.

Senator MILLIKIN. I am under the impression that they hire a l of housewives that want to make a little extra money for a temporar period of time that have not had social-security coverage, and d not expect to have social-security coverage.

Mr. IRONS. That is true, undoubtedly, but by the same token, Wood ward & Lothrop does the same thing at Christmas time in employ ment of people.

The CHAIRMAN. Thank you very much.

Mr. IRONS. Thank you.

The CHAIRMAN. Mr. Clarence Mitchell. You may be seated. Yo are appearing for the National Association for the Advancement o Colored People?

STATEMENT OF CLARENCE MITCHELL, NATIONAL ASSOCIATIO FOR THE ADVANCEMENT OF COLORED PEOPLE, WASHINGTON D. C.

Mr. MITCHELL. Yes, sir. My name is Clarence Mitchell. I am appearing for the National Association for the Advancement o Colored People.

I want to thank you, Mr. Chairman, and members of the committee for hearing us, and I would like to have the committee's permissio to file our written statement.

I would also like briefly to comment on its contents.

The CHAIRMAN. You may put your statement in the record.

(The statement referred to follows:)

TESTIMONY OF CLARENCE MITCHELL, LABOR SECRETARY FOR THE NATIONAL ASSOCIATION FOR THE ADVANCEMENT OF COLORED PEOPLE

By convention action, the National Association for the Advancement of Colored People has consistently gone on record in favor of broadening the Social Security Act. The purpose of our appearance before this committee is to record our full support of the President's proposal to include additional workers under this act. However, we especially recommend the inclusion of domestic and agricultural wage earners who are excluded from the present law.

According to the figures of the Social Security Administration, approximately 4,000,000 persons are now excluded from coverage by the present definition of agricultural labor. Three million domestic workers are also excluded. Of the persons in these two occupational groups, over a million and a half are colored. Thus, more than 21 percent of all excluded workers in these categories are colored.

The citizens of the United States who work in agriculture have always been bypassed when Congress enacts broad social legislation. Today, we are paying a terrible price for this neglect in the form of chaotic conditions that prevail in agricultural employment. Those who work in the fields are absolutely necessary to the well-being of the Nation, but our Government gives better treatment and protection to foreign agricultural workers than to our own citizens.

We cannot expect to maintain a healthy and effective labor supply in agriculture if we continue to give those who plant and harvest the Nation's crops so little protection against exploitation and insecurity. The inclusion of agricultural wage earners in the Social Security Act would be the first of several steps our Government should take to assure the farm workers the same benefits from social legislation that are now enjoyed by individuals in other types of employment.

The Women's Bureau of the United States Department of Labor published material on household employment in 1948. This material discussed the general conditions which tend to decrease the labor supply in domestic employment. One of the reasons cited by the Bureau was the exclusion of household employment from the provisions of the social-security program. This group of workers has always had an average wage that was so low that savings were not possible except in rare cases.

Studies of wages paid to domestic employees show that even during the war years the average wage of a domestic worker was not very high. At our request, the Bureau of Old Age and Survivors Insurance has furnished figures which show that in 1940 the average annual wage of domestic workers was $513, in 1945 it was $646, in 1946 it was $724, and in 1947 it was $737. To expect that individuals who earn such meager wages would in any way be able to provide for security in their old age is, of course, ridiculous. It is unfair to consign such workers to relief rolls in their old age when we make every effort to protect workers in other occupations who receive more pay and labor under more favorable conditions.

There is another problem which affects the household employee that must be remedied. Some domestic workers left this field during the war and worked in occupations covered by the present law. A great many of these individuals are now being forced back into domestic employment. Because of this return to their former occupations, they may lose the benefits they accumulated when they worked in covered occupations. The Bureau of Old Age and Survivors Insurance explains how this happens as follows:

"The insurance protection obtained as a result of social-security contributions made while in covered employment will gradually be dissipated by their resumption of noncovered employment. Thus, an individual who has a sufficient number of 'quarters of coverage' (quarters in which he has been paid in covered employment wages amounting to $50 or more) to acquire fully insured or currently insured status will lose that status as the number of quarters in noncovered employment increases. Under the present law, an individual who has on a given date approximately half as many 'quarters of coverage' as have elapsed since January 1, 1937, or since attainment of age 21, is said to be 'fully insured.' An individual is said to be 'currently insured' if he has at least six quarters of coverage in the 3-year period immediately preceding the current calendar quarter.

Should he die while fully or currently insured, survivors' benefits are paid. F retirement benefits, he must be fully insured."

Many countries in Europe and South American have already included domest workers in their old-age-insurance systems. Apparently, these systems have be successful and they serve as a challenge to us in this field.

Mr. MITCHELL. I am appearing primarily to speak on behalf of tw groups of workers who are excluded from practically all of the soci legislation that the Congress passes from time to time. As an orga ization, of course, we have repeatedly gone on record in favor of t broad social legislation that the President has advocated, and t Congress has passed, but we have also urged repeatedly that domest and agricultural wage earners be included in this legislation. So f that has not happened with reference to agricultural workers where it is possible for the Congress to enact legislation to prote such people, individuals who work in domestic employment.

The old-age and survivors insurance agency has indicated that b the present definitions of agricultural workers and by the prese information they have on the number of people in domestic emplo ment, there are approximately 7,000,000 people in those two grou which are excluded from present coverage. Our figures which hav been shaved down to take into consideration individuals who have le agriculture or who have left domestic employment, because they hav been able to get more favorable types of work, would indicate th there are still a million and a half or more of colored people who a in those two occupational groups. They constitute 21 percent of a of the people who are excluded from coverage of the present socia security legislation.

We have appeared before various committees of Congress fro time to time to advocate the inclusion of agricultural workers in suc legislation as the minimum-wage law, the National Labor Relatio Act, and other benefits, but of course we have been unable to get a remedies for those people. I just wanted to say in passing that so f as agricultural workers are concerned, it is a stark and unhapp fact that foreign workers who come to this country from Mexico a from the British possessions, to work in agriculture, enjoy a greate degree of protection from our Government than do our own peopl that is, American citizens who work in agricultural pursuits.

So far as the domestic employees are concerned, I would like merel to cite some figures on their wages which have been given to us b the old-age and survivors insurance agency. There are a great man people who assumed during the war that domestic workers were havin a pretty lush time of it, that they were able to make great wages a that undoubtedly they were among the highest paid people who wer earning a living because they were so hard to get. I suppose ther were some domestic employees who managed to do very well b themselves because of their great skills and because of the demand

However, we have figures which would show that even in the lus days of war employment, the period running from 1940 up to 194 the average wage of domestic workers in this country ranged fro $513 to $737 a year. Under a wage structure of that kind, it is jus not possible for people who work for a living to put aside any sub stantial sum to take care of them in their old age.

I earnestly urge that you gentlemen of the committee include domes tic and agricultural workers in this present bill. Of course, domesti

workers have been included to a certain extent by the House, but agricultural workers have been left out entirely. We hope very much that the Senate will remedy that defect and put these people back in.

The CHAIRMAN. Do you think it practical to put agricultural workers under it? Are you familiar with agricultural practices?

Mr. MITCHELL. I am familiar with their problems, Mr. Chairman.

The CHAIRMAN. You never had any experience with the farm work?

Mr. MITCHELL. My whole family could be called farmers. They come from Montgomery County, Md., and for about six or eight generations we have had land there which we have lived on, and know the problem.

The CHAIRMAN. Do you think it would be practical to collect and remit the insurance cost of the benefits in the case of the average agricultural worker, particularly the part-time worker, the worker who is just casually employed?

Mr. MITCHELL. I would, sir, yield to the judgment of the old-age and survivors insurance on that matter. I have respect for the people who have studied this thing from a statistical and insurance standpoint. They believe that the stamp plan, which has been advocated for domestic employees, could be applicable in farm work. It is my judgment that from the way they have been able to administer the present social-security program, they know what they are talking about, and I would stand by their belief on it.

The CHAIRMAN. Any further questions?

Senator KERR. You say there are approximately 4,000,000 persons now excluded from coverage by the present definition of agricultural labor. How many of those are self-employed and how many of them are employees?

Mr. MITCHELL. It is my understanding that these people would all be wage earners; again those are the figures of old-age and survivors insurance agency.

Senator KERR. You say the average domestic today makes how much?

Mr. MITCHELL. The latest figures I have would be for 1947. That would be an average of $737 per year.

Senator KERR. You do not know where a fellow could get a good cook for twice that amount?

Mr. MITCHELL. That, sir, is an interesting question. It came up in the House.

Senator KERR. It comes up in nearly every house.

Mr. MITCHELL. It certainly does.

Senator KERR. It is up in my house right now.

Mr. MITCHELL. As a matter of fact, Mr. Doughton, the chairman of the House Ways and Means Committee, challenged some figures that I had on domestic employment, which I cited at the House hearing.

Senator KERR. I am not challenging the figures.

Mr. MITCHELL. I was merely explaining what the situation is. It does seem peculiar when an individual who has a personal problem of not being able to get a wage earner for a given wage is told that people are making much less than he is willing to pay. In the House hearings I cited some figures to show the average wage of domestic employees, which as I indicated at that time were based on statistical studies in Baltimore, Chicago and a few other cities, on a sample basis. Mr.

Doughton made the comment, "Well, I do not know where you g these domestics from, that get low wages like this, because the peop that I know get much more than that."

So because of that pointed inquiry, I made another request of tl old-age and survivors insurance agency for every possible bit material they had in this field. These figures offered by me tod represent everything that they have as a result of careful studies mad on a Nation-wide basis. So these are the averages.

Senator MILLIKIN. Do they include board and keep?

Mr. MITCHELL. They do not include that. If we included situatio in which people had the right to live on the place, and other pr requisites which normally go along with domestic employment, it estimated that in such cases the figure might be a couple of hundr dollars more, which perhaps would put it in the neighborhood of thousand to twelve hundred dollars for the upper bracket. Of cour the vast majority of domestic servants do not receive salaries an prerequisites of that kind.

The CHAIRMAN. Thank you very much for your appearance here.

Mr. MITCHELL. Thank you for the opportunity to state our case.

The CHAIRMAN. Mr. Hubert F. O'Brien, president of the A. Smith Manufacturing Co., East Orange, N. J. Identify yourse for the record.

STATEMENT OF HUBERT F. O'BRIEN, PRESIDENT, THE A. P. SMIT MANUFACTURING CO., EAST ORANGE, N. J.

Mr. O'BRIEN. My name is Hubert F. O'Brien. I am president the A. P. Smith Manufacturing Co., East Orange, N. J. We are small concern employing approximately 300 people in the manufactu of valves, fire hydrants, and special equipment for public and priva waterworks throughout the country.

I would like, as briefly as possible, to tell you of the approach of small company to the problems of old age among its employees. would then like to state my own beliefs as to the proper role of tl Federal Government in the problems of old age; and in the light that philosophy to offer some specific comments on H. R. 6000.

I may be presumptuous in seeking to appear before this committe since I make no pretension of expertness in this very complicated fiel However, I have observed a growing feeling in many quarters th private pensions have no continuing place in the over-all old-age s curity field—that the whole pension load should be assumed by tl Federal Government. I am definitely opposed to this view. One the stock arguments used to support this contention is that small com panies cannot, or will not, set up proper pension plans and that ther fore to assure fairly universal coverage, the Federal Governmer should do the whole job. I feel that our experience, by no mea unique, may help to refute this specious argument.

By all standards, we were not the sort of company to set up a vo untary pension plan. We were small—less than 300 employees. W were a part of the highly cylical capital goods industry and shou avoid, like the plague, heavy fixed annual commitments. We ha as our bargaining union the United Steelworkers of America, CI an eminently practical and hardheaded group, who, friends advis

us, would not be moved at the sight of "strangers bearing gifts." And lastly, we were a "closely held" corporation and traditionally should have been too grasping to part with any of our substance easily.

We had broken the ice in the direction of employee benefits as far back as 1925, when a group life insurance plan and a group health and accident plan were put into effect. We started gathering information on pension plans in late 1941. However, it was not until 1944 that a formal plan was actually introduced. The intervening period was spent in reviewing many different types of plans, none of which seemed to meet the rather stiff requirements of our operation. After long study we developed a plan which we feel is sound and can be carried by the company under all foreseeable business conditions.

The plan is, of course, geared to the Federal social security system. All employees, whether production workers or officers of the company, are eligibleafter 2 years' service. All are on the same basis and have the same scale of benefits. They receive, entitrely at company expense, a basic pension at age 65 based on their length of service with the company and their earnings.

I should mention that the company pays for all past service.

Senator MILLIKIN. I did not quite understand that.

Mr. O'BRIEN. I forgot to include in here the fact that all of the past service of any employee with the company is included in his pension and paid for entirely at company expense.

Employees who wish to, may contribute a fixed percentage of their earnings to secure life-insuran e coverage and at retirement a larger pany, are eligible after 2 years' service. All are on the same basis and pension. At the present time 97 percent of those in our plan have chosen to contribute and receive the insurance coverage and higher pension. The individual employee may always secure a refund of his total contributions upon leaving the company for any reason; and after a stipulated period of service is also fully vested as to the employer's contribution.

The plan is of the funded type and is a combination of insurance and a self-administered trust, with a New York bank as the corporate trustee. The level of benefits, including social security, compares favorably with plans recently enacted under union pressure. In addition, should social-security benefits be increased, such increase will accrue to our employees and not be used to reduce our liability.

I have described our experience in some detail because I feel that there is a distinct place for private pension plans as a supplement to the basic minimum underlying layer of security which Federal pensions should provide. Some twelve-thousand-odd private plans were in existence prior to the Supreme Court ruling on the Inland Steel case, making it mandatory to bargain collectively on pensions. I think this Supreme Court ruling was most unfortunate for the future growth of private pension plans.

Pensions are by their nature long-term commitments of a highly technical sort. The recent labor disturbances arising from the pension issue with their hastily conceived plans are a product of this decision. I feel that private plans are an important and necessary supplement to Federal benefits and that their growth will be sounder and as fast if removed from the turbulent arena of mandatory collective bargaining.

THE FEDERAL ROLE IN FINANCING OLD AGE

(*a*) *The economic problem—size of Federal pension*

Throughout the ages humanity has sought security of many type Today, in our complex industrial society, one of the most gener desires seems to be for economic security in old age. "Old ag which is admittedly a vague term in many of its meanings, has, f this specific discussion, been generally accepted as being age 6 Economic security cannot be guaranteed by the promise of a certa number of dollars at some future time unless we also are assured a degree of stability in the whole economic system. The problen of financing old age on a Federal basis are so great that extren care must be taken lest the very attempt to provide individual econom security does not in itself disturb the whole economic system. in a laudable and humanitarian effort we attempt to promise t much to those retiring we are liable, through heavy taxation, reduce incentives; and through inflation to reduce the value of t pension to those retiring.

It might be profitable for a moment to consider the load that w are imposing upon a future work force. For many years we hav been marching in a direction which has directly reduced both t proportion of the total population in the work force, and the numb of hours which each worker has worked. One of the first efforts this direction was the elimination of child labor, so that gradual we have cut out of the work force large numbers at the lower end the life scale.

Senator MILLIKIN. Was there not a large increase in the work for in the war years; was it not practically doubled?

Mr. O'BRIEN. Yes; I believe that is correct. I was speaking, thoug of a more normal progress.

Then, with the acceptance of the principle of retirement, we hav similarly removed many workers from the upper end of the life scal While these two processes were operating to limit those in the wor force, there was at the same time a steady reduction of the numb of hours worked by those still working. From a common 60- 70-hour workweek we have dropped to a rather general 40-ho week, and in some cases a 35-hour workweek. Simultaneousl through advances in the field of medicine and public health, avera life expectancy increased and the relative proportion of those a 65 and over to the total population increased steadily. All of the developments represent distinct advances in our way of life, and am very much in favor of them, but we should not lose sight the fact that they have an impact on the rate of productivity require of the remaining work force if our standard of living is not to decli

In essence, at any time the goods and services, i. e., the standar of living of the entire population, is dependent upon the produc tion of the work force. If we somewhat arbitrarily take the wor force as being those aged 20 to 64, the proportion of those abov age 65 to the work force has increased sharply. In 1900 the were 13 people in the work force as defined above for each perso over 65. Today there are 8 people in the work force for each perso over 65, and it is predicted that within the next 50 years this rati may drop to less than 5 to 1.

Obviously, the only way that this smaller work force working a shorter number of hours can produce the goods and services to maintain the standard of living for the entire population is to increase their unit productivity by means of better tools and equipment. This, of course, means greater investment per job. To stimulate such investmen there must be strong incentives. Such incentives disappear under too heavy a tax load.

It therefore seems obvious that if we are not to delude ourselves with false promises of security, we should be careful to see that the Federal Government limits itself to the provisions of a minimum layer of basic protection to as large a group of the work force as can be administratively covered, the whole to be supported by equal employer-employee pay-roll taxes. The Federal Government should confine itself to the problem of old-age benefits and not venture into other fields, such as total and permanent disability which can best be handled at the State and local level.

(b) The method, OASI versus OAA

When the original Social Security Act was enacted in 1935, it provided for two systems of old-age benefits; a contributory system for covered workers, which in 1939 was amended to include survivors and dependents—familiarly referred to as OASI; and a noncontributory system financed equally by the State and the Federal Government through grants-in-aid, and distributed on the basis of need—abbreviated to OAA.

It is clear from the Congressional Record that one of the main reasons for the enactment of the contributory system of old-age benefits was to relieve the Federal Government from the heavy burden of general relief. The OAA program was thought of as a temporary program to carry the load until such time as the contributory program could pick it up. Yet today there are 2.6 million aged receiving an average of $43.60 monthly from OAA. The OASI at the same time (June 1949) covers 1.8 million aged for an average monthly benefit of approximately $22.50.

Senator MILLIKIN. That figure represents combined Federal and State contributions, does it not, of $22.50?

Mr. O'BRIEN. Yes, sir, that is correct. I believe the Federal contribution averaged approximately $25.

It is evident from this experience that the grants-in-aid system is clearly out of hand and must be checked at once.

The grants-in-aid system is fundamentally wrong for most purposes. It creates the illusion that Federal funds are free. To a large degree, the responsibility of raising funds is removed from those at the State level who are authorizing the expenditure. It makes State and local governments subservient to the Federal Government and generally tends to break down our Federal principle.

The matching formulas used to determine the extent of Federal assistance have yielded to continuous pressure. Originally on an equal basis, they have now been "refined" to a point where, as Mr. Reinhard Hohaus, actuary of the Metropolitan Life Insurance Co., has recently pointed out (speech delivered before the Ohio Chamber of Commerce) a State may actually add many citizens to their old-age assistance rolls, thereby attracting considerable Federal sums into the State, while actually reducing the State expenditures for this same purpose.

Such political "manna from Washington" will no doubt be promptly picked up by political practitioners among the various States. As evidence of the widely varying standards of need adopted by the States, in June of 1949, 81.9 percent of the population over age 65 in Louisiana were receiving old-age assistance, while the comparable figure in New Jersey was 6½ percent.

Senator MILLIKIN. How do you account for that difference in the percentage of population over age 65 receiving old-age assistance in Louisiana and the 6½ percent receiving old-age assistance in New Jersey?

Mr. O'BRIEN. It seems to me, Senator, that that would be largely based upon the definition of need within the respective States.

Senator MILLIKIN. Being an industrial State, are you getting more money in New Jersey via the contributory insurance system?

Mr. O'BRIEN. I think undoubtedly that would have some bearing. I read with considerable interest the discussion between yourself and Mr. Altmeyer on this subject, and it seemed to me that while there was some partial explanation due to the higher industrial activitiy in New Jersey, I still think that the major portion results from the State administration.

From the foregoing it seems quite clear that the Federal Government should as quickly as possible withdraw from the old-age-assistance program and concentrate its efforts in the old-age field in OASI. Such a suggestion may seem somewhat naive in view of the practical pressures involved. However, if steps are not taken immediately to reverse the trend, it may later prove impossible. The only sound reason for Federal grants-in-aid is to cover situations of national interest which the State and local governments are not able to handle. However, before the argument of financial inability is accepted, it would be well for the Federal Government to return certain taxing areas to the States so that they may carry out what are properly State and local functions. The funds in the final analysis come from the same source.

Specific comments on provisions of H. R. 6000:

1. Coverage: I am in favor of extending coverage to all those gainfully employed if it can be shown that such coverage is administratively practicable. For instance, in the case of farm operators who would not be covered under provisions of H. R. 6000 it seems to me there would be great question as to when a farm operator actually retires. I notice, however, from Mr. Altmeyer's testimony that they feel these and other questions offer no barrier.

2. Level of benefits: I would favor an increase of benefits of the order suggested in the bill since they would restore the approximate purchasing power of the original benefits. However, as noted in more detail below, I believe the wage and benefit base should be retained at $3,000.

Third. Wage and benefit base: As stated above, I think the base upon which contributions are made and benefits calculated should be retained at $3,000 a year. Under our present schedule the benefits in relation to salaries taxed are much greater at the lower salary levels than at the higher. To raise this base would simply increase the discrimination against those in the higher wage brackets. Also, as stated earlier, it is my feeling that the Federal pension should be at a

minimum level. Use of a $3,000 base would amply cover a minimum pension.

Fourth. Federal grants in aid for old-age assistance: As stated earlier, I feel that the most constructive action which Congress could take in this important and complex field, would be one designed to withdraw the Federal Government as rapidly as possible from the grants-in-aid program for public assistance.

Fifth. Contribution schedule. If and when benefits are increased, I would favor an increase in the contribution rate to 2 percent from the present 1½ percent. I believe it is important psychologically to relate increases in benefits to increased taxation. In place of the balance of the rate schedule which would produce an estimated peak fund of $75,000,000,000 shortly after 1990, I would recommend a stepped rate designed to stabilize the fund at the peak which would be produced by the 2-percent rate, if this is actuarially and practically feasible.

I would like to interject I have no basis or bias for the 2-percent rate. If actuaries should find that 2½ or 2¾ produced a more proper fund in their opinion, I certainly would not quarrel with that.

This would avoid some of the questions inherent in a fund reaching $75,000,000,000 with its investment problems and their impact on the economy, as well as the strong temptation to demand higher benefits as the fund continued to grow. I realize that such a recommendation may involve a somewhat higher leveling off of rate than would result from the proposed schedule, but the benefits might offset such an increase.

Sixth. Appropriations from general revenues: I am in favor of the provision which would repeal the Murray amendment of 1943 permitting Congress to appropriate from general funds for the support of the OASI program.

Seventh. Lump-sum death-benefit payment: I would favor provision of the present law which would pay death benefits only where there is no survivor eligible for monthly benefits.

Senator MILLIKIN. May I ask the reason for your point 6?

Mr. O'BRIEN. The appropriations from general revenues?

Senator MILLIKIN. Yes.

Mr. O'BRIEN. It is my feeling, Senator, that this program should be kept, so far as possible, on a self-sustaining basis—that is, that the pay-roll taxes should support it—and I would be in favor of trying to set up a level of taxes that would do that.

Senator MILLIKIN. But if it did not, how would you cover it?

Mr. O'BRIEN. Well, perhaps I can answer that question this way. My reason for feeling that we should be on a self-supporting basis is that unless we are, I feel that the pressure to continuously increase the benefits will be almost irresistible; and if it is closely geared to the tax imposed, it will offer some restraint.

8. Permanent and total disability insurance: I do not believe that this coverage should be included in any Federal program. Private insurance companies have had most unsatisfactory experience insuring this contingency and if it is to be covered at all it should be financed and administered by State and local agencies who can properly check applicants and, most important, give them help toward rehabilitation.

9. Permitted earnings: I am in favor of the provision raising retirees' permitted earnings from $14.99 per month to $600 per year.

There are many in the retired-age group who can contribute substantial services to their communities and who may yet need this basic pension. I would favor any provision that would provide an incentive for these people to contribute, rather than to just sit. I am sure that the majority of the people in this category would want it that way.

In conclusion, the more a person reads on this subject, the less likely is he to become dogmatic in his opinions. The lessons to be learned from the experiences of Germany and other pioneers in this field should cause us to go slowly before undertaking commitments whose full cost won't mature for perhaps 50 years. Inherent in their experience is the emphatic testimony that these programs are never static. Welfare-conscious administrative staffs often in unknowing partnership with well-meaning but misinformed politicians, continuously strive to cover more and more people for an increasing number of risks, at an increasing benefit level. The ultimate collapse of such a system is obvious.

It therefore falls upon the Congress to protect the security system which has been set up, from continuing demands for unwarranted expansion. The responsibility in this case is peculiarly heavy on Congress since the subject is so complex that most people have little idea of the full scale of costs which seemingly small present changes will ultimately entail. As a citizen who has laboriously endeavored to inform himself on this difficult subject, I have been impressed with the painstaking and thorough investigation made by this committee, as revealed by the testimony which I have read. Regardless of the complicated nature of the subject, Congress must render a decision. I am confident that you gentlemen are fully aware of your responsibilities.

The CHAIRMAN. We thank you for your appearance.

Mr. O'BRIEN. Thank you.

The CHAIRMAN. Mr. M. M. Fowler, Gulf Oil Co., Durham, N. C.

You may be seated, and identify yourself for the record.

STATEMENT OF M. M. FOWLER, DISTRIBUTOR OF GULF OIL CORP. PRODUCTS, DURHAM, N. C.

Mr. FOWLER. Mr. Chairman and gentlemen, my name is M. M. Fowler. I am a distributor of Gulf Oil products at Durham, N. C. I am not only appearing here for my behalf but am also representing the North Carolina Oil Jobbers Association, which has a membership of 500 independent businessmen who are jobbers or distributors of petroleum products like myself.

I would like to read a letter from the secretary of that association, authorizing me to speak for it and confirming an earlier authorization for me to speak in behalf of the consignment distributive section of the association.

I would like to read this letter into the record, if I may. It is dated March 10, 1950.

Mr. M. M. FOWLER,
Durham, N. C.

DEAR MR. FOWLER: At a meeting of our board of directors held in Raleigh today you were named to represent this association at a hearing in Washington before the Senate committee, on H. R. 6000.

My understanding is that you have already been authorized to represent the consignment distributors section of the association, and this now authorizes you to represent the association as a whole.

Yours very truly,

W. A. PARKER, *Secretary.*

In addition, I am representing the North Carolina Service Station Association, which has a membership of nearly 1,500 independent gasoline retailers. I would like to read a letter from the association signed by its president and executive secretary.

DURHAM, N. C., *February 16, 1950.*

Mr. M. M. FOWLER,
Durham, N. C.

DEAR MR. FOWLER: The North Carolina Service Station Association, with a membership of 1,480 independent gasoline retailers, would like for you to represent the association in your appearance before the congressional committee regarding the pending social-security bill H. R. 6000.

The independent retail dealers of our State would like to retain their present status insofar as social-security legislation is concerned, and our organization will appreciate any efforts that you can make toward that end.

With kindest regards, we remain,

Yours very truly,

THE NORTH CAROLINA SERVICE STATION ASSOCIATION.
RUSSELL KING, *President,*
C. F. DORITY, *Executive Secretary.*

I will now proceed with my statement.

My name is M. M. Fowler and I am distributor of Gulf Oil Corp. products at Durham, N. C.

I became interested in House bill No. 6000, which I understood broadens the coverage for social security. I came to Washington in January and secured a copy of this bill. I studied it, but frankly I did not understand its language. It was my understanding that as a distributor of petroleum products, I would, in all probability, be covered as an employee of the Gulf Oil Corp. under this act, which I do not want. Since I did not understand the language used in this act I secured a copy of House Report No. 1300, which explains various terms of this act.

From the report prepared for the Committee on Ways and Means by the staff of the Joint Committee on Internal Revenue Taxation (July 22, 1949), however, I do understand what this committee had to say in regard to their interpretations of the term "employee" as used in this act, which is as follows and is shown beginning on page 189:

The proposed definition may result in defining employer-employee status to include a wide range of service relationships, in addition to those listed above, which have heretofore been considered independent contractor relationships. Among these are the following:

"Wholesale distributors of oil products may have quite extensive investments and may hire numerous employees, but they are subject to some regulations by the oil companies whose products they distribute. There is permanency in their relationship with the oil companies, and they are closely integrated in the business of the oil companies, since they perform the integral function of serving as outlets for oil-company products."

This is why I believe this act will bring me under the law and I will be considered an employee of my supplier, as well as many thousand other small-business men throughout the country.

On page 195 of House Report No. 1300, this Joint Committee on Internal Revenue Taxation has this to say:

> The Federal Security Agency states as its present opinion that the economic-dependence test would extend the definition of employees to include the following groups who are considered independent contractors under the common law.

This list included contract filling-station operators.

The committee then went on to say:

> It is highly probable that the economic-dependency test would also extend the definition of employee to include bulk-oil distributors.

I have heard that there is another bill, similar to this bill, pending before Congress, which would make my employees, and me, employees of my supplying oil company under the unemployment-insurance law, but I am not familiar with the details of this bill.

In my business I spend approximately 70 percent of my time selling Gulf Oil Corp. products. I am also engaged as a jobber of fuel oil, as jobber for the automobile tire and accessory line, in the retail grocery business, the transport business, the building-repair business, and the banking business. I have on my pay roll 13 employees. All of these employees are now covered by social security, unemployment compensation, hospital insurance, life insurance, and workmen's compensation insurance. I use these employees for these various businesses mentioned as it will pay me to use them.

The Gulf Oil Corp. does not have anything to do with how much time I put to my business. If I wish to take a vacation, I do not have to ask them. I fix the hours that my plant opens and closes. I receive the majority of the merchandise that I get from Gulf Oil Corp. on consignment. I purchase outright numerous items that I handle. I get a commission on all consigned products. At times in the past the Gulf Oil Corp. has not had the supply of various petroleum products that I needed to take care of my customers. In cases like this we distributors go out on the open market and buy this merchandise where we can get it in order to take care of our customers who are depending on us. My bulk plant is rented from Gulf Oil Corp. from year to year.

As stated in the beginning, I started this connection with my supplier, Gulf Oil Corp., between 13 and 14 years ago. At that time their volume of refined oil sales per month was approximately 150,000 gallons. Now my average sales volume of refined oils is approximately 550,000 gallons per month. I have spent 13 years of hard work and many thousands of dollars building up this business, and I want to keep it. I have also reinvested practically everything I have made in retail outlets of my own for the sale of petroleum products and other products, and my investment in these outlets, when I get them fully paid for, will be over $200,000. My supplier has left me free in the development of these service stations. Most all other oil distributors whom I am acquainted with have done the same thing to some extent.

Several years ago the Social Security Administration ruled that distributors, such as myself, were employees of the various oil companies. As a result of this it was necessary that certain reports be made to our suppliers, which reports included the number of employees, the salaries or wages paid them, the gross income and operating expenses and the net income and our supplier in turn had to make reports to the Government. It was only after numerous lawsuits over a period of several years that this was discontinued and only after the Federal courts

ruled that distributors of petroleum products, such as myself, were not employees of our supplying companies.

I pay the expenses of my operation, such as lights, water, telephone, heat, furnish trucks, license tags, and other expense of operating a bulk distributing plant and selling petroleum products. This includes all types of insurance, such as cargo insurance, mistaken delivery, workmen's compensation, public liability and property damage, fire and theft, collision. I pay social-security taxes on each and every one of my employees.

The people in my employ are satisfactory to me. I select them, set the salaries or wages they receive, fix the hours they work, am responsible for all the benefits they receive, including vacations, sick leave, life insurance, and hospitalization. The supplier whose products I handle has nothing whatever to do with any of these matters. These employees might not be satisfactory to my supplier if they are ruled employees and there may also be a tendency on the part of my supplier that all of these people whom I employ are designated as their employees to take over the operation for which I have spent 13 years of hard work and invested many thousands of dollars of my money. I want to urge you gentlemen to protect us as small independent businessmen, to allow our status to remain as it is at the present time. I enjoy such profits as I may make out of my business and at the same time, I am subject to take such losses as occur.

I would like to call your attention to an example shown in Report 1300 on page 87. This example has to do with bulk-oil-plant operator and would tend to show that under certain conditions a bulk-oil-plant distributor or jobber would not be considered an employee. In this example, it refers to the X Oil Co. entering into a contract with A who owns his own storage tanks and trucks. In the great majority of cases throughout the country, the storage tanks and plants are owned by oil companies, and leased to jobbers, distributors such as myself. I, therefore, would not come under this exception.

You gentlemen of the committee may wonder why I am afraid that I will be included as an employee under this definition, because of all of the things I have mentioned which show that I am an independent businessman. The following are some of the reason why I am afraid that I will be included as an employee if this definition in H. R. 6000 becomes a law:

1. I know that I was considered an employee at one time by the Administrator of the social-security law.
2. I know that it required several years in court to clear that up.
3. I know that I am not included as an employee under the law now.
4. I know that this bill changes the present definition of employee.
5. I know that the purpose of this definition is to include more people as employees.
6. I know that the reason this proposed change in definition was included in the bill was to include people as employees who are supposed to be economically dependent on a supplying company.
7. I know from reading the House committee report that there are many ways that I can be considered as a part of the business of Gulf Oil Corp. and that this will be considered as evidence that I am an employee of Gulf.

8. I know that I sell many products under the trade name of Gulf and that the committee report says on page 85 that this is evidence to show that I am an employee.

As a matter of fact, nearly all of the seven tests contained in paragraph (4) of the definition could be applied in such a way as to make me an employee, despite the fact that I am an independent businessman. So, you can see why I am worried. What I want the Congress to do is leave the present law alone as far as the employee definition is concerned, and in that way I will know that I will not be considered as an employee of the company whose products I distribute.

What I have said today is based on my own experiences and refers to my own business, but it can apply equally as far as the many other thousands of oil jobbers, distributors, and consignees are concerned throughout the entire country, who are in a similar position. I know that they also want to retain their status as independent businessmen On behalf of the North Carolina Oil Jobbers Association, the consignment distributors section of the association, the North Carolina Service Station Association, and myself, I would like to urge that you gentlemen help us all by changing the definition contained in this bill so that we will be allowed to continue our status as independent businessmen.

I wish to thank each of you gentlemen for the privilege of appearing before this committee.

The CHAIRMAN. We are very glad to have you.

Are there any questions? If not, we thank you for your appearance.

Mr. FOWLER. Thank you.

The CHAIRMAN. We have one other witness to complete our work today, Mr. Leon Gilbert Simon, Agents Association of the Equitable Life Assurance Society of New York City. Is Mr. Simon here?

Is anyone appearing for Mr. Simon?

(No response)

The CHAIRMAN. That completes the call of witnesses for the day. The committee will adjourn until tomorrow at 10 o'clock.

(The following resolution was submitted for the record:)

RESOLUTION UNANIMOUSLY APPROVED BY THE BOARD OF DIRECTORS OF NORTH CAROLINA OIL JOBBERS ASSOCIATION

Whereas the North Carolina Oil Jobbers Association, representing approximately 500 independent oil marketers from throughout the State of North Carolina, is interested in improving their position and preserving their independence as small-business men; and

Whereas the provisions of H. R. 6000, as now written, might impose many hardships upon, and threaten or destroy the very independence of these small-business men: Now, therefore, be it

Resolved, That the North Carolina Oil Jobbers Association petition the Congress to amend H. R. 6000 so as to more clearly define, or better still prohibit, the use of the word "employee" in the contractual relationships of supplies, consignees, jobbers, distributors, lessees, and/or dealers. The objectionable definition of the word "employee" as used in the bill can be changed without loss of social-security benefits. The bill provides coverage for self-employed businessmen; but to preserve the well established lessor-lessee relationship, and to safeguard their independence as small-business men, they should be classified as being self-employed; be it further

Resolved, That a copy of this resolution be sent to each Senator and Representative in the Congress from North Carolina.

(At 12:40 p. m., the committee recessed, to reconvene Thursday, March 16, 1950, at 10 a. m.

SOCIAL SECURITY REVISION

THURSDAY, MARCH 16, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Hon. Walter F. George, chairman, presiding.

Present: Senators George, Myers, Millikin, Taft, Butler, and Martin.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order, please.

Senator Schoeppel, we will be very glad to hear from you now on H. R. 6000.

STATEMENT OF HON. ANDREW F. SCHOEPPEL, A UNITED STATES SENATOR FROM THE STATE OF KANSAS

Senator SCHOEPPEL. Thank you very much, Mr. Chairman.

Chairman George and members of the committee, I have requested time to appear before this committee in order to speak briefly in connection with the proposed definition of "employee" contained in section 210 (k) of H. R. 6000, beginning on page 48 of the bill. There is a sincere and intense interest in this proposed legislation among a substantial number of small-business men in my State. It is on their behalf that I appear here.

These small-business men all over my State have been urging me to oppose the provisions of paragraphs (3) and (4) of the proposed definition of employee contained in this bill. I know that the committee has already heard much testimony and received many manuscripts describing the confusion and chaos which will surely result from the inclusion of this vague, indefinite, and ambiguous language in paragraphs (3) and (4) of the definition. I am against this not only because of its vagueness, but also because it will surely have a stifling effect on many thriving small businesses.

It would like to direct the attention of the committee to one class of independent businessmen in my State who are genuinely and understandably alarmed at the prospects of this definition becoming law. The effects this definition would have on this group is typical of many classes of independent entrepreneurs.

I refer to the thousands of men in my State who are wholesale distributors and retail marketers of gasoline and other petroleum products. As one time chairman of the corporation commission of my State, which is a public service commission, and as chairman of the

Interstate Oil Compact Commission, I am familiar with some of the business practices prevailing in the marketing of petroleum products.

These men generally are truly small and independent businessmen, yet, after reading the ambiguous language appearing on pages 85 and 86 of the report of the House Ways and Means Committee, I am convinced that nearly all of these independent businessmen would likely be termed "employees" of their supplying oil companies under this proposed definition.

When I first read it, I thought that the example given at the bottom of page 87 of the committee report might mean the exclusion of wholesale oil distributors from the definition. Let me read that to the committee:

> *Example (3), bulk oil-plant operator.*—The X oil company is engaged in the business of marketing petroleum products and enters into a contract with A under which A is to operate a distribution station. A provides his own tanks and trucks He operates the station as his own and employs assistants of his own choice. A pays all expenses arising from the operation of the station, and fixes the hours and days during which the plant shall be open.
>
> The combined effect of all the factors specified in paragraph (4) of the definition as applied on this case clearly shows * * * that A is engaged in a business of his own and is not an employee.

The committee will note that the distributor in the above example provides his own tanks and trucks. Under the marketing practices of the oil business, however, the supplying oil company usually owns the tanks and the property and leases them to the distributor. So, the example given offers no comfort to these oil distributors in view of the wording of the definition. There is no protection there against the possibility, yes, the probability, that the administrator of this law would classify as employees all of the several hundred thousand small businessmen engaged in this business of distributing and selling petroleum products.

Mr. Chairman and members of the committee, the gasoline filling station operator is a familiar figure to all members of this committee. He usually sells a well-known brand of gasoline and oil which normally comprises the preponderance of his business. But he also sells tires, batteries, and many automobile accessories. . Many of them sell soda pop, candy, and the like. Some of them wash and grease cars. They may even engage in other wholly different and separated businesses. Yet, there are certain factors in the contractual arrangement they have with the supplying oil company which would cause them to be called employees of the oil company under this definition.

Mr. Chairman, as support for that last statement, let me refer to the analysis prepared by the staff of the Joint Committee on Internal Revenue Taxation dated July 22, 1949. This analysis is attached to the minority report in House Report 1300, but it represents the opinion of unbiased experts—it is more than the opinion of the minority members of the House Ways and Means Committee. At the bottom of page 195 and the top of page 196 of the report these experts conclude that it is highly probable that bulk-oil distributors and gasoline-station operators would be included as employees under the economic-dependency test, which is the basis for this definition.

Let us look for a moment at the wholesaler oil and gasoline distributor. Like the filling-station operator, he usually leases from or uses rent free the tanks and buildings of the oil company whose products

he sells. Yet, he operates as and really is an independent businessman. He frequently engages in other kinds of business. Yet, this definition would make him an employee of the oil company just because the predominance of his business is from the oil company's products.

I have no hesitancy in saying that if these wholesale and retail distributors of gasoline and oil are classified as employees of the oil companies, it will cause a change in the present business practices in the industry which will in many cases destroy the independent merchants and place the distribution of products in the hands of salaried personnel.

Once again, I do not wish to burden the members of this committee with details which have already been presented to them, but I am most anxious to emphasize with all my powers, that the Congress would make a serious mistake to incorporate into the new social security law a provision which would permit the Treasury Department to exercise its uninhibited pleasure to capture small businessmen as employees.

Senator MILLIKIN. Mr. Chairman, may I interrupt the Senator?

The CHAIRMAN. Yes.

Senator MILLIKIN. In addition to those listed criteria, they also reserve to themselves this privilege, which was developed when we had the same subject before us on another occasion. I am quoting from a proposed regulation which they intended to put out but which we stopped:

> Just as the above list of factors cannot be taken as all-inclusive, so, too, the statement of facts or elements set forth * * * cannot be considered complete. The absence of mention of any fact or element in these regulations * * * should be given no significance.

So they can add any number of additional tests that they want to, to bring the thing out the way they want to bring it out.

Senator SCHOEPPEL. Senator Millikin, as you point out there, it does leave a great latitude of discretion there that, in my humble opinion, could cause considerable confusion and difficulty.

I, for one, am definitely opposed to this program of destruction of small businesses.

Mr. Chairman, I am not going to discuss the merits of the other phases of this bill, but I must lift my voice in opposition to this unsound method of increasing coverage of the law. "Self-employed" are covered by the provisions of the bill and if Congress, in its wisdom, decides to retain that provision, there is no reason for making employees out of independent contractors.

If the Congress should enact this needless definition of "employee" for social-security purposes, it will rock, if not destroy, the very foundation of American small business. The whole policy of Congress today is to encourage and foster the growth of small business. The exact opposite effect will be promoted by this new trend toward attempting to make employees out of independent businessmen. I say "trend" advisedly; already, there are three separate bills that I know about which have this same definition of employee proposed as an amendment to the unemployment insurance law—H. R. 5591, H. R. 6718, and H. R. 7331. If we enact this definition in this bill, I say to you, gentlemen, it will be only the beginning of the elimination of small business and the forcible change of a long-accepted method of

doing business. Why should Congress force an industry, such as petroleum to change its entire marketing procedure when there is no good reason for doing it?

Many of these small-business men in my State, who may be found to be employees under this elastic definition of employee now in H. R. 6000 simply because a predominance of their business comes from the sale of the products of one company, have requested me to urge upon you the retention of the present definition of "employee" instead of the one contained in H. R. 6000. It is only in that way that they may continue as independent businessmen and thus promote the economic growth of our country.

I would also like to discuss briefly the second sentence of paragraph (2) of this proposed definition. That sentence reads as follows:

> For purposes of this paragraph, if an individual (either alone or as a member of a group) performs service for any other person under a written contract expressly reciting that such person shall have complete control over the performance of such service and that such individual is an employee, such individual with respect to such service shall, regardless of any modification not in writing, be deemed an employee of such person (or, if such person is an agent or employee with respect to the execution of such contract, the employee of the principal or employer of such person).

I venture to say that a single reading of this sentence does not reveal the purpose of it. Also, only those who have studied the matter know who is behind this proposal.

My attention was directed to this sentence by petitions from several reputable businessmen in the State of Kansas who are owners and operators of places of entertainment. These constituents of mine vigorously protest the incorporation of this provision in the law. It is in the bill to satisfy the whims of Mr. James Petrillo, the president of the American Federation of Musicians. Therefore, I shall refer to the second sentence of paragraph (2) as the "Petrillo clause."

Upon receiving the protests from my State, I made some inquiry to determine the history of this "Petrillo clause." I referred to the report of the House Ways and Means Committee (H. Rept. No. 1300), and I found on page 80 of that report this statement:

> The second sentence of paragraph (2) is designed to change the effect of the United States Supreme Court's holding in *Bartels* v. *Birmingham* ((1947) 332 U. S. 126) * * *.

I thereupon investigated the Bartels case. This is a case, which was finally decided by the Supreme Court, growing out of a suit by operators of public dance halls to recover social security and unemployment taxes which they had paid under protest on musicians playing with orchestras at the dance halls. These orchestras were so-called name bands which had been engaged by the dance-hall owners under a contractual arrangement with the leader of the band.

According to the decision of the Court of Appeals for the Eighth Circuit in this case (157 F. 2d at p. 298), the American Federation of Musicians required all its members to use a contract known as Form B. This Form B contract, which was required by Mr. Petrillo's union to be executed by all persons who made a contractual arrangement with an orchestra, provided that the ballroom owner was the employer of the band leader and of the musicians. The court found,

as a fact, that this contract was adopted by Mr. Petrillo's union in order to shift the burden for payment of the musicians' social security taxes, from the leader of the band (who must also be a member of the union) to the owner of the hotel, ballroom, or club. The court also found that these contracts were not entered into "by fair negotiations," but were forced upon the businessmen who contracted with the orchestras.

The union's endeavor to shift the tax burden was unsuccessful, because in the Bartels case the Supreme Court concluded that it should not confine itself to the terms of a written contract between the parties in determining who is an employer and thus liable for payment of social-security taxes, but that it should consider all relevant facts and circumstances which tend to show the actual and true relationship. The Supreme Court ruled that when that test was applied the musicians were not employees of the owners of the entertainment houses, the written contract to the contrary notwithstanding.

Thus, we see that the admitted and avowed purpose of the Petrillo clause is to permit a labor union to create the employer-employee relationship in any case where that union has the monopolistic powers and control of the occupational group which it represents. Does Congress wish to abdicate to a union the power to determine who is an employee, simply because that union is powerful enough to compel the execution of a certain kind of contract? I submit, if the committee please, that this kind of legislation is pernicious in character and is class legislation of the worst sort.

I shall not burden the committee by indulging in speculation as to all the possible interpretations which the Treasury Department might place upon the Petrillo clause, but one needs only to read that sentence to realize that a literal interpretation of its words might result in the inclusion of many relationships within the scope of master and servant for purposes of social security.

If this should become law, it will constitute an open invitation to all labor unions to insist upon the inclusion of the appropriate provisions of the musicians' union's Form B in all contracts of employment.

In conclusion, Mr. Chairman and members of the committee, I strongly urge this committee to strike out of the definition of employee now in H. R. 6000, the second sentence of paragraph (2) and all of paragraphs (3) and (4). This definition as now written would (a) make employees out of independent contractors, (b) promote lawsuits, and (c) destroy small businesses.

On behalf of the many small-business men of Kansas, whose very existence, they think—and I share their views—is threatened by this legislation, I sincerely want to thank the members of the committee for the courtesy that you have extended to me to appear before you in their behalf and present some of these matters that I have just outlined.

The CHAIRMAN. We are very glad to have your views, Senator, and your appearance before the committee.

Senator SCHOEPPEL. I have left copies for the members of the committee and those who might desire them.

The CHAIRMAN. The next witness is the Honorable Carl T. Curtis, United States Congressman from the State of Nebraska.

STATEMENT OF HON. CARL T. CURTIS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEBRASKA

Representative CURTIS. Mr. Chairman, the distinguished Senator who just testified was an outstanding Cornhusker football player, and I can commend anything he might say to you.

The CHAIRMAN. He does not need any character witnesses before this committee.

Representative CURTIS. I am fully aware of that.

Mr. Chairman, I am opposed to our social security system. It is unsound. Furthermore, it does not meet the needs of today's aged.

My remarks will be directed primarily at the old age and survivors insurance usually referred to as OASI. The bill before you is a $12,000,000,000 a year program. It will cost that much when it matures before the close of this century, even if the benefits are never again increased. It is actuarily unsound and I know of no actuary who is not in the employ of the Social Security Administration who approves or endorses it. Improving it is not the answer. We need a new system.

It is not necessary to argue that our social security system is not taking care of this generation of old people. Although the program has been in force 13 years, we have 8,400,000 men and women over 65 who are ineligible for its benefits. Apologists for the program promptly assert this is because the program is new. This argument cannot stand when we consider the admission of the Social Security Administration's head actuary that under H. R. 6000, 10 years from now there will still be 7,200,000 men and women over 65 ineligible for its benefits. This results from certain basic defects in the program.

Our present social security law is not only unfair, it is harsh and cruel. The benefits that are now paid are not equitably distributed. Individuals who are already out of the labor market: widows, who were widows when the law went into effect; orphans, whose fathers were not in covered employment; as well as countless millions who make their contribution to society without earned income are not helped by mere extension of coverage to all the occupations. They are outside the so-called insurance part of the social security law. Yet, in a social program these are the groups that should have first claim on whatever the American taxpayers can pay out for these purposes.

The program is geared to give advantage to the high-salaried and to discriminate against the low-paid. For instance, the man retiring on an average wage of $250 a month draws $16 a month more in OASI benefits than the man whose average wage was $100. Yet, he has only paid for $2.47 more protection in his social security taxes.

The present program as well as H. R. 6000 fails most of our aged, but offers attractive windfalls to the privileged few. A banker or a corporation officer whose salary has been $3,000 or more, who retires at 65 this year can, with his wife draw about $100 a month. The man's life expectancy is 12 years; his wife's is 14 years. He has paid into the social security system a total of $390, or less than 4 months' benefits.

Across the street there may be an aged individuad who has toiled and produced for years, but if he were taken out of the labor market before he became fully insured, he either gets nothing or is subject to a needs-test for relief. This means that he has to declare himself a

personal bankrupt and turn his life over to a case worker. Social-security advocates attempt to point out that the corporation executive has paid for his retirement and the other man has not. Mr. Chairman, the people know more about social security than you realize. They know that the individuals drawing the benefits have not paid for them. They have made a very small token payment only.

Of the primary beneficiaries now on the rolls, virtually none has paid more than $400 in employee contributions; some have paid less than $10, and the average total employee contributions for these benefits have been less than $150. For this average contribution of $150, each beneficiary will receive retirement payments totalling $3,000. If allowance were made for the value of a wife's and other benefits, the value would be much greater.

Further, Mr. Chairman, I believe that if the American taxpayers are to help orphans they should treat all orphans alike. The survivor benefits under OASI are as discriminatory as the retirement benefits. A family of children of a deceased father who earned $50 a quarter in covered employment over a period of six quarters is eligible for the minimum benefits. This deceased father had paid in taxes for these benefits the total sum of $3. How can you say to another widow and her fatherless children that they are not entitled to anything and that the first-mentioned family paid for their benefits? This program constitutes neither sound insurance nor a fair social program.

Our system of social security lacks flexibility. Who can say that 65 will be the proper retirement age toward the end of this century? Benefits cannot be tied to past wage records and still do the job in any particular year. H. R. 6000 is an admission of this.

For 13 years our Government has been paying for the keeping of voluminous and detailed wage records allegedly because they were needed to figure benefits, yet in the bill before you benefits were revised to meet present-day need.

Flexibility in a program is desirable. The wage-record system prohibits flexibility besides being a costly procedure.

May I say there that as long as you try to tie a social-security system to a wage-record system, you will not only do a bad job in taking care of the people who never have a wage record but you will always have this troublesome question of who is an employee—all for nothing. It does not add to the soundness of the program.

Another objection to a program in which the number of beneficiaries is much smaller in early years than in later is that, regardless of what financing method is adopted, there will be an uncontrollable tendency toward undue liberalization of individual benefit amounts. With only relatively few beneficiaries on the rolls now and in the immediate future, it is too easy to propose individual benefit rates to be approximately doubled; that primary benefit amounts in excess of $100 a month be promised, as well as the combined husband-and-wife amounts of $150 a month. With a relatively small number of beneficiaries now and with present benefit disbursements far below contribution receipts, the ability to fulfill these promises over the next few years seems to be all that matters. The tremendous future cost that will result when there are many more to whom we have made these commitments is too easily ignored.

In our population over 65, only 1 out of 5 is now eligible for benefits. On this basis we are fixing benefits so high that when the time arrives

that 5 out of 5 become eligible the program will be an impossible financial burden.

I have repeatedly stated that H. R. 6000, 40 years from now, will cost $12,000,000,000. This is a very conservative estimate. Compared with the life of our Republic, that is not a long period of time.

Mr. Chairman, I feel very keenly about this. I have a son 10 years old. Adopting this program means that when he is 50, the taxpayers then must pay $12,000,000,000 a year for old-age and survivors insurance alone. The taxpayers of that day will have no voice in determining the amount of payment for it is in the nature of a contractual agreement. We have no right to force such a program upon our children. The workers today have no right to expect a retirement benefit for themselves that today they are unwilling to provide for their parents.

Someone may suggest that when these benefits are to be paid 40 or 50 years from now, they will be paid from an accumulated trust fund adequate to meet these benefits. This is a fantasy. It is a myth. In the first place, we have no assurance that the progressive tax rates will go into effect and that any such fund will be accumulated.

If the sum could be collected, how could it be managed? Should these many billions in the so-called trust fund be retained in cash by the Treasury? The effect of such a procedure on the economy is well known to you gentlemen.

Should these funds be invested in securities other than Government securities? If this were done, the Social Security Administrator would soon control all the Nation's major business enterprises.

That leaves only Government bonds as an investment. I maintain the Government cannot carry a trust fund in its own Government bonds.

When a recipient is to receive his benefits, this year or 40 years from now, he wants them in dollars. There are only three ways to get dollars. These ways are:

1. Current taxation;
2. Issue of more bonds to borrow the people's money;
3. Inflation through printing press money or devaluation.

It matters not, so far as our economy is concerned, whether there or three warehouses of Government bonds in the trust fund or 40 warehouses of Government bonds. The people have to provide the money when the benefits must be paid.

What is the answer? We should adopt a pay-as-you-go program. We should make these benefits available now for all our aged, and all our widows and orphans. We should collect the money now. I submit that in any given year, those individuals who are so blessed as to have a job and good health should carry the load for those unable to provide for themselves in that particular year. The full cost should be paid each year, and when that year closes nothing is owed and nothing is promised. That is the only way we can be fair and honest with our children.

If this basic change is impossible at this time, then I suggest that no legislation be passed or that a stop-gap measure be approved providing additional money for the country's needy.

Senator MILLIKIN. What sort of impossibility do you see?

Representative CURTIS. Largely political. Social security has been sold to the people as something that was untouchable, that people paid

for. There has never been any real searching investigation of it on a broad scale. And politically you might not be able to make such broad, sweeping changes without a little more build-up and perhaps an investigation, which I will come to in my closing paragraph, that is, selling the idea to the American people.

Senator MILLIKIN. In your judgment, what would it cost to put a pay-as-you-go system into effect, giving the amounts of benefits that you have in mind?

Representative CURTIS. Senator Millikin, I do not want the responsibility of saying how much of a payment should be made to our old people. If it is X dollars or Y dollars, I do not want my criticism of social security to be identified as a certain price pension proposal.

I can tell you this: That the only way we can preserve the long-time solvency of this country is to pay them all—all our old and all our orphans—now, and pay the bill and let the American people know that if they want to raise that 20 percent, there is a tax raised.

Senator MILLIKIN. I am very much taken with the notion of pay-as-you go, but I would like to know what mechanics and money are involved.

Representative CURTIS. I can give you some figures. I will start out with about four figures as to the present program as provided in H. R. 6000. The Federal Government at the present time is making in grants to the States in this program 1.2 billion dollars. We will collect in taxes in fiscal 1951—that is, social security taxes—3.5 billion dollars. That is a burden on the Federal taxpayers of 4.7 billion dollars.

Now, the States are spending, in matching that—and this is an old figure, the year ending July 1, 1949—eight-tenths of a billion dollars, or $800,000,000. That is a grand total cost of 5.5 billion dollars.

I want to be fair about this. This is the social-security tax plus what we are paying out in grants and what the States are paying out. It is not figured on the benefits paid out. It is the levy on the American people I am talking about.

Now, by way of illustration—and again, let me say I am not going to assume the responsibility to say whether each old person should get $30, $40, or $80——

Senator MILLIKIN. We have to have as much instruction as we can get on this subject.

Representative CURTIS. Yes. The cost of a flat payment of the Federal Government of $30 per month to each individual over 65, each widowed mother with a child under 18, and so forth—and there are 11.4 million individuals over 65, 3 million widows and orphans, a total of 14.4 million—and $360 a year takes 5.1 billion dollars.

Now, if all other Federal subsidized pensions, such as military, veterans, civil-service, and railroad retirement, are offset, and if the benefits under this plan are made taxable, and allowing for the refusal of benefits by a small portion of the potential recipients, I estimate that this can be reduced by eight-tenths of a billion dollars, or $800,000,000.

This would leave a net cost of 4.3 billion dollars as compared to my figure with regard to the present program of 5.5 billion dollars.

Now, the Federal savings would be four-tenths of a billion dollars. This is based upon the Federal Government ending its grants to the

States, which will end a lot of abuses and bureaucracy besides saving dollars. It will be a savings to the States of $800,000,000.

Now, my estimates are high on this; perhaps more people would refuse it than I have estimated. I do not want to be in the position of advancing something and then underestimating what it would cost.

Since you have asked the question—I do not want to take too much of your time—but I must point this out. In taking just and kindly care of our old people, there are some things that count besides dollars and our present method of doing takes the most dollars. If here is an old lady who has a modest sum of money coming in as a matter of right, without need tests, without a case worker going around, who can live where she wants to, grandma will be a welcome guest in somebody's home—a grandchild, a daughter, a niece, or somebody—because she can pay part of the way. Those good, honest people might not be able to take her in if she had no income whatever.

But under our OAA program, she must declare herself a bankrupt, usually maintain her own living quarters, have a case worker come in and make out a budget for heat and light and medicines, and all the rest, and if the family are honest and the case workers find out that some relative gave this dear old lady $3, they cut down her allowance that much.

They end up by spending a lot more money, and they still make life miserable for many of these old people.

Senator MILLIKIN. As I figure, Congressman, if you have 14,000,000 people 65 or older now, and you give them $75 a month each, you have an annual tax bill of 12.6 billion dollars.

Representative CURTIS. Senator Millikin, I am not suggesting any dollar amount. What I am pointing out here is the dishonesty of legislating a program that will eventually take in all our old people for our children to pay for, and we do the legislating now.

Now, if we cannot afford to do this, all right. I think I have a very conservative record in voting in Congress. I am concerned about the financial solvency of this country, not only now, but in the years to lie ahead. We are legislating day after day, adding to the cost of the Federal budget for the years to come, which is probably a greater sin right now than the amount of money we are appropriating, and I think we are appropriating far too much money.

Mr. Chairman, it would take a tax rate on the first $3,000 of net income of individuals after deductions and before personal exemptions and credits for dependents, to produce 4.4 billion dollars. That would carry your $30-a-month program. But you would free these old people. They could make a little money without violating the law. Relatives could help them. Others may turn it down. I do not think it would cost that much—and again, I am not saying that no one should have more than $30 a month. The States would still be in the picture. We would forever get rid of this terrible system of matching money with the States.

Now, I agree with you that we just cannot pay all these recipients $75 a month. All right; I submit that we have no right to legislate so that the children in the country have to make such payments in the years that lie ahead.

Senator MILLIKIN. I think you are rendering a very constructive service when you point that out. I do not think there is any question about that.

I am now taking the next step: What are we going to do about it in terms of today?

Representative CURTIS. Mr. Millikin, there are those who would come in and say, "Abolish this system and do nothing."

Senator MILLIKIN. That is not going to be done. You know it and I know it and everybody else knows it. So let us get down to what we can do now.

Representative CURTIS. Yes. Let us do for all of them now and see what it costs, and fix it so the American people can control that cost.

The people that I deal with, when I get back home, are smarter than a lot of folks in Washington think. If they say that a 4-percent rate of tax on their first $3,000 is not quite enough to pay these old people, and they want to raise it to 4 or to 6 and add $10 to each one of these checks, they can. But if the sentiment swings the other way and if they think these people are getting too much, they will say so.

Senator MILLIKIN. Do you favor the continuance of the so-called insurance contribution or would you pay out of general revenue?

Representative CURTIS. May I read my last paragraph?

Senator MILLIKIN. Yes; of course.

Representative CURTIS. This should be followed by a thorough and objective study of the program. With due regard to the high caliber and public spirit of the individuals comprising the various advisory councils on social security, I regret these councils have not been able to make a more thorough reexamination of the fundamentals. Each council has been composed of experts in their own fields, who, being extremely busy men in these outisde fields, could not take the necessary time to make such reexamination; consequently, acceptance of the proposals developed by the Social Security Administration staff members became an almost inevitable course.

I feel a study should be made by a group consisting largely of persons who can devote full time for several months to the work, who are largely technicians in this field, and who at the same time are fully independent of administration pressure. Only in this way can a wholly objective and thorough chart be laid for future development.

Senator MILLIKIN. When we were setting up the advisory council to the Senate Committee on Finance, I spent a lot of time trying to find those technicians. The cold fact of the matter is that the basic information is alone in the possession of the Social Security Agency. There is no private actuary for any insurance company, including the biggest, that can give you the complete picture on this subject.

Representative CURTIS. That is correct.

Senator MILLIKIN. I know what I am talking about because I tried to get that kind of people.

Representative CURTIS. Yes. I think those men who have the background that could adapt themselves to that work will have to be engaged for a longer period of time and not be called in as consultants or advisers, but be put to work with the information.

Senator MILLIKIN. Ironically, they would have to go over to the Social Security Agency and get their information. There is no place else to get it. The insurance companies do not have it.

Representative CURTIS. That is true.

Senator MILLIKIN. They have no source of information, roughly speaking, except the Social Security Agency.

Representative CURTIS. Understand, Senator, the criticism I made was neither at the resolution or legislation calling for these councils or the men who serve on them, but they sit in in an advisory capacity.

Senator MILLIKIN. I think you have an excellent point, Congressman, if you could do something about it. But the question is, What are you going to do about it?

Representative CURTIS. I think it can be done, Mr. Millikin. I think technicians who absolutely had no other responsibility, with no outside activity or responsibility at all, who, if necessary, had to go into the places where the information exists; but they would do their own tabulating, their own questioning of the figures and the conclusions to be drawn therefrom. I am not ready to admit, Mr. Millikin, that there is not anyone that can investigate this thing.

Senator MILLIKIN. I spent a whole summer working on that problem, sweating here in Washington when I did not have sense enough to stay in the Senate Office Building, trying to find those kinds of people, and I finally—by the admission of the people in private business—had to give up the job because those people were not available. They did not have them.

For example, with respect to a big insurance company, you would think offhand, "My goodness, they must have the skills in here, that is, the combined skills to deal with a problem of this kind." But they do not have them.

Representative CURTIS. Mr. Millikin, I think this situation is so grave that we have got to take off the gloves and call a spade a spade. There are certain individuals connected with large business who, for selfish reasons, like this sort of thing. They have built up a big staff within the corporation to advise the management on this tangled problem as to who is an employee and who is not; and the result is that they have a group that can be indispensable because of the web that is put around them by the Government. So you are going to have some people among so-called large business that are not going to make much of a contribution.

Senator MILLIKIN. May I make this suggestion to you, Congressman? You would probably be amazed if you knew how many of the big fellows in the insurance world in private conversation favor exactly what you are talking about.

Representative CURTIS. Yes. The Senator was faced with a difficult thing for a hurry-up job in a few months. It was an approach for someone to advise on social security. These councils end up with people who are extremely busy. They rush in here for a few hours and the result is, "This sounds agreeable" and they sign the report. I want an investigation committee which will not sign anybody's report but will make one.

Senator MILLIKIN. Congressman, you are a little in error, if I might respectfully suggest.

Representative CURTIS. I stand corrected, sir.

Senator MILLIKIN. I may say that Senator George and I kept the wires busy all the time in cooperating completely on this problem. Those members of the council came from all over the United States. They attended the meetings, and they came here repeatedly. They averaged a meeting every 2 months over a period of from 1947 to the end of 1948. Many of them were technically skilled in this business

but, as I say, they were trained in a limited sphere of interests. There is no denying that.

I want to emphasize again that they may have reached wrong conclusions. This committee has never adopted their conclusions, and I am not offended at all by what you say. I recognize the strength of most of what you say. I am simply trying to point out to you that there was a good-faith effort by top-flight citizens to reach conclusions, and they just did not sign something that was handed to them. I have seen them in session debating this thing all the way around the table point by point in numerous meetings held here in Washington where they dropped their business and had come here from all over the country. That is what I am trying to get over. I am not saying their conclusions are right. We have to decide that ultimately.

Representative CURTIS. I did not see your council in work, Senator. I have heard some of them testify and I have cross-examined them. Now, understand, I am not to do the questioning, but as a matter of information, Senator, when they met every 2 months, for how long did they meet?

Senator MILLIKIN. They stayed for 2 days.

Representative CURTIS. That is the point.

Senator MILLIKIN. They had a staff that was the best staff we could get. They had a staff that had the thing laid out for them. I have seen them take it, point by point.

Representative CURTIS. I want the responsibility not on people who will come to Washington a couple of days every 2 months. I want the responsibility for a study of this by people who will spend 48 hours a week for 52 or 104 weeks, if necessary.

Senator MILLIKIN. You will have to go over to a lamasery in Tibet to find that kind of people, because if you are going to have good people they have some other things to do.

Representative CURTIS. I realize that, Senator, and I hope that I have not been offensive in my criticism of these things. But I think the program is so big and so far reaching that that has got to be done.

Senator MILLIKIN. Now let me read you this membership. There was the late Edward R. Stettinius, Jr., who was on the original council that evolved the first Social Security Act. Then Sumner H. Slichter. I think if you search the whole United States, or if you had a convention of all economists in the United States, Sumner Slichter would get the top vote as the top fellow in the whole business.

Next, Frank Bane, executive director of the Council of State Governments. Now, there is a gentleman who has been working with the problems of State governments and the relation of State governments to the Federal Government, and this problem involves those relationships. You could not have gotten a better man, I suggest.

J. Douglas Brown, dean of the faculty, Princeton University, a college professor. Well, it is not necessarily a sin to be a college professor. Some of them are pretty wise gentlemen.

Here is Malcolm Bryan, vice chairman of board, Trust Co. of Georgia. There is a practical businessman with a background of interest in social security.

Then, Nelson H. Cruikshank, director of social-insurance activities, American Federation of Labor, an outstanding expert in the business. He may have his own particular viewpoints, and undoubtedly has, but he is smart and knows what he is talking about.

Then, Mary H. Donlon, chairman of the New York State Workmen's Compensation Board, a very outstanding lady in social-security matters.

Next, Adrien J. Falk, president of S. & W. Fine Foods, Inc., an outstanding western businessman and leader in public affairs.

Marion B. Folsom, treasurer of Eastman Kodak Co., who was on the first Advisory Council, a smart man especially skilled in social-security matters.

Then, M. Albert Linton, president of the Provident Mutual Life Insurance Co. He is not ignorant in this business.

Then you have John Miller, assistant director of the National Planning Association, and William I. Myers, dean of the New York State College of Agriculture. There are a lot of agricultural problems to be considered in this business.

Also, Emil Rieve, president of the Textile Workers' Union and vice president of the Congress of Industrial Organizations. If you ever had him on the stand and cross-examined him, you found out that he knows his way around.

Then there is Florence R. Sabin, of Colorado, I am glad to say, a great scientist.

You also have S. Abbot Smith, who had been head of a small business organization, and a New England manufacturer.

You have Delos Walker, vice president of R. H. Macy & Co., a great expert in personnel.

And also, Ernest C. Young, dean of the graduate school of Purdue University.

I run through all of that to disabuse your mind, I hope, of any thought that we picked up a bunch of stumblebums to work on this problem.

Representative CURTIS. Oh, no, Senator. I would pay the highest tribute to those men as citizens and as successful people in their fields.

I raise two objections: One is that their field has not been social security, and the other one is that they cannot do it in 2 days out of every 2 months. It is not that kind of a job.

Senator MILLIKIN. Now, I have a note here from a gentleman of our staff who reminds me that we had an interim committee made up of the members I read you about, who went over every proposal between the main meetings and they submitted their data in constant liaison with the main staff, so that when the main committee met they did not plunge coldly into these problems. There had been a preliminary sifting by this interim committee.

Representative CURTIS. I understand that.

Senator MILLIKIN. Where you are puzzling me is: Where are we going to get the kind of fellows you are talking about? I agree if it could be done it would be the perfect thing to do, but I am trying to get a little enlightenment on how to do it.

Representative CURTIS. I am not ready to name names, Mr. Millikin, but I think it could be done. I certainly would not want this record to close with anything that I said indicating that these were not outstanding citizens. They were. I cannot agree with their conclusions, and I do not think that if, as individuals, they would shut themselves off from the rest of the world and study the problem for 60 days alone, they would come up with the same conclusions.

Senator MILLIKIN. I am not agreeing with their conclusions. We are checking their conclusions in this hearing.

With respect to the question I asked you formerly, would you sustain your plan with so-called insurance contribution by worker and employer, or would you take it out of general revenues?

Representative CURTIS. No; I would have a tax. Whether or not you had that on both the employer and employee, you may want to study that a little bit. If so, it should be collected as other withholding taxes are collected. I definitely would not keep the wage-record system.

Senator MILLIKIN. What is bothering me is that if we are going to take every one in 65 years or older, we will be taking in the whole citizenry, so why have a special tax? Why not pay it out of general revenue. In other words, in order to get away from these phony insurance principles to which you refer.

Representative CURTIS. Yes. I think this, Senator: I think there would be some merit in having a tax identified for that purpose so that the people who are not recipients would understand what it was costing and how it was being paid, and the recipients themselves would know how this was being paid by their neighbors and their friends and relatives.

Senator TAFT. How can you grade the benefits for different people without having kept a wage record?

Representative CURTIS. Well, you do not do it now.

Senator TAFT. You are for uniform pensions, is that it?

Representative CURTIS. Well, yes. Here is the point. We have spent a lot of money keeping wage records during the last 13 years. H. R. 6000 disregards that. It revises the benefits and says that they are unrealistic in the light of present need, and Dr. Slichter said that we should periodically do that. Now, back in my law office in Nebraska I might hire a girl for 3 months and then she gets married and quits working. But we have paid a small amount of social-security tax. That account has to be maintained probably for 90 years. Then when it comes to a show-down, we know that the Congress is going to fix benefits at such economic and political level as is necessary.

Senator TAFT. But with some relation to what that person has earned during his or her life. It seems to me that is a principle I do not want to abandon.

Representative CURTIS. That is the thing I do want to abandon, Senator Taft, for this reason: At the present time, as I pointed out in my statement, you are paying the $250-a-month man a benefit of $16 a month more than the $100-a-month man. Actuarially, he has paid for $2 47——

Senator TAFT. I understand all of the inequalities, and I agree that the benefits have very little relation to what you earned during your life; but they have some relation, and that relation is one that I do not want to entirely abandon. I hate to go to a flat pension, let us put it that way. Otherwise, I more or less agree with you all the way through.

Senator MILLIKIN. I might suggest that the Congressman has cut through all the inequalities by suggesting a pay-as-you-go system and some flat pension. I would rather go your route, if it can be done, than to go through all of the jiggling around of wage records and

inequities that will inevitably follow that sort of thing. But we do not have yet the economic basis for going your route.

Representative CURTIS. What I want to do is to escape the future consequences of this so-called insurance program. It is the German system. It did not work there, and I know that if we go on with this we will get a burden that we cannot carry.

Senator MILLIKIN. It might be called the germ system.

Representative CURTIS. Yes. As long as we are fixing benefits on the basis that 1 out of 5 over 65 will get the benefits, then we do not need to worry how high they are. But there will come a time when our kids will pay on the same rate for 5 out of 5.

Senator MILLIKIN. What you are saying is, "Cut out making promises that we do not know we can keep, and probably will not, and pay as we go so we know the size of it and we know what it is costing."

Representative CURTIS. Yes, sir. It may be as we look into this that we cannot pay many of our aged anything if we are going to save ourselves from bankruptcy. But, for goodness sakes, let us stop making a contractual relationship where our future generations of taxpayers will have to pay that. I think my estimate of $12,000,000,000 a year for this program before this century closes, if we do not raise the benefits again, is very conservative.

Senator MILLIKIN. It would be $12,000,000,000 right now if you gave all those 65 or older $75 a month.

Senator TAFT. That would not be so big if you had a gross income of a trillion dollars, as suggested by the President, at the end of the century.

Representative CURTIS. You know, Senator Taft, a farmer in my district figured out that if taxes increase in the same rate they have in the first half of the twentieth century that by the time the income reaches a trillion dollars our tax will be 2.7 trillion.

Senator TAFT. I think that is probably right.

Senator MILLIKIN. Well, all you need is bigger and faster printing presses.

The CHAIRMAN. May I say, Congressman, supplementing what Senator Millikin has said, that since the House passed this bill—since you passed it over in the House—and sent it to us last October 6, I have been endeavoring to find, even in the rather restricted field of actuaries, some outside actuary of real ability, real character, who could help. I have been told by several men that I have consulted, that they could not be of real help beyond this—they would be compelled to go into the Social Security Agency for their basic data, and based upon that data, they would come out with the same conclusion that any ordinary actuary would probably reach.

Representative CURTIS. I am aware of the limitation on the sources of information and how few people there are who specialize in this field. But I hate to come to the conclusion that when we take our pencils and figure out something and it points to danger for us, to say that there is not anyone smart enough to figure it out and change it.

The CHAIRMAN. I can understand that you could see the danger all right. I agree with you on that point. These actuaries with whom I have conferred have stated beyond that basic assumption that they would have to make, the data they got out of social security

would permit them then only to proceed in a helpful way upon assumptions. They could take a given assumption and, of course, work out to some end result.

Representative CURTIS. Let us analyze that a little bit, Mr. Chairman.

The CHAIRMAN. But I do not know how that would be helpful.

Representative CURTIS. Do you not think that we could get accurate figures on population?

The CHAIRMAN. Yes.

Representative CURTIS. And also life expectancy, how many old people we are going to have 30, 40, and 50 years from now. The thing that has been overlooked by these advisory councils is certain basic questions about trust funds and other things that can be determined by competent men if they have enough time.

The CHAIRMAN. Undoubtedly they can be helpful. On your own figures of taking $30 per month pension for all of the aged and the widows and dependent children, I believe you figured that would cost about $4,300,000,000 at this time?

Representative CURTIS. Yes.

The CHAIRMAN. Now, projecting that for the remainder of the century, about 40 years, you think it would reach about $12,000,000,000?

Representative CURTIS. No, Mr. Chairman. I said the program proposed in H. R. 6000 will cost $12,000,000,000 a year.

The CHAIRMAN. Have you projected it on the basis of the $30 per month pension?

Representative CURTIS. That is the beauty of a pay-as-you-go system, Mr. Chairman. We let the taxpayers of 1960 and 1970 and the year 2000 decide how much they are going to pay for the aged in any given year, and we do not legislate now for them.

Again let me say, Senator, I am not here proposing $30 or any other figure.

The CHAIRMAN. I understand.

Representative CURTIS. I do not want to be identified with a price-tag-pension program. The people I represent want the solvency of this country maintained, and I am thoroughly convinced that it cannot be if you go on with this present social-security system.

The CHAIRMAN. I do not know where we are headed with this social-security system plus private pension systems.

Representative CURTIS. I think one other thing we should not lose sight of in this legislation is this: Among federally sponsored pensions, a man can draw four or five of them at the present time.

The CHAIRMAN. You can draw more than one. Yes, one could draw several; you are right.

Representative CURTIS. He can qualify for social security, railroad retirement, military, perhaps veterans, and civil service. There is no charge off. It is somewhat unfair to the 4 out of 5 over 65 who draw nothing. But I am not here with my first plea that you pay anybody a sum of money now for the sake of attracting attention of those people. I think the vast majority need some attention. But what I am devoted to, from the little I have studied this on the Committee on Ways and Means for the last 6 years, is that I think the so-called insurance program is basically unsound and it is not fair to the people who will follow us on the scene.

The CHAIRMAN. Thank you very, very much.

Representative CURTIS. I thank you, gentlemen.

The CHAIRMAN. Hon. N. M. Mason, will you come forward, please? We will be very glad to have your assistance in solving this difficult problem.

STATEMENT OF HON. NOAH M. MASON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS

Representative MASON. Mr. Chairman, to begin with, I want to say that I approve and subscribe to the constructive outline that Mr. Curtis, my colleague, has made. I also want to say that I am not an expert in the social-security field and so I want to present in very brief time what might be called a bird's-eye picture of the problem as I see it, because I have collaborated with Mr. Curtis in the report that was prepared by the Ways and Means Committee and subscribe to that. Mr. Curtis has gone into the ramifications of this problem much more completely than I have, and so he has treated it in detail, where I am expected to treat it only as a kind of general outline.

With that as a preliminary, Mr. Chairman and members of the committee, I want to read my short statement and then subject myself to questions.

The CHAIRMAN. We will be very glad to hear you, sir.

Representative MASON. Mr. Chairman and members of the committee, I am one of the three members of the Ways and Means Committee that voted against H. R. 6000 when it was approved in committee. I was alone 1 of the 14 Members in the House that voted "no" when the bill was up for final passage in the House.

And right here I want to interject this: that in my opinion if that had been a secret vote it never would have passed the House, because if one Member of the House came to me at least two or three dozen came to me and said: "Noah, I know that thing is unsound; I know it stinks, but I felt I had to vote for it because of the pressure that was brought upon me."

I feel, therefore, that it is my duty and responsibility to make a statement before the distinguished members of this committee giving very briefly my reasons for opposing the bill.

In my opinion the weight of the testimony during the 3½ months of open hearings before the Ways and Means Committee on our present social security set-up was to the effect that it was unsound and dishonest, a Ponzi-type shell game that has been sold to the American worker as a plan to provide security in his old age. It is a program which if practiced by a private insurance company would land every director and every officer of that company in jail for misappropriation and misuse of trust funds. The program is characterized by the Brookings Institute report on our present social-security set-up as a plan whereby "We (the present generation) do the promising; you (all future generations) do the paying."

The future burden of H. R. 6000 is described on pages 168 and 169 of that same report as an enlarged old-age insurance system that would ease the cash position of the Federal Government today because the excess of revenues collected today through the social-security tax goes to meet the ordinary expenses of the Government, and that means

that a substantial part of future social-security costs will have to be met out of future tax revenues. The report estimates that the cost of H. R. 6000 pus the veterans program will be between 19 and 25 billion dollars by the year 1970. Personally, I think that is probably a little high, but it will be somewhere in that position because of the $12,000,000,000 that is usually estimated, and the $5,000,000,000 that we are now paying out, would make it $17,000,000,000.

Senator MILLIKIN. It would be twice as much if the value of the dollar continued to slide.

Representative MASON. Yes.

Gentlemen, can our economy carry this tremendous additional burden?

Perhaps at this point a concrete illustration to demonstrate how unsound and dishonest our present social-security program is would be in order; therefore I offer the following hypothetical case:

John Smith decides to establish his own social-security program, so he meticulously deducts a certain percent of each pay check he receives and places the cash regularly in his safety deposit box. After doing this for several years and having thus set aside, say, $5,000, to insure security in his old age, John Smith starts to spend each month more than he earns—as Uncle Sam does now. Then John Smith hits upon the plan of taking so much cash out of his lock box to spend each month and placing in the box, in lieu of the cash extracted, promissory notes to himself. If John Smith keeps this up, when he retires he will have only promissory notes to himself to live on—which he has no way of changing into cash for groceries.

That, gentlemen, is exactly what Uncle Sam is doing with the social-security receipts—the only difference being that Uncle Sam has the taxing power to invoke in order to change his IOU's into cash to meet his future social-security obligations. But that involves new taxes, additional taxes, to meet obligations that are supposed to have been paid for already by the beneficiaries. I wonder if that scheme of taxing the children and grandchildren of the social-security beneficiary for something he and his employer are supposed to have paid for—but Uncle Sam has spent the receipts from the social-security tax for other things—can be called anything but dishonest and immoral, "a Ponzi-type shell game that has been sold to the American worker as a plan to provide security in his old age."

On page 176 of the Brookings Institute report the authors recommend that the present social-security set-up be abandoned entirely and a genuine pay-as-you-go system be established in its place. This would do away with all need for reserves, all need for level premiums, all need for costly and elaborate bookkeeping systems, et cetera. This would mean, as the authors of the report point out, "Our generation would care for its own and trust future generations to do likewise."

Senator MILLIKIN. Congressman, did you get the impression from their report that they would raise the pay-as-you-go money by general taxation?

Representative MASON. I did. A very sensible and practical and wise conclusion for them to reach, it seems to me.

Senator MILLIKIN. That is what it amounts to anyhow, because when you make good these bonds that you are talking about that are piling up under the swindle that you referred to, they will be paid out of general taxation.

Representative MASON. Yes, sir.

In discussing the social-security problem on the floor of the House, I said:

Mr. Speaker, the action of the House on H. R. 6000, the social-security bill, has impelled me to do something that I have steadfastly refused to do for over 12 years; namely, to sign the Townsend plan petition now at the Speaker's desk. I signed that petition because when I compare the two programs for social security—the one contained in H. R. 6000 and the one contained in the Townsend plan—I am convinced that the Townsend plan is to be preferred to H .R. 6000.

In my opinion, after careful consideration, the Townsend plan is more equitable, more practical, more just, much easier and cheaper to administer, and less costly in the long run.

The social-security plan contained in H. R. 6000 when fully matured will require the payment of something like $1,000,000,000 per year in interest alone, in addition to the hundreds of millions of dollars each year for administrative costs. The Townsend plan will do away with both the interest on the social-security fund and the heavy administrative costs.

The social-security plan contained in H. R. 6000 proposes that the Federal Government shall collect up to eight or ten billions of dollars per year and spend the same for current Government expenses. The Townsend plan proposes that the Federal Government shall collect six or eight billions of dollars per year and hand it out immediately on a monthly basis to the old people of the Nation for them to spend for the necessities of life. I ask, which is the better plan? Which will bring more happiness to more people? Which can spend the money to a better advantage, the Federal Government or our worthy old people?

In my opinion the social-security program as set up and amended in H. R 6000 is both unsound and dishonest. I shall do what I can hereafter to substitute the Townsend plan, or some modification of it, for the administration's social-security program.

That is all, Mr. Chairman.

The CHAIRMAN. Are there any questions?

If not, thank you very much, Congressman.

Representative MASON. Thank you, Mr. Chairman and gentlemen.

The CHAIRMAN. Is Congressman Clair Engle in the room?

I do not believe he is present. I shall call him later.

We will now hear from Mrs. Abraham Epstein, vice president of the American Association for Social Security, New York City.

STATEMENT OF MRS. ABRAHAM EPSTEIN, VICE PRESIDENT, AMERICAN ASSOCIATION FOR SOCIAL SECURITY, NEW YORK, N. Y.

Mrs. EPSTEIN. First I want to thank you, gentlemen, for wanting me to be here today. I have been for many years connected with the American Association for Social Security, and many of you probably remember my husband, Abraham Epstein.

Our association started in 1927, and we have done a good deal of work in the field of social security for many years.

I am also here to represent the League for Industrial Democracy of New York City, which is a national organization. Mr. Epstein used to come to hearings very often during his life, and I still remember that in 1939 when the amendments to the Social Security Act were being discussed, he said, "Being responsible for the term 'social security'—and, as you know, we really started this term going, way back in 1927—Mr. Epstein said, "I do not have to proclaim my faith in social security. I believe and I continue to believe in social security," and so do I, gentlemen. And not because social security is a good political slogan, and not because it is a cure-all

and can do everything, but I believe and I still believe that properly handled it can be the best method of alleviating our major industrial hazards.

Well, this was in 1939 and since then very little has been done to our Social Security Act. Of course, we have recommendations from your Advisory Council which, to my mind, are very good recommendations, and with which I do agree in the main. But my main definition of social security is that social security is not, as certain Americans believe, a new-fangled idea of government pampering of the individual. Is is not that. Social security rather stems from one of the most primitive instincts of self-preservation.

To my mind, three main reasons make social security imperative. One is the civilized desire, and one of the ideals of Christianity; that is, to do unto others as you would have them do unto you. And the other one is the claim that unless a means of economic security is established, the people of the country might become politically dangerous. I mean, if there is a good deal of unemployment and if we throw people out on relief when they are old and no longer able to work, that is a very bad and dangerous thing to do. Then the third reason for social security, is more modern. I would consider social security the best medium for underpinning the purchasing power of the workers, and this purchasing power is essential to the maintenance of production and to the stability of our national economy.

Now, as I said before, I agree with most of the recommendations of the Advisory Council.

Senator TAFT. If you will pardon the interruption, why is that? After all, far from increasing the purchasing power, you tax much more money than you give them back, so that you would decrease purchasing power. You take away from a large number of workers, through their pay-roll tax, a much larger sum than you are giving back at the present moment.

Mrs. EPSTEIN. At the present moment, perhaps.

Senator TAFT. And for 10 years to come.

Mrs. EPSTEIN. If we change our social-security legislation we will not be doing that. We will be doing exactly the opposite, Senator.

Senator TAFT. I do not see how you increase purchasing power by taking away from some and giving it to others.

Mrs. EPSTEIN. We have to increase the purchasing power of those who are too old to work. In other words, if you cannot make money when you are old, you still have to eat and pay your rent and buy your food.

Senator TAFT. I do not question the justice of it. I was questioning the economic argument that in some way this was going to increase the purchasing power of the Nation.

As a matter of fact, you take more away from the workers who are working and give it to the other people, but then you do not give it to the other people, you keep it in a fund.

Mrs. EPSTEIN. I do not think it should be kept in a fund, Senator, and I will come to that later.

Senator TAFT. It has been kept in the fund for 14 years, and even under H. R. 6000, you add about $1,000,000,000 a year to the fund, so you decrease the purchasing power. In other words, you decrease the purchasing power by $1,000,000,000, and you do not increase it.

Senator MILLIKIN. May I play devil's advocate and suggest to the witness that there is really no decrease in the purchasing power. There may be a difference in the dynamism of your spending, because what you take away in the way of contributions the Federal Government spends for pay rolls and also all sorts of nonsensical things, but the money circulates.

Mrs. EPSTEIN. And there is more purchasing power.

I am not supposed to say anything about unemployment, but if a man has no money coming in, how is he going to buy a coat or buy the children food or pay his rent?

Senator MILLIKIN. If I may suggest, also, if you put this money in the hands of the aged, they have to spend it and it makes perhaps the most dynamic form of spending that you can have in your economy; so I have done pretty well by you.

Mrs. EPSTEIN. Thank you very much.

Senator TAFT. I personally question that. I think money spent out of savings for reinvestment is more dynamic than that spent for food, as far as that is concerned.

Mrs. EPSTEIN. I do not agree with you, Senator.

Now, may I proceed, Mr. Chairman?

The CHAIRMAN. Yes.

Mrs. EPSTEIN. I wonder if I convinced the Senator that I would like to have the purchasing power increased.

Senator TAFT. I understand that you propose changes that will produce more purchasing power, even if we do not have it.

Mrs. EPSTEIN. As I said before, I agree with most of the recommendations of the Advisory Council, because I happen to know many of the people who served on the Council, such as Mr. Brown and Mr. Linton, and many of the people that had been appointed, and I do think they were very wonderful people, and they really did the very best that could be done. So I congratulate this committee on having such a wonderful Advisory Council.

I agree also with many of the changes in H. R. 6000. I am not criticizing H. R. 6000 except that I think it could stand a lot of improvements. The changes I would like to see in our social-security legislation—and I would like to have them listed insofar as I think they are more important, in my opinion—first. We have in our Social Security Act no provisions for disability insurance. Now, that is a missing link in the whole social-security over-all plan.

The second point is the fact that we have a very inadequate coverage, which leaves millions of Americans without the protection which they should be entitled to under our Social Security Act.

Third, I believe also that our benefits are very inadequate today. I have spoken to quite a number of people who are getting benefits, old-age insurance, widows' pensions, survivors' pensions, who really have a hard time getting along on their allowance.

There is one particular thing also. Most of the social-security plans in other countries permit women to retire at the age of 60. I am sorry we are not doing this yet in the United States.

I am listing the things now, Mr. Chairman, and I will go into a little more detail.

Senator MILLIKIN. I might suggest that we get in the habit of taking averages. These elderly people cannot eat averages. When you have an average of $30 a month, that means some are getting as

little as $10 per month and that others are getting more. However, the point is that some may only be getting $10.

Mrs. EPSTEIN. That is very little. I know, for instance, in New York City a widow with a child who is receiving $21 a month. In New York City you cannot live on $21 a month. You might be able to do it in other parts of the United States, but not in New York City.

The fourth point is the fact that the eligibility requirements are a little too stringent for all the workers. Then, of course, one of the most important points is the financing of social security, and there I do agree with the Advisory Council and not with H. R. 6000.

Now, I just wanted to tell a little more about the protection of the risks caused by permanent or temporary sickness. Most nations of the world have included sickness insurance in their social-security systems.

Senator MILLIKIN. Yes; but look at the shape they are in.

Mrs. EPSTEIN. No; they are not in such bad shape. I might mention the fact that I was in England, and I am not talking about the National Health Act. I am talking about the cash disability benefits, which is another thing.

Senator MILLIKIN. I understand.

Mrs. EPSTEIN. The National Health Act is another subject, and we can spend hours talking about that.

No; I think that in the United States illness remains the greatest cause of poverty today, except, of course, during the depression when we had so much unemployment.

I did get some figures that the Social Security Administration gave me, and I have all reasons to believe that their figures are correct.

There were 4.6 million persons between the ages of 14 and 64, I was told, at any given date who were unable to work; 2.5 million of those people were disabled for less than 6 months, and 2.1 million had been disabled for more than 6 months. This does not include people in institutions.

Of course, the poorer people have more disabilities as a rule because of their condition of life, and sickness means that while your wages stop, the savings become exhausted, and then additional expenses have to be paid. So what happens to the family? They have to apply for relief because we do not have any sickness insurance in our social security act. Well, I do not believe in public relief. I mean, of course, it has to be done when we can do nothing else. But under social insurance, the claim is founded upon the right to benefits, which is preexistent to the emergency. It comes as a matter of right. Public relief aims only to provide a bare minimum of subsistence for the indigent, but social insurance tries to establish a minimum of economic sustenance, below which no one shall fall. Public relief and charity perpetuate existing economic injustice, but social insurance endeavors to eradicate much of our poverty and destitution by prevention rather than by giving relief and alms. Social security substitutes self-help and social justice for the demoralization incident to relief and charity.

These sound like big words, gentlemen, but when you talk to the people who are getting relief they are not such big words, at that. I do believe it is very, very important that we should consider the

disability provisions that were advocated by the Advisory Council.

In New York City, where I come from, many people are complaining that it costs a lot of money to keep people on relief and that it is expensive to the taxpayer. But we do forget that many of our people on relief are too sick to work. For instance, there were 20,300 employable adults receiving home relief in January 1950, who were not available for work because of a health condition. Our old-age and survivors insurance program will only be complete when we add disability insurance to it.

There are two kinds of disability insurance programs; one is a program for long-term disability, which would become available after 6 months of disability when that disability is pretty well established as being of long duration. The Advisory Council suggested some objective medical tests to determine disability. But I would go a little further than that when it comes to giving disability benefits. I would advocate allowances for the wife and the dependent children of the person who is insured but unable to work. I would like to have such allowances because it costs more money to keep a wife and children than if you are single.

I believe I have said most of what I could say on permanent disability, because it is advocated by the Advisory Council.

The States have taken the initiative in enacting temporary disability insurance, which is something that is not covered in the Advisory Council recommendations. But, in that field, the recent trends, as enacted in the States, evidence a complete departure from the sound principles of social insurance. We should aim to provide a basic minimum of security for those who are sick and unable to work because of illness of a temporary nature as well as illness of a permanent nature. If the employers wish to build above the minimum that is provided by law, then so much the better. Like old-age and survivors insurance and unemployment insurance, temporary disability cash benefits should not be handled through contracting out with private insurance companies, or other private plans, as is done by some of the States; but through a country-wide governmental plan where all risks would be pooled and definite schedules of benefit would be paid.

Thus, a person who is insured and becomes ill would know that his or her rights are. They would not be penalized when they change jobs or when they move from one State to another. I am speaking now about temporary disability. There is an infinite variety of plans, private and public, which are being developed in the States today. These will be expensive to administer and they will cause a good deal of litigation. There is always danger of rate differentials against the firms which employ women or older persons. And I am very much concerned with what happens to the women, as you will see later.

Temporary disability should become part and parcel of our Social Security Act. If we decide to leave the administration to the States, then we should establish standards to guide the States regarding eligibility requirements, amounts, and duration of benefits and, of course, how to prevent malingering. We should also decide how to finance the program of temporary disability—how much the workers should contribute and how much the employer.

When the Social Security Act was enacted, we agreed that insurance against old age and unemployment was a governmental function.

Now we are committed to this principle, and I do not think we should abandon this principle in the case of temporary-sickness insurance.

So I would like to ask, gentlemen, that Congress study the issue of temporary disability insurance, as soon as possible so that at least some recommendations could be made for either a Federal-State participation program, or a Federal program, just as you will see fit to do.

Now, I go on next to the extension of coverage, and I believe the extension of coverage under old-age and survivors should be as wide as possible. I agree with the Advisory Council that farm workers and household workers, domestics, should be covered. When the Social Security Act was originally discussed in 1935, the American Association for Social Security was then very active. Mr. Epstein used to talk very often. We thought that it would be best at the time to have coverage restricted to workers employed in industry and commercial concerns. We felt that, as a Nation, in 1935 we were much too inexperienced in the field of social-security administration to attempt too much at one time. Also, we were very strongly of the opinion that the stamp system would have been a much better method of administration and a much simpler one that the social-security card. But to date we have had experience in administration for quite a long time. Many people who are working on farms or many people who are working as domestics in private homes were in factories during the war. They already have a social-security card. They may already have credits, but they may not have enough credits to qualify for benefits, and it is very unfair to these people because they usually are not too well paid.

So I was aware of the difficulties that would be involved in covering those groups because I understand that that is not very easy. When I was in England last summer, and when I was in France next, I went around to the various offices where they were administering social security and to the local offices. I asked them how they were doing this, and they showed me the cards. I asked what happened when either a farm laborer or a domestic has more than one employer. They say that the employers take turns in buying the stamps to put on the card. That was fairly easy.

Senator MILLIKIN. I am sorry, I do not follow that.

Mrs. EPSTEIN. For instance, there is a cleaning woman, or a domestic, who works for different employers during different days of the week.

Senator MILLIKIN. And changes every day?

Mrs. EPSTEIN. Yes, sir. Now, the person for whom she works Monday will buy the stamp one week, and the other will buy it the following week.

Senator MILLIKIN. How does she know who the others are?

Mrs. EPSTEIN. She knows for whom she works.

Senator MILLIKIN. I mean the employer. I thought you said the employer buys the stamp. How would the employer know the other employers, which constantly are shifting for this lady?

Mrs. EPSTEIN. No: that is not it. I buy the stamp 1 week, and Mrs. Smith will buy it the next week. Each one of us take turns. I do not know whether I make myself clear.

In other words, Senator, I buy the stamp Monday, Mrs. Smith next week buys it on Tuesday, and Mrs. Jones Wednesday of the next week. They take turns.

Senator MILLIKIN. I think I understand you.

Mrs. EPSTEIN. That is the procedure they follow. They claim they have no trouble whatsoever.

In France, I also asked the same question. Although they do not have the stamps in France, they have another system. But I inquired of quite a number of people as to how it was done, and they claim it was very easy.

So I do not believe the administration should frighten us insofar as the two groups are concerned, and I would like to have them brought in under H. R. 6000, because when these people get old they have nothing but public relief and charity to look forward to, and I do not think they should be made to feel that they are second-class citizens and not entitled to social-security insurance as the others are.

Next, I agree with the recommendations of the Advisory Council regarding other groups, such as employees of nonprofit organizations. With respect to those, I might say that in the American Association for Social Security we had coverage, although we were a nonprofit organization, as you know, under both old-age insurance and unemployment insurance. And it only meant one thing. We had to work harder to raise money for it because we paid the employer contribution. We thought it was better for the morale of our staff to have it that way, and I think we had much better work from the staff on that account.

I agree with the Advisory Council regarding all other groups.

As to the self-employed and the independent farmers, it would be a little harder, I realize, because the absence of the employee-employer relationship will leave the administration without the enforcing assistance which the workers usually provide. Therefore, I believe that we could accomplish coverage for the self-employed through collecting the social-security contributions along with the income tax. I do believe that professional people like doctors and lawyers should also be entitled to the protection of social insurance. I see they have been left out of H. R. 6000. I think they should be brought back in.

Senator MILLIKIN. May I ask: do you know if any polls have been taken on doctors and lawyers and architects and engineers as to whether they want to come in?

Mrs. EPSTEIN. No; I do not know. I have discussed it individually with some of the people in New York and they expressed a desire to be covered.

Senator MILLIKIN. Mr. Chairman, may I ask Mr. Cohen whether there is any information on that?

The CHAIRMAN. Yes.

Senator MILLIKIN. Do the professional people want to be brought under the system?

Mr. COHEN (Wilbur J. Cohen, Special Assistant to the Commissioner for Social Security). I do not remember anything specifically in the nature of a poll, Senator. There are organizations that have taken action pro or con. I do recollect, however, that there was some general public poll that broke down the vote by professional groups. I recall that occurred about 3 or 4 months ago. I can look that up for you. But I do recall that they broke it down by doctors and lawyers, and two or three of the other groups, that are excluded in H. R. 6000.

Mrs. EPSTEIN. I believe benefits should be increased, gentlemen.

First, I think the maximum base should be raised in order to take into account the increase in wage levels that occurred since 1935. This is advocated by your Advisory Council. It is also taken into consideration in H. R. 6000. But I would like that upper limit on wages to be raised to $4,800. I believe it would be more realistic, but I think it should be raised.

Now, the benefits, of course, are woefully inadequate.

For instance, I would like to tell you that when Mr. Epstein died I was entitled to the social-security card of Mr. Epstein. As you know, we were covered for old-age and survivors insurance. I was entitled to benefits under about $30 a month for myself as a widow's pension. My son, who was then under 18, was entitled to about $20 a month. This paid for both of us $50 a month. Now, we live in New York City and that was during the war, and I challenge anyone living in New York City and during the war years of being able to live on $50 a month, to buy food, to pay the rent, and to take good care of a child. I do not think that can be done. But there are people who are even getting much less than that. I believe I mentioned some of the widows I know who have children and who are getting $21 a month in New York City. I do not think anyone can live in New York City that way, I do not think we could possibly do it and, of course, very frequently those allowances have to be supplemented by relief, and it is not very, very pleasant. So I do believe the benefits should be raised to 50 percent on the first $100 on the average monthly wage, and I would say 15 percent on the remainder, which would be, of course, up to the $400-a-month wage limit.

Of course, the people who are today receiving old-age insurance, people who are retired, have told me that it would be very unfair not to have for them the same formula that we are using for the other groups. I think it is going to create a lot of discrimination, and I think it is going to be very unpleasant, because people are not responsible for the fact that when they were working wages were lower, the cost of living was lower too, and as a result their benefits today are lower. I think we should do something about raising the benefits in that respect and use the same formula for those who retire later and for those who are now on the rolls. I wonder if I make myself clear?

The CHAIRMAN. I understand.

Mrs. EPSTEIN. I have a statement, Mr. Chairman, which I should like to leave later on.

Of course, may I mention, too, that it is very important to raise the survivor's pension in order that the mother with young children should not leave home to work and should be able to devote sufficient time to care for the children. I think, of course, it is important for her not to be forced to apply for relief or charity, which would be very bad for the children. Therefore, I would follow the recommendations of the Advisory Council and increase the protection for workers' dependents. Survivor benefits for a family should be at the rate of three-fourths of the primary insurance benefit for one child, and one-half for each additional child, rather than one-half for all children as at present. The parent's benefit should also be increased from one-half to three-fourths, and the widow's benefit should remain at three-fourths of the primary benefit.

Then I would set a maximum family benefit of 80 percent of the average monthly wage. I would have a minimum of $40, but I do

not believe I would set any other maximum except the 80 percent of the average monthly wage.

As to the work clause, or the retirement test, the $14.99, which is in the present act, should be raised, in my mind, to $50 as provided in H. R. 6000. I believe that will help people who can do a little part-time work and who ought to be encouraged.

I believe also in the provisions of H. R. 6000 with regard to the limit of $600 permitted the self-employed. I also agree with several of the other Advisory Council recommendations regarding the protection given to the dependents of women.

This brings me to another thing. The Advisory Council advocated that the age requirement should be reduced from 65 to 60 for women beneficiaries. Unfortunately, H. R. 6000 does not follow this recommendation. In 1939, if I remember, we pleaded for benefits to dependents of the insured because the original Social Security Act did not have dependent benefits. Now we should continue to round out the job and make the protection more complete. It is very difficult for a retired couple to get along on the husband's benefit only until the wife reaches 65. It is very hard for them. And it is very hard for a woman of 60 to get a job if she has spent her years keeping house or raising a family, or if she has lost the skills of her youth or has not recently been employed. I believe the wives and widows and dependent mothers should be entitled to draw their benefits at 60. I believe that the women who have been working should also be permitted to retire at 60, if they wish. Of course, the women who have good jobs and can make more money out of their jobs will not retire. That is perfectly all right. But those who are getting old on the job and who are a burden to their employer, because the employer can only find light work for them—and I know many of these women in New York City who come to me and tell me their stories—it seems to me that these people should be permitted to retire at 60.

I am rather surprised that there has been so little understanding of this problem in the United States, because I would like to say that we American women are supposed to be very spoiled. We are supposed to have so much more than our foreign sisters. We participate more in the life of our community, and we also participate much more in the life of the country as a whole, but we have not been able to persuade Congress that we should be entitled to retire at 60 instead of waiting until 65. I hope that will go back into the provisions of H. R. 6000.

Now, I am also in favor of the death benefit provided in H. R. 6000 and advocated by the Advisory Council because, to my mind, that is very important. Many people cannot afford too much money for insurance. Even then, for instance, if you took out an insurance policy many years ago for $4,000 or $5,000, what is it worth now? It is not worth very much because the money has depreciated and the cost of living has gone up. I do believe also that there is great need of additional funds when death strikes the household. Illness and death are very expensive propositions in this country. Family ties are not as strong as they used to be, and when the breadwinner dies in a family, frequently the widow and children are quite helpless, with huge bills to pay to the doctor, the hospital, and all the other things that come along. Therefore the death benefits I would endorse would be four times the primary benefit as is advocated by the Advisory Council.

I also do believe that eligibility requirements under old-age and survivors' insurance should be made much easier because many people who have contributed for years are not eligible for benefits, and that is very unfair. I am thinking here of reducing the relief rolls because under relief the money comes from the taxpayer's pocket. Of course, many workers cannot understand why, after having contributed many years to a social-security system, they have not been able to achieve coverage because they did not work long enough in covered employment.

Now, I am coming to the financing of the social-security program. I would follow the recommendations of the Advisory Council. However, I would like to make the statement that I do not agree with the provisions of H. R. 6000 concerning the repeal of the clause permitting Congress to appropriate sums from general revenue that may be required to finance a social-security program. I believe that clause should certainly go back in and we should permit appropriations to finance social security, and we should not confuse a governmental insurance program with a program of private insurance.

I also believe that we should have a Social Security Advisory Council and a Social Security Legislative Advisory Committee, which were provided in H. R. 2398, because I do believe the public ought to participate and understand more the issues in the social-security program.

I believe that is all, Mr. Chairman.

The CHAIRMAN. We thank you very much, Mrs. Epstein, and you may insert any part of your statement that you desire in the record at this point.

Mrs. EPSTEIN. Thank you.

(The statement follows:)

STATEMENT OF MRS. ABRAHAM EPSTEIN

I am vice president of the American Association for Social Security. The association was founded in 1927 by Mr. Epstein and I. We have done a great deal of work in the field of social security. I also represent the League for Industrial Democracy national organization with headquarters in New York City. I am secretary of the New York chapter of the league.

At a hearing of the Ways and Means Committee of the House of Representatives on February 27, 1939, when the amendments to the Social Security Act were being discussed, Mr. Epstein said, "Being responsible for the term 'social security' perhaps more than anybody else in the country, I don't have to proclaim my faith in social security. I believe, and continue to believe, in social security, not because it is a good political slogan, not because it is a cure-all or panacea for all our social ills, but because I have believed and still believe that, properly handled, it is the best known method of alleviating our major industrial hazards." What has happened to our social-security legislation since that time? We have gone through a world war; we have become increasingly aware of our power and influence as a nation and of our responsibilities. Yet our Social Security Act has not kept pace with those tremendous developments.

Fascism and communism depend on force to uphold their way of life. But democracy must prove itself worth while if it is to be accepted as a way of life by other people of the world. In simple terms this means how can we convince other nations of our sincerity and high purpose if we should repeat the unfortunate spectacle of the years of the depression. Therefore, the basis of social-securtiy legislation does not lie, as certain American believe, in a new-fangled idea of Government pampering of the individual, brought to America by the New Deal or Fair Deal just as you like to call it. Rather, modern social-security programs stem from the most primitive instinct of self-preservation. Three main reasons make social-security legislation imperative: One is the civilized desire and one of the main ideals of Christianity to "do unto others as you would have them do unto you," to feed and shelter the destitute and

helpless in the least degrading manner. Another is the sound political instinct that, unless a minimum of economic security protection is established the suffering masses may become politically dangerous. The third reason is more modern. It considers social security the best medium for underpinning the purchasing power of the workers which is essential to the maintenance of production and the stability of the national economy.

I agree with most of the recommendations of the Advisory Council on Social Security and I also agree with many of the changes proposed by H. R. 6000. So my criticisms of H. R. 6000 are not criticisms at all, but I think that H. R. 6000 can stand improvements. What I particularly want to emphasize (and I am listing those changes and the improvements needed in order of their importance insofar as my own opinion is concerned): First, the provisions for disability insurance, the missing link and a very important one in our chain of social security measures. Second, the inadequate coverage which leaves millions of Americans without the protection to which they should be rightfully entitled. Third, the inadequacy of benefits and specially the fact that we are one of the few countries of the world having a social insurance plan which does not permit women to draw their benefits at the age of 60. Fourth, the too-stringent eligibility requirements for older workers. And, last but not least—and I think this point should perhaps have priority over all the others—the financing of social security.

The absence of protection against the risks caused by permanent or by temporary illness is particularly striking because most nations having social security systems have had sickness insurance for a long time; in many countries it even preceeded other forms of social insurance. We know that except for the high rate of unemployment during the depression years, illness remains the greatest cause of poverty in the United States. According to the most recent surveys conducted by the Bureau of the Census in 1949 for persons between the ages 14 to 64 (not in institutions) there were 4.6 millions persons incapacitated in any given day who would otherwise be able to work; 2.5 millions were disabled for less than 6 months and 2.1 million had been disabled for more than 6 months. Also numerous studies have shown that illness is more prevalent and more severe among the lower-income groups. And, of course, sickness means that while wages stop the family's savings must be used to pay all the additional expenses incurred. When savings are exhausted, the family has to receive help from relatives or has to face the prospect of asking for relief or charity.

An appeal for benefits under public relief can only be made in case of indigency. Under social insurance the claim is founded upon the right to benefits which is preexistent to the emergency. Public relief aims only to provide a bare minimum of subsistence for the indigent. Social insurance tries to establish a minimum of economic sustenance below which no one shall fall. Public relief and charity merely perpetuate existing economic injustices. Social insurance endeavors to eradicate much of our poverty and destitution by prevention rather than relief and alms. It strives to dam at their origin the springs feeding the sea of destitution. It attempts to substitute self-help and social justice for the demoralization incident on public relief and private charity. There are about 770,000 to 920,000 persons on the public assistance rolls who are there because of disability. Many persons, of course, do not ask for help; they manage the best way they can, but such a state of incertitude does not help a sick man to recover quickly. On the contrary. In New York City many persons are complaining that we have so many people on relief and that it is costly to the taxpayers. We forget that many of these people are too sick to work. There were 20,300 employable adults receiving home relief, as of January 1, 1950, who were not available for work because of a health condition which would continue for a period varying from 1 month to 1 year. Disability insurance for permanent and total disability should become part and complement of our old-age and survivors insurance program. The benefit amounts can be based on the same average wage and benefit formula. It should become available after 6 months of disability which by then can be pretty well established as of long duration. The insured person should be unable to engage in any substantially gainful activity, as shown by objective medical tests. However, we should go further than the recommendations of the Advisory Council and the provisions of H. R. 6000. I would advocate allowances for the wife and the dependent children of the insured person. Family expenses are higher than those of a single person. We should follow the recommendations of the Advisory Council regarding insured status and eligibility for permanent disability insurance. I would agree with H. R. 6000 in permitting income of $50 a month for employment, since we should encourage the disabled

person to try to improve his condition. I would recommend enactment of rehabilitation provisions of H. R. 2893.

Old-age and survivors insurance and permanent disability insurance should be financed as a single system (as advocated by the Advisory Council and as in H. R. 6000).

We are today paying the cost of the lack of disability insurance. It is more expensive to support sick people on relief than to grant them social insurance benefits.

The States have taken the initiative in enacting temporary disability insurance plans. In that field the recent trends evidence a complete departure from the principles of social insurance.

We should aim to provide a basic minimum of security for those who are sick and unable to work because of illness of a temporary nature. If the employers wish to build above the minimum provided by law, then so much the better. Like old-age and survivors insurance and unemployment insurance, temporary disability cash benefits should not be handled through "contracting out" with private insurance or with other private plans, but through a country-wide governmental plan, where all risks would be pooled and definite schedules of benefits paid. Thus an insured person upon becoming sick would know what his or her rights are; they would not be penalized when they change jobs or when they move from one State to another.

An infinite variety of plans, private and public, will be expensive to administer and will cause much litigation. There is also danger of rate differentials against the firms which employ women or older persons. Temporary disability insurance should become part and parcel of our Social Security Act. If we leave the administration to the States, then we should establish standards to guide them, as to eligibility requirements, amounts and duration of benefits, prevention of malingering. We should also decide how to finance the program, how much the employers and the workers should contribute. When the Social Security Act was enacted, we agreed that insurance against old age and unemployment was a Government function, and we are now committed to that principle. Then why should we abandon it in the case of temporary sickness insurance?

It would be best for Congress to study that issue as soon as possible.

Regarding the extension of coverage under OASI, I believe it should be as wide as possible. I agree with the Advisory Council that farm workers and household workers should be covered; they should be included in H. R. 6000. When the Social Security Act was originally discussed, in 1935, we of the American Association for Social Security preferred to have coverage restricted to workers employed in industry and commercial concerns. We felt that as a Nation we were too inexperienced in the field of social-security administration to attempt too much at one time. We also were strongly of the opinion that the stamp system would be a better method of administration and a much simpler one than the social-security card. Conditions are different today. Many workers on farms and in private homes were in factories during the war and have already a social-security card. In fact, they may already have accumulated wage credits, but they may not be sufficient to qualify for benefits. Being aware of the many difficulties involved in covering those groups, I inquired while in England last summer, when I visited the local offices of the Ministry of National Insurance, and also in France. I was shown the cards and told that when a household worker has more than one employer, they take turns in buying the stamps. England has flat rates of contributions, and while I do not advocate this I feel that we should, however, be able to devise a simple system of administration that will not prove too complicated for farmers and housewives. It is a great injustice not to include our farm laborers and domestics under OASI. Many of them have only public relief or charity to fall back upon when they can no longer work. They should not be treated as second-class citizens. Wages received in kind should also be counted, when they are substantial enough to make a difference in the calculation of benefits.

Employees of nonprofit organizations are entitled to the protection of old-age and survivors insurance and it should be compulsory upon the organization as well as the employee, excluding members of religious orders, according to the Advisory Council recommendations. The American Association for Social Security was covered under both OASI and unemployment insurance. Since we paid the employer's contribution for our staff, we simply had to work harder to raise funds from our membership.

I also agree with the advisory council recommendations concerning coverage of other excluded groups: Federal civilian employees, employees of State and

local governments, the members of the armed forces, and also recommendation for a study of "the most practicable and equitable method of making the railroad retirement system supplementary to the basic old-age and survivors insurance program."

Greater obstacles confront the proposal for coverage of the self-employed and the independent farmers. For these groups the absence of an employee-employer relationship leaves the administration without the enforcing assistance which workers usually provide. However, many of the self-employed may have at one time or another worked in covered employment and will want to continue being protected. Professional groups such as doctors and lawyers are entitled to coverage as well as the others. I agree with H. R. 6000 that coverage should apply if the annual income from self-employment is $400 and over. I believe that the self-employed should send their contributions when they file their income-tax return.

Benefits should be increased. First, the maximum wage base should be raised in order to take into account the increase in wage levels and cost of living, as advocated by the Advisory Council and as taken into consideration in H. R. 6000. It would be more realistic, however, to raise the upper limit on wages to $4,800 as recommended by the Social Security Administration. In 1939, 97 percent of all the workers in employment covered by the law earned less than the maximum wage base of $3,000 a year. Since that time the rise in wages has been such that to cover all the wages of even 95 percent of the workers in the system a wage base of $4,800 would be required, according to the Social Security Administration.

Today benefits are woefully inadequate. For instance, I was entitled to a widow's benefit under my husband's social-security card because I had a dependent child in my care. My monthly benefit was about $30 for myself and about $20 for my son. I challenge anyone of being able to live in New York City on $50 a month, paying rent, buying food, and taking good care of a child, especially during the war. I know many widows with a child to support getting $21 a month in New York.

Benefits should be raised to 50 percent of the first $100 of the average monthly wage and 15 percent of the remainder (up to the $400-a-month wage limit). Persons now on the rolls and receiving benefits are telling me how unfair it would be for them to be penalized because during their working years wages were lower. We ought to use the same formula to compute their benefits as in the case of those who will retire later on.

We should do away with the continuation factor. An insured person cannot be blamed for not having been able to work all the time in covered employment and of course if coverage is broadened more and more, why should we keep the continuation factor?

It is most important to raise the survivors' benefits in order that the mother with young children should not have to leave home to work and should be able to devote sufficient time to their care. She should not be forced to apply for relief or charity to supplement benefits and her children ought not to be denied a good start in life. We should follow the recommendations of the Advisory Council "to increase the protection for a worker's dependents, survivors' benefits for a family should be at the rate of three-fourths of the primary insurance benefit for one child and one-half for each additional child, rather than one half for all children as at present. The parents' benefits should also be increased from one-half to three-fourths. Widow's benefits should also remain at three fourths of the primary insurance benefit."

As advocated in H. R. 6000 and by the Advisory Council the maximum family benefit should be 80 percent of the average monthly wage, with a minimum of $40. I would advocate no other maximum than the 80 percent of the average monthly wage.

The work clause or retirement test of $14.99 in the present law is too stringent and should be raised to $50 as provided in H. R. 6000. Widows with growing children might be able to do part-time work and still spend enough time at home to take care of their family obligations, and the $35-a-month work clause advocated by the Advisory Council is not high enough. We should follow the provisions of H. R. 6000 regarding the limit of $600 a year permitted the self-employed. No retirement test should be imposed on persons 70 and over, as recommended by the Advisory Council.

I also agree with the Advisory Council that we should equalize the protection given to the dependents of women and men and pay benefits to the young children of any currently insured woman upon her death or upon her eligibility for primary benefits, but if the child was dependent on the mother and if she was both

currently and fully insured. Benefits should be also payable to the aged, dependent husband of a primary beneficiary, if she was fully insured and also currently insured when she became eligible for primary benefits and also to the aged, dependent widower of a woman both fully and currently insured when she died.

The Advisory Council advocated lowering the age requirements from 65 to 60 for women beneficiaries. Unfortunately this was not embodied in H. R. 6000. Before 1939 we pleaded for benefits to dependents. Now is the time to round out the job and make the protection more complete. It is difficult for a retired couple to get along on the husband's benefit only and more than half of the married men who attain 65 have a wife who has reached 60. It is almost impossible for a woman of 60 to get a job if she has spent her years keeping house or raising a family, especially if she has lost the skills of her youth and has not recently been employed. Not only wives, widows, and dependent mothers should be entitled to draw their benefits at 60, but it would be unfair not to permit the women workers to retire at 60 if they wish. Women who have good jobs and can make more money than they would receive from benefits will, of course, continue working, but those who are getting old on the job and are a burden to the employer who can only find lighter work for them, ought to be permitted to retire. It is surprising that this particular problem is so little understood in the United States. American women are constantly reminded that they have better clothes than their foreign sisters, better equipped homes, less housework, and that they are pampered and even spoiled by their husbands, fathers, and sons. We are told that we are more economically independent and more vocal and that we participate to a greater extent than our foreign sisters in the life of the community and of the country as a whole. Yet we have not been able to persuade Congress that we should be entitled to our social-insurance benefits at 60 instead of waiting till we reach 65.

The Advisory Council also advocates a death benefit, a lump sum to be paid at the death of every insured worker, even though monthly survivors' benefits are payable The maximum should be four times the primary benefit rather than six times as at present, or three times as in H. R. 6000. There is great need of additional funds when death strikes a household. Illness and death are very expensive propositions. Family ties nowadays are not as strong as they used to be, death of the breadwinner often leaves the widow and children quite helpless, with huge bills to pay to the doctor, the hospital, the specialist, the undertaker. There may also be payments to be made on a home or furniture and all kind of other expenses are needed to readjust the wife and orphans to their new family status.

Regarding eligibility for benefits, the new groups that will be brought into the program must have a chance to qualify for benefits. I am thinking mostly of reducing the relief rolls, because there the money comes entirely from the taxpayers' pockets. Besides many workers with a social-security card wonder why they do not achieve coverage and why requirements are so stringent.

It is most important to follow the recommendations of the Advisory Council in the financing of our social-security program, and this to my mind is entitled to priority. The Advisory Council recommended that the increase in rates from 1 percent on employer and employee alike to $1\frac{1}{2}$ percent on the employer and on the worker be imposed when benefits are liberalized and we have not yet done that. It advocated $1\frac{1}{2}$ times the employee rate for the self-employed. I also believe that "there should be no further increase in rates until the current receipts of the trust fund, including interest, no longer equal current benefit payments, plus administrative costs."

At that time rates for employer and employees would rise to 2 percent. Government contributions from general revenues should be considered when a 2-percent rate for employer and employee plus interest on the investment of the trust fund are insufficient to meet the current costs. Mr. Epstein was always strongly of the opinion that general taxation ought to share more or less equally with employer and employee contribution in the financing of benefits and administrative costs. He believed that the huge reserves contemplated in the 1935 Social Security Act were altogether unnecessary in a program of social insurance. I do not agree with the provision of H. R. 6000 concerning the repeal of the clause permitting Congress to appropriate such sums from general revenue that may be required to finance the program. It is a step backward. We are still confusing the fundamental conceptions and aims of social insurance with those of private insurance. It is quite natural that we should make such a mistake. The objectives of private insurance are to provide protection in accordance with the means

of the policyholder and it must adhere strictly to the principles of actuarial science. It must lay aside reserves in order to enable it to meet its obligations. The aims of social insurance are not the same: it seeks chiefly to establish a minimum of economic sustenance for all wage earners, regardless of the premiums they are able to pay. It is concerned mainly with social needs rather than strict equity among the insured. The rates should be dictated by intelligent social policy, by a statesmanlike function of financial expediency and social wisdom, rather than by cold and abstract actuarial computations.

Since a nation must in one way or another provide benefits adequate to meet need as long as that need exists, a governmental social-insurance plan does not require large reserves, because it does not rely solely on premiums but rather on its power of taxation. The building up of huge governmental social-insurance reserves is an empty gesture in terms of the future because of the changes in the value of money in future years.

In conclusion, I would like to support provisions for a Social Security Advisory Council and a Social Security Legislative Advisory Committee, which were in H. R. 2893.

The CHAIRMAN. Congressman Engle, you were called prior to this witness, but you did not respond.

STATEMENT OF HON. CLAIR ENGLE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

Representative ENGLE. I am very sorry, Mr. Chairman.

The subject matter of my presentation will be very brief. I know it has been explored before by other witnesses. My name is Clair Engle, and I represent the Second District of California, which is the old mother-lode gold producing area.

My attention has been called by the gold producers as well as by the lessees to the section of the bill which would classify lessees or licensees of space within a mine when substantially all of the product of such service is required to be sold or turned over to the lessor or licensor as an employee. There are other sections of the bill which lend the same import to the legislation, namely, that it is probably the intention to include these licensees and lessees as employees.

Now the mining people in my area indicate to me that the application of that definition to the licensees and the lessees in the mine would have the effect for all practical purposes of terminating that kind of an arrangement in the mines out in California because of the additional business administration of those people which would be required, and because of certain additional expenses which would be added onto them.

The communications I have had from my gold-mining area indicate that both the operators and the lessees and the licensees under the arrangement which is now operating are opposed to their inclusion as employees under this legislation. Certain amendments, I believe, have been suggested here by people representing the mining industry. I will not go into the particular amendments which have been proposed and placed before your committee, because I am sure you gentlemen are more familiar with them in all probability than I.

The CHAIRMAN. We had witnesses, I believe, from your State. I know we had witnesses from Colorado, Utah, and perhaps another State, or one of the other western mining States, on this point.

Representative ENGLE. I was asked by my constituents to appear and call this matter to the committee's attention and the reasons for their concern about it, and with your permission, Mr. Chairman, I would like to have the privilege of inserting in the record at least excerpts

from some of the communications I have received, both from the operators and from the lessees and licensees, who are opposed to being included in this bill as employees.

The CHAIRMAN. Yes: you may furnish them to the secretary of the committee or to the reporter, and they will be included in the record.

Representative ENGLE. Thank you very much for your attention and for giving me this time.

(The statements follow:)

COMMUNICATIONS AND EXCERPTS FROM COMMUNICATIONS RECEIVED IN OPPOSITION TO THIS SECTION OF THE BILL

Telegram from Neil O'Donnell, Idaho-Maryland Mines, Nevada City, Calif.: "Gold miners in this area are opposed to social-security provisions of H. R. 6000, which classifies mine leasers as company employees * * *."

Telegram from W. W. Esterly, Grass Valley, Calif.: "Advise immediately what can be done to prevent Senate passage H. R. 6000 which will place leasers in our mines under social security and involve our mines in such a way as to prevent the present leasing system from operating and resulting in considerable reduction of employment in local mines."

Letter from Downey C. Clinch, 210 Broad Street, Nevada City, Calif.: "* * * It is my belief that enactment of this proposed legislation would cause a great hardship on the mines of this country together with a decline in employment at these mines and in the commercial interests of the area surrounding them."

Letter from Robert M. Searles, attorney at law, San Francisco, Calif.: "This section would destroy both the leaser's independence and the lessor's freedom from the employer relationship and responsibility which has made the arrangement so attractive to both sides. The administration would be very difficult because the lessors have no record of what each lessee produces, the amounts vary from time to time and calculations of taxes, of overtime, and other accounting now required of employers would be almost impossible."

The CHAIRMAN. We will now hear from Mr. Walter P. Townsend, general secretary of the Children's Aid Society of Pennsylvania, Philadelphia, Pa.

STATEMENT OF WALTER P. TOWNSEND, GENERAL SECRETARY, CHILDREN'S AID SOCIETY OF PENNSYLVANIA, PHILADELPHIA, PA.

Mr. TOWNSEND. Mr. Chairman and gentlemen of the committee, I am the general secretary of the Children's Aid Society of Pennsylvania, which is a private society working in nine counties in eastern Pennsylvania. These are all urban counties, that is, with urban or semiurban centers.

I am interested in the provisions of this bill which provide for an expansion of the amount of money which is available for rural child welfare services. I would like to speak about the work the Pennsylvania State Department of Welfare accomplishes in Pennsylvania in the rural areas which is made possible by the present grant from the Children's Bureau.

In Pennsylvania, the grant of Federal funds is used to support the work of the rural child welfare services in the department of welfare, and for grants to the county commissioners in the counties which are eligible for them. The rural child welfare services division in the department is the administrative unit. The actual care of the children is given in the 15 counties which are affiliated with the rural child welfare division. I understand that one more county is on the point of affiliating, so that the total will be 16 counties. Together these State

and county units make up the services which we know in Pennsylvania as rural child welfare services.

Under this program, service is provided for more than 2,800 children at any one time. The figure of 2,832 was the number of children under care on December 31, 1949. The responsible public authorities in the counties are the county commissioners who make the basic decisions and policies about the care of children, employment of workers, the rate of board to be paid foster parents, the clothing for children, the medical and dental care to be provided, and the manifold other decisions that have to be made when children must be cared for away from home.

In each county there is an advisory committee to the county commissioners, which is made up of citizens concerned with the welfare of children. They study the work done and the unmet needs of children and make recommendations to the county commissioners and to the child welfare workers. Their work serves to give to the commissioners the support and the citizen interest which is so important in child care work in the communities in which it is given.

Children must be cared for in their own communities and the kind of atmosphere created by the attitude of the local citizenry and public officials is of utmost importance. It must be emphasized that the work of child welfare service in Pennsylvania serves territory which otherwise would be without any adequate child care. Thirteen of the fifteen counties are rural in character, coming within the definition of population which is rural. The other two, both of which are in the soft-coal-mining area, have been determined to be areas of special need, where there was neither public nor private child care service in adequate amount. There is no duplication of service, therefore, in these counties.

In developing this very important local service for children, the most important contribution of the Federal fund has been not the money which has been given to the counties—important as that is—but the leadership and stimulation which has been given to the county citizens and the public officials. A member of one of these advisory boards told me that in her opinion this service had been one of the finest possible demonstrations of the development of local responsibility. I said before that the most important thing was the leadership made possible by the Federal grant, but the grant has been indispensable. More money is needed because there is a considerable number of counties and communities that need such service and which do not have it at the present time. The number of children receiving this service otherwise unavailable is impressive. On December 31, 1949, there were 2,832 children in the care of these 15 county agencies. One thousand and thirty-nine of these were given service in their own homes. The nature of this service is protective or preventive and aims at the preservation or rehabilitation of their own homes. One thousand two hundred and sixty-six children could not be cared for in their own homes and were placed with foster parents where they could have the love and affectionate care which is so important for growing children. The rest, approximately 500 in number, were cared for in institutions or other facilities providing special services needed.

The smallest of these county units, Wayne County, which is a small rural county, has 65 children in care, and the largest, Washington County, has 354. Those figures are as of December 31, 1949.

It is interesting to note in the fiscal year ending June 30, 1949, that the county commissioners supplied a total of $599,953.48, almost $600,000, for direct care and service to children. In addition in the counties, $68,800 of Federal funds were spent. In other words, of the money expended in the counties, 90 percent came from local funds and 10 percent from the Federal funds. The balance of the Federal funds, approximately $90,000, was allocated to the rural child-welfare division in the department of welfare to supply the field service necessary to operate a tri-county child guidance clinic and to give other services for children. This, in our opinion, is an impressive example of the development of local responsibility through the use of Federal funds. I therefore recommend that the amount of money provided for child-welfare services be increased from $3,000,000 to $12,000,000.

The CHAIRMAN. Thank you, sir.

Are there any questions?

Senator MYERS. I have no questions, Mr. Chairman.

The CHAIRMAN. Thank you very much for your appearance here, sir.

Mr. TOWNSEND. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. George E. Immerwahr, who was unable to appear, has submitted his statement for the record in lieu of his appearance, and I would like to say that Mr. Immerwahr was formerly the actuary for the Bureau of Old Age and Survivors Insurance at Baltimore, Md.

This statement will go in the record.

(The statement referred to follows:)

SOCIAL SECURITY AND THE COOPERATIVE WELFARE STATE

(By George E. Immerwahr)

In a recent address before the National Consumers League, subsequently published in an alumni periodical, Dean J. Douglas Brown, of Princeton University, speaks out on the subject of the welfare state. There is nothing wrong or unconstitutional about the welfare state, Dean Brown points out, quoting the preamble of the Constitution of the United States as his authority. The real danger, he says, lies in which form of welfare state we choose, whether the "paternalistic welfare state made paternalistic by political pressure" or the "cooperative welfare state." Only the former of these is dangerous. "It would, in time, break down individual incentive and mutual responsibility. Its end is either stagnation or dictatorship. The Santa Claus state may become the Stalin state."

The cooperative welfare state, on the other hand, is what Dean Brown avers the American people want. It "is consistent," he holds, "with democratic capitalism. It supports mutual self-help, taxation with representation; it sustains justice among our people, and avoids a loss of freedom by the person whose way of life is assured. It seeks where dependency does occur to deal with it constructively. It is the effort of a free people, through the organization of the state, to help each other in areas where private enterprise alone is insufficient.

"There is no question," he continues, "but that private enterprise is the most efficient framework of activity in the vast, major areas of economic life. It assures incentive, flexibility and progress in providing the means for general welfare. But where private enterprise is not enough, and where public action is necessary in the area of general welfare, it is important to the survival of democratic capitalism that as much as possible be accomplished by cooperative action rather than ex parte paternalistic action."

After setting forth these principles, Dean Brown devotes the remainder of his address to their application to American social security. Referring to "a growing pressure toward a paternalistic welfare state" in the field of social security, he asks:

"Will the American people take the right road in the choice between the cooperative as opposed to the paternalistic welfare state? Will they through ignorance or a softening of our moral fibers take the primrose path to state paternalism? A decade or a century from now men may look back and say that the decision was made in the year 1950. The America of that time will be vastly different nation according to the decision we make in the months immediately ahead."

Going into further detail, Dean Brown sets forth the following as the three essential ingredients of a social-security program in the democratic and cooperative form of welfare state, namely "(1) individual incentive, (2) mutual responsibility, and (3) an effective framework against the corroding fear of insecurity." After explaining the third of these in terms of our present-day economic structure, he speaks of the first two ingredients as follows:

"The American system of social security must, therefore, be built around social insurance and not dependency relief or free benefits such as sought by those who favor Townsendism. To preserve incentive, social insurance benefits must be related to past productivity—employment and earnings with real differentials according to the degree to which the individual has contributed to the society to which he is a part. To preserve mutual responsibility, social insurance costs must be shared by the individual insured through a direct, immediate, and tangible charge upon his income. So far as is possible, protection must be an earned and individual right, a specific protection against dependency, not a sugar-coated form of paternalistic relief, whether provided on a retail or a wholesale basis. Dependency relief will still be needed in many cases, but we must build on an effective structure of contributory social insurances to reduce constantly the scope of dependency relief."

I think that there are few if any of us who would disagree with the principles of democratic cooperation for public welfare which I have only partially quoted from Dean Brown's address. Similarly, few would disagree with his dislike for "free benefits" provided as a "sugar-coated form of paternalistic relief," for welfare "made paternalistic by political pressure." Because some students of social security, however, entertain doubts that our present social-security program and the proposed liberalizations of it which Dean Brown has publicly supported really fit into the cooperative welfare picture and suspect that they suggest more nearly the paternalistic picture, this paper is presented to explain in part their reasons for doubt and suspicion.

The background of the current social-security situation

The story of the development of old-age and survivors benefits in the formulation of the Social Security Act of 1935 and since that time is a complicated and fairly interesting one, but I shall merely outline the following high lights:

1. The original legislation was developed in a background of resistance to the Townsend movement, whose demands then were more extreme than now. Its framers took the "contributory principle" as the keystone of its defense against this movement.

2. Adherence to this principle was so strict that under the original Federal old-age benefit system, even in the case of those getting old-age benefits in the comparatively early years of the program, a substantial part of the benefits received would actually have been purchased by the contributions paid by the individuals receiving these benefits and by their employers. This individual equity relationship was achieved at the expense of having very small benefits paid in the early years of the program, since the old-age benefits under the program were to be based on cumulative wages posted to the individual employees' accounts beginning with wages of the year 1937.

3. Only about 60 percent of the gainfully employed jobs in the country were covered, the main exclusions being on account of administrative problems in collecting accurate employment taxes.

4. Since no workers attaining age 65 before 1941 could possibly get old-age benefits, and since a large percentage of those even younger would also fail to get them (often for reasons quite apart from the 60-percent coverage situation), it was inevitable that several decades would elapse before the majority of the then aged would be eligible for benefits under the program. While the legislative planners realized this deferment of the program's effectiveness and planned a federally aided old-age assistance program as a stop-gap, it appears that they seriously underestimated the extent of this deferment.

5. As total pay-roll tax rates were to reach 6 percent by 1949 (3 percent each for employer and employee), while benefit disbursements were to be low for

many years due to few beneficiaries and small average-size benefits, a very large "reserve account" was expected to accumulate from annual excesses of income over disbursements.

6. The 1939 amendments, which probably resulted from opposition to the reserve more than from any other factor, reduced the annual reserve accumulations primarily by suspending tax-rate increases (this suspension process was continued by legislation after 1939) and by basing individual benefit amounts on average rather than cumulative wages; the latter had the effect of appreciably raising individual benefit amounts in the early years of the program. Survivor benefits were introduced, and the number of early year old-age beneficiaries was also increased by various technical changes, but the reduction of the extent of deferment was only relatively slight. Except for very minor changes, the exclusions from covered employment largely continued. Beginning with the 1939 amendments, the Federal program became officially known as an "insurance" program.

7. The fairly close relationship between the actuarial value of the benefits to be received and the pay-roll taxes actually paid by and on behalf of the worker no longer existed after the 1939 amendments. In the case of those now on the primary (i. e., retired worker) benefit rolls, the average contribution paid per individual has been roughly about $250 while the actuarial value of benefits received (including expectation value of wife's and widow's benefits) has probably averaged over $4,000. But even in the case of the younger workers now covered, it is very unlikely that their benefits will be paid for by their own and their employers' pay-roll taxes.

8. Rather than old-age assistance (and the corresponding assistance for dependent children) proving only a stop-gap of diminishing magnitude, the assistance rolls have grown and assistance recipients still outnumber the recipients of Federal old-age and survivor insurance benefits. Moreover, average amounts of assistance payments have far outstripped insurance benefit averages. The former depend only on fiscal capacity of the States, the Federal Government being committed automatically to put up a certain proportion of the amount allowed by the State. The latter, on the other hand, even in a period of rising wages, are held down by past wages, and in general previously awarded benefits are not revised.

These developments under the 1939 amendments and other shortcomings of the present program have been discussed in further detail in various publications, including my own paper in the Transactions of the Actuarial Society (vol. 46, p. 266). This paper also discusses various proposed solutions to these problems, and in the latter part of the paper is mentioned the possibility of approaching the problems through a complete revision of method, by the adoption of a "social budgeting" method under which benefits payable to persons of any category (such as that of the aged) would be independent of need and of previous earnings, both as to their availability and as to their amount.

Current legislative proposals

The legislative proposals now under consideration, however, do not embody any substantial revision of the concepts of the law now in effect. Instead, they are for the most part mere quantitative changes. H. R. 6000, passed last year by the House of Representatives, was described by Mr. Robert J. Myers at last fall's meeting of the Middle Atlantic Actuarial Club, but its main provisions are reviewed briefly here as follows:

1. Job coverage is extended to bring in several major employment groups now excluded, the nonfarm self-employed, commission salesmen, domestic servants, employees of State and local governments and nonprofit institutions (on a partially voluntary basis), and some others. Farm owners and employees would still be excluded.

2. The annual wage base, used for both pay-roll tax and benefit computation purposes, is increased from $3,000 to $3,600.

3. The primary benefit formula is liberalized, the basic portion of the monthly benefit to be 50 percent of the first $100 of average monthly wage plus 10 percent of the next $200 (the present formula is 40 percent of the first $50 plus 10 percent of the next $200). Persons now on the benefit rolls would have their benefits increased, in effect by having the new formula applied to their past wages.

4. Various technical provisions would be introduced designed to improve the qualification possibilities and the benefit amounts of the newly covered groups.

5. Disability benefits would be added.

6. The Federal share of public assistance costs would be increased.

This bill is less of a liberalization, both as to coverage and benefit formula, than the bills H. R. 2892 and 2893 originally introduced in 1949 and sponsored by the Social Security Administration, which is now seeking in the Senate Finance Committee hearings to bring H. R. 6000 in closer conformity to the bills it originally sponsored. The further liberalizations sought, as they affect the insurance program, would bring farm owners and farm employees into coverage, would increase the annual wage base to $4,800, and would increase benefit amounts in various other ways.

It should be mentioned that H. R. 6000 contains a schedule for future employer and employee pay-roll tax rate increases. Except for the increase to 2 percent scheduled for 1951, however, there was probably no serious contemplation on the part of the House Ways and Means Committee that the schedule would be adhered to or would constitute any sort of commitment on future Congresses.

In commenting on various features of the proposed legislation, I will concern myself with the bill H. R. 2893 introduced in the House last year, since it is approximately the provisions of that bill which the administration has now been advocating in the Senate hearings.

First, as to extension of employment coverage. The proponents of the legislation point out that about 86 percent of gainful jobs would be covered (as compared to about 60 percent at present). Although only partially referred to in the legislation (or in the report on H. R. 6000), administrative machinery is said to have been worked out for wage reporting and tax collection in those employments previously excluded for administrative reasons. It is of interest to note, however, that the testimony of the Commissioner of Internal Revenue indicate a cost of collection figure about four times as great as that for current coverage.

The deferment of the program's effectiveness would be somewhat ameliorated by the extension of employment coverage and by the various technical changes designed to aid the newly covered groups, but the improvement will be a limited one. The frequent inference from the 86-percent coverage figure is that within a very few years 86 percent of the aged population, 86 percent of the orphaned children and their mothers, and 86 percent of the chronically disabled will be eligible to receive benefits under the program. This inference should be challenged in the light of experience of the present program. After 13 years of the existing 60-percent coverage, we find only about 33 percent of the male population now 65 or over are fully insured and so actually receiving or eligible to receive primary benefits, and even a smaller percentage of women of this age group are receiving or eligible for benefits either in their own right or as wives or widows. Under continuation of present coverage, it will take probably another decade before these proportions reach even 50 percent. To be sure, some of the newly covered groups have higher average ages than the presently covered, and various other factors may hasten their qualification; yet even with this extension of coverage to 86 percent, it is doubtful that more than about two-thirds of the aged population of the year 1960 will be insured at that time. Of the millions now on the old-age assistance rolls, very few can possibly expect transfer to the insurance-benefit rolls because of the new legislation, while many will be alive and still on the assistance rolls in 1960.

Another factor, generally overlooked, is that among those of the aged who have qualified for primary benefits now or who can qualify soon after extension of coverage, a higher proportion are in comfortable circumstances than among those who cannot qualify. This is because those who qualify are largely either the recent or the continuing workers, whereas those who fail to qualify are very often those whose failure has been occasioned by long periods of invalidism, unemployment, or intermittent employment, or by long previous retirement. While about 33 percent of the total male population now 65 or over are qualified, it has been estimated that if the one-third of the total group having the highest incomes were excluded from consideration it would be found that only about 20 percent of the remaining two-thirds are qualified. Yet it would seem that it is this lower two-thirds with whom there should be primary concern, as it is from this group that the public assistance recipients come.

As to financing, it should be noted that while there is plainly no aim at anything approaching actuarial level premium financing, there is at the same time a large initial excess of income over outgo with the consequent accumulation of a large reserve. This course, which lies roughly halfway between pay-as-you-go

and reserve financing, may possess the disadvantages of both of those courses without the advantages of either. In particular, there is no actuarial balance whose maintenance could serve as a safeguard against unsound liberalizations of the program while at the same time the large reserve to be accumulated will serve as ample temptation for such liberalizations. In fact, it is very clear that the present liberalization proposals are implemented by the common illusion that social-security benefits are cheap, an illusion that is inevitable when a program of this nature has the great bulk of its costs long deferred and at the same time has no level premium reserve financing. This is not to argue for reserve financing, however, since the accumulation of a large reserve (regardless of any actuarial virtue) may have serious effects on the economy and may become largely useless in the face of marked or continuing inflation.

The proposed legislation would depart even further from any relationship between the value of the individual worker's benefit and the combined employee and employer taxes paid with respect to his earnings. Under H. R. 2893 average old-age and survivor benefit amounts would be roughly doubled immediately, yet immediate pay-roll tax rates (exclusive of those attributable to costs of permanent and temporary disability benefits) would hardly rise (though they would be applicable to a larger earnings base), and such increase as there would be would of course, not be retroactive. The result is that, for individuals becoming entitled to retirement benefits in 1955, for example (see the attached chart), the aggregate employee contributions paid, or even the aggregate combined employee and employer contributions, would bear a very negligible ratio to the value of benefits. Even in the case of workers now entering the program, the great political improbability of a substantial early rise in pay-roll tax rates almost certainly means that their benefits, too, will fail to be paid for by pay-roll taxes.

The proposed legislation would greatly increase the differential between benefit amounts of high-paid and low-paid individuals. The excess of the high-paid individual's benefits over the low-paid individual's cannot be justified on the basis of individual equity, assuming such equity is measured by employee taxes, except perhaps in the remote future and even then improbably. It is true that the higher-paid employee pays a higher proportion of the cost of his larger benefits than the lower-paid pays of the cost of his smaller benefits, but since the proportion will generally be negligible anyhow, the higher-paid employee will derive a much greater profit from public funds than the lower paid. (See the attached chart.) Those persons who support the general structure of the program but oppose the increase of the annual wage base from $3,000 to a higher figure (say $3,600 or $4,800) point out that the differential between the $3,000 employee's benefit and the higher-paid employee's benefit could not be justified on equity grounds; but they apparently overlook the fact that the same type of anomaly exists as between the $1,200 and the $3,000 employee, under both proposed and existing legislation.

The proposed increase in wage base and change in benefits formula under H. R. 2893 are designed primarily to take account of recent increases in wage levels. Since 1939 wage levels have almost doubled, an annual wage of $4,800 today may correspond to $2,400 in 1939. The benefit formula under H. R. 2893 is such that the ratio of the $4,800 individual's benefit to his earnings will be only moderately higher than the ratio of the $2,400 individual's benefit to his earnings under the 1939 formula.

There is no satisfactory machinery, however, to take satisfactory account of future changes in wage and price levels, either upward or downward. While any significant downward wage and price trend is admittedly improbable, it can be seen that were such trend to occur the ratio of benefits to earnings might increase to an unfavorable extent. The drafters of H. R. 2893 hoped to take care of the upward-trend situation by basing benefits on wages of the five highest consecutive earnings years, though presumably in case of a very marked trend they would seek further increase in the annual earnings base and revision of the benefit formula. This difficulty with the highest 5-year approach is that, while it is of encouragement to the individual who has not yet retired or died, it is of no help to him or his survivors in the very likely event of a continued upward trend after his retirement or death.

A remedy for this difficulty might be to have some special adjustment made periodically in the benefits of individuals already on the benefit rolls, an adjustment possibly reflecting the change between the purchasing power of the then current dollar and that of the dollars on which their benefits are based. But to do this, it would seem, would emphasize increasingly the absence of relationship between contributions and benefits and would seriously question the basing of benefits in any way on past earnings.

The social budgeting approach

Years ago the well-known actuary Miles M. Dawson pointed out that unde a compulsory social-insurance system the many rigidities and limitations private insurance need not be present. Thus, in a system where the existen of future generations of participants was assured through the State's taxin power, there was not only no need for a reserve, but more important it woul be both possible and preferable at the commencement of the compulsory progra to bring into benefit status all those who would have been receiving benefits ha the program started long before. Such a program would be truly contributory for though the individual would not be paying for the benefits he himself was t receive in the future, he would be paying an equivalent cost by paying for th benefits of those now aged or disabled or orphaned or widowed. In return fo his paying for the benefits of these others, he is assured that when in the futur he becomes aged or disabled or deceased, he or his survivors' benefit will b paid for by those then in their productive years. As Dawson says, such a approach would say to every man: "In consideration of a contribution e your full share of the cost of providing this indemnity for all other contributin members of society, society will cover the entire hazards of your having the re sponsibilities resting upon you which make the insurance requisite or desirable. (Proceedings, Eighth International Congress of Social Insurance (1908), p. 192

The adaptation of this approach, as many students of the subject visualize i would be (1) to determine each year the amount which could be raised throug some predetermined form of direct taxation specifically earmarked for socia security purposes, (2) to determine the number of persons eligible for socia security benefits and their respective proportionate shares, and (3) to divid (2) into (1) to obtain the amount of each share. As visualized, each of th aged would receive the same size share, not only because of the difficulty e devising variable shares on any pertinent basis but primarily because a uniform individual benefit would be considered socially preferable, for reasons partiall indicated below. On the other hand, it might be desirable to pay benefits t some other category, such as orphans, at some uniform level different fro the uniform level for the aged.

To illustrate, assume that the social-security tax method decided upon wa to yield a total of $8,700,000,000 in 1951. This amount, incidentally, is just one half of the mean of the high and low estimates of the cost (assuming preser earnings levels (in the year 2000 of H. R. 2893 plus public assistance, a cos to be paid by a population much less than twice the present population. Assum further for 1951 a total of 11,000,000 aged, to have one benefit unit apiece 2,000,000 under 65 but chronically disabled also to have one unit apiece, an 2,000,000 dependent children to have three-quarters units apiece. The numbe of benefit units would total 14,500,000, so that each benefit unit would be $6 annually, or $50 monthly.

Social budgeting is distinct from current Townsend proposals in that socia budgeting avoids any form of hidden tax and keeps costs fully in the open. Th Townsend form of tax, misnamed "gross income" tax, is really a gross-receipt tax, which could be included several times, and to an immeasurable extent, i the price of every commodity. An appropriate tax for social budgeting woul be a flat percentage added to the individual normal income tax rate.

A system of uniform benefits under the social budgeting approach may b compared with the present or proposed old-age and survivors insurance legisla tion, with respect to the various problems under consideration, in the followin way:

Present program (or proposed liberalizations thereof, retaining present basic structure)	*Suggested system of uniform benefi independent of previous wage histo ies*
1. COVERAGE OF PRESENTLY EXCLUDED GROUPS OF WORKERS	
Administrative problems relating to wage reporting make coverage of some new groups very difficult. Any new coverage that is effected necessitates elaborate and confusing "new start" provisions.	Wage-reporting and new-start pro lems are obviously absent, as no wa records would be maintained for an one under this system.

2. COVERAGE OF RISKS ALREADY MATERIALIZED

Majority of those currently in need of benefits became aged, disabled, orphaned, etc., before inception of program or before protection could be acquired, and are therefore dependent upon public assistance.

All those currently in need, as well as those in need in future, can derive benefits under suggested system. Role of public assistance, while relatively incidental, would be that of genuine supplementation rather than substitution.

3. INCIDENCE OF FINANCING

Because of its deferred cost structure, the program cannot be financed satisfactorily by either actuarial-reserve or current-cost technique. Former technique is politically dangerous and economically unsound; latter leads to popular under-evaluation of benefit costs and to resulting dangers.

Current-cost technique can be satisfactorily applied to suggested system since immediate rate of benefit expenditures will not be too far below probable ultimate rate.

4. ADAPTABILITY TO CHANGING CONDITIONS

Benefit amounts largely dependent on wages received in long-past years lack flexibility to meet changing price levels and other conditions. Adjustments of benefit formula designed to remedy this situation do not meet problems of all beneficiaries, provide only temporary solution, and result in increased complications.

Under suggested system there would be no wage-benefit relationship from which inflexibility could result, and benefits could be made to change automatically with economic and fiscal developments.

5. PROTECTION AGAINST UNDUE LIBERALIZATION

Deferment of major benefit load results in temptation to overliberalize present benefit rates. Future costs cannot be closely forecasted and would be ignored even if they could be foretold.

Fact that cost of any liberalization would have to be borne immediately by the public would be main bulwark against undue liberalization.

6. APPROPRIATENESS IN MEETING SOCIAL NEED

Differential treatment provided is not in accord with, but if anything in inverse relation to, the need to which social insurance is properly applicable (i. e., that need which cannot be provided for by individual effort or through the various forms of private insurance). Moreover, though ostensibly weighted relatively in favor of the lower-paid, the benefit formula now operates to give the greatest actual public subsidies to the higher paid.

Suggested system would give effect to "floor of protection" concept and avoid special subsidies. Uniform social security benefit would be supplemented by individual's own savings, private pensions, etc. Local public assistance supplementation, not federally subsidized, would also be available.

7. RELATION TO PUBLIC ASSISTANCE

Since the OASI recipient now often sees that public assistance has served to put both him and the nonrecipient (or noncontributor) in exactly the same position, and since public-assistance payments are more numerous than OASI benefits and of larger average amount (not having OASI's inflexibility), public assistance now has the function of adversely competing with the program.

To the limited extent to which public assistance would be needed to supplement the suggested system, it would constitute true supplementation.

5. ADMINISTRATIVE EFFICIENCY AND ECONOMY

Despite the efficiency with which wage reports are processed and wage records are maintained, the cost of these operations is appreciable, and relatively higher costs and less efficient operations may be expected with respect to some of the excluded groups whose coverage is now contemplated.

These operations would be eliminated and there would also be savings in other operations. The existing income-tax machinery would suffice for collecting contributions.

Which is the cooperative method?

If we are to accept as our aim cooperative welfare instead of paternalistic welfare, and if we seek to preserve the ingredients Dean Brown speaks of namely individual incentive and mutual responsibility, we should ask ourselves which of these two social-security methods is more nearly the cooperative method and which is more nearly the paternalistic. The following are some of the questions whose answers may guide us to a solution:

1. Which is the more paternalistic in its effect, a program under which for some decades to come a substantial proportion of those in need are left to the mercies of needs test public assistance, or a system under which each individual in the categories where need is presumed received a benefit which is his own to use as he sees fit?

2. Which is the more cooperative and which the more paternalistic, a virtually noncontributory program promising expensive benefits for token considerations hiding true costs and therefore stimulating the demand for even more expensive benefits, or a system under which the present worker in paying for the benefits of those who can no longer contribute is contributing an amount equivalent to the real value of his own benefits?

3. Which is the more paternalistic, a program whose benefits may be tied in unrealistically to economic conditions of years already past and can be revised only through congressional wrangling over complicated and discriminatory formulas, or a system under which both income sources and benefit levels can vary automatically with economic changes?

4. Which is the more paternalistic, a program which uses public funds to subsidize the continuance of the differential of the high-paid worker's income over that of the low-paid worker, or a system which recognizes that the high-paid worker is better able than the low-paid to supplement his flat social-security benefit through nonsubsidized thrift and insurance channels, thus maintaining his differential through his own efforts and the medium of private enterprise?

The above are some of the many questions which can and should be asked in choosing our pattern of social security. As Dean Brown points out, the decisions made in the year 1950 may have far-reaching effect.

The CHAIRMAN. The next witness is Mr. John D. Battle, vice president of the National Coal Association.

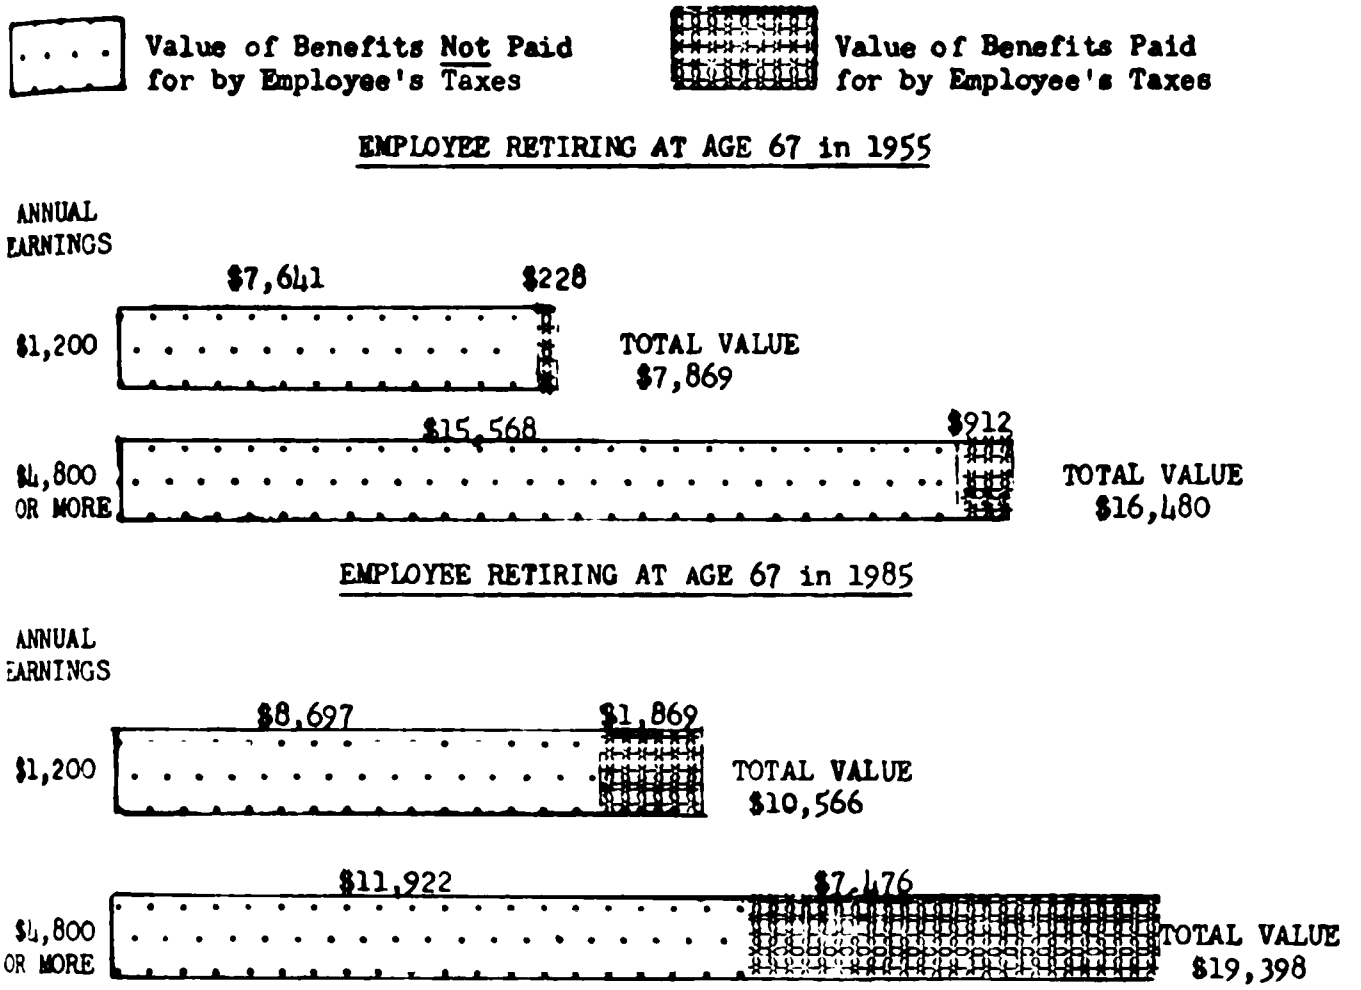
Mr. Battle?

STATEMENT OF JOHN D. BATTLE, EXECUTIVE VICE PRESIDENT, NATIONAL COAL ASSOCIATION

Mr. BATTLE. My name is John D. Battle. I appear here on behalf of the National Coal Association. The National Coal Association is the trade association of bituminous coal producers, with membership comprising about 75 percent of the commercial production of bituminous coal in the United States and with members in each of the major coal-producing States in the Nation.

As a representative of the bituminous coal-mining industry, I do not appear here today as a specially qualified social-security expert. I do appear for the purpose of explaining to the committee some of

VALUES OF INDIVIDUAL EMPLOYEE'S BENEFITS AND PAYROLL TAXES UNDER H. R. 2893



NOTE.- Values of benefits are actuarial values, as of retirement age, of employee's own (primary) benefits and of wife's and widow's benefits which may become payable after his retirement. Computation of wife's and widow's benefits makes allowance for probability of there being no wife or widow qualified to receive such benefits and also makes allowance for effect of benefit maximum.

Pay roll tax values are interest accumulations of net employee taxes to retirement age, the net tax after 1949 being one-half percent of pay roll less than the assumed total employee tax. Benefit of survivorship is ignored, and it is assumed that this saving plus one-half percent of pay roll is applied to the cost of survivor and disability claims incurred before retirement. Total employee tax rates assumed are 2 percent for 1950-59, 2½ percent for 1960-69, 3 percent for 1970-79, and 3½ percent for 1980-84, though H. R. 2893 provided no tax rate higher than 2 percent. Steady earnings of $1,200 a year for one employee and $4,800 (or more) for the other are assumed from 1950 on, while before 1950 the assumed earnings are $750 and $3,000 (or more), respectively. Fluctuating earnings could produce the same benefit values with lower tax values.

United States 1939-41 white population mortality and 2½ percent interest are assumed.

our industry's special problems under old-age and survivors' insurance, and also to express our position on the proposals of broadening the wage base, adding disability benefits, and sharply increasing benefits. The recommendations which we shall make are of vital importance to the coal industry.

You have before you a bill which in 1951 will impose old-age and survivors' insurance taxes at double the rate which has been in effect up to the beginning of this year. In addition, it would apply to $3,600 of an employee's annual wage instead of $3,000. The Social Security Commissioner has asked that the base be made $4,800, and some union representatives have demanded an even broader base.

You gentlemen will appreciate the difference between the $30 annual maximum per employee we have been paying, and the $72—over twice the old maximum—which we shall be paying next year if H. R. 6000 is enacted as presently written. You will understand the impact of the $96 maximum for next year proposed by Mr. Altmeyer—more than three times our maximum before this year.

Under Mr. Altmeyer's proposal, 15 years from now we would pay $144 per year tax on our high-wage employees—nearly five times the initial $30 maximum per employee. The withholding tax for social

security would also be $144. This would be for this one progra alone. You must also bear in mind that if the wage base for old-ag and survivors' insurance is broadened the same broadening for unem ployment compensation will be almost certain to follow. The unem ployment compensation tax the industry must also bear adds as muc as an additional 3 percent tax on wages.

The Commissioner has urged a benefit formula producing a prese benefit of around $123 per month for an old couple with maximu coverage of $250 per month since the system began, and $139 per mont 15 years from now. He has urged, however, that the $400-per-mont man should receive much higher benefits than the $250 man, and woul tax him and his employer and pay him benefits on an additional $1,8 per year in wages.

Old-age and survivors insurance was adopted as a measure to place floor of protection under persons who might otherwise prove to be relief problem in their old age. We do not subscribe to any theory tha the $400-per-month man needs more Government protection than th $250-per-month man, nor do we believe the proposal for imposing 6 percent more taxes on the $400 man and on his employer can be justifie

We accordingly urge you to retain the present $3,000 maximu annual wage base.

Under the proposed tax schedule, it is estimated in the report ac companying H. R. 6000 that OASI taxes will be 4.6 billion dollars pe year 5 years from now, 5.9 billion dollars per year 10 years from now and 8.3 billion dollars per year 20 years from now, and that a trus fund of over 60 billion dollars will have been accumulated by the These were intermediate estimates, and the possible range is so broad- depending on future economic conditions, longevity, employment prac tices, etc.—that the so-called reserve may be much lower, or greatl higher than 60 billion dollars.

It seems obvious to us that greatly increasing present tax burden to pile up this theoretical reserve may lead only to the size of the reserv being used as an argument for still further benefit liberalization. W are certain of only one thing—the proposed increase in the pay-ro tax from 1½ to 2 percent next year on top of the 50-percent increas which occurred last January 1, would be a tremendous burden on ou already precarious economy.

The inevitable effect of the impact of these additional regressiv taxes will be to reduce both corporate margins and take-home pay jus at a time when our economy is in need of encouragement. It woul be ironical to jeopardize our basic security—a sound economy—by taxe levied in the name of social security.

Our association is thus opposed to the proposed increase in the pay roll taxes.

H. R. 6000 proposed to add disability benefits to the present pro grams. Your committee has heard competent witnesses whose back grounds and actual experience entitle their opinions to great weight demonstrate why this pay-roll-tax-supported program of benefits pai "as a matter of right" should not be undertaken, and why the cost will be tremendous. No equally competent witness has denied the conclusions.

Our association opposes this tremendously expensive and question able program of disability benefits.

H. R. 6000 contains a definition of employee which would permit administrative and judicial determination that the employer-employee relationship exists merely on the basis of the adjudicator's views of the "combined effect" of broad and undefined "factors." These are in general the "factors" developed under the theory that social legislation was intended to protect "economic dependents" of a business, and hence that "employee" meant economic dependent. Even this flimsy theory, which you rejected 2 years ago, utterly fails under H. R. 6000, since the purpose of the bill is to cover self-employed as well as employees.

We can see no justification in twisting ordinary independent relationships into artificial employer-employee relationships for tax purposes, and can see a great deal of confusion and litigation if the proposed definition is adopted. Further, we believe that such action would have much broader implications than this particular tax. We are accordingly opposed to the proposed definition and earnestly request that it be stricken from the bill.

H. R. 6000 also proposes to sweep in a fortunate few of the present aged and pay them near-maximum benefits after 5 years' coverage, and, in contrast, do nothing at all about the present situation where millions of today's aged are left to the constantly expanding relief programs. The association recommends that OASI changes be presently limited to such modest increases in benefits as may be found essential to provide for those presently on the rolls or shortly to be on them. There needs to be a fundamental reappraisal of what should be done about our present crazy patchwork of old-age and survivors' insurance, public assistance, and the various and sundry other public and private approaches to the security of old people and orphans. This committee knows that the pending measure fails to do a defensible job, and that the time within which this committee has to act does not permit a realistic appraisal. It is also axiomatic that any unwise liberalization or expansion will be difficult—and, we believe politically impossible—to correct.

There is an increasing dissatisfaction with the actual results of the present social-security program. Its glowing promises for tomorrow are offset by its sorry current performance 15 years after its enactment. No one can defend the present distribution of Federal tax money by way of benefits—either from pay-roll taxes or general taxes—in meeting the actual problems of the destitute aged or destitute orphans. H. R. 6000 would both tremendously add to the tax burdens and increase the disparity between the actually needy aged and children off the rolls and the fortunate aged and children on the rolls, many of whom are unnecessarily receiving benefits. This is true in the Federal grant-in-aid public-assistance programs, where the State-to-State variance is from 10 percent of one State's aged on the rolls to 83 percent in another State, and where benefits average under $20 per recipient in one State and around $75 in another. The disparity in benefits is true under old-age and survivors insurance, where the present recipients have paid an average of only 3 or 4 percent of the costs of their benefits—6 or 8 percent if you count the employer tax—but those least likely to be needy receive by far the largest unpaid-for benefits.

Not only the benefit structure, standards, and conditions, but the financing requires a most thorough review, and reconsideration.

Old-age and survivors insurance is a contributor system, and ou association believes it to be a sound approach that cost of financin benefits should be to a substantial degree borne by prospective bene ficiaries. In that way, and in that way only can a system of check and balances be maintained between what people might like and wha they are willing to pay for.

But raising any supporting funds from sources other than the pros pective beneficiaries is a pure tax question, having no special signifi cance in the contributory theory of the system. Our organization be lieves that it should be an earmarked tax, but believes that it should b framed on principles of tax equity and sound public policy. It shoul not be a specific penalty for employing more people or paying mor wages. It should certainly not be the pay-roll tax imposed on em ployers, which does exactly these things, and which directly affect competition between products with high labor costs and those with lov labor costs.

The principal point which I wish to bring to the attention of th committee and the Congress is the fact that the bituminous coal-min ing industry has a very high, an unusually high, labor cost in relatio to total cost. Between 60 and 70 percent of the total cost of producin coal goes into pay rolls. The point we wish to stress is that our com petitors do not have such a high pay-roll cost factor and that an increase in the social-security tax, predicated on pay rolls, furthe accentuates an already serious discrimination against the bituminou coal-mining industry.

Our competitors are oil, natural gas, and hydroelectric power. I the production of a given unit of energy the labor factor involved i each of these three competitors of coal is only a small fraction of th labor cost involved in the coal industry.

In gross national product, the bituminous coal-mining industr represents slightly over 1 percent, but it would pay more than 5 per cent of total social-security taxes.

The social-security tax, predicated as it is on pay rolls, is alread seriously discriminatory against the bituminous coal-mining industry If we are to embark upon a greatly enlarged program involvin greatly increased costs, this discrimination will become all the mor serious. It is for this reason that the bituminous coal-mining industr today urges that your committee recommend changing the way i which the program is to be supported.

The proportion of the costs which the insured as a class should bea permits some discussion. However, it would appear manifestly ex pedient that at least half the costs should be raised by their direc contributions. I mean the contributions of the covered employees.

It is not similarly essential that the individual employer pay a amount equal to the aggregate paid by his particular employees. Th old-age and survivors insurance concept is more hurt than helped by theory that each individual employer is paying in on behalf of each o his employees an amount equal to what the individual himself pays It is perfectly apparent when measured against the benefits of a individual employee that the amount the employee has paid plus th amount the employer has paid with respect to his employment rep resents nothing like the cost of the particular benefit. For those retir

ing today the combined amount represents only a small fraction of the cost; for many retiring in the future the combination of employer and employee payments will represent perhaps double the actual costs of their benefits. As a matter of fact, as the benefit formula provides comparatively large benefits to short-time and low-income beneficiaries, it will be difficult enough to assure many employees who will retire in later years that they will get as much in benefits as their own contributions would purchase commercially.

As a matter of reality, the employer's pay-roll tax is not in any way earmarked for any individual employee. Its proceeds are used as part of a general fund to provide a floor of protection above that which could be purchased by contributions of low-wage individuals and by employees covered for relatively short times in the system. When this actual purpose and use of the employer excise taxes is recognized it is clear that this particular method of raising half the funds is not an essential part of the concept of social security.

Instead, the question of raising this half of the funds presents basically a question of tax equity.

Why should the bituminous-coal-mining industry be called upon to pay such a disproportionate part of the cost of the social-security program merely because it gives employment to a comparatively large number of workers? To apply a substantial part of the cost of this program on this basis seems to me to be completely unsound. What it amounts to is a conclusion that the only way to reduce or minimize social-security-tax liability is to have few workers and to pay them low wages. Certainly this is contrary to recent social thinking and national policy which suggest a desire to encourage employment and the highest wages consistent with business prudence.

Actually, the very fact that coal has such a high labor factor has already caused it to lose ground steadily in competition for the Nation's fuel markets. In 1929 bituminous coal contributed 55.1 percent to total fuel demands of the Nation. Since that time the trend has been steadily downward, bituminous coal's contribution in 1948 having fallen to 42.4 percent, the lowest in history. From this record it is apparent that coal is losing ground in competition with oil, natural gas, and hydro for the Nation's fuel markets. This loss is directly attributable to increased costs, primarily in the labor and related expense field.

Certainly to continue the present method of financing the social-security program on a greatly increased scale will seriously affect the competitive position of the bituminous-coal-mining industry and, in our judgment, is not only unnecessary but is wholly unjustified.

Mr. Altmeyer, Commissioner of the Social Security Administration, has indicated that the level premium cost of the enlarged social-security program, including OASI, disability, health insurance, etc., might run up to 15 percent of pay rolls. He indicates that on the present $140,000,000,000 taxable-income base the 15 percent would produce about $21,000,000,000 per year.

The committee has heard much from Mr. Altmeyer before, and, of course, his opinions and estimates are entitled to great weight. I think it only fair to say, however, that if Mr. Altmeyer says the enlarged pro-

gram will cost 15 percent of pay rolls, it is a fair assumption that it will not cost less than 15 percent.

If the bituminous-coal-mining industry is called upon to pay one-half of 15 percent of pay rolls, or even one-third of the 15-percent figure, as Mr. Altmeyer has indicated might be desirable, the discriminatory effect on the bituminous-coal-mining industry as against its competitors will be serious and, in many instances, fatal to the coal-mine owners.

The bituminous-coal-mining industry neither advocates nor opposes extending the coverage under the social-security laws. It does wish to emphasize that if there is to be any change in the program, we strongly urge elimination of the present excise tax on employers and supporting the program by a tax on the insured to carry about half the cost and the remaining 50 percent of total cost to be gained in one of three ways or a combination of the three: (1) From general revenues; (2) from earmarked income taxes; or (3) from a national sales tax earmarked for the purpose.

The social-security tax on employers is a sales tax. Of course, it is not labeled as such, but that is what it is. The only difference between this tax and the usual form of concealed sales tax is that instead of being applied to the sales price of the commodity it is applied only to that segment of the sales price representing labor costs.

It is much more inequitable than the manufacturers' sales tax which was defeated by the Congress in 1932. The manufacturers' sales tax was a concealed tax like the social-security tax on employers, but as it was imposed only on the manufacturers' sales price, wholesale and retail sales were not taxed, and pyramiding of the tax was avoided. There is nothing to prevent pyramiding in the case of the social-security tax on employers.

But there is another more serious inequity. A general sales tax applied to all sales does not affect the competitive situation. The social-security tax on employers does seriously affect the competitive situation. For example, the labor costs in the case of coal production are approximately 60 percent of the sales price, and a 2-percent tax on wages is equivalent to a 1.2 percent general sales tax. In the case of oil and natural gas production, principal competitors of bituminous coal, I understand the labor costs of production are not greater on the average than 15 percent of the sales price; and, therefore, a 2-percent tax on wages in this case is equivalent to only a 0.4 percent general sales tax.

In the case of company retirement plans, the employer gets something for his money. That is to say, turn-over is discouraged. Under a national social-security program, the employer gets nothing for his money, as the employee can shift his employment without loss.

In 1932 it was estimated that a manufacturers' sales tax at a rate of 2.25 percent would produce $595,000,000 of revenue. At that time, our national income was only $40,000,000,000. Now, it is in excess of $210,000,000,000, and such a tax would probably produce about $3,000,000,000. Such a tax would be more equitable than the present social-security tax on employers.

The social-security tax on employees is fair enough if we do not have further inflation and if future Congresses do not take away the

benefits now provided. If our economy remains in status quo, on the average a man will get what he pays for and oftentimes more, with some exceptions. Sometimes under the proposed bill he will pay in money, pay income tax on such money, and get nothing in return.

In conclusion, I feel strongly that there is no need for adopting the vast commitments of H. R. 6000 at this time, and that the whole matter needs further study.

The CHAIRMAN. Any questions? Thank you very much, Mr. Battle, for your appearance and the information you have given the committee.

The committee will stand in recess now until 10 o'clock tomorrow.

(Whereupon, at 12:15 p. m., the committee recessed to reconvene Friday, March 17, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

FRIDAY, MARCH 17, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D .C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Hon. Walter F. George, Chairman, presiding.

Present: Senators George, Connally, Millikin, and Martin.

Also present, Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order, please.

Mr. Reporter, please insert in the record two letters addressed to me, as chairman of the committee, but in the nature of supplemental statements by Mrs. Nola E. Patterson, editor and representative of the Life Insurance Field Force of America. Mrs. Patterson appeared at an earlier date in the hearing, but she wished to extend her remarks to this extent.

(The letters are as follows:)

LIFE INSURANCE FIELD FORCE OF AMERICA,
Atlanta, Ga., March 14, 1950.

Re H. R. 6000

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SIR: Pursuant to my presentation before your committee on February 6, 1950, in behalf of life insurance salesmen compensated solely by commission, it will be greatly appreciated if you will enter the following remarks in the record.

As predicted in my first presentation, certain life insurance companies are making a desperate attempt to have the fourth definition of the term "employee" eliminated from H. R. 6000. If they succeed in that, we firmly believe they will immediately claim that commission compensated life insurance salesmen are not "full time" salesmen as described in the third definition and thus continue to deprive these people and their families of their coverage.

Mr William E. Jones, assistant general counsel of the Northwestern Mutual Life Insurance Co., even proposes a ridiculous amendment under which these salesmen would be included as "full-time independent contractors" for whom the companies would be willing to pay half the tax. The purpose here is two-fold Not only can the companies then claim that the salesmen are not "full time" salesmen, but it would bolster their defense against negotiating with them in regard to their working conditions if they are classed as "independent contractors."

In regard to Mr. Jones' preposterous suggestion, we add the following evidence of employee status, particularly in connection with the salesmen of the Northwestern Mutual Life Insurance Co.:

1. Would any company dare appropriate the premium money of policyowners to pay social-security taxes for people who were not employed by the company?

2. The Northwestern Mutual has provided a company pension for its salesmen to which the company contributes. Again, would the company dare use premium money of policyowners to buy pensions for people who were not employed by the company?

3 Like many other life-insurance companies, the Northwestern Mutual inserted a disavowal of employee-employer status in its salesmen's compensation contracts

upon the advent of social security. However, they contain much evidence of employee status even yet. For instance, a rule is laid down in the contract as to how the salesman must conduct himself. It provides financial penalties for salesmen who do not produce a certain amount of business within a given time.

4. Salesmen of the Northwestern Mutual and other life-insurance companies cannot sell anything. They can only persuade people to make application to the company for the issuance of a policy. It is the company which accepts, rejects, postpones, or rates the risk. These salesmen cannot close any transaction. A reinstatement of a lapsed policy, a change of beneficiary or settlement agreement, and so forth, is not binding until approved by the company.

5. The evidence of employee status set forth in my presentation of February 6, 1950, applies with full force to the salesmen of the Northwestern Mutual.

Mr. Jones pretends that the wages-and-hours and unemployment compensation laws might apply if these salesmen were included as employees. Although this is not a good argument for excluding anyone from coverage, these salesmen as outside salesmen are exempt from wages-and-hours laws and in most States are exempt from unemployment compensation if they are compensated solely by commission. (See p. 51 of the enclosed Georgia law.)

Mr. Jones also deplores the administrative difficulties which would be involved. Again this is not good argument for depriving the salesmen of their benefits. Other business concerns, all industrial-life-insurance companies and the following 10 ordinary-life-insurance companies have fuond it possible to administer the law without undue difficulty. The 10 ordinary-life-insurance companies listed below recognized the employee status of their commission-compensated salesmen and included them into coverage, thus proving that other such companies can do likewise:

Acacia Mutual Life Insurance Co. of Washington, D. C.
Home Life Insurance Co. of New York.
Monarch Life Insurance Co.
New World Life Insurance Co.
North Carolina Mutual Life Insurance Co.
Provident Life Insurance Co. of North Dakota.
Security Mutual life Insurance Co. of New York.
State Farm Life Insurance Co.
Sun Life Assurance Co. of Canada.
Connecticut General Life Insurance Co.

The above-listed life-insurance companies have proven that commission-compensated life-insurance salesmen can be included into coverage and the law can be administered.

Mr. Jones says that as independent contractors the business expenses of these salesmen are deductible under the income-tax law. The business expenses of employees are likewise deductible under "Miscellaneous" in the self-same income-tax law.

Mr. Jones referred to the rulings of the Internal Revenue Bureau in regard to the coverage of life-insurance salesmen. The Internal Revenue Bureau did not have access to information from the employees. It had only the biased and incomplete information which was furnished it by the life-insurance companies which were determined to exclude their field forces from the benefits of social-security coverage.

We implore you to retain the fourth definition of the term "employee" in H. R. 6000. It is the only definition which will assure the coverage of life-insurance salesmen who are compensated solely by commission as the employees which they are and have always been.

Respectfully yours,

(Mrs.) Nola E. Patterson,
Editor and Representative of the Life Insurance Field Force of America.

Life Insurance Field Force of America,
Atlanta, Ga., March 17, 1950.

Re H. R. 6000

Hon. Walter F. George,
Chairman, Senate Finance Committee,
Washington, D. C.

Dear Sir: Pursuant to my presentation before your committee on February 6, 1950, and my subsequent letter of March 14, 1950, it will be greatly appreciated if you will enter this letter in the record.

Following printed reports that the Equitable Life Assurance Society made representations to your committee to the effect that its life-insurance salesmen are "independent contractors," one of the Equitable's salesmen sent me the following evidence of employer-employee relationship between the Equitable and its salesmen. He requested that I forward it to you to be considered by your committee:

"It would be difficult for an unbiased inquirer to adjudge the full-time agents of the Equitable Life Assurance Society anything but 'employees' in fact and in law. Not 'self-employed.' Not 'independent contractors.' Not 'operating their own business.'

"Some cogent reasons, briefly stated:

"1. Under New York and other States' laws and under Equitable regulations, 'group life insurance' can be purchased only by an 'employer' who has the right to make premium-deductions from his 'employees.' Absolutely forbidden is group life insurance for 'independent contractors' or 'associates' of any category. But, all Equitable agents enjoy full 'group life insurance.' Lawfully so.

"2. Agents fill out an 'application for employment.' They must pay an annual fee for an 'employee's fidelity bond.'

5. Until a few years ago the agency-contracts were replete with such phrases as 'the employer,' 'the employee,' 'employment,' etc. These were called in and a new printed form substituted.

"4. Agents are subject to book Rules for Agents. No discretions. Rigid.

"5. All 'independent contractors' buy their own occupational licenses. Equitable buys all such occupational licenses for its agents.

"6. Equitable can and does change compensation at will. In some cases it pays its 'actual independent contractors' ('brokers' and 'one-case agents') more compensation than it pays its own agents.

"7. Equitable charges against an agent's previously earned compensation a cash penalty for terminating his employment under some cases.

"8 Legal papers served on Equitable agents are binding; the society has to accept and respond to such service.

"9. By its printed unilateral contract of employment, Equitable holds the right to intrude and defend its agent against all claims and suits for any cause whatsoever. And to deduct from his compensation and otherwise to recover whatever it deems to be expense in connection with any such claim. Hardly independent actions.

"10. Whoever heard of a firm's purchasing for its 'independent contractors' a 'retirement pension plan'? Such is unlawful, forbidden by law and by regulations of all companies. Yet, Equitable has purchased a pension plan for its agents."

This is copied verbatim from this Equitable agent's letter. His use of the word "agent" refers to life-insurance salesman, both terms being erroneous. These people are neither agents nor salesman. They are employees who are paid according to the result accomplished rather than by the hour.

Sincerely yours,

(Mrs.) NOLA E. PATTERSON,

Editor and Representative of the Life Insurance Field Force of America.

The CHAIRMAN. The committee will begin its work this morning. We hope that there will be other members of the committe present within a short time. We will proceed without delay since we have matters coming up on the floor of the Senate today that make it necessary for us to conclude around 12 o'clock, or shortly after 12.

Mr. Mosher, I believe that you are first on this list. Mr. Mosher, you may be seated, if you wish.

STATEMENT OF IRA MOSHER, CHAIRMAN OF THE NATIONAL ASSOCIATION OF MANUFACTURERS EMPLOYEE BENEFITS COMMITTEE, AND DIRECTOR, RUSSELL HARRINGTON CUTLERY CO.

Mr. MOSHER. Thank you, Mr. Chairman.

For the record, my name is Ira Mosher. I appear before you as chairman of the NAM Employee Benefits Committee, which deals

with the entire field of employee-benefit programs, including employee pension programs and Federal Social Security.

With your permission, I am not going to read the brief which we have presented to you, which is pretty lengthy and goes into considerable detail. Again, with your permission, I would like the privilege of high lighting the more important points in that brief.

The CHAIRMAN. Do you wish to have the brief entered in the record?

Mr. MOSHER. Yes, sir.

The CHAIRMAN. The brief will be entered in full in the record, and you may then proceed.

(The brief is as follows:)

STATEMENT OF IRA MOSHER, DIRECTOR, RUSSELL HARRINGTON CUTLERY CO., AND FORMER PRESIDENT, NATIONAL ASSOCIATION OF MANUFACTURERS

My name is Ira Mosher. I am a director of the Russell Harrington Cutlery Co. I am a former president of the NAM and appear before you today as chairman of the NAM employee benefits committee, which deals with such matters as employee-pension programs, other employee-benefit programs, and social security.

INDUSTRY'S CONCERN ABOUT THE OLDER WORKER

To us the question of retirement security for the older worker is both a human and economic problem.

While manufacturing industry provides employment for only approximately 25 percent of all those gainfully employed, nevertheless, as a representative of companies that produce something like 80 percent of the country's manufactured products, we are in intimate contact at all times with the employee in industry and with his problems. That includes employees of all ages, and in many cases the retired employee as well.

Our concern about the older employee and his problems is not of recent origin. The record shows that in 1929, in 1938, and in the past few years we have undertaken programs looking toward more equitable utilization of the older worker in industry. Repeatedly we have urged that arbitrary age limits be disregarded and that employees be hired and utilized on the basis of their capacity, experience, and ability rather than age or other arbitrary factors. In 1947 the NAM board urged industrialists to see that their employment policies gave full recognition to individual qualifications without discrimination of any kind.

Not only have companies taken pains to hire and retain older employees; they have also, in many cases, made voluntary provision for employee retirement benefits, without waiting for either Government or union to force the issue.

On the other hand, society must reckon with the fact that whereas today the ratio of aged to those in their productive years (age 20 to 64) is about 1 to 8, 10 years from now that ratio will become 1 to 5. Both from the viewpoint of the employee himself and from the viewpoint of society, we may have to change our views concerning the wisdom of retiring employees at age 65 and may want to encourage their being continually employed as long as they are able and willing to continue in useful employment.

It has been loosely stated that industry is reluctant to employ older workers. I think it only fair to point out the facts.

1. Nearly $4\frac{1}{2}$ million workers over 45 years of age have been added to the Nation's pay rolls during the past 8 years.

2. Whereas the proportion of people over 45 years old in productive employment in December 1941 was 31.9 percent, at the beginning of this year, the over-45-year-old group constituted 35.7 percent of the Nation's labor force.

Our intimate knowledge of the problem of the aged, together with our concern for the preservation and strengthening of our economic system makes us approach the problem of Federal old-age retirement security with a deep sense of responsibility. Recognizing that the Federal program of protection for the aged has now been in operation for a period of over 12 years, we have given careful consideration to the proposals before this committee, with the purpose of making a constructive contribution to the improvement and strengthening of the Federal program of old-age and survivors insurance.

Industry has an important stake in such improvements in that program as will provide a sound system which will insure a minimum basic layer of protection for the aged within the framework of a healthy economic system. Since old-age security, like all other security, depends upon the production of goods and services, any permanent system of old age security must be so planned and administered as to strengthen the system of private competitive enterprise. That system alone can provide the increasing flow of goods and services which means an ever higher standard of living for all of the people, including the retired.

CAN WE AFFORD RETIREMENT SECURITY FOR THE AGED?

This question of retirement security for the aged is so fraught with emotional reactions that, in our natural desire to provide for the aged, there is a danger that we might overlook the importance of preserving the economic system which makes security possible. The question has been raised whether or not our system can stand the tremendous load imposed by any program providing a basic layer of protection for the aged. Serious students have questioned whether our system can stand that load. Our reply to that viewpoint is this:

If any system can possibly support a program of retirement security for the aged, the system of private competitive enterprise offers the only hope of accomplishing it.

From many responsible quarters we hear the assertion made that the ultimate cost of the present type of old age and survivors insurance program is likely to be so great as to crush our economy. These statements cannot be dismissed lightly. Since a gradual system of this kind will not reach its peak costs until 50 years from the initiation of the program, and since the full cost at that time cannot be predicted with any degree of confidence, the question is very properly raised: How can we pledge to make our children pay more for our maintenance when we are old than we are now willing to contribute for the maintenance of our older people? It is even said that it is dishonest of us to undertake a program of provision for the aged on the basis of relatively slight contributions now when we know full well that the ultimate cost of the program is going to be a great deal higher.

The tremendous magnitude of the ultimate costs of a national old age pension program, and the effect of such costs upon the economy, make it imperative that, if such a program is to be made to work, we must provide very definite limits to the expenditures contemplated. Every additional item of cost must be weighed on the basis not only of social need, but also the capacity of the economy to support the cost.

It is far better to make financially sound provisions for the major aspects of the program of retirement security, rather than give way to the impulse to provide a definite answer for all of the social hazards of our society, and bankrupt our economy in the process.

Accordingly, our recommendations to you today are directed toward the twin goals of:

1. Providing a minimum basic layer of protection for the aged; and
2. Avoiding any program which endangers the system which makes maximum production of goods and services possible.

BASIS OF CONSIDERATION

The broad basis of our approach to the development of a Federal system of old-age and survivors insurance rests on the following assumptions:

1. The Nation has had a 12-year experience with a Federal program of protection for the aged and their dependents. An examination of the capacity of our system to bear this cost requires that we adhere to the concept of provision for the aged and their survivors at the level of a minimum basic layer of protection. That means an old-age pension at such a level as to provide necessary food, clothing, and shelter and avoid pauperism while encouraging our citizens to supplement such provision with their own savings and other types of annuity programs.

2 The problems of old-age security are many and varied. While the fundamental program of providing earned retirement security for the aged has been set up on a Federal level, the Federal program must be restricted to those functions which cannot be more effectively discharged at the State or local level.

3. The Federal program should be so set up as to provide a maximum degree of incentive for individual savings and for private pension programs. This im-

plies that the Federal program should be limited to provide the basic necessities, and furthermore, that the employer should be encouraged and should be free to develop sound pension programs for his employees.

4. A Federal pension program must always adhere to a basis of financing by equal contributions from employers and employees. The intent that the program be maintained on a full contributory system should be made clear.

5. The Federal OASI program is intended to provide protection against definite and determinable hazards such as old age and death. Expanding the program into other areas must necessarily mean we travel uncharted uncertainty rather than rely on the extensive experience we have had with life insurance and annuities. Adherence to the definite, known hazards of old age and death is essential in order that the program be retained within economically feasible bounds, and in order that those who gain by it should feel that they must make contributions having a definite relationship to the benefits they expect to derive.

DEFICIENCIES OF PRESENT OASI PROGRAM

The deficiencies of the present system of provision for the aged have become clearly apparent to most observers.

While the level of benefits originally afforded for a mature system was reasonable in view of the price level in those days, it is noted by most students that a rising level of prices and accompanying depreciation of the dollar, due in part to the rapid rate at which rising wages have outstripped increases in productivity, now makes the present system inadequate. Another factor which reduced the level of effective benefits was the limitation on the group covered by the law. At the same time, if steps are taken to increase benefits under the Federal program in order to overcome the depreciation of the dollar, let us remember that that does not solve the problem for those who have retired on private pensions or their own savings or of other groups living on fixed incomes. It is important that any contemplated liberalization of the old-age pension system must not go so far as further to depreciate the dollar and thereby reduce still more the purchasing power of the income of these other groups. The increase in Federal benefits, if carried out, would only be a partial solution.

Those who support and encourage higher price levels, whether that be through encouragement of higher labor costs, through toleration of inefficiency or through unwise national fiscal policies, in effect deprive the most frugal and the more productive portion of our population of the just rewards of their contribution and frugality in their old age.

It was reasonable perhaps that, when the Federal social security program was begun, Congress proceeded cautiously and covered only that part of our population that could be most quickly and easily brought within the program. However, millions of people remain outside the coverage of the system. If there is to be a Federal program at all, it should be applicable to all of the people, not only to selected or favored groups. The limited nature of coverage is a distinct handicap of the present program.

Closely connected with the Federal OASI program is the old-age-assistance program intended to provide basic necessities for those who are in need, and supported in large measure by grants-in-aid from the Federal Government. The old-age-assistance program, despite its laudable aims, offers a strong temptation to those who seek the support of special interest groups rather than the general welfare. Because the Federal Government now contributes as much as 75 percent of the old-age assistance at the lower levels, some States have lost all restraint and have even departed from any reasonable concept of determination of need in extending old-age-assistance benefits among those over 65 years of age. One of the glaring faults of our present program is its encouragement of pauperization of the aged. The Federal OASI program must be so designed as to cut down, rather than increase, the mushrooming series of federally financed State welfare programs.

These three, then—level of benefits, incomplete coverage, and apparently uncontrollable growth of old-age assistance—are properly receiving the careful consideration of Congress.

RECOMMENDATIONS FOR IMPROVEMENT

A. Coverage

Perhaps the major unique characteristic of our country is the absence of class stratification—in fact, the absence of classes. It is no oratorical flag waving to say that we are all Americans, for we have established a system providing for

the greatest degree of free movement among groups, regions, occupations, and economic levels that the world has ever known. It should be a major concern of Government to encourage that kind of fluidity, to prevent rather than encourage stratification into classes or determination of policies on the basis of group interests.

If it is intended to maintain and strengthen a Federal system of old-age and survivors insurance, that system should be applicable to all. Therefore, on the broad basis of national policy, coverage under the old-age and survivors insurance program should not only be expanded, as suggested in H. R. 6000, but should cover all those who are gainfully employed, whether working for others or whether self-employed, subject only to unavoidable constitutional exceptions.

Other more specific reasons have been suggested for effectuating universal coverage. Unless all gainful employment is covered, there will be discrimination between those who are under the system and those who are not.

Strangely, this discrimination operates against both those who are outside the system and those who are within the system. Most people work in employment which is covered by this program at least part of their lives. But because so many people also work part of their lives in uncovered employment, there are a great many people with partial coverage.

The narrow scope of the program discriminates against these people in that they will not receive in their old age pensions related in amount to their actual lifetime earnings. On the other hand, because the benefit schedule favors those with low-covered earnings (particularly in the case of minimum benefits) the taxes paid by the people with only partial coverage are much smaller in comparison with the pension they will receive than in the case of people who are fully covered. In this sense, payment of any benefits to people who have been only partially covered discriminates against the groups who have to pay these taxes in full throughout their lifetimes. This discrimination would be greatly reduced if coverage were extended so that practically all of those gainfully employed would be covered by the system throughout their employment.

H. R. 6000 does increase the present coverage to include an estimated 11,000,000 people not covered under the present law.

However, H. R. 6000 contains approximately nine pages of definitions and categories of employment which are excluded from coverage. There may be the most excellent reason for certain of these exclusions. In some cases the exclusions may possibly be required by constitutional reasons. To avoid repeated amendments, every one of these categories should be reexamined with a view to include them within the coverage of the system if it is practical from an administrative standpoint to cover them.

Probably the largest group excluded from coverage both under the present law and under H. R. 6000 consists of farmers and farm workers. At a time when all kinds of far-reaching programs for aid to the farmer are being given serious consideration, it is strange that the agricultural population should be denied the benefits of this basic provision. It is understood that there are now no insuperable administrative problems involved in extending this program to farm operators and farm labor. Therefore, in the interests of more complete coverage and equality of social responsibility, the coverage of the OASI program should be extended to the farmers and other groups not now covered.

Particular attention should be devoted to the mechanics for integrating with the Federal social-security program all of the other public-retirement programs such as those covering civil-service employees, State employees, teachers, firemen, policemen, etc. Furthermore, there seems to be no sound reason for exempting railroad employees from the operation of the Federal social-security program, although they, like other employees of private companies, could, of course, still be entitled to the benefits of special-pension programs to supplement the Federal program. A strengthened Federal program requires that all those gainfully employed be brought under a single Federal program, without necessarily depriving any group of any special benefits to which they may now be entitled.

The bill also contains a considerable number of exclusions from the category of the self-employed. Here again, the entire list of categories should be reviewed for the purpose of making coverage as complete as possible, allowing exclusions only for constitutional reasons or if problems of administration are insuperable.

A further reason for making coverage as extensive as possible now rather than waiting is the serious problem involved whenever a new group is brought under coverage of the system. Every time a new group is covered for the first time, there is bound to be discrimination between those who have just retired or are about ready to retire and those who are still young enough to earn the necessary

credits to make them eligible for benefits before they retire. This discrimination or inequity constitutes a serious problem. It can be minimized by making the ultimate increase in coverage at this time so that there will be no need to make special provisions for a new start for additional groups repeatedly later.

Those who are concerned with the development of a sound program of Federal old-age and survivors insurance have become convinced that substantially universal coverage is an integral part of a sound program.

B. Definition of employee

Closely related to the question of coverage is the definition of "employee" contained in H. R. 6000.

Industry strongly objects to the proposed definition of the term "employee." The proposed provision can have only one effect—arbitrarily to classify as employees people who are not employees according to common law. We can think of only three possible reasons for this proposal. First, to extend coverage of the old-age system to self-employed by indirection, by arbitrarily classifying some people as "employees" of other people. Second, to shift a certain portion of the tax burden of some individuals to other individuals. Third, to make it easier for the Treasury to collect the taxes payable by some individuals by making other individuals or corporations serve as tax collectors.

The first of these purposes—to extend coverage of the act—is already accomplished by other provisions of H. R. 6000 which apparently extend coverage to all of the people who would be brought in by the peculiar definition of "employee."

Direct extension of coverage to the self-employed is the right way to go at this problem, whereas bringing people under the act by defining them as something which they are not would be wholly inappropriate.

The second possible purpose—to shift the tax burden—does not appear to be an objective within the public interest. It is impossible for any layman, and I rather believe it would be difficult for any lawyer, to determine from the language of section 206 (a) of this bill who might finally be determined to be "employees." But I presume that this definition, particularly the fourth paragraph, is intended to bring under "employee" status not only the particular occupations specified in section 3, but also many individuals who buy merchandise from other individuals or companies for resale or who perform services under special contracts or subcontracts under circumstances which would not make them "employees" under common law rules. In effect, here there will be many cases where the actual relationship is that of wholesaler and retailer, manufacturers and seller, or prime contractor and subcontractor. We cannot see how, by any stretch of the imagination, it is in the public interest to shift any part of the burden of paying for the old-age pension of a retailer to the wholesaler or the manufacturer from whom he buys or from a subcontractor to a prime contractor.

As to the third possible purpose, it may be easier for the Treasury to collect the old-age tax by getting contractors to pay the taxes and submit the returns for the employees of their subcontractors, but that seems to be a poor justification for creating an arbitrary and synthetic employment relationship where none exists in fact.

The term "employee" has been established by the courts through cases arising out of many fields and going back over many years. When the Social Security Act was passed, we all pretty well knew what the word "employee" meant. Apparently, however, some administrative authorities thought the quickest way to extend the coverage of the law would be to change the interpretation of the word "employee." Efforts to place a strange and artificial interpretation on this word led to the reaffirmation by Congress a couple of years ago that "employee" meant "employee" and not a lot of self-employed people. It is our opinion that that reaffirmation should stand. I certainly do not know what is meant by all of the proposed new definition. I have asked a number of lawyers and they assure me that they do not know what is meant by it.

This entire attempt to change actual relationships and obligations by an artificial, synthetic definition of the word "employee" is unsound and should be eliminated. The attempt to solve such problems by indirection is likely to create much more serious problems than it solves.

C. Level of benefits

The ultimate level of benefits provided under the old age and survivors program would have been adequate to provide a basic minimum layer of protection today had there been no substantial increase in cost of living and had many

benefits not been minimized by incomplete coverage. However, partly as a result of increased wages outrunning increased productivity, partly as a result of Government fiscal policies, partly as a result of high taxes and increased costs of operation flowing from increasing Government intervention in the operations of business, prices have risen until there is serious doubt whether benefits which might have been considered satisfactory in terms of 1938 dollars can be considered adequate today.

Accordingly, it is probable that the level of benefits will be increased. However, in the interest of a sound and stable economy, we urge that any consideration of increased benefits follow the principle of adhering to the provision of no more than a basic minimum layer of protection. Departure from this point can only result in an ever-greater increase in prices, depriving security from the very people we are trying to help. The aged and their survivors are the first victims of inflation or of dollar depreciation.

The manner in which the increased benefits are to be made payable seriously affects the equity of the resulting benefits and our economy.

Both the amount of tax collected and the benefit formula are based upon the annual wage base which under the present law is the first $3,000 earned a year. H. R. 6000 proposes to extend that to $3,600 a year and there have been official proposals to raise it as high as $4,800 a year.

We believe it important that, accepting the concept that the Federal old age program should provide no more than a basic minimum layer of protection, the $3,000 base be retaind. If the purpose of the OASI program be to provide a minimum protection for all of the people, and if it is to be financed on a truly contributory basis, the contributory taxes certainly should not be applicable to the upper brackets of earnings of employees earning above the average.

To extend the tax base in effect impairs the contributory nature of the system since it taxes those who are earning more without giving them a proportional return, thereby emphasizing the discriminatory aspect of the program. On the other hand, if they were to receive benefits in proportion to their contribution, the range between those earning the minimum and those who are taxed on the basis of $3,600 or $4,800 annual earnings would be so great as to nullify the principle of providing no more than a basic layer of protection

In any Federal system of retirement pensions, in order to provide a minimum layer of protection for those in the lower wage levels, it is inevitable that the first bracket of monthly earnings should yield a higher benefit ratio than higher earnings brackets. For example, under the present law, the benefit formula calls for 40 percent of the first $50 and 10 percent of the next $200 Under H. R. 6000, the benefit formula calls for 50 percent of the first $100, plus 10 percent of the next $200. Accordingly, the higher the wage base for tax and benefit payments, the less benefits the employee attains for his additional payments. This disparity will become ever more onerous as the taxes are increased to pay for greater benefits. Accordingly, the higher the salary base, the farther the system departs from a true contributory principle. We strongly urge that the present tax base of $3,000 per year be retained.

Another consideration is that, the higher the wage base, the less liberal is the benefit for employees receiving between $100 per month and $250 per month. For example, assume that the benefit formula is designed to provide a given maximum benefit. If the wage base is $3,000, the $250 per month employee is entitled to that maximum. But if the wage base is $3,600 or $4,800, the $250 per month employee will receive considerably below the maximum. Therefore, a retention of the $3,000 base will result in more liberal benefits to those persons who most need it.

We can well take the position that those who average over $3,000 a year during their working life are in position to supplement Federal old-age security with their own savings or other programs.

We are also informed that the increase in the base to $3,600 would provide a windfall for some of the newly covered groups. I hardly think that should be any part of a Federal social-security program.

We strongly urge that, whatever benefit formula be adopted, it should retain the principle of variation in benefits with the work and earnings record of the insured. That is the only honest and equitable way in which a contributory system can be operated.

D Relationship between taxes and benefits

One of the most serious problems in undertaking a social-security program is that any program based on an earnings record is misleadingly easy to main-

tain in its early years but may become an unbearable burden when the program approaches maturity. This is especially true during a time when for various reasons there is a greatly increasing proportion of the aged among our population.

One way of relating benefits to costs is to increase the tax rate whenever benefits are increased or whenever payments from the security fund outrun income. In conformity with this principle, if Congress sees fit to pass legislation increasing the level of benefits, it should, at the same time, increase the tax rate. On the other hand, increasing the tax rate at this time is likely to raise the total amount in the OASI trust fund to an undesirable level. For that reason, we believe that the increase to 1½ percent of pay roll up to $3,000 a year which went into effect on January 1 of this year, should be considered as the increase in pay roll corresponding to whatever increase in benefits may result from current congressional considerations.

Except for the inevitable building up of the fund during the early years resulting from even the minimum tax rate of 1 percent and continuing at a greater rate in view of the present 1½-percent tax rate, it is our view that the OASI program should be financed on a pay-as-you-go basis, modified only by the accumulation of a moderate contingency reserve during the early years. For that reason, we believe that the Committee may well want to reconsider the ascending scale of taxes provided under title II of the bill before this committee.

I suggest that increase in tax rates beyond the present 1½-percent level be deferred until such time as the outgo from the OASI trust fund approaches the income resulting from the 1½-percent tax upon employer and employee. The problems involved in managing of huge Government trust funds, the questions being raised concerning the validity of such a fund, the effect such funds may have upon the economy, all dictate the desirability of refraining from the attempt to build a huge fund or to make the Federal pension program similar to the normal private funded pension plan.

We recognize that delays in increasing the pay-roll taxes will mean greater increases in the later years.

We feel, on the other hand, that current pay-roll tax collections provide the best means yet found for supporting this program. We do not believe that Congress should contemplate support of this program from any source other than this special tax.

By reason of the steadily climbing age of the American population, it is inevitable that future pension costs under this program be much larger than they are today. In view of this fact and to avoid piling up of future liability larger than necessary, we strongly urge that the annual increment feature be eliminated from the benefit formula.

At the present time this annual increment is 1 percent. The House bill, H. R 6000, reduces the increment to one-half of 1 percent. It is our recommendation that the increment be eliminated entirely.

Adjustments of benefits for each individual in accordance with the period over which contributions have been made, is a common feature of private pension plans. Here, the pension level reflects the number of years the individual has been employed by a particular company. Private pension plans also normally make substantial allowances for past services of older individuals during the time preceding the adoption of the plan. The Federal Government has no interest in the length of time an individual has spent with any one employer.

It is for these reasons that we believe that, while there may be some reason for increasing the level of benefits to those now retiring, no promise of still greater pensions should be made to those who will retire later.

This recommendation is related closely to others which we have made and results from examination of the principles we believe to be sound, such as the principle that this program should provide a minimum layer of protection to as many people as possible and that provision for people now retired should be weighed in the light of the effect of pension costs on the economy as a whole.

Starting with these premises, we urge that no pension be based upon any earnings in excess of $3,000 per year and that there be no promise of an increment to those retiring in the distant future.

E. Encouragement of individual thrift and private pension programs

The mainstay of our economy has been the system of incentives which it has always provided for increased efforts and increased contributions to society. The incentive and the opportunity to save is in part responsible for the ability and willingness to work among Americans in all walks of life. Important as it

may be to provide safeguards against the hazards of our economy, it is even more important that such provision shall not interfere with the incentive to save, and to make other voluntary provisions for old age.

PERSONAL THRIFT

Personal thrift and frugality should be encouraged and rewarded. Our recommendation that the tax and benefit base be limited to $3,000 per year is based in part upon this consideration. If a man's entire wage or salary is taxed to support the social-security program, there may be little incentive or opportunity to save. However, if the tax is based only on the first $3,000, then each individual is encouraged to put into savings some portion of anything he receives above that amount—and it must be remembered that today even the average employee in industry is approaching an income of $3,000 per year. Since the average hourly earnings in manufacturing industry are approximately $1.40 an hour, a fully employed individual would earn $2,912 in 52 weeks at 40 hours per week.

In addition, it is important that we adhere to the concept of a basic minimum lawyer of protection so far as old-age and survivors insurance is concerned so that those who want to provide more comforts for themselves in their old age will be encouraged to do so voluntarily.

In addition to such personal savings as each man is encouraged to make for himself, public policy should facilitate thrift plans of the type which exist in many companies. I refer to the type of plan in which the employer encourages his employees to set aside up to a certain proportion of his wage or salary in a fund to which the employer contributes. These funds are so set up as to make it difficult to withdraw from the fund except in case of emergency. In other words, the fund is intended to be a long-time project, to be available to the employee only at about the time when he retires. This committee might well give consideration to income-tax aspects for employee contributions when such thrift funds are set up to meet specified standards, to insure that the employee's contribution is not taxed twice.

Another factor that encourages people to provide for their own old age is their capacity to retain gainful employment. The committee might well give favorable consideration not only to the provision of H. R. 6000 which raises permissible monthly earnings to $50 (without jeopardizing OASI benefits) but also to the suggestion that the earnings of those over age 65 be relieved of OASI pay-roll taxes if the individual involved has earned full OASI coverage.

COMPANY PENSION PROGRAMS

Another type of voluntary provision for old age which should receive encouragement is that represented by voluntary employer-employee pension programs. As a result of recent labor disputes, serious question has been raised concerning the feasibility and the desirability of company pension programs. There have been those who urge that all private pension programs be discontinued and prohibited and that all provisions for old age be concentrated in a Federal old-age and survivors insurance program.

This proposal has come not only from among employers faced with extravagant union demands for pensions, but also from students, experts, and Government spokesmen. There is good reason for deep concern about the direction in which company pension programs are likely to go under the pressure of intemperate demands of unions backed by industry-wide strike or threat of strike. But the solution to these serious problems does not lie in the direction of prohibiting private pension plans altogether. Rather, it seems to us, we should concern ourselves with means for protecting and encouraging sound, private pension programs.

For 30 or 40 years, companies have voluntarily initiated pension programs demonstrating a sincere devotion to the philosophy of improved employer-employee relations. In some cases, these pension programs have resulted in the accumulation of large funds which are now available for the payment of pensions. One private pension plan alone, for example, has a pension fund which amounts to nearly a billion dollars. It would be a serious mistake to endanger pension programs which have been voluntarily established over a period of years, or to prevent companies from establishing similar programs in the future if they have the will and the means to do so. Prohibition or discouragement of private pension programs would eliminate a large area in which the employer may assist his employees in acquiring additional security for their old age.

There is a definite place for company pension programs, in those cases in which a company feels itself sufficiently well established, sufficiently confident of its future prospects, and convinced of the resulting benefits to itself and to its employees, to voluntarily establish a sound pension program. In order to provide additional incentives for the establishment of such voluntary programs, and in view of the advantages that result from the establishment of contributory pension programs, we suggest that careful consideration be given to providing such tax treatment for employee contributions to company pension programs meeting specified standards, as will insure that no double taxation is involved.

Assuming that an old-age and survivors insurance Federal program has general coverage, a company pension program does not necessarily or unalterably tie an employee to a particular company. Since an employee carries his Federal old-age benefits with him from one employer to another (assuming substantially universal coverage), he is free to move to another employer if he desires. On the other hand, the existence of a pension program can be considered as evidence of the company's interest in the welfare of its employees and may very well result in improved employer-employee relations. Moreover, some contributory private pension programs provide for limited vesting of benefits in employees who have been covered by the pension program for relatively few years.

It is said that the private company pension program is unfair or discriminatory, since all companies cannot be expected to provide such supplemental programs. The company pension program is not intended to be a matter of universal application. It is not intended to provide merely the bare necessities. That is the function of the Federal program. The company program is intended to add to the basic minimum layer provided by the Federal program so that the employee may make expenditures for costs other than strict necessities. We strongly urge that no steps be taken which would discourage or prohibit the voluntary establishment of company pension programs.

DANGERS IN BARGAINING ON PENSION PROGRAMS

However, we find that all company pension programs today are threatened by the recent interpretation of the law to require companies to bargain collectively with reference to pensions and other employee benefits. That interpretation of the law, supplemented by a very questionable recommendation of a Presidential fact-finding board, has completely changed the nature and effect of pension programs in industry. Today, a company pension program, instead of being an evidence of the company's unusual interest in its employees' welfare, has become the chief cause of violent dispute between organized labor and management.

We have had an extensive steel strike flowing out of that dispute. We have seen an off-and-on coal strike over the past 8 months largely centered about the same question. During the past month we have seen one of our great automobile companies closed down by a strike concerning pensions. Not only have pensions, therefore, become a source of extensive dispute, but what is even more important in the long run, bargaining about pensions may result in the adoption and imposition of pension programs of doubtful merit in many companies and industries. Stronger and stronger efforts are being made by unions to convert company pension programs into industry-wide programs, such as the bankrupt plan in the coal industry or the area-wide plan now being actively pushed in Toledo. Such programs can only serve to destroy private pension plans.

On the other hand, it would be a serious error to attempt to set up a Federal pension program at a high enough level to supplant private pension programs. Since the Federal program is of general application rather than selective, the cost to the economy would be of tremendous proportions. Only last month, Prof. Sumner Slichter of Harvard estimated that a Federal program which would replace existing private pension programs would require from 8 to 13 percent of the pay roll to finance it. This is a tremendous burden when we bear in mind the fact that the old-age and survivors insurance program takes care of only one of the many social hazards against which protection is sought.

In order that this committee may discharge its responsibility for considering a Federal program of old-age security, we believe it must also devote some attention to the preservation of supplemental old-age security contained in voluntarily adopted company pension programs. Accordingly, we urge that action be taken to remove pension programs and similar employee benefit programs from the area of mandatory collective bargaining.

SAFEGUARD AGAINST DOLLAR DEPRECIATION

Finally, one of the best ways of encouraging private savings and thrift is to take such measures as will prevent a further increase in the price level or a further depreciation of the dollar. The one thing that is more than anything else calculated to discourage people from making provision for their old age is the knowledge or the suspicion that a dollar saved will buy less 20 years from now than a dollar spent today. The constant depreciation of the dollar discourages not only personal savings, but makes inadequate company pension programs which were sound and adequate when set up. Any provisions that can be made today against the hazards of old age will be totally inadequate 20 years from now if we permit the dollar to depreciate as it has during the past 10 years. This is a matter that should particularly be borne in mind when considering over-all problems of Federal expenditures and Federal taxation, for deficit financing is one of the major factors in the depreciation of the dollar. And it is most pertinent to point out that any Federal pension program which saddles the economy with too heavy a burden of nonproductive expenditures is bound to bring about dollar depreciation.

F. Financing of old-age security

If minimum old-age protection be regarded as a matter of right, then it should be supported solely by a pay-roll tax with equal contributions from employer and employee (or larger contributions from the self-employed). The program should have as a fundamental principle support by such joint contributions and should not depend upon a contribution from general funds. For that reason, we strongly endorse that provision of H. R. 6000 which cancels the previous authorization for drawing on general revenues to supplement pay-roll taxes for this program.

Only where employer and employee contribute can the system be made consistent with the principle that each person contributes to his own security (even though in point of fact each individual is supporting the aged of his generation, and being supported by the working group of a later generation when he retires).

The widespread ownership of life insurance and annuities makes a system based on joint contribution widely acceptable, and avoids the danger inherent in any system supported out of general Federal revenues. This contributory program may not meet all the standards of an orthodox private insurance program. Nevertheless, the features of joint contribution, of paying for expected benefits, of a relationship between contributions made and benefits expected, make the program sufficiently similar to an insurance program to give it general acceptance.

Taxes which are collected to support the old-age and survivors insurance program should not be diverted for the payment of benefits under other programs. One of the greatest dangers in building up a trust fund resides in the great temptation to use it for the payment of benefits other than those for which it was originally designed. The funds collected to date under the old-age and survivors insurance program, plus the contributions which are contemplated in the pending legislation, should be carefully safeguarded against being used for anything other than the old-age and survivors insurance program.

G. Federal grants-in-aid for old-age assistance

When the Federal grants-in-aid program for old-age assistance was first established, it was agreed that it was to be a residual program, to be reduced after the OASI program began to make itself felt. It was considered that as more and more of the aged became eligible for old-age and survivors insurance benefits, the need for the old-age-assistance program, based as it is on the charity approach, would be reduced to the vanishing point.

Experience has demonstrated that the old-age-assistance program, rather than being a residual program of shrinking size, is a permanent program which has grown greater by leaps and bounds. In September 1949 2⅔ millions of the aged were receiving about 119 million dollars of old-age assistance from the States and the Federal Government, equal to an annual rate of over 1.4 billion dollars.[1] In the same month, 1,600,000 retired persons (and their dependents) were receiving OASI benefits amounting to nearly 37½ million dollars, or an annual rate of less than 450 million dollars.[2]

---

[1] Social Security Bulletin, November 1949, table 18, p. 30.
[2] Social Security Bulletin, November 1949, table 1, p. 20.

In part, the growth of the program can be traced to the depreciation of the dollar since the old-age and survivors insurance program was established. The level of benefits will presumably substantially compensate for recent dollar depreciation when Congress takes appropriate action with respect to the proposals now before this committee.

Part of the growth of old-age assistance has been due to inadequacy of coverage of the OASI program (which has also reduced benefits). As a result, millions of the aged, being ineligible for benefits under the OASI program, are drawing their support from the old-age assistance program with an ever-increasing burden upon the Federal Government.

The Federal Government's share of welfare funds for all public-assistance purposes has increased from 17½ percent of total funds in 1932, to 28.8 percent in 1940, 38.8 percent in 1942, and 43.9 percent in 1948. It is obvious that more and more of the load is being carried by the Federal Government and less and less by the local and State governments.

Grants-in-aid to States are even now increasing at a tremendous rate. From about $733,000,000 in 1948, the expenditures reached $977,000,000 in 1949, and over a billion dollars has been appropriated for fiscal 1950.

We are here dealing with a problem of frightening proportions. Starting with the thesis that the Federal Government had an obligation to aid State government treasuries during the depths of a depression, we have increased the Federal contribution from dollar for dollar to the present when, at the lower levels, the Federal Government is contributing $3 for every dollar for State funds.

The need for assistance to the aged is recognized. However, recognition of the need for such assistance does not justify unwarranted expenditures, nor does it justify a program in which the Federal Government takes money from the States into the Federal Treasury and subsequently doles it out to the States as grants-in-aid. It is notorious that Federal money is considered as being "free." It comes from presumably unlimited funds available from Washington. The result is that some States have expanded their programs of old-age assistance, not for the purpose of filling actual needs, but for the purpose of attracting votes by promising more and more people more and more benefits at Federal expense.

A LOCAL PROBLEM REQUIRES LOCAL SOLUTION

Assistance to the needy is primarily and fundamentally a local problem. The determination of need is something that can only be done effectively at the local level. And even then, it will not be done properly at the local level unless the local administrators feel that they are spending their own money.

The direction in which we have been moving under the Federal-State old-age-assistance program can lead only to mass pauperization and unlimited drains upon the Federal Treasury. Already in some States as many as 80 percent of all citizens over 65 are receiving old-age assistance, presumably on the basis of need. It is obvious that the political attractiveness of dispensing Federal funds is too great for State politicians to withstand.

The bill passed by the House, instead of correcting the situation, only serves to make it worse. Instead of cutting down the ratio of Federal contribution at the lower level, the bill would make $20 of Federal money available for $5 of State and local funds. This can only serve to make a bad situation much worse.

THE RIGHT SOLUTION

In order that the problem of financing old-age assistance may be brought under control, the following provisions merit consideration for incorporation in the legislation under consideration:

1. Universal coverage. This will mean that practically all people, once they acquire eligibility for benefits, will be entitled to benefits under the OASI program after they reach 65.

2. Recipients of OASI benefits should be made ineligible for old-age assistance financed by Federal funds. If OASI benefits are increased along the lines of the proposals before this committee, recipients of those benefits will be getting a minimum of $25 per month and in most cases far beyond that. In those special cases in which supplemental funds are required, the States can be depended upon to supply the limited additional aid necessary.

3. There must be no increase in the proportion of Federal funds in the OAA program. On the contrary, steps should be taken to begin reducing Federal

grants-in-aid with the aim of eventually discontinuing Federal grants-in-aid for this purpose.

To quote President Roosevelt, in a speech to relief administrators on June 14, 1933: "The first responsibility of taking care of people out of work who are lacking housing, clothing, or food—the first charge is upon the locality; then if the locality has done everything that it possibly can do, it is the duty of the State to step in and do all the State can possibly do; and when the State can do no more, then it becomes the obligation of the Federal Government."

The problem is not to provide the individual States with the crutches of Federal grants-in-aid under the misconception that such money is free, but to provide the States with adequate tax sources to obtain the necessary funds with which to do efficiently and adequately the job of old-age assistance as well as other essential welfare activities.

There is far more involved here than merely shifting the burden from the Federal Government to the State governments. As the Hoover welfare task force made clear in its report, the operation of a welfare program can be conducted far more effectively at the local level:

"It may be contended that shifting a burden from the National Government to the States would not have any real effect on the over-all costs of Government. Four points deserve consideration in this connection: (1) The greater the distance between the spending agencies of Government and the people who have power to control them, the less effective are the brakes; (2) an opinion has gained wide acceptance that the resources of the National Government are inexhaustible; many people see no relationship between heavy Government expenditures, high taxes, and high prices; (3) as compared with most State and local governments, but not all, the Federal Government has high salary scales, related to high costs of living in metropolitan centers and control from Washington involves much travel; and (4) detailed Federal supervision results in substantial overhead costs."

Since, despite the desirability of such action, it appears impossible for the Federal Government to immediately get out of the business of Federal grants-in-aid for old-age assistance, it should at least make a start toward reducing the Federal contribution.

If old-age assistance goes in the direction in which it has been moving within the past decade, it imperils the entire system of security for the aged. We cannot emphasize too strongly the need to reverse the trend and to begin at once to reduce Federal grants-in-aid for old-age assistance purposes simultaneously with the proposed increase in coverage and benefits under the Federal OASI program.

H. A Federal program of permanent and total-disability benefits

We now come to a very important phase of the proposed legislation under consideration by this committee—incorporation in the Federal social-security program of a provision for benefits in case of permanent and total disability.

First, let me make it clear that the National Association of Manufacturers has for many years been vitally concerned about the problem of the handicapped and the disabled. We have been very active in the field of industrial health and safety and have, for many years, been carrying on a program among employers designed to prevent accidents and to encourage employers to provide adequate medical facilities in industry. As a part of this preventive program, we were instrumental in the establishment of the National Safety Council, which has been doing splendid work in the field of industrial safety.

Furthermore, we have been carrying on extensive programs to encourage employers to install and maintain sound safety programs. We have undertaken a program of considerable proportions to encourage the employment of the handicapped in industry, emphasizing the fundamental concept that if the handicapped individual and his job are properly mated, he is not handicapped on that job. As a matter of fact, only last month, on February 13, the president of the NAM was awarded a distinguished-service certificate by the President's Committee on the Employment of the Handicapped, for the results the NAM has achieved in encouraging the employmen tof the handicapped.

We are gratified that our efforts in the direction of increased safety in industry, together with the cooperation of all others involved, has been instrumental in reducing the accident rate in the United States. During 1949, fatilities due to work injuries decreased by 6 per ent over 1948, while permanent-total disabilities were reduced by 22 percent. Over-all work injuries in the United States decreased more than 7 percent from 1948 to 1949. Bureau of Labor Statistics states that the greatest reduction in volume of injury occurred in the railroad, mining,

and manufacturing industries, the drop in injuries being greater than the decline in employment. The record for the manufacturing industry is a reduction of 19 percent in injuries as compared with 1948.[1]

To us the problem of the handicapped and the disabled is not a vague social problem. Nearly every employer has at one time or another come into personal contact with the serious problems of the handicapped and the disabled. We speak about it from the depths of our experience.

In setting forth our opposition to this phase of the program, I want to make it perfectly clear that those who are permanently and totally disabled often do require assistance. I will go further and say that society has an obligation to assist these unfortunate people and their dependents.

However, we believe it to be extremely unwise to carry on that kind of a program on a Federal basis, whether it involves Federal administration or Federal financing.

In discussing the program of Federal pensions for the aged, we have clearly indicated our interest in the establishment of a sound system. We are convinced that at this stage in our social development it is not feasible to establish an insurance program for the disabled at the Federal level. Consequently, if a Federal program for total and permanent disability benefits is incorporated in the OASI program, it can only serve to endanger the soundness and stability of our program for the aged.

LACK OF OBJECTIVE CRITERIA

It is fundamental to any insurance system that we must be able to identify the hazards against which insurance is being sought. There are many cases of real or alleged disability in which it is impossible to set up objective criteria to determine whether or not the disability is real. The farther the administration of such a system is removed from the location in which the disability occurs, the greater the likelihood of improper or inadequate administration. Even where the program is administered on a local basis, there is plenty of room for difference of opinion, in many cases, whether or not there is total and permanent disability. That difference of opinion becomes greater the farther we get away from the point of application.

Since in some cases the sole basis for determination of disability is a subjective one, it is easy to envision the many abuses that are bound to result, particularly in case of widespread unemployment. It is quite clear that many people will take advantage of the opportunity to obtain benefits if they are unemployed and have exhausted their unemployment compensation, whether the alleged disability is real or not. Once an individual gets on the benefit rolls for a total disability, it would take exceedingly close local supervision to determine whether that disability actually continues. Tax-free disability payments would constitute a strong incentive to avoid active employment, once a person has become accustomed to receiving such disability benefits.

Another challenging aspect of the disability-benefit program is the presence of millions of women in the labor market. We know from past experience that many women do not remain in the labor market during their entire working lives. Complex as are the problems of administration of disability benefits for men, they become even more complex for women. Since many women normally leave the labor market anyway, there is bound to be a great temptation in such cases to claim total disability benefits, even though there may be no intention to return to the labor market. That temptation may be much too great for some people to resist.

The most important problem in the case of the totally disabled is the initiation of a sound rehabilitation program operating at the local level. A person receiving regular benefits under the total disability benefit provision is discouraged from undertaking the onerous and sometimes painful procedures which may be essential for rehabilitation. Local communities likewise would be discouraged from undertaking necessary rehabilitation programs, since they would feel that the problem has been taken care of by the Federal program of disability benefits. On the other hand, it would be next to impossible to administer a sound program of rehabilitation on a Federal level.

Even if the initial program of Federal disability benefits were hedged about by strict restrictions, those restrictions would gradually be eliminated, both by administration and by subsequent legislation. Every conceivable restriction

---

[1] BLS release, February 1950.

could be proved to operate inequitably in certain cases. Local administrators would be inclined to resolve the benefit of the doubt in favor of the claimant. This is especially true if the benefits are paid out of Federal funds, in view of the widespread illusion that "Federal money is free." In almost every case, the administrator would have to weigh the interests of the individual unfortunate case before him as against the availability of an "inexhaustible" Federal fund to help him. Even where expert medical advice of the highest integrity is available, the final decision in every case must be made not by the doctor, but by the administrator.

Obviously, the opportunity for political machinations in the administration and liberalization of the program would be many and various.

DISABILITY BENEFIT COSTS

The cost of such a program can be tremendous. The minority report of the House committee indicates that the Federal Security Agency itself estimated the administrative cost of this program for the first year to be over $20,000,000, with the expectation that there would be at least 300,000 claimants under the program, and an additional staff of over 5,000 people, not including doctors, would be required. Within 15 years it is anticipated that the number of claimants would grow to 1½ million persons and the cost to a billion dollars a year. Additional expenditures of this order should not be engaged in without a thorough examination of the real scope of the problem and any other possible alternatives. No such independent examination has been made.

Underestimating the costs of total and permanent disability benefits is not new. Private insurance companies have had some rather disastrous experience in this field with the resulting loss of millions of dollars. It is hardly probable that Federal administrators, who are not equipped to handle the problem on the same personal basis as are the private insurance companies, could possibly have a more encouraging experience.

So far as we know, no one has ever outlined a practical, workable program for the administration of the total and permanent disability benefits provision. As one who has had some experience in the administration of relief at the local level, I know that the problems of administration will be legion and will multiply as time goes by.

If we look abroad, we find no program of total disability benefits that compares with the proposed program in the amount of benefits extended and which has been in effect for any appreciable period of time. If we undertake such a program in this country, we will be entering a completely uncharted field, with no other experience to guide us, and with plenty of opportunity to go wrong.

It has been suggested by some that the total disability benefit program is being proposed as one way of bringing about socialized medicine. Since, for the time being at least, the proposal for socialized medicine has met with so much opposition that it may not be advocated seriously for immediate enactment, its proponents are searching for an indirect method for accomplishing the same result. A Federal program for total-disability benefits would naturally lead to the provision of many medical services through the Federal Government, which could then be extended to cover other fields as well.

POSITIVE APPROACH THROUGH REHABILITATION

We repeat—the primary emphasis in total-disability cases should be on rehabilitation of those affected. That rehabilitation can best be carried on at the local level, and in that case would not require a huge Federal organization which could well develop into a tremendous bureaucracy with political implications.

Various States already have machinery for vocational rehabilitation and are, therefore, in a position to strengthen their programs of rehabilitation. Agencies operating at the local community level can be much more effective in determining the existence of total disability and are in a position to take effective measures for rehabilitation. Many employers have worked wonders in effectuating rehabilitation of those who have been injured in industry, or veterans, both in their own plants and as participants in community programs. Some casualty insurance companies have demonstrated the miracles that can be performed in rehabilitating people who might have been regarded as totally and permanently disabled.

The administration of rehabilitation can be much more effectively carried out at the community level, by participation of employers, citizens, volunteer agencies of various kinds, insurance companies, and State assistance, than is

possible in any Federal program. Even if the program be only financed at the Federal level and administered entirely at the local level, the best results of local administration and local assumption of responsibility cannot be expected because there is the familiar assumption that Federal money is free and does not require as careful administration and weighing of costs as does a locally financed program.

The record does not show either a sufficiently careful evaluation of the needs to be covered nor of the methods to be utilized to warrant Congress endangering the present OASI program by attaching to it a program as full of uncertainties and dangers as is the proposal for the incorporation of total and permanent disability in the Federal OASI program.

MISCELLANEOUS PROVISIONS

There are two other provisions of H. R. 6000 to which we respectfully direct your attention.

Lump-sum death payments

The broadening of the provisions for lump-sum death benefits so that such benefits can be paid in every case seems to us to be a completely unjustified invasion of the field of private insurance in the one country in the world in which private insurance already provides the most extensive coverage. It is just such provisions as these that make many people question whether it is possible to carry out any Federal program of benefits without constantly adding to it a vast collection of unnecessary, miscellaneous "special features."

Virgin Islands and Puerto Rico

Before the expanded program is applied to the Virgin Islands and Puerto Rico on the same basis in which it is intended to apply in the United States, and particularly if the program is to cover agricultural employees and farmers, we suggest that a careful survey be made as to the effect of such extension in these territories. It is quite probable that the impact upon the economy of these areas and upon the incentive for useful employment might be so great as to do more harm than good. It is quite probable that it might be best to apply the program to these areas on a modified basis, providing for lower benefit levels. We do not presume to speak for these areas but merely raise the question for your consideration.

SUMMARY

The Federal program of old-age and survivors insurance is at best a highly controversial program. It is our belief that if a sound program of Federal old-age and survivors insurance is to be provided, it can only be done within the framework of our free enterprise economy. We have demonstrated our desire to cooperate in constructive efforts to achieve such a sound program.

The establishment of a sound Federal program cannot be considered apart from the economic system in which it plays so important a part. Accordingly, the stability and soundness of the economic and fiscal system should receive our most careful consideration as we review the various aspects of the OASI program.

Specifically, we urge this committee to consider the following phases of the proposal before you:

1. Complete coverage of all those gainfully employed, including the self employed, farmers, agricultural employees, and those covered by existing public and semipublic pension plans. These plans should be integrated with the uniform Federal old-age and survivors insurance program.
2. If the level of benefits be made appreciably higher than that existing under present law, benefits should nevertheless be consistent with the concept of a basic minimum layer of protection for the aged.
3. Avoidance of lump-sum death benefits to all insured.
4. Revision of the definition of "employee" in order to avoid unnecessary complication in reporting earnings and collecting pay-roll taxes.
5. Retention of the present $3,000 base for purposes of taxation and benefit formula.
6. Adoption of a substantially pay-as-you-go system, withholding any further increases in the present 1½ percent tax on employers and employees until payments from the trust fund approach the level of income to the fund.
7. Encouragement of individual thrift and private pension programs by appropriate tax incentives, by elimination of pension programs from the area of man-

datory collective bargaining, and by fiscal measures which prevent continuing depreciation of the dollar.

8. Measures to prevent taxes collected for the old-age and survivors insurance program from being utilized for any other purpose, such as total and permanent disability benefits. Conversely, measures to avoid drawing on general Federal revenues for the support of the OASI program.

9. A specific program for reducing Federal grants in aid for old-age assistance (and other welfare programs) by making old-age and survivors insurance beneficiaries ineligible for federally supported old-age assistance programs and by instituting a program of reduced Federal grants in aid, with the eventual purpose of getting the Federal Government entirely out of this picture.

10. Avoidance of Federal participation in any permanent and total disability benefits program. Emphasis should be placed upon encouragement of rehabilitation activities at the local level, to be carried out by private and public agencies, insurance companies, with maximum participation from citizens at the local level.

11 Review of the increased level of benefits insofar as they may apply to the Virgin Islands and Puerto Rico.

In view of the serious questions that have been raised concerning the ability of any economy to support a national program of old-age and survivors insurance, it is important that, in building the structure of an adequate system of old-age and survivors insurance, we refrain from putting such burdens upon the system as are bound to make it fail when the program reaches maturity.

Our first obligation is to make sure that those parts of the social-security program which we undertake on a Federal basis are thoroughly sound and can be sustained indefinitely.

Our second obligation is to avoid unsound programs which would endanger the economy.

It is unworthy of the Government of the most powerful country in the world, to so direct its fiscal policies as to pay off its obligations in depreciated dollars. Those who were urged to buy Government bonds until it hurt are now chagrined to realize that as these bonds mature, instead of paying $4 at maturity for a $3 investment, as the United States Government in good faith promised to do, these bonds are paying less than 2½ 1940 dollars.

You gentlemen of the Committee on Finance deal with many aspects of the fiscal policy of the United States Government. At the risk of seeming elementary amongst this expert group, I beg to remind you of these axioms:

1. The standard of living of our people depends, not upon financial maneuvering, but upon the production and distribution of goods and services.

2. The Federal Government cannot render to the people anything it does not take from them in the form of taxes. Accordingly, Government expenditures lower the standard of living of those who are taxed.

3. General price increases mean dollar depreciation. Dollar depreciation cheats not only the owners of Government securities, but reduces the standard of living of those who live on fixed incomes. For most practical purposes this means the beneficiaries of insurance policies, annuities and pensions.

4. It follows that every time that the Government spends any more than it must to provide essential Government functions, every time Congress votes additional gifts or grants-in-aid to this group or that, it is reducing the effectiveness of any provision we can make for the aged. More than that, every time that the Government puts its weight behind the demands of any group that its income be increased faster than the general increase in productivity, these very aged for whom we are now trying to provide are the innocent victims. And let us bear in mind that, as a general matter, Government payments are only part of the income of the aged, though an important part.

Only after we have had adequate experience with a sound program of OASI—a program which includes substantially full coverage and adequate benefits—should we concern ourselves with the adoption of further programs. And even then, we want to be certain not to undertake, at the Federal level, those programs, such as permanent and total disability benefits, which can best be applied and most constructively carried on through more suitable mechanisms.

We sincerely believe that the recommendations which we have submitted for your consideration should be considered as an entity, for we believe that all of the various aspects are necessary if we are to have the kind of sound program which we can all support and which will provide a minimum layer of basic protection for the aged, while protecting the vigor and strength of a free competitive economy in a democratic society.

Mr. MOSHER. Our interest in the condition of the aged worker is more than a passing phase. Since we speak for employers that produce something like 80 percent of the country's manufactured products, we are in intimate contact at all times with the employee in industry and with his problems. That applies to employees of all ages.

Eleven years ago NAM conducted a special survey to determine employer practice with reference to the age factor in employment. In 1938 the NAM board passed a resolution opposing establishment of arbitrary upper-age limits in the hiring or employment of workers. In 1947 the NAM board urged industrialists to see that their employment policies gave full recognition to individual qualifications and called for the elimination of any conditions of employment which are not related directly to qualifications for satisfactory job performance, safety, and security.

Upper-age limits were fairly thoroughly broken down during wartime labor shortages, and it is interesting to note that the employment of the aged continued well ahead of prewar levels even after the wartime labor shortages had passed. Whereas in December 1941 only 31.9 percent of the labor force were over 45 years of age, by the beginning of this year the proportion of those above 45 years had increased to 35.7 percent of the labor force.

When we come to consider the situation of those who are over 65 years of age, we must recognize that we are not necessarily being kind to the aged by requiring them to cease productive and gainful employment. In many, many cases the aged individual needs the feeling of being useful just as much as the economy needs his contribution. The ratio of aged to those in their so-called productive years (20 to 64) is now about 1 to 8. In 10 years that ratio will become 1 to 5. It is obvious that if we are going to prevent the support of the aged from creating an intolerable burden upon those who are productively employed it will be necessary that we encourage older employees to remain in productive employment as long as possible.

Support for the aged must come out of the total quantity of goods and services produced by those who are gainfully employed. Accordingly, in setting up any program for the aged, we must take every precaution to insure that the program can operate effectively and efficiently within a private competitive enterprise economy. Furthermore, we must make sure that the program is so designed as not to affect that economy adversely, or convert it into a different and less-efficient economy.

While the long-range implications of a general program of retirement pensions for the aged is a heavy burden for any economy to bear, we are convinced that if any system can support a program of retirement security for the aged the system of private competitive enterprise offers the only hope of accomplishing it.

At the same time, it seems clear that even the private competitive enterprise system cannot possibly support such a burden unless we adhere to the concept that this program for support of the aged be limited to a minimum basic layer of protection.

Our approach to this entire question of retirement benefits for the aged is motivated by a desire to help in the achievement of a sound program which meets the social needs of today without unduly burdening the productive capacities of tomorrow.

Following the brief in part, on page 5 we go into the coverage in some considerable detail. We concur in the desirability of extending the coverage contained in the proposals before this committee.

For many years the NAM has taken the position that the OASI system can be strengthened by increasing its coverage wherever administratively feasible. On the broad basis of national policy, coverage under the OASI program should be expanded even beyond the provisions in H. R. 6000. That coverage should be expanded to include all who are gainfully employed, whether working for others or self-employed, subject only to unavoidable constitutional exceptions.

H. R. 6000 contains approximately nine pages of definitions and categories of employment which are excluded from coverage. Without going into each of these categories in detail, we urge that every one of these categories be reexamined with a view to including them within the coverage of the system, on the assumption that there are no insuperable administrative difficulties.

On page 6 of the brief we go into the matter of the definition of "employee" and we urge that the committee give careful consideration to the question of the definition of "employee" as contained in H. R. 6000.

There seems to be very little reason for doing violence to the common law definition of "employee" and inventing a purely synthetic definition which is bound to cast a great deal of doubt on existing employment relationships, upon tax liability and upon the amount of taxes which certain groups are required to pay, depending upon whether they can be regarded as self-employed or "employees," as defined in section 206 (a) in H. R. 6000.

The level of benefits start at page 8 in our brief.

We have taken the position that the amount of benefits provided by a general Federal pension program should be limited to the provision of a minimum basic layer of protection. That means a level of benefits which will provide food, clothing and shelter at a level of decency, but not necessarily all that the pensioner may desire.

The level of benefits provided in the original law was a fairly good measure of a minimum basic layer of protection in view of the price level at that time. Recognizing that prices have risen, that the dollar has depreciated, it is obvious that the level of benefits today is inadequate, even though we adhere to the concept of a basic minimum layer of protection. However, we are not recommending any specific formula.

However, we believe that the wage base for tax purposes and for purposes of a benefit formula should be retained at $3,000 per year. H. R. 6000 proposes that the wage base be expanded to $3,600, and official proposals have been made to raise it as high as $8,000.

Senator CONNALLY. If I may interrupt there, your printed copy says $4,800; you say $8,000.

Mr. MOSHER. I beg your pardon, Senator—I am guilty of a transposition of figures. The figure of $4,800 is correct.

The average employee in manufacturing industry today earns just under $3,000 a year. It seems to us that if the employee who receives more than the average has his entire wage or salary taxed for social-security purposes, he is thereby discouraged from making his own provision for old age or from contributing to such group-saving programs as company thrift or pension plans.

Senator MILLIKIN. What are the statistics of savings of people earning from $3,000 to $4,800 as distinguished from those having less than $3,000?

Mr. MOSHER. I cannot answer the question, Senator. I can only give the general impression that those savings do come mainly from the $3,000-up group.

Senator MILLIKIN. In other words, generally in the higher group?

Mr. MOSHER. Yes, sir. The element of savings, the thrift factor, of course, preponderates in that upper group.

There is another consideration relating to the age base which may not have been brought to the attention of this committee. If we assume a given maximum primary benefit, the higher the tax base above $3,000 the less is the pension received by the $250 a month employee. Retention of the $3,000 base therefore will result in more liberal benefits to those persons who most need it, while at the same time encouraging those who receive over the base amount per year to make provisions for their own old age. That is a very important factor in working out any formula.

Knowing that suggestions have been made from various sources for a flat uniform benefit for all, we urge that the OASI program adhere to a specific relationship betewen benefits paid and the work and earnings record of the insured.

Senator MILLIKIN. If you include all of the coverage that you previously recommended, who would be excluded?

Mr. MOSHER. We would intend—and so recommend—that we would exclude practically nobody. We recognize that there are certain constitutional limitations as to certain forms of Government employees, State and city, that may not and perhaps cannot be covered without too much change. By and large, we go to universal coverage.

At the same time, it is urged that the annual increment, which amounts to 1 percent under present law and is reduced to one-half of 1 percent under H. R. 6000, be eliminated entirely. If the program is designed so as to provide a minimum basic layer of protection, there is no justification for providing an annual increment over this basic amount. This results only in an additional burden of a billion dollars a year in 10 or 15 years, without any reasonable justification for this additional expenditure.

On page 9 of our brief we go into the relation of taxes and benefits: in other words, the financing of the program.

In order that the beneficiaries and contributnrs to the OASI program appreciate that every benefit requires a larger contribution, it is sound to increase the tax rate whenever the benefits are increased.

On the other hand, we believe that it is a mistake to build up a large trust fund because of the problems involved in managing such trust funds, the questions being raised concerning the validity of such a fund, and the effect such funds may have upon the economy.

Senator MILLIKIN. What has the trust fund got to do with strengthening the insurance system?

Mr. MOSHER. Ordinarily, Senator, under ordinary insurance calculations, a fund appears to be very necessary to back up the strength of the company granting the pension, so to speak.

Senator MILLIKIN. This money is spent currently for general purposes, and will have to be paid by the taxpayer in the future, so what

does it do to strengthen the insurance system, especially where you get into coverage?

Mr. MOSHER. You are asking what would the creation of a Government fund do to strengthen the insurance?

Senator MILLIKIN. No, I am asking you: What does the existing trust fund do to strengthening the Government insurance system?

Mr. MOSHER. From a practical standpoint, nothing, Senator.

Senator MILLIKIN. It is sort of general revenue?

Mr. MOSHER. No, sir.

Senator MILLIKIN. But it has to be paid by taxation in the future?

Mr. MOSHER. Yes.

It is suggested, therefore, that the recent increase in tax rate to 1½ percent of pay roll upon employer and employee be considered as the tax increase corresponding to the benefit liberalization which this committee now has under consideration. Since the addition to the trust fund even at the present total tax rate of 3 percent is greater than will be the expenditures from the fund during the next 5 years, it is recommended that the tax rate remain fixed until such time as the expenditures from the fund approaches the income to the fund.

Realizing that a delay in increasing the pay-roll tax will mean greater increases in later years, we nevertheless adhere to the recommendation that the OASI program be financed out of current pay-roll tax collections. The program should be permanently considered as a pay-as-you-go matter, without increasing the present trust fund any more than can be helped.

The present system of financing, namely, on the basis of a dollar-for-dollar pay-roll tax on employer and employee, should be retained.

The CHAIRMAN. In that connection, it has been suggested to the committee by at least one witness who appeared, that the increased benefits, the additional benefits over and above present law, be met currently out of general taxes.

Mr. MOSHER. When you say "out of general taxes," do you mean from the receipts now supposedly going into the so-called fund, Senator?

The CHAIRMAN. Yes, sir. That is, the increase is to be taken care of currently.

Mr. MOSHER. Yes.

The CHAIRMAN. I inferred from the witness that he thought that the fund should be retained for the purpose of taking care of benefits that are already provided under existing law, and only the increases cared for currently. That would not be a very practical program.

Mr. MOSHER. I should say not. I think they have in mind increased benefits which are not provided for in the present calculation. What we say is that the income of the fund, under the proposed rates, will be more than sufficient for a number of years, to carry the benefits proposed under the policy, and we cannot see the justice of increasing that fund any more than the relatively small amount that will go into it in the next few years.

The CHAIRMAN. I see.

Mr. MOSHER. As it goes along, it should be kept on a strictly pay-as-you-go basis. For any increases in benefits, if there are any, the rates should be increased to produce the extra dollars, independent of any general call on the Treasury.

Senator MILLIKIN. Do you favor the continuance of the contributory system as distinguished from financing by general taxation?

Mr. MOSHER. Yes, sir; we favor—as I shall say later—that the fund be kept wholly separate and that there be no call on the Treasury.

Senator MILLIKIN. You would regulate the contribution year by year, according to the expenses?

Mr. MOSHER. Yes, sir.

Senator MILLIKIN. Why? Since the coverage under your proposal is so large as to include everyone, why not handle it by general taxation?

Mr. MOSHER. That just puts another load on the Federal Treasury. If I follow your question, sir, what you mean is: Why do we ask for any contributions at all? Why not take it all out of general taxes?

Senator MILLIKIN. I would like to get an answer to that.

Mr. MOSHER. I think the people who are going to receive these benefits should pay for what they get, and pay for it directly. I recognize that the so-called past-service element is one that we face, and one that has to be taken care of in any general plan or any particular private plan. Under our present set-up, there seems to be no room to take care of the past service credit, and by the elimination of the fund, we can argue that you do not need to build up the provision for it. But we do say that those of us who are going to receive a benefit of this kind should pay for that benefit as we go along, and it is not a fair charge on the General Treasury.

Senator MILLIKIN. The point I was getting at is this: As you increase the coverage, so that you have universal coverage, why go through the hocus-pocus of these contributions, if it is hocus-pocus?

Mr. MOSHER. Let us assume it is not hocus-pocus, Senator.

Senator MILLIKIN. All right.

Mr. MOSHER. To that extent we should be made to pay as directly as we can for the benefits we are going to receive.

Senator MILLIKIN. Your basic point is that by having the contribution the taxpayer is constantly aware of what it is costing him.

Mr. MOSHER. That is right, sir.

Senator MILLIKIN. That is the great virtue of the contributory system.

Mr. MOSHER. That is one of the very definite virtues, Senator.

Senator MILLIKIN. If you do it out of general revenues, it is diluted with other contributions.

Mr. MOSHER. Senator we all realize that unless we pay for things—if we think they are just a general drain on a general and unlimited Treasury—there will be no limit to the demands that we as individuals will make, or we as special groups will make. Unless we think we are paying for it, I think our experience of the past few years has proved that pretty generally.

Senator CONNALLY. Would it not be unfair to take it out of general taxes when everybody is not covered?

A lot of people would not be covered at all.

Mr. MOSHER. I think if you start on the basis that a lot of people will not be covered, it is very definitely not fair.

Senator CONNALLY. You have to take it out to pay these other benefits, and they are not contributing anything.

Mr. MOSHER. That is true. But, on the other hand, we are urging as general coverage as we can have. At the same time, we say it should

be paid out of contributions that are currently received. In fact, our brief says specifically that the system of financing dollar for dollar by employer and employee should be continued and should be the sole source of financing the Federal program. There should be no contribution from general funds. Accordingly, we endorse that provision of H. R. 6000 which cancels the previous authorization for drawing on general revenues to supplement pay-roll taxes for this program.

Senator MILLIKIN. Assuming the coverage you have in mind, Mr. Mosher, how high would your pay-roll tax go, that is, the combined tax?

Mr. MOSHER. I have to go to the figures now, Senator, I cannot carry those in my mind. It is expected to reach a total of 8.1 percent under H. R. 6000 in the year 2000.

Senator MILLIKIN. That will be in 50 years. It will go to 8.1 percent.

Mr. MOSHER. That is right. It will go to 8.1 percent.

Senator MILLIKIN. Divided equally?

Mr. MOSHER. Yes, sir; 4 percent apiece under the proposed benefits.

The CHAIRMAN. That is assuming universal coverage?

Mr. MOSHER. Yes, sir; practically universal coverage, Mr. Chairman.

Senator MILLIKIN. And the benefits on the basis as you have testified?

Mr. MOSHER. On the basis of H. R. 6000 as proposed, Senator.

Beginning with page 11 in the brief, we go into considerable detail for several pages on the matter of personal thrift plans and company-pension programs, and we want to point out that one of the dangers of any Federal program of retirement benefits is that the very provision of such a program may discourage individuals from practicing thrift and self-denial.

The limitation of the tax base to $3,000 per year is one way of encouraging individual thrift. Those who receive over $3,000 will then be encouraged to make their own provision, by laying aside some portion of the excess on which there is no pay-roll tax.

Senator MILLIKIN. How do you reconcile the continuous campaign of business to get people to buy, if necessary, to buy on the installment plan, with thrift?

Mr. MOSHER. That depends, I think, on the nature of the purchases, Senator. I think, if I am buying a refrigerator, if I need a refrigerator—and I assume that unless I needed it I would not be buying it—at the same time giving due recognition to some high-pressure salesmanship, that even if I do not have the money with which to pay for that item I will get enough satisfaction out of the ownership and use of it so I can justify that as a future charge on my earnings.

Senator MILLIKIN. Yes; but when you get to the age of 65 you will not have the cash in the bank.

Mr. MOSHER. I do not want to be smart, Senator, but at 65 I do not think I ought to be buying a refrigerator, perhaps, if I do not have one by that time.

Senator MILLIKIN. That is a great dilemma which you business folks are not facing up to very much. I have been waiting for a good, clear exposition as to how we can encourage people to spend and at the same time encourage them to be thrifty. Our whole economy rests on vast sales—sell the goods, if necessary, sell it on the installment plan. The whole thing would collapse if we did not have it. So, how can we tie in the two?

Mr. MOSHER. At the same time, Senators, using the figure that is more or less currently used, but not agreed to by all, we need a capital-formation factor that approaches some 20 percent in this country. That money has got to be saved somewhere to be spent in turn on capital improvements and extension of industries, in order to keep more and more jobs rolling.

Senator MILLIKIN. Customarily it has been spent above these brackets that you are talking about; has it not?

Mr. MOSHER. Except as it might go into general types of insurance and savings banks, because the savings account and the insurance, in small amounts, true, is a huge amount, even in the low-earning groups.

As you well know, the insurance factor carries down to almost the lowest group, and to no small amount as a proportion.

Senator MILLIKIN. I suggest to you that our potential capital formation is here in overabundance in terms of savings, but it does not flow into capital formation, for tax reasons, and many other reasons which we might go into.

Mr. MOSHER. If I follow you, Senator, the factor is there, but it gets diluted by reason of the taxes that follow the saving of it.

Senator MILLIKIN. To state one reason, people are discouraged from putting money into risk ventures, because of the tax incidence.

Mr. MOSHER. Of course, the future tax incidence. You mean aside from the fact of the taxes that they may have to pay before they get at the net amount which they could invest?

Senator MILLIKIN. Sometimes, when you feel in a philosophical mood, will you send us a little memo as to how you reconcile all this pressure to spend with what you advocate as sound frugality and thrift?

The CHAIRMAN. I suppose you are assuming that every producer is selling something that really adds to the capital assets of the purchaser.

Mr. MOSHER. Mr. Chairman, let me go astray for a moment, as it is an interesting argument. I would like to have your time to continue it.

I have had some experience in trying to increase productivity in England under the Marshall plan. I happen to be a member of the Anglo-America Commission on productivity.

I am just going to venture one statement, if I may.

One of the reasons for the relatively lower standard of living in certain countries—and I am avoiding mentioning any names—is because business has not sold its product to the people. Now, one of the biggest reasons, in my own opinion, for our relatively high standard of living is that supersalesmanship that has caused you and me to buy something, caused us to want it, to the end that we were willing to work hard enough to make the money with which to buy it. That is the role of sales promotion. We have it in this country, whereas, in some of the countries—I have in mind one in particular—they tell me that it is not nice to sell, that it is not the nice thing to do, that you should not have to sell. I am even told in that country that people do not need automobiles and do not want them. Now, I leave it there.

Now, coming back to the encouraging of individual thrift and private pension programs, adherence to the concept of a basic minimum

layer of protection also encourages individual thrift, because individuals who want more than that basic minimum layer have to make some provision for additional benefits themselves.

A third factor in encouraging individual thrift is to take such fiscal measures as will encourage thrift plans, set up for their employees by many companies.

I urge that the committee give careful consideration to income-tax aspects of employee contributions to such thrift funds.

Senator MILLIKIN. This is a method for compulsory saving. That is what it amounts to; does it not?

Mr. MOSHER. An encouragement to saving, Senator, but not compulsion.

As to company pension programs—as manufacturers, we are very much concerned about the future of company pension programs. For many years, some of our best-known companies have voluntarily initiated pension programs, based on a sincere devotion to the philosophy of improved employer-employee relations. Over 13,000 such pension programs are now in effect. There is a definite place for such company pension programs in those cases in which a company feels itself sufficiently well established, sufficiently confident of its future prospects, and convinced of the resulting benefits to itself and to its employees, to voluntarily establish a sound pension program.

The tax treatment for employee contributions to company pension programs, meeting specified standards, and the tax treatment of the resulting pensions to employees, should be carefully considered to make sure that no double taxation is involved, and that such pension programs are not discouraged.

Senator MILLIKIN. Will you agree with me that the average so-called little-business man is always teetering on the brink? He does not work with big fancy margins in normal times; therefore, he is not in a position to set up pension programs which have real stability to them.

Mr. MOSHER. That is undoubtedly true for one reason, as well as a lot of others. I am a small-business man, currently, at least. We are trying to expand that business; we are putting every penny we can find back into the business to make more jobs for more people, and to make more money for us as well. The result is that the dollars set aside into funds for that sort of purpose are just lacking. They are just not there. I think that that is pretty generally true.

Senator MILLIKIN. The labor leaders say that the private pension plans have the defect of diminishing or eliminating mobility in your labor force; that in order to earn the pension the worker has to work for a single company. What is your reaction?

Mr. MOSHER. Without going to the statistics which I think are available, I think you will find in most of these funds that after a period of time, sometimes as little as 5 years—in others it is 10 and sometimes longer—those funds do vest in the employee to the end that it eliminates the factor of tying up the employee after that time. I mean the ordinary plan—and most of these plans are in what I call the good group, and have a vesting feature that is one of the biggest answers to that criticism.

Senator CONNALLY. In other words, he could withdraw it if he quit?

Mr. MOSHER. Yes; or he could take it over himself, in many cases.

Senator MILLIKIN. Our experts suggest to me that the new plans—the Big Steel and the automobile and other plans—do not have a vesting feature.

Mr. MOSHER. I hesitate to answer you, Senator. It is obvious why—because these have been the result of a type of collective bargaining, and I question that, too. It has been the result of collective bargaining. It has not been the result of a sound financially considered program. That is the reason. It is true that they do not vest.

As a matter of fact, I was just about to say—it is taken out of the brief—we realize that serious criticisms have been made of company programs in recent months, and I am referring directly to the criticism you have in mind. The answers to each of these criticisms start on page 12 in the brief. We have not tried to cover them all, but in general we have covered the principal criticisms, and I think there is an adequate answer in each case to that criticism.

We are convinced that voluntarily established company pension programs can make a tremendous contribution, both to employee security and to improved employer-employee relations. The chief danger to sound company pension programs today arises from the fact that such pensions have now been construed to come within the scope of mandatory collective bargaining. The result of this construction of the law means that today pension programs, instead of being an evidence of the company's unusual interest in its employees' welfare, have become a major cause of violent dispute between organized labor and management.

We are back on the same subject the question referred to, Senator George.

We need only recall the recent Nation-wide steel strike flowing out of pension negotiations; the recent paralyzing coal strike, and the current strike at Chrysler.

Even more dangerous are the proposals now being made for industry-wide pension programs and such area-wide plans as are now being actively demanded in Toledo.

We believe that the solution lies not in prohibiting private pension programs, nor in having the Government take them over. We believe that the solution lies in removing private pension programs from the area of mandatory collective bargaining.

In considering a Federal system of old-age security, this committee can hardly disregard the existence and future of private pension programs.

Accordingly, we urge that appropriate action be taken in connection with pending social-security legislation to remove company pension programs and similar employee-benefit programs from the area of mandatory collective bargaining.

On page 13 of the brief we briefly mention inflation.

Finally, one of the best ways of encouraging private savings and thrift is to take such measures as will prevent a further depreciation of the dollar. The very provisions we are making today against the hazards of old age will be totally inadequate 20 years from now if we permit the dollar to depreciate as it has during the past 10 years.

This is a matter that should particularly be borne in mind when we consider over-all problems of Federal expenditures and Federal tax-

ation, for deficit financing is one of the major factors in the depreciation of the dollar. And it is most pertinent to point out that any Federal pension program which saddles the economy with too heavy a burden of nonproductive expenditures is bound to bring about dollar depreciation.

Senator MILLIKIN. Does that mean that you are strongly for a pay-as-you-go system?

Mr. MOSHER. That is right.

Senator MILLIKIN. In other words, we cannot sit here today and say what a benefit should be 10 years from now?

Mr. MOSHER. Yes, sir. The fund should have receipts enough—increase the rates if you have to, if the benefits go up that much higher.

On page 14 of our brief we go into some considerable detail with regard to the matter of Federal grants-in-aid for old-age assistance.

We have clearly stated our position with reference to strengthening the OASI system to enable it to serve its intended function. We now come to a phase of the problem which may be considered supplemental, but is in some respects competitive with the OASI program.

The Federal grants-in-aid program for old-age assistance was originally intended to be a residual program, initiated at a time when States governments were in dire financial straits, and it was believed that as more and more of the aged became eligible for OASI benefits the old-age assistance program would become reduced and could be carried on without Federal assistance.

Quite the contrary has happened. The grants-in-aid program has grown at an alarming rate. While we have been spending at the annual rate of $450,000,000 per year for OASI, we are spending at the rate of 1.4 billion dollars a year for old-age assistance.

The availability and the apparently inexhaustible supply of Federal dollars is in no small measure responsible for the growth of the OAA system. If the old age assistance program is truly a program based on need, the determination of need can only be carried out effectively if the local administrators feel they are spending their own money, rather than unlimited Federal funds. We must prevent the temptation of dispensing Federal funds with a free hand. We must bring back the old age assistance program to a true needs basis.

To accomplish this end, we urge four things:

(1) Substantially universal coverage under the OASI program so that once all those gainfully employed acquire eligibility, they will be receiving earned benefits under the OASI program, rather than be candidates for old age assistance.

(2) Recipients of OASI benefits should be made ineligible for old age assistance financed by Federal funds.

(3) There should be no increase in the proportion of Federal funds in the OAA program. Steps should be taken to begin reducing Federal grants-in-aid with the aim of eventually discontinuing Federal grants-in-aid for old age assistance.

(4) If the reduction or elimination of Federal contributions for old age assistance places too heavy a burden upon the finances of the individual States, the States should be aided by such reallocation of tax sources as to make additional funds available directly to the States rather than resorting to the growing burden of Federal grants-in-aid.

Today, old age assistance is not a supplement to the old age and survivors insurance program. It menaces the very existence of that program. Any expansion of benefits under the OASI system and increase in its coverage should be accompanied by positive steps to reduce or eliminate Federal grants-in-aid for old age assistance.

On page 18 of the brief we take up the matter of permanent and total disability benefits.

The problem of the handicapped and the disabled is no impersonal social problem so far as American employers are concerned. Nearly every employer has at one time or another come into personal contact with the weighty problems of the handicapped and disabled.

We know that those who are unfortunate enough to become totally and permanently disabled often require assistance. We recognize that there is a social obligation to assist these people and their dependents.

But we are convinced that the basic problem in the case of the totally and permanently disabled is twofold. First, there must be an active and effective program of rehabilitation, and second, there must be an opportunity for employment for those who can be utilized in productive employment.

We recognize that employers have a particular responsibility with reference to the employment of the handicapped. For years we have been vitally concerned in this problem and have assumed the responsibility for active interest in the field of industrial health and safety.

Our program has been designed to encourage employers to prevent accidents and to provide adequate medical facilities in industry.

In connection with accident prevention, we were instrumental in the establishment of the National Safety Council, which has been doing splendid work in the field of industrial safety.

For years we have been carrying on a national program to encourage the employment of the handicapped in industry. This program received recognition only last month when the president of the NAM was awarded a distinguished service certificate by the President's Committee on the Employment of the Handicapped for the results the NAM has achieved in encouraging the employment of handicapped veterans and civilians.

We have recently made a survey of employment opportunities for the handicapped and the aged, and we would be very glad to make that available to you, sir, if you wish to see it. It is a new study.

The CHAIRMAN. Yes, sir. We will be very glad to have it if you will furnish it to us.

Mr. MOSHER. Yes, sir; we will be glad to furnish it for the record.

(The survey is as follows:)

NATIONAL ASSOCIATION OF MANUFACTURERS, INDUSTRIAL RELATIONS DEPARTMENT.
PRELIMINARY SURVEY ON EMPLOYMENT OF THE PHYSICALLY HANDICAPPED AND OLDER WORKERS

INTRODUCTION

There has been a very steady and substantial increase in the employment of physically handicapped people in recent years. The placement figures of the public employment offices indicate that in 1940, eight-tenths of 1 percent of the total jobs secured were filled by workers who were physically handicapped. Since 1940, the rate increased until in 1918 it was 4.2 percent.

Those who have become handicapped in service have been traditionally taken care of by the employer. More than 40 years ago, in view of the general dissatis

faction of employers with the workings of the then existent employers' liability laws, the NAM, through its committee on industrial indemnity insurance, gave special attention to the problem of improving the conditions of wage earners in connection with industrial accidents, sickness and old-age relief. Members of this NAM committee indicated their desire to cooperate with State lawmakers in promoting sound industrial indemnity insurance. To the credit of both labor and management, the subject of workmen's compensation was pursued throughout the country and studies were undertaken by leaders of both groups in a spirit of fairness and understanding.

Recently employers, recognizing that benefits under workmen's compensation have not kept pace with wage rates, in many instances, have announced plans to provide additional benefits to employees suffering occupational injuries. Death benefits have been increased proportionately and frequently in instances where the employee is still incapacitated at the expiration of the legal period, the case is reopened and appropriate action taken by the employer.

Along with the gradual liberalization of the workmen's compensation laws, there arose a growing feeling that all employers in commerce, the professions, and industry had a responsibility to provide greater opportunity for the employment of physically substandard people who could render useful service.

WAR EXPERIENCE

The war gave this movement great impetus. The widespread effort of industry to hire the handicapped caused employers to go to unusual lengths to fit them into production. Many adjustments were made by management as it abandoned the normal tendency to place the handicapped in clerical or sedentary work and placed them in actual manufacturing and production jobs.

This development gave the handicapped the opportunity to demonstrate the contribution they could make as useful competent performers on the job. Great progress was made in matching the qualifications of the physically handicapped to existing jobs.

Very much the same condition prevailed with the unemployed overage worker during this period as a result of the war. His performance was generally lauded by management and his contribution toward winning the war was stressed on every hand.

Actually, industry has long recognized its responsibility to the overage worker. Going back many years, it has been traditional policy for employers to retain in employment its experienced workers. That development along with the recognition of seniority has brought the percentage of older workers to the highest point yet.

Never before has this group been so thoroughly protected against the security risks which are part of the life of free men. Aside from seniority policies, the employer is following his natural wishes and tendencies when he places more and more value on the mature employee with his store of experience, knowledge, and skill. Actually the employer, in the long run, must rely heavily upon the older, experienced worker to get out the work.

BACKGROUND OF NAM APPROACH

Nevertheless, the problem of the overage worker who seeks employment and faces obstacles in finding suitable work is a real and serious one not only for him, but for the rest of us. To the individual affected, there is no comfort in the fact that over-all statistics indicate that age, as such, is not a factor in finding a job. As far as he is concerned, it doesn't matter what the over-all picture is. The fact remains that the American system of initiative and enterprise is not working for him if he fails to find a niche in which he can provide for himself and those dependent upon him.

For this reason, American industry has long been concerned with this problem and has been deeply conscious of the fact that all possible job opportunities must be provided for those qualified for available jobs.

Back in 1938, the following statement of policy on age as a factor in employment was adopted by the NAM board of directors:

"The National Association of Manufacturers is opposed to the employment in industry of children under 16 years of age, and to the establishment of arbitrary upper age limits in the hiring or employment of workers below any which might be fixed for permanent retirement. It urges its members to carefully review their employment policies to see that no such arbitrary age limits are practiced

in their companies, and instruct their respective employment officers to employ persons according to their qualifications without regard to any maximum age."

In the decade since that declaration of policy, much progress has been made in industry and the employment record of thousands of companies reveals that older workers are placed and kept on the work force. However, recognizing that that problem reached far beyond industry and that there are three jobs in commerce, Government, and the professions for every one in manufacturing, NAM, last fall, joined with the Chamber of Commerce of the United States in a year-round campaign to assist the physically handicapped and older worker in his search for gainful employment.

WAR ACTIVITIES

Throughout the war, NAM recognized the obligation we all owed the veterans and began to prepare for their return to civilian employment. As eary as 1943, NAM published Rehabilitation and Training for Postwar Employment and again in 1945 Readjustment to Civilian Jobs was prepared by the country's leading psychiatrists and doctors serving as a subcommittee of the NAM medical advisory committee. In 1944 a standing committee on veterans' employment problems was established.

NAM presidents have served on the President's Committee on National Employ the Physically Handicapped Week each year since its formation. Employers were asked to examine their job requirements and take steps to admit the physically handicapped to gainful employment. Special NAM supplements, radio features, and press releases kept this issue alive year round and within 3 years of VJ-day, industry had placed 425,000 disable veterans in jobs. During the same period, handicapped civilians were given job opportunities.

In appealing to NAM members to survey their plants for additional job opportunities for the handicapped, Earl Bunting, managing director, said: "There are few things as basic as the individual's desire to take his proper place in society as a productive and self-supporting citizen. This is, in fact, at the very root of our democratic society. There is no longer any question as to the competence of workers who are physically handicapped because we have seen that when placed in jobs for which they are properly trained they become satisfactory and valued employees."

Maj. Gen. Graves B. Erskine, United States Marine Corps, who headed up the Rehabilitation and Reemployment Administration after the war and was chairman of the President's Committee on National Employ the Physically Handicapped Week, said: "Outstanding among private groups have been the Disabled American Veterans and the National Association of Manufacturers, to name 2 of the more than 100 that made up a working cooperating committee during the recent observance of National Employ the Physically Handicapped Week."

John Kratz, Associate Director, Office of Vocational Rehabilitation, Federal Security Administration, said: "I am pleased to learn of the fine cooperation of the NAM in prompting among its membership not only National Employ the Physically Handicapped Week but also stimulation of further efforts of understanding in providing suitable employment of qualified disabled persons."

During the war the scarcity of manpower coupled with the urgency for maximum production stimulated employers to find ways and means of utilizing most effectively the capacities of handicapped workers who had been considered, in many instances, unfit for industry. From this experience there emerged the important fact that, through proper evaluation of his physical limitations and his qualifications, it was possible to place the handicapped person on a job that was suitable.

SHELTERED WORKSHOPS

While it is possible to fit the great majority of the physically handicapped into work occupations whether in commerce, business, or industry, there is still a small percentage who are employable only under sheltered conditions or special workshops. Great numbers of such plants have been set up under private auspices throughout the country. Goodwill Industries of America with operations in 99 cities is an example of one of these organizations which operates sheltered workshops for the severely handicapped. Their business is based on household discards which are collected and turned into time cards, according to the statement of this organization.

According to the Baruch Committee on Physical Medicine, there are 150 communities in the United States which have community rehabilitation centers. Insurance companies in some instances have seen fit to supply such rehabilitation

service, as in the instance of the Liberty Mutual Insurance Co. in Boston, Mass., where we are told "Rehabilitation, like prevention, reduces insurance costs and thus benefits the people who buy and sell insurance."

MAN-JOB MATCHING

As a result of wartime experience with the handicapped in industry, it became apparent that in order to match a man with a job in which his health and safety would be protected and in which he could render a performance equal to that of the able-bodied person, these factors had to be met:

1. Health—the job must not agravate his disability;
2. Ability—the worker must have the qualifications required to perform the job;
3. Safety—he must not be placed in a position where his disability would represent a safety hazard to himself or others.

As more and more physically handicapped took their places in the factories alongside of the able-bodied and asked for no special treatment or consideration, it became evident that there was less need to treat the handicapped worker as a special problem. Today sound employment procedures based on matching the abilities and skills of the applicant with the demands of the job for the most part meet the problem. Fears which were sometimes justified when adequate provision was not made for proper placement prove groundless when the sound employment procedures of man-job matching were practiced.

PRINCIPLES EMERGING FROM EXPERIENCE WITH THE HANDICAPPED

As a result of industry's experience with the physically handicapped, especially since the beginning of the war, it would seem reasonable to indicate some principles which now guide employers in the employment of these people:

1. Contrary to belief in some quarters, the physically handicapped do not constitute a separate segment of the population with peculiar attributes of their own;
2. Jobs vary in their physical demands as much as individuals vary in their abilities and skills;
3. Matching the capacities of the individual with the physical demands of the job constitutes sound employment placement;
4. Lists of occupations for certain types of handicapped individuals emphasizes disabilities rather than abilities and is pretty well outmoded as means of assisting the physically handicapped in their search for gainful employment.
5. Every job can be considered suitable for an applicant with some degree of handicap.
6. Sound employment procedure involves a job analysis of all jobs in the plant and an appraisal of applicants in like terms.

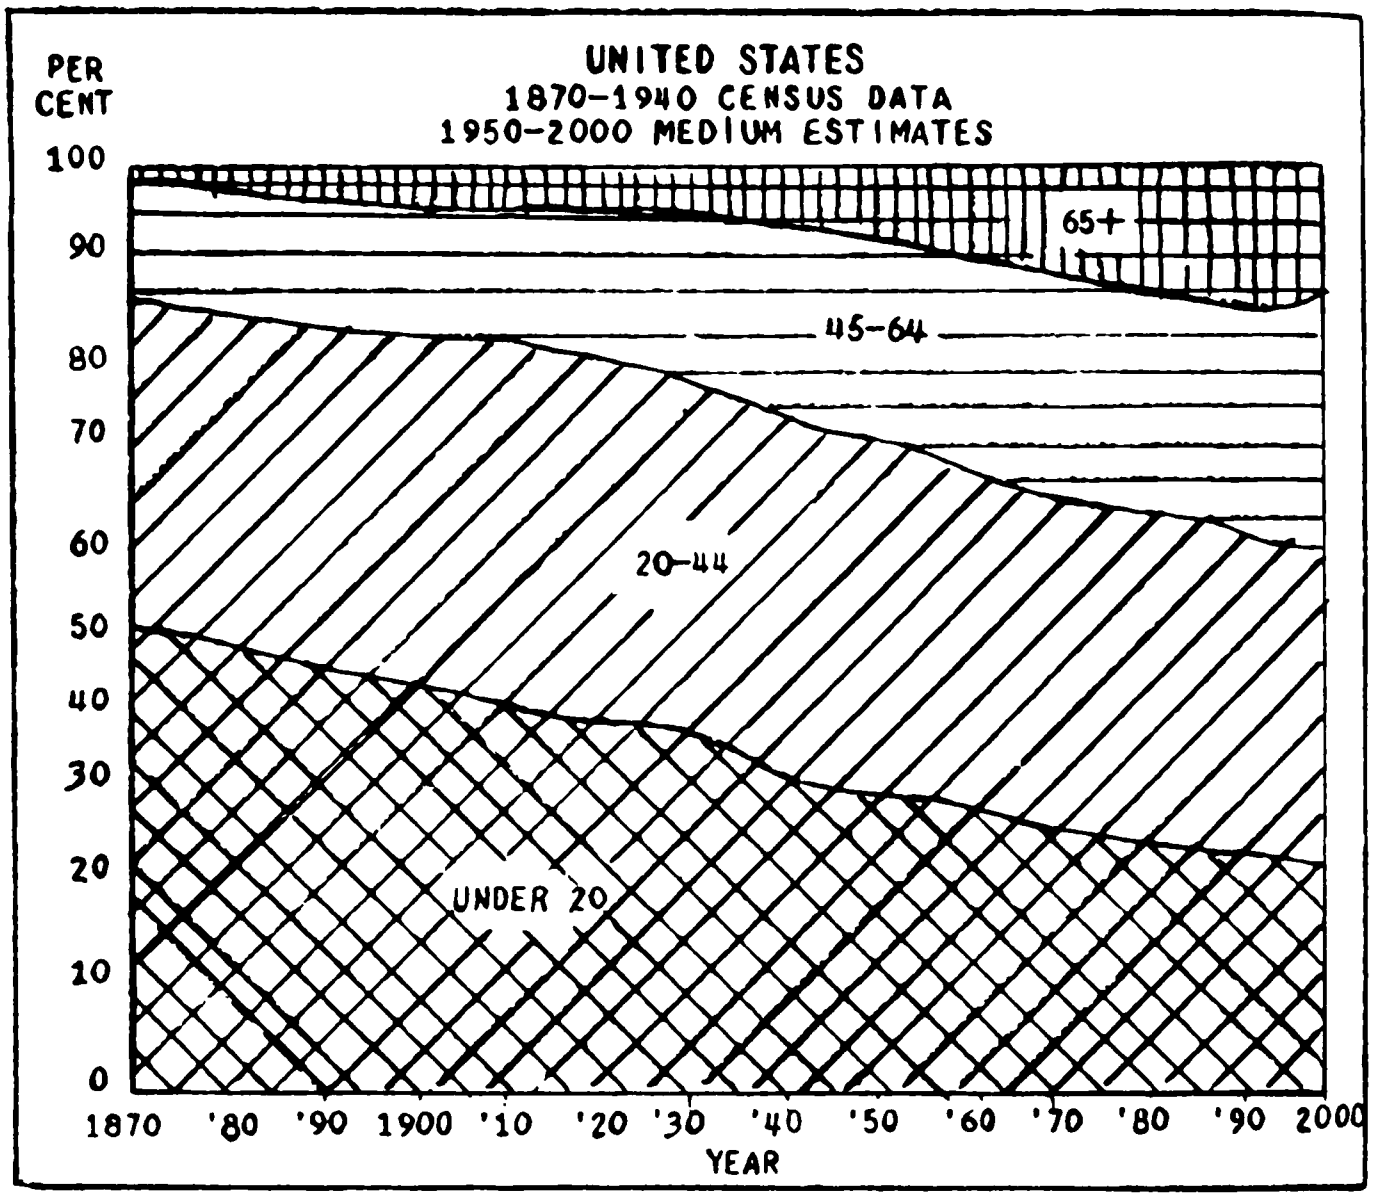
WHY JOBS FOR THE HANDICAPPED

Some of the reasons for industry's interest in the employment of the physically handicapped can be summarized as follows:

1. Experience has overwhelmingly demonstrated that handicapped workers, when properly placed in jobs they can do, make productive, steady, and capable employees.
2. Simple justice demands that the handicapped be given an equal opportunity with able-bodied workers for jobs they are qualified to fill.
3. Our economy needs the contribution of the handicapped to maintain and improve our high standard of living.
4. The handicapped individual needs the sense of satisfaction that goes with making his contribution to the general welfare.
5. It is good business to hire the physically handicapped and older workers where they fit into your operation.

OLDER WORKER PROBLEM

In this country there has been a decline in both birth and death rates which has resulted in a higher proportion of aged in the population. The proportion of the population 65 years and over, for instance, more than doubled in this country between 1870 and 1940. The accompanying chart indicates that while these aged persons constituted only 3 percent of the population in 1870, by 1940 they had grown to 6.8 percent. Past trends and future projections indicate little change in the size of the younger work force (20–44), but rather substantial increase in the percentage for the older work force (45–64 years).



It is rather interesting to figure that if financial support for the aged (65 and over) was supplied by direct taxation, each man and woman from 20 to 64 would pay $12 for each $100 provided for the aged person in 1940. By 1980 the tax would be $19. At the same time, we might take heed that in 1940, persons 50 and over (the group most interested in old-age income) comprised about 32 percent of the voting population, and in the projected population of 1980, this group rises to 42 percent.

When we bear in mind that someone must support those who are retired to idleness, the need for gainful employment of all persons willing and able to work becomes obvious. To use the age factor as such as a barrier to the employment of a qualified person is not only unfair, it is economically unsound.

JOINT CAMPAIGN

Recognizing that manufacturing industry—which is NAM's immediate interest—is responsible for only some 25 percent of the available jobs in this country and that most job opportunities lie outside industry, last fall NAM joined forces with the Chamber of Commerce of the United States in a business, commerce, and industry program to deal with the problem of employment of the physically handicapped and older workers. It was felt that working together both organizations would reach the majority of employers in the country.

SUCCESSFUL EXPERIENCE WITH HANDICAPPED

The progress made with the employment of the physically handicapped during and since the war pointed out a rather practical approach to the older-worker situation.

The reports each year of the President's Committee for National Employ the Physically Handicapped Week bear eloquent testimony to the increasing acceptance by employers of the physically handicapped as individuals who, when properly placed in jobs, are equal in every respect to their able-bodied associates. The social myth that the physically handicapped did not fit into modern industry

has been pretty well exploded and gradually the roadblocks that have stood in the way of the handicapped at the employment office are being removed. The discrimination and prejudice against the physically handicapped is being rapidly overcome by education. The dissemination of the facts concerning the physically handicapped as a worker is doing more than any other thing to gain for these individuals their rightful place in the work force.

The slogan of the President's campaign, "Hire the Physically Handicapped, It's Good Business," indicates pretty well the soundness of this approach. Repeatedly the NAM has called upon manufacturers throughout the land to review their job requirements in light of the physically handicapped and then place the physically handicapped in suitable occupations. Results confirmed the practicality of this plan because it put to more effective use the skills and abilities of this group and, at the same time, provided individuals with the satisfaction of doing their share. All this contributes to a higher standard of living for everyone.

JOB SURVEY FOR PHYSICALLY HANDICAPPED AND OLDER WORKERS

It was through such leadership and education by industry and individual employers that the long-standing prejudice against the handicapped gave way. And it is the same approach—education and leadership—that NAM is using to root out any prejudice that may still remain on the score of the overage worker.

Getting under way with this combined program involving the physically handicapped and older workers, the NAM and the Chamber of Commerce of the United States undertook a spot check of their memberships during the last few months. The purpose of this survey was to get a quick cross section of management thinking and prevailing practices. The NAM covered the manufacturing industries, while the United States Chamber of Commerce confined its inquiries to merchants, banks, insurance companies, utilities, railroads, and service groups.

The questions were directed first at the company's practice with reference to hiring physically handicapped and overage workers and then at the experience of the employer with this group. The large percentage of replies (roughly 50 percent) and the attending remarks indicated the interest in this problem on the part of the American employer.

FINDINGS

The answers to the first question, "Does your company follow a practice of hiring physically handicapped and/or older workers (over 45 years of age)," indicated that an overwhelming majority of employers have no arbitrary age or physical restrictions on employment. Fitness to do the job is the test generally applied in filling job vacancies. Those companies answering "No" indicated that they had no established policy but did, on occasion, hire physically handicapped and older workers.

While one might expect conditions for the employment of physically handicapped and older workers to be more favorable in the nonmanufacturing groups than in industry, it is interesting to note that a slightly higher percentage of manufacturing employers accept the idea of employing physically handicapped and older workers than is the case in the service organizations.

Here are some of the comments we received:

A life-insurance company said: "I believe we are fully alert to the contributions which physically handicapped and older workers can make to the productive effort of our company and the Nation, and we are endeavoring to translate this belief into action whenever the opportunity arises."

An electric-power company said: "It seems most important that every available source be utilized to enable our economy to stand the strain of more and more social-security and retirement benefits."

A utility company said: "The employment of physically impaired and older workers is, of course, of great importance to the individuals themselves and our experience has demonstrated that the contribution of those workers compares favorably with the contribution made by any other groups in the business."

As evidence of change in thinking, let us look to an air-line company: "Until some time in the recent past, we did have maximum age limits for some jobs, but we have, with rare exception, been able to eliminate age limits as we do not feel that, except on specialized jobs, we should adhere to some specific age

limit. We feel that many people at one age would be suitable for a job whereas others of the same age, or even younger, would not be suitable."

Where employers are experiencing difficulty in fitting physically handicapped and older workers into the work force, the major obstacle is the inability of the applicant to meet the requirements of the job. This indicates a real need to clear up the confusion in distinguishing between age and lack of qualifications as job barriers. Even so, the fact that the majority are experiencing no difficulty in placing the physically handicapped and older workers in productive occupations indicates what can be done in this field.

A railroad company said: "You realize, of course, that the physical and mental qualifications of our employees directly responsible for public safety, must be rigid."

A national bank said: "Approximately 25 percent of our employees are over 50 years of age and we found during the late war that they were the backbone of our organization."

In asking about the effect of physically handicapped and older workers on workmen's compensation costs, we were told (by a ratio of more than 10 to 1) that their presence had no serious adverse effect.

One of the objections frequently voiced to hiring the physically handicapped or older workers was the effect it had on workmen-compensation costs. The experience of the majority of these employers indicate that this objection is of questionable validity.

The figures indicate that the employment of the physically handicapped and older workers is not inconsistent with operating pension plans. While some companies seem to feel that it is necessary to limit hiring age in order that all employees meet retirement with a full pension, there is an overwhelming tendency to make the necessary adjustments to hire the older worker.

A public service corporation said: "We do not let old age interfere with our pension plan. So long as anyone is able to continue to work, we permit him to do so. In some instances, however, this brings criticism from younger people seeking employment."

An insurance company said: "If the potential employee is of such an age that he will not be insurable under our pension plan, he is hired on a temporary basis. We have a number of fine older employees who have been hired since 1940."

With few exceptions, the presence of physically handicapped and older workers has virtually no effect on prevailing employer practice and benefit programs. For example, in the case of group insurance, the increased cost of the older worker is small when combined with that of a balanced work force.

Collective-bargaining agreements presented no serious difficulties according to the survey. This was even more pronounced in the nonmanufacturing group where only 5 of 131 answers indicated any difficulty from this source.

GENERAL COMMENTS

There was every indication from the answers that there now exists a new and general awareness on the part of employers of the need for utilizing the skills, experience, and judgment of the physically handicapped and older workers. Employers generally recognize their responsibility to do everything in their power to remove whatever roadblocks have traditionally stood in the way of qualified people getting jobs. For instance, a large steel company says: "Furthermore, we are presently engaged in studies looking toward broader employment policies involving handicapped individuals generally. Our experience with veterans indicates that many such individuals may be employed without sacrifice to productive efficiency and with a high degree of satisfaction to the individual involved."

A machine-tool company says: "We have a very high percentage of employees over 45 years of age. Our products must have a high degree of accuracy and our older employees are the ones we depend upon for this."

Certain advantages found generally with physically handicapped and older workers were emphasized in the replies:

1. *Reliability.*—Less absenteeism and steadier work were indicated for both the physically handicapped and older workers.

2. *Better work habits.*—A manufacturing company in New Jersey stated: "Generally our handicapped and older workers are more loyal and have better work habits than younger, able-bodied men with less seniority."

3. *Less turn-over.*—Both physically handicapped and older workers tended to remain on the job and have a stabilizing influence on the younger workers. A

railroad company said: "We have noticed in employing physically handicapped or older workers that these individuals are extremely appreciative of the opportunity given them. They have a greater desire to please and labor turn-over among these workers is lower than among other workers."

4. *Good quality and output.*—The older worker was particularly singled out for mature judgment resulting from experience which tends to keep operations on a satisfactory level. A chemical company reported: "As we continue to improve physical labor-saving devices, steadiness, maturity, care, and experience become more important than physical strength in an industrial organization."

The success found by employers in placing physically handicapped and older workers in gainful employment is based, we were told, on proper job-placement methods.

A steel company said: "In order to derive the full benefits of the superior work attitude of older and handicapped workers, it is necessary to properly place them on jobs which will not aggravate their disabilities."

A chemical company said: "Any successful program must have as its premise the fact that the job assignment must be made on a sound economic basis both from the standpoint of output to the company and the monetary return to the individual. Therefore, in the job to which he is assigned, the disabled person should be able to produce as much as able-bodied persons performing the same job after an adequate learning period. This means matching the requirements of the job and the physical abilities of the individual. When a handicapped person is able to perform the duties of a job, he is no longer handicapped so far as that job is concerned."

Companies which indicated a reluctance to hire physically handicapped and older workers gave as the major reason their policy of promotion from within the organization. This involved, first of all, taking care of employees who became disabled while employed in the company as well as transferring older employees who for one reason or another find themselves unable to do their usual work.

A food-products-manufacturing company said: "At present we have about 6,500 in that group (over 45), which is approximately 22 percent of our entire personnel. Most of these people have long service records, and we feel morally obligated to keep them on the active pay roll to normal retirement age, if possible. With such a large group, this requires a considerable amount of adjustment in the way of job changes, etc. It is, therefore, our intent to hire at age 45 or over only those persons who we can absorb in our organization without prejudicing the future of our own 'older workers.'"

An electric-power company said: "The policy of this company is to employ on a career basis, usually starting employees in the early twenties. Thirty-five percent of our regular employees are 45 years of age or over. Our most valuable employees are within the age group of 45 years or over."

Success with the campaign to place physically handicapped workers in employment since the war stems almost entirely from the fact that they were fitted into existing situations and matched to existing jobs instead of attempting any segregation by creating special jobs for them. The survey indicates the wisdom of a similar approach with respect to older workers. They also must be fitted into existing jobs, exept in unusual circumstances.

NAM PILOT CLINICS

The NAM has been holding pilot clinics in New York, where groups of manufacturers consider ways and means of implementing this campaign for the employment of the over-age worker. This clinic approach to industrial-relations problems has been most effective in such fields as employment stabilization, employer-employee communications, management teamwork, and other aspects of personnel administration.

Through this technique it has been possible to explore a problem in all its ramifications and to find some practical solutions. To exercise industrial leadership and point the way to constructive action, we have gathered together manufacturers in small groups, first in New York and then in clinics or small round-table discussion groups sponsored by local or State employer associations affiliated with the National Industrial Council. Here employers come to grips with the problem and in frank discussion exchange their experiences. Interestingly enough, it is quickly apparent, regardless of the subject under discussion, that there is no one single or simple answer to the problem at hand. Conditions vary between sections of the country between different industries and frequently

between plants of the same company making the same products to such an extent that no one formula or solution can be applied universally.

Best results are secured where the individual employer examines his own situation and develops his own program. His intimate knowledge of the facts at hand puts him in the best position to apply the sound corrective.

These clinic discussions give employers an opportunity to learn what other employers are doing. They are encouraged by the successful experiences in other plants and stimulated to go back to their plants and do something about the problem. This is the next step in the NAM leadership and education campaign to open up additional opportunities for older workers.

SIGNIFICANT DEVELOPMENTS

In each instance we found a genuine interest in the subject and a willingness to inquire into its implications.

It was generally agreed—

1. That age or physical handicap of itself should not be a factor in employment.

2. That job applicants should be judged solely on their qualifications in light of the job to be filled.

3. That companies require employment interviewers to recognize that industry needs and must utilize the reservoir of skill, experiene, and knowledge of the physically handicapped and older workers.

4. That employment policies should be reviewed and where necessary revised with a view to giving the physically handicapped and over-age workers suitable job opportunities.

There is virtually no problem where employees have grown old or have been handicapped in service. Employers make such adjustments and transfers as may be found neecssary in these cases. The problem seems to be with the physically handicapped or overage person who is seeking employment. It was generally agreed by employers represented at these clinics that a specific skill is the applicant's greatest asset. Where a high order of skill is required in the plant, we found ready acceptance of physically handicapped and older applicants.

An official of one of the large rubber companies mentioned that their tendency to venerate the quarter century group made the older applicant more acceptable to their supervisory force. He held that ability to do the job should be the basis of selection. In this company a retired worker with short service is given a separation allowance in lieu of a pension.

A number of companies with compulsory retirement plans have found some of their workers separated from employment but with pensions which are inadequate because of inflation. In some cases, the retired worker secured employment elsewhere or became a dependent. Realizing this loss to the company and the economy in general in the case of a retired worker who is willing and able to work, some companies question the advisability of compulsory retirement because of age.

The president of one industry in the East stated: "We choose and select when we hire and I see no reason why we can't do the same thing when we retire workers."

And he went on to say that the most important thing from his point of view was to treat people as individuals whether they were young or old. He pointed out that the task in this problem seems to be that of breaking down prejudice and encouraging employers to treat physically handicapped and older applicants as individuals with varying skills and aptitudes rather than as members of a superannuated group.

The growing longevity of our people raises the serious problem of how our economy can handle the overwhelming cost involved in supporting a constantly increasing aged segment of the population. To take care of some in this group, the employer must be encouraged to study his job requirements and find out which positions in his plant or shop or office can be filled by those in the higher age bracket. However, this is not intended to limit opportunity of the physically handicapped or older applicant to certain types of jobs. What he needs from an employer is consideration of what he has to offer and the chance to show what he can do.

Fortunately, the performance of so-called overage workers during the war has gone a long way toward reducing the reluctance of employers to select workers

from this group. Industry is employing a greater number of older workers than ever before and is actively searching out ways to open new job opportunities for both the physically handicapped and older workers.

CONCLUSIONS

Even at this early date in the combined program of the NAM and the Chamber of Commerce of the United States, these reassuring trends appear in the hiring policy of American employers:

1. More and more employers are hiring on the basis of ability to fill the job without regard to physical handicaps or age or any other qualification which does not bear on the job to be done.
2. More and more companies are selecting applicants for employment with the idea of having the employee make the company his career.
3. More and more of industry is following the sound principle of promotion from within the organization.
4. Employers are taking care of those who become physically handicapped or grow old in service by training and transfers where necessary.
5. An increasing number of employers provide security for employees grown old in service.

RESPONSIBILITY OF INDIVIDUAL

This is the employer's side of the picture and his responsibilities in this area. There is, however, another side which can't be ignored—that of the worker and his own responsibility on this score. Experience proves that the employee with something to offer is generally acceptable. This reemphasizes the fundamental concept in a free society that an individual must do everything possible to fit himself most advantageously into our economy. Therefore, it follows that each person has to protect himself:

1. By acquiring the training necessary to develop abilities and skills.
2. By approaching a new job as he would a career, conscious of the fact that he must keep abreast of the requirements of the job.
3. By taking advantage of every educational opportunity in connection with his work with a view to promotion in line with his qualifications.

It would be most unfortunate if our attempts to provide the older worker with security should encourage the false assumption that the individual no longer need look after himself. Whatever is done must be based on the fact that the individual still has the problem of fitting himself into the work force on the highest level that his training and qualifications will permit.

The problem fundamentally is to encourage the full play of individual opportunity and initiative so that men with ideas can strike out into new fields and thereby provide more and more goods and services for more and more people. Full utilization of the abilities and skills of all our people depends upon an expanding economy. Any effort to provide gainful employment for the older group at the expense of younger or middle-aged people would be unrealistic and fraught with danger.

Any move in the direction of discouraging business from taking the risks that make for an expanding economy will tend to lessen job opportunities for everyone.

AREAS FOR FUTURE ACTIVITIES

Several universities have undertaken studies and conferences on the problem of the physically handicapped and the older people in our population. Research work with controlled groups has been started in some communities and plants. Industry welcomes the assistance of universities and is offering every aid to the projects.

There is more or less general recognition that the physically handicapped and older worker problem is one for Government, employers, and the individuals concerned. Each has a most important part to play in the solution of this problem.

Employers will continue to take an active interest in this program to make the best possible use of qualified people. The individual needs the satisfaction that goes with adequate employment and the economy needs the contribution he has to make if this Nation is to enjoy a constantly improving standard of living.

Physically handicapped and older worker spot-check survey of employment practices—National Association of Manufacturers and Chamber of Commerce of the United States

	Handicapped			Older worker		
	Yes	No	No answer	Yes	No	No answer
Question I Does your company follow a practice of hiring physically handicapped and/or older workers (over 45 years of age)?:

[1] 9 companies said that the nature of their work prevents them from hiring the physically handicapped; 8 companies said they have no formal policy but have no objection to hiring handicapped persons when qualified.

[2] 2 companies said that the nature of their work prevents them from hiring older workers; 5 companies said they have no formal policy but hire older workers when qualified; 3 companies said their policy calls for promotion from within the organization and that they hire older workers only when they cannot fill the vacancy from within the organization.

[3] There were 16 companies which stated that they follow a policy of grooming employees for careers.

Senator MILLIKIN. Did I understand you to say that that included a provision for the continued employment of the aged?

Mr. MOSHER. Yes. It goes into the question of employment opportunities for the handicapped and aged.

Senator MILLIKIN. Can you tell us briefly what you are going to do about the aged?

Mr. MOSHER. It is a question of keeping them on the jobs that they can do, and those jobs that are within their mental and physical capacities at those ages.

Senator MILLIKIN. Do you feel there is progress in that?

Mr. MOSHER. I think there has been tremendous progress made in that respect, Senator. We learned a lot in the war about the employment of the aged. We found a lot of them were pretty good on the jobs.

Senator MILLIKIN. Is it a subject that is really alive with the employers?

Mr. MOSHER. It is very much alive, Senator. It has been kept alive. NAM, as I indicated at the beginning of my talk, actively engaged in the matter for over 15 years. I cannot go back of that. I know we have kept the subject alive and it has received a great deal of interest. This [March 18 issue of NAM News] is an article as to just what the activities are at the moment, around the country.

Of course, NAM's job consists of stirring up the activity of our own members to do these jobs and to get them done. This happens to be a current article that came out this week as to what is going on.

May I continue, sir?

The CHAIRMAN. Yes.

Mr. MOSHER. This voluntary action on the part of the industry has resulted not only in a considerable employment of the handicapped, thereby encouraging their rehabilitation, but has also resulted in increased safety in industry.

I might add that I am a little disturbed at the way the Senator's questions anticipated just what I have in front of me to say.

While over-all work injuries in the United States decreased more than 7 percent from 1948 to 1949, the record in manufacturing industries is a reduction of 19 percent. That is just between those 2 years, 1948 and 1949.

When, however, we approach the problem of total and permanent disability benefits, we cannot avoid the conviction that such a program at the Federal level would be subject to so much abuse and inevitable difficulties in administration, that it might well endanger the entire old-age and survivors insurance program.

There are many cases of real or alleged disability in which objective criteria are lacking. It is hard enough to administer that kind of a program at the local level with all of the personal interest that can be demonstrated only at the local level. But the difference of opinion as to whether or not total or permanent disability exists becomes ever greater the further we get away from the point of application of the program. Since the sole basis of determination of disability is often a subjective one, many abuses are bound to result. Such abuses will increase in case of unemployment, and the more widespread the unemployment situation becomes, the more difficult will be the problem of administration of the total and permanent disability benefits.

In addition, since most women do not remain in the labor market during their entire working lives, there is bound to be a great temptation to claim disability benefits after retirement from the labor market, even though there may be no intention to return.

There has not been adequate experience or adequate planning of a workable program to justify the Federal Government going into the field of total and permanent disability benefits. The primary emphasis should be on rehabilitation. We know that rehabilitation can best be carried on at the local level. No huge Federal organization is required for effective rehabilitation programs at the local level.

Senator MILLIKIN. Would you favor any Federal contribution in that program?

Mr. MOSHER. I do not know that I feel myself qualified to answer that question either "Yes" or "No," Senator. I think, from a dollar standpoint, "Yes, encourage." But, as I said, "No quantity of money from the Federal standpoint," It is a local job, to be carried on locally.

Senator MILLIKIN. You said something awhile ago that led me to believe that perhaps you might think it a good idea that a certain proportion of Federal revenues be returned to the States for a series of social and welfare purposes, under some sort of standard, but without having the Federal Government take a directing hand in the details.

Mr. MOSHER. It is fundamental in our thinking that many of the undertakings that the Federal Government has gone into in recent years can best be handled by the States, or by the communities within those States. Now, we recognize that there is a financial problem involved in that, and in recommending that all of the activities that can be better handled Statewise and localwise, and in recommending that definitely, we say that, of course, there must go along with it some reallocation of taxing sources. In other words, we have to give back to the States in the one case and the States have to give back to the communities in the other case, on the basis of taxing.

Senator MILLIKIN. It is perfectly obvious that if we keep on taking the money out of the States for the Federal Government, we cannot at the same time ask them to assume all these responsibilities.

Mr. MOSHER. We cannot spend it but once, Senator, and I might suggest that in the process of going that route—that is, that we can spend it but once—we lose some of the "once" in the administration and collection. If we put it back Statewise and locally, I think we will get a lot more for our money, as well as have the job handled a lot better.

Senator MILLIKIN. Would you say that it comes down to either reducing the taxes or sending a part of the "take" back to the States?

Mr. MOSHER. I think the Federal tax should be reduced. I think the taxing source should be sent back. I frankly do not like the idea of a central body collecting taxes and handing the proceeds back. Let us put the tax source back and let them collect it.

Senator MILLIKIN. The way you put the tax source back is to lower the Federal tax, and for that reason you leave more money in the States for local purposes?

Mr. MOSHER. Yes, sir.

Senator MILLIKIN. But assuming that will not happen, then you come up against the suggestion made awhile ago of returning part of it back. It has to be one or the other, or maybe both.

Mr. MOSHER. It may be both, I hope, and I shall do everything I can to go the first route, namely, that we reduce the Federal load and put all of the load that we can back at the source and let the source raise the money, with the Federal Government keeping out of certain tax areas, or reducing their activities.

Senator MILLIKIN. In my State the State government spends about $80,000,000 a year and it sends $340,000,000 to Washington.

Mr. MOSHER. In our State, I cannot give you the figures in Massachusetts, but it is on a similar plan. But, in addition to that, our State undertakes to collect a great deal of the revenue, which it turns back to the cities and towns. That is why I am somewhat adamant in my position, that is, that having the State collect the money and returning it to the local communities results in a waste of money.

Senator MILLIKIN. There is a brokerage fee there.

Mr. MOSHER. Yes, sir. And the last one, I believe, is 2 percent—a small amount—on one of the State tax bills, but it means some hundreds of jobs.

The CHAIRMAN. The return of the sources of tax to the States and from the States to the municipalities has been a matter under study for some time, and sporadically for a long time.

Mr. MOSHER. It has been one of your particular studies, if I remember correctly, Mr. Chairman.

The CHAIRMAN. But the tendency is the other way.

Mr. MOSHER. It is easier, may I say, politically, to do it the other way. I mean, it is much easier to tax at a distance. We just do not see it and just do not think so much of it.

The CHAIRMAN. But the tendency now is frightful to duplicate your tax systems, even down to the municipalities.

Mr. MOSHER. Yes, sir; I recognize that.

The CHAIRMAN. That is, the Federal, States, and then communities.

Mr. MOSHER. We are even getting city income taxes now.

The CHAIRMAN. Yes, sir. So the whole drift is the other way, notwithstanding the logic of what you say and the desirability of what you say.

Mr. MOSHER. Might I venture to remark that gets the responsibility so far away, or tends to get it so far away, so you cannot pin the responsibility for the spending on the people who raise the money.

The CHAIRMAN. That is true.

Mr. MOSHER. I agree with you 100 percent it is the easiest way out; it is the hard way out, but I think it is the only way to get results.

The CHAIRMAN. It is not only the easy way out, it is the necessary way out, if we are going to spend so much all the time. Unless you have some idea of cutting back on expenditures, it is very difficult to give up a source of taxation.

Mr. MOSHER. I would agree, of course, without any question of doubt, that we have to reduce the volume of spending. There is not the slightest doubt in my mind as to that.

The CHAIRMAN. You may proceed.

Mr. MOSHER. We are just throwing it away, Mr. Chairman.

Our first obligation is to build an adequate, sound program of old-age and survivors' insurance, and we must not endanger that program by advancing into uncharted fields full of hidden dangers for a Federal program, such as the one we have been discussing.

NAM is so impressed with the importance of this entire subject that the major assignment given the committee, of which I am chairman, is to make a long-range study involving an entirely fresh look at this whole problem of employment retirement security, comprising not only the Federal program, but all forms of retirement security, and may I say, saving. Before this committee has occasion to consider the subject again, we hope to be able to present to you a comprehensive recommendation, not limited to the field to which this committee is immediately concerned, but I am just simply saying that we have started a study of the whole field to see the impact of all of the movements, and OASI is simply one factor in the situation. It is a long-time job and long-time basis. At this moment I do not know what we are going to get out of it, but I have every confidence it will be a real contribution to our thinking. I am not suggesting we delay action here, but I am just simply noting it as being in the process, and that it will be available to the public in due course.

Summarizing my remarks, Mr. Chairman and gentlemen, we urge this committee to give favorable consideration to 10 points:

(1) Make the coverage as complete as possible at this time, rather than engage in a series of half-way steps.

(2) In any contemplated increase in benefits to any appreciably higher level than that existing under present law, adherence to the concept of limiting the benefits to a basic minimum layer of protection for the aged, and avoiding any annual increment.

(3) Eliminate the provision for lump-sum death benefits to all those covered by the OASI program.

(4) Revise the definition of "employee" to return it to its normal meaning.

(5) Retain the present $3,000 tax and benefit base.

(6) Adopt a substantially pay-as-you-go system of financing, withholding any further increases beyond the present 1½-percent tax until payments from the trust fund approach income to the fund.

(7) Encourage individual thrift and private pension programs by appropriate tax incentives, by elimination of pension programs from the area of mandatory collective bargaining, and by preventing the continuing depreciation of the dollar.

(8) Prevent taxes collected for the OASI program from being utilized for any other purpose, such as disability benefits.

(9) Reduce Federal grants-in-aid for old-age assistance (and other welfare programs) by making OASI beneficiaries ineligible for federally financed old-age assistance and by reducing Federal grants-in aid with the eventual purpose of eliminating them.

(10) Avoid any Federal program of permanent and total disability benefits.

It seems to me that one final thought is in order. Recognizing our obligation to put the OASI program on a sound basis, we must devote more attention to an even higher obligation—that of avoiding programs which would endanger the economy or which would further depreciate the dollar.

Let us make sure that we can operate a sound program of old-age and survivors' insurance—a program which includes substantially full coverage and minimum benefits corresponding to the present level—before we undertake more hazardous and uncertain programs.

That is all, Mr. Chairman.

Senator MILLIKIN. Mr. Chairman, I want to state that I take issue with the statement that the Federal Government now provides $20,000,000 a year to the States for rehabilitation services under the Vocational Rehabilitation Act.

The CHAIRMAN. Thank you very much for your appearance here, Mr. Mosher.

Mr. MOSHER. Thank you, Mr. Chairman.

The CHAIRMAN. Our next witness will be Mr. Bates. Please identify yourself for the record. We know you, anyhow, but we have to get you identified in the record. You may be seated, if you prefer.

STATEMENT OF SANFORD BATES, COMMISSIONER OF NEW JERSEY STATE DEPARTMENT OF INSTITUTIONS AND AGENCIES

Mr. BATES. Thank you, sir.

My name is Sanford Bates, and I am the commissioner of institutions and agencies for the State of New Jersey, which is in reality

the welfare department of that State, and I have the honor to appear before you representing the State of New Jersey.

I have consulted with Governor Driscoll, and I have submitted to him a draft of what I propose to say but, of course, any statements I make are my own responsibility.

The CHAIRMAN. Your full statement may appear in the record at this point, if you wish.

Mr. BATES. Thank you, sir.

(The statement is as follows:)

STATEMENT OF SANFORD BATES, COMMISSIONER OF NEW JERSEY STATE DEPARTMENT OF INSTITUTIONS AND AGENCIES

I have the honor to appear before your honorable committee in my capacity as commissioner of the department of institutions and agencies, which is in reality the Welfare Department of the State of New Jersey.

I have consulted with Gov. Alfred E. Driscoll and submitted to him a draft of what I propose to say and it has his general approval; although any statements which I make are on my own responsibility.

The State of New Jersey, which is a thickly populated and rather highly industrialized State, must of necessity take a somewhat different viewpoint than some of the States whose representatives have appeared before you. New Jersey might be referred to as a creditor State and it would be inevitable that our people would have their attention directed to the question of taxes, especially at the Federal level.

And while we as welfare administrators agree on one fundamental policy expressed by many of your witnesses that the expansion of the insurance features of the Social Security Act are long overdue, nevertheless, we deplore the continued necessity to increase and expand the relief or assistance features.

Our main thesis can be stated in a few general propositions:

(1) It is our conception that the original purpose of the social-security legislation enacted in the depth of the depression was to set up a fair permanent method of providing for the needy aged through a system which has evolved in America and typifies the spirit of American industry and independence, namely, the insurance method.

The long-continued delay in increasing the amount of withdrawals and the continued limitation of coverage of the insurance provisions has been a matter of concern not only to welfare workers but to businessmen and others who realize the tremendous necessity of maintaining in our country the system of free enterprise, which made it the great and powerful country that it is today.

The result of this delay has been to engender a belief in the minds of many of our fellow citizens that they may neglect to provide for their own future and that the Government will do it. The surest way to defeat the principal purposes of the social security legislation and perhaps insure the adoption of the socialistic pension system is to fail to expand under OASI and yet permit the relief payments to increase and accumulate.

OASI must be placed on a sound footing by (a) increasing its coverage to include not only those included in H. R. 6000 but also the farm groups and the self-employed; (b) to follow through with the program began as of January 1 to raise the amount of benefit payments upon attaining eligibility.

To the extent that H. R. 6000 tends in the direction of the above, the State of New Jersey wishes to be recorded in its favor. We strongly urge that the farm workers be included and that a plan for enrolling self-employed persons be developed.

In New Jersey we consider it a matter for congratulation that we have upward of 90,000 recipients under the OASI as compared with 24,000 enrolled under old-age assistance.

Can there be any justice in a situation such as now exists whereby the man who is thrifty and saving and provides, with the help of his employer, for his own future, receives just about half as much in benefits per month as does the man who neglects to make such provision?

(2) It follows from the above that we cannot believe that the continual broadening and expansion of the assistance and relief parts of social security, which in the beginning were recognized as temporary, is in the interest of all of our people.

The State of New Jersey believes that one of the fundamental purposes of government, as stated in the preamble to our national Constitution, is to "promote the general welfare," but we call attention to the fact that this phrase "general welfare" connotes welfare for everybody, not only in the present and the near future but in the distant future, and that it includes the welfare not only of those who cannot or do not work but those without whose effort and contribution there would be no government. It seems incredible that in the midst of an era of great prosperity and high wages there should be such a long-sustained demand for increased assistance payments.

There has been a recognized and a continuing responsibility on the part of local and State government for meeting the needs of the unfortunate—the crippled, the diseased, the insane, the dependent children and the blind, and, latterly, those helpless victims of industrial cataclysms over which they had no control.

It is one thing to recognize this obligation toward our fellow men: it is another thing to say that the Government should go in for the noncontributory payment of benefits. Most of these hazards in our modern society can be surmounted or ameliorated through the use of insurance. Sickness benefits, such as we have in New Jersey (and we are one of only four States in the country to enact this advanced legislation) workmen's compensation, insurance against accidents, Blue Cross membership, and just plain thrift and industry would do much to reduce the terrific and mounting public obligation. It does not indicate any lack of concern for the temporarily unfortunate or unemployed to say that that minimal phase of welfare can and should be left to the locality.

The statement may sound more like that coming from the chamber of commerce than from a welfare department, but if the welfare of all is our concern, we cannot but point out that we live and succeed through the operation of incentives, and if the time should ever come when the incentives are toward shiftlessness and to dependence on the Government rather than on thrift and self-support, we should indeed be well on the way toward a complete departure from our American traditions.

One cannot emphasize the rights of the needy and unfortunate except as correlative to the ability and the willingness of those more fortunately placed to meet the obligations thus entailed upon them. It seems difficult to envisage a government that can provide for the needy and unfortunate without at the same time having in mind the needs of the industrious, the thrifty, and those who hold high their personal responsibility for their fellow men.

What incentives are being provided for by the Government to a young man or woman to save, to take out insurance, or to provide for their own old age or misfortune?

Some speakers before you have emphasized the need for preventive activity in the field of dependency as it has been so successfluly practiced in the fields of disease. However, it does no good to talk about preventing dependency unless we are willing to divert a small fraction of the constantly mounting sums which we pay on account of the lack of such effort. It would seem to us to be important to clearly write into H. R. 6000 a provision setting up a "bureau of prevention" in the social security authority, which can continually confront the conditions which make for dependency in our body politic and direct their efforts toward the eradication of the industrial, social, and economic inequalities which foster dependency.

(3) With this situation obtaining in New Jersey, we cannot help but point out that there are amendments in H. R. 6000 which will intensify our difficulties.

The Governor of New Jersey has publicly stated that New Jersey will not ask for any more Federal matching; that we cannot afford it. We cannot afford it because it now costs us between 5 and 6 times as much as through the payment of Federal taxes to provide for the welfare of our own taxpayers. This makes it inevitable that New Jersey is interested in what Louisiana, Colorado, California, and the other States of the Union do.

I need only say that the average number of persons over 65 on relief in New Jersey is 6.7 percent, whereas in Louisiana it is 81.2 percent, and throughout the country it is about 25 percent, to indicate the somewhat different approach which we are obliged to make to this problem. In fact, it might well be asked of the social-security system, Can an administration which allows of such wide divergencies be accurately referred to as a system?

These divergencies will be increased if the principle of variable grants, which has been suggested in connection with social-security matchings, and which has been enacted into law with reference to other Federal welfare legislation, is adopted. The devious contrivance written into this social-security legislation

a few years ago, whereby a larger amount of contribution from the Federal Government is made in small grants than in large, however, does bring about a situation which is tantamount to a variable grant. In other words, the low-income States, where the cost of living is correspondingly lower, receive as high as 80 percent of their grant from the Federal Government, whereas the high-income States who maintain their own industrial systems of welfare, and where their citizens still practice thrift and a high degree of responsibility for the welfare of their dependent relatives, receive, at most, 50 or 55 percent, and where the grants run higher, a correspondingly lower amount.

Thus does New Jersey not only pay for 14 times as many dependent people in Louisiana as in New Jersey but contributes to the Federal Government's larger contribution than certain of the other States where the grants average below. We naturally oppose any further legislation in the direction of discrimination of this sort between the States of the Union.

(4) We wish to record our approval of that part of H. R. 6000 which proposes matching funds for the relief of the permanently disabled. In our State the term "general assistance" includes provision at the municipal level, with State subsidies where requested (1) for this group of permanently disabled, and (2) transient relief for the temporarily unemployed.

We think it is quite possible that the municipalities may adequately care for the second group, but a proper and sympathetic understanding of the needs of the chronic sick requires a far better financed program and more intelligent handling. On the whole, we are pleased that the reported bill does not include matching for general or transient assistance (in this we differ from some of our colleagues), but sets up a fourth category for the benefit of persons whose claims are equally worthy with those of the blind, the dependent children, and the indigent aged.

(5) Because it definitely affects the welfare of all of our people we cannot at this point refrain saying a word about the tax situation. The war is over and yet Federal taxes are rising. Deficit spending is being tolerated. Rumors are adrift about amendments to the Federal income-tax law at some particularly uncomfortable points. Let me only mention two:

(*a*) Those persons who are giving their lives and a large measure of liberty to the care of our unfortunate physically and mentally sick neighbors and who, like the sick people that they serve, are forced to live in close proximity to their job are, so it is rumored, to be taxed on the "value of their maintenance."

(*b*) Throughout the country child-welfare departments have been saving for future citizenship thousands of unfortunate youngsters who have been removed by court action from degrading and evil surroundings and placed with foster parents. Again rumor has it that these foster parents are now to be classed as wage earners. And although the love and devotion which they expend upon the orphans whom they shelter cannot be taxed, the mere pittance which they receive as guardian for and on behalf of the child they must share with the Government to help pay the constantly rising costs thereof.

We have just adopted our State budget in New Jersey, which represents a total expenditure, including grants to counties and municipalities, of $164,000,000. As compared with this, the citizens of New Jersey will this year pay taxes to the Federal Government of $1,375,000,000. According to the figures, our average income is higher than some other States and yet it is not the highest, and it surely bears no such relation to other States as the relationship between State and Federal taxation.

Much has been said, and of a somewhat patronizing nature, about the help which the Federal Government has been to the States through the so-called grants-in-aid, which apply to highways, health work, school lunches, rehabilitation, hospitals, and so forth. But, after all, the biggest "grants-in-aid" is that which the States, or the taxpayers in the State, turn over to the Federal Government.

(6) We are unable to approve that amendment in H. R. 6000 which provides for matching for the expense of persons in public and private institutions, for the reason that this will open a new door of Federal expenditure; and, while it may contribute to the temporary advantage of New Jersey, in the long run it will add to the tax bills paid by New Jersey citizens.

Implicit in the provisions of the social-security legislation was obviously a resolution on the part of its authors, which resolution we heartily approve, to get people out of institutions and away from the abnormal influence of the orphanage and the poor farm, and the categorical assistances were undoubtedly to be regarded as in effect a premium on keeping these needy individuals in

their own homes and to make such possible. In fact, the laws of New Jersey specifically limit the payment of old-age assistance to those in their own or some family home. We fear the consequences of a country-wide reversal of this process. If the incentive is removed to obtain foster-home placements for either the aged or our dependent children and it becomes progressively easier to revert to the old idea of almshouse care, even the carefully worded safeguards in the bill may not be able to counteract this tendency.

In pursuance of the policy of our Governor that New Jersey will not ask for any new sources of Federal revenue, we cannot go along with many of our colleagues on this issue.

(7) We are strongly in favor of the amendments with reference to direct payment of medical care.

(8) A provision for a more careful and inclusive definition as to the persons to whom payments may be made in the case of aid to dependent children we can likewise agree on.

(9) We believe that the provision in H. R. 6000, which seems to discriminate in favor of optometrists against the ophthalmologists, should receive careful attention of your committee.

To summarize, so far as New Jersey is concerned, so important do we regard the expansion and implementation of the OASI part of the act that we would put up with whatever deprivation or loss of revenue that might come from your failure to enact any of the amendments that have to do with assistance.

In closing, I can only say that we believe the Government has come to a decisive turning point in this matter of welfare. We must all resolve to follow the course which will encourage self-help and self-reliance, and, without turning our backs upon the unfortunate of this generation who merit our sympathetic support, extend to those hard-working, industrious, long-suffering individuals in our community who make the sacrifices, which permit assistance payments to be made, the assurance that the Government does not forget them. Shall we not thus be more likely to "promote the general welfare" prophesied by our Constitution?

Mr. BATES. Mr. Chairman and gentlemen of the committee, the State of New Jersey, which is a thickly populated and rather highly industrialized State, must of necessity take a somewhat different viewpoint than some of the States whose representatives have appeared before you. New Jersey might be referred to as a creditor State, and it would be inevitable that our people would have their attention directed to the question of taxes, especially at the Federal level.

While we as welfare administrators agree on one fundamental policy expressed by many of your witnesses that the expansion of the insurance features of the Social Security Act are long overdue, nevertheless we deplore the continued necessity to increase and expand the relief or assistance features. In fact, I am a little disconcerted to the degree that I agree with the representative of the NAM with many of the things they said this morning.

The CHAIRMAN. Well, they might be right.

Mr. BATES. I think they were right on a good many things here this morning.

The CHAIRMAN. I mean, almost any segment of our economy and our society can, of course, have very helpful views on this broad question.

Mr. BATES. Our main thesis can be stated in a few general propositions:

(1) It is our contention that the original purpose of the social-security legislation enacted in the depths of the depression was to set up a fair permanent method of providing for the needy aged through a system which has evolved in America and typifies the spirit of American industry and independence; namely, the insurance method.

The long-continued delay in increasing the amount of withdrawals—for 13 years we have postponed the taking effect of these grade changes—and the continued limitation of coverage of the insurance provisions, has been a matter of concern, not only to welfare workers but to businessmen and others, who realize the tremendous necessity of maintaining in our country the system of free enterprise, which made it the great and powerful country that it is today.

The result of this delay has been to engender a belief in the minds of many of our fellow citizens that they may neglect to provide for their own future and that the Government will do it. The surest way to defeat the principal purposes of the social-security legislation and perhaps insure the adoption of the socialistic pension system is to forbear to expand under OASI and yet permit the relief payments to increase and accumulate.

OASI must be placed on a sound footing by (*a*) increasing its coverage to embrace not only those included in H. R. 6000 but also the farm groups and the self-employed; (*b*) to follow through with the program begun as of January 1, to raise the amount of benefit payments due recipients upon attaining eligibility.

I would like to make one interpolation here. As a Government employee, and speaking for the 6,000 employees in my own department, I very much hope that some provision will be made permitting an option to stay out of OASI to State employees that have a sound, adequate retirement system, such as we have in New Jersey.

I think you heard my colleague, Mr. Wood, some weeks ago, who voiced that opinion before you.

To the extent that H. R. 6000 tends in the direction of the above, the State of New Jersey wishes to be recorded in its favor.

We strongly urge that the farm worker be included, and that a plan for enrolling self-employed persons will be developed.

In New Jersey we consider it a matter for congratulation that we have upward of 90,000 recipients under the OASI as compared with 24,000 enrolled under old-age assistance.

We are one of the six States in the country where the number of persons under OASI exceeds those receiving relief.

I would like, if I might at this point, interpolate a comment on what Mr. Mosher has said in answer to a question by Senator Millikin.

I believe, as a welfare official, that there are values in the contributory system far beyond the question of financing. I come from New England, Senator, where we have some pretty stout ideas about thrift and self-reliance—at least we used to—and I think we are all looking forward to the time when a man, having worked his stint and contributed to his old-age allowance, can walk up to a Government officer with self-respect and say: "I will now take back what I have contributed." He has a right to that.

I sometimes argue with my friends as to what they mean by "the right to assistance". What gives an individual the right to assistance? True, he has the right to apply for assistance and we have the obligation to assist him, but when we speak of rights and duties I get a little bit confused as to what we mean by the right to be taken care of. That right would be an empty one if it was not matched on the other side by somebody's obligation to do it.

I am no economist, and I cannot argue the matter of how OASI should be financed. Personally, I do not care much what the Govern-

ment does with the money I contribute under OASI. If we can get i back from anybody, we can get it back when it is due us from th Government. I do feel that there is a psychological value in expandin this particular type, and I do not think it vitiates this principle, Senato Millikin, whether it is universal or not. If everybody in the countr had life insurance, the value of life insurance would be just as grea

Senator MILLIKIN. There is this difference. In the end there i first, an employer contribution which may be theoretical. If th employer did not directly contribute, he would have to pay the bil anyhow, as a matter of bargaining. But there is an employer contribu tion which is available to those who are in the system, which is no available for other methods of insuring ones future—those who ar not in the system. Then there is some contemplation under som theories that under any system you will ultimately have a genera Federal contribution to the system, which would not be available t those who are not in it. So, I am simply raising the point that ther might be some charges of discrimination and favoritism if you do no make the coverage as wide as possible.

Mr. BATES. I certainly think you should. Then I think again, witl reference to the method of withholding, it makes the discharge o that obligation very much easier. I do not know where we woul all be now if we had to pay Federal income taxes in a lump sum. I comes easier to pay the money if we never get it. It comes out i the same way in the matter of OASI. If it is taken out of you pay, thereby it does not seem to be as bad as it really is.

Can there be any justice in a situation such as now exists, whereb the man who is thrifty and saving and provides, with the help of hi employer, for his own future, receives just about half as much i benefits per month as does the man who neglects to make such provi sion? You have been told the average old-age assistance grant pe man is between $14 and $15; and it averages about $25 in OASI.

(2) Now, to us, it seems to follow from the above that we canno believe that the continual broadening and expansion of the assistanc or relief parts of social security, which in the beginning were recog nized as temporary, is in the interests of all of our people.

The State of New Jersey, I think, believes that one of the fundu mental purposes of government, as stated in the preamble to our Na tional Constitution, is to "promote the general welfare," but I cal attention to the fact that this phrase "general welfare" connotes wel fare for everybody, not only in the present and the near future bu in the distant future, and that it includes the welfare not only of thos who cannot or do not work but those without whose effort and con tribution there would be no government.

It seems incredible that in the midst of an era of great prosperit and high wages there should be such a long-sustained demand for in creased assistance payments.

There has been a recognized and a continuing responsibility on th part of local and State governments for meeting the needs of the un fortunate; the crippled, the diseased, the insane, the dependent chil dren and the blind, and, latterly those helpless victims of industria cataclysms over which they had no control.

The Federal Government, of course, came to the rescue when in solvency threatened our local units, and they could not discharge thes obligations.

It is one thing for us to recognize this obligation toward our fellow men; it is another thing to say that the Government should go in for the noncontributory payment of benefits. Most of these hazards in our modern society can be surmounted or ameliorated through the use of insurance. Sickness benefits, such as we have in New Jersey—and we are one of only four States in the country to enact this advanced legislation, unless there are some new ones lately—workmen's compensation, insurance against accidents, Blue Cross membership, insistence on the responsibility of relations and the disclosure of assets, and just plain thrift and industry would do much to reduce the terrific and mounting public obligations. It does not indicate any lack of concern for the temporarily unfortunate or unemployed to say that that minimal or residual phase of welfare can and should be left to the locality.

I admit this statement may sound more like that coming from the chamber of commerce than from a welfare department; but, if the welfare of all is our concern, we cannot but point out that we live and succeed through the operation of incentives, and if the time should ever come when the incentives are toward shiftlessness and toward dependence on the Government rather than on thrift and self-support we should indeed be well on the way toward a complete departure from our American traditions.

It seems difficult to envisage a government that will provide for the needy and unfortunate without at the same time having regard for the industrious, the thrifty, and those who hold high their personal responsibility for their fellow men.

What incentives are being provided for by the Government to the young man or woman to save, to take out insurance or to provide for their own old age or misfortune?

I spoke to a Congressman in a rather jocose vein once, and asked him what kind of bonus Congress was giving to men who did provide for their future and who did save. His reply was to ask me if I really meant that. What incentive is there for people to provide for their old age or misfortune?

Some speakers before you have emphasized the need for preventive activity in the field of dependency as it has been so successfully practiced in the fields of disease. We would not be so greatly disturbed about the increasing old-age problem, Mr. Chairman, if it had not been for the tremendous progress in the field of disease prevention. We have kept people alive 11 years longer in the last two generations, and, having kept them alive, we have now many more to take care of.

Senator MARTIN. This is very interesting. How has that largely been accomplished?

Mr. BATES. I think by the conquest of acute diseases, by the use of these new miraculous drugs, by insistence upon sanitary measures——

Senator MARTIN. Has it been pretty largely done by the incentive of the individual? Has it been done by the hard work in the laboratories and by individuals? It has been done by the hard work of physicians and surgeons who desired to succeed in their various professions. Has it not been largely done by that way?

Mr. BATES. I would say to some extent. But primarily I would say that it was done by intelligent conscious leadership. We did not stop drinking out of the old tin dipper because we thought it was wrong.

We had a picture of germs in our mind, and people dying, and therefore, we used the paper cup. So I think the greatest influence for the prolongation of life has come from preventive measures, that is, preventive health measures.

Senator MARTIN. What I am getting at is this: Has that not been largely done through the private-enterprise system, whereby the individual wanted to work out something, and not particularly for profit?

You take a man like Mr. Acheson, while he succeeded well financially, nevertheless that never seemed to be his incentive.

Mr. BATES. That is right.

Senator MARTIN. Of course, I am very much for preventive medicine and precautions, but I am just wondering if it has not been largely done as a result of the work of the individual rather than governmental agencies?

Mr. BATES. I think that is true. The individual and the private organizations and the foundations-supported organizations, and so forth.

However, it does no good to talk about preventing dependency unless we are willing to divert a small fraction of the constantly mounting sums which we pay on account of the lack of such effort. It would seem to us to be important to clearly write into H. R. 6000 a provision setting up a Bureau of Prevention in the Social Security Authority, which can continually confront the conditions which make for dependency in our body politic, and direct their efforts toward the eradication of the industrial, social, and economic inequalities which foster dependency.

(3) With this situation obtaining in New Jersey, we cannot help but point out that there are amendments in H. R. 6000 which will intensify our difficulties.

The Governor of New Jersey has stated that New Jersey will not ask for any more Federal matching; that we cannot affoad it.

Senator MARTIN. I think it might be well to insert here, Mr. Chairman, that the Governor in New Jersey has been one of the foremost men in our country fighting grants from the Federal Government because in many cases it is putting obligations on the States that they canot really afford.

I was going to ask the preceding witnesses—but I was called away to the telephone—about this matter of allocation of taxes to the three levels of Government. Governor Driscoll made an address, and I have quoted from it, in which he gave the high cost of collecting of Federal taxes, and then the administration of them going back to the States. It is just too high a brokerage fee. I forget now what it is. It is an enormous percentage and, of course, that costs the taxpayer of the United States, because all our taxes come out of the same pocket.

Mr. BATES. We cannot afford it because we have figured—and I do not say that New Jersey is getting ready to secede—that if we were off by ourselves, it would cost us about one-fifth to maintain our present welfare systems in terms of tax money of what it costs us today.

Senator MARTIN. Mr. Chairman, I might interject this: As Governor of Pennsylvania, I am not so sure but I would have refused

some of the Federal aid, because I could have done it much more economically if it had not looked as if it was done for political purposes—and I wanted to make the headlines—because I was of the opposite political party. But we went into the Federal supervision, the very expensive Federal supervision, although we could probably have done a lot of it cheaper without the Federal help. I have talked to Governor Driscoll, and I think he has a great deal of the same opinion.

Mr. BATES. I suppose it does not do us much good to talk about it because whether we take the Federal money or not, we have to pay the taxes.

The CHAIRMAN. Yes.

Mr. BATES. It makes it, however, inevitable that we in New Jersey are interested in the national scene and what Louisiana, Colorado, California, and the other States of the Union do.

I need only say that the average number of persons over 65 on relief in New Jersey is 6.7 percent, whereas in Louisiana it is 81.2 percent, and throughout the country it is about 25 percent, to indicate the somewhat different approach which we are obliged to make to this problem.

I do not know what the social-security authority regards as its function in the problem, but it does seem as though there was something the matter with the system whereby one State can draw Federal money to provide for 81 percent of its aged cases and another State can get along with 6.7 percent.

Senator MARTIN. I would like to ask this: Suppose all States could be kept down to 6.7 percent, as you have in New Jersey, what would that save the Federal Government? Have you figures on that?

Mr. BATES. I think if that impossible situation could be brought about, the average rate being about 25 percent, if they were all brought down to 6 percent it would cost about one-quarter of what it cost now.

The CHAIRMAN. That comes about, Mr. Bates, as you know, from the basic fact that the population of many States is largely rural. They are not covered by social security. They are not under the old-age and survivors insurance. The higher percentage of the rural population naturally would find whatever relief it did get through the aid and assistance programs.

Mr. BATES. I realize that, Mr. Chairman.

The CHAIRMAN. It also comes about from the further fact that we have made it possible for a State to spend less money and get more from the Federal Treasury under the Old Age Assistance Act than the State could, under the old-age and survivors insurance.

Mr. BATES. I have no quarrel with that policy, except to point it out and to interpret why the government of New Jersey feels the way we do.

The CHAIRMAN. I can see that; yes.

Mr. BATES. I then point out that these divergencies will be increased if the principle of variable grants, which has been suggested in connection with social-security matchings, and which has been enacted into law with reference to other Federal legislation, is adopted.

A substitute for the grants-in-aid has already been written into social-security legislation whereby in effect the lower the grant, the higher the percentage that is given. There is not only a stimulation to keep the amounts down, but it fosters a lack of responsibility in the

State administering a grant which may be as high as 80 percen Federal contribution—and I suspect possibly 100 percent of th grant—whereas, in the higher-income States, so-called, which are in variably not only higher-income States, but higher-cost-of-livin States, the percentage of grant is less.

Again I am not quarreling with that situation, but I merely poin out that it leaves us in the position where we are willing to tolerat the situation as it is, but we do not want to get any worse.

As the man said, speaking of death and taxes, "One thing abou death, it cannot get any worse."

(4) I would like to record our approval of that part of H. R. 600 which proposes matching funds for the relief of the permanently dis abled. In our State the term "general assistance" includes provisio at the municipal level, with State subsidies where requested (1) fo this group of permanently disabled, and (2) transient relief for th temporarily unemployed, who do not come under unemployment com pensation.

We think it is quite possible that the municipalities may adequatel care for the second group, but a proper and sympathetic understand ing of the needs of the chronic sick requires a far better financin program and more intelligent handling than can be given to it in th average small town or village. On the whole, we are pleased that th reported bill does not include matching for general or transient assist ance—and in this we differ from some of our colleagues—but sets u a fourth category for the benefit of persons whose claims are equall worthy with those of the blind, the dependent children, and the indi gent aged.

(5) Next, because it definitely affects the welfare of all of our peopl we cannot at this point refrain saying another word about the tax sit uation.

The war is over, and yet Federal taxes are rising. Deficit spend ing is being tolerated; rumors are adrift about amendments to th Federal income-tax law at some particularly uncomfortable point Although it may be of collateral interest, may I point out, Mr. Chair man, two instances of this, which are especially applicable to thos of us in the welfare administration?

(*a*) Those persons who are giving their lives, and a large measure o liberty to the care of our unfortunate physically and mentally sic neighbors, and who, like the sick people that they serve, are forced t live in institutions so that they may be in close proximity to their jo are, so it is rumored, to be taxed on the "value of their maintenance. That is, they are to be taxed for making that sacrifice in our insan hospitals and other institutions.

(*b*) Another example: Throughout the country child-welfare de partments have been saving for future citizenship thousands of un fortunate youngsters who have been removed by court action fro degrading and evil surroundings, and placed with foster parent Again rumor has it that these foster parents are now to be classed a wage earners. And, although the love and devotion which they ex pend on the orphans whom they shelter cannot be taxed, the mer pittance which they receive as guardians for and on behalf of th child they must share with the Government to help pay the constantl rising costs thereof.

I cite these only to show that when the only way out is more taxes, things like this are inevitable.

We have just adopted our State budget in New Jersey, which represents a total expenditure, including grants to counties and municipalities, of $164,000,000. That is $35 per inhabitant.

Senator MARTIN. That is per annum?

Mr. BATES. Yes, sir. We have the annual system. That is $35 per inhabitant, as against $60 per inhabitant in New York. Yours in Pennsylvania is almost identical with ours. I think it is about $34 per inhabitant.

As compared with this, the citizens of New Jersey will this year pay taxes to the Federal Government of $1,375,000,000 or $8.50 to the Federal Government for every $1 for the support of our own State government.

Much has been said about the help which the Federal Government has been to the States through the so-called grants-in-aid, as was stated here a few moments ago. That has become inevitable, and with the Government's superior taxing power, which not only takes our dollars but takes from us certain tax powers or functions which we might otherwise exercise——

Senator MILLIKIN. It also takes away your liberties.

Mr. BATES. But, after all, the biggest grant-in-aid is that which the States, or the taxpayers in the State, turn over to the Federal Government.

(6) Next—and I am nearly through, Mr. Chairman—we are unable to approve that amendment in H. R. 6000 which provides for matching for the expense of persons in public and private institutions for the reason that this will open a new door of Federal expenditure—and while it may contribute to the temporary advantage of New Jersey, in the long run it will add to the tax bills paid by New Jersey citizens.

It seems to me that implicit in the provisions of the social-security legislation was obviously a resolution on the part of its authors, which resolution we heartily approve, to get people out of institutions and away from the abnormal influence of the orphanage and the poor farm, and the categorical assistances were undoubtedly to be regarded as in effect a premium on keeping these needy individuals in their own homes and to make such possible. In fact, the laws of New Jersey specifically limit the payment of old-age assistance to those in their own or some family home. And this may be one reason why we are down to 6.7 percent. We fear the consequences of a country-wide reversal of this process. If the incentive is removed to obtain foster-home placements for either the aged or dependent children and it becomes progressively easier to revert to the old idea of almshouse care, even the carefully worded safeguards in the bill may not be able to counteract this tendency.

So, in pursuance of the policy of our Governor, to which I have adverted, that New Jersey will not ask for any new sources of Federal revenue, we cannot go along with many of our colleagues on this issue.

(7) We are strongly in favor of the amendments with reference to direct payment of medical care. It is possible with us that may be arranged for if the matching can be done on the basis of averaging grants, but in any event, we think it is entirely necessary to permit us to pay directly for this important service.

(8) A provision for a more careful and inclusive definition as to the persons to whom payments may be made in the case of aid to dependent children we can likewise agree on.

Senator MILLIKIN. How would you define that? Can you elaborate on that just a little bit?

Mr. BATES. Well, with us, of course, the definition is limited. I do not know that I can give you all the relationships, but it is limited to a child whose father is either dead or in prison or has deserted. Now, we find instance of deserving cases of dependents and deserted children where that more or less restrictive definition would deprive them of aid, and we would like to see that broadened. I would leave it to experts, like Mr. Fauri, to provide that language. I just want to record us in favor of the belief that certain of our children are being neglected because of the restrictive character of that definition.

We believe that the provision in H. R. 6000, which seems to discriminate in favor of optometrists, should receive the careful attention of your committee.

With your permission, Mr. Chairman, I would like to file a very short letter from the executive director of our commission for the blind on this subject.

The CHAIRMAN. Very well. It may be inserted in the record at this point.

(The letter is as follows:)

STATE OF NEW JERSEY, COMMISSION FOR THE BLIND,
Newark, January 27, 1950.

Hon. SANFORD BATES,
Commissioner, Department Institutions and Agencies,
Trenton, N. J.

DEAR COMMISSIONER BATES: On September 22, 1949, I wrote you concerning certain clauses in H. R. 6000 which I feel very strongly should be considered for elimination if and when the bill reaches the Senate. These two items had reference to the provision for legalizing eye examinations of applicants for assistance by optometrists and the definition of blindness for total disability which differed from that used to determine eligibility for financial assistance.

As you know, H. R. 6000 is now before the Senate Finance Committee. I feel that we should make every possible representation to that committee urging the changes in question. I trust that you may be in agreement with this and that you may take such steps as to make our influence in this connection as effective as possible.

Thanking you for your consideration in the foregoing, I remain

Very truly yours,

COMMISSION FOR THE BLIND,
GEORGE F. MYER, *Executive Director.*

Mr. BATES. To summarize, so far as New Jersey is concerned, so important do we regard the expansion and implementation of the OASI part of the act that we would put up with whatever deprivation or loss of revenue that might come from your failure to enact any of the amendments that have to do with assistance.

I join with others in believing that we are coming to a crisis in this matter of welfare. While we should not turn our backs upon the unfortunate of this generation who merit our support, we must resolve to follow the course which will encourage self-help and self-reliance and the reduction of dependency through preventive measures.

Thank you very much.

The CHAIRMAN. Thank you very much. We are very glad to have your appearance.

Mr. BATES. Thank you, Mr. Chairman.

The CHAIRMAN. The next witness is Mr. Lewis H. Fisher. You may have a seat if you wish, sir.

STATEMENT OF LEWIS H. FISHER, FIRST VICE PRESIDENT AND GENERAL COUNSEL OF THE NATIONAL ASSOCIATION OF RETIRED CIVIL EMPLOYEES

Mr. FISHER. Thank you, Mr. Chairman.

Mr. Chairman and members of the committee, my name is Lewis H. Fisher, and I appear here as the representative of the National Association of Retired Civil Employees, whose office is 1246 Twentieth Street NW., Washington, D. C.

The association was originally organized on February 19, 1921 (shortly after the passage of the original Civil Service Retirement Act), but became incorporated on February 27, 1947, under the laws of the District of Columbia as a nonprofit welfare corporation, and at the present time there is a membership of over 50,000 individuals. Nearly the entire membership is composed of Federal civil annuitants, but there are a few still in active service who compose the associate membership of our organization.

Objectives: Among the general objectives of the National Association of Retired Civil Employees are the following:

To sponsor and support legislation, rules, and regulations beneficial to annuitants and potential annuitants of the civilian public service.

To oppose legislation, rules, and regulations inimical to the interests of annuitants and potential annuitants.

To promote the general welfare of the annuitants and potential annuitants of the civilian public service.

To serve and advise retired officers and employees with respect to their rights under civil retirement law.

To cooperate with other organizations and associations in furtherance of the general objectives of this corporation.

We wish to emphasize our objection to the placing of public employees, Federal, State, county, and municipal, within the coverage of the Social Security Act, where such employes have their own retirement systems.

Our organization is cooperating with the National Conference on Public Employee Retirement Systems, the Joint Committee of Public Employee Retirement Systems, the National Education Association, as well as with policemen, firemen, and other public-employee groups in opposition to social-security coverage for public employees. Generally, we concur in the recommendations made by the representatives of the foregoing groups before this committee during the week of February 7 to 10, 1950.

Social security not needed for Federal employees: Simply stated, our objection is based on the fact that the public retirement systems are generally superior to the benefits of the purely social system. As the greater includes the less, the civil-service retirement system, to which most of our members belong, is amply sufficient for superannuation and disability benefits without the floor of protection so often asserted as the basis of social-security benefits.

As a matter of fact, the Civil Service Retirement Act is adequate both in terms of coverage and benefits to protect all retirement interests of Federal employees. That act grants retirement benefits to all officers and employees of the United States and District of Columbia Governments who are otherwise without retirement coverage. The text of this law on general retirement coverage begins:

> This Act shall apply to all officers and employees in or under the Executive, Judicial, and Legislative Branches of the United States Government and all officers and employees of the Municipal Government of the District of Columbia, except elective officers in the Executive Branch of the Government * * * (5 U. S. Code, sec. 693).

Senator MILLIKIN. How much does a Federal employee contribute toward the Federal employee annuity system?

Mr. FISHER. At the present time 6 percent of basic pay.

As Congress has already provided an adequate retirement system for all officers and employees "in or under" the United States Government, there seems no valid reason for imposing another system of record keeping, and so forth, for the same officers and employees.

Voluntary compacts: We join wholeheartedly in the recommendations previously made before this committee by the large numbers and groups whose representatives have asked for an amendment of section 218 (d), as follows:

> Strike out section 218 (d) (beginning with line 10, p. 82, to and including line 17, p. 83) and substitute therefor the following paragraph:
> (7) Such agreement shall exclude all public employees in positions covered by a retirement system, as previously defined in subsection (b) (4) of this section.

Accordingly, we favor the bills embodying the proposed amendment already introduced in the Senate to carry out the above recommendations.

Civil Service Commission comment: As I was with the Civil Service Commission for a number of years, I would like to quote from the Fifty-sixth Annual Report of the Civil Service Commission.

On pages 53 and 54 of the Fifty-sixth Annual Report of the Civil Service Commission, for the year ended June 30, 1939, the Commission renews its recommendations for the vesting of annuity benefits after at least 5 years of service for the Government and points out that under such a provision any former employee would have available a vested right to an old-age benefit based on service rendered, in addition to any benefit to which he might be entitled under the Social Security Act by reason of industrial employment. The Commission's report on this subject concludes:

> He would, therefore, have credit toward retirement security for his complete working period while at the same time the proposed method would avoid the application of excessive administrative costs involved if credits for service were made interchangeable between the Government and industrial retirement systems. The Commission cannot state too emphatically that the two systems should be kept separate.

Conclusions: It is a fact that public employees now contribute their share of the taxes used to pay some of the benefits of the social-security system, but there appears to be no question but that they would much rather continue the present practice than run the risk of having their benefits reduced to the industrial system level.

And there are practical reasons why Government employees should not be placed under the social-security system. In the first place it

would reduce the present level of benefits for public employees to that of the social-security system, or raise a great clamor to increase the industry benefit level to that of Government benefits.

Therefore, the real issue is why consider a lower benefit retirement for public employees when the present systems of retirement adequately care for such employees?

We greatly fear that if the social-security camel gets his nose in the Government employee tent, it will not be long before the whole body of the Social Security Act will be forced on the entire Government service.

Consequently, we urge that if temporaries and other presently exempted Federal employees are to be given retirement benefits they should be granted under the better benefit plan of the Civil Service Retirement Act as now written and not under the Social Security Act. In other words, why do an unnecessary thing?

The CHAIRMAN. Sir, we thank you very much for your appearance.

Mr. FISHER. Thank you, Mr. Chairman, and gentlemen of the committee.

The CHAIRMAN. Our next witness will be Mr. Garey, civil-service counsel of the American Federation of State, County, and Municipal Employees.

STATEMENT OF A. E. GAREY, CIVIL-SERVICE COUNSEL OF THE AMERICAN FEDERATION OF STATE, COUNTY, AND MUNICIPAL EMPLOYEES, MADISON, WIS.

Mr. GAREY. Mr. Chairman and gentlemen of the committee, my name is A. E. Garey, and, as you have stated, I am the civil-service counsel of the American Federation of State, County, and Municipal Employees, which is an affiliate of the American Federation of Labor.

My appearance here is at the request of the American Federation of Labor, because we, in our union, represent the States and the counties and municipalities, so far as public employees are concerned, exclusive, however, of teachers and fire fighters.

We agree, of course, with the position taken by the Federation of Labor in its appearance made here by President Green and Mr. Cruikshank, on March 1; but, because of our peculiar position in the States and counties and municipalities, this paper, which I hope each member has a copy of, is confined to a discussion of the extension of old-age and survivors insurance benefits to the public employees in the States and counties and municipalities, whether or not they are covered by existing retirement systems.

There has been a great deal of propaganda spread about the country against this extension of which we are talking and which we favor. We believe that the campaign has been engineered largely by the administrators of existing retirement systems, not all of them by any means, but by a few of them, and by some others. We think it is irresponsible, and we believe it is founded on the theory that if you frighten the people you can get them to besiege their Senators and their Congressmen in large numbers.

Because of my position, it has been necessary for me to do a great deal of work, a lifetime's work, in civil-service and retirement systems. As an attorney, I have had to draft many of these acts, and I think

I speak with some acquaintance with them when I say without condemning them that we must keep in mind that the State-wide systems, whether for State employees or for State and county and municipal employees, are investment systems, if they are good ones. And, because of the narrow base, they cannot do the things that are provided in social security. In other words, persons under those systems in the main must earn first what they can get out of them. What does that mean? It means, as you will see from my paper here, that it takes long years of service before members can get those benefits about which the committee must have heard a great deal.

So, I take the time for just a moment, without reading my paper, to call your attention to the inadequacies of those systems. On page 3, I touch upon the death benefits. What are the death benefits under most of the systems, exclusive of the systems for the uniformed forces? Fifty-three percent of all of them return the contributions made by the deceased with interest, and that is all. Another large percentage of them return those contributions without interest. A smaller percentage of them have the provision that the contributions shall be returned, or that there shall be a grant to the widow or dependents of $500, whichever is the greater. Only 8.11 percent of them contain provisions for some kind of insurance benefits to the dependents of the deceased.

Another great weakness, of course, of any of the local systems, or of nearly all of them, is that there is no means of transferring credits. A person under one system may have to leave that system, but he or she cannot transfer credits. Hence, without the over-all coverage of social security, that person has lost the security that he or she has earned up to such time.

Much has been said in these hearings about the fine benefits, the rich benefits, that are earnable under these systems, but little has been said about the fact that most of the employees never work long enough under these various systems to earn those benefits.

In a report by the Legislature of Kentucky, made in 1949, it is shown that the average service period of all persons in the Kentucky service working for $200 or less per month is but 5 years. The inadequacies there, or the rapid turn-over indicated in that State, are matched, I believe—and I am pretty well acquainted with the States—in all of the States which do not have civil-service systems. In the States that do have civil-service systems the tenure is a little longer. But I will show you in a moment how inadequate the tenure is even in other States. But, first, I want to touch on another weakness shown by an investigating committee of the Legislature of Illinois. That report, too, was rendered last fall.

Studying the systems in the State of Illinois, the report was made that, as of that date, those systems, so far as the contributions by the employers were concerned, were $272,000,000 deficient. In other words, if you are talking about an actuarial system and fund building—and that is the only system we can use on the State level and the lower units—you have got to build and maintain funds. Yet, in that rich State they are short now, according to the legislative committee, $272,000,000.

Another weakness which, to some extent is a weakness in social security itself—because under it it takes 5 years to earn coverage sufficient to acquire benefits in case of total disability incurred not

in line of duty—is that in most of the State systems it takes 10 years as a minimum to earn protection; 20 years in the State of Virginia, and Pennsylvania has no provisions for that kind of disability, which is true also of several other States.

So with respect to all these large numbers of people working in these systems, if they happen to be injured not in line of duty, they get nothing except probably the return of their contributions.

If you have time to turn to pages 5, 6, and 7, and then to the summary on page 9 of my report, you will see the results which we have obtained from a questionnaire which we developed and which we used within the past 6 weeks. We got responses from 35 of the States and State systems. You will be surprised, I think, if you will turn to page 5 and take the State of Alabama, a very fine retirement system. You notice there that of the persons retired, 51 in the past 5 years—it is a new program—that 31 draw between $2.92 and $25 a month. Of the remaining 20 persons, 14 receive allowances of $26 to $50, and above that level there are only 6.

Let us look at a larger State system. Take Louisiana for instance. The people there have a very liberal State system. You will notice that of those drawing $25 or less per month, there were 25. Of those drawing between $26 and $50, there were 116.

Now, let us turn to the State of North Carolina. North Carolina has a new system. Sixty-four persons were retired and 30 of the 64 draw $25 a month or less, and 20 additional ones draw only between $26 and $50 a month.

Turn now to the State of Illinois—both systems are good. In the municipal system of the State of Illinois, see page 5, during the past 5 years there were 850 people retired, and 324 of those draw from $10 to $25 a month as a total; 260 draw from $26 to $50 a month.

We shall have to skip most of the States. Let's refer to just one more, the State of Wisconsin. One thousand two hundred and twenty-four people have been retired during the past 5 years; 363 of them have been retired at $25 or less and 394 at $26 to $50 per month.

Without reading more of these data, if you will turn to page 9 you will find the summary. The median point of all of those persons that have been retired during the past 5 years under these State-wide State and municipal systems is $46.43. The average for all of the groups is but $50.05. Look at the next figure—22 percent of all of the retirants in the past 5 years draw but $25 per month.

Senator MARTIN. Does that include public school teachers?

Mr. GAREY. No.

Senator MARTIN. It does not?

Mr. GAREY. No, sir. Unless, Senator, they happen to be included in the State-wide systems; there are some systems that do include them. We tried to get an answer out of Ohio, and my friend, the administrator there, who has appeared before this committee on the other side, said that he was too busy to get me the facts from his State. There are two or three other States that have taken such position. But by and large the States responded very nicely to our questionnaire.

I do not want to take your time to remind you of the type of campaign that has been carried on and of the suggestions which have been made obviously to make extension impossible, but I would like to point out that one of those who made suggestions, a very able actuary, said

that if they—the suggestions—are adopted they will be equivalent to total exclusion.

We take the position, and we represent 100,000 dues-paying people who are interested enough in what we are doing to continue their memberships—heavy memberships in the States of Pennsylvania, Colorado, and Georgia, among others—that if the covered members in a State system feel unsafe because the conditions precedent to acceptance by a State now provided in H. R. 6000 are inadequate, resort should be made by such persons to their State legislatures which will have to act anyway in every instance before the OASI provisions can become effective. Our position is that the Federal Government should not place its requirements so high that it will shut out the covered employees as a class from accepting the benefits of OASI. And you all know that there is a not a single system of covered employees in this country that could automatically come under this Federal plan. You all know that since those acts stem from the legislature that the people back home will have to go to their legislatures to obtain acts to provide for the vote that we hear so much about, to provide money for it, and to take other necessary steps. We know, too, that if a legislature takes no action the OASI features cannot become effective in such States. So why draw the strings so tight on the Federal level that the States—and I think they are sovereign States—cannot exercise reasonable authority to guard their own people. Surely, the State legislatures are closer to the people than the Congress can be.

One of the so-called suggestions made to prevent acceptance by the States is that the two-thirds vote requirement in H. R. 6000 should be stepped up to become a requirement that two-thirds of all of those eligible must vote. In other words, those that do not vote would be counted against the proposition. Senators, I submit that such goal cannot be achieved in a democratic country. It seems to take a foreign country to get out 99.7 of the vote. We cannot do it here. Rarely could we hope to get out more than a majority vote. We wish it were a majority requirement, and if the legislatures of the States wanted to make it three-fourths or five-fifths, let the legislatures do it. If a legislature provided for a study period of a year, let the legislature do it. Whatever the legislature wants to add in addition to what you put in here, for goodness sakes, let the legislature do that thing.

If those people with their campaign—which as I have said is unfair and a scare campaign—want to continue the campaign on the State level, very well. Many of our own members have been frightened by such campaign talk as this: "If the social security becomes available, our system is jeopardized immediately." Some of them go home crying, thinking they have lost everything they have gained under their own systems. Anybody who will sit down with them for 5 minutes can point out all of the safeguards and show them that they cannot by acceptance lose anything. We can prove, and have proved time after time in this campaign, that there is not a system in this country that would not be benefited by integration. If social security were integrated with any system, such system would be improved. There would be no deterioration; there would be a stepping up of the benefits and allowances and protection all along the line.

In conference last night and this morning with Mr. Cruikshank, whom you all know, we have agreed as representatives of the American Federation of Labor to submit another amendment. Surely, gentlemen, if all the protection that you have in the bill now cannot stop these people—the opposition—and if you feel that the hue and cry they have set up will not be abated by a little time and calm judgment after the bill becomes law, and if you want to go still further without taking out democratic processes that we think ought to be kept in the bill, and without taking away from the legislature any more of its powers, then we suggest this amendment. It is this:

On page 83, line 2, strike out the period and insert a comma, and add the following:

and (D) the benefit rights and protection afforded any coverage group as defined in section (b) (5) and those individuals who at the time the referendum was taken, were receiving periodic benefits under a retirement system covering such group will not be reduced or impaired as a result of the agreement or as a result of legislative enactment in anticipation of the agreement, and (E) the benefit rights and protection afforded under the terms of such agreement separately or in combination with those provided under the retirement system shall be for all individuals who may be thereafter employed in positions covered by such retirement system at the time the referendum was held at least equal to those under the retirement system.

We hope that amendment, Senators, will remove the last element of fear. Thank you very much.

The CHAIRMAN. Thank you, Mr. Garey.

Mr. GAREY. Thank you, Mr. Chairman.

(Mr. Garey's prepared statement is as follows:)

To: The Senate Finance Committee, United States Congress.

Subject: Reasons for the enactment of H. R. 6000 without restrictive amendments so that employees of States, counties, and municipalities whether or not covered by local retirement systems may obtain old-age and survivors insurance benefits.

From: American Federation of State, County, and Municipal Employees, American Federation of Labor, by A. E. Garey, civil-service counsel.

Mr. Chairman and members of the committee, as the representative of the largest affiliated public employee group composed exclusively of State, county, and municipal employees, we endorse fully without further comment the position of the American Federation of Labor on H. R. 6000 as it was expressed at the St. Paul convention and presented to your committee on March 1 by President Green and Nelson H. Cruikshank. Because of our obligations exclusively to State, county, and municipal employees, we shall confine our remarks to the provisions of H. R. 6000 which make possible the use of the old-age and survivors insurance benefits by the States and local governments.

It is assumed that there is general agreement that the goal toward which we all are working is social-security coverage for the largest possible number of the people of America. The report of the Advisory Council on Social Security to the Senate Committee on Finance, Document No. 208 of the second session of the Eightieth Congress, contained the well-known recommendation that coverage be extended by the compact method so that the more than four million State, county, and municipal employees might be covered. The Ways and Means Committee of this Congress in its recommendation of H. R. 6000 took similar position, and added that employees already covered by a State or local government retirement system would have to express their wish for OASI coverage by a two-thirds vote.

Nelson H. Cruikshank of the American Federation of Labor, suggested in his statement to the committee March 1 that some clarification could be effected by including in the draft of the bill the statement of the purpose of the subsection as contained in the report of the House Ways and Means Committee. The statement carries so much meaning that I repeat here one sentence which should be brought to the attention of every State and local employee who has

been frightened by the false propaganda of the opponents of extension. I quote: "The provision for a referendum is included so as to assure those covered by adequate existing systems—that adequate safeguards are present so that their present pension plans will not be destroyed."

In a second recommendation the Federation of Labor took position that it would offer no objections if the bill were further amended to exclude from the OASI benefits, the uniformed fire and police forces. If your committee should consider this recommendation, we hope that great caution will be exercised so that only the members of such uniformed forces who are in retirement systems made up exclusively of firemen and policemen will be excluded. The fact should be kept in mind that there are a number of systems in which portions of the total covered membership are in the uniformed services. Surely it would be essential to so draft any amendment that thousands of covered employees who might wish by a two-thirds vote to obtain the OASI features would not be precluded from doing so merely because there are in their systems limited numbers of uniformed employees.

However, for purposes of emphasis, we make clear at this point that it is our position that the old-age and survivors insurance benefits should be made available to State, county, and municipal employees whether or not they are covered by State or local systems; provided, of course, that the State legislature by enactment accepts such benefits and that other requirements of the bill are met. Because only a few extremists have allowed themselves to forget so far the goals of social security that they recommend the exclusion of all public employees, it seems unnecessary for us to take the time of the committee to discuss in this paper the State, county, and municipal employees who have no coverage. It is assumed that these employees, probably 2,000,000, will be eligible for OASI coverage as provided presently in H. R. 6000. Accordingly, we shall give our attention to the more than 2,000,000 State, county, and municipal employees who have some kind of retirement benefits at the present time. It is the members of these latter groups, the covered groups, who are being besieged by some of the administrators of existing retirement systems to wire, write, call by telephone, or interview personally their United States Senators to urge total exclusion. Unfortunately, the representations have been made rather recklessly; the campaign that has been waged has been more or less irresponsible and appears to be motivated by the fear of such administrators that the benefits of the old-age and survivors insurance system will in some manner affect adversely their positions of leadership in their several localities. The campaign has been one of scare and it has been carried so far that thousands of public employees have come to fear that their total retirement whatever it may be will be jeopardized by the provisions of H. R. 6000. The unfair campaign has been so devoid of factual information and so motivated by frightening tactics that many public employees believe the hard-working Congressmen of the Ways and Means Committee who labored tirelessly for many long months somehow betrayed their trust to their own constituents. Only the experience of covered employees who may elect to accept the benefits of social security will undo the damage which has been done by the false propaganda.

The administrators of State and local systems should be frightened by the deficiencies of their own laws. Without exception every public employee retirement system would be improved by integration with or supplementation of the OASI features of H. R. 6000. An estimate of the American Municipal Association presented to this committee February 8 is that 75 percent of State, county, and municipal retirement systems lack survivorship benefit provisions. A very common provision is contained in most laws that the widow or other dependent survivor of a currently covered member shall be permitted to withdraw from the fund the contributions theretofore made by the deceased with or without interest. From a total of 35 State and State and municipal systems studied, exclusive of systems with fire and police coverage only, it was found that the percentage of covered employees whose beneficiaries receive only a refund of the member's contributions without interest is 6.4 percent; the percentage whose beneficiaries receive only a refund of the member's contributions with interest is 53.18 percent; the percentage whose beneficiaries receive a refund of the member's contributions plus a maximum of 6 months' pay is 27.15 percent; the percentage whose beneficiaries receive monthly pensions was 8.11 percent. The remaining 5.16 percent receive other allowances such as refund of contributions with interest or $500, whichever is the greater, or lump-sum allowances.

Another great weakness of local retirement systems is inherent in all investment systems constructed to provide for actuarial funding; namely, that the benefits must in the main go to those who continue in the service until they reach

the advanced service retirement ages. The most common retirement age is 65 after 30 to 35 years of service. Unfortunately only a relatively few attain these goals. In view of this fact very interestingly a survey made last year in Kentucky by a legislative research committee shows that the average service period of all employees in that State service who receive salaries up to $200 per month is less than 5 years. No one has reason to believe that this record of turn-over is greater than it is in any 1 of the other 25 non-civil-service States. Nor is the record much better in the so-called tenure States.

Carl H. Chatters, executive director of the American Municipal Association, on page 6 of his report to this committee under date of February 8 was well within the limits of conservative statement when he said that "perhaps nine-tenths of all who leave the service before retirement age normally forfeit all their rights to old-age benefits." These persons, all but a relatively few in most of the States and a very large percentage even in the civil-service States, who for one reason or another must leave the State, county, or municipal services, forfeit every type of earned security for themselves and their dependents. Earned credits cannot be transferred. Integrated or supplemental OASI benefits would help to stabilize coverage security for millions of State, county, and municipal employees.

Before we give attention to statistics to show how woefully inadequate are the allowances of most retirants, let's consider for just a moment the financial insecurity of probably 90 percent of all local systems. On January 11, 1949, the Illinois Public Employees Pension Laws Commission which had been created by the General Assembly of Illinois August 8, 1947, reported that "pension obligations and accrued deficiencies have practically doubled, and deficiencies are still rising." It went on to state that the reserve funds of the various systems in Illinois were at that time short as much as $272,899,188, which would be required as of that date to make the funds sound. Similar, even much greater, weaknesses in local systems are common over America.

I'll take time to refer to just one more weakness of State and local systems. In nearly all of the general employee retirement plans there are no protective provisions for employees who may, because of sickness or injury not in line of duty, become totally and permanently disabled during the first 10 years of covered service. Generally only those and their dependents are protected who during the first 10 or more years of service are disabled in line of duty. Required years of service for benefits for total disability not in line of duty in several of the better systems are: Colorado, 5 to 15 years; Michigan, 15 years; Minnesota, no provision; New Jersey, 10 years; New York, 15 years; North Carolina, 10 years; Ohio, 10 years; Pennsylvania, no provisions; Rhode Island, 10 years; Texas, 10 years; Virginia, 20 years. See Book of the States 1948–49.

From a questionnaire prepared in our offices which was answered in February and March of this year by the administrators of retirement systems, the following revealing data are obtained:

Retirement system	Employees covered	Number of persons retired during past 5 years	Monthly retirement allowance, not including disability allowance	Number of persons receiving such allowance
Alabama employees retirement system.	State employees, and employees of counties, cities, towns, and subordinate units which elect to participate.	51	$2.92 to $25	31
			$26 to $50	14
			$51 to $75	5
			$76 to $100	1
			In excess of $100	None
Public Employees Retirement Association of Colorado.	State, municipal, city and county, and school district employees.	139	$11.63 to $25	9
			$26 to $50	20
			$51 to $75	47
			$76 to $100	38
			In excess of $100	25
Illinois municipal retirement fund.	Employees of school districts, of municipalities with greater than 10,000 population, and of other municipalities which elect to participate [1]	[2] 850	$10 to $25	324
			$26 to $50	260
			$51 to $75	121
			$76 to $100	67
			In excess of $100	56
State employees retirement system of Illinois.[3]	State employees	660	$10 to $25	6
			$26 to $50	187
			$51 to $75	201
			$76 to $100	122
			In excess of $100	144

See footnotes at end of table, p. 2061.

Retirement system	Employees covered	Number of persons retired during past 5 years	Monthly retirement allowance, not including disability allowance	Number of persons receiving such allowance
Public employees retirement system of Indiana.	State employees and employees of counties, cities, towns, townships, school corporations, public libraries, and publicly operated utilities which elect to participate.	725	[4]	[4]
Louisiana State employees retirement system.	State employees	[5] 278	$7.85 to $25	25
			$26 to $50	116
			$51 to $75	49
			$76 to $100	26
			In excess of $100	42
Maine State retirement system.	State employees, and employees of counties, cities, towns, water districts or quasi-municipal corporations of the State which elect to participate.	[6] 926	$5 to $25	137
			$26 to $50	252
			$51 to $75	229
			$76 to $100	170
			In excess of $100	138
Michigan municipal employees retirement system.	Employees of municipalities which elect to enter.[7]	256	$25	[8] 19
			$26 to $50	93
			$51 to $75	72
			$76 to $100	42
			In excess of $100	30

[1] The term "municipality" includes employees of cities, villages, incorporated towns, counties, townships and school, park, sanitary, road, forest preserve, water, fire protection, public health, river conservancy, mosquito abatement, tuberculosis sanitarium or other local districts. The following described municipalities are specifically excluded from participation:

(a) Cities having a population exceeding 200,000.
(b) Counties having a population exceeding 500,000.
(c) Sanitary districts including in territorial limits two or more cities, villages, or towns having a total population exceeding 1,000,000.
(d) Park districts lying either wholly or in part within the territorial limits of any city having a population exceeding 200,000.
(e) Forest preserve districts, the boundaries of which are coextensive with the boundaries of any county having a population exceeding 500,000.
(f) School districts, the boundaries of which are coextensive with the boundaries of any city having a population exceeding 500,000.

[2] Approximately 850 retirement annuities granted since inception of fund, Jan. 1, 1941. Most of these have been in the last 5 years.
[3] Received too late to consider in determining the percentages.
[4] No break-down of data supplies. Statement made: "All retirees under law receive an allowance at normal retirement age of not less than $50 nor more than $100 per month."
[5] Retired from July 1, 1948, through Feb. 1, 1950.
[6] Retired since July 1, 1942.
[7] The term "municipality" includes counties, cities, villages, townships, and municipal corporations.
[8] Act permits retirement with as little as 10 years' service credit. Lower bracket pensions are being paid to employees with small amount of service credit.
[9] 545 of these have had less than 9 years' service, some even less than 1 year, since act made original members who had reached age 60 eligible for retirement regardless of length of service.
[10] All in this group have less than 20 years, some less than 10 years.
[11] Number retired for superannuation from July 1, 1929, to Feb. 1, 1950.
[12] Many of these members had from 5 to 10 years' service.
[13] Retired from July 1, 1947, to date.
[14] Only 7 cities have participated since inception of system in 1949.
[15] Retired since July 1, 1945.
[16] Average of all service retirement allowances including options I, II, and III.
[17] Average of all maximum service retirement allowances.
[18] Retired during past year.
[19] First retirement benefits became payable January 1950. In addition there were 16 active survivors' claims, widows with children. Benefits range from $33 to $79 in these cases.
[20] Range from $40 to $50. These are elderly employees with short periods of service in lower paid wage classifications.
[21] System established Sept. 1, 1947. Number of retirements effective as of Dec. 31, 1949.
[22] Retired from July 1, 1947, to Dec. 31, 1949.
[23] Retired since Apr. 1, 1949, through Jan. 31, 1950.
[24] This is a liquidating system. Effective Jan. 1, 1948, State employees were covered by the Wisconsin retirement fund, a State-wide system covering State and municipal employees.
[25] Retired through year 1947.
[26] System created Apr. 1, 1949.

From the above data it will be observed that the median or midpoint retirement allowance is but $46.43, and that the mean or average retirement allowance is but $50.05. It will be observed too that 22 percent of all the retirants draw but $25 or less per month, and that 53 percent draw $50 or less per month.

It becomes necessary for me in concluding this paper to invite the attention of the members of the committee to some extremely damaging amending proposals which have been suggested by powerful forces whose main objective is to defeat extension of OASI features to the State and local fields. We agree with one suggestion that the bill should be amended to exclude from those who are eligible to vote in a referendum persons already on retirement. Such people can, under the terms of the draft, obtain no benefits from extension to their field. Hence to extend to such people, old people in the main, the right and the invitation to take the trouble to vote is, in our opinion, little short of an insult.

We must take determined opposition to a suggestion offered by the opponents of extension that eligibility to vote in the proposed referendum be limited to persons who have had 10 or more years of service. I have pointed out all through this paper that in most jurisdictions public employees do not average 10 years of service and since from the statistics shown above more than 50 percent of all of those on retirement are drawing $50 or less which indicates generally short service periods, it will be seen that the 10-year limiting amendment would have the effect of reducing the eligible voters largely to those who have been in the service for fairly long periods and who because of acquired vested interests are less likely to want either integration or supplementation with or from social security. We hope such amendments will not be incorporated.

A further suggestion is made by the opponents that the two-thirds vote requirement be changed to mean that two-thirds of all of those eligible to vote be required to vote in a given referendum, and some of the opponents add to this fine dish of impossible ingredients the requirements that the majority be stepped up to three-fourths and that there be obtained a petition containing a majority of the names of the eligibles. It is submitted that if we are to maintain a democratic form of government in this country we cannot resort to the totalitarian tactics so common abroad. It is needless for me to remind the members of this committee that it is a very difficult thing to interest enough people in their own government, local, State, and Federal so that a majority of all of those eligible will participate in an election. In the 1940 Presidential contest in which two of the greatest vote getters in the history of America headed the respective major party tickets, only 59 percent of the total eligible voters took the trouble to vote. In the 1944 election the percenage of those exercising their franchise dropped to 56 and by 1948 the number interested enough to cast ballots was but 51 percent. To incorporate in H. R. 6000 additional restrictive amendments similar to those to which attention has been given above, would in our opinion be tantamount to total exclusion.

The OASI provisions of H. R. 6000, if enacted into law, will constitute an offer to the States, the counties and the municipalities to take advantage of such provisions. There will be certain over-all conditions which must be met. Such conditions are in the nature of prerequisite conditions but they do not preclude the States and subordinate units of government from making additional restrictions before acceptance of the proposition becomes possible.

I conclude this paper by mentioning what I think are the necessary actions to be taken before social security can be extended to any of the employees of the sovereign States or the subdivisions thereof who are presently covered by retirement systems. Such actions are:

I. Persuade the legislature which created the State or local public employee retirement system or systems that it should amend the act in question so that its members, if they chose to do so by a two-thirds vote, can take advantage of the Federal offer. Because such matters are most properly State, not Federal in their nature, the State legislature in order to make effective the Federal offer will find it necessary to amend the State or local retirement act to permit the covered members to vote. It will find it necessary to provide election machinery to determine the period of notice of election, and to appropriate funds for the election or in some manner make available moneys for such purposes. If in such legislative action the State chooses to step up the two-thirds vote requirement in the Federal act to two-thirds of all of those eligible to vote and even to a three-fourths majority, such action will be the business of the sovereign State. Why in view of the rights of the States to make conditions in addition to the existing conditions in the Federal act, but not in contravention thereof, should the Congress make more difficult the provisions already in the act? Can't

we leave such matters to our States? Surely few among us have reached that point in our thinking that would lead us to take position that only the Federal Government is interested in protecting the citizens of the several States of the Union. We believe that all such additional requirements if they are to be added should be permitted to be added by the States and not forced upon the States contrary to what we believe will be the wishes of most of the States of the Union. The fact should not be overlooked at this point that one has no reason to assume that State legislative bodies will proceed with the legislation outlined herein unless and until a very large demand is made for such thing by the people concerned. In other words, there can be no change in the present situation of covered members in any system until they and a great number of people in their State go to their own legislative bodies and make importunities for action.

II. If all of the requirements to which I have referred under I above have been met, then and only then will it be possible for the members of a State or local retirement system to proceed with an educational campaign and ultimately take a vote on the proposition of extension. Before a vote is taken clearly there will have to be agreement on the type of extension which is sought. Will it be integration or will it be supplementation? Under the provisions touched upon in I above the legislature may conceivably limit the choices to be exercised so that either integration or supplementation will have to be chosen if action is to be taken at all. Finally, of course, whatever proposition is submitted will have to be carried by the two-thirds vote of the members of a retirement system unless the legislature, as I have said above, requires that in its particular State a three-fourths vote or some higher requirement shall be met.

III. Finally, when all of the other conditions outlined in I and II above have been met, then there will have to be entered into between the Social Security Administrator for the Federal Government and the Governor of the State with respect to any one or more coverage groups designated by the State, the compact provided for in the act. Verily, the Government gold in the bullion depositories at Fort Knox is not more securely protected than are the covered employees by the present provisions of H. R. 6000. I am advised that there appeared recently in one of the New York papers comment on the campaign being waged by the administrators against extension of social security. The remark was to the effect that never had the writer seen so many people work so hard against their own best interests. Unfortunately, many of those who are participating have never had opportunity to study the proposition about which they wire and write their Senators. In contrast with the campaign which has been so viciously built up and without sufficient study by those who participate in it, I close with a quotation from a progress report made public in January 1950, by the committee on insurance and annuities of the American Association of University Professors. "This committee believes strongly that employees of colleges should be included under the old-age and survivorship provisions of the Federal Social Security Act."

A. E. GAREY.

The CHAIRMAN. We have one other witness this morning—Mr. Silberstein. Will you identify yourself for the record, please, sir.

STATEMENT OF ROBERT J. SILBERSTEIN FOR THE NATIONAL LAWYERS GUILD

Mr. SILBERSTEIN. Mr. Chairman and gentlemen of the committee, my name is Robert J. Silberstein. I am the executive secretary of the National Lawyers Guild, a national bar association which aims, among other things, "to aid in the adoption of laws for the economic and social welfare of the people."

In furtherance of that objective it has always taken an active interest in the proposed social-welfare legislation and especially in the development and improvement of our social-security system.

At our 1949 convention, as on previous occasions, we examined the condition of the existing social-security system and found it wanting

in many respects. Our delegates assembled in Detroit were substantially unanimous in agreeing to a resolution which urged "extension of (old-age and survivors' insurance) coverage to (all) those now excluded," emphasizing their view that "coverage to the self-employed is especially important to the legal and other professions, whose need for security in their old age and for their survivors is substantially as great as the need of employed persons."

This resolution also urged "a substantial increase in benefits to take into acount increased living costs and minimum living standards."

With regard to disability insurance the delegates urged "the establishment of a disability insurance program which would pay benefits for temporary disability on the same basis as unemployment insurance and for permanent disability on the same basis as old-age and survivors insurance."

The very detailed analysis of all of the provisions of H. R. 6000 and their evaluation in relation to the policies of the guild to which I just referred, as prepared for our national committee on social legislation, has already been distributed to all of the members of this committee. I do not intend to here repeat the content of that document. However, if it is possible, I should like very much to have the document included in the record of this hearing.

The CHAIRMAN. What is the length of the document?

Mr. SILBERSTEIN. The document is 12½ pages long.

The CHAIRMAN. Yes, sir; you may do so.

(The document referred to follows:)

CONGRESSIONAL PROPOSALS FOR IMPROVEMENT OF OLD-AGE AND SURVIVORS' INSURANCE AND FOR A NEW DISABILITY INSURANCE SYSTEM—H. R. 6000 *

(By Lazaar Henkin, chairman, committee on social legislation, New York chapter, National Lawyers Guild)

On October 5, 1949, the House of Representatives passed the Social Security Act Amendments of 1949, H. R. 6000. The bill now awaits action by the Senate; it has been referred to the Senate Committee on Finance. The bill has been widely hailed as legislation which would confer tremendous social-security benefits upon the American people. The fact is that the bill fails to meet the basic social-security needs of our people as these have been determined by the Ways and Means Committee of the House itself. The bill would impose additional heavy taxes upon the people and provide in exchange inadequate benefits. It is urgent that the Senate radically revise H. R. 6000.

I. THE BACKGROUND

The foundation for our social-security system was laid in 1935 with enactment of the Social Security Act.[1] The provisions of the act relating to old-age insurance were substantially revised and improved in 1939.

Notwithstanding such revision, it has long been apparent that our system of social security fails to provide protection in the fields in which an adequate social-security system should function. We still lack health and disability insurance, maternity and children's allowances. In those fields in which the system functions, its protection is deficient because it does not cover all who need protection, and the benefits provided are inadequate to assure a decent minimum standard of living.

Efforts were made in 1943 and 1945 to remedy these grievous faults by the establishment of a comprehensive Federal social-security system embracing health

---

*A report prepared for the national committee on social legislation of the National Lawyers Guild. This report deals solely with matters relating to old age, survivors, and disability benefits. That part of the bill which relates to public assistance will be the subject of a separate report.

[1] 42 U. S. C. secs. 301 et seq.; 40 Stat. 620 et seq. (1935) (hereinafter referred to as "SSA").

and disability insurance, a unified improved system of unemployment insurance and necessary extension and improvement of old-age and survivors' insurance. They failed.[2] These proposals were supported by the National Lawyers Guild (1943); S. 1050, H. R. 3293, 79th Cong. (1945).
after a careful study and analysis by its national committee on social legislation.[3]

The need for immediate action for extension and improvement of our social security system can no longer be questioned. It is established by the annual messages of President Truman in 1948 and 1949, the annual reports of the Federal Security Administration, the Report of the Advisory Council on Social Security to the Senate Finance Committee (80th Cong.), the report of the social security technical staff of the Ways and Means Committee of the House of Representatives (79th Cong.), and the report of the Commitee on Ways and Means submitted to the House of Representatives in support of H. R. 6000.[4] In 1948 the Presidential platforms of all parties pledge the immediate liberalization of our social securtiy laws.

In February 1949, Representative Doughton, chairman of the Committee on Ways and Means, introduced in the first session of the Eighty-first Congress, a bill, H. R. 2893, which sought in substantial measure to remedy the defects in the Social Security Act as regards old-age and survivors insurance and to provide new disability benefits for those unable to work because of illness or disease. Thereafter the Ways and Means Committee conducted extensive hearings. H. R. 2893 was abandoned and in its stead a new bill was introduced, H. R. 6000, which as regards old-age, survivors and disability benefits is more restricted than the superseded H. R. 2893. As noted above H. R. 6000 has passed the House and is now before the Senate.

To understand clearly the social security needs involved and the extent to which they would be met by this bill, it is necessary to examine the provisions of the existing law as well as the changes proposed by H. R. 6000.

II. Old-Age and Survivors Insurance

A. PRESENT LAW

1. *Coverage under present law.*—At the end of 1948 approximately 90,000,000 persons in the United States held social security numbers and accounts under the old-age and survivors insurance system of the Social Security Act. Of these, about 80,000,000 living workers had some wage credits in their account. About 2,577,000 persons were receiving payments each month under the program as of July 1949.[5]

Although 90 million persons had social securit accounts at the end of 1948, and as many as 80 million workers earned old-age and survivors insurance credits in the first 10 years of the existence of the law, only 44 million had some kind of insured status, and of these, only 13.2 million workers had a permanently insured status as the beginning of 1949.[6]

At the present time about 46 percent of all gainfully employed persons (including self-employed) are excluded in whole or in part from the old-age and survivors insurance program. It was estimated that of a civilian labor force of 63,815,000 in July 1949, 59,720,000 persons were gainfully employed; of these 34,300,000, or only 54 percent of the working population were covered by the old-age and survivors insurance system.[7]

In 1947, the over 25 million people excluded were classified as follows:

Self-employed—urban	6,000,000
Self-employed—farmers	5,000,000
Agricultural labor	3,500,000
Domestic workers	2,500,000
Employees of nonprofit institutions	1,000,000
State and local government employees	4,000,000
Federal Government employees	[8] 2,000,000

[2] The Wagner-Murray-Dingell bills of 1943 and 1945 (S. 1161, H. R. 2861, 78th Cong.

[6] SSB, April 1949, p. 5; and January 1949, p. 24.
[7] SSB, September 1949, p. 2.
[8] Report From the Advisory Council on Social Security to the Senate Finance Committee, S. Doc. No. 149, 80th Cong. (1948), 15–27. While the Committee on Ways and Means fixes the number presently excluded from coverage at the same figure of 25,000,000 (H. Rep. No. 1300, p. 9), the Federal Security Agency indicates it to be as high as 30,000,000 (annual report, 1948, 91–100).

Some 1½ million railroad workers were covered under a separate system.

The limitations on coverage seriously affect the adequacy of the entire system. Workers constantly shift from covered to noncovered employment. As a result, millions of workers eventually lose the credits acquired by them under the law while employed in covered employment. Some of these credits are lost forever. Furthermore, the constant shifting from covered to noncovered employment or vice versa, also greatly impairs the amount of the benefits, because the average wage, which is the basis for the computation of the benefits, is thereby reduced.

2. *Classes of beneficiaries under present law.*—Under the present law the following benefits are provided:

(*a*) Old-age insurance benefits for persons attaining age 65;

(*b*) Benefits for the 65-year-old wife of an old-age beneficiary;

(*c*) Benefits for children under 18 years of an old-age beneficiary and also benefits for such children in case of a deceased insured worker;

(*d*) Widow's benefits for widows aged 65, or widows under 65 having children under 18 in their care;

(*e*) Parent's benefits for dependent parents 65 years of age or older of a deceased wage earner who leaves no widow or young child entitled to benefits;

(*f*) A lump sum death payment to designated relatives in the event no survivor benefits are immediately payable.[9]

3. *Benefits under present law.*—Under the present system, benefits are computed on the basis of the average monthly wage of the wage earner, earned in covered employment. In computing the average monthly wage, nonworking periods, as well as working periods are counted. Employment in an occupation not covered by the law is deemed a nonworking period. The primary benefit is equal to 40 percent of the first $50 of the average monthly wage, plus 10 percent of the next $200 plus an increment of 1 percent for each year in which wages of $200 or more are paid to the individual. This primary insurance benefit is the benefit to the aged beneficiary wage earner. Survivor's and dependent's benefits are either three-quarters or one-half of the primary benefit. The maximum benefits payable on the basis of an individual's wages is the least of the following: $85 per month, or twice the primary benefit, or 80 percent of the average monthly wage. The minimum primary benefit is $10.[10]

Under this formula a retiring worker applying for benefits during the current 1949 year is entitled to a primary insurance benefit of about 45 percent of an average monthly wage of $50 and 22 percent of an average monthly wage of $250. The actual benefits are pitifully low. Indeed they are so low that frequently they are less than the relief allowances under other Federal public-assistance programs although such allowances are admittedly also below subsistence standards.

The average primary benefit for a retired worker of the age of 65 or over was $25.77 in July 1949.[11] At the end of 1946 a man's average primary benefit was $24.90 and that of a couple, $39. In 1943, the respective figures were $24.50 and $39.01.[12] Compared to this, the average payment under the old-age public assistance program was $43.69 in July 1949, ranging from $70.68 in California to $18.80 in Mississippi.[13]

It is noteworthy that public old age assistance is a form of pauper relief, financed by Government, usually out of general revenues, while benefits under the old age and survivors insurance provisions of the Social Security Act are paid for directly by the beneficiaries and their employers.

At the end of July, 1949, the assets of the old age and survivors insurance fund amounted to $11,310,285,000.[14]

4. *Eligibility requirements under present law.*—Under the present law, an individual is deemed to be insured for purposes of retirement, survivors and lump-sum death benefits, if

(*a*) He had not less that one quarter of coverage for each two of the quarters elapsing after 1936, or after the quarter in which he attained the age of 21, whichever quarter is later, and up to but excluding the quarter in which he attained the age of 65, or died, whichever first occurred, and in no case less than 6 quarters of coverage: or

[12] Senate Finance Committee report (note 4), p. 62, table 13, and Social Security Board, Ninth Annual Report, 47.
[13] SSB, September 1949, p. 26, table 17.
[14] SSB, September 1949, p. 20, table 5.

(*b*) He had at least 40 quarters of coverage.

An individual is deemed to be insured for purposes of survivor and lump-sum benefits only if had not less than 6 quarters of coverage during the 12 quarters immediately preceding the quarter in which he dies.[15]

B. CHANGES PROPOSED BY H. R. 6000

1. *Proposed coverage.*—The proposed bill would, with exceptions, to be noted, bring some additional 11,000,000 gainfully employed persons within the protection of the law. It would extend coverage to a small segment of agricultural labor and to domestic workers, to various type of salesmen, taxicab drivers, licensees, etc., to employees of charitable, educational, religious and similar institutions, to a substantial portion of employees of the United States and of its instrumentalities and to most of the urban self-employed, irrespective of citizenship or residence.[16]

The exceptions would still be:

(*a*) Agricultural labor, including domestics and other labor employed on the farm.

(*b*) Employees of the United States or of an instrumentality of the United States covered by a retirement system established pursuant to law; persons in military service; the President, the Vice President and members and employees of the legislative branch of the United States; employees of any instrumentality of the United States if exempt from the tax imposed by section 1410 of the Internal Revenue Code by specific provision of law, temporary post office and Census Bureau employees; relief workers, etc.

(*c*) Employees of State and local governments (except certain transit workers).

(*d*) Services performed by a minister of a church or a member of a religious order; persons in the employ of a foreign government, the UNO, and several other minor groups.

(*e*) Self-employed physicians, lawyers, dentists, osteopaths, veterinarians, Christian Science practitioners, engineers, and clergymen.

(*f*) Services performed in connection with the catching, taking, cultivating, etc., of any kind of fish, shell fish, crustacea, etc., except services aboard ship of 10 tons or more or in connection with the taking and catching of salmon and halibut for commercial purposes.

(*g*) Services performed by newsboys under 18, newspaper vendors, spouses and minor children, students in colleges or hospitals, employees of foreign governments, and many other minor groups.[17]

State and local government employes could be brought into the system by means of a voluntary agreement between a State and the Social Security Administration. The agreement could cover all or some of the State employees, or any subdivision thereof. State or local employees covered by a pension system could be brought under the law only if so elected by the employees after a referendum. The agreement would have to be for at least 5 years and could only be terminated thereafter upon 2 years' notice.[18]

Puerto Rico and the Virgin Islands, presently excluded,[19] would be brought under the law. Puerto Rico, however, would be included only if its legislature so elected.[20]

The rights of veterans of World War II as presently fixed by the law [21] are not only preserved but are enlarged. The period of time served in the armed forces would be considered as covered employment for the purposes of the law.[22]

The bill would also repeal Public Law 642, enacted by the Eightieth Congress, June 14, 1948, over the President's veto, which deprived commission salesmen, newspaper vendors, and similar persons numbering some 750,000 people of coverage under the law.[23]

---

[15] SSA secs. 209 (g), (h).
[16] H. R. 6000 sec. 104 (a), 81st Cong., 1st sess. (1949).
[17] Id., secs. 104 (a); 205.
[18] Id., sec. 106.
[19] Internal Revenue Code, sec. 1426 (e).
[20] H. R. 6000, secs. 104 (a), 108.
[21] SSA sec. 210
[22] H. R. 6000, sec. 105.
[23] Id., sec. 104 (a).

The Committee on Ways and Means estimates that H. R. 6000 when enacted into law would ultimately cover the following categories in addition to those already covered:

Self-employed, urban	4,500,000
State and local employees	3,800,000
Domestics	950,000
Employees of nonprofit institutions	600,000
Farm laborers—processing, etc	200,000
Federal employees	100,000
American employees, employed outside the United States	150,000
Virgin Islands	5,000
Puerto Rico	250,000
Salesmen, taxicab drivers, etc	[24] 500,000 to 750,000

This, according to the committee, would still exclude some 14,000,000 gainfully employed consisting of self-employed farmers, farm laborers, professionals, domestics, Federal, State, and local employees, and miscellaneous groups. According to the Federal Security Agency, the number excluded would amount to 19,000,000.[25]

2. *Proposed eligibility requirements.*—An individual would be deemed to be insured for purposes of retirement, survivors and lump-sum death benefits, if he has:

(*a*) Not less than one quarter of coverage for each two quarters elapsing after 1936 or after the quarter in which he attains 21, whichever is later up to but excluding the quarter in which he attains 65 or dies, whichever occurs first, but in no case less than six quarters of coverage, or

(*b*) Twenty quarters of coverage within the 40-quarter period ending with the quarter of retirement or of death, or

(*c*) At least 40 quarters of coverage.[26]

For purposes of lump-sum death benefits and benefits to widows under 65 having children under 18 in their care, and benefits to such children, an individual would be deemed to be insured if he has not less than six quarters of coverage in the period consisting of the quarter in which he died and the 12 calendar quarters immediately preceding the quarter during which he died, and excluding from such period any quarter of extended disability.[27] A quarter of coverage means a calendar quarter in which an individual has been paid wages of not less than $50 (if prior to 1950) and of not less than $100 (if after 1949). A self-employed person would be credited with one quarter of coverage if he had an income of $200 that is credited to such quarter.[28]

3. *Proposed classes of beneficiaries.*—An insured individual upon attaining age 65 would be entitled to a primary benefit.

The wife, at age 65, would be entitled to a wife's benefit equal to half of the primary benefit (as under existing law).

A child under 18 would be entitled to a child's benefit equal to half of the primary benefit (as under existing law). A widow upon attaining the age of 65 would be entitled to a benefit equal to three-fourths of the primary benefit (as under existing law). A parent at age 65, if there be no widow or widower or child qualified for benefit, and if one-half of income of parent came from insured, would be entitled to a benefit equal to three-fourths of primary benefit, instead of one-half as under present law.

A wife under 65 having children in her care under 18 would be entitled to a "mother's insurance benefit" (now known as "widow's current insurance benefit") equal to three-fourths of the primary benefit. The first child would be entitled to a child's benefit equal to three-fourths of the primary benefit instead of one-half as under the present law. Each additional child would get one-half of the primary benefit.

A divorced wife who is the mother of the deceased's child or has adopted a child of the deceased while married to him, or is the mother of a child legally adopted by her and the deceased during coverture and was receiving from him at least one-half of her support would be entitled to a mother's insurance benefit. (This would be a new benefit class.) [29]

---

[24] Committee on Ways and Means, Rept. No. 1300, 81st Cong., 1st sess., pp. 11–15.
[25] Supra, note 8.
[26] H. R. 6000, sec. 104 (a).
[27] Ibid.
[28] Ibid.
[29] Ibid., secs. 101 (a); 104 (a).

A lump-sum death benefit equal to three times the primary benefit would be payable to widow or widower. If there be none, it would be payable to one who incurred burial expenses. (Under existing law a lump-sum payment equal to six times primary benefit is payable only if there is no person surviving who qualifies for benefits.) [30]

4. *Proposed benefits.*—Significant changes relating to the amount of benefits are proposed in the bill.

Under present provisions of the Social Security Act, the primary insurance benefit is 40 percent of the first $50 of average monthly wages, and 10 percent of the next $200, plus a premium of 1 percent of the total basic benefit for each year of coverage (i. e., a year in which the beneficiary had $200 or more of taxable earnings).[31]

Under the proposed formula of the bill the primary benefit would be 50 percent of the first $100, plus 10 percent for the next $200 of the average monthly wage, plus a premium of one-half of 1 percent of the total for each year of coverage (i. e., a year in which the beneficiary had $200 or more of taxable earnings prior to 1950 and of $400 beginning January 1, 1950. For self-employed the required earnings would $400 of net income or more per year). Earnings above $3,600 a year are excluded. This benefit formula is modified by the introduction of an additional factor, called the continuation factor which can never be higher than 1. This factor is the quotient obtained by dividing the number of years of coverage after starting date (1936 or 1949, whichever results in higher benefits), by the number of calendar years elapsing from starting date (or the date of attaining age 21), to year of retirement or of death or, in case of permanent disability, year when disability occurs. For those who die or retire before 1950, or die before reaching 28, the continuation factor is always 1.[32] As a general proposition, this factor results in the reduction of the amount of benefits. Thus, an individual with an average wage of $200 per month is entitled to receive under the present law a primary benefit of $38 per month if covered for 10 years continuously when single, and $58 with wife of age 65; up to $42 and $63, respectively, if covered for 20 years continuously and up to $49 and $74, respectively, if covered for 40 years continously. Under the proposed bill the same individual would receive $63 and $94, $66 and $99, and $72 and $108, respectively.[32a] However, very few wage earners work for 10, let alone for 20 or 40 years without interruption. Over such periods of time, a wage earner might expect to suffer long spells of unemployment or noncovered employment.

Assuming then that he would have only one-half of his employment period covered, the individual taken in the above example would receive under the present law $26 and $39, $28 and $42, and $30 and $45 as compared with $32 and $48, $33 and $49.50, and $36 and $54 under the proposed bill.[33]

The proposed formula is weighted to favor the lower-paid wage earner as it should be if the system is to serve its purpose.

The bill proposes to increase the maximum benefit from $85 to $150 per month or 80 percent of average monthly wage, whichever is less.[34] The minimum is raised from $10 to $25.[35]

The amount which may be earned in employment by a beneficiary without deduction of benefit is increased from $15 to $50.[36] After beneficiary reaches age 75, benefits are payable regardless of earnings.[37]

5. *Proposed increase of benefits to current beneficiaries.*—The benefits payable to insured persons and their dependents under existing law are very low. This is due to the present formula and to the fact that the benefits are based on low prewar wages. To remedy this injustice to some extent the bill proposes to increase the benefits to current beneficiaries as of January 1, 1950, in accordance with a table incorporated into the bill.[38] Under this table, the present primary insurance beneficiaries are divided into 37 categories according to the amount of benefits presently payable to them from $10, the minimum, to $46, the maximum primary benefit possible under existing law upon covered earnings to date, with a $1 differential between each category. The minimum primary benefit is then

raised from $10 to $25 and the maximum primary benefit is raised from $46 to $64.40. In case of dependents, additional benefits would be payable in accordance with the basic provisions of the law.

C. COMMENT

1. *Coverage.*—The exclusion of a large segment of the gainfully employed from coverage at the time of the enactment of the Social Security Act was sought to be justified because of lack of experience in this country with compulsory old-age insurance and because of fear that such a program could not at the outset be administered on such a large scale.

We have now had 14 years of experience, which has shown us that these exclusions are unwarranted, are harmful to the welfare of the people and result in a system which fails to protect those who need it most. Millions of wage-earners are discriminated against. A heavier burden for the support of the indigent aged is cast upon localities and communities which can least afford it Incomplete coverage results in lower benefits. In many instances, wage earners are taxed without securing any benefits in return. This weakens the entire system. Partial coverage also affects the administration of the law. Universal coverage under a single administration would be financially sounder, more efficient, and could provide adequate benefits. All of the most recent studies made by Congress and the Federal Security Administration attest to the desirability of a unified all-inclusive old-age and survivors insurance system.[39]

The Ways and Means Committee in its report accompanying H. R. 6000 makes the following findings:

"The Congress is faced with a vital decision which cannot long be postponed. Inadequacies in the old-age and survivors insurance program have resulted in trends which seriously threaten our economic well-being. The assistance program, instead of being reduced to a secondary position as was anticipated, still cares for a much larger number of people than the insurance program. Furthermore, the average payments under assistance have more than doubled in amount since 1939 while benefits under insurance have scarcely risen at all. There are indications that if the insurance program is not strengthened and expanded, the old-age assistance program may develop into a very costly and ill-advised system of noncontributory pensions, payable not only to the needy but to all individuals at or above retirement age who are no longer employed. Moreover, there are increasing pressures for special pensions for particular groups and particular hazards. Without an adequate and universally applicable basic social insurance system, the demands for security by segments of the population threaten to result in unbalanced, overlapping and competing programs. The financing of such plans may become chaotic, their economic effects dangerous. There is a pressing need to strengthen the basic system at once before it is undermined by these forces. Once the basic system is firmly established, any remaining special needs of particular groups can be assessed and met in an orderly fashion." [40]

In the light of these conclusions reached by the committe after extensive hearings it is difficult to comprehend the proposals of the committee as contained in its bill, H. R. 6000. As regards coverage it still results in the exclusion of some 14,000,000 people from protection of the law. Why, for instance, should 600,000 lawyers, physicians, and other professionals be excluded? The exclusion cannot be justified upon the basis of their vocation, because those pursuing these professions in the employ of others are covered. Nor can it be justified by reason of self-employment when millions of other self-employed are to be covered. This exclusion is arbitrary, capricious and without any merit or justification.

The exclusion of farm laborers and of farmers is even less excusable. The Treasury Department and the numerous congressional and other committees which have studied the problem had time and again found that there would be no administrative difficulties in bringing the farm group into the social-security system. The earnings of the average farmers are below those of the average self-employed businessman or manufacturer, and the wages of agricultural laborers are among the lowest in the country. The need of these people for social security is as great as that of those groups already covered.[41] The exclusion of these groups is unpardonable.

---

[39] See, e. g., Annual Report of the Federal Security Agency, 1948, and testimony of A. J Altmeyer, Commissioner for Social Security, before the House Ways and Means Commission, March 23, 1949, SSB, April 1949.

[40] H. Rept. No. 1300.

[41] See Federal Security Agency, Annual Report (1948), 91 et seq.; report to the Senate Committee on Finance, S Doc. No. 149, 80th Cong., p. 17.

The proposals regarding coverage do not even go as far as those contained in the prior bill H. R. 2893. Under the terms of that bill it has been estimated [42] that as of June 1950, if enacted into law, it would add 19,000,000 persons to those presently covered and would cover the following:

Those employed in employment presently covered	37,100,000
Agricultural self-employed (new)	3,800,000
Agricultural hired workers (new)	2,300,000
Urban self-employed (new)	5,100,000
Federal employees (new)	200,000
State and local government employees (new)	3,300,000
Employees of nonprofit organizations (new)	600,000
Domestics (new)	1,700,000
Armed forces	2,000,000
Total	50,100,000

The following groups would then still be excluded:

Agricultural (family workers)	3,100,000
Federal, State, and local employees	2,200,000
Clergymen and members of religious orders	300,000
All others	1,300,000
Total	6,900,000

Some 1,500,000 railroad employees are covered by a separate system.

The failure to cover the entire gainfully employed population constitutes not only unfair discrimination, but it is economically unsound. Sooner or later, these groups will have to be brought within the system. But by that time a number of years will have elapsed during which these groups will have made no contributions to the system. Moreover, allowances will have to be made to the older people within these groups, to enable them to qualify for basic minimum benefits. Why, then not include them now and thus have them share the burden imposed upon the rest of the working population?

To the extent that the proposed bill fails to include farmers (self-employed) and agricultural laborers, the professionals, all domestic, all Federal employees, including those covered by a retirement system, railroad employees, and others similarly situated, it is deficient. It should be amended to include all these groups at least to the extent originally provided for in H. R. 2893 and the existing retirement systems should be maintained as supplementary to the benefits provided by the social-security system.

2. *Proposed benefits.*—Existing benefits are woefully inadequate. In many instances many beneficiaries are compelled to apply for and accept supplementary public assistance. The average primary benefit for old-age and survivor beneficiaries in July 1949 was equal to only about 58 percent of the average payment to aged recipients under public assistance.

The utter inadequacy of the present benefit formula will become manifest if it is borne in mind that a worker who has worked steadily for the past 13 years, and earned $3,000 per year throughout the entire period, is entitled upon retirement to a primary benefit of $45.20 and $22.60 additional if he has a wife, a total of $67.80 per month or about $815 a year for a couple. The present cost of living is 70 to 75 percent above that of 1939. Studies made by the Social Security Board in 1946, 1947, and 1948 in 13 cities show that an elderly couple needs not less than $1,400 per annum in Houston, Tex., $1,780 in New York, N. Y., and $1,830 in Washington, D. C., for a decent minimum standard of living. The present highest possible benefit for a couple is thus less than 60 percent for Houston and about 45 percent for New York and Washington.

The benefit formula in the proposed bill would still provide much less than these minimum requirements for elderly couples. To be truly adequate the law should provide for such benefits. Although the proposed formula would constitute a noticeable step forward toward achieving the goal, it falls far short even of the basic purposes set by the Ways and Means Committee, i. e., make the benefits large enough and thus the system sound enough to eliminate trends "which seriously threaten our economic well-being." The formula should be modified at least to the extent of eliminating from the computation formula of the continuation factor. The Ways and Means Committee justifies the use of

[42] Testimony of A. J. Altmeyer, Commissioner for Social Security before House Ways and Means Committee, SSB, April 1949, p. 3.

the factor by the necessity of giving some recognition to the differences in the length of time spent by people in the labor market. But this can be accomplished just as well by retaining the 1-percent premium for each year of covered employment instead of cutting it down to one-half of 1 percent, as the committee has done in H. R. 6000. The premium should be restored to 1 percent.

3. *Qualifying groups—Newly covered.*—Under the proposed qualifying formula, all newly covered groups could not qualify for retirement benefits until they were continuously employed for a period of 5 years from January 1949. This would be less than half the time required to qualify under the existing law. Nevertheless, the proposed qualifying requirements would be inequitable as regards the elderly workers in the newly covered groups. For the proposed formula would mean that newly covered persons age 60 would have to be continuously employed for 5 years until they reached the age of retirement. Under present economic conditions, it is not to be expected that persons of this age group could achieve such continuous employment. We believe that this heavy handicap should not be placed on such workers who were not heretofore covered because of inadequacies in the law and the failure of Congress to remedy the defects much earlier. In 1939, when the law was amended and date for the payment of benefits was advanced by 2 years, elderly workers were permitted to qualify for benefits after six quarters of coverage. We believe no greater qualifying period of coverage should be required from such elderly workers now.

4. *Reduction in qualifying age for women.*—The reduction of the qualifying age from 65 to 60 for women has been found to be necessary in view of the fact that, as a rule, the wife is that much younger than the husband and that a woman wage earner must retire at an earlier age than a man.

At the present time only about one-fifth of the wives of married primary beneficiaries are eligible for wife's benefits at the time their husbands attain age 65. If the wife's benefits were payable at 60, about three-fifths of the wives of insured men would be eligible for wife's benefits when their husbands reach the retirement age of 65. In 1947 only about one out of four widows without children qualified for a widow's benefits. Had the age been 60, about 40 percent would have qualified. How many women can find or keep a job at the age of 60?[43]

Under the circumstances, failure to provide for the lowering of the eligibility age for women to 60 years constitutes a gross miscarriage of justice, which should be rectified. H. R. 2893 provided for such lowering of the qualifying age.

II. Disability Insurance

The compelling need for security against sickness has generally been recognized.[44]

In its report to the Senate Committee on Finance, the Advisory Council on Social Security, in speaking of insurance against losses from permanent and total disability, said:

"There can be no question concerning the need for such protection. On an average day the number of persons kept from gainful work by disabilities which have continued for more than 6 months is about 2,000,000. The economic hardship resulting from permanent and total disability is frequently even greater than that created by old age or death. The family must not only face the loss of the breadwinner's earnings, but must meet the costs of medical care. As a rule, savings and other personal resources are soon exhausted. The problem of the disabled younger worker is particularly difficult since he is likely to have young children and not to have had an opportunity to acquire any significant savings." [45]

The House Ways and Means Committee itself has declared: "The addition of permanent and total disability benefits will inject more realism into the retirement concept, and will effectively counteract pressures for a reduction in the age of normal retirement."[46]

A. Permanent and Total Disability Benefits

1. *Nature of benefits.*—Medical care and hospitalization benefits do not meet the entire problem of the sick and disabled worker. Payment of cash disability

---

[43] S. Doc. No. 149 (supra, note 4), at p. 43, Social Security Agency Report (1948), 107.
[44] See Social Security Board, Ninth Annual Report (1944), 23, and subsequent annual reports; President Truman's messages to Congress, 1948 and 1949.
[45] Permanent and Total Disability Insurance, S. Doc. No. 162 (1948), 1.
[46] H. Rept. No. 1300, supra, note 9, at 27.

benefits is necessary for a sound social-security system. Such benefits provide partial continuity of income to the disabled worker whose need and whose family's need continues throughout his disability. In the case of a permanently disabled worker who must be deemed permanently retired, the need is similar to that of one retired by reason of old age. The needs of a temporarily disabled worker are similar to those of one temporarily unemployed.

The bill would provide benefits for persons under 65 who are permanently and totally disabled, i. e., suffering from a disability continuing for more than 6 months, which benefits are similar to the benefits under the old-age and survivors insurance provisions.

The term "permanent and total disability" is defined to mean: "(A) Inability to engage in any substantially gainful activity by reason of any medically demonstrable physical or mental impairment which is permanent, or (B) blindness."[46a]

The first 6 months of such disability would be in the nature of a waiting period and would not be compensable under the provisions relating to permanent disability. Benefits under the proposed law would begin with the seventh month of disability, and would terminate upon the person's death, recovery, or when he becomes entitled to benefits under the provisions of the law for old-age and survivors insurance.[47]

2. *Proposed beneficiary classes.*—The bill proposes to have only one beneficiary class; namely, disabled insured persons to whom a primary insurance benefit in an amount similar to the one payable under the old-age and survivors insurance would be paid. No provision whatever is made for the payment of benefits to wife, child, or other dependent.[48]

3. *Proposed coverage.*—Coverage would be for the same type of employment as under the old-age and survivors insurance provisions discussed above.

To qualify for primary benefits, one would have to have:

(*a*) Not less than six quarters of coverage during the 3-year period (12 calendar quarters) preceding the quarter in which disability began; and, in addition,

(*b*) Not less than 20 quarters of coverage during the 10-year period (40 calendar quarters) which ends with the quarter in which his disability began.[49]

A "quarter of coverage" means a "calendar quarter" in which an individual has been paid not less than $50 in wages prior to 1950 and not less than $100 after January 1, 1950, and if self-employed, not less than $200 a quarter.[50]

3. *Administrative provisions relating to disability benefits.*—Weekly disability benefits would be reduced with respect to disability for which one may claim or receive workmen's compensation benefits. The Administrator may allow payment of weekly benefits after taking necessary steps to assure reimbursement to the trust fund upon award of compensation benefits to claimants.[51]

The Administrator is authorized to promulgate regulations and establish the procedure to be followed for:

(*a*) Registration for disability benefits;

(*b*) Examination and reexamination of claimants; and

(*c*) Ascertainment of the right to benefit payments.[52]

The Administrator would be authorized to disqualify a claimant if he refused to submit to a physical examination or reexamination, or if, without good cause, he refused to accept rehabilitation services. The Administrator would also have the power to disqualify a claimant who resides outside the United States, if the Administrator finds that there are not adequate available means for determining a claimant's disability or for his rehabilitation.[53]

4. *Comment.*—Our country, the mightiest and greatest industrial country in the world, is the only industrially developed country without a law which provides for insurance against the hazards of sickness. The proposal in the bill for cash benefits to those permanently or totally disabled is, therefore, an important and necessary step in lessening the hardships resulting from inability to work because of sickness.

Studies made by Congress and the Federal Security Agency have established beyond doubt the vital need for this type of protection. The benefit to those

[50] Id., sec. 104 (a).
[51] Id., sec. 107.
[52] Ibid.
[53] Ibid.

qualifying and to the community would be substantial. Indeed, it would greatly relieve the local communities who are now forced to support the indigent sick.

The Federal Security Agency has found that: "Another factor contributing to the number of persons on public assistance is the fact that there is no Nation-wide plan of insurance against wage loss due to illness or disability nor is there an adequate program for rehabilitation or training for the handicapped. In addition, the need for a plan to help people meet the costs of medical care has been made increasingly clear in recent years. Many persons are unable to finance more than the costs of minor illnesses. For this reason, many people must look to public assistance for help in meeting their medical bills unless the medical facilities of the State are adequate to provide free health care to them. Among the people now receiving assistance are many who are dependent as a result of their own illness or that of the breadwinner. Programs to help people meet the cost of medical care and to provide compensation for wage loss are sorely needed. While the lengthening life span means that people live longer, the period of dependency is increasing for many people. Among old people there is a high incidence of chronic diseases, which are costly and of long duration." [54]

We believe that the bill should be amended in several respects in order that the protection it would afford be more adequate to meet the needs.

Qualification.—The qualifying requirement of the bill for workers employed in employment not heretofore covered by the old-age and survivors insurance provisions of the Social Security Act is harsh and inequitable. A worker would have to have 20 (out of 40) quarters of coverage preceding the quarter in which he becomes disabled. As the newly covered groups would have no such coverage, it means that the wage earners in the newly covered groups would have to work constantly for at least 5 years before qualifying for disability benefits under the law. To expect such continuous employment, especially from persons age 60 or over, is almost to expect the impossible. We believe that this is unjust, inequitable, and unsound. The qualifying period of quarters covered should be reduced to 6 quarters out of 12 preceding disability.

Amount of benefits.—The proposed primary benefits are identical with those provided for under the old-age and survivors insurance provisions. As noted above, these do not assure decent minimum living standards. These benefits should be increased.

Dependent allowances.—As proposed in H. R. 6000, neither the wife of a totally disabled worker nor his minor children would receive any benefits. A totally disabled person necessarily requires constant care and his expenses definitely increase. It seems clear, therefore, that the primary benefit to be received by the husband would be insufficient for the family needs of the disabled worker. Hence the wife if not gainfully employed and attending the husband should receive a supplemental benefit equal to one-half of the primary and additional benefits for dependent children. H. R. 2893 provided for benefits to aged wives, wives with children, and so forth, similar to those under the old-age and survivors insurance provisions of the law. This should be incorporated in the present bill.

Temporary disability benefits and maternity benefits.—In contrast to the proposals contained in H. R. 2893, the present bill fails to make any provision for temporary disability and maternity benefits. This, notwithstanding the urgent need for security against economic losses due to temporary illness.

On the average day, illness prevents about 2 to 2½ million persons recently in the labor forces from working or seeking work. In a year wages amounting to 5 or 6 billion dollars are lost due to illness lasting up to 6 months. The economic hardship caused by disability may be an even more serious hazard to workers than a wage loss because illness entails a more serious problem.[55]

Students of the problem had always visualized the solution to this problem as part of a comprehensive health insurance system where both medical care as well as cash benefits would be provided for. Unfortunately, Congress failed in its duty to the people, and several proposals made during the last 6 years for a comprehensive health insurance system, including medical care and cash disability benefits have met their death in committees. The next best solution was deemed a single cash disability payment scheme integrated as part of the social-security system.

Until quite recently no protection whatsoever was afforded workers against loss of earnings due to temporary nonindustrial disability. A few years ago

---

[54] Public Assistance Goals, 1949 (Federal Security Agency, December 1948), 3.
[55] Unemployment Insurance, S. Doc. No. 206, 80th Cong., p. 45.

Rhode Island began to pay benefits for unemployment due to temporary disability as part of the unemployment insurance system of the State. Since then California, New Jersey, New York, and Washington enacted temporary disability insurance laws. (In the State of Washington, the law has to be approved by referendum in the 1950 elections.) In California, New Jersey, and New York private insurance companies are permitted to underwrite the risk, and in New York it is administered as part of the workmen's compensation system.

The groups covered under these State disability laws are even more limited than those under the old-age and survivors insurance provisions of the Social Security Act.

We believe that there should be no exclusion from coverage for purposes of temporary disability of any gainfully employed persons. Discrimination as regards employment coverage should be barred once and for all from our system of social security. Wider coverage will lead to lower costs and more efficient administration.

Unless Congress acts now and establishes a uniform national system of temporary cash disability benefits, we are headed for State systems which will create even more conflicts than the present unemployment insurance system. Additional complications and conflicts must necessarily result from the fact that private insurance companies are permitted to underwrite the risk. This latter element will lead to restricted benefits in order to permit large profits which insurance companies will seek. Furthermore, many States may not pass disability compensation laws for some time with a resulting competitive disadvantage to business and industries in the States where such laws exist.

H. R. 2893 contained many acceptably sound provisions for the payment of benefits in case of temporary disability and the proposals contained therein should be incorporated in the present bill, except that the benefits to be provided should be equal to two-thirds of the claimant's average weekly wages, plus pro rata allowances for dependents, with an over-all limitation of 80 percent of former earnings.

III. Pay-Roll Taxes and Fiscal Policy Involved

Under the present law, both employers and employees are taxed 1 percent each upon the first $3,000 of the employee's annual wages; during 1950 and 1951 they will be taxed 1½ percent each and thereafter 2 percent each.[55a]

The bill proposes to raise the tax base from $3,000 to $3,600 beginning January 1950[56] and would raise the tax rate payable by the employees and employers as follows: For the year 1950, 1½ percent each; for 1951 to 1959 inclusive, 2 percent each; for 1960 to 1964 inclusive, 2½ percent each; for 1965 to 1969 inclusive, 3 percent each; after January 1, 1969, 3¼ percent each.[57]

With respect to self-employed, the tax rate also on the first $3,600 of annual net income would be 2¼ percent for the year 1950; 3 percent for 1950 to 1959 inclusive; 3¾ percent for 1960 to 1964 inclusive; 4½ percent for 1965 to 1969 inclusive, and 4⅞ percent after January 1, 1970.[58]

A nonprofit organization could elect not to pay the employer's tax. If it elected not to pay the tax, only one-half of the wages paid its employees would be credited in determining their insured status and amount of benefit.[59] A nonprofit organization could waive this tax exemption by filing a waiver. Thereafter it could not terminate its liability under the law except upon 2 years' prior notice in writing after the waiver has been in effect for not less than 5 years.

The Commissioner might terminate the liability of a nonprofit employer who has waived exemption from taxation if he finds that such employer has failed to comply substantially with the requirement of the law or is no longer able to comply therewith. This could be done only with the prior consent of the Federal Security Administrator.[60]

The clue to many of the fundamental shortcomings of the bill are to be found in its tax proposals. These violate sound principles of social security and are contrary to the basic conceptions underlying the Social Security Act as originally enacted.

[55a] Int. Rev. Code, secs. 1400 and 1410, as amended.
[56] H. R. 600, secs. 104 (a), 207 (a).
[57] Id., sec. 201 (a).
[58] Id., sec. 207 (a).
[59] Id., sec 109
[60] Id., sec. 202 (a).

To be sound, our social-security system must provide adequate insurance against the hazards of economic insecurity; it should assure a continuous flow of basic income and purchasing power to the population and thereby add to the stability of the national economy. To the extent that we tax the low income groups more than we return to them by way of benefits, we are cutting down their purchasing power and, hence, are lowering still more their already low standard of living. The objective of social security is thus defeated.

The above objective can best be achieved by a system financed on a pay-as-you-go basis with all current expenditures met out of general revenues, raised by a tax system based on ability to pay.

H. R. 6000 runs counter to all of these fundamentals. Its theory is that the full cost of the entire program of old-age retirement, survivors and permanent disability benefits is to be paid for by those covered under the law. The bill, therefore, provides for a tax rate that will, by 1970, amount to 6½ percent of the pay roll for wage earners and 4⅞ percent of net income for self-employed and is expected to accumulate the astronomical reserve of about $90,000,000,000 by 1990 and the sum of about $100,000,000,000 several years thereafter.[61] The committee estimates that the interest on this fund plus the then current taxes of 6½ percent on the pay roll and 4⅞ percent on covered self-employed net income would yield $12,000,000,000 annually, the estimated amount required to pay the proposed benefits. The committee estimates that for the next 30 years contributions to the fund will exced benefits to be paid and that under the most unfavorable possible circumstances, benefit payments would not exceed tax contributions for the next 15 years.

The National Lawyers Guild has always advocated the principle that social security should be financed out of general revenues on a pay-as-you-go basis. On such a basis the pay-roll tax required to provide the benefits proposed in H. R. 6000 during the next 20 years would in the years stated below be as follows:

	Percent of payroll	
	Cost on basis of pay-as-you-go	Tax fixed by H. R. 6000
1950	1.1	3
1955	2.2	4
1960	3.2	5
1970	4.8	6½

When the Social Security Act was first proposed, the Committee on Economic Security, appointed by President Roosevelt, recommended the pay-roll tax as the most feasible means of financing the system. It also recommended that the maximum joint employee-employer tax be fixed at 5 percent, which it estimated would suffice to finance the program for 25 years, after which the Federal Government would have to contribute toward the cost of benefits.[62]

The Social Security Act contains a blanket appropriation of such "sums as may be required to finance the benefits and payments" under the old-age and survivors provisions of the law.[63] This means Government participation in financing the program when the benefits exceed the contributions and the reserve is exhausted.

The Advisory Council to the Senate Finance Committee recommended in 1948 that Government contributions to the fund should begin when the employer-employee pay-roll tax of 4 percent plus interest on the reserve becomes insufficient to meet the costs of current benefit payments.

Said the Council: "The Council believes that old-age and survivors insurance should be planned on the assumption that general taxation will eventually share more or less equally with employer and employee contributions in financing future benefit outlays and administrative costs. Under our recommendations, the full rate of benefits will be paid to those who retire during the first two or three decades of operation even though they pay only a fraction of the cost of

[61] Unless otherwise indicated, these figures as well as other statistical data used hereafter are taken from the H. Rept. No. 1300, pp. 17–24, 31–38.
[62] Social Security in America, Social Security Board Publication No. 20 (1937), 204–207
[63] Social Security Act, sec. 201 (a).

their benefits. In a social-insurance system, it would be inequitable to ask either employers or employees to finance the entire cost of liabilities arising primarily because the act had not been passed earlier than it was. Hence, it is desirable for the Federal Government, as sponsor of the program, to assume at least part of these accrued liabilities based on the prior service of early retirants. A Government contribution would be a recognition of the interest of the Nation as a whole in the welfare of the aged and of widows and children. Such a contribution is particularly appropriate in view of the relief to the general taxpayer which should result from the substitution of social insurance for part of public assistance." [64]

The Council also stated that "there are compelling reasons for an eventual Government contribution to the system."

The attempt to finance the social security entirely by a pay-roll tax and to accumulate the immense reserves must be condemned upon the following grounds: Such a reserve creates grave problems affecting the national economy.[65] In addition to his own tax contribution, the employee is indirectly taxed with a substantial part of the employer contributions. This results from the fact that the employer necessarily shifts the tax to the consumer by increasing the cost price of his product. The employee is thus taxed to an extent which is equivalent to a substantial wage cut and thus undermines his purchasing power as a consumer in the current market.

In Great Britain as in most other countries the Government contributes to the financing of social security out of general revenues. The placing of the entire financial burden upon the employees and employers is injurious to the general welfare.

The taxes proposed would take away from the public for the next 30 years more than they would get during the same period. According to the estimates of the Ways and Means Committee, the income and outgo would be as follows:

Year	Taxes collected	Benefits paid out
	Billions	*Billions*
1950	3.3	1.3
1955	4.6	2.6
1960	5.9	3.8
1970	8.3	6.2
1980	8.6	8.4

We recommend that these tax provisions of the bill be completely repudiated, that the tax proposals contained in H. R. 2893 (fixing the maximum contribution rate at 2 percent on employees, 2 percent on employers and 2¼ percent on self-employed) be adopted instead and that the present provision of the Social Security Act appropriating from the general treasury funds sufficient to pay the required benefits be retained. The latter would mean that once the benefit payments exceed the current contributions and exhaust the accumulated reserve, the Federal Government would begin to participate in financing the program.

In its report to Congress on H. R. 6000 the committee stated that it believed "that it is not necessary in such a long range matter to attempt to be *unduly conservative* and provide an intentional overcharge especially when it is considered that it will be many, many years before any deficit or excess in the ultimate rate will be determined and even at that time it will probably be of only a small amount." [66]

The proposals contained in the bill would seem to indicate that the committee overlooked its own admonition against being "unduly conservative" and has made proposals for financing the program which are not only conservative but definitely unjust and burdensome and contrary to the basic principles of a sound social-security program.

---

[64] S. Doc. No. 149, supra, note 4, at 13.

[65] Id., at 45: "Some people fear that additions to the trust fund will have adverse effects on the economy. Whether the economic effects of additions to the trust fund are good or bad will depend on the general economic situation and on the fiscal policies of the Government." For the latest discussion of the problem, see letter of W. L. Mitchell, Acting Commissioner of the Social Security Administration, to the New York Times, Oct. 30, 1949, sec. 4, editorial page; and Nelson, Investment Issue in Social Security, Id., sec. 3, p. 1.

[66] At p. 35. [Italics supplied.]

By proposing to keep the benefits within the expected income over a period of 50 years, the committee has imposed a straitjacket upon the entire social-security system. The result is a proposed benefit formula which fails to provide the insured person benefits sufficient to maintain him in a decent minimum standard of living. Thus, assuming a wage earner who had had 2 years of covered employment out of every 3 in the labor market and who had earned $150 per month, his average monthly wage for the purposes of computing his benefit would be about $100 and his benefit would be about one-third of his former wages. The worker whose average wage was $300 would, according to the committee formula, receive only about 23 percent of his former average wage in benefits and even less when compared with his actual wage.

The result is that the bill fails to remedy in many important respects the existing shortcomings of the present social-security system and thus fails to assure adequate social security to the American people.

The proposal to limit the taxable earnings to $3,600 is unrealistic. In view of the general increase in the average wages since the enactment of the Social Securtiy Act, the taxable base, whether from wages or self-employment, should be fixed at $4,800. This would enable wage earners and self-employed people to receive higher benefits. Furthermore, as the committee itself has established such increase in the taxable base would result in the over-all reduction of the cost of the program.

The proposal to exempt non-profit organizations from contributing to the fund should be eliminated. Failure of a non-profit organization to contribute would reduce by one-half the "average wages" of their employees for purposes of computation of benefits with a resultant reduction in the benefit payable to them to the extent of about 20 to 25 percent. There is no reason for discrimination against employees of these organizations. When these employees become aged, sick, or disabled, their needs are as great as those of employees in other employment. The deficiencies which the bill would to some extent remedy, would unjustifiably be continued for these employees. Furthermore, some of these employees may work part of the covered period for an employer who had paid contributions and the benefits of such employees would have to be computed at various fractions creating unnecessary administrative problems. The provision permitting the Social Security Commissioner to exempt a defaulting nonprofit organization from coverage puts a premium on nonpayment of the contribution. It permits the Commissioner to punish the victims—the employees.

These provisions should be eliminated from the bill.

IV. Advisory Council

The administration of such a vast program of social welfare as the social-security system requires constant examination of its functioning and effectiveness as well as a continuous search for its improvement. For that reason H. R. 2893 provided for the creation of an Advisory Council which would function as a consultant to the Social Security Administrator, would study the efficiency of administrative operations, would suggest needed changes, and insure impartial solution of problems free from political influences.

H. R. 2893 also provided for the creation of a National Legislative Committee, to be appointed every 6 years by Congress, to study and reevaluate the social-security program and advise Congress regarding the same.

H. R. 6000 makes provision for such Advisory Council and Legislative Committee. We believe they are necessary and desirable for adequate and effective administration of the law. Accordingly, we suggest that the provisions of H. R. 2893, sections 1110 and 1111, pages 136 to 141 be incorporated in H. R. 6000.

V. Conclusions

One of our goals in the last war was the achievement of freedom from want. We have learned that economic insecurity throughout the world affects our own security. Because of that, we have made it our national policy to assist other countries to regain economic stability and to assist other people in finding a modicum of economic security, and thus, to establish peace and prosperity throughout the world. Surely we cannot do less for our own people. A sound and adequate system of social security would strengthen our own economic stability upon which the stability of the world so much depends.

We have urged Congress repeatedly to revise our social-security system so as to remedy admitted inadequacies and deficiencies. H. R. 6000 which has passed the House and now awaits action by the Senate does not meet the social needs of the American people; its fiscal provisions are based on fallacious reasoning and unsound principles; its benefit provisions are still grievously deficient; its coverage provisions, though expanded, are still excluding some 15 to 20 million gainfully employed persons who are entitled to the minimum protection against the hazards covered by the law; while it provides new additional protection against total permanent disability, it fails to recognize the needs of dependents and completely disregards the problems of temporary disability. We urge the Senate thoroughly to revise H. R. 6000 and amend it in the manner indicated in this analysis; we urge the House to reconsider the bill and jointly with the Senate to remedy the indicated shortcomings.

Congress has now the opportunity to enact the reforms in our social-security system so long overdue. The time to make it applicable to the entire gainfully employed population, fiscally sound, and to provide benefits that would assure a minimum decent standard of living, is now.

We strongly urge that the bill H. R. 6000, amended, as proposed herein, be enacted during the present session of Congress.

Mr. SILBERSTEIN. I want to confine my remarks to brief arguments supporting our general policy with regard to the main and most essential requirements of a sound social-security system.

1. Coverage should extend to all of the gainfully employed population: The original exclusion of a large segment of the gainfully employed from coverage at the time of the enactment of the Social Security Act was sought to be justified because of lack of experience in this country with compulsory old-age insurance and because of fear that such a program could not at the outset be administered on such a large scale.

We have now had 14 years of experience, which has shown us that these exclusions are unwarranted, are harmful to the welfare of the people and result in a system which fails to protect those who most need it. Millions of wage earners are discriminated against. A heavier burden for the support of the indigent aged is cast upon localities and communities which can least afford it. Incomplete coverage results in lower benefits. In many instances, wage earners are taxed without security any benefits in return. This weakens the entire system. Partial coverage also affects the administration of the law. Universal coverage under a single administration would be financially sounder, more efficient, and could provide adequate benefits. All of the most recent studies made by the Federal Security Administration attest to the desirability of a unified all-inclusive old-age and survivors insurance system.

The Ways and Means Committee in its report accompanying H. R. 6000 makes the following statement:

> Without an adequate and universally applicable basic social-insurance system, the demands for security by segments of the population threatens to result in unbalanced, overlapping, and competing programs. The financing of such plans may become chaotic, their economic effects dangerous.

Why for instance should 600,000 lawyers, physicians, and other professionals, be excluded? The exclusion cannot be justified upon the basis of their vocation, because those pursuing these professions in the employ of others are covered. This exclusion is arbitrary, capricious, and without any merit or justification.

The conception which may prevail in some quarters that self-employed lawyers are in general so well off as to be able to provide for their own needs in old age and disability is without foundation.

Surveys made by the Department of Commerce of the net incomes of lawyers in the United States show that 50 percent of the lawyers received annual net incomes of less than $2,760 in any year from 1933 to 1939. In 1941 which is, I believe, a normal year, if there is such a thing for the profession, the median annual net income was only $2,960. While in 1947 the figures in the Commerce Department indicate a rise in annual median net income to nearly $5,200, a large part of this rise was attributable to the inflation of costs and prices. Most of the lawyers even in that abnormal year could not have managed to set aside the funds required to provide for their old age, especially as they had to "keep up appearances" with all that implies. And the ability of a group to provide for itself must be judged on the basis of earnings over a long period of time—not for this or that peak year.

Viewed from that perspective it seems clear to us that the need of the legal profession for coverage is genuine and urgent.

We are convinced that there is no less need for coverage for the professional self-employed than for other self-employed groups who are to be covered if H. R. 6000 is enacted in its present form.

Senator MILLIKIN. Do you have any statistics on the number of aged lawyers who are receiving public assistance?

Mr. SILBERSTEIN. We do not have that.

The exclusion of farm laborers and of farmers is even less excusable. The Treasury Department and the numerous congressional and other committees which have studied the problem had time and again found that there would be no administrative difficulties in bringing the farm group into the social security system. The earnings of the average farmers are below those of the average self-employed businessman or manufacturer, and the wages of agricultural laborers are among the lowest in the country. The need of these people for social security is as great as that of those groups already covered. The exclusion of these groups is unpardonable.

The failure to cover the entire gainfully employed population constitutes not only unfair discrimination, but it is economically unsound in our opinion. Sooner or later these groups will have to be brought within the system. But by that time a number of years will have elapsed during which these groups will have made no contributions to the system. Moreover, allowances will have to be made to the older people within these groups, to enable them to qualify for basic minimum benefits. Why then not include them now and thus have them share the burden imposed upon the rest of the working population?

Senator MILLIKIN. Do you believe in the pay-as-you-go system?

Mr. SILBERSTEIN. We do.

The bill should be amended to extend coverage to the millions now excluded.

2. The benefits should be increased to provide a minimum living standard.

Existing benefits are woefully inadequate. In many instances many beneficiaries are compelled to apply for and accept supplementary public assistance.

Studies made by the Social Security Board in 1946, 1947, and 1948 in 13 cities show that an elderly couple needs not less than $1,400 per annum in Houston, Tex.; $1,780 in New York City, N. Y.; and, $1,830 in Washington, D. C., for a decent minimum standard of living. The

present highest possible benefit for a couple is thus less than 60 percent for Houston and about 45 percent for New York and Washington.

The benefit formula in the proposed bill, H. R. 6000, would still provide much less than these minimum requirements for elderly couples.

Thus, an individual with an average wage of $200 a month would be entitled to receive under the law, as revised by H. R. 6000, $63 per month if covered for 10 years continuously when single, and $94 with a wife 65 years old (H. Rept. No. 1300, p. 17). But most workers are not likely to have 10 years of continuous covered employment, and in most cases it will be years after the wage earner reaches 65 that his wife will reach the same age.

To be adequate the benefits under the law should be revised to provide allowances approximating the findings of the cost of living surveys made by the Social Security Board.

The question will be no doubt raised in connection with this point and with my later remarks on coverage for temporary disability that the proposed pay-roll taxes might have to be prohibitively high to bear the cost. In anticipation of that question, I would say, in the first place, that the House Ways and Means Committee estimated that contributions to the fund under H. R. 6000 would exceed the benefits to be paid for the next 30 years, and that the reserve should reach 90 billions within 40 years (Rept. No. 1300, pp. 17–24, 31–38). Such a reserve creates grave problems affecting the national economy, by reducing purchasing power and hence the domestic market within our country.

It is also in our view a basically unsound and improper method of financing the program. The viewpoint recently expressed by the Brookings Institution in Washington is in our opinion deserving of serious consideration. They said:

> The OASI trust fund is invested in Federal Government securities. Since the money is used by the Government in meeting its regular expenditure requirements, no real reserve is created. The obligations of the Government (liabilities) deposited in a trust account do not represent assets; they merely record future obligations which can be fulfilled only through the levy of future taxes on the economy in general. * * * The way to avoid the dilemma of the current pattern of old-age and survivors insurance with its pseudo resemblance to private insurance is to abandon it entirely.

But if the present system is to be adhered to in its general plan we suggest the appropriateness of contributions from the general funds of the National Treasury raised on the basis of ability to pay at such time as the contributions from pay-roll taxes prove to be inadequate.

Senator MILLIKIN. That is from income taxes?

Mr. SILBERSTEIN. General revenues, Senator. Specifically, in the printed full statement of our position, we recommend that the pay-roll taxes be not permitted to rise above 4 percent for employed persons; that is, 2 percent to the employee and employer, or above 2¼ percent for self-employed. At such time as the contributions by pay-roll taxes are inadequate, there should be a contribution from general revenues.

We agree with the view expressed by the Advisory Council to the Senate Finance Committee in 1948 that "there are compelling reasons for an eventual Government contribution to the system."

3. Disability coverage and benefits: The disability benefits under H. R. 6000 would begin only with the seventh month of disability,

and no provision whatever is made for the payments of benefits to a wife, child, or other dependent—section 104 (a) 107. The benefits are grossly inadequate in our opinion. A totally disabled person necessarily requires constant care. His expenses increase. The benefits would clearly be insufficient for the family needs. The wife, if not gainfully employed, should receive a supplemental benefit equal to one-half of the primary benefits, and additional benefits for dependents. H. R. 2893 provided such additional benefits, and the provisions of that bill should be adopted.

In a single year wages amounting to 5 or 6 billion dollars are lost due to illness lasting up to 6 months. The economic hardship caused by disability is usually more serious than a wage loss from unemployment due to the added expense of medical care (Unemployment Insurance, S. Doc. No. 206, 80th Cong., p. 45.)

We believe that coverage of temporary disability up to 6 months is essential to alleviate grave hardship, and for the well-being of our economy: That there should be no exclusion from coverage for purposes of temporay disability of any gainfuly employed persons; that the waiting period should be reduced to an absolute minimum.

Congress has now the opportunity to enact the reforms in our social-security system which are so long overdue. The time to make the system applicable to the entire gainfully employed population and to provide benefits that would assure a minimum decent standard of living is now.

We strongly urge that H. R. 6000 be enacted at this session of Congress with the amendment we have urged.

I thank you for your kind consideration, gentlemen.

The Chairman. We thank you for your appearance.

That completes the hearing for today, and the committee will recess until Monday morning at 10 o'clock.

(Whereupon, at 12:20 p. m. the committee was recessed to reconvene at 10 a. m. Monday, March 20, 1950.)

SOCIAL SECURITY REVISION

MONDAY, MARCH 20, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Hon. Walter F. George, chairman, presiding.

Present: Senators George, Byrd, Hoey, Millikin, Taft, and Brewster.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

Dr. Slichter, we are very glad to have you on H. R. 6000, the social-security bill, which we are studying, and we shall be very glad to hear from you. Do you wish to submit a general statement before we question you, if any questions arise, or would it interfere with you to be interrupted at any time?

STATEMENT OF DR. SUMNER H. SLICHTER, LAMONT PROFESSOR, HARVARD UNIVERSITY, CAMBRIDGE, MASS., ASSOCIATE CHAIRMAN OF THE ADVISORY COUNCIL ON SOCIAL SECURITY TO THE SENATE COMMITTEE ON FINANCE

Dr. SLICHTER. Mr. Chairman, I have a prepared statement which I can read in part if you care to have me do so. I also welcome questions at any time.

The CHAIRMAN. We are very glad to have you because you have your work on the Advisory Council, of course. We are familiar with the studies made by the council, and we recognize your peculiar fitness for this particular assignment that you have been good enough to assume this morning to come down here and talk to us about this bill. We have as the basis, of course, H. R. 6000 on which the hearings are proceeding.

Dr. SLICHTER. Mr. Chairman, I have assumed that the members of the committee were familiar with the recommendations of the Advisory Council. Consequently, the statement which I have prepared does not go into detail but undertakes to underline some of the main features of the conclusions which the council reached.

Suppose I read this rapidly and perhaps with a little skipping here and there, and then as I go along the members may see fit to interrupt with questions or if they prefer to defer the questions until the end, all well and good. I am particularly interested of course in the questions.

Perhaps I should remind the committee that Mr. Stettinius was the Chairman of the Advisory Council, and naturally we all regret that he cannot be here to do what I am doing this morning.

The 17 members of the council were from various walks of life. Four of them, I think, might be regarded as technical experts in this field: Dean Brown, who was chairman of the preceding council; Mr. Folsom; Mr. Linton of the Provident Mutual; and Mr. Cruikshank, the social-security expert of the A. F. of L.

As you are aware, it was a hard-working Council. It reached three basic conclusions concerning the problem of old-age security.

1. That the foundation of the country's system of old-age security ought to be a Federal system of contributory social insurance with benefits related to prior earnings and awarded without a means test.

2. That the present old-age and survivor's insurance act is not performing adequately the job that it was expected to do.

3. That the present act is sound in principle, and that its failure to do the job expected of it is attributable to three principal defects, all of them easily remedied.

The Council made 22 recommendations to remedy these defects. On 20 of these the Council was unanimous.

I wish to explain briefly to the members of the Finance Committee why the Advisory Council reached the conclusion that contributory social insurance related to prior earnings ought to be the foundation of the country's system of social security, and then I would like to explain briefly why the Council believes that the present act is not doing the job expected of it. Third, I would like to explain why the Council believes that improvements in the act will enable it to do the job. Then I should like to close by a few brief remarks on the problem of premature retirement of workers and the bearing of that on the cost of old-age security. I have a few remarks under one other heading, namely, the topic of insurance for total and so-called permanent disability, on which the Council made a second report.

The Council was unanimous in believing that contributory social insurance should be the foundation of the country's system of old-age security. This same conclusion, may I remind the committee, was reached by the Advisory Council to the Committee on Economic Security which helped draft the act of 1935 and by the Advisory Council of 1937–38. Our conclusion on this point that contributory social insurance should be the foundation of the country's scheme of old-age security rested upon several reasons.

In the first place, the pensions provided by contributory insurance are not charity. No means test is used, but pensions are awarded as a matter of right. Furthermore, the cost is met from the worker's own production in the form of a tax on pay rolls paid immediately by the employer and a tax on wages paid immediately by the worker. Hence the dignity and self-respect of the worker are shown consideration. After a lifetime of work, it is not right that men should be dependent upon charity.

In the second place, old-age insurance encourages self-reliance and thrift instead of discouraging them. A man by being thrifty does not diminish the amount of the pension that he receives. He simply assures himself of a better standard of living in his old age. This is in contrast to old-age relief based upon a means test. When a means

test is used, the man who has been thrifty and who has provided for himself adequately gets nothing. The man who has partly provided for himself gets small benefits. The man who has made no provision for himself gets the largest grant.

Senator BREWSTER. That makes it a penalty on thrift.

Dr. SLICHTER. That is right. If you want to reward people for not being thrifty, that is the way to do it.

In the third place, old-age insurance, which relates benefits in some measure to the prior earnings of workers, helps protect men from too drastic a drop in their standard of living on retirement. Naturally the standard of living of people tends to vary with their earnings. Since the purpose of old-age insurance is to protect men against having too drastic cuts in their standard of living when they retire, pensions should vary in some measure with past earnings. Flat benefits, which are not related to earnings but are the same for every one, would assure that there would be only an arbitrary relationship between men's standards of living before retirement and their standards of living after retirement. Under a system of flat benefits, the benefits that would be about right for some workers would be too small for many others and possibly too large for a third group.

Senator TAFT. That is a substantial difference between our plan and the English.

Dr. SLICHTER. Yes; one of the differences.

In the fourth place, a Federal system of old-age pensions should be the foundation of the country's system of old-age security, because it can be applied to all members of the labor force and can be made as broad, therefore, as the problem with which it is expected to deal. This method of meeting the problem does not depend upon the willingness of an employer to grant pensions or upon the bargaining power of unions and their ability to compel employers to grant pensions.

Furthermore, a system of old-age insurance can be applied to the self-employed as well as to the employees. Since about one out of five workers in the United States is self-employed, it is necessary that the scheme of old-age security be applicable to the self-employed as well as to the employees.

Senator MILLIKIN. Professor Slichter, we have tried during this hearing to get some statistics on the number of self-employed who after reaching the age of 65 are needy and must take recourse to public assistance. Have you developed any statistics on that?

Dr. SLICHTER. No, Senator Millikin; I am afraid I cannot give you a break-down between the self-employed and the employees on that.

Senator MILLIKIN. We have been trying to get at the need for insuring self-employed, and obviously one aspect of that is what the later history of the self-employed so far as indigency is concerned.

Dr. SLICHTER. There may be some figures in the report on low-income families, but I have not had a chance to go over that in detail. That came out only several months ago, and I am sorry I can't help you out. I have one or two remarks on that point which bear somewhat indirectly on your question but I am afraid do not meet it head-on.

Why did the Advisory Council reach the unanimous conclusion that the present act is not doing the job expected of it?

There were three principal reasons for this conclusion. One reason is that, even after 13 years, only about 39 percent of the male workers who become 65 years of age would be eligible for benefits if they were to retire. Hence, it is plain that many people who need to receive protection are not getting it. The principal reason why they are not receiving protection is that the act applies to only three out of five jobs. Another reason is that eligibility to receive benefits is determined by the proportion of time that a man spends in covered employment, not by the proportion of time that he is at work. He may be quite steadily employed and still not qualify if he is one of the many workers who move back and forth between manufacturing, which is covered, and agriculture, which is not. For example, of the 6,600,000 farm operators, about 1 out of 4 has made contributions to the old-age insurance scheme but is not insured.

Senator MILLIKIN. Doctor, are you referring to the proprietor or the farm worker?

Dr. SLICHTER. I am referring to the proprietor. In the case of the farm worker the percentage is a little more than 30. About 30 percent of the farm workers have made contributions because they have worked at some time or other in manufacturing or some other covered industry, but they haven't worked a sufficient proportion of the time to be eligible for benefits.

Senator MILLIKIN. In the case of a farm worker, does not experience show that a farm is able to carry an elderly worker further along than industry is?

Dr. SLICHTER. It shows that they do. I shall have a few remarks toward the end of this statement on what I call premature retirements. I think industry has been a little arbitrary in retiring everyone at age 65 as if there were some magic about 65, as if everyone above 65 was unfit to hold a job. In agriculture that is not true, and I doubt whether it is true in industry, but there is a difference in practice between agriculture and industry. I will give you in a few moments a comparison between the rural and the nonrural parts of the community with respect to the proportion of the male population above 65 years of age at work.

A second reason for believing that the Insurance Act is not doing the job expected of it is that the average pension is too small and is considerably less than the average payment for old-age assistance. The average pension for a single person averages about $26 a month and for a retired person with one dependent about $40 a month. The average payment under old-age assistance is about $44.50. Although the recipients of old-age assistance are half again as numerous as recipients of old-ge pensions, total payments for assistance are nearly 2½ times as large as total payments for pensions. The principal reason why pensions are small is that the benefit formula is too low even for workers steadily employed in covered industries. It provides 40 percent of the first $50 and 10 percent of the next $200 of average monthly earnings, plus additional allowances for dependents, plus a 1-percent increment for each year of service in covered industries.

The CHAIRMAN. Do you deal with the increment problem, Doctor?

Dr. SLICHTER. No; not in this statement; but I shall be glad to answer questions about it.

Senator MILLIKIN. Would you give us your viewpoint on that, Doctor?

The CHAIRMAN. Would you care to comment on that now? If so, we would be glad to hear you.

Dr. SLICHTER. I see no reason why I should not. The view in the Council was that it would be preferable to pay more adequate pensions now rather than to get up to some standard of adequacy 20 or 30 years from now by the method of an increment. If you put an increment into the formula and you say this formula, including the increment, will give an adequate pension, you are really saying—are you not?—that adequate pensions according to your standards, whatever the standard may be, will not be attained until 30 or 40 years from now, until the average person drawing a pension has had the benefit of the increment over a lifetime of employment in industry? If we assume that a lifetime of employment in industry is in the neighborhood of 40 years, that would mean that adequate pensions by whatever standard you accept will not be attained until 40 years hence.

That was the dominant thinking in the Council, and I shared it.

I think one can make this kind of case in favor of the increment. One can say, on the basis of past experience, that pensions have been slow to move up as rates of pay have moved up. For example, since 1940, as I shall point out in just a moment, although earnings per hour and earnings per week have more than doubled and per capita income has more than doubled, the average pension has risen only 14 percent. One can say, in a progressive economy such as ours, that the course of earnings is bound to be upward, and it is desirable to have in the formula some kind of automatic arrangement to keep pensions moving. That wasn't the original philosophy of the increment, and it is not a philosophy which I have heard expressed until very recently.

Senator BREWSTER. That apparently is based on the assumption that we are going to go on expanding indefinitely.

Dr. SLICHTER. That is right.

Senator BREWSTER. Do you have any historic record that would indicate that we have now entered that happier era?

Dr. SLICHTER. If we don't go on expanding, a lot of people who have been studying engineering and chemistry and physics have been wasting their time, and a lot of money which is being spent today on industrial research is being wasted. We have more time and effort and knowledge being expended today on raising the productivity of industry than ever before, and I think it would be very unrealistic to assume that that vast effort will be a complete fizzle.

Senator BREWSTER. I am speaking now in terms of dollars rather than in terms of product.

Dr. SLICHTER. Suppose productivity goes up and prices remain about the same, then wages will go up.

Senator BREWSTER. Just a moment. On what do you base the idea that the value of the dollar is not going to change after what has happened in the last 20 or 30 years? How do you assume that the dollar is going to go on indefinitely being depreciated instead of being possibly appreciated?

Dr. SLICHTER. I am not assuming that. I am willing to argue that if you want me to.

Senator BREWSTER. That is the answer. This whole thing is based on dollars.

Dr. SLICHTER. Oh, no; all that I am assuming is that the dollar does not necessarily depreciate in value, but that wages go up.

Senator BREWSTER. What has been the story of the last 30 or 40 years on the dollar?

Dr. SLICHTER. The story with respect to the value of money for centuries in all countries has been that it has gone down. I don't think it is relevant to this particular point, but if you want me to make an observation I should say that it will continue to go down. That is more of an argument than ever in favor of the increment.

Senator BREWSTER. Then you do assume that the dollar is going to continue to depreciate in its value?

Dr. SLICHTER. No. I believe it, but I don't assume it. It is not a necessary assumption. You may argue quite logically for the increment even though you believe something which I do not happen to believe: namely, that the value of the dollar will hold steady.

Senator BREWSTER. I did not indicate any of my belief at all. I was asking for yours.

Dr. SLICHTER. Yes.

Dr. BREWSTER. As I understand, you believe that the dollar will continue to go down.

Dr. SLICHTER. That is right, but that is not why I think there might be a case for the increment. As a matter of fact, I am not a pro-increment person. I am trying to set forth to the committee the latest thinking on the subject of the increment, and I have indicated where I stand, but I thought I ought also to present the view in favor of the increment. I would prefer a less mechanical way of dealing with the problem of keeping the size of pensions related to the size of earnings. I think that every 10 years or so enough will have happened so that the Congress will find it important to review the old-age insurance and survivors plan, and those reviews would seem to me to be the best occasion for adjusting pensions to whatever change in earnings may have occurred. The increment method is a method, but you can see that it is a rather rigid and mechanical method.

Senator BREWSTER. You do assume, then, then necessity of that review which does depart from your insurance philosophy; does it not?

Dr. SLICHTER. No.

Senator BREWSTER. It does not?

Dr. SLICHTER. No.

Senator BREWSTER. Do you mean that the relation of a man's payments to his pension is not at all the essential and integral part of your plan?

Dr. SLICHTER. Oh, yes, but that does not mean that in a changing world one should not take a look at the pension plan about every decade.

Senator BREWSTER. The Government then absorbs the depreciation of the dollar.

Dr. SLICHTER. I do not know what the Government does. It just takes a look, and it reaches such conclusions as the facts seem to call for. It may decide, "All right, we have taken this look, and no changes are needed." It may decide, "We have taken this look, and we think we had better do this or that to the benefit formula."

Senator BREWSTER. How do you relate that to any insurance philosophy? Can any private insurance company do what you propose?

Dr. SLICHTER. When they have sold annuities they certainly have had to revive their annuity contracts with the decline in the rate of interest.

Senator BREWSTER. Is that not an integral part of their contract?

Dr. SLICHTER. That is, but they are not charging the same price for annuities today that they charged 15 or 20 years ago. If you were fortunate enough to have purchased an annuity from an insurance company 15 or 20 years ago, you got it at a price far below the price that you would have to pay today.

Senator BREWSTER. I am sure, Dr. Slichter, you realize the difference between what one pays for a contract and what one receives under it. Insurance companies are still paying what they agreed to pay. You are proposing that the Government shall pay not what it agreed to pay, but some other figure which results from the depreciation of the dollar. Is not that the fact?

Dr. SLICHTER. I certainly should expect the Government to protect the recipients of pensions against a depreciation of the dollar.

Senator BREWSTER. And no private insurance company can possibly do that; can they?

Dr. SLICHTER. No. That is one reason for preferring the Government scheme.

Senator BREWSTER. Yes. So, the Government can automatically take care of the changing value of the dollar. Now suppose the dollar should go up in value, which you do not anticipate. Would you protect the Government in that event against the resulting advantage?

Dr. SLICHTER. I might.

Senator BREWSTER. Can you contemplate that the Government might sometime reduce its payments to a degree?

Dr. SLICHTER. Oh, I don't suppose it would reduce any past payments; no.

Senator BREWSTER. Not past payments, but future payments.

Dr. SLICHTER. No; I don't suppose the Government would.

Senator BREWSTER. I should think that is a warranted conclusion.

Dr. SLICHTER. I don't think you need worry about the dollars appreciating in value.

Senator BREWSTER. That is what I thought you said you expected.

Dr. SLICHTER. I said I expected money to depreciate in value. It has in all countries of the world for centuries.

Senator BREWSTER. Was your word "depreciate" then or did you mean to say "appreciate"? I thought you just said you did not anticipate any depreciation in the dollar.

Dr. SLICHTER. I said I did not expect any appreciation of the dollar over the long-term.

Senator BREWSTER. I am sorry, I misunderstood you.

Senator MILLIKIN. Mr. Chairman, if I may suggest, I think we get into terrific confusion all through this subject by semantics. We refer to this as an insurance system. I suggest that the relation between this and insurance as we know it in private companies is a very tenuous relation. We are using the word "insurance" where perhaps some other word might be a happier thing.

Dr. SLICHTER. I think that is a very wise remark, Senator Millikin. Of course, the act uses the word "insurance," and it is convenient therefore in talking about the act, in order to designate what I am talking about, to use that term. I think, without taking the time of the committee on this particular point, which I think is one of semantics, as you say, I would be willing to defend and I feel pretty sure

I could successfully defend the position that there is a very substantial element of insurance in this scheme. You have insurance regardless of who pays for it or regardless of how it is paid for. If you are assured by a responsible agency of protection against a certain definitely described contingency, as a mater of right, not on the basis of a means test, that is insurance. It is just as much insurance whether you get it free or whether you pay for it yourself. This is called social insurance because the method of payment is a mixed method of payment, but the method of payment does not alter the reality of the protection, and it is a reality of the protection which determines whether or not people have been assured against something.

Senator MILLIKIN. I think that would be a free-wheeling use of the word "insurance." I still think there is a vast difference between that definition of insurance and the definition that we associate with private companies. For example, we are sitting here taking a 50-cent dollar or a 40-cent dollar, whatever it is, from the so-called insured, and we are saying to him that when you reach the age of 65 we will give you so much money back. The reality of insurance may disappear completely if the toboggan of the dollar continues. So unless the Congress comes back every few years to readjust the system as you have suggested, and I think it is going to have to, there is no reality in our future assurances because we cannot sit here and anticipate what the dollar will be worth.

Dr. SLICHTER. Of course, by that same test, Senator Millikin, the Metropolitan Life Insurance Co. is not selling insurance. The Government has a better chance of giving protection to the people who come under its scheme than any private insurance company.

Senator MILLIKIN. The Government has a chance to revise. The obligation of an insurance company is to take in a certain number of dollars and to pay out a fixed number of dollars, which, as Senator Brewster points out, may have complete unreality in it or on the basis of the value of the dollar put in and the value of the dollar taken out, and the insurance companies, as you point out, have a certain rigidity in their way of doing business, a necessary rigidity, which makes it beyond, at least to a considerable degree, their power to keep the money they take in and the money they pay out adjusted to the strict realities of the cost of living.

Dr. SLICHTER. Right. In other words, the insurance companies are very handicapped in selling real protection.

Senator MILLIKIN. That is right.

Dr. SLICHTER. And the Government is in a better position than any private insurance company to give protection which takes into account the depreciation of the dollar, if that were to occur.

Senator MILLIKIN. That rests on the assumption that we will meet, and I think we will have to, just as we are meeting here. The reason we are meeting here now is because the dollar of 1934 and 1935 is an entirely different kind of dollar from the dollar of 1950.

Dr. SLICHTER. You are quite correct.

Senator BREWSTER. And the assumption would be that we should put the private insurance companies entirely out of business and the Government should take it all over. That is the only way that any measurable degree of justice can be achieved. Is that not correct?

Dr. SLICHTER. No; I do not think that is correct. No one has to patronize a private insurance company if he does not care to. If he

considers the probable trend of prices and decides that what the private insurance companies have to sell is worth buying, that is up to him. I have some insurance and annuities, but at my age I do not have to take a very long-run point of view because I can soon begin using mine. The dollar will have to drop pretty fast in order for me not to get pretty good value for my annuity. The private insurance company has a real place in the world.

Senator BREWSTER. You would not make a very good insurance salesman on the basis of what you have said.

Dr. SLICHTER. I wouldn't make a good salesman for any product because I have been trained to be skeptical of everything, you know.

Senator BREWSTER. Would you apply this same principle to the billions of dollars of the bonds which we have sold to our people in the last 10 years? Would you apply the same principle?

Dr. SLICHTER. I have suggested in public several times that the Government would do well to offer something close to the E bond, which is payable in a fixed amount of purchasing power. I bought E bonds, not because I thought they were the kind of security which I needed but because I thought it was the least I could do by way of making a sacrifice when young men were going into the service and giving some years of their lives, but if the people who for patriotic reasons bought E bonds a few years ago had been looking at things from just a narrow selfish investment point of view, they would have been much wiser to have purchased second-hand automobiles.

Senator MILLIKIN. Mr. Chairman, may I take the liberty, Doctor, of pointing up what you touched very briefly. The holder of a private insurance policy can get out any time he wants to, and in many policies he has a vested value which is available for other types of investment; whereas this is a compulsory system, he cannot get out, and therefore he is in the hands of Congress, which determines what he puts in in relation to what he takes out.

Dr. SLICHTER. That is right; and he also comes in not by his own option.

Senator MILLIKIN. I say it is compulsory as far as this system we are discussing now is concerned.

Dr. SLICHTER. That is right.

There is a third reason for believing the act is not doing the job. It is that the average monthly pensions have not kept pace with the rise in the cost of living or the rise in per capita income. We have covered that in part. The average monthly payments have increased 14 percent since 1940, during which time the cost of living has risen 69 percent, average weekly wages have risen 117 percent, and per capita income has risen 132 percent. So you see there has been a marked change in the relationship between pensions on the one hand and people's earnings on the other.

I think everyone will agree that pensions ought to bear a more or less constant ratio to the average earnings of persons through time. Otherwise, they do not give people the required help in maintaining their customary standards of living.

Senator MILLIKIN. I wish to refer to something which you cannot compel by law, and I wish we could compel it by law. Is it not a corollary of what you have said that all those interested in pensions should be equally interested in preserving the solvency of this Government? That is what will keep the value of the dollar up.

Dr. SLICHTER. Yes; you might compare a broad Government pension scheme with Alexander Hamilton's idea. He thought it was wise to have the public debt widely held. A comprehensive scheme of old-age pensions would do exactly the same sort of thing that Alexander Hamilton hoped to obtain by getting a large part of the community interested in the financial condition of the Government through owning the obligations of the Government.

Senator MILLIKIN. Is it overly hopeful to suggest that if we do increase this coverage to almost a universal scale and if we do educate the beneficiaries on what causes a depreciation of the value of the dollar that we might build up a rather strong public support for keeping the Government solvent?

Dr. SLICHTER. I wouldn't care to be overly optimistic on that. I think the influence would be in the right direction. I don't think it would be a negligible influence, but I wouldn't be candid if I said this is the panacea, this is the cure-all. This would be a help, but the demands that the Government undertake things which cost money come from a great many different directions, and many of those things have great merit. The same is true of each one of us individually. I can think of a great many meritorious ways of spending my income, and I would not be at a loss to get rid of my income if it were considably larger than it is. The Government is bound to be in that position; all governments are. So a universal pension plan would help. But let us not be grasping for panaceas. We should not be realistic if we did.

The third part of these remarks deals with why the Advisory Council believes that improvement of the act along the lines of its recommendations would enable the act to do the job expected of it and to become the foundation of the country's system of social security.

Senator TAFT. Professor Slichter, you haven't considered the adoption of an automatic formula of some sort, an index number that would go up every 5 years or down every 5 years according to some level of wages, which would require an automatic adjustment? It is a little easier thing to defend if we do not have to change it a little every 5 years. We are less likely to go wrong if there is a formula.

Dr. SLICHTER. Yes; I think we have considered that sort of thing in the Council, and in fact one of the final references toward the close of the Council's report is on this particular point. I think it may be said fairly that we reached the conclusion that the adjustment to changing conditions, including the changing price level, should probably not be made in an automatic mechanical way, that about every decade you would need to take a look at the total situation, and that an advisory council would be needed. You cannot foresee all of the problems which may come up in the course of about 10 years. That was our thinking on the matter.

Senator TAFT. You might consider the provision of an automatic council, or at least set up something to start an investigation every 10 years, something of that kind in the bill.

Dr. SLICHTER. That could be done, if the Eighty-first Congress could bind the Eighty-sixth. I do not know whether the Eighty-sixth would pay any attention to the Eighty-first or not.

Senator BREWSTER. The Eighty-first has not listened to the Eighieth.

Dr. SLICHTER. We have crowded a terrific amount of history into the last decade and I suspect we shall crowd a tremendous amount of history in the next decade. Consequently, 10 years may be too long to wait. If we were to set up an automatic 10-year arrangement that might or might not fit the facts.

Senator MILLIKIN. If we have a decline in the value of the dollar in the next 10 years that we have had in the past 10 years, we would be handing out ciphers instead of checks that had dollar signs on them.

Dr. SLICHTER. We probably shall not have the problems which go with a shooting war, but we shall make a terrific amount of history, and I don't know what will be needed.

In the first place, under this heading of modifying the act so that it will do the job expected of it, the council was unanimous in recommending that protection of the act be extended to virtually all of the 25,000,000 jobs not now covered, because obviously one cannot expect a program to give protection to people whom it does not cover. So it seemed to us that extension of coverage was of basic importance. Coverage was originally limited because of administrative difficulties. As Mr. Folsom, a member of our council and also a member of the original Advisory Council to the Committee on Economic Security, pointed out in these hearings, it was not the intention permanently to exclude the self-employed and the domestic servants and the farm laborers. They were excluded because of the administrative difficulties. Both the Bureau of Internal Revenue and the Social Security Administration believe that they are now prepared to handle the administrative problems that would be entailed in fairly complete extension of coverage.

H. R. 6000 is an important step toward more complete coverage, but, after all, it would bring in less than half of the uncovered jobs.

The incomplete coverage proposed in H. R. 6000, it seems to me, raises basic questions as to where and how uncovered groups would get security for their years of retirement. Nearly all of the groups left uncovered by H. R. 6000 are groups that cannot be expected to be covered by private insurance initiated by employers or negotiated by trade-unions. Most of them are self-employed. Apparently the philosophy of H. R. 6000 is that the uncovered groups should either be able to take care of themselves or should be expected to rely upon charity. Is it realistic to assume that all members of the uncovered groups would be able to take care of themselves? For those who are not, is it fair to expect them to rely upon charity? Have we a right to assume that farmers and professional people do not need the protection? Is farming so free from economic hazards that farmers should be left to take their chances with old-age assistance? Likewise, are the professions such secure callings that architects, engineers, lawyers, doctors, and dentists do not need the protection which old-age and survivors insurance would give them? Can every lawyer, every architect, every engineer count on reaching the age of 65 or 70 with adequate savings to provide for the years of his retirement? Certainly the people cannot expect old-age and survivors insurance scheme to be the foundation of the country's system of old-age security if large parts of the population are excluded from the plan.

Senator MILLIKIN. Mr. Chairman, may I ask a question of the witness.

The CHAIRMAN. Yes, Senator Millikin.

Senator MILLIKIN. I think that represents some deviation, Doctor, from the original philosophy of the system. As I recall it, the original philosophy of our security insurance system was to cover the fact that the worker in our modern industrial economy is subject to hazards, as is every one, which he cannot control. Now we move in to cover the self-employed, doctors, dentists, proprietors, the corner grocery store man, who had deliberately chosen a way of life which they hoped would yield to them larger profits than the ordinary worker has. The theory of course is that if he makes that choice, he also takes the losses of the business. That does not meet the problem of need when you are 65, for a fellow who has misjudged those risks can be just as needy as an industrial worker. Let us concede that at the outset. But isn't there a difference in theory between covering an industrial worker and covering a self-employed person?

Dr. SLICHTER. No; I don't think so, Senator Millikin. I don't think it is the fact that a chap works for an employer which gives him such imperfect control over his fate. The man who goes into self-employment may make a spectacular success and may be quite independent of any insurance scheme and quite beyond the need of charity. But the man who starts a little business which may or may not become a big one is really taking greater risks than the chap who goes to work for someone else and who has the protection of the resources of that someone else for whom he goes to work so long as the contract of employment continues.

Senator MILLIKIN. Also, according to the statistics of private enterprise, there are greater chances of failure than there are perhaps of inability to keep on the pay roll.

Dr. SLICHTER. We know the mortality of new business concerns is quite high. I am sure the members of the committee are familiar with that.

Senator MILLIKIN. I am coming back, though, to my original thesis that we are somewhat changing our theory. The private enterprise fellow is supposed to get his profit, after the Government gets through with him, and he is supposed to take his risk, and that all goes to his final expectancy in life, what he expects when he gets to be an old man. That is why I have been pressing all through this hearing to try to get some reliable statistics on the old-age history of self-employed to find out to what extent that problem exists, but so far we haven't had very much information on that.

Dr. SLICHTER. I think we have some pretty good circumstantial evidence to the effect that the age of retirement is higher among the self-employed than among the employees. In fact, the actual point of retirement among self-employed people is difficult to define. It is true that a self-employed person can protect himself by continuing to work to a greater extent than can an employee. An employee who comes under one of these retirement plants, where every one quits at 65 or 68 or 70, can do nothing about it except to look for work elsewhere. He is penalized pretty severely under the present old-age pension plan if he tries to get work elsewhere because that act says if you earn $15 or more per month in covered industries, you don't get any pension, a peculiarily vicious provision of law, it seems to me. I don't think the financial history of agriculture or the financial history of

retailing or even the financial history of such professions as architecture or engineering or law indicate that there is not a problem of appreciable magnitude for these people when they reach the usual ages of retirement. What we are saying if we exclude them is that: "We know there are going to be an appreciable number of you who will be without resources. We can't pick the individuals, but we know that the number will be appreciable. We are saying to you that though you have done the thing that is particularly important in our economy, you have tried to go to work for yourself, you have been your own job maker, you have tried to give jobs to others, when you reach the age of retirement without resources, you are going to be dependent upon charity."

That, it seems to me, is the wrong philosophy. You say we are changing our philosophy. Perhaps we are. My interpretation would be different. My interpretation would be that——

Senator MILLIKIN. I am asking you whether we would be changing our philosophy.

Dr. SLICHTER. I am giving you my opinion, which corresponds to that which Mr. Folsom presented. His impression of the deliberations of the original Council in 1935 was that considerations of administration rather than considerations of principle led to the exclusion of the self-employed.

The CHAIRMAN. The coverage of self-employed, Doctor, could more nearly and accurately be described as a system of compulsory savings, could it not? Any part of the social-security program partakes of that in a way, it seems to me.

Dr. SLICHTER. You do not have individual accounts. You have contributions. You become a member of the scheme, and you are assured certain protection. The amount of protection, according to the view of the Council, should have some relationship to earnings, and in that sense it partakes of the nature of compulsory saving, whether it be an employee or a self-employed person who is involved.

The CHAIRMAN. I don't believe that there was a great deal of worry about applying the system to the self-employed person in 1937. Undoubtedly that did enter into certain groups like domestics and farm laborers. I was here at the time. It also entered into the question of the self-employed, but it was rather a different philosophy that controlled the decision of the committee at that time.

Dr. SLICHTER. It seems to me that we have reached the time today when we must decide whether the self-employed who have reached the age of retirement without resources, and there will be a considerable proportion of them—it is in the very nature of the competitive economy that there are failures as well as successes—we must decide today whether those self-employed who have reached the age of retirement without resources are going to have something better than charity.

The CHAIRMAN. I do not think there would be any disagreement on that point, Doctor, and the need will be present among the self-employed as in other cases, but the self-employed man has not any fixed time for retirement. The employed person has in a system of economy such as ours a period beyond which he cannot remain employed. He simply goes out at the other man's say-so.

Dr. SLICHTER. That is right. We recognize in our recommendations the problem of defining the point of retirement. We say in the

case of self-employed that they shall be deemed to have retired at age 70, and they are given the opportunity of qualifying before age 70 if they report earnings of a negligible amount.

Senator TAFT. Dr. Slichter, taking specifically the question of self-employed farmers, I wonder if anybody has gone to the State of Ohio, say, and found out whether there are any people who were self-employed farmers who are now on charity to any extent.

Of course there would be a few cases, but is it enough to justify taxing the whole crowd? As far as I can see, the Farm Bureau and the Grange when they were here were not so much concerned about taking care of somebody who needed it as they were about the fact that they thought the farmers were paying for everybody else, so they ought to come in on the distribution. In Ohio, 70 percent of the farms are owned by the farmers. Those people own those farms, and certainly when they reach 65 they can make some disposition of that farm which will give them a living for the rest of their lives if their children are not running it for them. The old theory of the children supporting the parents works much more on the farm than it does now in the industrial community.

Dr. SLICHTER. That is true.

Senator TAFT. I wondered whether any real investigation had been made to see whether there was any need for this. I do not object to the principle of extending it. In fact, I think I am in favor of it. But it does seem to me it is a little bit more theory and not much evidence behind it.

Dr. SLICHTER. I do not suppose that you would find a time when there would be a smaller proportion of the farmers in need than today. This would be a better time than most to dispose of farms. There have been years when disposing of a farm in competition with quite a number of insurance companies that had farms to dispose of, as well as other creditors, could not be done very advantageously.

Senator TAFT. What I meant by disposing of it was that when a farmer gets to be 65 and he owns the farm——

Dr. SLICHTER. He can run it on shares.

Senator TAFT. He can get his son or nephew to run it. I think, as a matter of fact, more than half of the farms in Ohio represent farms leased or tenanted by relatives of a man who has retired. So he can cash in on that ownership somehow to preserve his living.

Dr. SLICHTER. I do not know who these people are who are drawing old-age assistance in some of the States. I wish I did. We do know that in some of the agricultural States, rightly or wrongly, a very high proportion of the population is drawing old-age assistance; three out of five of the population of 65 years of age or more in Oklahoma, and in several other States, Texas, Georgia, Mississippi, it is around half. In Louisiana it is up to four out of five. Those are predominantly agricultural States, but the precise occupational history of the people drawing old-age assistance I don't know. I did have computed a coefficient of rank correlation of the States and the District of Columbia, that is 49 in all, ranking the States (1) by the proportion of the population covered by the insurance scheme and (2) by the proportion of those aged 65 or more drawing old-age assistance. If the States are ranked with those having the largest proportion of OASI recipients per 1,000 of aged population at the top and those with the

smallest proportion of old-age assistance recipients at the top, the coefficient of rank correlation is about 0.49. If there were no correlation, it would be zero; if there were perfect correlation, it would be one. So it was an intermediate value. We found a high relationship between old-age assistance and the absence of protection from insurance. Since the absence of protection from insurance is associated with a high proportion of agriculture in the State, I suppose there is circumstantial evidence to the effect that where the State is predominantly agricutlural, the proportion of the older population drawing assistance today is for some reason or other, high.

Senator TAFT. The self-employed farmers are people who usually have been employed most of their lives.

Dr. SLICHTER. I don't know who they are, but they would have to be connected with agriculture in those States in some form or other.

Senator TAFT. I was only raising the question of the self-employed farmer. I see no reason, except administrative difficulties, which would exclude farm workmen, the man who has been drawing wages all the time.

Dr. SLICHTER. I do not think you can assume that there is any category of people who will reach the age of retirement without an appreciable proportion, for one reason or another, lacking in resources. That means if you do not have an insurance scheme, you will have to have charity.

Senator MILLIKIN. Mr. Chairman, may I ask the witness a question?

The CHAIRMAN. Yes; Senator Millikin.

Saentor MILLIKIN. This is a political institution. Therefore, we have to have regard for what people want. The evidence we have accumulated so far is in my judgment insufficient to determine whether the farm workers and the farm proprietors and professional people want this kind of system. Query: In the absence of evidence of that kind, assuming that my analysis of the evidence is correct, should we, as persons who are a part of the political system, force it on them prior to the time that we get more clear-cut evidence of desire for the system? We have had some recommendations by three farm organizations. One of them is genuinely in favor of it, and I am quite sure that its members are genuinely in favor of it, but as to the other two, one of which is much larger than the one that I referred to as being genuinely in favor of it, there is little evidence of polls taken or of grass roots examination as to whether the members do or do not want it. The board of directors think they want it, but it is unsupported and even the board of directors shows no enthusiasm. So I am especially wondering about the self-employed, the professional men who, theoretically at least, want to preserve their independence. I am wondering whether we have a political right in the absence of further evidence to impose this system on them. Do you have any observations on that?

Dr. SLICHTER. I think your judgment on that would be worth more than mine, because I speak here as an economist and am pointing to an economic problem which may or may not be appreciated by every one in the country. I do not think the farmers and the self-employed have given a great deal of attention to this problem. As a matter of fact, I do not think the employees in industry gave a great deal of attention to it. You begin to worry about this problem when it is too late. You begin to worry about it after the age of 45 or 50.

These 12,000 plans, roughly, that employers initiated did not represent a demand for pensions from most of the employees. They represented a recognition by management that here was a problem that management could not dodge, and management was stimulated to act by the tax situation which existed during the war, and we had what seemed to be a stampede toward pensions, but it wasn't. The unions did not get interested in demanding pension until it became harder to make a case across the board. I did see a poll taken a little while ago by Wallaces' Farmer which pertained, I believe, to farmers in Iowa, and it indicated that a very large proportion did not know about this legislation, and of those who did know about it, there was a substantial number who did not have an opinion, there was a minority who were opposed, and a large plurality, but nevertheless a plurality, not a majority, who were in favor. I do not think you would be forcing on people something that they would be opposed to. I think that you would be applying to them something that they have not given very much attention to, in exactly the same way that employers were doing when they instituted pension plans between 1940 and 1946. The popular interest in old-age security begins somewhere, I should say, about 45 years of age. It shouldn't, but it does.

Senator MILLIKIN. Doctor, may I make this further observation. I think your position for wider coverage is entirely consistent with the theory of the Council that at a later point the Government will have to supplement the insurance system by direct contribution. Obviously when you have reached that point, unless you take everyone in there will be a rank discrimination between those who are in and those who are out.

Senator TAFT. Dr. Slichter, is it not clear from the economic standpoint that the present 1½ percent pay-roll tax on employers is necessarily passed on as part of the cost?

Dr. SLICHTER. Yes; I do not know in which direction it is passed on. There is a dispute among economists on that. It is probably passed on in part to the consumer and in part it probably represents a limit on the employer's demand for labor. One of the questions that always arises in connection with the incidence of taxation is how long does it take to pass on a tax, and that depends. In a period of expansion you pass on taxes very quickly, and in a period of contraction, taxes tend to stick where they are first placed.

Senator TAFT. It has been the theory that the 1½ percent tax on every employer in the same industry necessarily becomes a cost of the industry and affects the competitive price or the fixed price either way.

Dr. SLICHTER. Yes.

Senator TAFT. What about the 1½ percent paid by the workman? Do you think under the present conditions, with the strength of the labor unions and the centering of attention on take-home pay, that that is passed on to any extent or not? What do you think about that?

Dr. SLICHTER. That might make unions press a little bit harder for wage demands, but I think what unions go after is determined pretty largely by their view of the immediate business outlook or what is in the cards this year. They will decide what they think is in the cards, and then they will advance their arguments in support of it. So I doubt whether the tax on employees would alter their view of what is in the cards.

Senator TAFT. Even in the case of salaries, even in the case of congressional salaries, I hear the argument made that those salaries must be higher because the tax is higher. That just results in passing on the cost.

Dr. SLICHTER. They might be justifying the same demand by another reason if a given reason were not handy. There is always a good case for higher wages or higher salaries.

Senator TAFT. Is there not at least an argument that a portion of the income tax paid by employees is to a certain extent passed on, perhaps, under some conditions to the consumer in the price of the product?

Dr. SLICHTER. I think some of it is passed on to the consumer. You are raising a very technical question——

Senator TAFT. I know it.

Dr. SLICHTER. About the incidence of taxation. I am sure you do not want me to go into the details of that. Some of it, I think, the worker probably bears, but you must remember that he does not come out at the short end. He is getting pension rights for that, which are worth more than whatever part of the tax may ultimately fall on him.

Senator TAFT. Well, I am only suggesting that, after all, in the last analysis, a very considerable part of this is paid by the dear old consumer, regardless of how we set up the pay-roll tax, and that therefore it is a general tax calling on all the population.

Dr. SLICHTER. Yes; but, you see, you put a tax on labor costs, and it can go both ways, and it depends upon the elasticities of supply and the elasticities of demand and a lot of technical things that we argue about in economics that I am sure will not interest the committee. I think, if you will accept the rough statement that it probably goes both ways, that the extent to which it goes both ways depends upon a number of conditions, that the precise extent to which it goes both ways is something that economists are not agreed upon, you will, I think, if you will accept all of that, have an accurate statement of our state of ignorance or knowledge, whatever you care to call it.

Senator TAFT. I know one theory was, when I studied economics in college, which was a long time ago, that all taxes were diffused. There seemed to be one school of thought that went to what I thought was an extreme point, that no matter where you levied them they all ended up at the same place.

Dr. SLICHTER. Henry George thought that he had a tax that would stick where you put it.

The CHAIRMAN. You have been discussing the extension of coverage, and I presume you will come to the question of increasing benefits.

Dr. SLICHTER. I was just about to go into that. Do you have a question before I do?

The CHAIRMAN. I had this question. Would you care to offer any comment on whether increased benefits would lessen the pressure for greater benefits under private insurance retirement plans? That has been discussed before the committee by some of the witnesses.

Dr. SLICHTER. I think so, because, if men have pretty adequate pensions, they become interested in other things, and the demands of their labor organizations will take a different direction. They didn't go after pensions until quite a late date.

The CHAIRMAN. That is true.

Dr. SLICHTER. And I think they would, in most cases, prefer to bargain about immediate things, such as wages. And there are some unions even today which say, "'No'; we are simply going to talk wages. We are not going to talk pensions."

I should think that unions would welcome the opportunity to bargain about something of more general immediate interest to their members than pensions. After all, they began to talk about pensions in 1948 and 1949, when the arguments for across-the-board wage increases were a little less persuasive than those arguments had been during the previous year or two.

I think the union representatives would probably have a more worthwhile opinion on this point than I have. It would be presumptuous for me to undertake to tell you how I think trade-unions would behave on this, but that is my opinion.

The CHAIRMAN. Thank you very much, Doctor, for your opinion.

Senator MILLIKIN. Doctor, if I might suggest this: Of course, when you bargain for pensions you are bargaining for wages. There is a per-hour cost and a per-day cost.

Dr. SLICHTER. But the chap who is 25 or 30 years of age is much more interested in that than the chap who is 55 or 60.

Senator MILLIKIN. I agree. But you also have the sons and daughters of the older fellows, who are also interested in seeing that daddy gets a pension, either from the private company or out of public funds.

What I started to suggest was that you also have the competitive situation among the unions themselves. As long as it is in the fair field of bargaining, if one union increases pension rights of its members, the other unions are compelled to do as well. And, personally, I don't see how, as long as that is in the fair field of bargaining, you will ever get rid of it as a competitive factor in bargaining. In other words, whatever we do here seems to me to be merely a floor against further bargaining by the unions, despite the fact that we have been told that that might not be the case.

Dr. SLICHTER. I don't see it that way. If I were planning the proposals for a union, if I were a business agent and I were planning those proposals and studying what my members would be most interested in, and if I found that my members had pretty adequate pensions, I would hesitate, I think, to make still new pension demands. I would expect some of those members to say, "Well, can't Slichter play a new record? Doesn't he realize that we have got pensions? We want something else now. He is behind the times. He is not an up-and-coming business agent. He is still talking about this ancient pension stuff."

I think the business agents are sensitive to what their members would most like to have; and, when the edge is taken off some things by the need being met, they will look in other directions.

Of course, the unions are always going to be imaginative and enterprising in thinking up things to ask. And if your question is, "Will they quit asking for things simply because they have adequate pensions?" my answer is "Obviously they will not." And I think it is a good thing for the economy that they keep prodding us for more production. That is one of the things that make us go ahead.

But I do not think they will play that old record again and again and again simply because they talked pensions in 1948 or 1949.

Senator TAFT. Fifteen hundred dollars is pretty small to fellows averaging $3,600 a year. It seems to me we have not begun to arrive at the point yet where they are going to be satisfied with pensions.

Senator BREWSTER. Mr. Reuther just came out for $200 a month.

Dr. SLICHTER. They may want more than a 50-percent ratio between earnings and pensions. That is quite possible. But there are a lot of people in a union who are not steamed up as much as they ought to be about their own problems of old-age security.

Senator BREWSTER. Doctor, I went through your statement, which covered the matter of increase in benefits and coverage. You do not give a figure as to the cost.

Have you arrived at any estimates or figures on that, as to what the over-all cost would be to the Government?

Dr. SLICHTER. Yes. I will give you that in just a few moments, if you will permit me.

Senator BREWSTER. It does not appear in your statement, does it?

Dr. SLICHTER. I think you will find it on page 14.

I would like to do a little skipping.

Senator BREWSTER. Well, I do not want to anticipate that, if you have it.

Dr. SLICHTER. I appreciate your bringing that up, and I shall be glad to cover that later.

Well, the Council made the second general recommendation that the eligibility requirements be liberalized so that a larger proportion of the workers who reach the age of 65 will be immediately eligible for pensions. I shall not go into that; but the effect of our recommendations, combined with the extension of coverage, would be to raise, by about the year 1955, the percentage of males reaching the age of 65 who would be immediately eligible for pensions up to somewhere in the neighborhood of 7 out of 10. And that is not as high a proportion as one might like to see, but we were pretty liberal in our recommendations for changes in eligibility requirements, and that is the estimated result.

Then, in the third place, the Council recommended changes in the benefit formula and other conditions of benefits which would have the total effect of doubling the benefits.

There were three types of recommendations: First, one pertaining immediately to the benefit formula and, second, some pertaining to dependents' benefits, the principal one of these being that wives' benefits begin at the age of 60 rather than 65. That would greatly increase the proportion of cases where, when a man reaches the age of 65, his wife will be able to draw a benefit, because the wife is usually a little bit younger than her husband. During 1948, only 196 of every 1,000 married men who claimed benefits at age 65 had wives who were 65 or over and entitled, therefore, to dependents' benefits under the present law. On the other hand, 565 out of every 1,000 married men claiming benefits at age 65 had wives who were at least 60 years of age and who would receive dependents' benefits if the recommendations of the Council were adopted. In other words, the recommendations of the Council would increase by nearly three times the number of cases in which wife's benefits are paid when the husband retires at age of 65.

The third type of recommendation pertaining to benefits was that the benefit base and the tax base be raised from $3,000 to $4,200.

Our benefit formula has these contrasts with the one in H. R. 6000. I think in some respects theirs is better than ours, and in some respects ours is better than theirs. We recommended that the benefits be 50 percent of the first $75 of wages. They recommended that it be 50 percent of the first $100 of wages. And you will perhaps recall that several members of the Council—Mr. Folsom, Mr. Cruikshank, and Mr. Rieve—told this committee that they preferred H. R. 6000 on that particular point. And I do also.

But H. R. 6000 keeps the 10 percent of additional wages; and that differs from the Council's recommendation, which was that it be 15 percent up to $350 a month. Our thought was that, since you are trying to protect a standard of living from dropping too much on retirement, the higher-paid worker should not receive too closely the same pensions as a lower-paid worker.

Two members of our Council, Mr. Rieve and Mr. Cruikshank, recommended that the rise in pensions above the basic amount be 20 percent of additional earnings. Well, I would favor at least 20 percent. I think I would go beyond that. I see no reason why it should not be 25 percent. I think that, if you are trying to protect against a drop in the standard of living at retirement, the chap who earns $100 more a month than another chap is entitled to at least $25 a month difference in his monthly pension. The Advisory Council's formula would give him $15 more. Mr. Cruikshank and Mr. Rieve would give him $20 more. H. R. 6000 would give him only $10 more.

I was one of those who thought that the limit of $4,200 on the benefit base and the tax base recommended by the Council is too low and is unfair to many skilled workers and to foremen and to others in the lower ranks of supervision. The upper limit of $4,200 in the benefit base means that no earnings of more than $4,200 count in producing an increase in the worker's pension. He may earn more, but you don't count it. And there are many skilled workers, straw bosses, foremen, assistant foremen, who earn $5,000, $5,500, or $6,000, and under the recommendations of the Council these men would receive no greater pensions than men earning only $4,200.

Senator MILLIKIN. They are in better position to accumulate some savings against the time of retirement than are the lower-paid workers.

Dr. SLICHTER. That is correct. But if you will note the figures on resources of persons earning $5,000 or more a year, there are about 22 percent who last year had liquid assets of less than $500. This is from the survey of the Board of Governors of the Reserve System. And 45 percent had liquid assets of less than $2,000.

I call the committee's attention to the fact that business enterprises themselves do not expect these men to depend on individual savings. They establish generous pension plans for executives. Harvard University does not trust its professors to provide for their old age. We have a compulsory pension plan, and it is quite a bit stiffer than the Federal one. The professor puts up 5 percent of his salary, and the university puts up 5 percent. That does not abolish the need for thrift, incidentally.

But these company plans tie men to one company, and they penalize men who move from one employment to another. They foster a kind of industrial serfdom. When one considers the serious deficiencies of the company pension plans——

Senator BYRD. Mr. Chairman, may I ask a question at this point?

Doctor, I would like to ask you: Have you given any thought to coordinating the private pension systems with this national social-security system?

Dr. SLICHTER. I think that should be done by the business enterprises themselves and not the Government, because you have a different problem in the case of each plan. It is important that it be done, but I don't think the Government can do it.

Senator BYRD. Do you anticipate that that will ever be done?

Dr. SLICHTER. Yes; I am sure most companies would be glad to do it.

Senator BYRD. Will the workers agree to it?

Dr. SLICHTER. I believe so. Some of their agreements provide for it now.

Senator BYRD. Is it not true, though, that the pensions given by the private companies are a good deal higher than the social-security system provides?

Dr. SLICHER. That is true.

Senator BYRD. I mean that will have the result, then, that before the worker will agree to it he will naturally want to be raised from the social-security level to the industrial level.

Dr. SLICHTER. He will want to keep what he has. There is no doubt about that.

Senator BYRD. I just wanted your opinion, so far as you have thought it out, as to whether that will ever come about. Because in some cases, as you know, the workers pay two costs. They pay one to the industry and one to the Government.

Dr. SLICHTER. That is true in some cases, but a good many of these private plans are noncontributory. Some of them are contributory. That is one reason why the problem of coordinating them with the Federal plan is one that has to be handled in a plant-by-plant fashion.

Senator BYRD. That is the point I am making.

Dr. SLICHTER. What the worker gets out of these private plans depends so much upon whether he turns down opportunities to better himself by going elsewhere. He usually loses whatever rights he has accumulated if he leaves one employer and goes to work for another.

Senator TAFT. What do you think, however, Dr. Slichter, about the question of whether we should limit or regulate plans which involve an industry? The present coal pension is based upon what is in all essentials a tax. I see why, employer-by-employer, we might well say that we should leave it alone entirely and let them fix it as they wish to. But when you have an industry plan, have you not got to a point where the Government has a direct interest? Is not the effect of an agreement by the coal operators with Mr. Lewis, for instance, to pay 30 cents a ton for a general industry plan exactly the same effect as if we set up a special Government fund, like the Railroad Retirement Act?

Dr. SLICHTER. Well, it has very much the same consequences.

I did not mean to imply in my answer to Senator Byrd's question that I favored no standards for private plans to meet the requirements of the Bureau of Internal Revenue. For a plan to qualify as a deductible expense, it should meet certain requirements. It should be nondiscriminatory, for example.

I would go beyond some of the present requirements, but I wouldn't try to take over on behalf of the Government a job which I think must in the main be a plant-by-plant job.

Senator TAFT. Well, now, we have a proposal in Toledo at the present moment to have a regional compulsory pension deduction, so that every employer in the Toledo region—and this has been urged very strenuously by the heads of the labor unions—shall pay a tax, and that every employee of every concern in that region shall participate in a joint fund.

Do you not think that goes beyond what we could well permit to run unregulated?

Dr. SLICHTER. I do not know. I would want to see the problems that develop.

I am very much interested in this particular question, and I am not sure that I have reached an opinion on it, because I keep switching back and forth.

It seems to me very doubtful to permit contributions to these private plans to qualify as deductions to expenses under the income tax, when they give no vesting rights whatsoever. And I sometimes reach the conclusion, and then abandon it, because I am still pondering that, that perhaps we ought to add to the standard that the plan does not qualify unless, after 5 years or 10 years of service, the rights vest, Johnson & Johnson, for example, have a plan in which rights vest after 15 years of service. That is very unusual. Fifteen years of service is a fairly long time, at that.

Senator TAFT. But what do you think of the advisability of permitting a deduction or a contribution to a fund which does not even cover your employees, like the petroleum fund, or the contributions made to a fund for unemployed musicians, where that particular employer may have never seen the recipients and may have no interest in them.

Do you think that is a proper investment for a company to be forced to make?

Dr. SLICHTER. Well, I agree that if you are going to set up something which is supposed to protect someone it is elementary that the boundary line between the people who are protected and those who are not should be sharply defined, and defined in such a way that anyone knows at any given time whether he is under it or out of it. And the trustees of the fund surely have the obligation to see that that boundary line is sharply observed. I do not think they should have the right, for example, to dilute the protection which people already covered have by going out and saying, "Well, you come in, too."

Senator TAFT. Do you think that we ought, at this time, to revise the internal-revenue provisions regarding deductibility as to the proper type of pension funds?

Dr. SLICHTER. I think that is a separate problem, and a very important problem.

Senator TAFT. You know the section to which I am referring.

Dr. SLICHTER. Yes. And I believe it would be very wise to take a look at it. Another thing which comes under that general heading, and I would not want it to be confused with the problem which the committee has before it, in considering H. R. 6000, but it is a closely related one: If the employer's contribution is a deductible expense,

should not the employee's contribution be a deductible expense? Why stack the cards, as we do today, against contributory plans?

Senator MILLIKIN. I think you could make a partial argument against it. I am not arguing against it, but I think you could make a partial argument against it, on the ground, Doctor, that the employee's obligations are personalized. The employer, as such, is usually an entity, and you cannot relate the big boss of this entity to the worker and have an exact analogy that would carry clear across the boards.

But I think that there is certainly a lot of surface argument in favor of what you have just said.

Does not this question of convertibility of private plans raised by Senator Byrd, come down to this: that you cannot have convertibility as a practical matter unless you have first a sound plan which promises solvency, and, as you have pointed out, have a vested right of the worker as he works along? Otherwise you have nothing to exchange. If I am a worker with a company that has a plan that promises solvency, I would resent very much having someone come into that same business from a plan that did not promise solvency, made by someone, let us say, who was not capable of guaranteeing the future assurance, and, as you pointed out, diluting the protection that I have paid for in a solvent plan. Does that not bring you to some judgment by someone on what is a solvent plan and what are the vested rights of the workers as they work along?

Dr. SLICHTER. The problem of the fellow who wants to come in from some other employer—that is the toughest of all.

Senator MILLIKIN. Yes.

Dr. SLICHTER. And I am not in favor of saying that these rights which have vested can be withdrawn and the funds repooled. Probably the best way to handle that is to just let the amount that a man has accumulated on leaving one employer to work for another employer be an installment on the purchase of an annuity payable at a certain time, say when he reaches 65.

But you can see the complications to that. If there were an adequate Federal pension plan, the employer and union might decide that, with respect to employees covered by a private plan, the plan would be continued for the employees above a certain age and the plan would be allowed to run out in 20 years or 15 years. With respect to all of the other employees in the plant, the discontinuance of the private plan might be offset by a wage increase. The decision would be a very individual decision in different plants. You might have one plant with a high average age in the work force, where the employees and employer would want to keep the plan and simply add it completely to the Federal old-age and survivors insurance scheme.

Senator MILLIKIN. You adhere to your conclusion that there is nothing that the Federal Government can do about it unless through indirect methods having to do with taxation or something of that kind?

Dr. SLICHTER. That is correct.

Senator BYRD. Doctor, the reason I raised that point is because it seems to me that in a few years there is going to be a serious problem to meet. And I don't agree with you on this point where you state that the emphasis is not going to be placed on pensions by the industrial bargaining in private industry.

In the last few months there has been emphasis placed on pensions both in the coal industry and the steel industry. Now, naturally when the corporation pays it, whatever it may be, that is added to the cost of whatever that corporation produces, insofar as they are able to do it. If you have a depressed business situation, perhaps they cannot add it. But in times of prosperity they are going to add it, and the consumer will pay it. The people of this country will pay it, just as they pay now, I imagine, this 30 cents a ton on coal. And it seems to me, as time goes on, unless there is some coordination—and I do not advocate it, because I have not brought it out sufficiently to do so—we are going to meet a situation somewhere along the line where, if we continue to increase these private pensions and increase them without any relation from one industry to another, somewhere along the line there has got to be a coordination with the national social security. Because, after all, whatever is paid by the corporation or whatever is paid by the Government is ultimately coming out of the pockets of the people of this country as a mass. Am I correct about that?

Dr. SLICHTER. Yes; I think there would be no dispute about that them without any relation from one industry to another, somewhere tion between the two, I can agree with you if you are not thinking of just uniform across-the-board coordination.

I think the managements and the unions in different industries will vary in their ideas of how they wish the private plans related to the Federal plan. And, if the Federal plan is pretty inadequate, they will lean much more heavily upon the private plans. If the Federal plan is more adequate, they will lean much less heavily upon the private plans. But different employers and unions in different industries and within the same industry will have different preferences as to the amount of emphasis they want to put on private pensions.

Senator BYRD. You have not come to my point yet that I have tried to make. I contend that these pensions that are paid for by the companies, by the private companies, and in taxation from the Government come out of the pockets of the American people sooner or later. There is no other place for them to come from. And the 30 cents a ton on coal, for example, when coal is one of the necessities of our existence is like taxing the people from the Federal Treasury. It has just the same effect. They have got to pay it.

The point I am making is that this thing may become so colossal if these private pensions are continued, with such payments as are made to the welfare funds of these unions, plus this, which I can see by your record is going to cost practically 10 percent of the pay rolls, though I do not know what they will mean in dollars and cents, that the whole cost of it may be simply fantastic and overwhelming unless there is some coordination between all these different plans. Do I make it clear? I am speaking of the money that comes from the corporation, the cost of which is passed on to the consumer.

Dr. SLICHTER. Yes. I would not single out the cost of pensions.

Senator BYRD. I mean the whole social-security program.

Dr. SLICHTER. You say the cost of pensions comes out of the people of the country. Well, the cost of wages does, too. And an industry may, in a sense, tax the country, for example, by maintaining a high wage scale, or it may tax the country by maintaining a lower wage

scale and a pension plan. We do not eliminate the taxing of the country by just focusing attention on the pension.

Senator BYRD. No; you do not understand me. I do not mean to tax them. I mean that if the corporations are compelled to increase their costs, or business anywhere increases its cost, that has either to be passed along to the consumer or taken out of the profits of the corporation or paid in some way. It does not come out of the thin air.

Dr. SLICHTER. Well, suppose all the employers in an industry agree to raise wages by a certain amount. Are they imposing a tax on the rest of the country?

Senator BYRD. Well, in a sense they are.

Dr. SLICHTER. Surely. And it does not make any difference what it is, whether it is wages or contributions to a pension plan.

Senator TAFT. But wages supposedly may be reduced under economic conditions. The pensions never can. You are saddling that onto something in the future. Wages are paid today. Pensions are paid sometime 50 years to come. It seems to me a very different kind of an obligation on the people of the country.

Senator BYRD. And it all depends, too, on the competitive situation. If we would have a depression in the country, maybe these corporations or business generally could not pass it along. Then it would have to come from some other source, naturally.

But as a general principle you will agree that if the costs of a corporation or an industry, an operating business, are increased, then the effort is made, of course, to pass that along to the consumer unless they are making an inordinate profit as of that time.

They will be governed, will they not, by the competitive status? If they are able to pass it on, they will pass it on. Is that not correct?

Dr. SLICHTER. That is correct.

Senator BYRD. Or they will pass as much of it along as they can.

I thought maybe you had given some study as to what these industries will be. I do not think they are going to be confined to the 12,000 you mentioned. I believe a year from now there will be many more than 12,000 that have these industry bargaining arrangements for pensions and different kinds of disabilities, and so forth.

Dr. SLICHTER. Well, as far as that is concerned, there are a great many enterprises in the United States which cannot afford adequate pension plans. And a good many of these pension plans that have been put into effect in the last couple of years have been put into effect only because they are so inadequate that they do not cost very much. The way you keep the costs down is by rigging them so that very few people ever draw pensions under them. They give an illusion of security rather than real security. That is one of my great quarrels with them. The employees are led to think they have something when they do not have it. Of the young employees who go to work for the United States Steel Corp., for example, I doubt whether 1 out of 20 will every qualify for protection under that plan.

Senator HOEY. I was just going to say, Doctor: What proportion of these private pension plans represent the joint contribution of the employees and the employers? What proportion is paid directly by the employer, and what proportion, if you know, represents the joint contributions of both?

Dr. SLICHTER. I have forgotten the figures on that. It is not far from 50–50. In proportion to the number of employees covered, the noncontributory plans are greatly in the predominance.

Senator BYRD. In other words, a majority of the employees do not contribute?

Dr. SLICHTER. That is right.

Senator BYRD. And you say, of course, it does not cost much. The welfare fund for coal costs $150,000,000 a year.

Dr. SLICHTER. It is a big industry.

Senator BYRD. And that is added to the cost of coal and is paid for by the people of America. It is not paid for by the coal companies

Dr. SLICHTER. There are some companies which could not even afford the inadequate pension plans that have been put into effect in the last couple of years. These plans look much more adequate than they are, because what is played up is the amount of pension which people will get; not the proportion of people who will get the pension. And the flaw in the plan is that something is offered which is pretty good—$100 a month is not to be sneezed at—but how many people will ever meet the 25-year-service requirement or the 30-year-service requirement that must be met in order to draw that pension? And the plans put a premium upon sticking for a lifetime with one employer. In a progressive and dynamic economy, we need to have a mobile labor force. We need to have people who move around, go into new parts of the country, go into new industries, go into new enterprises in new industries.

Some way or other, that I cannot understand, the notion has grown up that there is some special merit in sticking with an employer for a long, long time. Any they give buttons, gold buttons, and silver buttons, and bronze buttons. Ten years' service and you get your bronze button. Twenty-five years and you get your silver button, and 50 years brings you a gold button. Well, it is just as meritorious to be willing to go west and help develop the country. If we had stuck on the seaboard, here, for the last 200 years, this would not be much of a country.

So the philosophy of the private pension plan is inadequate.

Senator TAFT. My suggestion is that when an employer is asked to contribute to something other than a fund for his own employees, either an industry-wide fund or a regional fund or a fund for unemployed musicians, then it seems to me you get into a field where the Government ought to regulate it in some way.

I would not say that it should be prohibited, by any means, but it does seem to me you have gotten then into what is almost a tax field, so similar to a tax that we are interested in seeing that it does not get too big, as an industry fund. That was my suggestion, you see, that that should be regulated, and not that it should be forbidden in any way.

Dr. SLICHTER. I think these funds are affected with a public interest. I would like to see a minimum of regulation in all directions. I think the Government has plenty of things to do. And I am not prepared to suggest to the committee the details of regulation that would be needed. But if the Government concerns itself with the solvency of insurance companies, as it has done for a long, long time, then surely it is appropriate for the Government to concern itself with the solvency

of industry pension funds which really partake of the nature of insurance companies. That is, as people are counting upon security to come from these private pension plans, I think that is a fairly helpful analogy.

I do not want to presume on the committee by taking too much of your time, but I have a few observations here on costs and on the problem of the age of retirement, which I should like to make, quite quickly.

We concerned ourselves, in the council, at quite some length with what a system of old-age and survivors' insurance would cost. And it is plain that a great many different things affect the cost. How many people are going to reach the age of retirement? How many are going to be leigible for benefits when they do reach the age of retirement? How many of them are going to retire? How long are they going to live, and how long will the benefits be paid? And then, of course, how much will be paid? What will be the average rate of monthly benefit payment?

Well, since so many different things affect the cost, we had two series of estimates made. A low-cost estimate was made, that was deliberately intended to be on the low side, and a series of high-cost estimates that were deliberately intended to be on the high side. What we were trying to do—we cannot be sure that we did it—was to bracket the truth. And we don't know just where, within those limits, the truth is; but we tried to make the assumptions a little bit extreme in each case, so that we felt pretty sure that the low estimates would be too low and the high estimates would be too high.

Then we said, "It does not promote clear thinking to put these costs in absolute terms. They need to be put in relative terms. We do not know whether the price level will rise, or, if it does rise, at what rate it will rise. We do not even know at what rate productivity will increase. We do not know at what rate wages might rise without prices rising. But we are going to make this assumption. We are going to assume that if incomes go us, either real incomes or money incomes, or both, without too much of a lag pensions will go up at the same rate. And therefore, if pensions are liberalized from time to time to maintain a certain ratio between customary earnings and pensions we are interested in what the percentage of pay-roll cost is that would be necessary."

Now, unless you do that, some of these estimates, for example, that seem very huge in absolute dollar amounts may or may not be huge in relative amounts. It all depends upon what happens to pay rolls.

Well, we undertook, as I say, to bracket the truth, on the assumption that our recommendations were put into effect. And we reached the conclusion, or rather our actuarial consultant reached the conclusion, that somewhere between a little less than 6 percent and a little less than 10 percent of pay rolls, the ultimate cost would fall.

Senator BYRD. Doctor, could you put that in dollars?

Dr. SLICHTER. No.

Senator BYRD. What will be the pay roll, do you think, in the year 2000?

Dr. SLICHTER. Well, that would depend upon what happens to the price level.

Senator BYRD. I do not think, of course, any estimate made as to 50 years from now would be of any value at all.

Dr. SLICHTER. We gave estimates 10 years apart, for 1955, 1960, 1970, 1980, 1990, and 2000. We also gave level-premium costs.

Senator BYRD. Have you an estimate for the cost immediately, and then the cost 10 years from now? That is within the realm of what we can look forward to. Fifty years from now we do not know what is going to be the situation.

Dr. SLICHTER. The reason I referred to 50 years is that I wanted to give you the maximum figures. That is what it rises to.

I have a copy of that report, here, I think.

Senator TAFT. That is page 56 of the report.

Senator BYRD. I understand these are the recommendations of the Council.

Dr. SLICHTER. That is page 56, table 4.

Senator BYRD. One second, here, Doctor. Is this the recommendation of the Council, or is this the bill as passed by the House?

Dr. SLICHTER. This is the recommendation of the Council.

This is the cost under our recommendations.

Senator TAFT. Does this assume a gross income of a trillion dollars in the year 2000?

Dr. SLICHTER. It does not assume any amount of gross income. That is what we are trying to get away from. All it assumes is a given ratio between whatever gross income is and the amount of pensions.

Senator BYRD. The net cost, then, of the new plan as proposed by your Council would be $3,189,000,000?

Dr. SLICHTER. You are looking at table 5?

Senator BYRD. Yes.

Dr. SLICHTER. Well, that is the low-cost estimate for 1955.

Senator BYRD. That is in addition to what is being paid now?

Dr. SLICHTER. No, that is the total cost.

Senator BYRD. Well, how much additional cost will there be in 1955? That is a pretty good year to take, because we think we shall be living then.

Dr. SLICHTER. Well, if you look at the left-hand column in that same table, you will see that the cost of the present program is slightly oveh $1,000,000,000.

Senator BYRD. It would add, then, to about $2,000,000,000?

Dr. SLICHTER. That is right. You will notice that we raise the cost more in the near years than in the ultimate years, because we are trying to increase the proportion of people now near the age of retirement who qualify for pensions.

Senator BYRD. And that is the cost out of the Treasury?

Dr. SLICHTER. No; none of that is the cost out of the Treasury. That cost is more than met from the pay-roll tax.

Senator BYRD. This all comes from the pay-roll tax?

Dr. SLICHTER. Yes. As a matter of fact, the so-called reserve, which we do not regard as a reserve at all, which is just a sort of a residual, the trust fund—that would be increasing still in 1955.

Senator BYRD. What would be the additional cost of this legislation if it is passed, out of the Treasury?

Dr. SLICHTER. That would depend upon the decision of Congress, perhaps 10, 15, or 20 years from now. In other words, it might be zero. The answer to that question depends upon whether the Con-

gress at some time in the future decides to contribute to the scheme by general revenues rather than by continuing to raise the pay-roll tax. In other words, the present 1½-percent pay-roll tax will have to go up to 2 percent sometime before the decade of the fifties is over. That 2 percent will be more than adequate for a few years more. Then the Congress will have to decide whether to raise that to 2½ or whether to freeze it at 2 and say, "Any additional costs come from the Treasury."

Senator BYRD. If H. R. 6000 is enacted then, there will be no additional cost from the Treasury?

Dr. SLICHTER. That is right.

Senator BYRD. Then there is nothing in this bill that would compel the Congress, unless it desired to change it, to make any contributions in the future further than they are making now?

Dr. SLICHTER. That is right. On the other hand, there is nothing to prevent the Congress from deciding that there should be three-way contributions—from the employees, the employers, and the Government.

Senator BYRD. I fully understand. The Congress can spend as much as they can get hold of. That is what they do.

Dr. SLICHTER. Sometimes more.

Senator MILLIKIN. Mr. Chairman, is this not correct: That to the extent that we continue the trust-fund operation and the trust funds reflect more income than outgo, and while that situation continues there will be a cost to the Treasury because we will have to meet the costs of those bonds out of taxes?

Dr. SLICHTER. No. If you were to abolish the trust fund, you would not save the Government a cent, because the bonds which are in the trust fund would have to be sold to someone else, and the Government would have to continue to pay interest on them. In other words, the fact that the old-age and survivors' insurance scheme has run a surplus up to now, and, indeed, the fact that the cost estimates have run considerably below the original estimates made for the plan has not represented 1 cent additional cost to the Government. It has simply meant that a smaller part of the debt of the United States is owned by you and me and banks and insurance companies, and a larger part is owned by this trust fund. The amount that the people must pay to meet interest on the public debt is determined by the size of that debt, not by who owns it. And the fact that a trust fund, for example, happens to be running a surplus does not change the size of the debt and, therefore, does not change the interest burden of the Government.

Senator MILLIKIN. I suggest to you, Dr. Slichter, that this easy source of a couple of billion dollars of tax revenue every year which people are generally entirely unaware of tempts expenditures which might not be made. I suggest to you, secondly, that it is not a true trust fund at all; that the money is not used to strengthen the insurance system. It differs completely, I suggest, from the reserves of a private insurance company. I suggest to you also that as we enlarge the coverage in the future those covered will be the taxpayers, and so they will not only have contributed for their insurance but they will have to pay it again when they have to pay the bonds.

Senator BYRD. The total of the trust fund now, of all kinds, is $35,000,000,000.

Senator MILLIKIN. What have we in the trust fund at the present time, Mr. Cohen?

Mr. COHEN (Wilbur J. Cohen, Special Assistant to Commissioner for Social Security). About twelve and a half billion.

Senator MILLIKIN. We have about twelve and a half billion dollars in there now?

Senator BYRD. This particular trust fund, yes. The total is $35,000,000,000.

Dr. SLICHTER. May I suggest, with all due respect, that Senator Millikin's arithmetic is a little bit erroneous. I do not happen to be a friend of the trust fund. I am not in favor of abolishing it. But our appendix on pages 48 and 49, I think, is the best explanation of the real nature of this so-called trust fund that one can find.

The trust fund is not a necessary part of the insurance scheme. The scheme could be operated in a perfectly satisfactory manner from the narrow economic point of view without a trust fund. It does not make the scheme any more solvent, and you do not need it to assure future payments of pensions. It is the power of the Government to tax that assures the scheme of income.

Well, now, that being true, from the narrow economic point of view, the plan could have been started out with taxes just enough to provide revenue for current outgo only. You could have started out with taxes somewhere around one-tenth of 1 percent, and by the present time those taxes would be around three-tenths of 1 percent, and there would be no trust fund. You would have a balance roughly each year, the amount coming in and the amount going out being pretty much the same.

That policy, which is quite defensible from the narrow economic point of view, would have a serious defect. It would have given a large number of workers near the age of retirement pensions with virtually no contribution.

Now, we are pretty generous as it is, and this is just a question of judgment as to how far you want to go. You may decide, "We do not want to go that far. We are going to make these people contribute maybe 1 percent, and we are going to make the employer contribute 1 percent." You are not making those decisions for the purpose of creating a trust fund. You do not need the trust fund; you do not care about the trust fund. You are just trying to be less extreme in giving people pensions in return for virtually no contribution.

If you decide, "Well, these people are getting a pretty good break. One percent is only a small part of what they will be drawing, because they will not be contributing many years," then you have a trust fund. And the purpose is not to create a reserve. The purpose is not to do anything about the solvency of the system. You have not done anything about the solvency of the system. You have got to call it a trust fund, because you have got to have some trustees to see that the money is not mishandled. But what you are doing was just to control the size of the windfall that goes to the people who are near the age of retirement when the pension plan started.

Now, you might have gone further than we did. You might have said, "We are going to make it 1½ percent from the very beginning," and you would have had a larger trust fund. But you would not have improved the solvency of the system.

Senator BYRD. You would depend upon the ability of the Congress to tax the people for the system.

Dr. SLICHTER. And the ability of the people to pay the taxes.

Senator BYRD. That is the point I am getting at. Suppose you bring the taxes so high that you reach the point of diminishing returns.

Dr. SLICHTER. Then you don't have security.

Senator BYRD. But I understood you a little while ago that you would depend upon the right to tax for the solvency of this particular fund.

Dr. SLICHTER. It is not a matter of what I prefer, Senator Byrd. You do not have any other foundation, in the immediate sense. Of course, in the ultimate sense, what you are doing is asking the people in the productive-age groups to support the people in the non-productive-age groups. We have at the present time in this country about 60,000,000 people who are supporting 150,000,000 people, including the 60,000,000 people themselves. And, of course, the largest age group of the nonworkers whom they are supporting are young people. You have about 38,000,000 of them. And the problem of supporting the young people is many, many times the economic magnitude of the problem of supporting the old people. Even in 1980 we shall have more than twice as many people between 10 and 20 years of age in this country as we shall have above 65. But the ultimate questions are how many nonworkers there will be and at what standard of living the nonworkers are going to be supported. And the way we get this support is by taxes.

But, as for the trust, you don't try to create it. It is a result of some other decisions that you make. I think it is very important for people to understand that. I wish we could have a name for the thing which would prevent confusion, because some people who should be smart enough not to be confused by it have been badly mixed up.

If I may come back to the double-taxation point: Suppose we were to decide at the present time to get rid of the trust fund, either by reducing the rate of taxation or by liberalizing pensions, or both; and suppose that the scheme ran in the red at such a rate that the present trust fund was dissipated in the course of a couple of years. It would be necessary to pay interest on those bonds. We would not get rid of that obligation. Consequently, the necessity of paying interest on the bonds must not be charged as a cost against the scheme of old-age security.

Senator MILLIKIN. I do not see exactly, after following you closely and I hope intelligently, the function of the trust fund. Why do we not charge enough to pay for the thing as it goes? Why have a trust fund?

Dr. SLICHTER. We charge more than enough.

Senator MILLIKIN. Yes.

Dr. SLICHTER. And the result of doing that is the trust fund.

Senator MILLIKIN. And that has some defects in theory just in and of itself. That is No. 1.

But what we are doing is running a trust fund to provide general revenue for the Government instead of running a trust fund to buttress the system of insurance.

Dr. SLICHTER. I do not think that is correct, Senator Millikin, because regardless of whether the Government was running a surplus or running a deficit, this trust fund was building up. This trust fund

was building up in fiscal 1947 and 1948 when the Government was running a surplus in the neighborhood of $8,000,000,000.

Senator BYRD. Well, the trust fund gets the benefit, too, of the interest paid on the bonds. That is added to the income of the trust fund.

Dr. SLICHTER. That is right.

Senator MILLIKIN. But the taxpayer has to pay the interest on the bonds.

Dr. SLICHTER. But he would have to pay the interest on the bonds whether there were a trust fund or not.

Senator BYRD. Not on those particular bonds, in my judgment.

Dr. SLICHTER. You can charge to the additional cost of the old-age and survivors insurance scheme the difference between the rate of interest on the special issue bonds, 3½ percent, I think, or 2½ percent perhaps—I have forgotten—and the rate at which the Government might borrow under the present arrangements by which it rigs the market to borrow for next to nothing.

Senator BYRD. Is it not 3 percent that the Government pays on the trust fund?

Dr. SLICHTER. I think 3 percent on the special issues, and I think the average interest on the national debt is in the neighborhood of 2 percent. Now, that would be a legitimate charge. Or you might say: "We are not going to subsidize this by any special issues. We are going to tell the trust fund, 'You get only the average rate of interest on the public debt'." I would not quarrel with that.

Senator MILLIKIN. Doctor, I suggest that the interest factor aggravates your problem because the interest does not go into the insurance system. It again is covered by bonds, which have to be paid by the general taxpayer.

Now, if we were reducing our national debt by the amount of money that we are taking in, then we would be tending to keep things in balance. But I repeat most respectfully that what we are doing is providing a method of putting debt against the general taxpayer and of financing the general revenues of the Government. And I suggest that in its main essentials it has no relation to our insurance system. I suggest also that it tempts expenditures which might not be made if this money were not so easily available.

Dr. SLICHTER. Well, you have two points there, and let me comment separately on them.

You are not, by virtue of the trust fund, creating any debt which would not otherwise be created. Any time the Congress sees fit to cut the expenditures of the Government to such a point that the revenues equal those expenditures, it is free to do so, and it will not interfere in the slightest with the operation of the trust fund. The public debt will not increase, although the quantity of Government obligations held by the trust fund will increase.

What determines whether the public debt increases or not, and solely this, is whether the Congress spends more than the taxes yield. And, if the Congress spends more than the taxes yield, the public debt will go up, and it will go up by that amount and no more and no less, regardless of whether or not a trust fund is in existence. And likewise you can have this trust fund in existence while the public debt is rap-

idly going down, if the Congress happens to spend so little and tax so much that the public debt is going down.

Now, as to your second point———

Senator MILLIKIN. May I try to rebut your first answer?

I agree to everything that you have said; and it reinforces my point, I suggest, that this trust fund is a system for creating indebtedness and for raising funds for the general revenues which have no necessary relation to social security, our contributory system of insurance.

Dr. SLICHTER. Well, I will agree that you can have a social-security system without it, but you will have a different distribution of cost and benefits in point of time, and it is a question of what distribution in point of time you prefer to have.

Senator MILLIKIN. Doctor, could that not be solved by your rate of contribution and by your rates of benefits, thus tying directly to your insurance system rather than tying it to this method of getting money for general expenditure?

Dr. SLICHTER. The rate of contribution and the rate of benefit were determined not for the purpose of creating a trust fund. That is just an incidental result.

Senator MILLIKIN. Yes; but I do not see the point of the result when we are adding a general indebtedness of the taxpayer.

Dr. SLICHTER. The only way in which you could avoid the result would be to say, "We are going to give you a bigger windfall than even the very generous windfall which you are now being given." And that is a value judgment. We might decide, "All right; we will raise the windfall."

I happen to be one of those who think that we are being pretty generous as it is to the people who become eligible for pensions after only several years of contributions. I think we are a little too strict in who becomes eligible, but for those who do become eligible we are being pretty generous. And the only way in which you can avoid a trust fund is by being even more generous.

Senator MILLIKIN. It seems to me, Doctor, that we should have a contributory system that will pay the expense of the system. Under the way we are handling this trust fund, you have anticipated that at some point in the future we will have to have general revenue to supplement this system. These bonds already represent a future claim that amounts to a contribution by the general taxpayer.

Dr. SLICHTER. Senator Millikin, we don't have to have anything as definite as that in 1970. We shall have to supplement in 1970 the revenues of the old-age insurance and survivors plan, but we shall be perfectly free in 1970—that is probably about the time when it will become an issue, but it might be 5 years sooner or later—we shall be perfectly free to decide, "No: we will not do it out of general revenues," or, "Yes; we will do it out of general revenues." We can put another 1 percent on the pay-roll tax if we prefer.

Senator MILLIKIN. I suggest there is a limitation on that freedom; because if, under the rates prevailing, the system runs into a deficit, then that is the time when the trust fund under its proper functions comes to the rescue.

Well, how does the trust fund come to the rescue? It comes to the rescue by the general taxpayers' taking up the bonds or by a refinancing process which comes to the same thing. The Government might not

necessarily have to dig out and get $2,000,000,000 in silver dollars and pass them around. The Government might put out another type of bond to take the place of those called in under the trust fund. But in the end the system, the contributory system, is not meeting that deficit. The general taxpayer is meeting the deficit.

Dr. SLICHTER. Well, this alternative is a possibility now: Our children who will be in Congress here about 20 years from now are going to do about as they please. They are not going to take orders from us, but they might decide, around 1970, "Instead of raising the rate of contribution, let us go on for 10 or 15 years and liquidate this trust fund." That might or might not be a wise decision. They could decide that to liquidate the trust fund rather than raise the pay-roll tax at the time or to make an immediate contribution from general revenues.

Senator MILLIKIN. The general taxpayer would then be paying that and would be paying the liquidation of the trust fund.

Dr. SLICHTER. It would not affect the amount that the general taxpayer pays with respect to the bonds in the trust fund one particle. What the general taxpayer must pay is determined by the size of the public debt and the rate of interest on it. It does not make any difference whether that debt is owned by insurance companies or by individuals or by the trust fund of the old-age and survivors plan. You do not diminish what the general taxpayer must pay by selling the obligations from the trust fund. You do not increase it by the trust fund's increasing its holdings of obligations.

Senator MILLIKIN. Doctor, that all comes down to your basic assumption that if we were not piling up the bonds for this purpose, in connection with this purpose, we would be piling them up in order to cover our general-revenue expenditures.

Let us assume that that is correct. But what has that to do with the contributory insurance system? I mean, what is its necessary relationship?

Dr. SLICHTER. Let me ask you this: You are making this assumption, which I think is open to question; namely, that because the contributory insurance system happens to be running a surplus the Congress is more extravagant, and the deficit is larger, and the public debt grows more rapidly.

Senator MILLIKIN. That is one of my assumptions.

Dr. SLICHTER. And I do not think that the willingness of Congress to spend money, on the one hand, or the willingness of the Congress to tax, on the other hand, would be affected one iota by abolishing the trust fund.

Senator MILLIKIN. That is one of my assumptions. My other assumption is that it is not the function of an insurance system to raise money for general-revenue purposes. If we have to raise it, I am perfectly willing that it be raised by general taxation—to wit, through the issuance of bonds—which all of the people have to pay. I have no objection to that. But I object to using the contributory insurance system as a means of covering the general-revenue expenditures of the country.

Dr. SLICHTER. Well, all you have to do, Senator Millikin, is to balance the budget, and then the insurance system will not be used in that way. It cannot.

Senator MILLIKIN. That is right. Well, that is not a safe assumption, Doctor.

Dr. SLICHTER. But, so long as you are in the red on the budget, you are going to borrow from some place.

Senator MILLIKIN. I agree to that completely, but I am suggesting that I see no point in using the contributory insurance system as a vehicle for meeting that problem.

Let us meet it frontally, with a direct issuance of bonds to cover the debts. Why tie it up with this contributory social insurance, where it perform no real insurance function? The interest that you mention simply adds to the debt. They issue bonds to cover the interest, which then has to be paid by the general taxpayer.

Dr. SLICHTER. But the quantity of bonds issued is not affected by the trust fund one iota. There is no objection in principle to saying that the funds of the insurance scheme shall be invested in non-Federal Government securities, but I think that would be a mistake, myself.

Senator MILLIKIN. I think so, too.

Dr. SLICHTER. You would aggravate the investment problem. You would be putting the trust fund into a lot of private industries. It might be embarrassing to the Government to be the part owner of many industries or even a large creditor of private industries.

Senator MILLIKIN. I agree.

Dr. SLICHTER. And into the obligations of States and municipalities, and so on.

Senator MILLIKIN. But I do not think that there would be available a sufficient number of investments of that kind, considering the magnitude of this. That is No. 1.

But, No. 2, it would certainly be a mistake, from my philosophy, to be injecting the Government as an equity holder in all the corporations of the country.

Dr. SLICHTER. Whether it is an equity holder or a bondholder, I think it would be unfortunate for the Government to be a large equity or bond holder.

Senator MILLIKIN. But that is what takes the guts out of the trust fund as an instrument for strengthening your contributory insurance fund.

Dr. SLICHTER. That is not its purpose. It is not its purpose. The trust fund, you might say, does not have a purpose. It is residual. It is the result of some decisions independently made. And I think they were wise decisions. And the fact that they resulted in the creation of a trust fund is not an argument against those decisions. Nor do I think that it is realistic to say that, of the many pressures making for large expenditures by the Federal Government, the fact that money can be borrowed from this trust fund has any effect on the reaction of Congress to any of those pressures.

One thing the Government has no problem in doing, whether there be a trust fund or not, is borrowing money. It has gone to great extremes to refuse to submit its credit to general appraisal, and it has rigged the money market. I do not quarrel with rigging the money market in time of war, but so long as the Government borrows in a rigged money market its credit will not be tested, and the fact that there are a couple of billions a year in the trust fund which might be put into Government obligations is unimportant.

Senator MILLIKIN. Doctor, it uses the trust fund in part to rig the money market, because a part of the trust fund is not covered by the special bond but consists of going out into the market and buying bonds.

Dr. SLICHTER. All it has to do is to keep the banks well supplied with more reserves than they need, and it has perpetual ease in the money market.

Senator MILLIKIN. My point there, doctor, is that it is not the function of anything resembling an insurance system to put it in the power of the Treasury to rig the money market.

Dr. SLICHTER. The Treasury does not need the old-age and survivors insurance scheme to effect the terms on which it borrows the money.

Senator MILLIKIN. Well, but it does precisely that thing.

Because how much of the trust fund, Mr. Cohen, is in the general bonds of the Government? I mean, not covered by the special bond.

Mr. COHEN. That were purchased in the open market?

Senator MILLIKIN. Yes, purchased in the open market.

Mr. COHEN. I do not remember the exact amount. It is a large amount.

Senator MILLIKIN. The precise purpose of making that amount of investment was, to use a phrase that may be a little harsh, to rig the money market. And I suggest it is not the function of an insurance system to be rigging the money market.

Dr. SLICHTER. We have a public debt, if we exclude the nonnegotiable types, the E-bond type, approximating $150,000,000,000, I believe. The fraction of the special issues and the nonspecial issues in the trust fund to that negotiable public debt is very small. And the proportion of the negotiable public debt owned by the commercial banks is many, many times the proportion held in the trust fund.

Senator MILLIKIN. I understand that.

Senator Byrd, could I ask one more question?

Senator BYRD. Yes. At this point, though, I wanted to ask of Mr. Cohen what is the interest rate?

Mr. COHEN. The interest rate on the special issues is the average rate for all of the interest-bearing public debt, which is around 2 percent at the present time. The special issues which were purchased, I believe, about a year ago, were bought at somewhere around 2½ percent.

Senator BYRD. Well, are there not some trust funds that the Governments pays 3 percent on?

Mr. COHEN. Yes, sir.

Senator BYRD. Which ones are those?

Mr. COHEN. The railroad retirement program, I remember particularly, has a statutory rate of 3 percent.

Senator BYRD. And what are the others? Do you know? The unemployment insurance?

Mr. COHEN. The unemployment insurance is at the average rate, the 2 percent. But there are different rates. These $35,000,000,000 worth of bonds held by trust funds, I think, go all the way from 2 percent to 4 percent, Senator Byrd.

Senator BYRD. That was my understanding, that there were statutory rates established whereby the Government had to pay these certain rates; which is equivalent to taking a contribution out of the Treasury, if they are above the public rate.

Dr. SLICHTER. Of course, to the extent that the Government pays, on special issues, more than it would need to pay in the open market, the trust fund can hardly be accused of contributing to artificial ease.

Senator MILLIKIN. I will agree with that, but it gives you an enormous fund of money to manipulate the public value of bonds, in other words, rigging the market. And I do not say that that is not a legitimate function. It depends on how it is exercised.

My point is that it has no logical place in an insurance system.

Dr. SLICHTER. Well, I will agree with you, if you will allow me to change one word.

Senator MILLIKIN. We ought to be able to compromise on one word.

Dr. SLICHTER. I will agree that it has no necessary place. You could operate the plan without it. But if you did, you would be giving a bigger windfall to people coming on pension in the early years of the plan. You would be giving a bigger windfall to those people than I think they are entitled to.

Senator MILLIKIN. I might counter that with the suggestion that the higher rate prescribed by the special bond simply adds to the debt which the general taxpayer will have to meet in the future.

Dr. SLICHTER. I don't defend a special rate, except that it might be a wise thing to make borrowing from this fund slightly unattractive to the Treasury. In other words, there would be a subsidy to the extent that the special issues paid more than the Government could get in the open market. But you could easily defend that subsidy on the ground that it would be wise to prevent there being any particular attraction to the Government in borrowing from the trust fund.

Senator MILLIKIN. I was going to ask you this after the conclusion of your talk, but I think this is the logical place for it: Why not a pay-as-you-go system?

Dr. SLICHTER. Well, we have gone much further in the direction of a 100 percent pay-as-you-go system than we have gone in the direction of a level-premium system. Between those two possible extremes, for example, we are much closer to a pay-as-you-go than we are to a level premium. And your question is a good one, but I think that a pay-as-you-go system goes to an extreme, an unreasonable extreme, in giving people who draw pensions in the early years a windfall for which they make virtually no contribution. The pay-as-you-go system would start out at about one-tenth of 1 percent; and, as I said a few moments ago, the rate would be at the present time up to around three-tenths of 1 percent. I do not think that a pay-as-you-go system is fair in respect to the community and the people who go on pension in the early years of the scheme.

Senator MILLIKIN. If it were decided as a matter of social policy that X amount should be given to all people who come under the system at the age of 65, it that should be decided as a matter of social policy, then why not put the thing on a pay-as-you-go basis, even though there may be some discriminations? There are discriminations under the present system. There are certain discriminations as between the amount of money that the earner earns and the relation of that to the benefits which he gets. There are possibly discriminations between the new fellow entering into the system and the fellows who are closer to retirement. The present system is loaded with discriminations. I doubt whether you can bring any important new innova-

tion into Government without having some discrimination. But assuming, and I do not ask you to agree that it should be done, that the Congress should decide that as a matter of social policy every person covered by the system, every person who reaches the age of 65, should have a certain amount of pension, why not put it on a pay-as-you-go system, which we are going to come to anyhow?

Dr. SLICHTER. Well, the main objection to that kind of a scheme, I suppose, is that there would be too many people receiving pensions for which they contributed little or nothing. Why go to such an extreme and say, "Well, now, you are not going to pay anything, but you are 65," or "you are 70," and "therefore you are going to start getting something"? Why is it not fair to be somewhat less extreme?

Now, you cannot initiate this kind of a plan, any kind of a plan, whether a contributory plan or a plan financed out of general taxes, without that windfall element. And the essential question is, To what extremes do you want to go in giving windfalls?

Senator MILLIKIN. Doctor, I have no fixed conclusions on this. I am, as they say in the oil business, "putting the swab on you," for information. If you do not have that windfall in this system, I suggest that you have to get it out of public assistance. Now, it is one windfall or the other. Is it better to do it on at least a theory of a contributory system, or is it better to meet these discriminations that you are speaking of by general public assistance? That is what it comes to in the last analysis.

Dr. SLICHTER. I think that our recommendations show clearly that we believe that the plan should be made immediately more liberal, that the eligibility requirement should be temporarily relaxed to give the newly covered people "a new start" with respect to eligibility requirements, to get a lot of people under the plan; that the necessity of relying on public assistance should be drastically reduced. I think that we have presented a fairly comprehensive series of aggressive recommendations to accomplish those purposes.

But we did say this: "We think it is all right to collect about 1½ percent from the employer and about 1½ percent from the employee." We recommended that when these liberalizations accur, the contribution rate go up to 1½ percent. And that means accumulating a few billion dollars, which we have to put in something we call a trust fund, just to see that it is properly managed. And that trust fund is a sort of measure of the extent to which we just do not go all out for hand-outs, with nothing collected from the people who are going to get those hand-outs.

Senator MILLIKIN. Under the recommendations of the Council, and under H. R. 6000, there will be an inadequate level for a great deal of people of benefits under the insurance system. And I am merely suggesting, as a practical matter, that if the insurance system does not make up that gap it is going to be made up by the continuance of public assistance; which is precisely what is happening.

Dr. SLICHTER. I agree with you. And I think that result should be averted to a substantial extent, and it can be. And I call your attention to the fact that Mr. Folsom, Mr. Cruikshank, and Mr. Rieve, and I, all members of the Council, who have testified here, have suggested that the formula be 50 percent of the first $100 of earnings instead of 50 percent of the first $75. And I call your attention to the fact

that Mr. Cruikshank and Mr. Rieve suggested that it be 20 percent of additional earnings. I have suggested 20 percent as the minimum. And I call your attention to the fact that Mr. Cruikshank, Mr. Rieve, and I have all expressed the view that the $4,200 limit on benefit base is too low.

You know that $4,200 limit affects the man who does not earn $4,200 very much of the time. Whenever he does earn at that rate, it is not counted, no matter how little he may earn at some other time.

So I am quite in accord with your remark that we must have a plan which is adequate, if public assistance is to be of secondary importance. And one of the greatest objections to public assistance, aside from the fact that it is not fair that people after a lifetime of work should be dependent on charity, is that the less adequately a man has provided for himself, the clearer is his case for public assistance. And the chap who has partly provided for himself gets a little assistance. The chap who made no provision gets more. The chap who made adequate provision gets nothing. I do not think that is the kind of plan that we wish to have in the United States. Its influence upon the community is not the kind of influence which we, I think, should welcome.

Gentlemen, it is almost 1 o'clock. I do not know whether I ought to continue.

Senator MILLIKIN. I would like very much to hear, and I have been largely responsible for your not getting to it sooner, a discussion from you of premature retirement from the labor force of people.

Dr. SLICHTER. Well, I will make this quite brief. Many people have been in the habit of regarding old-age security as simply a result of the aging of the population. That is only partly true. It is as much a problem of earlier retirement as it is a problem of the aging of the population.

If you go back to 1890, you will discover that more than two-thirds of the white males of 65 years or more were members of the labor force, and practically all of them at work. By 1930 this percentage had fallen. We have the figures for each census. It had fallen to 54 percent. And then the depression hit us, and it was very dramatic in its effect upon retirements. By 1940, only 42.2 percent of all white males above 65 years of age were in the labor force.

Then came the war. That helped undo some of the trend. By 1945 the proportion of white males of that age group in the labor force had reached 49.9 percent, say 50 percent.

Now, this drop in the proportion of white males of 65 and over in the labor force has not been the result of voluntary retirements. It is the result of lay-offs by employers: many of these lay-offs made, of course, under pressure of depression.

But if you look at a break-down of the figures: Among rural farm population, even in 1940 nearly 70 percent of the males between 65 and 74 years of age were in the labor force; and even 31 percent of the males above 75 years of age as late as 1940 in the rural region were in the labor force. Among urban groups, on the other hand, only 47 percent of white males between 65 and 74 were in the labor force.

And, as I think you know, many large concerns have adopted the rigid rule: Everyone retires at 65.

Now, this practice of earlier and earlier retirements is bad for the individual worker in most cases. It is bad for the country, and it

greatly increases the costs of old-age insurance. It is bad for the worker in most cases, where his health is good—which it usually is—not mainly because it reduces his income, though that is often tragic, but because it cuts him off from the contact with his fellows that his job gives him. It makes him feel that he is a has-been, that he is now on the shelf. He is unhappy, he is maladjusted, and often his health suffers. These earlier retirements are bad for the country because they deprive the community of the output that retired workers might produce.

At present, for example, there are about 2.8 million workers of 65 years of age or more holding jobs, producing goods, and they produce between 10 billion and 11 billion dollars worth of goods a year. If we were to do what some of the large companies have recently been doing and say, "Everyone retires at 65," we would be at once cutting ourselves off from an annual product of between 10 and 11 billions.

We talk about the cost of old-age security reaching 10 or 11 billions maybe 30 or 40 years from now, but the universal institution of retirement at 65 would inflict that cost on us at once, at the present level of national income and not at some greater level of national income a generation hence. And, of course, earlier retirements greatly increase the cost of pensions. Let us suppose that pensions were to begin usually at 70 instead of 65. They would be paid on the average 3 years less, and contributions would be made 5 years more, and interest on any accumulations would be paid for 5 years more. So that the contribution rate which would buy a given pension beginning at the age of 65 would purchase a much larger pension beginning at the age of 70. And it seems to me that the time has come to challenge this notion that there is something magical about the age of 65. It is all right for professors and executives to retire at 65, because they are supposed to be imaginative and creative, and they may get in a rut as they get on in years, and perhaps they ought to be succeeded by younger men who have a new slant on things. But the great majority of the people, who are doing more or less routine jobs, who do not have to be imaginative and creative, and whose health is good—there is no reason for pushing them out simply because that age of 65 has been reached. And certainly the tendency to move the retirement age down is out of place in a community where health is improving and longevity is increasing. It is squarely in conflict with the advances which we are making in public health and in medical science.

You would think that we were going backward in those respects and that we had to drop people earlier, because we were growing sicker and losing out in the battle against disease; when, as a matter of fact, we are winning spectacular battles against disease.

Well, the Advisory Council pointed out that the great majority of retirements are involuntary, and it recommended that the Federal Government establish a commission to study the broad problem of the aged in the community and the adjustment of the aged to retirement.

I believe that some limited steps should be considered to help workers between the ages of 65 and 70 who are in good health to continue in employment, instead of being forced to retire. And I think that employers might be given an incentive not to retire physically fit workers before the age of 70.

What form might this incentive take? I think it should be a reward and not a penalty, because if you make it a penalty, employers will shy away from hiring people who are approaching the age of 65. On the other hand, suppose you make it a reward. And just to be definite, I would like to throw out a tentative suggestion, which probably can be improved upon. Let's assume, for the sake of illustration, that the average pension is $75 a month or $900 a year. That would mean that an employer who kept a man until he was 70, instead of retiring him at the age of 65, would be saving the pension system $4,500 in pensions. And suppose we say to the employer, "We are going to give you a rebate on this. You have saved us $4,500. We will give you a rebate of one-third for every year you keep the man on above 65, one-third of the saving." In the example I have given, one-third would be $1,500. If the employer had kept the man only until 68, he would have saved the pension fund $2,700, at a rate of $900 a year, and the rebate of one-third would have been $900.

Well, certainly this would give management an incentive to find ways of keeping men beyond the age of 65. And furthermore, instead of being a deterrent to the hiring of older workers by management, the rebate would be an incentive. If an employer hired a man, say of the age of 62, and kept him beyond the age of 65, say until the age of 70, the employer would be given a rebate for the saving made possible in the pension payments to the plan. So, naturally, the employers would be interested in hiring older workers who gave promise of being efficient after the age of 65. The older worker who had been put on the market by his employer going out of business or by a lay-off would find his employment opportunities greatly improved.

Now, I do not assert that this arrangement would completely solve the employment problem of the older worker, but certainly it would greatly reduce the seriousness of this particular problem. We would be, so to speak, killing two birds with one stone. We would be halting, on the one hand, the dangerous tendency for earlier and earlier retirements, and in addition we would be improving the employment opportunities for older workers.

We have talked a lot about better employment opportunities for older workers for some years, but we have not done anything about it. Here I think is a simple way of really doing something about it. It would not be a panacea, of course.

Senator MILLIKIN. Mr. Chairman, I would like to say to the witness that all through this hearing we have been probing this question. And all the responses of the witnesses confirm fully what has been said. There is a lot of talk and there has been a lot of talk and a lot of committees have been appointed, but practically nothing so far has been accomplished.

Dr. SLICHTER. Well, you see, if a chap is in good health at 62 years of age and loog for a job, at the present time the employer usually does not want him. But if the employer knows that, if he keeps that man until he is 67 or 68, he wins a rebate, that man becomes an attractive prospective employee. The employer realizes that he has got to adapt this older worker to his work force, and that may occasion a little more supervision than would be necessary in the case of a younger man, but I think we ought to get beyond the stage of talk and begin to experiment at least in a modest way with simple arrangements to do this. And certainly if we are going to improve public

health and advance the science of private medicine, we are going to have people reaching the age of 65 in better and better physical shape, and with their life expectancy at 65 going up, we have got to adjust our managerial practices to the trends of the time. We cannot buck the trends of the time with these managerial practices as we have been doing.

Senator BYRD. As I understand your proposition, if the employer decides that he wants a certain employee to continue above 65 he can do so. Of course, he can do so anyway, but in that event he would get one-third of the savings; the employer would?

Dr. SLICHTER. Yes.

Senator BYRD. That is a very good suggestion, I think.

Dr. SLICHTER. Now, the employee might say, "No, I don't want to do it." Then he would not have to. But I do not think you would find very many employees who, given the option of taking a pension and going on the shelf or continuing to go down to the shop, meeting their cronies, eating lunch with the same people, kidding with the same people, and drawing regular wages, would choose the pension, if health permitted their continuing work.

Senator BYRD. There is, I imagine, a great difference of physical vigor of people at a certain age. Some may be vigorous at that age and others may not be. This gives discretion.

Dr. SLICHTER. Well, there is evidence that the disabilities grow rapidly above the age of 55. But as to the proportion of people who are unable to work, I have some figures here from Mr. Durant's book, from the Bureau of the Census, on the labor force in the United States, 1890 to 1960. In his analysis of the white males as of April 1940, of those between 60 and 64 years of age, only 14.3 percent were unable to work.

Senator BYRD. To do any work?

Dr. SLICHTER. I do not say they could do no work around the house, but they were not able to compete in the labor market for jobs.

When you get up to the age group 65 to 74, that percentage is only 30.

Senator MILLIKIN. 65 to 74?

Dr. SLICHTER. Yes.

Senator BYRD. So 70 percent are not incapacitated.

Dr. SLICHTER. And if 70 percent are not incapacitated, where does this age of 65 that we just pulled out of the atmosphere come from? It is certainly not the result of research, certainly not the result of study. No one consulted any physiologists or physicians to discover that 65 was the right age. I think the insurance companies came along and said, "If you move some of these older chaps who are slowing up a bit out of your force, you can speed up the younger ones." And back about 30 years ago, we began getting pension plans sold on the basis that people above 65 might advantageously be moved out. Well, that is a narrow managerial point of view. That is not a national interest point of view. And it certainly is not a point of view which reflects the psychological needs and preferences of the man himself.

Well, gentlemen, I have taken more of your time than I should have. I was going to make some observations on the problem of permanent and total disability, on which our committee made some recommendations. I wonder whether Dean Brown, who is down here to testify, could not cover that. He was chairman of the preceding advisory

council, and he knows far more about this subject of social security than I pretend to know. I wonder whether you might not let him cover that instead of hearing from me on it.

The CHAIRMAN. We would be very glad to, Doctor, if you wish.

Dr. Brown, will you cover that point?

Dr. BROWN. Yes, sir.

The CHAIRMAN. Did you intend to cover it?

Dr. BROWN. Only very briefly.

The CHAIRMAN. Would you mind telling us what your position is, Dr. Schlichter?

Dr. SLICHTER. Well, I am glad to tell you. The old-age and survivors insurance plan, as you know, provides benefits in the case of the death of the wage earner. But suppose he is in an accident and does not get killed. From the narrow economic point of view, it would perhaps have been better for his family hed he been killed. They would have had protection to a limited extent under the system, and they would not have had the cost of taking care of him.

The worse thing that can happen, from the narrow economic point of view, is for a man to become completely incapacitated and yet live. He is no able to provide for his family, and yet he lives. Now, we thought, in the advisory council, that a beginning should be made to provide for this problem. There are a lot of people—the rough estimate is around 2,000,000 at any one time—who are unfit for work because of disabilities that have lasted 6 months or more. Only about 1 out of 20 of these disabilities is from industrial accidents. The rest are from getting hit by automobiles, and in many cases from degenerative disabilities. A man's heart gives out when he is 55, or something of that sort.

So we thought that a beginning should be made, and we proposed that after a waiting period of 6 months, disability benefits be paid to persons who met certain conditions. In the first place, the disability should be medically demonstrable by objective tests. You have got to be able to demonstrate to a doctor that he has a disability.

In the second place, he must have covered 40 quarters, 10 years, under the plan.

In the third place, this coverage record must be 1 out of 2 quarters, either from the time the plan goes into effect, if it were to go into effect in 1951 or 1952, until the date of the disability, or from age 21, whichever was later.

In the fourth place, he must have worked in covered employment for 6 quarters within the 12 preceding quarters.

And finally, he must have worked in covered employment for 2 quarters within the preceding 4. There is quite a series of requirements. And the idea was to start out on a limited scale, learn how to administer the plan, make whatever mistakes are made on a small scale, and, on the basis of experience, broaden the plan.

Now, our estimates were that by 1960, the number of persons drawing benefits would not be very large. They might be as low as 157,000, which would be somewhere around 10 percent of the total cases, or might be as high as around 450,000, or roughly 1 out of 4. That is obviously just a bite at a big and important problem.

But we thought that it would be better to undertake too little than to undertake too much, and to work out the method of administering

this kind of protection on a small scale, because a great deal of personal attention is obviously necessary in these cases. You wish to discover the cases where people can be trained either to do the old job or to do another job; and the rehabilitation service thinks that quite a high proportion of cases can be rehabilitated. Though I have not seen a break-down by age groups, I suspect that the proportion is very high for people, oh, below 45 or 50 years of age, particularly those with the kind of disabilities which come from accidents. There, probably the percentage of cases where rehabilitation is possible is quite high. I don't believe we know very much about it, and it may be quite a different story when you get into high age groups where disabilities are not due to the loss of a hand or a finger or a leg, but due to the development of degenerative conditions of one kind or another. There maye be nothing you can do about that.

But we think that the problem is a very big one. We think that it is not particularly well understood. We think that a small beginning should be promptly made in attacking it. And we think that we have recommended something which is workable, which undertakes, as I said a few moments ago, too little rather than too much. And we would hope that from the experience gained by the adoption of this recommendation, it would be possible gradually to relax the eligibility requirements. I do not like this requirement of 10 years coverage, but I think at the beginning that is a wise restriction.

Some of the other restrictions probably would have to be kept indefinitely. You want a very recent connection with the labor market, I am sure. You do not want people coming back who were in the labor market a year or two ago, saying, "Oh, I can't do any work any more. Therefore, I am entitled to an income under this disability program." So we have recommended that two out of the last four quarters must have been active quarters of employment.

I think that feature is not found in H. R. 6000, and I would recommend that it be included. I think it is not fair to the scheme to permit people to come under it who cannot demonstrate a fairly recent connection with the labor market.

That is all I have, gentlemen, on this particular point.

The CHAIRMAN. Doctor, we greatly appreciate your courtesy and your contribution.

Senator BYRD. It was very interesting, Doctor.

The CHAIRMAN. It was most interesting, and we are glad to have had you.

Dr. SLICHTER. I was very glad to be here.

(The prepared statement of Dr. Slichter follows:)

THE PROBLEM OF OLD-AGE SECURITY

(Testimony of Sumner H. Slichter, Associate Chairman of the Advisory Council on Social Security)

I

My purpose in appearing before you is to report to you on the work of the Advisory Council on Social Security, appointed by the Committee on Finance of the United States Senate, Eightieth Congress, under authority of Senate Resolution 141, and to answer your questions about the recommendations of the Council.

The Advisory Council consisted of 17 members from various walks of life and from different parts of the country. The first full meeting of the Council was held in Washington on December 4 and 5, 1947. Its recommendations on old-age and survivors' insurance were sent to Senator Millikin, the then chairman of the Committee on Finance, on April 8, 1948. Between December 1947 and April 1948, the Council met for two full days each month and an interim committee of the Council met for one full day between Council meetings. Between meetings the members of the Council did a large amount of home work analyzing memoranda prepared by the staff and the interim committee. On the average, 15 of the 17 members attended each meeting of the Council.

The Advisory Council reached three basic conclusions concerning the problem of old-age security:

1. That the foundation of the country's system of old-age security ought to be a Federal system of contributory soical insurance with benefits related to prior earnings and awarded without a means test.

2. That the present Old-Age and Survivors' Insurance Act is failing to perform adequately the job that it was expected to do.

3. That the present Old-Age and Survivors' Insurance Act is sound in principle, and that its failure to do the job expected of it is attributable to three principal defects in the act, all of them easily remedied.

In order to remedy the defects in the old-age and survivors' insurance plan, the Advisory Council made 22 recommendations for changes in the act. On 20 of these recommendations the Council was unanimous.

My remarks will be divided into four principal parts. First of all, I wish to explain to the members of the Finance Committee why the Advisory Council believes that contributory social insurance related to prior earnings ought to be the foundation of the country's system for old-age security. In the second place, I wish to explain why the Council believes that the present Old-Age and Survivors' Insurance Act is not doing the job expected of it. In the third place, I should like to explain why the Council believes that improvements in the act along the lines indicated by its 22 recommendations would enable the act to become the foundation of the country's system of social security. Finally, I wish to discuss briefly the problem of preventing the premature retirement of workers and to show the bearing of this problem on the cost of old-age security.

II

Why should Federal contributory social insurance related to prior earnings be the foundation of the country's system of old-age security?

The 17 members of the Council—employer members, labor members, and public members—were unanimous in believing that contributory social insurance should be the foundation of the country's system of old-age security. Furthermore, the same conclusion was reached by each of the two previous advisory councils—the Advisory Council to the Committee on Economic Security which helped draft the original law of 1935 and the Advisory Council of 1937–38. There are four principal reasons why the Advisory Council of 1947–48 reached the conclusion that a contributory system of old-age pensions should be the foundation of the Nation's system for old-age security.

In the first place, the pensions provided by a contributory insurance system are not charity. No means test is used, but pensions are awarded as a matter of right. Furthermore, the cost is met from the worker's own production in the form of a tax on pay rolls paid by the employer and a tax on wages paid by the worker. Hence the dignity and the self-respect of the worker are shown consideration. After a lifetime of work, it is not right that men should be dependent upon charity for income.

In the second place, old-age insurance encourages self-reliance and thrift instead of discouraging them. A man by being thrifty does not diminish the amount of the pension that he receives—he simply assures himself of a better standard of living in his old age. This is in contrast to old-age relief based upon a means test. When a means test is used, the man who has been thrifty and who has provided for himself gets nothing; the man who has partly provided for himself gets small benefits; the man who has made no provision for himself gets the largest grant. Such a system is equivalent to a series of rewards for not being thirfty and self-reliant. Old-age insurance, by avoiding the use of a means test, avoids discouraging thrift.

In the third place, old-age insurance which relates benefits in some measure to the prior earnings of workers helps protect men from too drastic a drop in their

standard of living on retirement. The standard of living of workers obviously tends to vary with their earnings. Since the purpose of old-age security is to protect men against having to make too drastic cuts in their standard of living when they retire, pensions should vary in some measure with past earnings. Flat benefits, which are not related to earnings but are the same for everyone, would assure that there would be only an arbitrary relationship between men's standards of living before retirement and their standards after retirement. Under a scheme of flat benefits, the benefits that would be about right for some workers would be too small for many others and possibly too large for a third group.

In the fourth place, a Federal system of old-age pensions should be the foundation of the country's system of old-age security because it can be applied to all members of the labor force and can be made as broad; therefore, as the problem with which it is supposed to deal. This method of meeting the problem does not depend upon the willingness of an employer to grant pensions or upon the bargaining power of unions and their ability to compel employers to grant pensions. Furthermore, a system of old-age insurance can be applied to the self-employed as well as to employees. Since about one out of five workers in the United States is self-employed, it is necessary that the scheme of old-age security be applicable to the self-employed as well as to employees.

III

What are the reasons for believing that the present Old-Age and Survivors Insurance Act is not doing the job expected of it?

The members of the Advisory Council were unanimous in believing that the present Old-Age and Survivors Insurance Act is not doing the job expected of it. There were three principal reasons for this conclusion.

One reason was that, even after 13 years, only about 39 percent of the male workers who reach 65 years of age would receive benefits if retired. Hence, if is plain that many people who need to receive protection from the system are not getting it. The principal reason why they are not receiving protection is that the Old-Age and Survivors Insurance Act applies to only about 3 out 5 jobs. Another reason is that eligibility to receive benefits is determined by the proportion of time that a man spends in covered employment, not by the proportion of time that he is at work. A man may be quite steadily employed and still not qualify for a pension if he is one of the many workers who move back and forth between manufacturing, which is covered, and agriculture which is not. At the present time, half again as many people are drawing old-age assistance as are drawing old-age pensions— 2.7 million are receiving old-age assistance and about 1.9 million, old-age pensions.

A second reason for believing that the Old-Age and Survivors Insurance Act is not doing the job expected of it was that the average pension is too small and is considerably less than the average payment for old-age assistance. The average pension for a single person averages about $26 a month and the average pension of a retired person with one dependent less than $40 a month. The average monthly payment under old-age assistance is about $44.50. Although the recipients of old-age assistance are half again as numerous as recipients of old-age pensions, total payments for assistance are nearly 2½ times as large as payments for pensions. The principal reason why pensions are small is that the benefit formula is too low even for workers steadily employed in covered industries. It provides a pension of only 40 percent of the first $50 of monthly earnings plus 10 percent of the next $200 of monthly earnings, plus 1 percent of this sum for each year of covered employment, plus additional allowances for dependents. In addition, the benefit formula provides that, in computing average monthly lifetime earnings, time worked in uncovered industries shall be counted, but makes no provision for counting the money earned in uncovered industries.

A third reason for believing that the Old-Age and Survivors Insurance Act has not done the job expected of it was that the average monthly pensions under it have not kept pace with the rise in the cost of living or the rise in per capita income. Average monthly pensions have increased 14 percent since 1940 while the cost of living has risen over 68 percent, average weekly wages in manufacturing have risen 117 percent, and the average per capita income of the country has increased 132 percent. During the period that average monthly pensions were increasing 14 percent, average monthly old-age assistance payments more than doubled. The purchasing power of pensions is 32 percent less today than it was 10 years ago.

Pensions ought to bear a more or less constant ratio to the average earnings of persons. Otherwise they do not give people the required help in maintaining their customary standards of living. Part of the explanation of why the increase in the average pension has been far less than the increase in the average wage is that, as monthly earnings rise from $50 a month to $250 a month, the primary pension increases only $10 for each $100 increase in earnings. Thus a man whose average lifetime earnings had risen from $150 a month in 1940 to $250 a month at present would have been entitled to a primary pension of $30 a month then and to a pension of $40 a month now (exclusive of the increment)—an increase of only 33 percent in his pension though his earnings had increased by 67 percent. Another part of the explanation why the increase in pensions has lagged behind the increase in wages is that only wages up to $3,000 a year count in computing the average earnings on which pensions are figured. As wages have gone up, more and more workers earn more than $3,000 a year. In 1948, about one out of four among all workers regularly in covered employment earned more than $3,000. Still another part of the explanation why pensions have increased more slowly than wages is that pensions are computed on the average monthly wages of each worker over his lifetime. Although the average worker is earning more than twice as much today as he was earning 10 years ago, his lower earnings of 10 years ago help bring down the monthly average of earnings on which his pension is computed. All in all, the present methods of computing pensions assure that pensions will be slow to rise whenever wages increase.

IV

Why does the Advisory Council believe that improvement of the act along the lines indicated by its 22 recommendations would enable the Old-Age and Survivors Insurance Act to do the job expected of it and to become the foundation of the country's system of social security?

In the first place, the recommendations of the Council would extend the protection of the act to virtually all of the 25,000,000 jobs not now covered. Obviously, one cannot expect a program to give protection to people whom it does not cover. Consequently, expansion of coverage of the old-age and survivors insurance scheme is of basic importance. Coverage was originally limited because of the administrative difficulties in applying the scheme to such groups as the self-employed and to some kinds of workers, such as domestic workers and farm laborers. As Mr. Folsom, a member of the original Advisory Council in 1935 has pointed out, it was not the intention to exclude permanently the uncovered workers from the protection of the scheme. Both the Bureau of Internal Revenue and the Social Security Agency have studied carefully the administrative problems of extending coverage. Both agencies have had the benefit of 13 years' experience administering the present act. Both believe that there are today no insurmountable administrative obstacles to extending the insurance scheme to the 25,000,000 jobs not now covered.

H. R. 6000 proposes that about 11,000,000 additional jobs be brought under the old-age and survivors insurance plan. This is a step in the right direction, but it would bring under the act substantially less than half of the jobs that are not now covered. Large and important categories, such as farmers, farm laborers, and a number of professional groups, would still be deprived of protection of the scheme.

The incomplete coverage proposed in H. R. 6000 raises basic questions as to where and how uncovered groups would get security for their years of retirement. Nearly all of the groups left uncovered by H. R. 6000 are groups that cannot be expected to be covered by private pension plans, initiated by employers or negotiated by trade-unions. Apparently the philosophy of H. R. 6000, therefore, is that the uncovered groups should either be able to take care of themselves or should be expected to rely upon charity. Is it realistic to assume that all members of the uncovered groups will be able to take care of themselves? For those who are not, is it fair to expect them to rely upon charity? Have we a right to assume that farmers and the professional people do not need the protection given by the old-age and survivors insurance plan? Is farming so free from economic hazards that farmers should be left to take their chances with old-age assistance? Likewise, are the professions such secure callings that architects, engineers, lawyers, doctors, and dentists do not need the protection which old-age and survivors insurance would give them? Can every lawyer, every architect, every engineer count on reaching the age of 65 or 70 with adequate savings to provide for the years of his retirement? Certainly the people cannot expect old-age and sur-

vivors insurance to be the foundation of the country's system of old-age security if large parts of the population are excluded from the plan.

In the second place, the recommendations of the Council would liberalize the eligibility requirements for pensions so that older workers who are newly covered by extension of the Old-Age and Survivors Insurance Act to new industries will soon become eligible for pensions. Unless the present provisions for eligibility are modified, all persons covered for the first time in January 1951, who attained age 59 after 1950, would have to have 10 years of coverage before they would be eligible for pensions. Even newly covered persons who reach 65 years of age in their first year of coverage would need seven more years to steady employment (28 quarters) before they could receive pensions. It would obviously do little immediate good to extend the act to the 25,000,000 uncovered workers if the eligibility requirements for new workers remain as strict as at present. H. R. 6000 makes a little improvement over the present law, but even H. R. 6000 would require 20 quarters of coverage, or 5 years, for newly covered employees to become eligible for pensions.

The Council recommends that the extension of coverage to new industries be accompanied by a "new start" in eligibility requirements that will require the same qualifying periods for older workers as was required for persons who were the same age when the system began operation in 1937. The Council believes that a minimum of six quarters of coverage should be required. It recommends that requirements for fully insured status should be one quarter of coverage for every two calendar quarters elapsing after the year in which coverage is extended and before the quarter in which a man attains the age of 65 (60 for women) or dies. This would mean that persons who had reached the age of 62 before coverage was extended could be fully insured by working half the time in the next 3 years. This eligibility requirement, combined with the extension of old-age and survivors insurance to the 25,000,000 jobs now not covered, would raise substantially the proportion of males who are fully insured on reaching the age of 65. By 1955 this proportion would be approximately 66 to 74 percent. Unless a very high percentage of persons who reach the retirement age are eligible for pensions, the Old-Age and Survivors Insurance Act obviously cannot do the job expected of it.

In the third place, the recommendations of the Advisory Council would substantially raise the average monthly benefits. It is plain that the Old-Age and Survivors Insurance Act cannot be expected to do an adequate job if the pensions received are less than the average old-age assistance benefit granted after a means test. Nor can the act do an adequate job if the pensions payable under it are so small in relation to average earnings that they fail to prevent a very drastic drop in the standard of living of retired workers. The primary insurance benefit for a worker with 10 years of coverage under the present act and with average monthly wages of $200 is less than one-fifth of his monthly wage and, if he has one dependent, his total benefits are less than 30 percent of his average monthly wage. Obviously such pensions are far too small.

The Advisory Council has made three types of recommendations designed to raise the average benefit. One recommendation is that the benefit formula be liberalized—that benefits be 50 percent of the first $75 of monthly wages instead of 40 percent of the first $50, and 15 percent of additional wages up to the amount of the tax base instead of 10 percent as at present. Another recommendation is that the benefit base and the tax base be raised from $3,000 a year to $4,200. Still other recommendations pertain to liberalizations in the benefits payable to dependents. The most important of these recommendations is that women may qualify for old-age benefits (either primary or supplementary) at the age of 60 instead of 65. During 1948 only 196 of every 1,000 married men who claimed benefits at age 65 had wives who were 65 or over and entitled, therefore, to dependents' benefits under the present law. On the other hand, 565 out of every 1,000 married men claiming benefits at age 65 had wives who were at least 60 years of age and who would receive dependents' benefits if the recommendations of the Council were adopted. In other words, the recommendations of the Council would increase by nearly three times the number of cases in which wives' benefits are paid when the husband retires at the age of 65.

The total effect of the recommendations of the Advisory Council would be to increase the average pension paid under the old-age and survivors' insurance scheme by about 100 percent. This would be an important improvement. Nevertheless, I do not believe that the recommendations of the Council go far enough. To begin with, the formula proposed by the Council is not sufficiently liberal, particularly for the workers earning above $75 a month. The Council recom-

mends, as I have pointed out, that pensions be 50 percent of the first $75 of average monthly earnings plus only 15 percent of the next $275 of monthly earnings. This formula would give a primary pension of $37.50 for workers earning $75, of $48.75 for workers earning $150 a month, and of $63.75 a month for workers earning $250 a month.

H. R. 6000 proposes that the primary pension be $50 for the first $100 of earnings. Several members of the Advisory Council—Mr. Folsom, of the Eastman Kodak Co.; Mr. Rieve, of the Textile Workers' Union, CIO; and Mr. Cruikshank, the social-security expert of the A. F. of L.—have expressed agreement with this feature of H. R. 6000, and I share their views. The benefit formula of 15 percent of wages between $75 and $350 a month does not provide a large enough spread between the pensions received by persons with low earnings and persons with higher earnings, though the council provides a greater spread than the formula in the present law or that proposed by H. R. 6000.[1] If pensions are to protect the standard of living of workers who retire, they must be fairly closely related to previous earnnigs. Certainly a rise of only $10 or $15 in pensions as average monthly earnings increase $100 does not provide a very close relationship between earnings and pensions, and is not fair to the skilled workers. The primary pension recommended by the council is about one-third of the earnings of a man making $150 a month, a little more than one-fourth of the earnings of a man making $250 a month, and only 22.5 percent of the earnings of a man making $350 a month. Two members of the council, Mr. Rieve and Mr. Cruikshank, have recommended that the rise in pensions above the basic amount be 20 percent of additional earnings. I am in favor of at least a 20-percent increase in pensions for each rise in average monthly earnings above the basic amount, but I believe that a 25-percent rise would be preferable. Such a rise would give a man with average monthly earnings of $200 a month a primary pension of $75 (assuming the formula provides for a pension of 50 percent of the first $100, as in H. R. 6000) and a man with average monthly wages of $300 a month a primary pension of $100. Certainly such a spread in the pension received by men with a difference of $100 in monthly earnings is not too large.

Finally, I believe that the limit of $4,200 on the benefit base and the tax base recommended by the council is too low and is unfair to many skilled workers and to foremen and others in the lower ranks of supervision. The upper limit of $4,200 in the benefit base means that no earnings of more than $4,200 a year produce an increase in a worker's pension. There are many skilled workers, straw bosses, foremen, assistant foremen who earn from $5,000, $5,500, to $6,000 a year but under the recommendations of the council these men would receive no greater pensions than men earning only $4,200 a year. Indeed, in the year 1948, 17 percent of the male workers who earned wages in covered industries in all four quarters earned more than $4,200. Why refuse to count any of these earnings over $4,200 in computing the pension that the man receives?

The primary pension for a worker earning $5,000 a year, if the pension were 50 percent of the first $100 and 15 percent of the additional earnings up to $4,200 a year, would be only $87.50 a month. It is not satisfactory to expect all men who receive more than $4,200 a year to depend on individual savings or on company pension plans. About 22 percent of persons with incomes of $5,000 or more in 1949 had liquid assets (bank deposits, Government savings bonds, and stocks and bonds of private corporations of less than $500 and 45 percent had liquid assets of less that $2,000. Business enterprises themselves do not expect these men to depend on individual savings because they establish generous pension plans for executives. But almost all of these company pension plans tie a man to one company and penalize the man who moves from one employer to another. When one considers the serious deficiencies of company pension plans, one reaches the conclusion that skilled workmen and foremen should not be dependent to any considerable extent upon them.

I am not in favor of increasing the tax base and the benefit base for the purpose of increasing the income of the pension fund. Nevertheless, if the benefit base is increased, the tax base should be correspondingly increased because the two should be the same. As a matter of fact, the increase in the tax base above $4,200 would not product much new tax revenue.

---

[1] The present law provides that primary pensions shall be 40 percent of the first $50 of monthly wages and 10 percent of wages from $50 to $250; H. R. 6000, that primary pensions shall be 50 percent of the first $100 of monthly wages and 10 percent of wages between $100 and $300 a month.

V

When the present Federal old-age pension plan was drawn up about 15 years ago, the prevailing opinion was that it should be inadequate—that it should provide only a bare minimum of security and that it should be supplemented in various ways. It is understandable that back in 1935, when the idea of a Federal old-age insurance plan was new, many people wished to avoid placing too much reliance on it. At that time, the serious disadvantages of private pension plans as devices for providing old-age security were not clearly seen. Nor were all of the developments and problems of old-age assistance clearly seen.

The time has come, I believe, for a change in our thinking about these matters. It is high time to adopt the view that the Federal pension plan should be so close to adequate that only moderate supplementation by private pension plans or public assistance will be necessary. Of course, substantial supplementation by individual thrift will always be necessary. For example, if one accepts as a rough, but modest, standard that an adequate pension for a worker and one dependent is about half of his average earnings, his standard of living will take a terrific fall on the day when he retires, unless he has accumulated at least a moderate amount of savings to supplement his pension.

If the Old-Age and Survivors Insurance Act were improved along the lines recommended by the Advisory Council with respect to coverage and eligibility requirements, and if the benefit formula were somewhat more liberal than that recommended by the council, the plan would really become the foundation of the country's arrangement for old-age security. Within 3 years after the effective date of these changes the number of recipients of old-age pensions would exceed the number of recipients of old-age assistance, total pension payments would be larger than payments for old-age assistance, and the Federal Government would be able to make substantial reductions in its expenditures for old-age assistance. As a matter of fact, the number of old-age insurance beneficiaries actually drawing benefits has increased during the last several years considerably faster than the number of old-age assistance recipients. Between December 1946 and January 1950, the number of old-age insurance beneficiaries increased by 932,000 in comparison with somewhat over 500,000 for old-age assistance recipients. It is illuminating, however, that the increase in the monthly amount of old-age assistance payments during the same period was more than twice as large as the increase in the total monthly old-age benefit payments under the old-age and survivors' insurance today—vivid evidence of the inadequate benefit formula in the Pension Act.

VI

What would a more adequate system of old-age and survivors insurance cost? The answer to this question depends upon many conditions—how many persons reach the age of retirement, how many become eligible for benefits, how many retire, how long benefits are paid, how much is paid as retirement benefits.

The best way to estimate the costs of an old-age insurance program is as a percentage of pay rolls and of the income of the self-employed, in case the insurance plan extends to the self-employed. In the next 20 or 30 years there will be a very large rise in pay rolls, partly due to the increase in the labor force and partly due to the rise in wages which must be expected to continue in the future as in the past. In another 30 years, for example, the labor force will increase by over 10,000,000, and if wages rise as rapidly as in the past, hourly earnings will increase between 80 and 90 percent. One must expect that the benefits paid under the old-age insurance plan will bear a more or less constant relationship to average monthly earnings. As wage rates rise benefits will be liberalized from time to time in order to maintain a more or less constant relationship between earnings and pensions. That is why the most realistic and conservative way of estimating costs is in terms of percentage of pay rolls and the income of the self-employed.

The actuarial consultant of the Advisory Council on Social Security prepared a low-cost estimate and a high-cost estimate of the recommendations of the council. He estimated that by the year 2000 the expanded program recommended by the Advisory Council would cost from 5.87 percent to 9.70 percent of pay rolls. The range in his estimates of level premium rose from 4.90 percent to 7.27 percent. The more liberal benefit formula which I had suggested would cost somewhat more.

VII

Fortunately the cost of old-age pensions can be substantially reduced by encouraging employers not to retire workers who are physically fit to perform their work. It is a cruel fiction that men on attaining the age of 65 suddenly become unfit to continue in their jobs. Let me conclude these remarks by calling to your attention an aspect of the problem of old-age security that has received all too little attention—namely, the problem of premature retirements.

Many people conceive the problem of old-age security as mainly a result of the aging of the population—that is, the increase in the proportion of the population of 65 years of age or more. As a matter of fact, the problem of old-age security is as much a problem of earlier retirement as a problem of the aging of the population. Back in 1890, 68.2 percent of all white males aged 65 and over were members of the labor force. By 1930, this percentage had fallen to 54. By 1940, only 42.2 percent of all white males of that age group were in the labor force.

The drop in the proportion of the population of 65 years of age or more in the labor force is not the result of voluntary retirements. It is the result of lay-offs by employers. For example, among rural farm population, 69.3 percent of males 65 to 74 years of age were in the labor force in 1940, and even 31.5 percent of males over 75 were in the labor force. Among urban groups, on the other hand, only 46.9 percent of white males between 65 and 74 years of age were in the labor force, and only 15 percent of those 75 years of age or more. Many large companies have adopted the rule that everyone must retire at the age of 65.

The practice of earlier and earlier retirements is bad for the individual worker in most cases, it is bad for the country, and it greatly increases the problem of an old-age insurance plan. Retirement is bad for the worker partly because it reduces his income, but even more because it cuts him off from the contact of his fellows that his job gives him, and makes him feel that he is a "has been" and is now on the shelf. He is unhappy and maladjusted. Often his health suffers. Earlier retirements are bad for the country because they deprive the community of the output that the retired workers might produce. At the present time, for example, there are about 2,800,000 workers of 65 years of age or more at work. They produce about $10,000,000,000 of goods. If the practice of universal retirement at 65 were made general, the country would be deprived of the output of these 2,800,000 men. In other words, general retirement at the age of 65 would cost the country about $10,000,000,000 a year. Finally, earlier retirements greatly increase the cost of pensions. Life expectancy at age 70 is about 3 years less than at age 65. If most men retired at 70, therefore, the number of years pensions would be paid in the average case would be about three less than if most men retired at 65. Furthermore, contributions would be paid for more years. Consequently, the contribution rate that will buy a given pension beginning at age 65 will purchase much larger pensions beginning at age 70.

The time has come to halt the tendency for employers to retire men at an earlier and earlier age. This tendency is quite out of place in a community where health is improving, longevity is increasing, and the remaining years of usefulness of workers at the age of 65 are growing. The advisory council on social security pointed out that the great majority of retirements are involuntary, and it recommended that the Federal Government establish a commission to study the broad problem of the aged in the community and the adjustment of aged to retirement. I believe that immediate steps should be taken, however, to help workers between the ages of 65 and 70 continue in employment instead of being forced to retire. The best way to do this is to give employers an incentive not to retire physically fit workers before the age of 70.

What form might this incentive take? It might be either a penalty or a reward. I believe that a reward is preferable than a penalty. If the employer were penalized for retiring men below the age of 70, he would be discouraged from hiring older workers—men of 60 or near 60, whom the employer might be willing to hire under ordinary circumstances. If the employer had doubts these men would be physically fit to work until they were 70 years of age, he would refuse to hire them.

The method of rewards, however, has great possibility. In order that I may be definite and concrete, let me venture a tentative suggestion. Let us assume for sake of illustration that the average pension were $75 a month, or $900 a year. An employer who kept a man until the man was 70 years of age instead of

retiring him at the age of 65 would be saving the pension system $4,500 in pensions. The employer might be rewarded for keeping men above 65 by being given a rebate of one-third of the resulting saving to the pension fund. In the example I have given, one-third of the saving would be $1,500. If the employer had kept the man until only age 68, the pension fund would have been saved $2,700, and the rebate of one-third would have given the employer $900.

This rebate would give managements an incentive to find ways of keeping men beyond the age of 65. Furthermore, instead of being a deterrent to managements' hiring older workers, the rebate would be an incentive. If an employer hired a man at age 62 and kept him until the age of 70, the employer would be given a rebate for the saving made possible in pension payments to the man. Naturally employers would be interested in hiring older workers who showed promise of being efficient after the age 65. The older workers who are now thrown on the market by firms going out of business and by lay-offs would find their employment opportunities greatly improved.

I do not assert that this arrangement would completely solve the employment problem of the older worker. Nevertheless, it would greatly reduce the seriousness of this particular problem. Thus, we would be killing two birds with one stone. We would be halting the dangerous tendency for earlier and earlier retirements. In addition, we would be improving the employment opportunities of older workers. An incorporation into the Old Age and Survivors Insurance Act of an incentive for employers to keep workers beyond the age of 65 would be a major improvement in the country's arrangements for old-age security. If would open new hope and opportunity for millions of older workers. It would greatly reduce the cost of pensions and it would make it possible to give much more liberal pensions than are now available with only a moderate increase in the cost of pensions. It would increase the productivity of the economy. This increase in productivity would alone go far to pay the total cost of old-age security.

Senator BYRD. Before we leave, Mr. Chairman, I would like to ask the Treasury Department to furnish a list of the bonds under the trust fund and the rate of interest paid on each.

The CHAIRMAN. Is there a representative of the Treasury Department here?

If not, Mr. Cohen, will you make a memorandum to ask the Treasury to supply that?

That possibly is in the report of the trustees of these several funds.

(When supplied, this information will be placed in the files for the information of the committee.)

The CHAIRMAN. Dr. Brown, it is now past 1 o'clock, and I suppose the committee would like to recess, if it is convenient for you to come back after a reasonable period of recess.

Dr. BROWN. Yes, sir.

The CHAIRMAN. I hand to the reporter for insertion in the record at this point a letter dated March 15, 1950, from the Honorable Morris F. de Castro, Acting Governor of the Virgin Islands, with respect to the proposals to include the islands in the Federal social-security program and particularly the amendments to H. R. 6000 in that regard recommended in the report to the Committee on Ways and Means from its Subcommittee on Extension of Social Security to Puerto Rico and the Virgin Islands, dated February 6, 1950.

(The letter referred to follows:)

GOVERNMENT OF THE VIRGIN ISLANDS
OF THE UNITED STATES,
Charlotte Amalie, St. Thomas, March 15, 1950.

Hon. WALTER F. GEORGE,
Chairman, Senate Committee on Finance,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR GEORGE: In behalf of the people of the Virgin Islands, I write to ask for your earnest and active support for the proposals now before your committee to include our islands in the Federal social-security program,

as provided in H. R. 6000, and particularly for the amendments to H. R. 6000 recommended in the report to the Committee on Ways and Means from its Subcommittee on Extension of Social Security to Puerto Rico and the Virgin Islands, dated February 6, 1950.

Extension of the social-security program to the Virgin Islands is long overdue. Fifteen years have passed since the act first went into effect in continental United States. Unfortunately, the islands were omitted from the act then, and for 15 long years, partly, I believe, because of preoccupation with the prosecution of the great war, the omission has not been corrected. Except for child-welfare services, our people are still without Federal help under this great program.

Virgin Islanders are citizens of the United States, and they are as loyal as those to be found anywhere under the American flag. We share proudly with all other United States citizens the responsibilities that such citizenship imposes. Virgin Islanders volunteered and were drafted into the United States armed forces for the great war. Virgin Islanders fought and died for our country to preserve the human rights and liberties so dear to every American. In the paths of peace also, Virgin Islanders have earnestly espoused the American way of life, and, after 33 years under the American flag, have developed our social and governmental institutions in the full democratic American pattern.

We must wrestle in the islands with the same ills that face our brothers on the mainland. We must deal with the familiar but distressing problems of old age and dependency, of people handicapped by blindness and other crippling afflictions, of widows and orphaned children. Alone and unaided, we are battling these problems with finances totally inadequate for the task. We are putting 56.4 percent of our entire budget into health, education, and welfare services. But, with the poor economy of our islands and their poor per capita income, even that high percentage of our budget produces pitiful results. Assistance grants average only $5.90 per person per month, or 19½ cents a day, to provide food, clothing, and shelter—all the necessities of life.

To change this picture of want and privation, we are asking Congress to treat us as it treats other American citizens. We are asking no special privileges under this program, no special benefits, no special exemptions just to be placed in the same status thereunder as other Americans. We should be and we want to be included in the social insurances, the public assistance, child-welfare and medical programs, and we should be and we want to be included thereunder on the same general basis as other Americans living under the American flag. H. R. 6000 does include our islands in all phases of the program, both the contributory retirement system and the public-assistance titles, for which we are happy. But in the public-assistance titles, H. R. 6000 provides for the islands only straight dollar-for-dollar matching of Federal and local funds instead of the much more favorable matching formula provided for the States. Actually, with our poor economy, we are in greater need of this favorable matching formula than almost any other part of the Nation.

The Report of the Subcommittee of Ways and Means, issued February 6, 1950, recommends very strongly that H. R. 6000 be amended to remove this unfavorable treatment of the islands in regard to the public-assistance program. It recommends (as originally provided in H. R. 6000) that the maximum monthly grants in the islands for adults be $30 per person instead of the $50 per person provided in the United States, and to this we do not object. Particularly, it urges that the matching ratios and ranges within this $30 maximum be placed, proportionately, on the same basis as in the United States. Similar amendments are provided in the programs for aid to children. For our Government, I vigorously and heartily endorse these recommendations. Sound programs could be organized in our islands thereunder. The total cost to the United States would be insignificant, less than a quarter of a million dollars a year. To our people, it would mean security—that security which is the prized heritage of Americans throughout the rest of the Nation.

In testimony before your committee on February 13, our director of social welfare, Mr. Roy W. Bornn, gave a full picture of our situation. We should be happy to supply any additional information you need. Senator George, we are counting upon your effective support of our cause in this matter. We urge that your committee make earnest recommendations to the Senate for speedy and favorable action.

With thanks in advance and with best wishes from the people of our islands and from me personally,

Sincerely,

MORRIS F. DE CASTRO,
Acting Governor.

The CHAIRMAN. There will also be placed in the record a statement submitted by the National Association of Insurance Agents expressing the desire that property insurance agents definitely not be included under any construction that may be placed on the definition of "employee" in any legislation growing out of the proposed bill.

(The statement referred to follows:)

STATEMENT BY THE NATIONAL ASSOCIATION OF INSURANCE AGENTS

With reference to developments before the Finance Committee of the United States Senate looking toward the revision of the Federal social-security laws; and particularly with reference to that section in a proposed bill, H. R. 6000, covering the definition of an "employee," the following statement is submitted in the hope that it may be of some benefit to a better understanding of the status of a large segment of the insurance business constituting the local property-insurance agents of the United States. These men, who are local agents of fire, casualty, surety, and bonding-insurance companies, have long claimed to and in fact do occupy the status of independent businessmen.

In dealing with the definition of "employee" in the proposed bill, it is the desire of the proponents of this statement that property-insurance agents be definitely understood to be not employees under any construction that may be placed on the definition of "employee" contained in the new law.

The business of property insurance in the United States is very largely produced through what is known as the American Agency System. That is a system by which insurance companies secure business through the medium of local insurance men, called agents. Because of the universal practice which prevails in this country, a property-insurance agent is vested with certain property rights, which include the ownership of the expirations of the business which he has produced and placed upon the company's books, together with other assets. This is all the agent's property. It is his plant. He is by virtue thereof established in the business. He is engaged in a distinct occupation. He is not under the direction of any insurance company. He has his own office, for which he pays the rent. He owns all his office equipment, hires and pays all his employees, and operates entirely as an independent contractor, without any supervision from any insurance company. His compensation is a given percentage of the insurance business written by him. Before he can operate as an insurance agent he must be licensed by the State so to act. He goes forth to the public seeking to secure and care for certain insurable interests. He proposes to give a certain, definite and distinct service in exchange for this trust. To be sure the service he is able to give is nearly always measured by his skill and knowledge.

While developing this business he is not acting as the agent of any particular insurance company because he represents many. He is acting for himself as an independent contractor. He is about to assume a distinct obligation to his clients to provide adequate indemnity for them in reliable companies at proper rates and in accordance with certain laws, established rules and customs. All of this has nothing to do with any relations between himself and any given insurance company. He is under no obligation to give the business to any certain company because the disposition of it belongs to him. After securing the business from the client he then determines in what company or companies to place the risk. He could if he so desired place the business in companies which he did not represent as agent, under a brokerage arrangement with some other agent. It cannot be said that in the soliciting and securing of insurance the agent is either a common-law agent of any particular insurance company or the employee of any company.

Upon the determination of an agent to place a line in a given company, he thereupon begins to exercise the agency power vested in him by the company to create extensive company liabilities. He then becomes charged with the duty of protecting the interest of both the company and the assured. This dual representation is a service that is highly beneficial and is in proportion to the knowledge, skill, ability, and industry of the agent himself. The development of this service to the highest point of efficiency is one of the things that stamps his business with a vested interest. The agent instinctively sees that in rendering a highly acceptable service to both the companies and the assureds he is building up for himself a stable and permanent business which has a recognized salable value.

Among the many court decisions supporting the foregoing statement are the following:

National Fire Insurance Co. v. *Sullard* (89 N. Y. S. 934; 97 App. Div. 233).
F. B. Miller Agency v. *Home Insurance Co.* (1934) (276 Ill. App. 418).
Rippberger, Bankrupt (No. 35559, January 2, 1926, opinion by Federal Judge Cliffe (N. D. Illinois).
Chapman Insurance Agency (50 F. (2d) 252).
Alliance Insurance Co. v. *City Realty* (52 (2d) 371).
Kelly v. *American Mine Owners Casualty Co.* (170 S. E. 580; 161 Va. 206).
Kerr & Elliott v. *Green Mountain Mutual Fire Insurance Co.* (111 Vt. 502).

The House Ways and Means Committee fully understood the legal relationship between property insurance agents and their companies as shown in the Congressional Record of Tuesday, October 4, 1949, page 14041, to which this committee is respectfully referred.

Reference is also made to the published hearings before the Committee on Finance, United States Senate, Eightieth Congress, second session, on House Joint Resolution 296, April 1 and 2, 1948, pages 61, 62, testimony of witness John F. Neville, associate counsel, National Association of Insurance Agents.

To summarize, it is hoped that this committee will consider the local property-insurance agent as an independent contractor, which is his true legal relationship with his companies. This would allow the property-insurance agent to enter the social-security system, if such be necessary under the law, not as an employee but as a self-employed businessman.

All of which is respectfully submitted.

NATIONAL ASSOCIATION OF INSURANCE AGENTS,
By JOHN F. NEVILLE, *Associate Counsel.*

SUPPLEMENTARY STATEMENT

Because of certain developments before the Senate Finance Committee, which is presently conducting hearings on the definition of "employee" in H. R. 6000, it is thought necessary and proper to repeat again and summarize the legal position occupied by the local property-insurance agent in relation to the companies he represents.

These insurance agents, representing fire, casualty, fidelity, and surety insurance companies, own their own business, which they may sell at will and are under no degree of control by the companies which they represent.

The independent contractor status of the local property-insurance agent has been and is now recognized by their companies, the courts, and by the agents themselves. Their independent status was understood and confirmed by the Ways and Means Committee of the House of Representatives in its deliveration of H. R. 6000, as shown by the Congressional Record of Tuesday, October 4, 1949, on page 14041.

It is hoped that the Senate Finance Committee presently considering the definition of "employee" in H. R. 6000 will recognize the local property agent's relationship with his companies and thereby allow these agents, if such a course of action is made necessary by law, to enter the social-security system not as employees but as independent, self-employed businessmen.

This short statement is amplified by a memorandum which is being submitted to the committee by the National Association of Insurance Agents, an unincorporated association of approximately 27,000 property-insurance agencies located in every State in the Union.

Respectfully submitted,

NATIONAL ASSOCIATION OF INSURANCE AGENTS,
By MAURICE G. HERNDON,
Washington Representative.

The CHAIRMAN. Then, if it is agreeable to the Senators, we will recess until 3 o'clock.

(Whereupon, at 1:20 p. m., a recess was taken until 3 p. m. this same day.)

AFTERNOON SESSION

(The committee reconvened at 3 p. m. pursuant to the noon recess.)

The CHAIRMAN. The committee will come to order.

Dr. BROWN. Dr. J. Douglas Brown, dean of the faculty, Princeton University. That is correct, is it not?

Dr. BROWN. That is correct, sir.

The CHAIRMAN. We will be very glad to hear from you, doctor.

STATEMENT OF DR. J. DOUGLAS BROWN, DEAN OF THE FACULTY, DIRECTOR OF THE INDUSTRIAL RELATIONS SECTION, AND PROFESSOR OF ECONOMICS, PRINCETON UNIVERSITY, PRINCETON, N. J.

Dr. BROWN. Mr. Chairman, I thought I might mention my previous connection with the old-age and survivors insurance because there may be questions you might care to ask me on that account.

The CHAIRMAN. You were on the advisory council on social security to the committee in 1948.

Dr. BROWN. Yes, sir.

The CHAIRMAN. And you also contributed a great deal in an advisory capacity in 1935 in connection with the so-called Calhoun report.

Dr. BROWN. Yes, sir. I was on the staff of the Committee on Economic Security, and then, in fact, sat in on the executive sessions of this committee at the time the bill was being considered and also I was chairman of the advisory council in 1937–38.

I would like to say that my interest as an economist arises out of the whole question of the preservation and enhancement of the dignity and the effectiveness of our human resources, and I come into the problem from the point of view of industrial relations and economics, not being an actuary.

To my mind it has always been the basic purpose of the Old-Age-Insurance Act to provide a self-reliant means of preventing old-age dependency, and at the same time as a very practical fact, to prevent this constant rise in the cost of needs-test assistance. In the early planning of the act the assumption was, of course, that the social-insurance side would by this time, certainly by 1950, have taken over the major burden of the protection of our aged people otherwise dependent on assistance. I don't know whether you would like to ask me questions or have me proceed with a relatively brief statement.

The CHAIRMAN. You may proceed and if it will not trouble you, we will interrupt you with questions if they arise.

Dr. BROWN. Not at all, sir.

The CHAIRMAN. Proceed, doctor.

Dr. BROWN. The failure of the old-age-insurance system to fulfill its expectations, it seems to me, has not been due to a failure in the essential mechanism of the program. It has been, rather, a failure in the relative dimensions of that mechanism in terms of the increasing problem. Since 1938 the essential mechanism has been practical and workable.

The CHAIRMAN. May I ask you now, did we do very much talking about covering the self-employed people in 1935?

Dr. BROWN. In 1935, sir, I believe most persons discussing it felt that administratively the self-employed would prove difficult to cover. As far as I can remember that was the situation. I was trying to recall this morning, during Professor Slichter's testimony, whether any dis-

cussion on principle had come before either of the committees of the Congress. I do not recall any discussion in hearings of the question of the principle of such coverage but the practicality was raised.

The CHAIRMAN. I know from time to time something was said about bringing in the self-employed, but I do not recall that we gave serious consideration at that time.

Dr. BROWN. It was recommended in the 1938 advisory council.

The CHAIRMAN. Yes; I know it was then, but I am now speaking of it initially.

Dr. BROWN. I think the feeling at that time, sir, was that there were sufficient administrative problems in dealing with the ordinary industrial employee, that those needed to be licked before additional coverages, especially in this case farm labor, domestic servants, and the self-employed as a finel step, should be taken up.

The CHAIRMAN. That is quite true. We were still in the depression in 1935, in that period, and we had just been at its depth in about 1932 and 1933, you know. The country was passing through some quite bitter experiences. I do not recall that we gave any serious consideration to the self-employed because I rather think that we were thinking of the workers, the man who was working for somebody else, who stopped working when somebody else decided rather than himself.

Dr. BROWN. Sir, I feel that a great deal of thinking has been done since that time and that——

The CHAIRMAN. Oh, yes, I know a great deal of thinking has been done here and abroad and around over the earth, but I just wonder if we are not coming into a confusion of a compulsory savings program for all people with social security. Of course, they might be said to be very closely akin, and one may partake of the nature and character of others. I was inquiring about your recollection because I know you were here with us.

Dr. BROWN. It seems to me, then, that the failure in the present system is not so much in the mechanism but in its dimensions and that we have tried to put a heavier and heavier burden upon it with a structure that is relatively, because of the depreciating dollar, getting smaller and smaller. So that meanwhile the great shift has been from the old-age insurance to the old-age assistance, because the pressure of circumstances has been such that some means of protection had to be afforded.

Summarizing very briefly, I would say, then, that the three principal means of enlargement are, first, the benefit structure should be enlarged in terms of present-day dollars and also in terms of present-day wage differentials, that is, the present-day differentials in normal wage income, which have been greatly enlarged since 1935. Then the coverage should be enlarged to cover all persons exposed to the risk of dependent old age. That would be my philosophy and approach to the self-employed. If they are exposed to the risk of dependent old age, then I would say it is an opportunity, a very desirable opportunity, for the Government to provide a contributory means of protection so that the individual can contribute to protect himself against dependent old age and against the need of depending on old-age assistance on a means-test basis.

The CHAIRMAN. I wonder how far our economic principles have departed from our political theories, at least?

Dr. BROWN. I recall in 1938, at the time of the revision, receiving from one Midwestern community a sort of petition. It was in a small community. This man wrote me and said, "All the shopkeepers and other self-employed people in my village feel we should be covered." It was quite a long list of individuals. He knew that I was interested in this problem. I think, as I will say later here, that in 1935 the great majority of the industrial workers did not realize fully the difference between insurance and assistance, but the Congress decided that the long-run policy of Government was that of insurance, even though the assistance needed to be provided in the immediate circumstance.

We face the same problem today, that a great many self-employed persons, a great many teachers, professional people, shopkeepers, do not fully realize the difference between assistance and insurance. But the Congress interpreting their desire for future protection decides that the long-run policy of Government is to have the contributory insurance available to them because it is a better public policy than to have them rely 20, 30, or 40 years later on the assistance. I feel that was a factor in the original passage of the Social Security Act. The great demand was for old-age assistance. The Townsend movement and various other movements were accumulating tremendous political pressure for some form of assistance, but Congress in its wisdom, seeing the long-run problem, said if we have assistance we must also have insurance so that there will be this contributory device to give people certain protection in old age and also to control the future costs of assistance.

The CHAIRMAN. Yes; I do not think there is any question about your premise here. That is the way we approached it in 1935. Undoubtedly the problem of old-age dependency was at the bottom of the whole of it. It is equally true, of course, that we were trying to take care of the workers, but recognize the necessity for State-aid programs and the emphasis upon State-aid programs has not yet died out in this country.

Dr. BROWN. In fact, one of my concerns is that there is bound to be a growth of assistance, because it is an easier way.

The CHAIRMAN. It is an easier way if there were any way to control it. I think most anybody would agree that a free pension system would be much easier administered.

Dr. BROWN. It would certainly cost a tremendous deal.

The CHAIRMAN. Yes; the cost will be tremendous, but that is not the point with me. The point with me is how you are going to control the cost at all. You might start out by controlling it, but how can you ultimately control it?

Dr. BROWN. I feel that the great majority of the American people realize that adequate old-age protection costs money and that they are willing to join in a 50–50 contributory scheme, and that the education of having to pay one's own way for a benefit that comes as a matter of right is our best means of education.

Senator TAFT. Anybody can go out and prove that they are not getting their money's worth, that it is really for the benefit of the low-income people under $1,200. It is all a fake to a large extent. That is my point. I am for that system; I am for the idea of a contributory system in a way, but it is so remotely related to what you have, it seems to me you are just fooling the people. You are saying we want to fool them into thinking that they are paying this themselves when, as a matter of fact, they are not.

Dr. BROWN. Senator, any system of old-age insurance, for that matter any system of contributory industrial pensions, has to start somewhere. I think the great problem that we have been going through in the last 10 or 15 years is that we had to start in the middle of the stream. In the first draft of the bill we started very thin in the middle of the stream. It was to take a long while before the benefits were to get up to any level at all. Then in 1938 the Congress decided that the benefits should be enhanced in the early years. I think even then, in order for the American people to become educated as to a contributory insurance scheme, we did not put benefits high enough. But as this thing gets going in the periods of time that countries are concerned about, in 30 or 40 years, there will be the balancing factor of contributions of the individual and those of his employer.

Senator TAFT. Not if you increase it. Here is this increase in pension which nobody has paid for at all. It will be paid for by the future worker, perfectly properly so, only it just disputes and contradicts the whole idea that this is insurance or anything like insurance. It does not have any relation practically, what you paid to what you get back.

Dr. BROWN. Let's avoid the word "insurance" except in one basic premise, and that is the use of the law of averages. That is that we are——

Senator TAFT. That is a tax system, the law of averages, not insurance.

Dr. BROWN. No, in the sense that the risks are averaged as to mortality, as to the contribution, as to diverse people working at various wages and so on. The important element where the words "social insurance" has come in is that there be contributions by reason of which, over time, benefits are paid at standard rates relative to past wages.

Senator TAFT. And then you give them three times what those rights are in many cases and in some cases you do not give them what they are worth.

Dr. BROWN. The important thing there, Senator, is that he did produce in the productive stream of the country but in those earlier times there was not available any system for contributing to an insurance scheme. As time passes from now on there will be a system available.

Senator TAFT. There are other inequalities. Take the man at $1,200 he gets 50 percent back. For the next $1,200 the fellow gets only 10 percent back. He is paying for the fellow in the lower group, is he not? It has no real relation. You get back something with no real relation to what you pay, just a kind of vague similarity.

Dr. BROWN. As far as differentials are concerned, Senator, I would certainly recommend that they be strengthened, that is, at least 15 percent above the base amount.

Senator TAFT. I am not concerned with that. I am just disputing the basic idea that this is insurance or anything like it, and the whole idea that you are paying in your youth for what you get back in your old age is complete fallacy. What you are doing is that the people who are working in 1960 are going to pay in their pay-roll taxes the old-age pensions of the people who are over 65 in 1960. That is the

fundamental characteristic of this system and will remain so no matter what we do about it. Is that not the fact? Is that not the real truth, that is a pay-as-you-go system in the long run?

Dr. BROWN. Certainly as to productive flows, it is pay-as-you-go. I think, Senator, where we get at odds is in the semantics of the word "insurance." Perhaps the word insurance should not have been used in the expression "social insurance." It got to be used. But the word "social" in "social insurance" is highly important because some of the very features that you mentioned come in when you say the words "social insurance." That is, for example, the graduation of benefits. Every social insurance scheme that I know of in foreign countries or here involves graduated benefits because it is social insurance.

Senator TAFT. Except in England where it is a flat payment.

Dr. BROWN. Yes, sir.

Senator TAFT. There is no graduation in England, is there?

Dr. BROWN. You are correct, but there are graduations in their other social insurances. For example, in unemployment insurance, young men and young women get a different benefit than fully mature men and women. Those graduations or differences in rate are based on social determinants, not precise contractual relationships. That is the point I want to make.

Senator TAFT. It seems to me there is no difference. I understand we are going to tax everybody and pay the people over 65, and we are going to pay them this pension in some relation to the work that they have done for the community during their lives. You are going to give those who have done better work presumably because they got more money, worked longer or something, a little better break than those who did not work so long. But I do not see any principle of insurance about that, social insurance or otherwise. It is just a determination of policy of what kind of old-age pension you are going to pay.

Dr. BROWN. May I suggest this, Senator, leaving out for the purpose of our discussion the word "insurance," this is a method of paying old-age benefits for which, during the period a man is able to, before retirement, he contributes. If he is a young man he contributes all his life.

Senator MILLIKIN. Toward which he contributes.

Dr. BROWN. Toward which he contributes. If he is a young man he contributes all his life. If he is a man about to retire, he contributes for only a short period.

Senator TAFT. I suggest he does not contribute at all, that his contributions are used to pay current old-age pensions and there is nothing left, and all he does is build up for himself, by reason of having worked, a more favorable treatment when he gets to be 65. There is not much relation, but some.

Dr. BROWN. I would agree entirely with you that the flows are current, and in fact one of the early arguments, you will remember, Mr. Chairman, was about the large reserve.

The CHAIRMAN. Yes. I quite clearly remember that.

Dr. BROWN. Some of us recommended strongly at the beginning one-half percent as to the original contributory rate. At one time it was to be one-half percent for 5 years, then 1 percent for 5 years, moving up very slowly so that the so-called reserve, which is a con-

tingency fund, would accumulate very slowly. But there was a tendency at that time because of the fear of what you say is not so, and which I agree is not possible, to accumulate funds against the future. Then the rate was put up to 1 percent and accumulated a very considerable contingency fund. I agree heartily with you, Senator, that it is on a pay-as-you-go basis, basically.

Senator TAFT. We come out with the same general conclusion except in one respect, and that is what interests me. That is whether since if the system is philosophically what I conceive of, then I see no reason why we should not include everybody at a minimum sum whether they have contributed anything or not. That is the tendency that we are getting toward, to a substitution of some minimum old-age insurance, so-called, in place of a needs test. Old-age assistance as far as the Federal Government is concerned, at least.

Dr. BROWN. I think it is highly important still that the economic, the financial, and the psychological, all these factors, have to come together. I think from the psychological point of view and the whole matter of incentives, which I would like to go into here, it is highly important that all contribute. I think it affects very deeply——

Senator TAFT. What about the people who cannot contribute?

Dr. BROWN. You mean who are already too old to?

Senator TAFT. Yes, either too old or the people who never worked, because they are sick, or something, are unable to work during their lives and accumulate any wage credits, or who are married to other people and are suddenly thrown on the labor market and are unable to work.

Dr. BROWN. I feel that wherever the family unit is the factor, that is, the wife dependent on the husband, the protection should arise out of the status of the wage earner, or the child in relation to the father. Where a person has never been in the labor market, I think that is another category that may well be handled by assistance. This is in a sense related to the productive effort of the head of the family, let us say. We have a tremendous problem of sustaining in a country as prosperous as ours, the incentive for productive effort.

I would like to read just a passage, Mr. Chairman——

Senator TAFT. I would always give advantage to them. I was not suggesting a flat sum. I do not think that this year we are going to be able to do this sort of thing. It seems to me the ultimate result of the system is to pay a minimum to everybody and get out of the old-age assistance altogether and let the States handle whatever supplemental assistance you may need.

Dr. BROWN. May I continue, Mr. Chairman?

The CHAIRMAN. Yes, Doctor.

Dr. BROWN. I would especially like, in respect to benefits, to emphasize the great importance of maintaining a full spread of differentials in an old-age and survivors insurance structure. A contributory social insurance system should strengthen, rather than weaken, the incentives so necessary in a free-enterprise system. In our efforts to support our least fortunate citizens it is easy to break down incentives by lessening the differential rewards for steady employment, higher earnings, and self-improvement. It is far harder to reestablish incentives once they are lost. Even America, with its great resources of materials and manpower, cannot afford to weaken the incentives of its people to produce more for a better standard of life.

I feel very strongly on this next point.

This country is on the brink of a long and steady descent into a condition of flattened differentials and comfortable averages. To make things easy and to avoid the trouble of differentiating talent, effort, or character, we are tempted to concede flat insurance benefits, flat assistance grants, flat rates of pay, flat levels of education, and a tragic averaging toward a single norm in scores of aspects of life. This is one of America's greatest dangers. It is a sympton of a declining conviction in the value of competition, incentive, free enterprise, and free opportunity to prove one's self a more productive and an economically more valuable person than one's neighbor. Our great heritage of free opportunity to excel is in no way inconsistent with our great heritage of equal dignity of every person before the law. We have begun to confuse equal political rights with equal economic attainment. If this confusion persists——

Senator MILLIKIN. On the question of equal dignity of every person before the law, the question still remains whether everyone has equal dignity under it at the time it operates. I am playing devil's advocate for the moment. I think there is much to what you have said, but we have to explore all the aspects of this thing. You insist now upon retention of the word "social." The sociological aspects of the thing are high lighted when a man gets to be 65 and you say that he has equal dignity before the law and you say he has equal dignity with people who are similarly situated in point of ability to work. If John Doe gets, let us say, $75 as a result of this benefit system, and his neighbor, Richard Roe, gets $25, is there equal dignity before the law under that kind of system?

Dr. BROWN. I would say that both have had an equal opportunity under the law to carry on an occupation, to exercise their minds and physiques the best they know how. If at the close of life one has been unable himself——

Senator MILLIKIN. Or make it unwilling.

Dr. BROWN. We will not let him suffer distress. We will have an assistance program for which there will be a needs test, where it will be determined whether he shall get so many dollars or so many dollars to support him and his wife. But here is another man who through his effort, through self-improvement, through learning to be a skilled mechanic, and there are many other ways, has been able to put himself on the average of $200 a month, that there be some means of self-protection on his part with the aid of Government so he does not have to go around and ask for needs-test relief. That is what I mean.

Senator MILLIKIN. You are talking now about two persons who are 65. Let us say that those two persons are not able to work any more. The point from the sociological standpoint is, are both those citizens dignified citizens, and to be a dignified citizen can either of the two labor under a sense of inferiority or discrimination because the other gets larger benefits? Speculating still further, when it comes to the question of need, when it comes to the question of food, it is not a civilized attitude to say that you are going to punish a citizen because he has not been frugal or because he has been wasteful or because he has been a loafer. You cannot run a government on differentiations of that kind if you are talking about sociological matters.

Dr. BROWN. Yes, but, Senator, I may say that during the depression I was on a relief committee in the town of Princeton, N. J., and

we never were punishing anyone. We were aiding those who through their own ability were unable to sustain themselves, but we did it with two great ideas. His essential dignity, that is, his being a person, was sustained. He had enough for himself and his wife to live, but as representatives of the taxpayer we could not sustain a differential for him that he would have liked and which he might have attained, if he had been able to, through his own efforts, at earlier times.

Senator MILLIKIN. As te representative of the taxpayer it all comes to the same thing because if he does not live out of—I have got to call it the insurance system so that we are using the same term even though the term is inadequate—if he does not get enough out of the insurance system, he supplements it with a humiliating addition which makes him confess that he has been a failure in the economic sense and puts him under a sense of feeling of inferiority.

Dr. BROWN. I would like to avoid that.

Senator MILLIKIN. You wind up giving them the same amount of money, both of them. One part comes out of a contributory benefit system and another part comes out of public assistance. The money is the same but to get it one citizen has to expose his failure in life and the other does not.

Dr. BROWN. The thing I want to see us avoid is the condition where the insurance benefit is not sufficiently adequate so that a man does have to apply also for assistance; rather that the man, who through continued effort, self-improvement, the learning of a skill—taking all advantages of his opportunities—is able through insurance to assure a level of life in his old age that he does not have to apply for assistance.

Senator MILLIKIN. Of course, I believe in maintaining incentives, but I am also looking at the cold fact that when he gets to be 65, if he is needy, either the need has to be satisfied out of the contribution side or it has to be satisfied out of public assistance, and the taxpayer pays the bill in either event.

Dr. BROWN. I would hope certainly, sir, that as time passes, the contributory—we will call it contributory social-security benefits, let's call it that, sir——

Senator MILLIKIN. I am not so sure that I could not demonstrate very simply that there is no security in it—because we cannot sit here today and say that 20 years from now anything we have devised has the slightest security in it.

Senator TAFT. I fully agree with your statement here about incentive, and all that I think is a very good statement, but does this system give anything like it? After all, there is an incentive to earn $1,200 a year. Everybody has that in order to live. After $1,200 a year under this system you get 15 percent of your benefits. After that you pay more than that; you pay probably 3 percent. Is there any incentive to earn more particularly? You can go out and get an insurance policy more satisfactorily than paying 3 percent and getting 15 percent back.

Dr. BROWN. I am leading here to my support of a very much sharper differential. I would like to see us put the maximum at least at $4,200, at least at $4,200, and that the ratio of increase above the base be at least 15 percent, preferably the 20 percent that Professor Slichter and the others mentioned, because I feel that we have come to a time in this country when we must respect differentials. All during the war—and

I was with the War Department where we were dealing with labor and wages—we were lifting the bottom in the structure of wages, we were very seldom raising the differentials. We were always raising from the bottom. It runs all through it.

Senator TAFT. I agree with your general principle. I am just questioning whether this system has very much relation to it. You add to that the fact that this thing is deducted from pay roll. I have a constant flow of correspondence saying people do not know they are paying income taxes because it is deducted from pay roll. They never see the money, so it does not mean anything to them anyway. It is a harmless method of taxation that they do not understand.

Dr. BROWN. I think, sir, you will find that an increasing proportion understand. The education can be constantly improved. Let me be devil's advocate, Senator, and say if we make all these things flat, do we help the incentive structure of the country?

Senator MILLIKIN. I would not say so.

Senator TAFT. No. I am just saying I do not think it does very much toward helping the incentive system.

Dr. BROWN. Maybe I am a little more desperate. Being a college professor observing the long-run situation, I may be a little more desperate about this loss in differentials because I feel it is extremely important that in every aspect of life, sound personnel administration, sound Government personnel administration, and in every other way, we relate benefit to effort. So long as a man is able, willing, in his right mind and right spirit, that the reward be related to his effort. Then if he gets in trouble, if he is in desperate condition, then you give him the needs-test relief that is necessary. If he is sick you take him to a hospital regardless of his ability. But so long as he is an able, gainful employee at any level, the benefit, of any kind, should be related to his effort. We are tending to average down all the time, to make it all even because it is so much easier. In universities they move over to a passed or failed mark, that you pass a man or fail him. Why? Because it is hard to give him a differential grade, a percent grade. It is just a part of the whole trend.

May I go on, Mr. Chairman?

Senator MILLIKIN. On Senator Taft's point there is really not sufficient knowledge that there is a deduction. When we lowered taxes a couple of years ago, that required an enormous flow of refunds to those who were on the pay rolls and had deductions. You would be absolutely dumbfounded how many of the recipients of those refunds were under the delusion that Harry was sending them that with his personal compliments out of his own pocket. I do not mean Harry Byrd; I mean President Truman.

There are one or two points in relation to this differential that I would like to add.

Senator TAFT. You are going to favor a greater differential than the Advisory Council, which only gave 50 percent on the first $75 and 15 percent after that?

Dr. BROWN. I would certainly go along on the $100 base which is in H. R. 6000. Then I would certainly favor the 15 percent addition which the Advisory Council favored, as a minimum, preferably 20 percent, because the more one studies this over the last 15 years, the more one realizes that the tremendous drive toward flattening out in-

centives through assistance grants must be offset by differential benefits under old-age insurance.

Senator TAFT. On your principle why would it not be more consistent to have 50 percent of the whole business? You have 50 percent of the $1,200 man. Why not 50 percent of the $2,400 man?

Dr. BROWN. The word "social" is still in there..

Senator TAFT. You mean it is too expensive? Is that not the reason?

Dr. BROWN. No, you can't do everything you would like to do.

I would like to add that if this confusion that I mentioned between political equality and economic equality is permitted to go on, we will drift into a sort of comfortable mediocrity and it will certainly lessen our drives and our leadership for young men to forge their way up to become a toolmaker rather than a machine operator, rather than an assembler, and so on.

It seems to me that those who demand a retreat to flat benefits have failed to see contributory social benefits, shall I call it, social insurance as an integral part of American social and economic policy. We have accepted it. It has been 15 years with us. Among those in this group are some actuaries and accountants who think of social insurance narrowly as a cash transaction carried on in a social vacuum and want to simplify bookkeeping at the expense of pouring out the baby with the bath. The incentives lost would tragically outweigh the slight savings in record keeping. They include insurance salesmen who do not want old-age insurance to interfere with their business interests, even though in the past it has been a great educational force to increase their business. To retain, untouched, their business with a few, they would let the many continue with inadequate protection. Finally, they include well-meaning supporters of the relief approach to social security who, in their zeal to spread equal charity to all, forget that the vast majority of the American wage earners prefer self-reliant and self-determined protection to State charity.

I feel very definitely there are these various approaches where one is tempted to take, say, the cash approach: let us make it simple. Another approach is to take the relief approach. Let's give everyone the same and assume that that will meet their needs. Concretely, I strongly support the recommendation that the differential factor in the old-age insurance benefit formula be at least 15 percent of average wages above the base amount, and not 10 percent. The 15 percent more adequately rewards the incentive to earn a higher average wage. Further, I strongly support a maximum in covered wages of at least $4,200, the maximum recommended by the Advisory Council. Any lower maximum will bunch far too many benefits at an arbitrary upper limit, regardless of differentials in incentive shown. Also, any lower maximum would continue a sharply reduced spread of covered wages and benefits in terms of the wages now being paid in cheaper dollars compared to those paid in 1935 when the $3,000 maximum was set. In other words, holding to $3,000 or even holding to $3,600 reduces the spread because meanwhile automatically the value of the dollar declines. To hold to that absolute maximum reduces the spread. Further, as long as universal coverage is not attained, I would favor the continuance in the benefit formula of a percentage per annum increment to reward those who have contributed longer and more steadily under old-age insurance coverage.

Senator MILLIKIN. Will you give your reasons for that last?

Dr. BROWN. Yes, sir. Because so long as coverage is not universal there will be some who have contributed the 1, the 1½ percent, and so on, they and their employers. As a matter of equity, you might say, those who have contributed longer or have contributed for a full life over against part of their life should receive an advantage. That was put in there in 1938.

The argument against it was basically an argument that, if all persons were covered, then it was merely a postponement of an adequate scale of benefits. Professor Slichter mentioned that this morning. If there is not universal coverage, if I were to assume that universal coverage was to be passed by the present Congress, I would withdraw——

Senator TAFT. What is universal coverage in your opinion? Do you mean everybody who has contributed? You do not include people who have not contributed?

Dr. BROWN. Only people who have contributed. It would be also the self-employed and a considerable proportion of Federal and State government personnel, for example, the in-and-out group especially. It is when a group has contributed and another not that there should be some factor of additional benefit to those who have contributed steadily throughout a considerable part of their lives.

Senator MILLIKIN. Take an in-and-out fellow. Take a fellow who has worked continuously throughout his life, but the necessities that confronted him required him to be on an in-and-out basis. He has contributed as much economically as the fellow who has been in covered employment throughout his life.

Dr. BROWN. But he hasn't had a withdrawal from his wages.

Senator MILLIKIN. He has not contributed as much money to the insurance system, but he has contributed as much to our productive system.

Dr. BROWN. I agree, but even that differential, sir, I think warrants a per-annum increment on his benefit.

Senator MILLIKIN. I understand your point, but I am just wondering about the social equity of taking the fellow who has been equally diligent, who under force of circumstances had to take work where he could find it and has kept working and has made an equal contribution to the productivity of the Nation but not to the insurance system. How much should we penalize him for that lack of contribution?

Dr. BROWN. Sir, I am in exactly that position as a college professor. I do feel that a man who has contributed since 1937 should have a bit of an advantage over me, say, if I were covered next year, because he has withdrawn from his pay year by year and month by month a certain small amount which warrants some difference, not a great difference, but this added increment is a matter of equity. I think the great majority of American wage earners would accept that. Shall I proceed?

The CHAIRMAN. Yes.

Senator MILLIKIN. At some point in your presentation, you may have it in here, Dean, I wish you would give us an answer why we should not go right into a pay-as-you-go business without any flubdub or delay, pay as you go right now.

Senator TAFT. I would observe the fact that I would accept the principle of graded payments, of payments in relation to wage credits.

Senator MILLIKIN. I do not care what conditions you put on it; all I am talking about is getting away from some of the phony features of this business and getting on a pay-as-you-go basis, meet the bill as we go along, and stop making promises that we have no way whatever to assure in the future.

Dr. BROWN. I would like to speak of coverage, and then I will get to contributions.

Senator MILLIKIN. Whenever it fits in.

Dr. BROWN. With respect to coverage, I am convinced after more than 15 years of study that it should be the universal privilege of American citizenship to participate in an automatic means of self-protection against dependency in old age. Theorists talk confidently about the sufficiency of the many private means of securing protection against dependency in one's declining years. But any of us who have served in responsible positions during the depression of the 1930's know that the best-laid plans of voluntary savings, home ownership, farm ownership, business investment, or private employer coverage can go sour in times of widespread business depression. I was on President Hoover's emergency committee for employment in 1930–31 and we found vast numbers of cases of farmers, businessmen, and many others who normally would have had sufficient savings to protect themselves who lost out in the general decline of values throughout the system. Even more likely is the heavy drain of illness of the wage earner and of members of his family upon the savings set aside for old age. The great majority of Americans do not want hand-outs in their old age. Most of all, they do not want to look forward to State charity when by small and regular contributions they can build up self-reliant protection.

In 1935 the Congress of the United States correctly, I believe, interpreted a widespread demand for old-age protection to be a demand for old-age insurance as the long-run policy of this country. That demand remains fundamental to the thinking of our people today regardless of current prosperity. It is in the mind of the farm worker, the domestic employee, the school teacher, the shopkeeper, and the filling-station operator. They do not fully understand. You can talk to them, as I have talked to any number of them just to get their state of mind on this, and they do not fully understand the techniques of old-age insurance as compared to assistance or relief, but I am convinced that they want the self-reliant, certain protection which contributory insurance provides. I sincerely hope that this Congress will interpret the fundamental desire of the now-uncovered groups as accurately and with the same foresight with which the Congress in 1935 interpreted the desires of the industrial employees.

Senator MILLIKIN. Let me break that down a little bit and carry it to the reductio ad absurdum, possibly. The worker under the contributory system is at best paying for only half of what he gets. We start out on the premise that everybody wants to be self-reliant, everyone wants to pay for what he gets. It gives him a sense of pride to be able to do that, and it does. In time under the Council's theory the Government itself will be contributing to maintain that insurance. By virtue of the nature of the system, by virtue of the fact that the employer contributes half and ultimately the Government will contribute probably a third, aren't you really arguing that a 33⅓-percent contribution will give a feeling of full respect?

Dr. BROWN. It will give a far greater feeling of self-respect. I do not think the point is that the man feels he is doing it all, no more than any of us feel that we are doing all of a lot of things we do. We are doing it in cooperation with others.

Senator MILLIKIN. You feel he can accept two-thirds with self respect, whereas he could not accept 100 percent with self-respect?

Dr. BROWN. No: I say the reverse, that for the 100 percent he has done nothing, he has gone bankrupt, he has depended upon a paternalistic state. If he has done a third, maybe a tenth, if he has done what he can and what the law calls for, and increasingly as he earns more he provides more and as the system matures and this problem that you worry about where the balance comes so that it is permissible without accumulating too much funds to charge 2 percent and $2\frac{1}{2}$ or 3, then he will certainly feel that he is contributing. I think it would be wonderful if an old-age insurance system could have started on a 3 percent contributory basis, pay as you go.

Senator MILLIKIN. I agree with that.

Dr. BROWN. It would have been far more wholesome. But we started in the middle of the stream. It was like a vast funnel. We had everybody paying and only one year group, age 65, taking benefits. Then 65 and 66, a very small outstream. The great question was, how low could you put the contribution rate and have it administratively reasonable? One-tenth of a percent? It was recommended at one time one-half percent, and that was considered too low. But the minute you have this vast stream contributing and only a small stream going out, then comes this problem of some kind of contingency fund, or the other one, that a man doesn't feel he is contributing as much as he should.

Senator MILLIKIN. Quite seriously, I agree that any contribution probably gives a better feeling in receiving the result than no contribution at all, of course. What I was really aiming at was, while we are putting out honest information, let's make it clear that the beneficiary is not paying the full cost of this.

Dr. BROWN. I quite agree.

Senator MILLIKIN. Let us make clear what discriminations are involved in that.

Dr. BROWN. Yes, sir.

Senator TAFT. Would it not be very difficult and does not the problem arise in a way as far as escaping from private care for this proposition, that it would be very difficult for the average workman to pay enough to buy an annuity at age 65? Would not such an annuity be so expensive that it is almost impossible to expect him to do it? Even then, if dollars depreciate, when he gets it, he gets very much less than he thought he was going to get. It is an almost impossible thing. The justification for Government action, I take it, is that it is almost an impossible thing for private people to do it anyway, even if you are going to dismiss those who carelessly do not do it. It seems to me you can set off old-age pensions from other fields of so-called social insurance because of the tremendous expense of the proposition.

Dr. BROWN. And the counterpressures, I might say, not only illness but the raising of a family. We have come to expect our people not only to send all children through high school but increasingly through

college, and even if it is a State-supported college there are many incidental expenses. By the time the last child is through college, the time intervening between then and retirement is so short that a great many people cannot save sufficiently for old age if they are on an ordinary income. So this means planning longer ahead.

I might say the Advisory Council on Social Security of 1937 38 strongly supported the coverage of nonprofit employees, farm and domestic employees, Government employees, and the self-employed under the act. Any administrative obstacles to such coverage have long since been resolved. As Chairman of your Council 12 years ago, I feel that I should repeat the recommendations of that Council, now reaffirmed after further study by another Advisory Council.

I would like to go into contributions, Mr. Chairman, if that is agreeable.

The CHAIRMAN. Yes, sir. I wanted to ask you one further question about the self-employed provision of H. R. 6000. Do you approve of that?

Dr. BROWN. I do not approve, sir, the limited coverage. I feel, in attacking the problem, we can move in just as easily on the rest of the group; and I feel, sir, that the farm group over this period of time have come to a stage where, if ever, they will accept the old-age insurance type of protection. I know that it will become increasingly acceptable and feel that now is the time to bring them in, sir.

The CHAIRMAN. I understand you want broader coverage, but just take a real look at the self-employed fellow who goes in. He does not get in under H. R. 6000 unless his earnings less his cost of doing business amounts to $400. You have let out the very group that are most in need of any help, have you not?

Dr. BROWN. As a necessary lower limit it may cut out a considerable number, but I do feel, if the net is that low, the chances are that he will need assistance as he approaches age 65.

The CHAIRMAN. What are you going to do for him, put him under State-aid system?

Dr. BROWN. I think, sir, if that net income is that low, it is just like a person on wages——

The CHAIRMAN. There are plenty of business people who do not make $400 over and above business costs. They think they are in business for themselves, but of course they are doing a very small business. They are the very ones in the community who need help most.

Dr. BROWN. I am not well enough informed to say exactly $400. I do feel their needs to be a separating point.

The CHAIRMAN. H. R. 6000 provides $400 net, I believe, and by net is meant the gross less the business expense.

Dr. BROWN. I believe the Advisory Council recommended a lower figure. As I recall, it was $200 net.

The CHAIRMAN. I am worried about that myself. Every time I look at the self-employed group, I see some more bugs in it.

Senator MILLIKIN. After you have the full coverage which you recommend, what categories of citizens would remain who are uncovered?

Dr. BROWN. It would be largely in the field of persons under other sovereign or semisovereign bodies; that is, if States did not see fit

under comity through contractual arrangements with the Federal Government to bring in their people. The Advisory Council felt that the old-age insurance scheme should be an understructure for even our civil-service pensions and also the railroad retirement program because a good many people move in and out of Federal service or in and out of railroad service. It should be the universal basic structure for protection in old age. Then various differential schemes, the private-employer schemes, the teacher schemes, the Government schemes for school teachers, policemen, firemen, and so on, could be built upon it. So a man who tried out to be a policeman for a year or two or tried out to be a school teacher or tried out in Government service could always fall back on the basic contributory scheme so he would not be left in the lurch in his old age.

Senator MILLIKIN. The testimony as to the teachers, policemen, and firemen was that the in-and-out rate, especially as to policemen and firemen, is very, very low, which brings me to the question, Would you compel admittance under this plan of those pension systems which teachers, policemen, and firemen have, with which they are satisfied?

Dr. BROWN. I feel it is important that they be educated to understand their advantages, and remove the great suspicion that in some way by loss of the existing plan they would only get the social security. I find that teachers' groups are continually worried about any disturbance of the existing plan. If the existing plan is to be made supplemental to the old-age insurance plan, they say, "Yes, but the legislature will reopen the plan." We have fought hard to get this particular plan. It is a good liberal plan, or at least more liberal than it would be.

The CHAIRMAN. Would not the legislature be inclined to do precisely that, Doctor, when tax dollars get tight?

Dr. BROWN. The basic hope is that they would get at least as good a benefit. Under the old-age insurance they will get certain additional advantages like survivorship benefits, which the existing plans do not always provide.

The CHAIRMAN. Then you run into this other thing. Many of the plans for teachers, policemen, firemen, and so forth, are pretty costly, but they pay big benefits.

Dr. BROWN. I know they do.

The CHAIRMAN. Then you have the question of whether you can superimpose upon that group an additional tax, though small.

Dr. BROWN. Sir, I think the basic arrangement would be just as it was with private plans when the original act was passed. That is, as if you took a pile of bricks say four or five high. The social-security structure replaces, say, the lowest brick. The structure remains the same height, but that part of the private element is taken out and the social-security protection is put in.

Senator BYRD. It would be credited in social security.

Dr. BROWN. That is right. That is our plan. For example, at Princeton University, I am on the pension board, and we have a plan that should the social-security legislation cover our teachers, if we could not afford to add it, we would take the 2 percent, whatever it came to, out of our present contribution and allow that to go to Government and have the teacher get a combination of the social-security benefit and our own teachers' insurance and annuity benefit.

Senator MILLIKIN. These witnesses on these three types of plans

we are now discussing—teachers, policemen, and firemen—made a pretty good case about what they are getting and what they are putting in. We are talking about teachers. If the teachers cannot understand this thing, who in the devil can understand it.

Dr. BROWN. Teachers teach certain subjects, sir.

Senator MILLIKIN. If they come in here and say, as they have said preponderantly, we do not want any part of this, we just want our own plan to go on, should we adopt techniques to force them in?

Dr. BROWN. I don't think, sir, that you can. I think what you can do is provide the opportunity for the State as a whole or such segments of State personnel, so long as the group comes in, to come in as a group. That is, for example, if the State of West Virginia decides that all its general legislative employees and executive branch employees should be covered, that might be the element, or if the city of Baltimore decides, under an arrangement with the State of Maryland, that they would like to come under, certain arrangements of that sort would be made.

I know there is a very strong feeling on the part of policemen and firemen, next to that, of course, on the part of teachers. One of the factors, of course, that time will tell is that the old-age insurance benefits, if improved, will become attractive not only in themselves as a part of the protection but also in the survivorship protection which is unusually advantageous.

Senator MILLIKIN. If these teacher pension funds, for example, have an election and two-thirds of the folks present at a meeting decide they want to come under, we are proposing that they may come under. Suppose 99 percent of them favor it, but suppose one teacher says, "No, sir; I have a vested right in this system for which I paid." Should we allow the 99 to overrule the 1?

Dr. BROWN. I think, sir, that is of course in the realm of political philosophy. At Princeton, we have compulsion. If they wish to work for us, they come under our teachers' insurance and annuity plan. I think that, since I have been dean, there have been but two men who have come to see me about their individual rights. My argument is that this is a team job. We are helping each other. Do you not want to come along? In 15 minutes they came along.

Senator MILLIKIN. You have a pretty big club there, Dean.

Dr. BROWN. I have, perhaps——

Senator MILLIKIN. As was said in the Senate onetime, you point your rapier with a rose, but nevertheless it is a rapier.

Dr. BROWN. I think they wish to cooperate on a team job, though, Senator.

Senator TAFT. The policemen and firemen are particularly interested in the features that permit them to retire at an earlier age because 65 is too old for firemen. They feel they would lose that benefit. There would be 10 years where they would be left flat. The only thing I see in the report is that when coverage is extended to State and local employees, or members of staff retirement systems, those systems can be adjusted to supplemental basic old-age and survisors insurance benefits. But you would have to tear them to pieces pretty much and rewrite the whole business and have a supplemental fee. There could not just be a credit, because it is much more complicated than that.

Dr. BROWN. You could run two entirely independent schemes if there were sufficient funds for both. In other words, if the rate of contribution under the Federal scheme remained at, say, 1 percent, there might be a good many schemes where benefits are not quite high enough and they might decide: "We will pay the 1 percent and we will pay all that we are paying now." But as soon as the rates got a bit higher, 1½ or 2 or 2½, as you say, Senator, the older scheme would probably have to be revised so that the total contribution over against the total benefit would fit that situation.

Senator TAFT. It might be higher or it might be lower. You could not tell in advance.

Dr. BROWN. According to what that particular organization or management felt, it could afford over against what its workers might ask for.

Senator MILLIKIN. That is precisely what they are afraid of, the reopening of those contracts that they have now.

Dr. BROWN. Yes.

Senator TAFT. I do not know; maybe education is desirable, but I would think there is nothing as universal as the desire on the part of every teacher, every farmer, and everyone to stay out as far as my concern in the State of Ohio. I do not think there is any dissent. They may not understand it, but they do not want to go in, I am sure.

Dr. BROWN. May I say one thing there, Senator, that the present benefit structure has not been what you would call a tremendously appealing one, and if that benefit structure were raised I think you would find a shifting in the balance. In the early stages, the nonprofit people, as you know, strongly opposed it, and had a good many of us in consultation, in various meetings and so on. Now, you find the nonprofit people in very large measure wanting to come in even with the low benefits.

Senator TAFT. That may be so of the next provision, but in this provision I do not think we can educate them fast enough.

Dr. BROWN. Would you care to have me discuss contributions?

The CHAIRMAN. Yes.

Dr. BROWN. In respect to contributions, I would urge that, following an immediate increase in rates to support and justify a sharp improvement in benefits, future rates be established in the light of developing experience. An old-age insurance system needs but a small contingency reserve to compensate for short-run variations in collections and disbursements. This reserve should not be a major element in the financing of the system nor in the fiscal policy of Government. Its investment in Government bonds involves no exciting mystery. Since a small faction of the collections in the old-age insurance system may accrue before the funds are needed for benefits, the General Treasury by borrowing the funds can postpone for a time an equivalent amount of general tax collections. When the old-age insurance system requires the return of the loan, the General Treasury may secure the funds through the general tax collections equivalent to those previously postponed. The sole difference is that the General Treasury pays interest meanwhile to the old-age insurance trust fund rather than to outside lenders.

Senator MILLIKIN. As was developed this morning, you agree that the taxpayer also pays for the interest.

Dr. BROWN. Yes, sir. I might say, Senator Millikin, from the very first I have opposed large reserves; and, as Professor Slichter said this morning, the so-called reserve is merely a sort of till money, a til-money adjustment factor. It is awfully big till money, I admit; but when you are dealing with this funnel condition of a great many people paying in, you come to a point where you cannot reduce the tax rate below a reasonably understandable fraction of a percent.

Senator MILLIKIN. It probably should more properly be called tap the till money.

Dr. BROWN. So there is a mechanism problem within the old-age insurance that you want to have contributions from a large number at the time that you are paying out relatively few in benefits. So there is that adjustment factor.

There is another adjustment factor that was not discussed this morning, and that is between times of good business and times of depression. In times of good business the contributions are likely to be high relative to benefits because many of your people carry on through age 66, 67, 68, and so on. Then along comes a sharp recession and a depression. Suddenly your benefit load rises and your contribution load declines, both because more men are out of work, the wage structure may have declined, and more people have quit early. So, in a sense, this is a contingency reserve to allow for slack times.

Senator MILLIKIN. Do we not already have a law permitting appropriation of Federal funds to cover that situation? Even if we did not have that law, that is exactly what you would have to do, and in that kind of situation you probably would be on a deficit-financing basis anyhow. So, the way you would get your money would be to sell bonds.

Dr. BROWN. I agree that that is entirely feasible, Senator, but there is one factor that led some of us to say we would rather see the variation on the plus side rather than in deficit financing, because here again you are dealing with psychology, and a great majority of the people, not knowing about Federal finance, will say, well, they had to get a special appropriation or they had to go to Congress and get a readjustment in contribution rates. We felt—those of us who were working with it—that it would be safer to have the play above zero rather than across the zero line. In fact, in 1935 it was far more of a worry because the Federal debt was much smaller. We can worry now about size of debt, but the relative part of the debt absorbed by the old-age insurance reserve is so much smaller than it was in 1935 that from that point of view it is to me of less concern.

I would like to repeat on the double taxation: The hobgoblin of double taxation has been raised by some who have failed to note that in the transaction just outlined there are two complete cycles of collection and disbursement. The insurance contributions are collected and, after being loaned to the Treasury, are disbursed as bond proceeds by the Treasury for value received by the Government. The question of whether value is received is itself a fiscal and political question. I am not saying that value was received, but I am saying the basic assumption is that there was value received. Later, general taxes are collected and, through loan repayment, the funds are disbursed as old-age benefits. These are the same two complete cycles which occur whenever a bank puts its depositors' money into Govern-

ment securities and later repays the depositor from the proceeds of such securities.

Senator MILLIKIN. I suggest there are a lot of differences there. As we widen this coverage under your recommendation it will accrue to everybody except certain governmental institution employees. The beneficiary under the system is the taxpayer. The beneficiary under the system has already contributed what is supposed to be his part to this system. He has not contributed on the theory that he is putting money in for general expenditure purposes. He has contributed it on the theory that he has contributed his part to an insurance system. When we take his money and spend it for general purposes—they may be excellent purposes—let us assume they are so good that we would cover them with bonds anyhow. Assume that if you wish. That is not the reason for making his contribution. He is making his contribution to protect his insurance system in which he has a stake, toward which he has contributed. In a few years, as soon as we get this thing to the point of universal coverage, the taxpayer, who is also a contributor, has to pay again. He has paid twice thinking that one payment completed the job, whereas it takes two payments, the last of which, it has been suggested, might have to be paid anyhow as a taxpayer if the Government had not gotten the money from this source. To me that is a fallacious argument so far as the insurance system is concerned, because you are collecting and disbursing money that is not necessarily related to your insurance system.

Dr. BROWN. Sir, I would put it this way: That basically the insurance should be financed on a pay-as-you-go basis. Let us say that, of the income in a relatively mature situation, of the total collections, 5 percent happens to be, in a time of good business, more than was needed to pay current benefits; 95 percent would be used to pay current benefits, but the 5 percent for mechanical reasons is set aside. The only place you can put it is in Government securities.

Senator MILLIKIN. I have no objection to a small regulating till, a small regulating till.

Dr. BROWN. In fact, sir, you and I are in agreement on that.

I would like to speak briefly on permanent- and total-disability insurance.

Finally, I would like to urge as strongly as I can the enactment of a program of contributory total- and permanent-disability insurance. This is a logical and greatly needed adjunct to old-age and survivors insurance. Many wage earners are not lucky enough to remain in good health until age 65. Certainly disability tends to increase toward 65. A great majority of the cases that cannot be rehabilitated do fall in the later years. At present, if they become disabled they not only risk early dependency but the loss of their old-age insurance benefits as well.

Your advisory council in 1938 recommended as follows:

The provision of benefits to an insured person who becomes permanently and totally disabled and to his dependents is socially desirable. On this point the council is in unanimous agreement.

That was employer, labor, and public.

There is a difference of opinion, however, as to the timing of the introduction of these benefits. Some members of the council favor the immediate inauguration of such benefits. Other members believe that, on account of additional costs and administrative difficulties, the problem should receive further study.

The program has received a vast deal of further study. Such a program has operated efficiently for decades in other leading industrial nations. Our social-insurance administration is as efficient as any in the world.

Senator MILLIKIN. As you know, there has been a lot of controversy about this. There is much approval of the rigorous objective tests that you propose in the Advisory Council's report, but as a political matter it also has been suggested that, no matter with what rigor you may start your system, politically you will be constantly relaxing that vigor. We have had a lot of experience with that. What do you think about that?

Dr. BROWN. I think we should relax to some degree, Senator. That is, these restrictions placed in the recommendations of the Advisory Council are extremely severe. As time passes we should relax on the eligibility qualifications. In terms of the requirements as to the physical or mental state of the individual, we must rely of course on the medical diagnosis that there is a medically demonstrable disability. I think there is bound to be reviews, and perhaps in the course of a year, or 2 or 3, many of the persons early determined as totally disabled would be given revised status as not being totally disabled.

Senator TAFT. The New York union, the Ladies Garment Workers' Union, testified to the fact that there was a practical distinction. It developed that their system did not apply until a man or woman was 60 years old. It seems to me that a possible compromise, if there is debate on this thing, might be simply to say we will make this retirement at age 65 or down to 60 or 55 if the permanent and total disability is one which then occurs and will continue indefinitely to age 65, where it is an appendency to old age, somebody getting old sooner. As a matter of fact, as I understand it, the great bulk of the permanent-disability cases strictly fall within that last 5 or 10 years before 65.

Dr. BROWN. They do, sir.

Senator TAFT. Is that not a little different thing? Say a fellow is injured. Say a man of 25 is in an automobile accident. He is in the same group as old age. It seems to me, it is an entirely different problem and something for which an entirely different provision of insurance ought to be undertaken.

Dr. BROWN. For some time I did favor the 55-year rule, but the convincing argument away from it is the tremendous need of the head of a family with wife and three or four children who is injured in an accident at age 28. It is the intensity of the need in those early cases. The volume of protection afforded under this program will come at age 50, 55, and 60, and the determinations will be much easier then, but there are still those early cases that do accumulate. A man is in good standing in his old-age and survivors insurance, and suddenly he is struck down.

Senator TAFT. We have now workmen's compensation laws that will fairly well take care of that. In fact, there is a man in Cincinnati now on whom the State has spent $99,000 up to this time. Of course, there are exceptional cases, and it must be within the capacity of the State fund. That was industrial accident, of course. It would not apply to an automobile accident.

Dr. BROWN. I think our hope in the Advisory Council was tha while these cases may not be so numerous they still cost so much tha even State workmen's compensation has not covered them adequatel in many cases, and certainly there is very seldom any privat protection.

Senator TAFT. It is not within the capacity of the States? Afte all, our only excuse for coming in here is the fact that the States prob ably cannot handle old-age insurance. Could they not handle tha type of case, and is it not their function to engage in rehabilitatio and to judge whether a man can be rehabilitated or not? Are they not far better able to handle that whole thing on a local basis tha the Federal Government to step in and try to make a Federal func out of it? That is more my doubt, not the wisdom of the system, bu whether it is not something that can be left entirely to the States

Dr. BROWN. Sir, on the whole economic side, the averaging of risk and the adequacy of benefits and so on, I think the Government can d that more effectively. I think, when it comes to the individual discre tion of servicing the rehabilitation case, then it can be done locally But I think you have the advantage of both here. That is, the Fed eral Government does the part it can do best, which is the averaging of the cases throughout the country. There is an already established mechanism of administration. The rehabilitation is itself an indi vidual treatment proposition. That does need to be done in the locality.

Senator TAFT. Are the benefits again to be based on wages or not?

Dr. BROWN. Yes, sir. It would be a part of the same basic struc ture of average wages and so on.

Senator TAFT. Is that a very good basis for people who are injured at age 25?

Dr. BROWN. It is the best you have.

Senator TAFT. Some who may be well started and others not started at all. It seems to me a much less defensible basis for giving bene fits that it is when a man has worked his whole life to age 60 or 65.

Dr. BROWN. You see in the Advisory Council recommendation, probably thinking of that, there is virtually a 10-year requirement, you see, 40 quarters. So, you would have at least the establishment of gainful employment at a given rate of wages for at least 10 years.

Senator TAFT. If he has worked 5 years, you leave him to the State. Why do you not leave them all to the State? It is not a tremendous field anymore.

Dr. BROWN. I think we looked upon it as an entering program.

Senator TAFT. That is what I object to, by the way. That is ex actly my objection to it. I think the extension of this social insurance, as in England, to every contingency of life is the greatest fear I have of it. It is the entering-wedge feature of this that concerns me most. I cannot quite see, therefore, why it is not something we can say, this is for the State to handle.

Dr. BROWN. Senator, could I counter with my greatest fear? That is that there will be an assistance arrangement for every possibility, that there will be old-age assistance and disability assistance, etc.

Senator TAFT. The question here is whether you take the social insurance system and apply it to something different. I can see, apply ing it down to 60 or 65, where it is really part of just a man's growing

old faster, almost, you might say, but when you begin to get into all sorts of other contingencies that might happen, automobile accidents, falling down in bathtubs, every kind of industrial accident, it seems to me you have got into an entirely new field of operation from which you might just as well go on and pay for every time you have a baby, the way they do in England, and pay a worker every time he is sick or has a temporary disability. I see no limit to the kind of things you can pay for if you go beyond it.

On old-age retirement, I think the State cannot afford to do it; I think the individuals cannot afford to do it, and I think we must do it; but I hesitate to go into some other field that could be handled in some other way.

Dr. BROWN. If I were sure, sir, that there were other ways. I know of one large industrial company that was talking to me about a man who had gone deaf. He was a buffer and a skilled man. They tried every way to use him in this plant and finally had to retire him at the expense of $27,000 for a deferred annuity. Even this company, a large company, found that a very sudden and heavy cost. If that were averaged over a large number, that cost could be handled. There aren't many people going deaf at a specific date so that they cannot be used. It is this question of other ways that worries me.

Senator TAFT. But you created the problem. You say we have no concern for a man who is permanently disabled in an automobile accident until he has worked for 10 years.

Dr. BROWN. I would like to make it 5.

Senator TAFT. If he has worked less than that, you are going to throw him on the street. I say it is just as important to provide for him as for the fellow who is injured after 10 years of work. I do not see the difference. If there is a system to take care of them, let us take care of the 10-year man under the same system. Let us encourage the development of State action on the subject.

Dr. BROWN. Quite frankly, if we thought the Ways and Means Committee and the Senate Finance Committee would go along, I think the advisory council would have recommended a shorter limitation. But we felt that probaly the committees of Congress and Congress would like to experiment— —

Senator TAFT. What about before he goes to work? There are plenty of those permanently disabled. You are not solving the problem at all by this thing. You are just getting us into another field, a small portion of which we cover. We will not cover more than a third, I would think, under this 10-year limitation of all the permanent-disability cases. Why get us in at all? Why not have them all handled the same way?

Dr. BROWN. What I am afraid of is that you may not get into it because to me it is an extremely important field, and I am sure it is a field where there are great resistances. At the close of my testimony here, I don't like to say unkind things but I feel called upon to mention the fact that the hard core of the opposition in this field is the insurance carriers. To me they have assumed a role—maybe as a college professor I should not attempt to be one of the neutral group, for maybe we are all affected—but it seems to me they have assumed the role of impartial advisors to save the Government from the foolish mistakes the carriers have made in competitive underwriting at an early stage when it was a highly competitive field of business. As

they were probably bound to do, they made many mistakes. The benefit proposal is not in the field of competitive underwriting. It is a type of protection afforded by the Government, buttressed on either side by unemployment insurance, by old-age insurance. It is a different thing. It seems to me that if the Congress of the United States takes the advice of the insurance companies we will have no permanent and total disability insurance in 1950 or in 1970 or in the year 2000. Meanwhile, the contributory old-age and survivors insurance program would be whittled down further and further until, as a minimum flat-rate benefit, it would not interfere in the slightest with such business as the carriers care to canvass.

Senator TAFT. Do you not think it inevitable if you put in this 10-year rate, again, it is not going to be insurance. Just as we probably will spend old-age insurance to cover everybody before we get through, so you will just extend the disability insurance to cover everybody, too. So, is not that the position you are going to get into? This idea that it is insurance, is it not just as much a fake in the case of disability as it is in the case of old age?

Dr. BROWN. Of course, fundamentally, sir, I do not agree that it is a fake at all.

Senator TAFT. You talked about spreading the risk again. You got back to an insurance justification for this. That is the only reason I bring it up again, because I do not think it is insurance.

Dr. BROWN. Would you agree, Senator, that there is an averaging of risk when you take the number of cases falling in the whole country and that, therefore, it can be done on a more manageable basis and on the basis of estimated cost?

Senator TAFT. I do not think there is any more averaging of risk in 150,000,000 people than there is in 8,000,000 people in Ohio: no.

Dr. BROWN. You have different occupations.

Senator TAFT. We have just as good risks in 8,000,000. That is a far larger proportion than any insurance company averages. The smallest State is around 300,000. If they can average 300,000 risks, they will be satisfied with that average. I do not think that average business justifies doing a Federal job instead of a State job. No: I do not think so. The more I think of it, the less I think it does.

Dr. BROWN. I feel, sir, as a citizen of New Jersey, that we should pay our fair share of the average for the coal industry, the steel industry, and some of the industries for which we use the product.

Senator TAFT. You pay in the price of coal, don't worry. You pay it in the price of coal today.

Dr. BROWN. Senator, I would like to see it attached to the price of coal if it is a necessary cost to protect the individual adequately throughout life.

Senator TAFT. I am only arguing how it should be done. It is not a question of whether it should be done or should not be done. It is a question of whether the Federal Government is the place to do it. That is the problem.

Senator MILLIKIN. Dean Brown, the thing that Senator Taft is talking about is graphically illustrated by aid to crippled children. Do the advocates of that kind of Federal aid come in here and present some overwhelming problem that cannot be met by the State? No: they come in here for $14,000,000 to cover the whole United States. Is it conceivable that in our own towns and in our own States we can-

not handle a $14,000,000 appropriation to aid crippled children? Yet, just through the tendencies that Senator Taft is talking about, we have pushed into that, and I voted for it because if people in the States will not take care of it I shall vote to use Federal money. But it is a crying outrage; it is an affront to the self-respecting people at the home level.

Dr. BROWN. Sir, I think the important factor in this is that the disability insurance is so closely related to old-age insurance. In other words, when does a man retire?

Senator MILLIKIN. The testimony indicates that it is not. Your testimony indicates it is something that can happen very young.

Dr. BROWN. Yes; but let us take a great many of the cases, from 55 on, the question of whether a man retires at 55, 65, or 75 is itself in considerable measure physiological. It is whether the rheumatism caught up with him or whether his eyesight did not fail or whether he had certain degenerative factors that aged him. If it is true, as Professor Slichter very ably presented this morning, that we should not think of 65 as absolute as to the older side, that many men can go on to 70 or 75, it is certainly true that many can't go even to 65. The employer can see that. Therefore, these two are very closely related.

Senator MILLIKIN. I think it is very true, as Dr. Slichter said, if you are permanently and totally disabled, you may be worse than dead, and you can be in that condition at age 5 or 15 or 30 or any other age. But that does not meet Senator Taft's suggestion of who shall assume the responsibility.

Dr. BROWN. In closing, in regard to the attitude of the carriers, it seems to me that it is high time that the positive needs of the workers, the employers, and the public of this country be placed above the negative convenience of a small but clever interest group.

I feel that the insurance carriers of this country have done a remarkable job in many fields, but I do not think that there is sufficient evidence presented by them why the Government of the United States could not proceed and proceed effectively in the field of permanent and total disability insurance.

It has been an honor and pleasure to serve on two occasions on advisory councils appointed by your committee. I know that you have wanted my frank comments as an independent student of social insurance. I am deeply grateful for this opportunity.

Senator TAFT. Dean Brown, what is your position on the temporary disability? Do you approve?

Dr. BROWN. I have not gone into it sufficiently, sir, to feel that I am ready to make specific recommendations as to temporary disability by Federal action. I have strongly supported cash sickness benefits in the State of New Jersey, which we now have. That is related to the unemployment insurance. I think we should proceed to study constantly the whole question of meeting medical costs and meeting the loss of wages in time of illness, but personally I am not in a position now to make specific recommendations.

Senator TAFT. What did the Advisory Council feel about it?

Dr. BROWN. We did not go into that.

Senator TAFT. It did not recommend that. There were two dissents from the permanent disability?

Dr. BROWN. Yes; as I recall. We had such unanimity of opinion, it is hard for me to remember when we had dissents, sir.

Senator MILLIKIN. I would like to express my own appreciation for the fine work that you did on the Council, Dean Brown.

Dr. BROWN. Thank you, sir.

The CHAIRMAN. Thank you very much for coming down today, Dean Brown.

Dr. BROWN. I appreciate the opportunity, sir.

The CHAIRMAN. We are very glad to have heard you.

(The prepared statement of Dr. Brown follows:)

STATEMENT BY J. DOUGLAS BROWN, PRINCETON UNIVERSITY

I am J. Douglas Brown, dean of the faculty, director of the industrial relations section, and professor of economics at Princeton University. My connection with the Federal program of old age and survivors insurance began as a member of the staff of the the Committee on Economic Security, 1934-35, when I assisted in the development of the program. Since then, in addition to continued university study of the subject, I served in 1937-38 as Chairman of the Advisory Council on Social Security which recommended changes in the act; in 1939 as special adviser on social security to the Secretary of the Treasury; and more recently, in 1947-48, as a public member of the Advisory Council on Social Security appointed by your committee. As an economist specializing in industrial relations, I have been particularly concerned in the operation of the program in the preservation and enhancement of the dignity and effectiveness of the human resources of our country.

The basic purpose of contributory old-age insurance has always been to provide a self-reliant means of preventing old-age dependency to an ever-increasing proportion of our people and to control and reduce the heavy costs of old-age assistance granted on a needs-test basis. It was hoped in 1935 that most certainly by 1950 the larger share of the old age protection of our people would be carried by the insurance system.

The failure of the old-age insurance system to fulfill the expectations of its early supporters has not been due to a failure in the essential mechanism of the program. As revised in 1939, this has proved effective and workable. The failure has been one arising from the limited dimensions of the system in terms of the job to be done. We have tried to carry a constantly heavier load on a smaller and smaller vehicle. The critical task today is to enlarge the vehicle before more millions of our citizens are forced to rely on needs-test assistance in their old age.

The old-age insurance system needs enlargement in three major dimensions:

(1) The benefit structure should be enlarged in terms of present-day dollars and in relation to present-day differentials in normal wage income.

(2) The coverage of the system should be enlarged to cover all persons exposed to the risk of dependent old age for which the Federal Government can legislate contributory protection.

(3) The contributions to the system should be increased in rate to provide an adequate justification and source for an enhanced benefit structure.

That such revisions should be necessary in the face of the dynamic changes in our country since 1939 requires little argument. Our Advisory Council on Social Security prepared a carefully reasoned justification of its conclusions on these three major points. I heartily support the conclusions of the Advisory Council. My comments will but supplement the Council's recommendations, more particularly in the light of H. R. 6000.

I would especially like to emphasize the great importance of maintaining a full spread of differentials in an old-age and survivors benefit structure. A contributory social-insurance system should strengthen, rather than weaken, the incentives so necessary under a free-enterprise economic system. In our efforts to support our less fortunate citizens it is easy to break down incentives by lessening the differential rewards for steady employment, higher earnings, and self-improvement. It is far harder to reestablish inventives once they are lost. Even America, with its great resources of materials and manpower, cannot afford to weaken the incentives of its people to produce more for a better standard of life.

This country is on the brink of a long, steady descent into a condition of flattened differentials and comfortable averages. To make things easy and to avoid the trouble of differentiating talent, effort, or character, we are tempted to concede flat insurance benefits, flat assistance grants, flat rates of pay, flat levels of education, and a tragic averaging toward a single norm in scores of aspects

of life. This is one of America's greatest dangers. It is a symptom of a declining conviction in the value of competition, incentive, free enterprise, and free opportunity to prove oneself a more productive and an economically more valuable person than one's neighbor. Our great heritage of free opportunity to excel is in no way inconsistent with our great heritage of equal dignity of every person before the law. We have begun to confuse equal political rights with equal economic attainment. If this confusion persists, we shall become a country of comfortable mediocrity, without sufficient drive or leadership to safeguard the precious heritage of western civilization.

Those who demand a retreat to flat benefits have failed to see contributory social insurance as an integral part of American social and economic policy. (1) They include some actuaries and accountants who think of social insurance narrowly as a cash transaction carried on in a social vacuum and who want to simplify bookkeeping at the expense of pouring out the baby with the bath. The incentives lost would tragically outweigh the slight savings in record keeping. (2) They include insurance salesmen who do not want old-age insurance to interfere with their business interests, even though in the past it has been a great educational force to increase their business. To retain, untouched, their business with a few, they would let the many continue with inadequate protection. (3) They include well-meaning supporters of the relief approach to social security who, in their zeal to spread equal charity to all, forget that the vast majority of American wage earners prefer self-reliant and self-determined protection to state charity.

Concretely, I strongly support the recommendation that the differential factor in the old-age insurance benefit formula be 15 percent of average wages above the base amount and not 10 percent. The 15 percent factor more adequately rewards the incentive to earn a higher average wage. Further, I strongly support a minimum in covered wages of at least $1,200, the maximum recommended by the Advisory Council. Any lower maximum will bunch far too many benefits at an arbitrary upper limit, regardless of differentials in incentive shown. Also, any lower maximum would continue a sharply reduced spread of covered wages and benefits in terms of the wages now being paid in cheaper dollars compared to those paid in 1935 when the $3,000 maximum was set. Further, so long as universal coverage is not attained, I would favor the continuance in the benefit formula of a percentage per annum increment to reward those who have contributed longer and more steadily under old-age insurance coverage.

(2) COVERAGE

In respect to coverage I am convinced after more than 15 years of study that it should be the universal privilege of American citizenship to participate in an automatic means of self-protection against dependency in old age. Theorists can talk confidently about the sufficiency of the many private means of securing protection against dependency in one's declining years, but any of us who served in responsible positions during the depression of the 1930's know that the best-laid plans of voluntary savings, home ownership, farm ownership, business investment, or private employer coverage can go sour in times of widespread business depression. Even more likely is the heavy drain of illness of the wage earner and of members of his family upon the savings set aside for old age. The great majority of Americans do not want hand-outs in their old age. Most of all, they do not want to look forward to State charity when by small and regular contributions they can build up self-reliant protection.

In 1935 the Congress of the United States correctly interpreted a widespread demand for old-age protection to be a demand for old-age insurance as the long-run policy of this country. That demand remains fundamental to the thinking of our people today, regardless of current prosperity. It is in the mind of the farm worker, the domestic employee, the school teacher, the shopkeeper, and the filling-station operator. They do not fully understand the techniques of old-age insurance as compared to assistance or relief, but I am convinced that they want the self-reliant, certain protection which contributory insurance provides. I sincerely hope that this Congress will interpret the fundamental desire of the now uncovered groups as accurately and with the same foresight with which the Congress in 1935 interpreted the desires of the industrial employee.

The Advisory Council on Social Security of 1937-38 strongly supported the coverage of nonprofit employees, farm and domestic employees, Government employees, and the self-employed under the act. Any administrative obstacles to such coverage have long since been resolved. As Chairman of your Council

12 years ago I feel that I should repeat the recommendations of that council, now reaffirmed after further study by another Advisory Council.

(3) CONTRIBUTIONS

In respect to contribution rates I would urge that, following an immediate increase in rates to support and justify a sharp improvement in benefits, future rates be established in the light of developing experience. An old-age insurance system needs but a small contingency reserve to compensate for short-run variations in collections and disbursements. This reserve should not be a major element in the financing of the system nor in the fiscal policy of government. Its investment in Government bonds involves no exciting mystery. Since a small fraction of the collections in the old-age insurance system may accrue before the funds are needed for benefits, the General Treasury by borrowing the funds can postpone for a time an equivalent amount of general tax collections. When the old-age insurance system requires the return of the loan the General Treasury may secure the funds through general tax collections equivalent to those previously postponed. The sole difference is that the General Treasury pays interest meanwhile to the old-age insurance trust fund rather than to outside lenders.

The hobgoblin of double taxation has been raised by some who have failed to note that in the transaction just outlined there are two complete cycles of collection and disbursement. The insurance contributions are collected and, after being loaned to the Treasury, are disbursed as bond proceeds by the Treasury for value received by the Government. Later, general taxes are collected and, through loan repayment, the funds are disbursed as old-age benefits. These are the same two complete cycles which occur whenever a bank puts its depositors' money into Government securities and later repays the depositor from the proceeds of such securities.

(4) PERMANENT AND TOTAL DISABILITY INSURANCE

Finally, I would like to urge as strongly as I can the enactment of a program of contributory total and permanent disability insurance. This is a logical and greatly needed adjunct to old-age and survivors insurance. Many wage-earners are not lucky enough to remain in good health until age 65. At present, if they become disabled, they not only risk early dependency, but the loss of their old-age insurance benefits as well.

Your Advisory Council in 1938 recommended as follows:

"The provision of benefits to an insured person who becomes permanently and totally disabled and to his dependents is socially desirable. On this point the Council is in unanimous agreement. There is difference of opinion, however, as to the timing of the introduction of these benefits. Some members of the Council favor the immediate inauguration of such benefits. Other members believe that, on acount of additional costs and administrative difficulties, the problem should receive further study."

The program has received a vast deal of further study. Such a program has operated efficiently for decades in other leading industrial nations. Our social-insurance administration is as efficient as any in the world.

The hard core of opposition to permanent and total disability insurance in this country are the insurance carriers, which have assumed the role of impartial advisers to Government to save Government from the foolish mistakes the carriers have made in competitive underwriting in this area of insurance. If the Congress of the United States takes the advice of the insurance companies, we will have no permanent and total disability insurance in 1950 or 1970 or in the year 2000. Meanwhile, the contributory old-age and survivors insurance program would be whittled down further and further until, as a minimum flat-rate benefit, it would not interfere in the slightest with such business as these carriers cared to canvass. It is high time that the positive needs of the workers, employers, and public of this country be placed above the negative convenience of a small but clever interest group.

It has been an honor and pleasure to serve on two occasions on Advisory Councils appointed by your committee. I know that you have wanted my frank comments as an independent student of social insurance. I am deeply grateful for this opportunity.

The CHAIRMAN. That winds up the hearing for today. We will recess until tomorrow morning at 10 o'clock.

(Whereupon, at 4:45 p. m., the committee recessed until 10 a. m. Tuesday, March 21, 1950.)

SOCIAL SECURITY REVISION

TUESDAY, MARCH 21, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Hon. Walter F. George (chairman), presiding.

Present: Senators George and Millikin.

Also present: Mrs. Elizabeth B. Springer, Chief Clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order. I wish to place into the record at this point a statement which I have just received from Secretary Maurice J. Tobin giving the views of the Department of Labor on the pending legislation, H. R. 6000.

(The statement is as follows:)

STATEMENT OF SECRETARY OF LABOR MAURICE J. TOBIN TO THE SENATE COMMITTEE ON FINANCE ON H. R. 6000, THE "SOCIAL SECURITY ACT AMENDMENTS OF 1949"

I appreciate the opportunity to submit my views on H. R. 6000, the "Social Security Act Amendments of 1949" which your committee is studying at this time. The improvement of the existing Social Security System of our Federal Government is of deep and urgent significance to our Nation. I realize that the problems to be solved in revising the Social Security Act are varied and complex but, as the House Committee on Ways and Means concluded in its report on H. R. 6000, "a sound and effective social insurance program is essential to the smooth functioning of our democratic society"

OLD-AGE AND SURVIVORS' INSURANCE

I am a strong advocate of social security because I believe it reinforces the worker's incentive toward greater productivity and better citizenship by giving him the prospect of dignified retirement. I believe it spreads, more evenly, certain financial burdens arising out of inevitable emergency circumstances which most individuals are called upon to meet. The payment of contributory insurance benefits curtails the need for public assistance—a need which grows with the increase in the life expectancy of persons in the United States and with rises in the cost of living. I believe also that the monetary benefits derived by employees and their survivors under a social security system serve to support the national purchasing power and are an added stabilization factor in our economy.

A basic measure of economic protection against the common hazards of old age, sickness, and death should be afforded to the peoples of our country on as broad a basis as practicable. The existing old-age and survivors' insurance system of our Federal Government is a notable start toward this objective. Since benefits under the system are related to average earnings and length of service, the insured in a measure earns and pays for his future benefits and those of his survivors.

There is general accord at this time that the present coverage of the Federal old-age and survivors insurance system is unduly limited in scope, and that the benefits thereunder are grossly inadequate in terms of today's cost of living. Facts substantiating this view are ably set forth in detail in the report of the

House Committee on Ways and Means on H. R. 6000 and in the reports of the advisory Council on Social Security to your committee. In my opinion, the Federal social insurance program should be expanded on a comprehensive basis and all gainfully employed persons, wherever possible and practical, allowed to participate. Old-age security, under Federal law, should not depend, as it does now, upon the kind of work an employee performs.

The current emphasis upon pensions in collective bargaining grows out of and illustrates the insufficiency of the present system. It also demonstrates the widespread acceptance of the idea that the changing requirements of our dynamic economy make the attainment of economically secure old age through individual planning extremely difficult to achieve. One of the essential fruits of sustained, productive labor should be comfortable and honorable retirement. The Government has a definite role in this matter, I believe—the role of establishing a method of securing such retirement. Private pension plans may provide valuable supplements to a public system, but it would be a serious error to think that industry pensions can take the place of a comprehensive and basic system of Federal old-age and survivors' insurance. Only a very small percentage of workers are presently covered by private pension plans and protection is generally available to workers only if they remain with the same company or industry until they reach the age of 65.

I am mindful of the careful thought and study that went into the drafting of H. R. 6000 as it was passed by the House of Representatives. The revisions which it would effect in the existing Social Security Act, however, while praiseworthy as far as they go, in my opinion stop short of accomplishing many desirable changes. I would like to refer briefly to some of the changes in the existing law not provided for in H. R. 6000, which, in my opinion, an adequate social-security program geared to present high levels of economic activity and need requires.

Coverage

The expansion of coverage would be a partial offset against the risks of modern industrial life, which, with its pressing production requirements, militates against the hiring and retention of older workers. The problem of the unemployed older worker does not arise primarily because such workers desire to retire or because they are unable to work. As a matter of fact, 50 percent of the men in this country who are more than 65 years of age, many of whom would be eligible for old-age benefits upon retirement, are now working. Some of these persons are undoubtedly forced to remain in employment by reason of economic necessity, which is a regrettable circumstance and one which an adequate social-insurance system would help to overcome. It is important in any event that older workers be able to obtain employment when it is needed and desired. The Department of Labor takes an active interest in promoting job opportunities for older workers for we consider this task of the highest human, as well as economic, importance. Promotional programs, however, cannot modify essentially the pattern of industrial hiring.

The present fragmentary coverage of the Federal system results in geographic, as well as individual inequities, in that more workers are covered in industrialized States than in States where agricultural activities predominate. In the latter States, with small per capita incomes, the public assistance rolls are disproportionately heavy.

Broader coverage and liberalization of eligibility requirements would reduce the number of workers who, because of shifts between covered and noncovered employment, fail to retain or benefit by an insured status, despite the intermittent contributions they make to the social insurance system when in covered employment.

When the social security law was passed in 1935 certain groups, such as farm and domestic labor, were excluded, by reason of administrative difficulties which it was thought their coverage would entail. The Federal Security Agency now states, and the statement is corroborated by other experts who have studied the problem, that workable plans have been evolved to apply to these groups. H. R. 6000 indicates a recognition of the feasibility of such coverage by providing for extension of the system to some of these groups on a limited basis.

H. R. 6000 would extend old-age and survivors' insurance to some 11,000,000 additional persons. This is a step in the right direction which I heartily endorse. I am convinced that we must constantly move forward in this field with a view to including under our social insurance system the major portion of our labor force. Extension of coverage on a comprehensive, rather than a piecemeal basis is highly desirable and, considering its long-range effects, wholly justified.

The widest gap in coverage which remains under H. R. 6000 is that which should be filled by the self-employed farmers. Farmers, some 5,000,000 in number, are under this bill—the largest single group remaining without the protection of social security. I feel that this is a grave omission.

Agricultural workers, approximately 3,500,000, are only partically included under H. R. 6000. These more or less irregularly employed groups frequently occupy the lower rungs of the economic ladder and are, therefore, imperatively in need of social insurance.

Again, I think the coverage of domestic workers proposed by H. R. 6000 is too narrow. Only about one-third of the approximately 2,000,000 household workers are covered by reason of the fact that coverage is conditioned on 26 days of employment for one employer during a 3-month period. Yet domestic workers comprise 5 percent of our labor force.

The condition for coverage of a minimum number of days of employment by a single individual excludes that large number of domestic workers who work for different households on a day-to-day basis. Actually, a daily worker with scattered employments on the basis of 5 or 6 days a week would tend to make greater contributions to the insurance fund than a worker who would be able to qualify under H. R. 6000 on the basis of 26 days employment in one household during a period of 3 months.

The domestic service occupation, in addition to having scant protection from any social legislation, is characterized by low pay. The bulk of its employees are women, most of whom support dependents, as well as themselves. The occupation has a greater proportion of older workers than almost any other, since it provides openings for those who cannot work in more demanding employments.

Household employment is an essential occupation, not only as a means of livelihood to a significant number of the labor force, but as an adjunct to the proper maintenance of many homes. Competent workers should be encouraged in this occupation through the fostering of old-age insurance protection. I have filed as an exhibit Bulletin 220 of the Women's Bureau of the Department which demonstrates certain facts concerning the subject of old-age insurance for household workers.

H. R. 6000 extends the Federal old-age and survivors' insurance system of the Federal Government to approximately 100,000 employees not now covered by the civil service retirement system, but excludes, among other groups, certain temporary employees. I would like to see included in the legislation, provisions which would bring within the protection of the system substantially all Federal employees, except legislative employees, not covered by the civil service retirement system benefits

If the guaranty of economic security under a social-insurance program is to be valid, the benefits provided thereunder must be geared to a decent standard of living. The benefits of the present Federal old-age insurance law are grossly inadequate. A visit to any corner grocery store will serve to furnish ample proof. These benefits did not meet the needs of retired persons even in 1939 when the benefits were established. Since that time the cost of living has risen 70 percent. The national income since 1939 has risen from $72,500,000,000 to approximately $225,000,000,000 in 1949. It is a tragic irony that those receiving old-age assistance are now receiving on an average almost twice as much in relief as retired workers receive in insurance benefits under the social-insurance program. It is true also that 10 percent of those now receiving old-age and survivors' insurance also receive old-age assistance. It seems clear to me that in the light of the fact that during the period since the old-age and survivors' insurance law was enacted, our national income has been more than trebled, benefit amounts could and should be increased in an amount substantially greater than the increase in the cost of living which has occurred during that period.

Further increase in the contribution rate would be in order in connection with increased benefits, as recommended by the President in his recent budget message, as would an increase in the maximum-wage base to $4,800. The rise in wage levels since 1939, when the $3,000 maximum wage base was established, has resulted in the exclusion from taxation and use in benefit computations of part of the wages of a substantial proportion of our workers. I recommend that the broader wage base be utilized to liberalize benefits further. In the event that costs of the system go higher at a later date, there is the possibility of the participation of the Federal Government in the program, as recommended by the Advisory Council on Social Security, "in recognition of the interest of the Nation as a whole in the welfare of the aged and of widows and children."

Eligibility qualifications

I am in favor of the provisions of H. R. 6000 which would establish a thir alternative of qualification regarding quarters of coverage inuring especially t the advantage of newly covered workers and of other liberalizing changes suc as relate to survivor benefits in connection with dependent children. I ar also very much in favor of the provision which would increase the income lim tation of a beneficiary in covered employment from $14.99 to $50 a month. Th proposed exemption is realistically related to real wage levels.

Disability insurance

Disability, which is one of the major causes of dependency, is in essence i voluntary, premature retirement. The recognition of this factor is essentia to an adequate social insurance program. It has been shown, for example, tha the disability of one or more parents is an element in almost one-third of th cases requiring public assistance aid to dependent children. Public protectio now available to workers generally in connection with disability and illness i confined, for the most part, to benefits payable under the various workmen' compensation laws for work-connected disability or disease. Although I d not believe that completely accurate figures are available on the point, it i estimated that only a small number of cases of disability are work-connecte or compensable under applicable laws. Disabilities appear to be more prevalen in lower income families by reason of generally unfavorable economic circum stances and such families can ill afford to meet the combined misfortune of los of income and heavy medical expense. Such emergencies must often be me through relief or public institutional care. The Railroad Retirement Act alread provides benefits for workers who are totally or permanently disabled for regula employment if they have reached the age of 60 or have rendered the minimum required years of service in the railroad industry. In addition, sickness bene fits, including maternity benefits, are available under the Railroad Retiremen Act in certain circumstances. I am in favor, therefore, of the provisions o H. R. 6000 which would establish insurance benefits, related as are retiremen benefits to wage, for incapacitated workers. H. R. 6000 does not provide for an benefits for the dependents of incapacitated workers. I feel that the economi plight of the dependents of wage earners is as serious when the income of suc wage earners ceases by reason of incapacity as by reason of retirement, and tha similar benefits should be provided for such dependents in both contingencies.

DEFINITION OF "WAGES" FOR FEDERAL UNEMPLOYMENT TAX ACT

Section 208 of H. R. 6000 would amend the definition of "wages" in the Federa Unemployment Tax Act to bring the definition into substantial accord with th definition of "wages" in the Federal Insurance Contributions Act. The principa difference is in the wage base upon which taxes are collected in the respectiv acts. The wage base proposed for old-age and related benefits would be $3,600 whereas the wage base under the Federal Unemployment Tax Act would con tinue to be, when amended by H. R. 6000, $3,000.

As I have indicated in this statement, I think the realistic wage base for con tributions toward old-age and survivors' insurance and related benefits is $4,800 My comments regarding this subject are equally applicable with respect to th wage base which I think is feasible under the Federal Unemployment Tax Act

I sincerely hope that early and favorable action will be taken by your commit tee to improve, expand, and liberalize our social insurance system as I have indicated.

The CHAIRMAN. The first witness is Mr. George F. Kohn.

Will you have a seat, sir? You are president of the Precision Grinding Wheel Co. of Philadelphia?

STATEMENT OF GEORGE F. KOHN, PRESIDENT, PRECISION GRINDING WHEEL CO., INC., PHILADELPHIA, PA.

Mr. KOHN. That is correct, sir.

The CHAIRMAN. All right, sir. We will be glad to hear you on this social-security bill.

Mr. KOHN. What I have here, Senator, is not a very long statement but I did not know whether you would prefer that I should read this

or whether I should speak a little more extemporaneously and give an opportunity for you and others to question me. I will do whichever you prefer.

The CHAIRMAN. You may proceed as you prefer. If you wish to put your statement in the record and speak to it, so to speak, we should be happy to have you do that.

Mr. KOHN. Perhaps I should do that; because there has been so much said by those who have preceded me, here, and I feel that most of the statements that I have to make have been pretty fully covered. So I will sort of high-point this and put the rest of it in the record through giving you a copy of the statement afterward.

The CHAIRMAN. Yes, sir.

Mr. KOHN. The principal things which I think I would like to touch upon here orally are coverage, cost, and benefits; and I would also like to take up the matter of total and permanent disability insurance and say a few words on what I think should be done with regard to the retirement age.

I feel, as do most of the people, I believe, who have already testified, here, that the coverage which is proposed under H. R. 6000, while it is a big step forward from what we have had heretofore under our law, is still insufficient. The present program covers about three out of every five jobs. Your H. R. 6000 contemplates an increase in coverage of about 11,000,000. But if my figures are correct—and I am not an expert in this—it still leaves about 14,000,000 who are not covered.

Now, I don't know how practical it is to cover all of those, but I do feel that it is rather important that our farm group be included. I recognize that there are certain administrative difficulties to be overcome to effect that properly, but I believe that you people who work out our salvations, with others to help you, probably can find some way to do that.

My great fear with regard to not having as full coverage as is possible is that sometime later it will be found necessary to include these people, and that your burden then to the participants is going to increase tremendously, and you are going to have additional burden upon those who are covered previously for the benefit of those who come into the over-all insurance picture later. I feel that we are going to have some of those problems as you increase now, if you take in only the 11,000,000. But I think the best way we can meet the situation is to do it forthwith, rather than to do it piecemeal some time in the future, which, as I said before, I feel is going to be necessary.

I am very much in favor of having as little participation as was the intent of the original social-security law by the Federal Government in our old-age assistance program. I have covered that somewhat in my brief, but I do want to make note of it here in talking to you.

I realize that it has been completely necessary presently, because the benefits under our old-age and survivors insurance law have been insufficient, with the devaluation of our money, to properly take care of those who require care in later life. But I think that if we do increase the benefits we should, as soon as possible, remove as much as possible our national Government from the old-age assistance in our various States. To me that is primarily a State and local problem, and I would like to see, if possible, over a period of years, the gradual diminution of the Federal aid in those States and local communities.

Now, as far as the benefits are concerned, I am in complete accord with the requirements, as you see them, or as they have been envisaged, for increase of approximately 70 percent. That is roughly in line with the change in the purchasing power of the dollar since the program was initiated. However, I am not in favor of an increase, at this time, from $3,000 to $3,600 or $4,200 or even $4,800, as has been at times suggested.

I would like to see the permanent and total disability insurance provisions removed from this statute. I feel that it is not in keeping with old-age benefits. To me, one is a different kind of an insurance or benefits program than the other. And I feel that your permanent and total disability problem is one that needs close investigation on a local level and should therefore rest not in a Federal law, but should be part and parcel of the problems of the individual localities in which these disabilities occur.

One of the things that is disturbing to me is the tendency which we apparently have in this country to feel that at 65 years of age we have reached the time at which people should retire from active work. We have in our company, which is not a large company but employs between 250 and 350 employees, depending upon the industrial situation of the moment, a great many older employees working, and we have been able to find ways and means for them to continue. If we have, in the years to come, as it seems we will, quite a change in the relationship of people under 65 and over 65 from the 1 to 8 ratio which exists today to the 1 to 5 ratio which is envisaged in 1980, unless we are able to keep these people at work for a longer time we are going to find to few productive workers supporting too many nonproductive workers. I am afraid it will throw a burden upon our funds for social security which will be so severe that the dollars required for the success of the program will require much greater taxation, and, of course, on that basis, further inflation. This will decrease the value of the funds which people will have available for them.

The main reason now, of course, as I see it, that it is necessary to recommend an increase in the amounts to be paid out is because of the devaluation of the dollar as far as its purchasing power is concerned.

I think it is important that we do not have our benefits at any time sufficiently attractive that it is almost as pleasant to retire as it is to work. I think that is very important to us. I think there should be a minimum layer of protection and that people should, from there on, particularly those who are in a position to so afford, build up such supplementary insurance as they can for themselves.

I want you to understand that in approving of an increase in the amounts to be paid I have no selfish motive. My own company has a pension plan with its union which is completely divorced from the provisions of social security, and any changes or liberalization of the bill will place a greater burden upon us than we have had heretofore; so I think I can say that I am not motivated by any selfish consideration in this.

Those are the main points, briefly given to you, that I have placed in this short brief. As I say, if I had come down here early in the days of this hearing, I might have carried it forward in a little more detail, but there have been so many people who have made these presentations, experts in this field, who have expressed the same opinions and thoughts

that I have, that I think with those few remarks, supplemented by the brief, I will have said all that has really marked bearing on the subject.

The CHAIRMAN. Thank you, sir. You may put your brief in the record by handing it to the reporter.

Are there any questions?

Senator MILLIKIN. I would like to ask what kind of operations you have in your business that are of a nature that permits you to keep the older fellows on? Do you have a mass-production line, or is it a hand-operation business?

Mr. KOHN. Well, we have very little assembly-line operations. The grinding wheel business is a type of industry in which that is not particularly practical. But we do have some continuous operations, such as watching ovens, in which the manual labor is minimum. It is more or less a question of watching instruments to be sure that they are operating properly, to push a few trucks into a dryer, which are on an overhead trolley, a monorail system, which makes it quite easy to do. We have some jobs in our shipping department, such as putting blotters onto our product, jobs of that kind, where the amount of time one is on one's feet, or the manual effort required, is a minimum.

Senator MILLIKIN. Do you think there is a large field of that kind over the country that could be exploited to keep at work the elderly people?

Mr. KOHN. I feel that there is. I travel a great deal for my company, and I am in the field in all types of plants about 20 or 21 weeks a year. And I would say not only are there quite a few opportunities for that, but it is my observation, though I can't speak as to all types of businesses, that basically in American industry they are making a good deal of effort to continue older people in employment.

Of course, there has been recently a tendency in private pension agreements to make the age of 70 about a maximum for compulsory retirement, even though there has been some encouragement to continue past 65.

Senator MILLIKIN. The larger companies that operate under mass production feel that it takes the alertness and agility of youth to run these assembly lines, and I can see how possibly that is true. One fellow that is to slow on the line spoils the performance of the line. And so you find pretty early human junking in businesses of that kind.

I have often wondered whether, as a matter of industry statesmanship, those concerns should not, if necessary, have some little subsidiary businesses where they could give room for the play of hand operations where the elderly could work as long as they want to work and perhaps during the period of the day that they can work effectively.

Mr. KOHN. As a matter of fact, Senator, your large corporations today are engaged in, I would say, multifold activities. I mean, I would think, if your philosophy is right, it answers its own question. Because you take the United States Steel Corp., for instance. They have ever so many subsidiaries, which are doing all different types of work. Now, whether or not, from the manipulative standpoint, it is practical to move workers from one plant into another plant and from one geographical area into another I don't know, but from the standpoint of the potential of jobs which might be done by older people, I would think that was a fact.

Senator MILLIKIN. It seems to me we have had quite a little testimony that there is a lot of thinking going on about it and a lot of committees working on it, but in the aggregate the net result of all their thinking so far appears not to have produced great results. Maybe they are just getting ready to produce great results. I hope that is true.

Mr. KOHN. I think that your small business, which never gets into the forefront of the public eye as much as your large corporations, where you don't have as much mass production, probably does a great deal more presently toward taking care of its older employees than do these large corporations.

Senator MILLIKIN. I was born and raised in a manufacturing town, and I can remember very clearly that there were many hand-operation jobs where men worked until they were very, very old, and wanted to, and did a good job. They perhaps were a little slower than they were when they were young, but they kept working, and their bosses seemed to be content with the economic aspects of the thing.

Mr. KOHN. Well, in Philadelphia, where my plant is, we have a couple of very large companies; not massive, but large in the general sense. I have been in them, and, of course, they are traditionally old-fashioned, I guess, in more ways than one. And I always used to think in these places where I went that it looked like the old-folks' home.

Senator MILLIKIN. Thank you very much.

The CHAIRMAN. Thank you, Mr. Kohn.

(The prepared statement of Mr. Kohn follows:)

STATEMENT OF GEORGE F. KOHN

MARCH 21, 1950.

My name is George F. Kohn. I am president of the Precision Grinding Wheel Co. of Philadelphia, a relatively small enterprise, employing between 200 and 350 people, depending on business conditions.

Many of the earlier witnesses before your committee have been qualified by training and experience to give expert testimony in the field of social security. I do not profess to such a background. With your indulgence, my remarks will be limited to a few fundamental considerations from the viewpoint of a citizen, a taxpayer, and a small employer.

We have had some 15 years of experience with Federal attempts to provide protection against the economic hazards of old age. It is appropriate at this time to reexamine the problem in the light of the additional facts now available to us and to bring into harmony our objectives, our approach, our methods, and our capacities.

Our present course is unrealistic and dangerous. The original intent of Congress was to establish a basic benefit system which would be supplemented temporarily by Federal participation in the public-assistance programs of the States. It was conceived that the benefit program eventually would embrace most of the workning population, resulting in a decline in the need for an assistance program and the withdrawal of Federal participation therefrom.

There was, and still is, substantial agreement that this approach is sound. Nevertheless, we have departed from this path and have shown remarkably little disposition to return to it. We are in the unhealthy position wherein the number of recipients and the amount of benefits under public assistance bear a very distorted relationship to the number of recipients and the amount of benefits under OASI.

For example, in February 1949, in my own State of Pennsylvania 221,884 people received $4,591,000 in old-age and survivors insurance benefits ($20.69 each). In the same period, 87,058 people received $3,470,000 in old-age assistance ($39.86 each). The tremendous sums being paid out as old-age assistance constitute a serious threat to our contributory old-age-benefit program.

The proportion of assistance costs net from the Federal Treasury continues to grow. At the same time we hear many proposals to increase Federal participation to an even greater degree. We can place our primary reliance on benefit plans or on the charity assistance approach, but to combine them is, in my opinion, impractical and philosophically wrong. It is time we decided which course we are going to follow.

I am personally convinced that a contributory Federal old-age and survivors benefit program is the most satisfactory approach to the economic problems of the aged in a competitive-enterprise economy. It is the only approach consistent with democratic principles. It engenders a self-reliance in contrast to the advice of false prophets that the people can and should depend on the questionable wisdom and paternalism of a highly centralized government.

If we reward citizens during their working years on the basis of their contribution to our national productivity, we should apply this some principle to their years of retirement. Old-age benefits should be based primarily on the worker's wage and employment records. Any general program for the aged based on "needs" is inconsistent with our program of individual initiative during working years. Indeed it puts a premium upon failure rather than upon success. This is a broad generalization based on principles and does not attempt to consider special cases which will inevitably arise.

I think everyone today recognizes that a Federal program on a noncontributory basis would be disastrous to morale and would encourage the kind of crackpot plans that are suggested from time to time and which could easily strain our finances to the breaking point. Benefits could become a political football and could destroy our competitive-enterprise system.

The relationship between benefits and costs is more likely to be understood and accepted when beneficiaries are required to pay a fair share of the cost. This relationship is of little significance to recipients of charity assistance or flat, noncontributory pensions.

Despite the general acceptance of the theory of OASI, we have failed up to this time to follow a logical course in relating the program to the economic system which makes it possible. The Social Security Administration has not carried on a program of basic education to inform citizens of the nature and costs of benefits and the ability of our economy to bear this burden. We have thought so hard with our hearts and so little with our heads that we have succumbed to the pressure to liberalize benefits without knowing how much they will cost, who will bear the cost, and how much cost our total economy can bear.

In framing legislation consistent with the objectives of a contributory-benefit program, certain fundamental considerations should be thoroughly evaluated. I respectfully commend your attention to the succeeding points.

COVERAGE

The present program covers only about three out of every five jobs. This is an unfortunate discrimination because the requirements of the aged have little relationship to the type of employment in which the bread-winner has been engaged. If our benefit program is to fulfill its purpose of providing a basic minimum layer of protection for all gainfully employed citizens, it cannot be done without substantially universal coverage.

The bill before you would add approximately 11 million new wage earners but would exclude approximately 14 million. I urge that you reexamine the case of each group which comprises these 14 million. I particularly urge reconsideration of the exclusion of farmers and those employed on farms. So long as such a large and influential group remains excluded, our program will be socially insufficient. Not closing this gap in a manner satisfactory to all citizens may oblige us sometime later to extend special consideration at a time when we can least afford it.

I am aware that it has been necessary in the past to exclude many from coverage because of administrative difficulties and because of uncertainties surrounding the taxation of various groups. Informed students contend that many of these difficulties can now be overcome. Your attention is respectfully directed toward the consideration of proposals for stamp-book plans and other simplified methods of accounting and administration.

A substantial saving in terms of ultimate cost will be achieved under universal coverage. By spreading the risk we will more than offset the cost of additional benefits. Losses to individuals who today shift from covered to uncovered employment will cease and the general objectives of a benefit program will be more effectively realized.

One of the most beneficial aspects of extended coverage would be the opportunity it will give us to gradually withdraw Federal grants to the States for public-assistance purposes. As the beneficiary rolls of the OASI program expand, the need for assistance should decline, until the costs of such assistance as is needed can be borne by the States and communities, where the burden properly belongs.

At this time we should reaffirm the principle expressed in the original social-security legislation: that the role of Federal participation in public assistance is a temporary expedient. We should not at this time succumb to current proposals which would enlarge and make permanent the use of Federal funds in this area.

As insurance coverage is extended and benefits are liberalized, we should provide for an orderly withdrawal of Federal participation in public-assistance programs. I recommend that the legislation you adopt contain a formula to reduce systematically the proportion of Federal funds granted for assistance purposes, aiming for complete Federal withdrawal in perhaps 20 years.

COST

We cannot prudently afford to overlook the role of our aging population in the ultimate cost of the benefits we legislate today. It is estimated that by 1980, those age 65 or over will exceed 20,000,000, or about one-fifth of the working population. This is double the number of aged living today.

The consequences of the growth of this group, a large proportion of which may be substantially nonproductive, may be judged somewhat by examining the conditions we face today. As the present time, not including taxes for Federal pensions, our governments—Federal, State, and local—extract some 51 billion dollars in taxes from our economy—about 23 percent of our national income.

Even in this period of robust economic activity, our annual budget is several billion dollars out of balance, despite the fact that citizens today are working the equivalent of 8 to 10 hours every week to carry the tax load we now have.

This unhappy situation prevails when the ratio of persons 65 and over to those under 65 is 1 to 8. In 1980 fewer young will have to support more old as the ratio changes to 1 to 5, or more older people will have to continue productive activities. This latter contradicts present trends toward public acceptance of retirement at 65.

It is unreasonable to expect that the various claims upon the revenues of Government in 1980 will be any less extensive than they are today. Will continued deficit financing over the years result in economic security for the aged? Is it reasonable to legislate substantial benefits for ourselves and pass the cost on to succeeding generations and saddle them with a perhaps unbearable load?

The issue today, it seems to me, is not how liberal a scale of benefits many of might like, but rather what ultimate costs we can afford. We all would like to be supported in the manner to which we would like to be accustomed. It seems to me the problem boils down to this decision we must make: to what degree shall the living standards of our productive citizens and their children at any time be reduced so that the living standards of our nonproductive citizens can be increased.

In the 1939 recommendations of the Social Security Board, the following significant paragraph appeared:

"The cost of any system of benefits will mount rapidly with the passage of time as a larger proportion of the population reaches retirement age. Consequently, a scale of benefits, the cost of which would be altogether reasonable now, might be unduly burdensome at the end of a generation. Therefore, in making increases in benefits, particularly in the early years of a system, it is essential to keep the ultimate cost in mind."

BENEFITS

I am not in favor of substantial benefits which would make it as attractive or more so to retire than to work, where a continuation of work is practical and possible. If old-age benefits are to be realistic they must not be based on what the individual wants or needs but on what the economy is capable of providing. The idea of "wants" or "needs" is too close to the assistance concept for me. That is why I favor benefits on the principle of a basic minimum layer of protection.

Benefits at present are below an acceptable minimum and should be brought into line with present-day costs of living. Public-assistance benefits have increased more than the cost of living but benefits under OASI have changed little. Many OASI beneficiaries have been forced to depend on public assistance for supplemental support. This is inconsistent with the principles of a sound benefit program.

I am not qualified to deal with the intricacies of the various benefit formulae which have been presented to you. It is my understanding, however, that the benefit formula contained in H. R. 6000 would increase benefits by approximately 70 percent. I find that a realistic answer in the light of increases in the cost of living since 1935.

I would like to emphasize that in endorsing an increase in benefit levels I am not doing so with the thought that it would act to reduce my own contributions to the pension program for my employees. Our plan provides benefits which are independent of social-security benefits. On the contrary, I know that a higher level of Federal old-age-retirement pensions will cost my company more money, since the company must match every cent of employee contributions in supporting higher expenditures.

In consideration of expended OASI benefits at the level mentioned above, I recommend that those covered under this program be ineligible to receive additional benefits under the federally supported old-age-assistance program. If benefits reflect the concept of a basic minimum layer of protection, no supplementation should be necessary in the usual case. If there need be exceptions, they can be financed out of State, local, or private funds without Federal support.

I recommend that the present $3,000 wage base be retained at the present time. As the program now exists there are already inequities. Those beneficiaries who have contributed a short time only before reaching 65 and retiring are and will be largely supported on their base benefits by the younger group who will continue to contribute over a protracted period. Raising the present $3,000 base to $3,600 or higher will only serve to increase this inequity. Later, when all the beneficiaries who began their contributions late in life are out of the picture, it will be time enough to discuss the raising of the wage base.

PERMANENT- AND TOTAL-DISABILITY INSURANCE

Proposals contained in H. R. 6000 to establish a compulsory system of permanent- and total-disability insurance should not be enacted into any law covering retirement benefits. Funds calculated to provide retirement benefits should not be endangered by the completely different problems covering disability insurance. The two problems are in no way related and should be kept separate in all legislative enactments.

As a matter of fact, while it is sound and desirable to administer old-age benefits on the Federal level, it is impractical to attempt Federal action on a problem which is essentially local in character. The evaluation of disability involves the investigation of individual cases and the making of subjective judgments which can better be done by local agencies trained in case-work techniques and aware of local realities.

Further, a Federal system, supported by the seemingly limitless funds of the Federal treasury, would engender little incentive for the sound administration of claims.

Involved in proposals for disability insurance is the provision for the diversion of OASI trust fund moneys to underwrite much of the cost of these benefits. The money in this fund has always been a target for those who would extend Federal services in a variety of directions. As presently constituted, it can meet only a very small portion of the pension liability which is steadily accruing and which will snowball in the years to come. To reduce this fund would be a dishonest and disastrous practice. It was collected for the purpose of insuring the pension promises which we have made; it was not intended as an enticing melon which could be cut for another party entirely.

It is absurd to offer the thesis that trust-fund moneys used for rehabilitation and other purposes would be replaced. Experience should tell us that it will never be replaced and that the old-age-benefit system would have to depend heavily on the support of additional taxation to make good its pension promises.

RETIREMENT AGE

With the greater vitality which succeeding generations are carrying into old age, there may be less desire to retire at 65. The more self-sufficient the aged

are, the lesser is the burden on the younger generation and the more productive is our economy. It must be our policy to encourage the producing power of the Nation, rather than to shackle it with obligations and practices which will lower our general standard of living.

As a move in that direction, it would be constructive to encourage our older citizens to remain in productive employment as long as they are capable and desire to, rather than to provide penalties for their continuing in employment. In my own company, for example, retirement is not compulsory at 65. It has long been my practice to encourage older employees to stay on the job. Although the size of my operation necessarily restricts the number of jobs available, I have been able to make adjustments which permitted the productive employment of many who wanted to work but whose productive efficiency had diminished. In this, our union, unlike many others, has been very cooperative.

It is up to industry to provide employment opportunities for the older worker and much progress is being made in that direction. However, I suggest that some inducement be incorporated into the OASI program to halt the trend toward earlier retirement and send it back in the other direction. This would help keep down the cost of old-age pensions and would enable the older citizen to remain productive and useful.

Old-age security depends in a great measure on the buying power of the pension dollar. The capacity of that dollar is largely governed by the general fiscal policies of the Federal Government. If prices and wages mount in an inflationary spiral, if the economy is subject to abnormal strains induced by unwise fiscal policies, the aged will be unable to resist this impact. High taxes, low interest rates, and the burden of a high public debt cannot contribute to old-age security. The recent capitulation of the operators in the coal dispute is an example of further inflationary trends leading to greater spiraling.

I recommend that consideration be given to a plan of tax incentives designed for citizens who wish to make additional provisions for old-age security.

Thank you for your consideration and attention.

The CHAIRMAN. Mr. Dinsmore?

You are the manager of the Blind Industrial Workers' Association of New York State?

STATEMENT OF RAYMOND J. DINSMORE, MANAGER, BLIND INDUSTRIAL WORKERS' ASSOCIATION OF NEW YORK STATE, INC., BROOKLYN, N. Y.

Mr. DINSMORE. Yes, sir.

The CHAIRMAN. And you are appearing here on the social-security bill.

Mr. DINSMORE. Yes, sir. I would like to make a few remarks, Mr. Chairman and gentlemen of the committee, regarding that part of H. R. 6000 on page 180 which deals with the proposed exemption on earnings of those blind people who are in receipt of public assistance and also who are employable enough to work.

We feel that, although in H. R. 6000 that provision has gone a long step forward, the conditions under which it is proposed to give these exemptions are such that it will be so confusing that its effects on the ultimate recipient will be virtually nullified. In other words, it is proposed to have these people certified by the rehabilitation agency of the State.

Now, in a great many States, that would mean a recipient would have to go to two or three different agencies; which is confusing and bewildering even to a person with normal vision, and it is exceedingly much more so for a person who is unable to get around, perhaps, without the help of a cane.

In New York State at the present time needs certification must come from the welfare division, and visual-acuity certification must come

from a State agency dealing directly with the blind. If this provision goes through as now written into H. R. 6000, it will mean another agency will be added to those two. Now, as I say, that is in New York State, but the same thing would be applicable perhaps in other States.

We feel that certification on a person's eligibility for need could be taken care of by one public agency. And also the provision as now inserted into H. R. 6000 makes it more or less a matter of opinion or policy as to whether the exemption will be granted at all, and also it can be left up to the agency as to how much.

The workers in the field of the blind have hit upon a figure of $50 a month that should be granted as an exemption on blind earnings. Having worked in this field for many years, we think the thing should be mandatory and incorporated into law if its effects are ever to be felt by the blind people. Left to a matter of policy, the thing can be kicked around here and there, and it can be reversed, or they can even cut it out when they want to. And, from what I am able to gather in the various States, the rehabilitation agency does not want the responsibility anyway. There is no particular point in having another agency brought into the field.

Now, the fact that exemption on earnings was considered at all, I think, is a good step forward, as I said before.

Despite the various Federal, State, and local laws governing assistance to the blind throughout the country, there is still mass poverty and privation existing among the blind. In the peak of wartime employment in New York State, a survey was made which brought focus upon this matter and showed that even during the peak of wartime employment less than 10 percent of the employable blind were gainfully employed. Well, it doesn't take any stretch of the imagination to see what would happen under normal circumstances.

Now, I know that speakers before me have covered this point pretty well on an over-all basis, and I would like to point out just two individual instances of how the thing is working today, why we feel an exemption should be granted.

I have 22 workers in our shop who are blind, working for us. We have a lot of homeworkers, people who are home-bound. I have, as an example, one blind woman, totally blind, 87 years of age, partly deaf, and crippled. The only way she is able to work and make any money at all is sitting up in bed. She is able to earn about $7 to $8 a month. Every nickel, gentlemen, of what that old lady earns is taken away from her at the present time—every nickel. Well, what has she got to live for? That is just an example of what is happening all over the country.

I have one caner, who makes his way to the shop every day; has to change busses; ride two busses. He is partly crippled, besides being blind. He is around 55 years of age. He is able to earn about $30 to $35 a month working 8 hours a day. Every nickel of what he makes is taken away. Of course, $30 a month isn't sufficient to keep him.

Now, what is happening in those two cases is just an example of what is happening all over the country. And you must remember that blind people, at least at the present time, are not covered by unemployment insurance. When a blind person is out of a job, he is just out of a job. As a usual thing, he does not have very much saved up,

because blind people as a class are poor. He can mortgage what little furniture he has, or he can go to the relief agency, and the relief agency tells him he must sell his insurance policy and give that up before he can get any relief. Before he even got insurance, he had to have his age "rated" 7 years. You know, the insurance companies, before they will issue a policy, must rate your age 7 years in advance, making the premium higher. That is why we feel it is vitally important that, in considering a revision of title X in H. R. 6000, an exemption should be granted, and that it be made mandatory, and that it not be confined strictly to earned income. Because there are relatives and friends of blind people who would like in some way to contribute to their well-being. They cannot do so under present conditions, because it would be penalized. If a dollar is given by a relative, that dollar is taken off. If $5 is given by a brother or sister or mother or father, that $5 is taken off. It doesn't enable relatives to help.

Now, limiting this to earned income would not enable these people to perform that little everyday human act.

We would like to have inserted in the bill, if it would seem practicable to you gentlemen, that part of S. 2066 which states: "Resources from any source"; which would broaden the scope. It would be practically the same thing, but it would be much easier to administer.

I think that is about all I can say on that subject. I did want to mention one point about the provision on page 95 of H. R. 6000, which defines blindness as 5/200ths. This is quite at variance with most recognized State standards of 20/200ths, which, broken down, in average layman's terms, means a person can see an article at 20 feet which he should be able to see at 200 feet.

If the definition is brought down to 5/200ths, it is going to mean an awful lot of border-line cases. Industrialists simply will not hire—in most States the compensation companies wouldn't permit hiring—people with less than 20/200ths. That means that these people can neither qualify for any type of assistance nor could they qualify for employment. Their lot would be pretty sad. And we ask that the definition of "blindness" be left as it has been in previous years as 20/200ths, and we feel that that will simplify the matter. It would cause a lot of confusion and chaos in the States otherwise.

Now, I have a written brief that I would like to leave, gentlemen, if I may. I believe that is all I can say on the subject.

The CHAIRMAN. Yes, sir.

You wish to leave your brief and have it inserted in the record? Is that what your request is?

Mr. DINSMORE. Yes, sir.

The CHAIRMAN. We will be glad to have you hand it to the reporter, and he will insert the brief in the record.

Mr. DINSMORE. I want to thank you, gentlemen, for the privilege of appearing here this morning.

The CHAIRMAN. Thank you, sir. We were very glad to have had you.

(The prepared statement of Mr. Dinsmore follows:)

STATEMENT OF R. J. DINSMORE

Eliminating all of the known vocations in which the use of eyesight is an absolute essential, plus the well-known fact that even the employable blind are slower in the performance of most industrial operations, it is an accepted fact that the vocations which are left open to the blind are the very cheapest in

pay to the blind worker. When you consider that the blind cannot be railroad workers, policemen, firemen, farm hands, bus drivers, aircraft pilots, medical doctors, or dentists, and so on down the line, it is easily understandable why, except in isolated instances, the average employable blind person cannot find job opportunities outside the sheltered workshop. Here again we find that the sheltered workshop, in order to compete in the open market, must pay a wage commensurate with the amount of work completed. This, in comparison to a sighted worker, is so much less in general that the wage is necessarily much lower and in most instances so substandard that some sort of subsidy is necessary, either through supplementation from the agency hiring him or through some sort of public assistance granted through a public agency.

Our lawmakers in the past have shied away from the word "subsidy" in connection with public assistance and wages, though subsidy is a generally accepted factor to farmers, shipping companies, aircraft companies, etc. In all of the aforementioned enterprises, the earning of a livelihood is the ultimate goal. Even where the employable blind people can find employment, substandard wages are the inevitable result and so generally recognized that loopholes were left open in the recently enacted minimum-wage law which will permit employers of blind persons to circumvent that law by characterizing said workers as "trainees" or "clients" and you may well rest assured that many of these "trainees" will be training for the next 20 years. The blind as a class are poor; that's why many of them are blind, inability to procure adequate medical care when it was most needed.

Despite Federal, State, and local public-assistance laws, despite the existence of hundreds of sheltered workshops throughout the Nation, there is mass poverty and privation among the blind. Direct focus was brought to bear on the magnitude of this situation when, during the peak of wartime employment, a survey was made in New York State which disclosed that less than 10 percent of the blind were gainfully employed, including those persons who were listed as self-employed, newsstand operators, free-lance musicians, and door-to-door salesmen. It is no strain on the imagination to determine what the job opportunities might be under general normal conditions.

Direct focus was again brought to bear on this situation during hearings on the National Rehabilitation Act in 1942. With the realization that private charity had borne all the burden of employment of the blind, the Government (Federal, that is) assumed its share of the burden in passing the National Rehabilitation Act, which is in operation in most States today, but even with this act in force over 7 years there is no indication at this time that the problem is anywhere near solved because of the number of unemployable blind, or those persons considered bad risks by the various State rehabilitation agencies. Also, in a majority of those placements made, some sort of subsidy is still necessary to enable the average blind worker to earn a living compatible with decency and health.

All workers in the field of blindness are generally agreed that in the administration of public assistance there should be disregarded a certain percent of a blind person's earnings. Recognition of this fact is incorporated in H. R. 6000, page 180. However, the scope of this recognition is so narrowed down and so worded that, unless certain mandatory provisions are included, it is highly doubtful that the ultimate recipient will ever feel its intended benefits. It is our experience that, where such matters are left to policy, that policy becomes a football to be kicked around in any manner administrators may feel inclined to indulge. If an exemption on earnings of blind assistance is to be granted, the amount should be stipulated and made mandatory on the administration; otherwise, manuals intended to implement the law will be written. It is our experience that manuals sometimes use language which narrows down the intent of the law, and indeed in some instances even reverses the intent of that law. Keep in mind that when a blind person is being interviewed for assistance he does not know what is being written about him. Questions are sometimes asked in such manner that the investigator gets the answer he wants; the client becomes confused and flustered, and in many many instances the report on a public-assistance client in the relief office falls far short in reflecting the need at the recipient level, though it looks good on paper.

Many States would like to enact their programs for blind assistance on a sound and realistic basis but have been prevented from doing so by the constant interference from the Federal Security Administration, which has consistently required the most literal and narrowest version of interpretation. We believe that those parts of S. 2066 which makes mandatory a floor, and requires a flat

exemption of $50 a month in considering earnings of the blind worker, is sound and imperative if industrial initiative is ever to be encouraged by the blind worker. We feel that, although present provisions in H. R. 6000 go a long way toward solving the problem, it should not be confined to "earned" income but should include income from any source, this to enable relative or friend or well-wisher of a blind recipient to aid a blind man or woman without having that amount taken away from him later by the State. There is a humane factor involved here that should not be overlooked.

The definition of blindness as now contained in H. R. 6000, being 5/200, if left at that latitude will be most unfortunate for it is at such variance with most accepted State standards that confusion and chaos will be the result, industrialists simply will not hire persons with less than 20/200 vision, and very few will consider their employment with even that much eyesight, with the ever-increasing machine age and use of highly mechanized implements of industry, physical examinations with rigid emphasis on eyesight, what is to become of the borderline case, that difference between 5/200 and 20/200? He can qualify neither for employment nor public assistance, left out in the cold on both ends of the five senses, sight, hearing, smell, taste, and touch. It is estimated that usage of eyesight absorbs 87 percent. It is understandable why such emphasis is placed on sight, especially in the industrial field. We cannot, however, evaluate eyesight in dollars and cents value alone, the inability to see the light of day, to see the faces of your loved ones, to see the beautiful sky, the flowers, and the beautiful pictures of nature are a drastic penalty on the life of man. It is dreadful to be blind. It is tough to be poor, but when you are both blind and poor, your lot is not an easy one to bear. The blind ask that their fellow countrymen and lawmakers help them to help themselves with an understanding of their problem and if he has the courage to try to overcome the rigors of his plight by honest effort at self-support, he be not penalized by having his initiative snatched away on his next relief check.

The CHAIRMAN. Mr. George Nelson?

Mr. Nelson, you are representing the International Association of Machinists?

STATEMENT OF GEORGE R. NELSON, GRAND LODGE REPRESENTATIVE, INDUSTRIAL ASSOCIATION OF MACHINISTS, WASHINGTON, D. C.

Mr. NELSON. Yes, Mr. Chairman.

The CHAIRMAN. You may be seated, if you wish.

Mr. NELSON. Mr. Chairman, my name is George R. Nelson. I am a grand lodge representative for the International Association of Machinists. I am appearing here today in behalf of President A. J. Hayes. Our address is Machinists' Building, Ninth Street and Mount Vernon Place, NW., Washington 1, D. C.

Mr. Chairman and members of the committee, I appreciate this opportunity to express our views on the proposed amendments before your committee to improve the social security program. Your consideration of amendments to this act and the final determination made by this Congress represents an important subject to our membership of over 500,000 and their families. Your decisions can also affect the economy and the welfare of thousands of manufacturers and business organizations in this country. These statements are not made without foundation. Let us take the actual example of the International Association of Machinists and the jurisdiction it covers. We embrace some 250 different types of industry and have collective bargaining agreements with 11,396 firms in this country.

Principally, because our present system of social security has become outmoded since Congress has failed, to date, to modernize the system since it was amended in 1939, we now have a definite problem of old-

age security. The first problem is that of the people who are attempting to exist on present payments which are totally inadequate for subsistence.

The second major problem is that of today's wage earner and his plans for future security. He is well aware of the fact that under today's payments, a single retired worker averages only $25.93 per month. He knows that the framework of our Social Security Act is sound, yet the discrepancies in the benefits and coverage of the present act leaves him fearful of future economic insecurity and dependency. This inadequacy of benefits and coverage has caused the recent demands for negotiation of private pension plans with employers even though it is recognized that such private plans are an extreme risk to both the employee and the employer. It must be remembered that most of the private plans negotiated as a supplement to the Federal system have been in large basic industries where the complex problems of application and administration can be absorbed without undue hardship. The exact opposite effect will be encountered if the many thousands of local union members must also press for additional protection in the event Congress fails to act this year. Today, in our union alone, many of our local lodges are preparing to bargain with their employers for private plans if further delay is encountered in modernizing our basic social security structure. There is no question but what this will place an extreme strain on peaceful labor relations. At best, these private plans can only provide piecemeal security and make normal retirement a hazardous risk.

The principle of a sound Federal system for old-age, survivors, and disability insurance has long since been accepted by our people. Years of study have now been given to the need for modernization of the present act. Both the Ways and Means Committee of the House of Representatives and your advisory council on social security have pointed to the urgent need for liberalization of the present social-security program. In keeping with the needs of our membership, we have also studied this situation. As the result of our studies we are convinced that the establishment of private pension plans in industry will not accomplish desirable results. As a labor organization, we believe that old-age retirement benefits should be provided by the accepted Federal systems such as the Social Security and the Railroad Retirement Acts.

There are significant features of the public system which a private pension scheme, by the very nature of things, cannot in any circumstance provide. I will mention only a few of them. The factors which are involved in setting up a private pension plan are so complex that even well-trained trade union negotiators cannot easily understand them.

A thorough understanding of complicated mathematical formulas, familiar only to acturial experts in the annuity and insurance fields is a basic requirement, and the average union shop committee cannot be expected to take the time to acquire such knowledge.

Considering the jurisdiction of our union as a whole and considering the fact that each company within an industrial class has problems peculiar to it, the size of the private old-age pension negotiating problem is overwhelming. Let me emphasize but just a few of the barriers and problems on which there are long and tedious arguments:

Shall the employees contribute to the pension fund? If so, how much, and on what basis?

Should the employee have vested rights in the fund if and when he leaves the covered plant?

Does his vested right entitle him to cash when he moves or to a certificate of equity in the fund? If so, and his next employer does not operate a pension system, what does the employee do with it?

At what age should a worker be entitled to a pension? Should retirement at that age be voluntary or forced? Suppose a worker dies before retirement age, what happens to his family? And, in any case, what assurance has the worker that the pension fund is safe? Or that his employer will be in business when he reaches retirement age?

To what extent will the operation of private pensions endanger the employment of older men in industries throughout the country? Or is there to be no minimum length of service to receive a pension?

From these questions, plus the size and scope of our organization, you can understand why it is impossible for us to prepare a model private pension plan to assist our local lodges in their negotiations.

Senator MILLIKIN. How are your members distributed according to size of the business? To use a very rough generality, how many of your folks are in big business, like steel or automobile companies, and how many work in smaller establishments? Do you have any way to put that into categories and give us an estimate of some kind?

Mr. NELSON. I can explain it broadly, and then we can furnish you with other specific information on it if that would be your desire.

Senator MILLIKIN. What I am getting at is that I am fully conscious of the difficulties of private pension plans, especially with little companies. I mean, they cannot assure the permanent solvency of their fund. And so I was curious to see how many were working with big outfits, that might have a presumption of continuance, as against little outfits, where the presumption of long continuance, according to the odds of business, is rather against them.

Mr. NELSON. To answer that, Senator Millikin, I would say that in the large majority we cover the so-called smaller plants; that is, the small machine shops, your garages, your smaller industrial plants. Now, by "smaller," I mean 500 and less employees.

Senator MILLIKIN. That is what I wanted to get at.

Mr. NELSON. We do have membership, in fact we do represent the membership, in such large industries as, for example, Boeing Aircraft, Consolidated Vultee Aircraft. We have some membership in Nash Kelvinator. Usually there, though, in the last ones I referred to, such as Nash Kelvinator, we represent the tool room because we are a semicraft organization, and in some cases we have to cover a whole plant because of NLRB regulations, but in the man we take our unit, the unit of the skilled mechanics in that particular plant. In the majority of all of the plants we cover, those 11,396 agreements that I mentioned, the majority of those are small companies, most of them with two to three hundred employees.

Senator MILLIKIN. Thank you very much.

Mr. NELSON. Another tragic result of private pensions will be to freeze the fluidity of the labor force. The free movement of our labor forces has been one of the important reasons for our success as a manufacturing Nation. No one would dare to contend that without the mobility of the labor force America could have produced

the staggering record in arming the arsenals of our allies during the last war which was established. Private pensions would seriously retard movements from job to job. To evaluate this harm in dollars and cents is, of course, impossible, but we know it will cause irreparable harm to the employees' retirement benefits.

Senator MILLIKIN. Mr. Chairman, may I ask the witness another question?

The CHAIRMAN. Yes, Senator.

Senator MILLIKIN. Under this private pension business, do you not build up a discrimination between workers doing the same kind of work, those working for a big company that can sustain a private pension plan, and those working for the little companies that you are talking about that may not be able to sustain them? In other words, you and I start out at the same age learning to be machinists. We both operate a lathe, let us say. Time passes on, and we both get to be 65. Let us say I have worked for Big Steel, and I have a pension now of $100 a month. You have worked for a smaller fellow, and you have no pension at all, except what you may get out of social security. And unless the social security is, roughly, equal to what you are getting under your private plan, you have a lot of dispossessed citizens that will feel distinctly a sense of discrimination. I mean you and I both have done the same kind of work. You have worked for a little fellow across the street, and you wind up without a private pension. I work for the big fellow on the other side of the street, and I wind up with a private pension. And I am not so sure that that is good for social feelings in this country.

Mr. NELSON. Senator Millikin, you have said in a few words what we have been trying to say here in a good many words. I mean, that is just exactly the way we feel about it. It is discrimination. But even going beyond that, you see, in most of your skilled trades you will find that the craftsmen there, because of the make-up of the companies themselves, will change jobs as work progresses and as natural changes take place in industry. So as a result some of them might work for a large company for years and then find that that type of work that they are doing there is completed or is in such a position that it can be reduced in force; that is, in number of employees; and then they just naturally transfer and go on to other jobs, and they are constantly building up. And in changing from one job to another there is going to be discrimination, very much so; and there definitely is discrimination between the man who is a good skilled mechanic and can afford to step from job to job and the fellow who remains with the one big basic company.

Senator MILLIKIN. I am not going to leave Big Steel. You are going to try to get into Big Steel. But everybody cannot get into Big Steel.

Mr. NELSON. That is right.

Senator MILLIKIN. So you are going to have a sense of frustration and discrimination.

Mr. NELSON. That is correct.

During the last war we encountered some difficulties in transferring employees to different companies and locations because they did not have adequate workers' compensation and other protection in the States in which the new plants were located. We have already been advised that in the event of another emergency, it will be necessary

to recruit mobile teams of workers to guarantee full production. These mobile teams will have to be the best mechanics we are able to secure so naturally this means workers who are in the upper age bracket. To a large extent, it will be these workers who have built up the highest pension benefits under the private pension plan and therefore the most reluctant to leave his regular employer.

These are some of the reasons why we believe in a pension system on an over-all basis administered by the Federal Government:

1. That Federal pensions can be provided at a lower cost.

2. If economic conditions warrant, a Federal pension program can be more easily amended to provide sufficient annuities.

3. Employees will be continuously covered when they change from company to company. Here we want to emphasize that private pensions have a detrimental effect upon an employee's freedom in choice of where he wants to work, and the more general private pensions become, the harder it will be for employees over 45 years of age to obtain employment.

The problem will become increasingly aggravating as more and more people are covered by pension plans. It will be less difficult to solve if all workers are covered by one plan such as a Federal system.

Try to imagine the mess we will be in if we have our old-age pensions being paid by thousands of private companies, trust funds, banks, and insurance companies, not to mention the problem created by having a substantial block of our aged population who weren't fortunate enough to work for a company which provided a private pension plan.

One final word about private pensions. We must realize that not all employers can provide liberal pension plans. In order for a plan to be economical many persons must be covered so the administrative cost can be spread over the entire group.

There is another basic reason why we believe that improvement of our established social-security system is of paramount importance today. Recent studies indicate that the population of those over 65 years of age is steadily increasing at a moderate rate. In 1948 there were 10,000,000; in 1960, it is estimated that there will be 18,000,000 persons over the age of 65 years.

From our experience we know that many workers over 65 years of age are today continuing on the job because present old-age benefits are not sufficient to guarantee them against dependency. In our organized plants these men are protected by seniority and with but few exceptions, they have a contractual right to remain at their job as long as their health allows. These men weigh their old-age security very closely before leaving their job. These men are proud, hard-working human beings; they do not want charity or the indignity of a means test; they do want lawful insured security which will allow them the dignity of retirement. That is why we do earnestly appeal for early enactment of a sound, expanded system of social security.

Today we are confronted with the fact that unemployment is steadily on the increase. According to census takers there are at present 4,700,000 unemployed in this country and it is estimated that another 1,750,000 college and high-school graduates will join the labor force this spring and summer. We believe that many jobs could be found for these people if it were possible for those who are employed

and over 65 years of age today to receive dignified retirement pensions.

This partially explains why I appear here today to ask for enactment of H. R. 6000 which would extend and improve the present social-security system.

We commend this bill because it particularly extends protection to cover the risk of total, permanent disability. It extends coverage to millions of new workers. It increases monthly benefits about 70 percent to those persons currently receiving benefits. It adheres to sound principles of contributory insurance by providing increased contribution rates by both the employer and employees. These improvements, as well as the additional provisions, enacted by the House of Representatives last session, are timely and reasonable. There are, however, certain recommendations which we wish to propose to the perfection of H. R. 6000.

The first relates to the benefit provision and the annual wage base. Examination of the benefit provisions of the present act shows how outdated our social-security system has become. The limit of $3,000 set in 1935 when the act was passed covered almost all wages earned in covered employment. While the bill you are now considering raises that amount to $3,600 it still falls far short of including the proportionate wage today. To correct this ratio in the annual wage base, this figure should be set at least on a $5,000 base. At present the average yearly rate for toolmakers in our organization is $4,264. With a wage base of at least $5,000, we believe that the benefit formula can provide a sound base of retirement insurance which can guarantee an adequate base of security.

Senator MILLIKIN. On that figure you gave us: Is that the average of a man who remained fully employed during the year?

Mr. NELSON. Yes, sir.

On this formula of setting benefits in relation to past earnings we believe that the benefits provided by the present Social Security Act should be increased so that an employee who reaches retirement age is entitled to receive a monthly annuity equivalent to at least one-half of the average monthly salary that he earned during the 10 years immediately prior to his retirement. If the act holds us to a $3,600 figure then those with the higher rate must still negotiate the added percentage of their wages and we will still be faced with the same complex problem.

The second recommendation, which we wish to propose for the improvement of H. R. 6000, relates to the retirement age of a worker's wife or a retired woman worker. As the act is presently constituted, many men who are eligible for retirement benefits find that the average 3-year difference between his age and that of his wife, prevents her from receiving her rightful benefits until she reaches the age of 65. To alleviate this situation, we propose that the age requirement for a wife to participate in her husband's retirement benefits should be lowered to 60 years. This same age of 60 years should also be applied to a woman who retires from employment. The correction of this discrepancy has been recognized for a considerable period of time; in fact, it is one of the recommendations contained in the study made by the Senate Advisory Council on Social Security in their report published in 1948.

In conclusion, we recommend that your committee give utmost consideration to extending protection to the veterans of World War II,

the employees of Puerto Rico and the Virgin Islands, and aid to dependent children. The disability insurance provision as contained in H. R. 6000 should be enacted as an important part of this measure. Our members employed by the railroads are protected by disability insurance and we know from experience that this is a workable, worthwhile program.

To summarize, we are now at the crucial point of a sound, comprehensive system of social security without discrimination to any segment of our working population, or a system of local private plans with their recognized risks and danger. We believe that your committee and the Congress can render a distinct service to the people and welfare of this great country by enacting constructive amendments to our present, accepted Social Security Act. We know our people have been patiently waiting for many years now to have this done. This system gives them the opportunity that they desire, to be common stockholders in Corporation America. It is, therefore, our plea that these amendments will receive your respectful attention and enacted without further delay.

The CHAIRMAN. Thank you, Mr. Nelson.

Mr. NELSON. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. W. D. Dobbins?

STATEMENT OF W. D. DOBBINS, W. D. DOBBINS & SONS DEVELOPMENT CO., BIRMINGHAM, ALA.

Mr. DOBBINS. Senator George and Senator Millikin, there is something I have in my brief that I would like to hand you, and then I have a speech that it will take me just a few minutes to deliver.

But first I would like to tell you my business.

The CHAIRMAN. Yes, sir?

Mr. DOBBINS. I am a businessman, and a hard-headed one at that. And I venture to say that you haven't had many businessmen before this meeting. As a general rule, our businessmen are interested in one thing, and that is their business.

I am reminded of what our Sunday-school teacher said. He said, "What would a burglar be interested in? Just being let alone." That is what the businessman wants, just to be left alone.

But I am afraid if we don't pay more attention to our form of government we will all want to be left alone.

My line is real estate. These are my sons [displaying photographs], and we built over a thousand houses last year. Just let me show you these, briefly.

The CHAIRMAN. Prefabricated houses? Or the conventional type?

Mr. DOBBINS. Well, we built them with machinery, you understand; heavy machinery. Everything is being built with heavy machinery now. When we talk today about employing people on roads, you know, we don't build roads with people any more. We build roads with machines and not with people. I just want to show you this, and I want to leave it with you. There is just one little paragraph, right there. I wish the Senators would read that, because that's what we depend on in this country. You see right here in this paragraph?

Now, without people employed, you understand, my property is not worth the paper it takes to write the deeds. And now it resolves itself down to a question of "How can we employ those people?" That

is the reason I have come before you. This is by Livingston, here, on How Efficiency Hits Employment in the United States. There are 4,700,000 unemployed now. We have poverty from one end of this land to another.

Now, here is a man right here, in Look magazine. He says, "Don't kid yourself about pensions. None of them will work." And he is right—if we are going to set our pension system up like a private insurance company. Because the private insurance companies today own $55,000,000 in bonds of the United States Government.

Senator MILLIKIN. You must mean 55 billions.

Mr. DOBBINS. Billions. It is easy to get those millions and billions mixed.

We are lending them against $13,000,000,000. And that should be collected this month, in my judgment, and it is distributed back to our people next month.

Right here is something about Senator Margaret Chase Smith. She came before you and she says:

> If we are as great a nation as we are, if we possess the genius to build an atomic bomb or hydrogen bomb that can threaten the very existence of the world, surely we must possess the will to provide the means of security for ourselves and for our fellow Americans after they have given the best years of their lives to the development of the country.
>
> Insecurity breeds war. A happy and secure people is the best guaranty against it. Adequate social security can make a great contribution to the realization of permanent peace.

And right here in America is the place to start.

Now, there is one other thing, right here, in Life magazine. It just appeared last week. It speaks of the Great Glut—all this farm stuff that we have got. I have been a farmer myself, farmed until I was 35, and was considered one of the best farmers in Jefferson County. Look at the potatoes piled up. And that is cottonseed. And I have sold milk for as little as a nickel a gallon, 60 cents a hundred pounds, to the Kraft Cheese Co. And see our precious little children starving to death because they didn't get it, couldn't get it.

Now, I am not here to talk pensions. I am talking distribution. That is what we have got to have if we live. You take this room, here. If we didn't have distribution of air in this room, we would soon perish. If a fan didn't turn, with one inlet coming out and one going in, I wouldn't give a nickel for it. Everything depends upon the circulation system.

Now, they sent me this stuff before, and I read what Senator Millikin and Senator Taft and all of you said. I have kept this right by my bed, and I have read it, and I have gone right through this book right here. I have put lots of time in it. In fact, I have developed a plan myself that would employ 10,000,000 people, that wouldn't cost a dime. This bill will not cost a dime. So if you will bear with me just a few minutes, we will go over this together. I hope you have a copy of this. I had these passed around.

The CHAIRMAN. Yes, sir. We have them.

Mr. DOBBINS. Gentlemen, Senators, and renowned statesmen, now this is imaginative thinking, our problem is not production, our problem is distribution, our problem today is not pensions or social security, but how can we give employment, profitable employment, to our great masses of unemployed and our great masses of youngsters who are

finishing high school and college by the millions. How can we give them good government and profitable employment? No unemployed person can pay tax or living expenses; therefore he is headed for trouble, jails or penitentiaries, and we are forced to care for him.

In Alabama since the war ended our prison population has risen from 3,500 to 7,000, mostly because of unemployment.

We can best do this by passing Senate bill 2181, by Senator Claude Pepper, cosponsored by Senator Langer, Senator Elmer Thomas, Senator Glenn Taylor, and Senator Sheridan Downey. How can this bill take care of the unemployed? By skimming cream off of all people who make more than $250 per month at 3 percent, collecting this money monthly, and putting it back in circulation at the very lowest ebb of humanity to all people past 60 years of ago who will retire and spend money in 30 days. It is estimated that this bill will bring in about $2,000,000,000 per month. If this money is put back in circulation at once, it will create such a demand for goods, food, medicines, and services until it will take care of all unemployed for a long time.

We holler inflation; then we holler depression. Let's define these two. Inflation means when there is more money than goods to buy. Depression means simply when there is more commodities than money to buy with. Money is very simple, but the simple things are what nobody understands. There are two ways to have more money. The Government can print it, or print bonds, which is the same thing, with the exception that the bonds pay a small return, or you can make money circulate. By retiring our senior citizens, say, at $100 per month, with the above sales tax as suggested, you can circulate our money so fast that by taking care of our senior citizens, we can also take care of ourselves. We have money in a healthy way, like the blood in your body circulates through your heart, 14 tons a day, although we only have 5 quarts of blood, making $1 do the work of $20, or 5 gallons of water in an automobile engine circulating millions of times.

We can never save ourselves from communism by the atom or hydrogen bombs. The only way we can save ourselves is by giving our people a better form of government, by giving our people real security by profitable work.

Now we used to work 12 hours a day 6 days a week, and we work now 8 hours and 5 days, or 40 hours. Why? To spread employment. When a man works from 20 years to 60 years, or 40 years, retire him. Why try to work the aged or let them starve or live off their sons and daughters? We can retire them at the age of 60, which will not cost us one penny, because the money in circulation will employ so many people and buy so much goods that it will boost our national income to $400,000,000,000. Make us prosperous, and make them happy. Then, by doing so, we can have a bunch of youngsters profitably employed who can pay for their homes, can raise a happy family. There is only one suggestion or change that I would make in the above bill. I would pay a flat $100 per month to all above 60. All money above that collected would go to retiring our national debt. We must retire our national debt. We must retire our national debt and live within our budget.

This bill offers the only solution to full profitable employment and paying off our national debt. The only way we can possibly help our

foreign neighbors is by making our Government work here at home and by setting an example for them to go by.

Devaluing the currency did not help Great Britain. What they needed was a market. They have it right at home in their millions of people, who need buying power. If they had this plan in Great Britain instead of the starvation plan, the Beveridge plan, with $7 per week, they would not need our help. They have not learned the secret of making money circulate. The reason we did not have a depression after this last war was that we paid $20 per week plus other benefits to our soldiers. This brought into my State $80,000,000 per year. Multiply this by 10, the money in circulation, and you have $800,000,000 purchasing power to keep the wheels of industry moving.

We have $12,000,000,000 in our social-security fund. We have millions unemployed. It reminds me of a rich man who has worlds of food but is constipated. What the man needs is a compound cathartic pill. What we need is a sales tax paid by all people, collected monthly, and distributed back monthly to all people past 60. The sales tax and distribution will work on our economic body the same as the cathartic pill did on the rich man.

Today the money taken out of social security and hoarded would be spent in industry if left in the pay check of the worker. As it works today, it takes money from our people, our people who need it most, and hoards it in social-security funds. If we could only think of the needs of our Nation today, instead of crossing all the bridges 50 years hence!

In conclusion, we only need three taxes: sales tax, income tax, and inheritance tax. We need our tax laws simplified. All taxes should be collected monthly, instead of yearly. It would be a great deal more simple to keep up with taxes each 30 days. It would keep money circulating on a more healthy basis and would give employment to a great many more people. Our whole democratic form of government revolves around profitably employed people. Unless we can give profitable employment to our people, we will go communistic. Our people must work and must eat.

Our problem is not production. Our problem is distribution.

The CHAIRMAN. Thank you very much, Mr. Dobbins.

Mr. DOBBINS. I appreciate very much coming before you fellows, and this is something that I have given much thought and time to.

And there are lots of suggestions I could make in passing this bill, from a sales-tax standpoint.

The CHAIRMAN. Thank you very much.

Mr. DOBBINS. Thank you.

The CHAIRMAN. Mr. Altekruse?

STATEMENT OF NEIL ALTEKRUSE, ARTIST, FORT WAYNE, IND.

Mr. ALTEKRUSE. Mr. Chairman and members of the committee, I am Neil Altekruse, an artist from Fort Wayne, Ind. The letter I wrote to Senator George is the first letter I have ever addressed to any Member of Congress. I was astounded when I received his invitation to appear before this group. You are probably just as surprised that I accepted.

I want to tell you right at the start that I am not a social-security expert. I am not an insurance expert. I am not a student of economics. There are some people who even think I am not a good artist—in other words, I am in no way technically qualified to argue about this law.

I am nothing more than an average American citizen with average intelligence. I am here only because I am very much worried about the future of my country and its solvency. I am violently opposed to continued deficit financing and to increasing our national debt. I am fighting-mad about the general type of legislation being proposed in Congress when I think of the real problems facing the country and the world today.

I am here to protest any bill which proposes to increase coverage, benefits, and tax rates in the name of social security, because I think the original law is, to put it simply, no damned good. Why? Simply because money being collected in the name of social security is providing none of the things it is claimed are being provided. The money is being spent on the general cost of government and is being charged back to the taxpayers in other forms.

Here, to my simple and unsocial mind, is what is happening. You have here an ordinary worker who earns, say, $2,500 a year, and his employer. Together they invest at today's 1½ percent rate, a total of $75 in what they believe to be insurance for the worker's old age when he is no longer productive. This $75 is credited to the worker's account by your Social Security Administration, and is immediately turned over to the Government for general spending. A bond is placed in the offing. This bond, which in private hands would be labeled an asset of the future, is, in Government hands nothing more than a debt liability. At the present time you have more than $11 billion worth of such debt liabilities in the social-security account. You know as well as I do that there is no assurance that the Government will be able to collect enough taxes to retire these bonds when they come due. And I don't need to remind you that they have only one source from which to collect taxes and that is the taxpayers of the United States. Why, in Fort Wayne recently, a group of men from the Treasury Department were in town trying to raise money to promote a big bond sale in order to get enough money to take care of the bonds that are due in 1950 and in 1951. And these bonds, mind you, were issued before the war or at its very inception and are mere peanuts in terms of the ones that will be coming due in the next few years.

So, you see, in this 10-year cycle the taxpayer is obligated for a total of $175; $75 in direct taxes on him and his employer, and $100 in a Government bond which the taxpayers money must retire. But that isn't all. Because all the money collected for social security trust funds—and also from postal savings, veterans insurance, and bank deposit insurance trust funds—has been spent, the national debt has been increased to a point where annual interest charges alone are $5.6 billion a year today. With a total of approximately 56 million employed people in the country, kindergarten mathematics shows you that the average wage earner gets another bill for $100 just to meet his year's interest payments. I, of course, realize that the proportionate share for each taxpayer may not be equal, but I am sure you get my point. This means, roughly speaking, that under the present social security law and with present administration policies, the average Joe Blow who earns $2,500 a year is getting a bill of $275 in taxes. You may argue that this is not the direct cost of social security. But it is the cost to the taxpayer because of the social security law. If the Government spenders never had access to the $11 billion in the first

place, it seems reasonable to assume that they might not have been so willing and anxious to spend it.

Let's examine briefly the reasons for H. R. 6000.

1. It proposes to increase benefits. Why? Because the cost of living has increased so much that the purchasing power of the dollar can no longer meet the cost of subsistence for the beneficiaries of this legislation.

And why has the cost of living increased? Because of Government spending which includes all the money collected in the name of social security. Government itself has caused most of the inflation in the country. But what of the other people in the country who are faced with the same situation? I dare say none of you have received anywhere near the number of letters from social security recipients that you have from property owners protesting the rent freeze which places them in a relatively much worse position, or from others living on fixed incomes from private investments who have been discriminated against in wholesale fashion by the same leaders who protest on behalf of the social security beneficiaries. To say nothing of the millions of E bond holders whose $25 will in terms of purchasing power be much less than $18.75 they invested originally.

2. It proposes to increase coverage to take in millions of more people. What better proof do you need that the law is discriminatory in the first place?

3. It proposes to increase the tax base from $3,000 to $3,600 to raise more money.

I charge that the only reason the Social Security Administration is so anxious to increase coverage and rates under this crazy law is to have available now more money to spend now on more wild-eyed schemes to control more activities and more votes and increase the debt still further, thereby further reducing the purchasing power of the dollar. If you pass this bill, you can be sure that within another 2 years you will be asked to consider another similar bill to increase benefits again for exactly the same reasons you are being asked to increase them today. Even you must wonder where it will all end.

Now let's have a look at who is pushing this legislation. How many old people and dependents have been clamoring at your doorsteps for this bill? It is my guess that this bill was drafted by the legal staff of the Social Security Administration to meet an imaginary need proved by a lot of assembled statistics. It is being pushed by Government employees who are anxious to increase the size and scope of their own influence, add more people to their department pay rolls, and probably make necessary new and enlarged quarters for an army of statisticians to paw through twenty or thirty thousand additional so-called active accounts, and make up some more pretty charts and graphs and pies like are contained in this testimony here which Walter George sent me—to waste your valuable time on a later date.

Book: I tried to read this stuff. Honest I did. All I have to say is that if this is the kind of stuff you are asked to listen to day after day, I wonder that any of you are still in your right minds! Costs in dollars and cents are very adroitly covered up by pecentage figures, but from this very testimony I have been able to figure out the following: There are now 35,000,000 people covered by the old-age and survivors insurance programs. But there are 80,000,000 so-called active accounts or 235 percent of the actual beneficiaries. These cards cost

12 cents apiece to handle, or a total carrying charge of some $9,600,000. But actual payments, actual benefits, are being made to only 2,700,000 people. In other words we are today spending close to $10,000,000 to make small hand-outs each month to 2.7 million people. What kind of business do you call that? When you look at what would happen under the bright and shiny new proposal, using the same ratios, you will increase your annual covering charge by more than $3,000,000 every year. In addition, you know, of course, that it will mean adding thousands more people to the already overstaffed Social Security Administration and probably make necessary tremendous investments in additional equipment and new and larger quarters to operate. It is all like a fantastic nightmare.

O. K. then. Just what is the real problem? And what is the real answer to that problem?

I will agree that we have a moral obligation to take care of our old people, and others who for some reason or other are unable to provide for themselves. But I will never agree that the social-security law is the right answer. It is discriminatory—it only helps 2.7 million of over 11 million old people in this category. It is expensive—so expensive from an administrative standpoint that it is incredible. It is dishonest—no Government insurance program can be operated on the same basis as a private insurance program, because the Government cannot be both debtor and creditor. It is inflationary—it is providing vast sums of money for the Government to spend at a time when the purchasing power of the dollor is taking a gigantic tailspin. It is immoral—it bilks taxpayers of billions of dollars for one alleged purpose and spends the billions for other purposes. It is hopelessly involved—it is impossible to administer any program of this magnitude at a Federal level with any degree of efficiency or cost-consciousness. It is cheating future generations by binding our children and grandchildren to commitments which nobody in Congress or in the country has the right to do, because none of us can possibly know what conditions will be at that time.

Why in the name of common sense don't we chuck the whole fool business and charge it off as a stupid error, which is what it is. Why in the name of reason don't we assume the responsibility for taking care of the aged and needy of our own generation and let future generations do likewise? And why in the name of heaven don't we do this now while the opportunity still presents itself? And why in the world don't we handle it at a State or local level which could compensate for varying economic conditions in terms of what we can afford to spend?

When are we going to stop spending money we don't have for things we don't want and can't afford? When are we going to stop cheating future generations by making long-term commitments with respect to future payments that cannot be met? When are we going to stop worrying about the small number of people on social security and start worrying about the 150,000,000 people who must—under any laws or circumstances—work to support those who cannot support themselves? Above all, when are we going to stop all this fuss about the exception to the rule in this country whose importance has been magnified a thousandfold by pressure groups and bureaucrats and start spending our time helping the people who are America to help themselves to whatever kind of a tomorrow they may choose?

It is past time that we said "No" to all the thousands-and-one cockeyed schemes which are bankrupting the country and destroying the moral fiber of the people through trying to do for them what every American should have the right and choice to do or not to do for himself. It is past time that the Members of Congress said "No" and spent all of their time trying to settle the country's real problems.

With Russia possessing the atom and hydrogen bombs and daily winning the cold war, with John L. Lewis paralyzing the entire country through his abuse of power, which is still not curbed legislatively, why in the world Members of Congress are wasting their time on the type of nonsense which is making the headlines today is simply beyond the comprehension of the man on the street.

On the solvency of the United States rests the hope of the people not only in this country but in the world. The average American is asking this question: "How long can this continue?" Not only are we going in debt $15,000,000 more every time the sun sets, gentlemen, but almost without exception every so-called piece of major legislation being considered today, is hastening the day when our economic structure can no longer support the political structure, and they will both collapse. You know that. I know that. Everybody knows that. We are all looking to the Members of Congress to stem the tide. The time is short, gentlemen. The time is now.

Senator MILLIKIN (presiding). A very interesting presentation. Thank you very much for coming.

Mr. ALTEKRUSE. Thank you, sir.

Senator MILLIKIN. The next witness is Mr. J. B. Robinson of the National Association of Magazine Publishers.

STATEMENT OF JESSE BAY ROBINSON, REPRESENTING THE NATIONAL ASSOCIATION OF MAGAZINE PUBLISHERS, INC.

Mr. ROBINSON. If the committee please, I represent the National Association of Magazine Publishers, Inc. This is the trade association of the magazine industry in this country.

The members of this association publish upward of 300 magazines. They consist of the general magazines that you see on the newsstands and in your home. They also publish a great many trade papers, agricultural publications, some religious publications, and others.

The publishing industry is very much concerned with the employee definition in H. R. 6000, and I desire to get on record for the association an opposition to that definition. The reason that the publishers are so concerned about this definition is because of the large number of subscriptions which are obtained by individual solicitation.

As you know, magazines are distributed over the newsstands. They are distributed in fulfillment of subscriptions; some subscriptions are obtained by mail; others are obtained by personal solicitation.

Over the years, on the average, about 55 percent of the subscriptions, all subscriptions, which the magazines receive are taken by personal solicitation. This involves a great many people. Those people are not employees under ordinary common law tests. They have been shot at by the Treasury Department at times and have successfully defended themselves under employee-employer tests as they are now understood.

I have prepared a statement analyzes the "employee" definition in this bill in relation to the magazine-soliciting business.

I am going to ask not to read it. It covers the technical side of the definition and the problems which will arise for the industry if this bill is passed with this definition.

What I would like to do, if it is satisfactory to the committee, is to submit this statement for the record and introduce Mr. Morris, of Sandusky, Ohio, who is in the subscription business. He runs a subscription agency. He has been in the subscription business all of his life. He will be able to tell the committee the facts as to how subscriptions are taken in this country by personal solicitation, and he will be able to tell you how he and others in the magazine industry think this employee definition will hit them.

Senator MILLIKIN. Your formal statement will be entered into the record.

(The statement referred to follows:)

STATEMENT BY JESSE BAY ROBINSON ON BEHALF OF THE NATIONAL ASSOCIATION OF MAGAZINE PUBLISHERS, INC.

This statement is submitted on behalf of the National Association of Magazine Publishers, Inc., in opposition to the definitions of the term "employee" contained in sections 101 (a) and 206 (a) of H. R. 6000, with particular reference to the third and fourth paragraphs thereof, which, in each instance, are identical and appear on pages 49–51 and 150–152 of the bill. These paragraphs purport by the process of statutory enactment to make individuals "employees" for purposes of the Federal old-age and survivors insurance system and Federal Insurance Contributions Act, who would not be "employees" under the usual common law rules.

The National Association of Magazine Publishers, Inc., is a trade association of the publishers of approximately 315 nationally known and distributed magazines, having a combined circulation of approximately 120,000,000 copies per issue. The magazines published by the association's members include general magazines, trade and business papers, agricultural publications and others.

The concern of the magazine industry with the employee definitions in H. R. 6000 is based on the fact that magazines supplied to the reading public in large part are supplied in fulfillment of subscriptions which are obtained through personal solicitation conducted by individuals. It is estimated that approximately 55 percent of all subscriptions received by magazine publishers over the last 20-odd years have been obtained by such personal solicitation. This is an overall figure, based on the best available records. In the case of some individual publishers, however, particularly a number of the smaller ones who do not have substantial newsstand distribution, their circulation is almost entirely dependent upon personal subscription solicitation.

The problems which will face the magazine publishing industry if H. R. 6000 is enacted with the present employee definitions, will arise because of the many individuals who solicit magazine subscriptions and the many different ways in which they carry on solicitation. Arrangements for magazine subscription soliciting are made with individuals by publishers directly and by subscription agencies of various kinds. Virtually anyone who does not have a known record or reputation for dishonesty or fraud can obtain magazine subscription blanks and engage in soliciting under the long-established practices in the industry. Because of the general informality of the arrangements, the lack of regular reporting requirements and the fact that the arrangements are seldom formally terminated, it is impossible to be exact as to the number of individuals involved. It has been estimated, however, by persons familiar with subscription operations, that if the paragraphs of the employee definitions referred to are enacted, question will be raised as to the status of 150,000, or more, individuals.

CHARACTERISTICS OF MAGAZINE SOLICITATION

Both men and women solicit magazine subscriptions. A relatively few solicit with some degree of regularity and, for a time or from time to time, engage in

soliciting as a full-time occupation. Many more solicit sporadically or as part-time activities in connection with other occupations, as in the case of school teachers and housewives or of students who solicit during vacation periods. Many solicit as a means of supplementing other income or filling in times of unemployment in their regular occupations.

The operations of magazine solicitors are carried on all over the United States, at places removed from the offices or places of business of the publishers or subscription agencies to which they send the subscriptions obtained. Some magazine solicitors go from door to door. Others solicit in business establishments of their own or where they may be employed. Still others use the telephone or personal correspondence. Such individuals generally pursue their activities in the manner and to the extent which they themselves determine and at such times and at such places as may suit their own conveniences and purposes. Many solicit subscriptions for several different magazines of different publishers at the same time. Their income is entirely dependent on their individual efforts and persistence, exercised independently in their own way to such extent as they may choose.

Actually, magazine soliciting calls for a marked degree of individual initiative and enterprise without the helping hand of the publisher or the subscription agency. In the nature of things, except in a very few instances where publishers and subscription agencies deliberately endeavor to secure magazine subscriptions through employees, the assistance and control which publishers or subscription agencies can render or exercise over the means and methods of the operations of the magazine solicitors are extremely limited or impossible.

The relationship between publishers or subscription agencies and solicitors of magazine subscriptions, with the few exceptions mentioned, is clearly not that of employer and employee, as those terms have heretofore been understood and defined. However, since social security and unemployment insurance legislation was first enacted, a number of publishers have had to defend themselves by proceedings in the Bureau of Internal Revenue and the courts. Although these proceedings have generally resulted in the determination that no relationship of employer-employee exists, there can be no question but that it is the desire and purpose of the administrators of the social security and corresponding contributions and taxing acts to extend the scope of the employee definitions, as they presently stand, to cover magazine solicitors and many others engaged in outside selling occupations. There can also be no question but that the fourth paragraphs, especially, of the employee de initions in H. R. 6000 would place in the hands of these administrators a tool with which they could effect such extension, in the exercise of uncontrolled discretion, to unknown and unpredictable limits.

PRACTICAL EFFECTS OF THE PROPOSED EMPLOYEE DEFINITIONS

The practical effects of the enactment of the third and fourth paragraphs of the employee definitions in H. R. 6000, if the administrative authorities succeed in applying them to magazine solicitors, will be serious. Publishers and subscription agencies will be faced with two problems of the utmost difficulty in connection with the withholding requirements of the Federal Insurance Contributions Act and the keeping of records and reporting.

(*a*) Withholding: Most magazine solicitors retain for themselves a percentage of the subscription price out of the payments which the subscribers make to such solicitors, for or on account of their subscriptions. Publishers and subscription agencies simply are not in a position in such instances to comply with the withholding requirements of the Federal Insurance Contributions Act. They will be faced with an impossible situation involving the risk of penalties, if they are required to withhold contributions in respect to these magazine solicitors.

(*b*) Records and reports: The burden of keeping records and reporting in respect of magazine solicitors is quite as serious as withholding, although harder to demonstrate. It is at this point, because of the expense involved, that the impact of the proposed definitions will be most severely felt. Quite conceivably, the financial burden of setting up and maintaining pay-roll records and preparing and filing returns for magazine solicitors would amount to more than the taxes which would have to be paid by publishers and subscription agencies. There is real apprehension in the industry that some publishers, particularly smaller ones who rely largely on subscriptions for circulation, could not survive the event.

The reasons for such apprehension arise out of the facts. It is a matter of fact that a very large proportion of the individuals who obtain authority to

solicit magazine subscriptions turn in subscriptions for no more than a couple of weeks and only a few do so for more than a period of a year. In addition to this short-term activity, there is a great deal of irregularity. It is not at all uncommon for a publisher or subscription agency to receive subscriptions from an individual more or less regularly for a period of time and then, after several weeks, during which he may be inactive or engaged in some other activity, about which the publisher or agency does not know, the individual may again send in further subscriptions.

The burden and expense of record keeping and reporting in connection with various taxes is, of course, a subject of some complaint in industry generally. In the publishing industry, however, by reason of the foregoing short-term activity and irregularity among magazine solicitors, these burdens and expenses would be unreasonably heavy, if such solicitors should be held to be covered by the withholding requirements of the Federal Insurance Contributions Act.

It is not irrelevant to note here the burden on the Treasury Department which would also result from an application of the proposed employee definitions to magazine solicitors. It is a characteristic of magazine soliciting that solicitors frequently shift from one publisher or agency to another. Also, there are many instances where solicitors solicit subscribtions to magazines of more than one publisher. Many solicit as a part-time occupation in addition to being engaged as an employee in some other occupation. In such a changing and involved situation there is bound to be a high incidence of excess withholding by the various employers or so-called employers, and, consequently, an unusually large number of adjustments and refund claims. This is surely a factor to be considered, particularly as it wouldn't arise, where a self-employment benefit and tax plan is provided, if only the well-recognized, common-law test of employer-employee is adopted.

THE PROPOSED EMPLOYEE DEFINITIONS ARE UNCERTAIN AND UNSOUND

The application of the proposed employee definitions in H. R. 6000 to magazine solicitors which has thus far been assumed is based on the well-known attitude or desire of the administrators of the social security and related taxing acts to extend coverage. Actually, such application is not conceded. The part of paragraphs (3) of the definitions which refers to house-to-house salesmen (subdivisions (G)) is a cause of concern, not because its provisions appear on their face to fit magazine solicitors, but because, by going beyond the common law tests of the relationship of employer and employee, it will no doubt cause the administrative agencies to raise questions, which will involve publishers and agencies in unnecessary explanations and, possibly, litigation, with the costs and expenses involved. The fourth paragraphs of the definitions are more serious and require more extended discussion. By picking out some of the common law tests of the employer-employee relationship to set up a separate category of statutory employees, but failing to specify, beyond referring to their "combined effect," how they are to be applied, the paragraphs are so uncertain and elusive that uncontrolled administrative discretion and determination of their application in individual instances appear as the only way in which the many questions which arise under the tests can be resolved.

Certainly, under the language of the fourth paragraphs, neither publishers and subscription agencies nor even the magazine solicitors themselves will be able to tell at the outset whether solicitors are employees or not. On the face of the paragraphs, an individual becomes an employee who has the "status of an employee," as determined by the "combined effect" of seven tests, namely:

"* * * (a) control over the individual, (b) permanency of the relationship, (c) regularity and frequency of performance of the service, (d) integration of the individual's work in the business to which he renders service, (e) lack of skill required of the individual, (f) lack of investment by the individual in facilities for work, and (g) lack of opportunities of the individual for profit or loss."

The use of the term "employee" in defining an individual's status as an employee is plainly not conducive to understanding and it is certainly not clear how the seven tests are to be weighed and applied to produce a "combined effect" in determining if an individual has such a status. It seems obvious that the administrators of the acts will have to promulgate regulations to make the fourth paragraphs workable, and this raises the fundamental issue of who is to make the law.

The attempt by the administrators to establish these seven tests or something closely resembling them is of recent history and need not be detailed to this committee. For present purposes it is sufficient to note that, in connection with the regulations proposed some 2 years ago by the Treasury Department, on the basis of some obscure language in the Supreme Court opinion in *United States* v. *Silk* (331 U. S. 704), the report of the House Ways and Means Committee on House Joint Resolution 296 (80th Cong.) observed that:

"The issue involved in the proposed regulations is whether the scope of social-security coverage should be determined by the Congress or by other branches of the Government. * * *

"* * * under the proposed regulations, the question of coverage will be determined not by the Congress, but by the Social Security Agency, the Treasury, and the courts."

In the unfortunate event that this issue should be resolved in favor of the administrative authorities writing the law as to coverage, the solution is not likely to result in relieving the magazine or any other industry, or the individuals performing selling services for it, of the risks and uncertainties inherent in the proposed paragraphs. At any rate, the regulations which were proposed by the Treasury Department, to which House Joint Resolution 296 (80th Cong.) was directed, listed six factors for the determination of the employee status, which, in their essentials, corresponded to the factors of the fourth paragraphs of the employee definitions in H. R. 6000, except the factor which has been added of regularity and frequency of service. These regulations then went on to provide that:

"* * * their listing is neither complete nor in order of importance); * * * The absence of mention of any factor, fact, or element in these regulations * * * should be given no significance, * * *.

"Each of the factors is to be examined and applied in a particular case for its significance in determining in that case whether, as a matter of economic reality, the individual is dependent upon, or independent of, the business to which he renders service. * * *

"No one factor is controlling. The mere number of factors pointing to a particular conclusion does not determine the result. All the factors are to be weighed for their composite effect. It is the total situation in the case that governs in the determination."

It is submitted that a regulation such as the foregoing (and what other is conceivable given the language of the fourth paragraphs and the known attitude of the Treasury Department), proposes an administrative determination in each individual case, without any fixed or definite standards which would serve as a guide either to persons who desire to abide by the law or to employees of the Bureau of Internal Revenue who are supposed to administer the law fairly and evenly throughout the country; in short, the proposal is government by men and not by law.

Once again, it is the practical effect of the vagaries of the proposed paragraphs and the probable regulations which give rise to protest. Every publisher and subscription agency which receives subscriptions from individual solicitors will be compelled to reassess its situation in the light of possible contentions by taxing officials. Publishers and agencies in many instances will find it necessary to litigate in order properly to determine their liabilities and duties. In the meantime, they will be under the necessity of paying such taxes as are assessed and attempt to obtain refunds or be subject to the risks and contingent liabilities of such taxes and of interest and penalties for failure to pay. They will also be subject to the risk of penalties for failure to withhold employee contributions.

All this can and should be avoided by simply allowing the present common-law tests to stand.

THE PROPOSED EMPLOYEE DEFINITIONS PRESENT RISKS TO THE INDIVIDUALS INVOLVED

The proposed employee definitions in H. R. 6000 are also a serious matter to the many individuals concerned. The proposed act in section 207 contains a new tax on self-employment income. Under this tax individuals rendering services to others will have to determine whether they are employees or not by the same definitions that are here discussed, and they will have to make such determination at the peril of penalties as provided by proposed new section 1646 of the Internal Revenue Code at page 161 of the pending bill.

H. R. 6000 proposes to extend social-security benefits to the self-employed. This is an altogether worthy purpose. But why should a large number of the

persons, who might otherwise benefit from the plan, be saddled with the uncertainties and risks of trying to make determinations as to whether or not they are employees or self-employed individuals under new tests, particularly the vague tests of the fourth paragraphs of the proposed definitions of the term "employee"?

Surely the common-law tests of the employer-employee relationship provide the soundest and best understood tests and are most likely to render the plan of providing social-security coverage for the self-employed workable.

THE PROPOSED EMPLOYEE DEFINITIONS ARE UNNECESSARY

The proposed employee definitions in H. R. 6000 are entirely unnecessary if the plan for coverage of the self-employed is adopted. When the Treasury Department proposed the regulations referred to above, social-security coverage of the self-employed had not reached its present advanced stage. However laudable may have been the desire of the Treasury Department to extend coverage, that objective is now by way of being achieved by orderly legislative processes. In order to achieve the social reform, there is no need to place in the hands of administrative officials a power to extend coverage by administrative fiat. There is no need to subject publishers or individuals to harassments and risks.

CONCLUSION

In conclusion, it is submitted:

1. That the proposed fourth paragraphs of the employee definitions in H. R. 6000, so far as they go beyond the common-law tests, are entirely unnecessary and confusing, in relation to the plan to provide social-security coverage for and require taxes from the self-employed;

2. In any event, the fourth paragraph of the proposed definitions is entirely unintelligible and unworkable and can only result, whether intended or not, at best, in an unwarranted delegation of power to administrative authorities to make rules of law without the guidance of any proper standards or safeguards for the protection of those who must abide by them or, at worst, in uncontrolled and varying applications of the provisions by the administrative agencies in comparable instances which should be treated alike; and

3. If the proposed definitions, in going beyond the common-law tests, should eventually result in magazine solicitors being held "employees" of magazine publishers and subscription agencies, it would impose undue and unreasonable burdens, hardships, and risks upon magazine publishers who are dependent upon subscription solicitation, upon the administrative agencies which must administer the act, and upon magazine solicitors as individuals.

Mr. ROBINSON. Then I would like to introduce Mr. Clinton Morris, of Sandusky, Ohio.

STATEMENT OF CLINTON MORRIS, SANDUSKY, OHIO, PERIODICAL PUBLISHERS SERVICE BUREAU, INC.

Mr. MORRIS. As Mr. Robinson has said, I am Clinton Morris, I reside in Sandusky, Ohio, and I am now and have been for more than 40 years engaged in the magazine subscription business.

During all that time I have been employed by Periodical Publishers Service Bureau, Inc., which has its home office in Sandusky, Ohio, and which has 36 branch subscription soliciting offices located in various cities of the United States.

My company, of which I am manager, does not publish magazines. It handles, on a commission basis, subscriptions to magazines published by others. The subscriptions are for the most part "paid during service" subscriptions; that is, subscriptions which are obtained by solicitors who receive a portion of the subscription price and which are paid for by the subscribers on an installment basis, each monthly installment of a subscription price being collected on a percentage basis by other persons known as collectors. My company handles

subscriptions for all kinds of magazines. When it obtains a subscription it is sent to the publisher involved, and the publisher, who is paid by my company, fills it by mailing directly to the subscriber the magazine or magazines called for by the subscription.

Senator MILLIKIN. Are you responsible for the payment of the subscription to the company?

Mr. MORRIS. Yes, sir; we are.

Although my 40 years in the magazine subscription business have been spent with one company, I am, because of my experience and the nature of my work and of my contacts with others in the same business, familiar not only with the way my company obtains subscriptions but also with the way other companies obtain them.

To my knowledge, two other companies besides my own handle subscriptions sold on a paid-during-service basis. Most subscriptions, however, are not so sold. They are sold on an all-cash basis, or on a two-pay basis. On a sale of a cash basis subscription the solicitor collects the full subscription price and then sends in the subscription and the money collected, less a portion which he retains for himself, to the publisher or subscription agency with which he deals. On the sale of a two-pay basis subscription the solicitor collects half the subscription price from the subscriber and sends in the subscription and the money collected, less his retained portion, and the publisher or agency involved bills the subscriber for the remaining half of the price.

I would say, from my experience, that by far the largest number of people who solicit subscriptions throughout the United States do so on the basis of catalogs which are sent to them on request by publishers or publishers' agents who deal with them entirely by mail.

Senator MILLIKIN. Tell me that again, please.

Mr. MORRIS. The majority of the people engaged in the magazine subscription business are what is known as catalog agents. They are sent a catalog, listing the magazines and giving the subscription price, the amount that they are to send to the publisher or the agent. They retain for themselves this commission.

Senator MILLIKIN. That is, the people that are in the same branch of the business that you are in?

Mr. MORRIS. The catalog agents, yes.

These catalogs contain the names of practically all magazines with their subscription prices. These solicitors obtain cash subscriptions and work on the basis of deducting and keeping a portion of the payments made by subscribers. From one company of this kind I requested specific information for the purpose of this hearing. I was told that the catalog solicitors include corporations and partnerships as well as individuals, and that the individuals include housewives, shut-ins, schoolboys and many others for whom soliciting is only a sideline and part-time activity. The above company received from such solicitors 89,742 separate orders in 1948 and 80,182 separate orders in 1949. The name of each of these solicitors stays on the company's subscription records until a year passes after the last subscription order has been received from him. Then it is taken off on the theory that the solicitor is no longer interested in obtaining catalogs or subscriptions.

According to the subscription records of 1948 of this company catalogs were sent to 18,019 solicitors, but from 2,539 of them no sub-

scriptions at all were received. Of the remaining 15,480 by far the largest number or 14,158 sent in from 1 to 25 subscriptions each during 1948 and each made, on an average, 16 cents per week.

Nine hundred and seventy-four sent in from 26 to 100 subscriptions each, and each of these made, on an average, 97 cents per week: 121 sent in from 100 to 200 subscriptions each and made, on an average $2.41 per week; 86 sent in from 200 to 500 subscriptions each and made, on an average, $6.18 per week; 20 sent in from 500 to 800 subscriptions each and made, on an average $14.24 per week; and the remaining 21 sent in over 800 subscriptions each and made, on an average, $24.80 per week. These people, of course have no fixed quotas, hours or territory and their subscriptions come in irregularly, generally increasing near Christmas time. In other words, they solicit where, when, and to such extent as they choose.

Other people obtain subscriptions by using their home telephones. The company mentioned above has a telephone sales department, and says that it has arrangements with 600 telephone sales solicitors scattered all around the country. These people, obviously solicit on their own and at their own expense and the circumstances as to them are comparable to the catalog solicitors already discussed.

Other solicitors work in groups, called crews, which travel from place to place on their own or out from branch offices of subscription agencies where they turn in subscriptions. Each crew member works on a basis of retaining or receiving a portion of the subscription price and pays his own expenses, which often includes a share of the cost of operating an automobile belonging to someone in the group, and the cost of meals or of board and lodging away from home.

My own company, and at least two others, have working arrangements with solicitors who obtain original subscriptions and with collectors who collect the monthly installments payable by subscribers and obtain renewal subscriptions.

In the month of January 1950 my company had made arrangements with 1,043 solicitors and 1,697 collectors. Most of those solicitors and collectors solicited or collected merely as a side line, and the largest part worked only part time. Of the 1,043 solicitors 706, or 70 percent made less than $50 in that month; and of the 1,697 collectors 1,045, or 61 percent made less than $50 in that month. Of course the earnings of solicitors or collectors depend upon themselves. They may do as little or as much work as they please. They have no minimum quotas or fixed routes.

Our records show that in January of this year and other periods, some solicitors sent in subscriptions with fair regularity for a time; others sent in subscriptions for a few weeks or from time to time or irregularly over a period of some months. The turn-over of such persons is very great, frequently running as high as 33 percent per month. A very few solicitors and collectors who devote their full time and solicit regularly, and get others to help them, make substantial money. One solicitor, for example, made, according to my company's records, $730 in January 1950, and one collector made $640.

In the case of my company, solicitors were ruled to be independent contractors by the Federal Bureau of Internal Revenue in July 1938, and are still so ruled, and I have been informed and believe many similar rulings were given by the Bureau to other companies with respect to solicitors.

A similar ruling was made in the case of my company at the same time by the Bureau with respect to collectors, but the Bureau reversed itself on collectors in March 1944, retroactively to January 1, 1944. Thereafter Federal Insurance Contributions Act taxes were paid on collectors for the first quarter in 1944 and a test suit instituted. The action was tried in the Federal district court in Toledo, Ohio, and after a full presentation of all the facts the court held in October 1947 that the collectors were independent contractors. In April 1949 the judgment to that effect was affirmed by the Court of Appeals for the Sixth Circuit (See *Brady* v. *Periodical Publishers Service Bureau, Inc.*, 173 F. 2d 776). Both the district court and the court of appeals decided the case with full knowledge of the Silk and Greyvan cases decided by the United States Supreme Court in June 1947.

In the collector case above-mentioned the court found after trial that during the first quarter of 1944 there were 2,194 collectors in the United States turning in collections to the branch offices above-mentioned; that they lived at varying distances therefrom, the greatest distance being 600 miles; that most collectors conduct their businesses with the branch offices by mail; that they receive commissions only and pay their own expenses; and it also found:

> The "collectors" and "collectors and solicitors" have the right to determine, and they do determine, for themselves how their work shall be done, determining for themselves on what days and during what hours the work shall be done; with respect to what particular subscriber or group of subscribers the work shall be done at any particular time, in other words where it shall be done at any particular time; whether it shall be done personally or through or with the help of husbands or wives or sons or daughters or brothers or sisters or neighbors or others obtained by them and not even known to the plaintiff; whether it shall be done on foot or by automobile or by trolley car or bus; whether it shall be done by personal visits to the subscriber or by telephone calls to him, or by mail to and from him; whether it shall be done by making one call per month upon subscriber, or making so-called "back calls" until the subscriber pays, or by collecting two or more installments at one time; whether more or less expense for back calls, transportation, and other things shall be incurred in connection with a particular collection or a particular verification or a particular solicitation of a renewal or original subscription; and whether or not to solicit renewal or original subscriptions, and when and from whom to solicit them.
>
> Under their agreements with the plaintiff, the collectors and collectors and solicitors are not required to, and in most cases do not, devote their entire time and attention to the work for which they are compensated by the plaintiff as aforesaid, but on the contrary they are free to engage in any other work they wish to engage in (including soliciting subscriptions for others and collecting for others), and many of the collectors and collectors and solicitors do engage in other work, treating the work for which the plaintiff pays them as a mere side line which is separate and apart from and in addition to housekeeping or to regular business activities.

These facts, although found as to our collectors, are equally typical in general of our solicitors.

The rulings above mentioned to the effect that magazine subscription solicitors are independent contractors were handed down by the Bureau of Internal Revenue to my company and many others under the well known common law test as to freedom from control as to means and methods, and the court decisions above mentioned on magazine subscription money collectors were handed down on the same theory even after the decisions in *United States* v. *Silk* (331 U. S. 704) and *Harrison* v. *Greyvan Lines, Inc.* (331 U. S. 704). Now it is proposed by H. R. 6000 to add to that test provisions which seem calculated to make employees of everyone who renders services for

another unless he invests capital in his business and serves the public generally.

H. R. 6000, in my opinion, although its language is far from clear, especially in subdivision 4 of its proposed new employee definition, is calculated to put employer responsibilities upon people who for excellent reasons have long been held by the courts and by Congress not to be rightly subject to such responsibilities.

Magazine subscription solicitors and collectors are not subject to control now as employees are, and they will not be subject to control hereafter, even if they are declared employees by some definition such as now contained in H. R. 6000. Nevertheless, if such a definition is enacted into statute, it appears to me that publishers and subscription agencies will be liable to withhold taxes in situations where they do not receive or control the money from which withholding is to be made and that they will also be obliged, at great expense, to keep pay roll records and file reports in respect of thousands of people who are not now on such rolls and who, individually, produce very little revenue. Consequently, in my opinion, the following things will happen in the magazine subscription business, if that bill is so enacted:

(1) A source, and often an important source, of income or supplemental income, will be taken away from many thousands of people throughout the United States who now solicit magazine subscriptions or collect magazine subscription moneys. This is so because this income of so many solicitors and collectors is so small that it will be practically impossible or economically unwise for publishers or publishers' agents to withhold taxes, keep detailed records, and make detailed reports with respect to them. In fact it would be altogether impossible in many instances either to compute or to collect accurately, in terms of dollars and cents, taxes on the very small amounts made by many of these people, who often live and work hundreds of miles away from the publishers or publishers' agents to whom they send in subscriptions or moneys collected and with whom they deal only by mail.

(2) The magazine business itself will be harmed if it becomes necessary to abolish important subscription soliciting methods long in use because the difficulties and expense of collecting taxes from thousands of solicitors or collectors of small earnings make it impossible to continue to use those methods. The long-established practices, which I have described, have been widely adopted in the magazine subscription business because they make it economically possible to reach large numbers of potential subscribers in places both near and remote from the place of business of the publisher or agency. Other methods of solicitation, whether economic or not, may be forced by statute as an alternative to the present methods of securing subscriptions, but, in my opinion, such a thing will surely result in the curtailment of the presently wide-open opportunities for persons to engage in soliciting and collecting and will also result in the reduction of the number of people to whom magazines can be sold. Ultimately, the result will be to restrict the circulation of magazines.

The CHAIRMAN. Thank you very much, Mr. Morris.

That finishes the call of the witnesses for today, and the committee will recess until 10 o'clock tomorrow morning.

(Whereupon, at 11:55 a. m., the committee recessed to reconvene Wednesday, March 22, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

WEDNESDAY, MARCH 22, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

Present: Senators George, Millikin, Taft, Brewster, and Martin.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

We had expected to hear this morning from Mr. H. L. Mitchell, president of the National Farm Labor Union, but I am advised by wire he will be unable to appear on account of illness. However, he will submit for the record a written statement on the need for social security for farm workers.

(The statement referred to, when submitted, will be placed in the files for the information of the committee.)

Senator MARTIN. Mr. Chairman, Dr. Francis B. Haas, who is the secretary of education of the Commonwealth of Pennsylvania, wishes to make known his opposition to that feature of H. R. 6000 permitting teachers and others to become a part of the State retirement systems.

The CHAIRMAN. It is so noted.

Senator MARTIN. Then, Gus Wachhaus, who is a member of the General Assembly of Pennsylvania, an who is blind, wants to place on record that he does not want anything that might interfere with the Pennsylvania or Missouri systems.

The CHAIRMAN. It is so noted.

Senator MARTIN. Dr. Joseph V. M. Ross of Berwick, Pa., wants the same notation made as it relates to the blind.

The CHAIRMAN. It is so noted.

Senator MARTIN. The same from Emory A. Rittenhouse of McKeesport, Pa., and Mrs. Paul Jones of the Washington County Branch of the Pennsylvania Association for the Blind; the same for Philip N. Harrison, who is the executive secretary for the Pennsylvania Association for the Blind.

The CHAIRMAN. It is so noted in the record.

Senator MARTIN. I also have here a statement from Mr. Leonard P. Fox, general secretary of the Pennsylvania State Chamber of Commerce, which, if it has not already been entered in the record, I would like to submit at this time.

(The statement referred to follows:)

STATEMENT FROM THE BOARD OF DIRECTORS OF THE PENNSYLVANIA STATE CHAMBER OF COMMERCE ON VARIOUS PROPOSALS IN H. R. 6000 TO EXPAND EXISTING SOCIAL-SECURITY LEGISLATION

The Pennsylvania State Chamber of Commerce, Harrisburg, Pa., is a business organization in the Commonwealth of Pennsylvania, composed of 3,600 individual business memberships, 155 local chamber of commerce in Pennsylvania, and 85 trade associations, both State-wide and regional. The Pennsylvania State Chamber's membership includes virtually all types of business. Actions taken by the board of directors of the State chamber were based on recommendations of its social-security committee comprising 19 members, representing various types of industry, and thoroughly conversant with the requirements and implications of social-security legislation.

INCREASES IN OASI BENEFITS

Since the enactment of the social-security legislation in 1935 and particularly since the amendments of 1939, there have been marked increases in wages with generally concurrent increases in living costs. The result is that the benefits for old-age and survivors insurance present too great a disparity with present wage scales and cost of living. One effect of this condition has been to require in numbers of cases the supplementing of OASI benefit awards by funds from State old-age assistance matched by Federal grants. Consequently, increasing the amounts of benefits under the old-age and survivors insurance proposal is favored as a logical step toward establishing a proper subsistence level for OASI beneficiaries. It is recommended that the minimum individual benefit be increased from $10 to $25 monthly and the maximum individual benefit be increased from $85 to $125 per month, with primary monthly individual benefit established at $65. It is also recommended that an increment of one-half of 1 percent per year be applicable.

KEEP PAY-ROLL TAXES ON PAY-AS-YOU-GO BASIS

The graduated increases in tax rates, equally applicable to employers and employees, proposed in H. R. 6000 for old-age and survivors insurance purposes, are opposed. It is recommended instead that the tax rate of 1½ percent, applicable equally to employers and employees as fixed January 1, 1950, be continued until such time that increase be necessary. The reserve fund is now approximately $11,000,000,000. Excess of income over outgo should not be permitted to result in an inordinately large reserve fund and the system should be on as nearly a pay-as-you-go basis as experience makes possible without extensive speculatory rate making. Flexibility is possible through rate increases by Congress when necessary.

DISABILITY BENEFITS OPPOSED

Disability benefit payments as provided in H. R. 6000 are opposed because of extreme difficulties, including great administrative costs and other expense, which would develop in adjudicating such claims throughout the Nation. State public-assistance systems, voluntary agencies, and the State vocational-rehabilitation agencies can more advantageously cope with the problems of the disabled. It is highly probable that any disability system in the social-security legislation would ultimately get out of hand and cause serious drains on the OASI funds.

SPECIFIC DEFINITION OF "EMPLOYEE" RECOMMENDED

It is recommended that a specific and final definition of "employee" be incorporated in the law on the original "master and servant" concept of common law. Great confusion would undoubtedly result from the granting of discretionary power to any administrative agency to define the word "employee." Especially affected in this area of uncertainty would be workers who should be considered as self-employed.

RECOMMENDED RETENTION OF TAX AND BENEFIT BASE

It is recommended that the tax and benefit base of each annual individual wage for OASI purposes be retained at $3,000 instead of being increased to $3,600, as provided in H. R. 6000. Such increase would result in increasing benefit amounts only to those earning more than $3,000 per year and would provide no increase for those earning below $3,000 annually. At the present time, the $3,000 wage base is fixed in unemployment-compensation laws of the States. Because of this

uniformity in the base tax, employers in number of States can submit to the State unemployment-compensation authorities duplicate wage report lists of those sent to Washington, on a quarterly calendar basis for OASI purposes. Variation in the wage bases would cause costly administrative difficulties in those States where employers may now submit employee wage reports as above indicated.

FIX MINIMUM MONTHLY EARNINGS AT $50

To prevent supplementing an OASI minimum monthly benefit award from old-age assistance funds and to encourage earnings on the part of older persons, it is recommended that a worker retired under the social-security legislation be permitted to earn up to $50 a month, instead of the present $15 per month, without forfeiting his OASI benefit. The proposal to permit a beneficiary 75 years of age or more to earn in excess of $50 a month without endangering his benefit is opposed as generally unnecessary. The proposal to provide lump-sum death payment is opposed because under the increased schedule of benefits provision for such cost could be available.

COVERAGE IN PUERTO RICO AND VIRGIN ISLANDS OPPOSED

The proposal to extend OASI coverage to workers in Puerto Rico and the Virgin Islands is opposed as unsound to provide high minimum benefits which are not commensurate with the economy or wage structure of those possessions.

Submitted by:

[SEAL] LEONARD P. FOX,

General Secretary, Pennsylvania State Chamber of Commerce.

MARCH 16, 1950.

Senator MARTIN. Mr. Chairman, the Reverend Edward T. Sullivan of the Catholic Charities of Carbondale, Pa., makes their views known as follows:

(1) Opposed to any enlargement of child-welfare services. A number of States are not using the money made available to them under "child-welfare services" at the present time because, as the Commissioner of Welfare of New York State pointed out in his testimony on H. R. 6000, the rules made by the Children's Bureau make it impossible for them to maintain their traditional relationships with voluntary agencies.

(2) Opposed to change in the definition of a "dependent child," which would have the effect of making title IV of the Social Security Act into a program of unemployment relief under the aegis of Aid to Dependent Children.

(3) Opposed to grant-in-aid to the States for general public assistance because this would bring the Federal Government into the entire field of relief and service and would set up a pattern of service for all American families, whether needy or not.

(4) Strongly in favor of the provisions of H. R. 6000 which would extend and improve the program of old-age and survivors insurance, including its provisions in regard to voluntary coverage of nonprofit agencies. We believe, however, that the time has come for the Congress to extend the program of old-age and survivors insurance so as to cover all the present aged. We believe that the present generation should face immediately the problem of caring for its own aged, on a pay-as-you-go basis.

Also, from the department of charities of the diocese of Erie, the Very Reverend Msgr. James M. Powers suggests the following:

In its present form H. R. 6000 is not too objectionable in the field of child care. However, the Catholic Church feels that if the amount appropriated for child-welfare services is increased much beyond the present figure of 3½ million dollars, it would be a serious threat to our Catholic-welfare programs. A greatly enlarged subsidy would enable the States to take over the child-welfare program from the counties in our State, and enable the State to handle the many Catholic children who are committed to us by the various counties.

Naturally, we in the Catholic welfare field are anxious to provide Catholic services for Catholic children. For this reason His Excellency, Bishop Gannon, has directed me to write to you to lay before you our desires in the matter. As you know, if the new program were instituted in Pennsylvania, it would work a serious hardship on Catholic welfare because of the present Pennsylvania philosophy and legislation regarding the use of public funds by private agencies.

For this reason, I ask you as a member of the Committee on Finance to consider favorably our request that you not increase the present 3½ million dollar subsidy until such time as there is more definite understanding as to how the program will affect voluntary child-welfare services. Rt. Rev. Msgr. John O'Grady of Washington presented very clearly the Catholic side of this picture before the Senate Comittee on Finance on February 1.

Mr. Chairman, Mr. Clarence Klocksin, of the legislative counsel of the Northwestern Mutual Life Insurance Co., proposes that full-time life-insurance salesmen be brought within the OASI provisions of the Social Security Act and suggests the following amendment:

At the end of section 211 of H. R. 6000 add a new paragraph to be designated section 211 (a) (9), as follows:

"(9) In computing 'net earnings from self-employment' of any individual under contract as a life-insurance salesman with any company authorized to issue life-insurance and annuity contracts, or under contract as a life-insurance salesman with an authorized agent of said company, there shall be deducted—

"(a) All remuneration earned by said individual as a life-insurance salesman except remuneration earned and received by him while under a written contract whereby he is required to devote his full time, or substantially all of his business activities, to the sale of life-insurance and annuity contracts to be issued by one company: *Provided*, That after termination of said full-time sales contract the receipt of commissions earned under said contract while the contract was in force shall not constitute earnings in self-employment.

"(b) Fifteen percent of the remuneration subject to this Act under subparagraph (a), which deduction shall be in lieu of all deductions allowed for business expenses attributable to the trade or business permitted under section 211 of this Act."

Amend section 207 (a) of H. R. 6000 by adding thereto an additional section, as follows:

"Sec. 207 (b). Chapter 9 of the Internal Revenue Code is amended by adding at the end thereof the following new subchapter:

"'Subchapter (G). Tax in respect to self-employment income of full-time life-insurance salesmen:

"'A. Rate of tax on salesmen: In lieu of all taxes imposed by subchapter (F) of Internal Revenue Code, and in addition to all other taxes, there shall be levied, collected, and paid each taxable year beginning after December 31, 1949, upon the self-employment income of every full-time life-insurance salesman after December 31, 1949, a tax equal to the percentages and at the rates provided in section 1400 of the Internal Revenue Code (as amended by sec. 201–A of H. R. 6000) in respect to wages received by employees.

"'B. Rate of tax to be paid by life-insurance company: In addition to all other taxes, every life-insurance company shall pay an excise tax, with respect to having individuals under contract with it as full-time life-insurance salesmen, upon the self-employment income paid by such life-insurance company to each full-time life-insurance salesman after December 31, 1949, in respect to services rendered by any such salesman after said date; and said tax shall be equal to the same percentages and at the same rates provided in section 1410 of the Internal Revenue Code (as amended by sec. 201–B of H. R. 6000) with respect to wages paid to employees.'"

Mr. Chairman, Congressman Robert F. Rich, Fifteenth District of Pennsylvania, would like to state that Mr. W. Clyde Sykes of the Emporium Forestry Co. desires a more definite definition of the word "employee" in the act.

Also, I desire to submit that James B. Boor of the Atlantic Refining Co. desires a more definite definition of the word "employee" in the act.

Miss Mary Harris, representing the Pennsylvania Association for the Blind of the Delaware County Branch, desires to object to permitting optometrists to making the eye examinations and vision tests.

The CHAIRMAN. We are glad to have these views, Senator.

Dr. Meriam? Doctor, you may come around. I think other members of the committee will be in shortly.

Is anyone else from the institution with you?

STATEMENT OF DR. LEWIS MERIAM, VICE PRESIDENT, BROOKINGS INSTITUTION, WASHINGTON, D. C.

Dr. MERIAM. No, sir. I regret that Dr. Moulton is out of the city, and my colleague Mr. Schlotterbeck is detained at home by illness; so that I am the only one.

The CHAIRMAN. Yes, sir. You may be seated if you wish to.

Dr. MERIAM. Mr. Chairman and gentlemen, the Brookings Institution appreciates your invitation to have a representative appear before you to testify on the important subject which you have under consideration. As that representative, I should like to present a brief opening statement summarizing the recommendations I would make and the broad reasons underlying them. The recommendations involve a complete departure from the concepts of private voluntary insurance upon which the existing system of old-age and survivors insurance is partially based. I am of the opinion that the system is socially questionable and from the standpoint of public finance thoroughly unsound. I shall do no more in this opening statement than broadly outline my position, and from then on leave to the members of the committee the question as to how long my testimony is to be.

The basic recommendations are that:

The social-security system should operate on a genuine pay-as-you-go basis.

The law should provide that all persons now in need because of old age or total and permanent disability and their dependents should be immediately eligible for benefits.

The cash to pay the benefits should be raised currently as the benefits come due.

We suggest that the system be financed through a flat-rate universal individual income tax without exemptions so that all persons with income contribute to the system.

The rate of tax should be high enough to supply each year the sum necessary to pay the promised benefits.

The proceeds of the tax should be earmarked and by periodic tax adjustment should be kept roughly in balance with the level of benefits.

In some years there would be a small balance; in others a small deficit. Thus no large reserves would be accumulated. Adjustments in benefits, taxes, or both should be made to preserve practical balance.

What are the basic reasons for these recommendations?

1. Persons who are in need require goods and services to bring them at least to a reasonable minimum of living. The goods and services they require will in the main be currently produced. In other words, the active workers and the owners of productive capital or land in each year must supply the bulk of the goods and services for the dependents of that year. A true pay-as-you-go system will recognize this basic economic fact.

2. The requirements of the needy are for essential goods and services. The level of money benefits granted under a social security system must be sufficient to supply the needed goods and services at prevailing prices. The utility of a system that promises fixed money

benefits payable in the distant future is impaired if not destroyed by an upward spiraling of prices. If wages and prices fall, the money benefits promised years before may place an unreasonably heavy burden on the active workers of that day. The present Congress, in our judgment, should preserve for future Congresses freedom to readjust benefits and taxes in the light of actual conditions prevailing in their time. No Congress can foresee conditions that will prevail 50 years hence, any more than the Congress in 1900 could have foreseen the past 50 years with two world wars and the great increase in wages and prices.

3. Future Congresses will have to give consideration to the total governmental demands for cash in their day and upon the capacity of the economy to yield the tax revenues. Like Congresses in the past, they will have to determine the priorities among the numerous and competing demands of various activities of Government, old and new. Naturally we all hope for an era of peace and good will among men, foreign and domestic tranquillity, and a continuation of those forces that have made the United States the most productive Nation in history, given its people the highest material level of living ever enjoyed by any people, and preserved for them a large measure of personal liberty and individual opportunity. That, however, is a hope; not an assured certainty. Since it is not an assured certainty, it seems the part of wisdom to go no further in committing future Congresses than is unavoidable. We can, I believe, safely trust future Congresses to do as well by the dependents of their day as we do by the dependents of ours.

Our own record to date leaves much to be desired.

1. We have established a no-means test old-age and survivors insurance system that promises benefits to covered workers who remain in it long enough to attain and retain an insured status. At the same time thousands of American citizens equally deserving are denied such benefits. Among them are the persons already too old ever to attain an insured status, active workers who are not in covered employment or who have not worked in covered employment long enough to attain an insured status. These excluded groups, their dependents, and their survivors draw no benefits without a means test and they may be far less able to maintain a reasonable level of living than many drawing these benefits under the old-age and survivors insurance system.

2. The National Government has made grants-in-aid to the States for public assistance for three categories: The aged, the blind, and dependent children living with relatives of the degree specified by law. Certain extensions are provided in bills now before your committee. I shall not go into the details. The point I wish to make is that the National Government has established no standards defining need or regulating the amount of benefit. Wide variation exists among the States. Persons in need from causes other than those occasioning Federal participation may get no assistance at all. Some States give assistance to individuals who would not be eligible in other States.

Thus for the future the Government promises no-means test benefits for all workers who have attained an insured status under old-age and survivors insurance regardless of their need but it has not made comparable provision for other citizens who are not under that sys-

tem despite the fact that they include many of our most needy classes. The first obligation of Congress and of the active workers is to extend benefits to all aged people in need and to eschew legislation which creates specially privileged classes.

3. The present provisions contain many anomalies largely resulting from pursuing false analogies to private voluntary insurance. By adopting certain concepts of private voluntary insurance, we have established a system that requires elaborate and costly record keeping, a system which passes along to future generations commitments for heavy benefit costs in their day and a system in which the reserve fund promotes a widespread belief of financial soundness.

Under the present old-age and survivors insurance system each succeeding year for the next half century will witness a substantial increase in the amount of cash which will be required to pay retirement benefits. We are passing along to children and grandchildren a benefit load proportionately much greater than what we today have been willing to assume.

Adoption of insurance concepts led to the establishment of a so-called reserve fund which consists of interest-bearing United States debt obligations equal in amount to the excess old-age and survivors insurance tax receipts. The excess tax receipts themselves are spent for general expenses of Government. The existence of this fund inevitably leads some to believe it will be comparable in function to the reserves of a private insurance company and hence will assist the Government in meeting the costs of retirement benefits in the decades ahead. Such is not the case, however, as I shall try to illustrate by the use of a simple parallel.

A group consisting of you, me, and a few others form a corporation to engage in a promising business venture. We are optimistic, socially enlightened, but a little short on the capital or cash side. An early decision is that we should at once start a sound contributory retirement system for our employees so that we shall not later be troubled by the heavy cost of benefits for past services. We begin at once to deposit in a special trust account the correct amounts for all our employees, consisting in part of contributions from the corporation and in part of sums of money withheld from the employees' wages.

As this trust account grows the question arises as to how it shall be invested. We are all optimistic over the future of our venture; the only thing that stands in our way is the need for more funds for expansion and for working capital. Our accountant comes forward with the brilliant suggestion that we invest the retirement trust fund in the bonds of our own corporation, specially issued for the purpose. He says they are first-class investments and we can use the cash to great advantage in increasing our productivity and our net income. We are all for it. Thereafter payments to the trust fund and the interest due on our bonds held by it are invested in these excellent bonds. The bonds belonging to the trust fund are meticulously deposited in a special box in the vault at the bank and adequate accounts are scrupulously maintained.

Some years later, when our oldest employees begin to retire, we can no longer invest all the annual contributions of the corporation and the employees in our bonds. Part of the annual contribution has

to be paid in cash because we need the cash to pay benefits. Late the cost of benefits exceeds the annual contributions to the fund. T the extent required, we must pay interest on the bonds held by th fund in cash in order to meet our benefit costs.

Our treasurer makes it perfectly clear that henceforth we mus pay a steadily mounting proportion of the interest due on these bond in cash out of current earnings. He insists that we cannot pay then out of anything else.

A director suggests that we could avoid our immediate difficult by selling to outside holders enough of the bonds presently in th reserve to supply the cash required for benefits. The treasurer point out that interest on the bonds thus sold to outsiders would thereafte have to be paid in cash from earnings. Next year and every yea thereafter, he tells us, we shall have to face the same problem, bu to a somewhat greater extent. It will be a continuous headache o growing intensity.

In the long run we can only pay the interest on our bonds in th retirement system or in the hands of outsiders out of corporate earn ings. Our bonds held by the fund are assets of the fund but they are liabilities of the corporation. The real security behind these bonds in the fund is the earning power of the enterprise—and this is based on the competency of the management and the workers of th corporation to produce goods and services which consumers want and to produce them at a profit.

How does the situation of our corporation differ from that of th Government with its old-age and survivors insurance reserve? Gov ernment has almost no income from earnings. The security behind the bonds in the old-age and survivors insurance reserve fund rests wholly upon the power of the Government to tax and to borrow. The bonds are not backed by earnings assets and thus do not reduce the amount of cash to be raised. The fact is that the draft on tax revenues or the amount to be raised by borrowing from the public will be the same whether there is a reserve fund or not.

The old-age and survivors insurance system, as we have it today, saddles future generations of American citizens with a tremendous commitment for benefit payments in addition to other costs of gov ernment. In view of the uncertainties of the age in which we live such legislation appears to us to be financially reckless.

The safe course, in our opinion, is to adopt a true pay-as-you-go system, giving such benefits as are reasonable and within our present economic ability, paying the costs each year, and trusting future generations to do likewise. The Government is not under contractual obligation to preserve the present system. In our judgment it should make fundamental revision now before the present benefits are readjusted to offset the change in the cost of living. The present offers an opportunity to shift to a financially sound system that may not come again.

The CHAIRMAN. Dr. Meriam, referring to the beginning of your statement, I wish to ask you this question, so as to get it clear in my mind. This is an excellent concept, here, and many parts of it make a very strong appeal to me, but I wish to get this very clear in my mind. You recommended it on page 1, among your recommendations:

The law should provide that all persons now in need because of old age or total and permanent disability and their dependents should be immediately eligible for

Do you mean to recommend a needs test when one has reached the retirement age fixed under your program?

Dr. MERIAM. Senator, that is the first obligation under which the Government rests, as I see it: to take care of those of its citizens whose resources place them below the level which the Congress establishes. They are in need because their resources are below that level.

The CHAIRMAN. Well, would you have that need determined at the Federal level? Or within the States?

Dr. MERIAM. I think our experience with the old-age assistance program indicates that the Federal Government will have to lay down certain Federal standards defining need, so that you will not be in the position in which you now are, of having such wide variations among the States as to what constitutes need and the amount of assistance which is to be given.

The CHAIRMAN. I wished to get that clarified in my mind before the other members of the committee proceed with their questions.

Senator MILLIKIN. I am not clear yet, Mr. Chairman, and I think that is a very penetrating question and goes to important aspects of the testimony.

Do you or do you not believe that the benefits which you are speaking of, here, should rest on a needs test?

Senator TAFT. What does that "all persons now in need" mean? Does that just refer to bringing in people as of this time, or is this a permanent needs test? Which?

Dr. MERIAM. The "now" refers, Senator, to the present. I have written a brief statement on benefits which perhaps, if I read it, may make it a little clearer.

Senator TAFT. May I raise one other question that the Senator has not raised?

Are these benefits under this plan to be flat, regardless of the past wages, and regardless of need?

Dr. MERIAM. Yes, sir.

Senator TAFT. Or are they to be varied in proportion to need? I mean, the plan is very indefinite.

Dr. MERIAM. Suppose I read this statement, then.

The CHAIRMAN. Senator Taft was not here when you began the statement.

I think, Senator, that broadly Dr. Meriam is suggesting a flat increase in income taxes on a net or gross basis.

Senator TAFT. But I was interested in the basis of the benefits.

Dr. MERIAM. Let me read this statement that I have prepared, which I think is a little more coherent than my answers would be:

Our view is that governmental social-security systems should go no further than to put a floor of protection under the people to give individual assurance that under no circumstances will they be in want; that if they would have a greater degree of protection than is afforded by such a minimum they should seek it through voluntary arrangements. Among voluntary arrangements we include personal savings, insurance, annuities, retirement systems for employees of public and private employers, home, farm, or business ownership, and other methods for protection characteristic of a free enterprise system. We do not believe that the Government should use its power to tax to compel its citizens to provide protection of a substantial part of the purchasing power they had been actively employed. The cost of such

protection in direct and indirect taxes will be so great that as the system matures many citizens will find that they have little margin for personal savings, little opportunity to do with their own as they will. Many of them will be forced to adhere closely to the pattern prescribed for them by the Government. We believe that the Government should leave to the people opportunity for initiative and adventure, the opportunity to take chances which may result in profits or losses.

Personally, I should prefer a system that takes into consideration the resources available to an individual or a family and in event of need gives only as much as is necessary to bring the individual or the family to a reasonable minimum level. Under modern administrative practices and adequate appropriations to supply the necessary funds, I believe this system could be applied without harshness and without involving too much loss of self-respect or self-confidence on the part of the recipient.

I am well aware—perhaps better aware than most—of the criticism leveled at the head of one who has the temerity to suggest even the use of a modern means test, such as has been developed in New Zealand.

Many persons who agree with me in respect to the financial dangers of the present system or of H. R. 6000 advocate the payment of a flat uniform benefit to each eligible individual—so much for a single man or single woman, so much for a husband and wife, and so much for each child. These sums would be payable without specific consideration of the resources possessed by the individual concerned.

Under a uniform flat-benefit system the Government would have to make a choice between two alternatives.

The first would be to pay to each beneficiary a fixed amount which would assure him a living in accordance with a minimum health and decency standard even in the absence of other personal resources. Any resources which he might have would then be available to enable him to live above the minimum health and decency standard. Under practically no condition would it be necessary to supplement the fixed benefit from public-assistance funds.

The other alternative would be to base the fixed benefit on the assumption that most people upon the happening of a covered contingency have some resources of their own or have some relative who is willing and able to give assistance. Research might disclose that a benefit of one-half or two-thirds of the amount required for a minimum of subsistence would make satisfactory provision for perhaps 75 to 85 percent of the population. Down at the bottom of the economic scale would be some who did not have enough to maintain a satisfactory level of living. Under such a system a public-assistance program would be necessary to make up the difference.

I am afraid that, should the Government say today that without any means test it will pay to every nonworking person aged 65 or over and to every other eligible person a benefit which will in and of itself sustain that person in accordance with a minimum standard of health and decency, the total amount of money required would be staggering according to present-day standards, although perhaps modest in comparison with the ultimate costs of H. R. 6000. When the Congress looked into the cost they may appear prohibitive if the cash to pay benefits had to be raised by current taxation.

I might say that that was exactly what happened in New Zealand. New Zealand started out in 1939, as I recall, with the idea that they were going to install a no-means-test system, a complete no-means-test system, but they were going to make benefits immediately available to take care of all present citizens who were lacking the resources to get along. When the Ministry completed its investigations, it discovered that the cost of such a universal system, without a means test, was so great that their economy could not stand it; and therefore they adopted a system which has what I have already referred to as a modern means test. And they have only one part of it which operates on a no-means-test basis; that is the part that relates to people who remain in the system and continue to pay for old age without a means test. They promise very low benefits in the first years, because the amount of contributions can't pay for more, and they gradually increase the amount of benefits on a scale so that the last time I studied the New Zealand law the full benefits were not to be reached until, as I recall, 1979.

A frank facing of the true costs of social security as an immediate charge might result in a decision either to use a test of resources in connection with eligibility or to assume some resources in arriving at the amount of benefit which you propose to pay.

May I express the hope that before this committee reports out a bill continuing the existing system that it examine into the costs of a system that will pay benefits to all our citizens who would be eligible for benefits had they spent their lives under a social-security system.

That refers to our people who are no longer in productive enterprise. They are beyond the age of productive enterprise, or they have had some misfortune—the death of the breadwinner, or disability. And we have them with us today. It seems to me that our obligation, our first obligation, is to take care of them.

To phrase it another way, for our generation to assume that responsibility for the old people and the survivors that H. R. 6000 will require our children and our grandchildren to assume, I know the costs will be high, but nothing like as high as we propose to require succeeding generations to pay.

The CHAIRMAN. Then, as I understand it, Doctor, you do suggest needs test, the need to be determined upon standards carefully worked out and laid down by the Congress itself?

Dr. MERIAM. Yes, sir. I have several things that I have worked out. I have prepared a statement with respect to the financing of the system through universal flat rate personal income tax.

The CHAIRMAN. Yes; I presume on some assumed benefit?

Dr. MERIAM. Yes, sir. In that, I have given some indications of what, it seems to me, would be the correct kind of mechanism to administer the means test I have always used. You can call it a resources test if you prefer.

Now, I think that whole discussion of the financing through individual income tax might be worth reading into the record if you so desire.

The CHAIRMAN. I am sure we will want that.

I think perhaps Senator Millikin wishes to pursue some questions.

Senator MILLIKIN. Yes; I have any number of questions.

The CHAIRMAN. And then we will come back to that, and have you read that into the record at some point in your testimony.

Senator MILLIKIN. As I figure it, Doctor, we have 11,000,000 people in this country now who are 65 years of age or older. I assume, since you say $75 a month for each one of them, your bill would be about $9,900,000,000 a year.

What will it be under the present system, say, in 10 or 15 years?

Dr. MERIAM. If I may, I would rather not go into the figures right now. I can provide you with the figures.

Senator MILLIKIN. Well, I must necessarily have the figures in order to judge the virtue of your plan and the virtue of any other plan. They may not be accurate, but we have just got to have them.

Dr. MERIAM. I will give you a memorandum on it.

Senator MILLIKIN. I would like to have a memorandum, but that forecloses present discussion of a very important subject.

Senator MARTIN. Mr. Chairman, it seems to me it would be rather important to have Dr. Meriam provide figures at this point, from the formula that he has worked out, as to the number that we would have on the list right now; and then, how it would be financed, the percentage that would be levied on in this flat income tax.

I think it would be a grand thing in America if everyone could be taken care of, but I would like to know how much this is going to add to our tax burden. I realize that a lot of that money will be spent. Well, it will all be spent, probably. But that will increase inflation, which is one of the dangers confronting us right now.

Dr. MERIAM. I can't sit here at the table, Senator, and give you those figures. I should be very glad to go back to the office where I have my details of record and prepare a memorandum; and I will talk with you afterwards to be sure I have exactly in mind what you want.

I can put that into the record. But I haven't the type of mentality that carries such figures around, and I think it would be much more valuable to the committee in the long run to have me submit a carefully worked out report on that, or a memorandum, than to sit and sort of "fudge it" from memory.

(The data referred to, when received, will be placed in the files for the information of the committee.)

Dr. MERIAM. I have not, in the book which we have just done, attempted to refigure the costs of a no-means test flat-sum system or a means test flat-sum system. The figuring which I have done on that subject is out of date, and I would be glad to do it over.

Senator MILLIKIN. Doctor, there is some available data that has bearing on the subject matter as far as the needs test is concerned, because that is the basis of our public assistance. And we now have 2,700,000 people who are receiving assistance through the assistance side of this program.

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. In other words, if we have 11,000,000 elderly people, 65 and over, and if 2,700,000 are now on the means-test basis, there is some kind of a springboard from which to jump so far as your proposed system is concerned. So whatever label you wish to put on the system that you are suggesting, does it not roughly come down, at least as of today, to the order of the expenditures we are now making under public assistance?

Dr. MERIAM. No, sir; I think you would find that a uniform program with Federal Government establishment of standards would

result in substantially more payment than you are now making under public assistance.

Senator MILLIKIN. That would depend on your standards, of course.

Dr. MERIAM. Yes, sir; it would depend on the standards. And the thing that bothers me about the public-assistance program and bothers a great many other people is the wide variation among the States as to the proportion of the population that is receiving assistance. Louisiana recently displaced Oklahoma and has moved up to top rank, with something like 80 percent of its present old people in receipt of public assistance.

Senator MILLIKIN. Let us assume that there are some maladjustments in that part of what we are doing at the present time. Let us assume it for the sake of this discussion, say. It seems to me that, in essence, what you are proposing comes to much the same thing as the system we have at the present time.

At the present time you have two-thirds of your people, or more than two-thirds of your people, that, one way or another, have means enough not to submit themselves to a means test. In other words, they are not receiving public assistance. As to the rest of them, some of them are getting benefits under the contributory insurance system; but when those are not sufficient we go over to public assistance and make up the deficiency under what I assume is your own theory, that every one will be entitled to a minimum receipt of, let us call it, benefits from the Government.

So your getting rid of the insurance system simply adds that much burden to what, let us call it, is the public-assistance burden.

Dr. MERIAM. You would have an immediate increase in the cost of a system similar to that of New Zealand, which is not called a public-assistance system but is called a social-security system.

Senator MILLIKIN. I do not want, in my discussion with you, to get fixed with labels. I do not care what we call it. I am merely suggesting that the end result of your plan brings us to the present end result that we have; that under your means test what you do not take care of by the present plan is taken care of by public assistance. And so you liquidate that problem in that way.

Dr. MERIAM. Your administration would be entirely different.

Senator MILLIKIN. Well, what do you think would be the advantages of your change in system, other than, let us assume, that there would be an enhancement in efficiency, which, let us assume, would mean a decrease in costs. But would it be of such magnitude as to say that we should attempt to achieve the same result we now have by a complete change in system?

Dr. MERIAM. The change in the efficiency of the system would not result in any material increase in cost. What the system that I suggest would prevent would be the heavy annual mounting costs which are involved in your present system. That is a thing that, it seems to me, we should do everything in our power to get away from. Because we are sitting here today, in 1950, proposing to commit the children and the grandchildren in 1970 and the year 2000 to make very much heavier payments. Now, that is what I am trying to get away from.

I am trying to recommend a system which will take care of our people today; and have us pay for it today. We know exactly how much it is going to cost.

Senator MILLIKIN. I have no quarrel with you on that at all.

Dr. MERIAM. Now, if we adopt a benefit system that puts a floor of protection under people and does not go up high, we are safe. Subsequent Congresses can increase that as they see fit in accordance with the conditions that prevail at that time.

We might conceivably start with a system that had a rather low standard of benefits that could be progressively increased and raised as our capacity to pay and our financial condition warrant.

Senator MILLIKIN. That is all inherent in the pay-as-you-go system.

Dr. MERIAM. Yes, sir; that is inherent, and that is the essence of the recommendation. It is that matter of getting our public finance on a level so that we are not making commitments for the future that we cannot foresee.

The rest of it, from my point of view, is detail. If we can do a whole lot more than would be involved in any kind of a resources test and move over to one that pays very much better benefits, I would not be opposed to it, provided we know what we are doing.

Senator MILLIKIN. But if we should determine that we will not put the system at least primarily on a means-test basis, would you still favor the pay-as-you-go plan?

Dr. MERIAM. Yes, sir: I favor the pay-as-you-go plan, whatever kind of system you introduce. It is chiefly applicable to a flat-rate benefit system. It can be applied otherwise. Take, for example, H. R. 6000. If you cut out increments for length of service, you can get on to a pay-as-you-go basis; but in any case where you are following the concepts of private insurance and you have established the concept of the insured status, the length of time, you are getting yourself into the position where you have not eliminated that gradual upstepping of your costs.

Senator MILLIKIN. Then you would favor the "pay as you go" no matter what kind of a system we have. That is No. 1.

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. No. 2, there might be some difference of opinion as to those who will be the beneficiaries under the system. In other words, there might be a means test, or there might not be a means test, but in any event it would be on a pay as you go.

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. You favor the needs test?

Dr. MERIAM. Yes, sir, personally.

Senator MILLIKIN. Assume that we followed your theory, the Congress would have to determine the standards for those who come under the benefits following the needs test and also the amount; is that correct?

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. On the assumption I have used, that there are 11,000,000 people 65 or older at the present time, if everyone were given, I am saying, $75 a month, do you think that our economy at the present time could stand taxation for that system of, say $9,900,000,000 a year?

Dr. MERIAM. I would want to study that further, sir.

Senator MILLIKIN. How much of a rate then would that require, Mr. Fauri?

Mr. FAURI. About 9 percent of pay roll, based on the coverage in H. R. 6000.

The CHAIRMAN. The recommendation of Dr. Meriam is for a flat increase in the rate on incomes and on gross income which would be, in many industries, the weekly wage or the monthly income. In others, it would not.

Senator MILLIKIN. Mr. Chairman, if Mr. Fauri is correct, the rate, assuming this were on a pay-roll system, would be no greater than the rates which now prevail in sytems such as the railroad retirement and some of our public employees' systems.

Dr. MERIAM. It ought not to be very different from any system that is based on a level premium actuarial reserve.

Senator MILLIKIN. Now, you base your theory on an income tax?

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. You are getting away from the pay-roll system?

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. And you are getting away from the classification of "employee"? It would go for everyone in the country?

Dr. MERIAM. Yes, sir. That would be completely eliminated.

Senator MILLIKIN. And the chairman said something that had escaped me. You are basing your income tax on gross income.

Dr. MERIAM. Personal income without exemptions.

The CHAIRMAN. Substantially gross.

Senator MILLIKIN. That comes to substantially gross.

Dr. MERIAM. Yes, sir. Certain business expenses would be deducted out, but there would be no exemptions.

Senator MILLIKIN. That comes close to the controversial feature of the Townsend plan.

Dr. MERIAM. There would be no exemptions, and there are certain reasons why I recommend that. As I say, I have them here, and if you would like to have me insert them in the record or read them into the record, I would be glad to do it.

Senator MILLIKIN. I would like to have your observation on this. There are obvious disadvantages in the present tax-deduction system that we have in the income-tax field; the main one, perhaps, being that the man who suffers the deduction is not aware of the fact and therefore perhaps is not as sensitive to spending programs and as sensitive to economy in Government as he might otherwise be.

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. When we had the question up whether we should have a deduction system, speaking quite frankly there was serious question as to whether, if everyone were put on the obligation of making an income-tax report, there would be large numbers of people who would not do it, and that you could not put that many people in jail. Now, let me have the benefit of your observations on that.

Dr. MERIAM. Well, Senator, the point is that under a system that involves a means test, or resources, the income report would be two things, from the poorer people. It would be the report of the amount of income on which they are to pay. It would also be the report on the basis of which the Government would decide whether that investigation should be made, to determine whether that person or that family was eligible for social-security benefits. That is, the lower income bracket people would have a distinct advantage.

Senator MILLIKIN. They would have an incentive.

Dr. MERIAM. And they would have a reason for filing that report. You would get away entirely from the application for public assist-

ance, which is the primary document, I think, in most States, in the administration of public assistance.

Senator MILLIKIN. Are you suggesting that the benefits will follow automatically from that kind of a report?

Dr. MERIAM. Yes, sir. That would follow for low-income people, but not necessarily for the high-income person. He would report on his resources, his income, and he would also report on his responsibilities.

Senator MILLIKIN. Well, his report, in a word, would contain the things necessary to determine whether he was in need, and the extent of his need. Is that correct?

Dr. MERIAM. Yes, sir; that is correct.

Senator MILLIKIN. That is the purpose of the report.

Dr. MERIAM. Now, certain of those reports would come in, and the reports would show, "Yes, this fellow has been on benefit for years." And this is just the annual check up, showing that his situation hasn't changed, and he stays on benefit. Some reports would come in showing that, according to the face of the record, the person is entitled to the benefit. But investigation would show he is not.

Senator MILLIKIN. One of the things that is so offensive about a needs test is, rightly or wrongly, the feeling on the part of the average citizen, of most citizens, that the welfare workers are engaged in "snooping." Would you not have a vast increase in that kind of "snooping," to check up on these reports?

Dr. MERIAM. You would have the same kind of investigator that checks up on our income tax if it does not look right, but with this difference, that in one case you are going to get something from the Government as a result of that investigation, and in the other case the Government may be going to get something from you.

Senator MILLIKIN. Doctor, I suggest there is a vast distinction. When we come to collecting taxes, we may be a little bit careless in the degree of the "snooping" that we do. The facts before us show that our checks are rather inadequate. That is the basis for the requests that come to us all the time to magnify the force of people who are doing that checking. But when it comes to paying out money for some strange reason or other I suggest to you we will be a whole lot more particular about that. And that is why I suggest that you will have a great magnification of the "snooping" process.

Dr. MERIAM. Of course, Senator, that depends somewhat on the type and nature of the standards which the Government would establish with respect to the payment of these benefits.

Senator MILLIKIN. Those standards, I suggest, will have to be rigid, or you are just opening the gate to have an automatic payment as a result of the report.

Dr. MERIAM. They would be rigid on the basis of the facts regarding number of people in the family. They would be rigid, fairly rigid, with respect to the resources which the family has.

Senator MILLIKIN. But the report in itself would be an utterly inadequate test, I suggest. You would have to check up.

Dr. MERIAM. Yes, sir; you would have to check. There is no question whatsoever as to that.

Senator MILLIKIN. You would have to check, and you would have to check rather vigorously.

Dr. MERIAM. Yes, sir; you would. But you do not have any question, in a case of that kind, of what in the old days used to be called "whether the family was deserving or not deserving". You would have no check into the morality or anything of that sort, which has frequently been involved in the administration of means tests. This, as I visualize it, is what you might call a straight economic investigation of the resources of that family, and that is a different type of fact than those which are involved in determining whether a mother is a satisfactory guardian for a child. I know something about social investigation and social work, and this, as I see it, is all on the economic side and would not go into the question of what I have so frequently found offensive, as to the moral conditions of the family, and so forth.

Senator BREWSTER. Have you a figure, Doctor, as to the number of individuals over 65 years of age who are economically independent?

Dr. MERIAM. I have some figures on that score, but I have not inserted them in the record.

Senator BREWSTER. Approximately how many do you figure in that status?

Dr. MERIAM. I think there is something like 27 percent of the people over 65 who are still working and self-supporting. Now, as to how many there are among the remainder who have resources enough so that they do not need it, I don't have the figures here. I am going to submit a memorandum to the committee on that score when I have the opportunity to sit down, at the office, and work on it. I will submit it within a very short time.

Senator BREWSTER. Well, have you estimated the cost of administering this needs test?

Dr. MERIAM. I do not think the cost of administering the needs test in connection with tying it in with the income tax would be excessive. It would cost more, of course, than a no-means-test system. And if the costs on investigation should be pretty high, you could save on the administrative costs by adopting the flat sum payment that is paid without any investigation at all.

Senator BREWSTER. What is the total income of the country to which this flat rate would be applicable?

Dr. MERIAM. I will get you that figure, sir. I do not have it in mind.

Senator BREWSTER. Was it around $225,000,000,000? Is that the approximate figure?

Dr. MERIAM. I haven't it in mind, sir. I can't answer you as to that.

Senator BREWSTER. What I had in mind was the total amount to which the flat rate would be applicable, and then the best estimate you could give of the cost of administering both the flat rate income tax and the means test.

Dr. MERIAM. I will put that in the record, sir.

(The material referred to, when received, will be placed in the files for the information of the committee.)

Senator BREWSTER. I suspect that when you get through you will find it is a great deal more than this ordinary income which we have, where you have these great exemptions, you see, which exempt all the little fellows. When you get through with estimating the cost of those, the figures will be very substantial.

I want to ask you whether or not there would be an alternative system of tax which would accomplish approximately the same result without so great a problem of administration. I am speaking now of some alternative form of tax, such as they have in Indiana, which they call, I think, the gross transaction tax.

Dr. MERIAM. I am very, very anxious if possible, sir, to use a tax that does not become a cost of production and does not enter into the price which we have to pay for the commodities.

Senator BREWSTER. Is there such an animal?

Dr. MERIAM. Well, sir, the nearest that I know of to it is the personal income tax. And that is the one reason that I have wanted to get rid of taxes that enter into the cost of production. The fault of any system of social security is that your system of financing is such that it tends to increase the price of commodities and the cost of living. Now, when you do that, you have impaired the value of the social-security system you have got.

One thing that worries me about H. R. 6000, our present system, and all the others, is that when you get these very high demands for cash to pay benefits which lie ahead of us, the Government is going to have difficulty in getting that cash, except through devices which are inflationary in themselves. You will find the cost of your living going up.

Now, all of us know that as to the people that we are talking about now, our present old people, who are no longer engaged in active production, they are living on some kind of fixed-money income. And they find that their situation is being made constantly more difficult by the system of taxation which the Government is using.

Now, I would take off the tax on employers' pay rolls. I wouldn't raise any of this money from a tax that is based on production. I would say: Levy a tax on the income of the people.

The employer gets caught there. He doesn't pay as an employer. He doesn't pay as an instrument of production. He pays as an individual who has this amount of income from his business.

Now, that is one of the basic reasons that led me to this recommendation of the tax. It is entirely possible that you can get this money very much more cheaply by the imposition of a sales tax, but that has the same defect. So that is the reason, it seems to me, that the principle of getting it out of the income tax is absolutely sound.

I should like to point out one thing in connection with the cost of administration. We are paying a tremendous amount now for the cost of administration of old-age assistance.

Senator BREWSTER. Ten percent.

Dr. MERIAM. That cost would be absorbed. That is, what I am suggesting wouldn't be additional cost.

Senator BREWSTER. You would save the cost of all the billions of records over in Baltimore?

Dr. MERIAM. I would like to see us save that money, because that is going to amount to a large sum of money. While the percentage is small, whether you base it on benefits paid or on the amount received, in the aggregate it is a tremendous figure. And I don't like to see those records over there—I don't like at all any social-security tax that is based on employers' pay roll and gets added into the cost of production.

There are two reasons I don't like it. First, it results in inflated prices or the tendency to inflate prices; and in the second place, it makes the people feel that they aren't paying for their social security. And social security can only be paid for out of taxes.

Senator BREWSTER. Would you in connection with the memoranda you are going to submit say whether you have a reliable estimate of how many of this 27 percent over 65 who are working would be otherwise independent, whether they are working because they have to work or whether they are working because they prefer to work? I think that enters into this question of determining on the means test. Do you suppose that figure is available?

Dr. MERIAM. I am not sure that the data on that are available. I will see how much I can get on it for you, sir. There are a lot of these questions I would like to know the answer to but I have never been able to get the data to answer them.

Senator MILLIKIN. I think that in some testimony we have had here someone offered that figure of the number of employes who are over 65.

Senator BREWSTER. He said it was 27 percent. He has given that figure. What I want is how many of those were working because they liked to work and how many were working because they had no one else to feed them. The figure I heard was that 90 percent of the people over 65 require some sort of outside assistance. What the basis for that figure is I do not know but it has always interested me a great deal as bearing on this general question.

Dr. MERIAM. I had occasion once to look into figures of that type which were very widely used and I could never find the material to answer those figures. I have talked to some people and the reply would be, "We took them from so and so."

I do not know whether you have had this in the record or not. This does not represent my own work at all. It is entitled "Graphic Facts From the Institute of Insurance, Division of Statistics and Research," and is a pie diagram of where our old folks get their income, the major source of income of people 65 and over.

Wait a minute, according to this chart I have understated a figure. This chart shows 34 percent are still working.

If the committee would like to have the chart, I shall be glad to give it to them. I am not sponsoring it. They say 17 percent have private assistance and 9 percent live on income from investments.

Senator BREWSTER. I would very much like to have it, Doctor.

Would that go in the record, Mr. Chairman?

The CHAIRMAN. I do not know whether that is in the record or not.

Senator BREWSTER. It is from the Institute of Life Insurance, division of statistics and research.

The CHAIRMAN. There has been some testimony offered here and maybe some charts were included.

Senator MARTIN. Mr. Chairman, I would like to make this observation. Your plan of tax which will not increase the cost of production to my mind is very sound but I have wondered whether in your tax plan you have taken into consideration the large number of copartnerships and very small corporations. The ones owned by an average of 2½ people furnish two-thirds of the employment in America. Now have you taken into consideration whether or not that would not add to the cost of production because the income of many

of these is either profits out of a copartnership at the end of a year or it is salaries that they receive as officers of the corporation?

Dr. MERIAM. I would tax the income that they receive from the business. I would not tax business as a business at all. The tax would be based on the personal income of the individual. There would be no business tax on any business concern whether it was a corporation or a partnership.

Senator MARTIN. I am wondering, Doctor, when you submit these figures if you would make a notation because that is a pretty considerable amount in the over-all income of the American people. There are so many small businesses that are conducted as a copartnership, as we term it in my own State, and I think there are similar businesses in most of the other States of the Union. That is a pretty considerable amount of the American income.

Dr. MERIAM. Yes: but just as far as it is possible to do so I would take the taxes for social security off the productive system of the country and put it on the personal income. Now how would that operate? That would operate to transfer purchasing power, take purchasing power in one group and transfer that purchasing power to another group. You would not greatly influence the amount of purchasing power which was in existence and being used. You would have some effect on the purposes for which that purchasing power is used. You would give purchasing power to people who have to use that purchasing power for the necessities of their current existence. They have to live out of the production of today. The dependents of today depend for most of the things that they buy on the current production of the workers and you transfer to them purchasing power. You would not increase the purchasing power: you would transfer it.

Senator MARTIN. I see your proposition that the individuals who are so fortunate that they can care for themselves will transfer part of that by Government to the unfortunate.

Dr. MERIAM. Yes, sir.

Senator MARTIN. Mr. Chairman, I feel that the doctor ought to give this a little bit in detail. There is no question, if all the Government is operated on a pay-as-you-go basis, there is no danger of economic collapse. When you project things into the future with the various degrees of inflation and values, you are getting into an uncertainty that you may have an economic collapse just as they did in Germany and many other countries where things of this kind have been undertaken. I think it would be very valuable to me in making up my own mind if this could be given in detail.

Dr. MERIAM. I will endeavor to do so.

The CHAIRMAN. Doctor, we will appreciate it if you will.

Dr. MERIAM. I have not the type of mentality that enables me to carry these in my head or to do good mental arithmetic. I am of the type of mentality that thinks best with a pencil and works the thing out. I am sorry I was not built the other way.

Senator MARTIN. There is not much danger then of getting something which would get us off in our thinking when you think it through.

Senator MILLIKIN. Doctor, may I pursue a little bit further your propositions that you do not want to add to the cost of production and that you want to decrease the cost of keeping records? Let me

ask you a couple of speculative questions for the purpose of getting some more information.

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. Does not an increase in income taxes, after certain lags, certain smoothing out, increase the cost of production although it does not have the direct and immediate impact of an excise tax?

Dr. MERIAM. Sir, I think that I know what you are talking about and I think it is an exceedingly important matter. As you know, we have progressively raised the income-tax brackets and there is very little income still available for taxation that is held by those upper brackets. Now the upper brackets have been the source of our venture capital so that there is very great danger that we may cripple our production. We know that in certain professions, such as dentistry, for example, the incentive to go on has been diminished by the high rates of taxation.

Senator MILLIKIN. Mr. Chairman, I will have to have my memory checked on this but our own experience on this committee indicates that we get perhaps 70 to 80 percent of our revenues from income taxes in the so-called lower brackets.

The CHAIRMAN. Yes; $5,000 and under.

Senator MILLIKIN. Yes; so that roughly speaking this upper bracket that used to have a large income, in a very rough sense, we can eliminate. So we have to trace what happens to these people who have most of the incomes of the country and who pay most of the taxes.

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. Now when you put an income tax on a worker, and that is the category we are talking about now, that immediately becomes the subject of bargaining and reflects itself in wages which in turn become a part of the cost of business, which in turn becomes a part of the prices which the consumer pays. So I am just projecting the speculation that with certain lags and eliminating certain of the immediate impacts of an excise tax on production by way of example you come in the end to the same thing, any form of tax becomes a part of cost and reflects itself in prices.

Dr. MERIAM. Yes, sir; but your distribution of it under the income tax is a very much more even thing.

Senator MILLIKIN. I will agree that the effect is a smoothed out effect, that the impact of the effect follows certain lags but I am coming to the end of the point and I am suggesting that any kind of tax reflects itself in cost and therefore in prices.

Dr. MERIAM. I am not going to take issue with you on that, sir. I believe that is true; after all, if we promise these great big social-security benefits we get the money through taxes and you are going to get an increase in prices as the result of that heavy taxation. I know of no tax—I wish I did—that you could guarantee would not affect prices at all. I know of no such tax.

Senator MARTIN. Along this matter of cost, I am wondering if it would be all right if I injected something?

Senator MILLIKIN. Certainly.

Senator MARTIN. This matter of cost of production is getting rather serious. Doctor, in many of our smaller items in this country as we are competing with the imports from foreign countries where the

standard of wages is much lower than in the United States. I have in my possession 28 items of manufacture and agricultural production that are being already variously affected. Now will not a tax like this make that situation considerably worse?

Dr. MERIAM. I would be inclined to say, sir, that it would perhaps make it better. If we could prevent our domestic prices from rising tremendously, then we would have less danger, as I see it, from the competition from the foreign countries and that is one of the reasons why I hate to see us make commitments now on the basis of long-run future instead of leaving the situation adjustable and flexible according to the conditions which we do confront.

Senator MARTIN. Thank you very much, Doctor, and thank you, Senator.

Senator MILLIKIN. Now coming to this transfer of purchasing power to which you referred in the very lowest brackets, $2,000 and under of gross income, for example, those people spend all of their money for the same type of goods for which the beneficiaries under this system would spend it.

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. The upper part of the brackets, let us say from $2,000 to $5,000 or $10,000, is the principal source of your savings.

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. Those savings theoretically enter into capital ventures, so you do have a true transfer of those in the lower income brackets if you are going to tax them for your system, you are going to transfer the same purchasing power from those in the lowest brackets to those who will be beneficiaries of the system.

In those upper brackets, however, I suggest that there is a distinction in effect, you will have perhaps less velocity of spending in the upper part of the brackets about which we are talking, you perhaps have more money that goes into capital goods than in consumer goods in relation to the lower brackets. So that so far as the upper bracket of this thing is concerned you will have a difference in dynamics of spending. Is that correct?

Dr. MERIAM. I think so.

Senator MILLIKIN. So that it is not precisely a transfer of one identical thing to another?

Dr. MERIAM. No, sir; it is not.

Senator MILLIKIN. When you transfer under your system you are putting money into the hands of the people who will spend it with great velocity.

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. That in turn activates the so-called consumer part of our economy but that in turn reaches up into capital goods. If I go into a grocery store and buy a can of beans I am buying a consumer article but the can itself has to be made and it ramifies on up into capital goods. Is that not correct?

Dr. MERIAM. That is correct.

Senator MILLIKIN. I am going through all of this so that we may keep clear that we are not just taking one type of purchasing power from one group and transferring the same type of purchasing power to another.

Dr. MERIAM. The purchasing power we transfer would be equal in amount but the use of it would be different. It is perfectly clear that

any system of social security, H. R. 6000 or anything else, in transferring purchasing power. That is what the social security system does.

Now the thing that bothers me is that if we go into the high benefits as were proposed in 2893, the amount of purchasing power which will be transferred would be very much greater and we would be doing that today without knowing what the condition is going to be in 1970, 1980, and so forth. Now my recommendation would be that we do not go any further than we have to, to put an adequate floor or protection under our poor people in effecting that transfer.

Senator MILLIKIN. Let us not at the same time take the floor out from the lowest-income category.

Dr. MERIAM. Sir, I think they would pay extremely small amounts.

Senator MILLIKIN. We took 7,000,000 off the tax rolls in our last reduction and I am wondering whether this will result in putting them back on.

Dr. MERIAM. I would put them back on. I have three bases for putting them back on. We are told, and I think there is a great deal of truth in it, that one reason the people like so-called social insurance is that they have the feeling that it is something for which they themselves have paid at least in part; they are contributors. Now let everybody have the satisfaction of knowing that he has contributed.

I have already mentioned the fact that it seems to me in a system of this kind the benefits resulting from the payment of that tax would furnish a very important and valuable means of administration and it would likewise supply us with a great deal of material which we do not now have with respect to who these people in the lower income brackets are, how they get along, and what the situation is.

Senator MILLIKIN. Merely to illuminate the question, let me suggest in a speculative way that here you are just transferring the record keeping. At the present time we are all somewhat dumfounded at the enormous amount of records that has to be kept under the present system but under the change you are suggesting you will still have to pile up all of the reports, a much larger number of reports than are being piled up at the present time because you will have to keep them for research backward to see what the individual taxpayer's status was a year ago or 5 years ago. So, to complete my point, instead of Social Security keeping these records, why the Treasury will be piling them up, so 10 years from now we will look at them and say "Great Scott, look at the cost of maintaining this record system."

Dr. MERIAM. Under the present system, sir, we have to have the records from the itme that a boy gets his first job and comes under the Social Security System. We have to have it in minute detail at least until his benefit account starts paying and all those records go into the determination of the amount of benefit.

Senator MILLIKIN. And your means test will require also a continuous record of each individual.

Dr. MERIAM. I do not think it would be necessary to preserve the records in detail.

Senator MILLIKIN. Doctor, if we did not preserve the records you would be the first man to come up here and say, "You are depriving us of a valuable source of statistical information."

Dr. MERIAM. I think, sir, we could prepare the necessary statistics and records as we go along. I do not think it would be necessary for

us to keep anything like the volume of records we now keep and it would be a statistical record kept for the sole purpose of statistics; but I think a record that went back only a few years would be adequate for the purpose of administration.

Senator MILLIKIN. My hunch is that there could be a saving but as a matter of fact, whether Treasury keeps the records or whether Social Security keeps the records, I doubt very much whether in the end it will amount to much saving.

Dr. MERIAM. All right, sir, your guess is as good as mine.

Senator MILLIKIN. Now, Doctor, I would like to examine your proposal in relation to certain features of the present system. Let us assume that tomorrow we started on pay-as-you-go. Let us assume that we start on a pay-as-you-go system tomorrow under your system or under any other method of payment or coverage. What will we do with the $12,500,000,000 of the so-called trust fund?

Dr. MERIAM. I am going to give you my own idea without ever having given a great deal of study to it. I have thought about it many times. The trust fund is divisible into two parts, that which results from the contribution of the employer and that which results from the contributions of the employee. Now if I were doing it, I would give to the employees who have money in that trust fund a United States Government deferred annuity bond payable at age 65 or under certain conditions with interest at a reasonable amount of money. Of course you would destroy the debt obligations in the Treasury for the amount that has been transferred to these individual annuity bonds. That would be what we would do with respect to the employee's part.

As far as the employer's part is concerned, I would cancel those debt obligations of the United States Government.

Senator MILLIKIN. Now, Doctor, I respectfully suggest that there is a little doubt about that, about the rightness of this. The employer's contribution is a part of the employee's benefit which accrues to him from the moment the employer makes his contribution so that the employee could say, "This is a part of the benefit to which I am entitled." The employer does not make his contribution to help his own insurance; he makes it to help the insurance system of the employee.

Dr. MERIAM. Now I would go on a different basis there, Senator. The employer's contribution under our existing system has never been in any way earmarked for his own employees.

Senator MILLIKIN. It has not been earmarked for him.

Dr. MERIAM. Then the next point is it has become a tax passed along to the consumers to a considerable extent in increased prices. Employers have deducted their payments under certain taxes.

Now my memory is not very accurate, but as I recall we had a case, and you may recall it better than I do, of a processing tax. If I am not mistaken, that processing tax was declared unconstitutional for some reason. The result was that the question arose as to what you could do with the proceeds of that processing tax. That was another tax that had been passed along to the consumer. It had been deducted in one way or another. The decision was that that tax should go into the General Treasury in accordance with the doctrine of unjust enrichment. To return that tax to the individual employer who had contributed would come under that same doctrine of unjust enrichment.

Now if you should decide that you wanted to make some use of those bonds in connection with the subsequent administration, you would not destroy them, but I think from an accounting standpoint if you are going to get any money on those bonds you have to raise it by taxes. I think the simple thing from the accounting standpoint, and following the whole progress of your system, would be to wipe them off as far as the employer's tax is concerned, wipe them off the books.

Senator MILLIKIN. I continue to suggest that there is no analogy between the cases which you have cited and about what we are talking. Once the employer's contribution is made it becomes a part of the employee's benefit which theoretically he has a right to anticipate. It is true that the employee has the same right to the employer's contribution as he has to his own. If we are going to fix the employee up, let us fix him up with bonds that will cover all of his benefits.

Dr. MERIAM. You could do that. You could have done that had the system provided that when the American Telephone & Telegraph Co. paid its social-security tax as an employer that money went to the employees of the American Telephone & Telegraph Co., but it never did. The effect on the employer was a general tax the proceeds of which were to be used for the operating of the system as a whole.

Senator MILLIKIN. The same thing is true of the employee's contribution.

Dr. MERIAM. You can figure out from the record what the employee has paid in. He has paid it in as an individual. You can take action to restore that value that was taken from the employee.

Senator MILLIKIN. The mathematics of it would be very simple, assuming my premise is correct, that the employee has as much interest, as much right to the money that has been contributed by him as by the employer. So that once you determine what the employee's share is on whatever basis you set up, you merely have to add an equal amount to cover the employer's contribution.

Dr. MERIAM. All right: then the employee of the American Telephone & Telegraph Co. would get what he himself paid in and what the American Telephone & Telegraph Co. as a company had paid on his account. If you want to do it that way, sir, that would be all right with me, although I question the justice of that, as I do not think it has ever been true that the employer's tax was not to be distributed all over the whole field of covered employment without any reference whatsoever to the particular employees of the company.

Senator MILLIKIN. I suggest, Doctor, that once the contribution has been made by the employee or the employer it loses its identity as to particular business. It all goes into the pot for better or worse.

Dr. MERIAM. Yes, sir.

Senator MILLIKIN. Therefore if you are distributing the pot, you do not go back to the companies. You simply go back to what this employee has put in, you double it and give him the bonds to cover it.

Now, I want to say that bond suggestion is the best suggestion I have heard. I have been worried about this so-called trust fund and how from a fiscal standpoint we could absorb the impact of doing away with it.

Dr. MERIAM. I still think myself that the unjust-enrichment theory is a preferable method of handling the money which has been paid in by the employer, but I would get that trust fund out of the way as far as operating a pay-as-you-go retirement system is concerned.

Senator MILLIKIN. Under your system, how would you adjust according to the coverage of the present system? How can you bring that in in relation to the time of coverage, the amount of coverage, the length of coverage of those who have been in the system?

Dr. MERIAM. If you move over to a flat-benefit system, either with or without a means test, you have eliminated that type of difficulty.

Senator MILLIKIN. From then on.

Dr. MERIAM. From then on.

Now you have returned to the employees who are under the existing system the amount of money which they themselves have contributed, according to my point of view. Or according to your point of view; you have returned them the money they have paid in and you returned them the amount of money that their employer paid on their account. Now they are on the square. From here on you pay them the benefit under the new system.

Now my belief has been that the people now on benefit will get about as much under a new system as they are now getting. That is one reason why I should like very much to see your committee adjust your system and get it on what looks to me as a sound financial basis while those benefits are still low.

Senator MILLIKIN. Doctor, if your plan does not give more benefits than those that are now being paid on the basis of the 100-cent dollar put in by those of the employees with longer coverage, I do not know whether there is much reason for us to be here.

Dr. MERIAM. My expectation is that the benefits would be substantially larger than the benefits which are now being paid.

Senator MILLIKIN. I did not understand you to say that.

Dr. MERIAM. But I would not look forward to the benefits piling up as thy will under the present system from the result of your length-of-service increment, and as the result of changing the benefit formula. It is that long-time piling, sir, that gives me the great concern from the standpoint of public finance and the public welfare, and one of my major concerns has been that we will find ourselves in the position that in order to meet those heavy commitments we will have to take action which results in an increase in prices and destroys the very thing which we started out to do.

Senator MILLIKIN. I am almost in complete agreement with your analysis of the phony nature of the present system and the analysis of the inequities involved in it and your analysis of our inability, our possible inability, to make good the promises we are now making for the future.

Dr. MERIAM. I should like to make one more statement, if I may, Senator. I have always hoped that the Congress would establish a commission or a committee or something to go thoroughly into this whole problem under its own auspices and direction, to see whether this thing could be worked out. I am a member of the staff of Brookings Institution. We are not a wealthy institution, we do not have great resources. We cannot do many of the things which ought to be done in studying this problem. We frequently find ourselves under compulsion to adopt the best that we have. I think it would be thoroughly worth while for the creation of a competent committee or commission under your direction, not to see how you are going to tinker with the existing social-security legislation, but to go seriously

into this question of how we can establish a system that will operate on the pay-as-you-go basis, give protection to all our people, and be so designed that we run the minimum chance of getting that thing into our price structure so that we destroy the very thing we are attempting to do.

Senator MILLIKIN. We have been here in session since January 17 listening to the best men in the country on this thing and prior to that time we had our own advisory council set up consisting of a lot of good men and women. Does there not come a time when you have to make a decision rather than continue to stir the same mush all the time?

Dr. MERIAM. My answer there would be that it would be a different kind of thing. It would be not a calling in of people who are engaged in other things and are busy with other things to give you the best they have on the basis of what I call a superficial sort of study; you have a great deal of straight-out analytical work to be done. It has not been done. I do not know of anybody who can do it. I should like very much to see these problems and these questions raised and answered through the employment of, shall I say, an actuarial and statistical staff so that you really have the information.

Now I have handed up a chart here in asking the kind of question to which we need the answer. I cannot tell you whether that is a good chart or not. I have seen actuarial work turned out by Government which did not look to me like first-class actuarial work. It is not the kind of information on which I would like to base a decision. That was in the case of the initial stages of the railroad retirement system.

Now we do not have resources to do that actuarial work. You cannot get people in here to testify who have done the work that is required.

Senator MILLIKIN. We attempted to set up the advisory council with people of the type you are describing. In the last analysis we found no one in the insurance field or any other field who could come up with independent statistics and a rounded knowledge of the whole subject except finally they would have to go to the Social Security Agency which is the one involved here.

Dr. MERIAM. Yes, sir. Years ago when I first got interested in this field, when I was working with retirement systems for Government employees, I worked intimately with the actuary, George Burton Buck, who is regarded as a leading pension actuary in the country. He was the actuary for the Mayors' Pension Commission and I know the amount of work involved in studying these things. It seems to me it is not something that could be done in a few weeks, could not possibly be done through an organization such as your advisory committee.

Senator MILLIKIN. It had an excellent staff but in the last analysis they had to go to Social Security for the data.

Dr. MERIAM. Yes, in the last analysis they will have to go to Social Security.

Senator MILLIKIN. They would have to go for information out of that accumulation of stuff that you have been condemning.

Doctor, let me ask you this question. Have you any knowledge of the viewpoint of the President's Economic Council on this question of the trust fund?

Dr. MERIAM. I think I have somewhere a statement from the President's Economic Committee. I will read you, sir, what I have here

covering what they said. I think that is the safest thing for me to do rather than to attempt my own interpretation of the meaning of the words they use.

Senator MILLIKIN. May I interrupt you to ask when this was said and what the source is? Where does this appear?

Dr. MERIAM. The Fourth Annual Report to the President by the Council of Economic Advisers, December 1949.

Senator MILLIKIN. Thank you.

Dr. MERIAM. I am reading from page 22. My colleague, Mr. Schlotterbeck, prepared this. I had hoped that he was going to be here to take care of this question.

On page 22 they state:

> The true nature of the social-security problem being what it is, the concept of saving "for social security" is in one sense useful and in another sense misleading. It is useful to recognize that we must save in order to enlarge our productive equipment * * * but it is misleading to assume that through any process of bookkeeping, either personal or national, millions of people can save "for food and clothing, the medical care and recreational allowances" which they will be consuming 30 years from now when they retire. What they consume when they retire will be produced not by themselves but by the working force at that time.
>
> The Council strongly favors the national system of social security which involves contributions from employers and from workers on a systematic basis and which also involves contribution by Government. * * * Yet our discussion of the social-security problem implies that gradual efforts should be made to improve the contributor system so that at least part of the contributions would be more nearly on a pay-as-you-go basis. By this we mean the gradual development of a closer balance between social-security receipts and payments from year to year.
>
> The ultimate objectives should be toward making withdrawals from the economy for the purposes of social security roughly balancing the contemporary cost of benefits. * * * We also believe that as coverage becomes more general, the larger part of the social-security receipts should be obtained through general revenues rather than through payroll taxes. .

Then there is a new paragraph:

> This gradual development would be sound economics for the reasons already given and it would also provide a better gauge as to the magnitude of social-security benefits which we can afford to enact into present legislation.

Senator MILLIKIN. Thank you very much.

The CHAIRMAN. Thank you, Dr. Meriam. Did you make a mental note of the requests that have been made of you?

Dr. MERIAM. I should like to make one sort of personal statement, if I may.

The CHAIRMAN. Yes, sir.

Dr. MERIAM. As I said a few moments ago, I started working on this subject back in 1905 to 1910 in the Census Bureau. In 1915 I went to the New York Bureau of Municipal Research to do the research work on principles governing the retirement of public employees. I was forced as a young fellow, somewhere about 32 at the time, to give a lot of thought, which a young fellow would not ordinarily give, to retirement and the retirement age. I had the feeling at 32 that I did not want to retire, that I wanted to say in harness. Now I am on the other side of the retirement age, I am past the compulsory retirement age established by the Brookings Institution. I am delighted that the president and the board of trustees have given me the opportunity to stay in harness.

We are going to have a greatly increased body of people past 65. They need, as I need, an opportunity to continue to work and make

a contribution to our society. My life has been spent, in part, giving thought to the future of a child and grandchildren, one of the things that I would like very much to continue. I hate to think of being in a position where a child and grandchildren of mine or somebody else are making provision for me. I think it is contrary to the interest of the people themselves, it is contrary to the interest of society that we should be pursuing the mirage of pensions with the idea that everybody ought to be entitled to a pension when they get to the age of 65 years. I should like to see a whole lot more attention given to increasing the opportunities for gainful work for the people who are 65 or over.

I remember very vividly when I was doing that research work for the retirement systems reading what the Germans were doing. That was the old Kaiser Germany before the First World War. They recognized certain positions which were reserved for people who had reached the age when they were no longer active enough for their particular job. They did not give those positions to anyone.

I would like to see a whole lot more attention given to the effective utilization of the people who are past 65 in the interest of society and in the interest of those people themselves, so that for as long as possible we can have the feeling that we are still in harness, we have not been turned out to pasture.

That may be a personal point of view but I know most men of my age or older have exactly that same point of view. I am very much afraid that we will go on with this idea of making heavy financial commitments, large benefits for people when they are 65 and over, and I do not think we ought to do it; we ought to give them limited provision for benefits and the largest possible provision for constructive effort.

Senator MILLIKIN. Has the Brookings Institution made any studies on the continuation of elderly people in productive work?

Dr. MERIAM. Sir, we have under consideration at the present time a further study with respect to the pension problem as a whole. We have not started that yet. I expect it is going to be started in the near future.

I will say personally I shall probably be a member of the advisory committee on that study but it is not proposed that I do that myself. We are planning to give some consideration to that which is extremely important. From the standpoint of mental health of old people I think it is extremely important.

Senator MILLIKIN. Do you see at the present time any legitimate role of the Government in helping along a thing of that kind?

Dr. MERIAM. If you think of the Government as three levels of government, Federal, State, and local, I am pretty sure that there is a role for government. I would expect, however, that we will have to do as the American people have done in the past, do a good deal of experimental work to find out what is the right way of doing it. I cannot quite conceive of anybody right at this moment sitting down and mapping you out a Federal program. I think it has to grow and develop.

Senator MILLIKIN. Of course primarily it is a problem of industry, is it not?

Dr. MERIAM. Yes, sir; industry and local activities.

Senator MILLIKIN. The activities of the Government would have to be a sort of background, an incentive role?

Dr. MERIAM. Yes, sir.

The CHAIRMAN. If there are no further questions, Doctor, we want to thank you for your appearance and thank the Institution.

Dr. MERIAM. Sir, we are very grateful for this opportunity to be heard.

The CHAIRMAN. I do not know whether this chart can be put in the record. If it can, it should be noted that it is a graphic factual chart from the Institute of Life Insurance, division of statistics and research. The facts stated there as to the revenue which people 65 years and over are drawing for their support of course can be placed.

(The chart referred to is as follows:)

The CHAIRMAN. Senators Pepper and Holland, distinguished Senators from Florida, have asked to have inserted in the record a statement on H. R. 6000 by Mr. Sherwood Smith, Welfare Commissioner of the State of Florida. We are very glad to incorporate it in the record.

(The statement referred to is as follows:)

STATEMENT BY SHERWOOD SMITH, WELFARE COMMISSIONER, STATE OF FLORIDA

Florida is one of many States it is believed whose people favor expansion of the social-security law. Because of its situation in regard to its aged population and its economy, it is confronted with public-assistance problems in which expansion of the act would be of particular help.

Long before enactment of the original social-security bill in 1935, Florida was faced with difficulties in meeting the needs of its residents who were unable to provide for themselves. More recently, with constantly rising living costs and the shrinkage of the value of the dollar, this condition has improved only because Florida has been able to administer a public-assistance program with the aid of Federal funds.

Broadening the scope of the social-security program, as embodied in H. R. 6000, it is believed will help the people of this State who are in need. Some amendments already proposed to your committee are recommended which would help solve the economic problems of the needy aged in Florida.

While shrinkage of the dollar value has worked against those retired persons who came to our State thinking they could live on savings and investments—and now find that those are insufficient—many others among our aged have spent part or all of their productive years in "uncovered" occupations with relatively low wage rates; and as a result have never had the benefits of the old-age and survivors insurance features of the Social Security Act; or an opportunity to build a personal retirement fund on which they could rely during those years when they can no longer provide for themselves.

Understandably when practically all employed persons build a retirement fund they will in their declining years be better able to provide for themselves, and there will be less demand upon their taxpaying neighbors.

In Florida, approximately one-third of our population above the age of 65 years is included in old age assistance payments for varying amounts. Only a small proportion of them receive old age and survivors insurance benefits. Extension of this coverage would be helpful.

That brings us to a further belief that if early benefits were increased and if the period of required participation were shortened in order to be covered under the old age and survivors insurance program as has been proposed, more of our own citizens would no longer have to rely on a public assistance program. Those who are near the age of retirement and are just getting into covered employment should have the advantage of this program.

There is no need to recite to you the economic pressure under which many of our citizens—not only in Florida, but elsewhere—live. When disability comes before the age of retirement, many of them have nowhere to turn. An insurance program as protection against permanent conditions of this kind would lessen a great deal of suffering; and provide sustenance to members of families deprived when disability comes to the wage earner.

Responsibility in a democracy to those in need certainly extends to those who are unable to produce for themselves or to care for themselves because of total and permanent disability.

Services to children which are made possible through the Social Security Act already are showing encouraging results. It is gratifying to note that further expansion of this program is included in H. R. 6000 with an increased appropriation, and that an even further increase is suggested in proposed amendments to the bill.

The Federal matching provisions of H. R. 6000 providing for increased financial participation by the Federal Government in low-income States meets with our approval.

The benefits which have come to needy people and our whole economy through the Social Security Act are manifold and evident; and that there is a need for expansion of its provisions so that benefits can be extended to those not now

covered on a contributory self-financing basis seems equally evident. This also will reduce greatly the heavy tax load for public assistance.

The CHAIRMAN. Congressman James J. Delaney, one of the Representatives in Congress from the State of New York, was expected to appear before the Senate committee in person during these hearings but he is now submitting a brief, which will go into the record, in which he deals with various phases of social security but particularly emphasizes the necessity for some provision for unemployment compensation benefits to the Federal employees who have been dismissed or go out of their positions with the Federal Government.

(The statement referred to is as follows:)

STATEMENT OF HON. JAMES J. DELANEY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. Chairman, after passage of H. R. 6000, there was brought to my attention the plight of 2,500 Federal employees who were laid off at the New York Navy Yard. These workers were thrust into the ranks of the unemployed without the protection of unemployment compensation because Federal employees are ineligible for such compensation.

Had I known of this situation before H. R. 6000 came before the House, I would have pressed for an amendment which would have extended to Federal employees the unemployment compensation benefits now provided for workers already covered by the Social Security Act, or to be covered by amendments in H. R. 6000.

Before H. R. 6000 goes before the Senate I would like to give my support to S. 2760, a bill introduced by Senator Pepper to bring Federal employees under the unemployment compensation provisions of the Social Security Act.

In the case of the lay-offs at the New York Navy Yard, many of those discharged had served 15 years or more in the yard. When the reduction in force became effective, these men found themselves jobless without the assistance of either severance pay or unemployment compensation. Had they been employed in private industry, they would have been assured of unemployment compensation as provided in the Social Security Act.

The navy yard workers' problem is a graphic and particular example of the general problem faced by all Federal employees. It is true Federal workers are assured a retirement annuity through the Civil Service Retirement Fund, but that retirement system makes no provision for automatic benefits for a person laid off in a reduction in force.

Faced with the necessity of obtaining ready cash, apart from dipping immediately into savings, the Federal employee when discharged with less than 20 years' service, and within that limitation only, can apply to the Civil Service Retirement Fund for a refund of money he contributed while on a Federal pay roll.

After a reduction-in-force discharge, the workers in the eligible group—with more than 1 year of service but less than 20—may withdraw their contributions plus interest. But outside that service bracket, there is this restriction: workers with more than 20 years in Federal service cannot get a refund—their money must remain untouched until they reach the retirement annuity benefit age of 62.

Those who do withdraw their money from the retirement fund can restore it when reinstated in Federal service, to get the full benefits of the system. The restoration is not compulsory.

If we were to equate withdrawals from the retirement fund with unemployment compensation, we must first note that this resource is made available only to those whose Federal service falls within the permitted range of years—no more than 20. The Federal employee with more than 20 years of service cannot touch the money he contributed to the retirement fund, no matter how desperate his need at the moment. Thus, as a matter of fact, the money in the retirement fund cannot be regarded as funds for unemployment benefits, even in a restricted, personal sense, since the money comes from a fund which is neither collected nor administered as an unemployment benefit fund. Further, the fund is not available to all Federal employees.

If, in desperation, the worker with less than 20 years' service does make a withdrawal, he is taking care of present needs at the expense of future needs. The money he properly regarded as an insurance for old age he must, instead, put to use in his working years.

By contrast, the discharged worker covered by social security can provide for present needs through unemployment compensation without actually taking the money from what has been set aside for his old-age benefits. It is true the unemployment compensation will not match the average take-home pay, but the money does provide a sum that is readily expendable. It stands as the worker's first financial resource in time of unemployment; in this connection, his savings might be regarded as his second resource.

Just the opposite is true in the case of the discharged Federal worker. His first financial resource is his savings, and he must immediately dip into savings for household and other current expenses. Even if he is eligible to make withdrawals from the retirement fund, he is using money which is, in fact, savings under another name.

There is a further disadvantage, in the long run, for the discharged Federal employee who does withdraw money from the retirement fund. For him to gain the full benefit of the retirement annuity should he be reemployed in Federal service, he must restore to the fund all the money he has withdrawn, plus interest. While restoration would obviously be to his advantage, actually restoring the money would certainly prove burdensome to a person set back by any extended period of unemployment.

Thus, against the many known benefits of the civil-service system, there stands this denial of unemployment compensation. This inequality has become especially trying at this time because of the extensive reductions in force and delays in finding new placement in Federal service for displaced career employees.

To provide unemployment compensation for Federal employees, four bills were introduced in the House in the first session of the present Congress. None of the bills was incorporated in the amendments to the Social Security Act now before this committee. A bill to meet this problem, S. 2760, introduced by Senator Pepper, has been referred to this committee. S. 2760 is a companion bill to H. R. 6433, introduced by Mr. Lynch of New York.

Mr. Pepper's bill would, I believe, best solve the financial problem of the Federal employee in the matter of unemployment insurance. The amendment would eliminate the financial disability now imposed on the Federal worker, and would assure him a source of funds for necessities while he is seeking new employment.

There is another section of the amendments of 1949 which I would like to commend to the special attention of the committee as requiring revision and clarification. I refer to section 218 (a) (1) which provides for voluntary agreements for a coverage of State and local government employees. While it is true such agreements would be made only at the request of a State, an impression has been established that this section would make mandatory the transfer of State and local civil-service employees from their own retirement system to Federal social-security.

In such case I urge that adoption of an amendment prepared by Senator Lehman, which would specifically exclude from the application of this section all public employees in positions covered by a retirement system as previously defined in the act.

The change sought is an important one. Senator Lehman's amendment would leave undisturbed those civil-service employees of cities, counties, and States who are now covered by actuarily sound retirement systems. There is no good served anyone by moving workers out of a sound retirement system into another system. On the contrary, such a change would be a backward move in those instances where the local retirement system pays greater benefits than the Federal system offers.

It is true the proposed coverage of local civil-service employees would benefit employees of many small municipalities, counties, and some States, wherever local retirement systems are not provided at all, or where the benefits payable under them are inadequate.

As this committee is aware, representatives of small municipalities have supported the proposed new coverage, while representatives of civil-service employees in the larger States and municipalities have opposed the change. In the case of the latter, the opposition has been to transfer from actuarity sound local retirement systems to the Federal social-security system. That is a sound position to take. I would add my support to the petitions of these civil-service groups for an amendment such as Senator Lehman proposes.

I believe it will be generally agreed that the Social Security Act is intended to protect those left unprotected, not to interfere with any soundly established retirement system.

The CHAIRMAN. The National Federation of American Shipping Inc., requested permission to appear as witnesses and present thei views on this bill. However, the schedule was filled and in lieu o their personal appearance I am inserting in the record at this point a letter signed by their counsel, Mr. A. U. Krebs. The federation i assured that their comments and recommendations will be given th same consideration that would be given, had they been presente orally.

(The letter referred to is as follows:)

NATIONAL FEDERATION OF AMERICAN SHIPPING, INC.,
Washington, D. C., March 17, 1950.

HON. WALTER GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: The National Federation of American Shipping, Inc representing the owners of approximately two-thirds of the privately owned dr cargo and passenger merchant vessels and approximately one-half of the privatel owned tank ships under the American flag, desires to make the following recom mendations and comments with respect to H. R. 6000 amending the Social Securit Act, which is the subject of hearings by your committee:

INCREASE IN LIMITATION ON WAGES SUBJECT TO CONTRIBUTION

H. R. 6000 provides for a $600 increase in the present $3,000 limitation on annua wages subject to contribution and used in the computation of benefits. Appropri ate increases in benefits can be made without an increase in the tax and wag base. Although such an increase in the wage base would be of benefit to olde workers, particularly those retiring in the next few years, it would add 20 pe cent more to the taxes paid by and on behalf of younger workers over their life time. Furthermore, such an increase would considerably complicate existin voluntary pension and welfare plans, which have been integrated with the presen $3,000 wage base. The federation urges that the present $3,000 wage base b retained.

COVERAGE OF WORKERS OUTSIDE THE UNITED STATES

H. R. 6000 provides for the coverage of American citizens employed by a American empl yer outside the United States. Many of the Americans employe outside of the United States are covered under foreign social-insurance scheme for all purposes. Other such workers must pay taxes under foreign scheme although their opportunity to benefit from the schemes is relatively slight. Th federation recommends that the provisions receive very careful study prior t adoption.

EXTENSION OF COVERAGE TO PUERTO RICO AND THE VIRGIN ISLANDS

H. R. 6000 proposes to extend coverage to employees in Puerto Rico and th Virgin Islands. The economy of these islands does not justify the introductio of a social insurance scheme based on the higher wage levels prevailing in th United States. This is particularly true when consideration is given to th proposed heavy weighting of the benefit formula on the first segment of wages, an the proposed minimum average monthly wage of $50 and a minimum benefit o $25. The Federation is, therefore, opposed to the proposed extension of coverage

DEFINITION OF "EMPLOYEE"

H. R. 6000 proposes a new definition of "employee." This definition bears n relation to existing concepts of the employer-employee relationship, and woul include persons commonly considered to be independent contractors. Thus, th definition would make it impracticable, if not impossible, for employers in man cases to withhold social-security taxes. The Federation urges that the propose definition be deleted.

BENEFIT FORMULA

H. R. 6000 proposes a new formula for the computation of benefits. Th proposed formula contains several unsound factors. In addition to the unjusti

fied increase in the benefit base previously referred to, the formula unwisely retains the annual increment added to the basic benefit amount for each year of coverage. This annual increment is both unnecessary and unsound, and will lead to excessively high benefits in future years. Benefits should be sufficient to afford the desired basic value of protection now, and not 20 to 40 years from now after they have been automatically increased by an annual increment factor. The Federation is, therefore, opposed to the formula.

ELIGIBILITY REQUIREMENTS FOR DISABILITY BENEFITS

The Federation recommends that the eligibility requirements for disability benefits be much more strict than those proposed by H. R. 6000. In inaugurating a new type of benefit, an extremely cautious approach should be employed until there is an opportunity to measure the drain on the insurance fund.

REDUCTION OF DISABILITY BENEFITS

H. R. 6000 provides that an individual entitled to disability benefits under the Federal social-security program and under workmen's compensation statutes on account of the same disability for the same period of time will have his social-security disability benefit reduced by an amount equal to one-half of whichever of the two benefits is the smaller. Where disability insurance benefits have already been paid, the required deduction will be made by deductions from any other benefits, such as old-age or survivors benefits or subsequent disability benefits payable on the basis of the individual's wages or self-employment income. When a workmen's compensation benefit is paid on other than a monthly basis, reduction of disability benefits must be made in such amounts as will most clearly approximate the prescribed reduction in the case of those paid on a monthly basis.

Seamen who fall ill or are injured in the service of a ship do not receive benefits under workmen's compensation statutes but are furnished maintenance and cure (medical care) by the shipowner under the general admiralty law. Seamen are also entitled to indemnity for injuries resulting from unseaworthines of the ship or negligence of the employer.

H. R. 6000 should be amended so as to give the same recognition to maintenance and cure, and court awards for damages, that is given to benefits under workmen's compensation statutes. This can be accomplished by the following amendments:

On page 92, line 4, insert the following immediately after the word "individual": ", or maintenance and cure benefits have been received by such individual when employed as a seaman,".

On page 92, line 14, insert the following immediately following after the comma following the word "benefit": "or receipt of the maintenance and cure benefits,"

On page 92, line 19, insert the following immediately after the word "compensation": "or maintenance and cure".

On page 92, line 20, beginning with the parenthesis, strike out all through the parenthesis, line 22 and insert the following: "or if an individual employed as a seaman receives a lump sum payment for the same disability for the same period of time pursuant to a court award for damages,".

On page 93, line 6, insert the following immediately after the word "compensation": "Or maintenance and cure".

On page 93, line 7, insert the following immediately after the word "benefit": ", or a lump sum payment,".

On page 93, line 9, insert the following immediately after the word "compensation": "or maintenace and cure".

On page 93, line 10, insert the following at the beginning thereof: "or lump sum payments."

WAITING PERIOD FOR DISABILITY BENEFITS

H. R. 6000 provides that in order for an individual who is totally and permanently disabled within the meaning of the bill to qualify for disability benefits such an individual must, among other things, serve a waiting period. Except for certain claimants who filed delayed applications during a prescribed grace, period, the waiting period consists of the month which includes the day on which disability is determined to have occurred and the six calendar months following such month.

Seamen who are unable to work because of illness or injuries sustained in the service of a ship do not have their wages cut off because of such incapacity. They receive wages for the period of the voyage, and often for longer periods.

The federation urges that H. R. 6000 be amended to provide that the waiting period with respect to a seaman shall be the period subsequent to his disability determination date in which wages are received, or the six calendar months following the month of the disability determination date, whichever is the longer. This can be accomplished by the following amendment:

On page 89, line 8, change the period to a comma and add the following: "except that with respect to an individual employed as a seaman such term means the period subsequent to his disability determination date in which wages are received, or the period beginning with the calendar month in which occurred his disability determination date (as determined under subsec. (c)) and ending at the expiration of the sixth calendar month following such month, whichever is the longer period."

REPORTS ON SEAMAN'S EARNINGS

Prior to 1947, a seaman's earnings were reported on an earned basis permitting the prorating on a daily basis over the entire period of a voyage, and allocating to each quarter of the year its respective share of the earnings reported. However, a Treasury ruling based on amendments to the Social Security Act in 1946 forced the discontinuance of this method of reporting, and the substitute method of reporting earnings on a paid basis has proven to be most difficult of administration. The federation urges that H. R. 6000 be amended so as to permit a seaman's earnings to be reported, and taxes to be paid thereon, on an "earned" rather than a "paid" basis. This method of reporting is best suited to the industry, and is considered more equitable to the seaman.

The federation desired to offer the above comments and recommendations at the hearings now in progress, but was advised some time ago that the witness schedule had been closed. The federation, therefore, respectfully requests that the comments and recommendations be given the same consideration which they would have received if they had been presented orally, and that this letter be incorporated in the record of the hearings.

Very truly yours,

A. U. KREBS, *Counsel.*

The CHAIRMAN. The committee will recess until 10 o'clock tomorrow morning.

(The following statement was submitted for the record:)

STATEMENT OF GEORGE BUCHAN ROBINSON

I

The contention of the Brookings Institution book—the Cost and Financing of Social Security, by Lewis Meriam and Karl Schlotterbeck, that OASI's reserve fund of Government bonds is a fiction is squarely founded, I submit, upon a certain identifiable error of accounting. That error is to treat the act of reserve accumulation of Government bonds—which is lending to the Government by OASI—as if it created the Government debt and/or interest cost of the bonds accumulated. A lender's lending cannot possibly create a borrower's debt or interest cost. The borrower—in this case the Government—creates his own debt and interest cost by his borrowings. This is a grave error, because whenever it is made, the fiscal effect of reserve accumulation of Government bonds is misunderstood.

If reserve accumulation of Government bonds created Government debt or interest cost, obviously such reserve accumulation would be fiscally harmful. But the exact opposite is the truth of the matter, that is to say, OASI reserve accumulation of Government bonds improves the Government's financial position, instead of harming it. It does so (1) by lodging with OASI—a branch of the Government—Government debt, which otherwise will be lodged with private creditors, and (2) by accomplishing that good purpose without itself increasing the Government's debt or interest cost; indeed, instead, it reduces both.

To be sure, OASI reserve accumulations would work to increase the Government's debt, if it should induce the Government to spend and borrow additionally. In this, OASI's fourteenth year, however, there is no evidence that the $12,000,000,000 reserve accumulation induced the Government to spend, or borrow, addi-

tionally; or that even freezes of the OASI tax rates induced the Government to spend, or borrow, less. There is presumptive evidence, therefore, that the amounts of the reserve accumulation affect only the amounts the Government borrows from other lenders, and not the total amount of the Government's debt. A Government which owes $257,000,000,000 cannot afford to misunderstand the fiscal effects of OASI reserve accumulation.

Some members of the committee will remember that in 1944, in a report to the Senate, the Committee on Finance said that OASI's having, or not having, $50,000,000,000 of 3 percent Government bonds in 1980 would make no difference to the taxpayers of that time. The committee's report said in substance that, with OASI owning $50,000,000,000 bonds, the taxpayers must pay $1,500,000,000 interest, and that with OASI owning no bonds, the taxpayers must pay the same annual sums in "direct appropriations" to OASI; and it treated those alternative payments as being fiscal equals. They were not fiscal equals, however, because with OASI owning no bonds, the taxpayers will be required, not only to make the $1,500,000,000 of direct appropriations to OASI, but also to hire $50,000,000,000 from other lenders, and pay $1,500,000,000 interest thereon. The committee's mistake, I submit, amounted to $50,000,000,000 of principal amount as of 1980, and to $1,500,000,000 of annual cost thereafter.

I wish to quote the phrase in your 1944 statement, that is, I submit, responsible for the committee's error. When you report postulated OASI's owning $50,000,000,000 bonds, it spoke of $1,500,000,000 as being needed "to pay the interest on $50,000,000,000 Government bonds in a reserve fund." That phrase, namely, "to pay the interest on $50,000,000,000 bonds in a reserve fund," treated OASI's having $50,000,000,000 bonds as creating interest cost of $1,500,000,000 a year.

The Government's interest cost is produced by the Government's owning bonds. Your report's phrase treated that interest cost as produced by OASI's owning Government bonds. That is the accounting error which has long plagued the OASI subject--the attributing of a borrower's debt or interest cost to a lender's lending. It is that error, moreover, that has persuaded many people that OASI's reserve accumulation forces the taxpayers to pay twice for their pensions. They would pay twice, to be sure, if the Government's borrowing from OASI created one cost, and the reverse side of the same transaction, i. e., OASI's lending to the Government, created a second cost. But lending does not create cost. It creates notes, or bonds receivable, i. e., assets, not debts.

The Brookings Institution book, by Meriam and Schlotterbeck, says (p. 155): "The obligations of the Government (liabilities) deposited in a trust account do not represent assets; they merely record future obligations which can be fulfilled only through the levy of future taxes, upon the economy in general." That passage, I submit, attributes to OASI's owning Government bonds taxation that will instead be produced by the Government's owning the bonds. The Government will not pay bonds because they belong to OASI, but because it owes bonds to whoever owns them.

I have examined dozens of versions of the accusations that OASI reserve accumulation of Government bonds lacks fiscal purpose and or that OASI's fund lacks substance. I have not seen a single version that is not founded in the accounting error I have described. Dr. Lewis Meriam repeated the error, indeed, in his testimony before the Committee on Finance, March 22, 1950. He said: "* * * we must pay interest on the bonds held by the fund in cash in order to meet our benefit costs." To be sure, we must pay interest on Government bonds in cash. But we must pay the same sums, whether the bonds belong to OASI or to others. We must pay because we owe the bonds, and without regard to the uses bond owners may make of the payments they receive. I do not say, of course, that the Committee on Finance was the author of the error. Its authors were certain influential actuaries, the published records show, spokesmen for the life-insurance companies and supporters of pay-as-you-go in OASI, who spoke about 1935.

In 1945 the life insurance indlustry's report, Social Security, declared OASI reserve accumulation of Government bonds to be fiscally purposeful (Social Security, pp. 36–37), having first, however, attributed to unnamed persons the accounting error the report abandoned. That error has now become, with the aid of certain of its own authors, anonymous. It is still influential, more is the pity.

The Meriam-Schlotterbeck book, I submit, also misquoted the Social Security Act. By misquotation, I mean making the act out to say things it does not say, by employing language that is at odds with the act's own language. Referring

to the passage I have quoted, I point out that it relates that Government bonds are 'deposited" in the trust fund, whereas in truth they are sold to the fund by the Government. The word "deposited" fails to take account of value's being paid for the bonds by OASI, and being received by the Government, whereas the statement that the bonds so "deposited * * * do not represent assets; they merely record future obligations * * *" supports the theory of value's not being paid and received, but is in conflict with both the language of the statute, and with the fact that the said bonds are both valid assets of OASI and valid liabilities of the Government.

It is indeed true that in a phrase preceding that in which the incorrect word "deposited" is employed, the authors say that the "trust fund is invested in Federal Government securities." This, however, does not excuse the later solecism, especially as it is just such casuistry as has misled innumerable readers vitally interested in the subject. I submit that obedience to the truth is a persistent imperative, and that even careless deviation is indefensible in those whose pretensions to scholarship and authority are as high as are those of the Brookings Institution.

A tragic feature of the Meriam-Schlotterbeck accounting error is that it holds OASI reserve accumulations to be fiscally purposeless, and OASI's Fund to be a fiction on grounds which have exclusive reference to the fund's moneys being invested in Government bonds. If those subversive findings were valid, all other funds which consist of Government bonds (bought for value paid) would also be fictions, and most banks and insurance companies would be insolvent now. The findings are not valid; but the critics have the Government on thin ice in the matter.

II

M. Albert Linton, president, Provident Mutual Life Insurance Co., and for many years ardent supporter of "pay-as-you-go" (and frozen tax rates) in OASI, proposed in a letter to the editor, the New York Times, published March 5, 1950, that another study of OASI be made.

What would now be studied? A program which, Mr. Linton said: "would bring the present aged retired immediately into the system, and pay them benefits. * * * Benefits would be paid out of the current OASI income, transforming the system into one that would be truly pay-as-you-go. The contentious reserve question would be solved, as benefits would probably take all of the 3-percent pay-roll taxes, and increases in the reserve fund would be greatly slowed down, or possibly halted."

Let OASI and Congress beware of this proposal, even though it be called "truly pay-as-you-go." The method Mr. Linton described would "solve the contentious reserve question" by abandoning further reserve accumulation; and although that abandonment would be helpful to all insurance salesmen, it would be the opposite for the rest of us, including the policyholders of the insurance companies.

In 1943, John M. Powell, president of Loyal Protective Life Insurance Co., presiding at a forum on social security held by the Health and Accident Association, said that the 1 percent employee tax rate was more favorable to the sale of insurance than a 3-percent rate will be. On the other hand, however, abandoning or reducing OASI's reserve accumulation would increase OASI's deficit, and that deficit is a second governmental deficit that is additional to a public debt, which now itself equals $257,000,000,000; and those deficits are continuously attacking the value of the dollar, even though that may not always be obvious. The insurance companies have need to beware lest their long-standing advocacy of frozen tax rates and more Government debt in OASI, seldom plainer than in Mr. Linton's present suggestions, shall in due course not only destroy OASI's chance to provide an enduring program, but also do much harm to dollars, including those due to their policyholders. The companies would in that event pay a high price—in loss of public confidence—for whatever additional insurance business employing pay-as-you-go in OASI is now obtaining for them. And so would others.

In 1938 Mr. Linton correctly treated OASI's reserve question as part of the Government's total fiscal question, and he should so treat it now. Mr. Linton said (Insuring the Future, the Atlantic Monthly, October 1938, p. 344):

"The * * * reserve plan in the Social Security Act (i. e., the act of 1935) may best be understood if it is looked upon as a device for solving the financial problem of the Government resulting from the existence side by side of a Gov-

ernment debt approaching 40 billions, and an old-age insurance program entailing heavy financial burdens. Looking forward to the time when annual old-age pension benefits will have grown to exceed annual pay-roll tax receipts by 1.5 billions or even more, the country may well be concerned if the budgets of this day shall have to provide not only for a large subsidy (i. e., to OASI) but also for interest of more than a billion a year on the Government debt. The double burden would bear heavily on the taxpayers."

Although the "device" of which Mr. Linton spoke, i. e., "the reserve plan" of the act of 1935, was thus recognized in 1938 by Mr. Linton as available "for solving the financial problem of the Government," being specifically the problem of having "side by side" a costly old-age pension program and a public debt "approaching 40 billions," the public debt was permitted to increase to its present size, and OASI' benefits were increased also, without that device being employed, indeed with Mr. Linton periodically recommending instead the opposite action of OASI tax freezes.

If there shall be another study of OASI, it should enquire at the outset what has become of Mr. Linton's 1938 concern for the future taxpayers, and especially why his concern for them is less now than then, whereas obviously it should be much greater. The story of Mr. Linton's unused "device"—unused though the need for its use became measured by an increase in the public debt or more than $200,000,000,000—testifies that increasing the OASI reserve accumulation—and not reducing it as Mr. Linton has suggested—is now in order, and should have prompt attention in any present study.

OASI reserve accumulation of Government bonds reduces the Government's net bonded debt, i. e., the amoung of Government bonds owned by others than the Government's own branch (OASI). With the Government's gross bonded debt almost $260,000,000,000, there has long been good reason for that favorable effect of OASI reserve accumulation to be noticed and respected. Mr. Linton, it appears, has forgotten about it.

III

Testifying before the Committee on Ways and Means of the House of Representatives, April 7, 1949, I opposed H. R. 2893, because, in view of the increased benefits it proposed to enact, it provided for insufficient reserve accumulation. (See hearings on H. R. 2893, pt. II, pp. 1612–1623.) I oppose H. R. 6000 upon the same grounds.

Respectfully yours,

GEORGE BUCHAN ROBINSON.

(Whereupon, at 12:15 p. m. the committee recessed to reconvene Thursday, March 23, 1950, at 10 a. m.)

60805—50—pt. 3——71

SOCIAL-SECURITY REVISION

THURSDAY, MARCH 23, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

Present: Senators George, Byrd, Johnson (Colorado), Kerr, Myers, Millikin, and Brewster.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

Senator Long?

STATEMENT OF HON. RUSSELL B. LONG, A UNITED STATES SENATOR FROM THE STATE OF LOUISIANA

Senator LONG. I did not bring a prepared statement, Mr. Chairman. I would just like to discuss one or two points in the present social-security bill, H. R. 6000, which I expect to support.

I think this bill goes a long way toward correcting the inadequate provisions that we have at the present time for the needs of retirement and the other phases of social security. The only objection that I would have to benefits at the present time is that I believe they will still be too meager even after we work this program out. I note that the average benefits will be about $46 for retirement, and in my own State, the average public-welfare check is about $47.50 for people over 65.

The CHAIRMAN. Old-age assistance?

Senator LONG. People who are on old-age assistance; and who are, you might say, in that respect wards of the State and the Federal Government. It seems to me we should try to work out a retirement program wherein the retirement benefits, the social insurance for retirement, would take up where the public-welfare program leaves off, so that at least a person who has paid for his own retirement could expect to live in a little bit better circumstances than a person who, for one reason or another, either was unable or failed to contribute to his own retirement. I feel that a minimum benefit, for example, of $25 for a person who has paid over a period of years for his own retirement is ridiculous, when a person on public welfare who could simply qualify as being needy could get twice that maximum. I know in your State, Senator Millikin, it even goes higher than $50 a month.

Senator MILLIKIN. It is $75.

Senator LONG. It seems, therefore, since our Government has adopted the position that it would match up to $50 a month for the retirement of individuals—that is, under public assistance—we should take up at $50 for the retirement of people under social security, so that we could feel that at least those who have paid for their own retirement would live a little bit better, or at least as well as those who were depending entirely on public assistance.

I do hope that someday we will see the public-assistance program and the social-security insurance features merged into one consistent program, and I hope that if that day is ever reached we will provide a basic $50 per month retirement for everyone at age 65.

I do not believe that is likely under the present bill, so I will not go into great detail on it.

I also believe that someday we will see fit to go to a cash-in and cash-out basis, rather than attempting to build up enormous surpluses on which a person could retire. I do not know exactly how much the Social Security Administration estimates would have to be in the fund for people to retire, but I would estimate that if we are going to build up a fund large enough for 60 million workers to ultimately retire on, and take those same dollars back out over a period of time, the fund would probably have to be somewhere between 300 billion and 400 billion dollars. I do not believe you could find that many securities to purchase, and there is not that much cash in America. It appears to me it would be necessary either for the Government to issue additional securities or to run the printing presses to create additional currencies to build up such an enormous fund. I feel that we are making a basic error when we look entirely toward the dollar value of retirement and not in terms of it as a case of taking a certain portion of the gross national product and providing for those whom we wish to retire from productive labor. I believe, if we look at it in that sense, we will find that all during the time we have had social security we could have paid greater benefits if we had been paying out the receipts that we were at that time taking in.

It is my feeling that the workers who are presently working should pay the expense of retiring those who are presently retired, and should in turn expect the succeeding workers to pay the expense of retiring them as time goes by, and that our social-security policy should be based on estimating how much of our gross national product the national economy could afford for us to set aside for the retirement of our aged people.

Senator MILLIKIN. I think what you are saying is that you believe in a pay-as-you-go system.

Senator LONG. That is right. I believe in pay as you go. I do think it is a very fine thing to have a substantial reserve. We have at present, I believe, about 12 billion dollars, or possibly substantially more than that, in reserves; and, where you do have a substantial reserve, anyone dependent on that retirement system knows that there is no prospect of the fund going broke at any time in the near future.

I think everyone who is retired likes to feel there is a large amount in the fund and no immediate prospect of the fund coming to an abrupt end. Therefore, for the peace of mind of all those who rely on our social-security system, I believe it is good to have a substantial fund there and to put a little bit more into the system each year than we

take out. But, as far as building these tremendous reserves, I believe that someday we will find that fallacious.

I think, also, we will find that we are making a mistake when we try to plan the retirement of a person 50 years in advance. I believe if we are able to provide a reasonably satisfactory retirement program for our people today, or during the next 5 or 10 years, future Congresses will find a way to better plan for their people than we can plan for them generations in advance.

Of course, those items I do not believe will have much effect on the present bill, because I believe that the committee and the Congress are pretty well committed at the present time to going along under the usual insurance programs to build up these large reserves; but I do hope over a period of time we can work toward a pay-as-you-go system.

One need that is extremely deserving of help, Mr. Chairman, is the situation of the disabled people in this country. That is the blind spot of our present public-assistance program, and I feel that it is probably one of the blind spots of our insurance program as well. In my State, we provide for about 125,000 aged people over the age of 65. In addition, we provide for about 24,000 disabled people, about one-sixth as many people as we have under old old-age program. But it is this one-sixth who must be aided by the State, with no aid from the Federal Government whatsoever.

If my memory serves me correctly, we are spending about a million dollars a month in my State, with no Federal aid, in the effort to provide for these disabled people. If economies must be effected in our program, there are many who would urge that we reduce the aid for this category, because there is no Federal matching, and the money would go further in the old-age program with Federal matching. But that would be a very unfair thing to do in most respects, because those are the cases of the most crying need. In many cases those people have heart disease or have been subjected to a heart attack, where any strenuous labor would kill them almost immediately. Many of those people have cancer, and many of them have other incurable diseases, which would make it completely impossible that they ever work again. It seems very unfair that the Federal Government would match us and make it possible for us to adequately provide for a person 67 years old, let us say, who is yet able to perform some useful labor, and at the same time give us no aid at all in providing for a man, let us say, 61 or 62 years old, who is bedridden and may never be able to do any work of a remunerative character again. And I certainly hope that this committee will come forth with a provision to enable us to care for the disabled.

The definition that is presently in the bill as it passed the House provides for aid for the totally and permanently disabled, and I do not believe anyone will be able to tell us exactly what that language means if that test is applied. I know in my own State our workmen's compensation law used the term "totally and permanently disabled." The term was so strict that the court saw fit to liberalize it, and our definition in Louisiana is that a man who was a carpenter, if he suffered an injury which would prevent him from climbing a scaffold, although he could do many other types of useful work, was totally and permanently disabled to be a carpenter and is entitled to compensation as a totally disabled worker although he might then go to work as a

watchman and make more money than he made as a carpenter, because he had been totally and permanently disabled for that particular job that he had been doing. We will find ourselves splitting hairs and fighting over definitions as long as we have the definition of "permanently and totally disabled," unless we intend to go further and define those terms in this act. To me the only proper definition of "aid to disabled" would be that the person be, first, needy, and that in addition to being a needy person, he has disability that is such as to prevent him from earning sufficient money to provide for his own needs. That is what we are ultimately going to arrive at in our definition of "totally and permanently disabled," in my opinion, if we ever put it in the act. And I feel that we might as well be realistic in the beginning and realize that the State program would have to attempt to set up a definition that would be more administrative and would rely on the fact that a person because of his disability was unable to earn sufficient income to provide for himself. Otherwise, I believe we will find ourselves in a situation where possibly a great number of people who would be entitled to some consideration may not receive it.

There are a lot of people who are temporarily disabled, although the temporary disability may last for as long as 6 or 8 months, and if they have no other visible source of income it would seem to me that they should be entitled to some consideration for public assistance. I do not feel that it would be proper for the National Government to say that it would not match or assist with any of those kinds of cases. Therefore, I hope that this committee will consider the amendment that I offered pertaining to the definition of "disabled."

In addition to that, Mr. Chairman, I have received complaints from some of our States and municipal employees, who feel that they will be compelled to come under the Social Security Act and receive less benefits than they would receive under the present retirement system within their States. As an example, our school teachers have a very excellent retirement system in the State of Louisiana that they have worked on over a period of many years. Now, the law provides that those people could vote whether or not they wanted to come under the social-security program; and on its face it would seem that they would be well protected. However, they feel that, in the event we pass the present social-security bill and include such a provision, many of the members of the State legislature would simply refuse to appropriate money for the State's matching portion to the retirement system, in the effort to compel the teachers to go under the social-security program, which would be less expensive to the State. They feel that to avoid any type of compulsion, or being forced by the legislature, or by a balking legislature, to go under the Federal retirement system, they would just prefere to be exempted. Therefore, an amendment has been presented, which I believe was proposed by Senator Lehman, in this connection, and I will not attempt to suggest to the committee what its decision should be on that matter, but I do believe that should be considered in studying this bill.

Further than that, I have heard from many of the timber people, logging mills, and paper mills in my State, who are concerned about the definition of "employee" where, as they feel, the individual is a private contractor. I have not had a chance to make sufficient study of that matter to know just what my own opinion would be, but I

would call it to the committee's attention so that they may give study to the position of an independent employee, or an independent contractor, who may or may not be covered by the act. I certainly hope that, however the committee works it out, we do clearly spell it out one way or the other, rather than leave it for administrative decision as to whether a person working as a private contractor for a logging mill or a pulp mill or something of that sort is an independent contractor. I feel it is only fair to both the employer and the employee that both sides know where they stand when Congress acts on this measure.

The CHAIRMAN. Thank you very much, Senator Long, for your appearance.

Senator LONG. I thank you very much for the time, Mr. Chairman, and your consideration.

The CHAIRMAN. Mr. Lowell Whittet?

Mr. Whittet, before you proceed, we shall offer for the record a statement prepared by Ernest W. Greene, vice president of the Hawaiian Sugar Planters' Association, in which he advocates the coverage of farm labor under social security.

(The statement referred to follows:)

STATEMENT OF ERNEST W. GREENE, VICE PRESIDENT, HAWAIIAN SUGAR PLANTERS' ASSOCIATION

I am Ernest W. Greene, vice president of the Hawaiian Sugar Planters' Association, of which all of the producers of sugar in Hawaii are members.

The executive committee of the association, on March 13, 1950, unanimously adopted a resolution as follows:

"Whereas the Committee on Finance of the United States Senate is presently conducting hearings on proposed amendments of the Social Security Act, and consideration is being given by said committee to proposals for the extension of the coverage of said act to include persons not now receiving benefits provided by the act: Now, therefore, be it

"*Resolved*, That this committee express to the Committee on Finance of the United States Senate the position of the sugar-plantation companies of Hawaii in favor of the extension of the coverage provisions of the Social Security Act in order to entitle agricultural labor to the same old-age and retirement benefits now received by other persons covered by the act."

The production of sugarcane and the processing of raw sugar therefrom is necessarily a large-scale operation under the conditions which exist in Hawaii. Persons employed by sugar producers are engaged in year-round employment in every phase of the farming and harvesting of sugarcane, transporting such sugarcane to the sugar mill on the plantation farm, and processing it into raw sugar.

About one-half of the employees of sugar producers are employed in employment which is covered by the present Social Security Act. The other half are employed in employment which is defined by the act as agricultural and, therefore, they are exempt from such coverage. Exemption in this instance means that many thousands of the persons employed in producing sugar do not participate in the benefits of social-security legislation.

The sugar producers of Hawaii urge that the Committee on Finance amend the Social Security Act to extend to employees employed in agriculture the old-age and retirement benefits which are now received by persons who are covered by the act.

We believe that coverage of agricultural workers will accomplish simple justice by affording to such workers the security which is now enjoyed by other workers who are employed in employment which is so classified as to be covered.

The CHAIRMAN. Also a request by the Honorable Guy M. Gillette, junior Senator from Iowa, on behalf of the National Brotherhood of Packinghouse Workers: and that will be entered into the record also, Mr. Reporter.

(The statement referred to follows:)

UNITED STATES SENATE,
March 23, 1950.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

MY DEAR CHAIRMAN: I am submitting the attached statement from the National Brotherhood of Packinghouse Workers with the request that it be considered by your committee and made a part of the record of the hearings.

Your consideration of this request will be appreciated by the undersigned.

Sincerely,

GUY M. GILLETTE.

STATEMENT FROM NATIONAL BROTHERHOOD OF PACKINGHOUSE WORKERS

Our union, the National Brotherhood of Packinghouse Workers, CUA, approves, in principle, extension and improvements to the Federal old-age and survivors insurance system, to amend the public-assistance and child-welfare provisions of the Social Security Act, and for other purposes as set forth in H. R. 6000. We feel that in one respect, at least, especially with reference to temporarily or permanently and totally disabled workers the bill (H. R. 6000) does not make ample provision. The effective date should be immediately after passage. Since the cruel effects on those afflicted with polio and heart disease, or permanently disabled by industrial or other accidents, is a matter that should no longer be ignored.

All statistics on the permanently and totally disabled in our population are estimates subject to a very large chance of error. No census of the disabled has even been taken. As the disabled are not entitled to any special benefits in this country, there also is nothing resembling automatic registration of these people.

The estimate of 750,000 as the total number of all people who are under 65 and permanently and totally disabled comes from the Social Security Administration. It is based upon sample surveys made in the year 1945. This figure includes only people permanently and totally disabled who are in the employable ages, that is, from 16 to 65. Permanent total disability, as used in this estimate, takes account only of disabilities which have lasted more than 6 months. H. R. 6000 will provide benefits for only a small percentage of all of the people who are permanently and totally disabled. To qualify for benefits, not only must the disability be of such nature as to completely prevent employment and have already lasted at least 6 months, but the claimant must be able to establish that he was fully or currently insured. In most cases this will mean that only people who have had pretty regular employment up to the time that they become permanently and totally disabled will be able to get any benefits. Many disease conditions, however, are of such a character that disability comes on very gradually Many such people will not be able to attain or maintain the status of being currently and fully insured, as that involves at least employment in covered industries in half or quarter years. Workers who are newly brought under coverage by the amendments to the Social Security Act made in H. R. 6000 will not be eligible to any total and permanent disability benefits until 1956 at the earliest

Approximately how many people will be able to get permanent and total disability benefits should H. R. 6000 become law is even more of a guess than the total number of permanently and totally disabled persons. The best guesses on this point are those given in the report of the Advisory Council on Social Security on permanent and total disability insurance which was made to the Senate Committee on Finance in May 1948. On pages 15 and 16 of that report occurs the following estimate regarding the proposal for including permanent- and total-disability benefits in old-age insurance benefits which was made by the Advisory Council:

"After the program has been in operation for a few years, the number of new disability claims arising annually will range from 20,000 to 50,000, although after perhaps a decade or so, when the full effect of the extension of coverage has made itself felt, this number will rise to perhaps 40,000 to 100,000. Eventually the total number of disabled persons who are on the benefit roll and who are under age 65 will number roughly 300,000 to 800,000. The eventual annual cost of the proposed permanent- and total-disability benefits as a percentage of pay roll will probably range from somewhat more than 0.1 to possibly as much as 0.3 per-

cent of pay roll: in terms of dollars this corresponds to about 200 to 500 million dollars a year."

The recommendations of this Council were more liberal in this respect than H. R. 6000 but, in general, will also serve as an estimate of how many people will get benefits under H. R. 6000.

Another estimate relates to H. R. 6000 as passed by the House of Representatives. This was published last October by the House Ways and Means Committee as a separate document and is entitled "Actuarial Cost Estimates for Expanded Coverage and Liberalized Benefits Proposed for the Old-Age and Survivors Insurance System by H. R. 6000." These actuarial cost estimates were prepared for the use of the Ways and Means Committee by Robert J. Myers, actuary to the committee. As appears on page 7 of this report, the total number of beneficiaries who are expected to qualify for disability benefits under H. R. 6000 by the year 1955 is 190,000 to 594,000. Totals will increase in future years. The very wide range in the possible numbers is explained on the basis of varying assumptions, but it is made clear that the lower estimate is the more likely. From the same report it appears on page 9 that by 1955 the cost of permanent- and total-disability allowances will range from 12 one-hundredths of 1 percent of pay rolls to 34 one-hundredths of 1 percent. The ultimate costs (by the year 2000) are estimated at 36 one-hundredths of 1 percent to 93 one-hundredths of 1 percent.

At the present time approximately 2,000,000 persons, aged 14 to 64, who would otherwise be gainfully employed, are affected with serious disabilities which have continued for more than 6 months. It has been estimated that the chief causes of disabilities lasting more than 45 days fall into the following classifications:

	Percent		*Percent*
Respiratory diseases	18.8	Communicable diseases	9.0
Degenerative diseases	17.0	Female diseases	6.3
Accidental injuries	13.4	Nervous diseases	6.1
Digestive diseases	11.5		

Latest available figures from the national office of vital statistics show deaths from cardiovascular diseases and congenital malformation of the cardiovascular system in United States in 1947 between ages of 25 and 64 were 211,758 according to Edward Robbins, national labor representative of the American Heart Association.

When disability strikes a wage earner, it may be economically more disastrous for him and his family than unemployment, death, or forced retirement; for, in addition to the loss of wages, there are the costs of medical care, hospitalization, special diets, the expense of moving to a more favorable climate, etc.

The problem is being met, to a minor extent, in a number of ways. In some cases the workers receive payments from the workmen's compensation funds of his State. However, such payments are possible only where the disability has arisen out of the worker's employment. There are also some companies which make payments to their disabled employees. In some instances the worker carries insurance against disability either as an individual or in combination with his fellow workers. In recent years, a few States have provided by statute for disability insurance.

However, these various methods provide protection for only about 27 percent of the workers who are covered by unemployment-compensation laws. The only adequate solution of the problem is the establishment of a national plan. Only a national plan can give country-wide coverage and lifetime protection. There is a constantly occurring mobility between both industries and States. After disability occurs, it may be necessary or desirable for the disabled person to change his place of residence. A national system would allow this mobility much more easily than other plans. Under a national plan the cost burden in the case of varying rates of disability between localities, due to epidemics, catastrophes, varying age, sex and occupational characteristics, would be equalized.

This national system should be operated in conjunction with the present old-age and survivors insurance plan. The existing facilities of this plan, with its wage-record system and field organization, could be used in the administration of disability benefits. Employers would have to keep only one set of records. Contributions could be kept in a single trust fund which would provide greater flexibility in financing. There would be no overlapping of functions, and the number of administrators would be kept at a minimum.

However, the provisions of the proposed H. R. 6000 relating to disability benefits do not go far enough. The proposed bill provides disability benefits for only those workers who are totally and permanently disabled. The problem of the temporarily disabled worker is also of large proportions. Each day about 2,000,000 persons are kept from their jobs by disability which has lasted less than 6 months. In addition, there are large numbers of workers whose physical condition is such that they should not be at work; but who are there because they cannot afford the loss of wages. It has been estimated that the annual wage loss to the labor force through temporary disability is between 3 and 4 billion dollars. In addition to this wage loss, the labor force also is subject to a medical cost of $3\frac{1}{2}$ billion dollars.

Temporary disability also means a loss in productivity which is a vital loss to the Nation. It has been estimated that this loss of productivity equals the total of the wage loss and the medical cost. This hidden loss must be deducted from profits or passed on to the consumer in the form of higher prices.

In addition to the economic loss which the worker suffers as a result of temporary disability, he also suffers indirect losses. Among these are impairment of occupational efficiency, risk of permanent disability, lowering of the standard of living, and the psychological effect of want.

The bitter fight which is being made on permanent- and total-disability benefits in connection with the old-age insurance system centers around the possibility that the provisions for benefits may be greatly liberalized in future years. Under the restrictive conditions of H. R. 6000, both the total number of people who will get benefits and the cost of these benefits will not be great. The private insurance companies, however, do not want the Government to pay any permanent- and total-disability benefits, although this is a feature of the old-age insurance systems in practically all other countries. Logically, also, a man who is permanently and totally disabled before 65 is from an economic point of view in substantially the same position as the person who is unable to work by reason of old age. Old age is itself for many people a condition of invalidity. Those who do not want us to get a decent old-age and survivors insurance system, however, oppose the logical step of providing benefits for people who are permanently and totally disabled before they reach old age.

DON MAHON,
President, National Brotherhood of Packinghouse Workers and Vice President, Confederated Unions of America.

The CHAIRMAN. All right, Mr. Whittet. Will you please identify yourself for the record?

STATEMENT OF LOWELL WHITTET, ASSISTANT CONTROLLER, ED. SCHUSTER & CO., INC., MILWAUKEE, WIS., AND MEMBER, SOCIAL SECURITY COMMITTEE, NATIONAL RETAIL DRY GOODS ASSOCIATION

Mr. WHITTET. I am Lowell Whittet, assistant controller of Ed. Schuster & Co., Inc., department store, Milwaukee, Wis., and member of the social-security committee of the National Retail Dry Goods Association.

I wish to thank the committee for extending to me the privilege of appearing here today on behalf of the National Retail Dry Goods Association which is composed of approximately 7,000 department and specialty stores throughout the United States. The annual sales of the members of this association exceed $10,000,000,000 and they employ more than 800,000 workers.

Our organization has had an active committee on social security since the early part of 1935, which, as you know, antedates the passage of the Social Security Act. We have continuously endeavored to study the entire subject of social security from the broad view of the general welfare of all the people. It is because of this deep interest by retailers in this subject that I am appearing today.

Our organization believes that the social-insurance program should be extended to include all employed individuals, including self-employed, not now covered by the act because it is the democratic way of life to provide equal rights to all members of our society. The confusion resulting from an individual moving between covered and noncovered employment should be eliminated.

We definitely favor the insurance rather than the public-assistance approach in meeting the problems of old age retirement. In other words, we favor a program based on a "right earned" rather than on a "dole or needs" basis. We believe that through universal coverage of workers gainfully employed there can be a substantial reduction in the public-assistance program, and that the Federal Government can eventually withdraw from part, and possibly all, of these programs.

We are frankly fearful of the trends of the two programs—OASI and public assistance—and unless coverage is extended in the insurance program, it will be undermined by and eventually collapse in favor of an outright public-assistance program.

We favor the retention of the definition of "employee" which is now in the Social Security Act. If there is universal coverage, there is no need to tamper with the definition of "employee" and such retention would make it unnecessary for the Federal agencies involved to exercise their discretion in the field of employee-employer relationship by the proposed new and untried formula.

Senator MILLIKIN. Mr. Chairman, may I ask a question, please?

The CHAIRMAN. Yes, Senator.

Senator MILLIKIN. By "universal coverage," do you mean that everyone should be covered?

Mr. WHITTET. Yes, sir.

Senator MILLIKIN. Even if one is not a worker, in the common acceptance of that term?

Mr. WHITTET. I would say he should be attached to the labor market.

Senator MILLIKIN. A man who looks after his own investments, for example?

Mr. WHITTET. He should have been attached to the labor market, in my opinion, in those employments which the bill would incorporate as "self-employed," or farmers, or domestics.

Senator MILLIKIN. He should be brought into the system one way or another?

Mr. WHITTET. Yes, sir.

Senator MILLIKIN. You have no exceptions?

Mr. WHITTET. No, sir.

Senator MILLIKIN. Thank you.

Mr. WHITTET. We favor the retention of the present formula, contained in the Social Security Act, for computing the average wage, rather than that proposed in bill H. R. 6000 which is complicated and will be exceedingly difficult to explain or understand.

If the objective of the program is to provide a minimum floor under fluctuating living standards, then you may want to consider the thought that any change in benefit amounts might be properly related to cost-of-living indices. In view of the constant changes in living costs a fairly constant floor under living standards can be maintained through such a relationship.

In any event, whatever action might be taken to increase benefit amounts, we believe that the present $3,000 wage base should be main-

tained as against increasing the base to $3,600 as proposed. Any desired increase in benefits can be secured by applying a different formula to the $3,000 base.

It has been argued that, unless the $3,600 base is adopted, there will be a marked tendency for benefit amounts to be uniform under present wage conditions. However, this is in no manner inconsistent with our concept of providing a basic minimum. On the other hand, it is clear that an upward progress in the wage base once started may eventually lead to the substitution of a complete national insurance program for private savings and private insurance. We think a particular objection against any increase in the wage base would be the far greater percentage increases in the benefits to those earning over $3,000 than to those earning $3,000 or less. Presumably, it is this latter class that are more in need of benefit increases at this time.

Senator MILLIKIN. Mr. Whittet, I am a little bit uncertain as to the meaning of the sentence which you have read: "On the other hand, it is clear that an upward progress in the wage base once started may eventually lead to the substitution of a complete national insurance program for private savings and private insurance." What is your reasoning on that?

Mr. WHITTET. The reasoning is that it may be $3600 this year, $5000 next year, or $10,000 the year thereafter. And as we increase that wage base level, we may simply be substituting a governmental program for a private plan.

Senator MILLIKIN. In other words, you feel there is a field for private insurance which should be protected?

Mr. WHITTET. Yes, sir.

As an additional consideration for the maintenance of the $3,000 wage base, we wish to point out that the wage base figure in the Federal Unemployment Tax Act and State unemployment compensation laws is $3,000. There would be a reporting complexity for employers if they were called upon to report on one wage base for OASI and another wage base for unemployment compensation purposes.

Also to be considered is the fact that thousands of private pension plans are now integrated with the $3,000 base. The change in that base would bring about substantial maladjustments that could only be cleared through detailed negotiations. We believe this is particularly undesirable since in our estimation it is entirely unnecessary.

We favor a revision in the present provision which permits a retired worker to earn only $14.99 per month without forfeiting his OASI benefits. This requirement has worked an unwarranted hardship upon many of our older people due to the increased cost of living.

We believe that the allowable monthly earnings should be increased to $50. If there are any earnings in excess of this amount, then the individual should simply be entitled to receive either his total earnings or his benefit, whichever is the larger.

We are opposed to that provision which provides for the payment of benefits to insured persons age 75 or over without consideration of their earnings.

Our organization wishes to register complete opposition to the establishment of either a national permanent disability or temporary disability program.

With reference to permanent and total disability, we are opposed to the inclusion of this feature in a national social security program for the following reasons:

1. It would discourage many people from attempting to rehabilitate themselves and from returning to a productive life.

2. It also would do something to an individual, as such. It deemphasizes him as a man and causes him to turn to the Federal Government to provide for his future.

3. It is the first step, and a big one, toward socialized medicine.

4. The problem of effective administration would be terrific, requiring not only specialists in this field, but a great deal of detail investigation and follow up by many governmental workers. Even then, malingering and other abuses could not be prevented.

5. The experience of the life insurance companies in this field has been adverse.

6. The estimated cost of this program appears low, ranging from 237 million in 1955 to 866 million in the year 2000. The question is raised as to whether anyone would be willing to underwrite these figures and definitely say that the costs will not be greater than the estimates.

We firmly believe that the field of permanent disability is one in which the Federal Government should not enter. The problem should be left with the States.

Comments of the social-security committee of the National Retail Dry Goods Association to the Finance Committee of the Senate:

My previous statement was based upon the policies of our national organization, the National Retail Dry Goods Association, while the subsequent remarks represent the views of our social-security committee. Due to lack of time, the following comments have not been submitted to our national organization, and consequently it has not had an opportunity to consider and approve them.

In view of recent developments, we believe that it is timely for you as a committee to stop, consider, and reevaluate the entire approach to the problem of the aged. We believe that you have the rare opportunity to investigate and to develop an entirely new and sounder approach to the problem of the aged.

Senator MILLIKIN. May I interrupt, Mr. Chairman, please?

The CHAIRMAN. Yes.

Senator MILLIKIN. What was the experience of the retail merchants during the war so far as the full-time or part-time employment of aged persons was concerned?

Mr. WHITTET. I would say that it was increased. It was very difficult to get the necessary help to man the stores.

Senator MILLIKIN. Are the retail merchants attempting as best they can to keep elderly people employed if they can work and want to work?

Mr. WHITTET. I can only speak for our own organization, sir; and in our own organization we are. We have many people over age 65 that are continuing to work and do a good job.

Senator MILLIKIN. Is the association, as such, giving any attention to that problem?

Mr. WHITTET. As far as I know, we have not given any attention to that specific problem.

Senator MILLIKIN. Thank you.

Mr. WHITTET. The fact that you have under consideration bill H. R. 6000 provides the opportunity for a very thorough reexamination at this time of the basic philosophy and principles underlying the present approach to the old age retirement problem as set forth by existing law and the proposed amendments to it by H. R. 6000.

The present approach raises serious questions, not only of minor imperfections, but of the over-all program. In our opinion, existing law and H. R. 6000 are defective in that they necessarily, to a certain degree, provide the formula and theory of a "reserve." This is because taxes collected under such a growing program in early years will exceed disbursements. This "reserve" under a governmental system is really illusory—money cannot be invested so as to constitute assets as in private insurance companies. This approach, which is so-called insurance, bears no analogy to insurance principles.

There is no conceivable way for today's workers to provide funds for the future on an insurance basis; rather the present attempt to finance on an insurance basis simply postpones the full impact of the benefits until some future date, a situation which is detrimental to a sound fiscal policy for Government. No matter how it is argued, these contributions collected by the Government and expended for current purposes are simply gone and are not available for the future. They must be raised again either from taxation or borrowing. Present contributors to OASI are being deceived because those who are now paying this pay-roll tax are taught to believe that a fund is being created from which their benefits will be paid. It is absolutely wrong to continue to convey the idea that a fund is being created to provide for old age payments when actually it is not being done.

Furthermore, considering the excess tax receipts as a reserve gives rise to pressures to further expand both benefits under the existing program and to expand in other social-security fields. New programs endanger sound fiscal policy through encouraging plans for Government expenditures in future periods because future obligations do not have to be met out of present taxation or borrowing.

As a consequence, enactment of H. R. 6000 is really legislating for the future generation, for the retirement problem as it will exist a generation hence. By reason of slowing developing maturity we have slowly developing costs, but the costs will inevitably increase from year to year. Bill H. R. 6000 is estimated by the Social Security Agency to cost $1,300,000,000 its first effective year and assuming the scale of benefits and coverage to be in no manner further increased, the annual cost will mount to 12 to 15 billion per year by conservative estimates within the next 50 years. The most critical defect is that the provisions of the proposed legislation providing very substantial future obligations do not deal in a realistic manner with the cost or the necessity of raising the money to meet the obligation involved. They do not provide for the future because they cannot.

Present approach does not adequately provide for the present aged through OASI and consequently the program has been supplemented by public assistance. Even if coverage under H. R. 6000 were extended to all gainfully employed not now covered, numbering approximately 23,000,000—H. R. 6000 is designed to increase coverage by 11,500,000—it would not take care of the existing retirement problems of the aged because any substantial benefits under its provisions for the noncovered group would not be forthcoming until

after a 5-year eligibility period had elapsed. Even then presumably only a relatively small part of the group to which coverage was extended would be entitled to benefits.

It is clear that the present approach in existing law and H. R. 6000 does not reach the problem of the present aged, or the immediate prospective aged. At the present time, only 40 percent of the men 65 years and over have insured status, and only 25 percent of the aged women. While further extension at this time would, as pointed out, bring in a larger proportion of the aged some 5 years from now, it is clear that there would be millions who would not be able to qualify because of present age.

We suggest that the committee earnestly consider a revision of the basic principles of OASI and the adoption of the following principles which we deem to be sound:

1. Each generation must provide for meeting the social problems of the retired aged and other nonproducers then living. The obligation of the producers to the nonproducers should be redetermined from time to time, and the required amount of money raised from the producers through pay-roll taxes to take care of these obligations. Each year payments to the aged can and should be paid out of pay-roll taxes collected in that year.

2. The prospective beneficiaries in the program must be made cost-conscious. This requires the retention of the contribution system based on earnings. We would not depart from this principle of a direct tax based on employment which, of course, involves some degree of differential benefits based on amount of wages earned. Future benefits should be based on past work, but paid for by workers then employed. We believe that contributions and benefits should be related to wages earned, or earnings in the case of the self-employed.

3. We believe that each individual should realize that he has a responsibility to make as much provision as possible for his old age. He should not depend upon someone else, particularly the Government, to provide for his old age. The most which any governmental plan should do is to provide a basic minimum.

Senator MILLIKIN. Mr. Chairman, might I ask a question, please?

What would be your own thought on the subject of a basic minimum, regardless of the past earnings of a man?

Mr. WHITTET. I would think that the basic minimum would have to at least equal the average of the old-age assistance.

Senator MILLIKIN. Your theory on that is that the average represents the composite of experience for the measurement of need?

Mr. WHITTET. Yes, sir.

The application of these principles, if the Congress sees fit to apply them, would mean immediate universal extension of coverage to all presently employed and the giving of benefit eligibility to those who are now over age 65. Benefits payable under this program should immediately be extended to all unemployed individuals now past retirement age, provided they performed work in occupations which will be covered under the act as amended. Individuals, while earning more than $50 per month, should be entitled to receive his benefits or his earnings, whichever is greater.

Senator MILLIKIN. May I ask the witness another question?

The CHAIRMAN. Yes, Senator.

Senator MILLIKIN. Mr. Fauri, our technical expert, advises us that the average of public assistance is $44. That is combined Federal and State contributions. Is that the figure you had in mind?

Mr. WHITTET. I had $44–$46 in mind; yes, sir.

Senator MILLIKIN. Thank you.

Mr. WHITTET. We also urge that the present exemption from income tax of OASI benefit payments should be removed and benefit payments should be included as subject to the income tax. Thus, those with incomes also receiving benefits would be required to contribute to the support of their Government when they had appreciable income from other sources. They would pay no tax in the event they were in the low-income group and in real need of their old-age benefits.

Certain manifest advantages would accrue from this revised approach.

A. We could immediately determine the essential factors involved in taking care of our present aged.

B. We would be facing up to the problems as to how much the current producers are willing to divert from their present standard of living to the care of the nonproducers. In short, what part of the national income are we able to use for this social-security purpose.

C. Having ascertained this share of the national income, we can then make a realistic determination of benefit amounts available for retired individuals and the contributions required finally from industry and present workers to meet the amount estimated.

We will be attempting to do now what we are piously legislating that our children and grandchildren do for us 30 or 40 years from now. Under this program, the electorate and its elected representatives would have to currently raise the money to meet the over-all obligations imposed. We should not impose any programs for the future merely because they are comparatively costless today.

We believe that you should face this very important problem realistically with a full appreciation of the obligations involved.

We hope that you will enact a program for the aged which will remain within the financial ability of industry and producers to support.

Senator MILLIKIN. Mr. Chairman, may I ask another question, please?

The CHAIRMAN. Yes, sir.

Senator MILLIKIN. With reference to the basic minimum of $44 or $45, or whatever it is, would you start out paying that? If we could do what we wanted to here, would you start out paying that $44 or $45 to every aged person 65 years old, say, starting tomorrow, regardless of what their past contributions would be?

Mr. WHITTET. Yes, sir; if they had been attached to the labor market in their previous years.

Senator MILLIKIN. And, regardless of what their earnings had been or whether they had been in and out, you would start the whole thing off at a flat minimum?

Mr. WHITTET. Yes, sir.

Senator MILLIKIN. Starting at once, and starting to pay the bill at once?

Mr. WHITTET. Yes, sir.

Senator MILLIKIN. Please clarify me on this: What would be the circumstances under which you would raise the basic minimum?

Mr. WHITTET. I would think one of the principles that you would want to use to resolve that question would be whether you could afford to raise the additional amount, whether you had the funds and the ability to carry the additional load.

Senator MILLIKIN. Would that be on a needs basis?

Mr. WHITTET. No, sir.

Senator MILLIKIN. Or would it have relation to prior contribution?

Mr. WHITTET. It would have relation to prior contribution.

Senator MILLIKIN. That is where the prior contribution would come in, on the excess over your basic minimum?

Mr. WHITTET. Yes, sir.

Senator MILLIKIN. Have you thought of a formula for that?

Mr. WHITTET. No, sir.

Senator MILLIKIN. In Colorado, under the public-assistance part of the program, we pay, I think, an average of about $75 a month to husband and wife. Now, the wife in a certain sense has not been attached to employment. Would you pay the husband and wife?

Mr. WHITTET. I would be inclined to pay the husband, and I think the status of the wife should be investigated and explored.

Senator MILLIKIN. What I was getting at: Would you give the wife the basic minimum, short of a needs test?

Mr. WHITTET. We would like to get away from the needs test and put it on a rights basis.

Senator MILLIKIN. That is what I am driving at, and I was wondering what your thinking was on that.

Mr. WHITTET. And, if that wife had been attached to the labor market in previous years, I would be inclined to say that she should have the basic minimum.

Senator MILLIKIN. And if not, then, if there is need, that would necessarily have to come under the needs test?

Mr. WHITTET. That is right.

Senator MILLIKIN. Thank you.

The CHAIRMAN. Thank you very much, Mr. Whittet. We were very glad to have your contribution and the benefit of your study.

Mr. WHITTET. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. John Dressler?

Mr. Dressler, you may have a seat.

STATEMENT OF JOHN DRESSLER, PRESIDENT, EASTERN STATES GASOLINE RETAILERS ASSOCIATION, AND EXECUTIVE SECRETARY, NEW JERSEY GASOLINE RETAILERS ASSOCIATION, HACKENSACK, N. J.

Mr. DRESSLER. Thank you, Senator.

The CHAIRMAN. You are the executive secretary of the New Jersey Gasoline Retailers Association?

Mr. DRESSLER. That is right, Senator, the New Jersey Gasoline Retailers Association and Allied Trades, Inc.

The CHAIRMAN. Yes, sir.

Mr. DRESSLER. My name is John Dressler.

I am here speaking first for the 3,000 operators of gasoline service stations who are members of the New Jersey Gasoline Retailers Association, of which I am executive secretary.

I am also speaking on behalf of the 8,000 service-station operators belonging to the Eastern States Gasoline Retailers Association, of which I am president.

Throughout the country the members of many such independent dealer organizations have passed resolutions expressing firm opposition to the definition of "employee" in H. R. 6000, which would undoubtedly make them "employees" of their lessor-suppliers for social-security purposes and petitioning their Senators and Congressmen to make certain that no such change is made in the present law.

These associations were organized to protect the interests and promote the welfare of some 200,000 retail gasoline dealers and their families throughout the Nation.

You gentlemen know and are being served faithfully by many of these men.

Resolutions and petitions to the above effect have been adopted by the dealer organizations shown on the attached schedule.

I should like merely to read this list, which I am sure is only partial:

Denver (Colo.) Petroleum Retailers Association
Retail Gasoline Dealers Association of Connecticut
Georgia Association of Petroleum Retailers
Maryland Retail Gasoline Dealers Association
Retail Gasoline Dealers Association of Massachusetts
West Michigan Gasoline Retail Dealers Association
New Jersey Gasoline Retailers Association
Inter-City (N. Y.) Gasoline Dealers Association
Long Island (N. Y.) Gasoline Dealers Association
Greensboro (N. C.) Service Station Protective Association
Independent Gasoline Dealers Association, Inc., of Youngstown, Ohio
Petroleum Retailers Association of Oklahoma
Petroleum Retailers of Philadelphia (Pa.)
Cambria County (Pa.) Retailers Association
Lawrence County (Pa.) Service Station Association
Erie County (Pa.) Gasoline Retailers Association
Pennsylvania Gasoline Retailers Association
Chattanooga (Tenn.) Retail Dealers Association
Retail Gasoline Dealers Association of Wisconsin

Those were the retailers. The wholesalers are as follows:

Alabama Petroleum Jobbers Association
Arkansas Independent Oil Marketers Association
Florida Independent Petroleum Marketers Association
Georgia Independent Oil Men's Association
Illinois Petroleum Marketers Association
Iowa Independent Oil Jobbers Association
Kansas Oil Men's Association
Kentucky Petroleum Marketers Association
Maine Independent Oil Marketers Association
Michigan Petroleum Association
Northwest Petroleum Association
Missouri Petroleum Association
Nebraska Petroleum Marketers Association
Empire State Petroleum Association
North Carolina Oil Jobbers Association
Ohio Petreleum Marketers Assosiation
Pennsylvania Petroleum Association
South Carolina Oil Jobbers Association
South Dakota Independent Oil Men's Association
Tennessee Oil Men's Association
Texas Oil Jobbers Association
Virginia Oil Men's Association
Virginia Petroleum Jobbers Association
Wisconsin Petroleum Association

These are the associations whose members would be affected by this bill and have expressed opposition to the definition of "employee."

The language in subparagraph (4) of the proposed definition is so vague as to defy anyone to guess how many independent businessmen will be included as an "employee." Even subparagraph (3) of the definition affords too much latitude of interpretation by the Treasury Department. The Congress can have no assurance that gasoline dealers will not be covered as employees unless the definition of such term in the law as presently on the books is left undisturbed.

Now these hundreds of thousands of independent lessee dealers are not only alarmed over this definition of "employee" in H. R. 6000. They smell more smoke!

They fear with good reason that this is merely the first of a planned or unplanned series of blows which will ultimately destroy their independence completely and convert them, for no good reason, from independent self-respecting businessmen into hired hands.

They know that already there are now three bills pending in Congress that would make them "employees" of their lessor and principal suppliers for Federal unemployment compensation purposes, by means of exactly and literally the same definition of "employee" as that contained in H. R. 6000. One of these bills is H. R. 6718.

Next on the agenda, if H. R. 6000 and H. R. 6718 become law, will, of course, be State unemployment-compensation laws which have to follow exactly the same pattern as the Federal law.

Is it therefore any wonder that these dealers are alarmed? Is it any wonder that they have a real fear of being treated as employees under other State and Federal employee laws, such as workmen's compensation laws, labor-relations laws, temporary employee disability laws, employers' liability laws, minimum-wage and maximum-hour laws—to mention merely a few—if this first blow (H. R. 6000) is taken at their independent status?

And is it any wonder that they are determined to do all they can to stop this first blow?

I know from talking directly with many of these people and from reading resolutions of their associations and their trade publications that these service-station operators are definitely opposed to being treated as employees of anyone for any purpose. They are an independent lot!

They lease their service stations from jobbers and supplying companies and usually buy most of their petroleum products and some of their accessories from these suppliers. However, they buy other items and some of their other petroleum products from other wholesalers. Their leases are usually just like any other lease of business property. They are truly independent merchants and under all law that I know about today they are so treated.

The Gasoline Retailer, which is the national newspaper of the automotive service industry with a circulation of over 94,000, carried, on February 15, 1950, a statement which I made and which I cannot emphasize too strongly:

> For years we have fought to create a greater degree of independence among gasoline retailers. We welcomed the change from company-operated to company-leased stations. We have constantly urged the suppliers to leave the retail market to the small-business man, but with one action (and, I might add,

similar action taken in other fields) on the part of our national legislators, all of this past effort can be nullified.

Let us continue to better the growth of the independent businessman. Let us insist on greater, not lesser, independence.

Now, gentlemen, don't let anybody fool you. These independent service-station operators are intended to be covered by this law as "employees" of their suppliers. This is apparent from pages 84 to 86 of the majority report of the House Ways and Means Committee. Just read these two pages.

It is also apparent from certain statements contained in an analysis of the definition of "employee" in H. R. 6000 prepared for the House Ways and Means Committee by the expert and unprejudiced staff of the Joint Committee on Internal Revenue Taxation on July 22, 1949, while H. R. 6000 was being considered by the House committee.

This analysis—while referred to only in the House minority report—is printed in the House Ways and Means Committee report, No. 1300, beginning at page 189. In such analysis, the staff of the Joint Committee on Internal Revenue Taxation, whom we certainly have no reason to doubt, said:

* * * It is the opinion of the staff that paragraph (3)—

now paragraph (4) in H. R. 6000—

of the definition adopts a method of extending the definition of employee which is basically undesirable because it is too uncertain in its scope and because it will extend the definition of employee to include groups for whom it would be impractical, if not impossible, to demand an accounting for remuneration or tax withholding from it.

Assurances by present administrators of the voluntary limits which they will place on interpretation of the broad provisions of paragraph (3)—

now paragraph (4)—

will not be binding for the future, and the Federal Security Agency and the Treasury will not be in a position to limit the scope of paragraph (3)—

paragraph (4) in the bill—

if the courts decide to place a wider interpretation on it. * * *

* * * The Federal Security Agency—

and, as the committee knows, that is the body which will administer this law—

states as its present opinion that the economic dependency test would extend the definition of employee to include the following groups who are considered independent contractors under the common law: * * *

CONTRACT FILLING-STATION OPERATORS

It is highly probable that the economic-dependency test would also extend the definition of employee to include the following: * * *

GASOLINE-STATION OPERATORS

* * * * * * *

(c) Gas-station operators: Gas-station operators who lease their stations from oil companies or distributors may have only limited investments in their facilities, and permanency is contemplated in their relationship with the oil companies or distributors.

Senator MILLIKIN. Mr. Chairman, may I ask a question, please?

I do not have the slightest idea what the committee or the Congress will do about this, but just assume that they do not accept the definition of "employee" that you are complaining about. Are you in a position

to say whether the members of your association would be content to consider themselves as self-employed and come under the social-security system as self-employed?

Mr. DRESSLER. Yes, sir. I say that further on. We do approve of the self-employed coverage, and we certainly like the idea.

Furthermore, retail outlets are integral to the production, distribution, and sale of oil products and a relatively slight degree of skill is required for this work. Conseqnently, although the degree of control exercised over gas-station operators may be slight and although they may have considerable opportunities for profit or loss, they might be treated as employees under paragraph (3)—

paragraph (4) in H. R. 6000—

of the proposed definition.

I am not a lawyer but some of my lawyer friends tell me that the above quotation will be a part of the legislative history of this law. They also tell me that since there is nothing inconsistent with that interpretation in the majority report of the House Ways and Means Committee, such interpretation by tax experts serving this congressional committee would be most persuasive if and when the courts come to interpret such an ambiguous statutory definition or the regulations based thereon—assuming the Senate does not change it.

These lawyer friends of mine also tell me that if the Treasury Department copies into its regulations pages 84 to 86 of the majority report of the House Committee, and the Senate does not change the definition, the courts would be bound absolutely thereby as a correct expression of Congress' intention. They also say that under the tests for determining who are "employees" set forth in paragraph (4) of this definition and interpreted on pages 84–86 of such majority report, all service-station operators who lease their stations from their principal suppliers could easily be ruled by the Treasury and the Federal Security Agency to be "employees" of their lessors for social-security purposes, and that the courts would be absolutely bound by such rulings.

I don't know. That's what these lawyers tell me. Of course, it looks that way to me as a layman. You gentlemen make the laws. You know. My lawyer friends say you will understand the above and they think you will agree with it if you reread pages 84–86 of the House majority report. I know it says this bill would treat as employees people we never thought would ever be so treated.

I can see just by reading the House committee's explanations of paragraph (4) of this definition that every single one of the factors of such paragraph could easily and clearly be applied to a dealer reselling branded products sold to him by a jobber, wholesaler, or oil company leasing his station to him, so as to make such dealer the "employee" of his supplier. If each of these "factors" could so clearly be applied, then I would suppose that the combined effect of these seven factors would leave no doubt that these people could be treated as employees.

Now getting down to brass tacks—these people I speak for take a firm stand in opposition to the extension of this definition beyond what we would ordinarily understand in everyday language to be an "employee."

My own constituents, as well as other lessee operators of service stations, want to continue as small independent businessmen. They

are entirely willing to pay social-security taxes as self-employed individuals. They consider that this is indeed a small price to pay for maintaining their independence.

At the present time, these dealers select their own employees.

They are not dominated by anyone.

They open and close the stations when they desire.

They take time off and they do not have to ask any company boss for permission to do so.

They keep their own books and that's their business.

Some of them hire relatives who might not be considered suitable as employees of a big company for one reason or another. But they are getting their livelihood through these independent businesses and that surely is the American way of doing things.

They do not have to tell the oil company or jobber anything about their business. All they have to do is pay for the products they buy and pay their rent, just as any other independent merchant, just as the corner grocer, who owns his own business but happens to lease his premises. To treat my constituents differently from a corner grocer is, to say the least, discrimination.

Some of these dealers are big tire dealers. Others derive a great deal of their income from services, such as washing cars, greasing cars and trucks, tire services, mechanical repair services, et cetera.

How will the supplying company or companies ruled to be the employers determine what the true "wages" of the dealer are in order to pay 1½ percent as social-security tax?

I am sure that the members of this committee readily appreciate that a supplying company could not long tolerate the uncertainty created by this situation, and would, therefore, be compelled to establish the control over the dealers which would make them in fact employees. Even then how could two or more supplying companies ascertain the amount of net income on which each of them must pay taxes on behalf of the dealer?

Even though the suppliers of gasoline, oil, grease, tires, batteries, et cetera, do not control to any great extent the manner in which the gasoline dealer conducts his business, and even though the dealer works for profits and not for wages, nevertheless, the adoption by Congress of a definition which will permit the Treasury Department or the courts to apply the so-called economic dependency test will result in such a service-station dealer being treated as the employee of one or more of his suppliers.

There is a still worse result from this proposal. Converting such independent dealer into an employee of his supplier or suppliers for social-security, unemployment-insurance, and other purposes would add to the suppliers' cost. There is a great deal of competition in the retail gasoline industry. Increases in the suppliers' direct and indirect costs such as supervision of many thousands of new employees, keeping detailed records, auditing, et cetera, et cetera, may well make it necessary for these suppliers to increase the rent to my constituents and to increase the price charged to them in order to avoid losing money. The marketing division of the oil industry is not making nearly as much money now as it did in the last 2 years. Increased rents to my members and others similarly situated and increases in the prices they have to pay for their principal products may well force them, one by one, to go to their suppliers and say: "Here, you take

the station. I can't operate it now at a profit." These suppliers have investments in these locations and they would, therefore, be compelled, as a matter of economic self-defense, to take them over and operate them with ordinary hired help.

Therefore, what appears to be an innocent definition may well destroy the independence of the dealer.

All of my constitutents, and I know that all other independent lessee operators of service stations throughout the country, are aware of what is going on in connection with this bill because it has been publicized through our trade publications and dealers associations.

We expect you gentlemen, as our friends in Congress, to stop this destructive trend right at the outset. We hope that you will, moreover, take action which will encourage independent business rather than discourage it.

We all, therefore, urge this committee to rewrite the definition of "employee" in H. R. 6000 by striking out paragraph (4). By that action lessee operators of service stations and any others similarly situated will be left in the same status as they are today; namely, independent self-employed merchants.

Thank you, gentlemen, for your time.

The CHAIRMAN. Are there any questions? It appears there are not.

Thank you very much, Mr. Dressler.

Mr. DRESSLER. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. Marshall? You may identify yourself for the record, and we will be glad to hear you.

STATEMENT OF J. HOWARD MARSHALL, PRESIDENT, ASHLAND OIL & REFINING CO., ASHLAND, KY.

Mr. MARSHALL. My name is J. Howard Marshall. I am president of the Ashland Oil & Refining Co. of Ashland, Ky.

Since what I have to say will relate not only to the position of my own company but will also go into some of the aspects of this particular law as related to the marketing branch of the petroleum industry in general, I might say, by way of general qualification, that I am also the vice president in charge of marketing of the American Petroleum Institute, and that during the war I served as chief counsel and Assistant Deputy Administrator of the Petroleum Administration for War. Particularly in that latter capacity, I have followed in some detail the general marketing practices of the petroleum industry over the Nation at large.

At the outset, I want to make it clear that this presentation will not raise any economic or social questions as to the propriety or desirability of the proposed extension of social security coverage, as such. Also, I am assuming for the purpose of this discussion that the adoption of the tax and benefit coverage of the "self-employed" as presently proposed in this bill will be adopted.

My sole purpose in this appearance is to argue against the proposed definition of "employee" in H. R. 6000. It is my position that the adoption of an unrealistic definition of "employee" is an unsound and impractical method of collecting taxes for self-employed under the proposed extended coverage of the Social Security Act. I want

to go on record as favoring extending the coverage of the Social Security Act but I want it done honestly, intelligently, and not in a way which is detrimental to small businesses.

I believe that the law should be so written that he who must carry the tax burden can clearly see his duty; that is, that everyone can tell who is whose "employees" and who is self-employed. The more I have studied this bill and the House committee report on it, the more convinced I am that the proposed definition of employee deliberately distorts and confuses normal business relationship and common understanding.

I should like to discuss with this committee briefly two challenging questions which are raised by the proposed definition of "employee" in H. R. 6000.

1. Will my company be required under this bill to gamble at its peril whether jobbers and dealers selling Ashland's products and the dealers of such jobbers and the employees of such dealers and of such jobbers are to be deemed Ashland's employees? If so, is Ashland confronted with the bitter alternative of either attempting to take over the business of our independent customers or policing the operators and employees of these customers, or, on the other hand, ceasing to do business with these independent merchants?

2. Will this proposed change in the definition of "employee," if it becomes law, disrupt the business economy of the Nation by jeopardizing the growth of small businesses? In other words, will it force big business to absorb little independent businesses to avoid assuming undisclosed and undeterminable future tax liabilities?

Since my observations will be based in part upon the effects this proposal will have upon the Ashland Oil & Refining Co., I feel that I should say a word or two about our company.

Ashland Oil & Refining Co. is one of the independents; we are not one of the so-called majors. As oil companies go, Ashland is a relatively small company generally classified as an independent refiner although, of course, we do engage in some marketing activities and in the production and transportation of crude oil and refined products. Our principal place of business is Ashland, Ky., and our products are sold throughout the Ohio River Valley.

As regards Ashland, I want to make it clear at the outset that our fundamental interest in this legislation, as far as our own company is concerned, springs from our concern over the future welfare of the independent jobbers and dealers who provide the outlet for our products. We operate no retail service stations, and relatively few wholesale bulk plants. Over 80 percent of our entire refinery production, totaling some 40,000 barrels per day, is sold to independent jobbers. We are the largest supplier of independent jobbers throughout the length and breadth of the Ohio Valley. Anything which tends to disrupt or render uncertain our relations with these independent jobbers or their relations with their service station dealers damages these dealers and wholesalers and jeopardizes the future of our company as an independent refiner.

Senator MILLIKIN. Mr. Marshall, this is beside the point, but I am just curious where you get your oil.

Mr. MARSHALL. Senator, we get our oil in part from eastern Kentucky, in part from western Kentucky, southern Illinois, and southern Indiana, and in part up the Mississippi River from as far south as

Baton Rouge; that oil in that territory being acquired largely on exchange with other companies.

Senator MILLIKIN. Thank you.

Mr. MARSHALL. When our customers can't tell whether they have to pay social security taxes on their employees or whether we do, when these customers have to argue with their dealers as to whether the dealer pays or the supplier pays, when all of us who have heretofore operated as independent refiners, wholesalers, and service station dealers cant' tell whether one is expected to police the other, and which one, when this extends even down to their customers, particularly the customers of our jobbers, then in my judgment another nail will have been driven by the Government, however inadvertent and however well-intentioned, into the coffin of the independents in the oil business.

Although Ashland markets a relatively higher proportion of its products to independent wholesalers than is the case with many oil companies, nevertheless the business practices and procedures of Ashland and of its jobber customers are substantially similar to those of other companies in the petroleum industry. Indeed, gentlemen, competition forces them to be so. It is for this reason that I am able to assure this committee that the effects which this proposed legislation would have upon our operations and the operations of our wholesale customers are typical of the industry at large.

The marketing set-up of Ashland, like that of every other significant supplier in the oil industry, is complicated by wide variety of outlets, customers, and business relationships. Indeed, when you come to gas marketing, let me say to you gentlemen that when you are dealing with wholesalers and when you are dealing with service stations, practically all of them today are operating on a basis which, under the common law and under the court decisions and under the Social Security Act as presently written makes them independent businessmen. Notwithstanding that, however, there are a great variety of relationships. For example, dealing with the wholesaler for the moment, the supplying company frequently leases him his place of business. It may be on short term or long term. The supplying company may or may not supply tanks or tankage. It may or may not assist the wholesaler in providing trucks.

When you come to the service station, tanks, pumps, equipment of one kind or another is leased, rented, loaned. There are just dozens of different relationships in which, without in any sense depriving the owner of the service station of his independence, assistance of one kind or another is provided to these independent businessmen.

In addition, the business of wholesale distributors of petroleum products and the business of most service station dealers involves the handling and selling of a wide variety of products ranging from gasoline to such products as antifreeze compounds, tires, batteries, and other automotive accessories, and all the other equipment that you gentlemen have all seen around in service stations. And if you went to the jobber's plant, you would see the same kind of thing. Of course, this raises the interesting question of how many suppliers might be deemed to be the employer of the employees of those operating service stations and other facilities marketing petroleum products.

I will not burden the committee with the detailed description of the different types of business arrangements which exist in the oil

industry. Suffice it to say that there are numerous distinctions, differences, and variations in the methods of distribution. As I will point out shortly, in this industry particularly, all of these various relationships for the sale of oil and gasoline necessarily involve elements which could be seized upon by the Federal administrators and others as a basis of holding jobbers, wholesalers, and service station dealers to be employees of their supplier under paragraph (4) of the proposed definition of "employee," despite the fact that all these resellers of products are truly independent businessmen.

I have searched the report of the House Ways and Means Committee in vain in an attempt to find something in the majority report which would clearly indicate an intent to exclude wholesale and retail gasoline and oil distributors from the vague limits of the proposed definition of "employee." I have noted from a reading of statements by other witnesses before this committee that your attention has been drawn to the fact that the example given at the bottom of page 87 in the report does not accurately describe the typical and predominant method by which gasoline and oil are marketed at wholesale.

By way of illustration, there, the example says: "The X oil company is engaged in the business of marketing petroleum products and enters into a contract with A, under which A is to operate a distribution station." By that, of course, they mean a bulk plant or wholesales plant, as we know it in the oil industry, I assume. Then it goes on to say: "A provides his own tanks and trucks. He operates the station as his own and employs assistants of his own choice."

Well, when you say "A provides his own tanks and trucks,"—maybe so, or maybe not. In the case of our own company, the jobber does usually provide his own trucks, but we have been known to help him with the financing of the trucks. Typically in the oil business, the ordinary wholesaler of petroleum products does not own his own plant. He leases it. He may lease it from an oil company. He may lease it from somebody else. Those things are expensive. A large amount of capital is involved.

Then, when it says here that he operates the station as his own: Gentlemen, does that mean that he can't put up the brand of a supplying company? Some do, and some don't. In our own case, many of our jobbers market under their own brands. But if the jobber so elects and wants to use the Ashland brands, he may. And that likewise is true of most companies. But the fact as to whether or not he uses his brand and in his turn with his dealers provides aid and assistance to promoting that brand doesn't make him more of an independent businessman than if he used our brand. It is still his business, and he still operates it, and he still selects the employees and chooses the ways and means of running the business. None of us, in any of those cases, have anything to say about his employees and don't want anything to say about them.

I think in the light of the facts as they exist in this industry, we can say with all candor that the example referred to in the House majority report will do more, if this proposed definition becomes law, to include wholesale distributors as employees than it will to exempt them from coverage. Anyone who does not fall within the exact factual description of the example—and let me assure you that it is not in any sense typical of the industry—will surely be considered

by the administrative agency as an "employee," on the theory that the failure specifically to exclude indicates an intention to include. The example used, as I have said, does not conform to typical types of bulk plant distributor relationships in the industry, which are now universally regarded as independent distributors.

Retail marketing in this industry, gentlemen, has always been predominantly in the hands of small-scale independent businessmen. The garage man and the country store were the first type of gasoline dealer. With the development of the automobile came the filling station.

Senator MILLIKIN. I suggest to you that the first gasoline dealer was the livery stable keeper.

Mr. MARSHALL. I suspect that is right, Senator Millikin.

Senator MILLIKIN. A very good friend of mine went to a large oil company many years ago with a plan for the filling station, years ahead of his time. The head of the company, one of the largest oil executives in the country, laughed him out of the office and said, "Young man, don't you know that the gasoline that will be sold in the future will be sold as it is now, from the livery stables?"

Mr. MARSHALL. That is very interesting. My first recollection in buying gasoline in a little town outside of Philadelphia was at a blacksmith's shop. In those days, they bought the gasoline in 5-gallon cans and poured it into the car. They looked like milk cans, as I recall, when my dad used to buy it.

With the development of the automobile came the filling station, often specializing in gasoline and lubricants. The mushroomed growth of the filling station is familiar, I know, to all members of this committee.

As a creator of small business enterprise in cities and towns up and down the countryside in the United States, gasoline and oil have had no rival. The wholesaling and retailing of gasolines, fuel oils, lubricants, tires and accessories have become the sole business of many, and a supplemental source of income for thousands upon thousands more of independent businessmen.

There was a time during the 1920's when the refiners of oil emphasized and were moving in the direction of the distribution of their products through outlets operated by those manufacturing the oil products; viz: the refiners. Even at the peak of this trend, however, the number of company-operated—and by that I mean oil refining companies—the number of company-operated outlets accounted for less than 10 percent of the total retail outlets in this country. This trend toward company-operated service stations was reversed in the early 1930's, and ever since the overwhelming trend in this industry has been in the direction of the independently operated service station. At the present time, all but a handful of the retail outlets for petroleum products are independently operated.

Senator BREWSTER. Would it occur to you that if you succeeded in this and got all the independent outlets under the control of the big oil companies, they could then indict the oil companies for being a monopoly in distribution under other theories that are now prevalent?

Mr. MARSHALL. Senator Brewster, it would certainly be my fear that anything that leads to refining companies actually taking over what today are the thousands of independent jobber and retail dealers in petroleum products, anything that leads in that direction, tends to

move in the direction of a restraint of competition in the business.

Senator BREWSTER. And so the Department of Justice would then indict them?

Mr. MARSHALL. Well, one is always under that risk, I suppose, these days.

This trend toward company-operated service stations was reversed in the early 1930's, and ever since the overwhelming majority have been operated by the independents.

In view of the independent character of most of the marketing operations of the petroleum industry, I want to examine the proposed definition of "employee" to see how it would affect these independent relationships. I just want to elaborate a little bit more on the application of the language of this proposed amendment to the facts as they exist in the oil business.

Paragraph (4) of the definition, which causes the most uncertainty, provides that any individual who is not an employee under the first three paragraphs of the subsection may be determined to be an employee "by the combined effect of"—and then it lists seven different combinations of factual situations. They are all listed back there on that chart, as I noticed when I came in. They are:

(A) control over the individual,
(B) permanency of the relationship,
(C) regularity and frequency of performance of the service,
(D) integration of the individual's work in the business to which he renders service,
(E) lack of skill required of the individual,
(F) lack of investment by the individual in facilities for work, and
(G) lack of opportunities of the individual for profit or loss.

Let us look at the first factor listed in paragraph (4) of the proposed definition, namely, that which appears under the general subject of "control." What is meant by "control" as it is used in this paragraph? The House committee said, on page 84 of its report, that there had been too much emphasis in the past on "the legal right to control" in determining who is an "employee." Obviously, then, the word means something more than "legal" control. Note also what the committee said in its report on page 85:

> Control * * * may in particular cases be evidenced by one or more of a variety of circumstances, including the performance by the individual of his service in accordance with procedures, or at times, fixed by the person for whom the service is performed.

What does this business of "in accordance with procedures" mean? My company and its independent jobbers and distributors to whom we sell, as well as every other supplying company, certainly suggests marketing procedures to their distributors, and they to the dealers from time to time. Distributors and dealers desire this help, and it promotes the sale of what we all have to sell. We all furnish advertising displays and techniques and give the distributors and dealers the benefit of knowledge gained from surveys and wide experience.

An let me point out that that does not apply just to the so-called major companies that sell under major brands. We sell hundreds of independent jobbers who sell under their own brands, "Joe Bloke's Special," or any name that he likes to put on it. And he, in dealing with his dealers, turns around and supplies his dealers and service stations with advertising helps and sales aids and assistance. His

dealers want it, and it helps them in their business. It does not make them any less independent because they get it.

However, what we are concerned about is that any of this material that is supplied might easily be construed administratively as "procedures."

I am frank to say that it is difficult for me to see how any distributor or dealer of a branded product of any kind could escape the danger of being labeled an "employee" of his supplier under the vague language contained in this definition.

As a further example of what will constitute evidence of control, the committee says, on page 85 of its report, that furnishing "the place, tools, or equipment for the work" or "the right to terminate the service of the individual without cause or on short notice" is indicative of "control."

Typically throughout the oil industry, in one form or another, by lease, by loan, or otherwise, those selling petroleum products, whether they are refiners or independent wholesalers or jobbers, furnish facilities, equipment, pumps, tanks, locations, trucks, to other independent wholesalers and dealers desiring to enter, maintain, or expand their businesses. Indeed, without such assistance, many of the independent marketers in the oil industry could never have gotten started. And the mere furnishing of the foregoing assistance does not, in any realistic sense, confer any control either in fact or as a matter of law, or as any one in the oil business understands the term.

The second factor in paragraph (4) of the proposed definition relates to "permanency." I am sure that every member of this committee recognizes that every seller of every product strives to attain a degree of permanency in the relationship between himself and his customers. It is certainly true of the oil industry, and I will tell you gentlemen that Ashland certainly tries to hang onto its customers as best it knows how. No distributor or dealer is anxious to shift his sources of supply unless there is some dissatisfaction in the arrangement—or unless you fail to keep yourself competitive, I might add. As indicative of the permanency of the relationship, I noticed in the remarks of Mr. Sam Weiss, who appeared before this committee on March 10, 1950, that he had been a distributor for the same oil company since 1927. Mr. E. B. Chapman, who appeared before the committee on the same day, testified that he had been a distributor for the same company for some 18 years. Mr. Fowler, who appeared on March 15, testified that he had been handling the products of the same company between 13 and 14 years.

Let me say that these are very typical examples of what happens.

It is clear, however, that the Administrator of this law, under this definition, would have to find in almost every case that the relationship between the supplying oil company and its distributors and dealers has enough of permanency to come within this "factor" of the proposed definition.

The third factor mentioned in paragraph (4) of the definition is "regularity and frequency of performance of the service." The report of the committee on page 85 indicates that this factor is the opposite of "sporadic part-time activity." I haven't the slightest doubt as to how this must be applied to every wholesaler or dealer relationship in the whole oil industry. This industry operates 24 hours a day, 7

days a week, 365 days a year. If this isn't "regularity and frequency," I don't know what it would be.

The fourth factor mentioned in paragraph (4) is "integration of the individual's work in the business to which he renders service." A great deal of knowledge about the business of marketing petroleum products is not necessary to know that the wholesale distributors and the retail dealers are essential to the business of the oil company whose products they sell.

Senator MILLIKIN. The same would be true as to the grocery store, would it not? The grocery store must have a relation with the wholesaler or jobber.

Mr. MARSHALL. Senator, with this possible difference. And I don't pretend to be an expert on the grocery-store business. In the oil business nothing is stored very long, and it can't be. Oil production starts at the well. From that point on, there is a regular constant stream of movement from there right on down through the pipe lines, the refineries, and thence to the wholesalers and to the filling stations.

Senator MILLIKIN. Well, if there is not a constant stream of movement in the grocery store, pretty soon the sheriff closes the door.

Mr. MARSHALL. There is no question of that. Let me assure you that is true in the oil business, too.

The fifth factor mentioned in paragraph (4) is the "lack of skill required of the individual." It is certainly true that no high degree of skill is required to operate a gasoline pump: although I was talking to my friend John Dressler before he came in, and he might disagree with me slightly on that. Certainly some of our dealers are very skillful individuals. However, we can't tell, from the way the act is worded how this factor of "skill" will be evaluated by the administrator of the act. Certainly the language of the bill is not very helpful in resolving the inherent ambiguity in the phrase.

The sixth factor mentioned is the "lack of investment by the individual in facilities for work." Once again, we don't know what interpretation the Administrator would give to this factor. We don't know what he would consider an "investment." We don't know whether he would consider premises which are leased instead of owned as a part of the retailer's investment or of the wholesaler's investment. The fact is that many dealers are able to operate without too substantial an investment in the basic facilities. Typically, independent distributors and dealers throughout the oil industry borrow, rent, or lease anything that competition permits them to get from their suppliers, and they are no less independent because they are smart in minimizing their own investment and getting themselves started in business.

The last factor mentioned in the proposed definition is the "lack of opportunities of the individual for profit or loss." While I feel sure that the Administrator would be forced to agree that a wholesale distributor and a dealer in the oil business possess the opportunity for profit and loss, I can't tell just how much of this opportunity the Administrator is going to say must be present. We do not know whether the opportunity for profit would be sufficient, or whether there must be sufficient investment so that a serious loss could be incurred. The point is that the answer to this ambiguous factor again can't be found in the proposed definition, and its interpretation will be left almost wholly to an administrative agency.

We can see, from all of the above, that paragraph (4) of the proposed definition of an employee amounts to an undefined method of giving uncertain weight to seven indefinite factors. The statute says that the employee-employer relationship will be determined "by the combined effect of" those seven indefinite factors.

I want to mention in passing two or three other points, but only in passing; first of all, as to paragraph (3) of the proposed definition. But before I take that up, I might note first that I have read with much interest the comments that were made by Senator Schoeppel in relation to the second sentence of paragraph (2) of the proposed definition of "employee," and I want to just say that I concur most heartily in the statement that Senator Schoeppel made before this committee. I know, from knowing Andy Schoeppel over a long period of years, that he is thoroughly familiar with the operations of the oil industry and knows whereof he speaks, and I don't think there is anything I could add to Senator Schoeppel's statement, but I do want to endorse it in passing.

Senator MYERS. May I interrupt, there, Mr. Chairman?

The CHAIRMAN. Yes; Senator Myers.

Senator MYERS. Mr. Marshall, are the employers of the distributors and the jobbers and the dealers with whom your company does business and to whom you have just referred, covered under social security presently?

Mr. MARSHALL. No; Senator Myers, but, as I said, though I don't know whether you were here when I started, my discussion here today is based on the assumption that the provisions of this act relating to the payment of social-security taxes by the self-employed will be passed. And my company favors it, and we think we ought to be covered.

Senator MYERS. I was not referring to that. I mean these independent distributors, independent businessmen, that distribute to the jobbers and the dealers to whom you have referred.

Are their employees presently covered under social security?

Mr. MARSHALL. Oh, yes. Their employees are covered under social security.

Senator MYERS. They are covered?

Mr. MARSHALL. Yes; within the limits of the present act.

Senator MYERS. That is right, of course.

Mr. MARSHALL. Let me say to you that with regard to the exact details, in the case of my own company, of how they handle their social-security taxes with their employees, I must admit that I don't know. I have never inquired. But I assume that the vast majority of them do, as regards those employees, pay social-security taxes within the limits of the present law.

Senator MYERS. And they are covered under the act.

Mr. MARSHALL. That is correct.

Senator MYERS. It would seem to me, then, that this definition of "employee" in paragraph (4) was intended to extend coverage to persons not already covered.

Mr. MARSHALL. Well, that may be the intent, Senator, of some of its sponsors, but the way it is drafted it would seem to me that it goes so far beyond that, relating to the question of who is obligated to pay and police the tax, that I would say that if that is all of its purpose it

goes so much further that it injects so much confusion in the thing that none of us would know where we stand.

Senator MYERS. That leads me to my last question.

Then do you have any suggestions as to a definition which will make absolutely sure and certain that such employees now covered do not become your employees, a definition which will at the same time extend coverage to those groups of employees who are not presently covered.

Mr. MARSHALL. Senator, my view on that is that these seven tests under paragraph (4) should be stricken from the act; that the provisions relating to self-employment should stand; and that for the determination of who are and who are not employees we should continue as we are under the present act for the determination of whose employee a person is, and stick with what in effect amounts to the rather definite standards as to the determination or who is and who is not an employee, which have been pretty well defined by the courts, which is the position in which we now are.

Senator MYERS. But if the purpose of the Congress is to extend coverage to employees not now covered, will it not be necessary that the definition probably be expanded in order to extend coverage, leaving your problem out entirely?

Mr. MARSHALL. I think you do that, Senator, by the provisions relating to self-employed, and I think that is as far as it is necessary to go.

Senator MYERS. Could there be some provision in that definition to make absolutely sure and certain that those employees now covered should remain covered in the same status and the same category as presently covered, and should not be transferred over to another employer?

Mr. MARSHALL. I don't believe it is necessary.

Senator MYERS. But do you think it could be done?

Mr. MARSHALL. I think it would be very difficult. I think it would be very difficult, and I think that if you rest upon the court decisions that is quite sufficient.

Senator MYERS. Your worry, then, seems to be that these employees now covered by independent contractors with whom you do business may eventually be determined to be your employees rather than the employees of your independent contractors.

Mr. MARSHALL. I most certainly am.

Senator MYERS. I mean, that is your position?

Mr. MARSHALL. I most certainly am; and then I don't know how to deal with our business relationships with the hundreds of people that we supply.

Senator MYERS. But would you be satisfied if some definition could be evolved to make absolutely certain that they would remain the employees of their present employer and would not be considered under any interpretation of the act to be your employees?

Mr. MARSHALL. Let me say again that I think it perfectly clear that if you put in none of these seven factors, those that are now employees under the court decisions that have pretty well defined it will continue to be so, and I don't think you need an additional definition.

Senator MYERS. Thank you.

The CHAIRMAN. All right. Please proceed, Mr. Marshall.

Mr. MARSHALL. I want to make brief reference to paragraph (3) of the definition of "employee." To my mind it illustrates the danger of going beyond the general common-law rules, even though this paragraph might be considered a model of definiteness as contrasted with the blank-check approach of paragraph (4).

It appears to me that the only category in this paragraph which could conceivably apply to the oil industry is that which is described under subsection A as "outside salesmen in the manufacturing and wholesale trade." After reading the House committee report, pages 81, 82, and 83, I am concerned about the possible application of this language to groups which are not intended to be included. For example, the wholesale oil and gasoline salesman, who is an independent businessman, might be found by the Administrator to be an employee.

I am unable to know, if this "outside salesman" group includes "drummers" and city salesmen of drygoods, hardware, and groceries, who asked for it, or whether it includes anyone who sells any kind of product. Obviously, if there are any extensions of coverage attempted under paragraph (3) such attempt requires the utmost care otherwise, it will end up with unexpected results when applied to unanticipated situations.

I emphasize that I hold no brief for the inclusion or exclusion of any of the occupational groups listed in paragraph (3). What I am urging is that, if the Congress wishes to include any specific occupational group as "employees" instead of as "self-employed," it do so in explicit and unmistakable language.

In conclusion, I submit, Mr. Chairman, that we cannot escape the conclusion that the proposed definition of "employee" will upset a long established and highly successful method of doing business in the petroleum industry and will have the effect of destroying many thousands of small independent businesses in this country.

It is my earnest recommendation that the Congress leave the definition of "employee" as it now stands in the present law. The matter of coverage of particular and specific occupations could then be handled by the Congress in explicit and unmistakable language. This recommendation will have no effect upon the extended coverage proposed in the bill, because all who are not "employees" may be covered and receive the full benefits of the Social Security Act, if Congress so desires, under the category of "self-employed."

All I am really saying, above everything else, is that we all want to know what we can do. And as an independent refiner of petroleum and petroleum products, I want to be in a position to deal with and assist the independent jobbers and the independent service-station operators with whom we have dealt and continue to deal, and upon which, in the last analysis, the future success of our business depends. I don't want a law or a definition that will end up in such a way that, intentionally or unintentionally—and it seems so often to happen this way—we have in effect given the independent business groups another kick in the pants.

I think, Mr. Chairman, that is all I have to say.

The CHAIRMAN. Well, sir, we thank you for your appearance.

Mr. MARSHALL. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. Frederick MacMillin?

STATEMENT OF FREDERICK MacMILLIN, EXECUTIVE DIRECTOR, WISCONSIN RETIREMENT FUND, MADISON, WIS.

Mr. MacMillin. I have filed with the committee, Mr. Chairman, copies of the statement, but I would like to speak orally to it.

My name is Frederick MacMillin. I am the executive director of the Wisconsin retirement fund, which has been constituted by the Wisconsin Legislature, the basic retirement system for the State of Wisconsin, and ultimately this system will replace all other public-employee systems in the State with the exception of the teachers and the Milwaukee systems.

At the present time this system comprises about 30,000 covered individuals.

My presentation will be confined to a discussion of the integration of existing public employee retirement systems with social security, as is now proposed in the bill as it was passed in the House. I have no illusions as to the development with respect to this point of view. I am well aware of the thousands and tens of thousands of communications which have been received by members of this committee and other Senators in opposition to that viewpoint, but I hope to clearly demonstrate, and least to my satisfaction, that these fears are ungrounded and that integration of existing retirement systems for public employees with social security will benefit those now included under these systems.

First of all, I am amazed at the implications being broadcast that the Congress is trying to force something on the States with respect to the coverage of State and municipal employees. And, of course, the facts are just the opposite. The proposal in the bill at present is in accord with the best traditions of States' rights. It simply constitutes an enabling act and must be implemented by the act of each State legislature if it is to be effective in that particular State. If the State legislature does not act, it is the same, for all practical purposes, as if Congress had never acted on this point; and therefore I am unable to understand why any legislature should memorialize Congress when they have the control within their own power.

Of course, obviously it is true that when this decision is made by any State legislature, the members of any retirement system will have the same opportunity to present their viewpoint and exert the same pressure on the State legislatures as they are now existing on Members of Congress. If for any reason a decision in a State legislature does not please the members of any system, of course, it is also true, as you know, that these members still retain the complete control, because of the referendum feature. There is no way of forcing them to take the integration against their wishes.

Now, in the testimony that is printed in part 2, frequently in response to questions on this referendum feature, as to which objections were raised, several individuals admitted that regardless of how the referendum feature was worded they would be opposed to it. They don't want any referendum on any basis.

I would like to say this to the committee: that rather than incorporate in the bill, if you retain this particular provision in the act, a referendum feature which is impossible of attainment, it would be much better to take the Lehman amendment straight and extend it to

everybody. For instance, it has been recommended that there be a two-thirds vote of all those under the system. In other words, if a person doesn't vote, it would be the same as if he voted "no." Well, you know better than I the difficulty of getting people to vote. I think that would be just as improper as to say that no Member could sit in the Congress unless he received a majority of all the electors in his district.

Senator BREWSTER. We would not have any President if that had been in effect.

Mr. MACMILLIN. That is true.

Incidentally, I do agree with the contrary view, that it is not desirable to include in any referendum the provisions that those now receiving pensions should be allowed to vote. I agree that that should be stricken, if for no other reason than because it would be cruel in giving them an idea that their benefits could be extended; which, of course, would not be possible under this bill.

In discussing this referendum feature, the contention has been made frequently that the issue is so complicated that it is not possible to conduct an educational campaign so that the members of these systems know what this is all about. Then I submit to the members of this committee that if, after an educational campaign, they can't understand the issues, then the people who have been flooding you with letters and telegrams don't understand the issue either. And I think that is true.

Senator MILLIKIN. Well, where does that bring us? Nobody understands it, so where do we come out?

Mr. MACMILLIN. As far as our own system is going to be concerned, Mr. Chairman, I am going to suggest an amendment in just a minute which I think would at least solve our dilemma without interfering with some of the these other people who are squawking.

Of course, these people are fearful that their systems are going to be abolished. I think these are reckless statements. I think the State legislatures are just as conscientious in dealing with this matter in good faith as is the Congress; and, as I indicated, I think the same pressures will be exerted there that were exerted here. I think it is perfectly possible to integrate any existing system with social security, with at least four results: first, that the aggregate annuities paid to the individuals will be increased; second, that there will be better provision for the dependents; third, that there will be better provision for survivors; and fourth, that there will be no material change in cost either to those under the system or to the taxpayers in the States. And that is a staement which you will challenge, but as to which I will explain my point of view in just a minute.

Now, several times members of this committee have inquired whether a system could be evolved whereby the integrity and individuality of the different existing retirement plans could be maintained and at the same time provide a method for giving a man coverage as he moves in and out of public and private employment. Well, Wisconsin has such a plan, which is written into our law and has been there from the beginning. We now provide, in the law pertaining to the Wisconsin retirement fund, for integration with social security as soon as the Congress acts. It will be automatic. It will not even require action by the legislature. It will go into operation at once unless the Congress includes provisions which would require legislative action.

Now, here is the way it would work under the Wisconsin system. At the present time most employees contribute 5 percent of their earnings, and the State, or the counties and the cities, match that with another 5 percent. The provision in our law is that as soon as they become covered by social security—and next January 1 that would go to 2 percent under this bill—they would pay 2 percent to Washington, or Baltimore, and 3 percent under our system. The result would be that all of their prior service credits up to now would remain unchallenged. They would build up their credits in the future at the rate of 3 percent instead of 5 percent, and they would in addition get all of the benefits of social security.

I think that any plan can be modified to accomplish the same result, and therefore I submit that the contentions which have been advanced to this committee, that there are grave doubts that many States and subdivisions thereof can afford to have both, and the statement that this would impose a double burden of contributions upon the underpaid public employee, are completely unfounded.

Now, as to the reasons why integration is desirable: First of all, the members of this committee are aware of the rapidly accelerating tendency to provide supplemental retirement plans in private industry, and we think it is grossly discriminatory to deny that same right to those employed by States and localities. We do not believe that they are second class citizens. We think that they should have the same opportunities that those in business and industry have.

Senator MILLIKIN. But if they do not want it, why should we compel them to take it?

Mr. MACMILLIN. You should not; and that is why you have a referendum feature, Senator Milliken.

Senator MILLIKIN. It deals with two things. First, it deals with a very small number of people who are hustled into a meeting to make the decision. And second, even if you did it with a 90-percent vote or a 95-percent vote, if an individual in there has a vested right in what you have got, you would have no right to vote him out of it. It is just a funny little American principle that we can not vote certain things out of existence in this country, even though 99 percent of the people favor it.

Mr. MACMILLIN. Are you thinking, for example, of the New York provision, the provision in their constitution?

Senator MILLIKIN. I am thinking that if they have a system where the individual has a vested right as of today, his vested right should not be destroyed by a two-thirds vote of all, a one-third vote of all, a majority, or any other portion of those present. Make it any figure you want to. There is just a certain little principle that we have there, about not voting people's vested rights away from them.

Mr. MACMILLIN. There are court opinions, of course, on both sides of the question, depending upon the wording in each particular system.

Senator MILLIKIN. I agree.

Mr. MACMILLIN. But that is a problem that, it seems to me, each system will have to face, and it may be that in some they can only make it applicable to new employees.

Senator MILLIKIN. The contracts are affected by public policy. There is no question about that. And how far public policy could reach in to mitigate what I have said to you, I am not prepared to state, because I do not know the details of the particular systems. But

this business of voting people's rights away by any percentage of those who are affected is a serious business.

Mr. MacMillin. My answer to that would be, Senator, that if there is a vested-right provision in a system, integration would probably be impossible for the existing employees. It would only be possible to make it applicable to new employees. But I think the States can take care of that adequately.

I just want to mention one other phase of that, and that is that it has been suggested that this plan will result in loading responsibilities upon the State and the Federal Government. I don't think that holds water, because after all we are not asking for anything more than employees in private business and industry are getting. We are not asking for more than they are.

Secondly, as was discussed, I understand, yesterday morning, because of the fact that this system has fallen far short of being self-supporting when considered on an actuarial basis, and since there seemed to be general agreement that there are financial burdens which are being shifted to the future, and which the people under our system and the taxpayers of our State and cities and counties are going to have to pay, we think we should be allowed to participate in the benefits.

Now, it is true that we could extend our own system to give the same benefits such as are expanded under social security. But that would mean that we would have to increase the 5 percent that the individuals pay, we would have to increase what the taxpayers pay, and we would have to increase our costs to get what we are already paying for or will have to pay for ultimately in supporting social security.

Senator Millikin. Do you object to the pay-as-you-go principle?

Mr. MacMillin. I think that is something that I am not prepared to take a position on one way or the other, Senator. I admit the difficulties of accumulating enough security to put this on an actuarially sound basis. I have no illusions as to the problem there.

As to how each individual would benefit from being under both systems: Our system provides that an individual coming to work at 30 and continuing to work until he is 65 will build up enough credits to give him half pay. We have about 1,200 annuitants at the present time, and only a very small percentage of those come anywhere close to half pay. Our average annuity is $50 per month. I think that less than one-third of our people over 65 have retired, because the annuity they would get is so small. And why? Because they have only been working for the Government for a short time. Their previous employment record was in private industry and business. Under this integration which we are supporting, here, let us take a man who is earning $250 a month and who was under our system from age 45 to 65. Under our system at 65 he would get only $66 a month. If the integration were to become effective, instead of getting $66 a month he would get anywhere from $130 a month to $161, depending upon when the service occurred. And I think you would concede that that is a tremendous increase in benefit to the person who would be so affected. In terms of benefit some would get a smaller increase and some a larger increase, depending upon the facts in each case.

Fourth, this integration would provide very valuable protection for dependents. Under most existing retirement systems, including our own, if an employee dies his widow gets either only a refund of his own contributions or a very nominal death benefit, as contrasted with what is provided under this bill, where a widow with two minor children would be getting $123 a month if her husband had been earning $200 a month. And I think you can realize the peace of mind that would give the people under our system.

Fifth, of equal value is the protection to surviving widows. Under most systems, including our own, widows receive little or nothing. I think about 90 percent of our annuitants have life annuities for the individual only, and, of course, the benefits under social security would be immeasurable to these surviving widows.

Sixth, and I think this is one of the most important points, existing retirement systems provide very limited protection for persons who have spent most of their working career in private business or industry. We receive many pathetic letters saying: "My husband is only getting $30 a month from your system" or "only $40 a month." Of course, it is obvious they can't live on that. Why do they get so little? They have been working for the Government for a short time, and they may have spent 20 or 25 years in private employment; and without integration they get no credit for private employment, and they receive only the pittance they get for their short period of governmental service.

Seventh, we think integration is essential for those who leave uncovered employment in the future to enter covered employment. I think that should be obvious to this committee. Our turn-over figures show that last year there was a turn-over of 12 percent of the people under our system. Every day we receive numerous applications of people who have left to go into private industry.

Now, I would like to suggest to the committee that if the amendment which is being proposed is adopted, to exclude all public retirement systems, you consider an amendment which would allow Wisconsin to be used as a guinea pig. Wisconsin, as far as I know, has the only law which has already provided for integration; and therefore, you could adopt this amendment which I shall read to the committee. This wording probably is not correct, but it will give you the idea. There could be added on to the Lehman amendment, for example:

Such exclusion shall not be applicable to the individuals included under any retirement system of any State or political subdivision thereof if the enactment ment establishing such system on February 1, 1950, expressly provided for making such system supplementary to the Federal old-age and survivors insurance system.

Now, that would give you a chance to, as I say, use Wisconsin as a guinea pig, our particular system. It would not affect the teachers' system in our State. It would not affect the Milwaukee system. It would not affect the police and firemen's insurance systems.

Senator MILLIKIN. Would you mind reading that again?

Mr. MACMILLIN. The part to be added on to the Lehman amendment?

Senator MILLIKIN. Yes.

Mr. MACMILLIN:

Such exclusion shall not be applicable to the individuals included under any retirement system of any State or political subdivision thereof if the enactment establishing such system on February 1, 1950, expressly provided for making such system supplementary to the Federal old-age and survivors insurance system.

And our law so provides, and has from the beginning.

Senator BREWSTER. You do not know of any other State that has done that?

Mr. MACMILLIN. Well, I think your technical adviser can give you better information; but so far as I know, we are the only ones who have done that.

You see, what we object to is that if New York does not want it, if Colorado does not want it, fine; but why should they say to Wisconsin: "You can't have it"?

Now, similar fears were expressed at the time social security was first adopted, in 1935

Senator MILLIKIN. I think it should be said that there are some objections to giving the privilege to any one to elect to come under the system.

Mr. MACMILLIN. You mean the problem of adverse selection? Is that what you are thinking about?

Senator MILLIKIN. Yes.

Mr. MACMILLIN. Well, of course, there wouldn't be adverse selection under our system, where we have 30,000 covered now.

Senator MILLIKIN. We would have to study it to find that out.

Mr. MACMILLIN. I mean, the whole system would come under as a whole.

Senator MILLIKIN. It still remains necessary to make a study of the Wisconsin system.

Mr. MACMILLIN. I don't see, where there is a coverage of 30,000 now, and where you have spread the risk over several hundred governmental units, you could possibly have any adverse selection.

Senator MILLIKIN. Well, if you were considering being insured by an insurance company you would want to take a look at it, would you not?

Mr. MACMILLIN. Similar fears were expressed in 1935, when social security was first adopted. I am thinking of fears as to the existing retirement systems. Senator Clark proposed an amendment in the Senate which was adopted, excluding additional private systems. That amendment was later eliminated in conference committee. And I think the record of what has happend over the years with respect to private supplementary systems bears out the fact that those fears were completely unfounded. Because you all know that when you consider the number of private systems today as compared with 1935 there is practically no comparison.

I hope this committee will stand by the report of the Advisory Council on Social Security, which was submitted to your committee in 1948. That committee went into this problem in detail, and I think that their report and their statement on this particular point states it much better than anybody could state it.

Now, I know you want to get away, and I will conclude with this: I am convinced that the individuals who have a chance to study this

will not agree with the pressure that has been brought to bear on this committee. There has been written into your record a letter submitted to Senator Millikin from a gentleman in Colorado. You recall the statement, probably, that I am referring to. I can not recall the gentleman's name. It is in the committee record twice, on pages 895 and 1093. In it he tells what happened when he went out and talked to 3,000 people in Colorado who were under these systems, as to whether or not they wanted to be under them or not. And he found a very different viewpoint from that which is expressed in the letters submitted to you.

Senator JOHNSON. Is that Mr. Roth's letter?

Mr. FAURI. That is the letter of Mr. Herrick Roth.

Mr. MACMILLIN. That is the name, yes. I was asked to come up to a meeting of city and county employees in Harrington 2 weeks ago, and I hadn't even mentioned H. R. 6000 when a man said: "I have been reading magazine articles. I understand our system is to be wrecked. If Congress passes H. R. 6000, we won't have any system left."

So I said, "I am going to explain to you just what would happen under H. R. 6000."

I read the provision in our law. I explained exactly how the provision would take effect, as to both systems. And without taking the time to give you the details, everybody in the meeting room said, "That would be wonderful. Why shouldn't we have that type of integration? We are going to write to our Senator that we want that." I am convinced that if it were possible to sit down with the people that have been flooding you with letters, they would come to the same conclusion.

Senator MILLIKIN. I suggest that the same group, if it met the next day and heard someone equally persuasive on the other side, would reach the opposite conclusion.

Mr. MACMILLIN. I am not willing to concede that, Senator.

The CHAIRMAN. You are assuming, however, that the States and municipalities would keep up their present retirement systems?

Mr. MACMILLIN. We are committed to that. We have already written it into our law.

The CHAIRMAN. I understand you are. But I say all your argument is based on that assumption.

Mr. MACMILLIN. Well, Senator, I have been around legislatures for a good many years and I have seen what has happened to public retirement systems. And I think it is very unrealistic, in view of what is happening in private industry, to suggest that any public-employee retirement system is going to be less liberal. I think the trend is all in the opposite direction. I know what happens when pension bills come before our legislature.

The CHAIRMAN. Yes. You have some considerable pressure back of private systems, too, that you would not have in your legislature. The tax dollars get tight. You would not expect to see any expansion of your State and municipal systems, would you? You might, in Wisconsin. You said you were a guinea pig, and so I assume you are.

Mr. MACMILLIN. Well, at least our retirement system I think is as sound as any retirement system you will find in the country. It is actuarially sound.

The CHAIRMAN. I am not questioning that. But I am simply saying that all your argument is predicated upon that basis; that is, that the States or municipalities are going to continue to support their private systems even though all the members in the system were taken in under social security.

Mr. MACMILLIN. Personally, I do not have any doubt. Whether I can convince you of that, of course, is a different matter. But I have been around the legislature for 20 years, and I have watched pension bills very closely, and the trend is in the opposite direction. I think the question is "Where are we going to have the limit?" rather than "Where are we going to cut them down?" I think the question is "Where are we going to have the top limit?"

The CHAIRMAN. Any other questions?

Thank you, sir, for your appearance.

Mr. MACMILLIN. Thank you, Mr. Chairman.

(The prepared statement of Mr. MacMillin follows:)

STATE AND LOCAL GOVERNMENTS SHOULD BE PERMITTED TO INTEGRATE EXISTING RETIREMENT SYSTEMS WITH SOCIAL SECURITY

(By Frederick N. MacMillin, Executive Director, Wisconsin Retirement Fund.)

I submit this testimony as the executive director of the Wisconsin Retirement Fund. This is the largest retirement system for public employees in the State of Wisconsin, and it has been constituted the basic retirement system by the Wisconsin Legislature. Ultimately, after legislative enactments have taken full effect, presumably the only other retirement system for public employees in the State of Wisconsin, outside of systems for the city of Milwaukee and Milwaukee County, will be the State-wide teachers' retirement plan.

The Wisconsin Retirement Fund now includes more than 25,000 active employees, and about 4,000 inactive accounts of persons who eventually may be eligible for a retirement annuity. Besides the State, 76 cities, 15 villages, 37 counties, and 33 other governmental units have voluntarily acted to include all eligible employees.

This presentation will be confined to a discussion of section 106 of H. R. 6000, which relates to the coverage of State and local employees.

OPPOSITION BASED ON FAULTY REASONING

It is difficult to understand the reason for the almost hysterical opposition to the inclusion of persons under existing public retirement systems which has emanated from certain quarters, and which has resulted in so much pressure being exerted on Members of Congress. I suggest that these persons have acted precipitously without fully thinking the matter through. There are sound reasons for concluding that a little less heat and more light on this matter would probably produce very different conclusions. I think it can be definitely established that if a little ingenuity is used, a way can be found to transform each retirement system into a supplementary system with the following results:

(1) The aggregate annuities payable would be increased.

(2) Valuable protection will be provided for dependents which is now largely lacking.

(3) Survivors of annuitants will continue to have annuity income after the death of the participant, whereas under existing plans many survivors are left without an annuity.

(4) There need not be any material change in the cost to either the employee or the governmental unit.

SIMILAR FEARS PREVIOUSLY PROVED UNFOUNDED

This is not the first time that there has been an attempt to stampede the Senate with a proposal for exclusion. In 1935 when the bill establishing the social security system reached the Senate, an amendment by Senator Clark, of Missouri, was adopted to exclude those persons covered by existing retirement systems main-

tained by employers. However, this Senate amendment was eliminated by the conference committee.

This decision has proved to be a wise one. While exact statistics evidently are not available, it appears that there were about 650 private retirement systems in business and industry in 1939, covering approximately 2,000,000 persons. By 1949 this had increased to at least 13,000 private system supplementaing social security and covering at least 7,000,000 persons. It should be common knowledge by this time that the existence of social security has not operated to reduce the coverage of private systems, but rather the trend is exactly the opposite. There is no logical reason to assume that the experience would be any different with respect to public employees.

The Advisory Council on Social Security appointed by the Senate Committee on Finance in 1947 gave careful consideration to this matter, and their conclusion as contained in their official report to the Committee on Finance on April 8, 1948, concisely states the essentials:

"Many proposals previously advanced for covering these workers have advocated excluding, on either a permissive or a mandatory basis, various limited groups of State and local employees, apparently in fear that coverage under old-age and survivors insurance would weaken or even completely destroy their State and local retirement system. As pointed out in the Council's recommendations for coverage of Federal and railroad employees, retirement systems supplementary to old-age and survivors insurance perform a valuable and necessary function. When coverage is extended to State and local employees who are members of staff retirement systems, those systems can be adjusted to supplement the basic old-age and survivors insurance benefits. Private employers have demonstrated that such adjustments can be made satisfactorily and without any loss in total retirement protection. The Council believes that in light of (*a*) the incontrovertible merit of the retention and development of supplementary plans, (*b*) the fact that employees under industrial pension systems did not suffer losses in benefits attributable to adjustment to old-age and survivors insurance program, and (*c*) the fact that State and local governments have recognized the need for, and taken action to provide retirement protection for their employees, any fear that the availability of old-age and survivors insurance will lead Government units to reduce the total protection afforded their employees is unjustified."

WISCONSIN HAS A PLAN FOR INTEGRATION

The Wisconsin legislature and the governing bodies of the 161 governmental units are specifically committed to the integration of the Wisconsin Retirement Fund with the old-age and survivors insurance system established by the Federal Government. From the very inception of this Wisconsin system there has been written into law (sec. 66.903 (2) (f) of the Wisconsin statutes) a provision whereby these public employees may also be given the advantage of inclusion under social security as soon as this is made possible by the Congress. Automatically the Wisconsin Retirement Fund will then be transformed into a plan providing supplementary benefits.

The practical result would be that the contributions of employees and governmental units to the Wisconsin Retirement Fund will be reduced by the amount of the respective contributions to social security. However, the employees will then receive the full benefits of social security, they will retain without change all accumulated credits under the Wisconsin Retirement Fund, and they will continue to build up additional credits under the Wisconsin Retirement Fund. Both employee groups and the fund staff have considered this carefully, and no one has yet been able to find any person who would not gain materially by obtaining the benefits to be derived both from social security and from the existing Wisconsin Retirement Fund.

In practice integration would work out this way in Wisconsin: At present, for general employees, the employee contributes 5 percent of his earnings up to $350 per month and the governmental unit matches that with a current service contribution of 5 percent. (The governmental units also pays all prior service, disability, death, and administration costs.) Under integration, beginning January 1, 1951, the employee would pay 2 percent to social security and only 3 percent to the Wisconsin Retirement Fund. In like manner, the governmental unit would pay 2 percent to Social Security and its matching current contribution to the Wisconsin Retirement Fund will be reduced by that amount. Thus, the contentions which have been advanced to the Committee on Finance that "there are grave doubts that many States and subdivisions thereof can

afford to have both" and that such "would impose a double burden of contributions upon the underpaid public employee" are completely unfounded. There is no reason why every existing public employee retirement plan cannot be modified in the same manner as the Wisconsin Retirement Fund.

REASONS WHY INTEGRATION IS DESIRABLE

Those who have opposed making it possible for persons under existing public employee retirement systems to procure the material benefits of social-security coverage also would do well to examine the advantages to be derived from dual coverage. Here are some of the reasons why such integration seem desirable:

(1) Since there is a rapidly accelerating tendency to provide supplementary retirement plans for employees in business and industry, it would be grossly discriminatory to deny the same advantage to those in public employment.

(2) Inasmuch as the old-age and survivors' benefit system has fallen far short of being self-supporting when considered from an actuarial standpoint, and since the benefits paid are far in excess of what can be provided actuarially from the actual contributions, the sytem is sound only because taxpayers are liable to underwrite the cost differentials. It is unjust to require public employees to help underwrite this cost without being able to participate in the benefits to be derived therefrom.

(3) As previously indicated, each participant would naturally benefit to the extent to which his annuity from two sources would exceed that to be derived only from the existing system. It is not possible to state the exact amount of the increase, since this would vary with length of service and the exact years when the service occurred. However, as an illustration consider a person earning $250 per month who contributed to the Wisconsin Retirement Fund from age 45 to 65, and who would at age 65 receive a life annuity of $66 per month. (If he had begun work at age 30, the annuity would have been half pay.) If the integration authorized under H. R. 6000 were to become effective, the combined annuity which he and his wife would receive, instead of being $66, would range from $130 to $161, depending upon when the service occurred.

(4) The protection for dependents would be particularly valuable. Under most existing retirement systems, if an employee dies leaving a wife and minor children, ordinarily the only payment made is a modest death benefit or the refund of the employee's own contributions. Contrast that with the payment under H. R. 6000 where a widow with two minor children would receive $123 per month if her husband had earned only $200 per month and had been covered for only 5 years. This should provide considerable peace of mind for an employee who now worries about what wil happen to his dependents in case of his death.

(5) Of equal value is the provision for a surviving widow. Under most existing systems, the widow receives little or nothing unless the employee elects a substantial reduction in his own annuity. For example, of 1,279 now receiving annuities under the Wisconsin Retirement Fund, in 1,163 instances the widow would receive nothing, with possibly few exceptions. But H. R. 6000 makes substantial provision for a surviving widow which would relieve the worries of a retired employee with respect to the support of his wife after his death.

(6) Existing retirement systems provide very limited protection for persons who have spent most of their working career in private employment and have entered public employment later in life. Many pathetic letters are received from old people in this category who find it impossible to live on the small amounts they receive. Yet it is unreasonable to expect the taxpayers of a municipal government to provide a full annuity for a person who had devoted only a few years to serving the public. It is, therefore, important that such persons shall be permitted to participate in the social-security program. This necessity can be shown by the following example:

Suppose that a man had worked in private employment from January 1, 1913, to January 1, 1946, and then would work for the State or a city from January 1, 1946, to January 1, 1956, at which time he would attain age 65. Assume that he earns $200 per month in public employment during the last 10 years of his working career. Since the Wisconsin Retirement Fund is devised to provide half pay of $100 in this instance only where a person has worked from age 30 to age 65 at least, the annuity in this case would be about $25 per month, obviously too small to support himself, let alone a wife. Because he had been in covered employment for only 9 years since 1937, he would not have acquired any rights under social security. Thus this man and his wife would be denied any par-

ticipation in the protection of this national program even though he had devoted the 33 best years of his working career to private employment.

It is difficult to understand how anyone can justify the continuation of any such unreasonable discrimination.

(7) Integration is essential for those who leave public employment in the future to enter covered employment. Certainly there should be no disposition on the part of anyone to deny a public employee the free choice of employment by trying to chain him to his present job. In many existing systems, such a change in employment results in the loss of retirement rights. Therefore it is important that he be given full social-security protection. Such change of employment is not rare. In Wisconsin in 1949 those under the Wisconsin Retirement Fund who terminated public employment for reasons other than death or retirement equaled 12 percent in a single year, and this in a State where the spoils system has been virtually eliminated at both the State and local levels.

(8) The fears that existing retirement systems will be abandoned seem to be entirely unfounded. The records of past years do not disclose that sound retirement systems for public employees have been abandoned. Since the trend is to constantly expand the benefits provided for those in private industry and business, there is no reason to anticipate a contrary trend in public employment. There is no reason why these retirement systems cannot be transformed into supplementary systems in the same manner as has been written into the Wisconsin Retirement Fund law.

(9) The safeguard written into H. R. 6000 requiring a referendum in the case of existing public employee retirement systems should effectively allay any alarm that may exist. This means that a ballot must be submitted to each present participant under a public retirement system to permit him by secret ballot to say whether he wants to integrate the system with social security. However, there appears to be no justification for requiring a two-thirds vote. The American tradition of majority rule should also be allowed to prevail in this instance.

It would be inexcusably selfish for the members of any retirement system which for any reason preferred to remain out of social security (which right they could protect by referendum) to try to prevent the members of another retirement system from being included when it was clearly to their advantage to be included.

(10) If the State of Wisconsin and the municipalities under the Wisconsin Retirement Fund are absolutely barred from including public employees under the social-security system, this will result in impairing the recruitment of qualified employees as vacancies occur in positions covered by the retirement plan. Individuals will hesitate to accept such jobs when it will mean that their dependents and survivors are denied the full protection provided by social security. This will lower the quality of the public service, and may even increase the cost of Government.

SPECIFIC CLASSES OF PUBLIC EMPLOYEES SHOULD NOT BE INCLUDED

It has also been suggested that specific classes of public employees be barred from participation in the old-age and survivors' insurance plan—such as, for example, policemen and firemen. Under the Wisconsin system this would be very unfair to policemen and firemen. Under the Wisconsin law all policemen and firemen, outside of the city of Milwaukee, who are hired after January 1, 1948, and many other policemen and firemen, are included under the Wisconsin Retirement Fund which specifically provides for integration with social security. It would be very unfortunate if in any city the employees of the street department, the park department, and so forth, were given the additional social-security protection, while the policemen and firemen—working for the same employer—were compelled to be confined to the lesser benefits provided under the Wisconsin Retirement Fund. This would be entirely indefensible.

REFERENDUM PROVISION SHOULD BE CORRECTED

With respect to the referendum provision, it seems quite cruel to require that present annuitants participate in the referendum which is made mandatory for existing public retirement systems. Such participation will only lead them to hope that their annuity will be increased because of such integration, when this would be wholly impossible under the proposed bill. This should be modified to exclude annuitants from the referendum.

ADMINISTRATIVE PROVISIONS SHOULD BE UNIFORM

A final comment on the administrative proposal. There seems to be no logical basis for treating governmental employers any differently than private employers from an administrative viewpoint. State governments should not be required to assume the responsibility and the expense of administration which the Social Security Administration pays for private employers. Likewise, it is believed that municipal and county governments and their employees will have a more comfortable feeling if their payments and records are transmitted directly to the responsible Federal agency, rather than channeled through a third party, thus increasing the likelihood of errors and confusion.

CONCLUSION: OPPOSITION TO INTEGRATION ENTIRELY UNNECESSARY

It would appear that in reality all of the pressure which has been brought to bear upon the Congress to induce it to prohibit the integration of existing retirement systems for public employees with the Federal old-age and survivors insurance system is completely unnecessary. All that the Congress would do in H. R. 6000 would be to enact enabling legislation. The real choice as to what would be done in any State would be made within that State. This is entirely proper, since the Federal Government should not try to dictate policies with respect to State and municipal employees.

Consequently, there is no logical reason why any State legislature should memoralize the Congress on this point. The final choice in that State will be made by the State legislature under H. R. 6000, not by Congress.

Likewise, there is no justifiable reason why the representatives or members of any retirement system for public employees should exert pressure on Members of Congress. These members of retirement systems will presumably have ample opportunity to present their case to their State legislature. Then, even if the legislature should happen to disregard their wishes with respect to integration, these employees still have complete control, since they have the prerogative to reject integration when the referendum is held.

In view of this complete control by each State legislature and also by the members of each existing retirement system, it would seem to be utterly selfish to try to prevent integration in one State where integration is wanted, simply because such is not desired in another State.

The CHAIRMAN. Miss Mildred Arnold?

Miss Arnold, we will be very glad to hear you. You are from the Children's Bureau of the Social Security Administration?

STATEMENT OF MISS MILDRED ARNOLD, DIRECTOR, DIVISION OF SOCIAL SERVICES, CHILDREN'S BUREAU, SOCIAL SECURITY ADMINISTRATION, FEDERAL SECURITY AGENCY, WASHINGTON, D. C.

Miss ARNOLD. Yes, Mr. Chairman. I am Director of the Division of Social Services of the Children's Bureau. I would like to make a statement on recommendations for an expanded program of child-welfare services.

Because questions have been asked, both in hearings before this committee and by other interested persons, I am here to present additional information concerning the child-welfare programs now being carried on by the various State welfare departments. At the same time I want to tell you how the children in this country would benefit if the annual appropriation for child-welfare services were increased from 3½ million to 12 million dollars.

First, I want to talk about the children who need child-welfare services. Children in need of child-welfare services may be anywhere, everywhere, in any or all of our communities. They may be living

with their own families or with relatives. They may be your neighbors' children or other children you have known intimately.

Some are disadvantaged from birth or at an early age by physical disabilities or mental conditions. Some suffer from family friction and lack of adjustment to other members of their family. Some have parents who are ill physically, sick mentally, or for some other reason cannot give them the care and affection they need. Others are victims of economic conditions which deprive them of normal home life. Some have been so seriously abused or neglected that someone outside their own family must provide the care they need. All of these children have the same need to be loved, the same desire for achievement, the same potentialities as other children. They differ only in that, through no fault of their own, they have been deprived of the opportunities we consider the birthright of every child in our democracy.

The purpose of the child-welfare program is to strengthen family life and to provide care and protection for those children who cannot be cared for in their own homes. Individualization of children needing help has long been the watchword of the child-welfare program. By individualization, we mean, first, seeing each child as an individual and understanding his peculiar problems. Then, in turn, we must individualize the plan for his care, being sure that it is the best way of meeting the problems of that particular child. To assure this, we must provide a variety of social services for children, including services to children in their own homes as well as in foster care; that is, in institutions or in foster family homes. The variety of services we now consider essential for the child-welfare program has expanded gradually as we have learned more about ways of helping children.

A hundred years ago, we thought that we could best help children by providing custodial care for them in institutions. Many States built large State institutions for dependent and neglected children in the 1800's. Here children received food and shelter but little individual attention. Gradually, we came to realize that most children thrive best in family homes.

The children themselves showed some of us that this was true. I remember Tommy who made me aware of this a number of years ago. He had been kept in an institution for several years. His mother was dead and his father had disappeared years before. He was a good-looking, docile child when he entered the institution. We realized that the institution was not meeting his needs when he became the ringleader in a number of stealing episodes. When I discussed this behavior with him, he poured out his feelings with the words, "Put us kids into homes and then we won't do these things." He was placed in the home of a farm family and 6 months later the rural school reported that he was one of the leaders in the school and a good influence on the other boys. Tommy had leadership qualities, which could be used for good or for bad, depending on how adequately his own individual needs were being met.

And so we learned, from long and sad experience, to "put kids into homes." Today, 42 percent of the children under care in the public child-welfare programs are in foster-family homes. Some of them are healthy, attractive infants for whom a permanent plan of adoption can and will be made. But these are few compared to the total. Only

one out of every five children in foster homes are waiting to be adopted.

Most of the children coming to the State and local welfare departments are not beautiful, blue-eyed babies, but older boys and girls, many coming as family groups. About 70 percent of them are of school age.

We have the conviction that these children, too, need a family home, and so the majority who are receiving foster care are in what are known as boarding homes. Perhaps this is an unfortunate term because these homes are in no sense commercial undertakings. They are homes of plain, wholesome American families whose home life has much to offer children. Often the children of these parents have grown up and gone away and the home seems empty without them. So the parents open their doors and their hearts to care for other children needing a home. At the present time public welfare departments are caring for 70,000 children in such boarding homes. Foster parents are paid a monthly stipend, often inadequate, to take care of the extra cost of having the children in their homes.

Foster homes are carefully selected and studied by child-welfare workers and matched with the children. And "home-finding," as it is termed in social-work language, calls for all the skill and understanding that a worker can muster. Sometimes it may take months to find the right home for a particular child. But, on the basis of my 10 years of experience in placing children in foster homes, I am convinced that with time, patience, and skill, the right home can usually be found.

All States, except six, now have some legislation regarding the licensing of boarding homes. The State welfare departments establish minimum standards which all homes have to meet before they can be licensed. State law or regulation sets the maximum number of children who can be cared for in any one home.

The maximum is usually four, although the average number of children cared for in any one home is probably closer to two or three.

These developments in foster care have had a profound effect upon the picture of child care in this country. No State institution for dependent and neglected children has been established in the last 14 years. Two States, Michigan and Minnesota, have closed their institutions for dependent children and instead have established a State foster-home service, with a small receiving home to care for the children temporarily until they can be placed in foster homes. Michigan was the first to establish a State institution for dependent children and the first to abolish it when able to introduce foster-family care on a State-wide basis. Only 15 States, at present, maintain institutions for dependent and neglected children.

Several States, such as Oklahoma for example, have introduced individual case-work services for children in their State institutions and as a result have been able to decrease the population of the institution by returning some children to their own homes and by placing others in adoptive and boarding homes. In the 14-year period, 1933–47, on the basis of reports from 29 States, the total number of children living in public institutions for dependent and neglected children was reduced 32 percent. From 1933 to 1943, the number of children receiving foster-family care from public agencies increased 70 percent. Since 1943 the number of children receiving foster-family care through public agencies has continued to increase.

Although every State has one or more public institutions to care for delinquent children, the number of children in these institutions has also decreased. In the 29 States for which comparable data are available, the population in these institutions decreased 29 percent between 1933 and 1947.

The decrease in the use of public institutions for dependent and delinquent children does not mean that no children's institutions are needed. There is and will continue to be a definite and useful place for the progressive and specialized institution serving the physically or mentally defective child, the emotionally damaged child, and the child who needs special temporary care. Often adolescents and older youth need institutional care because they are at a stage of development when they are seeking independence from adults. This means that many of them are unable to take on the substitute parental relationships inherent in the foster home.

As we have gained more understanding of children and of the use of foster care, we have also recognized that no improvement in the child's material surroundings and no affectionate care by strangers can fully compensate him for the loss of his birthright—life with his own family in his own home. Consequently, we are placing much greater emphasis on the provision of services to children in their own homes, preventing family break-downs wherever possible. And as a result we find that 40 percent of the children receiving public child-welfare services are still in their own homes and we earnestly hope that they can remain there.

We are slowly but steadily making headway in keeping children in their own homes, or, if this is not possible, in finding good substitute homes for them. But many children in need of help are still not receiving it. Vast areas of this country have no child-welfare services.

This may mean in effect that these services can actually discriminate against children. Only 20 percent of the 3,183 counties in the country have the services of a full-time child welfare worker paid from public funds. The services of private agencies are largely centered in the more urban areas. As a result of this, one child, whose home is in danger of being broken, may be fortunate enough to have an understanding and skillful child-welfare worker come to his rescue.

Another child, perhaps just 5 miles away in another county, may have no help available to him and may have to continue to live under extremely handicapping and unhappy conditions. For example—and this was a case just recently told to us by one of the States—Helen, age 7, is seriously neglected by her parents and in ill health. She happens to live in a county in a Midwestern State where there are no child-welfare services available. For 2 years she has been urgently in need of a good foster home, and her problems have been growing steadily worse because this need has not been met. In contrast, Tito, the same age, lives in a State in the southwestern part of our country and in a county where there are child-welfare services. He, too, had been seriously neglected by his relatives and was severely malnourished. But, unlike Helen, Tito, received the care he needed. The public-health nurse reported his situation to the child-welfare worker who immediately arranged for needed medical care and hospitalization for him. As soon as he was able to leave the hospital, she placed him in a good foster home and he has developed into a happy, healthy youngster.

If grants to the States for child-welfare services were increased from $3,500,000 to $12,000,000, what would this additional $8,500,000 mean in terms of the number of children who could be helped? How many more child-welfare workers would be available to serve children? How many additional counties could have services? What improvements would be possible in the child-welfare program?

State welfare departments were recently asked how they would use this additional money if it became available. This was their answer:

The great need is for more child-welfare workers. They represent the backbone of the service.

Only when these workers live in the counties, become a part of the community, and make their services known and respected, do families feel free to come to them with their problems and early enough so that a major disaster can be prevented. Every State needs more child-welfare workers in the counties. The States plan to use about $3,145,000 in this way. This would mean that a public child-welfare program could be establish in approximately 650 counties now without these services and the total number of counties with full-time child-welfare workers paid from public funds would be increased from 20 percent to 41 percent of the 3,183 counties in the country. And what is still more significant, 100,000 additional children would receive services under such an expansion.

The local child-welfare workers need the help of more experienced or more specialized workers. These workers are usually called child-welfare consultants. State welfare departments provide consultants to go regularly into the counties to help the local staff plan and improve their child-welfare program. Specialized consultants come in to work on specialized programs such as foster family care, juvenile delinquency, adoption, institutional care, homemaker service. For these types of services State plan to spend $1,275,000.

The lack of trained workers has been one of the principal road blocks to increased child-welfare services. In order to secure competent workers, State departments throughout the country have had to provide opportunities for workers to obtain needed training. One means of doing this is through the use of educational leave stipends for workers on the job. The worker is granted leave for a specified period, usually 1 year, so that she can attend a graduate school of social work. During this period, she is given a monthly stipend to cover the cost of training. The States would spend about $680,000 for educational leave. This would enable them to send 350 additional persons to schools for social work for training.

Senator MILLIKIN. Mr. Chairman?

The CHAIRMAN. Yes, Senator Millikin.

Senator MILLIKIN. My thought is this, in connection with testimony of this kind: Why cannot the States handle this particular problem?

Miss ARNOLD. Are you speaking now of the training of workers of the total program?

Senator MILLIKIN. I am speaking of the total problem and the training of workers.

Miss ARNOLD. We have found that the States have increased their appropriations for child-welfare services very materially since the Social Security Act was passed, but they still are not able to meet adequately all of the needs. They are not able to provide sufficient

funds for enough workers to be trained, for enough workers to go into the counties, and for the foster care of the children.

Senator MILLIKIN. Do you not believe that all of the States are capable of raising $12,000,000 for this purpose?

Miss ARNOLD. I think it would be difficult for many of the States to do it. They have already made very greatly increased appropriations for child-welfare services. They have also made very large grants, as you know, for the public-assistance program. I think it would be difficult for many of the States to appropriate adequately.

Senator MILLIKIN. Do you think that, of all of the things that can be sold in connection with social security, what you are talking about now has the greatest appeal?

Miss ARNOLD. I think it has a very great appeal.

Senator MILLIKIN. And if it has a great appeal, or the greatest appeal, and I should think it would have the greatest appeal of all, it is very hard for me to believe that 48 States of the Union have to come running down here to Washington to get $12,000,000. It seems to me that is a basic weakness in the situation.

Miss ARNOLD. I think we have to keep in mind the enormous increases that the States have made for the total program of public welfare in the country. It is often difficult for a small program, such as child welfare, to really be able to keep its head above water, on the basis of some of these other tremendous programs, where greatly increased appropriations have had to be made. I do feel that the States have made heroic efforts and have really done very well in pulling out State funds. We are now convinced that Federal funds do not dry up State funds. Every study we have made shows that they really have drawn out State funds. It must be remembered that these programs are administered in county welfare departments along with the other welfare programs, particularly public assistance. Usually the total appropriation for the public-welfare department goes in as a whole, and there have been enormous increases.

A few States may be able to make adequate appropriations, but many States have not been able to.

Senator MILLIKIN. If we take a subject like this, which touches our deepest emotions, and if we get in the habit of coming to Washington for something of that kind, why, of course, the States will not appropriate. I wonder why it cannot be sold at home. It is less than 10 cents per inhabitant of this country.

Miss ARNOLD. I think it has been sold, and I think the States have done a great deal. I have some figures here from individual States showing the great increases which they have made.

I do feel that this really needs to be a partnership all the way through. I think that we have to be concerned about children in Washington. I think the States have to be concerned, and I think the local governments have to be concerned.

Senator MILLIKIN. I have a little curiosity about this educational program. If a person teaches school, he provides his or her own education before he starts to teach. Why do we select this particular field in which to pay for instruction of the worker?

Miss ARNOLD. Because of the great dearth of trained social workers in the country. The teaching field, of course, is an old profession. We have been training teachers for many years. Social work is a relatively new profession. There is a very great dearth of trained social work-

ers, and particularly child-welfare workers, where the training is so very important.

Senator MILLIKIN. What you are saying is that this is a necessary incentive to get enough workers?

Miss ARNOLD. Yes.

Senator MILLIKIN. Enough skills?

Miss ARNOLD. Yes. Perhaps eventually, as the profession gets older and more people go into it, this training program may not be necessary.

Senator MILLIKIN. That will never happen. Once you start this kind of program, you will never recede from it, I suggest.

Miss ARNOLD. From the problems which I have been discussing, you can see that skilled and trained workers are necessary. It has not been possible to get enough trained workers to meet the need.

Senator MILLIKIN. I do not doubt the need for training but I am wondering who should pay for it.

Miss ARNOLD. I think the States have felt that it is a good investment to put a relatively small amount of their money into the training of workers. You see, these workers are brought in under the merit system in the States, so that they are State employees. They agree to come back to the program after completion of training. The States know that when they make this investment, which is a relatively small one, workers will come back and really make a contribution to the program.

About $2,300,000 would be used by the States for the care of children in foster-family homes. Many States, through State and local appropriations, have increased markedly their funds for foster-family care of children. For instance, North Carolina increased its funds for this purpose from $96,000 in 1945 to $235,000 in 1949. Despite these increases, foster-family-care programs are still inadequate in many parts of the country. Even though Arizona, for instance, increased its funds from $110,000 in 1945 to $252,000 in 1949, the State reports that very few additional children in need of foster-home care can be placed during this year because of inadequate funds.

Many States have indicated that they would use increased Federal funds to provide detention care in foster-family homes. For example, Iowa reports that a survey of detention care of childrin during 1947 reveal the shocking fact that of the 75 counties studied 90 percent had used jails for detention of children. If additional funds become available, Iowa will use about $12,000 to provide detention care in foster-family homes. Colorado, Florida, Illinois, Indiana, Oklahoma, Texas, and Utah are among other States that would use some of the increased funds for this type of care.

The States report that a substantial number of children referred to them are in need of emergency care. Unfortunately, some of these children are given shelter in jail, because of a complete lack of facilities for shelter care. These children are not delinquent. They are homeless. The States would use some of the additional funds—about $450,000—to provide emergency care in foster-family homes. Georgia cites this as a particular problem and would use about $60,000 to meet this need.

Other States would set up other special facilities for foster care. In Illinois there are critical problems growing out of the lack of facilities for unmarried mothers and their babies. The Illinois Public Welfare

Department believes that the provision of such facilities would do much to allay the "black market" in babies. Consequently, this State proposes to spend approximately $50,000 for foster-family care for unmarried mothers and their babies. Other States with similar proposals include Alabama, Georgia, Iowa, Michigan, North Carolina, Ohio, Oklahoma, Pennsylvania, and Vermont.

About $100,000 would be used for the return of runaway children as provided in H. R. 6000. Often, runaway children do not receive adequate care because of the possibility of their becoming financially dependent upon the local community in which they are stranded or detained. Arizona, Georgia, Illinois, Indiana, Iowa, Kentucky, Missouri, and South Carolina have pointed out the need for funds for runaways.

About $285,000 would be used for homemakers. A specially trained homemaker, working under the direction of a child-welfare agency, can do a lot to hold families together when the mother must go to the hospital or is ill at home. Only a small beginning has been made to provide homemakers in rural areas. Several States would like to develop this service: Arkansas, Georgia, Mississippi, Ohio, Oklahoma, Oregon, and Texas.

In summary, I would like to say that if grants to States for child-welfare services are increased from 3½ to 12 million dollars, I firmly believe this is what it would mean to children.

Fewer children will lose their homes needlessly as a result of family break-down.

More children will be cared for in good foster homes.

Fewer children will be detained in jail.

Fewer babies will find their way into the "black market."

More children will have the protection of careful placement in an adoptive home suited to their individual needs and capacities.

And finally, perhaps the most important of all, more children will reach adulthood able to make their maximum contribution to our democratic way of life.

Thank you.

The CHAIRMAN. Miss Arnold, we appreciate your appearance here. How long have you been with the Social Security Administration?

Miss ARNOLD. For about 7½ years.

The CHAIRMAN. And before that you were in social-security work?

Miss ARNOLD. I was director of the children's division of the Indiana Welfare Department; so, I was a receiver of these funds, and I knew what it meant in my State to have some Federal funds come in to help us develop the program.

The CHAIRMAN. You have been at both ends of the line?

Miss ARNOLD. Yes, I have. I have also been a county worker. I started out as a rural worker in one of the New York counties, so that I know something about the problems of rural children from that experience.

The CHAIRMAN. You point out that the drift is definitely away from institutional care for children, and to the foster home.

Miss ARNOLD. Yes; from general institutional care to foster homes. We need the specialized institution, but for shorter-time care of children.

The CHAIRMAN. And for special purposes.

Miss ARNOLD. And for special purposes; yes.

Senator JOHNSON. I would like to ask just one question, Mr. Chairman, if I may.

The CHAIRMAN. Yes, Senator Johnson.

Senator JOHNSON. Should the Congress vote additional funds amounting to $8,500,000, as you have suggested, what would that mean in the way of State appropriations to match that money?

Miss ARNOLD. Under the present title V, part 3, of the Social Security Act, there is not a matching provision. It started out with only a $1,500,000.

Senator JOHNSON. In any degree?

Miss ARNOLD. It simply says that for the local services Federal funds should pay part of the cost. We have been rather flexible in interpreting that provision. Perhaps the Congress would want to consider whether, if funds were increased to $12,000,000, some kind of matching formula should be provided. When it was set up first, the matching formula was not put in.

Senator JOHNSON. But the present law views the Federal money as a part of the contribution.

Miss ARNOLD. For the local services, yes. It says it shall pay part of the cost.

Senator JOHNSON. Could you make an estimate, provided we do not change the law and change the formula, of what an increase of $8,500,000 would mean in the way of increased State appropriations?

Miss ARNOLD. It would be difficult, but I think we could make an estimate, particularly with regard to local services.

Senator JOHNSON. That is all, Mr. Chairman.

The CHAIRMAN. Thank you very much, Miss Arnold, for your appearance and your contribution.

Miss ARNOLD. Thank you, Mr. Chairman.

The CHAIRMAN. Dr. Starks?

We are calling Dr. Starks a little out of order on this list, because of the fact that one of the Senators at least may have to go to the floor.

You may be seated, Dr. Starks. Please identify yourself for the record, sir.

STATEMENT OF DR. C. ROBERT STARKS, SECRETARY, COLORADO OSTEOPATHIC ASSOCIATION, DENVER, COLO.

Dr. STARKS. My name is Dr. C. Robert Starks. My home is in Denver, Colo., where I am actively engaged in practice as an osteopathic physician licensed in medicine and surgery. I appear here today as secretary of the Colorado Osteopathic Association and as a past president of the American Osteopathic Association. My statement has been prepared with the advice and assistance and is in consonance with the policies of the department of public relations of the American Osteopathic Association, and of the State association which is a divisional society of the national organization.

There are upward of 200 osteopathic physicians in practice in Colorado. Osteopathic physicians or surgeons are legally licensed in all States, to a total in excess of 11,000. More than 300 hospitals located throughout the country are staffed by doctors of osteopathy. The

members of the profession are engaged in general practice or in surgical or other specialty practice.

May I assure you that we greatly appreciate this privilege of discussing the medical provisions of H. R. 6000, an act to extend and improve the Federal old-age and survivors insurance system, to amend the public-assistance and child-welfare provisions of the Social Security Act, and for other purposes.

The primary objective of the Colorado and national associations is the promotion of the public health and it is in pursuance of that objective that we appear here today.

Disability insurance benefits: Title I, section 107, page 88 of the bill, amends title II of the Social Security Act to extend disability insurance benefits to qualifying individuals who are totally and permanently disabled. Insured persons who become totally and permanently disabled and remain so for a period of 6 months following determination of such disability are entitled to benefits. The Federal Security Administrator is authorized to provide for the determination and redetermination of disability by medical examinations to be performed by Government or private physicians. The Administrator is authorized to terminate disability benefits if the insured refuses to submit himself to examination or without good cause refuses to avail himself of rehabilitation services obtainable under the State-Federal programs provided under the Vocational Rehabilitation Act.

There are perhaps good and bad features in all social-security programs and this one is no exception.

Among the good points of the program, is the fact that it should serve as a case finder for rehabilitation purposes. Many disabled persons who could be restored to employability have never heard of the State-Federal vocational rehabilitation programs, which operate under the act of Congress approved June 2, 1920, as amended, entitled "An act to provide for the promotion of vocational rehabilitation of persons disabled in industry or otherwise and their return to civil employment."

For some 30 years, it has been the policy of Congress as set forth in that act, to make available vocational rehabilitation services, for the disabled. This bill should promote that vocational rehabilitation program.

Section 107 does not increase the number of persons entitled to medical services at Government expense. The medical care would be available only under the Vocational Rehabilitation Act. Only needy persons otherwise eligible under that act could obtain physical restoration services. It does not increase the coverage of the Vocational Rehabilitation Act.

Among the bad features of the program under section 107 is the possibility of malingering. This is partially offset by the 6-month waiting period. There can be no doubt that in many instances it would be extremely difficult to determine and certify the "medically demonstrable physical or mental impairment which is permanent." Wherever there is a family physician he would be in the best position to make the determination. It is noted on page 94 that the Administrator is authorized to secure the cooperation of local government and private groups for advice and assistance in securing efficient administration. The cooperation of these groups should serve to minimize

abuses, but inevitably the principal responsibility will rest on the examining physician.

If the Congress shall determine that the public good in such a program outweighs the potential abuses, the cooperation of the physicians of the country to make the system work will become a social responsibility.

Public assistance: The present Social Security Act limits Federal financial participation in public assistance payments to those which are paid to the recipient in money.

Title III of H. R. 6000 changes that. The term "public-assistance aid" (sec. 303, p. 173; sec. 323, p. 178; sec. 344, p. 185; and sec. 351, p. 194) is revised to mean "money payments with respect to or medical care in behalf of" a public-assistance recipient. Under this bill, then, all or any part of the federally matched assistance to the needy aged, dependent children, blind, and the newly added category of needy totally and permanently disabled, may be devoted to medical care and paid directly by the assistance agency to the supplier of medical care.

The Advisory Council on Social Security in its report to the Senate Committee on Finance, Senate Document 204, Eightieth Congress, states:

> It is frequently desirable to let recipients make their own arrangements for medical services. On the other hand, there are many circumstances in which the assistance agency finds it preferable to pay the doctor or other supplier of medical care directly.

In instances where the assistance agency finds it preferable to make the arrangements and pay for the medical care directly, there is no indication that the recipient has any choice of the type or quality of medical care tendered, except the possible choice of accepting that or nothing.

The bill does not define the term "medical care." On page 42 of the House report on the bill (House Report 1300, 81st Cong.) the term "medical care" is defined as "medical services." Defining a term with the term is not of much help. Letters from the chairman of the House Committee on Ways and Means and the Commissioner of Social Security, which I desire to make a part of the record, state that osteopathic services would be included within the term. There is, however, nothing to prevent their successors from reaching a different conclusion.

It is the Federal Security Administrator who is charged with the responsibility of prescribing regulations interpretative of the terms of the act. We ask that osteopathic inclusion be expressly provided for in the bill rather than left to the vagaries of administrative interpretation. Our request is urgently necessary because the Administrator has already, in other social-security grant-in-aid programs, administratively excluded osteopathic services from the definition of "medical care."

It is that fact which brings me to the next point in my discussion of that unfavorable precedent, and a request for its removal.

Crippled-children's services: Title V, part 2, of the Social Security Act authorizes Federal grants-in-aid to the States for—

> medical, surgical, corrective, and other services and care, and facilities for diagnosis, hospitalization, and aftercare, for children who are crippled or who are suffering from conditions which lead to crippling.

The program operates under State plans that require approval by the Federal Security Agency.

Colorado prepared a State plan for services for crippled children, and included services by licensed osteopathic physicians and hospitals. The Federal agency turned it down, refusing to approve the State plan so long as osteopathic participation remained a part of it.

In other words, according to the Federal agency, the terms "medical care" and "hospitalization" as used in the Social Security Act do not include services by doctors of osteopathy and hospitals.

Colorado had obviously thought otherwise. So had other States. They knuckled down. The osteopathic profession also knuckled down. But it was not a supine submission. The profession in Texas sought to enjoin the State agency from complying with the edict of the Federal agency requiring the State to exclude osteopathic services under a similar State plan (EMIC). The lower court granted the injunction, but the appeals court of the State held that the State agency was merely acting as the agent of the Federal agency and had to abide by the conditions imposed by the Federal agency. *Wilson* v. *State Board of Health* (188 S. W. 2d. 999).

A representative of the Federal agency, testifying before the Senate Committee on Education and Labor on June 22, 1946, on a bill for Federal aid for medical services for all children under 21 years of age, took the position that Congress apparently had acquiesced in the policy by which the Federal agency prevents the States from using the facilities of the osteopathic profession and institutions in carrying out the programs involving medical services under the Social Security Act.

Senator MILLIKIN. Is anyone connected with the Social Security Administration present who can say why the osteopaths were excluded?

The CHAIRMAN. There does not seem to be any representative here at this time.

Dr. STARKS. We put in our program, in Colorado, of course, then this question came up that the Federal agency was the one who said that, because of the definition in the law.

Senator MILLIKIN. Under the law, as you have quoted it, I just cannot understand why osteopaths would be excluded.

Dr. STARKS. Well, we could not, either.

Senator MILLIKIN. You give medical service.

Dr. STARKS. That is right.

I sought legal aid and advice on that matter of acquiescence by Congress, and was informed that Congress cannot be said to acquiesce, or demur, to an administrative interpretation unless and until the interpretation has been properly brought to the attention of Congress. *Lukens Steel Company* v. *Perkins* (60 S. Ct. 869; 310 U. S. 113).

That is a principal reason why I am here today—to bring to the attention of this congressional committee which has jurisdiction over social-security legislation, this policy of the Federal Security Agency which tortures the language of the Social Security Act to deny to the States the right to help crippled children by utilizing osteopathic services under the social-security program.

I said the States knuckled down. An impasse is apparently in the making in Kansas. The Kansas Legislature passed a law, approved April 2, 1949, expressly including doctors of osteopathy as physicians

qualified to render medical services under the crippled-children's program in that State.

Who is better able to judge the qualifications of the suppliers of medical care in such programs, the States or the Federal agency?

The House Appropriations Committee Report No. 450, recommending appropriations for the fiscal year 1944, sheds luminous light on that question as follows:

> The States have established standards for licensing health practitioners and the Federal Government has never attempted to establish such standards. In the judgment of the committee, the Children's Bureau has not the power under law either to establish such standards or to question the standards established by the State. It is not the desire of the committee, of course, to permit the use of Federal funds to break down safeguards against the practice of healing arts by improperly and inadequately trained persons, but the committee does believe that the State laws and standards constitute the necessary protection for the public.

In Colorado, and a number of other States, osteopathic and medical candidates take the same examination before the same State board and receive the same State license to practice medicine and surgery. In more than half the States the scope of the osteopathic license is equivalent to that of doctors of medicine. Most States license the practice of major operative surgery.

The American Osteopathic Association is the generally recognized agency for accrediting schools of osteopathy and surgery. However, several State medical boards have made personal inspections of all osteopathic schools preliminary to examinations of osteopathic applicants for unlimited licenses to practice and found them to be institutions furnishing training of comparable scope and quality to that provided in recognized medical schools.

Evidence that Congress has considered the training accorded in Osteopathic and medical institutions as comparable is furnished in the act regulating the practice of the healing art in the District of Columbia which states:

> The degrees, doctor of medicine and doctor of osteopathy, shall be accorded the same rights and privileges under governmental regulations.

The Congress, as you know, included that in the act of February 27, 1929 (45 Stat. 1329).

Another example of the recognized comparable quality of training in medical and osteopathic colleges is to be found in the Medical Service of the Veterans' Administration. In 1946 Congress prescribed that to be eligible for appointment in the Medical Service of the VA Department of Medicine and Surgery an applicant must—

> hold the degree of doctor of medicine or of doctor of osteopathy from a college or university approved by the Administrator, and have completed an internship satisfactory to the Administrator, and be licensed to practice medicine, surgery, or osteopathy in one of the States or Territories of the United States or in the District of Columbia.

In administering that law, Gen. Paul R. Hawley, then Chief Medical Director of the Veterans' Administration, took the position that there could not be two standards of proficiency in the Medical Service; and that as soon as he should become satisfied of the equivalence of osteopathic and medical education he would recommend appointment of osteopathic applicants. He was so satisfied. All osteopathic colleges and all intern-training hospitals approved by the American

Osteopathic Association have been approved by the Veterans' Administration, and a number of osteopathic physicians are now serving in the VA Department of Medicine and Surgery.

Thus, while one arm of the Federal Government is hiring osteopathic physicians as qualified to render medical services on an equivalent basis with doctors of medicine, another arm of the Federal Government denies to the States the exercise of a similar prerogative in the social-security program, even though the State must contribute and may be bearing the principal expense of the services involved.

We request that the terms "medical care" and "hospitalization" be expressly defined to include the services of osteopathic physicians and hospitals staffed by osteopathic physicians.

We submit the following amendment designated as amendment No. 1:

Page 198, after line 7, insert a new paragraph reading as follows:

(4) Section 1101 (a) of the Social Security Act is further amended by adding at the end thereof the following new paragraph:

"(8) The terms 'physician' and 'medical care' and 'hospitalization' include osteopathic practitioners or the services of osteopathic practitioners and hospitals within the scope of their practice as defined by State law."

The proposed amendment is in consonance with definitions of these terms as employed by Congress in connection with the rehabilitation program under the United States Employees' Compensation Act, as amended, which reads:

The term "physician" includes surgeons and osteopathic practitioners within the scope of their practice as defined by State law.

The term "medical, surgical, and hospital services and supplies" includes services and supplies by osteopathic practitioners and hospitals within the scope of their practice as defined by State law (U. S. C., 1940 ed., title 5, sec. 790).

The proposed amendment would not foreclose further extension of these terms by administrative interpretation because section 1101 (b) provides:

The terms "includes" and "including" when used in a definition contained in this act shall not be deemed to exclude other things otherwise within the meaning of the term defined.

Under the proposed amendment the States will be free to utilize the services of the osteopathic profession and its institutions in like manner as it may use the services of doctors of medicine and medical hospitals without fear of prejudice or jeopardy of Federal approval of their State plans for services under the respective titles of the Social Security Act. In addition, the amendment will confirm eligibility of doctors of osteopathy as physicians for purposes of physical examinations under title II of the Social Security Act, as amended by H. R. 6000.

Our proposed amendment No. 2 is as follows:

Page 57, line 3, strike the word "osteopath"

This is a technical amendment made necessary by the adoption of amendment No. 1. This is the exemption clause.

Senator JOHNSON. Would that amendment be subject to the adoption of amendment No. 1?

Dr. STARKS. Yes.

Senator JOHNSON. If amendment No. 1 is not adopted, then amendment No. 2 should not be adopted. Is that not correct?

Dr. STARKS. No. An amendment similar to our amendment No. 3 should be substituted then.

Our next and final amendment. No. 3, is as follows:

Page 159, lines 19 and 20, namely, line 19 after the word "physician" insert the phrase "(doctor of medicine or osteopathy)", and line 20 after the word "dentist" strike the word "osteopath."

That relates to an exemption clause, amending the tax provisions.

The effect of the amendment is to exempt osteopathic physicians as within the term "physician" as employed in section 1641 (c) of the Internal Revenue Code as amended by the pending bill.

The present language of the bill lists "physician" and "osteopath" in separate categories, which establishes an undesirable precedent and is a prejudicial deviation from former congressional and departmental classifications.

The suggested change is in conformity with language employed by the Civil Service Commission in Federal Personnel Manual MI–3 which reads:

Medical certificates for use in connection with temporary appointments and transfer, promotion, or reappointment under part 10 of the Commission's regulations may be executed by any duly licensed physican (doctor of medicine or osteopathy).

An osteopathic physician is a "competent, licensed physician" under the regulations of the Civil Aeronautics Administration:

Some question has arisen with regard to the interpretation of a "competent, licensed physican" who may conduct the subject examination.

Form ACA 1345, Report of Physical Examination for Student and Private Pilots, has heretofore stipulated that application for the examination be made to any licensed physician (M. D.) in active practice. Inasmuch as there appears to be physicians other than M. D.'s who are properly licensed, equipped, and fully capable of conducting this examination, the Form ACA 1345 has been revised, deleting reference to M. D.

Inspectors may therefore accept a medical certificate from an applicant where such certificate has been executed by any doctor of medicine or doctor of osteopathy licensed to practice under the laws of the State involved (Safety Regulation Instruction No. 206, Civil Aeronautics Administration, Department of Commerce).

The case of *Howerton* v. *District of Columbia* held:

The science of osteopathy has become sufficiently established to justify the classification of its practitioners within the exception to the act, "regular practicing physican" (52 App. D. C. 230, 289 Fed. 628 (1923), construing Act of May 2, 1918 (40 Stat. 560)).

Stedman's Medical Dictionary definition of osteopathy reads: "Osteopathy. A school of medicine based upon the theory that the normal body, when in correct adjustment, is a vital machine capable of making its own remedies against infections and other toxic conditions. The office of the physician of this school is to search for, and when found, to remove, if possible, any peculiar condition in joint, tissues, diet, or environment which are factors in destroying the natural resistance. The measures upon which he relies to effect this end are physical, hygienic, medicinal, and surgical, while relying chiefly on manipulation."

No congressional definition of physician excludes osteopathic physician. On the contrary, Congress has on a number of occasions specifically included doctors of osteopathy in the term physician (Public

Law 558, 75th Cong., 52 Stat. 586, 5 U. S. C. A. 790; Public Law 658, 79th Cong., 60 Stat. 904, 5 U. S. C. A. 150).

In conclusion, I would like to say that in the early part of my testimony, I adverted to certain letters from the chairman of the House Ways and Means Committee and the Commissioner of Social Security. I ask that they be inserted in the record following my remarks.

Senator MILLIKIN. Mr. Chairman, I see that Mr. Cohen has returned.

Mr. Cohen, why has the security agency held that the terms "medical care" and "hospitalization" as used in the Social Security Act do not include services of doctors of osteopathy?

Mr. COHEN (Wilbur J. Cohen, special assistant to Commissioner for Social Security). I believe you have reference there to the provisions of title V on maternal and child health and crippled children.

The CHAIRMAN. That is correct.

Mr. COHEN. It is my understanding, if I recollect correctly, that the position that was taken was that Congress did not specifically, as it had in other statutes, include osteopathy.

Senator MILLIKIN. Does the agency object to the inclusion of osteopathy?

Mr. COHEN. I believe that at the time this action that is referred to took place the agency did take that position.

Senator MILLIKIN. Has not Dr. Altmeyer recently stated that the osteopaths would not be discriminated against?

Mr. COHEN. I don't recollect whether that is in reference to the same matter that we are talking about today or not.

Senator MILLIKIN. Then do you recommend that if it is the view of this committee and of the Congress that osteopaths should be included, we should spell it out? Is that correct?

Mr. COHEN. Yes, sir. If the policy decision of the Congress is that it should be included, then I think it should be done by statute.

Dr. STARKS. The letter from the chairman of the Ways and Means Committee indicates that the bill includes osteopathic services as "medical care" and says Commissioner Altmeyer has given assurance against discrimination. The Commissioner's letter says he believes the bill does not discriminate.

Mr. Chairman, the sincerity of these gentlemen is not questioned. However, similar assurances also were given at the time of the adoption of the Social Security Act in 1935. For example, under date of February 20, 1935, the legislative chairman of the New Mexico Association of Osteopathic Physicians and Surgeons, Dr. McCune, wrote to Mr. Harry L. Hopkins, a member of the Committee on Economic Security which sponsored the original Social Security Act as follows:

DEAR SIR: Referring to the Economic Security Act which I am informed is now pending in Congress, I, as chairman of the legislative council of the New Mexico Association of Osteopathic Physicians and Surgeons, am asking if you will be so kind as to lend your influence to the end that nothing shall be written into this act at the time of its passage and approval, concerning health supervision, which would admit it to be construed as a preference to any school of practice.

We wish particularly that no regulation shall be incorporated in this act which would indicate congressional intention of a discriminatory nature as between practitioners of the various schools of healing practice.

Yours very sincerely,

CAROLINE C. MCCUNE, D. O.,
Legislative Chairman

Under date of February 27, 1935, Dr. McCune received a reply from the executive director of the Committee on Economic Security as follows:

DEAR DR. MCCUNE: Hon. Harry L. Hopkins, the Federal Emergency Relief Administrator, who is a member of this committee, has asked us to answer and reply to your letter of February 20 in which you urge that the Economic Security Act make no discriminations between different groups of physicians and surgeons.

We can assure you that there is no such discrimination provision in this bill.

Appreciating your interest in this very important matter we are,

Sincerely yours,

COMMITTEE ON ECONOMIC SECURITY,
EDWIN E. WITTE,
Executive Director.

The Federal administrative agency took a contrary view, as I have described.

The Social Security Act is administered in every Middlesex village and town. If the terms "physician" and "medical care" and "hospitalization" include the services of osteopathic physicians and hospitals, then the people entitled to benefits under the Social Security Act and the administrators at all levels are entitled to know it, and it is respectfully submitted that the only conclusive vehicle for conveying that information is by express inclusion in the context of the law, as our suggested amendments provide.

Mr. Chairman, that completes my statement. I want to assure you that the Colorado Osteopathic Association and the American Osteopathic Association stand ready to cooperate in any way possible with your committee in regard to this legislation, or any other, to the best of their ability.

I want to thank you very much for your consideration.

The CHAIRMAN. Thank you very much, Doctor. You referred to two letters from the chairman of the House Ways and Means Committee and the Commissioner of Social Security. If you will hand them to the reporter, they will be incorporated in the record following your statement.

Are there any questions?

Senator MILLIKIN. I am glad to see you, Doctor.

Senator JOHNSON. I appreciate the chairman's assistance in making it possible for Dr. Starks to appear here. He got his application in just a little late, and we had to have a special dispensation to make the arrangements.

I do want to thank the chairman for making those arrangements.

The CHAIRMAN. We were very glad to have you appear, Doctor.

Dr. STARKS. I want to thank the Chairman, too.

(The letters submitted by Dr. Starks for the record follow:)

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
Washington, D. C., August 22, 1949.

Hon. NOAH M. MASON,
House of Representatives, Washington, D. C.

MY DEAR COLLEAGUE: This is in reply to your letter of August 18 concerning osteopaths under the public assistance provisions of H. R. 6000.

I have discussed this matter with representatives of the Social Security Administration and have been assured by Mr. Altmeyer, the Commissioner, that the term "medical care" will not be interpreted to discriminate against osteopaths.

In order to make it absolutely clear that the term will be interpreted in this way, the following sentence has been included in the committee report:

"The term 'medical care' is not defined in the bill. Since medical care is to be provided in accordance with State plans, the term includes medical services provided by any person authorized by State law to render such services."

Sincerely yours,

(Signed) R. L. Doughton,
(Typed) R. L. DOUGHTON,
Chairman

FEDERAL SECURITY AGENCY,
Washington, August 22, 1939

Hon. NOAH M. MASON,
House of Representatives,
Washington 25, D. C.

DEAR MR. MASON: I have read your letter to Mr. Doughton, dated August 18, and Mr. Gourley's letter to you, dated August 17, copies of which you were kind enough to send to us, dealing with the matter of the status of osteopathic physicians under the public-assistance provisions of H. R. 6000.

The term "medical care" as used in the bill with reference to State plans of public assistance is not a defined term. The term, therefore, means such medical services as may be provided under the State plan by such persons as are authorized by State law to give such services. In view of this fact, we do not believe that the bill discriminates against practitioners of osteopathy or osteopathic patients.

We would have no objection to this information being included in the committee report or in a statement by the chairman of the committee when the bill comes up for debate.

Sincerely yours,

A. J. ALTMEYER, *Commissioner*

The CHAIRMAN. Miss Emily C. Hammond?

STATEMENT OF EMILY CUYLER HAMMOND, BALTIMORE, MD.

Miss HAMMOND. Mr. Chairman, I will proceed just as rapidly as I possibly can.

The CHAIRMAN. We do not want to be rude at all, but you will accommodate us by being as brief as you can.

Miss HAMMOND. I will be just as brief as possible.

I have a statement which I would like to have incorporated in the record. It is short. I will start it and skip certain sections.

The CHAIRMAN. Your whole statement will be incorporated in the record as you have prepared it.

Miss HAMMOND. Thank you.

My name is Emily Cuyler Hammond.

I am here as a private, individual American, representing no other individual or group, to testify against H. R. 6000 on the basis of 19 years' study of social security at home and in Europe. I am at present preparing a book on security or freedom in America.

Mr. Chairman, I shall give you, if I may, first a résumé of the rather unique experience from which I draw my conclusions; second, the reasons I believe the Social Security Act to be a misnomer and H. R. 6000 to offer no real security; and, third, an outline of recommendations for a self-supporting, pay-as-you-go American pension program.

In 1931, when the depression posed the question of what to do about those who could not take care of themselves, I went to Germany, on my own account, to investigate the whole field of social security from the point of view of the individual.

I chose Germany because, since Bismarck started the social-insurance movement back in 1883, the country had had time to assimilate its benefits, and the principle of insurance, it seemed to me, was more consistent with American tradition than the dole. I confidently expected to find the contributory German system a shield to human dignity as against the humiliation of public relief.

After studying the Bismarckian social insurances at the University of Heidelberg, I made an investigation of those laws in operation in a number of the great industrial centers, in cities, small towns, and rural areas. I interviewed Government officials in charge of the various programs on the Reich, Province, and municipal levels, and inspected their institutions, hospitals, low-cost housing projects, work relief projects, work camps, or whatever.

I talked to politicians, doctors, employers, and labor leaders. Most important of all, I talked to people covered by the laws. Wherever possible, I lived in workers' houses or in the home of some other Reich beneficiary or pensioner—because I wanted to find out the impact of these insurance laws on the individual German.

The first thing that impressed me as significant was that German social insurance was "insurance" in name only. It reality it was a money-raising device on the one hand and a Reich-subsidized handout on the other, given and taken as a "right" in exchange for freedom of action.

Government officials at all levels looked upon "das volk" as unable to take care of themselves. Generally speaking, they assumed that the more reichsmark they were able to dispense in subsidy to industry and agriculture and in benefits to the people, the less "trouble" there would be.

As Bismarck had introduced "social insurance" to buy off labor revolt spear-headed by the Socialists, so Weimar's Social Democratic and successive leftists regimes liberalized "social insurance" in an attempt to buy off Communist or Fascist revolution. In 1931 and 1932, Bruning's Center Party was caught holding the bag.

The vast majority of the Germans with whom I talked, concerned with the administration of the so-called social insurances—with a few notable exceptions—expressed their own selfish interests. The enormous, bloated bureaucracy whose members owed their jobs to the system was for it at all costs. The higher the official the rosier the glasses through which he viewed the welfare state.

Physicians with large outside practices looked darkly upon health insurance, declaring that it destroyed the doctor-patient relationship; those less proficient were grateful for its guarantee of their livelihood, proclaiming loudly the people's need.

Employers were divided and profoundly disturbed. For the most part they clung to the belief that social insurance was the purchase price of labor peace—and cheap at that, if it gave value received. But with the depression, the increasing burden of the Republic's "insurance" and welfare taxes had become so intolerable as further to reduce over-all production and everybody—employers, employees, and beneficiaries—had smaller pieces of the pie.

Desperate employers watching the growth of communism in their factories, among the ranks of the unemployed, and in the Reichstag, and listening to a mountebank promising to put the ancient German

gods to work to start the wheels of production again, committed the crime of backing Adolf Hitler.

Labor leaders, who had abdicated their effective power by advocating federal responsibility for the workers' welfare, boasted that it was really trade-unionism that had brought the social insurance into being, complained that the Government was not doing enough, but had no solution to offer as to how it might do more and remain solvent.

All these donors of social security deluded themselves on the people's reaction. The people, the beneficiaries of so much for so little, reacted quite differently from what was expected of them.

During those last years of the Weimar Republic's existence, the average German, I discovered, was not a free human being whose dignity was protected by his alleged "insurance" right to assistance in case of ill health, unemployment, disability, or old age. He was a state serf, cringing and conforming in the presence of officialdom; carping and cheating behind the back of the law; doing the minimum required of him; devoid of personal initiative, incapable of independent reasoning; blaming the Government for everything that went wrong. And no wonder.

The average German, under the Weimar Welfare Republic, did not have to think for himself or plan for his future. He was dependent on the fatherland, directly or indirectly, for his vocational training, for his employment and unemployment compensation; for his, his wife's, and his children's health; for any accident or disability that might befall any of them; or his old age; for his burial; for his survivors.

Having to make few important decisions for himself in day-to-day life, he could hardly be expected to know what to do in time of crisis. Just as his wife and his children could have little respect for the husband and father who ran to the Government for every need, so, in turn, he could have little faith in the paternalistic state unable to solve its own problems. The fatherland's various social-insurance "funds" had been broke so often that the fiction of reserves was no longer taken seriously. But when the Government exhibited its innate weakness by ruling by edict, the confused and harassed serf naturally turned to whomever most convincingly promised him a way out of his dilemma.

Mr. Chairman, I am convinced that Bismarckian social security in its political deceit, basing "rights" on token contributions, robbing the people of initiative and responsibility, reducing production by back-breaking taxation, necessitating ever-more-centralized Government controls, was the essential underlying cause of the failure of the Weimar Welfare Republic—and, incidentally, of Hitler's rise to power.

In December 1933, after making a comparative study of "security" under the Nazis, I came home, and in August 1935 witnessed, to my horror, my country following in the footsteps of Germany, embarking on a course I felt to be fraught with disaster. The Social Security Act was sponsored by men and women wanting to do good by their fellow men. Yet, there seemed to be not the slightest question of the wisdom of adopting a foreign concept or of copying a foreign system in extravagant detail which, however utopian it sounded in theory, had been proven in practice to be economically unsound. Whenever I brought up the point of the collapse of the Weimar Welfare Republic, the answer was: "Oh, that could only happen in Germany. The Germans are sheep. It couldn't happen here—or anywhere else."

In July 1937, I went back to Europe; and, from that time until the war brought me home again, I made a comparative study of social security in its social, economic, cultural, collective, and political aspects in France, Germany again, Poland, Austria, Hungary, Czechoslovakia, Switzerland, Italy, Albania, and Greece. Everywhere I found that the same cause resulted in the same effect: To the extent that a government took responsibility from the individual through "social security," to that extent the individual had lost his personal freedom and initiative. Social security was the barometer of dictatorship.

Since the war, I have made surveys in a number of States, to gather material for my book. Wanting to estimate the effect of Bismarckian social security on the individual American, I have talked to beneficiaries in their own homes, usually by a random ringing of doorbells in working-class districts. After allaying the initial dreadful suspicion that I might be a social worker coming to spy and after taking an oath that I would never divulge identity, I have encountered remarkable candor.

Although Europe was suffering varying degrees of depression when I was there, and we have been enjoying relatively high employment here, nevertheless I have the uncanny feeling that I am redreaming an old dream. There is the same sneering at the Government for not giving enough, the same boasting of chiseling with the easy: "Everybody else gets away with it, why shouldn't I?"

But there is a difference: There are still Americans who would rather suffer hardship than either undergo a needs test or cheat to get something for nothing. There is also a healthy questioning as to whether the law itself is not unjust and whether, after all, it would not be better to exchange alleged future security for an honest dollar.

Insecure democracy: Mr. Chairman, I am opposed to the present Social Security Act and to H. R. 6000 because OASI is un-American economically and ideologically. It will lead to statism here as it did in country after country in Europe—unless it is stopped now.

I submit, Mr. Chairman, that we cannot exact laws which undermine individual responsibility and expect to survive as a free people.

I shall not dwell upon the fictitious fund, the face of double taxation; the burden on industry passed on to the consumer in inflationary prices; the expense of an expanding bureaucracy tending unnecessary wage records; or the precariously mounting cost of H. R. 6000. I should prefer to concentrate on the effect of the injustices of the law on the individual American.

OASI is dishonest in principle and performance. Its avowed purpose is to protect the dignity of the individual. It proceeds to try to fool the individual into believing that, by his compulsory contributions, he is paying his own way for security in old age. This is not true; the people in increasing numbers know it; and their dignity is not protected by the pretense. On the contrary—

There is neither dignity nor justice in a $20,000 windfall—a hand-out from the public purse—to a $50,000-a-year executive employee. And the same goes for the hand-outs right on down the line to the unhappy compulsory contributor who misses insured status by a quarter and has to undergo a needs test to qualify for assistance.

According to Mr. Myers at the Agency, at the end of 1949, of the 80.4 million who had contributed into OASI, 36.7 million lacked insured status.

Senator MILLIKIN. Would you mind stating that again?

Miss HAMMOND. At the end of 1949, according to Mr. Myers, of the 80.4 million who had contributed into OASI, 36.7 million lacked insured status. Even under the lighter coverage of H. R. 6000, "15 or 20 million" of the gainfully employed would remain uncovered—not to mention those who would lose or never acquire "status."

In other words, OASI fails of its purpose: As a hand-out, it undermines the self-respect of those who could save for themselves, and offers no protection at all to those who need it most.

This has created doubt in the minds of many people as to the justice of the law. Why, they ask, should some who have worked diligently all their lives have to undergo the indignity of a needs test while others may receive windfall benefits whether they need them or not? Why should contributions ever have to be forfeited? Why should the Government want anyone to stop working?

Mr. Chairman, we cannot have apparently unjust laws and honest citizens.

(The material deleted from the prepared statement follows:)

INSECURE DEMOCRACY

I am opposed to the present Social Security Act and H. R. 6000 because—

I. Old-age and survivors insurance is a foreign concept unsuited to American needs. It is reactionary, discriminatory, and undemocratic. As it robbed the new industrial masses of initiative and responsibility in country after country in Europe, it will, if allowed to continue, do the same thing here.

Mr. Chairman, I submit: We cannot enact foreign laws which limit individual freedom and expect to survive as a free people.

II. OASI is dishonest in principle. It fools the people into believing that, through their compulsory contributions, they are paying their own way for security in old age. This is not true. OASI is an "insurance" in name only. As with old-age insurance in German, it is a money-raising device on the one hand and a federally subsidized old-age benefit program for selected classes of the population on the other.

In addition, while offering a benefit bargain, OASI sells a potential bill of goods in that there is no one who can accurately predict the purchasing power of the dollar 10 or 20 years hence. Capricious changing of the benefit formula only accents the farce of the arbitrary relationship of benefits to contributions.

H. R. 6000 in no way corrects the essential although undoubtely unintentional deception of the original act.

III. OASI is unjust in performance. It awards "windfall" benefits to some who have acquired insured status, while to others who have contributed just short of this lucky state of being, the act says: "You have forfeited your rights. The Treasury will not return your money. If you are in need, prove it: Go to your local State agency and apply to take a needs test for public assistance."

Under H. R. 6000, a $50,000-a-year executive who has been covered for the last 17 years may receive, if he retires at 65 in 1960, an OASI pension of $70 a month. With a total contribution over 23 years of $1,110 he may expect to receive $13,625, if he is single. If he is married to a wife his own age, he may expect to receive $21,486 for that same $1,110 contribution. Quite a nice "windfall" for a wealthy men to receive at public expense. And yet, under H. R. 6000, the man or woman who falls short of insured status, even by no fault of his own, forfeits his contributions and, if he is in need, must undergo the needs test.

OASI also unjustly divides American citizens into separate classes: the deserving and nondeserving of pension rights. On January 1, 1950, of the total 11,200,000 aged not in institutions, a total of 1,900,000 men and women were receiving OASI pensions as a matter of right whether they needed it or not. Of these, 200,000 were also receiving public assistance. A total of 2,500,000 other men and women were receiving public assistance on the basis of a needs test.

Even under the far wider coverage of H. R. 6000 the present aged are not allotted the privilege of pension rights.

The whole administration of OASI, with its complicated formulas, its rules and regulations and innumerable discriminations, creates doubt in the minds of many people as to the justice of the law. Why, they ask, should some who have worked diligently all their lives have to undergo the indignity of a needs test; while others may receive "windfall" benefits whether they need them or not? Why should contributions ever have to be forfeited? Why should the Government want anyone to stop working?

Mr. Chairman, we cannot have unjust laws and honest citizens.

IV. OASI is unsound economically. The fund which must be invested in Government obligations is a constant temptation of wasteful Federal spending. When benefits fall due, the Government must tax the people again to obtain the money to pay the benefits. (Parenthetically, when I was in Poland, the rumor persisted that the steamships *Pilsudski* and *Batory* were built out of old-age insurance funds. Had not the war intervened, the Government would have had to tax the people again to obtain the cash to pay the benefits. It would have amounted to double taxation.) It will amount to double taxation here if the system is not changed.

OASI is unsound fundamentally insofar as it reduces over-all production by discouraging old people from working; burdens industry with unnecessary costs; and maintains a large bureaucracy of nonproducers, maintaining unnecessary wage records.

Future OASI costs—expected under H. R. 6000 to more than double in 10 years and to increase by almost five times in 20 years—broach the question as to whether we have the right to impose such a load on the next generation.

Miss HAMMOND. Public assistance, financed by Federal grants-in-aid, which has mushroomed in recent years to a grotesque fungus is deplorable for three reasons: A. The needs test. B. Increasing costs. C. The increasing Federal penetration in a field I believe the fathers of our country never intended the Federal Government to enter.

I take it to be axiomatic that in a free society the individual is expected to earn his own bread and butter. When the individual fails, his family is next in line to look out for him; when his family fails, or he has no family, his church or his community takes over; when his church or his own community fails, the State takes over; and when the State wants more money, it cries to Washington.

The number of representatives of State agencies who have come into this room professing a desire for greater "insurance" coverage and at the same time holding out their hands for more grants-in-aid, is an indication of failure of the family, the church, the community and the State itself.

The more Federal money made available for the needy, the more needy there will be. Eventually, the more needy there are dependent on the Federal Government, the less Federal money there will be.

There will come a day of reckoning, as there has come to every other welfare state in history—unless, of course, the President of the United States should care to go with hat in hand to UNESCO or the world federalists asking grants-in-aid for crippled children, and needy blind, and aged among the cotton growers of Georgia, the apple growers of Virginia, the farmers and workers of Colorado, Ohio, Texas, and Maine, the once self-respecting citizens of our 48 States.

We Americans as individuals have already delegated too many of our prerogatives. The delegation of love of our neighbors, and of kindness to our neighbors' crippled children and other disabled members of our communities is in fact impossible. Love and kindness cannot be reduced to a benefit formula, nor to a price-of-living budget. Assistance should stay with the local community and receive not a penny of Federal aid.

Disability allowances as proposed by H. R. 6000 would bring the Federal Government into private homes in a manner never envisioned by the far-sighted writers of our Constitution. The constitutional consideration, the diagnostic difficulties, the problem of enforcement, and the political ramifications should be sufficient to make it unthinkable.

The H. R. 6000 redefinition of "employee" and proposal to include the self-employed under OASI would only undermine the independence of that many more of our citizens and hasten the day of an American Welfare republic.

Speaking for myself, I want to stay out. I emplore this committee to protect the rights of those Americans who wish to face the risks of life on their own.

Mr. Chairman, because I do earnestly believe that we as a nation are well on our way to losing our birthright of freedom, lured by the illusion of "security," I respectfully ask your committee's consideration of the following recommendations:

I. That the present Social Security Act be repealed in its entirety.

II. That the present Social Security Act be replaced by an honest responsible pay-as-you-go system under which—

A. Every American citizen would pay an income tax of 3 percent on the first $5,000 of income, without exemptions, for aid to the aged.

B. Every American citizen at the age of 65 would receive a flat amount, tied to the changing cost of a bare living, $35 a month to start, without a means or a work test.

C. State and local agencies would have the responsibility of caring for the disabled, for orphans and children in broken homes; and of subsidizing especially needy cases of aged.

D. The individual would have the responsibility of saving—by whatever means he saw fit—for his old age and his survivors. He would be free to work as long as he is able, to contribute to his own and his neighbor's fuller life.

III. That a special commission be appointed to make an exhaustive study of the costs of a universal, nondiscriminatory, democratic pay-as-you-go system of aid to the aged; and of the possibility of keeping both the necessary taxes and payments down to the State level. It is true that State income tax set-ups would complicate the problem of interstate payments. But so is democracy more complicated than dictatorship.

Cutting through the thicket of complexities of OASI—the benefit formulas, the qualifications, disqualifications, inadequate contributions, increment factors, windfall benefits, innumerable discriminations, and who has a right to what—our problem is simply this:

We want to make decent provision for those who cannot take care of themselves, without undermining the responsibility and initiative of those who can. There is a very fine line which divides too much from too little assistance. Too little means poverty, disease, death. Too much means serfdom. It saps individual self-respect and initiative, breeds indolence, and eventual revolution from the right or the left. The small tax credit I suggest for all American citizens at the age of 65 would serve as a margin of error. It would be a first line of protection for those who had little or nothing. It would eliminate the temptation to cheat and to beg for more and more and more from

the Government because the working and producing taxpayers in a pay-as-you-go system would always outnumber the voting recipients. It would not undermine incentive to work or to save but would return responsibility to the individual, where, in a free country, it belongs. In the long run, it would be cheaper, more efficient, more equitable, and more democratic.

I would just like to make one remark and that is that if this committee should report out H. R. 6000, doubling benefits, the possibility of a return to a sound system would be that much more difficult.

I want to thank you very much for the privilege of appearing.

The CHAIRMAN. Thank you very much, Miss Hammond, for your appearance and your contribution.

Miss HAMMOND. Thank you.

The CHAIRMAN. Miss Wright? Will you have a seat, please? You happen to be the last witness.

STATEMENT OF MISS IMOGENE B. WRIGHT, WASHINGTON, D. C.

Miss WRIGHT. Yes. This will only take me 7 minutes.

The CHAIRMAN. You are from Washington?

Miss WRIGHT. Yes.

The CHAIRMAN. And you are Miss Imogene B. Wright; is that the name?

Miss WRIGHT. That is right.

The CHAIRMAN. You may proceed with your statement.

Miss WRIGHT. Mr. Chairman and Senators of the Finance Committee, I am Imogene Wright, a waitress in one of Washington's larger hotels. I have been asked to furnish your committee information as to how tips of waitresses may be taxed for social-security purposes, and how the girls of the waitressing profession in general feel about the subject of tips and taxes.

In procuring the data and information for the compilation and production of my book, I interviewed over 100 girls who work in shops in Washington, Boston, and New York. The word picture I have thus put together seems about as complete and all-inclusive as any that has ever been published.

I think I should start with the over-all picture of tipping in the United States insofar as public eating places are concerned. My estimate, which is based on the most authoritative research work I have been able to locate, is that there are approximately 3,000,000 working waiters and waitresses in this country, and that these 3,000,000-odd serves receive tips, or gratuities, aggregating about $7,250,000 a day, based on the average taken from the research of our union which puts the waiter's or waitress' tips at $2.75 a day.

The average restaurant worker puts in about 280 days a year. We arrive at this figure by allowing him 1 day a week off, 2 weeks for vacation and 20 days off without pay or tips for sickness or personal business.

Multiply this $7,250,000 by 280 days and we get a probable grand total of $2,030,000,000 a year in tips, which would be taxable for social-security purposes if a way could be found to do it.

My estimate of the number of waiters and waitresses in the United States is based on a statement by the National Restaurant Association

in a recent bulletin, that there are about 525,000 public eating places in the United States and that 25 percent of America's meals are eaten outside the home.

The number of servers in these public eating places run all the way from one or two waitresses, in a small place, to over a hundred in some of the larger hotels and eating establishments. Restaurant association experts estimate that the average is between 8 and 10 servers for each restaurant.

I am sure that six would be a conserative figure—one which is not overstating the case. This would bring the total number of waiters and waitresses in these 525,000 establishments to 3,150,000—or $3,000,000 in round numbers.

From the best source of information available, I believe an estimate of $2.75 a day is a fair one for tips of the average waiter or waitress in the United States. I base this figure on the testimony of Mr. Charles E. Sands, the representative of the Hotel and Restaurant Employees International Union.

This union is a very efficient organization. It has the best of research workers and ideal facilities for this research. It has locals in 800 cities. I do not see how anyone can go behind Mr. Sands' figures.

These figures are that some workers in small restaurants may take in as low as 50 cents a day, while those in larger and better places will run all the way up to $4 or $5. By averaging these figures the best way you can, we get $2.75 a day. Multiply this by 3,000,000 workers and you get 7¼ million dollars a day in tips—$2,030,000,000 a year on the 280-day basis. In my opinion there are three ways in which this 2 billion can be taxed.

Way No. 1 would be to adopt the European system of having the establishment add 10 percent or 15 percent to the guest's check, to be paid the server as tips—just as restaurants in many places in the United States add 2 percent or 3 percent to the guest's check to be paid the State or city as a sales tax. I give these two different tip levels because tips will vary not only as between different communities and different sections of the country but as between different establishments in the same community.

Way No. 2 would be for Congress to pass minimum-wage laws for employees now depending on tips for the bulk of their take-home pay. I realize that, in order to do this, the prices on the menus would have to be raised accordingly. The establishment must make income meet outgo, but the consumer will pay in the end, just as the consumer always does.

Way No. 3 would be for Congress to enact a special social-security law for workers who must depend on tips for a living wage, patterned along the lines of the Civil Service Retirement Act. A standard level for tips would have to be set at, say, $2 a day. The employer would deduct 6 percent—or 12 cents per day—as the tax on tips from each weekly check paid the worker by the employer. This would be paid to the Government, along with 6 percent of the basic wage, for their social-security retirement fund. These tip workers would start drawing a retirement wage at 60 or 62, just as the Government worker does now, and based on the same method of computation.

It is my observation that a majority of waitresses would like to see tipping abolished and a minimum wage substituted. Most of us agree with our union representative, Mr. Sands, when he said:

> We believe our employees, our members, should be paid an adequate wage or commission so they would not be forced to take tips.

And now, gentlemen, to be perfectly blunt, we feel that H. R. 6000 was sent down to Congress as a red herring. We do not believe that those who conceived the bill sincerely believe they can ever tax all the tips of tip workers under the present system, because that would involve making over 3,000,000 people tell the truth. Rather, we believe this proposal was inspired or written by the Internal Revenue people to make this class of workers declare all their tips so they can be checked on for income-tax purposes.

To sum it all up, we of the waitressing profession think the proposal to tax our tips for social-security purposes is a very good one. We hope the Congress can and will work out a plan—with the cooperation and help of the employers and the workers—that will be satisfactory all around.

We hope you can give the waitressing profession, and with it our allied workers, the waiters, the feeling that those of us who live to be 60 will be as well taken care of in our declining years as the workers in the more and better fixed salary brackets.

We thank you very, very much.

The CHAIRMAN. Your appearance here at this time reminds us that we have not had lunch.

Senator MILLIKIN. I would like to ask one question.

The CHAIRMAN. Yes, Senator Millikin?

Senator MILLIKIN. If this were done, would you be embarrassing the estimates that are made by the waiters and waitresses as to their incomes for purposes of the income tax? I mean, there the tips are usually played down. Here, you play them up. I mean, would you be double-crossing yourself somewhere along the line?

Miss WRIGHT. Well, I am only going by the figures that I took from someone else.

Senator MILLIKIN. I see.

Miss WRIGHT. I didn't say as to how much any girl would make. That I can't say. No one can say. I only know how much I make.

Senator MILLIKIN. I think your answer was a very good one.

The CHAIRMAN. Thank you very much.

(The following statements and letters were submitted for the record:)

STATEMENT OF SENATOR LISTER HILL OF ALABAMA

Mr. Chairman and gentlemen of the committee, H. R. 6000 proposes desirable and much needed revision of the Nation's social-security program to meet the growing, changing demands and needs of the American people. I strongly supported the original Social Security Act of 1935. I joined in sponsoring those liberalizing amendments to the Social Security Act that have been enacted. And I am asking for the extension and expansion of social security.

I am addressing the committee at this time, however, with particular reference to the maternal and child health services and services for crippled children.

H. R. 6000 as it was passed by the House of Representatives in the last session of Congress does not include authorization for increasing the funds for these programs but leaves them at their present levels. I urge the committee to amend H. R. 6000 and authorize adequate funds to meet the urgent and growing need for these services. I urge the committee to increase the authorization of

funds for the work of the Children's Bureau in child welfare and child parent relationships.

The United States has seen a phenomenal increase in its child population during the last 10 years. The number of children under 5 years of age has nearly doubled. The 46,000,000 children in the country now constitute almost a third of the Nation's population.

Along with the sharp rise in the number of births, the cost of medical and health services has increased. As a result, the whole structure of State services for maternal and child health and for crippled children is threatened.

At no time has any State been able to furnish complete and State-wide maternal and child health services. Now 22 States have had to curtail the services they do provide.

We know the value of the maternal and child health services and the progress made under these programs. Since 1935 when the Social Security Act was passed maternal mortality has dropped 77 percent and infant mortality has declined 32 percent.

Curtailment of these vital services at a time when births and child population is increasing so sharply is literally a matter of life and death to the mothers and infants of America.

When the services are curtailed, the rural and low-income areas are the first to be affected. Yet this is where the services are most needed.

Half of the children in the United States are borne into one-sixth of the families. Generally these are young families whose maximum earning capacity has not yet been reached.

The States that are rich in children are the low-income States without financial resources to support adequate services for mothers and children. Mississippi, for example, has 63 children for every 100 adults. Yet Mississippi has a per capita income of $758 a year. Mississippi's capacity to support services for her mothers and children is considerably less than that of New York, which has 32 children per 100 adults and a per capita income of $1,891.

Despite the steady progress in maternal and child care, the death rates for mothers and children still vary widely in relation to the financial resources of the States. In 1947 the maternal mortality rate in Mississippi—with the lowest per capita income in the country—was more than twice the mortality rate in Nevada, with the highest per capita income.

Increased appropriations can help to correct these disparities because section 502 of the Social Security Act provides, in addition to a flat sum allotted to each State, that additional funds be granted on the basis of the number of live births and the financial need of the States. If the present authorization of $11,000,000 with State matching for the next fiscal year is increased to $22,000,000, the States with higher birth rates and lower per capita income can approach the level of the wealthier States in their maternal and child services.

The present authorization for crippled children's services carried on through the Children's Bureau is $7,500,000. I urge the committee to include in H. R. 6000 the authorization to increase to $22,500,000 the funds for crippled children's services. This is a threefold increase, but the need for preserving and expanding these services is imperative.

Thirty-seven States have reported that their crippled children's programs must be curtailed if additional funds are not available. More than 22,000 crippled children were on waiting lists for treatment in April 1948. By the end of 1948 the number had increased more than 50 percent and it has continued to rise during the past year. Children are being sent home from hospitals, clinics have been discontinued, and other methods of treatment have been abandoned due to inadequate funds.

A half million children are known to have defects requiring orthopedic or plastic treatment, including some 160,000 children with cerebral palsy. Another half million are victims of rheumatic fever. Two hundred thousand have epilepsy. The States have made great progress since the enactment of the Social Security Act in discovering and treating these children. But there are many more afflicted children than those on the records.

Some of the children can be cured. Many of them can be rehabilitated to lead normal, useful lives. Children with spastic type of cerebral palsy can be helped to the point where they can attend school, learn to hold responsible jobs, and take their rightful place in the community.

I am urging the committee to make increased provision for needy dependent children and needy mothers by taking them into consideration under the permanent and total disability provisions of H. R. 6000.

The presence of the mother in the home is essential for the proper care and guidance of young children. Yet disability insurance bears no relation to the number of dependents, and mothers in such families frequently must go to work.

The bill provides for increasing the funds for grants to the States for child welfare from the present $3,500,000 to $7,000,000 a year, and increasing the present $20,000 allotment for each State to $40,000 a year.

With the increase in child population in the United States we can expect a proportionate increase in the problems of child welfare. I hope the committee will further increase to $12,000,000 the authorization for child-welfare grants, to permit the States to expand their programs and employ additional trained staff experts.

There is no duplication of services in the programs provided under the Social Security Act and the other health and medical legislation which I have joined in sponsoring. All of the programs are essential to the health and welfare of our people.

The local public health units bill passed by the Senate will help local and county health offices to strengthen and expand their health services and preventive medicine.

The school health services bill provides for research into child life and the child's social and emotional development.

S. 2591 provides for research into the causes of certain crippling diseases such as multiple sclerosis, cerebral palsy, epilepsy, eye diseases, and others.

Our amendments last year to the Hospital and Health Center Construction Act are enabling the States to build more hospitals and health centers and provide more adequate facilities for the care of mothers and children.

As coauthor of these measures I can say that none of them will fulfill the need for specialized services in the field of maternal and child health and the care of crippled children.

The growth of child population and the increase in births, and the progressive curtailment of the State programs makes it urgent that we fill the gaps in H. R. 6000, broaden and strengthen the services our social-security program provides, and meet the developing need for the care of America's mothers and children.

STATEMENT OF HON. ARTHUR V. WATKINS, UNITED STATES SENATOR FROM UTAH

I have received considerable correspondence from my constituents in Utah as well as from people in other sections of the country on various sections of H. R. 6000. Many of my Utah constituents have found it impracticable to appear before the committee to present their views on many provisions of the proposed law; and, therefore, I am taking this opportunity to present to the committee for their consideration some of the ideas which have been expressed in my correspondence as well as some of my own ideas relating to this proposal.

Let me cite specifically some objections in connection with H. R. 6000:

MINING INDUSTRY

Section 210 (k) (3) (F) and 206 (d) (3) (F) and 210 (k) (4) and 206 (4) (2), if passed by the Congress, will result in the cessation of a large amount of mining in my State as well as in other States.

The changes in these sections would place mine lessors and mine lessees in an employer-employee classification which would be a direct reversal of present laws which recognize the independent status of the parties involved. Now why am I so sure that the adoption of this legislation will result in the cessation of a large segment of the western mining industry?

The mining industry in the State of Utah has gone through just such a period. From 1900 to 1940 mine leasing in the State of Utah flourished. Then the various social agencies in the State of Utah determined that the mine lessees would be better off as employees of the various mining companies rather than as independent businessmen; and, therefore, in 1940 by administrative action all mine lessees in the State of Utah were determined to be employees for the sake of various social-legislation purposes. The result is history. From 1940 until 1944 mine leasing in the State of Utah not only was terminated but almost the entire activity carried on formerly by these groups ceased. Some mining companies endeavored to continue their operation under the employer-employee relationship but found that it was totally uneconomical. Other witnesses before

this committee testifying on this problem have documented these facts, and I subscribe fully to the testimony of Mr. James K. Richardson, Mr. Robert M. Searls and Mr. Ralph Hopes.

The mine lessees themselves oppose their classification as employees. It is my understanding that neither the mine operators nor lessees are opposed to the inclusion of the lessees activity under social security if it is made possible for them to be included voluntarily on the basis of the self-employed category. This is not a situation where people are opposed to a practice, such as was the case of home workers under the wage and hour law, but is merely a question of how to insure the future of a segment of our people. The method contained in the cited sections of H. R. 6000 will not give security to this mine-lessee segment. Quite to the contrary, it will cause instability and unemployment. The far-reaching effect of the approval of the above-cited sections in my State of Utah would be that a number of men now making a very comfortable living would be throw on relief with an immediate loss in excess of $1,000,000 in new capital in the State plus the loss this would occasion to the farmers, grocers, and other merchants right on down the line.

At this point I wish to quote for the record a letter from the self-styled mayor of Alta, Utah, formerly one of the richest mining areas in the State, and the petition mentioned in Mayor Watson's letter:

CITY OF ROMANTIC ALTA, UTAH

EXECUTIVE DEPARTMENT

Mr. JAMES RICHARDSON,
Manager of Utah Mining Association,
Salt Lake City, Utah

DEAR MR. RICHARDSON: I address you at this time to admonish you of the great worry the leasers of this old famous mining camp have.

A few of them came to me today with the enclosed papers and asked me if there wasn't something I could do to help out in not having them put out of business, which they know will happen if our Federal Government passes a law making them employees of the owner or mining company owning the mineral land or mine in which they are leasing.

Therefore I would be much pleased if you would plead their case for them to the powers that be.

I, myself, know hundreds of these old leasers and most of them are expert miners, but many of them cannot qualify to work on company account because of age in many cases and in other cases they have slight disabilities, so they will not only be out of business, but they will have to go on relief.

Trusting you can do something for these men, I am

Sincerely yours,

GEORGE H. WATSON,
Mayor of Romantic Alta.

To Whom It May Concern:

We, the undersigned leasers, prefer leasing because we save thousands of tons of ore, and prospect for new veins and bodies of ore, also old cave-ins that the companies would leave that would never be recovered if it wasn't for a leaser.

Also, we feel free working for ourselves as a leaser which is no more than right in a free country as ours.

Steve Basta, Francis Coupens, Louie Chesnick, Ray Lofthouse, K. Lewis Fields, Bob Basta, Ash Jacobson, Ivan R. Hansen.

This committee and the Congress cannot escape the issue that the mining industry at the present time is a sick industry. An attempt was made by various Members in Congress in which I joined, to assist this industry by the passage of S. 2105, which was defeated just recently in the House. All those who testified in support of this measure stressed the fact that our mining industry was in a very precarious economic condition. Many of the mines are shut down; two of the largest mining areas in the State of Utah—Park City and the West Tintic area are almost 100 percent closed. Foreign imports of cheap concentrates in connection with the so-called reciprocal trade program have contributed to this drastic situation. However, the mining industry is doing its utmost to maintain its properties in workable condition. The products of this industry are vital to our national defense. The mine lessee activity is

insuring, at least, that these mines are kept in stand-by condition. The passage of H. R. 6000 with the above-cited sections included would contribute much toward the complete collapse of our mining industry.

I think it is important, also, to keep in mind that the Advisory Council to the Senate Finance Committee did not recommend enactment of these sections. I, therefore, urge upon the Senate Finance Committee that the amendments sponsored by the American Mining Congress be included in the bill which will be reported to the Senate floor.

PROPRIETOR AND INDEPENDENT CONTRACTOR

Another proposed change included in H. R. 6000 is included in section 210 (K) (2), to specifically change the effect of the United States Supreme Court's holding in *Bartels* v. *Birmingham* (332 U. S. 126). The particular language referred to reads as follows:

"For purposes of this paragraph, if an individual (either alone or as a member of a group) performs service for any other person under a written contract expressly reciting that such person shall have complete control over the performance of such service and that such individual is an employee, such individual with respect to such service shall, regardless of any modification not in writing, be deemed an employee of such person (or, if such person is an agent or employee with respect to the execution of such contract, the employee of the principal or employer of such person)."

In analyzing this problem I should like to quote a portion of a statement submitted to me by the Ballroom Operators' Association of Utah:

"I believe that a little history of what has happened in this relationship between the traveling band leader and the ballroom operator will help to clarify the matter in your mind.

"Prior to 1941, the ballroom operator signed a contract with the orchestra leader through a booker or agent representing the orchestra leader for his services and the members of his orchestra at the particular ballroom. This contract was called the Form A contract and under its terms, the musicians union contended that the operator was the employer of the orchestra leader and the members of his orchestra. This matter was contested by the ballroom operators and the matter was tried in a Federal court in Chicago. The issue involved was whether or not the Griff Williams orchestra were employees of a Chicago hotel. It is known as the Griff Williams case and inasmuch as I am anxious for you to get this information, I have not taken the time to look it up but could provide it if you deem it necessary. The circuit court of appeals for that area decided that the hotel was not the employer of the Griff Williams orchestra but that Griff Williams was an independent contractor and hence, the employer of the members in his orchestra. The matter was appealed to the Supreme Court who refused to review the case. As a result of this case, the musicians' union then prepared the Form B contract which supplanted the Form A contract. *The only difference in the Form A and the Form B was that the ballroom operator agreed that he was the employer and he was referred to as the employer and he signed the contract over the word 'employer.' This contract went into effect in June or July 1941 and we have had to sign it whether we liked it or not in order to get bands—it was what you might call 'economic pressure.'* [Italics supplied.] We would have to sign the contract whether or not it cited in the contract that we were the mayors of our respective cities but that fact would, of course, not have made us the mayors any more than it made us the employers.

"Immediately after the Griff Williams case, a few ballroom operators, under the name of Midwestern Ballroom Operators Association started the *Bartels* v. *Birmingham* case in Des Moines, Iowa. The United States Supreme Court in June 1947 handed down its decision affirming the point that name bands 'were not the employees of the dance hall or amusement hall operators.' Unbeknown to us and more or less surreptitiously, Mr. Petrillo included in H. R. 6000 the paragraph to which you refer in your letter of February 7 to Mr. Freed which would in effect make null and void the Supreme Court ruling in our favor referred to above and would compel us to pay the tax as employers of these orchestras simply because the contract recited that we had complete control when, as a matter of fact, we do not, and have never had control over these orchestras. Exhibit A contained herein will clarify this matter.

"This H. R. 6000 passed the House before we were even aware of the fact that this particular paragraph was in the bill, hence, we made no attempt to

stop it in the House because we knew nothing of it but we are attempting to see that the matter is properly clarified in the Senate.

"There are two types of orchestras which we employ as ballroom operators. Type 1 is what is known as a local band. This is an orchestra made up of musicians who live in the city or in the area close to the ballroom where they work; generally, they have day jobs and work in the ballroom from time to time when traveling bands are not available or deemed advisable not to use. These orchestras generally play for scale and on this particular type of orchestra, I have always paid title VIII and title IX of the Social Security Act and Unemployment Compensation to the State of Utah. By 'always,' I mean before the Bartels case and after although it is clear that I would not be compelled to under the terms of the Bartels case because the local orchestra leader is also the employer of his musicians. However, because the boys are not getting over scale, from a practical standpoint, it meant that the union would have to raise the scale of the orchestra enough to pay this tax, therefore, arrangements were made with the local union that I would pay the tax on these local bands and the scale was not raised as a result. This is handled similarly by other ballroom operators and where it is not, we, the National Ballroom Operators Association, could very easily see that it was handled this way. These local orchestras do not play any other place, except in their own vicinity and they are not musicians but are organized just as a side-line as their day jobs are their main livelihood and ambitions.

"Type 2 is what is known as the name, or traveling orchestras. This group represents themselves as going concerns and available to anyone who would like to hire them. They travel from one part of the country to the other on annual or semiannual tours. They are represented by a booker who contacts the ballroom operator; they are represented by a personal manager or agent who contacts the bookers for them; they furnish us with publicity; they tell us what type music they play; what radio stations they have played on and what records they have recorded. They inform us on how well they are known and what a big crowd they will draw. This type is broken down into two classes (1) the class that has not yet reached the top and these orchestras receive several hundred to a thousand dollars or so over the scale, and, (2) the class that at one time was in class (1) and has now reached the top and they, of course, receive thousands of dollars in excess of scale."

A similar problem arose in the State of Utah and a brief was filed for refund of unemployment compensation contribution paid under protest on name and traveling bands. I have attached copies of the brief and form contract as exhibits A and B, respectively, for inclusion at this point.

It is also interesting in this case to note that no recommendations of the Advisory Council were included covering this situation. I, therefore, suggest that the second paragraph of the cited section be deleted from the bill when the Senate committee reports it to the floor of the Senate.

TEACHER RETIREMENT

The various school teacher associations in my State have requested that I present their views in connection with the proposed amendments to H. R. 6000 which they feel will jeopardize the established teacher retirement systems which have been operating for nearly 15 years in Utah. These amendments are as follows:

"1. In section 218 under definition strike out (C) of paragraph (5).

"2. In section 218 strike out (d) (1) (line 10, p. 82, through line 17, p. 83) and substitute: '(7) Such agreement shall exclude all public employees in positions covered by a retirement system, as previously defined in subsections (b) (4) of this section.' "

The Utah State Teachers' Retirement Board's spokesman requested me to state as follows:

"This expression represents the almost unanimous opinion of the 8,000 members of our system:

"It is not our intention to deny anyone the benefits of a retirement system. We feel, however, that inasmuch as there is a State-wide teacher retirement system in each State, which systems can, and do meet the requirements of the members of the system better than would social security, these State systems should be protected. We feel, further, that if the door is opened by permissive agreement, some State governments will withdraw their support from the State

system, and transfer the obligation to the Federal Government. The ultimate cost to the taxpayer for a certain benefit is exactly the same, whether it be a Federal system or a State system. However, if one State should discontinue its teacher retirement system, and transfer to social security, other States would be inclined to do the same thing, in order to be on an equal basis."

In addition to the above quotation, the following is a summary of the objections the Utah State Teachers' Retirement Board, which represents all the teachers in the State of Utah, raised to inclusion of teachers under the social security program. They are fully cognizant of the fact that H. R. 6000 provides for voluntary arrangements between the State government and the Social Security Board for social security benefits to be made available to State and local employees. At the present time Utah State Teachers' Retirement System in about nine cases out of ten provides for more liberal benefits at more commensurable rates than contemplated in H. R. 6000. In addition, the social security benefits are not particularly attractive to unmarried workers or to workers without dependents. A large percentage, estimated between 60 to 70 percent of teachers in Utah are women and an even greater percentage have few or no dependents. The social-security system provisions of H. R. 6000 are not as beneficial to these classes as is the State retirement system.

I am informed that there is a State-wide teacher retirement system in every State and Alaska and Hawaii and that the same analysis above set forth is applicable in those States.

At this point I wish to quote a letter from Ray L. Lillywhite, secretary-director of the Utah State Teachers' Retirement Board:

"In Utah, our members contribute an average of 8 percent of their salary to our system. Under social security they would have to pay only 1½ percent, graduated up to approximately 4 percent by 1970. It appears, then, that social security gives more for the money than do the State systems. Perhaps it does at the present time, but a pension on teacher retirement allowance of $100 per month will cost just as much if it comes from the Federal Government as it does from a State or local system. Someone will have to pay the difference if the burden is shifted to Federal social security.

"We know that, at the present time, the members of our retirement system would not vote to go into social security, unless they could also keep the benefits of the present State Teacher Retirement Act. However, we feel that State legislatures would be very much inclined to drop the benefits of the State system, or eliminate them entirely if there was a possibility of shifting the burden, or part of it to the Federal Government. Our teachers would then be forced to vote for social-security coverage, in order to have protection. This agitation would be accelerated as more States transferred from their own State systems to Federal social security.

"Our proposed amendment to H. R. 6000 would exclude our public employees who are in positions now covered by a retirement system, and would thereby prevent any threat by State legislature, as indicated in the paragraph above.

"The teachers of Utah would greatly appreciate your efforts along the lines suggested."

MANUFACTURERS' AGENTS

I have received extensive correspondence from manufacturers' agents, both within and without the State of Utah, calling my attention to the drastic impact of section 210 (A) (1) (8) and section 210 (K) (4) of H. R. 6000. It seems to me that the language in these sections is arbitrary and impractical of application. I recognize that some of these standards have been used in various court decisions to determine the employee-employer relationships for purposes of other social legislation. Many years of litigation would be required to determine all the various implications of such an amendment. It seems to me that if it is to be determined that old-age benefits as well as the other benefits anticipated in H. R. 6000 are necessary for these particular independent merchant classifications that a more satisfactory solution could be reached by permitting them to voluntarily come within the scope of the act as self-employed individuals. This problem is also one closely tied in with the discussion above set forth in connection with mining lessons; and it is interesting to note that the Advisory Council made no recommendation regarding the definition of the term "employee" as contained in H. R. 6000.

Another item I wish to call to the attention of the committee relates to the inclusion of funeral benefits and disability insurance. Section 107 and related

sections of H. R. 6000, in my estimation, are unwarranted extensions of Federal bureaucracy and is a matter which has been and is now satisfactorily handled in the States by private insurance firms. Each State in its Workmen's Compensation Act provides for disability insurance in all degrees, from temporary disability to permanent disability. Extension of the Federal Security Agency into this field would, in my estimation, be an unwarranted invasion of the field of States' rights. I am not opposed to sound programs for the social betterment of the people, and where there are voids in these programs, I think logically the Federal Government might be expected to lead the way in exploring the necessity for such programs. But where satisfactory programs are in existence, being handled by the States or by voluntary organizations, it is very poor judgment, in my opinion, to increase the taxpayers' expense by adding new Government bureaus, more employees and a multitude of new regulations, all of which will merely be superimposed on existing ones. I urge the committee to delete the entire section 107 and all related sections from H. R. 6000 before it is reported to the Senate.

NEWSPAPER ACTIVITY

H. R. 6000, now before the Senate Committee on Finance, contains in section 210 (a) (16) (A) (B) an exemption for newsboys and news vendors identical with that in the present social-security laws.

Ample testimony and evidence has been taken by various congressional committees as to the equity for these exclusions and I urge the Senate committee to retain these exclusions in the bill to be reported to the Senate floor.

Previously in this statement I have called attention to certain specific sections in the bill defining employees. In addition to those specific sections cited, I want to emphasize the importance of retaining the definition of employees as contained in the present social-security laws. In my estimation, to extend the definition of employees as is done in H. R. 6000 now before the committee would open the door to numerous controversies and lawsuits. There is no successful guide to determine the extent of coverage under the proposed definitions.

I stress again the fact that the Advisory Council made no recommendation regarding the amendment of the definition of employee.

NONPROFIT, RELIGIOUS, CHARITABLE, ETC. ORGANIZATIONS

Section 210 (a) (9) proposes to amend the Social Security Act by including employees of nonprofit organizations organized and operated exclusively for religious, charitable, scientific, literary, educational, or humane purposes if such organization is not engaged in substantial lobbying activities and to exclude only licensed, ordained ministers of the church in exercising his ministry or a member of a religious order exercising the duties required by such order.

In addition an entirely new concept is provided. Contributions from the employees are compulsory but those by employers are voluntary. It seems inequitable to have coverage extended to these groups on a basis which would be discriminatory against the employees because of the reduction in benefits as a result of this partial contribution. The Advisory Council made no recommendations as to the discrimination indicated in this section. Undoubtedly certain groups now excluded might wish to be included and it would seem to me that it should be voluntary on their part. In the same manner self-employed are covered. I suggest that the committee seriously consider this aspect of the problem. I further suggest that the proposed longuage as contained in section 210 (a) (9) is too restrictive since it covers some groups which should be excluded.

I have been requested by the Utah Society of Naturopathic Physicians and Surgeons, Inc. to support their position as expressed in a letter of March 8, 1950, to the committee.

This association is desirous of amending 211 (C) (5) by adding the word "Naturopath" immediately following the word "Osteopath." It is the desire of this association that their members practicing naturopathic treatment be excluded from coverage on H. R. 6000 as a self-employed professional group. The amendment suggested to section 211 (C) (5) would accomplish this purpose.

STATEMENT OF HON. JAMES G. POLK, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF OHIO

Mr. Chairman and members of the committee: I am appearing before your committee today on behalf of the Wilknit Hosiery Co., Inc., of Greenfield, Ohio.

This is a direct-selling company whose hosiery is distributed by approximately 20,000 independent sales people, most of them working only part time.

Subsection 4 on page 51 of the bill H. R. 6000, relating to the definition of the word employee should be stricken from the bill. I refer to lines 4 to 16, inclusive, on page 51, which defines an employee as "(4) any individual who is not an employee under paragraph (1), (2), or (3) of this subsection but who, in the performance of service for any person for remuneration, has, with respect to such service, the status of an employee, as determined by the combined effect of (A) control over the individual, (B) permanency of the relationship, (C) regularity and frequency of performance of the service, (D) integration of the individual's work in the business to which he renders service, (E) lack of skill required of the individual, (F) lack of investment by the individual in facilities for work, and (G) lack of opportunities of the individual for profit or loss."

The above definition of the word "employee" is so involved and uncertain in its scope that it is basically undesirable. If retained in the bill, I believe it will result in costly and unnecessary litigation to determine what it means and you will find the courts will be unable to agree on the proper interpretation and application of the definition to specific cases. To retain this complicated definition will, in my judgment, only result in confusion and a large number of lawsuits by individuals suing for benefits or for the establishment of wage credits or to avoid a tax on the self-employed.

I am not a lawyer, but I know there are many able and experienced lawyers on this committee and I am going to suggest to you that in place of subsection 4 you substitute the old and well-understood common-law definition of the word "employee." The common-law definition has been construed by the courts to have a certain definite and well-understood meaning. I strongly urge your favorable consideration of my proposal to restore the common-law rule on who is or is not an employee.

To retain the complicated and unworkable definition of employee in subsection 4 of this bill will work great hardships on many businesses and will give small benefits to the salespeople involved.

In conclusion, may I quote from a letter I have received from Mr. L. Lowell Wilkin, general manager of the Wilknit Hosiery Co., Inc., under date of March 1, 1950:

"We now have approximately 130 local employees, and it takes 2 girls about 2 days a week to keep each employee's record up-to-date. There are approximately 20,000 independent salespeople selling our hosiery (most of them part time). From the preceding figures it takes 4 working days per week to keep 130 employees' records up-to-date. In the case of salespeople we believe that it would take one-fourth that time, which would be only 1 day per week for each 130 employees. In a 5-day week 1 girl could take care of 650 employees. Therefore, we would need 1 extra employee for each new 650 employees. If this bill, H. R. 6000, classes our 20,000 salespeople as employees, it would require over 30 more persons for us to employ locally. Of course, we could not operate.

"We have no control over these 20,000 independent salespeople. They do not even sign their name to applications. Many of them sell various lines of merchandise, and how could tax be figured in these cases? They collect their own profit when they make the sale. No wages are involved. There exists no means by which a wage could be established beyond guesswork, because we are not sure what prices they charge since we require only the "balance due" to be received by us. There are no pay rolls, no rate of pay, and no pay periods. Except in the mind of the salesperson no one knows how much time is put in."

There are no doubt a large number of business concerns in the United States similarly affected by subsection 4 of this bill.

In our effort to increase and extend social-security benefits, and I favor these increases in benefits, we should not harm private enterprise.

It is through employment by private enterprise that the part-time salespeople earn a livelihood. Many of these persons will be unable to secure employment if business concerns like the Wilknit Hosiery Co. are not able to profitably use the services of part-time salespeople.

It is my hope that this committee will eliminate subsection 4, and more clearly define the word "employee" as used in the bill.

DEPARTMENT OF AGRICULTURE,
Washington, January 13, 1950.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate.

DEAR SENATOR GEORGE: This is in reply to your request of October 14, 1949, for a report on H. R. 6000, a bill to extend and improve the Federal old-age and survivors insurance system, to amend the public assistance and child welfare provisions of the Social Security Act, and for other purposes. For the present our comments relate only to those provisions of the bill which affect employees of Farm Credit Administration agencies operating under the supervision of the Department.

At the present time, none of the employees of the Farm Credit institutions (except employees of 116 production credit associations in which a production credit corporation no longer owns any stock) are covered under the Federal old-age and survivors insurance system, since the basic statutes pertaining to these institutions exempt them from the tax imposed by section 1410 of the Internal Revenue Code. However, the employees of the production credit corporations, the Federal Intermediate credit banks, the district banks for cooperatives, Central Bank for Cooperatives, the Federal land banks, and the Federal Farm Mortgage Corporation are covered by the Civil Service Retirement Act. Consequently, the employees of 1,224 national farm loan associations and 387 production credit associations are the only ones working for Farm Credit institutions who are not covered under either one of the retirement systems. On several occasions, the Department has favorably recommended the enactment of legislation which would extend coverage of the Federal old-age and survivors insurance system to the employees of these associations. Section 203 (a) on page 127 of the bill, together with the definitions of employment contained in section 210 of the Social Security Act, and section 1426 (b) of the Internal Revenue Code, as amended by sections 104 (a) and 205 (a) of the bill (p. 34 and p. 136 respectively), would make all national farm loan associations and production credit associations subject to the tax imposed by section 1410, and would cover their employees under the Federal old-age and survivors insurance system. The Department favors these provisions and strongly recommends the inclusion of both groups of associations as a part of the general legislation to broaden the coverage under the Federal old-age and survivors insurance system.

However, under the provisions referred to above, it appears that the Federal land banks inadvertently would also be made subject to the tax and their employees would come under the Federal old-age and survivors insurance system. As indicated above, these employees are presently covered by the civil service retirement system. The Department believes that coverage of these employees under the civil service retirement system should be continued. Simple amendments in lines 12 and 13 on page 37 and lines 11 and 12 on page 139, which would consist of striking the words "which is partly or wholly owned by the United States" would accomplish the desired purpose, and we recommend that such amendments be made. The suggested amendments would have the effect of exempting the Federal land bank employees so long as they are covered by the civil service retirement system, but, if such employees were ever taken out from under the civil service retirement system, they would automatically be subject to the Federal old-age and survivors insurance system.

The Bureau of the Budget advises that, from the standpoint of the program of the President, there is no objection to the submission of this letter.

Sincerely,

CHARLES F. BRANNAN, *Secretary.*

FEDERAL SECURITY AGENCY,
OFFICE OF VOCATIONAL REHABILITATION,
Washington, D. C., March 22, 1950.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

DEAR MR. CHAIRMAN: I have followed with considerable interest the hearings that the Committee on Finance has been conducting on H. R. 6000, an act to extend and improve the Federal old-age and survivors insurance system, to amend the public-assistance and child-welfare provisions of the Social Security Act, and for other purposes.

During the course of these hearings, several witnesses, in discussing the problems and needs of disabled persons, have indicated that practically all totally and permanently disabled persons can attain economic security through the State-Federal program of vocational rehabilitation and that the introduction of a contributory program of disability insurance would not be necessary to achieve this objective. Such statements have deeply concerned me and warrant, it seems to me, further clarification. I would appreciate having this letter inserted in the record.

There is no doubt that the rehabilitation of disabled persons so that they might enter upon or return to work and become self-supporting is a sound investment in the conservation of our human resources. At the same time, it must be recognized that persons who come within the category of totally and permanently disabled for all forms of employment represent, in the main, those disabled persons for whom the possibilities of vocational rehabilitation are at present extremely limited or nonexistent. Further, there are certain economic problems associated with total and permanent disablement which cannot be met through the provisions of the existing vocational rehabilitation program. On the basis of the information which follows it is my opinion that permanent and total disability insurance would provide in part for an important and as yet unmet need, and would greatly facilitate the rehabilitation of disabled persons.

One of the major problems confronting disabled persons who are capable of being rehabilitated is the need for financial support for themselves and their dependents between the onset of disablement and the time they are physically and otherwise capable of undergoing rehabilitation. The State-Federal program of vocational rehabilitation does not authorize financial assistance to disabled persons during this period of their disablement. Data from some of our periodic studies of persons rehabilitated by the State agencies point up, at least partially, the extent of this problem.

Sixty-five percent of the 58,020 disabled persons who were rehabilitated by the State agencies during the 1949 fiscal year were reported to have had a prior work history of substantial employment at the time they were interviewed for rehabilitation, whereas 14 percent had never worked, and 21 percent had some work experience that was considered unsubstantial. Ten percent were dependent upon either public or private relief as the major source of support. Twenty-six percent were dependent upon wage earnings, which includes some living on savings from recent earnings as well as those who were currently working (mostly part time) but nevertheless required rehabilitation services to continue their employment or to secure more suitable employment. Some type of insurance benefits were reported as the major source of support for only about 8 percent of the cases—this includes 3 percent whose major source of support was workmen's compensation. An additional 10 percent were dependent upon friends, long-term savings other than insurance, and other miscellaneous sources. Therefore, approximately 46 percent of the total group were dependent upon their families for their major source of support at the time they were interviewed for rehabilitation services. These facts appear even more significant when one considers that close to one-half of the total group had one or more dependents at the time of application for services under the vocational rehabilitation program. As will be pointed out later, it should be kept in mind that only a portion of the 58,020 disabled persons referred to would come within the category of totally and permanently disabled as contained in H. R. 6000.

Another urgent need is that of financial support for the disabled person and his dependents while undergoing vocational rehabilitation. While maintenance is one of the services provided needy disabled persons it is available only in connection with certain other services and solely during the period the individual is receiving such services. For example, an individual may have completed his preparatory services and encounter several months' delay before securing suitable employment. Maintenance would not be available to the disabled individual under the rehabilitation program during this particular period. Perhaps of even greater importance is the fact that even though disabled persons in process of vocational rehabilitation may have dependents, financial assistance for the support of the families of these disabled persons is not available under the program. The lack of adequate financial means of support for disabled persons and their families during the period of rehabilitation not only frequently complicates the development of a suitable plan for the complete rehabilitation of disabled persons, but in many instances may be so serious as to make rehabilitation impossible.

Take, for example, a manual laborer, with two or three dependents, who is found to have tuberculosis in the advanced stage. Such a person would be totally disabled and might remain so permanently. With proper medical treatment and sanatorium care over an extended period of time, there might be some chance for recovery to the point where, with rehabilitation services, he might be returned to some form of employment. He would probably require vocational training as well as guidance and counseling before he could be placed in suitable employment. Although his tuberculosis would be arrested, he would, in order to preserve his health, have to enter employment compatible with his physical condition which in some instances might require sheltered employment. His problem during the sanatorium and postsanatorium period would be complicated by the financial needs of his family. Studies indicate that this is one of the major problems in the treatment and rehabilitation of persons with tuberculosis. The worry of family responsibilities often retards the process of medical recovery Frequently, such persons either do not enter the hospital at all, leave the hospital and return to work before they are physically able, or discontinue rehabilitation services to secure unsuitable work—only to suffer a relapse requiring another period of prolonged hospitalization and possibly leading to an early death. Without some means of financial support for his family during the long period of necessary hospitalization and rehabilitation, this man might never be able to resume his family responsibilities. Disability-insurance benefits would, by providing the necessary economic security for the family, reduce the psychological effects of the prolonged disability and increase the chances of recovery. Although it is recognized that not all victims of tuberculosis would come within the scope of the proposed program of extended disability insurance the above situation would be equally applicable to other types of cases of prolonged disablement.

It was mentioned earlier that although all persons rehabilitated under the State-Federal rehabilitation program have some permanent physical or mental impairment that constitutes a substantial employment handicap, only a small proportion of them would be considered as totally and permanently disabled. Of the total number rehabilitated during the fiscal year 1949, approximately 50 percent were under 31 years of age, and somewhat more than one-third had never worked or had only unsubstantial employment. Data are not available to indicate the number who currently are not accepted for rehabilitation because of the severity of their disablement, advanced age, or who are unable, for physical or other reasons, to apply for and undergo vocational rehabilitation.

At the same time it must be recognized that some persons generally considered to be totally and permanently disabled can be rehabilitated. Some could be prepared to enter the competitive labor market whereas the more severely disabled might be confined to a sheltered type of employment. The State agencies have, in fact, rehabilitated many persons who would be classified as totally and permanently disabled. For example, during the 1949 fiscal year, the State agencies rehabilitated into employment a total of 3,166 blind persons as well as 7,300 persons with such disabilities as multiple amputations, impairment of two or more limbs, and back and spinal injuries, including paraplegics. You may be interested in a specific example or two, as illustrative of such cases. (1) A man totally blind and part of the right arm amputated was supplied with training and equipment necessary to engage in the poultry-raising business, and he now builds his own chicken-breeder equipment and maintains an income sufficient to support his wife and two children. (2) A young man, 24 years of age, injured in an accident which resulted in total paralysis of the lower extremities. He was hospitalized for 1 year with an additional year devoted to training in radio repairing. Necessary equipment was provided him to set up a radio-repair shop in his own home. Without these services he probably would have continued to be totally and permanently incapacitated for gainful employment. (3) A young man with double leg amputations was supplied with artificial legs, training in their use, and institutional training in watch repairing. He is now successfully employed and supporting his wife and children. Without these services he no doubt would be classified as totally and permanently disabled.

Although many persons considered to be totally and permanently disabled could, under the most favorable conditions, be rehabilitated, I believe there would remain a substantial number of such persons for whom vocational rehabilitation would not be possible. This is particularly the case for the older group For example, about two-thirds of all those disabled for 6 months or more are in the 45–65 age group. A large portion of those who might qualify for disability benefits under H. R. 6000 would be older persons with heart or other forms of chronic diseases who could not, even under present economic conditions, be

effectively placed in industry. Even able-bodied workers in the older age groups find it hard to secure new jobs when out of employment for 6 months or more. For totally and permanently disabled workers in similar circumstances, finding employment in the competitive labor market is even more difficult. Although rapid strides are being made in the successful placement of disabled persons in industry, self-employment, and sheltered employment, it may take many years before a significant portion of the totally and permanently disabled are absorbed in the labor market. A contributory disability-insurance program would provide this group with protection against the contingencies of early forced retirement resulting from disablement.

During the process of the hearings some witnesses have indicated that the availability of disability benefits, even when small in amount, would encourage persons to accept benefits rather than undergo vocational rehabilitation. This position is not supported by experience in the administration of the publicly supported program of vocational rehabilitation during the past 30-year period. Within this period a substantial number of disabled persons who were recipients of insurance, workmen's compensation, or similar benefits have been rehabilitated annually. I am sure you will find that the experience of the Veterans' Administration in the vocational rehabilitation of veterans with service-connected disabilities, of both wars, will substantiate our experience. The experience of rehabilitation centers such as the Institute of Rehabilitation and Physical Medicine in New York, curative workshops, and similar facilities, in which many of the patients are beneficiaries of some form of financial assistance, I am sure will provide similar evidence. The fact that industrial compensation insurance carriers utilize these facilities in providing services to beneficiaries and the fact that one insurance carrier has established its own rehabilitation center is another case in point. It is my belief, which I am confident will be confirmed by those administering vocational rehabilitation in the States and other authorities in rehabilitation and allied fields, that disability benefits, especially when modest in amount, would have a positive influence and with few exceptions would facilitate materially the vocational rehabilitation of disabled persons. In fact, in many instances meaning the difference between success or failure.

In addition to providing a source of support for a number of disabled persons undergoing rehabilitation, another way in which a disability insurance program would facilitate vocational rehabilitation is that it would assist in the early referral of disabled persons for services. In this connection, I wish to point out that early provision of vocational rehabilitation services is important in the successful rehabilitation of disabled persons and is therefore important in keeping the number of persons who cannot be rehabilitated at a minimum. Rehabilitation can be more easily accomplished if services to the individual are initiated as soon as possible after the onset of disability—before the disabled person becomes discouraged and apathetic and before he loses his working skills. The problem of reaching disabled persons while they are still in the early stages of disability one that has been somewhat troublesome to the State rehabilitation agencies—would be reduced considerably under a program of disability insurance.

Before closing I wish to point out that the complementary nature of rehabilitation and disability insurance has long been recognized. Back years ago, it was apparent to those charged with the administration of workmen's compensation laws that the seriously disabled workman needed retraining, often in an entirely new occupation, if he were to make a successful job adjustment. In fact, the support given by such groups for public provision of vocational rehabilitation for civilians was an important factor in relation to the passage of the Vocational Rehabilitation Act of 1920. The Federal Employees' Compensation Act Amendments of 1949 (Public Law 357, 81st Cong.) including provision for the vocational rehabilitation of permanently disabled Federal employees drawing benefits under the act. Recently the importance of rehabilitation in relation to the payment of disability benefits has been emphasized in the way that the State-Federal vocational rehabilitation program has been cooperating with the officials of the welfare and retirement fund in rehabilitating disabled mine workers. With respect to disabled veterans of both wars, Congress has recognized the complementary nature of the two by providing rehabilitation services for veterans drawing disability benefits.

Finally, may I emphasize, that rehabilitation does not obviate the need for a disability-insurance program. An expanded program of vocational rehabilitation is necessary in order to reach all of the disabled who are in need of and can benefit from such services; a program of disability insurance will assist by

rounding out the rehabilitation program and in meeting the needs of those disabled persons who have no prospect of returning to the labor market. I urgently recommend that a program of disability insurance be enacted.

Sincerely yours,

MICHAEL J. SHORTLEY, *Director.*

AMERICAN HOTEL ASSOCIATION,
Washington, D. C., March 28, 1950.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: In connection with H. R. 6000, which is currently before the Senate Finance Committee in executive session, we are eager to place one further statement before your committee.

We are aghast at the misinformation and erroneous figures which were included in the statement of Mrs. Imogene B. Wright, who, as the final witness before your committee, testified regarding tip income of service personnel in hotels and restaurants. Mrs. Wright estimated:

(1) That there are three-million-odd service workers who receive tips or gratuities;

(2) That a grand total of $2,030,000,000 a year in tips is received by these employees.

Page 913 of the 1949 Statistical Abstract of the United States shows that there are a total number of employees in restaurants equaling 594,648. Obviously this includes all employees, and not simply those service employees who are in position to receive tips. Page 193 of the abstract shows total employment in the Nation's hotels of 607,575. In the testimony of Daniel J. O'Brien, who appeared before your committee, representing the American Hotel Association, appears the estimate that no more than 30 percent of employees in the Nation's hotels work in those departments which dispense food and beverages. This would account for only 182,272 people out of the total number of employees quoted above. Here, again, this includes all employees in the food and beverage department. So these Government figures reveal that less than 800,000 employees are engaged in restaurants and hotels in the food and beverage departments, and even this number is not in position to benefit from guests' gratuities.

Then, Mr. O'Brien testified that total tip income of service employees in hotels of the Nation is $70,000,000 annually. This is based on gross sales of food and beverage departments of approximately $1,000,000,000. In the light of these reputable estimates by the industry, coupled with official Government figures, it is readily apparent that Mrs. Wright's statistics appear to be without foundation whatsoever.

Finally, Mrs. Wright urged that H. R. 6000 be amended in a manner which would make the tip income of service employees subject to pay-roll tax as a means of enhancing old-age and retirement benefits for these employees. We call to your attention the fact that under current Bureau of Internal Revenue procedure, an employer is obliged to pay the social-security tax on any tip income declared by the employee. So, if this service personnel is desirous of enhancing their own social-security coverage, they have only to make a declaration to their employer of tip income under existing regulations. No modification of the statute is necessary to achieve this objective.

Respectfully,

M. O. RYAN

STATE OF NEW HAMPSHIRE,
DEPARTMENT OF PUBLIC WELFARE,
Concord, March 23, 1950.

Hon. WALTER GEORGE,
Senate Finance Committee, United States Senate,
Washington, D. C.

DEAR SENATOR GEORGE: This is to advise that inasmuch as New Hampshire was not represented at the hearings before your committee on H. R. 6000 and since this State has a major interest in such legislation, not only in the proposed amendments relating to public assistance but also those relating to the social-

security system, we should like you to consider this correspondence as a statement of our position regarding the bill.

This department, like other State agencies concerned with the administration of assistance, has long been disturbed by the growing size and cost of assistance programs. It is our opinion that public-assistance programs, which are based upon a needs test, were never intended to care for the large number of persons who are now forced upon them. We do not look with enthusiasm on growing assistance programs. Our board of public welfare and the administrators of the agency itself have been alarmed both by the failure of the contributory social-insurance system to keep pace in benefit levels with the rising cost of living and by the failure to extend the contributory system to a larger portion of the population. Today, because the contributory social-insurance programs are not carrying their share of the burden of economic need, public-assistance case loads and costs are disproportionately greater than necessary. The result is that the taxpayers are overburdened with the cost of an ever-increasing public-assistance program.

It is, therefore, our conclusion that the present old-age and survivors insurance program be extended in coverage, its eligibility requirements liberalized, and its benefit payments increased substantially.

Another matter of grave concern to New Hampshire is medical care. An item of cosiderable expense in the administration of public welfare in our State today is medical and hospital care. The present provisions of H. R. 6000 limit Federal sharing in medical-care cost to those individual cash grants which do not exceed Federal matching. In a State such as New Hampshire, where the average monthly payment is so close to the Federal ceiling, the medical-care needs of most recipients must be met largely from State and local funds. We therefore urge the committee to consider the advisory council's recommendation for a new and separate reimbursement formula for medical care furnished assistance recipients.

In conclusion, may we express the hope that the committee will find it possible to extend coverage, to liberalize benefits realistically, and otherwise strengthen old-age and survivors insurance, which from the point of view of public welfare, is basic to the country's total social-security program. We feel that if the Congress will act now to extend this self-financing method of assuring security, a method already in accord with our American tradition of independence, we can definitely look forward to the time when public-assistance case loads and costs will diminish.

Respectfully submitted.

JAMES J. BARRY, *Commissioner.*

TEXAS TRADE ASSOCIATION EXECUTIVES,
Dallas, Tex., March 25, 1950.

Hon. TOM CONNALLY,
United States Senate Office Building, Washington, D. C.

DEAR SENATOR: On behalf of the attached list of 28 Texas trade and business groups representing 40,000 Texas employers, we will appreciate your attention to the attached statement of our views regarding H. R. 6000.

Our attention has been required on so many other matters lately, such as wage-hour legislation, etc., that only recently were we able to consider these proposed amendments to our Social Security Act. We are now advised that hearings on this bill before the Senate Finance Committee will be concluded on March 24.

Therefore we will greatly appreciate it if you will file this statement with the Senate Finance Committee on our behalf, in lieu of a personal appearance which would be impossible at this late date.

While we have listed some of our specific objections to H. R. 6000 on the attached statement, it is our further opinion that the bill as a whole is unsound and unworkable, and if such a course is pursued it will result in irreparable harm to our national economy. We feel that Congress should adopt an entirely new approach toward amending our present Social Security Act.

Respectfully yours,

GENE EBERSOLE, *President,*
TEXAS TRADE ASSOCIATION EXECUTIVES.

STATEMENT OF TEXAS BUSINESS AND TRADE REPRESENTATIVES REGARDING SOCIAL SECURITY ACT AMENDMENTS OF 1949

Some of the features of this bill which we consider most objectionable are as follows:

1. *Definition of employee.*—The common-law rules are broadened by the addition of seven factors to be considered in determining employee status. These factors ignore legal considerations in the determination of this status and there is placed in an administrative agency substantial power to determine such status. Since this bill generally broadens the Social Security base, the agency will inevitably take the position that all persons doing any character of work for an employer are employees. The social aspect of this amendment strikes at little businesses and independent contractors and the trend will be for the employer to discontinue doing business with such persons due to the uncertainties and increased costs with respect to tort liability, wage-hour liability, and similar problems, or for employers to take over such businesses or contractors, either alternative being contrary to the principles of independent enterprise. The uncertainty under this definition will lead to increased administrative costs and prolonged litigation. If this definition is adopted it will probably be incorporated in the Federal and State unemployment compensation laws and in the law requiring the withholding of income tax at source which will further increase business costs.

2. *Definition of wages.*—This bill raises the annual wage base from $3,000 to $3,600 and therefore substantially increases the tax of both the employer and employee. Proper benefit increases can be made without this change. In addition, it also needlessly complicates present business pension and retirement programs based on the $3,000 wage limit. This $600 annual increase would probably be extended into Federal and State unemployment compensation programs, resulting in further increased taxes.

3. *Public assistance.*—The proposed act makes more Federal funds available to the States for public assistance to those not included in the Federal social-security program, for example, old age, blind, dependent children. This is further Federal encroachment on State powers. Effective social security should decrease, not increase, the need for public assistance and since H. R. 6000 increases public assistance it promotes Federal socialization.

4. *Permanent and total disability.*—This proposal would create a new program of insurance against loss of earnings due to permanent and total disability. Insurance companies have found this unworkable and extremely expensive. Subjective claims for disability are impossible to evaluate. Such a national program encourages worker laziness and security greed, and furnishes an effective national mechanism for vote influence.

It is our sincere belief that the basic issues involved in this legislation are of such significance and are such a radical departure from our present system that it behooves our Congress to reconsider the entire approach to the problem of amending our present social-security laws. While some remedial legislation may be necessary, we do not believe it should be done in the manner proposed in H. R. 6000.

OLD-AGE AND SURVIVORS INSURANCE FOR FARMERS

(Statement Submitted by W. I. Myers, Dean of the New York State College of Agriculture, Cornell University, Ithaca, N. Y.)

This statement deals with reasons favoring the extension of the old-age and survivors insurance program on an all-inclusive basis to self-employed farmers. I strongly favor extension of this program to hired farm workers also, but I shall not add to the testimony already presented in favor of this proposal. Instead, the entire statement is devoted to reasons why the program should be extended not only to the urban self-employed as provided in H. R. 6000, but to farmers as well.

Conditions on farms are almost completely different from those of a century ago. Formerly farm families were relatively self-sufficient and independent. Little capital was required and most of the things which were needed on the farm and in the home were produced on the farm. The welfare and future of rural people depended largely on factors which were under the direct control of the farm family.

The modern farmer, however, is a businessman who usually has to go into debt not only for his farm but for livestock and machinery as well. He buys large quantities of raw materials and sells them as manufactured or partly manufactured goods. Although most farmers raise part of their own food and do not have to pay rent, total cash farm family expenditures frequently exceed the value of things which are provided by the farm and used in the home. The liquidation of the debt involved in financing a modern farm business usually requires most of a working lifetime, even under favorable conditions.

This continued and progressive commercialization of farming has made the welfare of farmers increasingly dependent on factors beyond their control. A severe and prolonged decline in prices received for farm products, for example, can wipe out a lifetime of savings and destroy any possibility of income for their declining years. Farmers who happen to be born at a time which enables them to liquidate their debts under a stable or rising price level are fortunate. More farmers, however, are likely to encounter one or more periods of declining prices which may delay or prevent the repayment of their debts. Economic security for farmers which was relatively certain a century ago has now become difficult and in most cases inadequate. Increasing numbers of older farmers now approach their retiring years with uncertainty concerning sources of funds to meet their cash living costs.

At this point I should like to make it clear that I have no plan to remove all or even most of the risks and uncertainties involved in farming. It is, of course, impossible and in addition might be undesirable. Nor do I favor changes in the old-age and survivors insurance program which would assure sufficient retirement income to meet all needs of retired persons during their declining years. I do, however, favor extending the present old-age and survivors insurance program on a compulsory basis to self-employed farmers to give them a minimum level of retirement income to which they can plan to add income from savings, investments, and insurance, and provide, if possible, sufficient income to meet all of the needs of their declining years. The reasons for favoring this extension of the program are as follows:

Farmers face same risks as others.—It cannot be denied that farm people experience about all the hazards faced by city people. Old age and death play no favorites. Although the needs for their retirement years are lower in terms of dollars for farm people than for city people, the need does exist and provision should be made for meeting the need. In fact, it might be argued that farmers are more in need of OASI benefits than wage-earners because of the uncertainty and wide variations in net income in contrast to regular wage earnings which are more conducive to a planned savings or retirement program.

Many farm people have some OASI credit.—There is no way of knowing exactly how many farm operators have worked in covered employment or how

much OASI credit they have accumulated. The United States Department of Agriculture in a recent publication, however, estimated that 35 percent of all farm operators have some old-age and survivors insurance credit. A survey of 96 farms in one rural area in New York showed that 28 percent of the farm operators had some OASI credit. It is probable that the proportion of farmers with OASI credit varies in different parts of the country, being highest in the most industrialized areas. It is apparent, however, that a significant part of our present farmers have already made some OASI contributions. Both the survey in New York and estimate of the United States Department of Agriculture show that the contributions are usually not high enough to assure even minimum benefits. In most cases, these wage deductions will return nothing to either the farmers or their families unless they are again permitted to contribute to the program.

Farmers now help to pay cost of OASI.—OASI taxes in employment which is now covered by the program are considered a cost of doing business and are accordingly passed on to consumers. Farmers, thus, indirectly pay a share of OASI taxes although they receive no direct benefits from them. This is particularly important when one considers that such taxes are paid not only on purchases for the home but also on most production items, such as machinery, fertilizer, feed, and building materials. Some farmers are also helping to pay the cost of the present OASI program and receiving nothing in return by making contributions in covered employment which, as indicated above, are insufficient to obtain any OASI benefits for them. It is admitted, of course, that farmers would make additional contributions in order to benefit fully from the program. But such a move would also help them obtain some benefits from the indirect contributions which they are now making.

Costs distributed among those helped.—Without some such program as OASI it is generally agreed that large numbers of persons would need financial assistance during their declining years in addition to that which they might provide for themselves entirely through their own efforts. This might be provided through a program such as old-age assistance. Like most other thoughtful persons, however, I strongly favor a program which requires a maximum number of those who are able to participate to contribute directly on their own behalf. Extension of the OASI program to farmers would be an important step toward a reduction in the cost of public assistance and the further distribution of the cost of care for persons needing assistance in their declining years on the basis of their ability to contribute. The heavy old-age assistance load in many of the primarily agricultural States is a reflection of the high public cost for the aged needy where only a small proportion of them are eligible for OASI benefits.

More old people and children in rural areas.—Most rural areas in the United States have a larger number of persons 65 years of age and older per worker than do urban areas. Similarly, most rural areas have more children under 15 per worker than do urban areas. In New York State, for example, in 1940, 10 percent of the farm population was 65 years of age or older but only 6 percent of the urban population was 65 or older. Similarly, 24 percent of the farm population was less than 15 years of age but 20 percent of the urban population was less than 15. This means that people in rural areas carry a potentially heavier burden of care both for older people and for dependent children. Extending the OASI program to farmers would help to reduce public assistance for the old and for dependent children in rural areas.

Farm families buy less life insurance.—Studies of the life insurance carried by farm people show that on the average fewer of them carry such protection than do persons in cities. Even among these, the amount of the policy is often extremely low. In the New York survey, mentioned above, only 46 percent of the farm operators had life insurance. The average face value of life-insurance policies per family for all families was $2,450. A study for the Federal Reserve Board in Michigan in 1947 showed that 84 percent of the heads of households owned life insurance; among farmers, only 55 percent were insured. For the country as a whole, the Institute of Life Insurance estimated that families had an average of $4,600 of life-insurance protection in 1947. This includes group insurance, which makes up about one-fourth of the total. No doubt there are many reasons why farm people have less insurance. It is not particularly pertinent, however, to discuss them here. The important fact is that lack of life-insurance protection among farm people, in general, is a further indication of the need for protection of the farm family in case of death of the breadwinner, and for him and his dependents after he reaches retirement age.

No company pension plans for farmers.—Private industry and business as well as Government have provided pension plans covering millions of nonfarm workers. In most cases the workers as well as the employers contribute to the pension plans. Many such programs provide reasonably satisfactory retirement income. Where they are supplemented by OASI benefits, the retirement income may comprise a reasonably large proportion of total retirement needs. Farmers, however, have no opportunity to participate in private pension plans. Extending the OASI program to them would permit them to participate, to some extent, in retirement programs and benefits now available to their city cousins.

Would not discourage thrift and industry.—In my opinion extending the OASI program to farmers would not discourage thrift and initiative on the part of farmers. Farmers as a group have long been known for their thrift, initiative, and independence. None of us want to see them lose these characteristics. In my opinion, extending the OASI program to farmers would encourage such desirable traits, rather than discourage them. It would make farmers more conscious of the need for providing adequately for their families if they should die "too soon" and also to prvide for their own needs if they should live "too long." In my opinion, young farmers would be more likely to undertake the risks of farmer ownership if they knew that regardless of the outcome they would be assured of protection for their families in case of death and a modest cushion of retirement income for their declining years.

Cost of OASI benefits low.—All of us agree, I believe, that farm people face the same risks and have the same needs for OASI benefits as other workers. It is also true that farmers cannot provide for meeting such needs in any other way at a cost which compares favorably with the cost under the OASI program. Savings, investments, and insurance all are means of providing for these needs but in none of them can families obtain the degree of security and the amount of benefits at the low cost which is possible under this program. Because it offers low-cost protection, I believe farmers, like millions of others, should be permitted to benefit from the OASI program.

Administrative difficulties not insurmountable.—The self-employed generally have been exempt from the OASI program due in part at least to the increased administrative difficulties of keeping records and collecting taxes, as compared with employed persons. Intensive study by the Social Security Administration and the experience of social-security programs abroad indicate that such difficulties are not insurmountable. Since H. R. 6000 already provides for extending the OASI program to about 6,000,000 self-employed urban persons, I see no good administrative argument against extending the program to self-employed farmers. It is true that different problems will be encountered but with a system of annual reporting and the possible payment of contributions in connection with income-tax reports, I see no serious difficulties which cannot be overcome.

Many farm leaders favor extension of OASI to farmers.—Since serving as a member of the Advisory Council on Social Security of your committee, I have taken many opportunities to discuss with farmers, and particularly farm leaders, the present OASI program and the advantages and disadvantages of extending it to farmers. In all instances it has been my experience that when farmers understand the program, a large majority of them favor extension of it to farmers. The fact that more farmers have not testified in favor of OASI before this committee is in my opinion not a reflection of opposition to it but an indication of unfamiliarity with the program. In New York, for example, our State Farm Bureau Federation has given a great deal of time and study to this problem during the past 2 years. At its annual meeting in 1948 and again in 1949 it endorsed extension of the program to farmers as well as farm workers. Mr. Don J. Wickham, vice president of the federation, testified in favor of OASI for both farmers and their hired workers before the House Committee on H. R. 6000 in 1949. Mr. E. S. Foster, secretary of the federation, has already testified in favor of OASI for farmers and their workers before this committee. My contact with farm leaders from many other States indicates that most of those who understand the OASI program favor extension of it to farmers.

Would help preserve family farm.—Nowhere else in our economy except on the farm do we find the same tightly knit family-business interest that we find on the millions of family farms which are the backbone of American agriculture. Today, there are many influences which can conceivably affect or possibly even destroy the independence and soundness of the American family farm. In my opinion, extending the OASI program to farmers would contribute significantly to the preservation of the family farm by enabling farmers, through their own

efforts, to contribute to their own independence and well-being and that of their families in case misfortunte should strike during their productive years or in case they and their dependents need assistance during their declining years.

STATEMENT OF THE T. J. MOSS TIE CO. ON BEHALF OF ALL OTHER MEMBERS OF THE RAILROAD CROSS-TIE INDUSTRY SIMILARLY SITUATED

The T. J. Moss Tie Co., Security Building, St. Louis, is one of the several hundred individuals and firms whom, we understand, have expressed a desire to appear before your committee and give it the benefit of their views with reference to two sections of H. R. 6000, sections 206 (a) and 104 (a) of H. R. 6000 which propose amending the Social Security Act and the Internal Revenue Code by defining the word "employee" therein, but who because of limitations of time were unable to do so. This will give the committee some idea of the magnitude of the problems raised by these proposed amendments and the public concerned over the Congress enacting them into law.

These proposed amendments will result in an unnecessary destruction and alteration of fundamental business relationships far beyond our capacity to measure which relationships are historically established and economically indispensable, and without contributing any comparable benefit either to the economy or to the objectives of the act.

Tie companies obtain railroad ties primarily from these sources:

1. By purchase from farmers.
2. By purchase from independent producers who cut them from their own lands or lands which they control.
3. By purchase from contractors who produce them from company-owned lands.
4. By cutting them from their own lands with their own employees.

Those arrangements vary with the locality and the circumstances, but by and large all but 15 percent of the ties acquired by this company come from sources other than those produced by its own employees. There are thus dependent upon the company many hundred small and independent producers who as a part-time or full-time vocation, but often as an adjunct of other agricultural pursuits, utilize their woodlots or other forest preserves to create a local economy and to provide employment not otherwise available to themselves and other dependents.

The excursion contemplated by these amendments would destroy their status as contractors. It is academic. It fails to give proper credit to the rural and isolated situation they occupy. The farther removed an individual is from the concentrations of employment, such as a factory, the less adaptable he is to supervision. It is for this very reason that historically the contractor relationship developed and has been maintained with reference to these people, and it has never been possible either to adjust them or the operations they perform into a concentrated, compact producing unit.

The amendments urged completely dislocate and destroy the possibility of that relationship. If such a definition were adopted and were fully enforced by the Treasury and the Administrator, there is no limitation to the dislocation it would cause, except the complete annihilation of a contractor, and, for that matter, a subcontractor as well.

The criteria which are advanced are worse than useless.

Many hundreds of farmers, woodsmen, ranchers, and others in rural areas, sometimes as a vocation but most frequently as an adjunct of some other agricultural enterprise, harvest from a farm woodlot or other wooded tract sufficient growth to create a livelihood for themselves and an economy for the local community and others dependent upon them.

By the very nature of the work and circumstances they are small, and they are independent producers or contractors. They have no means of disposing of the products of their efforts save by arrangement or sale to a consumer such as the tie company.

Determination is largely left to the whim and caprice of the Administrator, depending upon the objectives which he seeks to obtain in the particular case:

1. *Control, for example.*—There is no control over any contractor save the end result, but there is always, and necessarily, some degree of contact which may be construed as a form of control.

2. *Permanency.*—How many times does the relationship have to be renewed to be permanent? There is a tendency to renegotiate with a satisfactory contractor. Does it require three or a hundred of these to be permanent?

3. *Integration.*—All work is integrated. One of the recent cases holds that a window cleaner is integrated because it is necessary to keep the window clean if the machinist is to run the machine inside the factory. Another case holds that the manufacturer of grain doors is integrated with railroading.

4. *Skill.*—Who can appraise the skill of the unlettered woodsman who appraises the board-foot content of the standing tree, or the cross-tie potential of an irregular log lying on the sawmill carriage?

5. *Investment.*—How much investment? All a tie hewer needs is a broadax. Is this sufficient investment in facilities? Under present concepts it has been and will probably continue to be ruled out, although it represents 100 percent of the necessary capital.

And finally, how many of these criteria need be present to constitute the line of demarcation between a "contractor" and an "employee." No one knows. No one can tell from the amendment. It is the combination of some uncertain number of these that produces what is referred to as an over-all picture, which is nothing more than an emotional judgment. These are not definitions. They are substitutes for definitions. These are not criteria. They are facilities for shoring up a result.

After these amendments were in effect a short time the only contractor or subcontractor that would be accepted under them would be a freak.

To reach into our economic system and destroy the contractor relationship is to so dislocate our economy that from a production standpoint the consequences are wholly unforeseeable. The destruction of independent enterprises, moreover, would be devastating.

Our national history and the history of this industry is replete with examples of young men in wooded areas seeking at first employment, then a smallmill, then a tract of timber, and finally an independent yard, until he provided himself and the community in which he lived with substantial employment and independent economic security.

There is no possibility for his survival under this amendment because he cannot assume the responsibility of dealing with hundreds he cannot see as "employees," nor can those with whom he is accustomed to deal undertake to assume the responsibility not only for him but for those whom he employs.

Yet that is the net eventual result of this change of definition.

NECESSITY

If there were any necessity for this field being explored there might be some justification for hazarding some of the risks involved. But we state as a matter of fact that—

1. The change in definition would not extend the coverage of the act to any person not otherwise covered; and

2. The change in definition in the act would not increase the amount of benefit paid to any person who was covered.

All of the persons who could possibly be covered are either employees of someone and as such covered by the present act or are self-employed and as such would be covered by the other provisions providing for coverage of self-employed persons.

Moreover, the bill provides that despite different tax rates for employees and self-employed persons, the benefits payable to each are identical. We have read with some interest the discussion before this committee by Mr. Robert E. Canfield, who represented the American Pulpwood Association, an industry closely akin to ours, in which he outlines the payment of benefits under paragraph 4. It is our opinion that his conclusions are sound. For the sake of brevity and to avoid repetition, we incorporate as a part hereof all of the argument and the conclusions which he arrives at thereunder.

What possible reason is there for self-employed persons being covered differently than other self-employed persons, and what difference does it make whether a person is covered as an employee or whether he is covered in some other manner. If a person is covered, he is covered.

It can only be concluded that the purpose of making these amendments is solely for the convenience of the Administrator and the Treasury in enforcement. The only objective than can be adduced from such a change of definition is to undertake to shoulder upon others responsibility for thousands over whom they have no supervision or relationship to accommodate the convenience of enforcement officials. In the light of the consequences to our industrial system

and to the hundreds of thousands of workers who entertain the hope and aspiration of bettering their economic life by establishing a small independent unit, the ills that will flow from such a change are overwhelming as compared with the achievement of this one dubious result, to wit, the featherbedding of enforcement.

This is no new undertaking. The House committee recommendations are reliably and accurately reported to have been influenced, if not dominated, from the enforcement agency. This is also currently reported to be true of the Advisory Council report to this committee. Let the results speak for itself.

The Administrator has previously interpreted the word "employer" in the pattern heretofore used and the National Labor Relations Board has undertaken to follow it. The Wage and Hour Division have similarly urged it for the same purpose and succeeded in having it engrafted into dicta in an opinion of the Supreme Court. Congress promptly ordered it otherwise. Then the Administrator and the Treasury Department undertook it again until Congress specifically ordered otherwise. This, then, represents the third trial. In view of the fact that many of the definitions employed by the other agencies of Government in social legislation have their root in the definitions of the Social Security Act, it is highly important that this committee weight both the considerations which prompt this persistent effort to alter a fundamental business relationship and the need for it and benefits to be derived therefrom.

From the standpoint of the individuals involved as well as the endless dislocations to industry which will follow, and particularly to industry engaged in the production of wood products, it is quite necessary for this committee gain to repudiate this unwarranted and fundamental change. Nothing has occurred in recent months nor has anything been adduced from the records of these proceedings which indicates a change of condition or a present necessity for the amendment to the word "employee," and we respectfully urge this committee not to adopt the amendment.

BOSTON HOUSING AUTHORITY,
Boston, Mass., March 22, 1960.

Senator GEORGE,
Chairman, Senate Committee on Finance,
United States Senate, Washington, D. C.

GENTLEMEN: I wish to place the Boston Housing Authority, a political subdivision of the Commonwealth of Massachusetts, on record as favoring H. R. 6000. However, I regard section 218 of H. R. 6000 as not quite as apt as it might be insofar as our authority and other local authorities in the Commonwealth of Massachusetts are concerned.

Chapter 121 of the General Laws of Massachusetts states: "A housing authority may enter into a compact or compacts with the Social Security Board or take such other action as it may deem appropriate to enable its employees to come within the provisions and obtain the benefits of the Social Security Act."

"If the employees of a housing authority shall come within the provisions of the Social Security Act, their employment shall be included in the term 'employment' as used in sections 1 to 7, both inclusive, of chapter 151A." (Ch. 151A is the Massachusetts Unemployment Insurance Act).

Inasmuch as our State legislature has already granted the right to an authority to enter into a compact with the Social Security Board, I feel that the Federal Legislature should permit the Social Security Administrator to deal directly with an authority and not through the Governor. Accordingly, I recommend that section 218 be amended by adding to section (k) the following:

"Where State law permits, the Administrator may, at the request of any political subdivision of a State, enter into an agreement with such political subdivision for the purpose of extending the insurance system established by this title to services performed by individuals as employees of such political subdivision. Such agreement to the extent practicable shall be governed by the provisions of this section applicable in the case on an agreement with a State."

As your committee is aware, the trend throughout the United States is to broaden the scope of the Social Security Act so as to cover employees such as ours. Our employees are not protected by civil service. Until 1948 they were not covered by any retirement system. In 1948, however, a law was enacted which permitted them to join the State retirement system. This year our State

law is again being broadened so as to permit our employees to enjoy the benefit of the employment security law. There is presently pending in our State legislature a bill, H–208, which will make this possible. It appears very likely that this bill will be enacted.

This proposed legislation is in line and in harmony with legislation enacted in Wisconsin, New York, Texas, Arizona, Kentucky, Montana, Nevada, Tennessee, and California.

If our State is willing, and our local authorities are willing, and the people employed by them are willing, to enter the social security service, then I feel that your committee should heed their request and allow them to participate in and enjoy the benefits of this liberal, progressive legislation.

In conclusion, let me commend you for the excellent work your committee is doing.

Very truly yours,

JOHN CARROLL, *Member.*

GEORGE A. MEYLS, JR.

Reference: Social security extension

CHAIRMAN OF THE FINANCE COMMITTEE,
United Seates Senate, Washington, D. C.

DEAR SIR: The Honorable Senator Herbert R. O'Conor has stated that if I will put into writing my views on social security, you will have them become part of the record. I hope they will not become so far buried that no attention will be paid to them.

From the time of inception of the Social Security Act which my records indicate was January 1, 1937, until about 1945, I was a subscriber to the fund and, of course, was eligible for its benefits.

Since 1945, I have been operating as an individual, doing a commission and wholesale business, and I have tried in every way to continue payments for my credit to the Board and I am prohibited by law from doing this as an individual even though I was perfectly willing to pay both the employee and the employer payments. I even went so far as to try and pay these through one of the corporations I represent, but I was told it was illegal for them to handle this for me.

Unless there has been some change in recent years, the maximum salary which is taxable under social security is $3,000 per anum which broken down into taxes prior to January 1, 1950, meant the employee and the employer each paid $30 per year or a total of $60. Since January 1, 1950, I understand this amounts to 1½ percent each or a combined total of $90 per annum.

As far as I can see, what the Government should be interested in is receiving this $90 per wage earner and what difference would it make to them if they receive this $90 from the United States Steel Corporation or Joe Doakes, the taxpayer. Because I am an individual and not organized, I cannot see why I am not allowed to participate in this old-age benefit.

I pay very heavy personal income taxes and the many, many, other hidden and excise taxes. I mention this because of the fact, if the time ever comes when payments into social security are not sufficient to meet the outgo, I believe the answer can only mean funds from the general tax receipts.

Reiterating again, gentlemen, I do want to participate in the old-age benefits in the social security fund and am perfectly willing to pay to the Government all of the funds they would receive were I employed by a large corporation. Being an individual, I cannot see why it is not possible for me to participate in these benefits. I am confident there are thousands and possibly millions occupying the same position as I do.

Thanking you for the opportunity of submitting my views and trusting you will act favorably upon them, I am

Most respectfully,

G. A. MEYLS, Jr.

STATEMENT BY CERTAIN AMERICAN NEWSPAPERS PUBLISHERS CONCERNING H. R. 6000

NEWSPAPER BOYS AND NEWSVENDORS

In 1939 newspaper boys under 18 years of age were excluded from the provisions of the Social Security Act by unanimous action of the Congress, and such exclusion continues as part of the law today.

In addition, during the first session of the Eightieth Congress, both Houses of Congress by unanimous consent passed a bill excluding news vendors from the Social Security Act and from the Internal Revenue Code, only to have the bill vetoed after adjournment of Congress, leaving no possibility for action upon the veto. Upon reintroduction in the second session of the Eightieth Congress, the bill again was passed in the House and in the Senate by unanimous consent. Again the bill was vetoed, but was passed over the veto by a big majority (304 to 28 in the House; 76 to 7 in the Senate).

When the bill leading to present H. R. 6000 was introduced in the House, the existing exclusion for newspaper boys under 18 years of age and the existing exclusion for news vendors were omitted.

The House Ways and Means Committee, however, restored these specific exclusions, and, in accordance with recommendations of that committee, these exclusions remain a part of H. R. 6000 as passed by the House, found in section 210 (a) (16) (A) (B) at pages 42 and 43 of the bill.

We believe that the equity and history behind these specific exclusions fully justify their continuance in the present law, and respectfully urge that the Senate confirm these exclusions as they now stand in H. R. 6000.

DEFINITION OF EMPLOYMENT

Since the beginning of social security legislation, the accepted common law definition of "employee" has been applied in determining the employment status of the individual. Under this definition there have been thousands of judicial and Treasury Department decisions establishing precedents in specific cases. Added to these are the vast body of judicial and administrative common-law decisions under State unemployment laws, State workmen's compensation laws, Federal wage-and hour-laws, Federal and State labor laws, tort law and related fields. There is no present reason for discarding this pattern.

Nevertheless, in November of 1947, the Commissioner of Internal Revenue issued a proposed set of regulations under which a greatly expanded area of coverage was contemplated through the device of a confusing and unrealistic definition of so-called economic reality. To prevent the Department's placing these proposed regulations in effect, the Congress passed a law specifically continuing in effect the status quo common law definition, at the same time making it clear that the Bureau had gone far beyond the legislative intent of the Congress in these proposed regulations.

This law, and the long-standing common law definition of employee is to be repealed by the present H. R. 6000 now under consideration by the Senate. Under the provisions of this bill, the definition of "employee" would be thrown into the field of so-called economic reality and outside the boundaries where precedents and decisions serve as a time-honored guide.

The proposed definition is fraught with the possibility of endless and expensive legislation, uncertainties, and the vagaries of never ending departmental or bureaucratic interpretations. It would discard hundreds of years of stabilized judicial procedent for an inequitable new concept which might require several more centuries to define.

We respectfully ask that the Senate and the members of the Finance Committee reinforce this legislation, H. R. 6000, with the certainty and equity which must always be the bulwark of any successful tax law; that it be free of the inequalities and injustices which will gnaw at and undermine the people's favorable option of the social-security system; that is retain a definition of "employee" which contains solid criteria establishing the status of an individual based upon decisions rendered under the common law; that the Congress amend H. R. 6000 by eliminating the proposed definition and by expressing in certain and final terms its unequivocal intent to retain the common law definition of "employee."

ADVANCE ALUMINUM CASTINGS CORP.,
Chicago, Ill., March 23, 1950.

Re social-security bill. H. R. 6000.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: On December 29, 1949, we wrote you regarding the above bill. Now that the bill is being considered by the Senate committee, there are two or three points we would like to specifically draw to your attention regarding the status of self-employed people known as direct-selling salespersons.

1. We believe the definition of "employee" should be the usual common-law rule as set forth in subparagraph (k), subsection (2) of bill H. R. 6000 and subsections (3) and (4) should be eliminated.

2. We believe section 210 (a) 18, which excludes services performed in the sale and distribution of goods for others, should end with the word "commodities" and would therefore read as follows:

> "Service performed by an individual in the sale or distribution of goods or commodities for another person, off the premises of such person, under an arrangement whereby such individual receives his entire remuneration (other than prizes) for such service directly from the purchasers of such goods or commodities."

3. We believe self-employed people are amply covered under section 211 of this bill.

As the bill is presently written, there will be confusion, court tests, and an extremely complicated situation. It passes to administrative agencies powers

which we believe are not essential or necessary. Congress will give us a definite pattern which is clearly understood in business circles, as well as in the courts, if the above suggestions are followed.

Our suggestions would not decrease the scope of coverage, would not give administrative agencies undue legislative powers, would keep legislative power in this connection in the Congress, and would provide the direct-selling industry with a rule which is practical, logical, and fully understood.

For further detail of our views substantiating our thoughts given herein we refer you to our original letter, copy of which is attached.

As you realize, this legislation is of major importance to the direct-selling industry and we therefore ask that you please give our proposals your serious deliberation and studied consideration.

Very truly yours,

G. L. HEFNER, *Treasurer.*

ADVANCE ALUMINUM CASTINGS CORP.,
Chicago, Ill., December 29, 1949.

Re social-security bill, H. R. 6000.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: We respectfully ask your careful consideration of the status of self-employed people, known as direct-selling salespersons, in connection with the above-entitled pending bill which would comprehensively amend the Social Security Act. We believe such people should not be considered in "employment" and should not be classified as "employees" under section 210.

The above-entitled bill in the form in which it passed the House considerably broadens the scope of coverage and redefines exemptions so as to include many persons who have been historically considered not to be employees. The classification of such class of persons as employees would tremendously add to the financial burden imposed upon the employers (both directly and indirectly) and would eventually lead to substantial increases in the cost of every manufactured article, a situation which everybody (including those clamoring most loudly for amendment) are anxious to avoid.

We are concerned, however, mostly with those portions of the amendments dealing with those types of salespersons who have historically been considered to be independent contractors. We market one of our products (Miracle Maid cookware) under a form of written contract through dealers operating in various States, which contract provides for the sale of our products to such dealers and the resale thereof to their customers. The difference in the cost to them and the resale price represents their gross profit. They own and operate their own automobiles, purchase their own sample equipment, hire their own assistants (who are unknown to us), bear all their own expenses, and, outside of the fact that they usually do not lease store space, are exactly in the same category as local retail stores who handle other products produced by us.

Section 210, which deals with the definition of "employment" and with exemptions from employment, has been very comprehensively amended so as to limit and restrict many of the exemptions heretofore made under the act. We are concerned primarily with section 210 (a) 18, which excludes services performed in the sale and distribution of goods for others and reads as follows:

> "Service performed by an individual in the sale or distribution of goods or commodities for another person, off the premises of such person, under an arrangement whereby such individual receives his entire remuneration (other than prizes) for such service directly from the purchasers of such goods or commodities, if such person makes no provision (other than by correspondence) with respect to the training of such individual for the performance of such service and imposes no requirement upon such individual with respect to (*a*) the fitness of such individual to perform such service, (*b*) the geographical area in which such service is to be performed, (*c*) the volume of goods or commodities to be sold or distributed, or (*d*) the selection or solicitation of customers."

If such paragraph had ended with the word "commodities" so that it would read as follows:

> "Service performed by an individual in the sale or distribution of goods or commodities for another person, off the premises of such person, under an arrangement whereby such individual receives his entire remuneration (other than prizes) for such service, directly from the purchasers of such goods or commodities"—

it would furnish a definite and certain criterion for application of the law and would not lead to dispute as to the scope of such exemption.

As presently phrased (even when read in the light of the definition of "employee" upon which we will hereafter comment) it is sufficiently comprehensive in its scope to include many distributors and dealers who are as much in business for themselves as any local retailer. In fact, the exemption provision might be interpreted (especially in view of the "liberal" attitude with which the courts are prone to construe the provisions of the Social Security Act) so as to include local retailers of many classifications who are engaged in the business of selling goods for others.

In addition to the limited exclusion found in section 210 (a) 18 the pending bill redefines "employee" in such a manner as to include many persons not historically considered to be employees and who, by any generally accepted definition of such term, cannot be so considered. The proposed definition of employee which is found in subparagraph (k) of section 210 reads as follows:

"(k) The term 'employees' means—

> "(1) any officer of a corporation; or
>
> "(2) any individual who, under the usual common-law rules applicable in determining the employer-employee relationship, has the status of an employee. For purposes of this paragraph, if an individual (either alone or as a member of a group) performs services for any other person under a written contact expressly reciting that such person shall have complete control over the performance of such service and that such individual is an employee, such individual with respect to such service shall, regardless of any modification not in writing, be deemed an employee of such person (or, if such person is an agent or employee with respect to the execution of such contract, the employee of the principal or employer of such person); or
>
> "(3) any individual (other than an individual who is an employee under paragraph (1) or (2) of this subsection) who performs services for remuneration for any person—
>
> "(A) as an outside salesman in the manufacturing or wholesale trade;
>
> * * * * * * *
>
> "(G) as a house-to-house salesman if under the contract of service or in fact such individual (i) is required to meet a minimum sales quota, or (ii) is expressly or impliedly required to furnish the services with respect to designated or regular customers or customers along a prescribed route, or (iii) is prohibited from furnishing the same or similar services for any other person—

if the contract of services contemplates that substantially all of such services (other than the services described in subparagraph (F) are to be performed personally by such individual except that an individual shall not be included in the term 'employee' under the provisions of this paragraph if such individual has a substantial investment (other than the investment by a salesman in facilities for transportation) in the facilities of the trade, occupation, business, or profession with respect to which the services are performed, or if the services are in the nature of a single transaction not part of a continuing relationship with the person for whom the services are performed; or

> "(4) any individual who is not an employee under paragraph (1), (2), or (3) of this subsection but who, in the performance of service for any person for remuneration has, with respect to such service, the status of an employee, as determined by the combined effect of (A) control over the individual, (B) permanency of the relationship, (C) regularity and frequency of performance of the service, (D) integration of the individual's work in the business to which he renders service, (E) lack of skill required of the individual, (F) lack of investment by the individual in facilities for work, and (G) lack of opportunities of the individual for profit or loss."

May we suggest that this definition could appropriately end with paragraph (2) of subparagraph (k) quoted above if our suggested revision of section 210 (a) 18 were adopted. If it is desired that the scope of the "employee" relationship be enlarged (and we see no necessity therefor) in view of the express inclusion

of "self-employed" persons under the act, then both paragraph (G) and subparagraph (4) of such section should be modified to include an exception reading substantially as follows:

> "except that an individual shall not be considered in employment under this paragraph, if service performed by the individual be in the sale or distribution of goods or commodities for another person, off the premises of such person, under an arrangement whereby such individual receives his entire remuneration (other than prizes) for such service directly from the purchasers of such goods or commodities."

May we point out generally that the inclusion of complicated and comprehensive definitions of this nature is bound to lead to many court tests of the meaning of the language which would place additional burdens on employers and subject them to the hazard of contingent liability, which may be substantial in the event of adverse rulings. It will also lead, we are sure, to differences between the Social Security Board and the Internal Revenue Department as to interpretation of the law which will further complicate the situation with respect to the position of the employer.

Please understand that we are not opposed to social security for all gainfully employed persons. If it is the wish of the Congress that coverage be extended along the lines suggested in the pending bill, such extensions can (so far as situations in which salespersons of the nature to which we are referring are concerned) be effected by including such persons in the self-employed group to which coverage is to be extended and to which they logically belong. By this simple method, the scope of coverage would be unchanged but the burden of attempting to establish and maintain a pay-roll system by direct-selling companies for direct-selling representatives would be eliminated.

May we point out further that a pay-roll system of any substantial accuracy whatsoever is impossible for direct-selling persons by the very nature of the business in which they are engaged. For example:

1. The gross earnings of such salespersons cannot be accurately determined especially where (as in our situation) such earnings consist of the difference between the price at which the product is sold to the salesperson and the price at which he resells to his customers, and such salesperson pays all his expenses.

2. Expenses of these salespersons cannot be accurately determined or controlled because such expenses vary according to the efficiency of the individual salespersons.

3. The net earnings from which the taxes to provide funds for social security payments are derived cannot be accurately determined because:

(*a*) The net earnings constitute the difference between the price at which the product is sold to the salesperson and the price which he obtains from his customers, less his expenses, and the gross earnings and expenses will vary from individual to individual.

(*b*) Even though we might be able (to some extent) to determine the gross earnings which a particular salesperson might make, the net earnings could not be determined with any degree of accuracy because we would have to rely upon reports from the salesperson as to the amount of his expenses and these expense reports are, generally speaking, inaccurate.

(*c*) The interest of such salesperson would be directly opposite to that of the company and there would be an incentive on the part of the salesperson to pad his expenses and understate his earnings.

(*d*) Under the contract with which our salespersons operate, it is practically impossible for us to determine the net earnings, and we would thus be subject to inquiries and investigations by the Internal Revenue Department and the Social Security Board—especially in those instances where the individuals involved would make an accurate report for income tax purposes but an inaccurate report to the company for social security purposes.

(*e*) Many direct salespersons handle various lines of merchandise. Thus, under the bill as proposed, the various companies for which such salespersons would operate would have to make reports and pay taxes on the earnings of the same individuals.

(*f*) Under the arrangement between ourselves and our direct sales representatives, the company never comes into the possession of any of the earnings of the salespersons and has no means of withholding moneys from earnings to cover the taxes imposed. The result of this will be that the company will have to try to devise some system of collection from the various salespersons involved, which, of course, cannot be 100 percent effective. The company will thus be required to pay a double portion of the tax for those persons from whom it cannot collect.

In this connection may we point out that effective functioning of a direct sales relationship requires that the earnings of the salespersons be retained directly by them and that the pending bill will require changing of this system in order that the company may come into possession of moneys from which the tax may be paid.

It does not seem probable that the Congress desires to set up legislation that is difficult or impossible of operation in order to obtain a coverage that may be desirable, when such coverage can be obtained through the operation of the coverage of self-employed persons—in which class these salespersons historically and logically belong.

The classification of these persons as employees would lead to many other difficulties and problems for the employer which are, for practical reasons, incapable of solution.

1. *Federal income tax withholding.*—The employer (if these persons were employees) would be required to collect and withhold taxes under the Federal income tax law. As we point out above, direct selling companies do not—and cannot by the very nature of their business—come into control of the direct salespeople's earnings. There would, thus again be presented a major collection problem and the employer would undoubtedly be subjected to considerable loss because of the impossibility of collecting from these salespersons.

2. *Use and sales taxes.*—The employer may be subjected to sales and use tax laws of the various States and many municipal corporations. Under the system now in operation, self-employed people take care of their own problems as to these taxes, and are liable for reporting on and paying the same. Transposing these persons into employees would place a burden upon the company to collect and report on these taxes (for which funds in many cases would not come into the employer's possession), and the employer would again become subject to added burdens and a grave possibility of monetary loss.

3. *State income-tax withholdings.*—Classification of these persons as employees would require the employer to comply with many States' laws as to income taxes with withholding tax provisions for individuals. Here again the employer would be faced with the problem of collection and with obtaining funds for which to pay the various amounts which it would be required, under the State income tax laws, to withhold.

4. *Tort liabilities, property damage, and so forth.*—Classification of these persons as employees would subject the employer to many lawsuits and possible liability for various tort liabilities, such as personal injuries, and for property damage occasioned to third persons by reason of the operations in which the salesperson is engaged.

5. *Corporate income tax liability.*—If these persons are classified as employees, there is grave danger that the direct selling companies will be held to be doing business in the States in which their various salespersons operate, and such companies would be subjected to the payment of State franchise and income taxes in situations in which they would not now be liable.

6. *Personal property taxes.*—Many of these salespersons carry a merchandise inventory. If the salespersons were classed as employees, the company would become responsible for the reporting and paying of personal property taxes on the inventory which is "owned" by the salespersons.

7. *Dishonest salespersons.*—Under the presently existing arrangement, salespersons would be the ones responsible and liable for their own dishonest and improper personal acts. Under an employer-employee set-up there is a grave possibility that the company would be held to be liable for these personal acts of the salespersons.

In general, the company would be subjected to all of the difficulties and problems outlined above in a situation where (historically and for practical reasons) it cannot control the activities of the salespersons. The reasons why such control cannot exist are briefly stated as follows:

1. Such salesperson cannot be supervised or observed in his work which is always performed outside of the premises of the company, and with no direct supervision from the company.

2. The number of hours which he works and the time or times in which such work is performed cannot be checked for the reasons set forth in the preceding paragraph No. 1.

3. The activities (dishonest, immoral, etc.) in which he may engage while operating his business cannot be controlled by the company.

We wish further to point out that some of the tests laid down to determine whether or not a person is an employee are not relevant to the definitions of employment or employee. For example, section 210 (a) 18 reads as follows:

"Service performed by an individual in the sale or distribution of goods or commodities for another person, off the premises of such person, under an arrangement whereby such individual receives his entire remuneration (other than prizes) for such service directly from the purchasers of such goods or commodities, if such person makes no provision (other than by correspondence) with respect to the training of such individual for the performance of such service and imposes no requirement upon such individual with respect to (A) the fitness of such individual to perform such service, (B) the geographical area in which such service is to be performed, (C) the volume of goods or commodities to be sold or distributed, or (D) the selection or solicitation of customers."

We do not believe the matter of training, whether by correspondence or otherwise, has any bearing on whether the salesperson functions as an employee or as a self-employed individual, or as a purchaser for resale to his own customers. We believe the line in parentheses "(other than by correspondence)" is not a gage of employment. We also believe that "(B) the geographical area in which such service is to be performed" and "(C) the volume of goods or commodities to be sold or distributed" are not gages of employment. We see no reason why a contract for sale of merchandise to an individual for resale cannot also have such stipulations and there be still no question of the independent nature of the relationship.

Section 210 (k) (3) (G) brings out sales volume to be sold and investment other than transportation. Neither of these are indicative of an employee relationship. As we all know, many distributor or dealer businesses of great magnitude have grown from a very small initial investment. These should not be included as requirements because the agreement could be one of sale to an individual for resale and still include both points.

Section 210 (k) (4) brings out regularity and frequency of performance of service, integration of the individual's work in the business to which he renders service, and lack of investment by the individual in facilities for work. As stated above, these are not indicative of any employee relationship and could very easily be part and parcel of an agreement whereby an individual buys merchandise for resale to his customers.

Your thoughtful consideration of the above when social-security bill, H. R. 6000, comes up for action will be greatly appreciated. In your consideration of this problem, generally, let us point out that many of the recent so-called social reforms which have been enacted into law have been made without adequate thought being given to the economic and practical difficulties which confront the honest employer in his endeavors to comply therewith, and of the practical consequences upon all citizens, including both the employees and the employers.

Very truly yours,

G. L. HEFNER, *Treasurer.*

SIMPLIFYING THE WORK REQUIRED OF EMPLOYERS AND THE GOVERNMENT IN ADMINISTERING THE WITHHOLDINGS FOR SOCIAL SECURITY TAXES AND INCOME TAXES

(Statement of Harry C. Gretz, Representing a Special Committee of the Controllers Institute of America)

Mr. Chairman and members of the Senate Finance Committee, my name is Harry C. Gretz. I reside at South Orange, N. J., and I represent the Controllers Institute of America. In addition to being a member of the institute, I am a member of its national board of directors and of its national tax committee. I am also chairman of a special committee on income and social-security-tax withholdings.

Just a word about the Controllers Institute. It was founded in 1931 by a group of 19 controllers of the larger corporations in the country. In the 19 years of its existence, it has expanded to a membership of over 3,600 representing some 2,700 different companies. It now has 43 local branches known as controls, which cover the whole United States and parts of Canada.

The institute is a technical and, in a sense, a professional organization. It stands for the observance of the highest ethical standards in corporate accounting

practice and in the reports of financial and operating conditions of corporations to their directors, stockholders, governments, and other interested parties.

The institute undertakes, through its national committees, to keep informed as to requirements of the Federal Government for information required from business and to represent the membership before Congress and governmental agencies in connection therewith.

I appreciate this opportunity to appear before your committee to discuss some of the problems associated with the mechanics of withholding, from the pay of each employee each pay period, certain amounts required by the Federal Insurance Contributions Act and other amounts required by subchapter D of the International Revenue Code—Collection of Income Tax at Source on Wages.

This is the second time I have had the privilege of appearing before you in connection with withholding. On August 11, 1942, I appeared before your committee to urge the adoption of the so-called wage-bracket withholding tables to be used in lieu of the actual determination to the nearest cent of the withholdings of the 5 percent victory tax under H. R. 7378. That suggestion was followed in that act, and even though the code has been amended several times since then and the withholdings for income-tax purposes have been greatly expanded, wage-bracket tables have been incorporated in all such later acts.

My purpose in appearing before you today is to urge further simplification in the work required of employers as tax collectors for the Government—not to recommend any increase or decrease in the amount of a tax. To summarize briefly, I urge amendments to the present Federal Insurance Contributions Act and the Internal Revenue Code to accomplish the following:

(*a*) Permit employers to make a single withholding from the pay of each employee each pay period, in lieu of separate withholdings for social-security taxes and income taxes. In lieu of separate withholdings, an allocation would be made annually of the total amount withheld to show the portion applicable to social-security taxes and the portion applicable to income taxes.

(*b*) Eliminate the necessity for furnishing the Government with quarterly information returns of the taxable wages paid to each employee under the Federal Insurance Contributions Act.

(*c*) Simplify the requirements for statements to employees and information returns to the Government by permitting the use of an annual statement which will show (a) taxable wages for social security, (b) social-security taxes withheld, (c) wages for income-tax purposes, and (d) income taxes withheld. The original of such statement would be furnished to the employee, with two copies being furnished the Government—one to be used for income-tax purposes and the other for old-age insurance purposes.

(*d*) Bring the definitions of "wages" for income-tax purposes and for social-security tax and benefit purposes into closer conformity.

WITHHOLDINGS FOR THE GOVERNMENT AMONG THE MOST COMPLICATED OF PAY-ROLL DEDUCTIONS

Most pay-roll deductions are flat amounts to be deducted from pay each pay period. However, the withholdings for social-security taxes and the withholdings for income-tax purposes require special computations or references to tables to determine the amount to be withheld.

In the case of social-security taxes prior to 1950, the computation was a relatively simple one. The rate was 1 percent computed to the nearest cent, which meant pointing off two decimal places to fix the amount. Now that the rate is 1½ percent, the derivation of the amount is not so simple. It means a multiplication or the use of a wage-bracket table in steps of 66⅔ cents to determine the amount to the nearest cent.

Even in social-security tax withholding there are some troublesome features, although not encountered each pay period. The $3,000 maximum taxable wages in any one year is one, and other definitions of "wages" also present some problems.

In the case of the income-tax withholdings, the computation of the amount is more complex. The tax rate is 15 percent of the amount by which wages exceed the number of withholding exemptions claimed, multiplied by an amount for each such exemption. However, the present laws simplify these computations for those employers who do not use certain types of computing machines by giving employers the option of using the wage-bracket tables.

To give you an idea of the number of withholdings which employers make in the course of the year, our committee obtained some data from 833 employers.

These data indicate that 63 percent of their employees were paid weekly; 14 percent biweekly; 18 percent semimonthly; and 5 percent monthly. There were a scattered few paid daily or at irregular intervals, and these were ignored. The average is between 41 and 42 pay periods a year per employee. If we assume an average of 1½ deductions per pay period for the 2 withholdings, that means about 60 withholdings a year per employee. For all employees subject to one or both withholdings, the total number will probably mean 2½ to 3 billion withholdings each year.

If we stop to consider that for each withholding we must determine or obtain from tables the amount to be withheld from the pay of each employee each pay period; make the deductions for these amounts; record the taxable wages and deductions; cumulate these amounts; prepare and make monthly tax payments to the Government; prepare quarterly wage information by individual employees under FICA; and prepare annual information returns showing wages and income tax withheld; and then multiply all these operations by 2½ to 3 billion withholdings a year—we can get a general idea of the volume of work employers are required to perform as tax collectors for the Government and we can also get a general idea of the work that must be done by the Government, at taxpayers' expense, to process all of the data supplied them. At the same time, we can get some idea of possible savings that would accrue to employers and the Government if only some of these operations could be eliminated.

ILLUSTRATING THE MAIN FEATURES OF COMBINED WITHHOLDING

Table No. 1 shows a comparison of combined withholding, with separate withholding for social-security (FIAC) taxes and income taxes (FITW). To illustrate, we take the case of an employee who is paid $45.50 weekly during the year and who claims three exemptions. Lines 1 through 4 show the present income tax withholding computed on the percentage basis. It will be noted that it is necessary, first, to obtain the amount subject to FITW by deducting from the gross wage an amount for claimed exemptions, figured at $13 each. To this net amount, a rate of 15 percent is applied. Line 5 shows the withholding taken from the wage-bracket withholding table. Incidentally, this brings out the savings to employers of using the wage-bracket withholding tables, as compared to the computations necessary on the percentage basis where employers do not use certain types of computing machines in connection with pay-roll work.

In addition to the income-tax withholdings, employers at present are required to compute a social-security witholding at 1½ percent of the gross wage (up to $3,000) or use a table in 66⅔-cent brackets to determine the amount. The social-security tax withholding in our illustration is shown on line 6.

The proposed combined withholding is shown on line 7 and taken from a wage-bracket table. This is in lieu of the two withholdings at present shown on lines 5 and 6. A necessary adjunct to combined withholding is the allocation at the end of the year, which is shown on lines 8 and 9. This is done by applying the 1½ percent rate to the annual wage, as defined in FICA, in order to arrive at the portion applicable to social-security taxes, the remaining portion of the combined withholding being deemed to apply to income taxes.

Our proposal also contemplates that the present W-2 forms, now showing the total wages and the amount of income tax withheld, be expanded to include the amount of wages as defined in FICA and the social-security taxes withheld.

Table 1 is intended merely to convey the general idea back of combined withholding, as distinguished from separate withholdings for social-security and income taxes. It illustrates the most simple case, namely, where wages for social-security and income-tax withholdings (before exemptions) are exactly the same.

Even under this illustration it will be noted that there are different amounts withheld, depending on the method of withholding. These differences are due entirely to rounding, as explained in the footnotes at the bottom of the table.

THE ADMINISTRATION'S TENTATIVE COUNTERPROPOSAL

After our committee had concluded there were potential savings in combined withholding, we presented our proposal to the institute's membership, with a large percentage of the membership voting being in favor of it. We then arranged joint meetings with all of the governmental agencies concerned. It was evident from the start that we were in agreement as to principle, although there were several features which required further consideration. At our request, repre-

sentatives of the Bureau prepared a tentative draft of proposed statutory provisions relative to the combined tax, including their ideas where we were not altogether in agreement.

Our proposal contemplated giving employers an option to use the combined withholding tables or to continue separate withholding under the present laws. Also, it left the matter open as to whether the tentative amount for social security under combined withholding should be based on the entire wages earned during the year or only on wages up to $3,000. The latter basis was preferred by the institute's committee, however, and several members of the committee came to feel that combined withholding would not be acceptable if it obliged employers to make current withholdings for social security on wages in excess of $3,000. The Government's proposal provided for currently ignoring the $3,000 limit and would make combined withholding mandatory with respect to all employees who are covered by FICA and who receive payments for wages subject to income-tax withholding which are not less than wages as defined by FICA, provided such payments do not include any amount on account of retirement except from wages under FICA.

For instance, employees of railroads would be excluded to the extent such employees are covered by the Railroad Retirement Act, and not by FICA. Also, employees who receive payments in kind (that is, living quarters or meals furnished for the convenience of the employer), which are wages under FICA but not for income taxes, would be excluded.

Under the Government's proposal, the definitions under income-tax withholding control where they are the equal of or greater than the wages as defined under FICA. For instance, combined withholding will be applicable to payments on account of sickness or accident disability, medical and hospitalization expenses or death payments, dismissal pay, and to the excess of wages over $3,000, all of which are not taxable under FICA.

However, the overwithholding during the year on account of applying the combined withholding to wages not taxable under FICA would automatically be made applicable to income-tax withholding. (See table II.) In such instances where the amount exempted for income-tax purposes exceeds the gross wages and the total withholdings are less than the FICA employee taxes (due to rounding), the amount withheld is deemed to be the amount due from the employee under FICA

PRINCIPAL POINTS ON WHICH THERE ARE DIFFERENCES OF OPINION

While a large majority of the institute members voting on our original proposal favored combined withholding, it should be pointed out that the proposal on which they voted contemplated the optional feature; that is to say, employers who so desired would have been free to continue making separate withholdings as at present. It was evident from the replies that a substantial number who favored the proposal as it was put up to them would not have favored combined withholding on a mandatory basis. Also, as I have previously indicated, there is difference of opinion in the institute's committee as to whether the current withholding for social security on the excess of wages over $3,000 would be, on balance, objectionable. As a matter of fact, these two differences of opinion are closely related because those of the committee who most urgently insist on the optional feature also oppose the current withholding for FICA on the excess over $3,000. Of course, with the option to continue separate withholding under the present laws, there would be no withholding on the excess over $3,000 where such option is exercised.

In the first meeting of our committee it was brought out that determining in what pay period the $3,000 was reached, applying the 1½ percent on the portion of the wage in that pay period which, when accumulated with prior wages during the year, would exactly total $3,000, and then making sure there were no further withholdings for FICA purposes, constituted quite a problem in the mechanics of social-security tax withholding.

When we submitted our draft of the proposal to the institute's membership, we mentioned that there were two ways to avoid that particular problem. One way would set up a table which would use the 1½ percent rate on the total wages up to the point where the rate was equal to $3,000, and, beyond that, to use a prorata of $45 a year (1½ percent of $3,000) applicable to the particular pay period.

The other way would be to ignore the $3,000 limitation for withholding purposes and at the year end use any excess as an additional income tax withholding.

Where the employee earns more than $3,000 in a year, this second way would overwithhold; whereas, if an employee earning at a rate of more than $3,000 failed to earn $3,000 in a year, the former method would underwithhold.

Either of these two methods would not only save time where the withholding tables are used, but the second method would also save time where the larger companies use certain types of computing machines which automatically apply the percentage method.

As previously mentioned, the Government's tenative statutory proposal makes mandatory a combined withholding formula which ignores the $3,000 maximum whether the withholdings are based on the percentage method or whether they are set up in withholding tables.

It is only fair to state that the Government's position regarding the mandatory requirements stems from the premise that options should only be used where the results under different plans are substantially the same. Consequenly, they object to an option which would result in substantially different withholdings under a similar set of facts. There is considerable merit in that position, and some employers have advised our committee that they did not want to be put in the position of being forced to exercise an option where the results would be substantially different.

There was one other point raised by some of the members, bearing on the question of an option to use separate withholding. This point is that the extra work at the year end of allocating the combined withholding and preparing the enlarged information statements for each employee came at a peak-load time, which would make it particularly burdensome to meet the dead line for furnishing such statements. In this connection, it is noted that the present law permits the Commissioner to extend the time for a period not exceeding 30 days. A reasonable administration by the Commissioner of this provision should mitigate this objection to the mandatory requirement.

Because most of the differences of opinion narrow down to the objections stemming from overwithholding of FICA taxes on wages in excess of $3,000, it appears desirable to set forth the possible extent of this overwithholding.

Table III illustrates the extent of possible overwithholding due to applying the 1½ percent on wages in excess of $3,000 per year, where taxpayer earns at the same rate during the entire year. The table assumes a joint return, because the overwithholding is less under a separate return. The overwithholding begins when rate of pay reaches $3,000 per year. Beyond this and up to the wage level where the second-bracket income-tax rate begins to apply, the amount of the overwithholding increases as the wage level increases. Because the income-tax portion of withholding reflects only the first-bracket rates, the overwithholding reaches a maximum at the wage level where the second-bracket rate begins. And because exemptions have the effect of increasing the wage level where this second-bracket rate begins, the amount of the possible overwithholding increases as the number of exemptions increases.

For instance, for any number of exemptions not less than two, the overwithholding increases progressively as the rate of pay increases from a weekly pay of about $58 a week to a weekly pay of about $111. Beyond this point, for an individual with two exemptions filing a joint return, the additional tax liability growing out of the second-bracket income-tax rate progressively reduces the overwithholding to a point about $196 a week, where there it is completely exhausted and beyond which underwithholding comes into the picture. The maximum overwithholding for such individual is about $42 a year.

For an individual with 10 exemptions filing a joint return, the overwithholding increases progressively as the rate of pay increases from about $58 a week to about $213 a week. At this rate, the maximum overwithholding for such individual reaches slightly more than $120 a year. As the rate increases beyond $213 a week, the overwithholding becomes progressively less as the total taxable income is subject to higher surtaxes and will be exhausted when the rate is the equivalent of about $335 a week.

HOW SERIOUS IS OVERWITHHOLDING DUE TO IGNORING THE $3,000 MAXIMUM UNDER FICA?

The following attempts to summarize the reasons back of the objection to mandatory combined withholding which will withhold on FICA wages in excess of $3,000:

(a) It is unfair to employees to take out of their pay any more than is absolutely necessary.

(*b*) Employees should be currently conscious of what part of their pay each pay period is taken out for social security and what part is taken out for income taxes.

(*c*) Combining FICA taxes which are imposed to offset the cost of old-age insurance with income taxes which go into the general revenues of the Government may result in a trend of thinking that old-age insurance be financed out of the general revenues.

(*d*) Ignoring the $3,000 wage limit in current withholding may be taken as an argument in favor of broadening the base.

As to the first point, quite a few employers express themselves as being reluctant to be a party to any proposition that would take more out of the pay of their employees than is absolutely necessary. Even though it would be done as a result of governmental action, they feel that their employees would resent the fact that the employer has suggested it to the Government. This point is well taken and needs very serious consideration.

There is a strong tendency toward overwithholding in the withholding requirements for income taxes under the present laws. This grows out of the fact that an individual's exemption allowances are prorated over the pay periods. For each individual who has taxable wages in one or more pay periods, but who in other pay periods has no wages or wages less than his exemption, there is overwithholding. (See table IV.) Of course, this does not apply where the net taxable income for the full year gets into the upper surtax brackets as, in such cases, there is underwithholding with such employees being required to make a declaration of their estimated tax liability and withholding and to make quarterly payments against any excess of tax liability over the withholding.

Because of the tendency under the present laws toward overwithholding for large numbers of workers, we asked the only group we believed were in a position to obtain employee reaction to overwithholding. This was the Bureau of Internal Revenue, which makes about 30,000,000 refunds each year to individual taxpayers on account of excessive overwithholdings. The Bureau's experience is that taxpayers have no gripes because more was taken out of their pay than was necessary and that they are more than pleased to get a lump-sum windfall when the refund comes around. It is possible that this reaction can be explained because the overwithholding was a sort of forced saving with all of the benefits that go with savings.

Among the group where the tax liability exceeds the withholding, there are, as time goes on, more and more employees who deliberately underclaim exemptions so that more of their tax liability will be taken out of their pay before they get it and that there will be that much less to make up in their quarterly payments. This is a strong indication that employees in this class would have no objection to theoretical overwithholding under FICA if the excess is applied to their income-tax liability.

These are the pros and cons, as our committee sees them, with respect to employee reaction to overwithholding more social-security taxes than is absolutely necessary. Our committee could not come to any unanimous conclusion on this point, but we are willing to abide with whatever decision your committee arrives at.

Points (*b*), (*c*), and (*d*) appear to require no further explanation. Your committee is well qualified to weigh these considerations against other factors which also have a bearing. We do wish, however, to point out that our recommendation for combined withholding should not be taken as an endorsement that old-age insurance benefits should be financed out of general revenues or as an endorsement of any increase in the base beyond the present $3,000 annual maximum.

To sum up the question of combined withholding and to make our position as employers perfectly clear: There are substantial savings in costs inherent in combined withholding and greater savings if the withholding formula contemplates ignoring, during the year, the differences in the definition of wages, of which the most important is the $3,000 maximum wage under the FICA. But we do not favor combined withholding unless Congress finds that the excessive FICA overwithholding during the year (which at the end of the year will be applied to income tax withholdings or subsequently refunded by the Government) is not objectionable to the employees, since it is the employees' pay out of which the excessive overwithholding is taken.

QUARTERLY INFORMATION RETURNS

A relatively large number of employers who wrote us regarding the proposal for combined withholding, which was submitted to the institute's membership, asked whether something could be done to relieve them of quarterly information returns of FICA wages for both Federal old-age insurance and State unemployment compensation purposes.

I became interested in the mechanics incident to social security in the very beginning and have followed its development up to the present time. I realized a fundamental difference in the data requirements as between the two. For old-age insurance, it appeared that it would be necessary to have a complete earnings record for the full service life of each employee, as practically every employee would be an actual beneficiary at age 65 or his dependents would have some rights in case of death. Also, if the insurance concept was to be retained, a record of taxable wages for the full service life would be needed.

On the other hand, there would be thousands and probably millions of employees who would never apply for unemployment benefits and, for these, any reporting is an economic waste; for those who do apply, only the most recent earnings should be necessary to qualify them and to determine the benefits to which they would be entitled.

In spite of this fundamental difference, employers have been required to furnish to both the Federal Government and to the State governments quarterly information returns of the wages paid to each employee. Since the early days of social security, I have been preaching the doctrine that annual information returns should be adequate for old-age insurance purposes and that information returns for only those who claim unemployment insurance, showing only recent data as to taxable wages, should be adequate for State unemployment-insurance purposes. I am happy to report that the States are moving in this direction.

In the original Social Security Act, the requirements for the collection of the tax, payments to the Government, and information returns by employees were left to regulations prescribed by the Commissioner under the approval of the Secretary of the Treasury. By the time Congress was considering the 1939 amendments to the law, the regulations provided for a combined quarterly tax return and information returns of taxable wages by employees. There was nothing in the law at that time that made quarterly information returns mandatory. It was merely that the Bureau decided it was desirable, for proper administration, that the tax returns and information returns be reconciled quarterly.

Then, in the 1939 amendments to the Social Security Act, Congress made it necessary for the Social Security Board to obtain quarterly wages of each covered employee by introducing quarters of coverage in the benefit eligibility requirements and by excluding certain quarters and certain quarterly earnings in the provisions relating to the computation of monthly benefits.

Perhaps in 1939 there was some justification for substituting quarters of coverage in lieu of years of coverage to qualify some aged persons who would not otherwise qualify. But, even then, the cost to do that, in terms of what it meant to employers and to the Board in being required to report and process quarterly earnings for every covered employee, was and still is enormous.

It now appears that the further we get away from the early days, the less need there is for quarters of coverage in the eligibility requirements. And, with the experience gained by employers in making proper returns, there is no necessity at this time for quarterly reconcilements. That the Bureau accepts this can be attested by the fact that for income-tax withholdings we now have the equivalent of monthly payments to the Government and an annual information return by employees.

In the computation of monthly benefits, the elimination of certain quarterly wages can have very little effect. When you consider that the average wage is then coupled with a very broad formula for determining the monthly benefit, which after all has only an indirect relation to past wages or contributions, there can be no justification for this otherwise unnecessary expense to employers and the Government.

Section 214 in H. R. 6000, now before your committee, continues the quarters of coverage in defining a fully insured individual and, while the benefit formula is extremely complicated (probably not 1 out of 100 applicants for old-age insurance could determine what he is entitled to even if he had a full record of his wages throughout his covered employment), it does use years of coverage rather than quarters of coverage. However, on page 67, under the caption "Treatment

of wages and self-employment income in year of computation," we find the clause "and there shall be counted only the wages paid to him prior to the *quarter* in which he filed such application" (italics supplied).

I hope you will permit me to stray from my main theme for a moment, but I do not want to overlook an opportunity to urge your committee to simplify, if at all possible, the benefit formula now included in H. R. 6000. While I offered the opinion that probably not 1 out of 100 applicants for old-age insurance could determine what he is entitled to even if he had a full record of his wages throughout his covered employment, I believe it would be possible to train employees of the Board so they could determine the benefits and could even explain the determination to the satisfaction of an applicant.

But this is not enough. Just recently there has been established a trend in connection with private pension plans, under which benefits under those plans take into consideration the primary benefits under Federal old-age insurance. That means that employees of employers should also know how to determine the benefits and explain the determination to the satisfaction of employees entitled to benefits under private pension plans.

Getting back to the main theme, namely, the elimination of quarterly information returns: To sum up our position on this point, there are substantial savings in costs to employers and Government if Congress will eliminate the necessity for such quarterly information, and it should be able to do this without any adverse effect on employee benefits. This saving in cost is independent of savings from combined withholding but, if combined withholding is also adopted, there can be greater savings through the use of a carbon copy of the W–2 form (expanded to also show social-security wages and taxes) for the purposes of the Social Security Administration.

SIMPLIFYING THE DEFINITIONS OF "WAGES"

Our consideration of the problems that would have to be met under combined withholding brought into sharp focus the differences in the definitions of "wages" for social-security and income-tax withholding purposes. I have seen a list of 22 such differences and the author of the list made it plain that there might be others.

Some of them appear to be justified. The excess over $3,000 of wages and payments on account of retirement, sickness or accident disability, medical and hospitalization expenses, or payments on account of death and dismissal payments, which are exempted under FICA, fall in this category.

But there are other differences, which approach the point of meticulous preciseness not justified by broad treatment given to other factors, such as previously mentioned, which should be removed. For instance, there appears to be no justification for exempting for income-tax purposes payments in kind but, at the same time, including them in the base for social-security taxes and benefit computations.

LUMP-SUM PAYMENTS MADE TO EMPLOYEES FOR TRAVELING EXPENSES

Lump-sum payments to employees for traveling or other bona fide ordinary and necessary expenses incurred or reasonably expected to be incurred in the business of the employer is another example of a difference in definition. They are taxable for social-security purposes but not subject to withholding for income taxes.

However, such lump-sum payments are, by regulations of the Bureau, gross income to the individual and reportable on forms 1099, annual information returns (T. D. 5480). Individuals may claim actual expenditures as a deduction, provided they attach a statement to the return explaining in detail the expenses deducted. Presumably, the employee will have to maintain a detailed record of the expenditures to support the deduction claimed.

Ordinarily, such lump-sum payments, in lieu of actual expenditures, have, as their objective, three main purposes, viz, (*a*) to avoid detailed records of traveling expenses, (*b*) to remove a temptation to pad expense vouchers, and (*c*) to fix automatically the maximum amount that the employer will pay.

Since individuals may claim actual expenses incurred as a deduction, there is no revenue to the Government where the lump-sum payment is a reasonable maximum allowance for actual expense.

For these reasons, I urge legislation which will exempt from income, and from wages defined under the Federal Insurance Contributions Act, lump-sum payments for traveling expenses, where it can be demonstrated to the satisfaction of the Commissioner that such payments in fact represent a reasonable maximum allowance for actual expense.

I apologize for taking up so much of your time, but our committee feels that the tremendous costs incurred by employers and the Government in administering the social-security and income-tax withholding plans warrant the time necessary to a full and complete statement about the mechanics of doing the job.

I conclude with the hope that your committee will give serious consideration to the suggestions we have made to reduce these costs.

TABLE I.—*Example: $45.50 weekly, $2,366 annually, 3 exemptions—FICA tax at 1½ percent*

	Weekly	Weekly×52
Total withholdings, determined separately:		
Income-tax withholding:		
1. Gross wage	$45 50	
2. Exemptions at $13 each [1]	39.00	
3. Net wage subject to income-tax withholding (1−2)	6.50	
4. Amount of income-tax withholding (15 percent of 3) [2]	.98	$50 96
or		
5. Income-tax withholding—Wage bracket table [3]	1 10	57 20
Social-security-tax withholding: 6. 1½ percent of gross wage	.68	35.36
Combined withholdings, with annual allocation: 7. Combined withholding—Wage bracket table [4]	1 78	92 56
Allocation:		
8. FICA tax −1½ percent of annual wage		35.49
9. Balance—Income-tax withholding		57 07

[1] The $13 weekly exemption allowance is a rounding of $12.8205 ($600÷ 9×1/52)

[2] The 15-percent rate is a rounding of 14.94 percent (the result of deducting 17 percent from the sum of 3 percent normal tax and 17 percent surtax, and multiplying the balance by 0.9)

[3] The $1.10 weekly withholding is a rounding of $1.05155 (the result of deducting 3 exemptions at $12.8205 from the gross wage (note 1) and multiplying the remainder by 14.94 percent tax rate (note 2).

[4] The $1.78 combined weekly withholding would come from a new wage-bracket table. It is the result of adding the $1.10 in the present wage-bracket table for income-tax withholding to 1½ percent of gross wage.

TABLE II.—*Illustration of automatic year-end transfer of theoretical overwithholding of FICA taxes to withholdings for income taxes*

	FICA tax	Income tax	Total
Example: $79 weekly wage; $4,108 for 52 weeks, 3 exemptions—Combined withholding, $7.29 weekly, $379.08 for 52 weeks:			
Theoretical allocation	$61 62	$317.46	$379.08
Allocation after transfer of theoretical overwithholding of FICA taxes to income taxes	45 00	334.08	379.08
Actual tax liability assuming a joint return, no other income, and deductions at 10 percent		314 94	
Example: $200 weekly wage; $10,400 for 52 weeks, 3 exemptions—Combined withholding, $27.10 weekly, $1,409.20 for 52 weeks:			
Theoretical allocation	156.00	1, 253. 20	1, 409. 20
Allocation after transfer of theoretical overwithholding of FICA taxes to income taxes	45.00	1, 364. 20	1, 409 20
ctual tax liability assuming a joint return, no other income, and deductions at 10 percent		1, 353. 22	

TABLE III.—Illustrating the extent of possible overwithholding due to applying the 1½ percent rate on wages in excess of $3,000 per year

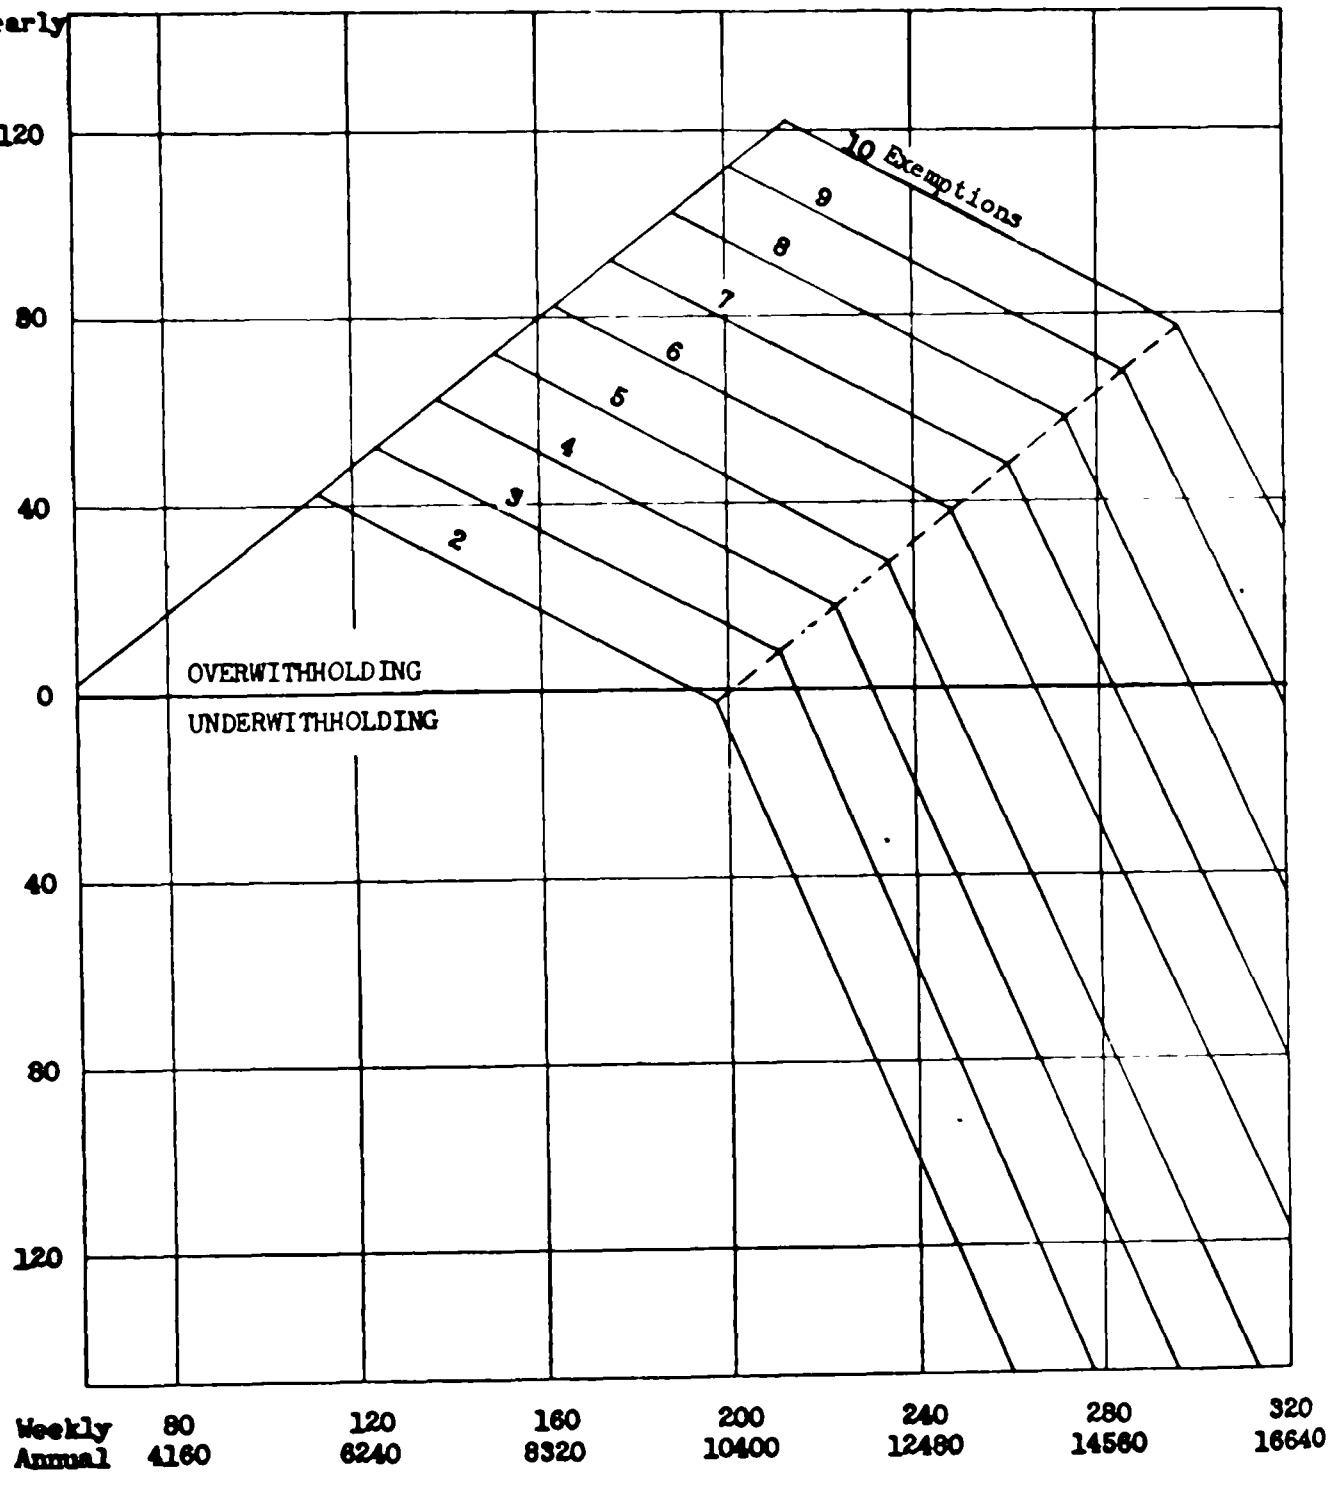

TABLE IV

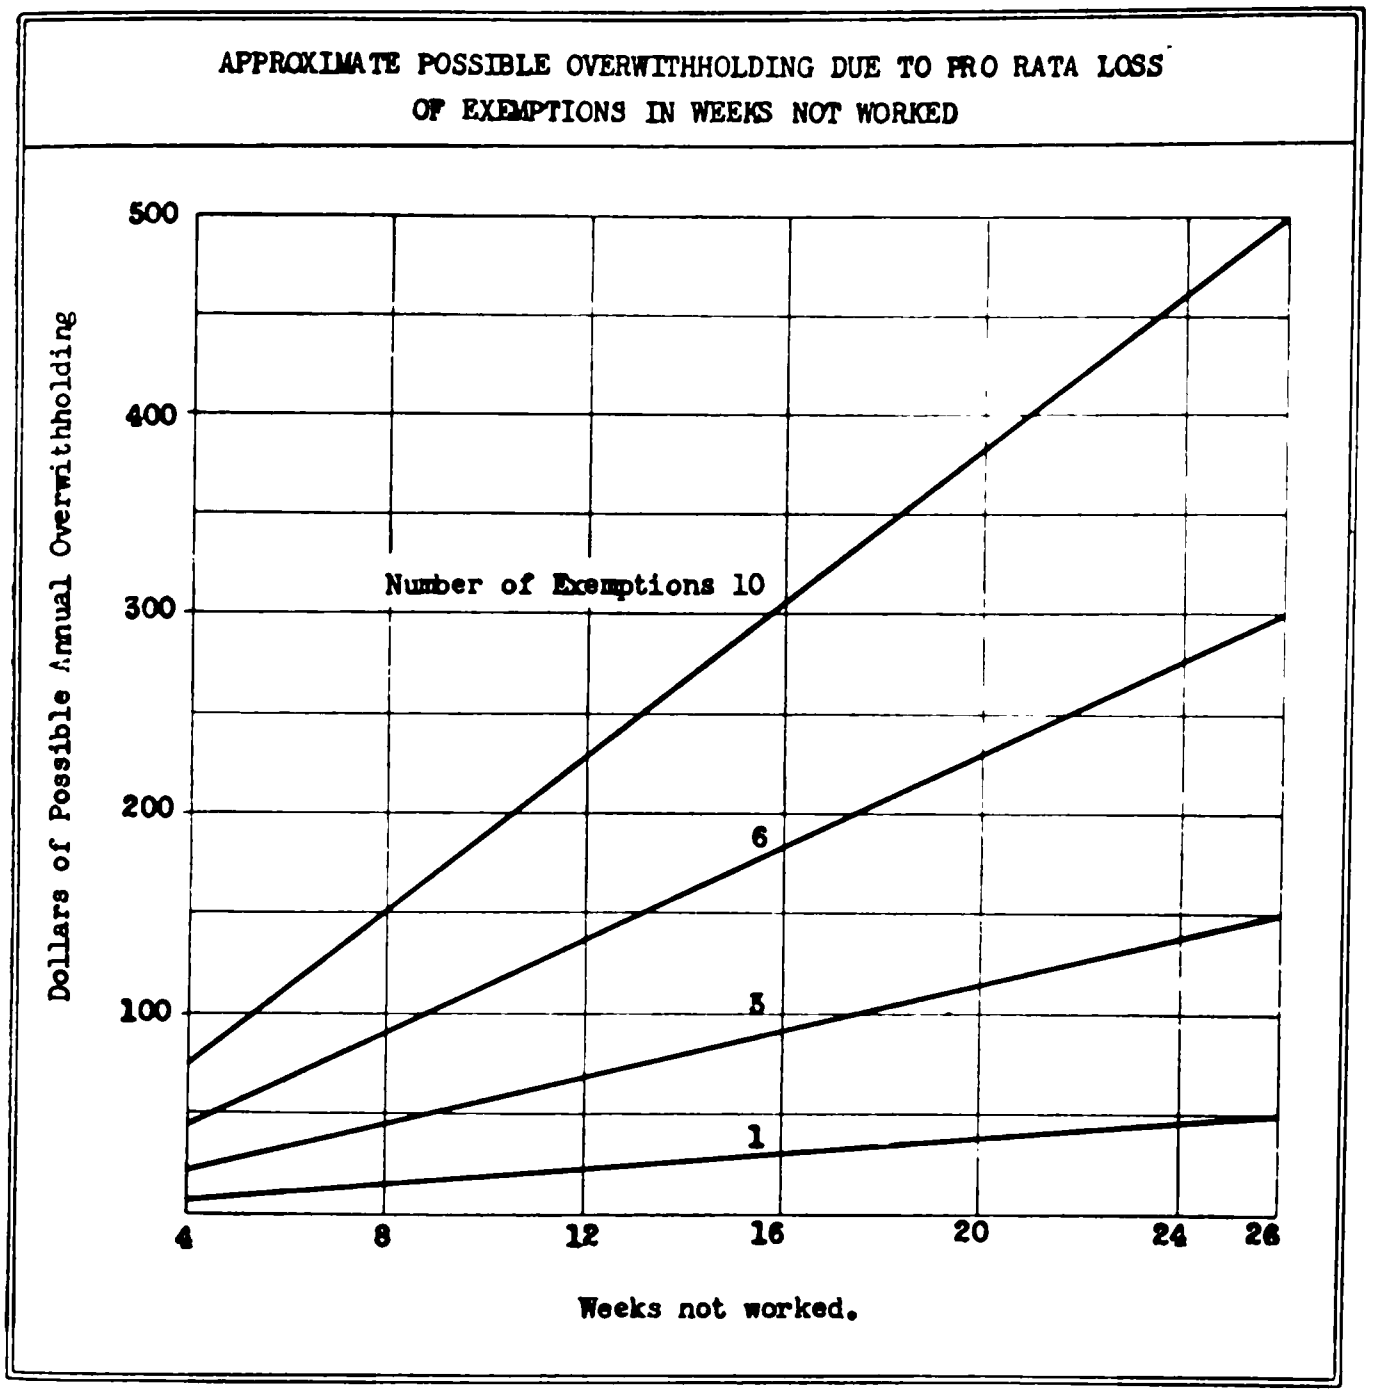

STATEMENT FROM THE COUNCIL FOR SOCIAL ACTION, CONGREGATIONAL CHRISTIAN CHURCHES

This statement is submitted in behalf of the Council for Social Action, an official agency of the Congregational Christian Churches. It represents only the Council for Social Action. In a democratic organization like the Congregational Christian Churches, no individual or group is empowered to speak for all members and churches.

The Church is concerned with social security for two basic reasons. First, family security is the first principle of social welfare. Social security helps to produce those conditions of physical, mental, and spiritual confidence and well-being which are essential to the development of good family life.

Secondly, social security is concerned with basic economic and social rights of people. The Church cannot be the Church and remain silent when people are involved.

In May 1949 the Council for Social Action adopted the following policy statement:

"We recommend that it be established as a national policy that all citizens are entitled to adequate social-security benefits. Existing social-security provisions should be extended to include especially the self-employed, domestics, agricultural workers, lay employees of religious, charitable, or any other group of workers not already covered by social security or some other adequate pension

plan. The comprehensive social-security program should include increased old-age and survivor's benefits, unemployment compensation, and an adequate program of public assistance and health protection.

"The Council for Social Action believes that the churches should be unequivocal in giving guidance to the Nation in the program of broad social welfare which social security legislation represents. Especially do we regard it as imperative for the churches to be included in a Federal social security plan offering protection to their lay employees. We believe that such a program can be operated without impairing in any way the rights and freedoms of the churches."

In line with this policy, we are happy to commend the general purpose of H. R. 6000. However, we would like to address ourselves to three specific points which have a bearing on this legislation:

1. We are critical of the provision making social-security insurance compulsory for employees and merely voluntary on the part of employers when they are religious or charitable organizations. We strongly urge extension of social security to employees of nonprofit organizations on the same basis as for employees in other areas. We believe that the special treatment afforded charitable, religious, and other nonprofit organizations is not in the best interest of either the organizations or their many employees. H. R. 6000 requires that the employee must make a "compulsory" contribution to the social-security fund, but the employer may or may not contribute an equivalent amount.

Voluntary contributions for the employer is an unwholesome and discriminatory principle. It destroys the concept of mutuality which is central to the entire social-security program. If the employer does not avail itself of the opportunity to make a voluntary contribution, the employee will receive only one-half of the benefits given other participants in the program. He may be "in" one year and "out" the next. His social-security benefit will always be the most expendable item in the budget. As a result, his old-age security benefit will be insecure and less than the benefit of other employees.

We do not agree with those who oppose compulsory contributions by the employer on the grounds that such compulsion would violate the principle of separation of church and state. We do not believe that any serious constitutional questions would be raised by including religious organizations on the same basis as other enterprises.

2. We regard the failure to provide coverage for agricultural labor as a most significant inadequacy of H. R. 6000. This means that 4,000,000 families who earn their living by producing raw materials to feed, clothe, and shelter city families will continue to receive few, if any, of the benefits of the social-security system.

Yet these farm families are among the least able to lay aside for their old age, for support of their dependents in case of death or for sudden emergencies. About half of all the families in agriculture, including the farm operators, the tenants, the sharecroppers, the hired workers, and the migrant seasonal help, made less than $2,000 in 1949 from both farm and part-time nonfarm work. One-fourth of all the families in agriculture received less than $1,000 that year, a year of farm prosperity. Clearly these families cannot afford to save enough for retirement or to tide them over a bad emergency on this income.

As a result, these people must rely on public assistance in their old age. Today, about 52 percent of the public old-age assistance load falls upon rural counties. In many agricultural States, twice as many people receive old-age assistance or charity as receive old-age insurance benefits. This necessity is inconsistent with the national policy of regarding a contributory insurance plan as far more desirable than a system of direct aid.

The social-security tax would not place too heavy a drain on the farmers' budget, yet the benefits the tax helps pay for would help keep these hard workers from the charity rolls. Many of the farm families have helped pay for social-security benefits through contributions made during periods when they were employed at nonfarm jobs.

The cost in human terms of the exclusion of agricultural workers from social-security insurance cannot be tabulated. This cost is not borne by the aged alone; the children of the many farm families whose main breadwinner has died without the protection of survivors insurance pay the price of exclusion also.

The Council for Social Action urges that the Congress act to extend the protection of the social-security insurance system to agricultural workers on the same basis as other citizens.

In connection wth our concern for the welfare of agricultural families, we believe that H. R. 6000 should provide for an increase in grants-in-aid to State assistance, health, and welfare programs. It is generally true that States and counties which lack funds or facilities cut services to farm families first. No State in the Union provides a well-rounded health and welfare program for all its rural families. Only substantial grants-in-aid will make possible adequate care for these Americans.

3. Congress needs to recognize the long-range and difficult problem of Puerto Rico. Welfare aids which can be extended through our social-security system will aid materially in the solution of one aspect of the problem of Puerto Rico.

We strongly support the provisions of H. R. 6000 which would extend old-age and survivors insurance to Puerto Rico and the Virgin Islands. The desire on the part of the 2,000,000 Americans, whose home is Puerto Rico, to be included in the social security insurance system is a healthy one. It reflects an optimism about the success of a current effort to raise productivity and living standards through industrialization. At this point in the economic development of the island, very few workers reach retirement age; few Puerto Ricans have sufficient income or enough steady employment to qualify for the insurance benefits if they do reach retirement age.

It is important, however, that workers who can contribute to an insurance system be permitted to share in the benefits on an equal basis with their fellow Americans on the mainland. ("Equal basis," as used above, means that Puerto Rican workers will receive benefits equal to those of U. S. workers of the same income.) This is consistent with the policy of placing a contributory insurance system above reliance on a system of direct assistance. If we do not include these workers in an insurance plan, they will be forced to rely on direct assistance.

We are wholly in accord with present provisions extending grants-in-aid to the insular government for public assistance. The whole social security system is predicated on the philosophy that local resources cannot be expected to meet all of the welfare needs, and that Federal assistance should be extended on the basis of need for the well-being of the Nation as a whole.

We support the proposals to include Puerto Rico in the public-assistance and child-welfare programs of social security. The average per capita income in Puerto Rico is less than half that of Mississippi, the lowest income State. The desperate need for welfare aids becomes increasingly apparent when one considers that these low incomes are not balanced off by lower cost of living. The cost of living in Puerto Rico at comparable standards to those in the United States is as high as that of the mainland.

The Puerto Ricans have demonstrated initiative and imagination with a program to meet the problem of maintaining economic gains in the face of rapidly growing population where the population is already dense and natural resources sharply limited. An unenlightened trade policy toward Puerto Rico has retarded industrialization of the island in the past. Now that the process is taking place, the benefits of increased public assistance and extension of the social security insurance can go a long way toward improving the economic health of a depressed domestic area.

A Statement by the Lutheran Church, Missouri Synod, Concerning Social Security Exemptions

To the United States Senate Finance Committee:

Sirs: Your committee is presently considering H. R. 6000, popularly known as "The new Federal social security bill." In lieu of appearing before your committee at its hearings, for which no appointment could be secured, the undersigned, speaking for the Lutheran Church, Missouri Synod, wish, in this brief written statement, to draw your attention to an apparent need of amending or clarifying section 210, page 40, subparagraph (9), which excepts—

"Service performed by a duly ordained, commissioned, or licensed minister of a church in the exercise of his ministry or by a member of a religious order in the exercise of duties required by such order."

We submit that the Lutheran Church, Missouri Synod, has in addition to its pastors a class of ministers, 1,374 of them in 1948, who should classify under the term "duly ordained," but might be held to be outside of the scope of that term in the administration of the act, on the technicality that they are not formally ordained and are not pastors.

Definition of the ministers in question

The 1,374 ministers in question belong to the clergy of our church and are officially defined by our church as "ministers of religion," "ministers of the Gospel," or "servants of the Word." They are trained for their vocation in institutions which our church maintains specifically and solely for that purpose. They are officially approved by the church, formally called by local congregations, installed by authority of the officials of the church, and consecrated for a life-long, full-time service to the church, precisely the same as the pastors. They receive a theological training which is substantially the same as that of pastors, originally the same, but today with more emphasis on education. They may, and on occasion do, transfer from their particular service to that of a pastor, or are called upon by a church in their present capacity to perform, or help perform, sacerdotal and other pastoral functions.

They are formally called, installed, and pledged for life to the service of the church as "ministers of religion," have an active part in the performance of the ministry of the church, and devote themselves primarily to teaching instead of preaching. Their main obligation is to conduct and teach Lutheran elementary, secondary, and higher schools, although in the local church they commonly instruct also adults and young people, and in general assist the pastor in the ministry of the congregation. In this respect they compare in a way to the teaching orders of the Roman Catholic Church, except that they are not organized as an order.

The ministers in question are men. Ordinarily they are married and have families. They are salaried by the local church, have no other vocation, and are covered by the pension system of our synod, under exactly the same terms as our pastors. Like the pastors, they have also been exempt from military service in World Wars I and II as "ministers of religion."

Classification under H. R. 6000.

We have no doubt that the authors of the bill intend to except the service of the ministers in question, especially since they name members of a religious order besides duly ordained, commissioned, or licensed ministers. But we also sense the need of amending or clarifying this provision, for we fear that, in the interpretation and administration of this act, the term "duly ordained" could be taken to mean only pastors, and that the ministers here under consideration would also not classify under "commissioned, or licensed minister."

Clarifying amendment

We respectfully urge, therefore, that section 210, page 40, subparagraph (9) of H. R. 6000, be amended by your honorable committee as follows:

"(9) Service performed by a duly ordained, commissioned, or licensed minister of a church, including a formally called and installed minister of religious education, in the exercise of his ministry or by a member of a religious order in the exercise of duties required by such order."

JOHN W. BEHNKEN, D. D.,
President, The Lutheran Church, Missouri Synod.

PAUL M. BRETSCHER, Ph. D.,
Chairman, Board for Parish Education,
The Lutheran Church, Missouri Synod.

STATEMENT OF EUGENE J. BUTLER, ASSISTANT DIRECTOR, LEGAL DEPARTMENT, NATIONAL CATHOLIC WELFARE CONFERENCE

I desire to address myself to the committee on the subject of title II of the Social Security Act, providing Federal old-age and survivors' insurance benefits, and section 1426 (b) (8) of the Internal Revenue Code which exempts certain organizations from the payment of taxes imposed under the Federal Insurance Contribution Act (title VIII of the Social Security Act).

The provisions of the Internal Revenue Code are the following:

"SEC. 1410. In addition to other taxes, every employer shall pay an excise tax, with respect to having individuals in his employ."

(The rate is fixed by the statute and is intended to increase progressively until it is 3 percent of the wages paid by the employer.)

Section 1426 (a) defines wages and section 1426 (b) defines employment as follows: "The term 'employment' means any service * * * except:" (there are ten classes of service excepted).

Among these excepted services is:

"(8) Services performed in the employ of a corporation, community chest, fund, or foundation, organized and operated exclusively for religious, charitable, scientific, literary or educational purposes, or for the prevention of cruelty to children or animals, no part of the net earnings of which inures to the benefit of any private shareholder or individual, and no substantial part of the activities of which is carrying on propaganda, or otherwise attempting to influence legislation."

This exception by definition has the effect of exempting a large number of organizations and their employees from the payment of tax under section 1410 and their employers from the payment of tax under section 1400.

This exception results further in the exclusion of employees in these organizations and institutions from the benefits of old-age and survivors' insurance.

From the very inception of the social security system, the National Catholic Welfare Conference has been concerned over the status of employees of religious organizations in relation to old-age and survivors insurance, and on many occasions has expressed its sincere desire to have lay employees of these organizations covered under this program.

When the legislation was first under consideration, and again in 1939, when the late President Franklin D. Roosevelt proposed amendments to the program in operation, a spokesman for the NCWC appealed for coverage for the lay employees of such organizations, and, at the same time, asked for serious considerations of methods to protect the traditional exemption from taxes of religious organizations.

At that time, the NCWC planned to present its views to the congressional committees. However, it will be recalled, such opposition to any possibility of taxing religious organizations had arisen, that the House Ways and Means Committee decided to abandon its attempt to work out a solution to the problem. Later, a communication was directed to the chairman of the Senate Committee on Finance which stated, in part:

"The administrative board (NCWC) pleads for a formula of participation of workers in the old-age benefits of the act without prejudice to the tax-exempt status of the nonprofit religious, charitable, and educational institutions."

In March of 1946, a spokesman for the NCWC appeared before the House Committee on Ways and Means and in presenting his testimony stated, in part:

"The exclusion of these employees (of religious organizations), unfair though it is, is traceable to the failure of this committee to develop a formula under which provision would be made to extend to these employees the benefits of old-age and survivors insurance but which, in extending benefits, would give sincere and full recognition to the fact that traditionally these church related activities have been generally exempt from taxation."

Very briefly, this has been the consistent attitude of the National Catholic Welfare Conference on this important subject over the years.

It has always been the contention of the NCWC that the employees of religious, charitable, and educational organizations should be covered. The NCWC has objected strongly to the fact that its employees and the employees of similar organizations were denied the benefits which old-age and supervivors insurance makes available to all other employees. However, it contended sincerely, and still insists, that the traditional tax-exempt status of religious organizations is not merely a "catch phrase," but a symbol of a distinctive American heritage. Far from being a special privilege, it is a recognition by the Federal Government of the important contributions to the general welfare made by religious, charitable and educational organizations and institutions.

Therefore, the National Catholic Welfare Conference has regarded this problem as one with two facets. On the one hand, there was the desire on the part of the administrative board that all of its employees, and the employees of all religious organizations, should enjoy the benefits which this program makes available. On the other hand, there was this tradition, this American heritage, that religious organizations should be exempt from direct tax levies. This principle, deeply rooted in our national history, the NCWC believes is worth preserving and defending.

The problem the administrative board of NCWC recognizes as one which has engaged the efforts of you distinguished gentlemen and your honorable predecessors in office is working out a formula which will make adequate porvision for both aspects which I have outlined.

During the Eightieth Congress, the administrative board was heartened by the proposal by the House Committee on Ways and Means in this connection. As you will recall, it was proposed at that time that the employees of religious,

charitable and educational organizations should be covered into the program on a "voluntary" basis. In other words, religious, charitable, and educational institutions, as employers, were permitted, in the proposed legislation, to determine whether or not to make the contributions to the old-age and survivors insurance fund and thus make it possible for the employees to be covered into the system. Although, admittedly, there was no absolute guaranty that all the employees of exempt organizations would enjoy these benefits, there was a definite recognition by the committee of the fact that the tax-exempt status of this type of institution should be protected.

That proposal was embodied in amendments to the Social Security Act which the House of Representatives approved in the Eightieth Congress.

It is our sincere opinion that the proposals contained in the legislation presently under consideration are adequate to meet the problem which the NCWC considers most important.

It is a matter of simple justice, that the employees of religious, charitable, and educational institutions be protected by the provisions of old-age and survivors insurance. From the standpoint of economics, it is imperative that they enjoy these benefits. It is not good for the continued efficient operation of any such institution that its employees are strongly attracted to other employment offering the social security benefits which are denied them in religious, charitable, and educational institutions.

H. R. 6000, in our opinion, in providing these benefits for this class of employee, is a long step forward in the advancement of this great social program. At the same time, this legislation, H. R. 6000, recognizes the importance of the American heritage of which I have spoken, and protects it. It makes completely voluntary the decision whether or not a religious, charitable, or educational institution shall contribute to the fund for old-age and survivors insurance coverage.

This measure makes provision for regulations covering the manner in which such an employer may make its voluntary contributions. The National Catholic Welfare Conference is confident that care will be taken to make these regulations just and equitable both to the employers and the employees.

The NCWC has pleaded for many years for a satisfactory solution to this perplexing problem. The present measure represents to my mind a major accomplishment. Your committee is to be congratulated.

STATEMENT OF THE NATIONAL FUNERAL DIRECTORS ASSOCIATION OF THE UNITED STATES, INC., CONCERNING LUMP SUM DEATH PAYMENTS AS A PART OF THE SOCIAL SECURITY PROGRAM

FOREWORD

The National Funeral Directors Association of the United States, Inc., was organized in 1882. As of March 1, 1950, this organization had 11,461 members in good standing. These members are primarily owners and operators of funeral establishment located in every State of the Union and in the District of Columbia.

It is estimated that each year the members of NFDA take care of the funeral services of more than 1,000,000 Americans. As counselor to the bereaved families the funeral director must advise them on many of the problems which arise at the time of death. One of these is the matter of social-security benefits.

In keeping with an association policy, we feel we are not in a position to comment on all the phases of the social-security program. However, each day funeral directors throughout the Nation have an opportunity to observe the reaction to and benefits of lump-sum death payments under the law, and it is in regard to this subject and this subject alone that we wish to submit the following statement.

STATEMENT ON LUMP-SUM DEATH PAYMENTS

It has come to our attention that testimony before the Finance Committee has revealed that certain groups are asking that all lump-sum death payments under the provisions of the social-security law be abolished.

The National Funeral Directors Association of the United States believes that as a part of the social-security program there should be a lump-sum death payment which is primarily a death benefit and not a burial or funeral allowance. This is the case under the present social-security law and under H. R. 6000. Under these two measures it is impossible for the individual who is going to

receive a lump-sum benefit or for the funeral director to know what the amount of such benefit is going to be until it is received. We believe that lump-sum payments should continue as provided for under the present law.

Under such a program, survivors selecting a funeral service cannot be greatly influenced by the amount of the social-security lump-sum payment. It has been the observation of our members that the survivors select the funeral service they would ordinarily choose, based upon their ability to pay, taking into consideration the costs thereof along with the expenses of the last illness. It is readily apparent that the amount of the lump-sum payment is no sufficient to meet all contingencies that arise with death; therefore industrial or other life-insurance benefits are essential. It has been a further observation that the payment of a lump-sum benefit is of material assistance to survivors in the lower income groups.

In addition to the foregoing, there are individuals covered by the present act who, having no dependents, will probably die without survivors and will receive no benefits therefrom except in the form of a lump-sum death payment reimbursing the person who paid the funeral expenses. Many of these individuals are aware of the fact that under the present law this payment will be made and are relying on it to help take care of the expenses of their last illness and death. If there are no social-security lump-sum payments, these individuals will not only fail to receive any benefits from social security but at the time of their death will probably be without sufficient funds to help defray the necessary expenses. If the lump-sum payment is denied in such cases, the Government will find itself in the unfortunate position of having levied confiscatory taxes.

It is our considered opinion that if the formula for lump-sum benefits as set up in H. R. 6000 is used that it will result in smaller payments. We do not feel that the House of Representatives so intended. We therefore urge that lump-sum payments be maintained and in an amount that will not be less than under the present law. Unless this is done, those who will need the payments most will suffer thereby.

OFFICERS OF THE NATIONAL FUNERAL DIRECTORS ASSOCIATION OF THE UNITED STATES, INC.

Edward A. Martin, president, 550 North Avenue, Grand Junction, Colo.
Jack Marshall, first vice president, Tilden, Nebr.
H. Fremont Alderson, second vice president, 75 Federal Street, New London, Conn.

District 8: E. A. Larkin, 466 Twenty-fourth Street, Ogden, Utah.

STATEMENT FROM THE DAIRY INDUSTRY COMMITTEE, WASHINGTON, D. C.

The Dairy Industry Committee is composed of six trade or business associations, as follows: American Butter Institute, American Dry Milk Institute, Evaporated Milk Association, International Association of Ice Cream Manufacturers, Milk Industry Foundation, National Cheese Institute.

These member associations in turn are composed of approximately 7,500 employers who employ approximately 500,000 employees throughout the United States in the dairy industry. The annual pay roll is in excess of 1.25 billion dollars. The old-age and survivors insurance tax, under the present law, to be

paid by these employers and by their employees for the year 1950, at the $1\frac{1}{2}$ rate, is $18\frac{3}{4}$ million dollars, or a total old-age pension tax of $37\frac{1}{2}$ million dollars.

In addition to their many thousands of employees, dairy industry companies contract for services of many thousands of individuals, small-business men, who are not infrequently have their own employees. These individuals are known as contract milk haulers and contract cream haulers. There are other individuals also who contract to haul cheese and whey and other dairy products. These contract haulers own the motor vehicles which they use and in many cases have their own employees and now are and always have been considered independent contractors. They are self-employed individuals who pay taxes on the wages of their employees in accordance with the law. In many cases they haul for more than one principal, and in many cases they haul dairy products for one principal over several routes. Throughout the country there are areas where these haulers buy and sell the routes over which they haul for a dairy industry firm.

Dairy industry processors also have contracts with hundreds of individuals known in the trade as cream buyers. These cream buyers operate their own general stores in many instances and as an incident thereto contract with a dairy company to purchase cream from the producers in the area surrounding the cream buyer's place of business. Generally, under the terms of the contract with the cream buyer, the dairy company informs the cream buyer of the price it will pay for fresh cream which meets the specified tests. The dairy company has no control over the cream-buyer's activities. If a cream buyer is on the job, his cream-buying may be more profitable to him than his general-store activity. On the other hand, if the cream buyer does not purchase for sale to the dairy firm enough cream to make it worth while for the dairy firm to expend time and money to aid the cream buyer in such extra activities, such firm, or the cream buyer himself, as a general rule, may terminate the contract on 30, 60, or 90 days' written notice.

The foregoing brief statement of facts may suffice to demonstrate the reason for grave concern on the part of dairy processors with reference to paragraph (4) of the proposed definition of "employee" as contained in H. R. 6000.

The 7,500 dairy-industry companies who are members of the above-named business associations respectfully submit for your careful consideration two points:

First: We recommend that the definition of "employee" be amended by deleting therefrom paragraph (4) found on page 51 (sec. 210 (k)) and on page 152 (sec. 206 (a)) of H. R. 6000.

Second: We favor increasing old-age pensions as proposed in H. R. 6000 but believe it unnecessary and unwise at this time to increase the tax rate or tax base as proposed (tax-rate increase, p. 123, sec. 201 (a) and (b); tax-base increase, pp. 31, 32, 129, and 130).

FIRST POINT

The dairy-processing industry favors the continuance of the means and methods which are now in effect, and which have been in effect for many years, to determine the status of an individual. We favor the continuance of the Gearhart amendment of 1948 whereby the Congress made it clear that the status of an individual is to be determined by the common-law rules. We seriously object, however, to paragraph (4) of the definition of "employee" found on pages 51 and 152 of the bill, wherein the "combined effect" of seven factors set forth in the paragraph is the indefinite and baffling guide for determining the status of an individual.

The legislative department of the our Government thus invests in two Federal bureaus, the Federal Social Security Agency and the Treasury Department, discretion unconfined and vagrant in the determination of when an individual is an employee. "This is delegation running riot," as the eminent jurist, Mr. Justice Cardozo, said in his opinion in the *Schechter case* (55 Supreme Court Reporter, p. 837 at p. 853). Since these Federal bureaus, in the determination of the status of an individual, not an employee under the first three paragraphs of the definition, have as their guide the "combined effect" of seven factors, obviously only the said Federal bureaus can say with any degree of certainty when an individual is an employee.

Under the present relatively simple tests, the two Federal bureaus often disagree as to the status of an individual. The result is that individuals held to be employees by the Social Security Agency receive old-age pensions although no

contributions were made to the Federal old-age fund on behalf of such individuals. No contributions were made because the Treasury Department held such individuals to be independent contractors. With the "combined effect" of seven factors to juggle and weigh, the two Federal bureaus will be establishing the status of individuals on a quicksand base, and the likelihood of disagreement between the bureaus is immeasurably increased. What weight is to be given each of the seven factors? Which of the factors is the determining factor? If a dairy company contracts with a hauler or cream buyer to do certain things, does said company have control over the individual? Many haulers and cream buyers have been operating under contracts with dairy firms for years, and the performance of service by the hauler or cream buyer or his employees is regular and daily. Do these facts change the status of the hauler or cream buyer who has always been considered an independent contractor, a self-employed individual who is brought into the old-age insurance field by H. R. 6000? The services rendered by the haulers and cream buyers certainly can be integrated in the business of the dairy processor. The latter could perform these services through his employees but prefers, in keeping with long practice in the dairy business, to contract out such services with self employed, independent contractors who have skill in handling motor vehicles and collecting and caring for dairy products and who have skill in buying and testing and caring for cream. Is it necessary, under the sixth factor, known as (F), that the dairy company investigate the financial condition of each hauler and cream buyer to determine the "lack of investment" or extent of investment of the hauler or cream buyer "in facilities for work"? Finally, the seventh factor, (G), provides for "lack of opportunities of the individual for profit and loss." Whenever an individual is engaged in business it seems axiomatic there are the concomitant opportunites for profit and loss.

The dairy company does not control these haulers or cream buyers, who, if they find their contracts unprofitable, will cancel the same. As above pointed out, however, many haulers develop dairy routes throughout the country and sell the same, just as cream buyers may develop a large business or neglect his cream buying, and profit or lose according to the skill and business acumen demonstrated. These self-employed, independent contractors may have one or two or more employees. They may go on collecting and paying old-age insurance taxes only to find out, perhaps, that they are employees, and their employees, if any, are employees of the contracting company for part or all of their working time.

It seems clear that havoc will be wrought in the dairy industry and great confusion and unnecessary costs and expenses will be involved if the two Federal bureaus are to be given such unlimited power and discretion. No dairy industry or other firm could say with any degree of certainty which of the self-employed independent contractors were his employees if paragraph (4) of the definition of "employee" is adopted or which continue to be independent contractors.

The "combined effect" of the seven factors for old-age insurance, if enacted into law, will open the way for amending the Federal and State unemployment compensation laws by inserting a similar definition of "employee" in those laws and then in the wage-and-hour laws and the Federal income-tax law for withholding purposes. It seems only realistic to suggest such action if "employee" is to be defined as proposed in H. R. 6000. If we are correct in our belief, then the combined effect of such a definition of "employee" will nullify the efforts by thousands of self-employed. Small employers will be wiped out. The firms who have dealt with those individuals for years as independent contractors will necessarily have to demand of such individuals information as to their social-security numbers, their ages, the value of their services separate from the price paid for the use of their vehicles and their operation of the same, or the operation of the vehicles by their employees, and separate from their store rentals and other expenses as allocated to the activities of cream buyers, and the financial interest of such individuals "in facilities for work."

If an individual, for years classified and regarded as an independent contractor is held to be an employee because of the elusive "combined effect" of the seven factors and other Federal and State laws are amended, as above indicated, so that there is a uniform definition of employee, then it may be expected that claims for personal injury or property damage will be filed against the contracting company for the negligence of someone operating a vehicle or performing some other service under contract over whom the company has no control and who may be a stranger to it.

Self-emnloyed individuals are to be brought within the Federal old-age insurance field, and we favor this broadening of the coverage. We most respectfully and definitely submit, however, especially because of such broadening of coverage,

that it is unnecessary and improper to invest the Federal Social Security Agency and the Treasury Department with the unlimited power and discretion contained in paragraph (4) of the definition of employee.

SECOND POINT

H. R. 6000 provides for an increase in the amount of old-age insurance payments. This appears to be a sound move. But, beginning with 1951 and for 8 years thereafter, the proposed tax for old-age insurance is to be increased from 1½ percent on the employer and 1½ percent on the employee to 2 percent on each, and the tax base is to be increased from the first $3,000 per year per employee to the first $3,600 per year per employee. Provision is also made for increasing the tax rate up to 3¼ percent on the employer and on the employee by 1967.

After 13 years of experience with the Federal old-age insurance law on a 1 percent tax against the employer and the same tax against the employee, and on a tax base of the first $3,000 per year per employee, 13.8 billions of dollars have been collected on which the general taxpayers have paid 1.27 billions of dollars in interest. Out of old-age and survivors' insurance trust funds, 2.9 billions have been paid out in old-age pensions (Social Security Bulletin of the Federal Security Agency, January-February 1950, p. 26). As of the end of November 1949 there was in the fund 11.85 billions. For each of the fiscal years 1947–48 and 1948–49, there was paid out in old-age insurance benefits approximately one-third of the income to the fund in each of those years.

With an 11.85 billion fund as of November 1949 and three times as much money coming into the fund currently as is being paid out, it seems unnecessary at this time to increase either the tax rate for employers and employees or the tax base as proposed in H. R. 6000.

You will doubtless recall that the original Social Security Act provided for a tax rate of 1 percent on the employer and 1 percent on the employee for 1937, 1938, and 1939 and one-half of 1 percent increases on each every 3 years until a 3 percent rate on each would be applicable with respect to employment after December 31, 1948. These increases in the tax rates were not put into effect. Instead, the 1 percent rate was continued until January 1, 1950, when the present rate of 1½ percent on each became effective. The Congress wisely modified the law with reference to the tax rate and should not now approve an increase in the rates as proposed in H. R. 6000. When the payments from the old-age insurance fund more nearly approximate the income to the fund from the taxes on the employer and employee, then we advocate a reexamination of the subject.

The Federal Security Agency, 3 to 5 years before the payments from the fund approximate the income, should advise Congress as to the tax necessary to provide the payments anticipated for 2 or 3 years.

A reserve fund of over 11 billions of dollars is unnecessary. The higher we build the old-age trust fund, more taxes the general taxpayer will be compelled to pay to provide interest on the taxes already paid by the employers and employees and others covered under the law, and the greater the tendency, in all probability, to veer more sharply from the use of insurance principles in this huge old-age and survivors insurance undertaking.

Respectfully submitted.

THE DAIRY INDUSTRY COMMITTEE,
M. H. BRIGHTMAN, *Executive Secretary.*

STATEMENT OF THE ASSOCIATED BLIND, INC., CONCERNING THE AMENDMENTS TO TITLE 10 OF THE FEDERAL SECURITY ACT AS EMBODIED IN S. 2066

The Associated Blind welcomes the opportunity to state its position with reference to S. 2066. A vast majority of the blind people who constantly turn to our organization for help are on "blind assistance." Furthermore, the Associated Blind is an organization conducted and directed by blind people themselves; and, therefore, in this double capacity of directly representing the blind themselves as well as living with this handicap ourselves, we feel you will find our views and experience most valuable in determining the course of action to be taken.

The blind have long struggled to minimize and eventually eliminate entirely the attitude of giving pauper relief and subsistance standards to any blind person compelled to seek public financial assistance. With the advent of the Federal Security Act in 1935, in which title 10 made it possible for the various States to grant this much-needed assistance to the blind, it was hailed with much joy and

enthusiasm by the blind, because it reduced the inadequacy of living standards and also took the first step toward that distant goal for the right to live as normal and decent human beings. However, this was short-lived when in 1940 there was an amendment to title 10 of the Federal Security Act requiring States to take into account all sources of income before granting financial assistance. Consequently, the means test was used in its most restrictive sense, thus reviving the attitude of pauper relief and marginal subsistance. Moreover, the administrative policies and regulations of the separate States indicated that public assistance was to be regarded in the light of emergency relief rather than as permanent assistance. Since a very small minority of blind people were able to secure full-time remunerative employment, it thereby developed the unhealthy situation where only paupers and indigents were considered eligible for assistance, whereas those blind people who might become partially self-supporting through their own labor were deprived of the incentive to work at all because the meager earnings derived from partial employment would be deductible from their request for assistance. All this created a deplorable situation in which the public agencies on the one hand catered to pauperism and indigence and reduced assistance to the minimum while, on the other hand, the blind who wished to engage in remunerative employment were penalized for it in the corresponding reduction of their earnings from the needed assistance, thus destroying all desire for incentive, initiative, and the hope to live as useful and self-supporting citizens.

As a result of this glaring defect and injustice in our public-assistance laws, the Associated Blind, along with other sympathetic groups, constantly sought to have such inadequacy corrected to the best interests of all concerned. To accomplish this, our organization strongly favored and advocated the principle of "exempt earnings." In other words, it was felt that a definite amount of money should be deductible annually from a blind person's income from all sources after which assistance would then be granted. In this way, a person of visual impairment would not be penalized for his efforts to seek and retain employment and at the same time be freed from the degrading investigation into his every activity as to the possible source of his income. The blind person would be encouraged to exercise initiative and be stimulated to take every advantage of self-improvement until such time that he felt he could gladly forego the benefits of public assistance. Thus, when this principle of granting an outright exemption was incorporated in H. R. 6000 (introduced into Congress in 1949), the Associated Blind was proud to announce to the blind that considerable progress had been made in this direction. However, H. R. 6000 restricted this principle of granting exemption only to those blind people seeking vocational rehabilitation, and the amount of exemption would be determined by the agencies administering this law. As to what exemptions would be granted would be left entirely to the discretion of such administrating agencies. This again involved the question of the means test and lacked universal application. In other words, the amount of exemption would differ from person to person and retain all the evils of prying investigation. Moreover, it excluded entirely that large group of blind people who had to apply for blind assistance but who could not avail themselves of any exemption because they were not on vocational rehabilitation.

While the principle of exemptions was desirable and a long step in the right direction, it was more than offset by the disadvantages that were in turn created. Hence, the blind do not endorse H. R. 6000 and reject its provisions in its entirety. It should be pointed out that H. R. 6000 states, on page 95, a revised definition of legal blindness. Whereas at present this is 20/200, it would be 5/200. The downward trend of this definition would work an undue hardship on many visually handicapped people who ranged between these two limits. Medical records and accumulated experience reveal unmistakenly the need of a large group of people to receive help from public-assistance laws due to the many pecularities of visual impairment ranging from 5/200 to 20/200, so that this entails social and economic deprivation.

In view of the foregoing, it should be abundantly clear that the Associated Blind is highly in favor of endorsing S. 2066 for the following reasons:

S. 2066 seeks to grant a flat exemption to all blind people seeking assistance. Its universal application removes, to a large degree, fear and degradation for the blind people subjected to needless investigation. It promotes initiative and encourages incentive for those blind who may become partially or fully employed. It is our strong belief that S. 2066, while yet inadequate and falls short of the desired goal, will nevertheless go a long way toward bringing about that social and economic security which is so essential to the spiritual welfare and human dignity of every American citizen.

RESOLUTION ADOPTED BY THE CALIFORNIA COMMISSION ON INTERSTATE COOPERATION

Whereas the Federal Unemployment Tax Act provides for a 3-percent excise tax upon pay rolls, and that a taxpayer who has paid into a State unemployment-insurance fund may offset such payments against the said 3-percent Federal tax to the extent of 90 percent thereof, provided that the State unemployment-insurance law is certified by the Secretary of Labor as being in conformity under the provisions of the Federal Unemployment Tax Act; and

Whereas the Federal Unemployment Tax Act requires that certain provisions be included in a State unemployment-insurance law in order that the same may be certified; and

Whereas the said Federal Unemployment Tax Act further provides that on December 31 of each calendar year the Secretary of Labor shall certify to the Secretary of the Treasury each State whose law he has approved and that the Secretary of Labor shall not certify a State law which he finds, after notice and hearing, has changed its law so that it no longer contains the provisions required in the Federal Unemployment Tax Act, or where the said Secretary has found that the State has failed to comply substantially with any of the required provisions; and

Whereas during December 1949, the Secretary of Labor threatened to refuse to certify the California Unemployment Insurance Act as being in conformity with the Federal Unemployment Tax Act on the ground that the California Unemployment Insurance Appeals Board had removed from the California statute the required provisions by interpreting them in a manner which the Secretary of Labor did not approve; and

Whereas the Secretary of Labor, through hearings held in Washington, D. C., in December 1949, endeavored to coerce the California State Department of Employment and the California Unemployment Insurance Appeals Board into delegating to the Federal Government the power to interpret the California unemployment insurance law under threat of withholding certification upon failure to so agree; and

Whereas the failure or refusal of the Secretary of Labor to certify the California Unemployment Insurance Act would have imposed a retroactive tax burden of approximately $200,000,000 upon California taxpayers and further, would have caused the immediate suspension of the entire California unemployment-insurance program, including immediate cessation of the payment of benefits to unemployed workers in California; and

Whereas it is the opinion of the California Commission on Interstate Cooperation that the intent and purpose of the Congress of the United States was to delegate to a Federal official the duty to ascertain whether the State laws contained the statuory provisions required by the Federal Unemployment Tax Act, and that it was not the intent or purpose of the Congress to authorize any Federal official to dictate to a State unemployment-insurance appeals board, a State department of employment, or the State supreme Court the interpretation of State laws; and

Whereas there is no effective judicial review of a decision of the Secretary of Labor for the protection of a State: Now, therefore, be it

Resolved, That the California Commission on Interstate Cooperation requests the Council of State Governments to take immediate action and to sponsor amendments to the Federal Unemployment Tax Act so as to provide, in effect, the following:

(1) That the power and authority of the Secretary of Labor under the provisions of the Federal Unemployment Tax Act be limited to a determination as to whether or not State unemployment-insurance laws contain the statutory provisions required by said Federal Unemployment Tax Act:

(2) That certification of a State law shall continue so long as such required provisions are contained in said State law, and so long as any judicial proceedings with respect thereto are pending; and

(3) That, if after hearing, the Secretary of Labor determines that a State law does not conform to said Federal requirements, adequate judicial review be provided; and be it further

Resolved, That the executive secretary of this commission be directed to forward copies of this resolution (1) to the executive secretary of the Council of State Governments with the urgent request that this matter be immediately considered by the board of managers of said council so that remedial proposals may be immediately considered by the Congress of the United States; and (2) to the president of the National Association of Attorneys General requesting their immediate cooperation in the presentation of said remedial proposals.

STATEMENT BY W. R. BULL, DIRECTOR OF SOCIAL SECURITY AND INSURANCE DEPARTMENT, NEW JERSEY STATE CHAMBER OF COMMERCE, NEWARK, N. J.

INTRODUCTION

Mr. Chairman and members of the Senate Finance Committee, my name is W. R. Bull. I am director of the social security and insurance department of the New Jersey State Chamber of Commerce, and secretary of the social security committee of the State chamber.

The membership of the State chamber consists of more than 1,500 business and industrial firms in New Jersey. The social security committee is composed of 40 executives from representative firms all of which are affected by and interested in the Social Security Act and its impact upon our present and future economy.

The State chamber and its social security committee have given much time and careful consideration to the problem of revising the provisions of the Social Security Act. The basic premises from which we began should be clearly stated.

General concepts

We believe that the old-age and survivors' insurance provisions of the Social Security Act should provide a basic floor of income at retirement and that coverage under these provisions should as far as possible be universal. We feel that any changes should be made within the confines of the present law and within our ability to meet not only the present costs of this program but also the future costs, which must of necessity rise.

We are hopeful that as a result of the study of social security by this committee the present imbalance between the old-age and survivors' insurance program and old-age assistance will be corrected. Despite the fact that the original intent of the Social Security Act was to supplant old-age assistance payments by insurance payments this goal has not been reached. There are at this time about 60 percent more persons receiving old-age assistance than are being paid benefits under the old-age and survivors' insurance program; furthermore, the average old-age assistance payment is nearly 100 percent larger than the average benefit under old-age and survivors' insurance.

In view of this situation we feel that the provisions in H. R. 6000 calling for increased Federal matching contributions to States for old-age assistance are not in accord with the basic tenet of our social security system. We therefore recommend that our insurance program be strengthened and extended so the Federal Government may withdraw at the earliest possible time from the State-Federal public assistance program and the statutory requirements necessary to carry out this provision should be included in the law.

It is in the light of these primary concepts that we respectfully submit the following recommendations.

Extension of coverage

We recommend that coverage under old-age and survivors' insurance be extended even beyond the limits set forth in H. R. 6000. In fact, we are in favor of universal coverage insofar as it is practicable, whereby a basic, minimum floor is provided for virtually all gainfully employed persons. By providing the broadest possible coverage the problem encountered at the present time with individuals who fluctuate between covered and uncovered employment would be largely eliminated, thus reducing in large part the need for future old-age assistance payments.

Retention of present tax base

To keep our system in line with this basic floor concept, which is the basis of all social insurances, we strongly urge that the taxable wage base remain at $3,000 and that benefits be computed from that base. We deem this basic floor concept essential if we are to preserve our traditional incentives of thrift and self-reliance, whereby the individual may build for himself additional security when he has earnings greater than his basic requirements.

Revision of benefit formula

Payments to beneficiaries under old-age and survivors' insurance do not provide a basic floor income when measured by the present cost of living. Accordingly, we recommend that the benefit formula be increased. We are concerned, however, that both the present and the future costs be kept in mind when an increase in the benefit level is considered. We, therefore, suggest that the minimum primary benefit be increased to $25; but we also suggest that the maximum primary benefit proposed in H. R. 6000 should be altered in view

of the basic income concept of this type of legislation. We must remember tnat certainty of income and not some hypothetical figure termed "adequate" is the primary criterion in any social insurance. It is recommended, therefore, that benefits be computed by use of the following formula:

Fifty percent of the first $100 of the average monthly wage plus 15 percent of the next $150 up to the maximum wage of $250. We are in accord with the advisory council on social security to this committee in their unanimous recommendation that the 1 percent increment factor be eliminated because of the annually increasing cost.

It is our opinion that the $150 maximum benefit for survivors' insurance proposed in H. R. 6000 should be reduced to $125. The maximum benefit must not be set so high that it will destroy private initiative and personal planning for additional financial security.

Definition of average annual wage

The existing definition of the average annual wage should be retained in favor of the complicated and complex continuation factor set forth in H. R. 6000. We are in accord, however, with that provision which permits a beneficiary to earn up to $50 a month without suffering loss of benefits. The existing $15 limit is undoubtedly too low and this increase will both encourage and permit individuals to lead useful economic lives to the benefit of themselves and society.

Lump-sum death benefits

It seems to us that the provision in H. R. 6000 requiring payment of a lump-sum death benefit in all cases should not be approved. The voluntary provision by large numbers of covered workers for meeting burial and last-illness expenses has been brought to the attention of this committee. It thus appears unnecessary to add this cost to the old-age and survivors' insurance program. Our organization favors the retention of the existing provision in the Social Security Act regarding lump-sum payments.

Definition of employee

Because we regard the extension of coverage to the widest practical base as desirable, the provision in H. R. 6000 redefining the term "employee" is felt to be necessary. Any individual employer or employee should know whether or not he is under the old-age and survivors' insurance program from a statement of the law rather than being dependent upon an arbitrary and discretionary administrative ruling. The proposed changes will in our opinion unnecessarily complicate the problem of covering the new wage groups.

Permanent and total disability

We believe that the proposal before this committee to provide permanent and total disability coverage under the old-age and survivors' insurance program should not be adopted. Disability protection is one of the most complicated and costly fields of insurance. Claims are very difficult to administer and control even with a competent and adequate staff since disability is a subjective and intangible concept which cannot be determined with any accuracy in most instances. The almost disastrous experience of private insurance carriers in this field should be carefully considered. We assert that the solution to this problem lies in State and local jurisdiction and control.

Cost of the program

In view of our recommendations to extend coverage and to increase benefits, we deem it highly important to emphasize the matter of paying for these liberalizations. In our opinion the tax burden should continue to be divided equally between employer and employee. We also feel that a beginning tax rate of 2 percent on employers and 2 percent on employees should be established, and that the tax increases which will be required in the future be stipulated in the legislation that is approved by this committee. It is essential that the citizens of this country realize now that any increase in a social-insurance program must be paid for (1) by increased production from those who are gainfully employed; or (2) by a reduction in take-home pay; or (3) by a reduction in other Government services. It should be clearly understood by all of us that we cannot obtain more benefits than we are willing to pay for, and that our payment must be in terms of production.

In conclusion, we wish to point out that a sound Federal fiscal policy, one which will prevent further inflation and provide a steady purchasing power for wage earners as well as old-age and survivors' insurance beneficiaries, is the only foundation upon which any real security for our citizens can be built.

STATEMENT ON BEHALF OF THE FOOD, TOBACCO, AGRICULTURAL, AND ALLIED WORKERS UNION OF AMERICA, BY ELIZABETH SASULY, WASHINGTON REPRESENTATIVE OF FTA

My name is Elizabeth Sasuly. I am the Washington representative of the Food, Tobacco, Agricultural, and Allied Workers Union of America.

Our union, FTA, speaks on behalf of 100,000 organized workers in the food, tobacco, and cotton-processing industries, for several thousands of agricultural workers who are members of our union, and for the millions of unorganized agricultural workers who have no means of making their needs known to Congress.

The original exclusion of agricultural workers from the Social Security Act was indefensible on grounds of humanity, economics, and reason. These workers, historically and notoriously the most underpaid and lease secure of all American workers, have always had the greatest need for such protection.

When the exclusion of agricultural workers in 1939 was extended to processing workers, by the device of calling these workers "agricultural," the injustice became doubly indefensible. FTA, therefore, urges your committee to take the following steps:

1. Extend full coverage of the social-security law to agricultural workers.

2. Repeal those sections of the definition of agricultural labor which at present designate close to half a million industrial workers employed in packing fresh fruits and vegetables and in other operations as agricultural workers (Sec. 1426 (h) of the Internal Revenue Code).

Stamp system proposals made by the Commissioner for Social Security Administration and endorsed by the Commissioner of Internal Revenue outline entirely workable plans for applying the law to agricultural workers. In the case of processing workers excluded by being called agricultural, procedures already in use for other industrial workers can be reapplied.

Over 200,000 workers are engaged in the preparation and packing of fresh fruits and vegetables for market. A large portion of these workers are members of FTA and work under FTA contract.

These workers were covered by the Social Security Act when it was passed in 1935. Four years later, in 1939, they were suddenly informed that they were now "agricultural" workers, and therefore not eligible for coverage. Congress had decided to call them so—without explanation. Their work remained the same. Their need for coverage remained the same. The bitter comment of many of these workers was this: "I guess we don't grow old any more."

The shed workers who ask this question work in modern, highly mechanized industrial plants. Arthur J. Altmeyer, writing in the Social Security Bulletin in 1945, said:

"There is little to distinguish the conditions under which workers perform services in these plants from those in ordinary urban factories. Except for the product handled, the work is virtually identical. * * * The inside of a typical citrus-packinghouse is a maze of conveyor belts and machinery."

Shed workers cannot possibly be classified as "agricultural." They turn to agricultural work only in periods of economic depression, and this in turn is understandable since agricultural work has always been the lowest paid and the least protected of any labor in the Nation.

Shed workers are therefore on a par with factory workers, in that they require training, experience, and skill in performing highly industrialized and mechanized tasks.

During the war, a number of shed workers went into war plants in order to contribute to war production. But because this employment was temporary, their wage credits were usually insufficient to give them an insured status entitling them to old-age and survivors' benefits. Shed workers are among the 31,700,000 people reported by the technical staff of the House Committee on Ways and Means in 1945 to have insufficient wage credits to make benefits possible because of frequent shifts between covered and noncovered employment.

Because of the nature of their work, shed workers need protection against insecurity more than other industrial workers. The bulk of shed workers—who pack the lettuce, carrots, tomatoes, citrus and other fruits grown in specialty crop production areas and shipped by rail express to terminal markets throughout the country—are forced to migrate from one area of the country to another during the year. The employers need their skills and the workers need the jobs. But the workers must pay for transportation covering hundreds of miles, for temporary housing and for other items that are not in the budgets of other industrial workers.

A typical lettuce packer often covers the following itinerary: He works in Salinas, Calif., from May through October. Some are lucky enough to work the entire Salinas season from April through November. Then he must go to the Salt River Valley in Arizona—700 miles away—for 6 weeks of work. In January he goes to the Imperial Valley in California—another 500 miles— for a 2½-month season. During this time, he takes his family with him, paying for transportation, paying high rent for temporary quarters, or he leaves his family behind, paying double rent and being deprived of their company.

It is obvious that such an itinerary does not leave much margin for saving against old age. And when the worker decides to settle down, say in Salinas, he of course loses work and income as the result.

But the effect of the 1939 exclusion of shed workers is more far-reaching than this. Stimulated by the action of Congress in 1939, a majority of the States changed their definition of agricultural worker to conform to the Federal statute. So the shed workers suffered still further as they were deprived of unemployment compensation.

Attempts have been made to carry this exclusion process still further, most notably in the many campaigns to secure exemption of shed workers from the protection of the National Labor Relations Act. Such attempts, of course, were laid to a proclaimed desire to aid small farmers, whose products were packed by cooperatives, while large growers packed their own in large establishments on their own farm enterprises.

But if such inequity existed, surely the way to remedy it was not at the expense of the shed workers, but rather by giving such workers the same coverage that is extended to others.

We urge most strongly that your committee act promptly to remedy this situation. We urge that even if coverage is extended to agricultural workers, shed workers be removed from the definition of 1939 which arbitrarily made them "agricultural" workers.

There are no problems of administering the law in such an event. It can be done merely by striking from paragraph (4) of section 1.26 (h) of the Internal Revenue Code the words "or, in the case of fruits and vegetables, as an incident to the preparation of such fruits and vegetables for market."

It is simply a question of restoring coverage in the manner in which it was applied before 1939. The same type of situation holds for processing workers excluded by other sections of the 1939 amendments: those engaged in processing dried fruits, employees of bean cleaning elevators, cotton gin workers, poultry hatchery employees, and employees of nurseries and greenhouses. Similarly, agricultural laborers employed by labor contractors and hired out in large gangs should not be included in the definition of agricultural labor.

Agricultural workers are the lowest paid, the least secure and the most exploited of all workers in the country.

Congress has consistently seen fit to exclude them from every piece of legislation which has provided benefits to industrial workers and also, with one exception, from all farm programs which have provided benefits for farmers. Agricultural workers have been degraded to the status of second class, grade B citizens—insofar as our laws are concerned. Their status under State laws is equally poor.

Four million people work as agricultural workers during the course of the year. During periods of industrial unemployment, such as we are in at the present time, the number naturally becomes much greater. Declining farm income, also marked at the present time, forces thousands of formerly operating farmers into agricultural labor. It should be noted, too, that the bulk of agricultural labor today is employed on big, commercial scale farms. The traditional "hired man" on the family size farm no longer represents agricultural labor.

Both the Democratic and Republican Parties have recognized the great need of social security coverage for agricultural labor and in their platforms have called for its extension to cover them.

The report of the House Committee on Ways and Means in 1946, entitled "Issues in Social Security," made the following recommendations:

"It seems particularly important to cover agricultural workers as (1) many of them also work at times in covered employment and make contributions but still have insufficient coverage for protection; (2) they have low incomes; and (3) a large proportion of them have heavy family responsibilities * * * There is no group in the population less able to provide for old age and family security, or who need OASI protection more."

FTA calls on the committee and the Congress to act on these generally agreed upon recommendations

The only objection that is raised to such inclusion is the fallacious one that workers might lose the books in which stamps indicating the contributions made by worker and employer might be lost, or that errors might be made.

Yet every day errors are made, cards are lost, records are confused in situations involving industrial workers. Such errors and replacements are constantly being worked upon by the Social Security Administration and no one claims that administration is impossible because of them.

Our union, like all others, uses a stamp-book system to record payment of dues and the standing of the individual member. These books are highly valued by the members, and are not lost. Thousands of our members travel from the asparagus fields of Stockton, Calif., to the Alaska salmon canneries each year, yet they do not lose their books. We are convinced that a valuable record of social security contributions, representing security for old age, would be equally cherished by the workers.

We know that the Social Security Administration has carried on studies for many years on the most feasible method of administering the law under increased coverage. The system of stamp books they have proposed has been found workable in other countries. We are convinced it would be workable here.

In conclusion, our organization wishes to stress the importance and the immediate need, as well as the feasibility, of removing shed workers from the unfair exclusion put upon them in 1939, and of extending coverage to agricultural workers who need it as much and more than any other group in the Nation.

Common justice and equity to a large, hard working and heavily exploited section of the American people demands that it be done.

SIOUX FALLS, S. DAK., *March 11, 1950.*

JOS. S. LAWRENCE, M. D.,
American Medical Association,
1523 L Street NW., Washington, D. C.

DEAR DR. LAWRENCE: Reading your Capitol Clinic No. 9, of March 7, the first paragraphs concerning flaws in the permanent and total disability clause of H. R. 6000, brings to mind many instances in my own experience which might better be reported.

At the present time I am examining for the rating boards of the Veterans' Administration center here in Sioux Falls. Each of the rating boards, not wishing to turn down any eligible veteran seeking total and permanent disability benefits accorded to World War I veterans who are now 60 years of age or older, make a special point to insist on excessive examination and laboratory work. For instance, it is well known by the members of the rating boards that a certain amount of arthritis exists in every individual having reached the age specified, so that, whether or not the veteran in his statement has mentioned rheumatism or arthritis, the rating board adds in their request for physical examination these words, "General medical, special orthopedic, with X-ray of all affected bones and joints." Of course this indicates to me, when examining the veteran, if I find any stiffness, any swelling of any joint, which would include the small joints of the hands, the entire spine, in most instances both hip joints, etc. If the examination shows stiffness, and shows X-ray changes, then it becomes a problem of the rating board to determine if enough joints are affected to make the veteran totally and permanently disabled.

It is quite plain, then, that "total and permanent disability" rests on the judgment of a board of laymen, who have a medical report before them, plus a number of more or less accurate "sworn" statements of other laymen, and occasionally other physicians, supporting the case.

It is quite generally accepted here that it is the duty of certain veterans service officers to seek out all veterans who have attained the age at which they are eligible to apply for the benefits mentioned, see that they fill out a claim form, and include in the claim that they are suffering from arthritis particularly of the spine. Many veterans, who are not disabled, and who do not need these benefits refuse to file such claims, and will not perjure themselves to make such claims. Many veterans who do file the claim are eligible for such benefits because they are permanently and totally disabled; I would guess this figure to be about 60 percent of all those examined need the benefits or are entitled to the

benefits because of disability. At the present time I spend one-half to two-thirds of my time examining for this type of claim alone.

I think it quite proper to carry the analogy to the general population. I can imagine the confusion and chaos which would occur when every citizen who has reached the age when they are eligible for total and permanent disability benefits applies for the same, thus demanding a physical examination including X-ray of all affected bones and joints, X-ray of the chest, and all other laboratory work required to support the claim. None of the examination being actually done to determine actual and medical proof of permanent and total disability. Even then the final outcome of the claim depending entirely upon the leniency of the particular rating board examining the evidence before them, keeping in mind the pressure of political ward heelers demanding help for their friends.

Sincerely yours,

DON H. MANNING, M. D.

STATEMENT OF GEORGE S. EATON, EXECUTIVE SECRETARY, NATIONAL TOOL & DIE MANUFACTURERS ASSOCIATION, CLEVELAND, OHIO

The small businesses that make up the special tool and die industry have very serious problems on pensions, both from the viewpoint of their owners and also from the viewpoint of their employees, who are highly paid mechanics.

In common with other small-business men, most tool and die shop owners do not see how they can maintain private pension plans. To undertake the heavy fixed obligations so required might easily lead to bankruptcy, in which case the supposed security gained by the workers would prove imaginary.

In view of the great increases in wage scales and the cost of living since the Federal social-security program was inaugurated, increases in the present old-age benefits are overdue. And to answer the needs of small businesses and their employees, these increases should be greater than provided in H. R. 6000.

A few words about the special tool and die industry will help in understanding its problems on pensions. The contract shops in this industry make to order specially designed tools, dies, jigs, fixtures, gages, molds, and special-purpose machines. Usually there is only one of a kind ordered. Many of them also do precision machining on a jobbing basis. They are almost invariably operated by their owners, who have come up from the bench.

The National Tool & Die Manufacturers Association represents the job-shop owners who make these specially designed tools and dies. All of these manufacturers are small-business men. The employment of a typical tool and die shop is 25 or 30. Many have 10 or less employees and only a few have more than 100. They employ tool and die makers, die sinkers, all-round machinists, machine specialists—all very highly skilled mechanics. There are now probably 2,500 contract tool and die shops in the United States.

The special tooling made by our members constitutes equipment which is necessary in adapting the machinery of a mass-production plant to the manufacture of a particular metal or plastic part. Before production can be started on a new or revised model someone must design and manufacture the special dies and tools needed. The "captive" tool rooms of the big manufacturing plants do much of this work, so that the contract shops must compete with their customers for business, and of course get it only if they can show advantages.

While our industry is the cornerstone of mass production, it is entirely dependent upon orders from mass-production plants for its business. The ingenuity and precision with which our industry works makes possible the necessary simplicity of mass production.

As would be expected from its nature, the contract tool and die industry is a hazardous one financially. During the years of the depression that followed the prosperous 20's the industry dropped far below the average earnings level of other manufacturing groups. Mortality of the shops in this industry has always been high except in good times. And they did poorly last year, when business was good in most lines.

When demand is active many of the highly skilled craftsmen employed in contract tool and die shops earn $4,800 a year or more. And practically all of them earn more than $3,000 a year.

Because of the big fluctuations in the orders received by contract tool and die shops, which they can do little to level out, and the custom among tool and die makers of seeking to broaden their experience by changing jobs, there is much

movement of workers among the various shops, even in good times. Private pension plans, even if practical from a financial standpoint, would fail to give a great many of these workmen the protection they would get from adequate Federal pensions.

In addition, the establishment of private pension plans in these small shops, in this precarious industry, would introduce such financial hazards that their existence would be threatened, and the plans probably bankrupt in depressions.

In view of present-day pressures for pensions to provide old-age security, rather than to rely on individual thrift and family cooperation, the only equitable way is to establish an all-embracing Federal system with as adequate payments as the country's economy can support.

Without attempting to pass judgment upon all the provisions of H. R. 6000, we wish to urge that the old-age benefits be brought more into harmony with the need and rights of the higher paid workers. This can be done by raising the maximum annual wage base from the present $3,000—established when wage levels were far below those of today—to $4,800, or at least to $4,200.

It is realized that pay-roll taxes on any wages above $1,200 a year that are included in the wage base bring increases in pensions that are small in comparison with the basic payments. But these increases are still enough to make a material contribution to the retirement benefits of the higher paid workers, to which they are entitled. Their payments and those of their employers are paying for much of the pensions granted the low-paid workers. The only hope of these higher paid employees for pension rights that are secure, and can be retained even though the workers change employers, is through increased retirement benefits under the Federal social-security plan.

Tool and die shop owners, with few exceptions, feel that they cannot maintain private pension plans. This feeling must be shared by the vast majority of small-business men everywhere. Yet they must compete for mechanics with the "captive" toolrooms of the giant corporations which do have pension plans. They are willing to meet the higher pay-roll taxes that would be required with a maximum wage base of $4,800, in order that their employees may look forward to more adequate retirement incomes, and they urge that Congress provide for such an increase in the wage base.

Unless social-security pensions are made adequate, pressure for private pensions will continue on all employers for years to come—on the small, for whom pension plans are impractical, as well as on the large. And these small businesses—the backbone of American life—may gradually disappear.

Practically all of the private pension plans negotiated within recent months have been in large, well-established companies with big reserves, and most such companies may well expect to have to maintain private pension plans. It is therefore only natural for spokesmen for the great national associations representing businessmen to recommend keeping the maximum wage base at $3,000, as we understand they have done.

While this may seem to serve best the desires of their large members, it will not meet the needs of the contract tool and die manufacturers and countless other small-business men. These employers know that the welfare of their employees and their own ability to stay in business will be helped by a higher maximum wage base in H. R. 6000.

THE AMERICAN PUBLIC HEALTH ASSOCIATION,
New York, N. Y., March 16, 1950.

Senator WALTER GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: The American Public Health Association appreciates the privilege of presenting to the Committee on Finance of the United States Senate its interest and convictions in the extension and improvement of social-insurance provisions with particular reference to H. R. 6000. It is requested that the following statement be considered by the Committee on Finance and included in the record.

The American Public Health Association, as the professional society of 12,000 public-health workers, has a broad interest in this legislation because of the values for health which derive from (a) increased coverage and more adequate benefits to assure maintenance of income when earnings are lost or cut off, and (b) the feeling of security which such changes will bring to people. Further-

more, public-health people have a special interest in income maintenance during periods of disability in (a) improving opportunity for the care of the disabled and chronic sick, and (b) making health services more effective.

The association believes that many features of H. R. 6000 are sound and wishes to go on record as follows:

(1) The association supports the provisions in H. R. 6000 allowing the utilization of Federal public-assistance funds in payments to recipients residing in public medical institutions meeting State standards.

(2) The association supports the provisions of H. R. 6000 for permanent and total-disability insurance.

This implements the following recommendation in a joint statement "Planning for the chronically ill," made by the American Hospital Association, American Medical Association, American Public Welfare Association, and the American Public Health Association:

"Other measures which enable chronically ill persons to be cared for at home include improved housing, supervised boarding homes, medical social service, recreational and occupational therapy, and vocational rehabilitation. Social-security measures to maintain income such as disability insurance, old-age insurance, and public assistance are likewise of vital importance."

(3) The association supports the following provisions of H. R. 6000 relating to extension of coverage of old-age and survivors insurance:

(a) Inclusion of employees of State and local Government by voluntary compact of the State with the Federal Security Agency. If such employees are under an existing retirement system, they can be included only if they elect to do so by a two-thirds majority.

(b) Inclusion of employees of nonprofit institutions; if the employer does not elect voluntarily to pay the employer's tax, the employee would receive credit with respect to only one-half his wages for the employee's tax which he must pay.

(4) The association supports the provisions in H. R. 6000 permitting the States to utilize Federal public-assistance funds in making direct payments for medical care to practitioners and institutions.

In this connection the association wishes to express its position with respect to medical care of the needy by the following statement:

It is recognized that public-welfare departments are now handicapped in carrying out their existing responsibility to assure medical care,[1] when needed and not otherwise available, to recipients of federally aided public assistance by the inadequate financial provisions of the Social Security Act and its requirement that all aid be extended in the form of cash payments to the recipient. It is therefore recommended that the latter restriction be eliminated and that the agency administering assistance be authorized to finance the purchase of medical care in behalf of assistance recipients. In order to assure the quality of medical care thus purchased for assistance recipients and relate it to their individual needs, it is also recommended that its financing be accomplished through funds earmarked for that purpose rather than charged against the funds available for cash payments to individuals. The further view is expressed that any provision to finance medical care for assistance recipients should permit the administration of the medical aspects of such care by public-health departments.

(5) The association recommends as amendments to H. R. 6000 the following provisions which were included in the report of the Advisory Council on Social Security to the Senate Finance Committee (Social Security Bulletin, October 1948, p. 8):

(*a*) "The Federal Government should pay one-half the medical-care costs incurred by the States above the regular maximums of $50 a month for a recipient ($15 for the third and succeeding persons in a family receiving aid to dependent children) but should not participate in the medical costs above the regular maximums which exceed a monthly average of $6 per person receiving old-age assistance or aid to the blind and a monthly average of $3 per person receiving aid to dependent children."

(*b*) "Federal grants-in-aid should be made available to the States for general assistance payments to needy persons not now eligible for assistance under the existing State-Federal public-assistance programs."

In further reference to our statement under (4), above, with respect to medical care of the needy, the association hopes that the committee report will make it

---

[1] Wherever the term "medical care" is used in this statement, it is understood to include dental, nursing, hospital, and other health care as well as physicians' services.

clear that the provisions of the Federal bill intend to leave the States latitude for the welfare departments to contract with or otherwise utilize the services of the State or local health departments in providing or in effecting and operating arrangements for medical services to needy persons, when this is in the interest of economy, efficiency, and quality of care in this part of the State's program. This is especially important since in Maryland, Richmond, Va., the District of Columbia, and in a number of other localities, health departments are now responsible for providing medical care for public-assistance recipients. There is a growing interest of health departments in this field. We believe that the greatest possible encouragement should be given to this sound development which will help achieve integrity and unified administration of all health and medical-care services. We consider it important that nothing in the bill hinder such developments.

Respectfully yours,

HUGH R. LEAVELL, M. D., Dr. P. H
Chairman, Executive Board

BORDEN'S,
Temple, Ariz., March 17, 1950

The Honorable CARL HAYDEN,
United States Senator, Washington, D. C.

DEAR SIR: As a representative of a corporation doing business in the State of Arizona, I wish to object to bill H. R. 6000, Social Security Act Amendments of 1949, as presently written and also wish to suggest certain modifications which are as follows:

(1) That paragraph 4 of section 206 of H. R. 6000 be deleted because it places power in the Terasury Department and the Social Security Agency which, in effect, gives these agencies legislative authority to determine which individuals are employees through the consideration of the seven factors as provided on page 152, paragraph 4 of this bill. Employers would be unduly burdened and embarrassed by having foisted on them as employees, individuals over whom they would have little or no control and in some cases, the employer would not even know said individuals.

(2) That the tax rate for old-age pensions for the employee and the employer, which was raised from 1 to 1½ percent for each this year, remain at 1½ percent until such time as it appears that the payments from Federal old-age pension trust fund each year approximate the income to the fund; and that the tax base of $3,000 remain the same since it is unnecessary to increase the tax base to increase the old-age pension.

(3) That old-age assistance payments to the needy aged be left to the States because they are closer to the recipients of these payments. If the Federal Government must participate in the payment of old-age assistance, that there be no increase in the Federal Government contributions to the Federal-State system to encourage situations which occurred in the State of Louisiana (under Federal-State set-up, wherein the Federal Government contributes the greater portion of the amount paid out) where 819 out of each 1,000 needy are receiving old-age assistance.

I sincerely trust that you will give the foregoing your utmost consideration.

Respectfully yours,

D. E. STUART,
Superintendent.

NATIONAL ASSOCIATION OF REFRIGERATED WAREHOUSES, INC.,
Washington, D. C., March 16, 1950.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
Senate Office Building, Washington, D. C.

DEAR SIR: Your committee is now considering H. R. 6000, as passed by the House of Representatives, extending the old-age and survivors insurance system, amending the public assistance and child welfare provisions of the Social Security Act.

The National Association of Refrigerated Warehouses, consists of over 500 responsible cold-storage warehouses, representing better than 90 percent of the public refrigerated storage space in the United States. The industry employs

more than 20,000 men and women and has an annual pay roll in excess of $50,000,000.

The association is vitally interested in and favorable to the major aspects of this legislation but does feel that any increase in the present $3,000 taxable base is unwarranted and unnecessary. It is believed that the fixed percentage increases in the social-security tax rate is sufficient for the needs of the program and entails sufficient burden upon both employer and employee, without adding to this burden further by an increase in the taxable base, regardless of amount. It is further felt that such increase will have an undesirable effect on the country's economy, and the reduction in take-home pay of employees will only accelerate labor's demands for increased wages.

We, therefore, wish to file herewith our opposition to any increase in the taxable base.

Respectfully yours,

J. L. GAGINI, *President.*

ASSOCIATION OF WASHINGTON CITIES,
Seattle, Wash., March 6, 1950.

To Members of the United States Senate:

LADIES AND GENTLEMEN: The Association of Washington Cities, representing the 238 cities and towns of the State of Washington, has long favored the extension of social-security coverage to municipal employees. Since many cities do not have a retirement system, it seems very logical that employees who work for municipal corporations should not be placed at a greater disadvantage in regard to old-age insurance coverage than those who work in private industry. Among the many other reasons for the extension of this coverage to local governments, it is quite apparent that municipalities themselves should not be placed at a disadvantage in competing for qualified personnel. The latter condition has resulted many times in cities which have lacked either the authority or the funds to establish full-scale retirement systems, or where it has been necessary to recruit temporary employees who could obtain no advantage from the ordinary career service type of retirement plan.

After years of work toward this end, it now appears that some action will be taken at this session of Congress to extend social-security protection to public employees through action on H. R. 6000. Because the resolution as presently drafted has obvious defects which would place municipal governments at a great disadvantage, we express the earnest hope that it will be revised prior to its final passage.

In the first place, it is highly essential that each municipality be given the right to decide for itself whether it is to have old-age and survivors' insurance coverage. Considering the home-rule problem of municipal governments, the sphere in which local autonomy is to be exercised is an important one. In this regard, there is occasional disagreement as to just what functions are to be considered local in nature, and those which are deemed of State-wide importance and of such nature that it is perfectly proper for the State legislature to declare basic policies. In the home-rule States, of course, it has often been necessary to resort to the courts to determine just what is a State, as opposed to a local, purpose, or where the dividing line between State and local control should be drawn. Among students of government, however, there is almost a complete unanimity that the State government should not attempt to fix salaries, or determine the working conditions of municipal employees over the heads of city councils elected for this purpose. For the State to arbitararily fix municipal salaries, or determine their personnel policies, including the extent to which retirement plans are to be utilized, is to place the State government in the role of a city council, where it is called upon to determine purely local policy without having at its disposal basic facts about the financial status or the other local conditions which pertain to the municipality concerned. It is very evident that city governments should have the right to determine their own personnel policies including the extent to which they will participate in retirement plans or social-security coverage. There are too many local factors to be considered to place this decision elsewhere, and cities therefore see no sound reason why State governments should make the decision as to social-security coverage for them, or why contracts for coverage should be handled through the State administration.

In the second place, cities definitely want the privilege of covering all municipal employees who have no retirement system at present. Workers employed by the city should not be placed at a disadvantage with those in private industry.

Lastly, some provision should be developed by the Social Security Board for those who shift from public to private employment, or who transfer several times during a period of years, so that they never work out satisfactory protection under a career service type of retirement plan. While we believe in encouraging career service in local government, the social problem occasioned by the lack of any old-age insurance will not be solved for the worker who shifts from one position to another unless some such action as that recommended be taken by the Congress.

Summarizing the above, this association suggests a revision of H. R. 6000, to provide the following:

1. Direct contracts between the cities and the Federal Government—let each municipality determine for itself whether it is to have old-age and survivors' insurance coverage.
2. The coverage of all municipal employees who have no retirement plans at present.
3. Some plan for those who shift from public to private employment, or who transfer several times during a period of years, so that satisfactory protection is never developed.

Please be assured that any consideration you may give these matters will be appreciated by the cities and towns of the State of Washington.

Very truly yours,

C. V. FAWCETT,
Chairman, Executive Committee.

NEW JERSEY WELFARE COUNCIL,
Newark, N. J., March 15, 1950.

The Honorable WALTER GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: The New Jersey Welfare Council, a State-wide membership organization which is concerned with the health and welfare needs of the citizens of New Jersey, wishes to advise you officially of its action in support of bill H. R. 6000 providing for the extension of the present Social Security Act, on which legislative hearings are now being held before your committee.

The New Jersey Welfare Council has gone on record officially endorsing H. R. 6000 as being a progressive and significant step forward in the development of the social security legislation in our country. We recognize that the enactment of this bill into law will serve to extend welfare benefits to an increasing number of people in the United States as well substantially increase benefits that are now being received.

We would like to point out, however, several instances in which we believe that the legislation now before you for consideration should be strengthened to provide an even more adequate social security system.

1. Coverage under old-age and survivors insurance should be broadened to provide full coverage so as to include farmers, farm workers, part-time domestics, and professional persons who will be excluded under the pending legislation.
2. The age at which women should become eligible for old-age and survivors insurance benefits should be reduced from 65 to 60 in accordance with recommendations of your Advisory Council on Social Security.
3. Under the public assistance titles of the act payment of direct medical care should be provided over and above the Federal matching ceilings for categorical assistance up to an average of $6 a month for adults and $3 a month for children.
4. The recommended appropriation of $7,000,000 for child welfare services should be increased to $12,000,000 as originally proposed in an earlier bill.
5. While the addition of a fourth assistance category, "Disability assistance for persons permanently disabled" will increase Federal coverage for needy persons, it is our opinion that a more desirable system of coverage for people requiring public assistance would be provided through the elimination of all categories and the adoption of a public assistance program for which Federal funds would be made available on a matching basis for all needy unemployed persons regardless of age or physical condition.

We trust that our recommendations may be entered into the official hearings of your committee and that they will be given favorable consideration in your preparation of legislative recommendations.

Sincerely yours,

ROBERT D. SMITH, *President.*

STATEMENT BY BENJAMIN C. MARSH, EXECUTIVE SECRETARY, PEOPLE'S LOBBY, INC., WASHINGTON, D. C.

Four facts need to be considered in connection with social security proposals:

1. No social security system can provide any more security than the economic system of which it is a part.

2. Social security measures must not be used to further imperialist designs.

3. Extension and increase of public social security measures postulate at least equal controls by Government of all economic activities and of individuals.

4. Only the Federal Government, can operate social security measures effectively, and economically.

1. The lure of health and unemployment insurance, and old-age pensions, tends to obscure the fact that such measures cannot be a substitute for a sound economic system under an economy of abundance, but on the contrary tend to postpone such an economy to the extent they are accepted as a substitute therefor.

Security and social benefits can be fully realized only out of maximum possible production, with such objective, and not the quest for profits, the motive for production.

Continuous deficiteering—and in only 2 out of the past 20 years has the Budget ever been balanced, though 8 years have been prosperous—dooms the effectiveness of social security measures.

Our economic system is in a state of highly unstable equilibrium, postponing a smash only through expenditures of billions for arms, and the cold war, a large part of it being paid for by long term interest bearing bonds.

Living off succeeding generations, doesn't provide security, it conceals the fact of insecurity.

2. First Germany and then Britain adopted a system of social security, such as we have undertaken—Germany to condition her workers for a supreme Deutschland über Alles effort in World War I to challenge Britannia Rules the Waves, and Britain a few years later, to condition her workers for the struggle to maintain that rule.

When Germany tensed for her second effort in World War II, and America's real rulers sensed the opportunity, to try to grasp the scepter from Britain's faltering hands—and so prevent Germany from grabbing it—President Roosevelt and Senator Wagner espoused social security here.

Social security and the concept of the American century developed simultaneously.

We grabbed bases throughout the world, in an effort to anticipate any other nation's getting them, tried to control the San Francisco Conference at which the United Nations was organized, and instigated the veto, in the Security Council.

3. The concepts of complete individual freedom and complete responsibility of Government to insure maintenance when unemployed and after working years—whether retirement be at 60, 65, or 70—are mutually exclusive—painful as that fact is to politicians, whose slogan is "as thy promises, so shalt thy votes be."

The Congressional Joint Committee on the Economic Report correctly stated, over a year ago: "The Government, which is the only instrumentability that can balance the needs of agriculture, industry, and labor, cannot afford to be without a plan."

Senator Joseph C. O'Mahoney, chairman of the joint committee, in submitting its report on the steel industry, said—"The collectivist corporation in our time has become the most significant aspect of our whole economic structure.

"These organizations are dominating a steadily increasing segment of the industrial and commercial activities of the whole Nation. They affect the lives not of the people of one city or one State, but of the people of the entire United States.

"Their managers may, and do determine by their private decisions, how much of a given commodity 144,000,000 people may have, and the price they pay for it."

Social security payments, whether for old-age pensions, unemployment benefits, or widows' allowances, come out of the national product.

Wages and prices determine temporarily, the degree of security while working; payments made by Government through taxes upon profits or other income (or by bonds which are a lien on future income), determine temporarily, the degree of security during periods of sickness, or unemployment, or as old-age pensions.

Obviously Government must determine the location and nature of production as well as the retained profits of production, and also rate of pay and place of employment of workers when it attempts to insure maintenance from the womb, whose productivity is encouraged by certain dogmas, to the tomb, recourse to which is being postponed.

This is merely to apply the practice of parity payments, farm-price supports, and conservation payments to farmers, all of which ineluctably involve acreage limitations, and Government direction of production.

4. At present about 39,800,000 persons are included in our old-age pension system, of whom 35,000,000 are in trade and industry.

Pending legislation proposes to add some 10,650,000 of whom about 4,500,000 are self-employed and 3,800,000 State and city employees.

About 10,150,000 persons will not be covered, even if pending pension legislation is enacted, including many who most need such pensions—1,600,000 farm-family workers, 1,500,000 farm laborers, 1,100,000 self-employed earning less than $400 a year net, 750,000 part time domestics, and about 500,000 nonsalaried doctors, dentists, lawyers, engineers, clergymen, and so forth.

The Social Security Administration reports that during the year ended June 30, 1949, $3,530,000,000 was collected from Federal, State, and local Governments, by the needy, the old and the jobless—of which the Federal Government paid $1,721,000,000—or nearly half.

During that year, Federal-State jobless payments amounted to $1,193,000,000 compared with $753,000,000 the year before, and 5,644,975 persons drew jobless pay, compared with 3,820,744, the preceding year.

Average weekly payment in fiscal 1949 was $19.91 compared with $18.19 in 1948.

Federal-State relief paid the needy, aged, blind and dependent children, amounted in 1949 to $1,710,000,000, an increase of $316,000,000 over the preceding year, and went to 4,062,505 individuals.

United States News and World Report, (March 17, 1950) states:

"People in 21 States of the Union get more cash from Federal, State, and local governments, than they get from factory pay rolls. In 15 other States, Government payments are more than half as large as manufacturing pay rolls.

"In no State do Government payments amount to less than a fourth of the income paid by manufacturers to their workers.

"Nearly 6,000,000 civilian workers depend upon some government directly for their livelihood.

"Government payment to individuals amounts to about $28,000,000 a year, compared with $46,000,000,000 in pay rolls of the manufacturing industry."

It shows that in North Dakota Government payments were 644 percent of manufacturing pay rolls, in South Dakota 336 percent, in New Mexico 413 percent, in Arizona 333 percent, in Utah 213 percent, in Nevada 325 percent, and in Wyoming 268 percent.

About a fifth of the Federal Government's receipts is now derived directly or indirectly from taxes on consumption, regardless of ability to pay.

Pensions paid by corporations, or other employers, are paid by consumers regardless of ability to pay, in higher prices. Only the Federal Government can levy progressive income taxes so as to put the burden of noncontributory payments for pensions, upon those able to pay.

Industry payment of pensions deprives the Government of revenue. All such payments like wages, are deducted from tax liability, as legitimate costs of doing business.

Business concerns are taxed chiefly at a fixed rate.

There is, however, a growing demand that excessive profits be distributed to stockholders, so they may be taxed even more progressively.

Industry pension plans enable them to escape more of such taxes, which is probably the reason many of the big stockholders in steel and coal and automobiles favor industry-paid pensions.

Government will have to pay most of pensions as well as of unemployment benefits, minus current contributions, because most collections to date are in Government securities, and the Government must borrow or tax.

The Federal Security Administration in reply to a question from People's Lobby, Inc. wrote us April 8, 1949, about social insurance collections:

"Collections since the beginning of these social insurance collections have been about $29,000,000,000. It is inevitable even under the present law, that the tax rate must go up at some future date, either by increase of the pay-roll taxes, or by contributions from the general fund."

There are about 11,300,000 persons in the United States, 65 years of age and over, most of them living on small fixed incomes, and many of them dependent on Federal or local relief or private charity.

It is too late for any contributory pension system to help them.

Company pensions will tend to make employees more conservative and content with the profit system, or at least compliant, since loss of a job usually means either less of the pension, or a reduction, by transfer.

Only the Federal Government can insure continuity in pensions; the crash of 1929–33 would have disrupted many company systems.

Every person working, with an income above the minimum requisite for a decent standard of living, should make an annual contribution to old-age pensions, as to unemployment compensation, and by some similar system of payment, because the past few years has developed an unfortunate and false conception here, that the Federal Treasury is the widow's cruse of oil, and self-replenishing.

Such contribution should be lower for heads of families with several dependents.

The experience of the United Mine Workers' pension and welfare fund proves the necessity of public supervision of funds collected from the public through laws giving employers such authority.

Of the nearly 40,000,000 persons now under a Government-pension system, about 7,200,000 are also covered by industrial pension and profit-sharing plans.

Of the 490,000 corporations in the United States, 13,000 have pension plans, and of these 4,662 are paid for in part by the employees, while in 8,338 employers pay the entire cost.

In 1946, of 526,363 corporations reporting on income, 359,310 reported a net income, and 131,842, or 25 percent, a deficit. In 1937, 57 percent of all corporations reported deficits and in 1938, 61 percent. Usually about a fourth to a third of corporations do not make a profit.

Of the 3,500,000 businesses (of all sorts) in the United States, 26,900 corporations—less than eight-tenths of 1 percent—employ 52 percent of the workers, so most employers have only a few employees.

Some two-fifths of new enterprises fail within 2 or 3 years, and only about one-tenth last much beyond the fifth year. Commercial and industrial failures (exclusive of banks) were 3,476 in 1947, or three times as many as in 1946, but a relatively small number compared with 31,822 in 1932, and even with 14,768 in 1939—before heavy Government spending started for hot and cold war.

New business risks are largely taken by private investment.

The congressional Joint Committee on the President's Economic Report in a report on investment published October 11, last year, states that capital requirements of the 600,000 retail and 70,000 wholesale firms which started between the first of 1945 and October 1947, were $7,000,000,000.

Of this, "63 percent was provided from the personal savings of the entrepreneurs, 14 percent from bank loans, 8 percent from suppliers, and 11 percent from other loans."

There is no reason to think the fate of these concerns will be any better than of other newcomers in our competitive system, and an additional pension charge of 3 percent or even 2 percent of pay roll will hasten their demise.

WEIL, GOTSHAL & MANGES,
Washington, D. C., March 9, 1950.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

MY DEAR SENATOR GEORGE: I respectfully wish to comment upon one particular phase of the amendments to be made to the Social Security Act as provided in H. R. 6000. My thoughts are addressed principally to the provision of the proposed act which will extend old-age and survivors insurance coverage to employees of nonprofit charitable institutions and the impact which this provision will have upon persons over 65 years of age who are employed by these institutions and are receiving insurance benefits under the present law as well as the financial burden which will be imposed upon these institutions.

Under section 209 (b) of the present law, employment by nonprofit charitable institutions is expressly exempted from coverage of the act. Consequently, wages

received from such employment are not subject to the provision of section 203 (d) (1) of the act which is applicable only to wages received in covered employment. Thus, a person over 65 years of age may receive wages for employment by a nonprofit charitable institution without forfeiting any of the benefits to which he may be entitled on the basis of wages previously earned in covered employment.

H. R. 6000 will extend coverage of the act to include employment by nonprofit charitable institutions so that persons now employed by such institutions who are also receiving insurance benefits on the basis of prior covered employment will lose such insurance benefits. Section 103 (b) proposes to increase from the present exemption of $15 a month to $50 a month the amount that may be earned by an insurance beneficiary from covered employment without loss of benefits. However, in most instances, wages received from such employment will exceed this exemption so that, in effect, the extension of coverage of the act will deprive these persons of the insurance benefits which they are presently receiving.

In this regard, there appear to be two cogent factors which your committee should consider:

First, many persons over 65 years of age have taken employment with charitable institutions because they are not physically able to perform arduous manual labor and they cannot readily find employment in productive occupations in private industry. Although wages paid by charitable institutions are substantially lower than the level of wages in productive industry, these persons have been able to supplement their income by the benefits provided under the present act and thus provide a minimum aggregate income for the support of themselves and their immediate dependents. H. R. 6000, in its present form, will deprive these persons of the insurance benefits which they have been receiving and reduce the bare minimum income which is necessary for their maintenance and support. When persons have attained the age of 65 years, they have established a certain pattern of living which is based upon the income which they can expect to have. If this income is reduced, they are faced with two alternatives, either to obtain higher wages in their present employment or to find new employment which will provide them with the necessary minimum wage. In the case of persons over 65 years of age now employed by charitable institutions, neither of these alternatives will be available. Charitable institutions themselves operate on minimum budgets and they cannot afford to increase wages to replace the loss of insurance benefits. As to the second alternative, it is extremely difficult even in periods of economic prosperity for persons over 65 years of age to find new employment in private industry. Under present economic conditions, such employment would be entirely unavailable to these persons.

Secondly, the impact of this provision will impose a severe financial hardship upon charitable institutions. They will be faced with pressure by their employees to increase wages to compensate for the loss of insurance benefits. Furthermore, if the threat of loss of the increased insurance benefits provided under H. R. 6000 should discourage persons over 65 years of age from continuing their employment, these charitable institutions will be forced to employ younger people who will require higher wages.

In view of the consequences which I have described herein, I would respectfully recommend to the committee that H. R. 6000 be amended so as to provide that persons over 65 years of age who are presently employed by a charitable institution may continue to receive without reduction the insurance benefits which have heretofore been paid to them. Although H. R. 6000 provides for an increase in insurance benefits, it would seem to be equitable if the foregoing provision is adopted that insurance benefits be paid to these persons at the rates presently in effect and not upon the increased rates provided under the proposed act. The provision could be so phrased that these persons would be entitled to receive benefits at the increased rates upon their retirement from employment and subject to the exemption of $50 per month provided under section 103 (b) (1) of H. R. 6000, or upon attaining the age of 75.

It is my understanding that only a relatively small number of persons would be eligible to avail themselves of the relief which would be provided by such provision and the cost thereof would be relatively small in comparison to the burden to which these persons would otherwise be subjected.

I trust that this matter will receive your favorable consideration and I would be happy to discuss this matter with you further if you should so desire.

Respectfully yours,

ELY KUSKEL.

STATE OF NEW YORK, SENATE RESOLUTION No. 114

ALBANY, *February 28, 1950.*

Committee on Rules (at request of Mr. Wicks):

Concurrent resolution of the senate and assembly memorializing the Congress of the United States to exclude members of retirement systems within the State from pending provisions extending the social-security law

Whereas there is now pending before the Congress of the United States certain legislation to extend the provisions of law, commonly referred to as the social security law, to include all public employees in the United States including public employees of the various cities and the governmental subdivisions of such States, and

Whereas in the State of New York pension and retirement systems have been established for many years and are available for membership by every public employees of the State, or its various subdivisions; and

Whereas under the constitution of the State of New York all such public employees, notably policemen, firemen, and public school teachers who are members of any such pension or retirement system within the State, enjoy a contractual relationship under which their rights cannot be diminished or impaired: Now therefore be it

Resolved (if the assembly concur), That the Congress of the United States hereby respectfully is memorialized to exclude from the provisions of such pending legislation members of the police departments, fire departments, public school teachers, and all other employees who are presently members of any pension or retirement system administered by the State of New York or any of its governmental subdivisions; and be it further

Resolved (if the assembly concur), That copies of this resolution be transmitted to the Secretary of the United States Senate, the Clerk of the House of Representatives, to each United States Senator and to each Member of the House of Representatives elected from the State of New York.

By order of the senate,

WILLIAM S. KING, *Secretary.*

In assembly March 1, 1950.
Concurred in without amendment.
By order of assembly:

ANSLEY B. BORKOWSKI, *Clerk.*

AMERICAN NATUROPATHIC ASSOCIATION,
Midland, Tex.

To the Members of the Senate Finance Committee.
(Attention Hon. Walter F. George, chairman)

DEAR SENATORS: This association represents the members of the naturopathic profession in the United States, comprising some 7,000 naturopathic physicians.

Naturopathy is a therapeutic system embracing a knowledge of the constitution, diseases, injuries, and disabilities of man and remedially employing nature's agencies, forces, processes, and products in the practice thereof.

We have observed that certain self-employed professional groups are specifically excluded from coverage in H. R. 6000, section 211 (c), (5), providing with reference thereto as follows: "The performance of service by an individual in the exercise of his profession as a physician, lawyer, dentist, osteopath, veterinarian, chiropractor, or optometrist or as a Christian Science practitioner, or as an aeronautical, chemical, civil, electrical, mechanical, metallurgical, or mining engineer; or the performance of such service by a partnership."

According to the report of the Committee on Ways and Means of the House of Representatives, the term "physician" as used in the section above quoted means "an individual who is legally qualified to practice medicine." It is quite obvious that is the reason osteopaths and chiropractors sought and obtained exclusion from coverage.

This association respectfully requests that the foregoing section 211 (c), (5), be amended by adding the word "naturopath" immediately following the word "osteopath," thereby according the naturopathic profession the same recognition and exempt status provided and granted the other schools of the healing arts in said section.

We believe it would be contrary to the public interest to include the naturopathic profession under the coverage of H. R. 6000 and exclude all other healing art professions from the provisions thereof, which now appears to be the case.

Respectfully submitted.

HENRY SCHLICHTING, JR., N. D.,
President.

THE NATIONAL SHERIFFS' ASSOCIATION,
Washington, D. C., March 16, 1950.

Senator WALTER F. GEORGE,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: The writer notes the Senate Finance Committee, of which you are chairman, is considering H. R. 6000 which would amend the Social Security Act to include employees of States, counties, and municipalities.

This bill, of course, would include deputy sheriffs, and as president of the National Sheriffs' Association I would like to endorse this bill whereby the deputies would have Social Security protection.

Our national offices are in Washington and in event testimony before the committee would be helpful, the executive secretary would be glad to appear.

With all good wishes, I am

Sincerely yours,

A. B. FOSTER,
President, National Sheriffs' Association.

A RESOLUTION RELATING TO REVISION OF THE SOCIAL SECURITY ACT BY THE INTERNATIONAL ASSOCIATION OF CHIEFS OF POLICE, WASHINGTON, D. C.

Whereas there is now before the various committees of the Senate and House of Representatives of the United States, proposals for revision of title II of the Social Security Act, relating to old-age and survivors insurance, namely as presented in H. R. 6000; and

Whereas, after careful consideration of all issues involved and a weighing of benefits now enjoyed by members of State of local police pension and retirement systems, the executive committee of the International Association of Chiefs of Police is of the firm belief that such members now receive and enjoy greater benefits and financial security from these existing pension and retirement systems than they would under social-security coverage; and

Whereas these present pension and retirement systems are adequate and well adapted to the needs of the public employees covered thereby; and

Whereas the imposing of social-security coverage upon these public employees now covered by State or local pension and retirement systems would require them to carry a double burden of contribution and ultimately would lead to dissolution of such State or local pension and retirement systems: Therefore be it

Resolved, That the executive committee of the International Association of Chiefs of Police does herewith petition the Senate and House of Representatives of the United States to specifically exclude from social-security coverage police, firemen, teachers, and other public employees now protected by adequate pension and retirement systems.

Certified to be a true and correct copy, this 8th day of February 1950.

EDWARD J. KELLY, *Executive Secretary.*

LAKE COUNTY DEPARTMENT OF PUBLIC WELFARE,
Gary, Ind., March 9, 1950.

Hon. Senator WALTER GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: I have studied H. R. 6000 very thoroughly and find its provisions very sound. The only defect is that it does not go far enough. All employees should be covered under OASI. The omission of certain groups such as farmers and farm hands is unsound. Farm hands are one of the first groups who become dependent in old age. States and communities that are

rural will be carrying a heavy burden when this group will have to rely on public assistance. The farmer is going to be placed in a rather unfair position without coverage. He will have to pay tax for those on public assistance, and pay tax through the purchase of products (as industry will charge part of the costs of OASI and private pensions plans to the cost of production). In other words, the groups left out will be triple taxed and yet will not obtain any social-security benefits for themselves.

I'm afraid that farm groups and farmers have not been fully informed about the implications of the OASI program.

H. R. 6000 does not embrace wholesale medical insurance. Frankly, I'm glad that it does not. I believe that private initiative and the competitive enterprise system should be given the opportunity to handle this social problem.

H. R. 6000 is a modest approach to basic social security. It does not go into areas that can be solved by private incentive and voluntary mutual responsibility. I would appreciate this being included in the hearing record.

Very truly yours,

FRED H. STEININGER, *Director.*

NATIONAL ASSOCIATION OF COUNTY OFFICIALS,
Washington, D. C., March 13, 1950.

Senator WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: I am enclosing herewith a copy of a resolution adopted by the National Association of County Officials which has a bearing upon H. R. 6000, now under consideration by the Senate Finance Committee. It is requested that this letter and the attached copy of our resolution be made part of the record of your committee in relation to that bill. Attention is invited particularly to that portion of the resolution calling for extension of social-security coverage to all employed persons, including self-employed and particularly on a permissive basis the employees of the State and local governments.

Sincerely,

KEITH L. SEEGMILLER,
Washington Representative.

RESOLUTION NO. 6

Resolved, That the National Association of County Officials go on record as favoring a system of social-security benefits available to every employable person; including the self-employed, and permissive legislation as to public employees.

Resolved, we, the officers and delegates to the National Association of County Officials convention, assembled in Oakland, Calif., this 20th day of July 1949, urge the enactment of a law which will provide that voluntary inmates of county infirmaries, homes, or hospitals, which said institutions meet social-security standards, be entitled to Federal funds for old-age assistance upon the same basis of matching as used for care in private homes.

ILLINOIS POLICE ASSOCIATION, INC.,
Evanston, Ill., March 18, 1950.

Senator WALTER F. GEORGE,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: Thank you for the fine way in which you received our presentation to the Senate Finance Committee on February 9, last, requesting an amendment to bill H. R. 6000 to exclude all public employees now covered by a pension plan.

We hope you will continue to support our efforts as stated in the enclosed resolution which represents over 33,000 members.

Very truly yours,

FRED H. EICHLER,
Chairman, Legislative Committee, Illinois Police Association, Inc.

PROTEST

To His Excellency, the President of the United States of America, and to the Honorable the Members of the Congress of the United States of America:

The undersigned organizations, representing a combined membership of more than 33,000 members, through their duly authorized representatives, whose signatures appear below, do hereby vigorously protest the passage of H. R. 6000 in its present form, and we wish to express our uncompromising opposition to this bill, or any other, which would seek to either absorb our existing organizations into the social-security system or provide for the membership of these organizations to vote them into the social-security system at some later date. We strongly urge the passage of the Lehman amendment to H. R. 6000 which would exclude from the operation of H. R. 6000 all public employees now covered by a retirement system, or, if that amendment be considered too broad, then the adoption of an amendment to H. R. 6000 which would have the effect of excluding the undersigned organizations completely from the operation of H. R. 6000. The undersigned organizations operate in the city of Chicago, the county of Cook, of the State of Illinois.

Policemen's Annuity and Benefit Fund of Chicago (12,000 members), by Joseph P. Fitzgerald; House of Correction Pension Fund (125 employees), by John E. Wagner; Illinois Police Association (10,000 members), by Fred H. Eichler; Firemen's Annuity and Benefit Fund of Chicago (6,000 members), by John P. O'Connor; Park Policemen's Annuity and Benefit Fund (1,200 members), by George A. Otlewis; Policemen's Benevolent and Protective Association (4,000 members), by Leonard A. Duncan.

Total membership of above organizations here represented, 33,325.

AMALGAMATED ASSOCIATION OF STREET, ELECTRIC RAILWAY, AND MOTOR COACH EMPLOYES OF AMERICA,
Detroit 26, Mich., March 13, 1950.

Hon. WALTER GEORGE,
Chairman, Senate Committee on Finance,
United States Capitol, Washington, D. C.

DEAR SENATOR GEORGE: At the hearings before your committee on proposed amendments to the Social Security Act, held on February 10, 1950, your committee very kindly gave our organization leave to submit a further statement and a proposed amendment to H. R. 6000 which would result in coverage of employees of public transportation systems taken over by State or municipal authorities after 1936.

As indicated in my statement before your committee, it is urgent that employees of public transportation systems acquired by State or municipal authorities after 1936 be afforded protection under the Social Security Act. We believe that such coverage should be definite and automatic. It appears that some groups of public employees, such as police, object to possible coverage under the voluntary agreement section of H. R. 6000, section 218. We would have no objection to the express elimination from the bill of groups of public employees not employed on public transportation systems. We are interested solely in obtaining coverage for employees of public transportation systems on an automatic rather than a voluntary basis.

The inequities which employees of such public transportation systems have suffered as a result of the transfers to public operation have been specifically dealt with in my statement before the committee. We are enclosing herewith a draft of proposed amendments to section 210 (a) (8) (B) of the Social Security Act as amended by H. R. 6000, and to section 1426 (b) (8) (B) of the Internal Revenue Code as amended by H. R. 6000. These amendments provide for coverage of employment performed in the employ of a State or municipally operated public transportation system acquired after 1936.

We hope that your committee will see fit to report these amendments favorably. We wish to thank your committee for the courtesies extended us.

Respectfully yours,

A. L. SPRADLING,
International President.

H. R. 6000

[In the Senate of the United States]

AMENDMENTS intended to be proposed by Mr. ——— to the bill (H. R. 6000) to extend and improve the Federal old-age and survivors insurance system, to amend the public-assistance and child-welfare provisions of the Social Security Act, and for other purposes, viz:

On page 39, beginning with line 16, strike out all down to and including line 18 on page 40, and insert in lieu thereof the following:

"(B) Service (other than service performed under an agreement under section 218) performed in the employ of a State, or any political subdivision thereof, or any instrumentality of any one or more of the foregoing which is wholly owned by one or more States or political subdivisions in connection with the operation of any public transportation system: *Provided*, That service performed in the employ of any of the foregoing in connection with the operation of any public transportation system acquired after 1936 by such State, political subdivision, or instrumentality shall be deemed unemployment within the meaning of section 210 (a) of this title."

On page 141, beginning with line 12, strike out all down to and including line 14, page 142, and insert in lieu thereof the following:

"(B) Service (other than service performed under an agrement under section 218) performed in the employ of a State, or any political subdivision thereof, or any instrumentality of any one or more of the foregoing which is wholly owned by one or more States or political subdivisions in connection with the operation of any public transportation system: *Provided*, That service performed in the employ of any of the foregoing in connection with the operation of any public transportation system acquired after 1936 by such State, political subdivision, or instrumentality shall be deemed employment within the meaning of section 210 (a) of this title."

COOK COUNTY DEPARTMENT OF WELFARE,
Chicago 1, Ill., March 22, 1950.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: Writing as director of a county department administering the three categorical public-assistance programs (old-age assistance, aid to dependent children, and blind assistance) I should like to submit for consideration by the Senate Finance Committee certain suggestions for additions and modifications in H. R. 6000.

At the outset I wish to make clear my general endorsement of the provisions of the bill, and to express satisfaction with the manner in which the House, especially through its Ways and Means Committee, attacked some of the inadequacies in the present social-security structure.

Social insurance coverage

I think that it is generally recognized that it is in the interest of the general welfare to relieve need resulting from economic insecurity beyond the individual's control. I believe such need should be met as far as possible by extending coverage and increasing benefit levels in the contributory social-insurance system.

The economic advantages of a system which is self-financing are obvious. Less obvious, perhaps, but also important, are the social advantages to the individual of a system which entitles the beneficiary to payments as a matter of right, without the necessity of inquiring into his personal situation. It is my conviction—a conviction based upon years of experience as an administrator—that most people find public assistance, with its necessary means tests and frequent investigations, most unpalatable even though necessary to life itself.

The contributory insurance systems have failed to increase benefits, even in relation to minimum subsistence standards, and they have also failed to include in coverage a large proportion of our population. As a result there is, quite naturally, an increased number of persons who must depend upon public assistance; these numbers include those persons not covered by the insurance programs as well as those who are covered but whose benefits are so low that public assistance is needed, too.

It seems to me that unless immediate steps are taken to extend social insurance coverage to all working people and to increase its benefit levels, the present pressures for higher flat grant assistance payments may seriously endanger the social-insurance system. Such pressures—to liberalize assistance payments—will, of course, continue unless the so-called new start recommendation of the Advisory Council is put into effect. Without this provision, whereby persons now approaching retirement age could qualify for benefits after a year and a half (1½) of covered employment rather than a minimum of 5 years as required in H. R. 6000, the effect of extended old-age and survivors insurance coverage will be long delayed.

Disability insurance

I wish to give my full support to the provisions of H. R. 6000 which relate to insurance against permanent and total disability. In Cook County, just as in other counties in Illinois and throughout the Nation, charges against tax funds for care of long-time disability and chronic illness are considerable.

Assistance categories

I agree with the recommendation of the American Public Welfare Association which has given long-standing support to plans for Federal participation in aid to all needy persons. This involves aid to so-called general assistance as well as to the three present categories. Such a recommendation is also before you from the Advisory Council on Social Security.

It seems to me that if you do not wish to commit the Federal Government to sharing in general assistance at this time that there are certain changes which could be made in H. R. 6000 which would go a long way toward reducing the present costs of assistance in the various States:

(*a*) Aid to the permanently and totally disabled could be broadened to include all those who are in need because of disability. Very often it is in the early stages of disability that use of assistance funds can be most productive—in terms of prevention, cure, and rehabilitation.

(*b*) The definition of eligibility for aid to dependent children could be broadened to include children with both parents in the home if actual need were found to exist. I think that the need of the child, rather than the "cause" of the dependency should be the factor determining eligibility for aid to dependent children.

Medical care

I should like to urge the adoption of the Advisory Council's recommendation to extend financial aid to the States for medical assistance beyond the ceilings on individual cash payments. The proposal of H. R. 6000 to include medical assistance within individual ceilings would not meet actual needs, and would be difficult to administer.

The recommendation of the Advisory Council (50 percent Federal reimbursement of the cost in an amount not to exceed $6 a month times the entire adult caseload, and $3 a month times the number of children receiving assistance) is a much to be preferred method of payment. If the Senate Finance Committee does not feel that it can adopt the above recommendation of the Advisory Council, it should act on the recommendation of the American Public Welfare Association—that ceilings on assistance payments apply on an average rather than individual basis. Under such a plan medical payments made to or in behalf of a needy person could exceed the ceiling in one month provided the averages of all such payments in the State did not exceed the ceiling.

In conclusion I wish to state that I realize fully that cost is a big problem in the achievement of adequate social-security programs. It is for this reason that those of us who administer assistance emphasize the need to extend the contributary system. Even with the extension of the insurance programs, there will always be a residual group which must depend upon public assistance. For this residual group, and for those persons not now covered by insurance programs, there must be adequate public assistance provisions.

Very truly yours,

JOSEPH L. MOSS,
Director, Cook County Department of Welfare.

The CHAIRMAN. That will conclude the hearings on H. R. 6000.

(Whereupon, at 1:45 p. m. the committee recessed.)

×
