Statement of—Continued

SOCIAL SECURITY REVISION

MONDAY, FEBRUARY 20, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

Present: Senators George, Connally, Hoey, Kerr, Myers, Millikin, and Taft.

Also present: Mrs. Elizabeth B. Springer, Chief Clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

The first witness is Mr. Charles E. Sands. Is Mr. Sands present? Then we will come back to him later and see if he has come in. Mr. Daniel J. O'Brien?

STATEMENT OF DANIEL J. O'BRIEN, FIRST VICE PRESIDENT, AMERICAN HOTEL ASSOCIATION

Mr. O'BRIEN. Yes, sir.

The CHAIRMAN. All right, Mr. O'Brien. Come around, if you please, sir. You may have a seat. You represent the American Hotel Association?

Mr. O'BRIEN. That is correct, Senator.

The CHAIRMAN. You are an officer of that association?

Mr. O'BRIEN. Yes; I am vice president.

The CHAIRMAN. We would be very glad to have you identify yourself accurately for the record and proceed. We will be glad to hear you on this bill.

Mr. O'BRIEN. Mr. Chairman and gentlemen of the committee, I am Daniel J. O'Brien, of Toledo, Ohio. I am representing the American Hotel Association, whose member hotels in every State have approximately 75 percent of the hotel rooms of the country.

While most individual hotels are relatively small business establishments, as compared with great manufacturing industries, our total effect upon the Nation's economy is substantial, we frequently are referred to as the seventh largest industry of the United States.

I am humble as I appear before you to testify upon a bill which runs 201 pages, to which the House Ways and Means Committee devoted itself for 6 months in 1949. However, our American Hotel Association has really given a great deal of thought to this entire social-security program, and we are anxious to pass on to you the problems which this program would present to us, if this bill were enacted in its present form.

We hotel men in America do not oppose social security and employee benefits to every employee. It does not follow, therefore, that any criticism of an individual portion of H. R. 6000 is in any sense an indictment of the principal objectives of this legislation. There are, however, an increasing number of employers who are now providing their employees with a greater degree of security, and more numerous health and welfare benefits, than ever before. These include vacation pay, holiday pay, year-end bonus, pension plan, hospitalization and medical plans, old-age and survivors insurance, disability insurance, life insurance, unemployment insurance, workmen's compensation, recreational activities and facilities, free meals, free work clothes, et cetera. These are over and above all cash wages, and constitute a very substantial cash outlay.

The question arises as to whether the increasing assumption of employee security and responsibility by the Federal Government would mean the ultimate abandonment of all private plans. Many of the benefit programs which are today offered to employees of individual hotels, are a part of the contract between the employer and the bargaining labor organization. I am sure considerable time would be required to switch over entirely to a Federal program of social security, if it were ultimately decreed that the Government should underwrite all employee occupational hazards.

I recall the great mental anguish with which I personally had to cope, when as a young man I debated the wisdom of paying a relatively substantial portion of my income for self-protection in the form of insurance. Those insurance premiums might have meant that my family could not make desired or necessary personal expenditures until the insurance had first been paid. I do feel earnestly that if there is any one thing to our system of incentives in America, it is based on the fact that as individuals, we have an obligation to try to provide some degree of security for ourselves and our loved ones. That incentive must be retained or the individual heights of performance to which American workers have always risen, will have been sacrificed in the years that lie ahead.

I am not sure I am ready to admit that the program which is herein contemplated is an insurance program. I am afraid that it is more in the nature of a relief program, which could be modified and distorted, from time to time, in response to pressure and from political spokesmen, or spokesmen from strong employee groups.

May I give an example of what I mean? A few years ago, the House Ways and Means Committee entertained legislation which proposed supplementing State unemployment compensation payments, and extending the period in which such compensation is available. Now, it could be that these proposals might have had soundness, even from an actuarial standpoint. But the facts remain that the Ways and Means Committee itself concluded, after extensive hearings on these measures in past years, that such a proposal as would increase unemployment compensation to $25 a week for 26 weeks, would actually put a premium on idleness. Members of the committee themselves expressed the belief that some unskilled employees would be slow to report for duty on some job if they could draw adequate unemployment compensation springing from their release from an earlier job. In that sense, the proposals did embody a principle of relief, and were not strictly based upon insurance principles.

I feel strongly that whatever is undertaken in the social-security field should follow closely the best accepted principles of insurance and, above all things, should be based upon an actuarial formula.

I am just an ordinary American, who has served both as employee and employer, and I do regret to observe that there are employees who are guilty of absenteesim, and who are quite willing to extend themselves to the maximum of their ability, physically and mentally, if provisions are made for their welfare without working. The Department of Commerce has heretofore published estimates of the total number of employable persons who are seasonal or occasional workers, and who seem to have no desire to be gainfully employed the year-round.

When World War II struck, England was paying a dole of 25 shillings to a married man with one or two children. As an unskilled worker, that man could earn only 30 shillings if he worked a full workweek. So, in spite of the fact that England was fighting for its very life, it took a year or two before those persons who were enjoying a dole could be diverted to the nation's work force. Here in America we must never destroy the personal initiative and the personal responsibility of our own people, no matter where they work.

I note that a proposal was made to the Ways and Means Committee, in connection with its hearings last year, to the effect that the mounting social-security program in the United States should be brought under the jurisdiction of a joint committee, comparable to the Joint Committee on Internal Revenue Taxation. It was urged that this committee be made up entirely of technical people from the Treasury, and from congressional committees. And it was emphasized that this committee would see to it that the program was administered as an insurance program on a sound actuarial basis. Businessmen generally would have more confidence if such an approach were used.

The very fact that Government bureaus develop into such monstrous agencies frightens the layman. I do not know whether it is true or not, but I have read on several occasions that the Veterans' Administration today has 1 employee for every 15 war veterans, living and dead. If any such multiplication of staff people was practiced in the case of the social-security program, something like every fourth family would have to be on the Federal pay roll to administer the program. Adherence to strict insurance procedure might minimize the temptation to make a social agency out of this department of Government. This, we fear, could easily defeat the altruistic purpose toward which we should all address ourselves: namely, a competent insurance program which is workable and practicable.

The Commissioner for Social Security has testified that administrative costs of the program have been held to 3 percent. If we are to launch out into untried fields, a limit on maximum administrative and operating costs should be set forth, to insure the actuarial soundness of the entire program. The Nation's employers and employees dare not risk possible future insolvency of this fund.

Let me now enumerate for you some of the problems which this bill poses for the hotel business. H. R. 6000 provides that an employee's income, arising from tips, shall be made taxable for social-security purposes.

We are opposed to this, for the following reasons:

In all the history of hotel and other service businesses, there has never been devised a way by which the employee would make an accurate statement regarding his or her tip income. We frankly regard the whole practice of tips as a bad one. It is an irritation to many of our guests, and it is a source of friction between management and employees. All attempts, however, to eliminate tips have failed. They have failed in hotels, in restaurants, on railway dining cars, and elsewhere, because the guest who wanted special service of some kind, would not be guided by the request of management that tips be banned. So, we have somehow to live with this practice, whether we like it or not.

Service employees in a hotel, or other service establishment, who receive tips, receive a somewhat lesser cash wage. Even so, many tip employees in hotels decline to accept an executive position, because a generous public does make service jobs highly lucrative. Many waitresses in our dining rooms, for instance, would not trade places with the cashier or the hostess.

But when it comes to an accurate declaration of income from tips that is another thing. The employee continues to regard this as a personal matter in which the employer has no responsibility. It is not uncommon for an employee to give one estimate of his tip income for income-tax purposes, and another estimate of tip income when filing a claim for unemployment or workmen's compensation benefits.

The Bureau of Internal Revenue has worked diligently, always with our cooperation as an industry, in seeking to ascertain a relatively accurate measurement of this income for income-tax purposes. But the Bureau has made little progress collecting income tax or in persuading tip employees to include an accurate statement of tip income in their returns.

H. R. 6000 provides that an employee shall declare his income from tips within 10 days after each quarter. This would seem like a relatively simple procedure; and yet it comes a long way from meeting the realistic problems which an employer in a hotel will experience.

Actually the proposal would put us in a position where we would be required to deduct a 1½-percent tax from money which is never in our hands, and to calculate the tax on an amount which we cannot ascertain. For example, most hotels hire casual waiters for many functions. These individual employees may not return to the hotel for a month or more when another special function is scheduled, or may never return. If the hotel is supposed to make a deduction from the cash wages of each such employee, based on tip income, an awkward situation arises. I can visualize 100 special banquet waiters standing in line before pay windows computing their tips, and giving a statement thereof to the paymaster and then having to wait in line while he figures 1½ percent on each estimate and then subtracting that from the sums due each worker. Such a performance would take all night, because they are paid as soon as the party is over.

Under this bill, the procedure would be even worse; 3 months after the dinner, the casual employe would send a statement to the hotel as to tips received that night. The hotel would have no wages from which to make the deduction. We could give other illustrations, but this reveals the impracticability of making deductions from funds which the employer never has. A like problem could easily arise in

seasonal and resort hotels where the employees would never work a full 3 months and 10 days. We contend that the procedure here proposed is unworkable.

If tips are to be taxed at all, the only way we have figured out that they might be treated is to leave them to the option of the employee. If he elected to have an estimated amount of tips included in his wage, for social-security purposes, he should be required to furnish a statement to his employer, showing tip receipts, and at the same time tender to his employer 1½ percent of such amount representing his share of the tax. And this would have to be done before the employee is paid. Otherwise, in view of the turn-over experienced in service industries, many employees would no longer be on the job 10 days after the conclusion of the quarter.

One of the principal reasons why we oppose this proposal is that we are afraid that employers might be held liable for retroactive tax assessments under the ensuing regulations which the Commissioner might draw if this bill were enacted in its present form. We might somehow got stuck for the tax where the employee made no declaration, and paid no tax, or had no wages coming. Or if it developed later, through investigations by the Bureau of Internal Revenue or other Government agency, that the employee had made too low a declaration at the outset, we are quite sure that management would have a retroactive assessment on its hands. The sum involved is so small that we recommend that tips not be made taxable at all.

It may be argued that this complex subject of tax based on tip income has been successfully met in the working of unemployment compensation taxes in a number of States. We do not agree that this is a comparable situation. In the first place, there is no uniformity in the various States. Many systems for computing this tip income have been tried under State laws, but none of these has worked out satisfactorily. All methods tried to date have failed in some respects. Experience under these other laws has clearly established the impracticability of this provision of the bill.

Now it might be argued by sponsors of this bill that the Treasury would never go behind the declaration of the individual employee regarding his tip income. If so, this should be made clear in the law, together with the assurance that there is no liability on the employer where the employee makes no declaration of tip income.

But while H. R. 6000 purports to be an amendment to the Federal social-security laws, we point out that it also contains an amendment to the laws relating to withholding of income tax. By amending the definition of "wages" in section 1621 (a) of the Internal Revenue Code, it would have the effect of requiring employers to withhold income tax upon the amount of tips received by an employee if such employee files a statement as to the amount of such tips with the employer within 10 days after the close of the calendar quarter. This provision emphasizes the impracticability of including tips in wages, as we pointed out above.

If an employee receives his pay every week for 3 months, and at the end of that time gives his employer a statement to the effect that he received several hundred dollars in tips during that period, is the employer supposed to withhold approximately 20 percent of such amount as income tax? He certainly cannot withhold it from wages

already paid, and the amount to be withheld might be so large that it would exceed several weeks' future pay, assuming the employee is still in his employ. The impracticability of such an amendment is obvious and it should be eliminated from the bill.

Let me next discuss section 210, subdivision (k). H. R. 6000, which defines "employee" to mean, among other things, any individual who under the usual common-law rules applicable in determining employer-employee relationship has the status of an employee. The bill proposes to amend this definition so as to include specifically an individual who performs service under a written contract expressly reciting that such person shall have complete control over the performance of such service and that such individual is an employee notwithstanding any modification of such contract not in writing.

The effect of this change would be to prohibit a true determination of the status of the person performing the services. It would make the language of the contract, however artificial and however misleading as to the true facts, the final and sole criterion. The obvious purpose is to prevent any determination as to the true relationship. This is not an academic point because this situation exists in connection with the employment of musicians who are members of the American Federation of Musicians.

Obviously this amendment is intended to overcome the effect of the Supreme Court decision in *Bartels* v. *Birmingham* (67 Sup. Ct. 1547). That case was based upon a set of facts which is common practice in the music world. An orchestra was built around a leader whose name and distinctive style in the presentation and rendition of dance music was intended to give the orchestra a marked individual character. The leader organized the orchestra, selected and trained the members thereof, and made contracts under which the orchestra would appear usually for a one-night stand in consideration of the payment of a lump sum. The orchestra leader took the lump sum, paid the expenses of transportation, music, et cetera, and paid the individual members of the orchestra fixed salaries, keeping the profit for himself.

In actual practice the ballroom or hotel engaging such an orchestra had none of the powers ordinarily given to an employer. It could not hire or fire the individual members of the orchestra; it frequently does not even know their names; it could not dictate their style, method or performance, musical selections, or instruments, which they played. The Supreme Court found upon the facts that the orchestra leader, rather than the ballroom, was the true employer.

The proposed amendment is obviously designed to place the liability for social-security tax payments upon the hotel or ballroom which engages such an orchestra. The form of contract involved in the Bartels case and which is still in use, in substantially the same form, provides that the ballroom or hotel shall have complete control of the service, and describes the hotel or ballroom as the employer. The Supreme Court found, however, that this fiction could not be maintained merely because it appeared in the contract, and the Court placed the liability where it belonged, namely, upon the orchestra leader.

We also point out that the proposed amendment fails to accomplish its purpose. In placing the obligation upon the person described

in the contract as the employer, which would be the hotel or ballroom, the proposed definition of the term "employee" also fails to relieve the orchestra leader from the same liability. The amendment also places the liability upon the individual who under the usual common-law rules, is the employer and this would include the orchestra leader, because the Supreme Court has clearly found that upon this common state of facts the orchestra leader is such employer.

We object therefore to the qualifying phrase in the amended section for two specific reasons:

(1) It attempts to create an employer-employee relationship where none exists; and

(2) It would make both the orchestra leader and the hotel the employer and make both liable for social-security tax upon the earnings of the same employees.

Omission of the qualifying provision proposed in this amendment, would not deprive any one of social security payments to which he is entitled but merely would leave the burden where it belongs, namely, upon the orchestra leader, who is the true employer, and who makes the profit from the services of the individual employee.

We estimate that each one-half of 1 percent increase in the levy will mean approximately $4,000,000 tax annually for the hotel employers of America, based on cash wage alone. Any additional expense is viewed with alarm in these days of increasing costs and dwindling revenues. This is just one more item to be added to current pay rolls. But if an increased tax, moving up to 2 percent is to be imposed, then we reiterate that the program must be tied to an accurate, honest, actuarial table, and administered strictly as an insurance program if the fund is to continue solvent through the years.

Thank you, gentlemen.

The CHAIRMAN. Do you operate a hotel at this time?

Mr. O'BRIEN. Yes, sir. I operate three hotels, the Commodore Perry, the Secor, and the Willard, in Toledo, Ohio.

The CHAIRMAN. What is your reaction to the compulsory self-employed insurance in H. R. 6000? Would you not be classed as a self-employed person?

Mr. O'BRIEN. No. I am an employee of a corporation.

The CHAIRMAN. That takes you out of that category, then.

Mr. O'BRIEN. Yes.

The CHAIRMAN. But if you were not, and if you were just an individual operating hotels, you would be brought under the Social Security Act.

Mr. O'BRIEN. Yes, if I were operating as an individual.

Some of the small hotels, of course, have individual proprietorship.

The CHAIRMAN. Any questions?

Senator MILLIKIN. Can you give us any statistics on the percentage of the whole wage of a waiter that the tips consist of?

Mr. O'BRIEN. Well, Senator, that is one of those things that the employee does not reveal to us.

Senator MILLIKIN. I understand there would be different places and different circumstances. But give us some examples.

Mr. O'BRIEN. While they don't give us those figures, Senator, we have a pretty good idea of what they amount to in some places.

Senator MILLIKIN. Give us a pretty good idea, then.

Mr. O'BRIEN. For example, in the case of one of my hotels, the waiters report for purposes of workmen's compensation $8 a week. But we know they make more than that in one watch.

The CHAIRMAN. It depends upon the hotel and the location.

Mr. O'BRIEN. Oh, yes. Some of those positions are very lucrative. The answer is that they will not accept executive positions. Just a year ago, I offered a waitress in our coffee shop a position as hostess. She gets about $18 salary. She said she would take it for $70 a week after all deductions. That had to be net take-home pay.

Senator MILLIKIN. Does the waiter view the tip as a part of his salary?

Mr. O'BRIEN. It depends upon what purpose they are viewing it for. Yes, I would say he does, naturally.

Senator MILLIKIN. Do not the tips enter into bargaining as a part of the wages?

Mr. O'BRIEN. Well, we find usually that the unions would like to ignore that feature, when we talk with them. But, of course, we bring it in, naturally.

Senator MILLIKIN. Well, now, assume that you want to bring the waiter under the benefits of the social-security insurance system: What would be the best way to do it?

Mr. O'BRIEN. Well, the onus should be put on them to report and at the same time to tender their part of the tax.

Senator MILLIKIN. To the employer?

Mr. O'BRIEN. To the employer. Obviously, it is impossible for us to know what it is.

Senator MILLIKIN. You object to the burden on the hotelman of trying to estimate what the waiters' tips may be?

Mr. O'BRIEN. Well, it would be impossible, Senator, for us to estimate. But I would refer you again to the statement I made regarding these casual workers. You can visualize a lot of banquet waiters or waitresses lined up. We pay them as soon as the function is over. In some New York hotels, for example, there might be 100 or 150 of those. Each one would have to report his tip at the time, turn in his 1½ percent or we would have to calculate it. Why, we would be serving breakfast in the morning by the time we got through.

Senator MILLIKIN. Could it be handled on a stamp plan system similar to that for migrant labor?

Mr. O'BRIEN. I have not given any thought to that. But we have no objection to it if the onus is put on the employee to report to us and at the same time tender us his share of the tax. But as the bill is written, of course, it isn't workable for us.

The CHAIRMAN. Are there any further questions?

Senator KERR. I would like to ask him about his last paragraph on page 10, Mr. Chairman. He says, in the statement:

> We estimate that each one-half of 1 percent increase in the levy will mean approximately $4,000,000 tax annually for the hotel employers of America, based on cash wage alone.

Mr. O'BRIEN. That is eliminating tips and other benefits.

Senator KERR. What part is that with reference to employees whose compensation is primarily in terms of salary, aside from tips?

Mr. O'BRIEN. Of course, this is taken on an over-all picture, tip and nontip employees. I don't have the break-down as between them.

Senator KERR. Would you make an estimate?

Mr. O'BRIEN. No, sir, I can't do that. I might be able to get the figures.

Senator KERR. You operate three hotels?

Mr. O'BRIEN. Yes, sir.

Senator KERR. Could you give us an estimate as to what part of your salary expense which would be subject to this tax, is with reference to employees who are now unquestionably covered by social security, and who are paid in regular amounts, and in whose compensation tips do not enter as a factor?

Mr. O'BRIEN. I would hate to hazard a guess. I will be glad to get you the figures and submit them to you.

Senator KERR. It is amazing. I never did operate a hotel, but I think I could make a guess.

Senator TAFT. Well, you see, you have certain difficulties. You cannot just take your pay roll of tipped people as against untipped people, because you have to reduce them all to $3,000 apiece, on which they pay. The $4,000,000 is not figured on all your salaries of untipped employees. It is only figured on salaries up to $3,000.

Mr. O'BRIEN. That is right.

Senator TAFT. But can you tell us what proportion of total pay roll is paid to tipped employees as against untipped employees? Have you any idea as to that?

Mr. O'BRIEN. Senator, I don't have the figures in my head. I can get them very quickly. I just hate to give a figure out of my head which may be inaccurate.

Senator MILLIKIN. It would be obviously difficult, because some hotels make a big play for the restaurant business and others do not. But the general overhead of the bookkeepers, the cashiers, the people behind the desk, and the people down in the basement that operate the machinery goes on regardless of how big their restaurant business may be.

Mr. O'BRIEN. That is correct, sir.

Senator MILLIKIN. I am rather an expert on hotels because I lived in one for 21 years.

Senator KERR. Would you not say that on an average less than 16 percent of the employees come within the classification of tipped employees?

Mr. O'BRIEN. Oh, no, sir.

Senator KERR. Well, aside from the waiters in the restaurant and the bellboys?

Mr. O'BRIEN. And the waitresses.

Senator KERR. And the waitresses.

Mr. O'BRIEN. Of course, it depends upon the relationship of your restaurant business to your room business. But I have more than that. I would have, say, 30 percent.

Senator KERR. Thirty percent. Would you say that that was less than the general average? You refer here to the fact that the hotel business is the seventh largest business in the country. Would you say that 30 percent would be more or less than the general average in that business?

Mr. O'BRIEN. I would imagine it would be about the average. But there are some hotels that have very small restaurant facilities, and other hotels that have unusually large restaurant facilities.

Senator KERR. Most of the volume of rooms is in hotels where the restaurant service is a comparatively small part of the over-all business, is it not?

Mr. O'BRIEN. It is hard to give a general answer to that, Senator, because the situation varies so much between hotels.

Senator KERR. Well, then, with reference to this $4,000,000, in your situation 70 percent of it would be unaffected by the recommendations you make here.

Mr. O'BRIEN. That is right.

Senator KERR. In other words, with reference to 70 percent of it, that is going to be present whether the recommendations you have made are accepted or not?

Mr. O'BRIEN. That is correct.

Senator KERR. That is what I was trying to bring out.

Senator MILLIKIN. Would this be true: That where a hotel is not in a position to push its liquor business, the restaurants are usually a losing proposition?

Mr. O'BRIEN. That is very true.

Senator MILLIKIN. And where you find a profitable restaurant, not in all cases, of course, it is usually because of its relationship to the liquor business; is that not true?

Mr. O'BRIEN. Yes. Although unfortunately we are finding a very serious slump in the liquor business.

Senator MILLIKIN. Would you like us to take the cabaret tax off?

Mr. O'BRIEN. I would, very much. As a matter of fact, I am going to close one room in the next 2 weeks as a result of increasing guest resistance to that tax.

The CHAIRMAN. Thank you very much.

Senator TAFT. May I ask one question?

The CHAIRMAN. Senator Taft.

Senator TAFT. Are there any considerable number of hotels that have pension plans for retirement? That is rather rare in the hotel business, is it not?

Mr. O'BRIEN. We have them in our organization.

Senator TAFT. You do?

Mr. O'BRIEN. Yes. It is spreading. The Albert Pick Hotels have, I know. I think the Hilton Hotels have. It is a program that has come about in the last few years and it is growing.

Senator TAFT. The ordinary hotel today, though, does not have a pension plan, does it?

Mr. O'BRIEN. You are right, Senator.

The CHAIRMAN. Thank you very much, Mr. O'Brien.

Mr. O'BRIEN. Thank you, Mr. Chairman.

The CHAIRMAN. Congressman Van Zandt, did you wish to make a statement?

STATEMENT OF HON. JAMES E. VAN ZANDT, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF PENNSYLVANIA

Representative VAN ZANDT. Thank you, Mr. Chairman.

I have come here to ask that I be permitted to insert a statement in the record. I must return to a meeting of the House Armed Services Committee, and I will, with your permission, file this statement. It is

in support of H. R. 6000 and follows the lines of my thought that was contained in the statement I made before the House of Representatives when H. R. 6000 was before the body and approved.

The CHAIRMAN. You may file it, Congressman. Thank you very much, sir.

(The statement of Representative Van Zandt follows:)

STATEMENT OF JAMES E. VAN ZANDT, MEMBER OF CONGRESS, TWENTY-SECOND DISTRICT OF PENNSYLVANIA, WITH RESPECT TO AMENDING THE SOCIAL SECURITY ACT

Mr. Chairman, I supported H. R. 6000 when it passed the House of Representatives during the first session of the Eighty-first Congress. I did so, because I felt it was a step in the right direction. Yet at the same time it was my belief that the provisions of H. R. 6000 did not truly meet the general problem of old-age pensions.

As many of you know, I have long been associated with various groups in the old-age pension field including the Townsend organization and the American pension plan. I am sure that you will agree with me that these pension groups are entitled to a lot of credit for they are pioneers in the effort to bring to the attention of the American people the general problem of old-age pensions.

Fifteen years ago the American people were faced with the problem of old-age pensions and from that day until this there has been a constant effort by pension groups and many of us in Congress to bring about a general revision of social security in all of its aspects.

You know as well as I do that when Congress approved the Social Security Act our Government accepted the responsibility of that segment of the population covered by the act. This was the beginning of a program that was designed to provide eventually for the problems of our aged.

Since the Social Security Act became effective statistical information furnished by Government agencies reveals that the number of aged persons is increasing rapidly due to the lengthening of the span of life because of the rapid strides made by the medical profession in treating human ills.

Then, too, we must recognize that the Social Security Act has resulted in many people depending upon the Government for security in their old age. While this attitude may be subject to criticism, yet it actually exists and the condition must be faced.

We cannot escape the fact that the cost of living has aggravated the general problem of old-age pensions and that present benefits under the Social Security Act are wholly inadequate. Then, of course, we have the cost of social security which has developed to be quite a problem to the Federal and State Governments, as well as to the employer and employees.

While I was not in Congress when the Social Security Act was approved, yet I felt at that time that since our Government was committed to provide benefits to the aged the program was not broad enough since it did not cover all citizens. Many of you will remember that at that time I was identified with the Veterans of Foreign Wars as commander in chief and my activities brought me in contact with not only those covered under the law but also with a large number not covered. To be frank, the glaring defects in the Social Security Act were immediately apparent.

Today we are faced with the terrific problem of old-age pensions. It is my opinion that the Congress of the United States through its failure to take positive action in this field over a period of 15 years, is responsible for the situation we are confronted with today. If Congress had kept abreast of developments in the field of old-age pensions and had taken action instead of using delaying tactics, the issue would have been met and we would have today the necessary laws to meet present-day needs.

Without doubt the question of industrial pensions and the many pension plans in effect at the present time have made this general problem of old-age pensions an acute one. As I have already said, it is my opinion that if Congress had taken action, the pension problem would have been solved years ago and we would not have the conglomeration of pension plans now being offered to the American people.

It is the consensus of opinion that the Social Security Act will have to be rewritten or a substitute adopted. It is freely predicted that the cost of social-

security benefits in the near future will be so great to employer and employee that a Federal Government subsidy will be necessary.

Then, let us not forget, that we are talking only about earned benefits under the Social Security Act and that we have not considered the cost of old age or public assistance to persons who are not contributors to the social-security fund. The cost of these old-age pensions, as you know, is shared by the Federal and State Governments.

In mentioning the total cost of the Social Security Act, it is evident that the day is not far off when the cost of taking care of our aged under all phases of the Social Security Act will become an unbearable burden to Federal and State Governments as well as to employer and employee.

In closing, I recognize that your committee has access to Government statistics that concern all phases of the general problem of old-age pensions. For that reason, I have confined my remarks to a general discussion of the subject. It is my considered judgment, however, that the only answer to the old-age-pension problem is a universal pension for the aged of this Nation. It may be the Townsend or American pension plan or some similar pension proposal that will provide the answer to this problem. One thing certain, we are not on the right track at present. It is a known fact that the aged of this country are not being taken care of for many of them are hungry. Therefore, I say to you, Congress had better devise a universal pension plan in keeping with the solvency of our Government and the needs of the American people.

The CHAIRMAN. Mr. Sands? You were called first, Mr. Sands. Will you give your full name and the capacity in which you appear for the benefit of the record?

STATEMENT OF CHARLES E. SANDS, REPRESENTING HOTEL AND RESTAURANT EMPLOYEES AND BARTENDERS INTERNATIONAL UNION, CINCINNATI, OHIO

Mr. SANDS. Mr. Chairman and members of the committee, I represent the Hotel and Restaurant Employees and Bartenders International Union of America. We have approximately 450,000 members, made up from 800 local unions throughout the United States, Canada, Puerto Rico, Hawaii, and Alaska.

We are affiliated with the American Federation of Labor and with the Railway Labor Executives Association, and we subscribe wholeheartedly to the presentation as made by the American Federation of Labor. I will not burden the committee by reiterating anything that may have been said, except that I do want particularly to appear here this morning in support of and to explain, as much as I can, and answer questions that I am able to, respecting the section of the bill, H. R. 6000, which deals with the tipping question or gratuities.

Our international union is wholeheartedly opposed to the tipping question. I was very pleased to hear the representative of the hotel men say that they didn't like it. Because for 50 years we have been trying to get together with them to eliminate the tipping question.

Senator KERR. Let me see if I understood your statement. Did you say you were opposed to the tipping question?

Mr. SANDS. We are opposed to tips; yes. We believe that employees, our members, should be paid an adequate wage and commission so that they would not be forced to take tips. And to that end, our international union is on record, and we have been trying for 50 years to work out some system that would bring it about, but we have never had, in that instance, the cooperation of the hotel men.

Senator KERR. Well, were you under the impression that they had been forced to take tips?

Mr. SANDS. Forced to take tips? Yes, they are forced. In order to make a livelihood, they are forced to take the tips. They are hired in these jobs, and it is an understood fact that tips are theirs, and that they are a part of the money they take home. And the employees who take these tips, in convention 4 years ago in Milwaukee, and again in Chicago last April, went on record in favor of this proposition, that tips should be included under the social-security system. That is the position of our international union.

Senator KERR. Now, if the employees want to eliminate the system——

Mr. SANDS. The employees will eliminate the system.

Senator KERR. Let me ask my question.

If the employees want to eliminate the system and the employers want to eliminate the system, all we will have to do is to get the public to agree to it, and it will be unanimous, will it not?

Mr. SANDS. That would be a good idea. I was interested when social security came into existence, 15 years ago, and I was led to believe, at least, that it was for the purpose of protecting workers when they became aged, permitting them to retire, or providing some payment to their heirs at death. Now we are confronted here, with this situation: that for 15 years the tips that these workers have made, and recognized by the employer, have never resulted in any premium for social-security purposes. The employers have not paid on it, and neither have the employees, with the result that the very purposes of the law is circumvented; because in the case of some of these employees, upon their retirement at 65 or upon their death the build-up of the money to their credit in social security is so meager that it is hardly worth going after. Because the substantial portion of their earnings over the past 15 years has been in the form of gratuities.

Senator HOEY. What proportion of the compensation of these employees is represented by tips, and what proportion by salary?

Mr. SANDS. That would vary, Senator, in the different classes of houses. Of course, in a high-class hotel or restaurant, naturally, the waiter or the waitress will make more than in other places, that are popular, or where the prices are cheaper.

Senator HOEY. What sort of an income do they get?

Mr. SANDS. Well, I will tell you, Senator. I worked out something, about 14 years ago, when we had numerous cases before the workmen's compensation board. Every time a waiter or waitress was injured we would have to go down and fight the cases. And we finally worked out, for Washington at least, where the compensation for an injured employee is two-thirds or was at that time two-thirds, of his earning power. We worked out the scale, then, for waiters at $2 a day, and we worked it out at $3 in tips and a dollar in lieu of the meals that they do not get when they are out injured; and that is $6 a day, which is $36 a week. And the people, then, all of them—that is, the males—were entitled to $24 when injured on work.

Senator HOEY. That was 14 years ago. But about what would it be now?

Mr. SANDS. You can't define the tipping question. Of course, the employer comes in here and tells you what a big job it would be to obtain what the people make in tips. Well, he already has that in

his files. For the purpose of paying premiums on workmen's compensation, he has got to know the approximate tips of the employee, because, when the employee is injured he is not paid on his salary alone, but he is paid on his entire earning power, which is salary and tips plus meals that he does not receive when he is injured. So he has that already. His premium for workmen's compensation is based on that.

Then, again, he has it for the purpose of unemployment insurance. When one of our people is unemployed, he does not just get the two-thirds, or whatever it is, of the salary. He receives it on all of his earnings—tips and salary. So he already has that in two instances.

Then again the Treasury Department comes along to the employer and wants to simplify its work. And they would like to know, for example, what the waiters or waitresses in a certain hotel make in tips. So he obtains it from them. And he has that.

So in three cases he already has now in his files the approximate earnings in tips of the employees. And then, if that doesn't satisfy him, it is a simple matter for any hotel or restaurant man to take the checks for any one day of a waiter or a waitress, or the amount of calls the bellboys had to the rooms, and they can come to a pretty fair idea of what the employee has made in tips.

Senator HOEY. I was just asking you about your opinion about it, Mr. Sands. I understand what you say, and what these others could do, but I was asking you, from your observation, approximately what salary is paid to the average waiter in Washington, for example, in Washington today, and how much he gets in tips.

Mr. SANDS. That varies in the various houses.

Senator HOEY. Could you give us an average?

Mr. SANDS. It would be unfair to average it, Senator, for the reason that here is a waiter who may work in some place on the side street, and he may make 50 cents a day in tips; and then again another waiter in another place may make $5 or $4. It goes with the class of the establishment and the clientele of the establishment. For instance, I had lunch the other day in the Carlton, and I certainly tipped more, and my bill was a great deal higher, than if I had eaten in some small restaurant. It varies with the types of houses.

Senator HOEY. That is all right. You just say you cannot state an average.

Mr. SANDS. Now, in connection with this bill, as I understand it, and, if I understand rightly, several years ago the Senate appointed a committee of laymen to thoroughly discuss this question, and it was thoroughly discussed by the committee, and the committee came in, as I understand it, with a unanimous recommendation on this phase of the question.

The facts are these—and someone asked the question as to the approximate number of tip-receiving people in a hotel, and it was estimated at 30 percent. Well, that is pretty accurate. I would say 25 percent of the employees of a hotel are in the tip-receiving class. And the hotel men in their negotiations show that they now recognize that, because when we negotiate a contract all kitchen employees are excluded as tip receivers, all maids are excluded, and the only ones left in the tip-receiving class—and their wages are based accordingly—are bellmen, lavatory attendants, waiters, and waitresses. Even the bartender in Washington is excluded as a tip-receiving employee.

They concede that. So that would leave you about 30 percent. And here is an international with 450,000 people who discussed this proposition and at their convention by a great majority voted that they wanted their tips paid on them by their employers and paid on them by themselves for the purpose of building up their account in the Social Security System. And if we don't do that for this class of workers, we are not accomplishing what the law intended to do when it was enacted—to provide some security for these people.

Senator KERR. How would you make that effective, Mr. Sands?

Mr. SANDS. Exactly as H. R. 6000 does. H. R. 6000 was recommended to this committee of the Senate, and it went through the Ways and Means Committee of the House, and now the House has passed it, and it provides, as I understand it, that within 10 days after the quarter the employee submits to his or her employer the amount received in gratuities the past quarter, and one and a half percent, which is the tax, is added to the amount. The employer then takes that and adds 1½ percent and files it. And as I understand this law, it is absolutely obligatory on the part of the employee to make that provision and to inform the employer and pay. Otherwise it absolves the employer from any responsibility. He certainly can't report what Jane Smith, the waitress, made, if Jane Smith doesn't go in and tell him what she makes.

Senator MILLIKIN. How do you meet the administrative objection that was made by the gentleman who preceded you?

Supposing a waiter is a banquet waiter and goes to a different hotel every night, sometimes a couple of hotels. How would you handle that?

Mr. SANDS. Well, in most of the cities where they have a number of banquets, the banquets are arranged for, and if the one giving the banquet doesn't put his foot down and say, "Here, I don't want to have anything added on to my bill. If my guests tip the waiter, all right, and if they don't, O. K."—then if the waiter receives any tip at that banquet or not, he has to be satisfied. But they have worked out a system now where there is a percentage that goes on the bill. In some cases it is 10 percent, in some cases 12 percent, and in some cities it is maybe more. So that if you go in and arrange for a banquet for $10, and the actual food is $7.50, 10 percent is added on to the $7.50. Of course, it isn't added on to what you pay for flowers or for what you pay for entertainment.

So when you get your bill, the tip is already on there, and your guests at the banquet are not embarrassed by tipping or by a plate being passed, or anything like that. Then the union paymaster goes to get the check for the extra men, maybe a hundred extra men. And let's say it is $4 for serving the job, plus the tip.

Senator MILLIKIN. I do not think I made myself clear. Supposing the waiter worked for 25 different employers during the month. Does he go to each one of those with a statement of the tip that he received there and make a statement to 25 different people at the end of the quarter?

Mr. SANDS. Well, if he was in a city where banquets were so many that he worked for 25 a month, the chances are that he would be booked through his organization or club, and they would take care of all that paying. He wouldn't even have to go after the money.

We have taken that all over from the hotel men. In fact, we become the paymaster of the hotels, and save them a lot of money by getting one check and paying off the tips and the salary to the worker.

Senator MILLIKIN. Let us take a hotel like the Willard, for example. Let us not talk about the Willard, but a hotel of that type.

Mr. SANDS. The Willard is a good hotel.

Senator MILLIKIN. What percentage of the total earnings of the waiter consists of tips?

Mr. SANDS. Well, they have worked out this system, Senator, for the purposes of unemployment insurance, workmen's compensation, and income tax. The waiters in a hotel like the Willard have a little shop meeting.

Senator KERR. A little what?

Mr. SANDS. A little shop meeting. And they thrash it out. Then they come to a sum which they will report for income-tax purposes to the employer, and it may be $3 a day or $4 a day or $5 a day.

Senator MILLIKIN. What is it, usually, in that kind of a case? I am not talking about the Willard, but any such hotel.

Mr. SANDS. I understand that in the Mayflower Hotel the waiters report $4 a day for the purposes of income tax, and I understand in the Washington Hotel it is $3 a day. And they do that.

Senator KERR. What relationship does that have to the facts?

Mr. SANDS. Well, I will be perfectly truthful. I don't believe that they give the Government any the best of it. I believe they are like all the rest of us. We hire people to help us pay as little as we can. But in this case, this may have a tendency to up that.

Senator KERR. Would you refer to that as lying within the law?

Mr. SANDS. Well, I don't know. You take a waiter in the Mayflower Hotel. After he pays his expenses in connection with the work, I don't think he would have much over $24 left. Some of them might, but I don't think he would have much over that. I mean, he has got to have a clean shirt.

Senator KERR. As I understand it, the members of the committee are trying to get some information, which I would like to have, and that is your opinion as to how much they receive in tips.

Senator MILLIKIN. What is the base pay of a waiter in a hotel the type of the Willard, a hotel in Washington, D. C.?

Mr. SANDS. It is less than $25, but out of that $25, there is deduction for the meals served the waiter. I believe it is 60 cents a day. I think his base pay would be around $21.

Senator TAFT. How can you do that? Is there not a minimum wage here in Washington?

Mr. SANDS. No. Unfortunately the Senate was in such a hurry to get away that we didn't press our amendment to put the District of Columbia under the Fair Labor Standards Act. No; that is the funny part of our business. We are here under the National Labor Relations Act, but we are not under the Fair Labor Standards Act in the District.

Senator MILLIKIN. Now let us go down to the Sinton Hotel, in Cincinnati, which I understand the Senator, here, owns.

Senator TAFT. No; I have no connection with it. I want that understood.

Senator MILLIKIN. The Senator disclaims any interest in that hotel. I miscalled the name of the hotel. But let us take the Sinton. What is the base pay of a waiter in Cincinnati in the Sinton Hotel?

Mr. SANDS. I am not qualified to say. It would be something around $21 or $22.

Senator MILLIKIN. And a 30-percent provision for tips?

Mr. SANDS. I did not get the question.

Senator MILLIKIN. The base pay, you said, is $21 or $22. Now, we are trying to find out what the earnings are. How much do you add to that?

Mr. SANDS. Well, your earnings you cannot figure except from the employee himself. For example, a waiter comes in today, and he doesn't feel well; he perhaps gives some of his work over to the other waiters to do for him.

Senator MILLIKIN. Let us assume now a normal case where a fellow feels reasonably well and does not get anybody to take his place. He comes at the appointed time, leaves at the appointed time, does his duty as a waiter during the day. What is his base pay?

Mr. SANDS. His base pay in a hotel like you mentioned in Cincinnati would be $21 or $22.

Senator MILLIKIN. Now, how much would be a fair addition to make to that because of tips, to get at his total earnings?

Mr. SANDS. Well, you couldn't do that, Senator.

Senator MILLIKIN. Then how can we work this out?

Mr. SANDS. Some waiters are more efficient, and some are less so.

Senator MILLIKIN. Then how can we do it, under this act?

Mr. SANDS. It has already been done.

Senator MILLIKIN. Then there must be some way of doing it. That is what I wanted to find out.

Mr. SANDS. Exactly. It has been done. I have pointed out that it has been done in three instances. When the employer pays premiums for unemployment insurance, he knows what the waiter has told him, and he takes his word for it.

Senator MILLIKIN. Do you not think that the representatives of the waiter have as good an idea as the employer?

Mr. SANDS. The representatives of the employees?

Senator MILLIKIN. Yes.

Mr. SANDS. They do.

Senator MILLIKIN. They are organized, are they not?

Mr. SANDS. Yes.

Senator MILLIKIN. Do not the representatives of the organized waiters know how much they are making for tips?

Mr. SANDS. You mean the outside business agents, or presidents?

Senator HOEY. No. You.

Senator MILLIKIN. As I understand it, in the hotel the men are organized.

Mr. SANDS. That is right.

Senator MILLIKIN. I assume they are organized in your union.

Mr. SANDS. That is right.

Senator MILLIKIN. Is there not somebody there that has a pretty close idea, either among the waiters or representing the waiters, as to how much in tips those boys are making?

Mr. SANDS. Individually, as a whole, or on an average?

Senator MILLIKIN. Individually.

Mr. SANDS. You couldn't determine it.

Senator MILLIKIN. Let us take the average. How much?

Mr. SANDS. They come together, the waiters do. They agree on an average over the year—the approximate tips. That is what they report.

Senator MILLIKIN. How much is that?

Mr. SANDS. In different hotels it is different amounts.

Senator MILLIKIN. Give us a range.

Mr. SANDS. Well, I think they report, in the hotels of Washington, in some hotels $2 a day tips, and in others $3, and in some $4, and maybe in some cases more.

Senator MILLIKIN. Let us move down the street a little from the Willard and get into a restaurant like one of the Childs type. Is that organized?

Mr. SANDS. No; not in Washington.

Senator MILLIKIN. Let us find a restaurant of that type that is organized. What is the base pay of the waitress?

Mr. SANDS. The waitress?

Senator MILLIKIN. Yes.

Mr. SANDS. I think it is $18.

Senator MILLIKIN. What tips will a waitress pick up in that type of a restaurant, average?

Mr. SANDS. Well, I couldn't answer that question, Senator. But the State of New York officially on this has set a percentage, and it is recognized. I don't know if it is by statute, but it is recognized for all these things that it is a percentage of 7½ percent of the check. That is what the State of New York has put in and recognized that the waiter or waitress makes. It is 7½ percent of the check. Now, they may make 10 percent in some cases. I don't know. But as a rule the public figures about 10 percent of the check in tips.

Senator MILLIKIN. I would like to get the answer to the administrative problem proposed by the gentleman who preceded you. In the case of these in-and-out waiters, the fellow who works the banquets, how is he going to report his tips without reporting to 30 or 40 people at the end of the quarter?

Mr. SANDS. The employer already knows it in most cases.

Senator MILLIKIN. Well, but he has to go to 30 different employers.

Mr. SANDS. No; he doesn't. He doesn't have to go to any of them. Because when you give a banquet, Senator, the tip is already added on your check.

Senator MILLIKIN. Yes.

Mr. SANDS. Unless you specifically stated, "I will take care of the tipping question." If you do that, they don't add anything. But if you just leave it to the maitre d'hotel or the head waiter, that is already added on your check.

Senator MILLIKIN. Now it is said that at that end of the quarter, so many days after every quarter, the waiter turns in his tips. Is that right?

Mr. SANDS. That is right, a report of his tips.

Senator MILLIKIN. Well, he works for 30 people. Does he not have to make 30 reports to 30 people? If I am an employer, I am not going to make my contribution on the basis of his working for 25 other people.

Mr. SANDS. Well, Senator, if he is working for 30 people in a month, he must be a very good waiter in the first place. In the second place, he would need an agent, just the same as an actor needs an agent. And the agent in this case is the union. The union does all the collecting of the salary and the tips, and the waiter or waitress doesn't even have to go after it. They serve the black coffee and they get on out. They go on up to their club or the union and collect the money on a certain day every week.

Senator KERR. Does the union then make the payment of the contribution?

Mr. SANDS. Beg pardon?

Senator KERR. Does the union then make the payment of that contribution to the Government?

Mr. SANDS. The union?

Senator KERR. Yes.

Mr. SANDS. Yes; the union deducts——

Senator KERR. Does it make the social-security contribution for the employer and the employee in those instances?

Mr. SANDS. Oh, no. For the simple reason that no one, practically, now, for tip employees, reports any social security. That is our complaint.

Senator KERR. Would you, under H. R. 6000?

Mr. SANDS. Under H. R. 6000?

Senator KERR. Does it put that burden on you?

Mr. SANDS. Would it? Well, it wouldn't make any difference if it did.

Senator KERR. But does it?

Mr. SANDS. No.

Well, it might at that, because the employer would have to add 1½ percent on the tips, and we just deduct the 1½ percent.

Senator KERR. With reference to the thing that you referred to a while ago, which started the questions, which was that under H. R. 6000 the employee within a certain number of days after the quarter submits to the employer the amount made in gratuities for the quarter, adding 1½ percent, and that the employer then puts his contribution in and sends it to the Government, would that be taken care of by the union, which you described as being the agent that receives the money for the employee and that pays it to the employee for the employer?

Mr. SANDS. Could be. We take care of everything now.

Senator KERR. Do you think that ought to be put into the law, then?

Mr. SANDS. If you want to put something into the law that will recognize the Hotel and Restaurant Employees and Bartenders Union as the bargaining agent in all of the hotels and restaurants of the country, we are perfectly satisfied.

Senator KERR. Would you not be willing for the law to put upon you the burden of making those reports in such instances where the employees and the employers have already recognized or do recognize you or any other union for that purpose?

Mr. SANDS. No; we wouldn't. Because as I understand this law now, the obligation on the employer is to report it and pay on it once the employee has reported and paid on the tips to him.

Senator KERR. But you told the Senator, though, that the employee did not do that, under these arrangements: that he did not have more than one person to see; that if he had 10 employers or 20, the union took care of all that.

Mr. SANDS. Senator, we would be perfectly willing to add to the collection the 1½ percent of tips. But the union does not make the employer's report to the Government. So the only thing we could do, then, at the end of the quarter or 10 days after it, would be to send back to the employer a list of the employees, with our check for the amount covering them. That is the only thing that we could do, because under H. R. 6000 the responsibility of reporting the tips, once the employee has reported to the employer and paid on it, is on management. We would be perfectly willing to go along with management and help them out and do their bookkeeping and do their collecting and then remit it back to them so that they can remit it to the Treasury. We are perfectly willing to do anything reasonable that will insure these people, whose living is partially made on tips, building up that fund in social security so that they will have something worth while when they are 65 or when they die, and it won't be a case of their having $10 coming.

I could recite you, if we had the time, where widows of bellboys in Washington didn't have over $12 to their credit in the Social Security fund, and cases where waiters and waitresses had so little to their credit that it wasn't worth going after. In one case it was $36, and the man didn't leave any next to kin. We would have to take out letters of administration in order to collect the money, and that would have cost us more than was in the fund for that individual. The purpose of the act was to insure the worker at death something for the widow; and at 65 something to retire on, so that he could hold his head up and not be a subject of charity. And here is this great amount of tips that is collected with the knowledge of the employer. And they like it. Don't let them kid you. They like it. They are not paying on it. And the employee is not paying on it. So the purpose of the Social Security Act, so far as these people are concerned, has been circumvented.

Now, all we ask is that the employer pay on the tips. They are taken with his knowledge. You never see a hotel man fire the employee for taking the tip. They are hired with that knowledge. The waiter knows, when he goes to work in a house like the Willard or the Netherlands Plaza in Cincinnati, that he is permitted to take tips. In the old days he used to have to split those tips.

The CHAIRMAN. We understand that you favor the House provision.

Mr. SANDS. Yes.

The CHAIRMAN. You want that kept in the bill.

Mr. SANDS. Yes, sir. Thank you very much.

Incidentally, you can repeal that cabaret tax, too. That will help us.

Senator TAFT. Mr. Sands, there is a point on which I would like to get a little more exact picture. Do you have a contract for the Mayflower or the Willard?

Mr. SANDS. Yes.

Senator TAFT. And is it worked on an hourly basis or a weekly basis?

Mr. SANDS. It is worked on a weekly basis. The workweek is 48 hours.

Senator TAFT. Forty-eight hours. And then is it a base rate per hour?

Mr. SANDS. No, per week.

Senator TAFT. Do you work 6 days?

Mr. SANDS. Six days, 48 hours.

Senator TAFT. And is there overtime?

Mr. SANDS. Yes. We get overtime, time-and-a-half, I believe.

Senator TAFT. Over 40 hours?

Mr. SANDS. No; over 48.

Senator TAFT. And that rate is how much per day, say, at the Willard? Or the Mayflower?

Mr. SANDS. I imagine that the scale in the Mayflower would be about $4 a day, based on a day rating. And, of course, there is a deduction.

Senator TAFT. Four dollars a day. And then you said, I think, in your testimony, that they report $4 tips.

Mr. SANDS. That is right.

Senator TAFT. So roughly speaking it is half-and-half. That is the picture I wanted to get.

Mr. SANDS. That is right.

Senator TAFT. It is about half-and-half, salary and tips?

Mr. SANDS. That is right. Of course, you understand, Senator, that the tips in the Mayflower are a little bit larger than they would be in Childs; not to say that Childs' food isn't good.

Senator TAFT. Do hotel workers in that classification receive their meals?

Mr. SANDS. The worker in a hotel who has anything to do with the preparation or the serving of food receives his food.

Senator TAFT. Three meals, or two?

Mr. SANDS. Two meals. And for that, I think it is 60 cents a day or 30 cents a meal, or something like that, that is deducted from their pay.

Senator TAFT. Oh, that is deducted from their pay?

Mr. SANDS. Yes.

Senator TAFT. I see. But roughly speaking, would you say generally in fairly good hotels it is half salary and half tips? The waiter's income?

Mr. SANDS. Yes. We do our best, Senator, believe it or not, to educate our people that they should report honestly and fairly on income tax. We do that.

Senator MILLIKIN. You have got me into a great state of confusion, because I have always favored not taxing the waiter for income-tax purposes on his tips.

Mr. SANDS. Why not?

Senator MILLIKIN. Now I have got to get myself readjusted here.

Mr. SANDS. Why not, Senator? It is income.

Senator MILLIKIN. It is a gratuity.

Mr. SANDS. It is part of his earnings. You would not get a waiter to work in the Mayflower Hotel—not that I am particularly boosting the Mayflower, although Mac is a good fellow—for $3.40 a day and his meals.

Senator MILLIKIN. Oh, I want him to get the tips. I want him to get those, but I thought they were gratuities. And I have always

been against considering them as included in income because they were gratuities.

Mr. SANDS. No; it is his income. As a matter of fact, we are fighting it out with the Treasury Department now. They even charge the waiter withholding tax on the value of the meals that he eats in the hotel.

Senator KERR. I would like to ask you what price they put as the value of the meals.

Mr. SANDS. Well, under the union contract, I think we recognize 30 cents.

Senator KERR. Thirty cents. You think that is about a fair price for the average meal they serve? [Laughter.]

Mr. SANDS. No. No; but, Senator, historically——

Senator KERR. You think the waiter gets a little bit better of that deal?

Mr. SANDS. Yes, I think he does. And I think he is entitled to it. And I don't think he should pay anything for it. Because it is a part of his job. And we have already got a ruling from the Treasury Department.

Senator KERR. I just wanted to ask you that one question.

Mr. SANDS. Where the meals are served for the convenience of the employer, there can't be a withholding tax withheld on it. Wouldn't it be fine if you went into the Mayflower and sat down and wanted Joe to wait on you and they told you Joe had to go out to get something to eat?

Senator TAFT. If a report is made on this bill, would that be presumptive for income-tax purposes, too?

Mr. SANDS. Yes.

Senator TAFT. And would the employer then have to deduct under the withholding part of the income tax on the same basis?

Mr. SANDS. No. He wouldn't.

Senator TAFT. The withholding tax does not apply to tips?

Mr. SANDS. No.

Senator TAFT. Well, if you are going to withhold on this tax, why not also withhold on income tax, while we are about it?

Mr. SANDS. We wouldn't have any objection to that.

The CHAIRMAN. Senator Millikin?

Senator MILLIKIN. I would like to ask one question. When you serve a $500-a-plate banquet, how much does the waiter get per plate? Or make it $100.

Mr. SANDS. Us Democrats understand $100 a plate more than we do $1 or $500.

Senator MILLIKIN. Oh, the more you add the ciphers, the better you understand it. But let us get to the $100. How much does the waiter get?

Mr. SANDS. My understanding is this. Let's take the Democratic dinner, over here. My understanding is that the hotels for serving that got $7.50 a person. So they would get the tip on $7.50, not on the $100. Even the Government doesn't get that. [Laughter.]

Senator MILLIKIN. It seems to me they were squeezing down on the boys a little, there.

The CHAIRMAN. Thank you very much for your appearance.

Mr. SANDS. Thank you.

(The following letter was later submitted for the record:)

AMERICAN HOTEL ASSOCIATION,
New York, N. Y., February 20, 1950.

Hon. WALTER GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: May I tender this brief supplemental statement, correcting some of the statements made by the witness who followed me, Mr. Charles E. Sands, representing the Hotel and Restaurant Employees and Bartenders International Union.

It would be our hope that this brief statement might appear in the record of the hearings, immediately after Mr. Sands' and my testimony, since both our statements had to do with the application of the social-security tax on tip income.

(1) Mr. Sands made a great point of the fact that the tip income of service employees in hotels and restaurants has been well established in many States for purposes of assessing the tax for unemployment compensation and workmen's compensation purposes.

I would like to point out, however, that under these State statutes the unemployment insurance tax and workmen's compensation assessment are paid wholly by the employer; and his liability is based upon the amount of tip income which is declared to him by the employee. In H. R. 6000, however, a different question is involved. First, the liability of the employer is based on the actual tip income, and no method is provided in the bill for ascertaining the true amount of the tip income. Furthermore, the bill requires the employer to remit the employee's 1½ percent tax on tip income and to withhold the Federal income tax based on this tip income; but this tip income never comes into the possession of the employer

I said in my statement that this issue has not been satisfactorily resolved in any single State, to our knowledge. In New York State, for instance, the unemployment compensation tax is assessed against the tip income of a service employee if that employee makes a declaration of tip income to his employer. If he does not do so, the employer may make an estimate of the tip income, and pay the tax upon that sum. However, in this instance, the employer pays the whole tax. There is little reason for the employee to challenge this declaration, since it means no liability to himself for this particular tax.

In Connecticut, as we understand, it is optional with the employee whether he declares tip income, but if he does so declare it, then that sum is subject to assessment for unemployment compensation and workmen's compensation, as part of his wages. But again we emphasize that it is entirely optional with the employee.

In my own State of Ohio, as an example, tips are not included for purposes of unemployment insurance. For workmen's compensation we do report what the employee chooses to declare. Some declare a figure, and others do not. But in every case it is purely a nominal figure. For example, the waiters in one of my company's hotels report about $8 a week, when we know their daily tips exceed that amount. The value of meals is included for both unemployment insurance and workmen's compensation.

(2) Mr. Sands also minimized (to say the least), the average tip income of service employees. He estimated that even in the finest hotels in Washington, D. C., the top tip income in a day was $5. We think this is extremely low, as shown by the example I gave to the committee in my testimony this morning.

(3) Mr. Sands also claimed that the employees' union, as it operates here in Washington, D. C., collected and computed the employee's earnings from tips and remitted for him the social-security tax to the employer. If that is done here in Washington, I think it is a very isolated case, and I know it is not common practice.

Presumably Mr. Sands is arguing that the entire industry could be unionized, and thus simplify the payment of this tax. We question whether the committee is willing to approve that section of the bill for this purpose.

(4) Mr. Sands also left the feeling with the committee that nearly all banquets, luncheons, and other meal functions are computed with a round figure, including gratuities. It still is the occasional function where the tip is handled in that manner, and it is not the regular practice.

I sincerely hope that these statements will prove pertinent to the committee's consideration of this problem. I am deeply grateful for the courtesies shown me this morning when I appeared before your committee.

Respectfully,

DANIEL J. O'BRIEN.

(The following statement was submitted for the record:)

STATEMENT OF GEORGE R. LESAUVAGE, ON BEHALF OF THE NATIONAL RESTAURANT ASSOCIATION

My name is George R. LeSauvage. I am chairman of the Government affairs committee of the National Restaurant Association. Eighty State and local restaurant associations have authorized our association to represent them in national affairs. I, therefore, speak for 180,000 public eating establishments doing about 80 percent of total volume of restaurant business in the country. Primarily our business is small business. Most restaurants are individually owned. We as an industry are an excellent example of the American free-enterprise system. The restaurant industry is interested in a sound social-security program. We are, however, concerned about the many problems with which we would be faced if bill H. R. 6000 is enacted in its present form.

WITHHOLDING TAX ON TIPS

Bill H. R. 6000, at page 169, amends the Internal Revenue Code with reference to withholding tax by employers. Line 24 contains a provision that tips "customarily received by an employee in the course of his employment * * * shall be considered as remuneration paid to him by his employer." Such a definition of "tips" goes way beyond the original intent of the withholding tax law. The term "withholding" means to "hold back." The theory of withholding tax was that an employer would "hold back" wages of an employee approximately equal to such employee's income tax. In view of the fact that tips which an employee receives are not given to the employer, it becomes impossible to "withhold" something which the employer never has.

An exception is provided in H. R. 6000 that only such amount of tips as the employee reports in writing each quarter shall be so considered as wages. However, this exception does not help the problem but, on the contrary, sets up a whole series of possibilities for confusion. For example: Let us assume an employee received $20 a week in tips and reports at the end of the quarter the receipt of tips in the total sum for that period of $260 (13 weeks at $20). Let us assume further that at the same time he gives the report to his employer—he also quits his job. The questions that come up under such a situation are: Does the employer have to pay the amount of the withholding tax on such reported tips? The withholding tax could amount to over $70. Does the employer have to hold back other wages due the employee to cover the amount of withholding tax on tips? What about the employees who quit their job before the quarter and at the quarter period report tips received to their employers? If such tips are considered wages the employer would be obligated to pay the withholding tax to the Government out of his own pocket. Any attempt to make an employer pay withholding tax on tips puts that employer in the position of a policeman. This would cause the poorest of employer-employee relations. We in the restaurant industry are proud of our fine conscientious employees. It is true that many receive tips for giving courteous service to the public. The American public insists upon their right to tip. Attempts to abolish tipping almost invariably have failed. As an industry we must recognize this fact. We believe that the vast majority of our restaurant employees want to pay their just share of income tax. We also believe that the vast majority are reporting the amount of tips on their income-tax returns. It seems most unwise to change the law on withholding just because a small number of tip-receiving employees are attempting to escape payment of a just tax. The complications which would ensue would far outnumber any benefits derived.

TIPS AS WAGES

H. R. 6000 at page 132, line 22, charges the definition of wages to include "tips received by an employee * * * from persons other than the person employing him * * * and shall be considered as remunerations paid to him by his employer." The effect of this change would be to increase the amount of tax paid by both the employer and the employee. Here again an exception is provided that tips will be considered wages only if the amount is reported in writing each quarter to the employer. Again the employer is put into the embarrassing position of prying into the employees' personal affairs. Employees receiving tips are extremely reluctant in divulging tip information to their employers. Employers are of the opinion that they have no right to ask their employees for information on tips.

We, from the restaurant industry, are opposed to the taxation of an employee's income arising from tips for social-security purposes. None of the 2,000,000 employees in this industry are asking for this change. It therefore seems unwise to complicate an already complex law with more complexities.

INSURANCE OR DOLE

Title II of the Social Security Act is entitled "Old Age and Survivors Insurance Benefits Payments." The use of the word "insurance" in this title can be questioned. The word "insurance" means "a contract whereby one party undertakes to indemnify another against loss by the happening of a contingent event." People believe that when they have life insurance a specific sum will be paid in the event of death. Most people believe that the social-security laws will pay a specific sum to their children in the event of death. They believe deductions are made from their wages to accomplish this purpose. In actual practice this is not true. Under the law, benefits are not paid children under 18 years if such child earns in excess of $14.99 in any month. In other words, the ambitious child who wants to work is penalized. A child is rewarded for being lazy. I understand the average benefit for a child under 18 years is about $15 per month. If the child is energetic and wants to pick up extra spending money he must check his ambition when his pay gets up to $14.99 per month. One penny over the amount means he loses the $15 per month from the Government and his work for the month has been for nothing.

CONCLUSION

The restaurant industry has many benefit programs offered employees. We, as an industry, have found great advantages in setting up group-insurance plans, hospitalization programs, health and accident provisions. Pension plans are also coming into greater prominence in our industry. We, as an industry, know the value of giving the employee a feeling of security. In our opinion, planning of this type should fall within the scope of good employee employer relations. Expansion of Federal legislation on this score complicates our Government and departs from the fundamental concept of that government, which governs least, governs best.

In conclusion, we wish to invite your attention to the situation as it exists in the restaurant business today, and that is, for several months there has been a steady decline in the volume of business. The cost of doing business has decreased very little so that any added cost will be of serious import to the restaurant business.

The CHAIRMAN. Dr. Alexander? Doctor, you are appearing for the relief and annuity board of the Southern Baptist Convention?

STATEMENT OF DR. WALTER R. ALEXANDER, EXECUTIVE SECRETARY, RELIEF AND ANNUITY BOARD OF THE SOUTHERN BAPTIST CONVENTION, DALLAS, TEX.

Dr. ALEXANDER. Yes, sir.

The CHAIRMAN. You may have a seat if you wish, Doctor. We will be glad to hear you.

Dr. ALEXANDER. I thought I would conserve your time if I reduced everything to writing. I will not read all of this, but I would be pleased if you would follow it as I proceed to read most of it.

Before proceeding with any formal statement, permit a very sincere word of appreciation for the privilege thus extended me. That word I express for the more than 6½ million members of the denomination I represent in my official capacity. I am Walter R. Alexander, executive secretary of the relief and annuity board of the Southern Baptist Convention. This denominational board has its headquarters in Dallas, Tex., by which State it was chartered as an eleemosynary in-

stitution in 1918. It is the pension board of Southern Baptists, operated by and answerable to that great Christian body. They hold membership in more than 27,000 Baptist churches dotting the land from Maryland to Florida, down the Atlantic seaboard, thence westward to the Pacific coast, including California and Oregon—22 States in all, and the District of Columbia.

The functions of this board are twofold. It extends relief, in the form of direct financial grants, to aged Baptist ministers and their wives, and to the widows and orphans of Baptist ministers. In so doing, it disburses denominational funds designated for the financial relief of these aged individuals who served for the most part on very modest salaries in other days before the retirement plans of the board had been instituted. For the past 10 to 15 years, the board has been operating retirement plans looking toward age annuities, with disability provisions, for all servants of the denomination. Its major plan is designed for the ordained ministers, pastors of churches. Into that plan, the Baptist minister pays 3 percent of his salary as dues, his church or churches contributing a like amount, these totals supplemented by denominational funds. In addition to this, the ministers' retirement plan, through which more than 11,000 Baptist preachers are participating, together with more than 12,000 Baptist churches, our board operates other contributory retirement plans: One for the employees of all south-wide denominational boards, institutions, and agencies; one for the employees of our Baptist orphanages; another for employees of our Baptist hospitals; another for the faculties and staffs of our Baptist schools and colleges; and still another entitled the "Age security plan," designed for lay church workers. Some of these plans are on a voluntary basis, although more and more employers are now making participation mandatory upon all new employees. These plans are meeting with increasing favor and are growing rapidly in the extent of their coverage. In all, over 26,000 certificates of participation have been issued to date. Southern Baptists offer, through the board I represent, the coverage of a contributory retirement plan to every salaried employee of the denomination, without regard to race, sex, age, or type of service rendered, and whether ordained or lay.

Several times in the past years, amendments to the original Social Security Act of 1935 have been considered by the Congress. Each time, Southern Baptists, along with other great denominations of America, have urged that no amendment be passed that would, to the least degree, or in any sense, violate the American principle of the separation of church and state, contrary to the spirit of the first amendment to the Constitution of the United States. In the Southern Baptist Annual for 1940 appear these words as the expression of the Southern Baptist Convention:

> Baptists believe in social security for the American people. They have advocated it for many years. Their several retirement plans are evidence of their belief in the plan of social security and of their desire to secure the application of this principle in behalf of all the workers in all the estates of the denomination, none of which are covered by the Federal Social Security Act. Baptists desire that the Government shall not amend the Social Security Act in any way that would result in an infringement upon our religious liberty. * * * We are informed that Congress does not desire to disturb the churches and church institutions by placing a tax upon them and their employees for social security; yet much pressure is being brought to bear upon the Government

to extend the coverage of the Social Security Act to employees of tax-exempt agencies.

The foregoing, expressed at the time the Walsh amendment was pending in the Senate, is a true expression of Southern Baptist convictions today, and remains applicable, although nearly 10 years have passed.

Up to the present time, employees of nonprofit organizations have been excluded from the coverage of the Social Security Act. To be more specific, the services excluded are those performed by "(1) employees of nonprofit organizations organized and operated exclusively for religious, charitable, scientific, literary, educational, or humane purposes, if the organization does not engage substantially in propaganda or other activities designed to influence legislation" (Social Security Revision, p. 3, hearings before the Committee on Finance, U. S. Senate, 81st Cong., 2d sess., on H. R. 6000, pt. I, Testimony and Recommendations by the Social Security Administration, January 17, 18, 19, and 20, 1950).

Under the bill now being considered, H. R. 6000—and again I quote—

all services excluded under present law are covered except services performed by—(1) ministers and members of religious orders * * *

et cetera.

Baptists have no members of religious orders, but we do have thousands of denominational servants, ordained and unordained—employees of churches, boards, institutions, and agencies. Under the terms of H. R. 6000, and as recommended by the Advisory Council, these would be covered automatically. This would mean (1) that, in the future, the function of providing for the economic security of employees of churches, denominational organizations, and other institutions of religion would be taken away from these groups and be made the function of the State; (2) that the churches and their institutions would be taxed by the State for the support of its social-security program; (3) that the door would be open for the punitive coercion of the churches by the State in the enforcement of its regulations; and (4) it involves the individual workers of the churches in a direct economic dependence upon the State that will tend to dull religious conviction and stifle independent, conscientious action.

Baptists still believe that the church is not in the same category as the economic corporation, that it is the voice of God in the world, and that its spiritual function becomes impossible when its organization and methods are controlled by the State, or when it becomes economically dependent upon any other group whatsoever. The church must remain free from entangling alliances if it is to continue its function as the voice of God in human society.

It should be noted here that H. R. 6000 makes an interesting and appreciated concession. It calls for contributions by employees of nonprofit organizations on a compulsory basis, permitting contributions made by the employer to be on a voluntary basis. To many people, this provision may appear to keep well defined that line of demarcation between church and state. In its practical application, however, it remains our conviction this would not be the case. There would soon be brought to bear upon nonparticipating employers a series of pressures—pressures that would intensify rather than diminish as the years pass. The demands of employees would be one

such pressure; public opinion, another; and sooner or later, the pressure of governmental authority. Participation upon the part of the employer would cease to be voluntary, except in theory, for such pressure would become practically coercive.

If and when such pressure upon the employer becomes coercive, the rights of freemen, guaranteed under the first amendment, are abridged. If not coercive, the employer, in the case of many of our Baptist institutions and agencies, will choose not to pay the employer's share of the tax; thus, the benefits accruing to the employee under the bill would be greatly reduced, for the bill further stipulates that—

if the employer does not elect to pay the employer's contribution, only one-half of the employee's wages will be credited toward benefits.

The Advisory Council has recommended inclusion of the employees of nonprofit organizations—and I quote—

to assist these institutions in fulfilling their purpose.

I submit to you gentlemen that, with benefits accruing to the employee greatly reduced, these institutions would not be fulfilling their purpose nearly so well as they are fulfilling it under existing conditions; for, in every case thus far in the administration of our plans for the lay employees of our denomination, the employer has agreed to, and is, matching the employee's money. Where the employee pays 3 percent of his salary, the employer contributes 3 percent; where the employee pays 4 percent, the employer contributes 4 percent; where the employee pays 5 percent, the employer matches his money.

Senator KERR. May I inquire, at that point: If I understand your statement correctly, you are advising the committee that your plan covers all of the employees of your organization, and that these items you give us, here, represent the minimum which is being received by them.

Dr. ALEXANDER. You mean these percentages I just referred to, Senator Kerr?

Senator KERR. Yes. All of the employees are in one of those three classifications?

Dr. ALEXANDER. I cannot truthfully say they are all in any plan. There are plans for all, and the majority are in, and the others are coming in rapidly. They are not all, as individuals, covered, but all covered are in one of those three classifications.

Senator TAFT. It is optional?

Dr. ALEXANDER. Yes, sir. Some plans are, and some are not. Now, the employers are making it mandatory for new employees but optional with those in the employ when the plan was inaugurated. Do I make myself clear?

The CHAIRMAN. But all the employees are eligible if they wish to come in?

Dr. ALEXANDER. Yes, sir, and we have a plan to cover every individual. There is no one omitted.

Senator KERR. And it is available to every employee: mandatory with reference to new ones, optional with reference to the old ones.

Dr. ALEXANDER. Generally speaking, that is the case. Now, there are a few minor exceptions. I can't say "Yes" or "No" as covering every individual.

Senator KERR. But generally?

Dr. ALEXANDER. Generally; yes, sir.

In view of the foregoing, we respectfully request of your committee the same consideration be given our denominational employees, all of them employees of nonprofit organizations, as is now accorded in the bill to members of religious orders. We ask for them continued exemption from the coverage of the Federal Social Security Act.

Senator KERR. What wording would you suggest, there, Doctor, to achieve that?

Dr. ALEXANDER. Pardon me. I did not understand you, Senator Kerr.

Senator KERR. Well, you quoted the language, back here, of H. R. 6000—

all services excluded under present law are covered except services performed by * * * (1) ministers and members of religious orders * * *

Dr. ALEXANDER. Yes, sir.

Senator KERR. Could not language be added there which would add the change which you seek?

Dr. ALEXANDER. I think it could. Frankly, I didn't know that was within my province, and I haven't attempted to frame it in words.

Senator KERR. Well, I did not ask you to. I asked you if it could be done.

Dr. ALEXANDER. Yes, it could.

If, in the wisdom of this committee, such a blanket exemption cannot be made, we then ask the same consideration for our group now given in the bill to State and local government employees. Such a provision would not make it mandatory upon the employee to participate under Federal social security; if, within a given group, the majority voted to continue participation through their denominational retirement board.

Scores of the heads of our various institutions throughout the Southland have expressed their convictions with regard to this matter, and their desires, in telegrams and letters to their respective Senators, including certain of you gentlemen. So also have the State secretaries, who, in their respective States, are the accepted leaders of our denominational work. The statements of this latter group I shall not read, but they are included here for the record. I bring these remarks to a close by calling your attention to two telegrams only, the first one appended below, received from the president of the Southern Baptist Convention and the other one from the executive secretary of the executive committee of the Southern Baptist Convention.

Then, gentlemen, on several pages that follow are telegrams from the State secretaries representing the various States of the Southern Baptist Convention. I have tried to be brief, and I shall be happy to answer any questions you may wish to ask further.

The CHAIRMAN. Are there any questions?

Senator TAFT. I would like to ask this: I suppose that the fundamental objection which you make to this would apply just as much to any proposal that an employee be given the option to go under either, in which case the employer would be under a compulsory requirement to deduct for the purposes of the Act.

Dr. ALEXANDER. That is true, Senator Taft.

Senator TAFT. You would still object to such an alternative proposal?

Dr. ALEXANDER. We offer the alternative if the first suggestion cannot meet with the approval of the committee and be approved by the Senate. We offer the second as an alternative.

Senator TAFT. It appears to me that while your plan is probably better, it probably is not so advantageous to a man. It depends on just what we do when we pass this law. Also, the question of transferring from your employment to other employment arises. A man may want to feel that he can do that. I am very much opposed, myself, to abolishing any of these funds or making everybody come under the other plan, but it does seem to me there is a problem there.

Dr. ALEXANDER. You mean the problem of an employee who goes back and forth?

Senator TAFT. The problem of an employee who goes back and forth from covered to noncovered occupations and who may want to take the social-security provisions.

Dr. ALEXANDER. I will be perfectly frank with you. As we see it, that is the only advantage Federal Social Security has to offer anybody; that is, anybody already covered in some retirement plan. They can move around at will from one type of service to another.

Senator TAFT. Do you transfer with any other funds at all, or do you work out any plan by which credits can be transferred?

Dr. ALEXANDER. We transfer, of course, only within the denomination, but we give to the individual a certain, shall I say, "paid up as of a given date" standing under certain circumstances, if he is going into secular work. And from that point on they have social-security coverage.

Senator TAFT. And how far is your plan actuarially sound?

Dr. ALEXANDER. That depends on the plan. We operate 12 in all. The major plan, of course, for the ordained minister is something that we are not considering here, anyway. We are thinking mainly here of the plans that cover all of our employees, the Baptist schools, hospitals, orphanages, State boards, and such groups as that, and all of the lay employees, men and women.

Senator TAFT. And do you build up a fund? How far do they provide funds?

Dr. ALEXANDER. These plans that I am referring to in the main are fully funded.

Senator TAFT. You invest the proceeds in securities?

Dr. ALEXANDER. Yes, sir.

Senator KERR. Do you invest in securities, or make contracts with insurance companies?

Dr. ALEXANDER. No. Our funds are all invested in securities, the affairs of the Board are audited, and they are subject to the approval of the denomination.

Senator KERR. And is any of that paid on separation? If he goes out after 10 years, does he get that reimbursed?

Dr. ALEXANDER. It does depend upon the plan. There are one or two of the older plans where he does not receive all he should, and we are hoping to be able to amend them very shortly. In the newer, later plans, he does receive full credit.

Senator TAFT. And then what about credits for past service? Are those paid up in any way? Or are the premiums supposed to be sufficient to make that up?

Dr. ALEXANDER. They are only partially funded.

Senator KERR. They are partially funded?

Dr. ALEXANDER. That is right; for the past service credits.

Senator KERR. By payments from time to time?

Dr. ALEXANDER. They are being more fully funded with the passing years, but they are not fully funded yet, nor will they be for some years to come.

Senator KERR. But you are working toward that?

Dr. ALEXANDER. Yes.

The CHAIRMAN. Are there any survival benefits provided, Doctor, to the worker?

Dr. ALEXANDER. Yes. There are no death benefits as such, as a lump sum. We have widows' benefits and orphans' benefits.

The CHAIRMAN. In other words, if the worker passes away almost immediately on retirement, or after retirement, but before he received a return of the benefits that you guarantee or stipulate, you do provide for survivor insurance or insurance to his wife, to his children?

Dr. ALEXANDER. Yes, sir. They never receive, under any circumstances, less than his personal payments with compound interest through the years, and in most of our plans a portion, a percentage, up to the full employer contribution. It depends upon the type of the plan.

Senator TAFT. One other question, Dr. Alexander. This exemption that now exists in the law is an exemption of all charitable institutions; and, of course, there may be many employers that are not covered at all and whose employees are therefore not covered in any way. Would you consider the possible exemption of so-called existing plans, or something of that kind, rather than the complete exemption, here?

Dr. ALEXANDER. Yes, sir.

Senator TAFT. You think that might be a possible method of handling the situation?

Dr. ALEXANDER. I think so. I am not going into it at all, though, because, as I say, speaking for the great denomination I represent, we have a plan for everybody. That is a problem for the others to work out.

Senator KERR. You have a twofold objection, as I understand it, one, to its application to your denomination, and, two, to its application generally to every church denomination.

Dr. ALEXANDER. That is true.

Senator TAFT. Whether they have a plan or not?

Dr. ALEXANDER. Yes, sir.

The CHAIRMAN. Senator Connally, any questions?

Senator CONNALLY. Do I understand that you mean, by that answer to Senator Kerr, that you oppose including any of these employees under social security?

Senator KERR. Senator, as I understand it, his basic objection is to the imposition of a tax by the Government upon any church organization or denomination.

Dr. ALEXANDER. That is true.

Senator CONNALLY. That is a generality, though. I am talking about getting right down to it. Do you oppose the law requiring payments by people who are employees of a Church organization?

Dr. ALEXANDER. You are asking me for my personal opinion?

Senator CONNALLY. Well, you are testifying, you know.

Dr. ALEXANDER. Yes, sir. My personal opinion is, and also as representing the organization, that I do, that is our position in the matter.

Senator CONNALLY. Then they would be excluded?

Dr. ALEXANDER. Yes, sir.

Senator CONNALLY. And it would be up to them to either get a plan in their denomination or be out and not have any plan; is that right?

Dr. ALEXANDER. Yes, sir; that would be the present situation. It is my own opinion that there is a great advantage in what you are doing right now; whether the plan stands with the social-security provisions as they are in House bill 6000, or whether they are amended. Because the matter is being brought home to the attention of all groups, nonprofit organizations, and you helping to bring to pass a security coverage where it does not exist at the present.

Now, speaking for my own denomination, we do have it in existence, and it has been, for about 15 years.

Did I answer your question, Senator Connally?

Senator CONNALLY. You answered it.

The CHAIRMAN. Thank you very much, Doctor.

Dr. ALEXANDER. Thank you, sir.

(The supplementary material filed by Dr. Alexander follows:)

STATEMENT BY WALTER R. ALEXANDER, EXECUTIVE SECRETARY, RELIEF AND ANNUITY BOARD OF THE SOUTHERN BAPTIST CONVENTION

Honored Senators, before proceeding with any formal statement, permit a very sincere word of appreciation for the privilege thus extended me. That word I express for the more than $6\frac{1}{2}$ million members of the denomination I represent in my official capacity. I am Walter R. Alexander, executive secretary of the relief and annuity board of the Southern Baptist Convention. This denominational board has its headquarters in Dallas, Tex., by which State it was chartered as an eleemosynary institution in 1918. It is the pension board of Southern Baptists, operated by and answerable to that great Christian body. They hold membership in more than 27,000 Baptist churches dotting the land from Maryland to Florida, down the Atlantic seaboard, thence westward to the Pacific coast, including California and Oregon, 22 States in all, and the District of Columbia.

The functions of this board are twofold. It extends relief, in the form of direct financial grants, to aged Baptist ministers and their wives, and to the widows and orphans of Baptist ministers. In so doing, it disburses denominational funds designated for the financial relief of these aged individuals who served for the most part on very modest salaries in other days before the retirement plans of the board had been instituted. For the past 10 to 15 years, the board has been operating retirement plans looking toward age annuities, with disability provisions, for all servants of the denomination. Its major plan is designed for the ordained ministers, pastors of churches. Into that plan, the Baptist minister pays 3 percent of his salary as dues, his church or churches contributing a like amount, these totals supplemented by denominational funds. In addition to this, the ministers' retirement plan, through which more than 11,000 Baptist preachers are participating, together with more than 12,000 Baptist churches, our board operates other contributory retirement plans; one for the employees of all south-wide denominational boards, institutions, and agencies; one for the employees of our Baptist orphanages; another for employees of our Baptist hospitals; another for the faculties and staffs of our Baptist schools and colleges; and still another, entitled the "Age Security Plan," designed for lay church workers. Some of these plans are on a voluntary basis, although more and more employers are now making participation mandatory upon all new employees. These plans are meeting with increasing favor and are growing rapidly in the extent of their coverage. In all, over 26,000 certificates of participation have been issued to date. Southern Baptists offer, through the board I represent, the coverage of a contributory retirement plan to every salaried em-

ployee of the denomination, without regard to race, sex, age, or type of service rendered, and whether ordained or lay.

Several times in the past years, amendments to the original Social Security Act of 1935 have been considered by the Congress. Each time, Southern Baptists, along with other great denominations of America, have urged that no amendment be passed that would, to the least degree, or in any sense, violate the American principle of the separation of church and state, contrary to the spirit of the first amendment to the Constitution of the United States. In the Southern Baptist Annual for 1940 appear these words as the expression of the Southern Baptist Convention: "Baptists believe in social security for the American people. They have advocated it for many years. Their several retirement plans are evidence of their belief in the plan of social security and of their desire to secure the application of this principle in behalf of all the workers in all the estates of the denomination, none of which are covered by the Federal Social Security Act. Baptists desire that the Government shall not amend the Social Security Act in any way that would result in an infringement upon our religious liberty * * *. We are informed that Congress does not desire to disturb the churches and church institutions by placing a tax upon them and their employees for social security; yet much pressure is being brought to bear upon the Government to extend the coverage of the Social Security Act to employees of tax-exempt agencies." The foregoing, expressed at the time the Walsh amendment was pending in the Senate, is a true expression of Southern Baptist convictions today, and remains applicable, although nearly 10 years have passed.

Up to the present time, employees of nonprofit organizations have been excluded from the coverage of the Social Security Act. To be more specific, the services excluded are those performed by "(1) employees of nonprofit organizations organized and operated exclusively for religious, charitable, scientific, literary, educational, or humane purposes, if the organization does not engage substantially in propaganda or other activities designed to influence legislation" (Social Security Revision, p. 3, hearings before the Committee on Finance, United States Senate, 81st Cong. 2d sess., on H. R. 6000—pt. I, Testimony and Recommendations by the Social Security Administration, January 17, 18, 19, and 20, 1950).

Under the bill now being considered, H. R. bill 6000 (and again I quote), "All services excluded under present law are covered except services performed by (1) ministers and members of religious orders," etc.

Baptists have no members of religious orders, but we do have thousands of denominational servants, ordained and unordained—employees of churches, boards, institutions, and agencies. Under the terms of H. R. 6000, and as recommended by the advisory council, these would be covered automatically. This would mean (1) that, in the future, the function of providing for the economic security of employees of church, denominational organizations, and other institutions of religion would be taken away from these groups and be made the function of the State; (2) that the churches and their institutions would be taxed by the State for the support of its social-security program; (3) that the door would be open for the punitive coercion of the churches by the State in the enforcement of its regulations; and (4) it involves the individual workers of the churches in a direct economic dependence upon the State that will tend to dull religious conviction and stifle independent, conscientious action.

Baptists still believe that the church is not in the same category as the economic corporation, that it is the voice of God in the world, and that its spiritual function becomes impossible when its organization and methods are controlled by the state, or when it becomes economically dependent upon any other group whatsoever. The church must remain free from entangling alliances if it is to continue its function as the voice of God in human society.

It should be noted here that H. R. bill 6000 makes an interesting and appreciated concession. It calls for contributions by employees of nonprofit organizations on a compulsory basis, permitting contributions made by the employer to be on a voluntary basis. To many people, this provision may appear to keep well defined that line of demarcation between church and state. In its practical application, however, it remains our conviction this would not be the case. There would soon be brought to bear upon nonparticipating employers a series of pressures—pressures that would intensify rather than diminish as the years pass. The demands of employees would be one such pressure; public opinion, another; and, sooner or later, the pressure of governmental authority. Participation upon the part of the employer would cease to be voluntary, except in theory, for such pressure would become practically coercive.

If and when such pressure upon the employer becomes coercive, the rights of free men, guaranteed under the first amendment, are abridged. If not coercive, the employer, in the case of our Baptist institutions and agencies, will choose not to pay the employer's share of the tax; thus, the benefits accruing to the employee under the bill would be reduced one-half, for the bill further stipulates that, "if the employer does not elect to pay the employer's contribution, only one-half of the employee's wages will be credited towards benefits."

The advisory council has recommended inclusion of the employees of nonprofit organizations (and I quote) "to assist these institutions in fulfilling their purpose." I submit to you gentlemen that, with benefits accruing to the employee reduced one-half, these institutions would not be fulfilling their purpose nearly so well as they are fulfilling it under existing conditions; for, in every case thus far in the administration of our plans for the lay employees of our denomination, the employer has agreed to, and is, matching the employee's money. Where the employee pays 3 percent of his salary, the employer contributes 3 percent; where the employee pays 4 percent, the employer contributes 4 percent; where the employee pays 5 percent, the emloyer matches his money.

In view of the foregoing, we resectfully request of your committee the same consideration be given our denominational employees, all of them employees of nonprofit organizations, as is now accorded in the bill to members of religious orders. We ask for them continued exemption from the coverage of the Federal Social Security Act.

If, in the wisdom of this committee, such a blanket exemption cannot be made, we then ask the same consideration for our group now given in the bill to State and local government employees. Such a provision would not make it mandatory upon the employee to participate under Federal social security, if, within a given group, the majority voted to continue participation through their denominational retirement board.

Scores of the heads of our various institutions throughout the Southland have expressed their convictions with regard to this matter, and their desires, in telegrams and letters to their respective Senators, including certain of you gentlemen. So also have the State secretaries, who, in their respective States, are the accepted leaders of our denominational work.

FEBRUARY 15, 1950.

SENATE FINANCE COMMITTEE,
(Care Dr. Walter R. Alexander, Baptist Building, Dallas):

The inclusion of nearly 600,000 employees of nonprofit institutions other than ministers and members of religious orders in H. R. 6000 is concern to hundreds of thousands of the 6½ million Baptists who compose the Southern Baptist Convention. Hundreds of our laity are participating through the ministers' retirement plan in addition to more than 10,000 pastors of churches. Moreover thousands of individuals are participating through the age security plan for lay church employees and hospitals, schools, colleges, orphanages, and other denominational agencies. The dues-paying members have their dues matched by the employer. Our people urge you to give the same consideration to our lay employees as is accorded in the bill to the members of religious orders, so that our lay workers shall have the same blanket exemption now granted the Roman Catholic Church. In the administration of our affairs as Southern Baptists the employer has agreed to and is maintaining the matching of the employees' money. This seems to be wise for all.

ROBERT G. LEE,
President, Southern Baptist Convention.

FEBRUARY 15, 1950.

SENATE FINANCE COMMITTEE,
(Care Dr. Walter R. Alexander, Baptist Building, Dallas):

While genuinely appreciative of the humanitarian purposes embodied in House of Representatives bill No. 6000, we Southern Baptists whose churches extend through 23 States in an arc from Maryland to the State of Washington, numbering 27,286 churches, are gravely concerned over the mandatory inclusion of the lay employees of our churches and religious agencies. We feel that as a minimum the option to enter or not to enter into the benefits of this bill allowed employees of municipal and State governments should be extended to the lay employees of the Southern Baptist Convention and similar religious bodies. We

frankly feel that the exclusion of members of religious orders which thereby exempts lay workers in the Roman Catholic Church without a similar provision for the lay workers of Evangelical Churches is discrimination sufficient to warrant the most extreme reaction. It is in order to preclude the necessity of violent attacks upon a bill whose purposes are the highest humanitarian sort that we urgently petition the Senate Finance Committee to make exemption of lay workers of Evangelical Churches.

The lay workers of the Southern Baptist Convention, in most cases, are already included in the plans of the relief and annuity board of the Southern Baptist Convention which actually is more generous that the proposed plan under Federal social security. We feel that those who elect to be included in this plan provided by our denomination rather than the plan of the Federal Government should be under no coercion in their choice.

At great expense we have provided these security plans for our employees both lay and ordained because we do not believe it a part of our basic American principles for our religious bodies to become involved with governmental agencies. We plead for the right to continue this relationship.

DUKE K. MCCALL,
Executive Secretary, Southern Baptist Convention Executive Committee.

Respectfully submitted,

WALTER R. ALEXANDER,
Executive Secretary, Relief and Annuity Board of the Southern Baptist Convention.

FEBRUARY 15, 1950.

Dr. WALTER R. ALEXANDER,
Relief and Annuity Board,
Baptist Building, Dallas:

Please express our opinion before Senate Finance Committee as follows: "We do not wish employees nonprofit organizations to be included in coverage Social Security Act. We believe present plan of greater benefit and more nearly in keeping with convictions of separation of church and State."

M. CHANDLER STITH,
Executive Secretary, District of Columbia Baptist Convention.

FEBRUARY 15, 1950.

SENATE FINANCE COMMITTEE.
(Care Dr. Walter R. Alexander, executive secretary of relief and annuity board, Southern Baptist Convention, Dallas):

Illinois Baptists earnestly desire that employees of nonprofit organizations be excluded from coverage in any Social Security Act.

NOEL M. TAYLOR,
Executive Secretary, Illinois Baptist State Association.

FEBRUARY 15, 1950.

SENATE FINANCE COMMITTEE.
(Care Walter R. Alexander, relief and annuity board, Southern Baptist Convention):

Our people much prefer that employees of our nonprofit organizations continue present denominational plans for security and that we therefore be not covered by Federal Social Security Act.

T. W. MEDEARIS,
General Superintendent, Missouri Baptist General Association.

FEBRUARY 15, 1950.

SENATE FINANCE COMMITTEE.
(Care Dr. Walter R. Alexander, relief and annuity board, Dallas:)

Kentucky Baptists number over one-half million. Seriously object to including employees of churches and church-related institutions under Government social

security as proposed in H. R. 6000. Relief and annuity board, Southern Baptist Convention entirely satisfactory in old age and survivors benefits for all our church employees.

W. C. BOONE,
General Secretary, Executive Board,
General Association of Baptists in Kentucky.

FEBRUARY 16, 1950.

SENATE FINANCE COMMITTEE.
(Care W. R. Alexander, Baptist Building, Dallas):

Please request Senate Finance Committee to exclude employees of nonprofit organizations and religious workers from coverage in Social Security Act. We believe this is vital and basic in the life of the Nation as well as religious denominations.

JAMES R. BRYANT,
Executive Secretary, Virginia Baptist Board of Missions and Education,
Baptist General Association of Virginia.

FEBRUARY 16, 1950.

Dr. WALTER R. ALEXANDER,
Executive Secretary, Relief and Annuity Board,
Baptist Building, Dallas:

On behalf South Carolina Baptists respectfully urge through you Senate Finance Committee exclude nonprofit organizations from coverage Social Security Act.

CHARLES F. SIMS,
General Secretary-Treasurer,
South Carolina Baptist General Board.

FEBRUARY 16, 1950.

SENATE FINANCE COMMITTEE,
(Care Dr. Walter R. Alexander, Baptist Bldg., Dallas):

Louisiana Baptist Convention cooperating in retirement plan of Southern Baptist Convention urgently request you to exclude all our employees from necessity of coverage under Social Security Act. We feel our denominations provision is not only ample for our participants but better.

W. H. KNIGHT,
Executive Secretary-Treasurer Executive Board,
Louisiana Baptist Convention.

FEBRUARY 16, 1950.

SENATE FINANCE COMMITTEE,
(Care Dr. Walter R. Alexander, Executive Secretary, Relief and Annuity Board, SBC, Baptist Bldg., Dallas):

To safeguard our long-established principles and forestall any encroachment upon religious liberty and the separation of church and state, I urge that employees nonprofit organizations be excluded from coverage in Social Security Act. Ample provision has been made for this group and our people are strong in their convictions on this matter.

CLIFTON C. THOMAS,
General Secretary, Maryland Baptist Union Association.

FEBRUARY 16, 1950.

Dr. WALTER R. ALEXANDER,
Relief and Annuity Board, Baptist Building, Dallas:

In view of the fact that all Baptist State employees are covered by a security system three times greater than Government social security, we urge Congress not to impose this injustice upon our employees by compelling employees of nonprofit institutions to accept Goverment social security.

CHARLES W. POPE,
Executive Secretary, Tennessee Baptist Convention.

FEBRUARY 16, 1950.

SENATE FINANCE COMMITTEE,
(Care Dr. Walter R. Alexander, Executive Secretary, Baptist Relief and Annuity Board, Baptist Bldg., Dallas):

To include religious workers in social security would soon destroy every semblance of separation of church and state and depart from fundamental American principles.

HARRY P. STAGG,
Executive Secretary, Baptist Convention of New Mexico.

FEBRUARY 16, 1950.

SENATE FINANCE COMMITTEE,
(Care Walter R. Alexander, Baptist Bldg., Dallas):

Through retirement plans operated by the relief and annuity board, a convention agency of Southern Baptists every individual who bears a salaried relationship to any church, institution, board, or agency of our Baptist denomination is offered generous coverage. I therefore respectfully and earnestly request that your committee exclude from coverage under the Social Security Act employees of nonprofit organizations.

JAMES W. MERRITT,
Executive Secretary, Treasurer, Georgia Baptist Convention.

FEBRUARY 16, 1950.

SENATE FINANCE COMMITTEE,
(Care Walter R. Alexander, Relief and Annuity Board, Dallas):

We urgently request that all lay workers in other churches be granted same consideration as that given to religious orders of Catholic Church in Senate bill No. 6000. We believe that this bill as proposed violates the principle of separation of church and state and that we have a plan in our own relief and annuity board which safeguards this principle and provides adequately for our church and denominational lay employees.

R. E. MIAM,
Executive Secretary,
H. C. PRICE,
President, Baptist General Convention of Oregon.

FEBRUARY 16, 1950.

SENATE FINANCE COMMITTEE
(Care Dr. Walter R. Alexander, Baptist Bldg., Dallas):

Baptists anxious there be no infringement on principle separation of church and State. Since Southern Baptist have retirement program for all employees of churches and convention organizations, request you make same exception for them now being allowed the Catholics of America.

J. HOWARD WILLIAMS,
Executive Secretary, Executive Board,
Baptist General Convention of Texas.

FEBRUARY 16, 1950.

SENATE FINANCE COMMITTEE
(Care Walter R. Alexander, Executive Secretary, Relief and Annuity Board, SBC, Baptist Bldg., Dallas):

In behalf of North Carolina Baptists I request that all employees of our church organizations, which are nonprofit organizations, be excluded from the Social Security Act. This request is made on the grounds that we have our own plans for covering full-time employees of our organization and of our Baptist churches.

M. A. HUGGINS,
General Secretary, Baptist State Convention of North Carolina.

FEBRUARY 16, 1950.

SENATE FINANCE COMMITTEE
(Care Walter R. Alexander, Executive Secretary, Relief and Annuity Board, Dallas):

Our employees are protected in disability and old age by our relief and annuity plan. Please exclude employees of nonprofit organizations on your impending Social Security Act.

WILLIS J. RAY,
Executive Secretary-Treasurer, Baptist General Convention of Arizona.

FEBRUARY 17, 1950.

DR. WALTER R. ALEXANDER,
Baptist Building, Dallas:

California Southern Baptists join you in requesting employees of nonprofit organizations be excluded from coverage in Social Security Act.

A. F. CRITTENDON,
Executive Secretary, Southern Baptist General Convention of California.

FEBRUARY 16, 1950.

DR. WALTER ALEXANDER,
Executive Secretary, Relief and Annuity Board,
Southern Baptist Convention, Dallas:

Arkansas Baptists earnestly request that Baptist employees be exempted from provision of Social Security Act, for they are members of a nonprofit organization.

B. L. BRIDGES,
Executive Secretary, Arkansas Baptist State Convention.

The CHAIRMAN. Mr. Thomas Walters?

Mr. RICHARDSON. Mr. Walters won't be here, Senator; and I am scheduled to follow Mr. Walters.

The CHAIRMAN. All right, Mr. Richardson. You may come around, then. Please identify yourself for the record.

STATEMENT OF GEORGE J. RICHARDSON, SECRETARY-TREASURER, INTERNATIONAL FIRE FIGHTERS ASSOCIATION, WASHINGTON, D. C.

Mr. RICHARDSON. I am George J. Richardson, secretary-treasurer of the International Fire Fighters Association, representing 80,000 out of a total of 92,000 fire fighters throughout the United States.

The CHAIRMAN. You represent 80,000 out of a total of 92,000?

Mr. RICHARDSON. Out of a total of 92,000 paid fire fighters, Senator. All of those are members of our association.

The CHAIRMAN. You do not include the volunteer systems?

Mr. RICHARDSON. No, sir. They are covered by social security by virtue of the occupation at which they work; so that they would not be involved in this.

The CHAIRMAN. I see.

Mr. RICHARDSON. We come first to endorse the bill as passed by the House, with one exception. That one exception is the provision which was in the original bill in the House last year, whereby policemen and firemen were exempted from the provisions of the bill. At that time we submitted to the House committee letters from 500 cities indicating that the firemen in those cities wanted to be excluded from the bill. We reiterate again at this time that same request, and we can submit to you probably 600 letters which have been submitted to

the Senators and to us during the last 2 or 3 weeks, indicating that they also are of the same opinion, that they want to be eliminated and excluded.

Senator CONNALLY. Was that originated by a sort of a propaganda public relations poll of all these people that sent these letters in?

Mr. RICHARDSON. No, sir; it was a policy that started in 1940.

Senator CONNALLY. Each fellow just had the urge to write? He did not have any suggestion from your organization?

Mr. RICHARDSON. No. I won't say that.

Senator CONNALLY. What will you say? I am asking you.

Mr. RICHARDSON. I am trying to say it, if you please.

Senator CONNALLY. I ask you if it was not true that all these letters, this wagonload of letters, were not inspired by an organized drive, sort of a propaganda proposition. There is nothing wrong in it, but I just wanted to know if that is true.

Mr. RICHARDSON. They were inspired by the fact that our organization since 1940 has been interested in this, since the original Wagner amendment was presented to the Senate. And our organization and the American Federation of Labor at that time opposed the inclusion of firemen and policemen. In each convention since, we have endorsed that policy. And when the bill was being prepared for the House last year, we assisted in the writing of the exclusion. We advised our members at that time to advise the members of the Ways and Means Committee that the bill was there and that there would be a possibility that there would be opposition to that provision.

When the bill came before your Senate committee, here, I talked with Senator George, and we told him we could get thousands of letters asking that firemen be exempted. We agreed that was not necessary.

The CHAIRMAN. I hope I did not mislead you, Mr. Richardson.

Mr. RICHARDSON. And for that reason we advised our locals to just advise their Senator that they were against the including of firemen in the bill.

Now, no later than this morning we took it up with the social security committee of the American Federation of Labor, who endorsed the bill in the House, with the exclusion of firemen and policemen, and they are going to come before you and endorse the position which we are asking you to endorse, to exclude us from the provisions of the bill, because more than 95 percent of our members have pension systems which they feel are adequate to take care of their wants.

We are fearful that if social security is made possible it will bring about eventually the elimination of the pension systems which we have, which we believe are particularly fitted to our occupation, because of early retirements, hazards that are involved in our occupation, that cannot be provided for in an over-all social-security bill.

So I say to you quite frankly, it is a simple thing we are asking you to do: to exclude us, and to restore, for example, on page 79 after line 13 of H. R. 6000, the simple words that "such agreement shall not provide for the inclusion of any such services performed by an individual in the course of his employment as a policeman or fireman." If that was inserted on page 79, after line 13, we would be happy to see the bill passed, with all of the other features you want to add to it, or as passed by the House.

The CHAIRMAN. I believe most of the witnesses who have appeared before us say that under your retirement system the firemen retire generally at a much younger age than 65.

Mr. RICHARDSON. Yes, sir.

The CHAIRMAN. It is 55 or 60, I believe.

Mr. RICHARDSON. That is right; 55, generally.

The CHAIRMAN. Fifty-five, generally. The policemen also, of course, retire at a younger age.

Mr. RICHARDSON. That is right, sir.

The CHAIRMAN. And that is because of the extreme hazards of your occupation.

Mr. RICHARDSON. That is definitely the reason we believe that our present situation covers us so well.

Now, we are dividing the time allotted to us; we have here our international president, and we have the distinguished president of our Ohio Fire Fighters Association, Bob Lukens; and the president of our New York local, John Crane; the president of our Detroit local; and the president of our Chicago local, James McGuire. They are all here, and we are trying to expedite the matter. I do not want to take up a lot of time.

Senator TAFT. I want to ask one question. Is this coverage universal?

Mr. RICHARDSON. Practically. There may be a few small communities—and it would not exceed 2,000 as a total, Senator Taft—where firemen are not covered by some type of pension. And we believe that in the course of a short time if you eliminate this belief that there is at the moment in some cities that social security is going to be enacted to cover everybody, and if that was out of the way and they knew they would be excluded, we could have legislation, which the present situation is now causing to be postponed, which would be adequate to cover them, very shortly.

Senator TAFT. How much turn-over is there among fire fighters?

Mr. RICHARDSON. Very, very little. I think you understand that the employment age of entry is from 21 to probably 30, as an average; and if in that period they do not make good they leave the department to go into some covered employment. But after they pass age 30, there is very little change of employment.

Senator TAFT. Once a fireman, always a fireman.

Mr. RICHARDSON. That is right. He takes the time to acquire the knowledge and technical skill to become an expert, and once he acquires it he is more valuable to the city.

Senator CONNALLY. Under these retirement plans that you already have, the voluntary plans, do the employers contribute to the fund?

Mr. RICHARDSON. In most of the cases, Senator, yes. They contribute from 5 to as much as 12 and 14 percent. Even in New York City, the employer contributes, and the employee contributes up to 12 percent in New York City. In Cincinnati they contribute up to 8 or 9 percent, or they used to.

Senator CONNALLY. Is that a State law?

Mr. RICHARDSON. A State law; and then there is a municipal act covering it. In 90 percent of our pension plans, there are employee contributions and employer contributions.

Senator KERR. May I ask a question, Mr. Chairman?

The CHAIRMAN. Yes, Senator Kerr.

Senator KERR. What percentage of those covered are protected by legislation making the State the one responsible for the payment of the benefits?

Mr. RICHARDSON. Very few. In fact, I know of none in which the State has the responsibility of paying the benefits. The State enacts the legislation which provides the method by which the taxes, or the tax, shall be collected. In the State of Ohio, there is $1,600,000 contributed by the State to the municipalities to supplement the funds which are collected from the employees and the employer, namely, the city.

Senator KERR. Then what percentage of the employees, firemen I am talking about, are employed by municipalities where you feel that they may know that they are secure in that they will get the benefits which are contemplated?

Mr. RICHARDSON. Well, I believe that practically 99 percent of the pension funds that are in existence may not be actuarially sound, but they are so sound that the municipality itself will see that the pension that is due will be paid when the men become eligible to get it.

Senator KERR. What percentage of your employees are in communities of less than 25,000? Take it over the Nation.

Mr. RICHARDSON. Well, in communities of less than 25,000, you probably have less than 20 percent of the total paid firemen in the country. You see, you get into the volunteers, from 10,000 down.

Senator KERR. Are there not so many more small communities than large ones that a greater percentage of your employees over-all would be in communities of 25,000 or less?

Mr. RICHARDSON. No, Senator. Because between 10,000 and 25,000 population, for each city in that category, there would be from 10 to 25 firemen. There would be 25 firemen in a city of 25,000 population, one per thousand, or slightly less. So that when you take New York, with 11,000, Detroit with 2,500, Chicago with 3,800, you can add them up, and the large cities are largely the area in which you get the great number of firemen.

Senator KERR. What is your estimate of the total number in the country?

Mr. RICHARDSON. Oh, it is 92,000, total. Within 500 I can tell you exactly.

Senator CONNALLY. Those are paid firemen?

Mr. RICHARDSON. That is right.

Senator CONNALLY. You are not talking about the fellow who wears the uniform and goes to the State convention of firemen?

Mr. RICHARDSON. There are nearly 600,000 of those, Senator; 200,000 in Pennsylvania, and quite a few in Texas, a lot of my friends down there.

Senator KERR. Do you think, then, from the standpoint of the security and getting the benefits that are contemplated, they are adequately protected?

Mr. RICHARDSON. Yes, sir. And I am trying to reflect their opinion to you in an honest and sincere way.

The CHAIRMAN. Thank you very much, Mr. Richardson.

Mr. RICHARDSON. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. John P. Redmond.

Mr. Redmond, you may be seated and identify yourself for the record.

STATEMENT OF JOHN P. REDMOND, PRESIDENT, INTERNATIONAL ASSOCIATION OF FIRE FIGHTERS, WASHINGTON, D. C.

Mr. REDMOND. Mr. Chairman and gentlemen of the Finance Committee, my name is John P. Redmond. I am president of the International Association of Fire Fighters, which represents 80,000 active fire fighters in the United States and Canada in over 900 cities.

The International Association of Fire Fighters have, by repeated convention action, gone on record as opposing the extension of coverage under the Social Security Act to the fire fighters of the United States.

The fire fighters of the United States at present have retirement, annuity, and pension systems in the 48 States, which are not only adequate but the benefit provisions are more liberal than the provisions of the Social Security Act as contemplated in H. R. 6000.

The fire fighters of the United States have been provided, through State statutes and city ordinances as long ago as the year of 1875, with pension protection, and this helped to build the efficiency and morale of our fire departments so that they could cope with that ever present menace of fire which before the turn of the century destroyed great segments of many of our cities.

To open the door by allowing the proponents of social security to conduct referendums would instill into the minds of the fire fighters that the construction of their present pension security would be destroyed and eventually social unsecurity would replace that which they have labored for over 75 years to secure. Instead of a young man entering into the fire-fighting service and making a life career of this profession, his job of the future would be a stopping place on the highway of life until he could secure a better and more profitable position. The now prevailing pension systems throughout the United States have reduced the turn-over in personnel to a very minimum. The very few withdrawals from the fire departments have been caused by disablement in the performance of duty and retirement because of age and service.

To do anything which would cause the disruption of this smooth-working arrangement of one of the most essential services in any community, would be disastrous, as every incipient fire is a potential conflagration, and fire out of control destroys everything in its path and cannot be controlled except by natural barriers. Floods will recede, but fire out of control is an all-destroying force.

Therefore, on behalf of the citizens of the communities we serve, we urgently request that H. R. 6000 be amended as follows:

Strike out on page 80, line 19, after the word "system," all of item (C) in subsection (5).

Strike out on page 82 beginning on line 10, section 218 (d) to and including line 17, page 83, and substitute therefor the following paragraph:

> Such agreement shall exclude all public employees in positions covered by a retirement system, as previously defined in subsection (B) (4) of this section.

The fire fighters for generations have been underpaid, and have been compelled to work long hours and cannot afford the cost of additional protection offered by social security.

It would be difficult to persuade the State and municipal governments—the employers—to continue to support their local retirement systems at present levels.

Many States have tax-limitation laws and as pensions are tied in with salaries and the limit has been reached, it would mean that in the event H. R. 6000 passes in its present form, new sources of revenue would have to be provided to meet the additional cost of social security. As the present source of revenue is just enough to provide a very low salary and the cost of the present retirement systems, any additional cost without additional revenue would mean reduction of salaries, reduction of retirement benefits, and longer years of service. This would result in over-aged fire departments, larger fire losses, greater loss of life, and injuries atendant to fires, with eventual additional cost for fire-insurance premiums.

If the present bill is so essential to those who now have retirement systems, I would suggest that an additional appropriation be provided by the Congress of the United States so as not to impoverish the various subdivision of State governments who are slowly being paralyzed by taxation by the National and State governments.

Gentlemen, I submit this because of the fact that, being associated with the fire-fighting service as a member of it for 34 years in the city of Chicago, and being a trustee of the firemen's pension fund for 17 years, I realize how important the role is that a pension plays, what an important factor pensions are, in maintaining the morale and efficiency of the fire departments throughout the country. To impair them in any way, shape, or form would not only reduce the morale and the efficiency of the fire departments but work a hardship generally upon the people of the community. Because each individual fire fighter realizes, when he goes into a building, that every building has its hazards today aside from the attendant hazards that we had years ago, such as carbon monoxide. We have such additional hazards today as volatile oil, nitrocellulose, plastics, and various other things that explode at a low heat point. And the result is that they would stay outside of the buildings, the losses would increase, and naturally the loss of life. If our pension funds are destroyed, that is exactly what will occur. And, of course, they will be destroyed, in some of the States where the tax-limitation laws are now in effect, because they cannot add this additional 3 percent without reducing the present benefits that they are getting from pensions or reducing the salaries of the fire fighters in the present locality.

I have here a list of some of the cities. Here is a survey that we have made in 1948, covering nearly all the cities in the United States. I will leave this with the committee. There are 69 questions propounded in that survey relating to pension funds, so that we can arrive at a safe and sane method of securing additional legislation at the State levels.

For the benefit of the committee and to show you exactly what we have to contend with, taking some of the cities, spot checking, between 30,000 and 10,000, 18 cities, the average fire fighter works 74 hours and at an average hourly rate of 49 cents an hour. If you reduce that again by 1½ cents, you will bring his salary down to about 47½ cents an hour, which is not sufficient at this day and age.

The CHAIRMAN. Do you wish to leave that for the record?

Mr. REDMOND. Yes, I will leave the table including those 18 cities, the hours worked per week, and the salaries, for the record.

(The tabulation follows:)

Cities	Hours worked per week	Salaries per year	Cities	Hours worked per week	Salaries per year
Murphysboro, Ill	25	$1,980	Lafayette, La	72	$1,92

Average workweek, 74 hours.
Average hourly wage, 49 cents an hour.

Mr. REDMOND. So you can recognize why we are opposing the extension of social security to the fire fighters, especially because of the low wages that are being paid, the long hours we are being compelled to work because of the low wages. And we know that it is not going to benefit the type of service that we are rendering to the communities at the present time.

Now, since the inception of the organization, in 1918, and up until 1928, there was a continual climb, as far as the fire losses were concerned, in the United States and Canada. In the United States the losses increased until they hit the all-time high in 1928 of $550,000,000. In those self-same years there were created in the various States throughout the United States pension acts for fire fighters, with the result that the losses started to recede until they hit the all-time low in 1937 of $225,000,000 annually, or a saving of approximately $325,000,000 annually. Of course, it is true that after the war, they again climbed to $700,000,000, but there was a change-over from wartime activities to peacetime activities, and we anticipated because of this change-over in personnel and various other activities that the losses would increase approximately in comparison to what they were in 1928, which would be three times. We anticipated that the inventories would be three times the value of what they were in 1928. So you can readily understand that we are doing everything we possibly can to reduce this loss, and the only way we can continue to reduce this loss and the attendant loss of life and injury sustained by fire is to have these protective measures at the State level and at the city level.

Now, there is the humane side of the question that I would like to bring to your attention. Being a trustee for 18 years, I can say that it was our sacred, inviolate duty to see that every beneficiary under the act was properly taken care of. During the 18 years that I was a member of the Chicago firemen's pension fund we never had an orphan go wrong. We had to arrange for the shifting of the guardianship of some of those orphans, but the result was that all of those children came through in a fine manner. Some of them are lawyers, and some of them are doctors today.

As far as the disabled men are concerned, some of them had been in hospitals for years, and their family neglected them. We saw that the family went out and visited them and brought clothing and newspapers to them and things which they should have. I am just calling this to your attention for the reason that we consider them by name and not by number, which is what they will be if they are to be under social security. We are very anxious that that be prevented, and that they not be required to come under social security.

That is all I have to say, unless you have some questions to ask.

The CHAIRMAN. Thank you very much for your appearance.

Mr. REDMOND. Thank you.

The CHAIRMAN. Mr. James McGuire?

You may have a seat if you will, sir. You are appearing on behalf of the International Association of Fire Fighters also?

STATEMENT OF JAMES T. McGUIRE, PRESIDENT, CHICAGO FIREMEN'S ASSOCIATION, LOCAL NO. 2, INTERNATIONAL ASSOCIATION OF FIRE FIGHTERS

Mr. McGUIRE. I am appearing for the Chicago Fire Fighters Association, in conjunction with the international.

Senator KERR. Mr. Chairman, the gentleman who has just left the stand is the national president of the Fire Fighters Association?

Mr. McGUIRE. Yes, sir.

Senator KERR. I wonder if he would tell us that he has the same confidence in the security of the benefits of the firemen in the average town that the preceding witness had.

Just answer "yes" or "no."

Mr. REDMOND. Yes. I do. But I would like to explain why even under conditions, where the fire fighters have been charged with paying the benefits, in the city of Chicago——

Senator KERR. I am talking about the towns of 25,000 population.

Mr. REDMOND. The answer is the same; yes.

The CHAIRMAN. Thank you very much, Mr. Redmond.

All right, Mr. McGuire.

Mr. McGUIRE. Mr. Chairman and members of the committee, I am James T. McGuire, president of the Chicago Firemen's Association, Local No. 2, International Association of Fire Fighters, affiliated with the American Federation of Labor, and have requested this opportunity to appear before you to represent the rank and file of the Chicago Fire Department, comprising some 3,500 members.

At present, Chicago firemen contribute to and are beneficiaries of our long-established pension fund. We wish to register our objection and opposition to the proposed expansion of the Federal Insurance Contributions Act to apply to or include our membership under House bill 6000.

While our organization approves of and is in favor of making social security available to those municipal or other governmental employees having no retirement coverage or whose pension protection is inadequate, we are definitely opposed to any extension of the scope of the Federal social security program to affect employees having a stable pension fund.

Our members view with keen anxiety the proposal to open the door to our possible inclusion under the proposed House bill 6000. They are concerned, even though House bill 6000 provides optional participation by a two-thirds referendum vote. Many firemen have, by their contributions, built up equities of considerable value and they are fearful that these equities are in jeopardy by any change that may result from this proposed legislation. They fear that the lower rate of contribution under the Federal Social Security Act would prove too great a temptation to short-sighted public officials and to selfishly motivated taxpaying groups who would seize upon this legislation as an opportunity to relieve the local taxpayers of their legally existing established obligations to present pension funds, thereby decreasing the efficiency of fire departments through our Nation. Of even greater reason for retaining our present pension system, and objection to inclusion under Federal old-age pension, it is an important fact that Chicago firemen, regardless of age in the event of incapacity, are eligible and become beneficiaries of our present pension fund.

The only adequate protection to the firemen of the city of Chicago is complete and absolute exclusion from the provisions of House bill 6000, and it should be amended as follows:

First: In section 218, under definition, strike out (C) of paragraph 5, page 80, lines 19 through 22.

Second: In section 218, strike out (D) (1) of line 10, page 82, through line 17, page 83, and substitute:

(7) Such agreement shall exclude all public employees in positions covered by a retirement system, as previously defined in subsection (b) (c) of this section.

We wish to thank you for this opportunity of appearing before you, and we will be glad to answer any questions you want to put.

The CHAIRMAN. Are there any questions?

If not, we thank you for your appearance, Mr. McGuire.

Mr. MCGUIRE. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. Thom? You may be seated, and please identify yourself for the record.

STATEMENT OF GLENN THOM, PRESIDENT, DETROIT FIRE FIGHTERS ASSOCIATION, OF THE INTERNATIONAL ASSOCIATION OF FIRE FIGHTERS, DETROIT, MICH.

Mr. THOM. Mr. Chairman, and members of the committee, my name is Glenn Thom. I am president of the Detroit Fire Fighters Association, which is part of the International Association of Fire Fighters, and also a member of the board of trustees of the city of Detroit policemen and firemen retirement system. I will read a brief prepared statement with respect to that system:

This is to certify that the following resolution was adopted by the board of trustees of the policemen and firemen retirement system at its meeting held Monday, February 13, 1950:

"By Mr. Woltemate, supported by Mr. Saigger:

"Whereas the policemen and firemen of the city of Detroit, numbering approximately 7,000 members and beneficiaries, have been covered by retirement plans for more than 60 years; and

"Whereas the said policemen and firemen are now covered by a retirement plan, the provisions of which they consider to be in the best interests of the city of Detroit and themselves; and

"Whereas the said policemen and firemen are concerned with efforts being made in Washington to include them under the provisions of the Social Security Act by direct Federal action or by indirect Federal action, designed to apply public pressures to accomplish their eventual inclusion under the act: Therefore be it

"*Resolved*, That the board of trustees of the policemen and firemen retirement system of the city of Detroit urge the Senate Finance Committee, in their deliberations, to protect the interests of said policemen and firemen in he city of Detroit by positive exclusion from the Senate bill corresponding to H. R. 6000; and be it further

"*Resolved*, That Mr. Glenn E. Thom, of the Detroit Fire Department, as an elected trustee of the policemen and firemen retirement system, and/or a rep-representative of the Police Department, appearing before the Senate Finance Committee, be authorized to speak for the members and beneficiaries of the policemen and firemen retirement system of the city of Detroit."

Yeas: Trustees Woltemate, Markey, Furlong, Saigger, Creedon, and Chairman Reinelt—6.

Nays: None.

J. C. HORGAN, *Executive Secretary.*

I submit that in evidence to the committee.

Gentlemen, we take the same position as the previous spokesmen representing the International Association of Fire Fighters and the various local organizations represented therein. It is our opinions and our conclusion that to be included under social security as proposed would be definitely detrimental: possibly not at the present time but in the long run. So that we have asked the positive exclusion as mentioned in the resolution.

The CHAIRMAN. Is your organization affiliated with any of the national unions?

Mr. THOM. We are affiliated with the International Association of Fire Fighters.

The CHAIRMAN. Thank you very much, Mr. Thom.

Mr. THOM. Thank you, Mr. Chairman.

The CHAIRMAN. We have one other witness scheduled for the morning—Mr. John P. Crane.

Mr. Crane, will you please identify yourself for the record?

STATEMENT OF JOHN P. CRANE, PRESIDENT, LOCAL 94, INTERNATIONAL ASSOCIATION OF FIRE FIGHTERS, NEW YORK CITY

Mr. CRANE. Mr. Chairman and gentlemen, I am John P. Crane, fireman first-class, Fire Department, city of New York, president of Local 94, International Association of Fire Fighters, A. F. of L.

While we do not feel that our pension systems are adequate, we do feel, however, that they are more in line with our needs and the needs of our communities than social security for fire fighters. Therefore, we request the committee to exclude completely paid firemen of the fire departments throughout the United States.

Our reason for this is a survey made at the request of a former mayor of the city of New York, Mayor LaGuardia, which indicated over the years that 1,765 fire fighters had died at an average age of less than 50 years.

Our pension systems give protection, under those terms, and I do not believe that the protection we have is anywhere in line with social security, which is considerably less.

Now, the cost of present protection to the fire department of the ci of New York runs around 8 million dollars, and in 10 years it will l up to 12 millions. Add to this the cost of social security, and yc are merely adding a burden to the city of New York which cann benefit us as fire fighters, because we don't, first of all, live long enoug to get the benefit.

Secondly, it is a temptation to the city officials. And our experien with city officials indicates that you can arrive at decisions when e pediency so determines and force the community to meet your requir ments, but when the time comes to live up to the intention of tho agreements we have the same experience that I find the papers indica we have with the Soviet Government. The intention always deviat from what it was originally. And where in 1940 we agreed to pay percent for our pensions, and the city passed a law, we found we we paying 6 percent but that the new men were paying 14, 15, 19, and 2 percent. Now are you going to ask these fellows to contribute mo than that? It is a physical impossibility, on our salaries, with incon tax and other deductions, to do so.

Our occupation is peculiar. We have one of the lowest life e pectancies, 53 years of age. Our earning expectancy is 23 years le than normal. We have the highest incidence of accidents, disabli accidents. We have the highest incidence, by 100 percent, of hea disease. We have the highest incidence of unemployables among ou retired men, of age groups running from 40 to 65, of any known grou in the country. That is why social security is so inadequate to ou needs and why pension systems are a requirement to efficient service-pension systems based upon the needs of the community.

And in New York City we pay the highest rates in the country. Mayor O'Dwyer is making an effort to reduce those rates—but tl requirements of the fire fighter are also the highest. In our 20-ye retirement, we give consideration to the fact of our occupation th when you are reaching your twentieth year in service, you are n longer employable, and the city examines you and finds you are unf and you are retired; and our experience is that there is nowhere el we can go and get a job.

On that basis, please don't put us in social security and tempt tl administration or any governor of the State of New York to tal our pension systems away from us, because our probationary firem for 6 months are not covered and therefore they would have nothir to say about whether they would go in or would not go in under th legislation.

Our systems are a contractual obligation of the city of New Yor and for those firemen outside of the city it is a contractual obligati on the part of the State of New York. We cannot go broke while tl State of New York is a solvent corporation.

Gentlemen, I submit that is our request, and I thank you for tl privilege of appearing here.

The CHAIRMAN. We thank you very much for your appearanc Mr. Crane.

Mr. CRANE. Thank you.

The CHAIRMAN. Attention has been called to the fact that M Lukens, of Middletown, Ohio, is here and desires to testify.

You may proceed, Mr. Lukens.

STATEMENT OF ROBERT M. LUKENS, PRESIDENT, ASSOCIATION OF OHIO FIRE FIGHTERS, MIDDLETOWN, OHIO

Mr. LUKENS. Mr. Chairman, I am Robert M. Lukens, of the Middletown, Ohio, Fire Department, and president of the Association of Ohio Fire Fighters, with approximately 5,000 members in Ohio, and affiliated with the A. F. of L. and the International Fire Fighters Association. And by the way, Senator, our State has 73 locals, and probably 55 of them are in that range class from 10,000 to approximately 50,000.

Senator KERR. What percentage of your 5,000 members would you say are in those communities?

Mr. LUKENS. I would say 60 percent.

Senator KERR. Are in those communities?

Mr. LUKENS. Yes, sir.

Senator KERR. Now, are they under a State plan?

Mr. LUKENS. Yes, sir. We passed it 4 years ago.

We have had a pension in Ohio since 1880, and we have constantly striven, by action before the State legislature and our city officials, to make that a sound financial pension system.

Senator KERR. Do they not do that, at least in part, by annual or biennial appropriations by the State legislature?

Mr. LUKENS. No, sir. We have a State law that the State shall contribute one-tenth of a mill to each municipality for their pension purposes. That is set up in a fund of $1,600,000, which does have to be appropriated for that purpose at every session of the legislature, every 2 years.

Senator KERR. But they are appropriating out of a fund which is created from the proceeds of this tax?

Mr. LUKENS. That is right.

Senator KERR. Can you tell the committee generally if the average of the States have similar programs, or if they are dependent on just appropriations by the legislature from general funds?

Mr. LUKENS. I couldn't answer that. I think probably Mr. Richardson could answer the question. But I am only familiar with Ohio. Our municipalities there pay three-tenths of a mill, and we as individuals pay 4 percent of our salaries.

Senator MYERS. Four percent?

Mr. LUKENS. Four percent in Ohio. And our cities in this bracket from 10 to 50 thousand—of which I live in one of 40,000—are today fast approaching an actuarially sound pension system on this set-up. It is working out fine, and we are building better fire departments, because of our good pension system. In other words, it is an attractive profession today for a man. He comes into the department, and he knows that his widow, his orphan, is going to be protected if he gives his life in fighting fire and saving people.

Now, if you put us under social security, we are not going to be able to attract the type of men into the department that are needed.

Senator MYERS. Does that State law embrace those employees in municipalities of 10 to 50 thousand?

Mr. LUKENS. Ours is all-embracing. If you have two or more paid firemen in your municipality, you must set up a pension system.

Senator MYERS. Regardless of the population?

Mr. LUKENS. That is right. If you have less than two paid firemen, you don't have to do that. But if you have two firemen, you have to set it up.

We are attracting the highest type of men, and if we go into social security and lose this pension system, which we eventually will, we are going back 50 years to the day when a man came on the fire department because he couldn't get any other job and he was satisfied to come there and sit in the stations. Today fire fighting is a career. And the pensions, more than anything else, have helped to make it that.

I am going to leave this paper with you. And 5,000 firemen in Ohio will ask you to please exclude us from the provisions of H. R. 6000.

Thank you.

The CHAIRMAN. Thank you very much, Mr. Lukens.

You may leave the document with the reporter.

(The prepared statement follows:)

REPORT OF R. M. LUKENS, MIDDLETOWN, OHIO, TO SENATE FINANCE COMMITTEE ON FEBRUARY 20, 1950

I am Robert M. Lukens, of the Middletown, Ohio, Fire Department, and president of the Association of Ohio Fire Fighters, representing 5,000 firemen in Ohio.

In Ohio we have had a pension system since 1880, and through working with the State legislature and city officials we have, in Ohio, a financially sound pension system. The State contributes one-tenth of a mill, the city three-tenths of a mill, and the fireman 4 percent of his salary. In 1945 the Governor of Ohio set up a pension study commission, and one of the recommendations of this committee was that firemen be permitted to retire at 52 years of age and after 25 years of service. Thus recognizing that an old-age fire department was a liability to a city.

Under social security the disability benefits will not protect firemen and their families. Firemen will not enter burning buildings and do dangerous work unless they know their families will be protected in case of injury or death.

Higher type men are being attracted to the fire service today by our pension systems. Inclusion of firemen in social security will definitely lower the type of men we are now getting into the fire service, and the efficiency that has been built up in those cities will be lost.

The State of Ohio and the cities in Ohio are contributing the maximum amount they are able to contribute to our pensions. To add the additional cost of social security would be a further burden, and unless the Federal Government gives them financial aid cuts in salaries probably would be made to pay the cost of social security.

Five thousand firemen in Ohio ask you for total exclusion from H. R. 6000.

The CHAIRMAN. This concludes the hearing today.

We have no witnesses assigned for tomorrow.

The following day is a semiholiday or legal holiday, and so we will not sit again until Thursday morning.

We will meet then at 10 o'clock.

Thank you very much.

(Thereupon, at 12:25 p. m., the committee recessed, to reconvene Thursday, February 23, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

THURSDAY, FEBRUARY 23, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George (chairman), presiding.

Present: Senators George, Byrd, Hoey, Kerr, Millikin, Taft, and Butler.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will please come to order.

Is Mr. Donnelly present? Mr. James L. Donnelly, executive vice president of the Illinois Manufacturers' Association? Since he is not present we will insert his statement at this point in the record.

(The statement is as follows:)

STATEMENT SUBMITTED BY THE ILLINOIS MANUFACTURERS' ASSOCIATION, CHICAGO, ILL.

The above measure has passed the House of Representatives of the Federal Congress and is now pending consideration before the Senate Finance Committee. The measure proposes to extend the old-age and survivors' insurance coverage to approximately 11,000,000 persons not now covered, as well as to make substantial extensions in the benefit payments.

The Illinois Manufacturers' Association submits that the changes contemplated by H. R. 6000 will not contribute to the establishment of a sound social security program for the American people. H. R. 6000 aggravates many of the basic flaws in the existing Federal old-age benefits program.

The Illinois Manufacturers' Association also submits that at the outset of any consideration of major changes in the Federal Social Security Act, the experience with the existing act should be carefully reviewed.

The Federal social security program has not diminished the dollar need for other types of public aid. On the contrary, both Federal and State appropriations for such purposes have increased at the same time the social security taxes and benefits have increased.

Public expenditures for various types of relief aids have increased at a time when employment and economic activity have been at high levels.

There has never been a confession of existing liability under the act on the part of the Social Security Administrator. The extent of the actual liabilities already incurred by the Government under the existing program has never been revealed. The wisdom of ascertaining the extent of present and potential financial obligations of the Federal Government under the existing program, as a condition precedent to the assumption of new financial obligations by the Federal Government, is obvious.

Social security taxes are not regarded as the equivalent of insurance premiums. The commitment by the Government to pay benefits to the worker is changed at the will of one party. Premiums, benefits, coverage, and resources are shifting factors over which the taxpayer has little or no control.

The program tends to subsidize the least productive workers at the expense of the more productive workers.

Some persons receive benefits from the old-age and survivor's insurance system even though they have paid no premiums. Others who have paid premiums discover they have no cash surrender value; and for them or their heirs the policy may never mature. Persons paying identical taxes may secure different benefits.

Since the system is based on compulsion and the investments are always in nonproductive enterprises, the normal economic controls for efficient management are lacking.

Political factors tend to encourage the belief that the system is morally and financially sound, and that it will provide greater benefits than could be achieved under noncompulsory coverage.

In view of the inadequacies in many of the basic provisions of the existing social security program, it seems entirely clear that major changes should not be made in the program until Congress has determined whether the program as now constituted is, in fact, calculated to provide a sound public aid and retirement system for the American people, and has made recommendations regarding such changes in said program as the congressional inquiry may indicate to be necessary.

The Illinois Manufacturers' Association accordingly recommends that Congress defer action on H. R. 6000 pending a thorough congressional inquiry into the problem of social security. The association submits that such congressional inquiry should include a study of the following factors:

(1) The extent of the financial obligation which has been incurred by the Federal Government under the existing Federal social security program.

(2) A determination of the dependability of the payment of benefits to the American people promised by the social security program.

(3) The relationship of the social security program to other forms of public assistance—Federal, State, and local.

(4) The use of the funds collected under the social security program by the Federal Government.

(5) The relationship between the benefits received and the taxes paid by the various classes of beneficiaries under the social security program.

(6) The influence, present and potential, of the social security program upon our American economy.

(7) The extent to which political expediency, instead of sound financial considerations and the ultimate welfare of the beneficiaries, has influenced the development of the social security program.

(8) An investigation of the manner in which the social security program is being administered.

In event, notwithstanding the representations of the Illinois Manufacturers Association, Congress elects to proceed with the consideration of H. R. 6000 before making the proposed inquiry, the committee submits the following recommendations in relation to certain specific provisions of said proposal:

(1) The inclusion of the provision for the payment of benefits to individuals who have been permanently and totally disabled should be opposed.

Permanent and total disability is a specialized form of coverage which has no relationship to the problem of benefits for aged persons. The problem of permanent and total disability insurance is not national in scope.

Funds for permanent and total disability benefits provided by this program must come from pay-roll taxes in the States. There is no sound reason for collecting and dispensing this tax on a Federal level.

The proposal to collect pay-roll taxes for old-age and survivors' insurance and then divert those taxes to pay "permanent and total disability" benefits is wrong in principle.

(2) The new definition of "employment," which includes all types of workers irrespective of their status or need for coverage, is too broad and should be eliminated.

The proposal to enlarge the definition of employment to include new groups of individuals, when the soundness of the existing system is open to question, is unwise.

(3) The proposed definition of "employee" is objectionable.

The bill, after enumerating new classes of employees to be covered by the act, establishes "seven combined tests" for determining what additional classes of workers might be defined as employees and brought under the provisions of the act. These tests, which, it is submitted give unnecessary discretion to the Social Security Agency, are: (*a*) Control over the individual, (*b*) permanency of the relationship, (*c*) regularity and frequency of

performance of the service, (*d*) integration of the individual's work in the business to which he renders services, (*e*) lack of skill required of the individual, (*f*) lack of investment by the individual.

(4) The proposed change in the maximum wages to be taxed from the present $3,000 to a new maximum of $3,600, is objectionable. This plan contemplates an increase in the tax burden upon the individuals involved without a corresponding increase in benefits.

A new, higher taxable wage base of $3,600 in place of the present $3,000 base would mean a hidden tax increase on top of another admitted tax-rate increase for old-age and survivors' insurance. The basic level of benefits neither requires nor should it place a greater burden on one wage earner than another, unless comparable benefits are assured. The conflict of this proposed wage base with unemployment compensation and private retirement plans involves serious difficulties which should be avoided.

(5) The tax rates contemplated by the existing law are adequate and should not be increased.

The original tax rate of 1 percent each on employer and employee for old-age and survivors' insurance was increased to $1\frac{1}{2}$ percent on January 1, 1950. The existing law provides that the rate be increased to 2 percent on the employer and employee on January 1, 1952. This 100-percent increase in tax revenue is adequate for the foreseeable future. The proposal in H. R. 6000 to raise the rates on both the employer and employee to 2 percent for 1951–59, $2\frac{1}{2}$ percent for 1960–64, 3 percent for 1965–69, and $3\frac{1}{4}$ percent thereafter is based upon an unrealistic and unsound estimate of the future cost of the old-age and survivors' insurance program.

(6) The act should not be extended to include Puerto Rico and the Virgin Islands.

The system as conceived, financed, and administered is designed for the economy of continental United States and not for nonindustrial economies. Puerto Rico and the Virgin Islands have a low standard of living compared to the 48 States. In many cases, the problem of the individual would be to earn enough in wages to qualify for old-age benefits. The proposed minimum benefits would guarantee a disproportionately large proportion of the normal wage. This would improperly divert funds to those nonindustrial areas

(7) The proposed method of determining the average monthly wage is undesirable.

The present method of determining said wage is more realistic than is the proposed method in relation to the contributions which are made to the national production by each covered worker and should be retained.

The present formula is direct, and easily understood. The new formula is involved and difficult.

(8) The proposed changes in the lump-sum death-benefit provision of the act are unreasonable and inconsistent with the purported purpose of the act

Lump-sum death benefits, equaling six times the worker's primary monthly benefit amount, are now paid only when no survivor of the deceased is immediately eligible for monthly benefits. The proposal in H. R. 6000 to pay lump-sum death benefits equaling three times the primary-benefit amount, irrespective of the payment of monthly benefits to a survivor of the worker, projects the Federal Government into the field of burial insurance and represents an unreasonable extension of the coverage of the act.

(9) Public assistance should be the responsibility of State government. Federal participation, supervision, and direction of such services should be discontinued.

When enacted, the Social Security Act, and particularly the old-age and survivors insurance program, was intended to eventually supplant direct types of State public aid. The act has not accomplished its original purpose in this regard.

Public-aid programs are essentially local in character. They do not constitute a national problem or require handling on a national scale. The Federal Government should withdraw from this field.

Respectfully submitted.

JAMES L. DONNELLY,
Executive Vice President, Illinois Manufacturers' Association.

The CHAIRMAN. I will call the only other witness listed for this morning, Mr. Carl K. Schmidt, Jr., executive secretary of the Illinois Public Aid Commission.

STATEMENT OF CARL K. SCHMIDT, JR., EXECUTIVE SECRETARY, ILLINOIS PUBLIC AID COMMISSION, CHICAGO, ILL.

Mr. SCHMIDT. I am here, Mr. Chairman.

The CHAIRMAN. Will you come around, Mr. Schmidt?

There were two or three other witnesses listed for the morning, from the NAM, and the clerk advises me that the principal witness, who was expected to give us a rather full review of the bill, has canceled his engagement for some reason. So you seem to be the only witness present this morning. Will you identify yourself, please, sir, for the record?

Mr. SCHMIDT. My name is Carl K. Schmidt, Jr. I am executive secretary of the Illinois Public Aid Commission.

Senator MILLIKIN. What is the Illinois Public Aid Commission?

Mr. SCHMIDT. The Illinois Public Aid Commission administers directly the old-age-assistance, aid-to-dependent-children, and blind-assistance programs in Illinois, and supervises the administration of general assistance through some 1,455 local governmental units. Of these it supervises directly the ones which receive State relief funds.

The CHAIRMAN. We will be glad to hear you on this bill.

Mr. SCHMIDT. Mr. Chairman and members of the committee, at the present time there are about 342,000 persons receiving assistance in one form or another in the State of Illinois, and the cost is running somewhere between $11,500,000 and $12,000,000 a month. In the summer of 1945 the number of persons reached a low point and has been increasing steadily since that time, with seasonal changes.

In considering the problem of dependency, I feel very strongly that the primary responsibility for obtaining security against the risks of present-day living rests with the individual, his own energy, his own initiative, and his own resourcefulness. However, in the American economy and society of the present day and the foreseeable future there are large numbers of the population who may, for reasons mostly beyond their control, be deprived of income sufficient for a livelihood consistent with decency and health at American standards.

I consider these major risks as loss of employment in times of business decline or readjustment; loss of employment due to sickness, disability in old age, or other handicap; the possibility of voluntary savings being inadequate to meet the costs of necessary medical care, or the basic maintenance requirements of the individual and his dependents upon his retirement or death; and the inability of some individuals, because of various physical, mental, or personal limitations, to provide an adequate livelihood for themselves and their dependents or to solve in a manner acceptable to society the personal and social problems with which they are confronted.

The general welfare requires that the whole society, through the instrumentality of government, provide for preventing dependency, destitution, and social maladjustment due to these causes, and that it alleviate such destitution, dependency, and social maladjustment whenever and wherever it cannot be prevented.

Responsibility for preventing and alleviating dependency, destitution, and social maladjustment, and promoting the general welfare is of concern to the National Government as well as to State and local governments. The United States is a nation as well as a federation

of diverse States and of localities of citizens with their local governments, local needs, standards, and philosophies.

It is fundamental, therefore, that the Federal, State, and local governments participate jointly in meeting present-day welfare problems and in assisting the average American citizen in safeguarding himself against the economic and social risks that confront him. The distribution of responsibility among the various levels of government, however, should be subject to adjustment in the light of experience and in the light of changing conditions in the economy.

With regard to insurance provisions, a broad principle might be stated as follows: That the economic risk of income losses due to unemployment in old age, should be pooled through a system or systems of contributions by employees and employers; that such system or systems should be self-supporting; that the benefits thus established should be made available to all qualified individuals as matter of right, without personal investigation or subjection to a "means test"; that so far as they can be financed through the contributions received the benefit rates should be established at a level sufficient to meet average needs in the contingency; that such system or systems should be compulsory both for the protection of the individual and the whole society; and that such system or systems should properly constitute the primary provision against dependency.

The present Federal Social Security Act and also H. R. 6000 fall short of carrying out this principle. Large numbers of the population who are most in need of protection against income losses are not covered, in particular: Agricultural workers, all domestics, taxi drivers, and other groups whose incomes generally fall in the lower brackets. Failure to include these groups accounts in large measure for the size of the public assistance load in States which have a large rural population.

Senator MILLIKIN. Mr. Chairman, may I interrupt, please?

The CHAIRMAN. Yes.

Senator MILLIKIN. I think it has been the experience of the members of this committee that we have had remarkably few requests from farm workers and domestic workers to be covered by this system. Our mail is usually a pretty good barometer of what people are thinking. How do you account for that?

Now, of course, some of the farm organizations have come out. There is not any particular smoke or steam coming out of their shoes as they rush here to tell us about it. But as far as the grass-roots expression, the desire to be covered by farm workers or domestics, is concerned, I believe I am safe in saying that the members of the committee have had very, very little correspondence. How do you account for that?

Mr. SCHMIDT. I don't think I can account for that, Senator. I don't know why they haven't come forth and made their wishes known, if they have wishes, in this direction.

Senator KERR. Is it possible that they do not have the knowledge that the opportunity is available to them to make such wishes known?

Mr. SCHMIDT. I have heard that stated. And when you ask, "Is it possible?"—I would say it is possible. It may be probable.

Continuing: Admittedly, inclusion of these groups presents administrative difficulties, but the principle of compulsory social insurance categorically assumes universal coverage, with no exceptions. If it

is valid to compel some groups to contribute toward the contingency of dependency, it is valid to compel all other groups to contribute toward the same contingency.

It is recommended that all groups now excluded should be included, especially agricultural workers, farmers, and domestics not covered by the present bill.

The CHAIRMAN. Do you think all self-employed should be compelled to come into the system? Have you thought of that yet?

Mr. SCHMIDT. Yes; I have thought of it.

The CHAIRMAN. And have you any comments to make on it? I am speaking now of the self-employed.

Mr. SCHMIDT. I admit the administrative difficulties of administering a program covering the self-employed, but I think that they can be worked out, and that if they can they should be covered.

Senator MILLIKIN. What is your philosophical basis for that, keeping in mind that we are setting up a system to take care of the worker; on the theory that the worker, for the reasons you have stated, is not able to protect himself under all of the contingencies of modern industrial life. Bring yourself over, now, to the self-employed, and give us your philosophy as to that.

Mr. SCHMIDT. It is my feeling that the self-employed person falls much into the same category as the worker; that he bears the same risk of going out of business or not making enough to provide himself with savings to take care of himself in his old age. And to the extent that that is true, with these many self-employed people—we have in Illinois 130,000 persons on old-age assistance. When we have a group of persons that large, many of whom have been self-employed persons in the past, who have not saved enough money to take care of themselves, or who felt that they could not and still maintain their standard of living that they thought they should have——

Senator MILLIKIN. You have said something very interesting. What percentage of the persons on public assistance in Illinois were formerly self-employed?

Mr. SCHMIDT. That percentage I don't have before me.

Senator MILLIKIN. Can you get it?

Mr. SCHMIDT. Not readily.

Senator MILLIKIN. I think we should have dependable figures on that, Senator.

Senator KERR. I think it would be most interesting if we could have a tabulation showing the relative comparative percentage of those now on assistance rolls who were formerly self-employed, as related to those on the assistance rolls who were formerly workers.

Senator MILLIKIN. I think it goes to the heart of it, Senator.

Mr. SCHMIDT. I think it would provide a very good bit of information for you, if you had that.

Senator MILLIKIN. Will you try to get it for us?

Mr. SCHMIDT. Yes, sir; I will.

(The information follows at this point:)

We do not have currently available first-hand information concerning persons now receiving old-age assistance in Illinois who were formerly self-employed, but we are now making such a study in cooperation with the Federal Bureau of Public Assistance and the Federal Bureau of Old-Age and Survivors Insurance. On my earlier point on the importance of including agricultural workers, I should like to add that, as of August 1944, about 12 percent of our old-age rolls in Illinois were formerly agricultural workers. At that time there were 15,750 former agricultural workers on our rolls then totaling 125,950.

Mr. SCHMIDT. Assuming that those persons, the self-employed, have the same type of risks, then I think they, too, should be included in the pension program.

With regard to the assistance provisions, a broad principle might be stated as follows: That the Federal Government should assist the States and localities in providing financial assistance and welfare services to individuals and families who are unable to supply themselves with a decent livelihood or who need aid in solving in a manner acceptable to the society, personal and social problems with which they are confronted; that the need for such assistance and services should be prevented or reduced wherever possible by persistent attention to the development of wider economic opportunities and facilities for fostering the improvement of individual and family life; that primary responsibility for administering and establishing standards for these services should rest with the States and localities.

The present Social Security Act and also H. R. 6000 fall short of carrying out this principle.

(*a*) The present act provides only for needy dependent children, the blind and the aged, and for limited appropriations for grants-in-aid to child welfare services, services to crippled children, and maternal and child health. It does not provide at all for other groups of needy persons. H. R. 6000 meets this deficiency by proposing only a very limited and administratively difficult grant-in-aid program for assistance to the permanently and totally disabled. The administrative and medical difficulties in determining whether or not a person is permanently and totally disabled would be almost insurmountable. Differences of opinion would undoubtedly arise among persons attempting to administer such a category, however closely defined by law plus Federal and State administrative regulation. Experience with physically or mentally incapacitated fathers in the present aid to dependent children program demonstrates beyond all doubt that the medical profession itself encounters difficulty in determining incapacity, let alone the greater difficulties that may well be anticipated in determining total and permanent disability.

(*b*) Adequate medical care when one is ill is a basic human need. Furthermore, illness, especially long-term and chronic disease, is one of the primary causes of dependency. The present law makes no special provision for medical care extended by the States to the needy aged, the blind, or dependent children. Furthermore, it prohibits Federal matching of any grants made direct to any source of medical care or to persons receiving care in public institutions. H. R. 6000 stipulates that Federal grants-in-aid may be made to the States to provide for medical assistance to needy persons recognized under the Federal grant-in-aid program, provided that the cost of this assistance can be met within the ceilings contained in the bill. H. R. 6000 will also permit matching of grants paid direct to vendors of medical care and to patients in public institutions. However, these provisions are largely negated by the fact that few States will find it possible to give necessary care within the ceilings stipulated in the bill.

It is recommended that:

(*a*) Instead of the limited and administratively difficult new category for the permanently and totally disabled, the bill should provide for Federal grants-in-aid to the States for general assistance, defined

as all needy persons not qualifying for assistance under other titles of the act. If the Congress feels that it cannot or is unwilling at this time to provide grants-in-aid to this remaining group of needy persons who are now supported entirely by the State and local governments, the following compromise is recommended:

(1) The aid to dependent children program should be extended to cover all needy minor children living in family homes. The Federal contribution formula for aid to dependent children as thus extended should be based on a ceiling of $50 each for the first two individuals in the family and $20 for each additional individual.

This extension of aid to dependent children to include all needy minor children will remove from the general assistance rolls all family cases with children; it will carry out more adequately the declared Federal interest in children expressed in both the aid to dependent children and the child welfare titles of the Federal law; and it should assist in eliminating many of the difficulties now encountered by the State in administering the aid-to-dependent-children program which as now constituted places a premium on the broken home.

Senator MILLIKIN. Mr. Chairman, might I ask the witness to sharpen his testimony a little bit on the totally disabled, as to the catastrophic illness?

What do you think should be done about that?

Mr. SCHMIDT. This is in the public assistance section.

Senator MILLIKIN. Perhaps I should lay a premise for what I am asking you. As I understand it, organizations like the Blue Cross and other organizations that are trying to take care of illness on a voluntary contribution basis have difficulty in financing the catastrophic illness, the totally disabled, cases of that kind. Have you given any thought to how that might be supplemented in any way?

Mr. SCHMIDT. If these cases of the totally and permanently disabled, as are now set up in H. R. 6000, were put into a program such as is considered here, then they would be taken care of under that program. In our general-assistance program in Illinois, the persons who are ill or disabled get full care, under our program. And presumably we would carry over the same basic philosophy with a new category, which is recommended in H. R. 6000, for the permanently and totally disabled. And I am recommending here that if Congress does not extend this to the total general-assistance program, this limited group of totally and permanently disabled be expended to take in those who are ill or disabled, rather than just the permanently and totally disabled, which is a very difficult thing to determine. When is a man permanently disabled, especially with the advances in science that are going on all the time.

Senator MILLIKIN. You have two great holes that breach the wall. You have the phony case, and you have the malingering case, which you have to watch out for.

Mr. SCHMIDT. Right. Very definitely.

Senator MILLIKIN. And they can throw almost any system by the heels unless you do watch out for them.

Mr. SCHMIDT. Right. We have a considerable difficulty in our aid-to-dependent-children program in determining incapacity of the father. And the medical people themselves disagree. It takes, many times, several different consultations of different physicians in order to agree on that.

Senator MILLIKIN. I do not want to take too much time, but I would like to ask again whether you have given any thought to how the efforts of these private organizations, such as Blue Cross, might be supplemented in the field of total disability and long chronic illness. Have you given any thought to that?

Mr. SCHMIDT. You mean supplement the public assistance programs?

Senator MILLIKIN. No, supplement their efforts to take care of their own people in those kinds of cases, which at the present time impose too much of a burden on that system.

Mr. SCHMIDT. No, you evidently mean the disability insurance plan. I don't feel confident to comment in that sphere, Senator. I see what you mean.

Senator HOEY. Could you make any estimate of how much the average cost would be of aid to dependent children under the program that you suggest, this $50 apiece, and so forth?

Mr. SCHMIDT. I don't have it in front of me. I have it in Illinois. I am sorry that I don't have it with me.

Senator HOEY. Could you furnish it for the record?

Mr. SCHMIDT. I could attempt to get it for you; yes, sir.

Senator HOEY. Thank you.

(The information is as follows:)

If aid to dependent children were extended to include all needy children in family homes, and the Federal aid ceilings were raised to $50 each for the first two individuals in the family, and $20 each for each additional individual, and providing medical extra at $6 per adult and $3 per child, it is estimated that annual expenditures in Illinois, under present standards and caseloads, would total 54.6 million dollars, of which 40.9 million dollars, or 74.9 percent, would represent Federal funds and 13.7 million dollars, or 25.1 percent, State funds. Taking aid to dependent children coverage as is—which is the same as proposed by H. R. 6000—but raising the Federal contribution to 50–50–20, with medical extra at $6 per adult and $3 per child, annual expenditures totaling 32.9 million dollars would be distributed 23.9 million dollars Federal, or 74 percent, and 8.4 million dollars, or 26 percent, State. The larger sum of 54.6 million dollars involved in extension of coverage represents mainly cases with minor children now cared for by general assistance agencies in Illinois.

At the present time Federal funds represent only 34 percent of aid to dependent children costs in Illinois, as against this State's outlay of 66 percent.

In computing Federal-State proportions for matching under the proposed 50–50–20 ceilings, we have predicated the Federal share as follows: four-fifths of the first $28; one-half of the next $11; one-third of the next $11. This is the same proportion as the Federal matching of the 27–27–18 ceilings proposed in H. R. 6000.

Senator BUTLER. Mr. Schmidt, in your statement, before you complete it, do you give any statistics as to the number of dependent children in your area, say, this last year?

Mr. SCHMIDT. We have 26,000 cases, Senator, families.

Senator BUTLER. Does your statement show how that has increased, say, over the last 10 years?

Mr. SCHMIDT. I can give it to you over the last year, but not over the last 10 years. You see, our program started in 1941.

Senator BUTLER. Could you supply the figures, over that period?

Mr. SCHMIDT. Certainly.

The CHAIRMAN. From 1941 up to the present time?

Mr. SCHMIDT. Yes.

(The material is as follows:)

Mothers' pension and aid to dependent children in Illinois

Calendar year:	*Average monthly number of cases*
1941	[1] 8,688
1942	[1] 22,894
1943	25,684
1944	21,092
1945	19,794
1946	21,565
1947	22,476
1948	22,029
1949	25,000

[1] Includes the county-State administered mothers' pension program and State-Federal administered aid to dependent children program. The final payments under the mothers' pension program were made in August 1942.

Senator MILLIKIN. Senator Butler, would you mind if I suggested that he also give us an estimate of the increase in population during the same period?

Mr. SCHMIDT. Total population, Senator? Or those under 16?

Senator MILLIKIN. Total population. If you have the other, that would be useful, too.

(The information is as follows:)

Mothers' pension and aid to dependent children in Illinois

Calendar year	Estimated population as of July 1 of each year [1]	Recipients		Recipient rates	
		Average monthly number of persons	Average monthly number of children	Per 1,000 population	Per 1,000 children under 18 years
1941	7,943,608	[2] 28,117	[2] 19,429	4	9
1942	7,904,164	[2] 73,524	[2] 51,782	9	24
1943	7,593,255	84,330	58,646	11	27
1944	7,630,000	70,820	49,728	9	23
1945	7,721,000	67,257	47,463	9	22
1946	8,028,453	73,194	52,614	9	24
1947	8,221,000	77,489	55,794	9	24
1948	8,348,000	77,318	55,884	9	24
1949	8,449,000	88,331	63,547	10	27

[1] Published by Illinois Department of Public Health, Division of Vital Statistics, based on population estimates of the U. S. Bureau of the Census.

[2] Includes the county-State administered mothers' pension program and State-Federal administered aid to dependent children program. The final payments under the mothers' pension program were made in August 1942.

Senator BUTLER. Does the dependent-children program work rather directly under your supervision?

Mr. SCHMIDT. We administer it directly through the 102 county offices.

Senator BUTLER. Do you have any trouble like what was reported from my own home town of Omaha, where you turn over the aid to the parents and it is not used for the purpose for which it was intended?

Mr. SCHMIDT. Well, we have cases, there, where it is alleged that the mother will spend the money for things for which it has not been granted. We do have cases like that.

Senator BUTLER. In such cases, do you continue to deliver the fund in toto per month to the parent or parents?

Mr. SCHMIDT. No. We find out for what they have spent their money, and if it is a reasonable expenditure within the budget, if it happens to be an emergency that would have been considered in the

budget, it would be permitted. If it isn't, then we feel that that is evidence in itself that the funds for the necessities of life which have been provided to them were greater than necessary.

Senator BUTLER. Are they dropped, then, from the rolls?

Mr. SCHMIDT. It depends upon how flagrant the case is. Usually it would be a case of a deduction in grant and not of dropping from the rolls.

Senator BUTLER. In the case of medical care, you make payments direct to the vendor?

Mr. SCHMIDT. We do for hospitalization; and for physicians' care we pay as much as we can in the grant, in order to get the Federal matching.

Senator BUTLER. You do not follow that plan at all in aid to dependent children?

Mr. SCHMIDT. If we can put it into the grant, we do get the matching, but in Illinois we do not follow the $27 and $18 matching. We have what we call no maximum on the grant, but we do have a budget ceiling, the standard budget for the State.

The CHAIRMAN. All right. You may proceed, Mr. Schmidt.

Mr. SCHMIDT. Thank you.

At present, care is offered for the child whose father is dead, deserted, or incapacitated, but not a needy child whose father is at home but, for reasons beyond his control, is unemployed or unable to earn enough to provide his family with a decent livelihood.

The upward adjustment in contribution rates is recommended because we agree with the Advisory Council to the Senate Committee on Finance that one or two person's family cases should have the same level of assistance as do the aged and the blind.

(2) Provision should be made for Federal grants-in-aid to the disabled, defined as an individual who is either temporarily or permanently unable to support himself at a decent level by reason of any medically demonstrable illness, injury, or other impairment and who is without other resources for a decent livelihood. This will remove from the general assistance rolls a second group, leaving for general assistance only able-bodied adults who are unemployed or underemployed.

(*b*) Provision should be made for reasonable Federal contributions toward the costs of medical care for public assistance recipients by providing that up to a maximum of $6 per month per adult recipient averaged for the entire number of adults receiving assistance, and up to a maximum of $3 per month per child averaged for the total number of children receiving assistance, the Federal Government will meet one-half of State expenditures.

That completes my testimony, and I appreciate the opportunity of appearing before you.

The CHAIRMAN. We were very glad to have you, sir.

Are there any questions?

Senator MILLIKIN. I would like to ask the witness:

Do you carry your matching down to the county level? Your matching of Federal funds?

Mr. SCHMIDT. Each case is matched on Federal funds, but the county level does not provide local funds.

Senator MILLIKIN. It is all State?

Mr. SCHMIDT. It is all State and Federal.

Senator MILLIKIN. I see. What percentage of your revenues in Illinois is devoted to welfare?

Mr. SCHMIDT. Approximately 20 percent.

Senator MILLIKIN. I mean your State revenues.

Mr. SCHMIDT. Right. We have a $265,000,000 biennium budget, which is approximately 20 percent of the total.

The CHAIRMAN. Thank you very much, Mr. Schmidt, for your appearance.

The other witnesses who were scheduled for today are not here, and we have no one else, then, to hear this morning.

The committee will recess until tomorrow morning at 10 o'clock.

(At the request of Senator Millikin, the following letter is inserted in the record:)

HOUSE OF REPRESENTATIVES,
Washington, D. C., February 28, 1950.

Hon. EUGENE D. MILLIKIN,
United States Senate, Washington, D. C.

DEAR SENATOR MILLIKIN: In further reply to your letter of February 8, I am glad to provide you with a statement on the so-called gross income tax that has been the principal source of revenue in the Territory of Hawaii for 15 years.

I am indebted to the Legislative Reference Bureau of the Territory of Hawaii for this information, and therefore am certain that it is up to date and authentic.

"Hawaii's general excise (gross income) tax is a comprehensive turn-over tax levied on virtually all sales of goods and services in the Territory. Originally enacted in 1935, the general excise tax is the chief source of Territorial revenue in Hawaii. During the fiscal year ended June 30, 1949, it yielded $26,152,000, approximately 40 percent of all Territorial tax collections. The general excise is buttressed by two auxiliary taxes, designed to minimize avoidance of the general excise: (i) a consumption tax, similar to the use taxes imposed by several mainland States; (ii) a compensating tax levied on purchases made through sales representatives and manufacturers' agents. Personal compensation is not taxed under the genral excise, but rather under separate Territorial taxes—a net income tax and a compensation-dividends tax.

"A. *Tax base and legal incidence.*—The general excise tax is levied on the gross receipts of persons licensed under this tax law to do business in Hawaii. All such receipts, except for those of persons or firms specially exempted, are taxable. In the case of taxpayers engaged in overseas trade, such as sugar or pineapple firms, the value of shipments prior to their entrance into foreign or interstate commerce is taken as the tax base.

"Legally, the general excise is a tax imposed upon the vendor for the privilege of engaging in business in the Territory. No explicit provision for passing the tax on to purchasers is made by law, but vendors are prohibited from holding out to the public that the tax is not included in the price of goods offered for sale.

"B. *Exemptions.*—Persons and firms exempted from the general excise are limited to the following: Banks, public utilities, insurance companies (all subject to special taxes in lieu of the general excise); fraternal benefit societies; associations operated exclusively for religious, charitable, scientific, or educational purposes; business leagues, chambers of commerce, boards of trades, etc., if not operated for profit; hosiptals; nonprofit cemetery associations; agricultural cooperative associations; building and loan associations; and lepers confined to the hospital settlement at Kalawao. In addition, persons with impaired sight are granted special exemptions of $2,000 per annum.

"C. *Rates.*—

	Percent
1. Manufacturing and producing of agricultural commodities (except pineapple and sugar products)	1
2. Wholesaling	1
3. Canning and sugar processing	2½
4. Retailing and all other types of business not otherwise specified	2½
5. Blind vendors	1

"D. *Administration.*—The general excise tax is administered by the Territorial Office of the Tax Commissioner. Persons engaging in business are required

to obtain a license, paying a yearly fee of $1. Reports of taxable sales and remittances of tax due are made monthly, and a reconciliation form filed annually.

"E. *Allocation of revenues.*—Forty percent of all the general excise, compensating, and consumption taxes which are collected at the rate of 2½ percent are allocated among the counties of the Territory in the following proportion: City and county of Honolulu, 55 percent; county of Hawaii, 20 percent; county of Maui, 15 percent; county of Kauai, 10 percent. In the calendar year 1949, the total amount of general excise taxes shared among the counties was $8,420,000.

"F. *Auxiliary taxes.*—(1) Consumption tax: To prevent avoidance of the general excise tax by direct purchase from out-of-Territory sources, a tax of 2½ percent is imposed upon goods brought into the Territory for consumption or other use, unless such property is taxed under the general excise tax or compensating tax law.

"(2) Compensating tax: A compensating tax is imposed upon purchases of commodities through purchasing agents, manufacturers' representatives, or other intermediaries who are not licensed under the general excise tax. If the purchased is licensed to sell at retail and has purchased the commodity for that purpose, the rate of the tax is 1 percent. In all other cases, the tax is 2½ percent of the purchase price."

I appreciate very sincerely your interest in the Territory of Hawaii.

Yours sincerely,

J. R. FARRINGTON. *Delegate from Hawaii.*

(Whereupon, at 10:35 p. m., the committee recessed to reconvene Friday, February 24, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

FRIDAY, FEBRUARY 24, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George, chairman, presiding.

Present: Senators George, Kerr, Myers, Millikin, Taft, Butler, Brewster, and Martin.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will pleace come to order.

Mr. Benson, I believe you are the first witness on the morning's list. You are the president of the National Association of Life Underwriters?

STATEMENT OF JUDD C. BENSON, PRESIDENT, NATIONAL ASSOCIATION OF LIFE UNDERWRITERS, NEW YORK, N. Y.

Mr. BENSON. Correct, sir.

The CHAIRMAN. While the committee has a general idea of what you mean by the National Association of Life Underwriters, will you please indicate to us the nature of the organization, if you do not cover that in your statement?

Mr. BENSON. I believe we do not cover it.

The National Association of Life Underwriters is the agents' or salesmen's group, and our organization is constituted in this manner: There are 565 local associations, distributed throughout the States, Alaska, and Hawaii, and the National Association of Life Underwriters is actually a federation of the local associations. Together they comprise individual memberships that run about 50,000 to 55,000—about 52,000 as of December 31 last year; that is, paid and of good standing.

Senator MILLIKIN. What are the categories of insurance men that one finds in an average community? You have salesmen, and you have agents.

Mr. BENSON. Well, I think in our case the words "salesmen" and "agents" are synonymous, Senator. The usual set-up in ordinary insurance in a city involves a manager or general agent, who has agents or salesmen working for him. Characteristically, in the industrial or weekly premium field, the men who operate those offices are known as district agents and they have agents working for them.

Senator MILLIKIN. I see. Let me ask you another question. Maybe Senator George is groping for this same thing. There is a

definite underwriting function, where you make a contract and somebody underwrites the contract?

Mr. BENSON. That is true, Senator, I mean the home office does the underwriting.

Senator MILLIKIN. Well, does this organization you are concerned with do that type of underwriting?

Mr. BENSON. No, sir. We get the applications, and when you get to the home office the medical department and the so-called underwriting department underwrite them.

Senator MILLIKIN. I see.

The CHAIRMAN. We will be very glad to hear you, Mr. Benson.

Mr. BENSON. If it is agreeable with the chairman and the members of the committee, I do not believe it will be necessary for me to read the prepared statement. If you are willing, I would be glad to comment extemporaneously and make some references to the statement. Is that satisfactory, sir?

The CHAIRMAN. Yes, sir; you may do so.

Mr. BENSON. I would like to refer back, if I may, to some statements that have been made here, and I believe perhaps we can give the committee some information that might be interesting and helpful that I do not believe has been supplied. I have read each statement that has been submitted to the committee on H. R. 6000, and I will try not to repeat, because I notice that there has been quite a lot of repetition.

I would like to indicate this one thing, that I think we are sort of like the hired hand that has been sent out to try out a new combine. Because our members deal each day with social security; that is, we sit down at the dining-room table and explain it to the man who is going to get the benefits.

So the first point I would like to bring to you is how the thing actually works. And if I could leave nothing else with the committee, I would like to impress upon you this point, namely, that the contributory structure of the Social Security Act is, in our opinion, a sound structure basically. We agreed with the basic structure when it was originally established. We agreed with it again in 1939. And I would like to, as I said, emphasize the fact that the basic pay-roll tax structure is all right.

There have been, I have noted, some observations here that perhaps the whole thing should be, as I think someone used the word, "junked," and that we should start out on a new tack. Now, that upsets us quite considerably, and I would like to point out why.

When we go out to talk to a prospect about selling a policy, the No. 1 thing we do is to explain to him in some detail, and map out for him, just how his social security is going to work for him. And what we sell is on top of the basic structure, and we sell the superstructure.

Well, during the last 13 years though, of course, I can't give precise figures, we have had 80,000,000 policyholders. Of course, all of those people don't carry enough insurance to have what we call an insurance program; that is, an amount payable at death to take care of expenses and an amount to take care of the wife while the children are growing up. But I would like to offer you the conservative estimate, as an opinion, that somewhere between 10 and 20 million people have had their insurance programed. The basic thing in this programing is social security. Now, if we were to junk social security, that would

be the equivalent of lapsing what I believe was said to be here, $80,000,000,000 of insurance outstanding in survivors' benefits. So perhaps you can see that when we start talking about junking it, that upsets us a little bit.

Senator MILLIKIN. Well now, when you gentlemen place before your prospective customers these nice pictures of sitting and fishing down in the Senator's State at this time of the year, down at Sea Island or some such place, it is very essential that you have this base of Federal social security in order to build up this amount which you sell, the superstructure, to that fellow, so that he can go down there and fish when he gets to the retirement age. Is that right?

Mr. BENSON. Well, let's put it this way, Senator. There are three very good reasons why the passage of the original Social Security Act helped private insurance as much as it hurt us. In the first place, the fellow whom we visit perhaps didn't want to talk to us about insurance, before we went in and said to him, "Now, do you know how much your social-insurance benefits are going to be?" And, of course, he didn't. And we said, "Wouldn't you like to?" And he would. So, the first thing we knew, we were in an interview with him; and the first thing he knew, he ended up with some insurance. So at least we got to talk with this fellow.

Senator MILLIKIN. You got that superstructure, and I am heartily in favor of it, along with this basic thing which helps the gentleman retire and go down and bask in the sunshine where we all wish we were at this moment. And you do not want that interfered with. You do not want the Government to get up into that superstructure, because if it did, that would put you out of business. Is that not right?

Mr. BENSON. Senator, you have made my speech, as shown in our filed statement opposing raising the wage base and adding disability.

I might say for the record, Mr. Chairman, that I didn't write that to Senator Millikin. I would like to make that perfectly clear.

Senator KERR. Would you further say that he did not write to you what you have already said?

Mr. BENSON. That is right.

But I think it is important that we lay down that fact that a lot of people are depending on what the Government has said they are going to get.

Is that sufficient on that point?

The CHAIRMAN. Yes.

Mr. BENSON. Coming back to this combine that I mentioned, I came from a farm out in Kansas, and I get back to these farming things. I think it is kind of like a combine. We think that the combine shouldn't be thrown away, but perhaps it could be fixed up a little bit. For instance, we would like to have a bigger motor in there to carry a little bit bigger load; which means that the benefits are presently not big enough. And I think it is pretty important to recognize that the Social Security Board says, I believe, that there are about 2,600,0000 people— I believe that is the figure—who are eligible for social-security benefits but are not taking them. Of course, that stems probably from two fundamental reasons. People just don't necessarily like to quit working, you know. And the second reason is that the benefits frequently do not meet a basic minimum level. I will have trouble with that word this morning; I was going to use the

word "subsistence" level, and my people talked me out of it. They said, "That is a bad word." Somebody said, "That sounds like bread and water." So we are talking about a basic minimum level of benefits. And the present act for lower-paid people does not provide that basic minimum. We think it should be brought up so that it would.

We think the coverage should be extended, and that would be like getting a better cylinder to thresh the grain. But most of all, we think this combine needs a good blower to get rid of the chaff and the weed seed, which means, we oppose any attempt to load this act, which is a perfectly good act, down with a lot of extraneous things, like total and permanent disability, and things like funeral benefits. We think that would complicate the machinery considerably.

I will come to that a little bit later.

Senator TAFT. May I ask: Does any straight insurance depend upon whether you are working or not after you reach the age of retirement?

Mr. BENSON. It does not, sir.

Senator TAFT. That is purely a feature of this Government old-age insurance?

Mr. BENSON. That is purely a feature of the Social Security Act a hundred percent; yes, sir.

Now, I have covered the general effects of the Social Security Act, but, Senator Millikin, I would like to make this one additional point. I think it has a big bearing. There were a great many people in the lower-income levels that we used to call on, and we would say, "Wouldn't you like to have $50 or $75 or $100 a month at age 65?" And they would. But we were getting along pretty good until we quoted the premium. Right after that, the deal was over. Because, very candidly, they just couldn't afford it.

Now we are in this situation. We have a base to work on, here, and our prospect, shall we say, is going to get $40 or something like that. Then we have got a pretty decent chance. He is encouraged, shall I say, to try to buy another $25 or $30. I think it is important that that be borne in mind. That is a pretty vital thing.

There isn't any question but that the advertising that has gone on about the Government program, and so on, has put the stamp of Government approval on the life-insurance business. There can be no question. We go back to the days of World War I. And when these boys came home and told dad they were insured for $10,000, and he only had $1,000, it changed the aspect of the thing. And the first thing we knew, he was talking about $10,000. So there isn't any mistake about it. That was really a very helpful thing. It helped a lot.

I thought you might be interested in the progress of the attitude of the public toward OASI. I would say the first 3 or 4 years after the Social Security Act was passed when we went out to talk to people about it they would brush it off and say, "Oh, I think that is just kind of a Government scheme. I don't think we will ever get anything out of that." That was honestly the attitude about it. But during the past 13 years, I think that has substantially changed.

Now, there is one thing that has come into the statements, here, as I have read them, and that is that you gentlemen would be led to the impression that there is a tremendous demand for expanding the Social Security Act; that is, from the grass roots. I will have to say to you

that I, personally, am not cognizant of that demand. Probably it is wiser to expand the act more than the actual demand. Because very few people have said to us, "Well, why don't you try to get us covered under social security, too?"

Whether that is a matter of education, or the fact that we are in pretty high wage level times, and so on, is a question. In other words, if we were in a depression, maybe there would be a big rush up here to say, "Won't you bring us under the act?"

Senator MYERS. Mr. Benson, these remarks are directed particularly toward extended coverage?

Mr. BENSON. That is right.

Senator MYERS. And not increased pensions?

Mr. BENSON. No; toward extended coverage, Senator. I just wanted to make the point, which I thought might be interesting to the committee, that I personally have observed no tremendous grass-roots demand to extend this act. Of course, I am sure you have been impressed by the fact that there have been more witnesses, I think, up here saying "Keep us out" than "Put us in."

Senator TAFT. Yes; I think I have a hundred telegrams to one: "Keep out."

Mr. BENSON. Yes; everybody says "Keep us out."

Senator MILLIKIN. Mr. Chairman, all through this hearing we have been trying to find whether the farmhand wants this social security. So far we have had no durable testimony that he does, except that there may be some intimations to that effect from the testimony of some of the organizations of farmers. And they do not seem to be overly steamed up about it.

Now, what do you people find out when you try to sell policies to farm workers?

Mr. BENSON. We have not discovered any great demand among those people. Does your question come back to the farm hand; the hired man?

Senator MILLIKIN. I am talking about the farm worker. That is right.

Mr. BENSON. I would like to be very fair about that, Senator. I don't know whether he has heard enough about social security to really be up demanding about it. I will go so far as to say this: I personally do not believe that there is what you would call any pertinent demand from farmers as an over-all group.

Senator MILLIKIN. All right. Now, take the farm owner. Is he hot about this subject?

Mr. BENSON. I think he is not hot about it.

Senator MYERS. What is your view, Mr. Benson, on this question: Would it be good for the general economy of the country? I think that would be the test, rather than the demand that might come from various groups. Do you think it would be a good thing? Do you think it would benefit our over-all economy?

Mr. BENSON. Well, yes. My statement, here, quoting it verbatim, says that "we favor the extension of social security to all who are gainfully employed wherever administratively feasible." Now, those sound like weasel words, but we don't mean them that way. However, the only thing that has come in to you so far that has indicated that it would be feasible to cover farmers and domestics and people like that, unfortuntaely, has been from people who weren't going to collect the

tax. And I am impressed by the fact that the Bureau of Internal Revenue hasn't yet been up here saying, "We know how to collect the tax; we know how to administer it." Now, there isn't very much mystery that the Social Security Administration would be faced with, when they get in the benefits, in finding out how to send out the checks.

Senator MYERS. Well, it is your view that the coverage should be extended to domestics and farm hands if feasible?

Mr. BENSON. Yes, sir.

Senator MYERS. And you qualify it with "if feasible."

Mr. BENSON. That is right.

Senator MYERS. But you do believe coverage should be extended if the taxes can be collected?

Mr. BENSON. That is right. But I am tremendously impressed with the fact that there is nobody that is really going to do it coming up here and saying just how they are going to do it. I should think the committee would want to be pretty well persuaded about that. I am sure I wouldn't know.

Senator KERR. Do I understand you to say that you are for it if feasible, but that you don't think it is feasible?

Mr. BENSON. I do not know whether it is feasible or not. I wouldn't have any idea.

Senator KERR. Do you think it might be?

Mr. BENSON. I don't have an opinion, Senator. Because it seems to me that is a matter for the Bureau of Internal Revenue. It would be their problem. There have been all kinds of plans advanced here. I don't know.

Senator KERR. Do you have an opinion as to whether it should be extended to the farm operator himself, the self-employed?

Mr. BENSON. If we are looking at it as a matter of need, probably it is more important to extend it to the farm worker.

Senator KERR. But is the extension of it to the farm operator himself a matter of merit, though probably of less merit than to the farm worker?

Mr. BENSON. Yes; I would say that. Because, well, I have seen that go on all the time, and you know what happens, Senator. My State out there is next to yours. And the farmer that hasn't done too awfully well more or less stays on the farm. Maybe the kids do the work, and what not. And those fellows aren't in such bad shape. And the ones who make a little money move to town, don't they?

Senator KERR. And get in bad shape?

Mr. BENSON. Well, sometimes.

Senator TAFT. I think most of them go to Florida.

Mr. BENSON. Of course, now we are getting into a deep subject, here. Of course, things have been better out there recently.

Senator MYERS. You mean the deep South, do you not, Mr. Benson?

Mr. BENSON. Of course, the farmers out in my part of the country are doing pretty good right now. If we get down to need, I don't think they need much more social security, you see. They are coming along pretty good. They need a good rain once in a while, but not so much social security.

The CHAIRMAN. What is your observation about the self-employed group generally? Do they want to be put under social security?

Mr. BENSON. Personally, I do not believe, Senator, there is any demand for that. But, now, here is what concerns us and what is back

of our statement that we believe that all persons who are gainfully employed should be covered wherever feasible. Because you take the self-employed group: If the statistics were available—you were trying to find that out yesterday morning, Senator Millikin, about the percentage of self-employed who are needy in their old age, and what not.

The CHAIRMAN. Those who are not drawing old-age assistance, whether they came from the employed, the self-employed group, or the wage earners?

Mr. BENSON. I don't know that, either. If we knew that, that would be something else. But I am operating on this kind of a theory: that probably if we would take a hundred thousaid self-employed—and that would take in everybody from the filling station operator on up—they would contribute as many people at age 65 who don't have enough money to live on as any other hundred thousand workers. Because maybe I can add this one thing to the testimony, and that is I have learned in 27 years selling life-insurance: The man who is self-reliant and who takes care of himself—it depends a darn sight more on his character, his sense of responsibility, and his integrity and moral fiber than it does on the amount of money he earns is least likely to need outside help. Now, on that, I will stand.

Senator KERR. I do not get the significance of that statement.

Mr. BENSON. I am saying this, Senator: As you go around to sell life-insurance policies, you see fellows who are making what we would call a pretty nominal sum of money. And if he is a pretty good, thrifty citizen, and has good moral fiber and a good sense of personal responsibility—now, we can't sell him $50,000, but he will get down to cases and he will do something about his own case. And then I have talked to fellows, ten, fifteen, or twenty thousand dollars a year, and it is a cinch that at 65 they are going to be broke.

And the point I want to make is that you can't just take the fact that all the rich will take care of themselves and all the people that don't make a lot of money will have to be taken care of. That isn't the case.

Senator KERR. You are backing up, by these statements, the proposition you laid down to start with, that out of a hundred thousand self-employed during the productive years, there will be as many in need of social-security assistance after 65 as there will be among a hundred thousand who are employed?

Mr. BENSON. I am disposed to believe that. Now, obviously, I can't prove that, can I? But I am honestly disposed to believe it. And then if we don't cover them and this system matures, we will come out where there is a large number of people in the community getting social-security benefits. In other words, the curve is up pretty sharply as to the number of people who were getting benefits each year. Well, if you live in a town with a thousand people, and, shall we say, there are a hundred people past 65, then, if 98 percent of them were getting benefits the other 2 percent would feel pretty badly at being left out and they would probably do something about it.

So the point I want to make is that unless you extend coverage as the system matures I believe you gentlemen and future Congresses will have a big demand on you to bring these people under social security when they become conscious of it. And they will not have made any contribution in the meantime. That is what disturbs us.

Then there is another important point. The fellow who isn't under social security and turns up and has to be taken care of—and it seems we have all agreed we are going to take care of him somehow—will be taken care of out of general taxation at some level, local, State, national, or some place. Then the worker is paying toward his own social security, and then is having to make a contribution to the general fund to help take care of this other fellow. You see, that is the rub in this thing.

Senator MILLIKIN. Is not your argument in the direction of a universal pension?

Mr. BENSON. No. Pardon me, Senator. Did you say "in the line of"?

Senator MILLIKIN. In the direction.

Mr. BENSON. In the direction, yes.

Senator KERR. You mean universal coverage by old age insurance?

Mr. BENSON. We believe in universal coverage.

Senator KERR. I believe the Senator addressed his query to quite another proposition, that of old age pensions; and I would be glad to know which you had in mind.

Mr. BENSON. I prefer the universal coverage under the Social Security System.

Senator MILLIKIN. To put everybody under the insurance system?

Mr. BENSON. That is right. It goes deeper than that. I do not believe there is anyone so wise that he knows exactly what the cost of this thing is going to be. Because maybe the assumptions on which these high and low estimates were based will not come to pass.

You take a good round depression. It would change the whole thing. Or real good times may keep the worker in the labor market. So I don't believe anybody can tell what these costs are going to be. It would be pretty difficult.

Yes, Senator?

Senator MYERS. Referring back to your statement about universal and extended coverage if feasible and your further statement that you would like to hear something from the Internal Revenue Department, the Commissioner, as to whether it was not feasible, were you familiar with the original bill, H. R. 2893?

Mr. BENSON. You mean when Mr. Schoeneman came over?

Senator MYERS. Yes. Did not that bill extend the coverage beyond that contemplated in H. R. 6000?

Mr. BENSON. Yes, it did. Mr. Schoeneman was over and testified to that committee. And, though I hope I may apologize to him, in his absence, I must say that it didn't impress me.

Senator MYERS. Well, whether it impressed you or not, he testified on that bill. He testified before the Ways and Means Committee on April 1, 1949. And, reading from page 1345 of his testimony, he said:

> Before beginning that discussion I would like to emphasize that we in the Bureau of Internal Revenue believe that we can adequately and satisfactorily administer the provisions of H. R. 2893, if enacted into law.

Do you remember that statement?

Mr. BENSON. Yes, I do.

Senator MYERS. Do you remember the further statement which appeared on page 1347 of the House hearings, in which he said:

> On the basis of the above five factors—

and I am not going to read them all—

I feel confident in stating that given the necessary personnel and facilities, the program proposed is administratively feasible.

Do you remember that testimony?

Mr. BENSON. Yes; I do.

Senator MYERS. At least we do have that testimony from the Department.

Mr. BENSON. Yes; I am aware of that.

Senator MYERS. I wondered if you were when you indicated that you would like to hear from somebody from the Department of Internal Revenue on this legislation.

Mr. BENSON. Yes; I am thoroughly aware of that, and it seemed to me that what it was lacking was a spelling out of the thing. Do you have the full text of the testimony there?

Senator MYERS. I do; yes.

Mr. BENSON. As it went on and developed, purely as a matter of opinion it seemed to me that it wasn't spelled out specifically enough. I think at least the Ways and Means Committee were not tremendously impressed with it.

The CHAIRMAN. Did he advocate the stamp plan of protection for the farm worker?

Mr. BENSON. I don't know that I recall that. I believe it was the stamp plan for the domestics, and some other sort of a plan for the farm worker.

The CHAIRMAN. I have seen some of it. All that testimony amounts to is that they regard it as feasible and practicable. But right down to the grass roots it is highly questionable whether it is not.

Senator MYERS. Might I interrupt and say that I understand, from just a cursory review of this testimony, Senator, that on page 1349 in the House hearings he did discuss the stamp system, and apparently, from a hasty reading of it, I would say, recommended the stamp system.

Mr. BENSON. Did it apply to the farm worker, too?

Senator MYERS. Let me read it:

Stamp system: Under this system the social-security tax would be paid through the purchase of stamps by the employer and his affixing them to the employee's stamp book. The stamps accumulated in this book would constitute the employee's working record during the period the book is valid.

Senator TAFT. At any event, this committee has not heard any testimony, and I think we should, from the Commissioner of Internal Revenue.

The CHAIRMAN. We have not heard as yet from the Commissioner of Internal Revenue; no, sir.

Mr. BENSON. Of course, that is a very difficult problem. I am sure I do not know; maybe the stamp plan is a perfect plan, Senator.

Senator MYERS. I mentioned that just because you raised the question that we should hear from the Commissioner. I thoroughly agree that this committee should also hear from the Commissioner, but I wanted to point out that he had testified as being in favor of a coverage even much beyond that contemplated in H. R. 6000.

Mr. BENSON. You are perfectly correct about that, Senator.

Senator TAFT. But after hearing that testimony the House then left farm laborers out.

Mr. BENSON. Yes; maybe that was the reason. I don't know. But in any event they did.

I would like to make this general observation, too. There has been some testimony here to the effect that they believed that there should be some more research done about this social security question. Well, I would like to make this flat statement to the committee. I believe there has been plenty of research done on the thing. I can't see where there is any particular thing that would be added by further studies. The studies are pretty good. We have the Calhoun report, and we have the Senate Advisory Council.

It is rather interesting to read some of the latest studies. They all, now, are beginning to refer back to each other for references. We are kind of researching each other on this question, just at this point.

Senator KERR. Do you think there should now be more action taken which would provide something for further research, rather than further research with reference to action already taken?

Mr. BENSON. I hadn't thought of it, but it is a pretty good idea. I think that would be all right. But everyone now is putting down at the bottom what somebody else says, and then somebody writes another book, and he puts down what two other fellows said, particularly if he agrees with them. So I don't think we are getting much new material on extending coverage and increasing benefits.

I believe you raised the question, did you not, Senator Millikin, some place along the line, about where somebody wanted to research it again?

Senator MILLIKIN. No, I do not remember that. But that is a good way to get an honorary college degree, you know: To refer to some other college professor and what he said.

Mr. BENSON. I did not know that.

The CHAIRMAN. All right, Mr. Benson, you may proceed.

Mr. BENSON. On the Social Security Administration, I would like to make this comment. We in the life-insurance business are of the opinion that administratively the Social Security Administration or Board has done a good job. They have done a good administrative job. We believe it has been done efficiently. We get prompt replies from them when we ask them for information, and so on. It seems to us to be very good.

Senator MILLIKIN. Have you made a study of their work load and the number of people that accomplish that work load? Have you made a study of the distribution of their employees by categories and by skills in relation to the work load and the requirements of the work load?

Mr. BENSON. Naturally I have not, Senator. Let me tell you the basis as to that other conclusion. From a practical point of view, we go on the matter of whether we are courteously treated when we go into their offices and whether the people there can help us with our problem or not. I am looking at it from a purely practical point of view. If we want to find out what a man's wage credits are and write in to Baltimore, we hear from them right away. And then I took a look at the over-all administrative cost, that is, 3 percent of the total contributions and 8 percent of the benefits. And that impresses me as being a good job.

But the thing I would emphasize from the purely practical point of view is that it is a good Board.

Senator MILLIKIN. It is a courteous outfit?

Mr. BENSON. Yes; it is. And they do a good administrative job.

Now, having stated that, I have a criticism. And we are very much concerned over one fact, that the Social Security people, in our opinion, are leaning pretty heavily upon the phrase in the law which says that they shall make recommendations to the Congress. Well, we think that making a recommendation is one thing and selling it is another. And we don't find the word "selling" in the law. And the Social Security people out in the sticks are willing to drop anything, almost any time, on the theory of explaining the act to a group of people, but it only takes about 5 minutes to explain it and the rest of the time is spent on selling the idea as to how it should be amended. Now, whether that is contrary to the intent of Congress I don't know. I would like to leave the observation with the committee here, that in our opinion that is not a good thing for an administrative group to do.

Senator TAFT. Do you think there is any difference between them and the State Department and the Agriculture Department in that respect?

Mr. BENSON. I am just not familiar with the other departments. I have had the impact of this.

Senator MILLIKIN. Well, you fellows sell your system.

Mr. BENSON. But that is what we get paid for.

Senator MILLIKIN. That is what they get paid for.

Senator TAFT. Not at all. The statute prohibits them from doing it.

Senator MILLIKIN. Oh, nobody pays any attention to that.

Mr. BENSON. Well, I am impressed with that statement.

There is another thing I would like to have in the record, if we may, Mr. Chairman. I don't think it has been mentioned, and we felt sort of left out about it. It is the fact that there are 80,000,000 people who are currently insured for life insurance. And I would like to make this observation, if I may. The premiums being paid currently, right now, are $7,000,000,000 and a little plus per year. That is what people are doing for themselves. That is distributed among 80,000,000 people. Social security now covers about 35 to 45 million.

Senator MARTIN. Is that 80,000,000 policies?

Mr. BENSON. No, sir; that is 80,000,000 individual persons who are insured.

Senator MILLIKIN. Are there any duplications?

Mr. BENSON. No, sir. We will stand on that. That is a record that we can really make; because the companies contributed to that research.

Senator MILLIKIN. That is all kinds of research?

Mr. BENSON. That includes what we call ordinary insurance, so-called industrial or weekly premium insurance, and group insurance.

Senator MILLIKIN. Burial insurance?

Mr. BENSON. No, sir; nor fraternal insurance. The proper definition is "legal reserve life insurance."

Senator MARTIN. This is life insurance only. The correct way to state it is insurance involving life contingencies, having nothing to do with hospital care, accident and sickness, or anything like that. That does, though, include group insurance.

Mr. BENSON. Group insurance; yes, sir.

Senator MARTIN. And, if I understand it, that is 80,000,000 individuals?

Mr. BENSON. That is right. Yes, sir. That is 80,000,000 individual people.

Senator MILLIKIN. And they are paying $7,000,000,000 a year?

Mr. BENSON. That is the '48 figure, which will be documented. I am going to leave with each of you gentlemen this so-called life insurance fact book. That is the '48 figure. I imagine when the '49 figure comes out it will be up some, because the total amount of insurance in force at the present time is $213,000,000,000; that is, the total amount outstanding. That is $213,000,000,000 at the end of December 1949.

Now, the benefits paid, death benefits, annuities, everything like that, was 3¼ billion in 1948.

Senator MARTIN. How much was that?

Mr. BENSON. Three and a quarter billion. Now, as that contrasts with OASI, where the taxes collected were some 1.7 billion dollars for the comparable period, and next year's benefits are to be some $800,000,000.

Senator MARTIN. Might I ask a question, there, Mr. Chairman?

The CHAIRMAN. Yes, Senator.

Senator MARTIN. This $213,000,000,000 of outstanding life insurance is also, I presume, actuarially sound?

Mr. BENSON. Yes, sir, the reserves back of that are between 55 and 56 billion dollars—it will be in the fact book, there—as of the end of 1948. You see, the 1949 figures have not been compiled, Senator, but that is as of the end of 1948. And that is going up at the rate of about $4,000,000,000 per year; in other words, the curve of increase in reserves, which is nothing more nor less than the total reflection of the improvement in cash values of all of the policies for all of the times for the year.

Senator TAFT. In other words, there are $4,000,000,000 of net savings in life-insurance premiums?

Mr. BENSON. Correct.

Senator TAFT. Which is then reinvested by the life-insurance companies in mortgages and bonds.

Mr. BENSON. All the various categories.

Senator KERR. I take it that the reserves go up not only by the savings from premiums but also by the earnings from principal?

Mr. BENSON. That is right, sir.

Senator MILLIKIN. What percentage of the insurance that you were discussing represents annuities?

Mr. BENSON. You mean of that premium income?

Senator MILLIKIN. Yes.

Mr. BENSON. Of the $213,000,000,000, none of it now.

Senator MILLIKIN. How many people have policies, first, which are actually paying annuities? And how many people have policies which contemplate the payment of annuities?

Senator KERR. You mean life retirement benefits, Senator?

Senator MILLIKIN. Exactly.

Mr. BENSON. That is spelled out in the fact book, if I can put my finger on it.

Senator KERR. Did I understand you to say that the $213,000,000,000 did not include any of the amount now in force providing for retirement?

Mr. BENSON. Well, thank you, Senator, for that. I should clarify that statement. Because some contracts work this way. A man is insured for a thousand dollars until he is age 65, and at age 65 that policy pays him $10 a month the rest of his life. Thank you for the correction.

That, incidentally, is not a tremendous percentage, however.

Senator MARTIN. That is included, though, there?

Mr. BENSON. That would be listed as $1,000 of the $213,000,000,000.

Senator, here you are. At the end of 1948 there were 660,000 people who have private annuities that are actually in payment, paying $253,000,000. Now, then, there are 2,253,000 that are fully paid for, but the people have not started taking them yet, and the amount of income from those will be $463,000,000. And those that are being currently purchased, where there are no life contingencies—that is what we call a deferred annuity—640,000, which will pay $379,000,000 at their maturity date.

Senator MILLIKIN. Can you average those figures?

Mr. BENSON. Well, the total of those would be $3,553,000, and the total benefits would be $1,095,000,000, when they were all in benefit payment.

Senator TAFT. A year?

Mr. BENSON. Yes, sir.

Senator MILLIKIN. How much per person, average?

Mr. BENSON. I am pretty bad on arithmetic.

Senator KERR. About $280 a year, would it be?

Mr. BENSON. Yes; about $300 a year.

I don't know whether this is a good time to do it, Senator, but I think maybe it is a good time to point out another point I wanted to make, which is this: That I do not agree with the general impression that has been left with the committee that income payments have to be big for people when they retire. I believe, from experience, that that is a mistaken notion. Because actually what happens—and we have had all kinds of experience with this—is that many widows don't end up with enough insurance to have $100 a month, or something like that. They have $40 a month, or $50 a month, or something like that. Well, I had occasion, during the last year—and made a little research on this—in 14 different cities, typical cities, Los Angeles, Chicago, Detroit, 14 of them, in which people in 2 categories, retired industrial workers—I looked to that particularly—put ads in papers and said, "Well, I have $50 a month coming in for life. What do you have to offer me?" Well, if you were to read the replies that came back, a fellow would be tempted to quit working and go and live in some of these places. But the point I want to make is that you don't have to have $100 a month. I think that is important. And that is one thing we have learned in the life-insurance business. And I want to leave that impression with the committee. The replies come back, and in one city an industrial worker got back 33 replies, and 22 of them were perfectly good things.

Senator MARTIN. Excuse me. I am not following you. Maybe the other men are, but I am not quite following you. What do those replies contain?

Mr. BENSON. Well, the ad says, "What do you have to offer?" People will come back and say, "I have a nice home in the country out here, and we have an extra room"—which many people do. And

maybe part of the living comes from the farm. And the odd part of it is that about 90 percent of them come back and offer to do the job for $40 a month, because they figure this fellow has to have $10 for cigarettes and carfare and what not. It is a very compelling thing.

Senator MARTIN. Is that person going to do some work?

Mr. BENSON. No, sir.

Senator MARTIN. They are just going to live?

Mr. BENSON. That is right. You see, when you get right down to cases, people who are retired, by and large, live with somebody else anyway. And this one thing we have learned, in the life-insurance business, that if a widow who is elderly has an income of $50 a month you can be sure of one thing. When she goes to visit, from one child to another, they will all be down at the train to meet her. You can be dead sure of that.

Senator KERR. She has become an asset instead of a liability?

Mr. BENSON. She surely has. And as a matter of fact, instead of calling up Detroit and saying, "When can we send mother up?" the thing is more, "Won't you stay until after the first of the month? We would like to have you stay with the children. We have some things to do."

I would like to really drive that point home. That is important. We have a saying in the life-insurance business, and it is true, that "the only difference between an old woman and an elderly lady is $100 a month." That is for sure. You can depend on that.

Senator MYERS. You prefaced your remarks by speaking of industrial workers and not elderly ladies.

Mr. BENSON. That is right.

Senator MYERS. And you indicated that an industrial worker could get along rather well on $100 a month after retirement.

Mr. BENSON. I am saying this, Senator: I am familiar with the arguments on the other side, but I am saying this: Any person—this is for sure—that has a cash income of $50 a month and will have it the rest of his life at this level of wages will not be in any want. He can be very well taken care of.

Senator TAFT. That is per person, and not per family?

Mr. BENSON. That is per person.

Senator MYERS. Let us pursue that further: Let us take into consideration our cities. In my city of Philadelphia, do you think an industrial worker who is retired and has $100 a month can get along very well?

Mr. BENSON. Well, Senator, I will tell you what I would be glad to do. That thing happened, and I have the replies.

Senator MYERS. It may have happened, but what can they rent a room for?

Mr. BENSON. But that isn't the way it works out, Senator.

Senator MYERS. How does it work out? It may be a man with a family, but many of them do not have families. Many of them may be single men and have no children to live with.

Mr. BENSON. I will quote you the ad, Senator.

Senator MYERS. Of course, I am not basing it on ads. I am wondering how a man who is an industrial worker, we will say a single man, or maybe a man with one child, who has to go out and rent a room, can get by on 50 bucks a month.

Mr. BENSON. He doesn't do it that way, Senator.

Senator MYERS. How does he do it?

Mr. BENSON. I will tell you. And may I be very specific?

Senator MYERS. Surely.

Mr. BENSON. All right. The ad was run in Philadelphia in the Inquirer. The Inquirer? Is that right?

Senator MYERS. You can mention the Bulletin, too, and bring them in.

Mr. BENSON. I believe it was in the Bulletin, too. I believe it read like this:

A retired industrial worker, age 65, with a guaranteed income for life, $50 per month, desires a permanent home, room and board; no other funds available. What do you have to offer?

And I will rest my case on the replies.

Senator MYERS. What are the replies?

Mr. BENSON. I believe there were about 40, and the great majority of them offer to take care of him, in perfectly good places, for $40 to $45 a month. I will get the replies and show them to you.

Senator MYERS. Between $40 and $45 a month? What does he do with the other 5 bucks?

Mr. BENSON. Senator, the sharp point is this. And I am glad you brought that out. You helped me make my point. The sharp point is this, and the argument we are in with the Social Security Board, that the Board is presuming that this man is not going to have saved any money and is not going to have done anything about himself. Now, we take the hard position. We are taking a harder position than anybody has taken here so far in dealing with the man that has been improvident all of his life and has not saved any dollars. I will put it the hard way. So long as he can be reasonably well taken care of, we feel that is enough. He may suffer some privations. I know that. And that is the penalty for the man who didn't save any money.

Senator MYERS. Well, you are not advancing this as an argument against the increase in benefits as proposed in H. R. 6000, are you?

Mr. BENSON. Against the benefits proposed?

Senator MYERS. The increased benefits proposed in H. R. 6000.

Mr. BENSON. I am advancing it as an argument against the benefits.

Senator MYERS. You do not think the benefits should be increased?

Mr. BENSON. Yes, I do; but not to the extent that they would be in H. R. 6000. Our point of difference is very small, but still there is a difference.

Senator MYERS. Of course, you must consider, too, that many of these people are not single.

Mr. BENSON. Then an ad was run, also, which said that an elderly couple wants a home.

Senator MYERS. They cannot do it for the same amount of $50.

Mr. BENSON. The figure was $85. And the replies are equally interesting.

Senator MYERS. Well, I would like to see a few individual cases of people that try to get along on that. I mean, they can. It is possible. But I would like to see it.

Mr. BENSON. Senator, if you are going to say "comfortably and independently" then I am on your side.

Senator MYERS. Well, you cannot live comfortably these days on $100 a month. That is certainly true as to a married couple who

have to pay for rent and utilities, or even rent a room. Nevertheless, you are opposed to the increased benefits suggested in H. R. 6000?

Mr. BENSON. Well, when we come to it, I have a benefit formula that will come out.

The CHAIRMAN. Will you proceed, please, Mr. Benson? We have several other witnesses here this morning.

Mr. BENSON. All right, sir.

Suppose, then, that we do this. I wonder if the gentlemen of the committee would be willing to take page 19 of the statement.

(2) An extension of benefits under H. R. 6000 to include all who are gainfully employed wherever such coverage is administratively feasible.

And I think ke have explored that point. Down below there is one point which is of interest to us, and I would like the committee to just be aware of one thing, if they will. That is at the bottom of page 19, where it says:

The subsection provides as follows:

"(3) Any individual other than an individual who is an employee under paragraph (1) or (2) of this subsection who performs service for remuneration for any person. * * * (B) as a full-time life-insurance salesman: * * *."

May we remind the committee that Mr. M. Albert Linton, testifying on behalf of the Life Insurance Association of America and the American Life Convention before this committee on February 10, 1950, offered a similar endorsement of this subsection.

Enactment of this subsection will enable our members to be included for benefits with proper payment of taxes. Such inclusion we have sought for many years.

I would like to make three observations on that, very briefly. That particular subsection was worked out by the technical staff of the Committee on Ways and Means, and is agreeable to the company organizations and representatives of our organization, and, insofar as I know, everyone was happy about it.

Senator MILLIKIN. You are talking about a full-time insurance salesman?

Mr. BENSON. That is right.

Senator MILLIKIN. What salary does he get?

Mr. BENSON. None.

Senator MILLIKIN. He works entirely on commission?

Mr. BENSON. Well, Senator, then we would get off into categories.

Senator MILLIKIN. Well, is that correct?

Mr. BENSON. Yes.

Senator MILLIKIN. He can work all day, or part of the day, work when he pleases? I mean, let us walk down the main street of Squeedunk, and we have a fellow who is in the real-estate business. And he does a little insurance; he writes a few policies; he sells a little real estate. He engages in various kinds of trading. In one way or another he ekes out a living. Now, do we put him in?

Mr. BENSON. No.

Senator MILLIKIN. How do you distinguish?

Mr. BENSON. Purely on a practical basis, Senator. A full-time agent has a very close relation to his company. He may be able to see who he wants and when he wants. Ordinarily, that would lead one to conclude that he is not an employee at common law. However, the restrictions and obligations assumed in his contract—the territory to which he is assigned and which he is expected to cover—and the careful

rules and forms he must follow distinguished the full-time life-insurance salesman from the ordinary independent salesman.

His actual method of solicitation and his relationship to his company through his general agent or manager are very similar in practice to that of the life-insurance agent whose company has already recognized him as an employee for social-security purposes. In some cases the relationship is not similar; it is identical.

The twilight zone in this particular field has caused a great deal of trouble. The subsection we endorse is a very slight extension of the common-law rule. You will note that it excludes as employees those full-time life-insurance salesmen who are in fact carrying their own overhead or who are acting casually or as brokers.

The subsection has, moreover, been agreed to, as affording a practical solution, in testimony here the life-insurance company associations representing the bulk of those with whom our members have salesmen's contracts.

With your permission, Senator, I should like to add one more point which may come before you in a year or so. H. R. 6000 does not propose to extend this definition of employee for purposes of unemployment compensation. At present, insurance salesmen on commission are specifically excluded from unemployment compensation under the Federal statute. It is definitely not our thought at this time to advocate the extension to unemployment compensation of the subsection we endorse in H. R. 6000.

In this section 210, you will recall, there are some specific inclusions. This is the approach recommended by the joint tax staff and includes a full-time life-insurance salesman under the reasonable limitations I have mentioned.

And then there is a paragraph 4 which covers additional persons on the basis of the combined effect of a series of factors. The joint tax staff opposed the approach of this paragraph. While we understand that this paragraph 4 might, under careful regulations, work no great hardship on the great bulk of the life-insurance industry, nevertheless we refrain from advocating its adoption because of its reportedly unfair possible application to other industries.

Senator MILLIKIN. Now, do you fellows propose to contribute the benefits of this insurance salesman regardless of whether he sells any insurance?

Mr. BENSON. That would be reflected in his commissions, if he didn't sell any insurance.

Senator MILLIKIN. But, if he does not sell any insurance, he has no commissions, and hence you do not contribute?

Mr. BENSON. Hence he would get no benefits.

Senator MILLIKIN. Hence he would get no benefits. Well, how does that cover him, then?

Mr. BENSON. Well, there are a lot of people that are covered that get very negligible benefits.

Well, Senator, he wouldn't go on too long selling no insurance.

Maybe I can help you this way. I know everybody would say, "Well, is there such a thing as a full-time life-insurance agent?" And every once in a while at our convention somebody gets up and says the same thing. But I think maybe this will help. There is probably an area, out here, of—let me estimate it at 5 percent of our people, as to

which I think it will be difficult to make the distinction. But I believe, very honestly and sincerely, and so do the companies, and so do the technical staff that wrote this bill, and we went into it in great detail, that this will probably take care of 95 percent of the situations. The contribution will be all right. And the companies are willing to pay their part. And we are at least narrowing the area of difficulty.

Senator MILLIKIN. All right. Now, you are talking about a full-time-life-insurance salesman. Who makes the contribtuion for him?

Mr. BENSON. The act provides that he pays half and the company pays the other half.

Senator KERR. Does the company pay the other half in addition to the regular commission and renewals that they pay him on the business he writes?

Mr. BENSON. That is right.

That is a very difficult question, Senator Millikin. I am not wanting to say that this is a very simple one-sentence answer to the thing, but what it represents is the best.

I would like to make this one point. You may wonder why life-insurance agents want to be covered. It is a perfectly good question. Well, I think the reason is because day in and day out they are setting down with other people about their social-security benefits, and so on, and talking about it all the time, and they naturally are conversant with it, and they would like to have it, too.

Senator KERR. You think they sell it enough so that they are willing to buy a little?

Mr. BENSON. That is right.

Senator MILLIKIN. But the point is that the insurance company itself is going to pay its employer part of the contribution.

Mr. BENSON. That is in the act; yes, sir.

Senator MILLIKIN. And that is agreeable to you?

Mr. BENSON. That is the reason why I put this statement here. Mr. Linton endorsed these same provisions of the act.

Senator MILLIKIN. And the amount that you contribute will vary according to the amount of the insurance that he sells?

Mr. BENSON. Correct. Exactly.

I don't think the thing is too awfully much different. There are instances where difficulty has arisen. For instance, well, I know a paper company in our town; their salesmen are out selling, and the only difference is what they call a drawing account. And they don't have a formal contract with their company, because they have no vested interest in the renewal account, you see, of that paper business. We have a contract with our agents. And I think that is what has thrown the thing into confusion.

Senator MILLIKIN. Yes, but now let us take the average fellow on the main street that sells a little insurance and sells a little real estate. He trades a horse once in a while, or he sells a farm, and he is a good free-enterpriser. Now let me get at this relationship of employer and employee, if there is one. He has a right to sell policies for your company. Is that right? You tell him, when he goes to work, what time of day he goes to work?

Mr. BENSON. No.

Senator MILLIKIN. Do you tell him when he quit, what days he works?

Mr. BENSON. No; of course not.

Senator MILLIKIN. Do you tell him whom he shall see?

Mr. BENSON. No.

Senator MILLIKIN. But you do not have the control over that full-time salesman that is the customary attribute of the relationship of employer and employee; do you?

Mr. BENSON. Senator, many of our people are not, in the strict sense of the word, common-law employees, for two principal reasons. The main reason is that it is impossible—we would like to, but it is impossible—to direct how a salesman uses his time. Because he has an appointment at 11 in the morning, and the fellow says, "Mary wants to talk about it, too. Will you come out after supper?" Well, now, you can't do anything about that. You have got to go.

Senator MILLIKIN. What you want to do, then, is carve out an exception.

Mr. BENSON. That is true. And the act, for good or bad—I wish there were a better way of doing it, frankly, Senator. I really do. But we worked at it long and hard. And this represents what you would call an exception. I believe in the act there are six in this particular section, here.

Senator TAFT. Where the employer contributes, as distinguished from the wholly self-employed, who contributes only for himself?

Mr. BENSON. That is it exactly. Now, maybe it is a bad thing to set up any particular group like that. But we worked at it very hard and could not figure out another way to do it.

I would like to leave this impression with the committee. We honestly believe the thing will work.

Senator KERR. Well, this group that you are talking about will either be classified as self-employed or as employed by an employer.

Mr. BENSON. Probably neither.

Senator TAFT. You mean under the definition in the act they probably would not fall under either?

Mr. BENSON. That is right. I am refering to some practical cases which still will have to be disposed of by regulations.

Senator KERR. Suppose you discuss that for a minute.

Mr. BENSON. Senator, if you will emphasize the word "practical," a full-time life-insurance salesman is from that standpoint an employee. They go to the office regularly. The bulk of them are in the big cities, these full-time salesmen. They keep pretty regular office hours. And they are required to attend meetings. And you can make out a case for the other side of it, too; all except that you can't tell a man just exactly how he is going to use his time or what he is going to say when he gets there. It isn't like making bolts out of a rod of steel. Because you don't say the same thing to every fellow to whom you sell a policy.

Senator KERR. As I understand it, what you are saying is that this is a better way to cover this group than to define them as self-employed and to cover them under that classification?

Mr. BENSON. That is correct, sir.

May we go back to the top of page 17, please? Now, I will try to be very brief, gentlemen. We are disturbed over the word "insurance" in the Social Security Insurance Act. Now, here is where that causes trouble. We go out to sell a policy to a man. And I will ask you if you will pick up this little chart, please, sir.

Senator KERR. You mean the comparison of primary benefits?

Mr. BENSON. No; this little colored chart. Well, the part colored in blue is what it does for the man's family if he dies and what it does for him and his wife if they retire. Then, if you were to add that up, that would come up to a pretty good-sized amount of total benefits. Well, the contribution has been $30, and now it is $45 on his part, and he isn't too worried about the employer's part. And he says, all of a sudden, "Well, if I get all this much for $45 from the Government, how does it come that it costs so much more to get what you are selling me?" Whereupon, we have to stop and spend a long time explaining to him the difference between the Social Security Act and private insurance.

Now, maybe this will save time. We are suggesting that instead of the Social Security Insurance Act it should be called the Federal Retirement and Dependents Benefit Act of 1950. We say, in the statement:

> The Congress acted very wisely when the Pure Food and Drugs Act was enacted. Among other things, that act provided that all articles of food and drugs should be clearly and correctly labeled in order that the public will in no wise be deceived. We hold that it is equally important that the public should in no wise be deceived in the matter of social security. We suggest that the word "retirement" is more significant than the words "old age" due to the fact that the act, in reality, contemplates that workers will retire before benefits are paid and the mere attainment of so-called old age in no wise assures a worker of benefits. We also believe that the words "dependents' benefits" more accurately describes the class of beneficiaries who will actually receive benefits than does the rather all-inclusive word "survivors," as the term is generally understood.

Senator MILLIKIN. Why do you not just call it the Federal Benefit Act of 1950?

Mr. BENSON. I will buy that.

Senator MILLIKIN. Why all this other monkey business?

Mr. BENSON. It suits me.

Senator MILLIKIN. That is what it is.

Mr. BENSON. That is right.

Senator MILLIKIN. This system we have is not an insurance act, is it?

Mr. BENSON. That is my point. And I would like to leave the idea with the committee, though, that we aren't willing to quibble over words. I do want to leave the impression here that it creates practical difficulties for us. And they are really practical.

I have done this much, just looking into it; and I can't find a definition in any lawbook of insurance that doesn't have three elements in it that I can find, first of all, that it is a contract; and second, that it does have a specific premium, and that the insured is obligated and the insurer is obligated to do something definitely in consideration of that premium, and then what is to happen is spelled out. Well, social security is not a contract. Nobody knows what the premium is going to be, or what the contribution or tax or anything else is going to be, and there is no relationship between the amount of tax paid and what a man may get. A fellow 30 years old, unmarried, pays $45. If he dies, little or nothing is paid. If a man has three small children and dies, it can end up at fifteen or twenty thousand dollars—with which we have no quarrel.

Senator TAFT. You said it has no relation. It has some relation, but not much.

Mr. BENSON. Not much. Thank you, Senator. There is not a direct relation.

Senator TAFT. Yes; I agree with you.

Mr. BENSON. Now, we are not quarreling about the fellow getting the money, but we don't want to call it insurance, because our premiums look a little out of line compared to this tax proposition.

Senator KERR. Do you suppose if we changed the title a little you would change your premiums a little?

Mr. BENSON. Well, Senator, in my particular position I would not have any objections.

Senator MILLIKIN. Let me ask you this, Mr. Benson. And I take no position on it. I am just groping for information. Why do we not cut out all this monkey business and cut out the fiction of reserve fund and start right out and pay the benefits that we decide should be paid to people of a certain age and collect the taxes necessary to do it as we go?

Mr. BENSON. Well, of course, it isn't without merit, is it?

Senator MILLIKIN. I would like to have somebody tear big holes in it.

Mr. BENSON. I don't think I am that smart.

Senator MILLIKIN. Right off the bat, I cannot see any reason why we go through all this hocus-pocus. Why do we not start right in and decide that people of a certain age are going to receive so much benefit and that we are going to tax people currently, people who have to produce the things anyway to pay the benefits, a sufficient amount to do the job? The reserve fund is phony. It is a swindle.

Mr. BENSON. Well, at least it is a phony. But here is what I think is wrong with it, in three points: The first one is that I do believe a system would work better if there is a relationship between total earnings and ultimate benefits. Because I believe if we were to suddenly agree on the fact, just to take a figure out of the air, that the correct amount is $60 a month, for the sake of argument, then, Senator, some people would have their income improved considerably by that $60. And I think you would immediately have a difficult situation. And there would be places were $60 would be too much and other places where it is not enough. So I think there should be some relation, there.

Senator MILLIKIN. Mr. Benson, in the end the very fact that we are sitting here now shows that politically we are going to adjust these benefits to what we consider to be the realities of the day and age in which we, again, sit here.

Mr. BENSON. I think that is right.

Senator MILLIKIN. So it all comes to the same thing.

Senator TAFT. But Mr. Benson, is there not this one thing? I mean, I agree with Senator Millikin, but it seems to me this is a system of taxation and not insurance, as you suggest.

Mr. BENSON. That is right.

Senator TAFT. But should not the benefits bear some relation, again, to the taxes paid? Or, putting it another way, some relation to what the man has earned, the work he has done for the community, during his life? In other words, could you not accept the general theory of universal overage and taxation and still grade the benefits with some relation to what a man has earned and, consequently, what he has probably paid?

Mr. BENSON. We prefer the earning notion. Senator, when we get to it, if we do, here, today, we are suggesting a benefit formula of 60 percent of the first $50 of average wages. Now, frankly, what we are attempting to do is to preserve the integrity of this system and establish thereby a floor, upon the theory that everybody that had credits would earn $50, on the average. And we are honestly attempting to establish a floor of $30. As a matter of fact, we would like to see in there that anybody that is getting benefits would get $30. Because we do not believe there is very much realism in the thing without that.

Senator TAFT. As compared to $25 under this H. R. 6000; the higher benefits in the lower grade? Is that right?

Mr. BENSON. Yes. We think it is a little more realistic. Now, then, on top of that we want to establish, on top of the minimum, and additional benefit definitely related to earnings.

Senator MILLIKIN. The fact remains, though, that we have been jiggling around with this thing since 1934 or 1935. People that went into that system paid 100-cent dollars in those days. Now we are getting an average, those who are getting benefits, of how much, Mr. Cohen? $26 a month? And it is worth $13. Is it not perfectly obvious that we have got to meet here again and again and again to bring this thing into relation to reality?

Mr. BENSON. Senator, that would impress me, except that I would worry about one thing, and that is that the great danger in this, as I see it, is that if we get that benefit too high, somewhere along the line, I am not impressed that when we get back to the 100-cent dollar the Congress will meet and bring the benefits back down.

Senator MILLIKIN. I think you can be dead sure that it will not.

Mr. BENSON. Frankly, I am, too, but I was being cautious.

Senator MILLIKIN. Why not remove the problem that exists in that situation?

Mr. BENSON. Senator, maybe I should not say this, but I will anyway: That we have the whole thing under consideration, and we are meeting in Oklahoma City on the 20th of March—and if we change our mind, we will advise the committee—as to the very problem you bring up here.

I know another gentleman is going to talk about the lump-sim death benefit, and then I am willing to close on the subject of total and permanent disability, which I know is rather a perplexing thing now.

We are flatly opposed to including any total and permanent disability benefits in the act. And the reason we are is that we believe that it introduces a completely new concept of administration, moving from objective decisions over to discretionary decisions.

Senator MYERS. Has that always been your opinion, Mr. Benson?

Mr. BENSON. Yes.

Then I would like to base it on this further premise: That we are of the opinion that adding total and permanent disability benefits to the act would create many administrative problems and solve very few problems of people who are disabled.

Now, may I amplify that in this way: The disabled range all the way from the man who is ill, who has to have a doctor, to the man who has to be hospitalized, with, perhaps, nursing care and expensive

medicines, and a primary insurance benefit has nothing to do with his problem. It won't solve it. He will still be a problem. Then down here is a man who needs to be rehabilitated, maybe to do a job with one hand that he used to have two to do it with.

So since I have prepared this thing, I have come across the most interesting material I have found in a Government bureau. I was put in touch with the office of vocational rehabilitation people. Do each of you have these "brass tacks" books? I don't know if I am bringing to your attention something that you already know all about, but I think it is tremendously interesting. Will you look on page 15? I believe the pages are numbered. You will observe there, and I have checked it with the people down there at this bureau, that for $460, cooperatively with the States, something over 220,000 people have been rehabilitated.

Now, if you will turn to page 24, there is the most interesting statement I have ever seen. And these people insist it is true. Incidentally, this is a Social Security Board publication.

Senator MILLIKIN. Pretty fancy, too, is it not?

Mr. BENSON. It is a beautiful job. It says:

> The record shows that most—

now I am interested in the word "most"—

> most disabled persons can be rehabilitated.

And those people stand on that word.

> When rehabilitated they make safe, steady, productive workers.
> The total cost of rehabilitation is repaid many times over in increased income-tax payments alone.

And this very well bears that out.

So I would like, if I may, based upon this and the interviews which I have had with these people, to make these observations relative to total and permanent disability.

First of all, it seems to me that here is an opportunity for the Congress to save literally billions of dollars. Because the high estimate, the ultimate estimate, is a billion and a quarter for total and permanent disability, and the low estimate is $500,000,000, which only explains one thing, that nobody knows what it will be. I think that is all we can make out of that.

But here is, I believe, about the first Government agency that I have ever found that could honestly make the Government a profit, really.

Senator MARTIN. Mr. Chairman, I wanted to ask Mr. Benson whether or not he has gone into the statements made on page 24 of this statement, as to what it is that that is based on. There must be some figures. They just make statements there. I want to know, Mr. Benson, whether you have gone into the figures that they base those statements on.

Mr. BENSON. Let me put it this way, Senator. We have visited a bit. And, Mr. Chairman, if I may make this suggestion, and I make it most respectfully, it would seem that this committee would be tremendously interested in having a first-hand story from the people who actually do this work. It is the most fascinating story I have ever seen. I am completely impressed by the fact that we are going to spend $1,100,000,000-odd, according to the budget that you are going to consider, for conserving our natural resources.

Senator MILLIKIN. Who is the man who knows more about it than anybody else?

Mr. BENSON. Mr. Michael J. Shortley.

Senator MARTIN. Mr. Chairman, I think Mr. Benson's suggestion is probably a very good one, but, of course, this hearing would be rather long drawn out. I would like to see those figures that those statements are based on.

Now, I believe very much in what is stated on page 24, from my own experience as a governor, because we did an awful lot of work along that line. I can testify, myself, that as it relates to the blind we have done wonders on a pretty small appropriation. But I am very much for getting everybody self-supporting if we possibly can, even if it costs more money than you get back in taxes. I would like to have the figures on that.

Mr. BENSON. Well, Senator, I don't like to beg your question. That isn't a good thing. But it seems somewhat inappropriate for me.

Senator MARTIN. The reason I asked is that I thought you had probably investigated that.

Mr. BENSON. I visited with Mr. Shortley, met Mr. McEldowney, and Mr. Kincannon, who are the three top men down there. And, Senator, I think they would be hard put, if I may express this as an opinion, to completely document the word "most." Because I have tried to pin them down. I said, "What does 'most' mean? Does it mean 51 percent? Does it mean 80 percent? What does it mean?" Well, they talked in round figures, 60 or 70 percent, or something like that. But, gentlemen, I think the thing goes deeper than that, and I will give you this experience, from my own company, on this total and permanent disability thing, when we were in it. And that is that we discovered that most people who become disabled and start getting a little money, even if it is a little money, become very frightened. And unless they are encouraged and shown how they can get back on a proper basis, they become afraid to get off the disability payment. They are more scared than they are disabled, for fear that if they do a little work, they can't get back on the claim. Honestly, much of it is mental, and you need understanding people. It is really a sales job. And we found when we went out to these people and talked to them, we found out a lot of things. We said, "Let's explore what you can do. Instead of getting $50 a month the rest of your life, wouldn't it be better if we would settle with you for $4,000, set you up in business?" And that actually happened. And we discovered a lot of things.

Now, I would like to say this: If the rehabilitation program can accomplish what we believe it can accomplish, it seems to me it goes right to the heart of this whole disability question. I am sure that is the most perplexting thing in this whole matter.

Senator MYERS. Is there not such a thing as the Life Insurance Association of America?

Mr. BENSON. Yes.

Senator MYERS. And the social-security committee of that association?

Mr. BENSON. Yes.

Senator MYERS. And did not that committee, in 1945, recommend total and permanent disability insurance benefits under social security?

Mr. BENSON. Total and permanent disability benefits? Not to my knowledge.

Senator MYERS. You were a member of that social-security committee; were you not? I am referring to the social-security committee of the Life Insurance Association of America.

Mr. BENSON. I don't belong to the Life Insurance Association of America. That is a company organization.

Senator MYERS. There is such an organization, and it has a social-security committee?

Mr. BENSON. That is right.

Senator MYERS. So, of course, I would think its views would be somewhat similar to yours. It has the same objectives as your association. Do you know whether that association, in 1945, recommended total and permanent disability insurance?

Mr. BENSON. As I say, not to the best of my knowledge. I think there was some discussion about its being limited to those between the ages of 55 and 65, in order to take care of the incidence of disability in some occupations where disability or, shall we say, termination of economic effectiveness, came early.

Senator MYERS. Well, not only between 55 and 65. It merely recommended that those benefits would cease, of course, if the individual receiving the benefits should recover before age 65.

Mr. BENSON. That is right.

Senator MYERS. If not, they would continue. So, at least one segment of the insurance industry did recommend, back in 1945, total and permanent disability benefits under social security.

Mr. BENSON. Senator, may I go ahead with my recommendations, here?

Senator MYERS. Surely.

Mr. BENSON. The point I would like to emphasize here, as I said, is that if the committee can develop the fact that these people can do the thing they think they can, then it seems to me it should not be a part of the Social Security Act, because whatever number of disabled people we have, and nobody seems to know how many there are, it seems to me it is as important to rehabilitate those who are not under social security as those who are.

Senator MYERS. But what happens to them before rehabilitation?

Mr. BENSON. It seems to me we have this kind of a problem, Senator: Would you agree with me that that would reduce the area to whatever extent it can be accomplished?

Senator MYERS. Oh, I think the plan is fine. You mean the rehabilitation plan?

Mr. BENSON. Yes.

Senator MYERS. Oh, of course.

Mr. BENSON. Now, then, I feel this way: If social security can be expanded, if the coverage can be expanded, broadly enough, and we can get a basic minimum benefit that will reasonably meet the minimum requirements, then, it seems to me, that should relieve the States of the assistance problem very materially. And by spending less money than they are spending now, they should be able to come in and do the interim job.

Of course, Senator, I think what you are going to point out to me is that they do not have the facilities to rehabilitate all those people: which is true, incidentally.

Senator MYERS. Getting back to the original question, does the National Association of Life Underwriters have a social security committee?

Mr. BENSON. Yes, sir.

Senator MYERS. And you are a member of that committee?

Mr. BENSON. Yes, sir.

Senator MYERS. And was it not that association, jointly with the Life Convention, the National Life Insurance Association of America, that issued a joint statement advocating total and permanent disability under social security?

Mr. BENSON. The only difference, Senator, is that that was not an official statement presented to Members of Congress.

Senator MYERS. Of course not; but I just wondered why your association has changed its mind since 1940. That is all.

Mr. BENSON. I don't know that we have changed our minds. Because when three associations issue a statement which is designed to be helpful to those persons who are considering social security, you see, after all it does not mean that everybody is in complete agreement on everything that is made in the State.

Senator MYERS. Of course, everybody was not. But the Association of Life Underwriters in 1945 issued a statement. And I will quote from it, and then I do not need to pursue it further, because it is getting late. But the three associations, including the National Association of Life Underwriters, of whose social security committee you are a member, issued a statement:

> The onset of premature old age creates a need for benefits to bridge the gap between the time earnings cease and the normal retirement age of 65. Such benefits could be made available by reducing the eligibility age by as much as, say, 10 years, upon submission of proof of total and presumably permanent disability, subject to discontinuance of benefits if recovery before age 65 should take place. Such a program of permanent and total disability benefits after age 55 is recommended.

Now, I am only wondering what happened in the meantime to make your association change its mind.

Mr. BENSON. Well, I can answer that question very forthrightly. I will go back to my text. We believe that introducing total and permanent disability benefits would create broad administrative problems and solve very few. Now, we have done a lot of studying since 1945.

Senator MYERS. But then your association has changed its mind. It has changed its policies.

Mr. BENSON. Yes, I would say so.

Senator MYERS. That is all I wanted to ask.

The CHAIRMAN. All right, Mr. Benson. Have you anything else? We must bring your testimony to a close.

Senator MILLIKIN. Mr. Chairman, I would like to ask Mr. Benson. Who should take up this load? Who should have the responsibility of taking up this load of permanent and total disability?

Mr. BENSON. We believe, Senator, that that is a State problem, because we believe that the nearer you bring the source of money to the benefits to be paid, the more you will get a much better administrative situation.

Senator MILLIKIN. And your theory is that as we increase the insurance benefits the States will have less burdens to meet as far as public assistance is concerned and therefore they will have more money to take care of this?

Mr. BENSON. It would seem to us that way.

I would like to say to Senator Myers that I think this is one of the most difficult problems that we are all coping with, and I do not know that we have the answer. I was delighted when I saw this vocational rehabilitation material. I thought, "maybe here is light on the thing. Maybe here is how we can get somewhere."

Senator MILLIKIN. I would like to ask one more question.

Why should we deduct earnings from persons entitled to insurance benefits?

Mr. BENSON. Why should we do what?

Senator MILLIKIN. Why should we deduct the earnings of a man who continues to work, who has reached the age when he is entitled to benefits under the insurance system?

Mr. BENSON. Well, I don't think we should. Did you notice my development of the different idea about the increment thing, on page 22a?

Senator MILLIKIN. That is what prompted me to say something about it.

Mr. BENSON. Well, I don't want to fall out with the chairman, Senator.

The CHAIRMAN. Well, we will have to conclude, because I do want to cover one other witness. We have been an hour and a half with you, Mr. Benson.

Mr. BENSON. Can I say one thing more, if I can say it in 1 minute?

The CHAIRMAN. Yes.

Mr. BENSON. It has been proposed that the increment should be left in at a half of 1 percent. We believe that that is unwise, because this Congress is proposing additional benefits for which future workers will have to pay. It has been talked about at the rate of eight-tenths of 1 percent of pay roll. It occurs to us that this Congress might act wisely to let future workers determine whether they want to improve the benefits to that extent and assume that tax load. Because there is an implied promise to pay, very definitely.

The CHAIRMAN. That is fully developed in your original statement?

Mr. BENSON. Yes. Now, then, the other thing: We say we would like to encourage people to work past age 65. We think that is healthy. And we think a way to do that is to say to the man, "If you will continue to work, we will improve your benefit a little bit in succeeding years, so that you will get more money." Then he will have an incentive to continue work, which we think is a sound thing.

The CHAIRMAN. We thank you, sir. We have your prepared statement, in which you have developed your ideas fully, and, of course, we will consider it. Thank you very much for your appearance.

(The prepared statement of Mr. Benson follows:)

STATEMENT OF THE NATIONAL ASSOCIATION OF LIFE UNDERWRITERS BY JUDD C. BENSON, PRESIDENT

FOREWORD

The National Association of Life Underwriters is comprised of local associations in all the States of the Union, Alaska and Hawaii. The local associations have as members 51,224[1] licensed agents, general agents, and agency managers. This membership represents the sales staff of the life insurance industry.

[1] Members in good standing December 31, 1949.

There are presently 80,000,000 individual owners of life insurance and annuities in the United States. These policy owners pay premiums in excess of $7,000,000,000 per year to the private life-insurance companies and have thus established and maintain more than $212,000,000,000 of life insurance in force.

Each working day our members discuss with 150,000 to 200,000 individuals the question of their personal economic security and that of their families. In more than 50 percent of such interviews, the subject of social security, as it applies to the individual and his dependents, is the first to be considered. Our membership should, therefore, understand the attitudes and wishes of the American public concerning social security as well as any other organized group.

We are aware of the fact that the present Social Security Act is not fulfilling the needs for which it was designed and it is our desire to assist, if possible, in improving the act. We endorse amendments which will make the act understandable, easily integrated with private insurance plans, as well as practical to the end that it will accomplish the objectives which Congress originally intended. To those objectives we did and we do subscribe.

In our opinion, many of the provisions of H. R. 6000 are not consistent with the original and desirable objectives of the Social Security Act. These amendments we will oppose.

THE ORGANIZATION OF OUR STATEMENT

This statement will proceed as follows:

1. A general definition of our concept of a practical social-security plan.
2. Statement of eight guiding principles for measuring the desirability of proposed amendments.
3. The general concepts in H. R. 6000 which violate the eight guiding principles.
4. The provision of H. R. 6000 which we oppose.
5. The provisions of H. R. 6000 which we favor, together with additional suggestions.
6. A brief statement pertaining to the public assistance provisions of H. R. 6000.
7. Conclusions.

This statement is not presented as "expert testimony." We hope, however, that whatever the statement may lack in brilliant economic theory or "high and low" actuarial estimates, it will make up for by establishing some guideposts which will lead to constructive amendments.

We want a practical system for providing benefits for retired workers and dependent beneficiaries of deceased workers which our children will be glad to pay for when we are the beneficiaries and they are called upon to pay the taxes which will provide our benefits.

SECTION I

GENERAL DEFINITION

The National Association of Life Underwriters favors a system of Federal benefits for retired workers and dependents of deceased workers which will treat all citizens equitably and fairly. We advocate basic minimum benefits which will eliminate the fear of destitution but which at the same time will impose upon those who have been lazy or improvident certain privations as a penalty for their indolence; and which finally reserves for those who, throughout their lifetimes have practiced industry and thrift, the rewards of a very sufficient and, at times, abundant way of life for themselves and their families.

SECTION II

GUIDING PRINCIPLES FOR A SOCIAL SECURITY ACT

I. The title of a congressional act which provides benefits for workers and their surviving dependents should accurately describe the system of benefits to be provided, set forth those who are to receive benefits, and should not create impressions or carry implications which are contrary to the true concepts of the act.

II. The government of a republic should strive to treat each of its citizens equitably and fairly. Therefore, it is highly important that any act which

provides Government benefits should be designed so that the benefits are equally available to all persons who are gainfully employed, wherever such benefits are administratively feasible.

III. The benefit formula of the act should be designed to provide a basic minimum level of benefits. Such a level of benefits fulfills the objects of the original Social Security Act. In all probability such benefits will not impose a pay-roll tax which future workers will be unwilling to pay in order to maintain a labor market which is not unduly competitive due to the continued efforts of millions of marginal workers who are unwillingly forced to remain in the labor market due to the inadequacy of retirement benefits.

IV. A sound system of benefits should impose upon specially designated groups, whether established by geographical, economic, or industrial boundaries, the responsibility for supplying such benefits as those groups may desire above the basic minimum level provided by the Federal Government.

V. The system of benefits should be devised in such a way that—

(*a*) There will remain with the individual worker the responsibility for providing such benefits as he may desire for himself and his own family above the basic minimum level.

(*b*) The strong moral fiber which is created and maintained by reason of the characteristics of personal responsibility and thrift will in nowise be impaired.

(*c*) There will remain with the individual ample opportunity and ability for "private savings" which will supply the flow of private capital so vital to a free-enterprise system.

VI. The rules pertaining to eligibility for benefits should be designed in such a manner that the benefit program will not impose enforced retirement on workers at a specified age and should provide some definite incentive for them to work beyond normal retirement age so long as they enjoy good health and their efforts are economically productive.

VII. A system of benefits to be administered by the Federal Government to provide retirement funds and benefits to dependents of deceased workers should avoid the introduction of new types of benefits which are foreign to these benefits. Such benefits should be particularly avoided when they will involve a new and entirely different administrative technique.

VIII. In view of the fact that payment of future benefits will represent a charge, through the medium of a pay-roll tax, upon the economy of the country at the time the benefits mature, any possible errors in establishing a wage base, a formula for providing benefits and provisions for taxing future workers should be on the conservative rather than the liberal side. Future Congresses can easily correct errors of conservatism but will find it next to impossible to correct errors providing benefits which are too liberal because of the "implied promise to pay" inherent in the act.

SECTION III

CERTAIN CONCEPTS IN H. R. 6000 VIOLATE THE EIGHT GUIDING PRINCIPLES

The greatest hazards which are created by a system of Federal benefits payable to citizens of a republic or certain classes of them lie in—

1. The unavoidable and persistent demands of beneficiaries of the system for more and greater benefits; and,
2. The perfectly normal human desire of the top administrators of a Federal bureau to increase its size, scope of activity, and responsibility and thus its prestige.

Beneficiaries find it easy to "let the Government take care of all our needs." That temptation is resisted only by those of exceptionally strong moral fiber and an understanding of the economic and political consequences of too expansive and too expensive a system.

The concepts in H. R. 6000 violate the eight guiding principles, in our opinion, in the following particulars:

(*a*) Rather than adhering to the concept of a formula which will provide basic minimum benefits, there is a strong tendency toward an attempt to provide "adequate" benefits.

(*b*) Rather than attempting to keep the tax at the lowest possible rate which will provide necessary funds to pay benefits, the base for taxes and the rate are increased so as to produce a very substantial surplus in the trust fund.

(c) In addition to increasing benefits at this time, an increment factor i insisted upon, which will continuously impose a higher tax burden on futur generations of workers.

(d) Entirely new types of benefits are introduced by seeking benefits fo those who are totally and permanently disabled and lump-sum death benefit in all instances whether dependent beneficiaries survive or not.

It is significant to note that H. R. 6000 offers more and larger benefits to eac worker and great care has obviously been used in making sure that the improve system of benefits, rather than the increase in the tax rate, has been strongl emphasized in all publicity which has eminated from Washington.

It is doubtless true that the very small pay-roll tax which employees hav paid has caused most of them to have a distorted or at least an uninformed poin of view relative to the cost which will be imposed upon their children to pa their parents benefits if the system is expanded in a manner suggested by th Social Security Board.

May we respectfully suggest that perhaps the greatest service this Congres can possibly render will be to "reaffirm their belief in the validity of the origina concepts of the Social Security Act" and take the necessary steps to have th act as universally understood as possible by all workers who are or may becom a part of the system.

SECTION IV

PROVISIONS OF H. R. 6000 WHICH WE OPPOSE

1. Any increase in the wage base above $3,000

Raising of the wage base above $3,000 is in violation of guiding principle III, IV, V, and VIII.

A wage base above $3,000 serves only to increase benefits for better paid workers and is entirely unnecessary to establish a basic minimum level o benefits.

The primary weakness to be corrected in our social security system at the pres ent time is the inadequacy of benefits for those workers who earn average wages o less than $3,000 per year. A change in the wage base as has been proposed by the Social Security Board ($4,800) would benefit essentially a group of semi skilled and highly skilled workers. This, in our opinion, is one of the specia groups clearly identified by "industrial boundaries" who are individually, o together with their employer, amply able to provide whatever benefits they may desire above the basic minimum level. There is no necessity for transferring this particular responsibility to the Federal Government.

Such a change might accommodate 15.5 percent of presently included workers whose earnings average $3,000 to $3,600 per year, 13 percent of included workers whose incomes average $3,600 to $4,800 per year, and 8.4 percent whose incomes exceed $4,800.[2] The change would be of negligible consequence benefit wise to the group who earn $3,000 to $3,600 and certainly is in nowise necessary for the 13 percent who earn more than $300 per month or those who earn $4,800 per year.

May we emphasize, out of our experience, that there is a very important psychological factor to be considered in connection with changing the wage base The present law clearly implies that those workers who earn more than $3,000 per year shall be responsible for any desired benefits above those provided by the Federal Government. In the event this Congress reaffirms this principle we believe such action will go far in impressing upon the average worker that he does have this responsibility and he will proceed to do something about it On the contrary a change in the wage base by this Congress will create in his mind the general impression that future Congresses will likewise change the wage base to accommodate his situation and he will be encouraged to neglect his personal responsibility in this matter.

It may be argued that it is desirable to increase the wage base due to the fact that taxes levied on the increase over $3,000 will more than offset the benefits which will be paid by reason of such increase. If this is true, we suggest that the argument is lacking in validity and only opens up an invitation for those persons who are in that particular wage category to insist that some

---

[2] Social Security Board charts submitted to Senate Finance Committee, hearings H. R 6000.

future Congress improve their particular benefits, arising from wages earned above $3,000, in order to correct the "inequity" in the relationship between benefits and taxes paid. This would be the next excuse for substantially increasing the benefits.

2. *The inclusion of any lump-sum death benefit*

This is in violation of guiding principles III and VII.

Our association is greatly concerned over the fact that H. R. 6000 contemplates paying lump-sum death benefits equal to three times a worker's primary benefit, whether there are dependent beneficiaries to receive income or not. The present law pays such benefits only in the event there are no dependents entitled to receive such income.

We insist that the inclusion of any death benefit whatever, under a system of Federal benefits, is contrary to the concepts of the act and wholly unnecessary. We again direct your attention to the fact that 80,000,000 citizens of the United States are covered by private insurance for a total amount of more than $212,000,000,000. You will doubtless agree that this 80,000,000 will include a great majority of the 60,000,000 persons who comprise the working population and more particularly the 45 to 50 million persons now covered, or who are likely to be covered, under the proposed amendments in H. R. 6000. The payment of such a death benefit is a direct departure from the purposes of the social security program, which is to provide retirement funds and to alleviate the distress of those persons who, by reason of the death of the worker, do not have a basic minimum level of income. We feel sure that it was not the original purpose, and should not be, of such a program to provide what amounts to a system of "funeral benefits."

Perhaps the first results of such a program would be to increase the cost of funerals of deceased workers in lower income groups. This would impose a hardship particularly on lower income groups who are not eligible for benefits under the act.

This, we feel, represents a direct invasion by the Federal Government into a field which is already well covered by private enterprise and we, therefore, respectfully suggest that all provisions providing for lump sum death benefits should be stricken from the act.

Once the principle providing for the universal payment of lump sum death benefits has been established, future Congresses will be called upon to consider the "inadequacy" of such benefits and it will readily be pointed out that it is quite as important to provide all workers with a fund, payable to their estate, which will be sufficient to pay not only funeral benefits but "any and all expenses connected with their last illness," thus transferring that particular responsibility to the Federal Government also.

3. *Any inclusion for total and permanent disability benefits*

This provision violates guiding principles III and VII.

This amendment introduces a completely new concept into the act which we believe is fundamentally unsound for the following reasons:

(*a*) It will create expensive and extensive administrative problems and procedures and will solve very few of the problems of disabled workers.

(*b*) This law will not be more than 1 or 2 years old until its advocates will be back asking the very pertinent question "So long as Congress has agreed to take care of those persons who are disabled for 6 months or longer, what good reason prevails to indicate that the Federal Government should not take care of those persons who are disabled for 1 week, 1 month, or 3 months?"

The Social Security Administration made such a request to the House Ways and Means Committee in 1949, and we presume it is only temporarily dropped from the list of "asks" because it was conspicuously unpopular in 1949.

(*c*) A system of primary benefits as provided in H. R. 6000 would be neither adequate nor appropriate to care for workers who are actually totally and permanently disabled.

Disabled workers would fall into categories ranging from those who require hospitalization, constant medical care and nursing, to those who are in need of a rehabilitation program in order to equip them to properly reenter the labor market. The system of primary benefits would be entirely inadequate to cover the first situation and would be an inappropriate type of benefit to fit the second.

Proper treatment for totally and permanently disabled persons involves the following procedures:

(1) A correct diagnosis of the illness or impairment involved.

(2) A prescribed procedure for correct treatment to reinstate the worker in the labor market at the earliest possible date.

(3) Supervision to make certain that the prescribed treatment is followed meticulously.

(4) Proper administrative procedures for rehabilitation, including very close and realistic supervision of such cases to prevent malingering.

These procedures, we believe, cannot be most satisfactorily accomplished by the Federal Government. In the event such services are provided at the Federal level, they will be subject to many abuses.

Such a system of benefits disturbs the original concepts of the Social Security Act and will create a greatly expanded bureaucracy which would become, at best a "political tool of whatever administration happened to be in power". We suggest:

1. That such assistance as may be required for those who are totally and permanently disabled and such rehabilitation programs as may be necessary to reestablish the disabled worker in the labor market should be a responsibility of State and local Governments. If Congress is willing to extend the scope of coverage of the Social Security Act and improve the benefits, the State and local Governments should be substantially relieved in the public-assistance field. It is doubtless true that many of the cases of total and permanent disability which are presently in existence are already being cared for on some basis through the public-assistance program.

Therefore, it cannot be said that it will unduly increase the load on the State and local governments, but as their load is decreased by improving the Social Security Act the State and local governments should be able to very adequately care for their disabled citizens who are not covered by private plans.

The necessary requirements for each such disabled person, varying as they do, can be appraised and provided for much more realistically at the local rather than the Federal level. There would be little or no alertness on the part of the local public to attempt to prevent abuses of the system and also to prevent malingering if the general attitude of "why worry—the Government is paying for it anyway" should prevail. We believe, on the other hand, the local public will be very alert to abuses and malingering if it is "their specific tax money which is being spent." This would be equally true whether benefits are provided by general taxation or some form of tax applicable to the specific class of workers who may receive benefits.

4. The inclusion of any increment factor whatever in determining the benefit for retired workers or surviving dependents

This violates guiding principles III, IV, V, and VIII.

The effect of any increment factor in a benefit formula under a Federal system of benefits is to provide increased benefits for those with longer wage credits. Such a program would seem to be based on the theory that each worker should receive benefits directly related to his total contributions. The benefit formula proposed in H. R. 6000, and more specifically in our recommendations, make it obvious that such is not the case. If this were the case, 1 percentage would be applied to the total wage base in determining the primary benefit instead of applying a large percentage to the first bracket of average monthly income and a smaller percentage to the remainder of the average monthly income. Such an approach is contrary to the true concept of the social-security program.

Under a Federal system of benefits which forthrightly recognizes that benefits arise from a tax upon the wages of the workers who are included in order to provide benefits for workers who have retired or beneficiaries of deceased workers, it is entirely unnecessary and inappropriate to project the equity theory into such a system. To do so, only confuses the basic theory and fails to take into account the most important point of all: namely, that workers who have presently attained age 65 and desire to retire have as great a need for a basic minimum benefit as those who will retire 10, 20, or 40 years hence. So long as it is commonly agreed that the financing of the social-security system need not be and should not be on an actuarially sound basis, any attempt to impose the equity theory only adds confusion.

The second most important point is that, by introducing the increment into the formula, the present Congress is presuming to impose an increased benefit load, through increased pay-roll taxes, upon future generations of workers who may be entirely unwilling to assume such responsibility. Frankly, if younger workers were thoroughly conscious of the increased tax burden which will be imposed, we doubt seriously if they would favor such a system.

SECTION V

THE PROVISIONS OF H. R. 6000 WHICH WE FAVOR, TOGETHER WITH ADDITIONAL SUGGESTIONS

Based upon the fundamental guiding principles which we have offered for your consideration, the National Association of Life Underwriters favors the following amendments to the Social Security Act:

(1) A change in the title of H. R. 6000 as follows: "The Federal Retirement and Dependents Benefit Act of 1950."

This suggestion is consistent with our first fundamental guiding principle.

The Congress acted very wisely when the Pure Food and Drugs Act was enacted. Among other things, that act provided that all articles of food and drugs should be clearly and correctly labeled in order that the public will in no wise be deceived. We hold that it is equally important that the public should in no wise be deceived in the matter of social security. We suggest that the word "retirement" is more significant than the words "old age" due to the fact that the act, in reality, contemplates that workers will retire before benefits are paid and the mere attainment of so-called old age in no wise assures a worker of benefits. We also believe that the words "dependents' benefits" more accurately describes the class of beneficiaries who will actually receive benefits than does the rather all-inclusive word "survivors," as the term is generally understood.

The general characteristics of the social-security system are not such as to indicate that the word "insurance" should be included in the title. The benefits provided are not insurance in the true concept of the word, nor as the term "insurance" has come to be understood by the American public. We offer the following arguments in favor of this statement:

(1) There is no contractual agreement under social security which guarantees that benefits in a stipulated amount will be paid in consideration of specific premiums. Quite the contrary is true. Congress will doubtless change the schedule of benefits from time to time. During the past 10 years Congress has acted to change the schedule of pay-roll taxes which was provided in the original act. In view of the fact that the person who is covered does not have a guaranteed benefit, nor is he protected by a contractual arrangement whereby his taxes are fixed beyond the power of Congress to change the rate, it is unreasonable to attach the term "insurance" to such a system. It is well agreed that there cannot be and will not be a fixed relationship between the taxes paid by each worker and his benefits at retirement or for his dependent beneficiaries.

In its true sense, insurance contemplates a correct relationship between premiums paid, the age of the insured, and the maturity of the value of the contract at death or some predetermined age. This is not true in H. R. 6000 and should not be true in any scheme of Federal benefits.

In a great majority of life-insurance contracts the policyholder builds certain equities in the contract which are available to him to do with as he pleases. Such is not the case in the Federal system of benefits, the taxpayer being limited to the strict provisions of the law.

It is our contention that a system of benefits which will most adequately serve the needs of the greatest number of workers and their dependent beneficiaries will eliminate entirely the theory of "equities" and will forthrightly recognize and state to the public that each year's benefits represent a charge upon the general economy of the same period in which the benefits are paid, with a nominal accumulation of reserves for contingency purposes only.

It will, of course, be contended by the strong proponents of H. R. 6000 that it is appropriate to label the social-security system as "insurance" due to the fact that it "distributes the risk among surviving workers in the system for losses which fall on dependents of deceased workers by reason of the loss of the income of the deceased worker." We readily grant that this is one characteristic which is somewhat similar to insurance, but we in no wise agree that it is correct to label the whole system "insurance" when all of the other characteristics common to the system are in no wise the same nor even similar to the characteristics of the American life-insurance system.

(2) An extension of benefits under H. R. 6000 to include all who are gainfully employed, wherever such coverage is administratively feasible.

This recommendation is consistent with our general definition and is designed to implement fundamental guiding principle II.

Our association wishes to endorse and respectfully ask favorable consideration from this committee in retaining unaltered section 210 (k) (3) (B), H. R. 6000, pages 48–49.

The subsection provides as follows: "(3) Any individual (other than an individual who is an employee under paragraph (1) or (2) of this subsection) who performs service for remuneration for any person * * *

"(*b*) As a full-time life-insurance salesman * * *."

May we remind the committee that Mr. M. Albert Linton, testifying on behalf of the Life Insurance Association of America and the American Life Convention before this committee on February 10, 1950, offered a similar endorsement of this subsection.

Enactment of this subsection will enable our members to be included for benefits with proper payment of taxes. Such inclusion we have sought for many years.

It has been argued that it is unwise to impose a social-security system involving pay-roll taxes on groups of persons a majority of whom do not wish to be included. It is contended that they receive benefits they do not seek and have imposed upon them taxes which they do not wish to pay. We believe this reasoning is not valid, due to the fact that the same group of citizens will ultimately contribute a certain percentage of their number to the relief rolls for some form of public assistance. Funds to meet their assistance requirements must be raised by general taxation and, therefore, the worker who is included in a system of Federal benefits must contribute through a general tax levy to provide the funds for public assistance and, at the same time, assume a pay-roll tax which is designed to be adequate to provide the benefits for those who are in his benefit group. This, we believe, is the strongest argument for extended coverage.

There seems to be general agreement among actuaries that the ratio of workers age 20 to 64, inclusive, to persons past age 65 is constantly diminishing. This indicates the probability of a heavier tax burden on workers in the future to provide benefits for persons in retirement. As the system of Federal benefits matures, with a higher percentage of retired persons receiving benefits, we believe that the demands "to be included" from groups who are not included presently will increase very sharply. Should a future Congress conclude to provide such benefits, many citizens would receive substantial benefits, without having paid an appropriate pay-roll tax to assume their share of the burden in caring for retired workers during the time they were earning wages.

Some have suggested that there is a top limit beyond which pay-roll taxes should not go; and, after that limit is reached, additional funds to provide benefits will have to be contributed by an appropriation from general revenues. At that point it will be extremely difficult to deny benefits to any group whether they have paid taxes or not.

To summarize, if social security is good, then each citizen should benefit from it; and, if it is bad, we feel that each citizen should be in on the big mistake.

(3) Any benefit formula which will provide a primary benefit equal to 60 percent of the first $50 of average monthly wages, and 15 percent of the next $200 of average monthly wages: This suggestion implements guiding principles II, III, IV, and V.

It will be noted that this formula provides benefits which are somewhat less but similar to those recommended in H. R. 6000. It has the advantage, however, of providing larger minimum benefits for workers in the very low-income groups, and we believe it is important to establish a formula which favors this group.

A formula which provides benefits equal to 15 percent of average wages above the first bracket as opposed to 10 percent of such wages will create a system of benefits which is much more realistic for better-paid workers and will tend to relieve future Congresses from coping with the problem created by the complaints of better-paid workers who will insist that there is a very poor relationship and one adversed to them when the 10-percent factor is used in calculating benefits. This problem will be greatly accentuated as the pay-roll taxes increase, and this would be a good way and a good time to avoid that difficulty.

(4) We favor liberal conditions of eligibility for benefits.

We recommend that conditions of eligibility for retirement and dependents' benefits must be sufficiently liberal to include as beneficiaries as large a percentage of workers who pay taxes and their dependent beneficiaries as is possible.

(5) We recommend a work clause which will enable a worker qualified for benefits at age 65 to earn an amount equal to $50 per month without any reduction in his social-security retirement benefits, as is currently provided in H. R.

6000. We also favor removal of the work clause at age 70 rather than age 75.

These suggestions are made to implement our fundamental guiding principles II, III, IV, VI, and VIII.

We believe that no particular good is to be accomplished by insisting upon a work clause continuing to age 75. Whatever merit there may be in the act being designed to eliminate "marginal workers" from the labor market would be nullified unless the work clause is entirely removed at age 70.

Our association would also like to suggest that a work clause be included which would enable a widow, who is othewise eligible for dependents' benefits, to earn $50 per month without impairing her widow's benefits. Whatever amounts she might earn above $50 per month in average wages should act as a reduction against her social-security benefits in the same amount by which such wages exceed $50 per month.

(6) NOTE.—As this statement is being prepared, the Board of Trustees of the National Association of Life Underwriters has under consideration the following recommendation. If included in the statement, it will carry our endorsement.

We favor a revision in the benefit formula which will provide an improvement in benefits for workers who defer benefits past age 65, equal to 3 to 5 percent of the primary benefit at age 65 for each year of deferment; the deferment not to extend past age 70. (Wife's benefit not to be improved.)

While the benefit formula in the present Social Security Act has been inadequate to allow workers to retire, even on a basic minimum level of benefits, it is extremely doubtful whether more than 50 percent of our workers desire to retire at age 65, particularly if they are in good health. The present system has the general effect of "enforced retirement" if a worker is to receive benefits. While we appreciate the fact that it is difficult to devise an entirely satisfactory plan which will allow workers to "ease up" rather than retire, we suggest that the act should encourage workers to continue past age 65. Hence, our suggestion of the change in the formula.

The actuaries of the Social Security Department are the only ones who have the basic data upon which to determine the cost of such a change in the formula. We presume, however, that it would not impose as great a cost as the 1 percent increment factor which has been proposed by the Social Security Board and would serve a much better and more practical purpose for workers who are covered.

If all workers were to retire at age 65 there would be, hypothetically, little extra charge on the trust fund if all workers deferred retirement to age 70 and by so doing, improved their benefits by 20 percent (4 percent improvement per year). The question to be determined is the average age at which workers will retire with the improved benefit formula, and the number who would probably defer retirement if their benefits were substantially improved. It is our opinion that a 3 percent annual improvement in the benefits would not place an undue burden on the trust fund and that 5 percent is probably too great an improvement. Actuarial study should determine the answer to the problem—we suggest the fundamental principle.

In this same connection, the position of the worker past 65 would be substantially improved if all pay-roll taxes for him and his employer could be eliminated. It would add to his incentive to continue working and to the incentive of his employer to keep him on the job. This poses another actuarial question, the answer to which might prove interesting to the committee.

SECTION VI

PUBLIC ASSISTANCE

Our committee on social security has not undertaken to make an exhaustive study of the very involved public-assistance question. The committee has, however, considered the statements which were presented to the Committee on Ways and Means in 1949, the statements which have been presented to this committee, and the comments of well-informed persons who have studied the question at length.

As a result of this admittedly limited investigation we are led to make the following observations pertaining to the so-called public-assistance sections of H. R. 6000.

I. Whereas improvements in the Federal system for providing benefits at retirement and benefits for dependents of deceased workers are presumed to progressively eliminate the necessity for the Federal Government to participate in

public-assistance programs, we are at a complete loss to understand where th suggested amendments move in any direction other than directly opposite fron this principle. There certainly is no merit whatever in improving the retiremen and dependents' benefits under the Federal system and, at the same time, impos ing a greater load on the Federal Government for public assistance, which shoul fall within the province of the State and local governments.

II. As the public-assistance section of the act is designed, it represents an ope invitation, in fact an urge, for the welfare departments of the various States t use all their ingenuity to get the greatest number of people on their relief rolls a quickly as possible. As a matter of fact, it would appear to be a law which woul almost impose upon the wealthier States the obligation to violate the true con cepts of public assistance in order to protect the financial position of their own State against the tremendous demands for public assistance by States whos economic situation is not so fortunate. There surely can be no merit in a law which encourages this type of procedure.

III. The features of the public-assistance sections which are most dangerou and violate forthrightly our concept of "States' rights" are those which provid very substantial Federal funds for assistance in the various States but only pro vided the State welfare agencies comply with rules and regulations which ar set down by some administrative head at the Federal level. This at once put every State government on their knees before a Federal Bureau because any failure to comply with the wishes of the Federal Administrator would brin down on the head of the State welfare director the wrath of all groups wh were clamoring for public assistance and wanting to get their hands on "th Federal funds."

Business interests of States which are less fortunate, economically, would als be insisting that the State welfare director comply immediately because Federa funds flowing into the State for public assistance will substantially improve th general purchasing power and thus the business conditions in States which ar heavy benefactors under the Federal assistance program. The committee surely has ample evidence before it, which is indicative of the vast difference in tech niques which prevails in determining those persons who may be "needy" in on State as opposed to another, and thus eligible for public assistance.

IV. We are going to be so bold as to suggest that unless a public-assistance sec tion of the act can be drafted which will correct the obvious objections to H. R 6000, the Congress would do much better to omit that section of the act entirely until a better approach to the problem can be devised. This is based upon the fundamental theory that no improvements in the law will be much better than adding objectionable features and magnify the existing ones.

SECTION VII

CONCLUSION

In conclusion, we would like to reiterate three suggestions which are embodied in this statement.

1. Congress should adhere to the original concept of the Social Securtiy Act and devote its attention primarily to improving the scope and benefits of the act so that the original objectives can be attained.

2. Some set of guiding principles should be agreed upon which will act as guideposts for lawmakers, administrators, as well as workers and their dependent beneficiaries.

3. In view of the fact that no man or group of men are able to predict, with any degree of certainty, the full implications of a greatly expanded system of Federal benefits, we again suggest that any percentage of error should be on the conservative rather than the liberal side. We repeat, future Congresses will have little difficulty in correcting errors of conservatism and will find it almost impossible to correct errors which promise benefits beyond the willingness or ability of our children to pay them.

It is always better to promise little and perform more than it is to promise much and fail to meet the promise.

The CHAIRMAN. Mr. Guernsey? The next witness is Mr. S. Kendrick Guernsey, executive vice president of the Gulf Life Insurance Co.

Mr. Guernsey, you have with you Mr. Turpin. Mr. Turpin is from Macon, Ga., and he is here in connection with your statement on this matter?

STATEMENTS OF S. KENDRICK GUERNSEY, EXECUTIVE VICE PRESIDENT, GULF LIFE INSURANCE CO., JACKSONVILLE, FLA., SPEAKING ON BEHALF OF LIFE INSURERS CONFERENCE, AND WILLIAM TURPIN, GENERAL COUNSEL, BANKERS LIFE AND HEALTH, MACON, GA.

Mr. GUERNSEY. That is correct.

The CHAIRMAN. I am sorry that due to a serious accident to his mother, Senator Byrd is not able to be present this morning.

Mr. Guernsey, will you identify yourself for the record?

Mr. GUERNSEY. My name, gentlemen, is S. Kendrick Guernsey. I am vice president of the Gulf Life Insurance Co., Jacksonville, Fla., and I very deeply appreciate this opportunity to appear before you this morning.

Realizing that you are quite far behind in your schedule, I shall try to be brief, and perhaps will speak a little more rapidly than I should like.

The CHAIRMAN. You may take your time, Mr. Guernsey. Try, if you will, to finish your testimony before lunch time, however.

Mr. GUERNSEY. Thank you.

This statement is respectfully submitted on behalf of the Life Insurers Conference, an organization of which my company is a member, together with 80 other companies. These companies, principally located in the south and southeast portion of the United States, are generally referred to as the weekly premium life insurance companies. Including companies outside of this area, our total membership is domiciled in 22 States, providing employment to over 55,000 home office and field personnel. As you no doubt know, companies of this type write life insurance in small amounts, averaging about $250 per policy—although many of these policies are in even smaller amounts. The premiums are paid usually on a weekly basis and are collected by agents who call at the home of the policyowner. Most of these companies had their beginning during the first half of this century and are the small and medium-sized companies in the life-insurance industry. For convenience, they might be called the small businessmen in the life-insurance field. The policies which these companies write are attractive to the large masses of our lower-income employees and workers who by nature or habit do not set aside sufficient moneys to pay their life-insurance premiums on a semiannual or annual basis. This means of distribution has rendered a great service to that segment of the American people who otherwise would not have found such protection available.

We feel it essential that you consider this background in conjunction with the way in which H. R. 6000 would deal with these companies and their policyowners, for it is not exaggeration to say that the continuance—the very life—of many of these smaller companies may be dependent upon your complete understanding of all effects of this proposed legislation.

We find it much more desirable to appear before you favoring and endorsing a program rather than opposing one. Therefore, let me say at the outset that since social security as we know it today has been accepted in principle by the people of the United States it seems reasonable to endorse a moderate increase in benefits to make the sys-

tem more realistic, provided, always, that the people can and will pa for it. We naturally assume that such proposed revisions would co template that the plan be maintained on a self-supporting basis. I planning such changes it would seem vital to the committee's deliber tions that you have available the services of an independent actuar who is in a position to raise issues as well as answer technical question

In our opinion, the proposed new types of benefits are directly co trary to the established purposes of the Social Security Act. Hov ever, believing that other segments of the life-insurance business a better qualified to deal with most of those proposals, we are electi to confine our testimony to one of these features of the proposed bi which, if enacted, would immediately and drastically affect our bus ness existence for reasons which I will state. I refer to the funer or so-called lump-sum death benefit.

At present the act provides for a lump-sum death benefit to be pa in the event an insured worker dies without leaving a survivor imm diately eligible for benefits. We understand that this provision w adopted, not because of an existing social problem but as a carry-ov of an original money-back principle. H. R. 6000, however, provides lump-sum death benefit for all insured workers, whether or not oth benefits have been paid. The amount of this lump-sum payme would be equal to three times the insured worker's primary month benefit. Here again there appears to be no justification in a socia insurance program for the continuation of a guaranteed payment n intended to meet a social need.

Latest figures indicate that approximately 80,000,000 persons in t United States own life-insurance policies. As has been previous stated in testimony, a large segment of those in covered employme today have made provision for their funeral expenses through owne ship of some kind of life insurance. Of this number of persons, tw out of every three, or over 55,000,000, pay life-insurance premiums the weekly basis and on policies in smaller amounts. Let me emph size that the life-insurance business has done one of its most outstan ing jobs in the distribution of voluntary protection to meet the nee of the lower-income workers and employees—the same lump-sum pa ments on death which this section of the bill proposes to duplicate take over on the assumption that a need exists. The amount of su weekly premium life insurance in force in the United States is ov $32,000,000,000.

Senator KERR. Is that a part of the $207,000,000,000 referred earlier in the day?

Mr. GUERNSEY. Yes, Senator.

Now it may be possible that a frugal employee, for example, ow ing a $5,000 life-insurance policy would not allow a funeral bene in the neighborhood of $150 to affect his individually purchased in- ance. On the other hand, there is little doubt that the low-income e ployee, owning insurance in small amounts, and, through force circumstance, watching every penny, would discontinue the private purchased small insurance policy, especially when he realizes that is being taxed for similar Government lump-sum death payment And inevitably the removal of incentive to private thrift would me that oncoming generations would increasingly rely on the Governme rather than their own efforts to take care of the inevitable expense death.

In most instances, the small life insurance policy has taught the lower income employee and his family their first, and probably only, continuing example of thrift. If you remove it, you will weaken and perhaps destroy his one financial demonstration that he believes in private initiative and dependence on himself.

Rather than deal entirely with national figures and averages, it would seem of equal importance and interest to introduce an example and to show just how such a proposal would affect our business and policy owners in a specific State. We have chosen for this illustration the State of Virginia because of its stable economy—being neither preponderantly industrial, agricultural, nor to any large degree affected by tourist trade, though my own State of Florida and others we have considered, would show comparable figures. The population of the State of Virginia is approximately 3,000,000 persons. There are in force in that State 3,372,000 weekly premium life insurance policies, representing over $814,000,000 of life insurance. Simply stated, there is already in force in Virginia more than one policy for each inhabitant of that State.

Senator KERR. Could you tell us how many inhabitants of that State do not have such a policy?

Mr. GUERNSEY. It would have to be a guess.

Senator KERR. Would you make a guess?

Mr. GUERNSEY. Senator, I fear a guess would not be of great value to you. I would have no idea.

Senator KERR. You do know that there are quite a number who do not have any such policy?

Mr. GUERNSEY. Admittedly.

Senator KERR. Would you say that you could safely estimate that half of them do not have?

Mr. GUERNSEY. I would not consider any figure I might give you a safe one, because it would be a guess.

The conspicuous absence of a social problem to be solved in this instance points to the unnecessary inclusion of the proposed lump-sum death benefit in this bill.

If this effort of free enterprise is not recognized and the lump-sum death benefit is retained in H. R. 6000, then the $814,000,000 of voluntarily purchased life insurance in this one State alone would be put in jeopardy and, if not immediately, would, in our opinion, through Government competition, begin to disappear.

Following this same example further, it is of equal important to show how these small privately purchased policies pay benefits. Last year in the State of Virginia there was paid out on 24,369 weekly premium life policies death benefits amounting to $4,334,000. In addition to this insurance in force and benefits paid, there are millions of dollars of life insurance in force in larger amounts under ordinary and group life insurance contracts. In fact, the total amount of life insurance in force in that State is in excess of $3,000,000,000.

Senator MILLIKIN. Are we talking here about insurance to take care of funeral expenses? Is that what we are really talking about?

Mr. GUERNSEY. Exactly.

This is the story of only one State. A similar outstanding job is being done elsewhere in the Nation. A pauper's burial, known frequently a decade or two ago, is now almost unheard of.

Senator MILLIKIN. Do we have any statistics on that?

Mr. GUERNSEY. No, sir; nothing except our observation.

We do not presume to speak for all weekly premium life insuran nor the larger companies writing such life insurance which do n belong to this association. Nonetheless, it must be apparent that the business would be affected in proportion to ours. There is also reas to believe that were this proposal enacted, it would not be long befo appeals would be made to further increase these benefits to compe sate for increased costs of funerals, thereby putting in jeopardy li insurance in even higher amounts.

We are sincerely convinced that this public need is not only bei met, but that every year a better job is being done. We feel that t public has demonstrated its wishes on this point by its large sca voluntary purchase of life insurance. We therefore see no realist purpose for the inclusion of a lump-sum death benefit in H. R. 60 and strongly urge that the provision be stricken from the bill.

It is contrary to the basic principles upon which the economy of th great country is founded for the Government to enter into a fie where private enterprise has made such a contribution and for whi it has so ably demonstrated its ability to adequately provide.

Gentlemen of the committee, I find it difficult to speak without em tion on this subject for in this plan I see so clearly a perfect examp of the type of proposal which has brought so many nations of t world today to that position where they are dependent upon the Unit States of America, a free enterprise nation, for the essentials of li which their socialistic systems cannot provide.

Two years ago it was my privilege to visit 20 nations, where I soug and found the opportunity to talk to men and women of all statio in life—porters in hotels, waiters, drivers of busses, small merchant business and professional men in the larger fields, American consu and ambassadors, and governing officials of the countries in which was a visitor, including mayors, governors, prime ministers, and pres dents. I sought to learn without fear or favor what they thought the governing policies of their country. Particularly did I seek th information in those countries where the so-called welfare state ha made the greatest inroads, and I am thinking primarily of Austral and New Zealand, whose peoples in most respects are more like o own than those of other nations. With the exception of those who we forming or administering the socialistic policies of those nations, found dissatisfaction, disillusionment, and in many places, discourag ment. Many said to me, "A few years ago we said it can't happen her but it did. The symptoms, the trends are identical in your countr today. If you would keep your country what it is, you will go bac to America and use your utmost effort to preserve and protect tho things which have made your country great." That is why I am he today.

You are aware that in recent weeks the citizens of both Austral and New Zealand have rebelled against the impractical theories dreamers and the wastefulness of bureaucratic administrations a replaced them with a government wherein there is a hope of equali and opportunity for all. To be sure, I am here to try to protect t interests of my own company and a large segment of our policy owne I am here to fight for the life-insurance business as a whole, but abo all, I am here in a conscientious and hopeful effort to try to do n

part to preserve those things which have made by country the admiration of all others, except those who have envy or malice in their hearts.

We sincerely believe that the decision which is made in connection with H. R. 6000 will determine in large measure the extent to which individual responsibility and private initiative are subordinated in this country to Government control—or—call it what you will. We do know that the prosperity of this country under its present system should dictate a far wiser plan for its future than that conceived in this section of the bill. The proper action is to strike the lump-sum death benefit from this act.

The CHAIRMAN. Mr. Guernsey, we appreciate your appearance, sir.

Are there questions?

Senator MYERS. I just wondered whether this gentleman appeared when the original social security bill was under consideration, 10 or more years ago.

Mr. GUERNSEY. No, Senator, I did not.

Senator MILLIKIN. I would like to ask Mr. Cohen, Mr. Chairman, whether he has any statistics on pauper burial.

Mr. COHEN (Wilbur J. Cohen, technical adviser to the Commissioner for Social Security). We have some statistics, Senator Millikin, from the public-assistance figures, as to those burials of people on the public-assistance rolls, with which we can supply you.

The CHAIRMAN. Anything that bears on this question, Mr. Cohen.

USE OF PUBLIC FUNDS FOR BURIAL OF NEEDY PERSONS

Public assistance agencies in the United States generally have policies that make it possible to provide for burial of needy persons. Some assistance agencies make payments directly to the undertaker or others for burial of an assistance recipient. It is common practice also to permit recipients of assistance to maintain cash or liquid asset reserves to meet the cost of such contingencies as last illness and burial. In many States, moreover, budgetary standards provide for including a sum for insurance premiums in determining the amount of the money payment to the recipient. Even if the cost of insurance premiums is not specifically taken into account in determining how much assistance a needy person is to receive, the recipient is free to use his money for this purpose if he wishes.

On the basis of reports received from 37 States, it is estimated that in the Nation in the fiscal year 1949, payments for burial from assistance funds, including funds appropriated for old-age assistance, aid to dependent children, aid to the blind, general assistance, and burial assistance, were about $5,500,000.

Although there is some provision for meeting burial costs under each type of assistance, the problem is most acute in the program of old-age assistance. The table attached summarizes the provisions for burial in the State plans for old-age assistance.

As of January 1950, 28 of the 51 jurisdictions making payments to the needy aged had some plan for making payments for burial either to the undertaker directly or to others. Such payments are not subject to Federal participation. In some States amounts spent for burial of recipients are recovered from their estates wherever possible. In other States the recovery provision is not enforceable during the lifetime of a spouse or other dependent. All of the 28 States making payments for funeral expenses also permit recipients to maintain cash or liquid assets reserves which may, in some instances, include the cash surrender or loan value of insurance policies and which can be used to meet burial expenses or other contingencies such as the expense of last illness. In 23 States the maximum amount of the reserve that may be held is specified in the State plan; in the other States the amount is not indicated.

All of the 23 States that do not make vendor payments for burial permit the recipient to maintain a reserve which may sometimes include the cash-surrender or loan value of insurance policies, and may in all probability be used for burial.

Thirty-three of the fifty-one State jurisdictions have provisions in their old-age assistance plans for including an amount for insurance premiums in de-

termining the size of the recipient's cash assistance payment. Seven Sta specify the amount to be allowed for this purpose and nine States, the maxim amount. In other States the amount included is probably the amount actu paid by the recipient, within specified limits.

Although the plans of 18 States do not specifically include an amount insurance in determining the recipient's needs, the item may be covered by otl budgeted items such as "Miscellaneous expense." Among the 18 States with specific provision for budgeting the cost of insurance payments are seven w average assistance payments above the national average. It cannot be conclu that in the absence of a specific provision for budgeting this item recipients unable to pay insurance premiums out of their current income.

[1] Within specified limits.

The CHAIRMAN. In connection with that question also, Mr. Cohen, let me make the request that you supply us, if you have it, any data which would indicate how many people have been retired under the Assistance Act at 65 that were originally in the self-employed class or were wage earners, salary earners.

Mr. COHEN. Yes.

In reply to the question that you raise now and Senator Millikin raised yesterday, we are making a study which will indicate what the different types of employment were of people who are on the assistance rolls now; so that we will have the information as to whether they were farmers or self-employed or whether they were covered under the insurance system.

The CHAIRMAN. We will appreciate that information.

Are there any further questions?

Senator KERR. I would like to ask just one question, Mr. Chairman.

The CHAIRMAN. Yes, Senator.

Senator KERR. On page 5 of your statement, Mr. Guernsey, you say that—

> Last year in the State of Virginia there was paid out on 24,369 weekly premium life policies death benefits amounting to $4,334,000.

If you could give us the total number of deaths in the State of Virginia that year, then we would know the percentage of those dying who had these policies, would we not?

Mr. GUERNSEY. You are correct. I do not have that figure.

The CHAIRMAN. Could you supply that, Mr. Guernsey?

Mr. GUERNSEY. I would be happy to do that.

The CHAIRMAN. I suppose from some of the insurance companies, their records, you might get it.

Senator MYERS. I might add, Mr. Chairman, that we could then view the statement in the proper perspective; namely, that "the conspicuous absence of a social problem to be solved in this instance points to the unnecessary inclusion of the proposed lump-sum death benefit in this bill." There may not be a social problem, but merely because there were policies in effect for every one person in Virginia does not indicate that every person had a policy. They may have had a number of policies. And Senator Kerr's question was as to what percentage of the population was covered by insurance.

Mr. GUERNSEY. I think your point is very well taken.

Senator MYERS. Then, of course, we can much better determine whether a social problem exists.

Senator MILLIKIN. I suggest, Mr. Chairman, in addition to the policy, there are many people who do not have policies who are financially able to provide for funerals. So there is still an open gap there as to whether there is a social problem.

The CHAIRMAN. Mr. Turpin, you are experienced in this field, as I happen to know. Could you give us any idea about how many policies of this character are held by the citizens of Georgia, which has a population almost equal to the Virginia population?

Mr. TURPIN. I can give you figures from my own company, which is a Georgia company, and which has been in the industrial insurance business in Georgia for 40 years, and with which operations I intimately am personally familiar.

The CHAIRMAN. Yes, sir.

Mr. TURPIN. We have over 200,000 policies in force in the State of Georgia, on over 200,000 different persons, of the industrial type, which, under Georgia law, is a policy with a death benefit not exceeding $500, and in which the premiums are paid either weekly or monthly. And coming to the specific question which the Senator asked with respect to deaths and funerals, let me mention the case of Bibb County, from which I come, and which Senator George knows intimately. It contains Macon, a—for us—large industrial city, with 40 percent Negro population. When I was a boy, which was longer ago than I like to think, the city of Macon maintained a potter's field. Macon has no potter's field today, and so far as I have been able to learn has not had a single pauper burial, white or colored, in the last 15 years. And the industrial insurance companies, of which mine is one of the largest in that field, though one of the very small companies, has buried those people. We are taking care of that need, sir, certainly in the South. I am not prepared to testify about the industrial cities of the North. But we are taking care of the funeral expenses of the working and poorer classes of people.

Senator BREWSTER. This would be true, would it not, that practically all of these would be for people in the lower-income brackets?

Mr. GUERNSEY. That is correct.

Senator BREWSTER. So that if we had the figure as to the number of people with moderate incomes, in the one-, two-, and three-thousand-dollar class, that would be the fairest comparison to determine how adequately they were covered. The social problem would not arise with people with incomes above those amounts, would it, to any degree?

Mr. GUERNSEY. I think you are correct, sir, but there is one interesting fact that I think would surprise you gentlemen. It has been very pleasing to us and interesting to find that men who have become successful in after life, who received their first taste of life insurance on the little 25-cent or 50-cent policy, and now may perhaps have a million dollars in life insurance, are still retaining those initial policies, perhaps for a sentimental purpose. It would not be significant, but it is interesting to those in the life-insurance business.

Senator MARTIN. I would like to suggest this, Mr. Chairman: Using the Commonwealth of Virginia as an example, there are so many policies there. Does that include fraternal policies? There are a great number of fraternal insurance policies in the Northern States which provide a funeral benefit.

Mr. GUERNSEY. If they come under this classification it would include them.

The CHAIRMAN. It is the weekly benefit plan.

Mr. GUERNSEY. The weekly benefit plan; yes.

Senator MARTIN. There are quite a number of fraternities that also have an insurance benefit, and particularly the funeral benefit, and I wondered whether that included those.

Mr. GUERNSEY. It would if the payments are made weekly.

The CHAIRMAN. Thank you very much, Mr. Guernsey.

Mr. GUERNSEY. Thank you, Mr. Chairman.

(At the request of Senator Butler, the following tables are inserted in the record:)

EXHIBIT D.—*Social-security versus railroad-retirement monthly survivor benefits—a comparison*

	Social security, 1950	H. R. 6000, social security proposed	Railroad retirement, 1950
Maximum survivor benefits possible:			
Aged widows	$34.20	$48.30	$40.61
Widows with children	34.20	48.30	40.61
Children	22.80	[1] 48.30	27.08
Widow and 1 child	57.00	96.60	67.69
Widow	34.20	48.30	40.61
And 2 children	22.80	[1] 48.30	27.08
	22.80	32.20	27.08
Total	79.80	128.80	94.77
Widow and 3 or more children or 4 or more children	21.25	37.50	27.08
	21.25	37.50	27.08
	21.25	37.50	27.08
	21.25	37.50	27.08
Total (prorated equally)	85.00	150.00	108.32
Maximum	85.00	150.00	108.32
Parents	22.80	[1] 48.30	27.08

[1] 75 percent of the primary insurance amount for first child and parents.

Source: Rail Pension News, published by the National Railroad Pension Forum, Inc., 1104 West 104th Pl., Chicago, Ill.

The above exhibit D has been submitted by Mr. Thomas G. Stack, president of the National Railroad Pension Forum, Inc. (a voluntary organization of union and nonunion rail workers), February 1950.

EXHIBIT E—FOUR TIMES 1½ PERCENT EQUALS 6 PERCENT

One rail worker pays 6-percent railroad-retirement tax. One industrial worker pays 1½-percent social-security tax. Therefore, one rail worker pays as much tax as the combined tax of four industrial workers.

Social security provides four industrial workers and their families with retirement and survivor benefits as compared to railroad-retirement benefits received by one rail worker, for whom there are no family benefits until after his death.

Social security versus railroad retirement tax rates and monthly benefits—a comparison

	Social security, 1950	H. R. 6000, social security proposed	Railroad retirement, 1950
Tax rate (percent)	[1] 1½	[2] 1½	[2] 6
Cost per month	$3.75	$4.50	$18.00
Cost per year	45.00	54.00	216.00
Maximum retirement benefits possible to 1 worker and his family:			
Old age	45.60	64.40	
Wife	22.80	32.20	
Husband and wife	68.40	96.60	
Dependent children	[3] 16.60	[3] 53.40	
Total	85.00	150.00	144.00
Maximum retirement benefits possible to 4 workers and their familes	85.00 85.00 85.00 85.00	150.00 150.00 150.00 150.00	
Total	340.00	600.00	
Maximum survivor benefits possible: Widow and 3 or more children or 4 or more children, of 1 deceased worker	85.00	150.00	
Maximum survivor benefits possible to 4 familes of 4 deceased workers [4]	85.00 85.00 85.00 85.00	150.00 150.00 15.000 150.00	108.32
Total	340.00	600.00	

[1] On $250 maximum earnings per month.
[2] On $300 maximum earnings per month.
[3] Pro rated equally.
[4] 4 widows and 12 or more children, or 16 or more children.

The CHAIRMAN. The next witness is Dr. Ernest H. Hahne, president of Miami University, of Oxford, Ohio, and member of the board of directors of the Cincinnati Federal Reserve Bank Branch.

Will you have a seat, please, sir? What particular phase of the proposed bill do you propose to cover?

STATEMENT OF DR. ERNEST H. HAHNE, PRESIDENT, MIAMI UNIVERSITY, OXFORD, OHIO, AND MEMBER, BOARD OF DIRECTORS, CINCINNATI BRANCH, FEDERAL RESERVE BANK

Dr. HAHNE. Mr. Chairman, it is my intention to speak briefly about the self-employment tax and the relationship of the extended coverage to the general costs of government. I am interested in those two phases primarily because I have taught public finance at Northwestern University for 26 years, and I speak primarily as a person interested in the tax aspects of the bill.

The CHAIRMAN. We will be glad to hear you. I was simply inquiring on behalf of some of the Senators who may be required to go to the floor.

Dr. HAHNE. I realize the time limitations, Mr. Chairman.

The CHAIRMAN. We will be pleased to hear you.

Dr. HAHNE. I will be as brief and succinct as I can under the circumstances.

The CHAIRMAN. You are dealing with what to my mind is an important issue in this legislation, and that is the self-employment problem, including the self-employment tax.

Dr. HAHNE. I am attempting, sir, to not duplicate what you have already heard, but to pick out the self-employment problem and focus my attention upon it.

The CHAIRMAN. Yes, sir.

Dr. HAHNE. My first proposition is that we are trying to levy a self-employment tax, and in doing it, we are introducing into our tax system a new type of tax. The Ways and Means Committee report in August last year specified that unless the net earnings from self-employment amount to more than $400, and are less than $3,600 a self-employed person does not pay a self-employment tax on the income, and he receives no credit for old-age and survivors insurance benefits.

So it is that specific thing, Mr. Chairman, that I am interested in.

The CHAIRMAN. Yes.

Dr. HAHNE. Now, the reason that I call it a specific tax and speak from the point of view of one who is interested in public finance is that it has a base, that is to say, from $400 income to $3,600. In the second place, it has a method of computation, which is specified definitely in section 211. And in the third place, it has a rate which is specified in section 1640. I will not enumerate those rates, Mr. Chairman; you are so familiar with them. In the fourth place, it has exclusions from gross income. And in the fifth place, it allows deductions from gross income, and therefore has all the characteristics of an individual tax.

Now, my third proposition is that it is not a payroll tax. It more closely resembles, in my opinion, a personal income tax with a $400 exemption and a $3,600 maximum. And therefore, being at the present time, according to H. R. 6000, levied upon urban self-employed, it must be regarded as essentially a tax that classifies the urban self-employed businessmen as an employee. Psychologically, sir, it reduces him from an ordinary entrepreneur with the standing of a businessman to a wage earner.

My fourth proposition is that this tax is not a contribution, in the sense that the present taxes levied under the Social Security Act are; because it possesses an element of legal compulsion, as distinguished from economic compulsion. And if the self-employed persons wanted the benefits that were proclaimed by the sponsors of the bill, they would, as Mr. Benson pointed out, seek inclusion in this act voluntarily. And therefore the element of compulsion is present.

I will not go any further into this statement. I am assuming, Mr. Chairman, that the printed statement may be included in the record.

The CHAIRMAN. Yes; we would be pleased to have your entire statement included in the record.

Dr. HAHNE. In that way we can be brief at this juncture.

My next proposition is that this self-employment tax differs from the pay-roll tax in that it cannot be shifted. Here is a small-business man; and this tax is levied upon his net earnings. And it so defined in the Act. Consequently, unlike a payroll tax, which enters into the costs, as computed by lawyers and accountants, it is not shifted, and therefore the small-business men fall in a little different position than

the ordinary concern that pays both the pay-roll tax of the employers and the employees.

My sixth proposition is that the burden of the self-employment tax falls most heavily on marginal enterprise. Very frequently these businessmen are operating very small stores of various sorts, they are highly competitive, and they would prefer to work for themselves rather than become employees in larger concerns. They have very smal capital invested. And in many instances it seems to me that by forcing them to pay a self-employment tax we nullify the very objective of this law by perhaps forcing them to become employees. Because they are marginal-business men.

The CHAIRMAN. We are at least forcing them to invest to what we think is wise for them to buy.

Dr. HAHNE. That is right, sir.

My seventh proposition is that under the guise of social security, the self-employment tax capacity actually promotes insecurity. In times of full employment, the small urban businessman retains hold of his business because he feels that there is more long-run security than he would obtain if he were to go into other enterprises where he would become an employee and perhaps be tied up with strike-infested industries or industries that are more subject to the whims of the business cycle.

In other words, in my judgment, this is the straw that breaks the camel's back because it is a tax upon the small-business man. And it is not inconceivable, moreover, Mr. Chairman, that the self-employment tax will cause many a small-business man to abandon his own enterprise and enter the labor market in the areas that are already congested, thereby increasing the in-and-out movement between the insured and the uninsured urban employment, ultimately changing the actuarial basis for the computation of the average monthly wage, or the years of coverage for the benefit payments. And for those reasons, the social-security amendments that are proposed under H. R. 6000 actually may promote, in the long run, insecurity, while designed to aim at security.

My eighth proposition, Mr. Chairman, is that the self-employment tax lacks the primary essential of certainty. Adam Smith long ago laid down four essentials of the tax system—equality, certainty, convenience of payment, and productivity. And he placed first and foremost certainty. The reason he did this is that the individual taxayer should know that he was paying a specific tax, but that all other taxpayers similarly situated, too, were paying that tax. And under this bill the rates imposed upon the employee and the self-employed are different and therefore it makes a difference as to how the taxpayer is classified, as to whether he is self-employed or an employee. Therefore, he may be in and out, sometimes, of the labor market, and both the continuation factor and the increment factor that the bill considers actually take into consideration this uncertainty, and your committee has already heard of the uncertainties that will be involved, Mr. Chairman, by turning over to the Treasury the questions of discretion as to when a man is or is not self-employed. I am not going into that at this juncture because of the pressure of time.

My next proposition is that this introduces a dangerous special-income-tax principle. Now, a special income tax has not been of

any particular danger in America, but it has in other countries. And in effect, this is a proportional income tax levied upon the low-income groups, in addition to the progressive rates of the income tax, personal income tax. Therefore, what we are doing is making it possible to add special income taxes from now on for special benefits, because this introduces the benefit principle along with the ability-to-pay principle of the personal income tax. And thereby this bill consolidates the benefit principle with the ability principle, and introduces substantial confusion into the tax system; and as the pressure becomes more and more acute, later on for more and more revenues, we are likely to say, "Let us add particular or special taxes to meet particular costs of Government." That danger, as I say, has not been so important in this country, but it has been important elsewhere.

Senator MILLIKIN. Could you say that another phrasing of your point would be that it is bad fiscal policy to tie up your tax system with collections for special purposes?

Dr. HAHNE. That is right.

Senator MILLIKIN. Just as it is bad governmental policy to tie up a given amount of your revenues for definite purposes, with the result that ultimately all of your revenues are strait-jacketed and you have no fluidity for your general expenditure purposes.

Dr. HAHNE. That is the entire difficulty with the benefit principle, where we have our gasoline taxes tied up, for example, simply to roads, improvements, and for no other purposes in the States. We are then handicapped, from the standpoint of fluidity, in the administration of the revenues that the States levy. And I think that same principle would apply, Mr. Senator, to the Federal Government.

My next proposition is that we should look at the implications of this self-employment tax. Because, at the very time when we are trying to promote small enterprise and protect and encourage small business, along comes this self-employment tax, and that does not in itself help the small vendor of goods and services.

I would like to recall to your attention that when Bismarck established the social-security system in Germany, covering sickness, accident, old age, and disability, he said that "For reasons of state"—that is a direct quotation, sir—he was interested in the welfare of the working classes. And he spoke of social insurance as a bribe. And he used the word "bribe."

Now, when workers look to the state for social security, they will fight for that state. It was, therefore, a wise policy from the Bismarckian point of view. So, too, when Hitler was seeking power in 1927, under the Weimar Republic, following the leadership of Bismarck, he tried to include the peasants and the small professional groups and the small-business men by telling them that they should resent exclusion from unemployment insurance. And he then won over the small-business men to his support. That became the nucleus for fascism and the totalitarian state that eventuated, and which, I think, is something for which we need now to be on the alert.

Now, these are the significant aspects of public finance from the point of view of those of us who are investigating the theories of Adolph Wagner, as directing the policies of Germany. These theoretical origins do not come before Congress as a rule, but the responsibility for laws based upon them is yours. And you should be cog-

nizant of the precedent that has been set by history. And I think that Xenophon was right, when he said: "Those who do not learn their history must experience it."

My final point is that this tax is inequitable and discriminatory, because it singles out the self-employed in the cities and excludes the self-employed farmers. And when their representatives come before your committee and ask to have the farmers included in the extended coverage it seems to me that we are getting into more and more difficulties in administering the Social Security Act. We all admit that the Social Security Act, as it now stands, is a necessary phase of our public policy. Let us not go headlong into overexpansion of self-employed coverage at the present time.

Now, my reason for saying that, Mr. Chairman, is found in the second part of my statement, namely, on page 7. The history of veterans' pensions shows that they tend constantly to increase. And I have gone here into the history of veterans' pensions, and I will not belabor you with that at the present time, because of the pressure of time.

But my next point, I think, is very important; namely, that the social-security costs cannot be isolated. They must be correlated with other Federal Government costs, because national security and social security go hand in hand. Now, each national- and social-security cost must be added together in order to gain a proper perspective from which to judge the merits of extended coverage and liberalization of benefits. Each possesses what is known in fiscal science as "continuing costs." Thus the Spanish-American War incurred military costs amounting to $582,000,000, but the continuing costs of that war, as of June 30, 1946, had reached $2,400,000,000. Likewise the national expenditures for war, defense, and related activities between July 1, 1940, and August 14, 1945, VJ-day, had reached $316,439,000,000, and as of the midcentury point, December 31, 1949, had soared to $471,106,000,000, according to the latest estimates of the office of the Fiscal Assistant Secretary.

Senator MILLIKIN. It will probably cost a trillion before we are all through.

Dr. HAHNE. I have written an article for the Encyclopedia Britannica predicting it would cost $1,300,000,000,000. Fairly accurate estimates have been made by the National Industrial Conference Board, in their study on America's Resources for World Leadership, in which they predict the war costs in 1972 will reach $700,000,000,000. Now, our estimates that are included in the report of the Ways and Means Committee that you have, show that when it is figured at 2 percent that the social-security trust fund goes up, by 1990, to $91,000,000,000.

Now, that $91,000,000,000 debt is a part of this general picture and must be added to the continuing costs of the war and these related activities. If it is computed at 2¼ percent, then the trust fund may reach $98,600,000,000. In other words, it seems to me that the Senate has a responsibility behind the scenes of the public press and the radio and the commentators, here, to see where this thing is going before expanding coverage too rapidly at the present time.

Now, if self-employed coverage expands in the direction as it is now included in the act, we are face to face with tremendous obligations, because the trust fund must be added to the other obligations that are already a part of the fiscal operations of Government. And, conse-

quently, it seems to me, and I need not stress it much further, that the fact is that these two costs, those of national security and social security, rest in your hands, because you direct the destinies of the Senate, and you must look at both sides of the case for security.

That, sir, is the burden of my presentation.

Senator MILLIKIN. Do you have any statistics on the number of aged who are on public assistance who have been self-employed during their active lives?

Dr. HAHNE. They are not trustworthy. At Miami University we have the Scripps Foundation for population problems, and we have very accurate analyses of the self-employed farm population or what they call the rural-farm population. I can give you those figures. But I cannot give you the urban figures.

Senator MILLIKIN. We have a dearth of dependable statistics on that so far.

Dr. HAHNE. That is right. I think you must call upon the Federal Security Agency, sir. I don't know where else you could get reliable data.

Senator MILLIKIN. They can dig up the best they can for us, you think?

Dr. HAHNE. Yes, I think so.

Senator MILLIKIN. Let me ask you: Do the hills around Oxford roll as attractively as they used to?

Dr. HAHNE. You are welcome to come out, sir; and our students would be delighted to hear you at the assembly any time you come.

Senator MILLIKIN. Does the spring and the fall burgeon as beautifuly as it used to?

Dr. HAHNE. Yes, sir; just as beautifully.

Senator MILLIKIN. Let us sing Auld Lang Syne.

Dr. HAHNE. Thank you, sir.

The CHAIRMAN. Are there any questions?

Thank you very much.

Dr. HAHNE. Thank you, Mr. Chairman. I am sorry to have taken so much time, sir.

(The prepared statement of Dr. Hahne follows:)

STATEMENT BY ERNEST H. HAHNE, PRESIDENT OF MIAMI UNIVERSITY, OXFORD, OHIO, AND MEMBERS OF BOARD OF DIRECTORS OF CINCINNATI BRANCH, FEDERAL RESERVE BANK

THE SELF-EMPLOYMENT TAX

1. *Nature of the self-employment tax.*—The Social Security Act amendments of 1949 extend the coverage of old-age and survivors insurance to add approximately 11,000,000 new persons to the 35,000,000 now covered during the average week. This new coverage will include about 4,500,000 nonfarm self-employed persons, excluding certain specified professions and trades. According to the report of the Ways and Means Committee on H. R. 6000 (p. 10), "Unless his net earnings from self-employment amount to $400 or more in a given year he pays no self-employment tax on such income and receives no credit toward old age, survivors, and disability benefits. If wages are earned in covered employment (upon which employment tax is payable), such wages are deducted from the $3,600 annual maximum in determining the amount of net earnings from self-employment that is taxable and creditable in any year." But income from casual self-employment would not be taxed.

2. *The self-employment tax structure.*—The base of the tax is that portion of net earnings from self-employment in excess of $400 and less than $3,600. Section 211 defines the method of computation and nature of "net earnings from self-employment." Section 1640 sets forth the rate structure: 2¼ percent for

1950; 3 percent from 1951 through 1959; 3¾ percent from 1960 through 1964; and 4½ percent from 1965 through 1969; while thereafter the rate would be 4¾ percent. Exclusions from gross income and deductions, as set forth in section 1641, do not correspond to the personal income tax. In other words, H. R. 6000 introduces an entirely new feature in the Federal tax system.

3. *The self-employment tax is not a pay-roll tax.*—It more closely resembles a personal income tax with a $400 exemption, and $3,600 maximum. The small-business man in urban communities does not put himself on the pay roll. He usually does not consider himself a wage earner, but a businessman. This tax has the psychological effect of classifying him as an employee.

4. *The self-employment tax is not a contribution.*—This tax possesses all the elements of legal compulsion found in a tax. If self-employed persons wanted the benefits proclaimed by the sponsors of this bill, they would seek inclusion in coverage voluntarily, and the payment then might resemble more closely a fee or price. Clearly, the House Ways and Means Committee believed a voluntary contribution would not be effective in accomplishing the purposes sought by the Social Security Administration. The report of that committee stated: "Your committee gave thorough consideration to the possibility of coverage on a voluntary basis, but there are fundamental objections to that approach. The history of voluntary social insurance in the United States and in other countries indicates definitely that only a very small proportion of all eligible individuals actually elect to participate." Evidently, the Social Security Administration has decided that it knows what is best for the small self-employed businessman. It is thinking, however, more precisely that social insurance cannot be made to pay out on a self-supporting basis except by making the payment of the self-employed tax compulsory. The grasp for greater control over self-employed small-business man is given greater priority than either the promotion of the individual initiative of the small-business man, or Federal aid to the self-employed persons by exempting them from additional taxes.

5. *The self-employment tax cannot be shifted.*—Like the personal income tax it is levied on the "net earnings from self-employment." Pay rolls of larger firms are more likely to enter into the calculations of cost accountants, but small-business men do not, as a rule, employ the same bookkeeping methods. Moreover, small-business men engage in highly competitive businesses. This is not the time to discourage small-business operators still further.

6. *The burden of the self-employment tax falls heavily on marginal enterprise.*—Very frequently small-business men operating stores, of various sorts, are competing directly with agencies owned and operated by large-scale business organizations. They prefer to work for themselves rather than as employees for someone else. Nevertheless the inevitable effect of the self-employment tax is to increase the number of employees, and perhaps the number dependent upon public assistance in times of depression, thereby nullifying the very objective of H. R. 6000.

7. *Under the guise of social security the self-employment tax promotes insecurity.*—In times of full employment small urban businessmen retain hold of their businesses because they consider the long-run security of their own enterprise to be more trustworthy than strike-endangered plants and industries, over which they exercise little or no control. The self-employment tax contains the inherent danger of proving to be the "straw that breaks the camel's back." It is not inconceivable that the self-employment tax will cause many small-business men to abandon their own enterprise and enter the labor markets in areas already congested where the increased labor supply may extend the period of unemployment, thereby increasing the in-and-out movement between insured and uninsured urban employment, and ultimately changing the actuarial basis in computing the average monthly wage, or years of coverage required for benefit payments.

8. *The self-employment tax lacks the primary tax-essential of certainty.*—Adam Smith long ago laid down the four essentials of a sound tax or tax system—equality, certainty, convenience of payment, and productivity in yield. He placed certainty as the prime prerequisite of a sound tax; an individual should know what he is expected to pay, and that others in similar position pay it. Tax liability is not established by H. R. 6000 with certainty. Under this bill the rates imposed upon the employee and the self-employed are different, and it makes a difference how the taxpayer is classified. No doubt progress has been made in clarifying the legal concept of an employee as contained in the present bill, but there still remains the twilight zone when an employee engages in a "side-line," works elsewhere during a period of strikes, sells his own product

made at home, and so on. In such instances the Treasury must determine whether the tax liability is that of an employee or a self-employed person, and the individual will not know whether he is liable for the lower rate of the employee or the higher rate of the self-employed until a decision has been handed down by the Treasury. As a rule, urban self-employed business men are hesitant to employ legal services and accountants to present their cases to the Treasury and courts; hence there is a greater likelihood of injustice and uncertainty from the self-employment tax than under the income tax.

9. *The self-employment tax introduces the dangerous special income tax principle.*—Relying upon the benefit principle the net-earnings tax appears to be innocuous. It is, in effect, however, a special income tax, with its own proportional rate structure, which at any time could easily be consolidated into the Federal income tax, now based upon the ability-to-pay principle. Since the personal income tax with its progressive rate structure is highly correlated in its yield to the business cycle, it has been supplemented by productive proportional rates levied as commodity taxes. With the present widespread public demand for repeal of these commodity taxes, the Federal tax system becomes still more treacherously allied to the whims of the business cycle, with embarrassingly low yields during a depression. Standing alone, the self-employment tax violates the ability principle by taxing, not at higher rates, but, by additional rates, those in the lower income brackets. Thus as commodity taxes are repealed, the fiscal needs of the Treasury could be met by raising the rates of the self-employed tax, violating still further the ability principle and stressing the benefit principle of taxation. Special taxes on incomes received from such sources as rents, interest, profits, and professional incomes with added rate structures certainly fall within the provision of taxing incomes "from whatever source derived," and seem altogether as logical as singling out the "net earnings of the self-employed." The present Congress must foresee direction taken by the self-employment tax.

10. *Ulterior purposes of the self-employment tax must not be overlooked.*—Extended coverage causes 4,500,000 more persons to look to the Federal Government for so-called social security. Under Bismark, Prussia established a social-insurance system, including sickness, accident, old-age, and disability insurance. He became the unquestioned leader of state socialism in Germany. He once stated that "for reasons of state," he was interested in the welfare of the wording classes, and spoke of social insurance as a "bribe." When workers look to the state for social security they more willingly fight for that state. German experience has already proved the validity of this political doctrine, since militarism before World War I was strengthened by centralization of political power in Germany. Likewise, under the Wiemar Republic in 1927 Hitler made an appeal to peasants, professional groups, and small-business men stating that they should resent exclusion from the benefits of unemployment insurance. Around this nucleus he gained political strength for fascism. It was based upon a centralization of power. The present bill in a somewhat similar manner by extending coverage to the self-employed becomes a step causing more persons to look to the Federal Government for national and social security. But the German people found to their sorrow that social-security laws did not guarantee social security. At present there is no intention whatsoever, in our responsible political circles, of moving in the direction of totalitarian government, whether fascism or communism, but equally there is little room to doubt but that centralization of power is gained by compelling small-business men to join a compulsory social-insurance program. This becomes a stepping stone to power that might advantageously be used by power-seeking minorities. Xenophon once said: "Those who do not learn their history must experience it!"

11. *Unless extended to cover all self-employed, the self-employment tax becomes inequitable and discriminatory.*—H. R. 6000 imposes a tax on nonfarm self-employed persons. According to the report of the House Ways and Means Committee on the Social Security Act amendments of 1949 (p. 9) so difficult were the problems of administration that it was considered undesirable to extend coverage of the self-employed in 1939 "until the administrative agencies had further experience with coverage of employees in industry and commerce," but that now "practicable administrative procedures for coverage of the self-employed have been developed." Despite this progress, the committee has been unwilling to include certain professional classes, farm operators and workers. Apparently the committee considers it "practicable," on administrative grounds, to extend coverage to nonfarm self-employed persons, but impracticable to include other self-employed groups. This policy places expediency before equity. It would

be the course of wisdom to avoid discriminatory taxes on some self-employed until such time as equitable taxes could be applied to all farmers and professional groups which are also self-employed.

The administrative problems would mount rapidly if the present provisions covering 4,500,000 nonfarm self-employed were extended to include 28,105,000 rural-farm population by 1955, including about 2,461,000 over 65 by 1955 and as many as 3,488,000 persons over 65 in the rural-farm population by 1975. Since your committee has already heard statements pointing out existing defects in social-security administration, it is unwise to plunge blindly into extended coverage on the scale that would be required if all self-employed persons, nonfarm, farm, as well as professional groups, were embraced within the provisions of the present bill. Mr. Doughton, on October 4, 1949, wisely pointed out: "Moreover, the inclusion of large groups of people who do not desire social-security coverage would make most difficult the administration of the system" (Congressional Record, October 4, 1949, p. 14021).

EXTENDED COVERAGE, LIBERALIZATION OF BENEFITS AND INCREASED COSTS OF GOVERNMENT

1. *The history of veterans' pensions serves as a guide to the future costs of extended coverage and liberalization of benefits.*—Veterans' pensions rose from $15,000,000 in 1866 to $174,000,000 in 1913; then to $433,000,000 in 1941 and to $2,085,000,000 in 1948. Pensions for veterans were the forerunner of social security. Although humanitarian motives play a very important role in fiscal policy, the student of economic history of the United States finds the history of veterans' pensions a discouraging aspect of financial history. What has heretofore happened in the administration of veterans' pensions could be repeated in the history of civilian security. The record is one of waste.

2. *Social-security costs should not be isolated, but correlated with other costs of Federal Government.*—National, and social, security costs must be added together in order to gain a proper perspective from which to judge the merits of extended coverage and liberalization of benefits. Each possesses what is known in fiscal science as "continuing costs." Thus the Spanish-American War incurred military costs amounting to $582,000,000, but the continuing costs of that war, as of June 30, 1946, had reached $2,400,000,000. Likewise the national expenditures for war, defense, and related activities between July 1, 1940, and August 14, 1945 (VJ-day), had reached $316,439,000,000, and as of the mid-century point, December 31, 1949, had soared to $471,106,000,000, according to the latest estimates of the Office of the Fiscal Assistant Secretary; while the National Industrial Conference Board's study of America's Resources for World Leadership, based upon estimates made by the War Department, fixed war costs plus continuing costs by 1972 at $700,000,000,000.

According to the estimates made by the Social Security Administration the trust fund, figured at 2 percent, by the year 1990 will reach $91,000,000,000; or, if computed at $2^1/_4$ percent then the trust fund may reach $98,600,000,000. (See Report of Ways and Means Committee, August 22, 1949, p. 35.)

Ignoring all other Federal costs except national security and social security, the total future costs being placed by this generation upon our children compels this Congress to hesitate, and carefully decide, whether this is the proper time to extend coverage, and liberalize social-security benefits.

3. *Congress once undertook to guarantee the financial solvency of the social-insurance system.*—In 1943 Congress passed the Murray amendment to safeguard the claimants under the social-security law, because of the fear that failure to increase pay-roll tax rates at that time might impair the ability of the Treasury to meet these obligations. The present attempt to place the system on a self-sustaining basis is traceable again to possible fears that unless the difference between contributions and benefit payments increases in the near future the long-run obligations will not be met except by the levy of additional taxes paid into the general funds. Although H. R. 6000 in effect now repeals the Murray amendment by increasing pay-roll tax rates, the extended coverage and liberalization of benefits to some extent impairs the future trust fund, when compared with the earlier intentions of raising rates to safeguard that fund at a time when no such extended coverage was contemplated.

Judging from the past, therefore, Congress does not intend to impair the payment of benefits, even though it may load additional taxes upon the Federal taxpayers. By extending coverage and liberalizing benefits these contingent moral liabilities increase sharply. At a time when war activities and war-

related activities for the fiscal year 1949 reached $30,684,000,000, and defense costs continue to mount. Congress should not extend coverage that may sometime require heavy subsidies from already overloaded taxpayers. Although one Congress cannot bind its successors, it may establish a widely accepted concept of "rights" to benefit payments that impose future moral obligations that could become impossible to meet, because taxpayers believe other competing claims for their support are more vital to their national security.

The CHAIRMAN. Dr. Eveline Burns? Dr. Burns, we may be able to hear you, but I wanted to make a little inquiry.

Will you be seated? What is the length, approximately, of your statement?

Dr. BURNS. I cover, sir, quite a considerable number of points, in the program. We have made a rather careful analysis of the legislation that is before you.

The CHAIRMAN. I am afraid we will have to suspend at this point, because of the work on the Senate floor. You would have to remain over until Monday, because I do not believe we will be able to have a session tomorrow.

Dr. BURNS. I would like to come down again, of course. I would be very glad to do so.

The CHAIRMAN. We are very sorry to put you to that necessity, but I am sure that all of us must go to the floor of the Senate this afternoon.

So I suggest that you come back on Monday, and we will be able to hear you then.

Dr. BURNS. Thank you. I prefer to do that.

The CHAIRMAN. Mr. Argo, I will have to make the same statement to you.

STATEMENT OF R. K. ARGO, PERSONNEL DIRECTOR, ALABAMA MILLS, INC., BIRMINGHAM, ALA.

Mr. ARGO. Senator, it will be impossible for me to be here Monday, but I would like to submit my statement for the record, if that would suit you.

The CHAIRMAN. Yes. And suppose you tell us what points you cover in your statement. Then you may offer your statement for the record.

Mr. ARGO. Well, I cover several points, including disability coverage and the definition of "employee."

The CHAIRMAN. You are not in the life-insurance field?

Mr. ARGO. No, sir.

The CHAIRMAN. You may have a seat if you will, there, and if you wish to make any oral statement in connection with your brief, we will be very glad to hear from you.

Mr. ARGO. I would be glad for the statement to stand.

The CHAIRMAN. It fully covers your position?

Mr. ARGO. Yes, sir.

The CHAIRMAN. For the purpose of identifying yourself, you are Mr. R. K. Argo of the Alabama Mills, Inc., Birmingham, Ala.?

Mr. ARGO. Yes, sir.

The CHAIRMAN. And what are your mills? Textile mills?

Mr. ARGO. Yes, sir.

The CHAIRMAN. Cotton textile mills?

Mr. ARGO. Yes.

The CHAIRMAN. Very well. We will be glad to have your statement, and we will put it into the record.

We regret that we cannot hear you orally this morning.

(The prepared statement of Mr. Argo follows:)

STATEMENT OF R. K. ARGO TO THE SENATE FINANCE COMMITTEE ON THE SOCIAL SECURITY ACT (H. R. 6000)

I am R. K. Argo, personnel director of Alabama Mills, Inc., Birmingham, Ala., chairman of the social-security committee of the Alabama State Chamber of Commerce, a member of the social-security committee of the Associated Industries of Alabama, and a member of the legislative committee of the Alabama Cotton Manufacturers Association. Today I am presenting the views of the above-mentioned associations.

H. R. 6000—Extension of coverage.—Old-age and survivors' insurance coverage would be extended to add approximately 11,000,000 new persons to the 35,000,000 persons now covered during an average week. The groups add d to the system under the bill are as follows: Nonfarm self-employed with some exceptions; employees of State and local governments; domestic servants in a private home; employees of nonprofit institutions; agricultural processing workers; Federal employees not covered under any retirement system; Americans employed by an American aircraft outside the United States; employees and self-employed in the Virgin Islands (about 5,000) and, if requested by the legislature, in Puerto Rico; and salesmen.

It seems to be the opinion of most business groups that universal coverage extending even beyond the groups proposed to be covered by H. R. 6000 is fundamentally desirable. This position contemplates the establishment of old-age and survivors' insurance as a basic minimum floor of protection for all gainfully employed. It is our feeling that, unless universal coverage was recommended, there would be the danger of another wholesale and costly revision of the program at a later date in order to give other groups a new start. However, the basic reason for recommending universal coverage is that all gainfully employed people must be made to realize, through the taxing device, that social security is not a give-away program, and that everyone who works for a living and who expects to receive benefits from the Government must pay his share of the cost while gainfully employed.

We strongly recommend that steps be taken to diminish or to terminate any Federal participation in State old-age pension programs now jointly financed by the State and Federal Governments in the field of public assistance. With universal coverage of OASI, the Federal Government should retire completely from public assistance. H. R. 6000 is dangerous in that it proposes more rather than less Federal money for public assistance. If this view prevails, the political manipulation by certain States which throws more and more of the burden onto the Federal Treasury and reduces the State's responsibilities for old-age pensions will be accelerated rather than diminished.

H. R. 6000—Increase in Federal share of public assistance costs.—The bill would strengthen financing of public assistance in all States, and, particularly, would enable States with low-average payments to raise the level of payments to needy recipients under the State-Federal program. Federal funds would be made available to the States under the following matching formula:

(*a*) For old-age assistance, aid to the blind, and aid to the totally and permanently disabled, Federal funds will equal four-fifths of the first $25 per recipient plus one-half of the next $10 plus one-third of the next $15 with a maximum of $50 on individual assistance payments.

(*b*) For aid to dependent children, Federal funds will equal four-fifths of the first $15 per recipient (including one adult in each family) plus one-half of the next $6, plus one-third of the remainder, with maximums on individual assistance payments of $27 for the adult plus $27 for the first child plus $18 for each additional child in the family.

We strongly urge opposition to further increases in Federal assistance grants to States as provided in H. R. 6000. The glaring examples of abuse and manipulation by some States of the present matching formula are undesirable. As an example, the average paid to recipients during August 1949 for public assistance in the State of California was $70.70, as compared to the State of Georgia $20.73

This comparison shows the inconsistency of the program. Another illustration: The State of Louisiana recipients were paid during the month of August 1949 an average of $47.08, and for the fiscal year ended June 30, 1949, 810 out of each 1,000 persons 65 years of age and over were on the public-assistance roll. In comparison to this for the same period, in the State of New Jersey, 66 out of each 1,000 persons 65 years or older were on the public-assistance rolls and were paid $48.34.

The present type of unequal matching induces States to increase the number of recipients rather than the average payment. The average payment per recipient can be reduced in the present law with financial advantage to the State. A glaring example of this is the State of Mississippi, which from September 1947 to September 1948 increased their recipients by 13,728 and reduced the average payment to recipients $1.85; but, due to the unequal matching, this State, by this increase in the rolls of recipients, realized many thousand dollars more from the Federal level than they had previously done.

We recommend that we return to the original dollar-for-dollar matching for public assistance as the first step to eliminate the Federal Government's participation in this program. We firmly believe that this is a problem which should be handled at the local level without any Federal participation.

H. R. 6000—Definition of "employee."—The new definition, which is effective with respect to services performed after 1949, has four parts. The first part provides (as does existing law) that an officer of a corporation is an employee of the corporation. The second provides that the usual common-law rules are to be used to determine whether an individual is an employee. Thus all persons who have been determined to be employees under existing law will continue to be considered employees. * * *

The third part of the definition extends coverage to individuals who perform services, under prescribed circumstances, in seven occupational groups.

The fourth test of employee status differentiates between individuals who are employees and those who are not employees on the basis of a factual considerations and not on the basis of technical legal considerations. Under this test, the status of an individual in the performance of service for any person for remuneration is determined from the combined effect of the following enumerated factors: (1) Control over the individual; (2) permanency of the relationship; (3) regularity and frequency of performance of the service; (4) integration of the individual's work in the business to which he renders service; (5) lack of skill required of the individual; (6) lack of investment by the individual in facilities for work; and (7) lack of opportunities of the individual for profit or loss. * * *

We believe that this test is so broad that any bureau or administrator in Washington would have the authority to rule in many cases independent contractors could be classified as employees. As an example, the paper industry in our State of Alabama contracts with small independent contractors for logs used in this particular industry. We believe, under this test, the administrator of this act could hold these small independent contractors and their employees to be employees of the contracting company. You can readily see the tax liability that could be imposed.

We recommend that there be united opposition to the proposed revisions in the definition of "employee." This concurs in the House Ways and Means Committee minority report which said "Paragraph 4 of the definition of 'employee' gives to the Treasury Department virtually unlimited discretion, through authority to extend the definition of 'employee,' to determine where the impact of the social-security taxes will fall. As a result of this authority, large numbers of persons will have no way of knowing their social-security tax liability until the Treasury determines it for them."

We therefore recommend that existing definitions of employee now contained in the law be retained; furthermore, with universal coverage, the need for revising the definition of "employee" is no longer of major importance.

H. R. 6000—Permanent- and total-disability insurance—

Coverage: All persons covered by the old-age and survivors insurance program would have protection against the hazard of enforced retirement and loss of earnings caused by permanent and total disability.

Benefits: Permanently and totally disabled workers would have their benefits and average wage computed on the same basis as for old-age benefits, but no payment would be available for dependents of disabled workers.

Eligibility for benefits: An individual would be insured for disability benefits if he had both (*a*) 6 quarters of coverage out of the 13-quarter

period ending when his disability occurred, and (*b*) 20 quarters of coverage out of the 40-quarter period ending when his disability occurred.

H. R. 6000 will put the Federal Government into the disability-insurance business. The experience of life-insurance companies on disability has been very disastrous. Many life-insurance companies, as is generally known, suffered very serious losses during the depression. Life-insurance companies, as you know, where they furnish disability insurance, make this available only to select groups at a high rate; but, under the proposed bill, all types of risks will be brought in and will constitute a much greater hazard than insurance companies have under their policies. The trouble with disability in a tax-supported system is that people will claim benefits as a matter of right because they have paid their taxes to cover the receipts of disability. In the first place, it would be impossible to police such a large-scale program because it is a known fact that disability is very hard to disprove. Rheumatism, low back pains, and other obscure things such as nervous disorders, feigned heart diseases, which keep people from working, are most difficult to handle. Another danger in this program is that one receiving benefits for disability will certainly want to remain on the rolls if jobs become scarce or the wage scale falls.

You must remember that this is not benefits for 26 weeks or 1 year; it can mean benefits for life. The situation which we would probably face is that in the event of a depression, in a system of this kind, when the claimants have exhausted their unemployment-compensation benefits, they would then try to prove their inability to work and show that they are disabled and be put on the permanent benefit rolls.

We would like to bring out one of the dangers, particularly in the textile industry, where many women are employed. Say we have a woman who has been working in our industry for 10 years. She is married and wants to go home. She does so, and after 6 months she claims that she is not able to work because she is disabled. You probably could not prove that she was not disabled, and she claims benefits, say, for rheumatism, nervous break-down, or some other obscure cause. You could see exactly what would be the outcome in a case of this kind. We believe that policing this would be impossible. Just remember that when you become 65 years of age that is a fact, but total disability would be mighty hard to disprove at any age.

H. R. 6000, taxable wage base.—Under the proposed bill, the total annual earnings on which benefits would be computed and contributions paid is raised from $3,000 to $3,600. We strongly urge the $3,000 taxable wage base be maintained, inasmuch as the entire tax plan already established ih OASI and State unemployment insurance is at $3,000. I quote from the minority report of the House Ways and Means Committee, which we believe is an excellent reason why the present wage base should be retained:

"We definitely are of the opinion that the proposed increase in the wage-base limit from $3,000, as proposed in H. R. 6000, results in higher benefits to those better able to provide their own protection and does nothing to increase the benefits for those with average wages below $3,000 for whom the system should be primarily concerned. It increases the dollar cost of the system substantially, provides a windfall to persons near retirement who earn $3,600 or more, and unnecessarily complicates the keeping of wage records by employers who must continue to report unemployment taxes on a $3,000 wage base."

We believe benefits should be increased by increasing the formula and not the taxable wage base. We feel that benefits as provided in H. R. 6000 go entirely too far.

The CHAIRMAN. The committee will recess until Monday morning at 10 a. m.

(Whereupon, at 12:35 p. m., the committee recessed to reconvene Monday, February 27, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

MONDAY, FEBRUARY 27, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George, chairman, presiding.

Present: Senators George, Johnson of Colorado, Kerr, Millikin, Taft, Butler, and Brewster.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

Mr. Rieve?

STATEMENT OF EMIL RIEVE, CHAIRMAN, CIO SOCIAL SECURITY COMMITTEE, AND GENERAL PRESIDENT, TEXTILE WORKERS UNION OF AMERICA, CIO

Mr. RIEVE. Good morning, Senator.

The CHAIRMAN. You are on first this morning. We hope other members of the committee may come in during your appearance, but it is rather difficult to secure full attendance at any time, especially this session.

You are the chairman of the CIO Social Security Committee?

Mr. RIEVE. That is correct, Senator.

The CHAIRMAN. And the general president of the Textile Workers Union of America?

Mr. RIEVE. That is right, Senator. I am also vice president of the CIO.

The CHAIRMAN. You were on the Senate Advisory Council last year.

Mr. RIEVE. Yes; I was one of the two labor representatives on that committee.

The CHAIRMAN. We will be very glad to hear you, sir, on H. R. 6000.

Mr. RIEVE. I appreciate this opportunity to discuss with your committee the CIO position on improving our Federal social-security program. I am appearing here today as chairman of the CIO committee on social security, which has a number of proposals for strengthening the bill H. R. 6000 that you are now considering.

This Congress is certainly going to pass some kind of social-security legislation. I am optimistic, you see. The need has existed for many years, and the demand has become too widespread to be ignored.

Now that you have undertaken the job, it is our hope that you will do it thoroughly. We urge you to adopt a program which will be adequate for some time to come rather than to settle for the smallest possible degree of progress.

With this in mind, our proposals go somewhat beyond both the terms of H. R. 6000 and the recommendations of the Advisory Council on Social Security, which reported to your committee in the Eightieth Congress.

I had the honor to be one of the two labor representatives on that Council, and I joined in its recommendations for improving old-age and survivors insurance, and for setting up benefits covering permanent and total disability. The Council's program would be far better than the present law: but there have been several new developments which we think should impel you to move further.

First is the fact that pensions have become a primary issue in collective bargaining. The steel strike and the Ford agreement dramatized the question. Today, the country as a whole accepts the principle that one way or another industrial workers have a right to decent retirement incomes.

I do not think any of you will deny that the steel strike, in particular, was a leading factor in the overwhelming approval of H. R. 6000 in the House of Representatives last year. We now have a situation in which higher social-security benefits will reduce the actual or potential burden on employers, as well as providing benefits for workers.

Our CIO unions entered into such agreements deliberately. It is no part of our philosophy to win pensions for our members only, leaving the rest of the population to look out for itself. We want adequate pensions for all; and we are convinced that our efforts are helping to get them.

As President Philip Murray told the House Ways and Means Committee last April, in supporting the administration's social-security bill:

> We do not regard collective-bargaining plans as a substitute for the basic legislation we are asking. Rather they are supplementary, to provide more adequate total benefits and to meet problems not covered by legislation. The poorer the laws, the greater emphasis we will have to put on collective-bargaining supplements * * * We are not afraid that Congress will do too much, but rather we fear it will do too little.

The steel industry fact-finding board developed a similar point in its report on the eve of last year's strike. I assume you are familiar with this report, but I can supply your committee with a copy if you so desire.

The CHAIRMAN. If you will submit it, Mr. Rieve, it will be valuable for our reference.

Mr. RIEVE. We will supply it, sir.

(The report has been placed in the committee files.)

Mr. RIEVE. In short, there may have been a time, many years ago, when certain labor unions resisted social legislation for fear it would weaken their appeal to workers. We in the CIO have no such idea.

The second reason why we ask you to go beyond the Advisory Council's report is not really new. Rather, it is an old reason strengthened by recent experience.

We in the labor movement have argued for a long time that we must have in this country an economy of high production and full em-

ployment. The events since the end of the war—while they have not been uniformly pleasant—have shown that this is not only desirable but possible. Whole new avenues of progress, including the peaceful application of atomic energy, have opened up. The conservative economist, Sumner Slichter; the President's Council of Economic Advisers; and the President himself have all spoken in glowing terms of our prospects.

Barring another war, there is no ceiling on our future if only we conduct our affairs with ordinary good sense. Therefore there is no doubt that we can afford an adequate social-security program, for the cost will be relatively slight in an expanding economy.

The third reason for doing better than the Advisory Council's recommendations may seem indirect to some of you.

In recent months, communism has won great new victories in Asia. I think it is fair to say that the Communists were able to take over China so easily because the former Chinese Government, after many years in power, failed completely to meet the needs of the people.

I am aware that this is not the place to discuss foreign affairs. But I think most of us realize that everything we do, as the major anti-Communist power in the world, has an effect on the thinking of people everywhere.

If we fail to provide a fair measure of security for the average worker, we strengthen the strongest argument for communism. If the rich can retire in luxury while workers are left to charity, we weaken the cause of democracy at home and abroad.

Now I would like to discuss briefly the specific recommendations of the CIO. To begin with, I ask your permission to insert in the record four resolutions adopted by the CIO convention last November, together with a resolution adopted by the CIO executive board on February 15, 1950.

In my oral testimony, I will devote most of my attention to the CIO proposals which go beyond H. R. 6000 and the Advisory Council's recommendations. I do not want to burden your committee by repeating a mass of statistics already in the record.

With your permission I will deal in order with the three basic sections of H. R. 6000—old-age and survivors insurance, permanent and total disability insurance, and public-assistance and child-welfare programs. I shall also discuss our strong conviction that the program of temporary disability insurance, rejected by the House, should be restored to the bill.

Old-age and survivors insurance: First. Coverage—the CIO believes that all Americans, including the self-employed, should be protected by our social-security system. Your committee has already been reminded that the restrictions on coverage enacted in 1935 are responsible for many of today's problems. This Congress should not perpetuate the mistake.

Although H. R. 6000 extends coverage to 11,000,000 more persons, we favor the broader provisions of H. R. 2893.

Specifically, a number of CIO members are included in the group removed from coverage by the Gearhart resolution, after a Supreme Court decision had indicated they were employees and therefore protected. Our agent laundry drivers, who belong to the Amalgamated Clothing Workers of America, are among them. They have proposed

changes in the wording of the law which will meet their problem together with a brief, which I ask permission to introduce in the record as an appendix to our statement.

The CHAIRMAN. You may do so.

Senator MILLIKIN. Mr. Rieve, what is the basis of employment of the laundry drivers? Do they work on commission, or how do they work?

Mr. RIEVE. They work on a commission fixed by the contract. The Supreme Court indicated that they were employees. Then the Gearhart resolution took them out of the provision of the law, on the argument that they were not employees really but that they were independent salesmen, so to speak.

Senator MILLIKIN. Well, there is a lot of debate on that. I did not want to get into that. All I wanted to find out was what is the employment contract, or whatever the contract is, of the laundry worker. Do they work when they please and quite when they please, or do they have a basic wage?

Mr. RIEVE. No, they don't work when they please. They get a commission fixed by the contract. And, Senator, it is described in the appendix as to just what they are doing and what their status is.

The CHAIRMAN. Have you a copy of a contract?

Mr. RIEVE. No, but we can supply that, Senator.

The CHAIRMAN. We would be glad to have it.

Mr. RIEVE. Fine. We will supply it.

(The material referred to appears following statement prepared by Amalgamated Clothing Workers on p. 1268.)

Mr. RIEVE. Second. Insured status: Eligibility provisions should be liberalized in order to protect as many workers as possible. We favor the plan suggested by the Advisory Council in its report. Also we strongly urge a provision to exclude, in determining insured status, any quarters during which a worker was disabled or involuntarily unemployed. H. R. 6000 excludes only the first of these.

The CHAIRMAN. Would it interrupt you, there, to ask you how you would enforce that; particularly, now, with reference to the involuntarily unemployed?

Mr. RIEVE. Well, if the worker is not paying any social security, he is unemployed. That quarter ought to be taken out in computing his status.

The CHAIRMAN. How would you check that? You see, in many States the unemployed worker, if he has been working in a group of less than eight workers, is not under unemployment compensation.

Mr. RIEVE. Well, all right. The unemployment-compensation law may have to be amended to jibe with that.

The CHAIRMAN. I just wondered how you would enforce it. How would you check it? How would you know it?

Mr. RIEVE. The worker has to apply to the unemployment compensation office to see if he is covered by unemployment compensation, and that office would know whether he is unemployed or not.

The CHAIRMAN. You may proceed. I was wondering, though, how we could check the involuntarily unemployed. You would obviously have to do it, if you were going to give them full credit. And you refer to "a provision to exclude, in determining insured status, any quarters during which a worker was disabled or involuntarily unemployed."

Mr. RIEVE. H. R. 6000 already covers the first, the disabled.

The CHAIRMAN. Yes, sir. That is right.

Mr. RIEVE. Now, we propose that it will be extended to the involuntarily unemployed. I think that there is a problem of proper enforcement, but I believe that ways can be found to bring it about; that is, if we would broaden our unemployment-insurance scheme, so that a worker has to report when he is unemployed in order to be entitled to unemployment compensation, so that a record could be kept of whether he continues unemployed for that quarter or not. Now, there might be difficulties in the mechanical set-up. I don't know just how to work it out, but it seems to me it can be worked out, Senator.

There is no reason why an economic disaster which is bad enough at the time should be permitted to strike again after a worker has retired.

You see, the way it is now, the worker is unemployed, not of his own choice, and then that is counted against him; and when he retires it is counted against him again, because he had no earnings during that period of time. So he actually suffers twice.

Third. Benefit categories: We favor reducing the age of permissive retirement for women from 65 to 60, with a similar cut in the age requirement for the wife, widow, or dependent mother of a covered worker. What is happening in this, Senator, is that the average wife is somewhat younger than the husband is. The result of it is that on the average the wives are about 3 or 4 years younger than the husbands are; so that when the husband reaches 65 really he cannot retire, because his wife is not entitled to her share of his retirement, because she is not 65 years of age yet. So he has to almost be 70 years of age before he retires, if he has to depend on the supplementary income that his wife gets from the old-age pension. By reducing that age for women, they could probably retire when the men reach the age of 65.

Fourth. Benefit amounts: Here is a point I should like to discuss at greater length. Not only do we in the CIO propose a generally higher level of benefits than H. R. 6000, but in addition, we would like to make clear the principles we follow in considering this part of the social-security program.

We do not accept the idea that social security should be only a minimum, and a low one at that. We are not impressed by the arguments of the insurance companies that every worker should buy enough private protection to supplement his Federal benefits.

Judged by the standards of workers, private insurance is expensive. Also, the benefits are fixed by the original contract; they cannot be adjusted to the cost of living. When living costs go up, the worker is unable to buy additional protection at the same rate; his age has also increased.

Our union plans also have obvious limitations. They usually demand continued employment by one company, or at best in one industry. If the company fails, or the worker goes elsewhere, the protection is lost. To be sure, the benefits paid under union plans can be raised through collective bargaining; but this does not give the worker freedom of movement.

Private insurance gives a worker flexibility in employment; union-negotiated insurance is flexible in amount. But only Federal social

insurance can provide both at a cost within the average worker's reach.

Furthermore, CIO supports the principle that benefits should have a relation to past earnings. Those who earn higher wages contribute more toward the program; as a general rule they have a higher standard of living; and they should get larger pensions.

At the same time, we recognize that the lowest-paid workers will reach old age with the least personal resources. We accept the idea that their pensions should represent a somewhat greater proportion of their past earnings than do those of the higher-paid group.

H. R. 6000 maintains both these ideas, but it doesn't go far enough in either direction. Before getting into the figure, however, I would like to make one other point.

There are a good many people today who deliver eloquent speeches in favor of equal pensions for everybody, regardless of the social-security system. Now this idea has a certain amount of appeal; we do not want to see anyone suffering hardship because of old age.

The CIO is also in favor of adequate pensions for all. But we are firmly convinced that the only realistic path to this goal is expanding and improving the present social-security system. We recognize that millions of our citizens have reached retirement age without being entitled to Federal pensions. We realize that millions of others will be under the same handicap in the future—either because their occupations were not covered by the act, or because they were not covered for a long enough time to draw full benefits.

These are a part of the growing pains of social security. They are the reason why we are urging more general grants for old-age assistance. But they are not an excuse for abandoning the social-security program itself.

Senator MILLIKIN. When you say, Mr. Rieve, "but they are not an excuse for abandoning the social-security program itself," you are referring to the insurance program?

Mr. RIEVE. Yes: I am referring to abandoning our present social security in favor of a flat amount for everybody.

Senator MILLIKIN. A contributory insurance system is what you are talking about?

Mr. RIEVE. Yes, for everybody.

I have read about testimony before your committee favoring a flat benefit of $25 or $30 a month. That's not a pension; it's a parody. Yet even paying this amount to the 11,000,000 Americans over the age of 65 would cost more than $3,000,000,000 a y ear. A flat benefit of $50 a month would cost more than $6,000,000,000 a year.

The conservatives who have spoken favorably of flat-rate pensions are not among those who are willing to pump additional billions into the Federal system. We suspect their real aim is to break down the whole social security program.

We in CIO, on the other hand, have no objection to expenditures of this size for old-age pensions, provided the money is raised and disbursed in a fair and sound way. We believe these conditions can be met by following the existing social security pattern, with the improvements we suggest.

I would like to remark, in passing, that we deplore the opposition of private insurance companies to higher Federal benefits. In the first

place, we do not believe these companies have an inherent right to make money from the insecurity of our people. In the second place, we are convinced—and the record bears us out—that the Federal plan encourages the purchase of supplementary insurance, because the Federal pension helps bring an adequate retirement income within reach.

Here is what the CIO proposes as a program for liberalizing benefit amounts: The calculation of the average monthly wage should be revised. This calculation is of primary importance in determining what the worker gets in the way of a pension.

As you know, hourly paid workers cannot, as a rule, work full time throughout the year. Seasonal unemployment is typical of many industries. Others close down at intervals because of material shortages, weather conditions, or other factors.

Under the present law, these periods of involuntary unemployment also reduce the workers' pension rights. H. R. 6000 applies a remedy only in the event of permanent and total disability. This is not enough.

We suggest that the average monthly wage should be based on earnings in the highest quarters of five consecutive years—the 5 years which produced the highest total earnings.

The benefit formula I am about to propose is based on the assumption that you will adopt this suggestion. We are primarily interested in a certain level of benefits. If the average monthly wage is brought down by a different method of calculation, we naturally want to increase the percentage of the average monthly wage which is paid as a pension.

Actually our recommendations on the benefit formula are at a minimum level from our point of view. As I have indicated, we believe social insurance payments should be enough to maintain an American standard of living. At the same time, we want to be practical; so we have scaled down our proposals to a substantial degree.

We favor the provision of H. R. 6000 regarding the first part of the benefit formula; that is, a primary benefit of 50 percent of the first $100 of the average monthly wage. But we believe that the percentage for wages in excess of $100 should be doubled, permitting 20 percent to be added to the primary benefit.

The CHAIRMAN. Mr. Rieve, at that point: Mr. Murray did, did he not, advocate the administration bill, that is, the bill first introduced in the House, H. R. 2893? And that bill had this formula: Fifty percent of the first $75 of average wage, plus 15 percent of the next $325. You are suggesting a change there?

Mr. RIEVE. We are. That is right.

The CHAIRMAN. You want 50 percent of the first $100, and then a doubling of the percentage for wages in excess of $100, to permit 20 percent to be added to the primary benefit?

Mr. RIEVE. That is right, yes.

We also favor the present 1 percent annual increment, rather than the one-half of 1 percent allowed in H. R. 6000. And we urge that the wage base be raised to $4,800 instead of $3,600.

We have prepared a table comparing the benefits under this formula with the present figures, and with those contemplated by H. R. 6000.

Comparison of benefits after 20 years of coverage provided by various plans (single person)

Method of calculation	CIO proposal: Best quarters in 5 consecutive years	Present law: Monthly average of total taxable wages (reduced for periods of noncoverage)	H. R. 6000: Entire period of coverage [1]
Amount of average monthly wage:			
$100	$60	$30	$55.00
$150	72	36	60.50
$200	84	42	66.00
$250	96	48	71.50
$300	108	48	77.00
$400	132	48	77.00

[1] After 1955, benefits are reduced by periods in which the worker was not covered.

I will not take the time to read the figures, but you will note that we propose, for a single person after 20 years of coverage, a minimum of $60 and a maximum of $132, compared to a minimum of $55 and a maximum of $77 under H. R. 6000.

The greatest differences occur in wages of more than $200 a month. This is in line with our belief, as I mentioned earlier, that benefits should be related to past earnings. We are willing to modify this relationship for the sake of the lowest paid; but we must accept the unhappy fact that many wage earners are paid too little to build up adequate pension reserves. We cannot correct the inequities in our economy by means of the social security system.

This is why we urge a primary benefit of 20 percent, instead of 10 percent, of wages above $100 a month. A similar approach is involved in our view on the annual increment. While we hope you will extend coverage to all workers, we do not think you should penalize those who have been making contributions for many years.

At the same time, we do not believe there should be too drastic a reduction imposed on those whose periods of covered employment are interrupted. We feel the continuation factor in H. R. 6000 cuts benefits too far.

We advocate a wage base of $4,800 because this figure, in terms of wage and price levels, is equivalent to the $3,000 base of the prewar years. Anything less than $4,800 is a step backward, and puts an adequate program that much further out of reach.

Also, the $25 minimum in H. R. 6000 is entirely too low, even though it is much better than the present $10. We propose a minimum of $50 a month for all covered workers.

After all, the aim of social security is not to provide a little spending money for aged workers who must find other means of support. We want to do better than that; and to do it, $50 a month is as low as we can go.

Along the same line, we vigorously approve the provision in H. R. 6000 permitting outside earnings up to $50 a month. Together with our proposed benefit minimum, this opens the way to a $100 monthly income for a retired worker in the lowest pension bracket who retains some earning power. Certainly this is more realistic than the $14.99 limit for the same worker today.

The maximum for family benefits, in our opinion, should be 80 percent of the average monthly wage, without a dollar ceiling. To chop off benefits at $150, as H. R. 6000 contemplates, would defeat the purposes of social insurance where there are a number of dependents.

Simple justice calls for higher dependents' and survivors' benefits. The surviving dependents are just as important as the surviving workers, though the latter have held the spotlight.

A widow should receive 100 percent of the primary benefits; her living costs are just as high as a retired single worker's. We also favor increasing the allowance for the first child or dependent parent of a deceased worker to 75 percent of the primary benefit, as set forth in H. R. 6000. We are sure you agree that protection for the children of widowed mothers has an importance which transcends any statistical analysis. It is a form of investment in the Nation's future.

In all these cases, limiting the maximum family benefit to 80 percent, of the deceased workers' average monthly wage eliminates the risk of excessive allowances.

Finally, we urge liberal wage credits for veterans covering their period of service, the cost to be met from the general revenues.

You will note that I have not brought out an array of figures on the cost of living, family budgets and so on as part of our case in behalf of these higher pension payments. It seems to me it is unnecessary to do so. Our proposed schedule of benefits is clearly not extravagant.

Therefore I will simply point out that a budget developed jointly by the Social Security Administration and the Bureau of Labor Statistics calls for an income of more than $140 a month for an aged couple in a representative city. These agencies describe the budget as "modest but adequate." I think it can be said that the first adjective is more descriptive than the second. Actually, of course, we believe these figures are not nearly adequate to provide a decent American standard of living.

In any event, the CIO proposals would produce such an income only in a relatively few cases.

I would like to turn now to the second basic section of H. R. 6000.

I would like now to turn to the question of permanent and total disability.

PERMANENT AND TOTAL DISABILITY

H. R. 6000 provides payments for total and permanent disability closely in line with those recommended by the Advisory Council. In the opinion of CIO, no part of the bill is more important than this one.

A worker who becomes permanently and totally disabled loses in three ways. First, his income is cut off, often at the very peak of his family obligations. Second, he often is saddled with medical costs which consume whatever savings he may have. And third, he is very likely to lose his insured status under the social-security laws, and therefore be deprived of pension benefits when he reaches the age of 65.

There is presently no way for the average worker to insure himself against this triple disaster. In my own union, the Textile Workers Union of America, 90 percent of the membership is protected by group insurance covering disability; but the payments terminate after 13 or 26 weeks.

Senator MILLIKIN. Mr. Rieve, is it the insurance of your own union?

Mr. RIEVE. Under contractual collective bargaining relations with the employers, as a part of our bargaining, it is provided in the contract that the employer takes out insurance covering these workers for total disability from 13 to 26 weeks.

No broader insurance coverage is offered by private companies except as part of a retirement-income program. About the only available benefit is the insurance companies' practice of waiving premiums on group life insurance for workers who become permanently and totally disabled before the age of sixty.

It is impossible, of coure, for the average worker to provide his own disability protection through personal savings. Thus the only recourse for the totally and permanently disabled is public relief. Where the family includes growing children, the handicap of a disabling injury or illness is therefor extended to the next generation.

There are an estimated 2,000,000 people who are not working because of total and permanent disability. Less than 5 percent are covered by the workmen's compensation acts of the various States. An even smaller number are covered by railroad retirement legislation, State and local retirement programs and veterans' benefits. All the rest are dependent on public or private charity.

The fact that the statistics in this field are so incomplete is evidence of our neglect. If there was an organized attempt being made to care for these people, we would have more exact information about them.

All the hesitation about moving forward in this field seems to arise from the tales of woe told by the insurance companies about their experience in the early thirties. If we judged any proposal, in any field, according to the sad experience of those years, we would have to be against it. We learn from experience in this country; we don't become paralyzed by it.

It is true that the insurance companies had a bad time with permanent and total disability provisions in the thirties, and it cost them money. Could it not be possible that highly aggressive salesmanship during the optimistic twenties, combined with the basic mistakes of the insurance company actuaries, was responsible?

Twenty-five years ago, when the rates for this type of coverage were set up, the actuaries assumed that those who were totally and permanently disabled had a life expectancy of less than 2 years. But medical science—which did not consult the actuaries—added to his life span considerably.

Then we had a great depression. A good many people had to choose between food and insurance premiums. Obviously those who felt healthy allowed their policies to lapse; those who kept the insurance felt there was a strong possibility they would need it.

I do not deny that there were fake claims—that some people tried to use their insurance for unemployment compensation. But remember, this was at a time when there wasn't any other kind of unemployment compensation.

It seems to me that when the insurance companies assume that no law can be drawn which prevents such abuses, they are taking a dim view of your committee's talents. I have more confidence in you than that.

As a matter of fact, we believe that H. R. 6000 provides the necessary safeguards. We propose benefits in the same amounts we have suggested for the old-age pension, including allowance for dependents. Such a program, applied under the rules laid down in the House bill, will rescue millions of Americans from destitution and dependency which they now suffer through no fault of their own. We see no reason for further neglect of this clearcut need.

Rehabilitation: Rehabilitation of the physically handicapped goes hand in hand with aid for the disabled. We urge immediate expansion of the present program, which the record shows has been highly effective within its restricted limits.

According to the report of the Joint Committee on Low Income Families and Economic Stability, 53,000 persons were rehabilitated under the Federal-State program in fiscal 1948. Three out of four were unemployed when accepted for rehabilitation. But after treatment and training under the program, nearly 90 percent were employed, with an average income of $1,830.

Currently the number of disabled is increasing much faster than our rehabilitation services can handle them. We support the administration proposal in this field. We also are supporting separate legislation for other improvements in rehabilitation services.

Temporary disability: We were deeply disappointed when the House Ways and Means Committee rejected the administration proposal for a national system of temporary disability insurance. We urge your committee to restore the program set forth in H. R. 2893.

As you know, this program follows the pattern of unemployment compensation. Maximum benefits are $30 for a single worker, and $45 for a worker with three or more dependents. Maximum duration is 26 weeks.

A number of States have established programs of this nature, but all except one permit private insurance companies to provide the coverage. Our experience with these plans has not been satisfactory. Costs are higher, protection is uncertain, and there is much duplication and confusion in the administration of the programs.

As I mentioned earlier, I have had a great deal of experience with union-negotiated plans through my own organization. We were among the pioneers in this field. I will not argue that our union plans have not served a good purpose; but they suffer from the same disadvantages as union-negotiated pensions plans.

We in the CIO are particularly anxious to avoid a repetition of the workmen's compensation approach. The record of the insurance companies in this field is notoriously bad. I urge your committee to examine the ratio of premiums to losses, as set forth on page 248 of a volume entitled "Spectator Premiums and Losses by State of Casualty, Surety and Miscellaneous Lines in 1948"; 1949 edition.

These figures show that the benefits paid out represent only about half the premiums written; in workmen's compensation alone, the proportion is even lower. These facts are shocking.

In contrast, the temporary disability program in Rhode Island—the only State excluding private companies from the system—has operated at an administrative cost of only 3 percent of the contributions collected. In this field at least, the efficiency of Government is far more impressive than that of private enterprise.

Public assistance and child welfare: The CIO position in this field was presented in considerable detail before the House Ways and Means Committee. The record is available, and I will not belabor the question.

In general, we endorse more liberal Federal grants-in-aid to the States, covering the field of general assistance. We feel that dependent children suffer undue discrimination because of the low limits on Federal contributions on their behalf—limits which H. R. 600 retains. We believe the Federal Government should insist that the various States improve the standards of their assistance program.

We advocate extending Federal funds for public assistance to Puerto Rico and the Virgin Islands.

Finally, we endorse the recommendations on child welfare services which have been made by the American Parents' Committee.

I have tried to give you our major proposals in the social security field. Now I suppose it is proper to say a few words about financing them.

Frankly, the question of cost is highly technical, and I am not prepared to go into the details. You may recall that even the advisory council found it impossible to make a firm estimate covering its own recommendations.

My experience has been that statistical experts very rarely agree among themselves. However, we in the CIO have our own experts, and I would like to submit for the record an appendix which represents their best thinking on the subject. May I do so?

The CHAIRMAN. You may. Just hand it to the reporter.

Mr. RIEVE. In broad terms, we endorse the view of the advisory council that the social-security contributions of workers and employers should eventually be matched by the Federal Government, from funds raised through general taxation.

The council pointed out that the system starts with an accrued liability, because so many present members of the working force will not have contributed during their full working lifetime. This burden should not be carried entirely by the pay-roll tax. Also, a Government contribution would recognize the interest of the Nation as a whole in the welfare of the aged, the disabled, and their dependents. The council also noted the relief to the general taxpayer which results from substituting old-age pensions for public assistance.

So far as we can determine, our proposals can be financed within the terms recommended by the advisory council—that is, a Government contribution which matches the sum raised through pay-roll taxes.

Surely it cannot be said that such a program is beyond our means. As I mentioned very early in this statement, even the conservative economists agree that we have every chance to create a truly abundant life in the years ahead. We can be defeated only by our own timidity.

A few years back, the President's Council of Economic Advisers said that the surest way to bring about an economic collapse was to adopt policies based on one. The same principle applies to social security.

We hope you will agree with us that the best social-security program is one which expects the future to be better than the past. If you do, we think you can do no less than accept the proposals we have offered.

The CHAIRMAN. Thank you, Mr. Rieve.

You have attached to your statement the brief prepared by the Amalgamated Clothing Workers?

Mr. RIEVE. That is correct. And I would like to introduce another document, which is sort of an outline of the recommendations for improvement of the legislation on old-age and survivors insurance now under consideration before the Senate Finance Committee, H. R. 6000. It is a sort of an addition to what I have presented here.

The CHAIRMAN. Yes, sir. You may do so.

Are there any questions? Senator Millikin?

Senator MILLIKIN. Mr. Rieve, I would like to ask you for your own opinion: Is it practicable in the large mass-production industries to give elderly people who are not capable of working a full day, a part day's work? And I should say in connection with that that I am not thinking of any reduction of the benefits. I would like to maintain their benefits and at the same time make what they can earn as something extra, having it in mind that we are developing a lot more elderly people than we used to have, and if we are going to have this productivity which we are referring to and a better and increasing standard of general welfare, we are going to have to keep people working if they want to work and if they are capable of working. Do you see any reason why the larger industries could not stop this business of junking people at relatively early age, and keep them working longer if they want to work and are able to work, and adjust the work hours and conditions of employment to their ability to work?

Mr. RIEVE. I am categorically opposed to mandatory retirement. I think that medical science has proven that people are not as old at 65 today as they were 25 years ago, as a whole. Now, there are exceptions to that rule, as there are exceptions to all rules.

In a good many mass-production industries, where they operate primarily on a chain or a belt system, the worker has to keep up with that belt, and if you have some one in the middle of that belt that is slower than the rest of the belt, it slows up production all around. There are perhaps possibilities that that worked could be absorbed in other operations, because there are all kinds of other operations in a plant. And I will say that I don't think that industry has done its full share of trying to absorb the older people. I think primarily they feel, I suppose, that the younger man is more productive, and consequently they prefer younger people. I am afraid we are reaching again the stage we did some years before the war—it died down a little—where a man 45 or 50 had difficulties in getting a job, because industry felt that his productivity was limited to a few more years and then they would have a liability on their hands.

Generally speaking, I think a worker could be absorbed. There are exceptions.

Senator MILLIKIN. As distinguished from mass-production industries, that would be particularly true in handicraft businesses.

Mr. RIEVE. Oh, yes. There is no question about it.

Senator MILLIKIN. A man might not be able to work 6 or 7 hours, but he might be able to do a good 3 or 4 hours' work?

Mr. RIEVE. That could be done. There is a little cost atttached to an employer where he has on one job two men instead of one man; and when a shift changes there is always a little cost attached. I

think the other man cannot pick up the machine from the one wl left it without some little difficulty. That is just one thing.

Senator MILLIKIN. Is there not a challenge there to industri statesmanship?

Mr. RIEVE. There is.

Senator MILLIKIN. Industry should bear its own costs. It shou not be shifting its costs to the public. Do you not think that that a rule that should be followed, so far as practicable?

Mr. RIEVE. Yes, I think I agree with you, Senator, on that poi And I suppose we will have to educate industry in that direction. don't think industry is doing it. I am not going to say that indust is not doing it at all, but I am not, either, going to say that they a doing their full share. They could do better than they are in that fiel

Senator MILLIKIN. You rendered a great service on the Adviso Council. You of course are aware of the large numbers of peop we are going to have. We have them now, but they are gettii larger and larger. And if we are going to have this productivi which is the basis of carrying all of our plans of every kind, all of o Government expense and all of our private expense, it seems to r that we have to stop junking people as long as they have some usefu ness in them.

Mr. RIEVE. We found, during the war, that we had no problem wi the aged. Industry was only too glad to get them. And they render a valuable service to their country. Without them we could n have prosecuted the war as successfully as we did.

I see no reason why the same people cannot make an equal contr bution to productivity in peacetime.

The CHAIRMAN. Is industry making progress in that direction

Mr. RIEVE. I would rather say, judging war years as a base, th industry is slipping, definitely slipping, making no progress in th direction. Industry probably is making more progress in that dire tion than existed prior to the war. I don't think it has slipped to bad a situation as existed prior to the war. But if you take war yea as a base, then industry is slipping. It is laying off more people. contract negotiations and as to old age pensions, industry insists most instances that there be a mandatory laying off of workers at years or 68 years of age regardless of any kind of an investigation to whether the person involved is still able to produce or not.

Senator MILLIKIN. There are a lot of statistics to the effect that du ing the last 10 years we have not increased our per man productio per day. Have you any comments on that? It used to be said th we were increasing our per man per day production about 2½ or 3 pe cent per year, but that during the last 10 years we have stopped doi that.

Mr. RIEVE. I think we have a chart over here on that score. Th chart which I have is by the Council of Economic Advisers. It show here, the rise in per man-hour productivity.

The CHAIRMAN. Is that true, Mr. Rieve, or not, in the texti industry?

Mr. RIEVE. Definitely true. It is definitely true in the texti industry.

The CHAIRMAN. You know as to that industry.

Mr. RIEVE. That arises from two reasons, Senator. It arises b cause for 60 years or more the textile industry has been notorious

slow in technological improvements. But they are catching up and catching up very fast. As a result of that, productivity in the textile industry has risen tremendously per man-hour. Because the man has a better tool to operate with, too. It doesn't necessarily follow that he exerts himself more, although that is so, too. But also he has a better tool to operate with.

Senator MILLIKIN. How much unemployment do you have in the textile industry now?

Mr. RIEVE. I suppose we still have around 100,000. We used to have 200,000. I don't have the figures over the last 2 weeks or so. Our unemployment has risen sharply in the last 2 months.

Senator MILLIKIN. Are you speaking generally, or as to the textile business?

Mr. RIEVE. Well, generally; but the textile industry is not immune from it. Let me put it that way. In the textile industry, here, a year or so ago, we were the first to feel the effects of unemployment; a little more than the other industries. I think that we are about in line now.

Senator MILLIKIN. Are imports bothering you much?

Mr. RIEVE. They are beginning to, yes, very much.

The CHAIRMAN. Are there further questions?

We thank you very much, Mr. Rieve.

(The appendixes submitted by Mr. Rieve are as follows:)

STATEMENT PREPARED BY THE AMALGAMATED CLOTHING WORKERS ON SPECIFIC PROTECTION OF AGENT LAUNDRY DRIVERS UNDER H. R. 6000

Many employers, relying upon the ambiguous nature of the Social Security Act, have sought, and unfortunately, invariably succeeded in withdrawing from coverage under the act, their employees engaged as drivers by the simple device of designating them agent drivers. This withdrawal from coverage was accomplished without any change in the nature of the work performed, the economic function of the driver, or previously existing relationship to his employer.

The framers of H. R. 6000, cognizant of the economic realities prevailing among so-called agent drivers and other commission salesmen sought to eliminate the ambiguities and correct the deficiencies contained in the original Social Security Act by specific provision relating thereto (sec. 210 (k) (3) and (4) of H. R. 6000).

As the House Ways and Means majority report accompanying H. R. 6000 explained (p. 81):

"Your committee believes that the usual common law rules for determining the employer-employee relationship fall short of covering certain individuals who should be taxed at the employee rate under the old-age, survivors, and disability insurance program. The statutory provisions set forth in paragraphs (3) and (4) (sec. 210 (k)) are designed to correct this deficiency in existing law by extending the definition to include those individuals, who although not employees under the usual common-law rules, *occupy the same status as those who are employees under such rules*" [italics supplied].

Further, during the debate on the bill on the House floor, Representative Walter A. Lynch, one of the proponents of H. R. 6000 and a member of the Ways and Means Committee made expressly clear that the framers of the bill intended to cover agent drivers. He stated (81st Cong., 1st sess., Congressional Record, pp. 14192–14193, October 5, 1949):

"The bill would redefine (employee) and would thereby restore coverage to from 500,000 to 750,000 salesmen, taxi drivers, industrial home workers, contract loggers, mine lessees, *agent drivers and commission drivers*, and other persons technically not employees at common law who were deprived of employee status by Public Law 642 Eightieth Congress, the so-called Gearhart resolution. These workers who were taken out from under the social-security program by the Eightieth Congress are dependent upon their earnings from work like other groups covered as employees under the bill.

"It is our intention to bring under coverage those who were callously thrown out of social security by the Gearhart Act and *likewise to circumvent unscrupu-*

lous employers who believe that, by entering into contracts with agent driver and commission driver salesmen and similarly situated salesmen stating that they are independent contractors, they can go behind the intention of the Social Security Act." [Italics supplied.]

All familiar with the laundry industry and similar service industries know that Representative Lynch's statement is a wholly accurate summarization of the existing facts. Prior to 1930 there were no agent drivers in the laundry industry. In the early thirties, with the advent of social security, unemployment insurance, and other social legislation laundry owners, seeking to reduce operating expenses, began to convert their regular drivers to agent drivers. The general method whereby this fictitious conversion was accomplished was to compel the driver to purchase a truck on terms providing for little or no down payment and intallment payments extended over a period of many years. Significantly, under the contract of purchase, each agent driver was compelled to bring all laundry bundles collected exclusively to his employer until the purchase price had been fully paid. The employer thus retained full control of the driver to the same extent that he had hitherto exercised when the driver was designated as an employee. The agent driver continued as theretofore to drive a laundry vehicle, pick up and mark bundles, carry them between the customers and the laundry, collect payments for services and account for the money so collected to the laundry. The only difference was that agent drivers received percentages of retail prices fixed to cover the agent driver's expenses instead of fixed salaries. Even this difference, however, is illusory; the agent driver's net earnings or take-home pay remaind identical to what his wage had been.

Unfortunately, however, despite Representative Lynch's clear and concise statement that agent drivers are entitled to the benefits of H. R. 6000 and H. R. 6000 contemplated covering them, that bill would lend itself to the purposes of the litigious employer who seeks to deprive agent drivers from coverage.

That such an ambiguity exists is established by merely looking to the House Ways and Means Committee minority report dealing with the precise question of agent drivers. Contrary to the majority report and Representative Lynch's statement, the minority would interpret the proposed bill as excluding agent drivers (p. 200).

In sum, only by the attached clarifying amendments will the intention of the framers of H. R. 6000 be fully carried out. We therefore respectfully direct the committee's attention to these amendments and urge that H. R. 6000 be clarified as there indicated.

PROPOSED AMENDMENTS TO H. R. 6000

Section 210 (k) (2) should be amended as follows: Page 49, line 4, omit "expressly"; page 49, line 5, omit "complete." As thereby amended, section 210 (k) (2), page 49, lines 2 through 12, would read as follows:

"* * * For purposes of this paragraph, if an individual (either alone or as a member of a group) performs service for any other person under a written contract reciting that such person shall have control over the performance of such service and that such individual is an employee, such individual with respect to such service shall, regardless of any modification not in writing, be deemed an employee of such person (or, if such person is an agent or employee with respect to the execution of such contract, the employee of the principal or employer of such person); or."

More importantly, section 210 (k) (3) should be amended as follows: Add a new subparagraph (G), after subparagraph (F), to read as follows: "(G) As an agent driver or commission driver;".

If the Senate committee accepts the foregoing amendment, subparagraph (G), page 50, line 8, in H. R. 6000 will become "(H)."

Section 203 (k) (4) (F), appearing at lines 14 and 15 of page 51, should be amended by adding the following: "(other than the investment by a salesman or agent driver in facilities for transportation)."

CONTRACT

AGREEMENT made this —— day of ———, 19——, between ———, with its principal place of business located at ———, hereinafter called the Employer and the Independent Laundry Drivers Union, Local 324, Amalgamated Clothing

Workers of America, located at 799 Broadway, New York City, hereinafter called the Union, for and in behalf of the members thereof now employed and/or hereafter to be employed by the Employer and collectively designated as "Agent Drivers."

Whereas it is the intent and purpose of the Employer and the Union that this Agreement shall promote and improve industrial and economic relationships between the Employer and its Agent Drivers covered by this agreement, and

Whereas it is expected that the respective representatives of the parties to the agreement shall represent in the shop and in their dealings the cooperative spirit of the agreement and shall be leaders in promoting that amity and spirit of good will which it is the purpose of this agreement to establish,

Now, Therefore, in consideration of the mutual covenants, promises, and agreements herein contained, the parties hereto agree as follows:

1. *Definition.*—The term "Agent Drivers" when used in this agreement include all of the Agent Drivers of the Employer, who themselves operate laundry routes, whether or not said Agent Drivers own shares or stock in the business of the Employer. An Agent Driver is one who furnishes his own vehicle in connection with the operation of a route.

2. *Recognition.*—The Employer recognizes the Union as the exclusive bargaining representative for all of its Agent Drivers as defined in the preceding clause, and will employ such Agent Drivers only who are members in good standing of the Union, and will furnish an official working card from the Union upon commencement of the employment. In the event the Employer violates any of the provisions of this clause the Union shall be free to take such action as it deems appropriate 1 week after the Union has given notice to the Employer by registered mail of such violation, anything in clause 12 to the contrary notwithstanding.

3. *Status of other workers.*—(*a*) The Employer shall not employ any other employees who are not members in good standing of a local union or joint board affiliated with the Amalgamated Clothing Workers of America. In the event the Employer violates this provision the Union shall be free to take such action as it deems appropriate, anything in clause 12 to the contrary notwithstanding.

(*b*) In the event (1) the Employer fails to transmit to the said local union or joint board affiliated with the Amalgamated Clothing Workers of America all sums required o be checked off and transmitted to it by the Employer in accordance with the provisions of the collective-bargaining agreement between the Employer and the said local union or joint board affiliated with the Amalgamated Clothing Workers of America; or (2) the Employer fails to comply with any arbitration decision or award rendered under the collective agreement between the Employer and said local union or joint board affiliated with the Amalgamated Clothing Workers of America; or (3) of termination or absence of a collective agreement between the Employer and said local union or joint board affiliated with the Amalgamated Clothing Workers of America, the Union shall be free to take such action as it deems appropriate, anything in clause 12 to the contrary notwithstanding.

(*c*) The Union shall not support any stoppage by said local union or joint board affiliated with the Amalgamated Clothing Workers of America, under the provisions of this clause 3, unless said local union or joint board obtain the consent of the Union before effecting such stoppage. Said local union or joint board shall be notified by the Union before the Union effects any stoppage under the provisions of this agreement against the Employer.

4. *Registration.*—(*a*) The Employer shall furnish to the Union, once each month, a written list indicating all Agent Drivers employed by it and their helpers, if any, as well as laundry stores or other wholesale customers for whom the Employer processes work. Changes made in said list shall be communicated to the Union by the Employer by means of a written supplementary list, and the said changes shall be incorporated in the written list furnished to the Union in the following month.

(*b*) The Employer shall process work for only such laundry storekeepers or other wholesale customers as are registered with and agreed upon by the Union, and which employ only members in good standing of the Amalgamated Clothing Workers Union, and which laundry storekeepers, if they drive a vehicle themselves in the operation of a laundry route, are members in good standing of the Union. It is the purpose and intent of the parties, by this provision, to eliminate destructive competition of nonunion labor to prevent undue overtaxing of facilities of the Employer's laundry and to avoid vicious speed-ups. It is the expectation and hope of the parties hereby to minimize undermining of fair labor stand-

ards, depreciation in quality of productive work, and interference with proper service to the public and with the earning of living wages by the Agent Drivers. Consent by the Union to dealing with laundry storekeepers shall not be unreasonably withheld, and the granting or refusal thereof shall be guided by the policy expressed in this clause.

5. *Wages.*—(*a*) Each Agent Driver shall account to the Employer for his collections periodically in accordance with the manner and method heretofore prevailing in the plant.

(*b*) Out of such collections thus accounted for the Agent Driver shall, subject to clause 16 below, retain as his commission 50 percent of said collections on wet wash laundry bundles, and 40 percent of said collections on all other services. The balance of the collections shall be paid over by the Agent Driver to the Employer. The percentage of collections presently retained by the Agent Driver shall in no case be reduced, however, anything herein to the contrary notwithstanding.

(*c*) The commissions herein provided for are adjusted so as to include expenses incurred by the Agent Drivers in the operation of the vehicle and route, such as advertising, tickets, license charge, vehicle registration, vehicle insurance, etc.

(*d*) The Employer shall furnish to the Agent Drivers weekly a statement and route-sheet setting forth the individual retail amount to be collected from each customer and the amount of the gross collections to be made.

(*e*) The Employer shall not perform laundry services directly or indirectly to contractors or storekeepers or otherwise, for the public, at prices less than those charged to the public by him through the Agent Drivers.

6. *Disability relief and benefit fund.*—On the first day of the week following the date of this agreement, and on the first day of each week thereafter during the term of this agreement, the Employer shall pay to the Union's Disability Relief and Benefit Fund 2 percent of the net gross collections received by it from the Agent Drivers during the preceding week. By the net gross collections is meant that amount of collections remaining after deductions of commissions by the Agent Drivers and after deduction of Union dues as herein provided below. Nothing herein contained shall be deemed to be a waiver of any sums presently owing from the Employer to the fund. In the event the Employer violates this provision the Union shall be free to take such action as it deems appropriate one week after the Union has given notice to the Employer by registered mail of such violation, anything in clause 12 to the contrary notwithstanding.

7. *Responsibility for lost laundry.*—(*a*) The Employer shall be responsible for all laundry bundles brought into the plant for processing by the Agent Drivers and not returned to them for delivery to the customers.

(*b*) The Employer shall pay to each Agent Driver each week 2 percent of the net amount of collections (as defined in clause 6) cashed in weekly, as reimbursement for "unknown losses" in laundry brought in for processing and returned incomplete to the Agent Drivers. "Unknown losses" are such losses in bundles returned to the Agent Driver as are not included within definition of "known losses" below.

(*c*) The Employer shall be responsible for all "known losses" in laundry brought in to the plant by the Agent Drivers for processing and returned incomplete to the Agent Drivers. "Known losses" include:

1. Laundry bundles not returned to Agent Drivers for delivery.
2. Mix-ups.
3. Loss of items brought into the plant by the Agent Driver for processing by piecework rather than by weight.

(*d*) Anything in this Agreement to the contrary notwithstanding, in the event the Employer charges for fire or theft insurance, or other so-called surcharges on laundry work, the Employer shall be responsible for all damages, including loss, theft or fire, to the laundry work from the time of pick-up from the customers by the Agent Drivers to the time of delivery to the customers by the Agent Drivers.

8. *Schedule of services.*—(*A*) For the purpose of enabling the Agent Drivers to make specific commitments to customers with respect to delivery of processed work, the Employer shall post a notice in the plant clearly indicating the following:

1. Schedule of days and hours during the week when Agent Drivers customarily bring in work for processing; and
2. A further schedule stating the day and hour when work brought in on each of the occasions enumerated may be picked up completely processed and ready for delivery.

(*B*) The Employer shall not discriminate with respect to service or quality of work as between Agent Drivers and other drivers or stores for which the employer processes work. Work shall be processed on the first-come-first-served basis, unless otherwise agreed upon in writing by the parties.

(*C*) The Employer shall not in any week, or for any reason, prior to the day that has been established by common practice in the plant as the dead line for the payment over of the balance of collections for the preceding week, withhold from any Agent Driver any processed laundry which is ready for delivery to the public.

9. *Hours of work.*—No Agent Driver shall be obliged to work more than 44 hours in any one week.

10. *Changes of employment.*—No change shall be made in the Agent Drivers by the Employer, either by the release of, or addition of Agent Drivers unless by mutual written consent of the parties hereto or unless the Joint Committee below provided for under clause 11 has voted and consented thereto, or failing such consent, the Impartial Chairman and Arbitrator under the agreement has approved such change. No Joint Committee regulation or arbitration decision shall change or vary any of the provisions of this agreement. In the event the Employer violates any of the provisions of this clause the Union shall be free to take such action as it deems appropriate 1 week after the Union has given notice to the Employer by registered mail of such violation, anything in clause 12 to the contrary notwithstanding.

11. *Fair-trade regulations.*—(*a*) There shall be a joint committee, one-half of the membership of which shall consist of three representatives of each Employers' Association having contractual relationship with the Union and the other half of the membership of which shall consist of an equal number of representatives selected by the Union. This Joint Committee shall, following investigation and study of conditions in the industry, establish fair-trade-practice regulations, which, however, shall in no case conflict with any City, State, or Federal Laws. The Employer and the Union agree to abide and be bound by fair-trade regulations thus established to the end that conditions of below-cost competition may be eliminated and labor conditions stabilized.

(*b*) The parties hereto recognize the necessity of avoiding and eliminating intolerable competitive conditions which have existed in the industry, of maintaining decent labor conditions, of enabling the inside employees and Agent Drivers to earn a living wage, of giving proper and efficient service to the public, and of operating the laundry of the Employer in accordance with the rules and regulations of the Health Department for the protection of the inside employees and the public.

(*c*) It is recognized in principle that unreasonable changes in registration of Agent Drivers by the Employer and other Employers may result in overloading of some plants with work and in undersupplying of others, to the detriment of the members of the Union and of the members of any other local union or joint board affiliated with the Amalgamated Clothing Workers of America, who may be employed therein, and of the industry generally. It is agreed therefore that a maximum work-week of 44 hours for inside employees shall be the guide for determining the proper application of the provisions of clause 10 hereof, to the end that work brought in by Agent Drivers shall not overcrowd any one plant, that members of the Union and of any other local union or joint board affiliated with the Amalgamated Clothing Workers of America, shall be afforded more equal opportunity for earning a living wage, that speed-ups and slow-downs by reason of overloading or lack of work may be eliminated, and that the provisions of clause 8 hereof may be effectively administered.

12. *Strikes—lock-outs.*—This Agreement provides for an orderly adjustment of all matters in dispute between the parties. It is agreed that strikes, lock-outs, sympathy strikes, and stoppages of work are prohibited, subject to the provisions of clauses 2, 3, 4, 10, 13, 14, 16, 18 hereof, and in the case of the Union then only upon the authority of the Manager of the Union.

13. *Arbitration.*—(*a*) Any and all matters in dispute between the parties hereto arising out of this Agreement shall be submitted to the Impartial Chairman designated by Hyman Blumberg. All decisions of the Impartial Chairman shall be rendered within ten (10) days after the matter is submitted to him. The decision of said Impartial Chairman shall be final and binding upon all parties with regard to any matter submitted to him under the terms of this Agreement.

(*b*) Decisions of the Impartial Chairman shall be effective the date the decision is rendered. Failure to abide by such decision shall be considered a breach of this

Agreement and the Union or Employer shall be free to enforce such decision by such action as it deems appropriate, anything in clause 12 to the contrary notwithstanding.

14. *Labor Disputes.*—It is agreed that the Employer will not do work, directly or indirectly, for any person, firm, or corporation engaged in the laundry industry and involved in a strike or labor dispute. In the event the employer violates this provision the Union shall be free to take such action as it deems appropriate, anything in clause 12 to the contrary notwithstanding.

15. *Soliciting.*—(*a*) Agent Drivers agree to furnish their own vehicles, and be responsible for same.

(*b*) Agent Drivers agree to furnish customers for the route.

(*c*) The Employer shall not, directly or indirectly, in any manner, divulge the identity of the customers of the routes operated by the Agent Drivers, nor shall it directly or indirectly solicit said customers for itself or for any person or Agent Driver unless it has first paid in cash, as a bonus to the Agent Driver, the amount of $30 per dollar of average weekly business of the route involved. The preceding 4 weeks shall be the basis for calculating the average volume of business per week of the route. For example: If the route averages $100 per week for the preceding 4 weeks the amount of cash bonus to the Agent Driver shall be $3,000.

16. *Check-off.*—The Employer shall, in addition, collect weekly from each Agent Driver a sum representing Union dues, in accordance with a list furnished by the Union and shall transmit the same to the Union semimonthly. The Employer agrees to be responsible for such collection of Union dues as well as for transmittal of same to the Union. Should the Employer fail to effect such collection, it shall nevertheless be liable for the total sum required to be collected as herein provided for. In the event the Employer violates this provision the Union shall be free to take such action as it deems appropriate 1 week after the Union has given notice to the Employer by registered mail of such violation, anything in clause 12 to the contrary notwithstanding.

17. *Examination of books.*—The Union shall have the right at all reasonable times to examine the books, records, and papers of the Employer for the purpose of determining whether the Employer is complying with the provisions of this agreement.

18. *Recognition of Union Representatives.*—The Employer agrees to recognize and deal with such representatives of the Union as the Union may elect or appoint. The Employer further agrees to permit duly accredited represenatives of the Union to visit its plant during working hours. The Union may post notices in the plant of the Employer. In the event the Employer violates this provision the Union shall be free to take such action as it deems appropriate 1 week after the Union has given notice to the Employer by registered mail of such violation, anything in clause 12 to the contrary notwithstanding.

19. *Duration.*—This agreement shall commence on the date first mentioned above, and shall terminate on the day of ——— 19——, on which latter date this Agreement and the provisions thereof shall be automatically renewed from year to year thereafter unless 30 days prior to the expiration date of this Agreement of any renewal thereof notice in writing by registered mail is given by either party to the other of its desire to terminate this Agreement.

CERTIFICATE OF AUTHORIZATION

The undersigned members of Inter-Borough Laundry Board of Trade, Inc., hereby authorize Louis H. Solomon, Esq., to execute on their behalf and in his sole discretion a collective-bargaining agreement between said association and

Independent Laundry Drivers Union, Local 324, Amalgamated Clothing Workers of America, for the period from May 1, 1946, to May 31, 1948, and with provision for annual renewal of said agrement thereafter, and they each further authorize said Louis H. Solomon, Esq., to execute on their behalf and in his sole discretion any and all supplements to and modifications of said collective-bargaining agreement, and each of the undersigned hereby agrees to be bound by said collective-bargaining agreement and any and all supplements thereto and modifications thereof as shall be executed by Louis H. Solomons, Esq., with the same force and effect as if each of said documents shall have been executed by each of the undersigned individually.

(Signed by members of Inter-Borough Laundry Board of Trade, Inc.)

SUPPLEMENTAL AGREEMENT

Supplement to collective-bargaining agreement made as of May 1, 1946, between Inter-Borough Laundry Board of Trade, Inc., and Independent Laundry Drivers Union, Local 324, Amalgamated Clothing Workers of America.

It is agreed by and between the parties to the foregoing collective-bargaining agreement as follows:

1. Clause 6 of said agreement, entitled "Disability Relief and Benefit Fund," is modified so as to provide that with respect to net-gross collections received by the employer from the agent drivers for the period commencing with the first day of the week following May 1, 1936, and ending with the end of the last full week in May 1947, the employer shall pay 1½ percent to the union's disability relief and benefit fund, and after the said date of the last full week in May 1947, the employer shall pay the full 2 percent to the union's disability relief and benefit fund as provided for in clause 6 of the said agreement.

2. The foregoing modification shall be applicable to the members of the Inter-Borough Laundry Board of Trade, Inc., only as long as they remain members of said association.

In witness whereof the parties hereto have caused this supplemental agreement to be executed by their duly authorized agents this 3d day of May 1946.

INTER-BOROUGH LANDRY BOARD OF TRADE, INC.,
By LOUIS H. SOLOMON, *Owners.*
INDEPENDENT LAUNDRY DRIVERS UNION, LOCAL 324, AMALGAMATED CLOTHING WORKERS OF AMERICA,
By MURRAY M. GASSMA, *Manager.*

Supplemental agreements made as of June 19, 1947, between the Inter-Borough Laundry Board of Trade, Inc., hereinafter called the Employer, and Independent Laundry Drivers Local 324 of the Amalgamated Clothing Workers of America, hereinafter called the Union.

Whereas the Employer and the Union are parties to a collective bargaining agreement dated May 1, 1946, and presently in force (herein called the Agreement), and

Whereas the Employer is presently negotiating with the Laundry Workers Joint Board for an extension of the contract to 1952, and the parties hereto have agreed to an extension of the contract between the parties hereto to terminate on June 19, 1952, in contemplation of the extension of the Laundry Workers Joint Board contract to 1952,

Now, Therefore, in consideration of the premises, the parties agreed that said Agreement shall be modified and amended as follows:

1. Clause 19 of the Agreement is amended so as to provide that the termination date shall be June 19, 1952, or at such earlier date as is finally fixed with the Laundry Workers Joint Board for the termination of the Laundry Workers Joint Board contract presently in negotiations. In the event that the Laundry Workers Joint Board contract presently in negotiation shall terminate at an earlier date, and shall be extended for a further period, then the contract between the parties hereto shall be extended accordingly to the termination date of the Laundry Workers Joint Board contract as renewed and further renewed.

2. Except as herein modified and amended, the Agreement shall continue full force and effect until the 19th day of June 1952, or earlier as her provided.

In witness whereof the parties hereto have caused this Supplemental Agr ment to be executed by their duly authorized agents.

INTER-BOROUGH LAUNDRY BOARD OF TRADE, INC.,
By LOUIS H. SOLOMON, *Employer.*
INDEPENDENT LAUNDRY DRIVERS UNION LOCAL 324 OF THE AMALGAMATED CLOTHING WORKERS OF AMERICA,
By MURRAY M. GASSMA, *Manager.*

CERTIFICATE OF AUTHORIZATION

We, the undersigned employers have authorized the Supplemental Agreem dated June 19, 1947 between the Inter-Borough Laundry Board of Trade, I and the Independent Laundry Drivers Union Local 324 of the Amalgamat Clothing Workers of America and do hereby ratify same with the same force a effect as if the same were entered into between said union and each of t undersigned individually and executed by each of the undersigned individua

(Signed by employers.)

SUPPLEMENTAL AGREEMENT

Supplemental agreement made this 26th day of December 1947 between Int Borough Laundry Board of Trade, Inc., with its principal place of business loca at 101 Park Avenue, New York City (hereinafter called the "Association"), and on behalf of its members signatory hereto (herein collectively called "Employer"), and INDEPENDENT LAUNDRY DRIVERS UNION LOCAL 324 of t AMALGAMATED CLOTHING WORKERS OF AMERICA, located at 799 Broadway, N York, N. Y. (hereinafter called the Union), for and on behalf of the membe thereof now employed or hereafter to be employed by the Employer and coll tively designated as "Agent Drivers."

Whereas, the parties hereto are parties to a collective bargaining agreem dated May 1, 1946, and to agreements supplemental thereto dated May 1, 1946, a June 19, 1947 (said collective bargaining agreement and supplements being he inafter referred to as the Agreement), and which Agreement is in full force a effect and by its terms will not expire until June 19, 1952, and

Whereas, the parties desire to amend the Agreement in the manner hereinaf set forth,

Now, therefore, in consideration of the premises, the parties agree that t Agreement shall be modified and amended as follows:

1. Clause 5–E of the Agreement is changed to read as follows:

"In the event the Employer charges its retail customers, or in the event t Employer's regular drivers or its own or other storekeepers charge the E ployer's or the storekeepers' retail customers, prices for laundry services th are less than the prices which the Employer instructs its Agent Drivers to char to the public, then the prices to be charged by the Agent Drivers to the pub shall be reduced so as to equal said lesser prices charged by the Employer or its regular drivers or by the storekeepers, and the commissions provided for Clause 3–B hereof shall be calculated upon said lesser prices charged by t Agent Drivers. The foregoing provisions shall be fully applicable to 'cash a carry' laundry services performed by the Employer except that a differential 20 percent between the prices charged by the Employer to 'cash and carr customers and the prices charged to other retail customers for laundry servic shall be permitted before the requirement of reducing the prices to be collect by the Agent Drivers becomes effective. If the Employer fails or refuses comply with the provisions of this paragraph after demand by the Union t Union may submit the matter to arbitration and, in the event the Arbitrator fin that the Employer has violated this paragraph he shall award damages for su violation in addition to such other relief as he may find appropriate."

2. Clause 12 of the Agreement is amended by including 5–E in the claus enumerated therein.

3. Except as herein modified or amended the Agreement shall continue in full force and effect.

In witness whereof the parties hereto have caused this Supplemental Agreement to be executed by their duly authorized agents upon the date first above written.

RESOLUTION ON SOCIAL SECURITY

(Adopted by CIO Executive Board, February 15, 1950)

CIO affiliates, through their collective-bargaining efforts, have continued to make notable advances in obtaining social-security protection. This progress not only aids those directly involved but gives a tremendous impetus to the passage of adequate social-security laws. The entire Nation is indebted to

the strikers in steel, auto, and other industries who through their sacrifices h contributed so much to the cause of economic security.

We must not relax our efforts. Very substantial improvements must still made before we achieve our goal of adequate social-insurance protection for Americans.

The CIO Committee on Social Security has been developing detailed legi tive proposals to carry out the resolutions adopted at our recent convent These deal with four main branches of social security: Old age, survivors, a disability insurance; public assistance; unemployment insurance and empl ment offices; and a national health program, including health insurance.

We strongly urge all affiliated unions and industrial union councils to pl social-security improvement No. 1 on their legislative-action program. All our combined strength should be directed toward an informed membership w can express the urgency of the need of across-the-board improvement to th respective Congressmen.

OLD AGE, SURVIVORS, AND DISABILITY INSURANCE

The CIO position will be presented in a few weeks before the Senate Fina Committee, which is now holding hearings on H. R. 6000, the bill passed by House last session.

We support universal coverage, which is indispensable to proper protect for all aged citizens. As a minimum immediate step, we believe that bene should be more than doubled in line with the specific proposals of the CIO Co mittee for Social Security. The permissive retirement age for women sho be reduced to 60. The program for total and permanent disability insurance n in H. R. 6000 must be retained and should be improved. The national syst for temporary disability insurance outlined in the administration bill in House should be enacted.

PUBLIC ASSISTANCE

This phase of social security likewise requires substantial improvement beyo the provisions of H. R. 6000. No matter how much better we make social surance laws, many Americans will have to rely on public aid on the basis need to help them in emergencies. This last resort must be adequate to h all needy persons, not just the aged, the blind, and dependent children, as present. H. R. 6000 should be amended to provide Federal matching gra for general relief also. The grants should be adjusted to the financial requi ments of the States. Dependent children should be aided on as liberal a ba as other groups. Federal standards should be strengthened to reduce reside requirements and secure other improvements.

UNEMPLOYMENT INSURANCE AND EMPLOYMENT OFFICES

We commend the plans of the Committee on Social Security to introduce a l for a national system of unemployment insurance and employment offices w adequate benefits for all wage earners. We urge the House Ways and Me Committee to give immediate consideration to this proposal as well as to otl bills aimed at patchwork improvement in the Federal-State system.

With unemployment now close to 5,000,000, Congress must make plans to place the insufficient protection written into State laws. Benefits must raised substantially and duration extended so that able-bodied men and wom who cannot find jobs are not abandoned to public or private charity.

The program for Federal standards again recommended by President T man would be a valuable interim step. It should be accompanied by reinsura grants to States whose funds are running low and by adequate appropriati for the Federal and State employment-security agencies.

HEALTH INSURANCE AND THE NATIONAL HEALTH PROGRAM

We deeply regret the continued failure of the organized doctors to support legislation to make essential medical services available to all Americans. Hi paid press agents have fanned the doctors' fears of Government action throu misstatement of facts and distortions. The American Medical Associati through its board of trustees, has even reversed its previous support for p manent- and total-disability insurance. Bills that would give Federal funds train more doctors and other medical personnel and to expand local pub

health services and medical research still are tied up in congressional committees.

We urge immediate passage of such measures. We also urge as rapid action as possible toward the establishment of a national system of health insurance to cover the costs of medical care on an efficient, unified basis for all Americans.

RESOLUTION NO. 15

OLD-AGE, SURVIVORS, AND DISABILITY INSURANCE AND PUBLIC ASSISTANCE

The drive of affiliated CIO unions for pensions, health and other social-security provisions has roused Congress from 14 years of inaction. Today it seems possible that the provisions of the Social Security Act, which were admittedly inadequate when enacted in 1935 and are now a mockery of social security, may be modernized to meet in some degree the needs of old people, the dependent, the sick, the disabled and the unemployed.

We are proud of the fact that our unions, by making social security the No. 1 item in their 1949 collective-bargaining demands, have forced congressional committees to take social security out of moth balls and put it high on the legislative calendar for the second session of the Eighty-first Congress.

We welcome the support of those who are now campaigning for improvement of the Government social-security programs, even though they err in representing our collective-bargaining demands as an alternative to extension and improvement of the Government programs. They are mistaken in charging that our demands are in any sense competitive with or alternatives for Government programs. They are not. They are and will continue to be a necessary supplement to the Government program. We reaffirm our belief in and support for comprehensive National Government programs of social security that, by coverage for all families and pooling of risk, can give maximum protection at the least expense. Likewise, we reaffirm our belief and support for our collective bargaining for pensions and social security.

We propose to the American people that they join in a great crusade to end the double standard whereby—

> Workers who have invested their lives in building our industrial supremacy receive average pensions of slightly more than $300 a year, while—
>
> Management executives receive pensions from $25,000 to $77,000 a year (usually under noncontributory plans that are said to be morally debilitating when proposed for wage earners), and
>
> Members of Congress may receive pensions of more than $8,000 a year.

This is morally wrong, economically and socially destructive. It is part of the boom-and-bust philosophy of the twenties that has been repudiated in five successive Presidential elections.

The 14 years of inaction and procrastination by Congress are shameful. Old-age and survivors insurance contributions by workers and employers will rise from 1 percent to 1½ percent of wages on January 1, 1950, but Congress has not yet acted to increase OAS benefits above the present average of $25 a month, which is less than half the amounts paid by some States as public assistance to needy persons qualifying under the hateful means test.

H. R. 6000, which the House passed shortly before adjournment, is a step in the right direction. It covers 11,000,000 people under old-age and survivors insurance and increases benefits by close to 100 percent for low-paid workers and by about 50 percent for better-paid workers. H. R. 6000 also launches a new system of permanent- and total-disability insurance and brings various improvements in public assistance.

The Republican members of the House Ways and Means Committee all signed a minority report which was less liberal and which was translated into a bill offered as a substitute. The overwhelming final vote for H. R. 6000 was partly the result of our collective-bargaining efforts which demonstrated the determination of American wage earners to achieve security. The bill's passage was a defeat for the insurance companies which had vigorously fought genuine improvements. Regrettably, the insurance companies' lobby did influence some members of the committee and thus watered down the administration's proposals quite drastically.

The Senate Finance Committee has not considered social security at this session, although its advisory council last year recommended many improvements,

some of which go beyond the House version. Only a few members of the Senate Finance Committee have in the past voted for measures favored by organized labor. The most vigorous kind of public pressure must be organized in order to secure favorable and prompt action by this committee and the Senate.

Although the CIO favored passage of H. R. 6000, despite its inadequacies, we had urged in hearings that the committee support the administration bill, which would have doubled insurance benefits on the average, extended coverage to nearly all Americans, and added a national system of temporary- as well as permanent-disability insurance. We also favored extensive improvements in public assistance, including Federal grants to States for general assistance for all types of persons in need. This proposal was rejected by the House committee. The present social-security law is so out of date that even the substantial advances in H. R. 6000 would leave many gaps and inadequacies.

Our State industrial-union councils have made vigorous efforts to improve State laws on workmen's compensation, unemployment compensation, and public assistance. In a handful of States temporary-disability laws have been passed, most of which are wholly unsatisfactory. Fifty-one separate State systems of social insurance are highly confusing. In many States underrepresentation of industrial areas in their legislatures makes it difficult to secure good laws, especially since insurance companies and other conservative forces constantly marshal their efforts to defeat us. Such separate State systems are wasteful and cannot adequately protect our many members who move from State to State.

CIO workers have a profound interest in social insurance. A sound national system is vitally necessary and long overdue. If well planned and well administered, the social-security system will in itself help avoid economic ups and downs: Now, therefore, be it

Resolved, The Congress of Industrial Organizations reaffirms our desire for a unified comprehensive national social-insurance system, with universal coverage and adequate benefits, giving protection against the hazards of old-age survivorship, permanent and temporary disability, sickness, industrial accidents, and unemployment, geared in with a national employment service and other positive programs to minimize such hazards.

We urge Congress, at its coming session, to revise the social-security system more liberally than is done by H. R. 6000 through adopting the following provisions:

(*a*) Universal coverage.

(*b*) Relating benefits to earnings in the best five consecutive years, liberalizing the formula, restoring the full 1-percent annual increment, and raising the wage base ceiling to $4,800.

(*c*) Providing specifically for contributions from the general revenues so as to avoid undue piling up of pay-roll taxes.

(*d*) Inclusion of temporary- and partial- as well as total- and permanent-disability insurance with dependents' benefits to help provide adequate levels for families.

(*e*) In connection with the public-assistance program, the addition of Federal grants to the States for general assistance to all types of needy persons, with more liberal matching provisions for the poorer States and no ceilings; and Federal standards to see that needs are met and residence requirements and liens on property are removed.

We urge the National Government to continue seeking to develop additional methods for more adequate provisions for older persons who have not reached the retirement age but cannot find good jobs, or who have passed the retirement age but do not have social-insurance protection.

We call upon our affiliates to renew their efforts to achieve adequate social security both through collective bargaining and through legislation on the National and State levels.

In connection with State legislation, we urge action to improve State laws on workmen's compensation, and pending development of a national social-insurance system, public assistance, unemployment compensation, and temporary-disability insurance along the lines recommended by the CIO.

RESOLUTION NO. 17

UNEMPLOYMENT INSURANCE AND THE PUBLIC EMPLOYMENT SERVICE

Unemployment insurance, together with other New Deal measures such as Federal insurance of bank deposits, the Securities and Exchange Commission, and the Home Owners' Loan Corporation, helped to prevent the 1949 recession

from becoming a full-scale depression. The more than 2.5 billion dollars in benefits paid out in the past year contributed to purchasing power at a time when wage payments were shrinking.

But the dangerous weaknesses of the present inadequate and discriminatory Federal-State crazy quilt of unemployment insurance and public employment services have been high lighted during the latest test of the system:

Benefits are too low, averaging only one-third of weekly earnings. This is because of low maximums set by State laws.

Duration of benefits is too limited. One-third of all claimants exhaust their rights under present laws before they find new jobs.

Disqualifications, based on discriminatory laws and rulings, deprive many thousands of workers of benefits to which they should be entitled.

Workers employed in more than one State lose their rights partly or completely. At the same time, inefficient and discriminatory placement work by State employment services harms both workers and State unemployment insurance trust funds.

Reactionary forces have seized upon the 51 State systems as an excuse and means for fighting progress. They have used experience rating to reduce their taxes in good times so that in some States funds may prove inadequate even under poor benefit provisions. The employment service, too, has suffered through the artificial erection of State barriers across labor markets and because of the necessity of supporting 51 separate systems to carry out the same program.

Congressional appropriations have failed to finance adequate functioning of either Federal or State employment security agencies, a situation which has been seized upon as an argument for bills to undermine already weak Federal controls. The Interstate Conference of Employment Security Agencies, composed of State administrators of unemployment insurance, has lobbied at taxpayers' expense for legislation undermining a sound system out of funds provided by Congress. The interstate conference has in other ways taken over functions that should properly be performed by the Federal Bureau of Employment Security.

Recognizing the need for basic improvements in our present unemployment compensation system, President Truman recommended in his midyear economic report that Congress establish minimum benefit standards for all parts of the country, providing "benefits for 26 weeks ranging up to $30 a week for single individuals with additional amounts for dependents." Although a bill to provide such Federal minimum standards was introduced in the House of Representatives by Congressman King, no hearings were held on it, nor on another proposal for providing Federal funds to pay benefits for more than 26 weeks in States suffering severe unemployment.

The transfer of the Bureau of Employment Security to the Labor Department is only a first step which must be reinforced by improved laws and adequate appropriations: Now, therefore, be it

Resolved, That the Congress of Industrial Organizations reaffirms its belief that only a national system of unemployment insurance, geared in with a national employment service and a unified national social insurance system, can properly discharge the responsibility of the National Government to deal adequately with the national problems of unemployment, arising from Nation-wide corporations, competitive areas, and labor markets.

That we support, as a preliminary step in the right direction, President Truman's proposal for national minimum benefit standards, realizing, however, that such standards cannot really give assurance of proper performance, as for example in rulings on suitable work disqualifications, and cannot overcome inherent difficulties in relying on separate State laws, such as uneconomically small areas for pooling risks, confusion, waste, and insufficient protection for people who work in more than one State.

That we favor as an interim measure immediate provision of benefits up to 52 weeks in a calendar year out of Federal funds, provided States meet certain minimum benefits standards.

That we believe the Federal Government has a basic responsibility in times of mass unemployment to provide adequate payments to the unemployed as a matter of right so long as necessary if sufficient jobs cannot be provided, in order that family needs are met and purchasing power is maintained.

That we oppose proposals for making workers bear part of the cost of unemployment insurance through pay-roll taxes as intolerable under the present inefficient Federal-State system and inconsistent with our objective under a unified social

insurance system of holding down pay-roll taxes to a minimum; if any deficit occur these should be met out of general revenues and progressive taxation.

That we again condemn experience rating as unsound in that it prevents accumulation of adequate unemployment insurance reserves in good times, raises taxes in bad times, and provides a constant incentive for employers to fight workers' benefit claims administratively and by amendment of State laws.

That we urge strengthening of the Federal Bureau of Employment Security through redirected use of the present staff and through more adequate appropriations as it can take leadership in improving the program and achieving better cooperation from the States. We call upon Congress to make adequate appropriations for State employment security agencies, including a substantial contingency fund. But we oppose automatic return of administrative funds to States in any form whatsoever as inconsistent with proper Federal responsibility and programing. We urge Congress and the Department of Labor to prevent use of Federal funds for the lobbying activities of the Interstate Conference of Employment Security Agencies.

That the full benefits of this program and the legislation above recommended be applied to Puerto Rico as an integral part of the American economic unit.

RESOLUTION No. 9

SECURITY THROUGH COLLECTIVE BARGAINING

The United Steelworkers of America is now engaged in a strike in pursuance of the basic objective of securing pensions and a health and welfare program on a noncontributory basis from the steel industry. Many other CIO unions are similarly engaged in collective bargaining on these issues. Unions have continually fought for improved living standards, higher wages, better working conditions, and health and security benefits and shall continue to fight for these objectives in coming years.

Through the stalwart efforts of the United Steelworkers, the issue on pensions and health and welfare benefits has been brought to the forefront. The Fact-Finding Board in the steel dispute accepted the Steelworkers' position that workers are entitled to pensions and health and welfare benefits and that the cost of such benefits are to be considered as a cost of operation and to be paid solely by the corporation. The Fact-Finding Board accepted unequivocally the position of the Steelworkers' Union that reserves must be set aside by corporations for pensions and health and welfare benefits just as reserves are set aside by corporations for depreciation of plants, buildings, and equipment.

It is a fundamental obligation for corporations to provide for health and medical needs of the individual worker during the time of his employment and to further provide for the safeguarding of that worker's life and dignity when he becomes too old to work and too young to die: Now, therefore, be it

Resolved, We reiterate our stand that programs of security and protection for working people be recognized as a legitimate and proper cost of doing business and that programs under collective bargaining must be entirely financed by employer contributions.

Because Government social-security programs fail to meet standards of adequacy and are now completely lacking in benefits and services for health and disability, it should be a continuing necessity for unions to bargain collectively to supplement these Government security programs.

Noncontributary security programs won through collective bargaining shall be democratically administered with full regard to the interest of the worker. They shall establish the highest possible standards of benefits with available funds. Arrangements for programs under collective bargaining shall be those which maximize benefits to the workers.

The CIO must vigorously pursue through collective-bargaining programs to bring to its members a coordinated system of security benefits, increased real wages, shortening of the workweek with no cut in take-home pay, the guaranteed minimum annual wage, and improved working conditions.

RESOLUTION No. 26

INDUSTRIAL SAFETY AND HEALTH

Lack of safe and healthful working conditions continues to levy a fearful toll on the life, limb, and health of the worker in American industry. The latest reliable figures indicate that more than 16,000 workers are killed and an addi-

tional number in excess of 2,000,000 are injured each year in these industrial casualties. These appalling totals are a vital concern of the Congress of Industrial Organizations.

The solution of this grave problem has been left for too long in the hands of one or another limited group. A large segment of American management continues to insist that safety is a sole prerogative of the employer. Some spokesmen for the technical experts, such as physicians and safety engineers, likewise endeavor to make safety and industrial health their exclusive jurisdiction. Enlightenment is needed to convince the autocrat in the field of safety and occupational health that elimination of health hazards in industry is the joint concern of all those involved in industry.

The failure to confront this national problem of industrial safety is chargeable in large measure to frequent legislative attempts to remove from the United States Department of Labor and the respective State departments of labor the functions of establishing safe and healthful working standards, and of enforcing these standards. A part of these destructive legislative assaults is an irrational opposition to the establishment of safety codes equipped with the authority of law and susceptible of constant improvement without involved legislative proceedings.

Some of the confusion having to do with enforcement of Federal and State safety laws results from misunderstandings arising between the respective labor departments and the respective public-health agencies throughout the country. The extremists on each side in these jurisdictional disputes must be made to realize that every public agency has its proper place in the field of peculiar competence in bringing about the elimination of accidents and occupational diseases arising within industry. Cooperation, not contention is necessary. It is encouraging to note that this problem appears to be on the way to solution.

President Truman has made a tremendous contribution by calling National Conferences on Industrial Safety, which are bringing together leaders of management, of labor, of the medical profession, and of the engineering services to devise cooperative ways and means of meeting the problem. The first of these conferences called by President Truman was held in Washington, D. C., in March 1949, and a second President's Conference on Industrial Safety is scheduled for June 1950. At the same time the suggestion of the first President's conference that similar conferences be called by the governors of the respective States is meeting with success.

An almost criminal deficiency in the field of industrial safety and occupational diseases is the difficulty of obtaining accurate statistics and detailed reports on the subject matter. The gathering of this information is a proper function of the Bureau of Labor Statistics of the United States Department of Labor supported by the full cooperation of the respective State departments of labor, the United States Public Health Service, the State and local public health agencies, and of management and labor.

The problem of industrial safety and occupational diseases can properly be met only through the full cooperation of all of those concerned in the mounting toll of industrial casualties: Now, therefore, be it

Resolved, (1) We rededicate the CIO to the high objective of making the workplaces of America safe and healthful, with special consideration for the women and young persons who toil in them.

(2) We redouble our insistence that labor be brought into full joint participation at the plant level with management, the technical agencies, and the public authority in instituting and carrying out safety and occupational health programs in industry.

(3) We urge Congress to provide the United States Department of Labor with the necessary authorizations and adequate appropriations required by the Bureau of Labor Standards to formulate national standards of industrial safety and occupational health for the guidance of the respective States in protecting workers from safety and health hazards in industry.

(4) We urge legislation authorizing, directing, and providing adequate funds for the promulgation and enforcement by the United States Department of Labor, in cooperation with State labor departments, of national uniform health and safety codes covering employment in hazardous industries in or affecting interstate commerce as proposed in the Burke-Humphrey bill (H. R. 4997; S. 1992).

(5) We urge our affiliated organizations with members in the various States to make every effort to strengthen the State departments of labor and to have delegated to those departments the enforcement of all State codes, statutes,

and regulations designed to protect workers from unsafe or unhealthy working conditions.

(6) We support S. 1439 which would provide Federal assistance to State agencies administering labor laws to promote, establish, and maintain safe workplaces and practices in industry. This bill has been recommended for passage by the Senate Committee on Labor and Public Welfare.

(7) We urge our affiliated organizations to insist on the drafting in the several States of safety and occupational health codes by qualified experts from management, from labor and from the medical and engineering fields, working in conjunction with the State departments of labor, and to obtain for such codes the status of law.

(8) We commend the Surgeon General of the United States for establishing in the Industrial Hygiene Division of the United States Public Health Service a Public Advisory Committee composed of industrial physicians and nurses, management and labor representatives. Further, we endorse the recommendation of the Public Advisory Committee that the USPHS and the United States Department of Labor cooperate fully in their respective proper fields to protect workers in industry from occupational disease hazards.

(9) We endorse the reports of the President's Conference on Industrial Safety held in Washington, D. C., in March 1949, as an excellent beginning in the national campaign to make industry safe for the workers employed in it.

(10) We hail with satisfaction the assurance that another President's Conference on Industrial Safety will be held in Washington, D. C., in June 1950. Further, we note with satisfaction the excellent work done by the 75 CIO delegates sent by our affiliates to the 1949 conference, and we urge our affiliates to send similar qualified delegates to the 1950 President's conference.

(11) We urge our affiliates and their members to work for the calling of Governor's Conferences on Industrial Safety in the respective States.

(12) We urge Congress to make available to the Bureau of Labor Statistics of the United States Department of Labor the facilities and appropriations that will enable the BLS to compile complete, accurate, and detailed records on accidents and diseases occurring in American industry for the information and guidance of those persons of good will who are striving to reduce and eliminate the frightful toll of death and injury exacted by accidents and occupational diseases every year in American industry.

(13) We urge all of those concerned to cooperate to the fullest extent in bringing safe and healthy working conditions into the smaller plants where 70 percent of the Nation's industrial casualties occur each year.

A Note on Costs of Social Security

(Statement Prepared as Supplement to Testimony by Emil Rieve for the CIO)

A decent social-security program is a good investment in the preservation of the lifetime productivity of American workers. Only as we protect the physical and mental well-being of the Nation's work force will it be able to make its maximum contribution to the Nation's economic progress.

This position was well summed up in the recent economic report of the President's Council of Economic Advisers, which reminded the Nation that:

"* * * social-security programs should be measured primarily against what a strong economy can afford to do. Workers are more productive when they live in the assurance of protection against foreseeable hazards, rather than in dread of their incapacity to cope with them. Social-security programs also serve to cushion the effects of recessionary trends whenever these may appear, because old-age payments constitute a steady flow of income, and because unemployment insurance benefits and assistance payments rise as other forms of income decline." [1]

Much confusion and misunderstanding seems to attend consideration of the problem of cost in connection with proposals to liberalize existing social-security statutes. The very nature of the elements that must be weighed—future population trends including the general birth rates and death rates, forecasting the age at which workers will retire a decade or two hence, productivity and wage

---

[1] Economic Report of the President, Together With the Report to the President, the Annual Economic Review by the Council of Economic Advisers, January 1950.

trends in the economy—these and other factors make it almost impossible to estimate the future costs of such programs with any degree of exactitude.

As we enter the atomic age we urge the committee not to sacrifice existing needs and responsibilities on the altar of what are at best dubious cost projections.

* * * * * * *

Making sound cost estimates for a pension and survivors insurance program is a rather elusive task. Overconservatism somehow always seems to predominate such calculations. It is pretty well established, for example, that in setting up private pension systems, insurance companies have always tended to overload their premiums. Thus, they seem to overestimate life expectancy, the number of people who will actually retire at age 65, etc.

Similar miscalculations which tend to exaggerate costs were characteristic of the estimates of the Social Security Administration at the time the Federal program was originally laid down. Faulty population estimates, for example, failed to take into account the sharp increase in the birth rate which took place during the past decade. At the same time, experience has shown that although retirement benefits are available thousands and thousands of workers who reach 65 are able to and prefer to continue to work.

In his recent testimony before the House committee, Arthur Altmeyer, Commissioner of the Social Security Administration, admitted that the Government had originally estimated the cost of the present program at a level premium of 7.9 percent of pay rolls. On the basis of actual experience under the program and more current population statistics, this figure has now been revised downward to some 4.5 percent of pay rolls.

We think that this committee should be aware of the history of such estimates and take with a grain of salt any new estimates that are presented here. The fact remains that actuaries and economists seem to go awry in the face of changing birth rates, rising wage levels, and the like. Almost any estimate of eventual cost tends to be too high.

* * * * * * *

One of the most common errors made in estimating the costs of liberalizing the present program is that which ignores many of the costs currently being assumed to meet the same needs. It is by no means true that the increased pay-roll taxes which would be imposed under a liberalized Federal program are a net addition to the present burdens. For example, much of the public assistance or private charity which goes to supplement the presently inadequate old-age pensions could be dispensed with, if the existing Federal program was sufficiently liberalized.

The manner in which pay-roll tax costs under a social-security program are often a substitute rather than an additional cost can be clearly seen in the case of temporary disability insurance. Assuming, as is generally agreed, that the cost of this type of program could be met by a 1-percent tax on pay rolls, it should be obvious that this would be no new cost suddenly to be thrust on society. The fact remains that by some catch-as-can method which doubtless imposes severe and unexpected burdens upon millions of people, the families of temporarily disabled wage earners must scrape together resources to get by.

Such unbudgeted costs are in many ways the most severe of all and doubtless involve greater suffering than would a pay-roll tax. Furthermore, a wage earner lacking adequate resources during such periods of enforced disability returns to work before he is fully recovered. Frequently, he is laid up again, and the entire Nation, along with his family, suffers an economic loss.

To repeat, then, the pay-roll tax costs imposed to finance a liberalized social-security program will represent, to a considerable extent, merely the regularization of charges already assumed to aid the aged and the needy.

* * * * * * *

Necessarily, the estimated costs of social security are a projection into the future. This is reasonable since any program, once set up, will presumably operate for years ahead. But projecting costs on the basis of future needs and operations of a program is only part of the task. Any realistic evaluation of costs must also take into consideration the factor of economic growth. As the Council of Economic Advisers expressed it in their recent report to the President:

"Social-security expansion now, insofar as it applies to persons who will not retire for many years, should make considerable allowance for an assumption of continuing secular economic growth. Almost all of our national policies in the long run depend on the validity of this assumption."

Further, the Council pointed out that its "* * * main reason for offe this analysis is to promote the application of sound economic principles to so security matters. * * * It seems clear to us that the application of so analysis reveals that our Nation can afford a considerably expanded so security program without impairing our economic stability or weakening growth potential." [2]

As an indication of perspective which is gained when one projects fu economic growth of the Nation, as well as the cost of social security, in ano recent report the Council pointed out that 25 years hence the total costs of presently recommended programs in the field of social insurance and public sistance, including medical care, might range up to $25,000,000,000 a year. Council added, however, that although this is a very large figure it shoul viewed against the "rate of growth which would result from fairly consis maximum production and employment" which "would mean a total national put of 500 to 600 billion dollars 25 years from now, or in the range of $300,0 000,000 above the present levels." The Council went on to add that "the pros tive increase of $20,000,000,000 in social-welfare costs would thus repre less than 7 percent of the total increase in national output. This would be a moderate proportion of its increasing income for a prosperous democ to devote to the aid of those less able to protect themselves against econo risks." [3]

To repeat, it is patently unfair to project costs into the future without mak similarly reasonable projections of what our economy will look like some ye hence.

As an example of the kind of scare propaganda which can be pumped out time when proposals to liberalize the OASI program are under considerat let me call to your attention the much-quoted study recently issued by the Br ings Institution entitled "The Cost and Financing of Social Security." study estimates that the original administration bill, H. R. 2893, by 1980 w have entailed annual charges of from $10,065,000,000 to $14,688,000,000, possible intermediate estimate of $12,377,000,000 annually. This certainly se like an enormous figure and taken by itself might well be inclined to scare l lators into shying away from an effective liberalization of existing pension

We have already called attention, however, to the fact that even if t estimates proved to be true, and that's a doubtful assumption based upon experience in this field, these costs would represent but a very small shar what national income is apt to be 25 or 30 years hence according to the Cou of Economic Advisers.

If one prefers a more conservative source than the Council of Economic visers, Sumner H. Slichter has only recently made estimates of the prob level of national output in 1980. His estimates come to somewhat lower le than do the Council's, but this stems in part from the fact that Professor Sli assumes that by 1980 the average workweek will be around 30 hours inste the current 40-hour level. Even with this somewhat radical assumption, Sli estimates that in 1980, total output will be around $416,000,000,000 per compared to around the level of $250,000,000,000 in 1949.[4]

Viewed against even this more conservative level of national output the ch of $12,377,000,000 which Brookings blows up is obviously well within the li of this country. The issue becomes one of letting the American people decid 1950 whether by 1980 they can afford to apply around 11 or 12 billion dollar a prospective increase of at least $150,000,000,000 in their national produc to provide decent care for the aged, the survivors of stricken wage earners, the permanently disabled. (Moreover, as we indicated above, this wouldn' an entirely new cost, since much of it would otherwise have to be borne in inefficient and unplanned-for fashion.)

Regardless of what program is finally recommended by this committee, w costs are under consideration the probable and potential economic growth of United States is certainly a relevant factor.

* * * * * * *

As we have already indicated, any cost estimates are in the nature of sp lative guesses. Recognizing that it is impossible to make full allowance for

[4] The Atlantic, November 1949, p. 39.

many changing elements, the CIO has nevertheless tentatively tried to estimate what costs are involved in substituting its own proposals in place of those in H. R. 6000. We estimate that the cost of this program would involve a long-range level premium somewhere between 7 and 8 percent. Unlike some of the other estimates which were presented to you, we are frank to admit that ours is very tentative and is based, to a considerable extent, on measures which have been used by the Federal Security Administration and others which in the past have proven to be somewhat faulty.

We believe that regardless of what program is set up and what the eventual costs may be, at no point should workers contribute more than 2 percent of pay roll. Furthermore, we believe it quite proper that as the system develops, a substantial part of the total cost might be financed out of the general revenues of the Federal Government.

There are many good and sufficient reasons for this procedure. Clearly these costs are a kind of general social charge which society should properly meet, in part at least, through the general taxing and revenue powers of Government. This also enables the Government to keep a firm hand within the system to prevent abuses, etc.

Keeping the pay-roll tax on wage earners down to no more than 2 percent will also conform to the economic needs of the country. As the Council of Economic Advisers concluded in its recent economic report to the Nation, we shall not "be completely out of the woods" until we are "successful in raising the level of consumption, which is not now sufficiently high for sustained maximum production and employment."

Pay-roll taxes are highly regressive and harm consumption. Consequently, any increases in pay-roll taxes work counter to the development of a high consumption economy and should be avoided wherever possible. Confining the pay-roll tax to 2 percent on workers therefore makes good economic sense.

* * * * * * *

A first-rate economic power cannot afford to accept a second- or third-rate system of social security. The program the CIO is proposing is well within the economic strength of the United States and, indeed, over the long pull it will buttress that strength.

OUTLINE OF RECOMMENDATIONS BY THE CONGRESS OF INDUSTRIAL ORGANIZATIONS FOR IMMEDIATE IMPROVEMENTS IN PROPOSED LEGISLATION ON OLD-AGE AND SURVIVORS INSURANCE

For the convenience of the Senate Finance Committee the following outline follows the order and terminology of the tables in the committee's publication, The Major Differences in the Present Social Security Law, The Recommendations of the Advisory Council and H. R. 6000.

I. COVERAGE

Universal coverage along the general lines of the administration bill in the House (H. R. 2893). Nonprofit employees would be covered on the same basis as other employees with the exception of ministers and members of religious orders. Agent laundry drivers should be covered as indicated in a special brief prepared by the Amalgamated Clothing Workers of America. Employees of State and local governments engaged in proprietary functions should be covered like other employees. Other State and local employees should be eligible by agreement for voluntary coverage with appropriate safeguards for existing retirement plans. For example, present beneficiaries should be excluded from elections held on participation.

II. INSURED STATUS

Liberalize provisions for fully insured status by the new-start provision recommended by the Advisory Council to the Senate Finance Committee. This new-start provision requires 1 quarter of coverage for each 2 calendar quarters elapsing after 1948 (or after attainment of age 21, if later) and before death or attainment of retirement age, but in no case less than 6 quarters nor more than 40 quarters. Quarters of coverage earned any time after 1936 count toward meeting the requirement.

III. BENEFIT CATEGORIES

Reduce the age of permissive retirement for women from 65 to 60, with simi reduction for wives, widows, and dependent mothers.

IV. BENEFIT AMOUNTS

A. *Average monthly wage.*—Should be calculated on taxable wages in highest quarters in each of the five consecutive years with highest total taxa wages.

B. *Worker's primary benefit amount.*—Increase amounts received by pres beneficiaries in line with those for new beneficiaries.

Retain provision in H. R. 6000 for taking 50 percent of the first $100 of average monthly wage but liberalize the rest of the formula by adding 20 perc of the balance of the average monthly wage (up to $400), plus 1 percent of sum thus obtained for each year of coverage.

Avoid severe penalties for periods of noncoverage, eliminating the spec provision for a reduction of benefits by the continuation factor now in H. 6000.

C. *Minimum primary benefit.*—Raise to $50 a month.

D. *Maximum family benefit.*—Eighty percent of the average monthly wa without the flat maximum of $150 proposed in H. R. 6000.

E. *Dependents' and survivors' benefits (as related to primary benefit).*—Ra widows' benefit to 100 percent, and benefits for first child and dependent par of deceased worker to 75 percent.

V. EMPLOYMENT INCOME LIMITATION FOR BENEFICIARY (WORK CLAUSE)

Increase the present limitation on earnings to $50 with no limitation for in viduals aged 75 and over (same as in H. R. 6000).

VI. FINANCING

A. *Maximum taxable amount*—Wages and self-employment income of $4,8

B. *Tax rate.*

C. *Appropriations from general revenues.*—Retain present authorization fo congressional appropriation of sums from general revenues that may be requi to finance the program. As recommended by the Advisory Council, postpone further increase above present 1½-percent rates until the current receipts of trust fund, including interest, no longer equal current benefit payments a administrative costs. Government contribution from general revenues ba upon progressive taxation should in time match employer and employee contri tions along the lines of the Advisory Council report.

(For CIO recommendations on other phases, see Mr. Rieve's general statem to the Senate Finance Committee and CIO testimony before the House Ways a Means Committee, March and April 1949.)

(The following letters and statement were submitted for t record:)

INTERNATIONAL LONGSHOREMEN'S AND WAREHOUSEMEN'S UNION,
Washington, D. C., March 1, 195(

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee, Washington, D. C.

DEAR SENATOR GEORGE: The International Longshoremen's and Wareho men's Union and the National Union of Marine Cooks and Stewards are s mitting the enclosed statement on behalf of the membership of both unions.

Both these unions join in supporting the broad program for enlarged soc security benefits outlined before your committee by the spokesmen for vari trade unions.

We would emphasize two other special problems deserving prompt remedy your committee. These are:

(1) The continued exclusion from coverage of the Social Security Act of thousands of pineapple and sugar workers of Hawaii, all members of the ILW We urge most strenuously that these workers and thousands of other agricultu workers employed on commercial farms throughout the United States, be cove by broadening the present provisions of the law and amending H. R. 6000 along lines indicated.

(2) The need to bring about a substantial increase in old-age pensions. Increasingly, the insecurity of the older members of both unions is becoming a major problem. Only through adequate Federal legislation can this be met. The attempts to meet this need through piecemeal collective-bargaining agreements has obvious disadvantages. Congress must act to institute a real old-age pension program.

I would appreciate it if this letter and the accompanying statement were included in the record of the hearings on H. R. 6000 before your committee.

Very truly yours,

WILLIAM GLAZIER, *Washington Representative.*

STATEMENT ON AMENDMENTS TO THE SOCIAL SECURITY ACT BY THE INTERNATIONAL LONGSHOREMEN'S AND WAREHOUSEMEN'S UNION AND THE NATIONAL UNION OF MARINE COOKS AND STEWARDS

The International Longshoremen's and Warehousemen's Union and the National Union of Marine Cooks and Stewards desire to aline themselves with those who have appeared before this committee in support of measures designed to render existing social security legislation more nearly adequate. H. R. 6000, as passed by the House, represents an important advance over the present law, but it, too, is inadequate both in coverage and benefits.

We support the standards adopted by the CIO committee on social security and incorporated in the CIO statement to this committee. And we particularly wish to endorse and support the statement submitted by Russ Nixon of the United Electrical, Radio and Machine Workers of America.

This committee is fully cognizant of the facts and of the arguments in support of broadened coverage and higher benefits. We do not intend to reargue the case. We do not believe that this committee or the Senate itself will wish to stand before the American people in support of the present niggardly and penurious benefits or in support of the present serious exclusions from coverage.

We wish to emphasize only two points. Among the membership of the ILWU are some 20,000 workers on Hawaiian sugar and pineapple plantations. Most of these workers are excluded from coverage under the Social Security Act because they are engaged in agriculture. Most of them would continue to be excluded if H. R. 6000 were enacted.

The employment of these workers is in no significant respect different from the employment of factory workers. Their insecurity is no different from the insecurity of those engaged in manufacturing or other covered employment. When they become too old to continue working they are just as much in need. There are no administrative difficulties involved in their coverage.

The only basis for their continued exclusion is the differential advantage obtained by employers of such workers who do not have to pay the 1½ percent pay-roll tax. Even this is no real reason for continued exclusion because the employers would pass the tax on to consumers of agricultural products. We do not believe that the American people who consume Hawaiian pineapple and Hawaiian sugar wish to be party to the continued exclusion of these workers from benefits accorded to millions of other workers.

On behalf of these workers and others like them employed in commercial farms throughout the United States, we urge this committee to broaden the present coverage, and to amend H. R. 6000, to include agricultural workers under the act.

The other point we wish to emphasize is the importance, from the standpoint of industrial peace, of a substantial rise in old-age pensions. The movement for industrial pensions through collective bargaining has gained great momentum since the end of the war. First the coal miners, then the steel workers and now the auto workers—to mention only the largest groups of workers—have demanded and secured pension plans through union agreements with their employers.

These plans leave much to be desired. They furnish only very inadequate support to the older worker, and only a very small proportion of older workers are covered. They nevertheless represent an advance. The workers who do benefit receive pensions substantially greater than their Federal pensions under the Social Security Act.

To secure these plans, however, the workers involved have had to go through long and costly strikes. The miners struck in 1946 for their pension plan. The steelworkers and the auto workers had to strike in 1948 for theirs. Chrysler workers are on strike right now for the same objective.

Through its failure to amend the Social Security Act to provide an adequ Federal pension system, Congress has itself been responsible for these ma industrial tie-ups.

On the west coast, the CIO maritime unions, including the ILWU and MC S, have contracts which expire on June 15, 1951. These contracts were obtai only after a long a bitter strike in the fall of 1948. For the first time, th contracts are for a period in excess of a year. They provide all the machin necessary for the maintenance of industrial peace until their expiration June 1951.

All these unions are concerned over their older members. They are concer that these men who have devoted their lives to the maritime industry sl not suffer an indigent old age. They are concerned to find ways and means retiring the older members and thus to help meet the crushing unemploym problem facing the membership of these unions.

A pension plan, financed by the shipping industry is almost certain to demanded by these unions in the 1951 negotiations. We submit that substan liberalizatoin of the old-age benefits of the Social Security Act can play an portant role in preventing interruption of shipping to and from the west co

In the ILWU, there are more than 1,000 longshoremen on the Pacific coast v are 65 years of age or older. This is nearly 10 percent of the men. Th men are doing heavy physical labor and should be eligible to retire if anybo is eligible to retire. But they cannot live on the outrageously low pensions r payable under the Federal act. It is no wonder the union is pushing pensions.

The ILWU and MC and S would rather have adequate pensions provided law than pension plans won by collective bargaining. But we intend to see protection for our older members and some assistance on the unemployment pr lem even if it means a pension plan by union contract and even it a strik necessary to secure such contract.

Dated: February 23, 1950.

INTERNATIONAL LONGSHOREMEN'S AND WAREHOUSEMEN'S UNION,
Washington, D. C., March 22, 195

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee, Washington, D. C.

DEAR SENATOR GEORGE: On February 23, 1950, a statement on behalf of International Longshoremen's and Warehousemen's Union and the Natio Union of Marine Cooks and Stewards was submitted to you, urging that cer amendments to the Social Security Act be enacted by the Senate Fina Committee. Specifically, we are concerned about extending the coverage of act to agricultural workers and bringing about a substantial rise in old pensions.

Since that date I have been in communication with the members of union who are employed on the sugar and pineapple plantations of Haw Speaking through the union, these workers, both in the fields and in the su mills and in the pineapple canning and processing plants, have asked t specific notice be taken of the discrimination against them that exists in present law.

As you are well aware, the agricultural workers as such are outside the co age of the act. These workers, 20,000 of whom are members of the ILWU Hawaii, have been excluded from old-age and survivors' insurance and unemp ment insurance as well.

There is no question that these workers are as much in need of coverag industrial and commercial employees. Originally, they were excluded w the act was enacted in 1935, on the theory that their coverage would put onerous burden on the "small farmer" who employs them.

The fact is that the vast majority of agricultural workers excluded f coverage are employed by vast commercial operations which are a far cry f the "dirt farmer" about whom so much concern was shown in 1935. Th workers should be covered by the act, and it would be no problem to excl if this were felt to be necessary, the farm hand employed by the small farm while protecting the agricultural worker employed on the large commer farms throughout the United States. However, we see no need even for s exemption under the law.

Secondly, we urge most strongly that the amendment to the Social Security Act passed in 1939, which excluded thousands of workers engaged in what are essentially commercial or manufacturing processes on agricultural products, be repealed.

As you well know, the 1939 amendment excluded workers originally covered when the act was passed in 1935, such as workers employed in packing sheds, the processing of dried fruits, cotton gins, etc. Workers employed in essentially industrial processes were excluded wholesale from the protection of the Social Security Act. There is no reason for such discrimination.

We urge most strenuously that your committee amend the Social Security Act to cover all agricultural workers, including both field and mill or shed workers.

Respectfully yours,

WILLIAM GLAZIER,
Washington Representative.

The CHAIRMAN. We have one other witness. Dr. Eveline Burns? Dr. Burns, we again express our regret that we could not hear you Friday, but we are glad to now have the opportunity to hear you. Will you please identify yourself for the record?

STATEMENT OF DR. EVELINE M. BURNS, ECONOMIST AND PROFESSOR AT THE NEW YORK SCHOOL OF SOCIAL WORK, COLUMBIA UNIVERSITY, APPEARING ON BEHALF OF THE NATIONAL CONSUMERS' LEAGUE AND THE CONSUMERS' LEAGUE OF NEW YORK

Dr. BURNS. My name is Eveline M. Burns, and I am an economist and professor at the New York School of Social Work, Columbia University. I have been studying social security problems for over 25 years and am the author of numerous books and articles on the subject. I am making this statement on behalf of the National Consumers' League and the Consumers' League of New York, of which I am president.

The Consumers' League, as I think you gentlemen know, has been in existence for over half a cenutry. It is an organization of nonpolitical groups of citizens who are interested in social welfare. And right from the very first we have been supporters of the Social Security Act.

We desive to urge you gentlemen to extend the Social Security Act to make the principle of contributory social insurance more generally used for meeting the problems of economic security.

We do so because we believe that the social-insurance principle, the contributory social insurance principle, is the best available device for meeting the needs of our people for adequate minimum security, and yet at the same time protecting the taxpayer and permitting a minimum of interference with the running of our economy.

With your permission, sir, I should like, if I may, to put my prepared statement in the record and then just highlight for your consideration certain points to which we attach considerable importance.

The CHAIRMAN. We would be pleased to have you do so.

Dr. BURNS. We believe it is extremely important in considering this difficult problem to bear in mind the basic factors of American life which explain why the institution of contributory social insurance is valued by our people.

As we see it, the facts we have to bear in mind are, first of all, the growing numbers of the aged, which means, on the one hand, a very large demand for adequate security from a vocally effective voting

population. But on the other hand, those growing numbers of the aged involve a very heavy burden on those who are in the productive age groups.

We also believe that one must build on the fact that our increasing money incomes and wages are still inadequate to permit people to provide for their own old age security through savings, particularly when one takes into account the kind of society in which we live, and notably the impact of advertising and display upon the average individual; so that you are up against a losing battle, so to say, if you are going to tell him that he should save adequate sums for his own old age.

We also think we must accept it as a fact that our society is not prepared to allow aged individuals, if they are in need, to starve. We do, in fact, do something about it, either through public assistance, or through social insurance, and the problem we face is merely one of method; not "Shall we do anything at all?"

Finally, we think that one must take it as a fact that the vast majority of our people want a form of security on which they can count, which frees them from dependence upon administrators and from undergoing any kind of a means test.

I stress that rather particularly, because I think it is something that must be borne in mind when you gentlemen come to consider, as you no doubt will, the proposals made by the Brookings Institution and Dr. Meriam. These you will recall from the press accounts, propose that we should, in essence, go back to a system which involves a means test type of program, in which we might provide a minimum sum for individuals, provided they could pass a certain kind of a means or income test.

I believe we should find such a system that is quite repugnant to the average American, and it will not offset the demand which we now see coming up again and again through the drive for pensions in the States, and through the collective-bargaining drive for pensions, namely, a demand for something on which people can count, and which does not require them to undergo humiliating procedures.

I would like to suggest to you that the Brookings study probably relies upon the experience of New Zealand, which has a system of this kind. But I would also remind you that the reason why the New Zealand system is effective and accepted by the New Zealand population is because, first of all, the minimum income that an aged person is entitled to, in this instance, so many pounds a year, is written into the act itself; that this minimum income, as stated, is very high in relation to current earnings. It would mean that a man and wife would receive approximately two-thirds of the prevailing basic wage in New Zealand, which, if we transferred that equivalent to this country, would mean we would probably have to have a flat rate, for an aged couple, of something like $150 or $160 a month. And, secondly, the act also states precisely how much income a person can possess.

Such a statement might be feasible in a very small country like New Zealand, where there are relatively slight differences in economic standards of living. I doubt whether we could envisage such a program in this country. Unless it has those provisions in it, I believe it would not be acceptable.

Senator MILLIKIN. May I suggest that as far as I am aware the means test in all of these fields is repugnant. I think you will find that they have been more or less forced into these systems because of the economics of it; that if you do not have some kind of a means test you have a burden of cost which perhaps so far we have not evolved sufficiently in our economy to carry.

Dr. BURNS. Well, I think, Senator, it is partly a question of where you peg your guaranteed benefit.

Senator MILLIKIN. I am opposed, for example, to taking any deductions out of the pension when it is due. But I am plagued by the problem of: Is it economically feasible not to make any deductions?

Dr. BURNS. As I say, it is largely a matter, I think, of where you peg your minimum. And, of course, if one is talking about "economically feasible," the fact that, whether through this program or another, the aged are continuing to exist means that they are being carried by the productive members of the community in any circumstances, whether the money comes from taxation or through insurance or through public assistance.

Senator MILLIKIN. Which reinforces the thought that you have got to calculate all of the time on what are the burdens of which the productive segment of the economy can carry.

Dr. BURNS. That is right. And that we have had very much in mind.

Senator MILLIKIN. What we do not produce we cannot consume.

Dr. BURNS. Exactly. And we have had that in mind, as I think you will see in various points in my testimony.

May I, then, come to these specific suggestions? We hope very much that you will extend the coverage of the old-age and survivors insurance program, which, as you know, is still inadequate. And its limited coverage has the disadvantage of denying protection of a kind that is valued by our people, to important segments of our population. The limited coverage today is extremely unfair to the agricultural States, which have to carry a disproportionate old-age-assistance program. It is unfair too in that the limited coverage not only denies eligibility to some people but also lowers the benefits that they would otherwise get, if they happened to be working, but, unfortunately for them, working in covered employment. And also unfortunately, it interferes with mobility.

We would therefore urge you to adopt the proposals of the Advisory Council rather than those of H. R. 6000, because the Advisory Council proposals are very much wider and would bring in a much greater segment of our population.

In particular we would like to urge on you the desirability of covering workers in agriculture and in domestic service.

Senator KERR. As you make that recommendation, do you refer both to the self-employed and to the wage earners?

Dr. BURNS. Yes; both the self-employed and the wage earners. But we are much more concerned, of course, with the wage earners. Because it is with the wage earners that the need is more especially evident.

Senator KERR. Do you have any statistics to show that among those now receiving old-age benefits there are a higher number of recipients who were formerly wage earners than those who were formerly self-employed?

Dr. BURNS. I don't have any statistics of that kind. I don't eve know whether that type of information is available.

Senator KERR. Suppose in your examination it was found tha among those receiving there was just as high a percentage of recipient formerly self-employed as formerly wage earners?

Dr. BURNS. You are referring to the old-age-assistance recipients

Senator KERR. Yes.

Dr. BURNS. Well, I would not argue for a moment, sir, that there no need among the self-employed. We are interested in extending to the self-employed. But we are particularly concerned that th wage earners as such should be covered, even if other considerations o other measures might lead to the exclusion of the self-employed. W would prefer to see both covered.

We have noticed in the case of the agricultural and domestic worker that various witnesses have pointed out to you that there has been n overt demand from these groups for coverage. I would like to sugges to you that that is only to be expected. Those two groups of peopl are, after all, among the lowest paid and the least organized in ou community, and it is those people who are least likely to be sending deputations or representations because of their economic position.

If, for a moment, I could speak to you not as an economist but as housewife, I would like to say that my own experience has been tha among domestic servants there is an extremely keen desire for cover age. Furthermore, I, and I know a number of my housewife friend have had the same experience, have great difficulty in getting domesti servants. And one of the reasons that is given to one is the fac that "If I come back to domestic service, I lose my social security. You see, many of these domestic workers did have the opportunity during the war of going into other employment, and they learned, some of them for the first time, that there was such a thing as social security Now they don't want to go back to an employment where that privileg does not exist.

So, just as one among the many housewives of this country who fee the shortage and inability to get domestic workers, I would like t see one of those obstacles to entry to the profession removed, and I think it would be removed by adequate social-security protection.

The only reason, as far as I can see, for excluding agriculture has been the dislike of throwing additional burdens on the farmers. I would like to suggest to you that that is probably an illusion, this fea of throwing a burden on the farmers, because in fact since your agri cultural populations are relatively poor and since, as we know, the agricultural States have as a rule a heavy public-assistance burden since the people have to be cared for anyway, the burden on the farmers in taxes comes to be quite a heavy one. It is a matter of which way you collect the tax, rather than the absolute level of the tax

We would like, on eligibility, to urge you to support the proposals of the Advisory Council for a new start, rather than those in H. R 6000. The effect of adopting the proposals in H. R. 6000 will be t defer for at least 5 years the full impact of extended coverage.

Senator MILLIKIN. May I interrupt you, please?

Dr. BURNS. Yes, sir.

Senator MILLIKIN. Now, I think there is quit a little to your point that the farm worker is unorganized and perhaps does not know very much about this social-security system. But the farm owner is perhaps

in a better position to have better knowledge. And also he is a taxpayer. We do not hear from the farm owner any demand that the farm worker be covered. And, as you point out, he is carrying quite a heavy burden in connection with the public-assistance programs of the agricultural States.

Dr. BURNS. I may be mistaken, sir, but I was under the impression that the Grange and the Farm Bureau had recently testified to you in favor of coverage and that they had in fact, after study, reversed their original position.

The CHAIRMAN. It was a very qualified endorsement, though.

Senator MILLIKIN. It was a qualified endorsement and without any heat.

Dr. BURNS. But I think the mere fact that they have changed their position is significant when they have changed it from one of considerable uncertainty and opposition to one of being in favor of it.

Senator MILLIKIN. You know, there is competition between the farm organizations, just as there is between labor organizations. If one of the farm organizations comes out for some kind of a program, then a competitive element has been introduced, and pretty soon you find the others coming out either for the same thing or for something a little bit different. But I am merely making the point that as the distinguished chairman has pointed out, their endorsements are rather qualified and they do not throw sparks out all over the place.

Dr. BURNS. It is not for me to advise you gentlemen as to what weight you should give to the motivation of the different people who appear before you.

The CHAIRMAN. If you brought the farm owner in, you would have to bring him in as a self-employed person, of course?

Dr. BURNS. Yes.

The CHAIRMAN. Have you looked at the scale of payments to the self-employed, and have you actually taken a fine pencil and figured out what you were going to get for that money?

Dr. BURNS. You mean the total tax in relation to the benefit? Is your point that you think it would not be significant?

The CHAIRMAN. I want to find out if you have calculated how much the unemployed would get out of this program in H. R. 6000, for instance.

Dr. BURNS. I have not worked it out in detail for the various classes, but I gathered from reading the material that even so they would get a better bargain, so to say, than they would secure by putting the same amount of money in a private-insurance company.

The CHAIRMAN. I would think so; and much more than any other retirement system that I know anything about. In fact, I think it would be a very burdensome part of this program if it is carried out as the House has it. That is my own viewpoint. Because in the first place the contribution is only one and one-half times that of the employed worker; which would be a very small contribution. And it is based on not entirely a gross income. It is based on a partial gross-net income formula.

Dr. BURNS. I should think, Senator, it would largely depend upon what the facts would show concerning the actual range of incomes of the self-employed.

The CHAIRMAN. That is true, of course.

Dr. BURNS. Because the unearned element is less in the higher groups.

The CHAIRMAN. That is, of course, true, but I think if you will look at it you will find that the benefits would be very, very out of proportion to the benefits of other beneficiaries under your social-security system.

Dr. BURNS. I think it might be disproportionate. But, as I say, I think it would depend on the actual distribution of earnings.

The CHAIRMAN. Of course, I suppose that would arise because the committee and the agency are loath to impose a tax on the self-employed in the first instance that would be somewhat discouraging, because they have to pay other taxes, of course, quite a number of other taxes.

Dr. BURNS. Your question reminds me of one point I would like to make. I notice there have been questions before you as to the method of administering these programs in, say, domestic service. I originally lived in Great Britain. I have now been in this country 24 years. But when I was in Great Britain I operated under a system which collected taxes in respect of domestic servants. And that was done on the basis of a stamp system.

From my experience there, I can say that it was by no means a difficult thing for the housewife to do, to know that every time you paid the maid so much you had to get a stamp from the post office and stick it on the little card that she had. There were appropriate squares for each particular week. I believe that can be worked out, and it has always seemed to me that when you looked at the ingenuity with which the American housewife handled the rationing-point system, it is not too much to expect her to handle something very much simpler of this kind, namely the stamp system.

May I again come back to my point as to eligibility; namely, that we hope you will adopt the recommendations of the Advisory Council rather than the provisions of H. R. 6000. The Advisory Council proposals would make it possible for the persons newly brought in under coverage to become beneficiaries within 18 months of the passage of the act. The reason we think that is important is because we are gravely concerned about this rising tide of pensions on the one hand, and of, from some points of view, the uneconomically undesirable collective-bargaining agreements on the other, which we interpret as a response to the dissatisfaction with the limited coverage of the Social Security Act.

We are afraid if you postpone for another 5 years or more the full impact of extended coverage, this pension movement may receive such an impetus that it will be extremely difficult to stop.

Senator MILLIKIN. Do you not think, also, that anything we might do would merely become a further platform for further private plans?

Dr. BURNS. I think that depends, sir, on the strength of collective bargaining, actually.

Senator MILLIKIN. There is nothing weak about collective bargaining.

Dr. BURNS. No, there is nothing weak about it, but it may well be that the $100 guaranty is about all that the union can squeeze out of industry at the present time.

Senator MILLIKIN. That is an evolutionary subject.

Dr. BURNS. It is, and I think it would be a bold person who would guess which way it would go.

Senator KERR. If, as you say, you are afraid of an expansion of the coverage under old-age assistance and you want to head it off by more liberal rules of insurance eligibility, would you not be providing in another form exactly what you said you were opposed to?

Dr. BURNS. I don't think so, sir.

Senator KERR. Would an extended or expanded program called old-age insurance be any more attractive to you than one of the same substance but which you had to call old-age assistance?

Dr. BURNS. I think there are two or three elements in it. One is that you do emphasize the contributory principle.

Senator KERR. Do you think you emphasize it by making it effective within 18 months? Would that not be just the opposite of emphasizing it?

Dr. BURNS. Well, you are emphasizing it, even though it is for a limited period, for 18 months——

Senator KERR. Instead of calling attention to the fact that it ought to be, are you not in reality indicating that it does not need to be?

Dr. BURNS. No; I don't think so. I think you are emphasizing the fact, for the people who benefit, that there is some contribution limit, and this element is going to be increasingly effective 2 years, 3 years, 4 years, and so on, in the future. Secondly, I think that it enables you to apply a uniform policy on general principles rather than allowing the kind of thing to develop that has developed in some of the States, of a rather uncontrollable movement for extremely generous treatment of the aged in relation to other sections of the population. It seems to me we have to look at this broad problem as a Nation-wide one in terms of what standard of living those who are in the productive groups feel it proper and appropriate to provide for those in the nonproductive groups. Now, inevitably there is an element of compromise through this whole program.

Senator KERR. Would it be possible that you were confusing compromise with unconditional surrender?

Dr. BURNS. I would like to feel I was not, at any rate.

I recognize, Senator, the point which you are probably getting at, which is this: That there is going to be for the people newly admitted an enormous unearned benefit payable to them.

Senator KERR. It looks to me like it is the distinction without a difference as compared to old-age assistance.

Dr. BURNS. Well, I would say this: When you first do it, you are going to give a considerable benefit to the people that you newly bring in.

Senator KERR. And you are doing it whether they need it or not.

Dr. BURNS. You are doing it whether they need it or not.

Senator KERR. And whether they have done anything to acquire it or not.

Dr. BURNS. You have given them, as I say, a limited contributory requirement. Now, part of their inability to contribute, remember, was not their fault. It was due to the fact that the Congress of 1935 didn't make it possible for many of them to come in. And I would recognize quite frankly that when we start extending coverage in this way, even if we had a 5 years' requirement, we are still giving a bonus,

so to say, to some groups of people. But we are setting a pattern so that additional people coming in thereafter will be subject to these requirements for each additional year that they work. And this unearned benefit is something that was in our program when we did it in 1935. It is in our program, really, all the way through the first generation. Nobody in the system in the first generation can possibly have earned it. And we weight the formula in favor of the low-income group. So that I think largely the over-all interest has to prevail even though one recognizes that one is, as I say, giving a considerable bonus to the people who come in the early years.

Now, that is not revolutionary. It is done in the private pension plans. After all, these collective-bargaining plans, any of the plans in which the worker contributes, involve that same kind of bonus to the person who happens to be old at the time the organization or the society decides to put the program into effect.

Senator MILLIKIN. That is a result of bargaining, but not a result of actuarial principles.

Dr. BURNS. Well, it depends. If, when you say "actuarial principles," you mean whether the individual's contribution actuarially buys his individual benefit——

Senator MILLIKIN. Exactly. What I mean is that I think we get into great confusion, here, talking about an insurance system when we have not got an insurance system. From a social standpoint, if X dollars is required for a retired person age 65, it does not make any difference whether he has earned it or has not earned it if it is required I mean, from a social standpoint. Then we commence to jiggle around with that and mess it up with insurance principles and commence to mitigate it by saying, "Well, now, he needs it, but he is not going to get it, because he has not contributed for a certain length of time" and other considerations of that kind, which are very sound from an insurance standpoint, but which throw us when we commence to think from the social standpoint.

Dr. BURNS. I would quite agree with you, Senator, that one cannot apply the principle of private insurance, flat and unmodified, in this general field. To me, the value of this system we call contributory social insurance lies in the contributory element. In other words, it is an attempt to tie up, to get some close connection between, the benefit which the individual receives and the general level of taxes which has to be paid.

The CHAIRMAN. Do you think it has merit as compared to a free pension system?

Dr. BURNS. I think it has that degree of merit as compared with a free pension system. Because our problem, the one we face in society today, is one of these large numbers of people, the groups of people coming to the Congress with the statement that this group wants this and this group wants that and another group wants he other hing with the feeling that it all comes out of a bottomless pit. Now, we have to think of ways in which we can connect, in the mind and in the pocketbook of the citizen, some idea that "if my group is getting more and more benefits, then somehow or other that is going to be reflected in my taxes." It does not have to be reflected 100 percent, it can not possibly be, for the reasons that are in your mind, Senator. But some indication there should be that, "All right, if we are going to be more

generous, there will be more taxes.' That to me is the valuable element.

Senator MILLIKIN. Many people viewing all these inconsistencies of theory which work into great inconsistencies of practice are suggesting that we start right out and have a pay-as-you-go system, giving X dollars for every person who reaches retirement age; that we have a pay-as-you-go system and stop calling it insurance. Put any accurate semantics on it that you want to, but cut out all this monkey business and all these confusions which result from considering as an insurance system that which is not one. Get right down to the end point of having X dollars for every person who reaches retirement age, and start collecting whatever is necessary to sustain the system, and continue to do that. What do you think about doing that?

Dr. BURNS. Well, from many points of view, at first that is appealing. I think perhaps there are one or two considerations that should be borne in mind. First of all, a straight pay-as-you-go system, in which you only collected precisely what was needed to meet the current payment, would still, I think, mislead the public as to the nature of the burden because of the increasing numbers of the aged. In other words, even if we brought in everybody today, as you would suggest, and if we paid them X dollars a month, still the total burden on the American taxpayers, whoever they were, is, as we know, going to be greater merely because the number of the aged is going to double. Therefore I think, if you said that this year we will merely collect as much money as is needed to pay the benefits we are paying out in this year, you might have people still taking a too optimistic idea of what this commitment would be. Therefore, even in the beginning, I think it would be necessary to collect a little more, not the large sums that are proposed in H. R. 6000, but something more than is currently needed, in order to bring home to people that this is an expensive commitment.

Senator MILLIKIN. But as it is now, are we not failing to bring home to people the ultimate cost? Is there not an element of very gross deception in our present viewpoint of the thing which does not commence to reflect the ultimate costs of the system?

Dr. BURNS. Well, at the present time we are collecting considerably more than is needed for the current expenditures.

Now, it is not an actuarial reserve, but I think nobody has ever suggested that a public program should have a full actuarial reserve. That is unnecessary because of the power to tax, and it is undesirable because of the magnitude that that reserve would amount to.

Senator MILLIKIN. I would not want to enter into an argument, but I suggest it is not a reserve at all.

Dr. BURNS. Well, if you don't want me to enter into it now, I won't. I still think it is a reserve. But I think it does not achieve the purposes that some of the people who thought of it thought it was going to achieve.

Senator MILLIKIN. In other words, I have great reserve about the reserve.

Dr. BURNS. May I then turn to another element of the eligibility, which is the age of retirement?

Senator MILLIKIN. You did not quite give me an answer as to this matter: Let us establish our field of coverage, determine upon our

field of coverage, and say, "O. K. Let us collect the bill and pay a we go." What is the matter with it?

Dr. BURNS. One answer, as I say, is that I think I would not lik to see a pay-as-you-go system with no contingency reserve at all. would like to see some contingency reserve, partly to allow for occa sional changes in the general level of employment and economi activity and partly in order that people should be reminded of th fact that this is a growing commitment. On the other side, I thin that the possible danger, sir, in the proposal you have would be this That if you do it every year and you simply say, "We will guarante this payment and we will collect it out of the taxes that we think w are going to impose each year," it is quite possible that in some period there may be financial stringency of one kind or another, and if th thing is entirely tied up to what happens each year it is possible tha the benefit amount may change very considerably from one year t another.

Senator MILLIKIN. But that will happen anyhow, I suggest. W are now changing the benefits. That is why we are sitting here.

Dr. BURNS. Yes; we are changing the benefits, but we are not goin back from the original guaranty. We are on the whole changing then in something of an upward direction.

Senator BREWSTER. Do you mean that you would never go down?

Dr. BURNS. Well, I would never go down below the 1935 level, cer tainly, because I think the 1935 level was meager to a degree.

Senator BREWSTER. But that was not my question. My questio was: Is it not possible to have whatever tax is used geared to the na tional production and to the national income, so that it will automati cally adjust itself to the appropriate proportion of the national prod uct, which is all you would ask for anyone?

Dr. BURNS. Yes. Well, I think you could very well envisage a pro gram of that kind. Whether one would expect the benefits under suc a program to go down would, of course, depend upon one's expectation as to the general trend of activity in the country.

Senator BREWSTER. Those who have been the most interested an the longest advocates of the program have contended for precisel that: that those beneficiaries simply desired their fair share of what ever was the naitonal product and their fair share of the nationa income. So that it automatically adjusts itself. It relieves this bod of the constant problem of measuring the economic changes.

Dr. BURNS. Well, of course, part of it happens automatically, if yo have a system where your benefit fomula in any sense reflects the pre vious levels of earnings.

Senator BREWSTER. That is right. That is the objective which the have already had.

Dr. BURNS. Yes, which would be one thing that would not happen i the hypotheical question that the Senator put to me, I think.

Senator MILLIKIN. Is there not a basic absurdity in our sitting her now and promising benefits 20 years from now or 30 years from now with any definite dollar sign on them? Is there not a basic absurdity i that? And is that not demonstrated by the fact that we are sittin here now changing the benefits that we set up in 1935, or whenever i was, because of the difference in the value of the dollar? Are we no proving by sitting here the basic absurdity of it?

Dr. BURNS. I do not think I would like to suggest that you gentlemen are wasting your time in sitting here considering it.

Senator KERR. You think there might be a remedy for that, for any of us who really feel that we are wasting our time?

Dr. BURNS. Well, as I say, part of the reason you are sitting here is because when we passed the Social Security Act originally we were extremely timid. We were doing something which was new and untried and about which a great deal of concern was expressed. Therefore, at every point where there was a question, "Should we put benefits at this level, or at this level?" we tended to adopt the lower level rather than the higher level. I mean, if you take for example the original $10 minimum benefit—now, what possible contribution to security could have been provided by a $10 benefit?

Senator BREWSTER. That was not quite it; was it? Was that not on a matching basis?

Dr. BURNS. No; that is old-age insurance I am talking about, Senator.

The CHAIRMAN. That was the minimum benefit.

Dr. BURNS. The minimum benefit in old-age insurance was originally $10.

Senator BREWSTER. I thought you were speaking about old-age assistance.

Dr. BURNS. No; I am confining my testimony to the insurance program.

Senator BREWSTER. But why do you call that insurance?

Dr. BURNS. Well, Senator Millikin was asking me that a little while ago. I call it a contributory social-insurance program. I have never held that you could apply the private insurance theory and practice to this all the way down the line.

May I now, then, proceed? I don't want to take up too much of your time, gentlemen. There are two or three points that I am very anxious to make.

On the age-of-retirement matter, we hope that you will agree to lower the age of retirement to 60 for wives and widows. We do not, however, urge you to lower the age of retirement for the primary beneficiary. We think the primary beneficiary age should remain at 65, as it now is, for both men and women. And we urge that because we are so impressed by the influence of the growing numbers of the aged and the importance of encouraging rather than discouraging, through the Social Security Act, people to keep on working as long as possible.

Indeed, we would like to go further and urge you to consider the possibility of putting into the social-security program some such formula as is adopted in a number of other countries, whereby the average monthly benefits increase by a specific amount for each year or half year that the person continues to work after 65. In other words, if he wants to, he can retire at 65, but if he goes on working, when he does retire his benefit will be increased by a certain amount.

We feel that anything that we can do through our social-security program and other devices to utilize the effective working time of persons over 65 who are capable of working and willing to work should receive the most careful attention.

Now as to the adequacy of the benefits: The Consumers' League believes very strongly that the benefits should be liberalized and more

closely approximate what is required for a basic minimum livin standard. At least we ought to have benefits which would compar favorably with those which are paid on the public-assistance progran

We think the increase in the minimum benefit is all to the good, bu we still feel that the $25 minimum is too low. If, through all thes procedures, you finally allow a person to be a beneficiary on this pr gram, then we think that the benefit should make a substantial co tribution to his standard of living and in particular should make unnecessary for him to have recourse to public assistance. Otherwis you are merely making the covered worker have benefits from tw sources, if he has to go to public assistance for supplementation.

We recognize that the problem of the right amount of benefit probably the most difficult one of all that you gentlemen have t handle. The National Consumers' League, as I say, has gone o record in favor of minimum adequate benefits, but has not given de tailed consideration to the formula. The Consumers' League of Ne York, however, has done so. As we see it, there are before you thre possible theories that you must choose between. One is that the benefi formula should assure an adequate minimum to the persons receivin benefits. The second is the theory that the benefit formula shoul reflect differences in previous earnings. And the third is the theor that the benefit formula should reflect the differences in periods o covered employment. Those theories underlie one or another of th proposals that are before you at the present time.

We suggest to you that not all of those three objectives are mutuall consistent, and we hope that where it comes to making a choice betwee them, as we believe you will have to do, you will allow the major weigh to be attached to the importance of assuring a benefit which provide for a decent, acceptable minimum for those persons who are covere by the program.

Specifically what we mean is this. We would like to see the minimum pushed up toward $50. I believe Mr. Rieve was suggesting the sam think to you today. If you push the mimimum up toward $50, ther it is to us a very real question how far above that you can reflec differentials in wages. We believe there must be some difference re flecting differences in wages, because of the fact that there are ver real differences in the standards of living and incomes of people i different parts of the country. In that respect, our problem is muc more complicated than that of many other countries.

However, we do not feel that it is desirable to be too ambitious, t try to reflect too minutely and too high up the income scale, thes differences in income. Because we believe that to do so it will be matter of using the power of government to tax and force people t put their savings in a particular form, beyond the point at which w feel such compulsion would be justified. In other words, it woul seem to us that if you had a more modest range than some of thos that have been proposed to you, if you push up your minimum, an you have some degree of differential as between the minimum and the maximum, above that maximum level we think it is more in keep ing with the American ideal of individualism to say in effect to peo ple, "If your income has been above that amount and you want mor old-age security than this program provides, then you can buy a littl farm or you can write insurance, or save in any other way."

Senator MILLIKIN. How much increase in the cost of goods consumed by the consumers will result from your program?

Dr. BURNS. That, Senator, I couldn't tell you. I am afraid you must ask the agenices which have all the statistical resources which are not available to university professors.

Senator MILLIKIN. Of course, the consumers will pay. It is the consumers, your constituents, who will pay and pay and pay.

Dr. BURNS. The consumer or the taxpayer, however you collect your taxes.

Senator MILLIKIN. It all comes to the consumer.

Dr. BURNS. If you put it on a pay roll, and it comes through to the consumer, it does not necessarily hit the same people as it would hit if you collected the same sum, say, out of a progressive tax system.

Senator MILLIKIN. In the end, as an economist, would you not say it all averages out, allowing for time lags?

Dr. BURNS. I would put it this way, Senator. Of course, the cost of what is consumed by the recipients of these benefits ultimately comes out of the total national income; that is to say, out of what is produced by those of us who are still producing. However, there is a difference, I think, as to the classes within the community on whom that cost will fall. Some people's incomes will be cut into more and others into less, depending upon the kind of tax that you decide to levy.

Senator MILLIKIN. Yes; but even those disparities have a tendency in broad economics to smooth themselves out, because those who are injured immediately take protective steps to get a bigger cut of the income.

Dr. BURNS. Well, I would like to know sometimes, as a taxpayer, what are some of these protective steps I could take to even it out.

Senator MILLIKIN. You could add a dollar to the cost of that lovely hat you have on, if you were in the hat business.

Dr. BURNS. Yes; but as a fixed-income salaried employee I don't know whether I would get much response from Columbia University.

Senator MILLIKIN. And then you have those 53 taxes in that lovely pair of shoes you are wearing.

Dr. BURNS. Your eyesight is excellent, Senator, if I may so comment.

Senator MILLIKIN. I might say that I did not intend to go any further with my analysis of your wearing apparel.

Dr. BURNS. I was wondering when you were going to stop, Senator.

May I say this then, because I am very ceascious of the passage of time: On the question of the conflict between the adequate minimum benefit, on the one hand, and the number of years a worker has been covered by the program on the other, we would urge you to adopt your own Advisory Council's recommendation, which eliminates the 1 percent increment, rather than H. R. 6000, which has both the half of 1 percent increment and the continuation factor.

One of our reasons for doing that is this: That if you go back to the basic purpose of this program, to provide security for people, to take off society's back this particular headache which has been plaguing us for so long, then, to judge the adequacy of the program, you must either judge the adequacy of the benefits yielded by your formula by reference to the person who is going to get benefits in the next 5 or 10 years, who we suspect is the person that really matters, or you must judge by reference to the benefits that are going to be

yielded at the end of a period of covered employment which includ the increments. In the one case, if they are not really adequate, i cluding all the increments, then you are being inadequate in the ear period. If you make your benefits adequate for the earlier perio excluding the increments, then we think you are possibly paying u necessarily high benefits at the other end of the scale.

We would urge this particularly on you because of the fact that the Social Security Act and proposed amendments we use exactly t same benefit formula for the people who are aged and for the peop who are disabled and, above all, for the people at the present tin who are the survivors. Now, the person who dies and leaves survivo is likely to be a person dying in the middle years of his life, whi means he will not have been able to benefit by the full range of t increment. And we are therefore almost automatically providi inadequate benefits for survivors if we fix a formula which provid adequate benefits only on the assumption that you count in all t increments of a full working life.

We also would hope that in the minimum benefit provisions y would eliminate the provision of the maximum, in the Advisory Cou cil's proposals, which is a multiple of the primary benefit, and whi for survivors has the effect of denying adequate payments if the are more than about two or three children in the family.

Senator MILLIKIN. Would you set a maximum?

Dr. BURNS. I am sorry, sir. I meant the maximum.

Senator MILLIKIN. Would you set a maximum?

Dr. BURNS. I would set a maximum.

Senator MILLIKIN. How much would you make it?

Dr. BURNS. I would not set it in terms of a money amount, for t same reason. We believe that the 80 percent previous earnings is sufficient maximum and makes a good deal of sense, because, after a if the family was getting along on the wage earner's salary before, th if he is dead there is one less person to live on that particular wag

Senator MILLIKIN. What might the maximum be? I mean, y push the minimum up to a neighborhood of $50. What might yo maximum be?

Dr. BURNS. I think it would depend on how much you wish reflect additional variations in earnings in your benefit formula. might go up to $80, $90, or $100 for the primary beneficiary. But the of course, so far as the survivors go—and it is to the survivors th this maximum applies in fact—that would depend on the numbers persons in the family.

May I then, to conserve time, turn to a major point we do wish emphasize to you, and that is our hope that you will enact permane disability insurance. We think it is important not only in order relieve the public assistance rolls of the very large proportion permanently disabled persons who are now on them, but also becau we think it is a thoroughly undesirable way of life for the many hu dreds of thousands of disabled persons at the present time to ha to live on the kind of standards and be subject to the kind of inve gation and treatment that accompanies life on public assistance. Fu thermore, we believe that if you would introduce a permanent disabili insurance program it would somewhat relax the pressure which suspect you will feel to lower the age of retirement to 60 years. Th

comes partly supported by reference to all these disabled persons in the later years of life.

We know that you have been told that it is difficult to administer. We very much doubt whether that is the case. It is admittedly harder to administer than an old-age insurance program. But we cannot but believe that when you have had the railroad retirement system, the workmen's compensation laws in this country all these years, and the Veterans' Administration, administering permanent disability insurance programs, and when other countries have been administering these programs for many, many years, the administrative problem is certainly not insuperable; unless you want to make the assumption, which we frankly would deny, that either Americans are less inventive in developing administrative controls or are more immoral than other people in their determination to get something for nothing.

But we would like to see the permanent disability proposals in H. R. 6000 strengthened by the introduction of the provisions about rehabilitation that are contained in section 209 of H. R. 2893. That provided, you will remember for continuous contact with the Rehabilitation Service, and it also gave power to the Administrator to deny benefits to a disabled person who had refused to undergo rehabilitation treatment.

We are also not impressed by the arguments of the private insurance companies that this proposal was a flop when they tried to administer it. First of all, we think it is invalid to draw inferences from a limited program operated by private companies, which inevitably involve certain adverse risk selections, a condition which is not in the picture if you have a universally compulsory program.

Secondly, we think that their argument that this program will be abused in periods of depression is based on an experience and a time which, as I believe Mr. Rieve pointed out to you today, predated the unemployment insurance programs which we now have. If it is feared that in periods of unemployment the disability insurance program will be misused, the remedy is to improve and extend the coverage of our unemployment insurance programs and not to say that we will not have a disability insurance program.

We would also urge you very strongly to remove from H. R. 6000 the present provision whereby, on a permanent disability benefit, an individual receives no dependents' benefits. That seems to us to be forgetting the major purpose of this program.

Senator KERR. Would you mind repeating that? I got lost, there.

Dr. BURNS. I am not surprised, sir. I was trying to talk so quickly because of the time.

H. R. 6000 provides that a permanently disabled person who is found to be eligible and thereby entitled to a benefit, shall receive only the primary benefit. He shall not be entitled to a benefit for his wife and dependent children. We urge the removal of that provision, that reduction of benefit. Because what is the purpose of the program? The purpose of the program is to provide modest benefit, modest security, for people who are premanently disabled. And certainly the benefit formula is unlikely to yield that kind of a payment on the primary benefit alone; when you remember that, after all, many of these permanently disabled people will be people pretty much in the prime of life. They will have families. If we allowed dependents'

benefits on the aged program, when people are 65, we should su remember that the probability of dependents is very much greater the person who is disabled at some age below 65.

The last point that I would urge upon you concerns the finan proposals. We would hope you would adopt those of the Advi Council rather than those in H. R. 6000. In essence, H. R. 6000 w throw the whole cost of the program on employers and workers an order to prevent the burden from ever increasing above 6½ per on the two parties, it provides, as you recall, for the building up very large reserve. In other words, it goes back to the principle the original 1935 act.

We would urge rather the adoption of the Advisory Council's posals, which would be, as you recall, to require employers and wor together to pay not more than 4 percent. And when the yield of tax plus the interest on any incidental reserve that has accumul fails to equal the annual costs of the program, the difference sh come from the general taxpayer.

We prefer that method firstly, because we see no purpose, an the contrary many disadvantages, in accumulating the enormous serve that would be necessary to put into effect the financial prop of H. R. 6000. And those I will not elaborate on, because they l been brought before you by other witnesses.

Secondly, we believe that you have to face the fact that if are going to provide anything like adequate benefits for the l mass of pretty low income receivers that you are going to bring the program, you cannot assess the whole cost of that against individuals on an individual actuarial basis. Somebody has go put in the difference. And we think it is not desirable to throw whole of that difference as is in fact done in H. R. 6000, on the ployers of the higher paid workers. We feel that since this prog inevitably contains a large amount of unearned benefits, particul in the first generation of the problem, those should properly assessed against the general taxpayer.

And thirdly we believe that in large measure this is not putting a burden on the general taxpayer. He is in fact meeting a hundred cent today the costs of those persons who receive public old age secu outside the insurance system, namely, through public assistance. we think it is a very good bargain for the general taxpayer i will throw something into the social insurance program, and result of doing so, get the beneficiaries to pay at least part of benefits that are guaranteed to them under the program.

The very last thing I would ask you to consider is the desirabi of putting into H. R. 6000 the proposals that were contained in last year's bill, H. R. 2893, for setting up advisory bodies. You remember that there was to be a citizens advisory committee, advi to the administration, and a periodically appointed citizens leg tive committee. We, as a citizens organization, feel very, very stro that the citizen must be kept better informed about this prog about all aspects of it, and of the many complicated issues that involved. And we would like to see, therefore, this machinery, w was provided for in H. R. 2893, introduced into the program at present time. Because, as I say, we would strongly emphasize belief that this is a program which involves the interests of large n bers of people. We all look at it in different ways. There are

ferent points of view. And we think it vital that every step possible be taken to keep the citizen informed as to what is at stake.

We therefore hope that you will report out these amendments to the Social Security Act. And I am very appreciative of the time you have given me.

The CHAIRMAN. We thank you very much for your appearance.

(The prepared statement of Dr. Burns follows:)

STATEMENT ON BEHALF OF THE NATIONAL CONSUMERS' LEAGUE AND THE CONSUMERS' LEAGUE OF NEW YORK BY PROF. EVELINE M. BURNS, PRESIDENT OF THE NEW YORK CONSUMERS' LEAGUE

My name is Eveline M. Burns and I am an economist and professor at the New York School of Social Work, Columbia University. I have been studying social-security problems for over 25 years and am the author of numerous books and articles on the subject. I am making this statement on behalf of the National Consumers' League, and the Consumers' League of New York of which I am president.

The Consumers' League has been in existence for a half-century. We have members in every State of the Union—persons who, regardless of political affiliations, believe that fair-labor standards and social security are a matter of general public concern. The league participated in the early campaigns for social-security legislation both in the States and in the Congress. We desire to be placed on record in support of the extension of social insurance to cover more risks and more persons, and of the adoption of a benefit formula which will yield the average beneficiary an adequate minimum of security. Specifically, the points to which we attach particular importance are (1) the extension of coverage and scope of the old-age and survivors-insurance program; (2) the provision of more adequate benefits; (3) the establishment of permanent disability insurance; (4) a method of financing whereby employer, worker, and the general taxpayer all share in the costs; (5) the creation of advisory bodies representative of the beneficiaries and the citizens.

I. SOCIAL INSURANCE THE OBJECTIVE

We believe that planning for further programs for the security of the aged must take into account the basic facts of American life. These are: (1) that the numbers of persons concerned, the population over 65, form a large and growing proportion of the total population. Whether we like it or not, therefore, this substantial segment of the voters will, in a democracy, make their views felt. But also, because the group is so large, decisions regarding the standard of living which public policy will assure them and the conditions under which this security may be claimed, have direct and serious consequences for the rest of the population which is actively producing and adding to the national income.

(2) That a very substantial proportion of the population can no longer save enough to assure economic independence in old age.

(3) That the older principle of reliance upon the family for the support of the aged has been gravely weakened by the shift from independent production and agriculture to wage earning and industry as the typical method of earning a living, by the high degree of mobility of the American population and by the great emphasis we now place on the responsibilities of parents to children.

(4) That society today is not prepared to allow the incomeless aged to starve. Either by way of social insurance or public assistance we do in fact, through Government, provide a minimum of income for the aged. Thus the choice we face is not whether or not to take any action at all, but merely a choice between alternative methods.

(5) That the people of America have very definite ideas as to what are acceptable and unacceptable methods of attaining old-age security. In particular they reject any solution which requires them to undergo a humiliating needs test. They want a form of security on which they can count, under conditions which are known in advance, and which so far as possible frees them from a sense of dependence upon the discretion of individual administrators, however well-intentioned and well-trained. They are willing to pay something to get this kind of security.

We may or may not regret these facts, but they must be accepted as setting the framework in which social security planning must take place.

The Consumers League has long favored the adoption of social insurance as the best method of meeting the demands of individuals and families for basic economic security, in a manner that gives the maximum of protection to the taxpayer and involves a minimum of interference in the running of our economy. We have, therefore, been greatly disturbed by the fact that 15 years after the passage of the Social Security Act more aged persons and survivors are benefiting under our public assistance programs than under old-age and survivors' insurance. We have also been concerned with the growth of irresponsible demands for old-age pensions in many States which would place extremely heavy burdens on the general taxpayers and provide a standard of living for aged persons out of line with that which is available to other groups suffering interruptions of income. We believe, too, that the increasing pressure to include security clauses in collective bargaining agreements is an inevitable, but in some respects unfortunate, response to the inadequacies of the present law since it is tending to divide the workers of the Nation into two groups. No one can blame the union leaders for using the collective bargaining process to meet the demands of their members for old age security, in view of the refusal of Congress hitherto to amend the Social Security Act. But the result is a situation in which the powerfuly organized secure not only higher wages, but also very extensive security benefits. The larger number of the unorganized lack even minimum security.

We hold that this situation is due in large measure to two features of the present law; its limited coverage and the extremely low level of benefits yielded by the present formula.

II. EXTENDING THE COVERAGE AND SCOPE OF OASI

Limited coverage not only denies the advantages of social insurance to important segments of our population, but it has other undesirable consequences. It is unfair to the agricultural States, because it leaves them with a disproportionately heavy burden of support of the needy aged through old-age assistance, a substantial part of the costs of which are carried by the States and localities. Because workers move in great numbers between covered and uncovered employment, limited coverage causes some workers to lose eligibility, for their earnings in uncovered employment do not count toward establishing eligibility. It also lowers the benefits that eligible workers can claim since their total earnings, which form one element in the benefit formula, fail to include earnings in uncovered employment. Finally, limited coverage tends to restrict the free mobility of labor between employments, and discourages entry into such occupations as domestic service.

(a) *Extension of coverage to all occupations*

We are therefore pleased to note that both your own Advisory Council and H. R. 6000 propose an extension of coverage. We would urge you to adopt the broader coverage proposals of the Advisory Council rather than those in H. R. 6000. We see no justification for the failure to extend coverage of the law to general agricultural labor and to the self-employed, and we urge their inclusion in the interests both of encouraging mobility of the employed population and for the sake of the persons concerned whose needs for assured security are often greater than those of the industrial wage earner, as your own Advisory Council has so clearly shown. We believe that there are no longer any insuperable administrative obstacles to their coverage. The argument that these groups are excluded in order to relieve farmers of additional taxation is largely illusory, since so long as these groups need income in old age they become part of the old age assistance load whose costs must be paid from taxes in which farmers carry their share.

While strongly favoring extension of OASI coverage to such groups as agricultural workers, employees of nonprofit corporations, and the self-employed, we would especially urge on you the importance of including domestic service. Household workers are among the groups most in need of assured old-age security. We recognize that in the past administrative obstacles have been formidable, but we believe that these are no longer insuperable. As the committee is aware, both the Treasury and the Social Security Administration have been giving intensive study to the appropriate methods for some years and both feel convinced that coverage is now feasible. The device of a stamp book, to be held by the worker, and on which the employer pastes a stamp purchased from any post office at the time of paying wages, would free the domestic em-

ployer of much troublesome record keeping. If supplied by the Administration with a table in which was shown the amount of the stamp that was to be affixed for each payment in a specified earnings interval or wage class, it should be easily possible for the most harassed or confused housewife to know what her legal obligations are. A Nation that has successfully coped with the complexities of point rationing can, we believe, readily adapt to the much less complicated problem of knowing what stamps are to be affixed to a worker's card, especially if the number of wage classes be kept relatively small. The worker in turn could be made responsible for turning in the cards at fixed yearly or half-yearly dates, receiving a new one from the Administration. If the experience of other countries be any guide, the worker's self-interest can be relied on to return the completed cards.

(b) Eligibility requirements

The question of covered occupations is, however, not the only aspect of the program affecting the numbers of the aged who can qualify for OASI benefits. Some persons, although in covered employment, will be ineligible because they have not earned a sufficient sum or been engaged in covered employment for a sufficient number of quarters. We urge you to adopt the proposals of the Senate Advisory Council relating to insured status rather than those of H. R. 6000. Under the latter, persons newly covered will be unable to qualify for benefits until 5 years after the amending act is passed, whereas the Council's proposals would permit newly covered persons to qualify after 18 months.

We seriously question the social wisdom of deferring by yet another 5 years the contribution which our old-age insurance system can make to solving the Nation's problem of old-age insecurity. Most of those affected will be persons who for no fault of their own have been denied the opportunity of accumulating qualifying credits. Why should they be penalized for this fact? The only answer can be the assertion that, if anything like adequate minimum benefits are paid, persons newly covered if admitted after 18 months will be given a large windfall or unearned benefit. That they will receive benefits out of all proportion to what they have paid in is undeniable. But this will also be true in only slightly lesser degree if they are admitted after 5 years. And it is also true of all those in employments now covered who were already approaching 65 in 1935, when the Social Security Act was passed. We cannot be too refined about individual equities in a social insurance program affecting almost all the people in the country. We must think of the total national interest and the broad balance of gains and losses. That interest is to provide for the old-age security of as many people as possible through the social insurance system. Another 5 years of limited coverage may well give the pension movement an irresistible impetus.

The blanketing in of workers already old at the time an old-age insurance system is inaugurated is no revolutionary principle. It is customary in private pension plans to provide benefits to workers close to retirement age even though they will have contributed proportionately far less toward the cost than their younger colleagues. Nor does it involve a wholly new cost so far as the general taxpayer is concerned since many of those ineligible for OASI will receive old-age assistance toward the cost of which they do not contribute at all.

We would, however, urge that the minimum earnings in any year required to qualify for benefits be increased above the present $200, and we again refer you to the basic purposes of the program. It was presumably instituted for the purpose of enabling persons who have been self-supporting earners to retire on a modest competence when they reach the age at which earning becomes increasingly uncertain. It cannot seriously be argued that persons earning only $200 a year are in this positoin. We therefore favor the higher, though still modest, requirement of $400 as in H. R. 6000.

(c) The age of retirement

In view of the fact that almost half of the men 65 and over have wives below the age of 65 we urge a reduction of the qualifying age to 60 for wives of retired beneficiaries. Because of the difficulty experienced by older women in securing new employment we further suggest a lowering of the qualifying age to 60 in the case of widows. We are however opposed to suggestions for lowering the age of retirement of primary beneficiaries below 65 because we are impressed by the seriousness of the problem of the increasing numbers of the aged. This country, faced with the prospect of 20,000,000 persons over the age of 65 must ask itself whether it is economically desirable to use its social security

system to encourage early retirement from the productive process. If anything the inducements should be the other way. We would like to see consideration given to devices in use in the old age insurance programs in other countries which face the same problem whereby although a worker is free to retire on the benefit to which he is entitled at age 65, the monthly amount of this benefit is increased by a certain percentage for each year or half year that he continues to work beyond the age of 65.

III. INCREASING THE ADEQUACY OF OASI BENEFITS

The low level of benefits under the present law, even for the worker solely and steadily engaged in covered employment, is evident. We have been shocked by the studies which have been made of the living conditions of beneficiaries. These reveal how small a contribution to the minimum living costs of the aged person is made by the current OASI benefits. So long as such low benefits prevail, we must expect strong demands for generous pensions in States where there are powerful lobbies of the aged. What is perhaps even more important, the whole institution of social insurance is likely to be brought into disrepute when the insurance benefits are little more than half the payments secured under old age assistance.

We therefore welcome the increase in benefits as provided for in both the Advisory Council's proposals and in H. R. 6000. However, the minimum benefit of $25 is undesirably low especially when it is recalled that it will, under the assumption of universal coverage, apply primarily to the worker who has very low earnings and who is therefore unlikely to have any substantial savings with which to eke out his tiny benefit.

The selection of an appropriate benefit formula presents perplexing difficulties unless the central purpose of this legislation is constantly borne in mind. We believe its sole justification lies in the extent to which it assures the majority of our people a minimum of economic security under conditions that do not involve a loss of self respect, in other words, in the extent to which it removes in a manner acceptable to the majority of citizens the increasingly troublesome problem of old age insecurity from the Nation as a whole. It follows that the test of an acceptable benefit formula is the extent to which it makes recourse to other methods of public aid unnecessary. The National Consumers League urges the payment of more adequate benefits but does not have specific suggestions to make as to the precise benefit formula. The Consumer's League of New York has examined the formulas proposed in the various bills now before you and desires to offer the following observations.

The benefit proposals now before you appear to combine three objectives: (a) the one I have mentioned, namely, a desire to assure an adequate benefit to the average worker, (b) a desire to provide a benefit that reflects gradations in earnings, (c) a desire to provide a benefit that reflects period of coverage. We do not believe that all these are mutually consistent, without an extension of governmental compulsion to contribute to a public program beyond the point at which we believe this can be socially justified.

To be specific, we recognize that some reflection of previous earnings in the benefit formula is desirable because of the very great range of real incomes in the different parts of the country. A universal uniform minimum would create very real difficulties in so diversified a country as the United States. A benefit that would be appropriate in the industrialized cities of the North would be beyond the average income of those living in many rural areas in the South. But we do not believe that a public program should be too ambitious in this respect. To assure a realistic minimum to those who are eligible under the law will in any case involve a substantial increase above the present average benefits. To differentiate widely above that higher minimum would require an extension of the compulsive powers of Government to force higher-paid individuals to take their additional security in a specific form, namely, a cash annuity provided through governmental auspices. We believe it to be more in keeping with the spirit of American enterprise and individualism to use a public program to guarantee a minimum cash income which will remove the need for dependence on public assistance and to leave it to individuals to provide whatever additional security they need through private insurance, personal savings, collective-bargaining pension plans, or in any other way. We, therefore, do not favor an increase of the wage base beyond the present $3,000, but urge rather that within this limit the object of the amendments to the benefit formula should be to assure the average beneficiary a realistic minimum. If price changes and real wage

increases in the future make a formula fixed in relation to wage and price standards of 1950 inappropriate, we suggest consideration of methods of automatic adjustments by reference to indexes of costs of living or average per capita income, as is already done in some other countries.

There is nothing novel in the suggestion that in choosing between the conflicting objectives in the benefit formula the major weight should be upon assuring an adequate minimum rather than on reflecting wide differentials in earnings. From the very first this principle has been embodied in the Social Security Act through the heavy weighting of the basic formula in favor of the low-paid worker.

We especially urge you to pay attention to the ultimate objective of the program when dealing with the second group of conflicting benefit objectives now embodied in H. R. 6000. This is the conflict between the desire for an adequate benefit and one that reflects period of time in covered employment. In a public program with universal coverage, we, like your Advisory Council, see no purpose in injecting this element into the benefit formula. More particularly, we see no advantage in the introduction of two items reflecting period of coverage, namely, the 0.5 percent increment and the continuation factor as proposed in H. R. 6000.

If coverage as we propose is universal, then almost all workers will, if tax collecting is efficient, have been in covered employment throughout their working lives. If it is not universal, why penalize the worker whose lack of covered employment is due not to his own fault but to a decision by Congress? The remedy for the possibly disproportionate payments to the exceptional worker who is eligible but has had so little employment of any kind as barely to qualify under the minimum-earnings requirements is to pay more attention to the eligibility formula, not to penalize the 90 to 95 percent of persons who normally do work all the time for the sake of avoiding overgenerous payments to the 5 or 10 percent who do not.

The system of providing for increments to benefits reflecting years of coverage has a further disadvantage. Either the benefits throughout the entire first generation of the life of the program are inadequate because they will fail to reflect a full working life of increments or once the plan has been in operation a generation the average benefit will be unnecessarily high in relation to any adequate minimum. You cannot have it both ways. We believe that the benefit formula should be so framed as to provide benefits that on the average are adequate here and now for the current generation of aged, not for those who will be the aged a generation hence.

It is especially important to recall that the benefit formula under discussion applies not merely to the aged but also to survivors and, if the recommendations in H. R. 6000 are adopted, also to permanently disabled persons. Except for survivors of those already retired, none of these persons will have had the opportunity of securing the full increment due to life-long coverage. The family of the worker who dies in his thirties or forties will therefore be penalized because their benefits will reflect only the limited years of coverage that the breadwinner was able to accumulate prior to his death.

Surviving families are, indeed, at a serious disadvantage because of the operation of the minimum benefit provisions. We welcome the proposal to increase the benefit of the first child to 75 percent of the primary benefit. But much of this gain may be lost to the larger families because of the maximum limits to family benefit. We are pleased to note that H. R. 6000 eliminates the type of maximum contained in both the Social Security Act and the Advisory Council recommendations whereby family benefits cannot exceed a fixed multiple of the primary benefit amount. Such a limit automatically denies payments to some children in the larger surviving families (any children beyond 2½ under the Social Security Act, and any beyond 4 under the Council's proposals). But we regret the inclusion in H. R. 6000 of a limit of a fixed dollar amount to benefit payments. This limit has the consequence of preventing the surviving families of all workers earning a little over the not very high monthly sum of $150 from receiving benefits proportionate to their numbers, if there are more than three children in the family. We see no necessity for this additional limit so long as the maximum of 80 percent of previous earnings is retained. This at least has the justification of not making a family better off on benefit than when dependent on the father's earnings and recognizes that as there is one less mouth to feed than when the father was alive and earning, family income needs are in fact less as a result of his death.

IV. ADOPTION OF DISABILITY INSURANCE

We welcome the inclusion of permanent disability insurance in the Nation's social insurance program. Loss of income on account of ill health is a major threat to the security of American families. Analysis of the case loads of the general assistance or relief systems in our communities reveals that a large proportion of those on the relief rolls are disabled persons, the majority of them permanently so.

It is degrading for self-respecting citizens to be permanently dependent upon the relief system, characterized as it is by constant investigation and dependence on the discretion of even the most well-intentioned of administrators. And it casts a heavy burden upon the relief authorities who typically are dependent in large measure on the support of the localities whose fiscal resources are relatively limited.

There is another important reason for completing our social insurance program by the introduction of disability insurance, namely, that it would serve to protect the old-age insurance system from pressures to lower the general retirement age. The case for such action which usually stresses the heavier incidence of permanent disability among the elderly would be greatly weakened if there were in existence a system providing social insurance benefits to the totally or permanently disabled.

We are aware that it is claimed that this type of social insurance is difficult to administer and asserted that the danger of malingering is great. We believe these dangers to be vastly exaggerated. Three States and the Railroad Retirement Board are already administering temporary disability insurance (the latter also administers permanent disability insurance) and have developed administrative controls and safeguards in the legislation, which have kept malingering and abuse to a minimum. A large number of other countries have operated successful disability insurance programs for decades. Unless it is maintained (which we would deny) that Americans are naturally more prone to dodge work than other peoples or that they are less ingenious in devising legislative and administrative controls, we see no reason why a social insurance program which has successfully operated elsewhere cannot be equally successful in the United States.

Nor are we impressed by the frequent citations of the unfortunate experience of private insurance companies with this type of risk. A compulsory public program avoids many of the dangers of adverse risk selection inherent in private voluntary insurance. Furthermore the assertion made by the private companies that in times of heavy unemployment the unemployed will crowd onto the disability insurance rolls, as it is alleged they did in the last depression, overlooks the fact that at that time there was no alternative public provision for the unemployed as such, thanks to the Social Security Act, we have today.

The arguments that this type of insurance is especially prone to abuse must also be considered in relation to the safeguards proposed by both the Advisory Council and H. R. 6000. The requirement that the totally disabled claimant must undergo what is tantamount to a 6-month waiting period, with no insurance income, when taken in conjunction with the more stringent eligibility conditions is a very rigorous protection against misuse of the system. Indeed it is so harsh a provision that though we recognize it may be necessary initially and while administrative experience is gained, we look forward to the time when this particular requirement can be eliminated.

We would however like to see included in the bill provisions similar to those contained in section 209 of H. R. 2893 introduced at the last session of Congress. This would provide for emphasis upon rehabilitation of all those disabled persons whose employability is likely to be enhanced after appropriate treatment, and for the denial of benefit to persons who refuse to avail themselves of such rehabilitative services. Rehabilitation and the assurance of benefits for permanent disability must go hand in hand.

There is another limitation in H. R. 6000, however, which we hope the Senate will eliminate. This is the provision that dependents' benefits will not be payable in permanent disability cases. We can see no possible justification for this provision. If it is desired to make sure that malingerers do not secure benefits the remedy is to tighten up the eligibility requirements, not to penalize the large majority of the genuinely disable by providing them with a benefit which is manifestly inadequate. Here it seems to us the framers of H. R. 6000 have for-

gotten the essential purpose of a social insurance program, namely, to provide real security to those whom the law declares to be eligible Family benefits are even more necessary for disability than for old age beneficiaries for the probability that there will be dependent wives and children is far greater in the younger age groups.

V. FINANCIAL ARRANGEMENTS

We are opposed to the methods of financing the program proposed in H. R. 6000 and in favor of those suggested by your Advisory Council. The House bill would throw the entire cost on the workers and their employers, whereas the Advisory Council envisages a three-way division of the costs in which the worker as potential beneficiary, the employer, and the general taxpayer would all participate We prefer the Council's proposals for several reasons

(*a*) The House bill in its desire to collect only from the workers and the employers but also to prevent the actual combined rate of tax from ever exceeding $6^1/_2$ percent is forced to adopt the device, found in the original Social Security Act, of accumulating a huge reserve. For many reasons, some of which have already been elaborated upon by other witnesses before this committee, we regard the accumulation of so large a reserve fund as undesirable and unnecessary.

(*b*) The present act, and all proposed amendments including H. R. 6000 recognize the impossibility of at one and the same time providing adequate minimum benefits for the lower paid workers, and expecting these groups to pay the full actuarial costs of their own benefits. Despite our high levels of income, they are not yet high enough for many groups of fully employed, hard-working persons to enable them both to maintain acceptable living standards during their working years and to contribute a sum equal to the full actuarial cost of an adequate old age annuity and of unemployment and disability benefits. All proposals therefore, provide for the payment of unearned benefits to the lower income groups. The costs of these unearned benefits however, are met from the employers' contributions of those in the higher covered income brackets, and, to the extent that employers are able in some cases to shift the taxes onto workers, out of the earnings of some of the higher-paid groups. I some groups of taxpayers thus in any case pay for the unearned benefits of others, we do not see why this principle is not applied beyond the $3,000 a year income limit by drawing for a part of the costs on the yield of the more progressive general revenues. This is a particularly important point when it is recalled that the major unearned benefits will be received by those who were already old when the system was initiated This accrued liability, arising out of the fact that the community did not utilize the social insurance principle earler, should not be thrown upon present and future employers and workers alone, but should be shouldered also by the general body of taxpayers

(*c*) The real question facing the general taxpayer is in large measure one of where he shall make his contribution. The income receiver whose earnings do not permit him to pay for more than a fraction of the cost of his old-age security is likely to become a recipient of old-age assistance, in which case the entire amount of his social security will be paid by the general taxpayer. We believe it is a good bargain for the general taxpayer if, by adding to what employers and workers contribute, he succeeds in getting the beneficiary to carry at least a part of a cost that would otherwise fall entirely upon the general revenues.

VI. PROVISION FOR ADVISORY BODIES

We urge the Senate to consider the advisability of adding to the law a provision for the establishment of a Social Security Advisory Council and a Social Security Legislative Advisory Committee as was proposed in H. R. 2893 on which the House held hearings last year. Your own Advisory Council again and again stressed the desirability of securing greater citizen participation in so important a piece of legislation as the Social Security Act. As citizens' organizations, we of the Consumers' League appreciate the importance of keeping the citizen in touch with the operation of programs which he helps to finance, and informed of the problems and policy issues to which social-security legislation gives rise. The arrangements proposed in H. R. 2893 would go far toward remedying what has hitherto been a real weakness in our social-security structure; namely, the difficulty experienced by the citizen and the legislator in securing periodic impartial and authoritative reports, and expressions of opinion regarding the functioning of our complicated series of social-security programs.

VII. ACTION IS NEEDED NOW

It is not too much to say that the future of social insurance in America is today largely in the hands of this Congress. Failure to strengthen this method of providing security may well throw us back to the chaotic methods in force before 1935 and expose the country to uncoordinated and segmental treatment of all groups strong enough to exert pressure. We must accept the fact that our people demand a form of security that enables them to know exactly what they can count on, how much, and under what objective conditions it can be obtained. They want a system that will free them from dependence on the discretion of administrators and investigators and that is removed from all the taint of the old poor law. The strength of the pension drive is sufficient proof of the intensity of this feeling. At the same time the taxpayer needs to know the extent of his obligations, and the tendency to regard the Federal Treasury as a bottomless purse must be guarded against. Social insurance enables the country to meet in large measure the demand for self-respecting economic security, while emphasizing to the beneficiary, through the contributions he makes, that there is a close connection between what you get and what you pay for.

The CHAIRMAN. The committee will recess until 10 o'clock tomorrow morning.

(Whereupon, at 12:05 p. m., the committee recessed to reconvene Tuesday, February 28, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

TUESDAY, FEBRUARY 28, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George, chairman, presiding.

Present: Senators George, Johnson of Colorado, Kerr, Myers, Millikin, and Martin.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

We hope there will be other members of the committee who will come in during the course of the hearing this morning.

Dr. Paullin, you are listed first. Do you desire to go first in the presentation of your views on H. R. 6000, or do you wish to call first one of your associates?

Dr. PAULLIN. Mr. Chairman, I think for the logical presentation of this discussion which we hope to bring to you, it would be well that Dr. Sensenich, from South Bend, Ind., the past president of the American Medical Association, make the first statement, if that would please you, sir.

The CHAIRMAN. That would be quite agreeable.

Dr. Sensenich, we are glad to have you appear this morning on H. R. 6000, and the committee will be very glad to hear you at this time.

You may be seated if you wish to.

STATEMENT OF DR. R. L. SENSENICH, SOUTH BEND, IND., ON BEHALF OF THE AMERICAN MEDICAL ASSOCIATION

Dr. SENSENICH. Thank you very much, Mr. Chairman.

I will, I think, select certain portions of my statement here, from which to speak.

The CHAIRMAN. Doctor, if you wish to, you can put your whole statement in the record, and then you may discuss it as you wish, or you can use your statement entirely if you prefer.

Dr. SENSENICH. If I may, I would wish it made a part of the record as it is, and then, in order to save the time of the committee, Senator George, I would like to discuss various portions of it which I think are particularly helpful in relation to this matter.

The CHAIRMAN. Very well, sir. Provide the reporter with a copy, and it will be entered in the record in its entirety. Then you may discuss it.

60805—50—pt. 3——13

Dr. SENSENICH. Very well, sir.

I am a practicing physician in South Bend, Ind., and have been among those deputized by the board of trustees of the American Medical Association, with a membership of 144,000 physicians, and have come here for the purpose of discussing with the committee and presenting to the committee the various features of H. R. 6000 which we think should be discussed. I would say that, referring to the first pages of my statement:

> The American Medical Association has made it a practice to take a stand on legislation involving medical care and the health of the American people. While H. R. 6000 is primarily a social welfare proposal, it does contain one provision having serious medical implications, namely, that section on compulsory contributory permanent and total disability insurance.

Now, Mr. Chairman, I refer you to page 2. And these are quotes from various statements of the house of delegates and the board.

> The major benefits included in the present social security system—old age and unemployment—are adaptable to mass or objective administration from an office remote from the individual. This is not true of total and permanent disability benefits. Age is a condition over which the individual is unable to exercise any control, and unemployment is an occurrence over which the individual may have little or no control. Qualification for the benefits is categorical and not difficult to determine. In contrast, total and permanent disability is often a condition over which the individual who is disabled and his physician may exercise control.
>
> This subjective control which may be exercised by the individual multiplies the opportunity for malingering and actually takes the program out of the insurance category. We must always oppose any program which places a brake on the incentive of the sick and disabled to desire recovery.
>
> To initiate a Federal disability program would represent another step toward wholesale nationalization of medical care and the socialization of the practice of medicine. The program as now proposed would not accomplish the entire nationalization of medical care but the inevitable expansion and liberalization of the program which would surely follow makes probable its eventual accomplishment. The steps in liberalization are not hard to visualize—such as payment of benefits to dependents of disabled covered persons, removal of the time lag of 6 months and substitution of temporary disability benefits, then eventually full cash sickness and disability provisions. We would then have nothing less than a total national compulsory sickness program.

In the hearings on this bill, persons fully qualified in the field of economics and insurance and students of political science warned against the high additional percentage of national income to be committed to social programs by the enactment of extensions as proposed by H. R. 6000. Of this danger, we are aware.

The American Medical Association recognized the need for assistance to the disabled and the needy and feels that this aid should always be administered on a local level. Financial assistance to the locality should only be advanced from State or Federal sources when a need can be clearly shown.

The foregoing is from actions of the house of delegates and the board of trustees.

Section 107 of H. R. 6000, beginning with line 6, page 88 of the bill, and dealing with disability insurance benefits, was apparently included on the recommendation of the majority report of the Advisory Council on Social Security appointed by the Senate Committee on Finance pursuant to Senate Resolution 141, Eightieth Congress, and submitted to your committee under date of May 8, 1948.

As indicated in the statement of the board of trustees, the American Medical Association is opposed to this particular part of the bill, and

I would like to present to your committee some of the reasons that prompted the board in taking its action.

1. This disability benefits program represents a plan that will inevitably be expanded far beyond its somewhat limited applicability as proposed in the bill. The majority report of the Advisory Council itself suggests that the recommended program is only a beginning when it stated, after discussing the administrative difficulties involved in carrying out the program (p. 2, S. Doc. No. 162, 80th Cong., 2d sess.):

> In view of the admitted administrative difficulties in undertaking the payment of such benefits, however, the Council recommends a highly circumscribed program. More progress will be made in the long run if the persons responsible for operating the program have an opportunity to develop experience under relatively favorable conditions.

There is implicit in the foregoing statement, it seems to me, the expectation that as administrative experience accumulates—after what we may call a settling process—the program will be expanded.

To minimize the occurrence of malingering, the Council recommended, and the bill provides for, a waiting period of 6 months after the determination of disability before benefits will be available. After the administrative experience mentioned by the Council has accumulated, it is not difficult to anticipate that this waiting period will be shortened or perhaps done away with in its entirety.

There is no specific provision in section 107 to provide medical care to the recipients of disability benefits. I give emphasis to the word "specific" for the bill does provide that the Federal Security Administrator may direct a recipient of benefits to accept rehabilitation services available to him under a State plan approved under the Federal Vocational Rehabilitation Act. That act contemplates that a State plan will make available medical care to those needy individuals undergoing rehabilitation. The accent is on the needy, in that particular place.

Whether or not a recipient of benefits under section 107 of the pending bill who is directed to undergo rehabilitation under a State plan will receive medical care only if he is needy or whether the Administrator, under the broad discretionary powers given him by section 107, may authorize the furnishing of such medical care without regard to need is a question that the bill does not clearly answer. Assuming, however, to stress a point, that there is nothing contained in section 107 of the pending bill that would authorize the supplying of medical care except perhaps to those financially in need, there is little assurance that the program will not be expanded to provide federally controlled medical and surgical care to the disabled. It seems to me that that eventuality is not remote. The providing of benefits to those who suffer disability, either temporary or total, has been suggested to the Congress on previous occasions and almost invariably such suggestions have been coupled with the supplying of medical care on the theory that if medical care will lessen or terminate the period of disability then the need for rendering federally financed aid to the disabled person will cease and Federal funds will thereby be conserved. That is a line of reasoning with which there is no argument, but the manner in which that medical care shall be provided and what shall be its standards and who shall be entitled to that care is quite another matter, which is left to a very broad discretion.

Time and again representatives of the Federal Security Agency have recommended disability benefits plus medical care. I do not believe that that statement will be seriously questioned but I wish to recall to the attention of the committee the viewpoint expressed by Mr. A. J. Altmeyer, then Chairman of the Social Security Board, who is now Commissioner for Social Security, presented on July 18, 1941, to the House Committee Investigating National Defense Migration, at which time he said:

> Our eventual goal should be the establishment of a well-rounded system of social insurance to provide at least a minimum security to individuals and their families due to unemployment, sickness, disability, old age, and death. In addition, we must provide a series of constructive social services to supplement the cash aids provided under social insurance. Medical care should be available to individuals and their families so that we may build a healthier, happier Nation. Such a system of medical care would be instrumental in reducing the costs of cash payments for sickness and disability.

That is the end of the quotation. It is a blueprint of the structure of which the provisions of H. R. 6000 relating to disability benefits must be considered as an important part. The provisions contained in the bill in section 107 should not therefore be appraised solely as an isolated, detached effort to provide some measure of aid to the disabled worker but as a part of a movement toward completing plans for a compulsory, federalized sickness insurance program such as is contemplated by another bill now pending before the Senate Committee on Labor and Public Welfare, S. 1679, which, among other things, proposes a compulsory national program of so-called health insurance which will result in the federalization of the practice of medicine.

Expansion of the pending proposal may be anticipated along other lines, too. With benefits provided for total and permanent disability, it will be only a short step to providing benefits for temporary disability, including sickness, and then benefits for the dependents of the disabled.

I urge the committee, therefore, to explore carefully and fully the potentialities of the pending proposal.

Senator KERR. May I ask a question?

The CHAIRMAN. Yes, Senator Kerr.

Senator KERR. In the paragraph just before that, I take it that your objection is aimed solely at what you think to be the proposed method, and not at the objectives?

Dr. SENSENICH. As to providing that medical care should be available to every individual, regardless of whether he is disabled, whether he is ill, or what constitutes a need for medical service. With that we are in agreement.

Senator KERR. You are in agreement with that objective?

Dr. SENSENICH. But we are not in agreement, sir, upon the Federal Government or any government, for that matter, taking over the responsibility for the medical care of every individual who is ill. And that would seem to be, sir, the eventual development out of this program, of which this proposal as to the disabled is only one feature. Perhaps I didn't understand you, Senator.

Senator KERR. Well, you have answered enough questions, to where I would say you had answered any possible construction of what I asked you. The question I asked was whether or not you were finding

fault with the objectives in the paragraph, or with the methods by which you thought certain ones were trying to achieve the objective.

Dr. SENSENICH. I am sorry I didn't understand you correctly.

2. The majority of the Advisory Council recommended a restrictive definition of a compensable disability in order to reduce the incidence of malingering. They defined "permanent and total disability" to mean any disability which is medically demonstrable by objective tests, which prevents the worker from performing any substantially gainful activity, and which is likely to be of long-continued and indefinite duration. That is quite a clear definition. That is the definition offered by the committee.

Senator KERR. How would you define it?

Dr. SENSENICH. I think that is a very good definition, sir.

The definition contained in section 107 of H. R. 6000 departs from this recommendation by failing to require that the compensable disability be demonstrable by objective tests. By "objective tests" are meant the things that can be observed or proved in the findings of an examination of this man from a physical standpoint, Senator Kerr.

Senator KERR. You think that anything a fellow feels inside of him, then, is determinable objectively by observation from others?

Dr. SENSENICH. No; it is not. And if you were to ask me, Senator Kerr, as to whether I felt that that was all that was necessary in the diagnosis of a medical case or in its care, I should say that is not correct. There are many things that are not objective.

Senator KERR. It is easier to find fault with standards suggested than it is to suggest standards about which there is no fault.

Dr. SENSENICH. That is true, Senator Kerr. But if I may continue, I think you will find why I am presenting what I am at this place.

Senator KERR. I think I knew that before you started.

Dr. SENSENICH. I think I can make it clear, sir.

Senator MILLIKIN. Well, if you do not have standards based on objective tests, you open the whole field to malingering and phoney claims of all kinds.

Dr. SENSENICH. That is the reason I am continuing on. I think you have heard from those who have had to deal with the total disability claims to life insurance companies and the claims of others who allege disability, as a result of injury, and so on, the enormous amount of malingering and of complaint of disabling illness which cannot be proved by objective means and often is subject to great question.

The definition thus broadened in section 107 may bring into importance many simulated symptoms of conditions which cannot be demonstrated by objective tests and will make even more uncertain and indefinite a satisfactory application of the provisions of the bill.

3. Reference has been made to the discretionary powers proposed to be lodged with the Administrator of the Federal Security Agency in connection with the disability-benefits program. The Administrator will, for one thing, decide who will make the initial examination and the contemplated reexaminations to determine the existence of a disability of a kind to confer entitlement of benefits.

We meet up with that problem all the time. He may utilize physicians who are employees of the Government, such as salaried physicians of the Veterans' Administration or of the United States Public

Health Service, or other physicians who are on a salary specifically to function in connection with the disability benefits program. He may utilize private practitioners of medicine on a fee basis but there is no assurance that the family physician of the potential beneficiary will be permitted to have any voice in the determination of disability although he is the one presumably best qualified to make the determination.

Senator MILLIKIN. I think it should be said there, Doctor, that there also would be great pressure on the family physician to find the existence of a disability which might be questionable.

Dr. SENSENICH. That is very true, sir. As a matter of fact, in England, in the administration of their certification for certain benefits, it became so terribly difficult for the physicians that they asked to be released from that responsibility; the end result being that the illness, then, would be determined by a nonmedical individual, and the system was very, very badly imposed upon.

Senator MILLIKIN. We had some testimony earlier, as I recall it, to the effect that under some State plan—I may have this a little twisted, but I think the idea is correct—they have picked panels from another community to make these decisions, just to avoid the pressure that comes on the family physician and local physicians who know the case.

Dr. SENSENICH. That is quite understandable, Senator.

Senator KERR. May I ask a question, Mr. Chairman?

The CHAIRMAN. Yes, Senator Kerr.

Senator KERR. Do I understand that you take the position that those to whom you have just referred should not be permitted to help determine the disability?

Dr. SENSENICH. No, Senator Kerr. What I am developing here, when I will have finished another paragraph or two, is rather to show the difficulties in the administration of this bill.

Senator KERR. You will pardon me if I seem to be unable to anticipate your conclusion, but I have found this out, that oftentimes when I did not know where I was going, when I was on a journey, I was unable to recognize the destination when I got there.

Dr. SENSENICH. I think that would be a fair observation but I am quite sure, Senator Kerr, that I know my destination.

Senator MILLIKIN. It would be advisable to know where you are going before you start.

Senator KERR. I am interested in your remark that he may utilize physicians who are employees of the Government, such as salaried physicians of the Veterans' Administration. Are we proceeding to the conclusion that they are not qualified to make these examinations?

Dr. SENSENICH. No, this is just enumerating the means or what kind of medical proof might be submitted as to the total disability of this individual. We are not complaining of that.

Senator KERR. Now, on the basis of what would be adequate? Or what would not be adequate? I mean, you have some reason for putting that in.

Dr. SENSENICH. Yes, and I conclude that in the next paragraph, Senator Kerr.

Senator KERR. I am looking forward to that next paragraph with great anticipation.

Dr. SENSENICH. All right, sir. We will have then the probability of the disabled worker being forced to rely on a governmental employee

for the establishing of his rights, with no assurance of an opportunity to present evidence on his own behalf. This seems important in view of the fact that the bill grants no right of appeal from any adverse decision reached by the Administrator nor, as a matter of fact, is that official even required to act in accordance with the advice given him by his medical adviser.

Senator KERR. Do you think he should be?

Dr. SENSENICH. If we will drop that detail, I think that the individual should have the same right of appeal as he has in your and my life insurance policies, if we are not satisfied that we are being fairly treated as to disability.

This individual has no appeal. He has no appeal, and even the physician, who is not of his selection, who does not represent him but is appointed by someone else or provided by another agency, may do exactly as he wishes, and without anything from the individual physician, who probably is best acquainted with the facts. I wanted to make that clear in connection with your question, Senator Kerr.

Even though a family or attending physician is designated or permitted to make the required examinations and determinations, that physician will be placed in a most difficult position. This, I think, will answer your other question, Senator Kerr. A dual relationship will obtain; one, a physician-patient relationship, because the physician has been the attending physician, and the other, a physician-Government-examinee relationship, because the physician, compensated by the Government, will be examining the worker, not for the purpose of treatment but for the purpose of determining the eligibility of the worker to receive the specified cash sums. That situation has arisen many times.

If in a border-line case, and certainly many such cases will arise, the physician resolves a doubt in favor of the worker, who is also his patient, he may be accused of conniving to defraud the Government. If he resolves that doubt in favor of the Government, he will most assuredly invite the animosity of his patient and thereby will make it impossible for him to function efficiently thereafter in the treatment of his patient's condition.

It has been actually known, and I am sure, Senator Kerr, that you have heard of instances in connection with disabilities following industrial injuries, where the boards, the State agencies, must determine whether the individual is disabled, first of all, and the extent of that disability, and the probable outlook. Where it is found that the individual goes to a physician other than his regular attending physician, there is no argument about that. But there are cases where some physicians seem to be rather favorably selected by those who feel that their case should be presented to their interests.

Now, that is a bit unfortunate, but nevertheless it is a situation which obtains, and which makes it difficult, in the administration of such an act. We are now in the border-line cases, and we have departed from those in which there is actual objective evidence. Obviously, a case in which a man who has lost a leg or an arm is one which is apparent to anyone.

Senator KERR. You would not even have to have a physician to determine that.

Dr. SENSENICH. No, Senator Kerr, I would be willing to ease up the restrictions on the determining of that disability.

Senator KERR. Well, that is encouraging.

Dr. SENSENICH. The majority report of the Advisory Council perhaps realized that much discretionary power would be conferred on the Administrator if its recommendations were enacted into law, for the report suggested on page 2 as follows:

> We believe further that it would be desirable to establish a public advisory board to counsel with the Federal administration particularly during the early years of the operation of this new program. Such an advisory group could assure that a variety of viewpoints are considered in the formulation of policy. The advisory group might appropriately later review and make recommendations on the conduct of operations and the extent to which the program achieves its purpose.

That is a quote from the recommendation of the committee. And again, the Council recommended a decentralization of administrative procedure in order to prevent too much concentration of administrative action and decision in Washington. Here again, however, the provisions of section 107 depart from the recommendations of the majority report, for there is no reference to the creation of a public advisory board nor is there any indication that the administrative functions will be decentralized.

4. It is a fact well known to physicians that the mental attitude of a patient is a most important factor in his recovery. We may call it the will to get well. Disability benefits may well remove from many disabled workers the incentive to become a contributing member of society, the incentive, in other words, to recover from his disability.

5. As indicated in the statement on H. R. 6000 formulated by our board of trustees, which I read to you earlier, no apt parallel can be drawn between the existing old-age and unemployment programs and the proposed disability benefits program. They are not comparable. A worker either is or is not aged and he has no control over the fact. A worker is either unemployed or he is not and, possibly with a few exceptions, he has little or no control over the fact. There are no border-line cases, generally speaking. Little if any exercise of discretion in awarding benefits, particularly on account of old age, is necessary. These two programs lend themselves somewhat readily to mass treatment. That is not true with respect to disability benefits. Highly personalized equations must be considered in individual cases and that necessity precludes the administration of the program on a mass basis.

Senator Kerr, I am referring there to that question of yours a while ago as to objective proof. We have a wide borderline of those who have no objective proof. As to the insurance companies, I think someone from one of the insurance companies appeared before the committee not very long ago. I know I have had personal experience with the individual who is financially able, is about able to retire or has retired, and has a coronary attack which may be of minor character and may possibly not disqualify him even for the continuance of the business to which he has been accustomed. But he frequently decides that that constitutes a disability, and from that time on he claims to recover disability from the insurance company, even though he is not in financial need, and the program he is following is what he would have followed even had he had no illness.

Too, total and permanent disability is often a condition over which the individual and his physician may exercise some control and that fact would seem to remove the program from the insurance category.

6. These, Mr. Chairman, are some of the reasons that prompted the board of trustees to express opposition to the program outlined by section 107 of H. R. 6000. The board is convinced that that program is the forerunner of a completely federalized system of compulsory sickness insurance, such as has frequently been advocated by the Commissioner of Social Security, Mr. Altmeyer. It believes that any such nationally directed and controlled program will inevitably result in the socialization of the practice of medicine and in a marked deterioration in the quality of the medical care that the American people has been accustomed to receive. While American medicine is interested in the rehabilitation of the disabled, it believes that rehabilitation can best be accomplished on a local level without direction and interference from a Federal administrative agency remote from the problem. Furthermore, the proposed Federal disability program will call for a certification of a medical condition which, as defined in the bill, will invite abuse and fraud and the ultimate cost of the program cannot be predicted with any degree of assurance.

Insurance companies have taken a very, very serious beating on their full disabilities.

Several States have initiated programs in aid of the disabled worker but the period of duration of these programs has been too short to justify a final appraisal at this time. More experience in this field is necessary and should be gained before attempting even the somewhat restricted program contemplated by section 107.

May I add to this that we are all, I think, of one mind, certainly, that we feel that the disabled individual should have the proper kind of care. He should have medical care. He should have every opportunity for rehabilitation.

Senator KERR. That is an interesting observation, and as one member of the committee I would be very grateful to you if you could tell us how you thought that might be obtainable.

Dr. SENSENICH. I shall be very glad to. May I just complete this statement here? The difficulty, however, in the administration of this bill is this—and let us be realistic—most of the people, the larger number of the people, whom you and I know, who are disabled, are the individuals who would not be touched by this bill at all, for the simple reason that this is attached to the pay roll. The crippled child, the individual who has been disabled from childhood, the individual who is not in covered employment, who has an injury, has a disability, would not be eligible for any help under this bill. And that includes a far greater number than the others. As for those who were injured in industry and are in covered employment, provisions are made for them under State laws. They can be sustained for long periods of time. In fact, as long as they live, if they are completely disabled. And they are under the State acts.

So, after all, the number of individuals involved here would not be sufficient to justify the setting up of a program which is so essentially difficult to administer and offers so many opportunities, and I might even say incentives, to irregularity and to claims that constitute in the main fraud, the attempt to gain something to which they are not entitled.

Senator KERR. Then do I understand that you are objecting to it because it covers too few? In other words, do you just make the objection that it covers too few?

Dr. SENSENICH. No; it is too difficult to administer. And it is setting up a means which is very difficult to administer, which is in a bad direction, which is subject to malingering and a great many things, to cover a few individuals, when the rest of the individuals are taken care of through other mechanisms. If there were a meeting of a need which could not otherwise be provided for, then there might be some reason for experimentation with it, which is not true.

Senator KERR. I understood a while ago that you objected to it on the ground that it would lead to too many.

Dr. SENSENICH. Too many frauds.

Senator KERR. No; you said it might come to be applied to everybody.

Dr. SENSENICH. Oh, no; that this would lead to an expansion beyond this bill, an expansion into compulsory sickness plans.

Senator KERR. Now answer the question I first asked you, on your observation, there, where you expressed the belief or the thought that it would be wonderful if this medical care were available to all. You said that you would answer the question I asked you as to how that would be brought about.

Dr. SENSENICH. Oh. I am glad you reminded me of that. I would say this: That, so far as the care of the individual in need of medical care is concerned, regardless of whether he is crippled, whether he has an acute illness, a chronic illness, or what, medical care should be available to him; and it is.

Senator KERR. Then our problem is not in providing it, but just in advising him as to the fact that it is already available to him?

Dr. SENSENICH. And the improvement of the functioning of the agencies which are responsible for him in the event he is unable to provide the care for himself.

Senator KERR. It is amazing how such an important fact is so little known, Doctor.

Dr. SENSENICH. I might observe, Senator, that there are a great many men who make it their business to say contrariwise, if I am understood.

Senator KERR. Well, that would not be particularly persuasive to those who need the care; would it, Doctor? If it were available to them, they would not be particularly impressed by statements of those who said that it were not.

Dr. SENSENICH. I think that is true.

Senator KERR. Well, would it not be equally true that, if they needed it and it were not available to them, they would not be too much impressed by statements of men that it was available to them?

Dr. SENSENICH. Yes, but they do not enact the bills into law, and they do not administer the law, and they are not those who have to do with the public.

Senator KERR. Well, I thought we had left the legislative field and were talking about the matter that you said you thought this medical care should be available to them and is.

Dr. SENSENICH. And is. Now, then, as to the individual who is in need, the agency and the local government who is responsible for the care of the individual in need should function, and I think in the main does. If it does not, then it should; and means should be taken to stimulate that effort.

Senator KERR. Which local agency of government is it that is charged with the responsibility of making medical aid available to this group?

Dr. SENSENICH. It differs in the States. In some States it is the welfare agency.

Senator KERR. Let us take Oklahoma. I know a little more about that.

Dr. SENSENICH. I don't Senator Kerr. I don't know what your situation is.

Senator KERR. I thought you said it was available in all of the States.

Dr. SENSENICH. I cannot go into the detail of it, though. May I ask you a question? Is it true in Oklahoma, Senator Kerr, that you do not have a public agency that is responsible for the care of the individual who needs medical care?

Senator KERR. Amazing as it may be, that is true. And, so far as I know, it is likewise true in every State I know anything about.

Dr. SENSENICH. Oh, I couldn't agree with that, sir. I wouldn't argue with you as to Oklahoma.

Senator KERR. Well, then, let us talk about some State that you do know about.

Dr. SENSENICH. In my own State, Indiana, the responsibility for the individual is in the township trustee. Many of those needing care are already in a situation where, by age or otherwise, they are eligible for care under the welfare department. And those who are not cared for under the welfare program are cared for under the township trustee, who has funds for that purpose and is responsible. He may hospitalize them and give them any medical care they need as long as they need it.

Senator KERR. That is true in the State of Indiana?

Dr. SENSENICH. In the State of Indiana.

Senator KERR. Well, that is wonderful. I am delighted to get that information. Now, what other State do you know about that has it?

Dr. SENSENICH. Well, in the main——

Senator KERR. Did you say "in Maine"?

Dr. SENSENICH. No; I said "in the main."

Senator KERR. Well, let us leave the realm of general discussion and be specific.

Dr. SENSENICH. I am not sufficiently familiar with all the individual States.

Senator KERR. Oh.

Dr. SENSENICH. I have been told about them but I hesitate to make detailed statements simply as the result of information given me by people in those States. I have been interested in this for a long period of time, and I am amazed to hear you say that there are many States who do not have provision for those in need of medical care. My neighboring States—Michigan, Ohio, Illinois, and Wisconsin—I know all have the legal mechanism for doing that. It is almost unbelievable, if you did not say so, Senator, that even Oklahoma does not have that provision.

Senator KERR. Well, I am not amazed greatly that the situation is as I have pictured it in Oklahoma. I am more amazed at what you tell me the ample medical care available to the people of Indiana is

than you are at my telling you that such care is not available in Oklahoma.

Dr. SENSENICH. I see.

Well, may I say just a word in conclusion? We have other men who will appear before the committee.

This program, or this bill, if it were enacted into law would add considerably to the funds required by a department which I am told at the present time is already approximately $7,000,000,000 in arrears of the predictable commitments. That amazed me. I understood they had $11,000,000,000, and I now understand they should have $18,000,000,000. I don't see how the Nation can assume responsibility without the determination of need for so many individuals, even though it should, in the judgment of the Federal Government, be advisable that they take over.

Senator KERR. Especially is that true if no need exists, Doctor.

Dr. SENSENICH. Well, that is true, sir. And may I say just this, in passing, Senator George.

With reference to the matter of complaint if need must be demonstrated in these areas where medical care is provided by a governmental agency, that seems to be a very distressing matter to a certain group, who constantly say all service should be provided as a matter of right, and that the matter of determination of need is a very painful and undesirable thing. I am a bit surprised at that, at the inconsistency of it, because everything that we have had to do with is determined upon need.

If we turn to the social-security system as it is—and I have no complaint, except that I should like to be perfectly factual—the social-security system at the present time rests upon need to this extent: Even though the individual has paid in to old-age pension funds all the years in covered employment, when he arrives at 65 years of age if he actually earns, in my own State I think in excess of 50 cents a day, he doesn't get a pension. Is this determined on right or need?

So I am not so much concerned about this "need" definition. I don't think it should be embarrassing to the individual and in any way harmful; and properly administered, certainly it would be far more realistic.

Thank you, Mr. Chairman.

The CHAIRMAN. Thank you, Dr. Sesenich.

Are there any other questions?

(The prepared statement of Dr. Sensenich follows:)

STATEMENT BY DR. R. L. SENSENICH ON BEHALF OF THE AMERICAN MEDICAL ASSOCIATION

It is customary, I believe, for each witness at the start to identify himself for purposes of the record. I am Dr. R. L. Sensenich. My home is in South Bend, Ind., where I have practiced medicine for many years. I am the immediate past president of the American Medical Association and have been deputized by the board of trustees of the association, an organization of over 144,000 physicians, to bring to your attention the action taken by the board on certain parts of H. R. 6000, a bill now pending before your committee to extend and improve the Federal old-age and survivors insurance system, to amend the public-assistance and child-welfare provisions of the Social Security Act, and for other purposes.

The following statement with respect to the bill was adopted by the board of trustees on December 8, 1949:

"In the past, the American Medical Association has made it a practice to take a stand on legislation involving medical care and the health of the American

people. While H. R. 6000 is primarily a social-welfare proposal, it does contain one provision having serious medical implications; namely, that section on compulsory contributory permanent- and total-disability insurance.

"The major benefits included in the present social-security system—old-age and unemployment—are adaptable to mass or objective administration from an office remote from the individual. This is not true of total- and permanent-disability benefits. Age is a condition over which the individual is unable to exercise any control, and unemployment is an occurrence over which the individual may have little or no control. Qualification for the benefits is categorical and not difficult to determine. In contrast, total and permanent disability is often a condition over which the individual who is disabled and his physician may exercise control.

"This subjective control which may be exercised by the individual multiplies the opportunity for malingering and actually takes the program out of the insurance category. We must always oppose any program which places a brake on the incentive of the sick and disabled to desire recovery.

"To initiate a Federal disability program would represent another step toward wholesale nationalization of medical care and the socialization of the practice of medicine. The program as now proposed would not accomplish the entire nationalization of medical care, but the inevitable expansion and liberalization of the program which would surely follow makes probable its eventual accomplishment. The steps in liberalization are not hard to visualize, such as payment of benefits to dependents of disabled covered persons, removal of the time lag of 6 months, and substitution of temporary-disability benefits, then eventually full cash sickness and disability provisions. We would then have nothing less than a total national compulsory sickness program.

"During the hearings on this bill persons fully qualified in the field of economics and insurance and students of political science warned against the high additional percentage of national income to be committed to social programs by the enactment of extensions as proposed by H. R. 6000. Of this danger, we are aware.

"The American Medical Association recognized the need for assistance to the disabled needy and feels that this aid should always be administered on a local level. Financial assistance to the locality should only be advanced from State or Federal sources when a need can be clearly shown."

Section 107 of H. R. 6000, beginning with line 6, page 88 of the bill and dealing with disability-insurance benefits, was apparently included on the recommendation of the majority report of the Advisory Council on Social Security appointed by the Senate Committee on Finance pursuant to Senate Resolution 141, Eightieth Congress, and submitted to your committee under date of May 8, 1948.

As indicated in the statement of the board of trustees, the American Medical Association is opposed to this particular part of the bill, and I would like to present to your committee some of the reasons that prompted the board in taking its action.

1. This disability-benefits program represents a plan that will inevitably be expanded far beyond its somewhat limited applicability as proposed in the bill. The majority report of the Advisory Council itself suggests that the recommended program is only a beginning when it stated, after discussing the administrative difficulties involved in carrying out the program (p. 2, S. Doc. 162, 80th Cong. 2d sess.):

"In view of the admitted administrative difficulties in undertaking the payment of such benefits, however, the Council recommends a highly circumscribed program. More progress will be made in the long run if the persons responsible for operating the program have an opportunity to develop experience under relatively favorable conditions."

There is implicit in the foregoing statement, it seems to me, the expectation that as administrative experience accumulates—after what we may call a settling process—the program will be expanded.

To minimize the occurrence of malingering, the Council recommended, and the bill provides for, a waiting period of 6 months after the determination of disability before benefits will be available. After the administrative experience mentioned by the Council his accumulated, it is not difficult to anticipate that this waiting period will be shortened or perhaps done away with in its entirety.

There is no specific provision in section 107 to provide medical care to the recipients of disability benefits. I give emphasis to the word "specific" for the bill does provide that the Federal Security Administrator may direct a recipient of benefits to accept rehabilitation services available to him under a State plan

approved under the Federal Vocational Rehabilitation Act. That act contemplates that a State plan will make available medical care to those needy individuls undergoing rehabilitation. Whether or not a recipient of benefits under section 107 of the pending bill who is directed to undergo rehabilitation under a State plan will receive medical care only if he is needy or whether the Administrator, under the broad discretionary powers given him by section 107 may authorize the furnishing of such medical care without regard to need, is a question that the bill does not clearly answer. Assuming, however, to stress a point, that there is nothing contained in section 107 of the pending bill that would authorize the supplying of medical care except perhaps to those financially in need, there is little assurance that the program will not be expanded to provide federally controlled medical and surgical care to the disabled. It seems to me that eventuality is not remote. The providing of benefits to those who suffer disability, either temporary or total, has been suggested to the Congress on previous occasions and almost invariably such suggestions have been coupled with the supplying of medical care on the theory that if medical care will lessen or terminate the period of disability then the need for rendering federally financed aid to the disabled person will cease and Federal funds will thereby be conserved.

Time and again representatives of the Federal Security Agency have recommended disability benefits plus medical care. I do not believe that that statement will be seriously questioned but I wish to recall to the attention of the committee the viewpoint expressed by Mr. A. J. Altmeyer, then Chairman of the Social Security Board, who is now Commissioner for Social Security, presented on July 18, 1941, to the House Committee Investigating National Defense Migration, at which time he said:

"Our eventual goal should be the establishment of a well-rounded system of social insurance to provide at least a minimum security to individuals and their families due to unemployment, sickness, disability, old age, and death. In addition, we must provide a series of constructive social services to supplement the cash aids provided under social insurance. Medical care should be available individuals and their families so that we may build a healthier, happier nation. Such a system of medical care would be instrumental in reducing the costs of cash payments for sickness and disability."

That is the end of the quotation. It is a blueprint of the structure of which the provisions of H. R. 6000 relating to disability benefits must be considered as an important part. The provisions contained in the bill in section 107 should not therefore be appraised solely as an isolated, detached effort to provide some measure of aid to the disabled worker but as a part of a movement toward completing plans for a compulsory, federalized sickness insurance program such as is contemplated by another bill now pending before the Senate Committee on Labor and Public Welfare, S. 1679, which, among other things, proposes a compulsory national program of so-called health insurance which will result in the federalization of the practice of medicine.

Expansion of the pending proposal may be anticipated along other lines, too. With benefits provided for total and permanent disability, it will be only a short step to providing benefits for temporary disability, including sickness, and then benefits for the dependents of the disabled.

I urge the committee, therefore, to explore carefully and fully the potentialities of the pending proposal.

2. The majority of the advisory council recommended a restrictive definition of a compensable disability in order to reduce the incidence of malingering. They defined "permanent and total disability" to mean any disability which is medically demonstrable by objective tests, which prevents the worker from performing any substantially gainful activity, and which is likely to be of long-continued and indefinite duration. The definition contained in section 107 of H. R. 6000 departs from this recommendation by failing to require that the compensable disability be demonstrable by objective tests. The definition thus broadened may bring into importance many simulated symptoms of conditions which cannot be demonstrated by objective tests and will make even more uncertain and indefinite a satisfactory application of the provisions of the bill.

3. Reference has been made to the discretionary powers proposed to be lodged with the Administrator of the Federal Security Agency in connection with the disability benefits program. The Administrator will, for one thing, decide who will make the initial examination and the contemplated reexaminations to determine the existence of a disability of a kind to confer entitlement of benefits. He may utilize physicians who are employees of the Government, such as salaried

physicians of the Veterans' Administration or of the United States Public Health Service, or other physicians who are on a salary specifically to function in connection with the disability benefits program. He may utilize private practitioners of medicine on a fee basis but there is no assurance that the family physician of the potential beneficiary will be permitted to have any voice in the determination of disability although he is the one presumably best qualified to make the determination. We will have then the probability of the disabled worker being forced to rely on a governmental employee for the establishing of his rights, with no assurance of an opportunity to present evidence on his own behalf. This seems important in view of the fact that the bill grants no right of appeal from any adverse decision reached by the Administrator nor, as a matter of fact, is that official even required to act in accordance with the advice given him by his medical adviser.

Even though a family or attending physician is designated or permitted to make the required examinations and determinations, that physician will be placed in a most difficult position. A dual relationship will obtain, one, a physician-patient relationship because the physician has been the attending physician, and the other, a physician-government-examinee relationship because the physician, compensated by the Government, will be examining the worker, not for the purpose of treatment but for the purpose of determining the eligibility of the worker to receive the specified cash sums.

If in a border-line case, and certainly many such cases will arise, the physician resolves a doubt in favor of the worker, who is also his patient, he may be accused of conniving to defraud the Government. If he resolves that doubt in favor of the Government, he will most assuredly invite the animosity of his patient and thereby will make it impossible for him to function efficiently thereafter in the treatment of his patient's condition.

The majority report of the advisory council perhaps realized that much discretionary power would be conferred on the Administrator if its recommendations were enacted into law, for the report suggested on page 2 as follows:

"We believe further that it would be desirable to establish a public advisory board to counsel with the Federal administration particularly during the early years of the operation of this new program. Such an advisory group could assure that a variety of viewpoints are considered in the formulation of policy. The advisory group might appropriately later review and make recommendations on the conduct of operations and the extent to which the program achieves its purpose."

And again, the council recommended a decentralization of administrative procedure in order to prevent too much concentration of administrative action and decision in Washington. Here again, however, the provisions of section 107 depart from the recommendations of the majority report, for there is no reference to the creation of a public advisory board nor is there any indication that the administrative functions will be decentralized.

4. It is a fact well known to physicians that the mental attitude of a patient is a most important factor in his recovery. We may call it the will to get well. Disability benefits may well remove from many disabled workers the incentive to become a contributing member of society, the incentive, in other words, to recover from his disability.

5. As indicated in the statement on H. R. 6000 formulated by our board of trustees, no apt parallel can be drawn between the existing old-age and unemployment programs and the proposed disability-benefits program. A worker either is or is not aged and he has no control over the fact. A worker is either unemployed or he is not and, possibly with a few exceptions, he has little or no control over the fact. There are no border-line cases, generally speaking. Little if any exercise of discretion in awarding benefits, particularly on account of old age, is necessary. These two programs lend themselves somewhat readily to mass treatment. That is not true with respect to disability benefits. Highly personalized equations must be considered in individual cases and that necessity precludes the administration of the program on a mass basis. Too, total and permanent disability is often a condition over which the individual and his physician may exercise some control and that fact would seem to remove the program from the insurance category.

6. These Mr. Chairman, are some of the reasons that prompted the board of trustees to express opposition to the program outlined by section 107 of H. R. 6000. The board is convinced that that program is the forerunner of a completely federalized system of compulsory sickness insurance, such as has frequently been advocated by the Commissioner of Social Security, Mr. Altmeyer.

It believes that any such nationally directed and controlled program will inevitably result in the socialization of the practice of medicine and in a marked deterioration in the quality of the medical care that the American people have been accustomed to receive. While American medicine is interested in the rehabilitation of the disabled, it believes that the rehabilitation can best be accomplished on a local level without direction and interference from a Federal administrative agency remote from the problem. Furthermore, the proposed Federal disability program will call for a certification of a medical condition which, as defined in the bill, will invite abuse and fraud and the ultimate cost of the program cannot be predicted with any degree of assurance.

Several States have initiated programs in aid of the disabled worker but the period of duration of these programs has been too short to justify a final appraisal at this time. More experience in this field is necessary and should be gained before attempting even the somewhat restricted program contemplated by section 107.

I appreciate very much, Mr. Chairman, the opportunity to discuss this matter with your committee.

Senator JOHNSON. Mr. Chairman, I hope Dr. Murphey can be put on next, because I have to leave to go to another committee. I would like to hear Dr. Murphey's testimony, if it would not conflict with the procedure.

Dr. PAULLIN. We had a little different program arranged, but I think that is all right. Dr. Murphey is a representative of the Colorado State Medical Society.

The CHAIRMAN. Doctor, you may be seated, and we will be very glad to hear you at this time.

Senator MILLIKIN. Dr. Murphey, I may say, Mr. Chairman, is an outstanding and highly reputed physician of the Rocky Mountain area.

The CHAIRMAN. Doctor, would you like to put your entire statement in the record and deal with it, as the previous witness, Dr. Sensenich, did? Or would you like to confine yourself to your manuscript?

STATEMENT OF DR. BRADFORD MURPHEY, DENVER, COLO., REPRESENTING OFFICERS AND BOARD OF TRUSTEES OF THE COLORADO STATE MEDICAL SOCIETY

Dr. MURPHEY. Mr. Chairman, I would like to introduce the entire statement into the record, but in the interests of conserving the time and energies of this committee, I would like to single out certain portions of my statement for emphasis.

The CHAIRMAN. Yes, sir. Your statement will be set out in the record in full and you may proceed in your own way, Doctor.

Dr. MURPHEY. Well, let me begin, Senator, by saying that my name is Bradford Murphey, and I am a practicing physician in Denver, Colo.

I am here to speak in behalf of the officers and trustees of the Colorado State Medical Society, who are, as a group, opposed to H. R. 6000.

I am here to offer testimony against the bill as a whole, but more particularly I wish to emphasize the reasons why our group feels that the section dealing with permanent and total disability is an unwise procedure.

In the first place, I think that there is every reason to believe that the disability benefits proposed in H. R. 6000 would be continuously expanded and constantly liberalized, through political pressure.

The provision of benefits to the permanently disabled would surely lead to the extension of such benefits to the dependents of disabled persons; and also to those who are temporarily or partially disabled; and finally, perhaps, to everyone who is incapacitated, in whole or in part, either permanently or temporarily. This would all add up in the end to a compulsory sickness program of national dimensions.

In the second place, I am convinced that the permanent and total disability provisions of H. R. 6000 would lead to at least partial duplication with workmen's compensation programs in all those cases where the disability is occupational in nature.

In the third place, since total and permanent disability is frequently a condition over which both the individual, who is disabled, and his attending physician, may and can exercise some control, either consciously or unconsciously, qualifications for benefits will be very difficult to determine, the issue will be highly controversial in each case or certainly at least in border-line cases, and certainly for this reason it will be very expensive.

In the fourth place, since the definition of permanent and total disability as formulated in section 107 of H. R. 6000 does not require that disability be proven by objective tests, the proposed program, if adopted, would be wide open to abuse by dishonest claimants, through malingering, and to even greater abuse by unscrupulous doctors and lawyers working with such malingerers.

A disability program of this type would also be open to exploitation by another and far larger group of individuals, who are neurotic rather than dishonest, and who are for this reason bent on deceiving themselves rather than on defrauding the Government.

This program would make the flight of the neurotically ill individual away from self-responsibility and health and into illness profitable for himself and for his lawyer, and, by rewarding illness, it would make his return to health and self-responsibility very difficult and, probably in some instances, quite impossible.

In the fifth place, the failure of H. R. 6000 to require proof of disability by objective tests would, if the bill were enacted into law, involve the social-security program in enough controversy and litigation to keep all of the psychiatrists and lawyers in the country busy and for this reason would probably bankrupt our economy.

In the sixth place, H. R. 6000, like most of the legislative proposals favored by the Social Security Administration, gives the Social Security Administrator discretionary powers so great as to make him a threat to our democratic pattern of government, and further to make him a menace to the private practice of medicine.

Under the provisions of this act, the Administrator would be permitted to decide what physician or group of physicians could be used to determine disability and benefit rights. He would have the power to entirely exclude private practitioners from participation in such a program, notwithstanding the fact that the family physician surely would be the one best qualified to make such determinations of disability.

Under the provisions of this bill the Social Security Administrator could employ physicians on a full-time basis, to carry out this function of the disability-benefits program.

He could, as the previous witness has testified, have this work done entirely by full-time employees of Government.

But regardless of whether the work were done by a full-time employee of government, such as a public-health officer, or by the private physician, it would certainly place the physician so employed in a position of serving two masters—his patient on the one hand and the Administrator of Social Security on the other.

Since the physician's salary would not be paid by the patient, it is not too difficult to guess what would happen in such a splitting of loyalties. If the physician resolves such a conflict of loyalties in favor of the patient in a debatable case, he would run the risk of minimizing his chances for promotion and advancement in his department or bureau. If he habitually favored the Social Security Administration, he would soon incur the hostility of his patients and hence create a negative relationship with them which would destroy his effectiveness as their physician.

The treatment of illness and the work of the physician is accomplished in large measure through the relationship of trust and confidence and even of affection which has to exist between a doctor and his patient. When the doctor is placed in a position like this, and finds against the patient, he destroys his relationship with his patient, as we have pointed out.

In the seventh place, all of us in the medical profession who have had any experience with State industrial commissions and workmen's compensation programs realize that the official classification of an individual as a totally and permanently disabled person is sometimes a life sentence to invalidism.

The power of suggestion associated with an official declaration of total disability, plus the cash benefits that would accrue to the disabled person by remaining disabled, would, we think, create a psychological pressure great enough in many cases to rob the disabled person of all incentive to recovery.

The disability provisions of H. R. 6000 would, then, in fact, in the case of tens of thousands of neurotic individuals, tend to establish incentives in the opposite direction toward neurotically determined disability. The ultimate cost and waste of a disability program geared to incentives to illness rather than incentives to recovery would be enormous and would, in our opinion, jeopardize the economic, the psychological, and the moral stability of our social order.

Now, these are just some of the main reasons, Mr. Chairman, why the officers and trustees of the Colorado State Medical Society are opposed to H. R. 6000 in its entirety and especially to section 107 of this proposed legislation.

Like the sponsors and the proponents of H. R. 6000, we are interested in providing security for the aged. We are interested in providing security for disabled persons. We are interested in helping the defenseless and the neglected child. But we are convinced that the means and the methods proposed in H. R. 6000 for providing such security are by their very nature far more of a threat to our free society than the social ills that they seek to cure.

We think, sir, that the responsibility of Government at the local, at the State, and at the National level is to protect property and life and to maintain a climate and an atmosphere of fair play in which people can work out their own destiny and through their own sweat and effort make provision for their own security. When Government

attempts to do what the individual should do for himself, it must resort to compulsory methods that would involve the degredation of the individual, and that would also place too much power in the hands of the people who would have to administer such programs.

Thank you.

The CHAIRMAN. Any questions?

Senator MILLIKIN. Dr. Murphey, in Colorado, let us assume that John Doe, by objective tests, becomes totally disabled.

Let us assume that he is indigent. What are the means available to him to have his case taken care of?

Dr. MURPHEY. In an industrial case, we have our State industrial bureau, and he will be taken care of through that mechanism. In a nonindustrial case, we have private organizations in the field of philanthropy, numerous health and welfare agencies, and in addition to these we have city and county and State programs for assisting those who are destitute and unable to provide for their own care.

Senator MILLIKIN. And their dependents?

Dr. MURPHEY. And their dependents; yes, sir.

Senator JOHNSON. Dr. Murphey, you heard the colloquy between Dr. Sensenich and Senator Kerr a moment ago. It seems to me that Colorado has a better system even than Indiana, if that were possible. We have a very fine general hospital in Colorado, with which you are connected. You are connected with the mental-illness section of it. We have this very splendid general hospital, to which citizens of Colorado may be sent by their communities, and the county commissioner pay the bill. Many of the counties—in fact, almost all of the counties—either have a hospital of their own in the counties, such as Greeley, which has a very large hospital, or they have arrangements with private hospitals in their counties to take care of indigent patients. So that Colorado is in pretty good shape so far as taking care of illnesses and medical cases on the part of citizens who were unable to pay their own way is concerned. Would you not say that?

Dr. MURPHEY. That is true, Senator Johnson. Any person in Colorado, even in the most sparsely settled counties and those most remote from medical-care facilities, can be and usually are, certified by their board of commissioners as elegible for care and treatment in the Colorado General Hospital, one of the finest hospitals of its kind in the Nation. It is a teaching hospital associated with the University of Colorado School of Medicine. It is well staffed and the people who come from the counties for medical care get the best kind of care; not only the physical aspects of such care, but they get the personal attention and the kind of personal relationship they need with doctors who are interested in people.

I have not said anything about our various pension programs for providing aid to needy people in our various industries, like the Colorado Fuel & Iron Co., and other industrial and commercial concerns, but I want to point out that Colorado workers are well protected in matters of this kind.

Senator JOHNSON. Then we have a very fine rehabilitation program for assisting the handicapped, amputees, and others that may be taken care of and trained so that they may become self-supporting. We have care for the blind. We have a very good program. Of course, it could be greatly improved and expanded, no doubt, but it is an excellent program as it is.

Dr. MURPHEY. I am glad to have the opportunity to plug my State, because I think that Senator Johnson is understating it ratther than overstating it. I feel that we have one of the finest State hospitals for the care of mental cases that there is in the Nation. We give the mentally ill, in our State hospital at Pueblo, care comparable to that provided by any State in the Union. And, as Senator Johnson has pointed out, a great many of our more populous counties have hospitals of their own, and in nearly all the counties where there is a hospital at all, the county commissioners have a working arrangement with the private hospital to provide care at the county or local level. Some of the more difficult cases, that require more expensive diagnosis and treatment, are sent on to the Colorado General Hospital at Denver, which is a teaching hospital connected with the University of Colorado School of Medicine.

Senator JOHNSON. And is it not true that the physicians in Denver take turns in serving that hospital and donate their services free?

Dr. MURPHEY. Yes, sir. At the present time the Denver General Hospital serves the city and county of Denver. And most of the physicians in Denver are very proud indeed to accept a place on the staff of that hospital, and they give their services freely without any kind of remuneration, and they give their services very happily.

Senator JOHNSON. Thank you.

Senator MARTIN. Mr. Chairman, may I ask a question?

The CHAIRMAN. Senator Martin.

Senator MARTIN. How is the expense divided between the State and local levels of government?

Dr. MURPHEY. In the city and county of Denver, all cases that require public assistance of a medical nature are taken care of by the Denver General Hospital.

Senator MARTIN. How is the expense divided between the State and the local levels of government?

Dr. MURPHEY. Senator, most of the cost of medical care at that level falls on the city and county of Denver. In the case of a county outside the city of Denver, the cost is split between the State and the county. Colorado General grants to the counties a very low per diem rate, thus assuming part of the financial burden at the State level. The counties, however, are required to pay a certain rate to Colorado General.

Senator MILLIKIN. Dr. Murphey, many of us are interested in the gap that seems to fall, in our voluntary systems, caused by long chronic illness, what you call catastrophic illness, and these total disability cases, which seem to tax the abilities of the voluntary systems to take care of them. What is the medical answer to that problem? How can we reach this goal that we are all interested in, of adequate medical care for all people who need it, to fit the size of their pocketbooks?

Dr. MURPHEY. I think in the case of chronic illness of catastrophic nature, such as tuberculosis or mental disease, we already have the pattern very well established. It is recognized by most doctors everywhere that illness of that kind simply is too burdensome for the average wage earner to meet alone, and the State of Colorado provides assistance to such people, with tuberculosis programs and also with programs for the care of mental illnesses.

We feel even in such cases, however, it is morally necessary to be sure that individuals who can afford to pay for their care be required

to do so and that they should not be permitted to shift their obligation to do so to the State.

Senator MARTIN. Does the State of Colorado assume the full cost of, we will say, tubercular patients, or mental patients, or does the local level of government share in the cost?

Dr. MURPHEY. Again, it is customary to split the cost between the counties and the State, and aid is only, of course, given when the individual can certify his need for such care and his inability to provide it himself.

If I may repeat what the previous speaker has said, we believe very strongly in a needs or means test. We think that that is important in order to prevent people from exploiting the taxpayer. We can see nothing illogical or undignified about a means test, because we all submit ourselves to a means test every time we pay our income taxes.

The CHAIRMAN. It is sometimes painful, too, Doctor.

Dr. MURPHEY. Very.

Senator MARTIN. Does the State of Colorado provide so much per diem for patients at, as we will call them, private hospitals?

Dr. MURPHEY. They do, sir.

Senator MARTIN. How much is that per diem?

Dr. MURPHEY. I am sorry, sir. I can't give you the exact figure.

Senator MARTIN. Has that plan been imposed upon by certain localities?

Dr. MURPHEY. Generally speaking, there has been very little abuse.

The CHAIRMAN. Senator Kerr, any questions?

Senator KERR. I have no questions, Mr. Chairman.

The CHAIRMAN. Thank you very much for your contribution, Doctor.

(The prepared statement of Dr. Murphey follows:)

STATEMENT SUBMITTED BY BRADFORD MURPHEY, M. D., ON BEHALF OF THE COLORADO STATE MEDICAL SOCIETY

Mr. Chairman, for the record, my name is Bradford Murphey. I am engaged in the private practice of medicine in Denver, Colo. I am appearing before your committee as the official representative of the officers and board of trustees of the Colorado State Medical Society. My specialty is psychiatry and the greater part of my professional experience has been in the two related fields of child psychiatry and community psychiatry. I am an associate clinical professor of psychiatry at the University of Colorado School of Medicine. I have been deeply interested in social welfare for many years, and in this connection am a past president of the Colorado Conference of Social Welfare. At the preesnt time I am vice president of the Denver Area Council of Social Agencies and chairman of the Colorado White House Conference for 1950 on Children and Youth. My testimony will reflect the unanimous thinking of the officers and trustees of the Colorado State Medical Society and is offered in opposition to H. R. 6000 in its entirety and especially to that section of the act which makes provision for permanent and total disability insurance benefits on a compulsory basis. The officers and trustees of the Colorado State Medical Society are opposed to H. R. 6000 in its entirety because:

1. It is based on an un-American, paternalistic theory of government which assumes that the moral and social responsibility of the citizen to provide for his own personal security can and should be shifted to the Government.

2. It is dishonest, in that it leads the unwary, the improvident, and the opportunistic members of our society to believe that they can achieve social security for themselves by simply exercising their right to vote instead of exercising their minds and muscles in personal effort and hard work.

3. It would expand and tend to perpetuate the unsound theories and follies of the present social-security system, which already costs us $50,000,000 a year

to administer and which requires an army of 15,000 employees to carry on its work.

4. It would render even more unsound financially a social-security system already notoriously unsound in this respect.

5. It would bring under the yoke of compulsion, millions of working people still free to provide their own security.

6. It would establish a precedent and initiate a trend which would in all probability extend the phony benefits of compulsory security to clergymen, merchants, farmers, physicians, dentists, editors, and many others who are self-employed.

7. It would increase the cost of living for everybody, since the new taxes proposed would inevitably be passed on to the public in higher prices for goods and services.

8. It would greatly jeopardize and perhaps, in the long run, entirely ruin the great insurance companies of this country to which millions of our people now look for their own personal security.

9. It would tend to greatly expand public assistance programs with all of their inflexibilities and red tape, and it would do so at the expense of our private voluntary institutions and agencies.

10. It would increase the cost of our paternalistic social-security system to such an extent as to threaten the solvency of our Government.

11. It would greatly increase the size of the security tax fund held by the Government, and, by the same token, it would increase the temptation for Government to use such funds for other purposes, as, indeed, it is now doing.

12. It would further expand the already enormously expensive wage records system now maintained by the Government, and at the same time it would multiply opportunities for the misuse of workers' records for political reasons, and for purposes of social coercion.

As I have already stated, the officers and trustees of the Colorado State Medical Society are especially opposed to that section of H. R. 6000 which provides for permanent and total disability insurance benefits; i. e., section 107, beginning with line 6, page 88. As their representative and as a private citizen engaged in the practice of medicine, I am opposed to this part of the bill for the following reasons:

1. There is every reason to believe that the disability benefits proposed in H. R. 6000 would be continuously expanded and liberalized through political pressure. The provision of benefits to the permanently disabled would lead inevitably to the extension of such benefits to the dependents of disabled persons, to those who are temporarily or partially disabled and finally to everyone who is incapacitated in whole or in part, either temporarily or permanently. This would all add up, in the end, to a compulsory sickness program of national dimensions.

2. The permanent and total disability provisions of H. R. 6000 would lead to at least partial duplication with workmen's compensation programs in all those cases where the disability is occupational in nature.

3. Since total and permanent disability is frequently a condition over which both the individual who is disabled and his attending physician may exercise control consciously or unconsciously, qualification for benefits will be very difficult to determine, highly controversial, and hence, very expensive.

4. Since the definition of permanent and total disability, as formulated in section 107 of H. R. 6000, does not require that disability be proven by objective tests, the proposed program, if adopted, would be wide open to abuse by dishonest claimants through malingering and to even greater abuse by unscrupulous doctors and lawyers working with such malingerers. A disability program of this type would also be open to exploitation by another and far larger group of individuals, who are neurotic rather than dishonest, and who are, for this reason, bent on deceiving themselves rather than defrauding the Government. This program would make the flight of the neurotically ill individual away from self-responsibility and into illness profitable for himself and for his lawyer and, by rewarding illness, it would make his return to health and self-responsibility very difficult and perhaps in some instances even impossible.

5. The failure of H. R. 6000 to require proof of disability by objective tests would, if the bill were enacted into law, involve the social-security program in enough controversy and litigation to keep all of the psychiatrists and lawyers in the country busy and to bankrupt our economy.

6. H. R. 6000, like most of the legislative proposals favored by the Social Security Administration, gives the Social Security Administration discretionary powers so great as to make the Administrator a threat to our democratic pattern

of government and a menace to the private practice of medicine. Under the provisions of this act, the Administrator would be permitted to decide what physician or group of physicians could be used to determine disability and benefit rights. He would have the power to entirely exclude private practitioners from participation in such a program, notwithstanding the fact that the family physician would presumably be the one best qualified to make such determinations of disability. Under the provisions of this bill, the Social Security Administrator could employ physicians on a full-time basis to carry out this function of the disability benefits program. This would place the physician, so employed, in the position of serving two masters—his patient and the Administrator of Social Security. Since the physician's salary would not be paid by the patient, it is not too difficult to guess what would happen in such a splitting of loyalties. If the physician resolved such a conflict of loyalties in favor of the patient in debatable cases, he would run the risk of minimizing his chances for promotion and advancement in his department or bureau. If he habitually favored the Social Security Administration, he would soon incur the hostility of his patients, and hence create a negative relationship with them which would destroy his effectiveness as their physician.

7. All of us in the medical profession who have had any experience with State industrial commissions and workmen's compensation programs realize that the official classification of an individual as a totally and permanently disabled person is sometimes a life sentence to invalidism. The power of suggestion associated with an official declaration of total disability, plus the cash benefits that would accrue to the disabled person by remaining disabled, would create a psychological pressure great enough, in many cases, to rob the disabled person of all incentive to recovery. The disability provisions of H. R. 6000 would tend, in fact, in tens of thousands of neurotic individuals to establish incentives in the opposite direction toward neurotically determined, permanent disability. The ultimate cost and waste of a disability program geared to incentives to illness rather than incentives to recovery would be enormous and would jeopardize the economic, the psychological, and the moral stability of our social order.

These, sir, are some of the reasons why the officers and trustees of the Colorado State Medical Society are opposed to H. R. 6000 in its entirety and especially to section 107 of this proposed legislation. Like the sponsors and the proponents of H. R. 6000, we are interested in providing security for the aged, for the disabled person, and for the defenseless and neglected child, but we are convinced that the means and methods proposed in H. R. 6000 for providing such security are, by their very nature, far more of a threat to our free society than the social ills they seek to cure.

The CHAIRMAN. Will you introduce your next witness, Dr. Paullin?

Dr. PAULLIN. Mr. Chairman, may I present Dr. Gunnar Gundersen, a member of the board of trustees of the American Medical Association.

The CHAIRMAN. Dr. Gundersen, you may be seated if you wish. Where is your residence, Doctor?

STATEMENT OF DR. GUNNAR GUNDERSEN, LA CROSSE, WIS., SPEAKING AS A MEMBER OF THE BOARD OF TRUSTEES OF THE AMERICAN MEDICAL ASSOCIATION

Dr. GUNDERSEN. Mr. Chairman, my name is Gunnar Gundersen. My address is La Crosse, Wis.

I think I can be rather brief in my statement, Mr. Chairman, because a great deal of this has been covered by Dr. Sensenich, and it would be merely repetitious. I think I had better submit the statement as a whole for the record and then make some comments with respect to some of the phases that I don't think have been emphasized sufficiently.

The CHAIRMAN. Your statement will go in the record as a whole, and you may deal with it as you elect.

Dr. GUNDERSEN. I may say, in explanation of this statement, that the first two pages are practically verbatim copies of the official statements made by the house of delegates of the American Medical Asso-

ciation, as also augmented by the board of trustees from time to time, registering their official opposition to those parts of the bill in question.

Now, as far as the rest of the statement is concerned, beginning on page 2 at the bottom, through various discussions from time to time in the organized profession, we can state that we are opposed to H. R. 6000 for several good reasons.

First, although the physician has always readily accepted the challenge of treating the ailments of the patients, the provisions regarding disability certification in this bill would compromise the physician, because it would establish a new, different, and puzzling physician-patient relationship.

Second, the disability sections of this bill would most definitely establish a bench mark for further expansion of these disability provisions toward a full-fledged system of compulsory sickness insurance.

Then we go on to the matter of certification for disability. And that would impose upon the physicians a heavy burden of continuous checking on patients. The physician would be caught between the pressure of Government officials to cut off certification quickly and promptly, and pressure from this new class of patients to prolong the period of disability. With the insurance all bought and paid for, it must be expected that a large number of persons would convince themselves that they are in a state of very poor health.

The success of the whole program would depend primarily upon the physician, although he would have no guaranty that his judgment would be accepted by all parties. The physician naturally objects to being made responsible for the efficient operation of an administrative monstrosity. The need for certification would work to the great disadvantage of the conscientious physician who steadfastly refused to "sign" at the insistence of his patient. Then the disgruntled patient would simply go from physician to physcian seeking someone who would certify him as being totally and permanently disabled. This procedure, quite apart from the difficulties presented to the physician, would hinder the physician in taking care of all of his patients. The reputation for integrity of the American physician is unchallenged throughout the world. That reputation must be protected and maintained in order that standards of medical care in the United States may continue to improve.

The proposal for federally sponsored long-term disability insurance has been made despite the unfortunate experience of life-insurance companies, who could select at their risks, with this type of insurance. To a considerable extent, disability is a business-cycle risk rather than an insurance risk. "Disability" increases markedly in a period of depression. Under economic pressure, disability insurance becomes unemployment compensation for the young and pensions for the old—even those under 65. Claim rates for insurance companies on their disability contracts increased from 50 to 100 percent between 1929 and 1933—from galley proof, for Journal of the American Medical Association book-review section, of our review of an actuarial article by Grange and Miller.

The Federal Government would face serious difficulties with such a flood of claimants, many of whom would be malingerers, and Federal officials would certainly resort to the tactic of shifting the blame for the break-down of the system to the shoulders of the members of

the medical profession. Physicians do not want to be left "holding the sack." Some insurance-company leaders, in private conversations, blame the physicians for the huge disability losses suffered by the companies in the 1930's, without seeming to understand that the insurance company had forged a new physician-patient relationship. Several of the States have recently enacted temporary cash sickness-insurance plans. In California, for instance, there is a program in progress of development.

Their brief experience is insufficient to demonstrate whether the State is too large and complex an area for the successful operation of this type of insurance. Some industrial physicians, however, have reported successfully operated employer plans, both the insured and self-insured type. In these plans the employer and his committee of employees or union representatives can control malingering. Simply making disability insurance a national governmental program would not solve the problems inherent in this type of insurance.

National uniformity as provided in this bill is not automatically an advantage. Uniformity as such is neither a vice nor a virtue: uniformity is just uniformity. For example, the American people have been extremely fortunate in that the life-insurance laws of some of our States were not made uniform Federal insurance laws. In the case of disability insurance, in which the individual's personal attitude so largely determines his status as a claimant, the local control of both collection and payments is essential to reduce abuse to a minimum.

Senator MILLIKIN. Doctor, may I ask you this, please? Assume, without conceding, that the States, out of their own resources—I say "assume it without conceding"—are unable to meet all of the expenses of these disability claims via the routes which have been described here this morning, via taxation in the city and county of Denver for Denver General Hospital, via State taxation for the State hospital which Dr. Murphey described, via the local hospitals. Assume that the State's resources ar insufficient to do a good job. If there is to be any Federal aid, would you say it should be on the side of assistance rather than insurance?

Dr. GUNDERSEN. Yes; I believe so.

Senator MILLIKIN. Because that keeps the administration local rather than Federal?

Dr. GUNDERSEN. Yes; and I think that is what we would be for.

Senator MILLIKIN. Thank you very much.

Dr. GUNDERSEN. Now, finally, the American Medical Association is deeply concerned that the quality of medical care to be kept at the highest possible level; that nothing in the administration of Federal or other programs should develop along a course which will not keep uppermost the importance of high-quality standards. I fear that H. R. 6000, if enacted, will result in a deterioration of medical service and furthermore result in untold abuses where the question of determination of disability is involved.

The CHAIRMAN. Does that complete your statement, Doctor?

Dr. GUNDERSEN. Yes, Mr. Chairman.

The CHAIRMAN. Are there any questions?

Senator MILLIKIN. Are you familiar with any statistics that would give any support to the thesis that there are uncared-for persons who are totally and permanently disabled in the States, the problem being of such magnitude as to give rise to Federal responsibility?

Dr. GUNDERSEN. I am not familiar with the national picture, but I can say that, from my own State of Wisconsin, I don't think there are any problems in that State that can't be solved on a local level. And in regard to the question raised, I think, by Senator Kerr, sometime ago, of people lacking medical care in the State of Wisconsin, by reason of inability to pay for same, we established a roving committee in 1935 to 1937 which covered the entire State, and which was a very thoroughgoing investigation. And we couldn't uncover a single case that needed medical care and couldn't get it in that State at that time.

Now, that was after a very thoroughgoing covering of the State by a committee of physicains who visited every area in the State and invited people interested in this field of medical care into conferences lasting up to 2 days at a time, in order to ferret out and estimate the magnitude of this problem if the problem existed. That was done, was sponsored and carried out, by our local State medical society at that time.

Senator MILLIKIN. I think your State has been rather advanced in such matters. We have had no testimony here that I recall along the line of the question that I am directing to you. Perhaps there will be some before we finish.

I think the basis of asking the Federal Government to do something is the showing that there is a need and that the duty or obligation cannot be discharged at the local level. I doubt whether we have had any specific testimony along that line so far. Your testimony negatives it so far as Wisconsin is concerned; Dr. Murphey's testimony negatives it so far as Colorado is concerned; Dr. Sensenich's testimony negatives it so far as Indiana is concerned.

I am really tossing out the suggestion to those who believe in this proposal that we ought to have more durable facts in the record than we have at the present time.

Dr. GUNDERSEN. Well, this came about at that time as a result of the general statement that has gone out that one-third of the Nation was ill-housed and ill-clothed and ill-fed and didn't have medical service, and we set out at the time to find out exactly what the facts were in our State so that we could answer it from our level at least.

The CHAIRMAN. Senator Kerr?

Senator KERR. When was it that this committee roved in Wisconsin?

Dr. GUNDERSEN. I think the dates were in 1936 and 1937.

Senator KERR. And they found out that at that time there was nobody in the State needing medical care but what had access to it from the standpoint of its proximity and their ability to pay for it?

Dr. GUNDERSEN. That is right.

Senator KERR. How long since that committee has thus roved in Wisconsin?

Dr. GUNDERSEN. Well, they made their report, and the committee was disbanded in 1938, I think the date was.

Senator KERR. Has there been any examination or bringing it down to date since that time?

Dr. GUNDERSEN. No; because I think the employment figures, and so on, in the State have been entirely satisfactory, and the economic conditions at that time were generally worse than they have been since. So they have not felt any need for keeping the report up to date; but I think it might be a good idea.

Senator KERR. You heard the statement of Dr. Sensenich a while ago. First he said that he thought medical care should be available to all of these people, and could be; and then when I asked him how he would suggest that it be done, you heard his answer to the effect that it was already done.

Dr. GUNDERSEN. Well, I don't think anybody would admit that it is perfect at the present time, but I think there is room for improvement of our present system, Senator, on a private basis.

Senator KERR. Then do you subscribe to his belief that such medical care is already available to all of the people of this Nation?

Dr. GUNDERSEN. I am sure it is correct as far as my own State is concerned.

Senator KERR. You do not have any opinion about it beyond that?

Dr. GUNDERSEN. What the situation is in the so-called backward States I wouldn't know.

Senator KERR. Well, backward or forward, do you know what the condition is in other areas?

Dr. GUNDERSEN. Only by what I have read.

Senator KERR. I see. Not enough about it that you would care to express an opinion?

Dr. GUNDERSEN. That is right.

Senator MILLIKIN. You do not like to make a diagnosis without seeing the patient; do you?

Dr. GUNDERSEN. That is right.

The CHAIRMAN. Senator Myers, any questions?

Senator MYERS. First, Mr. Chairman, I apologize for coming in late. I did not hear all of the Doctor's testimony. In fact, I heard a very small part of it. But I note that in the beginning of his statement he indicates that he is speaking as a member of the executive committee of the board of trustees of the American Medical Association. And in the preface of his statement it says: "Statement by Dr. Gunnar Gundersen on behalf of the American Medical Association." How is a policy on important issues of this kind formulated, Doctor?

Dr. GUNDERSEN. I didn't hear that, Senator.

Senator MYERS. I said, how is AMA policy on such important matters as this bill formulated?

Dr. GUNDERSEN. The policy-forming body of the American Medical Association is its house of delegates, which meets twice a year. And in intervals between meetings of the house the responsibility is in the hands of the board of trustees, a board of nine men.

Senator MYERS. Well, has the board of trustees endorsed the statement which you are now making to the committee today?

Dr. GUNDERSEN. Yes, sir.

Senator MYERS. Has the house of delegates endorsed it?

Dr. GUNDERSEN. Yes.

Senator MYERS. When, Doctor?

Dr. GUNDERSEN. At its meeting here in Washington in December of last year.

Senator MYERS. In 1949, in December?

Dr. GUNDERSEN. In 1949, in December.

Senator MYERS. What action did the house of delegates take at that meeting?

Dr. GUNDERSEN. Now, I don't believe that I have the resolution which was passed at the time, but it is substantially as I have read it into the record.

Senator MYERS. It was my understanding that the house of delegates took no action in its December meeting. I may be misinformed. That is the reason I inquired. And, if there is any resolution, I think it should go into the record, to make absolutely sure and certain that it is not just the board of trustees but the association itself which stands behind the statement that you are making.

Dr. GUNDERSEN. I can furnish that to the committee.

The CHAIRMAN. If you can supply that for the record, you may furnish it to the committee, and it will go into the record.

(For clarification of this discussion, see Dr. Gundersen's further statement on p. 1352.)

Senator MYERS. I just wanted to make sure, Doctor, that it was the association itself, through its house of delegates, that endorsed your statement and not just the board of trustees.

Dr. GUNDERSEN. I may say that in my prepared statement I have stayed very close to it, and, as I stated originally, the first two pages of my statement are practically verbatim copies of the official statements made by the house of delegates of the American Medical Association, as also augmented by the board of trustees from time to time, and I wasn't wandering off the reservation and making any statement for myself.

Senator MYERS. Is that not a reversal of the position which they may have heretofore taken?

Dr. GUNDERSEN. What individual men testifying may have done, I can't answer, Senator.

Senator MYERS. No; I mean the house of delegates. Is that a reversal? You say the house of delegates endorsed the position which you are taking today. I say, is that a reversal of position which the American Medical Association may have heretofore taken on disability insurance, whether total- or permanent-disability insurance, under social security?

Dr. GUNDERSEN. No: I think they have been consistent right along in that regard, sir.

Senator MYERS. It was my understanding that through the years, back in 1938, even in the period to which you referred, up until 1947, the house of delegates on numerous occasions indicated that social-security measures to maintain income such as disability insurance "are likewise vitally important." In fact, I quote to you, Doctor, that the house of delegates, on June 12, 1947, when they were considering the problems of the chronically ill, adopted an official report which included the following:

> Social-security measures to maintain income such as disability insurance, old-age insurance, and public assistance, are likewise of vital importance.

It would seem to me that this is a reversal of the position which you have heretofore taken. Are you familiar with that?

Dr. GUNDERSEN. No, sir. I was not on the board at that time, and I wasn't in the house of delegates in 1947, so I can't speak from personal knowledge on that.

Senator MYERS. It is my understanding that on previous occasions the house of delegates took a rather similar position, that total or

permanent disability is something that should be seriously considered in the social-security law; that such assistance would assist materially the recovery of such patents. I am just wondering if there has been a reversal of opinion. You have no knowledge of that, you say, Doctor, because you were not a member of the board at that time?

Dr. GUNDERSEN. That is right.

Senator MYERS. Thank you very much. That is all.

The CHAIRMAN. Thank you very much, Doctor, for your contribution.

Dr. GUNDERSEN. Thank you.

(The prepared statement of Dr. Gundersen is as follows:)

STATEMENT BY DR. GUNNAR GUNDERSEN ON BEHALF OF THE AMERICAN MEDICAL ASSOCIATION

My name is Gunnar Gundersen. I have been a practicing physician since 1920 in La Crosse, Wis. I am speaking today as a member of the executive committee of the board of trustees of the American Medical Association and on behalf of the 140,000 physicians who are members of the association, and I am here to express opposition to H. R. 6000.

In the past, the American Medical Association has made it a practice to take a stand on legislation involving medical care and the health of the American people. While H. R. 6000 is primarily a social welfare proposal, it does contain one provision having serious medical implications, namely, that section on compulsory permanent and total disability insurance.

The major benefits included in the present social-security system—old age and unemployment—are adaptable to mass or objective administration from an office remote from the individual. This is not true of total and permanent disability benefits. Age is a condition over which the individual is unable to exercise any control, and unemployment is an occurrence over which the individual may have little or no control. Qualification for the benefits is categorical and not difficult to determine. In contrast, total and permanent disability is often a condition over which the individual who is disabled and his physician may exercise control. This subjective control which may be exercised by the individual multiplies the opportunity for malingering and actually takes the program out of the insurance category. We must always oppose any program which places a brake on the incentive of the sick and disabled to desire recovery.

To initiate a Federal disability program would represent another step toward wholesale nationalization of medical care and the socialization of the practice of medicine. The program as now proposed would not accomplish the entire nationalization of medical care but the inevitable expansion and liberalization of the program which would surely follow makes probable its eventual accomplishment. The steps in liberalization are not hard to visualize—such as payment of benefits to dependents of disabled covered persons, removal of the time lag of 6 months and substitution of temporary disability benefits, then eventually full cash sickness and disability provisions. We would then have nothing less than a total national compulsory sickness program.

During the hearings on this bill persons fully qualified in the field of economics and insurance and students of political science warned against the high additional percentage of national income to be committed to social programs by the enactment of extensions as proposed by H. R. 6000—of this danger, we are aware.

The American Medical Association recognizes the need for assistance to the disabled needy and feels that this aid should always be administered on a local level. Financial assistance to the locality should only be advanced from State or Federal sources when a need can be clearly shown.

The American Medical Association must oppose H. R. 6000 for several good reasons. First, although the physician has always readily accepted the challenge of treating the ailments of his patients, the provision regarding disability certification in this bill would compromise the physician because it would establish a new, different, and puzzling physician-patient relationship. Second, the disability sections of this bill would most definitely establish a bench-mark for further expansion of these disability provisions toward a full-fledged system of compulsory sickness insurance.

Cash benefits for permanent and total disability would make the physician, of course, responsible for certifying disability. He would have to assume the very heavy burden of continuous checking on patients. He would be caught between the pressure from Government officials to cut off certification quickly and promptly and pressure from this new class of patients to prolong the period of disability. With the insurance all bought and paid for it must be expected that a large number of persons would convince themselves that they are in very poor health. The success of the whole program would depend primarily upon the physician although he would have no guarantee that his judgment would be accepted by all parties. The physician naturally objects to being made responsible for the efficient operation of an administrative monstrosity. The need for certification would work to the great disadvantage of the conscientious physician who steadfastly refused to "sign" at the insistence of his patient. Then the disgruntled patent would simply go from physician to phyisician seeking someone who would certify him as being totally and permanently disabled. This procedure, quite apart from the difficulties presented to the physician, would hinder the physician in taking care of all of his patients. The reputation for integrity of the American physician is unchallenged throughout the world. That reputation must be protected and maintained in order that standards of medical care in the United States may continue to improve.

The proposal for federally sponsored long-term disability insurance has been made despite the unfortunate experience of life insurance companies, who could select at their risks, with this type of insurance. To a considerable extent disability is a business cycle risk rather than an insurance risk. "Disability" increases markedly in a period of depression. Under economic pressure, disability insurance becomes unemployment compensation for the young and pensions for the old (even those under 65). Claim rates for insurance companies on their disability contracts increased from 50 to 100 percent between 1929 and 1933 (from galley proof—for J. A. M. A. book reviews section—of our review of an actuarial article by Grange and Miller). The Federal Government would face serious difficulties with such a flood of claimants, many of whom would be malingerers, and Federal officials would certainly resort to the tactic of shifting the blame for the break-down of the system to the shoudlers of the members of the medical profession. Physicians do not want to be left "holding the sack." Some insurance company leaders, in private conversations, blame the physician for the huge disability losses suffered by the companies in the 1930's, without seeming to understand that the insurance company had forged a new physician-patient relationship. Several of the States have recently enacted temporary cash sickness insurance plans. Their brief experience is insufficient to demonstrate whether the State is too large and complex an area for the successful operation of this type of insurance. Some industrial physicians, however, have reported successfully operated employer plans, both the insured and self-insured types. In these plans the employer and his committee of employees or union representatives can control malingering. Simply making disability insurance a national governmental program would not solve the problems inherent in this type of insurance.

National uniformity as provided in this bill is not automatically an advantage. Uniformity as such is neither a vice nor a virtue; uniformity is just uniformity. For example, the American people have been extremely fortunate in that the life insurance laws of some of our States were not made uniform Federal insurance laws. In the case of disability insurance, in which the individual's personal attitude so largely determines his status as a claimant, the local control of both collection and payments is essential to reduce abuse to a minimum.

The American Medical Association is deeply concerned that the quality of medical care be kept at the highest possible level, that nothing in the administration of Federal or other programs should develop along a course which will not keep uppermost the importance of high quality standards. I fear that H. R. 6000, if enacted, will result in a deterioration of medical service and furthermore result in untold abuses where the question of determination of disability is involved.

The CHAIRMAN. Dr. Paullin?

Let me say, gentlemen of the committee, that Dr. Paullin is a resident of Atlanta, Ga., and is a physician well known in the South, the Southeast and throughout the country.

I believe, Doctor, you have been with this Medical Association for a number of years. Will you tell us how many?

STATEMENT OF DR. JAMES E. PAULLIN, ATLANTA, GA.

Dr. PAULLIN. Do you want to know my age, Senator? I should say 45 years.

The CHAIRMAN. I think I already know your age, having been with you in college. Doctor, you are engaged, however, in the practice of medicine now in Georgia, and have been?

Dr. PAULLIN. Yes, sir.

The CHAIRMAN. And your practice has been coextensive with the State, in that you have treated patients from all parts of the State practically continuously?

Dr. PAULLIN. Yes, sir.

The CHAIRMAN. Well, sir, we will be very glad to have you make a statement regarding H. R. 6000 or any part of it that you wish to discuss.

Dr. PAULLIN. I would like to offer, Mr. Chairman, my statement, and thank you for the privilege of appearing before your committee.

I am appearing from a little different point of view from that of a great many of the men, here, in that I am offering to the committee my experience with total and permanent disability as a practitioner of medicine, having observed total and permanent disability claims over a period of years, and I want to give the committee the results of my observations and experience in these cases.

Of course, I come from a small town, and perhaps have small ideas. But in reading the amendments which have been offered to the Social Security Act under H. R. 6000, I was amazed at the recommendations for increased appropriations in money which are requested to be given as benefits under the various titles of the bill, as well as to increase the numbers concerned or covered. So far as I could tell, the requests for money to support this program were increased tremendously, none were eliminated, and none were decreased.

Naturally, the question arose in my mind as to how all of these benefits could be undertaken without increasing the tax burden on the productivity of our citizens, to meet the increasing demands for assistance, and why our citizens are willing to allow Uncle Sam to assume the responsibility for their support, education, health, housing, and retirement without the necessity of any effort on their part to produce income from which these taxes are to be paid.

I have not given all provisions of this act careful study, and if I had, I would not be competent to offer valid testimony concerning them. However, I do have experience and observations concerning total and permanent disability, which is section 107 in H. R. 6000, and which will involve, if enacted, the expenditure ultimately of millions upon millions of dollars as a part of the social-security program.

I do not believe that anyone would oppose rendering assistance to those in dire distress or who are in great need and who are not financially able to help themselves, either because of sickness, injury, or disease. However, the actual need must be established, with a primary interest centered on a program which would rehabilitate the person or persons disabled in an effort to make them self-supporting members of society. This must be the chief purpose for which contributions are made for aiding this group of our citizens. To those of us who have been in the active practice of medicine for any considerable number of years, it is clear that there are many psychological

factors demanding consideration in any discussion of the determin tion of the presence or absence of disability.

First, if a tax is levied for the purpose of furnishing total an permanent disability insurance for an individual, and if the individu pays for it for a certain length of time, he automatically develo the feeling that he has a right, under certain circumstances, to d mand the benefits which he has purchased. In other words, the is an honest psychological approach on the part of the person wit disability insurance to demand support even though he is consciou that he is not totally and permanently disabled. If there is writte into the law a clear statement defining disability, either total o permanent, and if the insured does not completely qualify for the benefits, if he sees or hears of some one with no more disability tha he has drawing benefits for disability, he makes an earnest effor naturally, to effect total disability in order to collect his pay check.

The second psychological effect of disability is that the patient wh claims disability benefits makes an effort to satisfy his own conscienc as to the justice of his demands, and he develops subjective sympton of disease which no one can demonstrate as nonexistent. Particularl is this true with certain types of individuals who are, to some exten emotionally unstable. Such a condition occurs in a higher percentag among women than among men. We as physicians know that dis appointments, frustrations, emotional instability, ill-adjusted famil life, and various other situational and environmental difficulties wi cause in some people a reaction of defeatism, with the developmen of more subjective complaints, which the patient cannot adequatel describe, if given an opportunity, in an all-day rehearsal of his ail ments, and which, if they were the result of disease, would prove fata before the narrative could be finished.

Third, if a person is insured by the Federal Government agains disability and can draw a nice pay check each month for his disability in a complaining individual as above described, the stage is set fo the making of a complete, permanent, 18-carat invalid who is totall disabled, and who will resist with vehemence any and all efforts to ward rehabilitation.

Within the past 20 years I think all of us have become conscious that the present trend of society is leading to a steady and gradua weakening, and even disintegration of our moral and spiritual con sciousness, and with it, unfortunately, the deliberate surrendering o individual initiative, ambition, and a desire to succeed in any under taking for a paltry mess of pottage served by a paternalistic gov ernment. The development of this type of philosophy, among an oth erwise healthy citizenship, weakens the very foundation of that type of citizen who has made this Government possible, and will greatly increase the demands for Government benefits which, in times of stress and strain, will be greatly increased and force our people into a moral state of indolence, and our national economy into a state of bankruptcy.

I ask those of you who visit among your constituents to observe the tremendous increase in the members of our population who are looking for a position and not for a job, a position they consider ornamental to a business without the assumption of any tremendous amount of responsibility, and which could be used to enhance the business because of their supposedly striking qualifications and their abil-

ity to draw a nice pay check. Those who seek a job are people who are willing to work, who glory in the accomplishment of a task, and who are happy to be productive. These are few in number. Evidence of this belief can be obtained by spending a few hours in any of the States or localities, and visiting any of the employment agencies.

Fourth, physicians have little sympathy with this point of view since they not only work when willing and able, but also without a contract. They go on call both day and night, irrespective of a national emergency, to render service to the rich, to the poor, and to all of our citizens, regardless of race, creed, or religion. They are conscious of demands which are made upon them, and which will be increasingly made if the provisions of this act are passed, for certification as to presence of total and permanent disability which does not exist. It takes a physician of considerable stamina—just as it takes you Congressmen a good deal of stamina to resist the appeals which are made to you—to be able to resist some of these appeals. And sometimes they will not do so.

Some 20 or 25 years ago many large insurance companies issued policies on a great number of people, covering them for total and permanent disability. During prosperous times the insurance companies made money on this type of contract. When the sailing became a little rough, a great many physicians will recall, considerable numbers of patients so insured demanded to be classed as permanently and totally disabled so they could retire from business and receive a tax-free income which was sufficient for them to enjoy the art of living without any of the responsibilities, restrictions, or obligations connected with the honorable profession of work. I am not referring in this statement to those patients who obviously suffered a disability which prevented them from working. But I am referring to that large group which developed only subjective complaints, such as nervous disorders, headaches, backaches, rheumatism, angina pectoris, and other disorders which could not in the slightest degree be detected by physical or other examinations. These people, many of them, had persuaded themselves—honestly—that they were sick and disabled. Many of them could not do the slightest thing, if such was called work, but much could be done under the name of pleasure, such as fishing, skeet shooting, piloting a boat, bird hunting, a little 10-cent ante——

Senator KERR. What was that, Doctor? I did not catch that.

Dr. PAULLIN. Ten-cent ante.

Senator KERR. Oh, yes.

Dr. PAULLIN. They couldn't afford more than 10 cents because of the permanent disability, I mean—and other pleasures which would perhaps require no physical exercise but which might increase their blood pressure, and be indulged in without damaging their chances of living provided no work was involved.

The depression, which came along in the thirties, also caused many people in a different financial bracket, insured under a group policy, to seek the security of total and permanent disability. All of this illustrates the point that when the field is made fertile for the development of dependency on some agency or carrier other than the patient's own efforts, they naturally seek the course of least resistance and demand help from other sources. The experience of life-insurance companies, if studied, would be most interesting, because I do not

believe that the underwriters have been at all successful in removing from their pay roll any of those who are collecting for total and permanent disability, except by death, and the mortality among those drawing this disability is extremely low for the disease for which they are being paid total disability; extremely low in comparison to population.

Senator MILLIKIN. Do you recommend, Doctor, the widespread adoption of total disabilities so that we may have greater longevity?

Dr. PAULLIN. Well, I don't know. If you did that you couldn't work. So who is going to pay for it?

Senator MARTIN. Oh, do not worry about that. Worry is bad for the health.

Dr. PAULLIN. It is my belief that unemployment, which is liable to increase in this country, from a psychological standpoint will cause the development of a great many subjective symptoms which should be classed as rendering a patient totally and permanently disabled. It is true that with stimuli such as this, unemployment, and others, it is almost next to impossible to determine total disability in a patient who has made up his mind and is determined to prove that he is totally disabled in order to obtain a life income from the Federal Government.

Senator MILLIKIN. Doctor, may I ask you this, seriously: Are there cases of illness which cannot be pegged objectively, but which nevertheless are genuine cases of illness? I mean, are physicians in a position to peg objectively every genuine case of illness?

Dr. PAULLIN. If you have the patient under observation for a sufficient length of time, Senator, even though you can find no objective evidence of illness, there are certain people with mental depression, with manic-depressive psychoses, and various mental illnesses, which you cannot find objectively except by a close study of that patient, who are totally disabled. On the other hand, those patients are few in number compared to a much greater number who develop subjective complaints and who are demanding treatment, who would become totally disabled if they could get a certain amount of security which would encourage them in their total disability.

A great number of women are employed, some 18 million, many of whom probably would qualify for benefits under the proposed program. It is realized by those who are engaged in the practice of medicine that this would be a most difficult group to properly evaluate their claims for disability.

There are other pitfalls which could be brought to your attention, but I believe the idea has been developed from a practical standpoint sufficiently to warn the Congress of what a disastrous step it will be to our national economy to write into the Social Security Act any such program as that recommended in H. R. 6000, section 107, for total and permanent disability. Social Security funds should necessarily be limited in amount; they represent taxes which are drained from the producers of the Nation. Unless there is some limitation on the fantastic demands for funds, our national economic health will be thrown tremendously out of balance and a fatal condition of shock develop from which there is no recovery.

Since it has been very clearly shown that cash disability benefits diminish the incentive toward rehabilitation, self-reliance, and self-maintenance, which is extremely undesirable, it seems to me that the

emphasis, and any consideration which is given to this program, should be focused on rehabilitation.

Senator MILLIKIN. Would you favor Federal aid in that field?

Dr. PAULLIN. I am coming to that right this minute, Senator.

This cannot be done successfully in my opinion under Federal contral. All of the States, insofar as I know have agencies which are capable of handling individuals who claim disability, such as the State welfare agencies. These agencies are on the ground. They know of the individual who applies for assistance. They have an opportunity to investigate their worthiness, and they have facilities for rehabilitation. They receive funds from graints-in-aid. They are also capable of finding work for him or her, and determining whether treatment at home, in an institution, or in other places is the most desirable. Please let them handle it.

I therefore respectfully request that this part of the program, section 107, be eliminated in the social-security amendment to H. R. 6000 since its adoption, in my opinion, will lead to the development of a considerable number of malingering and semiinvalid individuals among many of our worthwhile citizens. It would mean a further encroachment upon States' rights, and the building up of Federal pay rolls which could be used for political influence in the handling of claims. It matters not what safeguards are taken to write into the law those who would be eligible for insurance: all of us know that after a short space of time no attention is paid to this law, just as is happening in other phases of the social-security program and in the treatment of veterans in VA hospitals and general hospitals. It is common knowledge that veterans with non-service-connected disabilities who are perfectly able to pay for hospital care and medical services are being treated at considerable public expense when the law specifies under what conditions they should be beneficiaries of this service. The same could, in my opinion, happen with those drawing compensation for total and permanent disability benefits.

Thank you.

The CHAIRMAN. Any questions?

There are no questions, Dr. Paullin, and we thank you very much for your appearance and for your contribution, here, to this important segment of the bill.

We have one more witness this morning, Rev. Roland E. Darrow.

You may have a seat if you prefer, sir. Will you identify yourself to the reporter?

STATEMENT OF THE REVEREND ROLAND E. DARROW, PASTOR, FIRST METHODIST CHURCH, MONTICELLO, ARK., APPEARING FOR ARKANSAS FREE ENTERPRISE ASSOCIATION AND ARKANSAS PUBLIC EXPENDITURE COUNCIL

Dr. DARROW. If the Senator please, I will read my statement, which does identify me, and then I want to eliminate three sentences from it.

The CHAIRMAN. Yes, sir. You may do so.

Dr. DARROW. Thank you.

My name is Roland E. Darrow. I am at present pastor of the First Methodist Church in Monticello, Ark. I appear before this committee as spokesman for the Arkansas Free Enterprise Association and the

Arkansas Public Expenditure Council. These organizations have membership of nearly 5,000 persons, an excellent cross section of th State of Arkansas.

I am appearing in the public interest in opposition to H. R. 6000 I am an ordained minister in the Methodist Church. My pastorat is a representative one in the State of Arkansas. I have held pas torates in other cities of Arkansas and Missouri. My congregation have been an excellent cross section of contemporary American lif in every phase of human experience. My interest in people and thei problems has always been more than casual. I am a member of th Masonic fraternity, the chamber of commerce, past president of th Drew County Tuberculosis Association, president of the Drew Count Foundation for Infantile Paralysis, chaplain of the VFW, a Stat director of the Arkansas Free Enterprise Association, the distric governor of Lions International, and other organizations, all seekin to promote the general public welfare. I served in World War II a a chaplain and saw service in the European Theater of Operations

While in college I majored in political science and history and i the social sciences, having a double major. My fundamental interest have been in the field of human relationships. I have watched th trend of the philosophy of government for many years and have com to the conclusion that our Government has not only forgotten its basi concepts, but has deliberately turned its back upon the processes o law as established in the Constitution and has sought to seize upo every opportunity to utilize the problems, perplexities, and insecuritie of the people to offer them a paternalism which is, at heart, a socialisti scheme covetous of their very birthright.

We have been trying to believe that in America we have the las stronghold of democracy under the freedoms of constitutional gover ment. It seems to me that we have deluded ourselves into believin that liberty and freedom are inalienable rights and shall stand for ever. They are highly alienable and in the past decade and a half w have been living under crisis legislation, or emergency governmen which is the antithesis of liberty and freedom.

My opposition to this bill, H. R. 6000, stems from my concern abou the trends in our Government and the great influence exerted on ever hand by the foreign ideologies imported by the propagandists fro decadent European systems of government.

The Social Security Act was passed to alleviate temporary condi tions with the hope that it might be the answer to the problem of socia insecurity. In common with many other persons, and against sobe judgment, I believed we might, by legislation, bring to an end th destitution into which so many of our people had fallen. The claim of the backers of the act appealed to the humanitarian impulse w all have and it was easy to sell to the public. But the record of con fusion and inequities speaks for itself. Instead of eliminating th various alphabetical agencies the Social Security Act was to replac in 1936, it merely seemed to increase and give a permanency to a hug program of Federal aid. In the years when employment rose an the national income touched new heights, the Social Security Ac found places to distribute Federal funds far in excess of the million of dollars distributed in the days of the depression. We just con tinued the depression crisis for millions of Americans. And that i a cancer in the body of the American public.

We have heard about social insurance and social assistance. There is a distinction between the two, I know. But both plans are supported, in the end, out of general taxes. One requires a "contribution" and the other requires a show of poverty, indigence, or some other condition or physical handicap.

My protest hinges upon four points out of many other objections. First, I believe that this bill, H. R. 6000, is really class or special-privilege legislation. I have gone through page after page of the bill and am amazed at the favored class as over against the unfavored class. A selected group of employees is entitled to so-called insurance benefits that are maintained by the entire employed taxpaying public. In the bill it is assumed that an aged wife requires only half as much food, clothing, and other necessities as her husband. And it also assumes that a widow will eat only three-fourths as much as a widower, can live in a home three-fourths cheaper, and possibly wear about three-fourths as much clothing.

I would like to eliminate the next three sentences, please, in the prepared statement.

Then there is the matter of forcing the self-employed to enter the system. It is special legislation designed to collect and control a large and significant section of our population under the guise of social insurance and social assistance. To maintain this select group all of us must pay a tax for their special benefit.

The second objection I have is this: It is an unsound financial program. That is, it is unsound from the taxpayer's standpoint. To me, the "trust fund" scandal is a confusing system of embezzlement. According to the testimony given before this committee the Government, through this agency, is collecting 2 percent more now than is necessary to finance the system on a pay-as-you-go basis. The amount of money supposed to be in the trust fund is more than $11,000,000,000. The Federal Government has "borrowed" and used the money. The funds have gone into general expenditures and Treasury, and other bonds have been substituted for these trust funds and interest paid on the money thus extracted. Trust funds are supposed to be an inviolate trust. The tragedy of this matter is that we have no conscience on the matter. That is flagrantly unsound philosophy as well as unsound business. The interest paid in has been used and I believe that we are now paying, out of the general revenues, interest on both the principal and interest we have borrowed. That is a double tax on those who have "contributed" to this fund and upon this large group of people who are not participating in the program as set up. Another thing that causes me to regard this whole matter with repugnance and distrust is the fact that the Secretary of the Treasury has bought more than $2,228,000,000 worth of public issues. What a dangerous opportunity to manipulate the financial markets with such a club. The man who buys may sell as well, at will. Then there is the cost of the whole program in this year. The SSA estimates the cost of the program to range from 1.49 to 12 percent. My question is, Which? On the present basis of benefits and cost of administration the SSA relates it is now collecting 2 percent more than is necessary to maintain the system on a pay-as-you-go basis.

A third point I would make is this: This, to me, is the entering wedge of socialism. H. R. 6000 will nationalize such a large segment

of our employed population that the choice of the type of government will be controlled by those in power. The original purpose of this bill seems to be the tapping of new sources of revenue. It has a precedent set in other countries since the 1880's. It has been a device to secure revenue and to control the workers. Germany, Russia, and Britain have adopted the plan with variations, but with the same result. The idea came to us from Geneva via the ILO. It was given impetus at the Montreal Conference in 1943 and was pushed upon Britain almost immediately thereafter. If this program of socialism is pushed upon us, who is there left in the world to subsidize us as we are now subsidizing Britain?

I believe the Supreme Court found a reason to say, in 1937, that when a governmental agency provides funds for a project or program, it has an inherent right to specify how those funds shall be spent. That principle makes the Government an overseer in all our business, financial, social, and personal transactions. We have grown great and strong as a Nation on the principle of free enterprise. We are becoming decadent as a Nation because of Government interference in business and the Government in business. I would not abrogate the essential laws of human conduct but I would like to see this bill stopped and a new set of ideas set up to care for the aged, blind, orphaned, and those otherwise disenfranchised. We have the brains to do it on the American pattern. We do not need to follow the system that has come from an impotent and frustrated Europe.

My fourth point is based on the necessity to recognize the value of one man. That is the American citizen. Millions of our people have been trained on the false philosophy of something for nothing. That came in the early stages of relief. Now we find the general attitude to be that of one who leans upon a beneficent hand and waits to be fed, clothed, housed, and voted. The creeping force of this bill will eventually make the average American citizen incapable of thinking out his own problems. This kind of legislation will stultify human integrity and individuality. It will provide a false idea of security and tend to put afar off the evil day of reckoning. Our Lord told a story about some men working in a vineyard. Some worked all day and others worked a part of the day; some worked 1 hour. Yet all received the same pay for that day. That is a great social principle that every man is entitled to the security, food, shelter, and other necessities that a day's wage would provide. But the men who labored and bore the heat of that long day were the most blessed, for they earned what they received. The others were to be pitied: that worthy charity was a boon, but they were to be pitied. Their economic and social system had not provided for them except for the gratuity of one man. They were the losers although they gained a day's wage.

There is something more to an individual that demands careful treatment. A man is more than body. He is a free spirit. He should be treated as a free man and given an opportunity to help work out his problems on the American basis.

Finally, I am opposed to this bill because it is cumbersome, has not fulfilled its mission thus far, and has been established on a false basis. It is not social insurance but a clever taxing program. The actuarial study of this bill has shown glaring inadequacies in the structure of

the bill. The benefits to be paid in the future will amount to about five times the benefits paid now. In 50 years the conceivable benefits to be paid will rise to more than 11 billions of dollars. This is in connection with the limited coverage feature of the bill. The total costs will be staggering. The program is new and there is more than a $7,000,000,000 deficit. Actuarial costs are not met in the present rates set up. Less than half of the persons now over age 65 are now receiving benefits. And it is apparently the plan of the bill that millions shall pay but never receive the benefits of their contributions.

We are not yet bound under the heel of socialism. Let us throw this bill aside and labor for an American plan that will take politics and vote getting out of the system.

As a taxpayer, and a most interested member of this Nation, I wish to respectfully request a complete investigation of the entire social-security program before any further extensions or so-called improvements are made in the program as presently constituted. I believe this investigation should be made by an independent group to the end that the inequities, confusions, and contradictions may be rectified and/or an American program be set up consistent with the ideologies of the American people as developed through the hard-won experience of the past 150 years.

That is the end of my statement, Senator.

The CHAIRMAN. Are there any questions?

Senator MYERS. Do I take it, Reverend, that you are advocating the repeal of the Social Security Act?

Dr. Darrow. I am advocating an investigation which will determine a more equitable way of handling the needs. Because we have to care for the aged, the blind, the orphans, and that group, I would not eliminate them by discarding the act as it stands.

Senator MYERS. Would you eliminate the old-age and survivors insurance?

Dr. DARROW. I am not an expert on that, Senator, but I would eliminate those provisions which are actuarially unsound, as I understand it, from the way the bill is set up.

Senator MYERS. Well, I just take it from your statement, of course, that you are opposed to this bill, which provides for extension of coverage, increase in benefits, and total and permanent disability. Is it then your belief that the old-age and survivors benefits set up in this Social Security Act are unsound and should be changed, eliminated, or repealed?

Dr. DARROW. I think it is unsound, because according to the figures which come from the material in this bill, about half of the old-age group is now being served by this bill.

Senator MYERS. Do you think it is our responsibility to insure the other half so that all will be covered?

Dr. DARROW. I would make it possible that all those who can show need can be covered.

Senator MYERS. But based only on need?

Dr. DARROW. Based absolutely on need. A man who does not need it certainly should not have it.

Senator MYERS. Then you are not in accord with this contributory system, whereby a man and his employer will pay a certain percentage of his wages, in order that he may in old age, or at least over the age of 65, have a pension regardless of need?

Dr. DARROW. No, sir; I am not, the way it is constituted, for the reason that there are many who contribute year after year and then, because of a change of job or because they are earning a certain amount past 65, cannot recover from the system any of the amount that they have paid in. It is not equitable on that basis.

Senator MYERS. Then you have a fundamental disagreement with the policy established by the Congress that there shall be some contributory system by which a man when he reaches the age of 65 shall receive, we call it, a pension, regardless of need?

Dr. DARROW. On the basis on which it is now set up, I am in disagreement.

Senator MYERS. Well, I want to get your fundamental philosophy. You think it should be based only on need, and that if there is no need, then no system is necessary to provide for the man or woman after they have reached that age of 65 and have retired from active business?

Dr. DARROW. I think it would be fundamental that if there was no need they would not need to receive it. However, if we were going to give a blanket assurance as to old age, Senator—and this is not offered in any sense as a substitute for this bill—my idea would be that if everyone were to pay, everyone would receive it, and that would be considered as part of their income and they would pay income tax on what they receive.

The CHAIRMAN. Are there any additional questions?

If not, we thank you for your appearance here today.

Dr. DARROW. Thank you, Mr. Chairman.

STATEMENT OF DR. GUNNAR GUNDERSEN—Resumed

Dr. GUNDERSEN. Mr. Chairman, I would like to offer for the sake of the record a statement in regard to Senator Myers' question about my recollection as far as the board of trustees is concerned and the house of delegates' policy, to the effect that my recollection was in error, and that no statement had emanated from the house of delegates. But it was a statement by the board of trustees of the American Medical Association.

Senator MYERS. So you are here representing the board of trustees rather than the American Medical Association itself?

Dr. GUNDERSEN. I am representing the American Medical Association through the board of trustees, but the statement I made emanated from the board of trustees rather than the house of delegates.

Senator MYERS. I see.

The CHAIRMAN. The committee will stand in recess until 10 o'clock tomorrow.

(Whereupon, at 12:20 p. m., the committee recessed, to reconvene Wednesday, March 1, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

WEDNESDAY, MARCH 1, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant ot recess, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

Present: Senators George, Lucas, Hoey, Kerr, Myers, Millikin, and Taft.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

I think we had better proceed now, President Green. There will be other members present later. You are appearing here on H. R. 6000, a bill to amend the social-security legislation. The committee will be very glad to hear you. You may, if you wish, go through your statement without any interruptions, or if you do not object to questions, you may indicate your pleasure about that.

STATEMENT OF WILLIAM GREEN, PRESIDENT, AMERICAN FEDERATION OF LABOR

Mr. GREEN. It will be perfectly all right, Senator, for you to ask questions as you wish. If you want to interrupt at any time, that will be perfectly agreeable.

The CHAIRMAN. You may proceed, Mr. Green.

Mr. GREEN. Mr. Chairman and members of the Committee on Finance, I am grateful to you for the opportunity afforded me to present the views of the American Federation of Labor on the important matter of the economic security of the working people of our country, which you have now been studying for many weeks.

The 8,000,000 workers in unions affiliated with the American Federation of Labor consider this matter of economic security of paramount imporance. They and the members of their families regard the attainment of securtiy as a primary goal and objective. In this respect they are no different from other people. They share the willingness of the members of other groups in our society to assume risks and undertake ventures. They likewise share the desire of business groups, farmers, and others to establish for themselves a basic floor of security.

The challenge of economic insecurity is one of transcendent importance to our whole democratic way of life. Dictatorship breeds in insecurity and want. Communism feeds on it. In these days we are spending billions to help strengthen democracy throughout the world.

This we should do and the American Federation of Labor enthusiastically and vigorously supports the continuance of this economic aid to foreign countries for so long as democratic government is threatened by Communist or other totalitarian menace.

This world-wide struggle is not one that we can win with slogans and fine phrases. We must demonstrate by deeds beyond any misunderstanding that our way of life is capable of meeting the problem of insecurity. As Justice Cordoza said in his famous opinion on a social-security case in 1937 (*Helvering* v. *Davis*):

> The hope behind this statute is to save men and women from the poorhouse as well as from the haunting fear that such a lot awaits them when the journey's end is near.

It will do us no good to preach the advantages of democracy and free enterprise either at home or abroad if the Communists here and in the Kremlin can point to our failure to remove from the working people of America this haunting fear. We therefore view our efforts toward providing economic security for wage earners and other workers as part and parcel of our world-wide fight to beat back the Communist menace.

Working people who have given thought to this problem recognize that it is not a simple one. We recognize that the problem that confronted the members of the Ways and Means Committee of the House a year ago as they undertook to prepare recommended changes in our social-security system and the problem now before this committee is not a simple one. We recognize that the very success of our social objectives in some fields has made more difficult the attainment of objectives in other areas. For example, the remarkable improvements in medical science which have taken place over the last 50 years in America, together with improved working conditions which have been attained through collective bargaining, and the vastly increased safety and protection afforded workers at the work place have greatly lengthened the average span of life. But these very successes have complicated the problem of security in old age, as they have brought it about that working people, like most others in this country, can now look forward to a much longer period after the normal retirement age.

The problems that confront us as we undertake the provision of security in old age are particularly complex and difficult in a democratic society. There are easy and short-cut solutions to the problem of security which are available to totalitarian nations. We are told, for example, that there is no unemployment in Russia. Perhaps this is true, but it is easy to wipe out unemployment where excess workers can be herded into slave labor camps. We are told also that in the totalitarian nations there is no problem in taking care of the aged. The solution of this problem may be simple where long hours of work under poor conditions tend to reduce the number of aged and where an all-encompassing state undertakes to provide every need of the individual. But I am sure all of us would agree that these solutions are worse than the evils they undertake to cure.

Here in America the problem is admittedly more complex, for as we undertake to provide security for all our citizens we mean to accomplish this while at the same time holding to other equally desirable objectives.

First, we mean to maintain a free and dynamic economic and social system. The workers of America are committed to maintaing a system.

which provides freedom of enterprise. They recognize that their standard of living has greatly profited by the incentives to movement and change and the development of new enterprises and new industries and new methods of production. They believe that freedom of enterprise applies not only to the investor and the business men, but should also characterize the wage earner's way of life. Just as the investor is free to invest his capital in new enterprises or new processes that give promise of greater returns, so the worker must be free to invest his skill and labor wherever it appears to him to be of best advantage. This means that the worker under our system should have no restrictions placed on his freedom to move from job to job or from one part of the country to another, or from one industry to another, in response to the opportunities which a free and dynamic economic system offers him.

This very freedom, however, entails certain hazards.

Senator MILLIKIN. Mr. Green, would you mind giving us the benefit of your observation on the relation of these private pension plans to the mobility of labor? It has been said, here, that these plans tend to tie a man to a definite job all of his life, and I wondered if you had done any reflecting on that.

Mr. GREEN. Well, I will be very glad to do that. There isn't any doubt but what the negotiation of private pension plans has created a favorable psychological condition among a large number of workers; a better state of mind, a better feeling. But, after all, it is not a plan that is based upon the policy of security for all; and it is that policy that we feel should be established in the United States of America.

First of all, it obligates the worker to remain at one place in order to be entitled to his pension.

Senator MILLIKIN. Yes; the reason I mention that is that you are discussing here the right of the worker to have freedom of movement; and the complaint has been made here that these private pension plans have a tendency to sort of shackle a man to one job with one employer all of his life.

Mr. GREEN. That is what I have said. It interferes with freedom of movement and freedom of action and, I think I can say, freedom of enterprise. Because it ties the man to one position, if he is to be the beneficiary of the private pension plan.

Now, what we want is to establish a plan, a pension plan, that will provide security for a worker when he retires regardless of where he works or where he is located.

Senator KERR. Well, in that connection, Mr. Green, is not one of the reasons urged by the union to induce the employer to provide a better pension system, and is not one of the considerations upon which the employer looks with favor, the result which he hopes to attain that will cause employees to want to stay with him? Is that not one of the reasons urged and accepted in receiving a better pension program from any given employer?

Mr. GREEN. Well, that may be back of the movement. I am not sure. It does tend to hold men to their positions.

Senator KERR. I mean, it has that advantage, along with whatever disadvantage it might have.

Mr. GREEN. But our free enterprise system is based on this principle: That a man should have the right—and be permitted to exer-

cise that right—to sell his labor under the most favorable condition where he can, to his best advantage, and when he can.

Senator KERR. Yes, I understand that. And if, in the working ou of the pension arrangement with his employer, he creates those mor favorable working conditions, they are calculated to persuade him t give consideration to that in determining whether he will leave a cer tain employment or not.

Mr. GREEN. Yes; all of that is true. Of course we are goin through the experimental stage, and we will find out, as the result o experience, how it does work.

The CHAIRMAN. All right, President Green. You may proceed

Mr. GREEN. This very freedom, however, entails certain hazards We recognize, for example, that under our system, even in a period o full employment, there will be an area of "frictional unemployment. To meet this situation and in the hope that we can prevent such un employment leading to mass unemployment, we have devised a syster of unemployment insurance. Another of the hazards that wage earn ers face in this free society of ours is that of dependent old age. An other is loss of earning power due to physical disability. Our probler is how to devise a means of underwriting these risks without limitin the freedom which is characteristic of our way of life, and which w mean to maintain.

That is the point that I want to emphasize: the exercise of freedom Take, for instance, a plant where a pension system is in effect coverin only that plant. So long as the worker remains there, he is entitled t security pay. But suppose for some reason or other that plant close down for all or a large part of the time, and the man is faced wit unemployment. Then he is faced with this decision: if I leave, I los my pension; but if I go elsewhere, I will get full employment. Tha is a serious problem for him to face.

Another of the complexities which confront us is how to provid security and maintain respect for the dignity of the individual. Thi respect for the worth of the individual human personality is one o the most priceless heritages of our American tradition. It is on that is not easy to preserve in an economic system characterized b the processes of mass production, but it is one which our people priz mostly highly. They demand therefore that whatever solution i devised to the difficult problem of security must be one which doe not destroy the dignity of the worker who has contributed throug the long years of his working life to the prosperity and security o this Nation.

We are also quite aware that in the last analysis our security rest in the maintenance of a sound economy. Such an economy can onl be maintained by full employment and full production, with price wage and monetary policies that contribute to long run stability Without that, there can be no genuine security either for the worker businessmen or farmers. Our plans for social security must be made then, in the full recognition that mere promises of cash benefits i future years cannot guarantee security. They must also be made i recognition of the fact that the method of financing and the type o benefits provided have a direct bearing on the stability of our economi system. Our people will not be satisfied with a package of promises They will demand that the promises for the future be based on system of financing which fits into the over-all structure of our ec

nomic system and which includes a program for maintaining the funds out of which the benefits are to be paid.

There are those who maintain that these objectives which I have outlined are contradictory. Some say that it is impossible to provide security without loss of freedom. Others maintain that it is all right to provide assistance to those who have not succeeded through individual effort in providing their own security. They are willing to sacrifice dignity and self-respect for a minimum of security. They would provide aid to the needy when they can prove their need through the application of the means test. Strangely, these persons seem to forget that such an approach is the surest way to crush initiative and to destroy the very incentive for venture and self-advancement they profess to be most anxious to preserve. These are the men of little faith—little faith in the capacity of America and the ingenuity of American labor and management to meet and solve an admittedly complex problem.

We in the American Federation of Labor have long believed that there is a way to attain all these objectives. This is through the method of social insurance. Nowhere is the confidence in this approach better stated than in the opening section of the report of the Advisory Council to your committee, which was published now nearly 2 years ago. On page one of its report the Council stated:

> The Council favors as the foundation of the social-security system the method of contributory social insurance with benefits related to prior earnings and awarded without a needs test. Differential benefits based on a work record are a reward for productive effort and are consistent with general economic incentives, while the knowledge that benefits will be paid—irrespective of whether the individual is in need—supports and stimulates his drive to add his personal savings to the basic security he has acquired through the insurance system. Under such a social insurance system, the individual earns a right to a benefit that is related to his contribution to production. This earned right is his best guaranty that he will receive the benefits promised and that they will not be conditioned on his accepting either scrutiny of his personal affairs or restrictions from which others are free.

Senator TAFT. What do you say, Mr. Green, as to the rule that seems to be in effect that a man who goes on working can not get this pension?

Mr. GREEN. If he goes on working?

Senator TAFT. Yes; if he earns more than a certain amount. I mean, do you think that ought to be eliminated also?

Mr. GREEN. That, I should think, should be dealt with as a special question; yes.

Senator TAFT. You mean if he is entitled to it, he should get it, even if he is working? Or that he should not? What do you feel about that?

Mr. GREEN. I know there are a great many people, workers, who beg and plead to continue work even when their retirement age is reached, and there are many of them that are retired because the system is rigid and inflexible.

Senator TAFT. Many men sixty-five years of age want to go on working for five years or more doing the same thing they have been doing. Do you think they should have to wait until they quit working to get these benefits, or do you think they should get them anyway?

Mr. GREEN. I think so; because they have earned it.

Senator LUCAS. Do I understand you to say, Mr. Green, that if the man goes on working after the age of retirement he is entitled to both social security and his wages?

Mr. GREEN. Oh, is that what the Senator asked?

Senator TAFT. Yes. Maybe I did not make it clear.

Mr. GREEN. If he continues working and drawing his wages, h should not get these benefits; because there is no proposal for him t draw pay and social-security benefits at the same time. That is no a right principle.

Senator TAFT. There has been some suggestion, however, that man who has retired should be able to do odd jobs to a greater exten than—$15 a month, is it? And that he still should be able to get hi pension. Have you any views on that question?

Mr. GREEN. Well, if he gets some pay like that, some insignifican amount, that ought to be supplemented, I think, by security pay.

Senator MILLIKIN. There have been some suggestions, Mr. Greer that if a man does not take his benefit when he is 65 but waits, say until he is 70, the amount of his benefit should be increased when h reaches the age of 70.

Mr. GREEN. That would seem to be just.

Senator MILLIKIN. There have been some suggestions to that effect

Mr. GREEN. It could be worked out; yes.

Senator MILLIKIN. Let me ask you this. I have asked the sam question of other witnesses. I think you have already touched o the need for continually increasing the productivity of the Nation i order to carry these various burdens that we have. Do you see an reason why at least in some fields we cannot keep people that ar willing to work and able to work, keep them working longer tha they do under present "human junking" rules? Is there any reaso why we should not try to keep people working if they are willing t work and able to work after they become elderly?

Mr. GREEN. I think, and my own personal opinion is, that a man a worker, should be accorded the privilege to work, regardless of age if he is willing, healthy, and strong enough to work.

Senator MILLIKIN. Exactly. I realize that it might not be prac tical in some businesses, but if a man cannot work 6 hours a day or hours a day, but can, we will assume, do a good 4 hours a day work is there any reason why we should not keep him working 4 hours i he wants to and if he is able?

Mr. GREEN. Well, if he wants to and can, I think it is perfectly right. It creates a better state of mind, a better psychology, and better social order, I think. I know I have run across a large num ber of workers that tried their best to be continued in employment, bu they had reached the age of retirement and there was no choice. The had to retire. Well, many of them go out and find work in othe places, in other lines.

Senator MILLIKIN. We are lengthening the period of education a one end of the scale, and if we have earlier retirement ages at th other end of the scale, I respectfully suggest that pretty soon w get to a point where too narrow a segment of our productive life i carrying the whole burdn of things, and that if we can we shoul keep people working assuming that they are able and willing to work for as long a period as their health and energies permit.

Mr. GREEN. Well, I agree with you on that principle.

Senator KERR. Mr. President, you do not expect to retire when yo reach the age of 65, do you?

Mr. GREEN. The trouble with a lot of people is that they are old when they are young, and they are young when they get old.

Senator KERR. Let us not apply that to you or me.

Mr. GREEN. No, sir.

The representative from the American Federation of Labor, who was a member of this Advisory Council, was glad to join the other members, drawn from our leading universities, from business management, and agriculture, in signing this statement I just quoted a moment ago. It represents a principle to which the American Federation of Labor has for many years been committed.

I need not remind the members of this committee that there is today widespread dissatisfaction with the present social-security program. It is not dissatisfaction with the basic approach to the problem nor with the principles of social insurance, to which we have been committed in this country since 1935. On the contrary, it is dissatisfaction with the limited extent to which these principles have been applied to the problem. Today we in America are forced to admit that our social insurance system has, in the protection afforded working people, actually fallen behind some systems in foreign countries. We shall never be satisfied with a system as good as any. With our great resources we can and should have the best in the world.

That is a point I have always felt should be emphasized; that is, that we here in America should set a standard for the world in this respect—because there is a conflict on now between two ideologies. The one is the free-enterprise system, and the other is the totalitarian type of government. Which is the best? We have a great opportunity here in America to demonstrate to the world that the free-enterprise system is the best of all. Now, we cannot do that if we allow nations that are classified as partly totalitarian or totalitarian in full to set a higher standard than we set here, under our free-enterprise system in America. And I am definitely of the opinion—and that opinion was crystallized and fixed in my mind when I attended the International Labor Conference in London a few weeks ago—that we can maintain our free-enterprise system intact in America if we will demonstrate to the world that it is better than any other form of government. And I know that we who are leading the fight to preserve our free-enterprise system, we in the labor movement, are fighting for it in a field where those who advocate the totalitarian system hope to win first, that is, among the masses. If we are strengthened in our position, we can maintain it; and there is nothing that will strengthen us in our position more than to establish here in America a sound, practical social-security system. So there is more involved than the mere payment of benefits to some retired worker. There is involved our proposals in the very preservation of our form of government. And the fight between the two ideologicals, then, will be won by those who advocate the free democratic way of life as we have it here in America. I want to make that observation, here.

Revisions in our system of social insurance were due in 1946. There was little opportunity earlier since soon after the amendments of 1939 went into effect, we entered into the period of wartime economy. In 1945 and 1946 the House Ways and Means Committee completed an exhaustive study of our social-security program which pointed up many of its deficiencies. Throughout the entire 2 years of 1946 to

1948, however, the Congress failed to make the basic changes that were needed. In fact the few changes that were made took us backward rather than forward. The one constructive step that was made was the appointment of the advisory council to this committee, and the changes which this representative group of citizens recommended are now long past due. The failure of Congress to act after the end of the war has created a vacuum in this field which there have been attempts to fill by other methods, some of them unsound and ill-advised.

Today many unions in the American Federation of Labor are waiting to see what Congress does to revise the basic social-security structure. They cannot be restrained indefinitely. Many of them are in a strong position to bargain collectively for plans to meet their own individual problems. They are waiting to see what Congress does this year with the social-security amendments which are now before you. They cannot be expected to wait much longer.

We in the American Federation of Labor believe that provision for old age, survivors, and disability insurance for workers in industry, trade, and agriculture must be through a comprehensive Federal system, with the broadest practical coverage. We do not believe, however, that it is practical, as has been proposed in some quarters, to incorporate into a universal system either the railroad-retirement program or the special retirement programs the Federal Government has developed for its own employees. We do recognize the appropriateness of plans developed through collective bargaining to meet particular situations, but believe that these plans should supplement the basic Federal Social Security System, and not supplant it.

The bill which you have before you which was passed by the House last fall is a constructive measure which we are glad to support. It goes a long way toward meeting the need for revising our Social Security System. We have studied it carefully. It was before our convention which met in St. Paul last October. It has been reviewed in detail by our social-security committee and the report of that committee was studied by our executive council which met in Miami only last month.

While we are pleased with the constructive approach to the problem presented in H. R. 6000, our analysis of this bill indicates that it needs to be strengthened at a number of points. These specific points were outlined by convention action of the American Federation of Labor and by the executive council accepting the recommendations of our social-security committee. In broad outline, they are as follows:

1. The retirement age for women should be lowered to 60 years.

The CHAIRMAN. May I ask, on that point, the advisory council made that recommendation, I believe?

Mr. GREEN. I believe it did; yes.

The CHAIRMAN. Yes, sir. And there seemed to be quite a sentiment for it. But there has been some opposition expressed before this committee. I think maybe the opposition came from the agency itself. I may be wrong on that, but there has been some.

I am reminded that it was the business and professional women's groups that expressed some opposition to it.

I assume that one reason, Mr. Green, why the House did not go to 60 for women was probably the increased cost on the pay rolls. It has been estimated that it would cost, of course, a fraction of 1 percent

more if this recommendation were incorporated in the law. But the American Federation is endorsing the 60-year retirement for women provision.

Mr. GREEN. Yes. We approved it, Senator, after giving it careful thought and consideration, because we felt that human values were involved and that we ought to endeavor to protect those human values by giving that special provision for the protection of women.

Senator TAFT. What is the difference, Mr. Green, between woman and man at 60 and 65? We just drafted a constitutional amendment saying there should not be any difference.

Mr. GREEN. Well, Senator, I think we all agree that there is a physical difference between men and women workers.

Senator TAFT. My general theory is that they grow old more gracefully than men do, on the whole. I do not quite see why a woman of 60 is not able to work just as well as a man at 60. What is the difference? I do not see any.

Mr. GREEN. I think it is based on the same principle that was recognized when we prohibited women from working in the coal mines, and in certain other lines of work, and attempted to protect women employed in factories and mills. And I think that is the basis of it, really.

Senator TAFT. Are you looking in the direction of reducing the 65 to 60 for men? Are you looking in that direction at all? Have you advocated that?

Mr. GREEN. No, we have not.

Senator TAFT. I was wondering if this was a step, so to speak, toward getting the age down to 60 for men.

Mr. GREEN. No, we are not advocating that.

Senator MILLIKIN. Mr. Chairman, may I ask Mr. Cruikshank: Did you folks figure out what the cost of that would be when you were working on the Council?

Mr. CRUIKSHANK. Yes, my recollection, Senator, is that it was about half of 1 percent.

Mr. GREEN. Was that the increase in the cost?

Mr. CRUIKSHANK. Yes. I would want to check back as to the figures.

Senator TAFT. I think it is over-all one half of 1 percent.

The CHAIRMAN. I think it was estimated that the over-all on pay rolls was apt to go up about half of 1 percent.

Senator MILLIKIN. Mr. Chairman, if I may say so at this point, Mr. Cruikshank rendered great service to the Advisory Council to which President Green referred. He was a most useful and valuable member of the Advisory Council.

Mr. GREEN. Well, we count on him doing it when we assign him.

Senator KERR. I would like to ask Mr. Green a question, there. Senator Taft referred to the fact that the Senate had just recently passed, and I think by such an overwhelming vote that it was almost unanimous, a resolution submitting a constitutional amendment to the States really prohibiting any difference with reference to opportunity in the situation of men and women in Government or employment or civil rights.

Mr. GREEN. Yes, sir.

Senator KERR. Now, that was done, I would say, with what seemed to be almost an avalanche of support from the women themselves.

Mr. GREEN. From the women?

Senator KERR. Yes. I mean the initiative in that regard was not taken by any men that I knew of other than those moving in response to the urge from the women. Would that not seem to conflict with this situation?

Mr. GREEN. That might have been the case, yes.

Senator KERR. Do you think consideration has been given to that in contemplating this recommendation?

Mr. GREEN. How large a number of women are concerned about it?

Senator KERR. If you can, I would like for you to tell the committee that.

(The information is as follows:)

ESTIMATE OF NUMBER OF WOMEN AFFECTED BY LOWERING AGE OF ELIGIBILITY TO 60

There are a number of concepts to be considered in estimating the number of women who would be affected by this proposal, but taking into account the present situation we estimate that the number of female beneficiaries would be increased by about 60 percent relatively in the three old-age categories: female primary, wives' and widows' benefits. At present there are about 400,000 eligible wives whose husbands are in receipt of primary benefits; for retirement age 60 for women this figure would be increased to about 650,000. Likewise, there are now about 265,000 widows over age 65 receiving benefits; for retirement age 60 for this group the total would be about 425,000. Finally, there are now about 185,000 women who are primary beneficiaries and if the retirement age were reduced to 60 this figure would probably be about 300,000. These estimates relate only to the specific question of the lower retirement age and do not include effects of increased coverage or different eligibility provisions.

The CHAIRMAN. All right, Mr. Green.

Mr. GREEN. 2. Coverage should be extended to agricultural workers.

3. Eligibility requirements should be liberalized, particularly for new entrants into the system.

4. Provision for temporary disability insurance should be restored.

5. The protection afforded existing retirement systems for employees of State and local governments who prefer the protection of such systems to coverage under social security should be further assured.

Senator HOEY. Might I ask Mr. Green a question at this point?

The CHAIRMAN. Yes, Senator Hoey.

Senator HOEY. We have had so many requests from State and local retirement systems to be exempted from this law. They feel that they would rather go under their own systems, and that there would be very great confusion that would result from a change. That is true of the retirement systems for teachers in my State and for State employees and with reference to other organizations, like firemen and State police and law-enforcement agencies. They do not want to come under this system. Do you think they ought to be brought under it? This present law provides that they can vote on it. But they seem to think that the agitation and discussion of all this would interfere. And their systems are working perfectly, they feel, or, if not perfectly, satisfactorily, and they feel that they are getting better returns than they would get under social security. What would you think? Do you think they ought to be included under this anyway?

Mr. GREEN. Well, we believe that the best interests of the workers of the Nation will be served by being covered by a universal social-security system. However, as a result of experimentation, as in the

case of the firemen to which you refer, they have established a social-security plan and system that is acceptable and that is satisfactory. Then arangements, I think, should be made for those under such satisfactory systems to be exempt, and their wishes to be fully met in that respect.

But now there are some of these other systems that you refer to that are so inadequate. They do not measure up to anything approximating the standard that we try to incorporate in sound social-security plans. A policy of careful thought and discrimination should be followed in that respect, so that the coverage provided for in our bill shall cover those who are entitled to be covered, and who are probably subject to a social-security system in name only. Now, that is the way we feel about it.

Senator KERR. Mr. Green, as I read your No. 5, there, you are asking further assurance of protection for existing retirement systems.

Mr. GREEN. "The protection afforded existing retirement systems for employees of State and local governments who prefer the protection of such systems to coverage under social security should be further assured." Now, that is a general recommendation, but Mr. Cruikshank has prepared some figures and data and material on that, that he will submit to you, and he will give you a clear answer to that question.

Senator KERR. As I understand it, what you are asking is that the protection afforded existing retirement systems be further assured.

Mr. CRUIKSHANK. I wonder if the Senator would be willing to hold that question until we submit our detailed recommendations?

Senator KERR. I would be delighted, if you wish; but I would like to know whether or not my interpretation of the statement which is made in that paragraph is correct.

Mr. CRUIKSHANK. It is correct, sir; but we have a specific implementation of that which we expect to submit.

Mr. GREEN. We have specific information that is assembled.

The CHAIRMAN. All right, Mr. Green.

Mr. GREEN. 6. The benefit formula should be revised in a manner to maintain a more direct relationship between benefits and past earnings.

7. The rehabilitation provisions of the permanent-disability-insurance program should be strengthened.

8. The public-assistance and child-welfare programs of title III should be strengthened and liberalized.

Now, I wish to announce that I am accompanied by our director of social-insurance activities, Mr. Nelson Cruikshank, who is sitting here beside me; and, with your permission, I am asking that he present to this committee the more specific and detailed recommendations with respect to this legislation which have been approved by the American Federation of Labor.

And, in closing, I wish to say to the committee, and to urge with all the emphasis at my command, that this committee do all that is consistent with sound legislative procedure to hasten the enactment of progressive amendments to our Social Security Act. The workers of America have been patient. It has been nearly 11 years since there have been any constructive amendments to the Federal social-security program. The workers have been patient, but their patience is wear-

ing thin. For nearly 4 years now, Congress has been studying the problem. The time for study is coming to a close. The time for action is at hand. Today, when all the world is looking to America for leadership in democratic government, this Congress must prove to the working people of this country and prove to the world that a democratic nation can provide a basis of security for all its citizens.

I am pleased to submit that statement to you. It reflects and represents the considered judgment, the well-considered judgment, of the American Federation of Labor.

The CHAIRMAN. We were pleased to have your statement, Mr. Green.

Senator LUCAS. May I make an observation?

The CHAIRMAN. Yes.

Senator LUCAS. Mr. Chairman, as one member of the committee, I desire to commend President Green upon the very vigorous defense that he has made of the free-enterprise system of America.

It is only a repetition of your previous position, Mr. Green, as well as that of your predecessor, Mr. Gompers. But I think it is well that you have restated it in such forceful language before this committee; because either through ignorance or design the position of the American Federation of Labor, of which you are president, has been frequently misrepresented.

Mr. GREEN. Thank you, Senator. Thank you very much.

Senator MILLIKIN. May I ask Mr. Green one question?

Mr. Green, what are your own statistics, now, on unemployment at the present time?

Mr. GREEN. That is, so far as our workers are concerned?

Senator MILLIKIN. Yes.

Mr. GREEN. Well, there is some local unemployment in spots; but, generally speaking, we are not suffering from unemployment at the present time.

Senator MILLIKIN. But can you give us a figure?

Mr. Cruikshank, do you know what the present estimate is?

Mr. CRUIKSHANK. Between 4½ and 4¾ million.

The CHAIRMAN. At the present time?

Mr. CRUIKSHANK. Yes.

Senator TAFT. I saw that as the figure for January. Does that apply to February, too?

Mr. CRUIKSHANK. We do not have a figure for February. We will have within a few days; and, if the committee would like to have us file that with you, we would be glad to do so.

The CHAIRMAN. We would be very glad to have you supply that to us.

(The material referred to follows:)

UNEMPLOYMENT DATA, FEBRUARY 1950

The number of unemployed workers for the month of February is estimated by the Bureau of the Census, United States Department of Commerce, at 4,684,000 on the basis of sample interviews. This includes 3,426,000 men and 1,258,000 women and represents 7.6 percent of the total civilian labor force. The comparable figure for February 1949 was 5.3 percent.

We believe that this report presents the most reliable picture of employment and unemployment available each month. Since it does not represent a complete count of the unemployed but instead is based upon sampling techniques, it is difficult to determine how accurate the report is. Estimates of sampling variability indicate that the chances are 19 out of 20 that a complete census would vary from the sampling figure by not more than 380,000.

At the same time, it should be noted that we disagree with the Census Bureau with the manner in which it classifies certain groups of workers. In particular we feel that workers in the following two groups should be classed as "unemployed":

(1) Persons who had been temporarily laid off from their jobs with definite instructions to return to work within 30 days of lay-off.

(2) Persons who had a new job or business to which they were scheduled to report within the following 30 days.

At the present time, these workers are classed as "with a job but not at work" along with people who are ill or on vacation. In our opinion, individuals who are not employed, even if they expect to be employed within 30 days, are still unemployed and should be classified as such. In February 1950, a total of 144,000 workers were included in these two categories, which if added to the first figure would give a total of 4,828,000 unemployed.

The CHAIRMAN. And now, Dr. Cruikshank, we will be very glad to have you next, if that is the correct order of appearance.

STATEMENT OF NELSON H. CRUIKSHANK, DIRECTOR OF SOCIAL-INSURANCE ACTIVITIES, AMERICAN FEDERATION OF LABOR

Mr. CRUIKSHANK. Mr. Chairman and members of the committee, my name is Nelson Cruikshank. I am director of social-insurance activities for the American Federation of Labor.

I appreciate the opportunity of appearing as a representative of the American Federation of Labor before your committee. President Green has laid before you certain basic policies of the American Federation of Labor applicable to programs designed to meet the problems of old age, disability, and those arising from the death of the family breadwinner. As he indicated, it shall be my purpose to present the more specific recommendations adopted by the American Federation of Labor with respect to the legislation which you are now considering.

The convention of the American Federation of Labor was in session in St. Paul, Minn., at the time the House of Representatives adopted by a vote of 333 to 14 the bill which is now before your committee—H. R. 6000. The news of its passing the House electrified the convention. President Green from the floor characterized it as the most progressive single step taken by this Congress.

While the delegates to the convention were greatly cheered by the news of the passage of this bill by the House, they proceeded to consider and adopt some specific recommendations for its further improvement. I should like to speak of each of these briefly.

The first recommendation was that the age at which a retired worker's wife or a retired woman worker becomes eligible for benefits be lowered to 60 years. This recommendation is made on two basic considerations. The first is that for single women it is more difficult to obtain employment after age 60.

Senator TAFT. Do you think it is more difficult than for a man? It is always difficult for anybody over 60, as far as that is concerned.

Mr. CRUIKSHANK. Many single women, many women who are single at the age of 60, widows, for example, have been a long time out of the labor market. Suppose a widow, under this program, had children 18 years of age or under that entitled her to benefits. When that youngest child becomes 18, she is no longer entitled to benefit, and at a rather advanced age she finds herself going back into the labor market.

Senator TAFT. Would she not come in under the survivors?

Mr. CRUIKSHANK. Well, she would as long as there were children, but as soon as the last child reaches age 18, then she is without benefit until she reaches the retirement age.

Senator TAFT. Even though she is the widow of a covered employee?

Mr. CRUIKSHANK. Yes, sir. And, even though she might have been a working girl in her younger years, she will find that the processes in the plant, and so on, have changed a lot, and it is very difficult for her to find employment, whereas it is more common for men to remain in steady employment throughout those years of their lives.

The second reason is that because of the average difference of about 2½ years between the ages of husband and wife, in actual practice the retirement age for the husband is in most cases determined by the age at which his wife becomes eligible for a wife's benefit. In order actually to provide for voluntary retirement of the wage-earning husband at 65, it is therefore necessary to lower the eligibility age for women. For these same reasons, the Advisory Council on Social Security included this proposal in their recommendations in 1948.

The second recommendation was that the coverage be extended to agricultural workers.

Senator MYERS. What do you think is the real reason why it was not covered in H. R. 6000? I am informed that it was the cost.

Mr. CRUIKSHANK. I am told that is true.

Senator MYERS. That was the real and fundamental reason for the failure of the House to reduce the age to 60.

Mr. CRUIKSHANK. I believe that is correct; yes, sir. This recommendation that the coverage be extended to agricultural workers is also in line with the recommendations of the Advisory Council. Agricultural workers constitute a group which needs the protection of social security as much as or more than any other group. Their need is sharpened by the fact that they are generally denied the protection afforded by other types of social legislation and the fact that in a great many instances their employment is seasonal and irregular. Wages are low, and the opportunity to provide security through individual savings is less for them than almost any other group.

In order to extend protection of social security to farm wage earners in a practical manner, it would be necessary also to provide such protection for farm operators. This is because many agricultural wage earners become farm operators, and farm operators frequently become wage workers.

Of course, there are many other reasons, which are primarily the concern of the farm people themselves, but that is one which is of particular significance to us.

Senator MILLIKIN. Dr. Cruikshank, it has developed frequently during this hearing that there is not very much grass-roots demand for covering either the farm worker or the farm owner. Have you any explanation of that?

Mr. CRUIKSHANK. I have wondered about it, myself, Senator. I think it is because this is a new program and a pretty new approach to the method of security for farm operators particularly.

Now, for the farm workers, the farm wage earners, it is quite understandable to us that demand is not articulate, because farm wage earners are not an articulate group on any question. They are not organized. In the one organization that does represent them, the Farm

Labor Union, in the American Federation of Labor, it is a very prominent part of their program. I have attended their conventions, and they were interesting conventions. The delegates are there in their overalls. Those delegates right in the fields, believe you me, do express an interest in it. But it is a small organization. The protections of the right to organize that are afforded other workers are not available to them. And, as a general group, they are inarticulate.

Now, I understand that the major farm organizations, the Grange, and the Farm Bureau Federation, have changed their position materially on this, and I think in that respect they speak for their membership.

The CHAIRMAN. Doctor, the chief difficulty at this point is the administrative problem involved: is it not? Theoretically, it sounds simple, but in actual practice it still has difficulties, and very serious difficulties.

Mr. CRUIKSHANK. It would be a different type of administrative problem, Senator. The Senate Advisory Council Committee went into that quite thoroughly, as I believe your committee is going into it, and we found that in the Social Security Administration, working together with the Treasury Department, and even the Post Office Department, they had developed administrative devices that were quite adequate to this particular problem. And the members of the Advisory Council were convinced that the administrative problem was no longer an insurmountable hurdle; that it had been met in other countries, and we could meet it here.

The CHAIRMAN. They are approaching it from a theoretical point of view. Not many of them are actual farmers, Doctor, or are familiar with the administrative difficulties involved at this point. I do not say they are insurmountable, but they are difficulties nevertheless. And, on the other hand, this committee has received objections to the so-called stamp plan by other groups in the economy, who say that you ought not to break down the system of accounting and the system of tax returns that we have adopted in this country, and that the stamp plan will tend to do it.

Mr. CRUIKSHANK. Well, there were men on our Council that were very close to the agricultural scene, men from Purdue University, from the Agricultural School, and from Cornell. And they were in communication with their constituency, if that phrase can be used. And they were convinced that it was a practical method.

More than one method has been proposed; and it does seem that, while what you say is exactly true—it is a different problem, and it is a difficult problem—it is no longer a sufficiently difficult problem to justify the denial of the benefits of this program to those affected.

The CHAIRMAN. It is a difficult problem, and the suggested methods undoubtedly will work very satisfactorily within groups of farm workers. But there are other groups and other types to which it would be applied, as I see it, with a very great deal of difficulty. I hope that it is not insuperable, but that is the primary problem, I think, that will confront this committe when we consider it. If it were suggested that farm operators as well as farm labor would have the option to come into the system, I do not believe there would be any serious objection to it, and it might be the beginning of a system that would cover your farm workers.

I mean, in other words, if you would demonstrate it, under a voluntary system. I understand all the objections to the voluntary approach, but if it were tried—and in this field it does seem to me there is an oportunity to try it—there would certainly seem to be in this particular field some real opportunity to base you act on actual experience.

Mr. CRUIKSHANK. I would suggest this, Senator. And I am glad you mentioned the awareness of the committee of the voluntary approach.

The CHAIRMAN. Yes; there is no question about that.

Mr. CRUIKSHANK. But I would think this would be a very important area for a good strong advisory committee to the administration, with the farmers sitting right on it, the men that can sit with these administrators and say, "Now, this will work; and this won't work." They would then have men of practical experience sitting right at their elbows when they work out the procedures for such an extension as this. And I believe that could be worked out very practically.

The CHAIRMAN. Thank you very much for your observation.

Senator MYERS. Dr. Cruikshank, I understood you to say that both the Grange and the Farm Bureau have changed their previous position as to farm workers' and operators' coverage under this act. It is my understanding that one has recommended full coverage, and that the other organization has recommended coverage of only farm workers. When did they change their position? Do you know, Dr. Cruikshank?

Mr. CRUIKSHANK. Just within recent months. The Grange, for example, testified before the House Ways and Means Committee against the provision, and then later sent a memorandum to Chairman Doughton saying that they wished to reverse their position. And that was a little less than a year ago.

Senator MYERS. Do you know what may have occasioned that change in position?

Mr. CRUIKSHANK. Well, I am told by one or two of the men with whom I work on other councils, that there was a good bit of discussion of it in local areas, and also that here, with their economist, Dr. Halvorson, they have reviewed the administrative difficulties in some detail, and the administrative procedures that were proposed, and that they were convinced that it was practical. Now, of course, I can't speak for those groups.

Senator MYERS. Do you think that they have gone back to their local organizations and to the grass roots to inquire as to the sentiment among their constituent members for coverage under this program?

Mr. CRUIKSHANK. To be very frank, I couldn't speak with any authority on that, with one exception. I have only talked to one man, from a State organization. And he informed me that in his State they did. That does not mean that in other States they did not, but that is the extent of my knowledge.

Senator MYERS. It seemed to me that they went back to their membership, and that that was one of the real reasons for their changing their position.

Mr. CRUIKSHANK. That certainly was true in one State.

The CHAIRMAN. Doctor, the position taken by the Grange and the Farm Bureau Federation, as I recall it, was one favoring this recommendation; but a very cautiously stated recommendation and somewhat conditional. It was not an outright and unqualified and positive declaration on the part of the organizations themselves. It was more

the expression of a hope that it might be workable and that if it could be made workable they would favor it.

Mr. CRUIKSHANK. Senator, maybe their statement is about like the statement of the A. F. of L. in 1931, which was a careful and cautious statement, but since we have been under the system we are strong for it. I think that is one of the most significant things that the people who are under the system the longest and most fully under it are the people who like it best. I think that would be true of the farmers after they have been under it a while.

The CHAIRMAN. There is no quarrel with your expression on that point. That is the reason why I suggested it might be possible to have a voluntary system so far as farm workers were concerned as a matter of trial and error so that we might have some experience to go on, actual experience at the grass roots.

So far as the farm owner is concerned, of course, there is no more difficulty involved there than in any other self-employed person coming under the system, but for reasons which I think you would appreciate, the committee might hesitate to say that the farm owner and operator could come under without making any provision for the farm workers. It certainly would not look very equitable, would it?

Mr. CRUIKSHANK. No, indeed; that is right. I would not minimize for a minute, Senator George, the difficulties. However, I would suggest that the increased complexities of a voluntary experiment might be more serious than the complexities of universal coverage. In other words, your suggested experiment might find that it was experimenting in an unfavorable situation.

The CHAIRMAN. Doctor, the House bill does exactly that in the case of members in State and municipal retirement systems. It leaves it entirely optional to them to come under or not to come under. Therefore, it is not a wholly consistent position to say that you might not apply the voluntary system to the farm workers themselves.

Mr. CRUIKSHANK. You are aware, I am sure, that you would have to have safeguards to take in large enough groups to prevent adverse selection and so forth.

The CHAIRMAN. I realize all that, and I am not committing myself to the voluntary system even for farm workers, but it does seem to me that it is worthy of some thought, and your suggestion undoubtedly is a very helpful one, that a committee of real farmers be set up to aid the Social Security Administrator in the administration of this provision if it were put into the act.

Senator TAFT. Mr. Cruikshank, I have talked to farmers about coming under social security, I think more farm owners than operators, and it seems to me one of the most frequently stated position that appeared in the statements here was that they felt they were paying for this system and were not getting anything out of it. To a large extent pay-roll taxes are passed on into the price of goods that they have to pay. Therefore, they are paying part of these taxes, and having figured that out now, they have about concluded that they think they ought not to be paying taxes and getting no benefit from it. They would rather pay some more direct taxes perhaps and get the benefits than pay some of the taxes and get no benefits.

Mr. CRUIKSHANK. Senator, we have been trying to tell them that for 10 years.

Senator TAFT. It seems to me that is the thing that has tended to change their attitude as I talked to them and as I read their statements here.

Senator MILLIKIN. I think there is an even more direct farmer philosophy to the extent it has been expressed, and that is that the farm worker when he gets into difficulty goes on public assistance, and the farmers pays that directly.

Mr. CRUIKSHANK. That is quite true.

Senator MILLIKIN. He does not have the offset of benefits under the insurance system.

Mr. CRUIKSHANK. Plus the surprising number of them who have been in and out of the system. The charts that Commissioner Altmeyer showed I know even surprised me to the extent of those that have earned some limited rights under the system because of the tremendous in-and-out movement.

The CHAIRMAN. They have some wage credits.

Mr. CRUIKSHANK. Yes, sir.

The CHAIRMAN. The percentage that do have some wage credits is rather high, surprisingly high.

Mr. CRUIKSHANK. Yes, sir.

Senator MILLIKIN. There may be a little exaggeration but, generally speaking, I do not believe I have ever got even a letter from either a farmer or a farm owner asking to come under the system. I say there might be a few exceptions, but I can recall certainly no extensive mail on the subject, and our mail is a pretty good barometer on these things. It has mystified me.

Senator LUCAS. Mr. Chairman, I am in the same position as the Senator from Colorado. I come right from the heart of the agricultural section of Illinois, and I do not think my mail shows a single letter either from a farmer or an operator. May I ask this question, Mr. Cruikshank. You are the director of social insurance activities of the American Federation of Labor. Why do you, as director of this activity in the Federation of Labor, go into the agricultural field and make your second recommendation here with respect to coverage of farmers and farm workers?

Mr. CRUIKSHANK. For two reasons, Senator Lucas. One reason, and the major reason, is that we do not try to devise our policies just with respect to our own membership. That is, we would not come in suggesting a system for just the people in the industries that we have organized.

Senator LUCAS. In other words, you cover the whole field?

Mr. CRUIKSHANK. That is right; yes, sir. We try to make recommendations related to what we think is sound social policy. The second is that we have about 30,000 of these farm workers, which I know is a small proportion, but we have them in an organization that has a charter from the American Federation of Labor.

Senator MILLIKIN. What organization is that, Doctor?

Mr. CRUIKSHANK. The National Farm Labor Union. I believe that Mr. H. L. Mitchell is to appear here briefly later on. He is the president of the organization.

The CHAIRMAN. Yes. He is listed as a witness.

Senator TAFT. Dr. Cruikshank, I have talked to farmers at farm meetings, I suppose about 50 of them in the last 4 months, and they

express interest and I would say the general view was in favor of going in. But I would think the lack of letters reflects what I see, that they have not exactly made up their minds. They are discussing the thing. There is no very strong feeling. There is some difference of opinion. It seems to me that accounts for the fact that you do not have a determined movement, but certainly they are interested in Ohio. The other point is that in Ohio, at least, there is hardly a county where there are not two or three industrial plants at the county seat and where the people do not fluctuate in their work between the farm work and industrial work. Some of them it is hard to tell whether they are farm labor or the other, which shows why there is this tremendous in and out business which you are talking about.

Mr. CRUIKSHANK. I know what you are talking about. I was raised in one of those towns in Ohio.

Senator TAFT. At least half the counties in Ohio are in that situation, with industrial plants drawing their labor from the farm area throughout the country.

Mr. CRUIKSHANK. That is exactly right, sir.

Senator MYERS. I think you might realize, too, that folks usually write us more frequently when they are against something than when they advocate something. That has been my general experience.

Mr. CRUIKSHANK. I had in mind to suggest, though I doubted it was in order, that if this covered the farmers and then you proposed to take it away from them, I think you would hear plenty. I do not know whether that is relevant or not. I know it does not answer your question.

Should I go ahead, sir?

The CHAIRMAN. Yes.

Mr. CRUIKSHANK. The inclusion of protection against permanent and total disability in H. R. 6000 constituted one of its most important contributions to economic security. It is in a large measure an answer to the pressures for reducing the retirement age.

One of you gentlemen asked about that earlier. There have been such pressures within the American Federation of Labor but it has been pointed out to those groups which have called for the lowering of the retirement age that the real need which they are attempting to meet is that which arises largely out of the workers being physically unable to engage in gainful employment.

While we agree that the qualifying requirements for insured status in disability program should be carefully drawn, in our opinion the somewhat more liberal concept of what is "permanent" disability set forth in the recommendations of the Senate Advisory Council should be applied.

The executive council of the American Federation of Labor in its meeting last month also accepted a further recommendation with respect to the disability insurance provision of this bill offered by the social security committee. This was to the effect that the provision for the financing of rehabilitation services which was contained in H. R. 2893 and was recommended by the Advisory Council but which is not included in H. R. 6000 should be restored. Our unions have had long experience with the administration of disability insurance in connection with workmen's compensation and on the basis of that experience we are convinced that the rehabilitation features of the program are essential to the sound administration of the disability

insurance. Under the workmen's compensation laws, the desirability of financing rehabilitation services out of the workmen's compensation revenues has long been recognized.

In the days ahead this committee is going to hear a great deal of discussion about this proposed extension of social insurance to cover the risk of total and permanent disability.

Mr. Chairman, may I pause for just a moment here and ask about the question of procedure. I understand the committee likes to complete by 12 o'clock if it is possible. I appreciate that the questions asked have all been in response to your interest, and that is what we are here for. There are two other gentlemen with me this morning, and I am a little doubtful, if I continue to read all this, as to whether we will get through by 12. Can we anticipate that you may be able to sit a little later than 12?

The CHAIRMAN. I think the committee could sit today until 1 o'clock, Doctor, if it is necessary.

Mr. CRUIKSHANK. I would appreciate it greatly. That would not crowd us, but I do not want these gentlemen to come here and then let me push them off the end of the program.

The CHAIRMAN. Senator Lucas and Senator Myers will have to go to the floor. Maybe some other Senators may find it necessary, but Senator Lucas will get permission and we will get permission and we will sit until 1, if necessary.

Mr. CRUIKSHANK. I appreciate that greatly, Mr. Chairman.

Representatives of the organized medical profession may even charge here, as they have elsewhere, that such an extension is a step which will lead to what they call "socialized medicine." Representatives of private interests will assure this committee that such a program is impossible to administer. There may even be those who will solemnly bring forth the arguments that 40 years ago such a program was presented to the State legislatures when workmen's compensation laws were first under consideration. They will claim that workers will inflict self-injury and that with disability benefits established as a right, they will use them to retire on by conjuring up imaginary ailments. The charge of malingering will, I am sure, be brought forward not once, but many times. In your consideration of the advisability of retaining the disability provisions of H. R. 6000, we respectfully urge that the decision be made on the basis of practical experience and not on the basis of fears of what might happen. The fact is that disability programs have been successfully administered for years by governmental agencies, including the Veterans' Administration, the Railroad Retirement Board, Federal and State retirement systems, and the State workmen's compensation agencies.

In this connection, because many workers in the American Federation of Labor are under the provisions of the Railroad Retirement Act which provides disability insurance similar to that contemplated in H. R. 6000, I asked the chairman of the Railroad Retirement Board, Mr. William J. Kennedy, to tell me of his experience in the operation of this program. I have here a letter from Mr. Kennedy dated January 27, 1950. I should like to ask, Mr. Chairman, that this entire letter be included in the record of this hearing, as it has an important bearing on the feasibility of a program of this kind.

The CHAIRMAN. We would be very glad to have you include it at this point or at the end of your remarks, just as you wish. I have it here and the clerk can use it.

(The letter referred to follows:)

RAILROAD RETIREMENT BOARD,
Chicago, Ill., January 27, 1950.

Mr NELSON H. CRUIKSHANK,
Director, Social Insurance Activities,
American Federation of Labor, Washington 1, D. C.

DEAR MR. CRUIKSHANK: I have your inquiry concerning the operation of the railroad retirement disability insurance program and your comments on the arguments against Federal disability retirement programs in general.

I have never been able to understand the often-heard charge that a disability program is impossible to administer, in the light of the obviously successful existence of the railroad retirement system, an essential part of which is the provision for disability retirement benefits. These disability benefits are of two types: those payable in the case of permanent disability for all regular employment for hire, and those payable in the case of permanent disability for one's regular occupation. Benefits of the former type have been paid since July 1937, and of the latter since January 1947. Only the former are included in the current discussions on the Social Security Act amendments.

While the administration of the disability part of our program has presented problems not involved in the payment of old-age retirement benefits, we have not found these problems insuperable or even particularly difficult. The value of the disability program to the railroad workers and the industry has fully justified the decision to include it in the law and the additional effort required for its administration.

When the law first became effective we established carefully worked out standards, both medical and legal, for determining eligibility for total disability benefits. The same thing was done for occupational disability benefits after the enactment of the 1946 amendments. In each case, the Board had the cooperation of the railroads and railroad labor organizations (the second time such cooperation was a statutory requirement). In each case, also, the standards were incorporated into Board regulations and, in our opinion, were in strict conformity with the statutory requirements and with the intent of Congress as reflected in the well-documented legislative history of the act. While experience with the program has in the course of years enabled us to simplify the process of adjudication, the standards originally established have worked out fully satisfactorily. No administrative problems have developed that would require the relaxation of these standards.

If further evidence is needed that Government units are fully capable of administering permanent disability programs, one need only point to the disability benefits of the Federal Civil Service Retirement Act and most of the State retirement laws, and especially to the workmen's compensation laws in existence in every State in the Union.

A final comment that is in order is that there is no evidence of large-scale malingering traceable to the existence of the disability benefits. We have no doubt that a few irresponsible persons here and there occasionally succeed in simulating disability in order to take advantage of the disability retirement provisions. To condemn the program for that reason would be like condemning a barrel of apples because it contained one or two rotten ones. The observation of all who are concerned with the administration and study of the program is that malingering and abuse are so rare that they can in no sense be said to weaken it or detract from its value.

I am sending you a number of issues of our Monthly Review, each one of which contains at least one article on some aspect of our disability program. I hope they will prove useful in helping you to understand and evaluate it. If I can be of further assistance, please do not hesitate to call on me.

Sincerely yours,

WILLIAM J. KENNEDY, *Chairman.*

Senator MILLIKIN. May I ask what is the contribution of the railroad worker and the railroad company?

Mr. CRUIKSHANK. The contribution of employees is, I think, 6 percent of pay roll up to $300 per month as of this time. It is more for the employer because under the railroad retirement system the employer pays the cost of unemployment insurance which is currently

one-half of 1 percent. The employer now pays a combined rate of 6¼ percent for the two programs.

In this letter Mr. Kennedy says:

> I have never been able to understand the often-heard charge that a disability program is impossible to administer, in the light of the obviously successful existence of the railroad retirement system, an essential part of which is the provision for disability retirement benefits.

While agreeing that the administration of the disability part of the railroad retirement system has presented certain difficulties not involved in the payment of old-age retirement benefits, Mr. Kennedy goes on to state:

> We have not found these problems insuperable or even particularly difficult.

In commenting on the charge of malingering, Mr. Kennedy says:

> We have no doubt that a few irresponsible persons here and there occasionally succeed in simulating disability in order to take advantage of the disability provisions. To condemn the program for that reason would be like condemning a barrel of apples because it contained one or two rotten ones.

I respectfully commend the careful reading of this entire letter based on actual experience in administering a disability insurance program to each member of this committee.

Mr. Chairman, I am glad to have with me, too, this morning, Dr. Leo Price. Dr. Price has for a number of years been the director of the Union Health Center of the International Ladies Garment Workers Union in New York. They administer medical service and care to nearly 250,000 workers in New York. He directs and administers a very large, if not the largest, health center of that kind in the country.

Also, he is a member in good standing of the Medical Society of New York and of the American Medical Association. He is in charge of the medical aspects of a going disability insurance program. If there are questions that you want to ask him about the problems that a doctor faces or the technical problems of administering a disability insurance program, he is here to answer those questions or to make other comments that you gentlemen think might shed light on the problems that have been raised in this field.

I think it might be well for me to finish and then permit Dr. Price to make a brief statement, which would be very brief, I assure you, in view of the time.

The CHAIRMAN. I think that would expedite the hearing.

Mr. CRUIKSHANK. And then ask him those questions that relate to the administration of this program because, as I say, he does not deal with theory; he is really running one and running it successfully.

The fourth major recommendation adopted by the St. Paul convention was that the provision for temporary disability contained in H. R. 2893 be restored. The need for protection in this area has long been recognized. It would be possible, of course, to provide this much-needed type of protection through the extension of the State unemployment compensation laws. However, in four of the five States where such laws have been enacted they include provisions for such protection through private insurance carriers. In our opinion this represents a distortion of the purposes of the program by introducing an element of private gain which threatens the entire system. Moreover, with the inclusion of provision for permanent and total disability under title II of the Social Security Act, the machinery for

administering temporary disability through the Federal Government would be available for making the determinations necessary in connection with the temporary disability program.

Senator TAFT. What is the relation not between State unemployment compensation laws, but the State workmen's compensation law, which we have in Ohio, for instance, which is a compulsory system? Does that not overlap directly the temporary disability field?

Mr. CRUIKSHANK. It overlaps in one limited area. Of course a man is frequently temporarily disabled because of some accident at the work place, naturally. I think that such disabilities account for about 10 percent of the cases of temporary disability.

Senator TAFT. The others are all sickness?

Mr. CRUIKSHANK. Sickness or accident away from the work place, a disability that is not work-connected. That is, about 90 percent of the disabilites are not work-connected.

Senator TAFT. What do they relate to, then? How does the 90 percent divide itself up? How much is sickness?

Mr. CRUIKSHANK. That I could not say offhand. I do not know how much of it is illness like a cold or flu or something, and how much of it is automobile accidents or some other accident in the home or somewhere else. I could find that figure for you.

Senator TAFT. I would like to know. It may be available somewhere.

(The information is as follows:)

BREAK-DOWN OF TYPES OF DISABILITY

Analyses indicate that 90 percent of all cases of disability result from illness. Of the remaining 10 percent of cases of disability, 7 percent result from accident and other causes not compensable under the State workmen's compensation laws. Three percent of the cases of disability are work-connected, and are compensable under the State workmen's compensation laws. This indicates that there would be very little potential overlapping between coverage presently afforded by State workmen's compensation acts and that contemplated under a temporary-disability-insurance provision. Furthermore, the temporary-disability-insurance provisions of the House bill 2893 provided that no person should be eligible for the temporary-disability benefits who was eligible for benefits under a State workmen's compensation act.

Senator KERR. A good deal of it is with reference to those people who for a little while are protected and then the protection runs out before the disability terminates.

Mr. CRUIKSHANK. In workmen's compensation? I would not think that many of them would, because the duration of protection and disability in workmen's compensation is relatively high. Some might, yes, sir.

Senator MILLIKIN. What is our system in Colorado, Jim?

Mr. JAMES A. BROWNLOW (secretary-treasurer, metal trades department, American Federation of Labor). It is elective. Do you mean as to whether it is compulsory?

Senator MILLIKIN. In our workmen's compensation system how do we take care of total and permanent disability?

Mr. BROWNLOW. They are paid as long as they are alive by an appropriation that is not an appropriation, but a setting aside a portion of the amount of funds to guarantee what would be considered actuarily sound, that the person might live under the age class he is in.

Senator MILLIKIN. We used to have a choice under the State system of coming under a private system. Do we still have that?

Mr. BROWNLOW. That is correct. It is elective, Senator. There are three ways out there.

Senator TAFT. Do you agree on the question of temporary disability, that only 10 percent is covered by workmen's compensation?

Mr. BROWNLOW. I have seen the figures to that effect, Senator.

Mr. CRUIKSHANK. Dr. Price has just informed me it is about 95 to 5 percent, rather than 90 to 10.

Mr. BROWNLOW. I was going to say to Senator Taft the statistics I was reading only last night pertaining to workmen's compensation, said that 10 percent of the disability was covered. Dr. Price's figures are probably better.

Mr. CRUIKSHANK. In addition to these recommendations for improvement in H. R. 6000 which were adopted by the convention, further proposals were accepted by the executive council of the American Federation of Labor last month on the recommendation of our social security committee.

The first of these deals with the conditions under which coverage of old-age and survivors and disability insurance would be extended to employees of State and local governments. After a full review of the problems involved the executive council came to the conclusion that the provisions of section 106 of H. R. 6000 needed to be strengthened in one respect. That is the point that President Green spoke of, Senator Kerr. It has long been the position of the American Federation of Labor that the employees of State and local governments who are under a retirement or pension plan that has been designed to meet the special conditions of their employment, and where this plan is preferred to the Federal Government plan by the employees covered, its continuance should not be jeopardized and the plan should not only be permitted to continue in operation, but such continuance should be encouraged. The executive council was of the opinion that the intention of the provision for a referendum vote in such cases, as contained in H. R. 6000, was clear. This opinion was based on the statement of the purpose of this subsection as contained in the report of the House Ways and Means Committee. It was their feeling, however, that this intention should be incorporated within the act itself and we therefore recommend that this section be amended in this manner.

With such amendment, the entire section would insure the continuance of the retirement and pension plans where they are preferred by the workers who are employed under those plans, and at the same time the way would be left open for those employees of State and local governments who are either without protection or whose protection is in their opinion inadequate to elect coverage under the Social Security Act. It was the opinion of the Executive Council that both these objectives should be provided for in the law.

I should like at this point to file with your committee for inclusion in the record a copy of a portion of the report of the A. F. of L. social security committee which was adopted after a full hearing by the executive council on February 7. In submitting this report I am also authorized to advise your committee, Mr. Chairman, that the American Federation of Labor would not object to a provision, similar to that contained in H. R. 2893, prohibiting the inclusion of policemen and firemen in any agreement between the Federal Government and a State to extend the coverage of the program to State or local government agencies.

(The report referred to follows:)

PROPOSED AMENDMENTS TO PENDING OLD AGE, SURVIVORS AND DISABILITY LEGISLATION

The committee gave thorough consideration to the question of how and under what circumstances coverage could be extended to employees of State and local governments who are covered by existing retirement plans. While the committee accepted the terms of the reference of the 1949 convention as superseding the actions of previous conventions, full consideration was given to the intent and purpose of the earlier enactments and the full record was reviewed.

On the basis of this study, your committee is of the opinion that the provisions of section 106 of H. R. 6000, and especially subsections 218 (d) (1), (2), and (3), contained on pages 82 and 83 of the bill, especially when viewed in the light of the clear intent and purpose of these subsections as set forth in the majority report of the House Ways and Means Committee provide adequate safeguards to protect existing retirement or pension plans for these employees who wish to maintain such plans providing at the same time a method of extending the protection of social security to those now without protection or with inadequate protection. The statement of purpose referred to reads as follows:

"Members of an existing retirement system would be treated as a separate coverage group, and coverage could not be extended to them unless the employees and beneficiaries so elect by a two-thirds majority vote in a written referendum, and it is intended that this be accomplished by secret ballot. The provision for a referendum is included so as to assure those covered by adequate existing systems (such as firemen, policemen, and teachers) that adequate safeguards are present so that their present pension plans will not be destroyed" (p. 11, report of Ways and Means Committee to accompany H. R. 6000).

In order, however, to give full implementation to the policy of the American Federation of Labor with respect to the desirability of preserving intact existing retirement plans which are preferred by the employees of State and local governments who are under these plans to coverage under the social security program, your committee recommends that the section of H. R. 6000 above referred to be amended in such manner as to incorporate within the language of the act itself the purpose and intent stated in the Ways and Means Committee report.

With this amendment your committee recommends full support of this section of H. R. 6000.

Senator MILLIKIN. How about the school teachers?

Mr. CRUIKSHANK. We would not want the blanket exclusion to be applied to school teachers because there is a wider variation in their plans. Some of them are good and some are bad.

Senator MILLIKIN. Where they have a plan that is acceptable to them, would you include them?

Mr. CRUIKSHANK. Oh, yes, sir; but we believe that the referendum provision protects that.

Senator MILLIKIN. I do not believe I quite got your answer. Would you include them or would you exclude them where they are satisfied with their own system?

Mr. CRUIKSHANK. Where they are satisfied with their own system, we would exclude them.

Senator TAFT. That does not seem to satisfy the teachers or the firemen in Ohio. They do not want to be subject to change by a majority vote of their own people. They think they have certain rights as minorities and individual rights. They do not think the majority of them ought to be able to vote them away even if the majority should happen to want to change.

Mr. CRUIKSHANK. With respect to the teachers, Senator, we have talked to quite a number of them and their representatives when the hearing was held before the A. F. of L. social security committee on this subject. We understand that there is a good bit of misinformation about the degree of protection that they have under the refer-

endum provision here. When I have talked to teachers groups an explained to them what is actually in H. R. 6000, I haven't been u successful in any instance in convincing them that they have th protection that is necessary, at the same time keeping the door ope for extension where it is desirable. The firemen represent a differe situation. So far as we know there isn't any poor firemen's plan.

Senator TAFT. Except in the question of transfer between covere and uncovered occupation, why should we not say to a sovereign Stat as to their own employees that they take care of them and the Federa Government should be out of it? Here is a State, an absolutely sov ereign State. These are their employees. Is it not a reasonable pos tion to exclude them altogether and say, "This is your job"?

Mr. CRUIKSHANK. That might be applicable to career employee with some exceptions, but you take even the university professor. H moves around a great deal from State to State.

Senator TAFT. University professors are not ordinarily State em ployees. Some of them are of course, in the State universities. would not necessarily apply the same rule there. But teachers a direct employees of the State and their local subdivisions. They a pretty well put. The firemen and policemen seem to feel that afte the first 4 or 5 years they are set for life. There is not much inte change. I just wonder whether it would not be more satisfactory t say to the State, "You look after your own employees." After al we have an entirely separate Federal system for Federal employee We have a separate system for railroad employees by law here. Wh should they not have the responsibility of providing a system for the employees?

Mr. CRUIKSHANK. If they would look after them it would be a right, but in many areas they are not doing it.

Senator TAFT. It is a job for the sovereign States to do. They a perfectly able to do it. There isn't a State that cannot do it. The are not poor. In each and every case they have money for this kin of thing. They collect taxes to pay for it.

Mr. CRUIKSHANK. There is also a great in-and-out movement wher we do not have——

Senator TAFT. That is the only argument. I agree that is an argu ment where it applies.

Mr. CRUIKSHANK. That, to us, is the main argument, and there a many of these custodial employees who do not think of themselves a career employees at all. There are a great many of them.

The CHAIRMAN. All right, Doctor, you may proceed.

Senator TAFT. Dr. Cruikshank, you mentioned a little while earli the mail that had or had not been received, particularly that no ma had been received to include farmers. I assure you we have all r ceived tons of mail to exclude these groups from the Social Securit Act.

Mr. CRUIKSHANK. They are a very able group, and they have some thing that is of value. They fought for it and won it, and we don wonder that they want to hold it.

Senator MYERS. When people are against something they do writ it. They may not write you otherwise if they are advocating some thing.

Mr. CRUIKSHANK. That is right.

We have also reviewed the benefit provisions of the bill which is before you. While it is recognized that the bill represents substantial liberalization of benefits, in our opinion it falls short of providing an adequate base of security. The American Federation of Labor has always maintained that benefits should be related to past earnings. This is an essential element of social insurance. We have always recognized, also, that benefits should be weighted in favor of the worker whose income has been low. This desirable weighting gets out of proportion, however, when there is too low a limit on the wage which is included in the computation of benefits. Our first recommendation with respect to the benefit formula is, therefore, that all wages be included up to $5,400 a year, permitting a maximum average monthly wage of $450. This will provide a more direct relationship between benefits and past earnings.

When the Social Security Act was passed in 1935 the limit of $3,000 annual wage included 97 percent of all wages earned in covered employment. The $5,400 limit which we propose covers just about the same proportion of wages as the $3,000 limit covered in 1935. If $3,000 was the right figure for 1935, then $5,400 is the right figure for 1950.

Secondly, we urge a liberalization of the formula for establishing the primary benefit amount. We propose that the amount be 50 percent of the first $100 average monthly wage computed on the basis of the highest 5 years, plus 20 percent of the next $350 of average monthly wage. We believe the 1 percent per year increment should be retained.

Mr. Chairman, I have here a chart which translates this in terms of percentage, which we think is the significant figure. [Indicating chart:]

These are the percentages represented by the benefits now in relation to the past wages. In other words, under the present law a man who has averaged $200 a month for 20 years and retires after 20 years of covered employment, under the present law, benefits are just a little above 20 percent of his past earnings. You see they go down to where in the higher-wage brackets they are just a little above 10 percent of past earnings under the present law.

Senator TAFT. Is that 10 percent of past average earnings?

Mr. CRUIKSHANK. Yes, sir.

Senator TAFT. Average for how long?

Mr. CRUIKSHANK. There is no differentiation made for the high period. This is the whole period.

Senator TAFT. All the way back?

Mr. CRUIKSHANK. Yes, sir: it goes all the way back. You will see that the present law weights it in favor of the low-wage man. You will notice the break here where it starts to go down more sharply, which is the break-off point of your $3,000 limitation under the present law. In H. R. 6000 your formula weights it even more for the low-wage man, and you are doing better percentagewise by the low-wage man than you are under the present law—not less absolutely, but a steeper curve down. Again the break-off point indicated by the sharply decreasing line at the $300-a-month figure, $3,600 per year, proposed in H. R. 6000. We are proposing a formula which practically maintains the curve of the present law. It is considerably above the present law and above H. R. 6000. But it gives a better break

in terms of the proportion of the wage that is recoverable for the high-wage man.

Senator MILLIKIN. What would be the cost of this program, Dr. Cruikshank?

Mr. CRUIKSHANK. With all of the provisions that we are recommending, we thing that it will, on a long-term basis, run between 8 and 10 percent of pay roll.

Senator TAFT. How do you get up to 60 percent? You say here 50 percent of the first $100.

Mr. CRUIKSHANK. That is because of the increment.

Senator TAFT. I see.

Mr. CRUIKSHANK (indicating chart). In terms of a typical survivor's benefit case you have the same situation, a little more accentuated. This is percentage of wage recoverable in the case of a widow and two children, where the worker dies after 10 years of covered employment. You see the curve of the present law, and more sharply to break off at the $250 figure, the breaking point here at $300 per month. This curve follows roughly the curve of the present law, but at a higher level. We think very frankly that H. R. 6000 warps the program too much in favor of the lower wage man at the cost of the higher wage man, that a social insurance system should enable him to recover a substantial portion of his wages up to 30 percent for the higher wage man.

Senator TAFT. Dr. Cruikshank, last year before the House did you not testify for a lower benefit? Did you not testify for 50 percent of the first $75 and 15 percent of the next $325?

Mr. CRUIKSHANK. Yes, Senator, we did. Our proposal that we supported in the House was lower than this. Since that time, in view of many things that have taken place, our social-security committee met and worked out this as the——

Senator TAFT. What is the changed condition since a year ago? This has no relation to prices going up and down. Why the change of position?

Mr. CRUIKSHANK. In the main, the change in position is the pressure of the private plans, negotiated plans.

Senator TAFT. You mean they have raised your sights, so to speak?

Mr. CRUIKSHANK. That is right, yes.

Senator MILLIKIN. Dr. Cruikshank, do you not believe that whatever we do here in the way of increasing these benefits—and I am in favor of increasing them—will just become a basis for a new series of private agreements whereupon we will be called upon to raise this again and we get into just a continual process of successive readjustments?

Mr. CRUIKSHANK. No, sir; I don't think so. I think there are brakes that operate to control a contributory plan, and that if we can make this plan the basis of a really decent retirement system and relate it to wages, particularly carrying it on up into the higher brackets of wages, and men know that as they gain increased wages they will also increase their old-age security, and if enough wages are covered all the way up, you will actually remove a lot of that pressure. If you break off the wage that is included in the computation at a point lower than many workers are getting, then I think what you say would be true. If the revised program disproportionately favors the

low-wage people at the cost of those having higher wages, what you actually do with increased coverage is to shift the burden of public assistance to a system supported by pay-roll taxes. In our opinion, in the long run it will be very difficult to maintain the policy of a contributory plan if a larger part of the higher wages are not permitted to be recoverable on retirement. The pressures for negotiating plans in collective bargaining will be increased if the wage base is not raised, and this will be a continually disturbing factor in labor relations.

Senator MILLIKIN. Pensions are a very attractive subject to bargain for, are they not?

Mr. CRUIKSHANK. Yes, sir, they are.

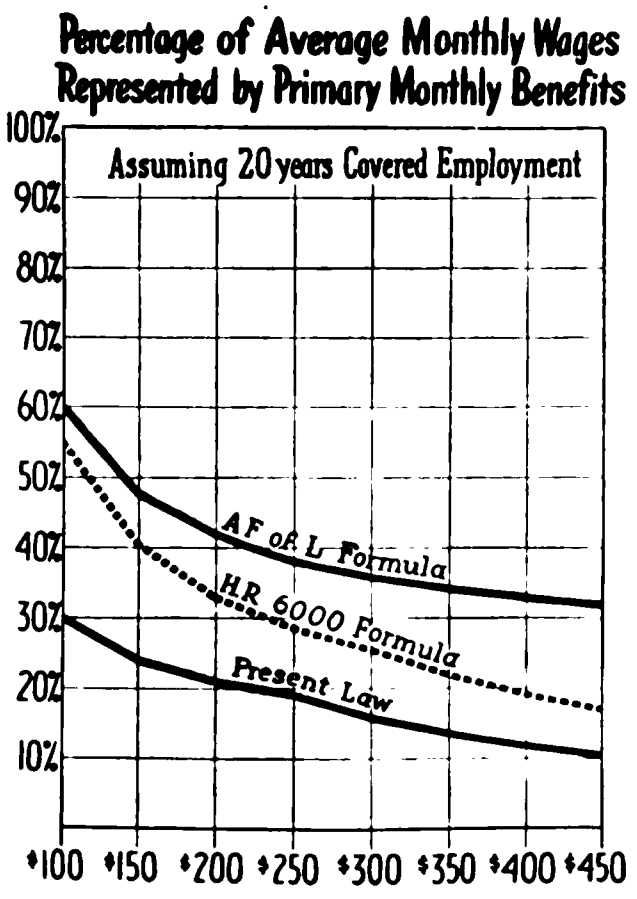
Senator MILLIKIN. No matter what we do here, would it cause that subject to lose its attractiveness?

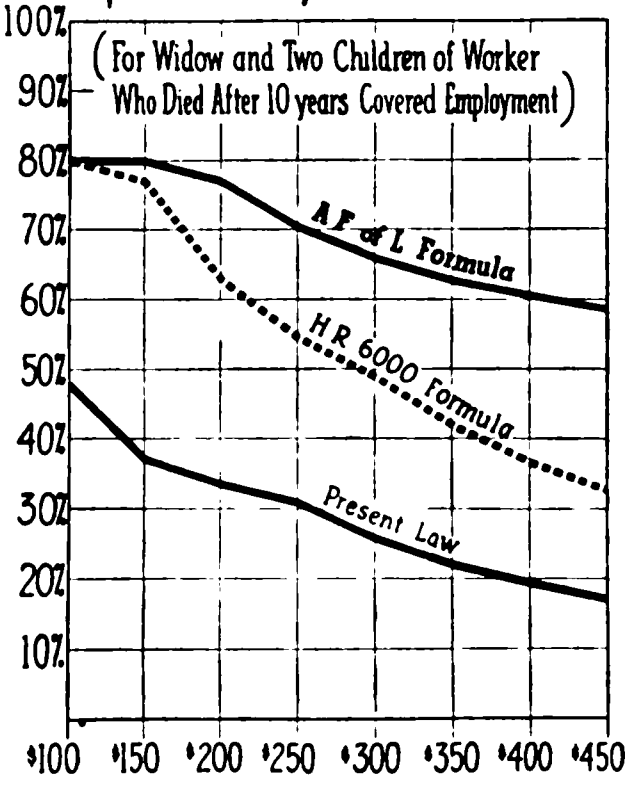
Mr. CRUIKSHANK. I think it would.

I have copies of these charts that are reduced in size for inclusion in the record, if you would like to have them.

The CHAIRMAN. We will be pleased to have you file them with the reporter.

(The charts referred to follow:)





Mr. CRUIKSHANK. If the primary benefit was adjusted in the manner we have proposed, we believe that the benefits for dependents as provided in H. R. 6000 will be adequate.

Our social-security committee further recommended that the eligibility requirements of H. R. 6000 be liberalized along the lines recommended by the Advisory Council.

One of the major reasons for the failure of the old-age and survivors insurance program to replace public assistance as the chief method of meeting income loss in old age is the difficulty which older people face in meeting the present eligibility requirements. The program has now been in effect nearly 15 years, but still only a little over

20 percent of the population aged 65 and over is either insured under the program or receiving benefits. While H. R. 6000 somewhat liberalizes the too-strict eligibility requirements of the present law, it does not in our opinion go far enough. The "new start" provisions set forth in the Advisory Council's Report more nearly meet the need.

Especially when the coverage of the program is extended it will be necessary to relax the eligibility requirements in order to prevent the possibility of large numbers of workers paying contributions for a number of years but never being able to acquire an insured status before death or retirement.

When a private pension plan is put into effect, it is customary to give credit for past service. Since it is not possible to give credit in a contributory social insurance system for past service in exactly the same way, because wage records are not available, it is necessary to presume past service both in the benefit formula and the eligibility requirements. I emphasize this point because the charge is frequently made that the liberalization of eligibility requirements represents a windfall to the newly insured workers. While the device is different from that employed in private pension plans, the principle is precisely the same. Under the formula proposed by the Advisory Council no one would be eligible for benefits who had not demonstrated a bona fide connection with the labor force. This is the safeguard that needs to be preserved.

While social-security legislation was being considered by the House Ways and Means Committee last summer, the executive council of the American Federation of Labor, in addition to its recommendations with respect to old-age and survivors insurance, made a number of specific recommendations with respect to public assistance. These relate to title III of the bill which is before you.

In its report to the St. Paul convention the executive council said:

> Our emphasis on the prior necessity for improving the contributory insurance system should not be taken as an indication that we do not appreciate the need for a well-developed public assistance program. No matter how well designed the insurance system, there will always be those who for one reason or another are not eligible for its benefits. Public assistance as we conceive it should be the last line of defense against the ravages of hunger, want, and disease.

The executive council then adopted six objectives and standards applicable to a sound program of public assistance. These were: (1) that Federal grants-in-aid should be made for general assistance payments; (2) grants made by the Federal Government should encourage the States to include aid to dependent children; (3) the Federal grants to the States should leave to the States the determination as to how payments for medical care should be made; (4) Federal grants should be made available to the States for general welfare services for adults, families, and children; (5) the States with lower per capita income should be given proportionately larger grants from Federal funds, and (6) residence requirements should be removed except for short-term requirements in case of old-age assistance.

We have reviewed the provisions of title III of H. R. 6000 in relation to these standards. We found that in a number of respects H. R. 6000 would need to be amended in order to bring it in line with them. Because these recommendations are somewhat detailed in form, I should like to submit for inclusion in the record the analysis that we

have made along with the recommendations, rather than to take the time of the committee to go into detail now.

(The information referred to follows:)

ANALYSIS OF TITLE III OF H. R. 6000 IN RELATION TO STANDARDS FOR PUBLIC ASSISTANCE ADOPTED BY THE SIXTY-EIGHTH CONVENTION OF THE AMERICAN FEDERATION OF LABOR AT ST. PAUL, MINN., OCTOBER 10, 1949

(The numbered quotations are from the Official Proceedings of the Sixty-eighth Convention, p. 170)

1. "Federal grants-in-aid should be made available to the States for general assistance payments to needy persons not now eligible for assistance under the existing program."

Title III, part 5 of H. R. 6000 adds a fourteenth title to the Social Security Act, making Federal financial participation available to States for a new category of assistance which is called aid to the permanently and totally disabled. This category by definition applies to only a relatively small part of the persons included in the recommendation of this first objective. For H. R. 6000 to carry out this recommendation in full, the additional category would need to be amended so as to make Federal financial participation available to States in the cost of making assistance available to the entire group of needy persons including employables not now eligible for assistance under titles I, IV, and X. This recommendation does not mean that general assistance should be used as a method of dealing with mass unemployment. An extension of unemployment insurance and Federal works would be necessary to meet such a situation.

2. "The grants made by the Federal Government should encourage the States to improve the aid to dependent children."

Present provisions of H. R. 6000 provide for significant improvements in the aid-to-dependent-children program. The inclusion of an adult in the application of Federal maximums is a significant improvement and the effect of the change in the formula governing Federal participation is to increase significantly the rate of Federal participation in this program. Also, in the aid-to-dependent-children program as in relation to all the other programs, the extension to Puerto Rico and the Virgin Islands should be noted as a very desirable improvement. H. R. 6000, however, leaves unchanged the maximums governing Federal participation as they apply to children—$27 for the first child and $18 for each child thereafter. We do not believe that the inclusion of one adult at $27 makes the maximum in the aid-to-dependent-children program equivalent to the maximums prevailing in the other programs. The Federal maximum in aid to dependent children for a mother and child under H. R. 6000 is still only $54. The Federal maximum for two recipients of old-age assistance is $100. The Senate Advisory Council on Social Security recommended that Federal participation be governed by a maximum of $50 for the first person in the family, $50 for the second person in the family, and $20 for succeeding persons. This recommendation would more nearly constitute equivalent financing for aid to dependent children as related to the other categories than do the present provisions of H. R. 6000. It would also seem desirable for the aid-to-dependent-children category to include both parents within the maximums when they are in the home rather than limiting Federal participation to one adult as the provisions of H. R. 6000 do.

3. "The grants-in-aid should permit the States to determine whether payments for medical care should be made directly to the presons and agencies providing medical care and service or whether they should be paid by the needy person out of an assistance grant."

H. R. 6000 does authorize Federal participation in payments for medical care made directly to the doctor, hospital, or other vendor of medical services or supplies by the assistance agency on behalf of the needy person. Expenditures under this authorization are, however, limited to the individual matching maximums ($50 for old-age assistance and aid to the blind and $27, $18 for aid to dependent children) which must also be applied in determining Federal participation in grants to individuals for maintenance purposes so that the effectiveness of this authorization is very limited. The Senate Advisory Council on Social Security recommended that maximums governing payments to persons or agencies providing medical care and service should be on an average basis and should be over and above the regular maximums governing Federal participation in money payments for maintenance. The Council's recommendation was that this average maximum should be $6 per adult and $3 per child.

4. "Federal financial aid should be made available to the States for genera welfare services for adults, families, and children."

H. R. 6000, as it stands, contains no specific authorization for the financing o Welfare services for families and adults. Such a provision was originally con tained in H. R. 2892 but this provision was deleted.

We feel that the need for welfare services is not always indicated by th presence of economic need and is certainly not limited to those who are i economic need. To achieve the recommendation of our objective for No. 4, H. R 6000 would need to be amended to include specific authorization for the pro vision of welfare services for families and adults. Authorization of specia funds for this purpose would stimulate the States to further activity in thi area.

5. "The States with lower per capita income should be given proportionatel larger grants from Federal funds."

The formula governing Federal financial participation now written in H. R 6000 would, in general, result in a higher proportion of Federal participatio in expenditures of most low-income States. It does so, however, only becaus the payments in most of the low per capita income States are low payments Although under the formula written into H. R. 6000, the low-income State would generally experience a higher ratio of Federal financial participatior we do not feel that this carries out the recommendation of our objective No. 5 since a high ratio of Federal participation prevails only because and as lon as payments are low and not because fiscal capacity as measured by per capit income is low. To carry out this recommendation, a variable grant formul based on a comparison of the State's per capita income and the national averag would need to be substituted for the formula now in the bill.

6. "Except for a short-term requirement in the case of old-age assistance n State should be eligible to receive Federal funds if its public-assistance progra imposes a residence requirement as a condition of eligibility."

H. R. 6000 makes a reduction of maximum residence requirements permitte in aid to the blind to 1 year and places the same limitation in the new categor in title XIV. Although this constitutes a liberalization in the residence pro visions in title X and results in a 1-year residence requirement in the new title, it leaves the residence provision in old-age assistance unchanged. H. R 6000 therefore does not carry out the recommendation in this very importan aspect of public-assistance administration, and to do so it would have to b changed to prohibit any residence requirement in aid to the blind, aid to de pendent children, and the fourth category, and to reduce the residence require ment in old-age assistance to, perhaps, 1 year. This was the amendment to th Social Security Act recommended by the Senate Advisory Council on Socia Security.

Senator MILLIKIN. Mr. Chairman, may I interrupt the witness fo a question?

The CHAIRMAN. Yes.

Senator MILLIKIN. I forget what your position was on the proposi tion of ultimate Federal contribution to the system. Were you fo that?

Mr. CRUIKSHANK. The American Federation of Labor has sup ported the three-way program of contribution for the insurance system.

Senator MILLIKIN. Let me ask you this: Why should not we deter mine what the retirement benefits should be and the benefits fo dependents and start right out on a full pay-as-you-go system, withou all this other monkey business?

Mr. CRUIKSHANK. There are some appealing features to that, bu I think there are a number of important things against it. One, th workers want to have a sense of participation in it, a direct sense that comes from a direct contribution.

Senator MILLIKIN. They would have that under pay-as-you-go They would have a larger tax than they have now. It would accent uate their sense of participation.

Mr. CRUIKSHANK. If you make it just strictly pay-as-you-go, it would be a cheap system now and very expensive system later on.

Senator MILLIKIN. It has to be paid for, no matter what your system is. You may defer your payments, but ultimately they will catch up with you.

Mr. CRUIKSHANK. That is right. Of course, in a sense you do pay as you go because the people who are retired only consume generally what is produced now anyhow.

Senator MILLIKIN. At the present time we are really paying more as we go.

Mr. CRUIKSHANK. That is right.

Senator MILLIKIN. But we mask that whole thing with a reserve system which I respectfully suggest is entirely phony. So that leads me to the thought, which I present from time to time, why not start right out with a full pay-as-you-go system and if that involves Federal contribution, meet it honestly and openly and cut out all of this inconsistent mixture of an insurance system with a benefit system.

Mr. CRUIKSHANK. It is a social-insurance system, and a pay-as-you-go program of that kind would penalize certain workers as they come into certain categories. That is, workers who are young now would be called upon to pay for a larger proportion of benefits later on. The most equitable system, we feel, is to set up a modified reserve system of this kind. We do not agree with you at all that it is phoney, and I think the weight of our leading economists in this country is that it is a very valid approach to the problem, Senator.

Senator MILLIKIN. I would say that a sound reserve system is a valid approach. My argument—and I do not want to go into it because we haven't the time now—goes to the point that what we have now is not a sound reserve system.

Mr. CRUIKSHANK. It is not a fully funded system, if that is what you mean, but we do not think it needs to be.

Senator MILLIKIN. The system does not spend the proceeds which come in for enhancing the value of the insurance system. That is the sense of it.

The CHAIRMAN. Doctor, you do not comment on the fact that H. R. 6000 repeals the authorization for appropriations out of the general funds to finance the system. What is your position on that or have you taken any position on that?

Mr. CRUIKSHANK. Not directly related to this bill, and that is why I did not put it in. I was confining my statement to what has been directly related to this bill by our social-security committee and the executive council and the convention. However, in our convention actions of years past, there are statements in support of that provision for a contribution out of general revenues toward the system. It was not an action taken with specific reference to this bill, but they have never reversed that action, so I could say the position of the federation would be really to restore that provision in the act.

Senator TAFT. Broadly speaking, though, are these pensions not all paid out of the earnings of the people who are working at that time? Broadly speaking, are not we simply saying, instead of calling on the children to support their parents, we are going to call on the people who are working today to support the people over 65. Is that not the substance of the whole system? Is not that inevitable?

Mr. CRUIKSHANK. All the food they eat and most of the clothe they wear and all of course are produced this year——

Senator TAFT. If the money that is paid by them is put in bonds then you have to tax the people to pay the interest on the bonds Substantially, when you are going to support 11,000,000 of 17,000,00 people over 65, is not the only way to do it out of the current earning of the people who are working? Is there any other substantial wa to support any such tremendous cost, and are we not really saying i effect, "Now, instead of calling on the children to support their parent which has been the theory in the past, we are going to call on all th people who are working to support the people who are not workin over 65."

Mr. CRUIKSHANK. In the long run that is true, but it is also true o every private annuity plan or anything else.

Senator TAFT. I do not think it is, because you have a small grou that is perfectly able to fund their obligations, who acquire propert which is theirs to call upon when you get through. There is no suc fund and there never will be such fund. It is impossible on suc scale of payments.

Mr. CRUIKSHANK. The criticism you make of the funds being i Government bonds and all is also true of every life insurance compan

Senator TAFT. No, because the life insurance company is not th Government. As far as the life insurance companies, they call o somebody else to do it. Here we are calling on ourselves to do it.

Mr. CRUIKSHANK. It is the same people.

Senator MILLIKIN. We collect the contributions for insurance; w spend the collections for general purposes, and then we have to declar an Irish dividend and call upon the people to pay for it again.

Mr. CRUIKSHANK. Senator, I am going to skip that for a momen because Mr. Brownlow has something to say about that.

Senator MYERS. Instead of Irish dividend, you are now getting int an Irish debate.

Senator TAFT. Assuming this bill or some bill goes into effect, I d not know what the President's budget is based on, it will increase th current payments in the next fiscal year from $800,000,000 to $2. 300,000,000. How much more would the payments be increased unde the recommendations you make to increase the benefits and to exten it, and so forth? Do you have any idea how much more that would be

Mr. CRUIKSHANK. I haven't projected those figures, but we coul give them to you, if you wish.

Senator TAFT. Would it require an immediate increase in the rate

Mr. CRUIKSHANK. An immediate increase in the contribution rate

Senator TAFT. After all, we are not going to have so much surplus and if we have to pay $2,300,000,000 next year out of this old-ag insurance fund we are not going to have a tremendous surplus.

Mr. CRUIKSHANK. I do not think it would require an immediat increase. However, I could give you a statement on that.

Senator TAFT. We plan to collect about $4,000,000,000 or something like that, something in the neighborhood of $4,000,000,000 and to pa out $2,300,000,000. If this bill is passed, how much bigger would tha $2,300,000,000 be? Perhaps you could figure that for us.

Mr. CRUIKSHANK. I would be glad to; yes, sir.

(The information is as follows:)

COST STATISTICS UNDER AFL PROPOSALS WITH RESPECT TO INCREASING BENEFITS

The $2,300,000,000 of benefit disbursements in the fiscal year 1951, as shown by the President's budget, are based on the proposals of H. R. 2893 except as to effective dates, and likewise with the $4,000,000,000 figure for the tax receipts. The $2,300,000,000 includes $400,000,000 for temporary disability benefits, which, however, would be effective for only 6 months of the fiscal year and then only for the present limited coverage. (On a full-year basis after coverage had been extended and the insured population was aware of the benefits available, the outgo for this category would be somewhat in excess of $1,000,000,000 per year.) Likewise, for both benefit and tax figures, coverage is assumed to be extended at the beginning of 1951, although the other benefit provisions would be effective in July 1950. Also, the tax rate is assumed to be increased to 4 percent at the beginning of 1951.

Our proposal differs in only two important respects from H. R. 2893: Namely, a wage base of $5,400 instead of $4,800, and in the benefit formula factors: Namely, 50 percent of the first $100, plus 20 percent, instead of 50 percent of the first $75 plus 15 percent. The former change is relatively minor from a cost standpoint. Contribution income would be increased by about 1 percent relatively, and benefit disbursements by perhaps half this amount. On the other hand, the change in the benefit formula would increase costs by about 20 percent, relatively (as far as OASDI is concerned). Accordingly, the figure comparable to the $2,300,000,000 one for fiscal year 1951 would be about $2,700,000,000.

As I have indicated, the first-year cost is rather misleading, since it does not take full acount of expanded coverage or of temporary disability benefits on a full-year basis. Due to these elements, as well as to the natural increase to the program, we estimate the cost of our proposal for the fiscal year 1952 would be roughly in the neighborhood of $3,500,000,000, but at the same time since the 4 percent tax rate would be applicable for the full year to the expanded coverage and to the higher wage base, the contribution income would amount to about $5,500,000,000, so that in neither year would outgo come anywhere near to exceeding income.

Mr. CRUIKSHANK. When our convention in October adopted the standards which I have referred to, an additional principle was set forth which relates to the administration of public assistance. This principle was stated as follows:

It is especially important that in keeping with American tradition we should continue to use and augment the services and aid of voluntary organizations, and we should supplement these with Government funds and services to maintain and improve health and welfare, particularly of our children, through means which always recognize and uphold the dignity of the individual.

We have no evidence that the adoption of this statement of policy by the convention indicates any feeling on the part of our membership that the principle is not now in operations. Experience has universally shown that sound and progressive development of welfare services under private auspices has supported and fostered a sound and progressive development of programs under public auspices. The reverse is likewise true. The public programs of social insurance and public assistance in assuming the major responsibility of protection against economic need—even though this job is not yet complete—has relieved private agencies of a burden which they were financially unable to carry. Release from this burden has freed them for the more effective use of the skills of their staff, especially in the area of prevention of social break-down and distress and for a more effective development of specialized help in services to particular individuals and groups. I believe that the testimony from the schools of social work and from the fields of private family and child care will support this view.

The CHAIRMAN. Are there further questions?

Senator MYERS. I want to say I appreciated Mr. Cruikshank's testimony particularly because of its specific character and its excellent explanation and interpretation of H. R. 6000, rather than the generalizations that we have heard so frequently. I do believe he has contributed immeasurably to the deliberations of this committee.

The CHAIRMAN. We thank you, Doctor, for your contribution.

Mr. CRUIKSHANK. I cannot let this pass, Mr. Chairman, without thanking all of you gentlemen for the honorary degree you have given me this morning [laughter].

The CHAIRMAN. It does not carry any very heavy emoluments, Doctor.

Senator MYERS. Doctor, anyone who appears before this committee and testifies as you do is entitled to an honorary degree.

Mr. CRUIKSHANK. Thank you.

We now have Dr. Price, who has a brief statement, and will answer questions on this disability phase, Senator.

The CHAIRMAN. Will you identify yourself for the record?

STATEMENT OF DR. LEO PRICE, DIRECTOR, UNION HEALTH CENTER OF THE INTERNATIONAL LADIES' GARMENT WORKERS UNION, NEW YORK CITY

Dr. PRICE. I am the director of the Union Health Center of the International Ladies' Garment Workers Union in New York City. I am a member of organized medicine, being a fellow of the American Medical Association, and a member of its correlating committee on medical care for workers in industry. I am also a member of the Advisory Committee to the United States Public Health Service on Industrial Hygiene, and I don't think I need to burden you with all the other societies and committees on which I serve.

I am particularly appreciative of the opportunity to tell you something about just one phase of H. R. 6000. That is the part that concerns total and permanent disability which we have just been thrust into within the last 6 months. This retirement fund was established under collective bargaining agreement between the employers and the International Ladies' Garment Workers Union's New York joint board of the cloak and suit industry. It involves 40,000 workers in this section of the ladies' garment industry, which was approximately 200,000 workers in the New York area.

The fund began to function in July 1946 as a retirement program, and up to the present time has retired 2,214 workers on a voluntary basis after they reached 65 years of age and satisfied some eligibility standards.

In the latter part of 1949, as director of the health center, I was called in to develop and administer medically a new phase of the retirement funds' activity, namely, retirement for total and permanent disability, for which there was no increase in the contribution by the employers, due to careful handling of reserve funds.

The Union Health Center, I might tell you, is a very large organization. We handle as many as 2,700 services in a day, which involves about 2,200 individuals. We keep an accounting on every service we give. We have 175 physicians on our staff, 35 nurses, 30 techni-

cians, a well-equipped laboratory, an X-ray and electrocardiographic service equal to that of a good-sized hospital. We have five pharmacists and five clerks in a drug store which dispenses as many as 600 or 700 prescriptions a day.

This is just to give you some conception of the magnitude of the operation of this ambulatory medical service. In addition, we administer the partial and temporary sickness insurance for these 200,000 workers, and now this permanent and total disability phase of the retirement program.

Senator MILLIKIN. Do you have a special tax for that?

Dr. PRICE. Yes, that is a part of the health and welfare clause collective bargaining agreement which the employer pays into the union funds. We have been in operation 35 years, and naturally when health and welfare clauses appeared in collective bargaining, we also benefited, having had this organization and being able to expand.

Senator MILLIKIN. What percentage of the contribution is paid by the employer and what percentage by the employee?

Dr. PRICE. During the war stabilization period there was a 3-percent contribution from the employer. Half of that is used for vacation funds. A good proportion is for sickness insurance. A large proportion for hospitalization, for surgical indemnities. In other words, we run an entire social-security program ourselves. Only a million and a quarter is used in the operation of this medical institution.

Senator MILLIKIN. You have a lump sum that comes in and you allocate that yourselves to your social-security program?

Senator TAFT. The employers pay 3 percent and the employee pays something, too?

Dr. PRICE. No, nothing more. We began with the complete employee contribution back in 1913, but after collective-bargaining gains in health and welfare clauses during the war period, the employer pays the full 3 percent.

Senator TAFT. How can you do this job on 3 percent?

Dr. PRICE. There are reserves. We only operate the medical service. Of course it is a limited-scope medical service. We have a budget of only a million and a quarter dollars and that is three-tenths of 1 percent of the pay roll.

Senator TAFT. You have hospital care, and you have a lot of other things. How do you do that with 3 percent?

Dr. PRICE. I would say, of course, that streamlined and mass-production methods are used there. I think one of the important things to know is that our cost for service is so much lower than that for the charity clinics which give service right in New York because we have a population that is concentrated in one area, and we are able to give them most of this service during the hours of 4 to 7 after they are through work.

Senator TAFT. They are all right in that one building?

Dr. PRICE. Right. There are many great advantages in that operation.

From funds now available to the retirement board it was able to set aside $1,000,000 for retirement benefits for the totally and permanently disabled workers who have reached the age of 60, which means, as a trial, that only 100 such persons may be given the privilege of retirement.

The CHAIRMAN. You do not retire for total and permanent disability without an age requirement?

Dr. PRICE. No. They must be 60.

The CHAIRMAN. They must have reached the age of 60.

Dr. PRICE. Yes, and have satisfied certain eligibility requirements concerning the period that they have been employed in the industry.

Medical criteria have been so established that it is possible to determine whether or not total and permanent disability exists. Physical findings must be supported by diagnostic evidence or unquestioned evidence presented by the specialist. For example, the fact that a man has had one, two, or three coronary attacks does not necessarily mean that he is totally and permanently disabled in our industry. Our industry does not require special vigor. Our people, we have found, are able to work after having had a coronary attack.

Senator TAFT. You say they are better after a coronary attack?

The CHAIRMAN. You do not recommend it, do you, Doctor?

Dr. PRICE. They haven't followed our recommendations, Senator, and a surprisingly large number in the older-age group that have not taken more than 2 or 3 weeks' rest go back on the job because of the seasonal period in which this work occurs. They cannot afford to lose a job, in spite of our recommendations for rest. We found they had been right and we had been wrong because they lived to have a second attack at 70, which isn't so bad. We are quite fatalistic about it.

Electrocardiograms must show extensive damage to the heart muscle or clinical examination must establish definitely the presence of decompensation before we certify total and permanent disability. Evidence of near-vision blindness which prevents threading needles or operation machines or definite paralysis are unquestionably totally and permanently disabling.

We have a single classification at the present time and the criteria developed so far are exceedingly stringent. On this criteria 60 percent of the applicants were found totally and permanently disabled and 40 percent were not found to be permanently and totally disabled according to our criteria.

Now we are planning a second classification to cover some individuals whose condition might not be fully disabling on single diagnostic evidence, but who present so many different physical handicaps contributing to total and permanent disability that we would be willing to recommend that they be considered eligible for retirement. We on the medical board function only to report medical findings to the Retirement Fund. It is possible to formulate criteria to cover this classification. Let me just review for a moment and amplify this statement. In the 3½ years, 2,214 workers, or about 5 percent of the industry, sought voluntary retirement at 65 years or over. They received $65 per month.

Senator MILLIKIN. Is it mostly machine operations or machine and hand?

Dr. PRICE. Both. Most of this section of the industry is highly skilled, and we have very large impaired worker, chronic invalid and old-age groups. One hundred and five have now made application at the age of 60 or over for retirement on the basis of a claim for total and permanent disability. To date, 88 applicants have been examined

and certified by the medical review board of 3 physicians. In 53, or 60 percent, permanent and total disability was found to exist.

In 20 or 23 percent, permanent and total disability was found not to exist.

And in 15, or 17 percent, permanently and totally disabled was found not to exist, but reexamination or review was ordered in 3 to 6 months to establish progression or regression of the impairments found.

Seventy-eight percent of these examinations are done within the institution, and the balance is done in the home and in the hospital.

I described to you our facilities. I want to say the method used is a very careful, stringent use of forms to record a very thorough history, a record of the claimant's earning capacity, when he worked, when he ceased to work, what accidents he had throughout his lifetime. In view of our 35 years of service to this group, I would say that over 90 percent of the applicants have been our patients and we have their records for very many years, so that we can see the progressive degenerative conditions as they appear.

Senator MILLIKIN. Does the employer have a voice in these determinations?

Dr. PRICE. Yes. The board is made up of the employers, the union members, and representatives of the public.

Approximately one out of two were subjected to electrocardiographic examinations. One out of two was subjected to X-ray examinations. There was an average of two laboratory tests per applicant, one out of three was also examined by specialists, and in most instances it was an eye specialist.

You may be interested in general to know about this group of people who were examined: 76 percent of them, three out of four, had three or more serious diagnoses. Each individual who was declared totally and permanently disabled averaged well over four diagnoses. The individual declared not totally and permanently disabled averaged slightly less than four diagnoses.

The largest group of totally and permanently disabling conditions was related to the heart and blood-vessel system; namely, the individual who had hypertensive heart disease; repeated attacks of infarction due to coronary thrombosis; paralysis due to cerebral hemorrhage or thrombosis. Many had obliterans arteriosclerosis of the extremities. Our second group is marked impairment of vision, especially near vision caused by marked nearsightedness, cataracts, or senile degeneration of the retina.

Accompanying the cardiovascular system as a major cause of disability were frequent complications of pulmonary degenerative disease, such as bronchitis and bronchiectasis and emphysema.

The CHAIRMAN. What is emphysema?

Dr. PRICE. Emphysema is the overventilation of the lungs which occurs after a long period of bronchitis or bronchiectasis, and a great deal of difficulty in breathing, shortness of breath. Those are the symptoms.

Derangements of other systems of the body were found, but not in a degree which were considered permanently and totally disabling. I will skip them because I don't think it has any particular use here.

It is interesting to note that syphilis in our series was not a cause of total and permanent disability.

I want to give you some facts on the health of these 2,214 retired workers who sought retirement on a voluntary basis. We also had their records and in preparation I though it might interest you to know the physical state of health of these people who retire at 65 years or over. Of these 2,214 workers, 16 percent of the retired were 65 years of age; 13 percent were 66. And the percentage gradually decreased as they grew older until it reached 0.8 percent who were over 80 years of age. One was 88 years old.

Since the inception of the program in 1946, 351 or 16 percent of this group of 2,214 pensioners died; 62 percent of the 351 who died were in the 65- to 69-year-old group.

Of the 2,214 retired, it is estimated on the life expectancy figures used by the retirement fund that it would be necessary to put aside enough money for 23,505 years. After 3½ years' experience with this program we find that the life expectancy has already been reduced by early deaths to an estimate of 20,260 years on the table utilized, or an estimate average reduction of 1½ years per retired individual. Of course, this is not actuarially correct because at this time we do not know how many of these workers will live longer than the expectancy table prepared.

How long after they seek voluntary retirement do they enjoy the $65 a month? (64, or 18 percent, of the 351 dead pensioners received 1 to 3 checks before they died. Forty-five, or 13 percent, of this group received 4 to 6 checks. Fifty-six, or 16 percent, received 7 to 12 checks.)

Senator MILLIKIN. This retirement seems to be a pretty deadly business.

Dr. PRICE. It is a deadly business, but it is a very profitable one in this group for the fund. Seventy-four percent of this group of 351 died within 2 years of their retirement. The greatest proportion of deaths in this group was due to heart and blood-vessel system and cancer.

There has been some talk about H. R. 6000 being likely in the first place to influence the patient's desire for recovery. With long actual experience among this group and an insistence on our part quite often particularly in the heart clinic, asking them to retire, we find great resistance. They must prefer to work. Among workers in the garment industry who have made application for medical certification of total and permanent disability, it is rare to find a person who has no deside for recovery or for an opportunity to become rehabilitated and earn a livelihood. The sad fact is that few of these workers we examined could possibly be rehabilitated. Yet charity is repulsive to them. That is one of the reasons that this center was formed, so they could come somewhere where they could get service at a time and place and cost within their means. The requirement to prove need in order to secure public assistance is highly objectionable to their dignity. Workers cannot accumulate sufficient funds to take care of themselves and their families in the event of total and permanent disability because of the high cost of maintenance, food, housing and education, and the catastrophic effect of sickness and accidents

and the insecurity resulting from the hazards of employment in this industry.

From our experience with the workers we found that industrial workers and persons in the higher economic brackets cannot secure insurance for total and permanent disability even if such policies were freely available because of the high cost of this type of insurance and because of the limitation of physical conditions and age placed on the issuance of this insurance. It is an exceedingly remote possibility that insurance companies could give a population of substandard risks, an opportunity to be insured. Yet workers who are poor risks have often made a substantial contribution to the economy.

In the garment industry the workers have paid a high premium for this small security of retirement on the grounds of total and permanent disability by working in most instances 30 to 40 years in this industry. In the early days they worked under the most unsanitary sweatshop conditions at low wages, long hours and under the strain of seasonal fluctuations of employment. They have paid social security in recent years, but because of permanent disability or chronic disease they have become ineligible to secure the benefits of Federal social security and are unable to secure work because of their age and multiple physical impairments. These workers have well earned an opportunity to secure some assistance inasmuch as it is only in rare instances that their families can chip in to pay their housing and food for the balance of the years that they may live.

I thank you.

Senator MILLIKIN. There used to be a very high tubercular incidence in the business.

Dr. PRICE. That is right. Our institution started after the finding by the United States Public Health Service in 1913 of a very high incidence of tuberculosis. One of our most important phases of work at the present time is a tuberculosis-control program which we have maintained for 35 years.

The CHAIRMAN. Have you reduced the tuberculosis percentage?

Dr. PRICE. We have learned a lot about tuberculosis, and we have been able to return many workers with cured or arrested tuberculosis into the industry, by watching them regularly so they do not become infectious—get into the advanced stages of tuberculosis. We catch it very early now by X-raying practically every one in the industry.

Senator MILLIKIN. You have achieved a much better state of working conditions.

Dr. PRICE. Oh, yes; considerably.

The CHAIRMAN. Thank you very much, Doctor, for your appearance and your contribution.

Dr. PRICE. Thank you.

The CHAIRMAN. Mr. Brownlow?

Senator MILLIKIN. Let me award you a doctorate before we get going here. I want to say, Mr. Chairman, that Mr. Brownlow is one of our most highly respected citizens out in Colorado and a much beloved man.

The CHAIRMAN. I can very well understand that.

STATEMENT OF JAMES A. BROWNLOW, SECRETARY-TREASURER OF THE METAL TRADES DEPARTMENT, AMERICAN FEDERATION OF LABOR, AND MEMBER, AMERICAN FEDERATION OF LABOR SOCIAL SECURITY COMMITTEE

Mr. BROWNLOW. Would you rather I present the statement, Mr. Chairman, or do you want me to go through it? I realize how limited the time is.

The CHAIRMAN. You suit your own convenience. Which do you prefer?

Mr. BROWNLOW. I am at your service.

The CHAIRMAN. We would like to hear you. We regret that the committee has constantly declined in numbers, but your statement will, of course, be in the record, and they will have the opportunity to read your statement.

Mr. BROWNLOW. I appreciate the opportunity of appearing before the committee and of expressing at least one phase of my reasons for favoring the adoption of the bill.

The Metal Trades Department comprises 14 affiliated and 3 cooperating national and international unions of the American Federation of Labor, with a combined membership of over 2,000,000 members, all or some of whom are engaged in metal working industries. The department was chartered by the American Federation of Labor in 1908.

I am wholeheartedly in agreement with, and vigorously in support of H. R. 6000, concerning disability, survivors', and retirement insurance, as well as the expanded coverage, liberalized eligibility requirements, and increased contributions; and with the proposed amendments, which I feel will strengthen this bill and make it more acceptable to the many millions of people in the United States affected by it.

These improvements in the social security law are long, long overdue, and as one who has been especially interested in Federal and State social-security legislation, I believe your most active and determined attention to this bill in committee and to the amendments to it, and, of course, your support of it in the Senate is warranted.

Trade unionists are vitally interested in social security, as are the many millions of others who may be covered at the present time or who hope to be, as a result of this bill which you are now considering.

My testimony today will depart from an analysis of the bill before you. I will attempt to discuss another aspect of its effect.

The trade unions have been directly concerned with one or another aspect of social security from their very origin, over a hundred or more years ago. The local and national or international unions have themselves, provided for sickness, death and other benefits to their members, paid out of their regular dues and assessments, and they will continue to do so.

However, we must recognize that the trade-unions are, first and foremost, economic organizations, and cannot provide adequately by themselves for old age, for payments to dependents on death of members, for disability, or for sickness, with any degree of uniformity or without placing an unreasonable burden upon some employers.

In the past there have been many plans inaugurated by companies, though we have never been, and are not now, reconciled to those

company plans of providing for retirement pensions, for group insurance in case of death, or employee-benefit plans for cash payments in case of sickness. We know only too well that many, if not most of the company plans were instituted with the expectation that they would stop the growth of trade unionism.

We also know only too well that they were started and have been continued to lessen somewhat the insistence on the part of the workers for direct increases in wages and improvements in hours and working conditions. We have never been impressed with the so-called welfare plans of employers, whose main object has been to prevent the growth of free and effective trade-unionism.

We feel that these company-sponsored and company-run plans have been fetters for the workers and their trade union organizations. In fact, most if not all of this type of plan was paternal in its origin and unilaterally administered.

There was, to a great degree, reluctance on the part of the employees, to change employment, to seek new jobs, even though they might be available in periods of unemployment, due to the fear of losing their standing in the parent company plan.

There is no question on our part that what good these company plans possess would be better served if labor participated in their administration, and if they became part of the collective-bargaining process and trade agreement, rather than to continue as a pure gift, subject to revocation by the donor.

After World War I, in the early 1920's, certain unions began to negotiate for, and succeeded in obtaining, various systems of unemployment insurance, which were incorporated in collective trade agreements, mutually arrived at by management and the labor organizations. These plans continued until the passage of the social security law and the introduction of State unemployment-insurance laws.

There is, of course, no question that the advent of unemployment insurance legislation and the continued efforts on the part of the unions and farseeing legislators to retain such provisions as are already on the State legislative books, and further, to improve them, have not completely removed the incentive on the part of the unions to secure special unemployment-insurance plans through collective bargaining.

This development, in the case of unemployment-insurance and collective-bargaining contracts, is very pertinent to the relation of trade-unions to improved social-security legislation, which is being considered today.

In the 1920's, besides unemployment-insurance plans in trade agreements, there were also provisions for sickness, disability, funeral, old-age, and death benefits, as well as medical care, included in collective agreements.

The Amalgamated Association of Street and Electric Railway Employees of America was one of the pioneers in the latter type of benefit plans, while the needle trades unions were preeminent in the incorporation of unemployment insurance benefits in their collective agreements. But, notwithstanding these developments, altogether the number of plans of all kinds were very limited, and the coverage of workers very small.

It has been in the last 9 or 10 years, and particularly during the war years and since, that the movement has spread very rapidly to demand the incorporation into collective trade agreements of what

have become known as health and welfare funds. It is not my inten tion to go into detail concerning these plans. However, they do hav a definite relationship to our consideration of the provisions of H. R 6000.

But there is one aspect of this whole question of the demand fo health and welfare funds which goes to the very heart of this bill The trade-unions are, as you well know, ever-progressive organiza tions, in the sense that they represent the economic interests and th determined will of their members to demand and secure improvement in their working conditions.

We in the trade-unions have no alternative but to organize ever worker possible, and to persuade our employers to pay higher wages shorten our hours of work, and improve our conditions of work. W have no other reason for existence, no other justification, except a stated before, to improve the welfare of the workingman.

Why have the trade-unions, then, begun to put so much emphasi on health and welfare funds in collective bargaining? The answe is quite simple. Because the social-security law has not been amended Because its provisions are so antiquated and unjust. Because th benefits are so meager and unsatisfactory. Because the type of benefi is so limited.

The present social-security benefits do not begin to compare witl old-age pension benefits in the various States. I believe in my own State of Colorado—incidentally, Senator Millikin, I might say I wa in the legislature at the time when you were very active in this at th time the original old-age pension law was passed in Colorado and i has now gone to great extremes, as I understand—old-age benefit pay ments for man and wife reaching 60 years of age can be in excess o $130 per month.

I might say that the 60 years of age carries a long period of living in the State with that 65 years of age. I think 30 years residence i the State entitles them to the old-age pension at the age of 60.

Senator MILLIKIN. They must have been there since 1906, as I recall

Mr. BROWNLOW. Over 65 I think, it is 9 years, as I remember Senator.

There is no deduction from the earnings to achieve this amount The beneficiaries need only to reach the age of 60 and to have reside in the State for a stated period of years.

Senator MILLIKIN. I believe they have to show a need.

Mr. BROWNLOW. That is right. It is on the basis of need. There a means test. Also let me say this on the question of need; that witl the patrimony provision in there, they are permitted, you see, to hav their own rent and so forth, and this of course is in excess of that.

It was the fond hope of many that, as credits under social securit began to accumulate, the direct pension or gift, would gradually dis appear. However, this is not the case. I might say at the time w were considering those bills, we felt that within 12 years one woul displace the other. That is, the old-age pension as such, on the bas of need and so forth, would go down steadily and of course insuranc as a result of earnings would accrue to the beneficiary. I understan that that has not been the case, that rather than that, the old-age pen sion is increasing and the insured worker is not keeping pace with them

The earned benefits under social security are not as large as th

old-age pension payments. One does not have to stretch his imagination very much to see what occurs under a situation of that kind.

Further, there is no use denying the fact that the inadequacy of the present social security law has been a major cause for industrial strife, for unsatisfactory management-labor relations, and for much of the turmoil and unceasing demands for relief on the part of the workers in one industry after another.

The tide cannot be stopped or turned back. The workers are insistent that they receive adequate benefits and additional types of benefits not now included in the social-security law.

The workers are neither greedy nor unreasonable in these demands for adequate social security.

With a rising cost of living, in addition to the ever-expanding standard of living which we consider our American heritage, the existing scale of benefits is simply out of date. It is meaningless. And we cannot expect any American worker to think of himself as a public charge, or pauper, or accommodate himself to a reduced standard of living because of either old age, unemployment, or other reasons beyond his control, for the loss of his earning power.

We Americans have been taught to believe in the American way of life, in the American standard of living, and in American prosperity. Those who labor believe in it. They want our laws to recognize it in terms of the depreciated dollar, and the ever-increasing standard of living.

Unless the social security law is amended to provide greater retirement and survivors' benefits, and to include disability benefits as well, the trade-unions are simply compelled to fight as hard as they can on the economic battlefield, to secure improvements in benefits by and of themselves, with all the attendant strife of economic conflict.

Let me be quite blunt about the matter. You and I know that the trade-union movement includes powerful and less powerful labor organizations, and strategically placed and less strategically situated bodies of industrially organized men and women.

Not all trade-unions have the same powerful or significant economic power over the employers of the community, region, or Nation. And, because of this difference in economic and social power, the trade-unions cannot all secure the most favored, desirable, or needed health and welfare funds for their members.

In the matter of social security, there ought to be a minimum provided for all trade-unionists, and for all workers, regardless of their economic or social power.

And that minimum, incorporated in the existing social security law, ought by every standard of decency and fairness and existing economic fact, to be raised and brought up to date.

Properly financed and administered, retirement benefits are as much a charge against industry as depreciation of machinery or any other contingency that industry may provide for. That the Government has a like responsibility is also true. In the instance of old-age and survivors' insurance, the worker is willing and does make his contribution, thereby sharing the cost with the employer, who might well have to meet it all, and with Government who meets it in another form by taxation, referring of course again to direct aid to the States and so forth under the so-called old-age benefit plans.

It is 15 years since the social security law was put on the books. It is high time indeed, in view of the increased cost of living since then, and in view of our experience with the social security law, to make very much needed improvements.

I have up to now referred exclusively to the trade-unions and to trade-union members. Let me say, with all the emphasis at my command, that since the trade-union movement was first launched in this or any other country, its purpose was not only to secure better working conditions for its own members, but to secure better working conditions for all workers, for all wage earners and salaried employees, for men and women and children, for all types of workers, wherever they were found, in agriculture as well as in industry, in the home or in the factory, in Government or in private employment, in private enterprise establishments as well as in nonprofit organizations. And, note this well, for all who toil, whether organized or unorganized, in trade-unions or not, we will do our best. We believe that as trade-unionists we are the more conscious and articulate and organized, and therefore, the better able to win concessions for ourselves.

If I may digress for a moment, Mr. Chairman, the question has been brought to my attention, not once but many, many times, is it advisable that the American Federation of Labor or the trade-union movement as such pursue with the same degree of insistence that we have been in late years for increases in the social security benefits, or should we just turn directly around to the unorganized employee or for that matter to the organized employee and use it, as a matter of fact, as an inducement to join the union, that is, with those who are not members of the union, and then to those who are members say, "We can do this as a result of collective bargaining with the employer. We are not interested in the Federal limitations governing social security or retirement benefits. We will take it out of the employer." And as a matter of fact economically and particularly since the war and during the war years we have been in a pretty good position to do it, as witness what has occurred in many of the industries throughout the country.

There is now that question developing in the minds of those who have given it much thought within the trade-union movement, whether or not we shouldn't cease our activity before the Senate and the House of Representatives and say to the employer instead, "You shall pay it, and not us, and we won't even contribute," and use that as an organizing medium. Personally, I don't agree with the philosophy or the theory, but nevertheless it is becoming quite predominant in the thinking of many.

But that does not mean that we are exclusively or even primarily concerned with improvements for ourselves. We have proven by our economic and political deeds, not just words or resolutions, that we are always fighting for advanced labor and social legislation for all of the workers, in cities, States, and in the Nation.

And so we come before your committee, to secure your assent to the provisions of H. R. 6000, not to benefit the members of this or that union, but to benefit the members of all unions, and to benefit all those who are not members of any union whatever, and under present conditions, very difficult to organize in any union.

That last thought needs a little elaboration. We believe, by the passage of H. R. 6000, that it will help those who cannot help them-

selves, because of the fact that they face the most difficult obstacles in organizing into unions and thereby improving their own working conditions by and through their own economic strength.

That is the issue in this great need for the enactment of amendments providing for increased benefits to the present social security law. Shall those out of a minimum of social security who cannot provide for themselves individually or collectively?

Therefore, the subsidiary issue is: Shall those be left out of a minimum of social security, in terms of present-day prices and present-day needs, who are not strategically placed in terms of economic and social power, to compel their employers to contribute so that workers may have a decent benefit in their old age, so that their dependents may have a decent survivors' benefit, and so that the workers' families may survive when they are disabled or sick and cannot earn their normal wage?

I noticed Senator Taft asking Mr. Cruikshank and President Green about the difference in the survivors between the women and the men. President Green, of course, turned it very cleverly, I thought. That is, the Senator seemed to think that. Actually this is what happened: I am sure you are fully aware of it. Ordinarily the woman is somewhat younger than the man. As the bread-winning opportunities of the man are taken away from him, of course the same is true of the woman. The thinking, I am sure, of the A. F. of L. is that the woman and the man would be in position to retire together—when I say retire together—to go on a small farm or do something else whereby they would be together rather than just piecemeal and then separated in the sense that the man would be receiving some benefits and the woman of course none whatever, or for that matter, probably being requested to work and which she would have to do.

Let there be no mistake about it, when all of the workers everywhere—and that includes agriculture, the home, the self-employed—when all of the workers and all of the employers contribute to a Nation-wide fund, then all of the workers and self-employed benefit directly and fully.

And last, but not least, of even greater importance, such a national fund provides for everybody at the least cost and to at least a minimum, and what is more, such a national fund remains actuarily sound and solvent at all times. The workers have faith in it. They know that they can count on it all their calculations. Of course, I don't have to repeat here what has been said repeatedly relative to the history of insolvent companies, insolvent insurance companies prior to Federal regulations and other insolvencies which can develop. Of course some of these privately operated plans just leave the employee completely at the mercy of the State or any one else.

Senator MILLIKIN. If I may suggest it, all that you are saying also suggests that we have to keep this Government solvent.

Mr. BROWNLOW. Senator, I am one of those who still believes in out system very definitely. I feel that one of the greatest ways of keeping our Government solvent, not only financially but politically and econimacally generally is by meeting the problems of our people.

Senator MILLIKIN. I would agee with you on that.

Mr. BROWNLOW. I am sure you do.

Senator MILLIKIN. But I am sure you cannot meet the problems of the people on a sound basis unless you meet them with a sound dollar.

Mr. BROWNLOW. That is right. I think perhaps Lincoln stressed it, one of the early ones to stress it, when he said that Government must meet the need of its people. At the time he was talking about a strike up in Bridgeport, Conn. The question was raised as to whether or not our constitutional law was such that it prohibited certain actions up there on the part of the State agencies. Lincoln said if our constitution restricts certain actions or oppresses the people, then our constitution must be changed. I am very much afraid that the changing of the constitution sometimes can go just a little bit too far, but I think the restriction upon the changes will come when Government itself recognizes and meets the need of the people without drastic measures.

Senator MILLIKIN. What I am talking about is, if we are to accomplish the thing you are talking about and which you want, and which almost everyone wants, we cannot do it with phony money.

Mr. BROWNLOW. That is right.

Senator MILLIKIN. We have to do it with sound money. I think we have all to show an equal interest in keeping up the value of that money.

Mr. BROWNLOW. That is true, sir. There is no question of it.

Senator MILLIKIN. One of the reasons we are sitting here now is that that dollar that we talked about in 1935 is now from a 40- to 50-cent dollar, and that is one reason we are here to raise those benefits. The same process, Jim, that took it to 40 to 50 can take it the rest of the way.

Mr. BROWNLOW. That is true.

You know what it is to have a dollar put away, to have some life insurance, to have provision for the uncertainties of life, to have some assurance as to the future of your own dependents. The worker, everywhere, is entitled to some degree of feeling which you have. There is no adequate and certain and inclusive way of doing this for the workers of this, the richest land in the world, except by an adequate social security law.

We want peaceful and better management-labor relations. We can never have such relations unless the workers have a minimum of social security provided by law. As trade-unionists we can endeavor to protect ourselves, and some of us will undoubtedly succeed in winning very decent provisions in collective bargaining contracts, but again, think of the industrial chaos which might result.

But not all trade-unions are in a position to do this. Practically all nontrade unionists will get little or nothing.

The adoption of H. R. 6000 with amendments, is one of the strongest assurances for industrial peace. It is one of the finest measures to give the workers a solid sense of security concerning their future, and it is in the best traditions of our American democracy, to let the workers, all the workers, share in our prosperity, in our abundance, in our hopeful, generous, free, and ever-expanding life.

Never in all of the history of our country was it so necessary to have a united Nation, a happy people, to meet the challenge of those who would ensalve the world, and for us to set an example of what a free, democratic government can do.

One further concluding statement—there has been much comment on the practice of investing old-age and survivors' insurance reserve funds in Government bonds, resulting in double taxation. This charge

has been well refuted by the Wall Street Journal and also by the statements of the Advisory Council on Social Security to the Senate Committee on Finance, and others much more familiar than I with the investing of Government funds of this type.

Again I want to thank you for this opportunity of appearing before you.

Mr. Chairman, I have here an excerpt from the comments of the Wall Street Journal which at least in my younger days I was always told was the answer to all financial problems of the Nation, and I would like to submit it to you for inclusion in the record.

The CHAIRMAN. Yes, you may give it to the reporter for inclusion in the record.

(The information referred to follows:)

[From the Wall Street Journal, February 9, 1950]

BONDS IN UNITED STATES PENSION RESERVE—THE STALE FALLACY THAT THE TRUST FUND IS A FICTION STILL CROPS UP DESPITE AUTHORITATIVE REFUTATION

(By F. A. Korsmeyer)

Letters to this newspaper from subscribers, among other things, show that misunderstanding of the reserve fund of the old-age and survivors insurance of the Social Security Act is still widespread. Many persons still believe what some insurance company officials asserted in the middle 1930's, that the accumulation of a pension reserve fund invested in United States bonds was purposeless, that the reserve was a fiction and that it could actually result in the cost of pensions being paid twice over. Those insurance company men have long since realized their error: a sort of vicarious recantation came in 1945 from a committee representing the three principal associations of life companies. The committee said, in part:

"The first step in understanding this problem is to agree that pay roll taxes are collected so that workers may currently make a contribution to the support of the OASI system from which they hope later to benefit. The money might conceivably be held in the form of cash to be used when needed. However, the Government must currently borrow large sums, and will later need large amounts for refinancing at least some of its rapidly maturing obligations. It is reasonable for the OASI system, if it has funds available, to take advantage of this opportunity to earn interest on its money by purchasing Government bonds.

"Furthermore, the apparent double taxation does not involve an avoidable burden if it can be assumed that the excess of income over outgo is used by the Government for some essential purpose, and does not by its existence and availability stimualte unnecessary expenditures. The purchasing of bonds by the OASI system means that, later on, when it needs money in excess of pay-roll tax receipts in order to pay benefits, the interest on the bonds (raised, of course, by general taxation) will be available to meet the additional benefit load. However, if the bonds had not been bought by the system but were in the hands of the public, then not only would the interest on the bonds have to be raised by general taaxtion, but additional general taxes would have to be levied to cover the deficit in OASI operations. Current pay-roll taxation to create a reserve fund, therefore, makes possible the use of interest which the government has to raise by taaxtion anyway for a purpose which would otherwise require further general taxation on its own account."

SAME THING IN CLEARER TERMS

This heavy language is not much easier to understand than the cryptic chatter of an insurance agent trying to write another policy. A report from the Advisory Council on Social Security to the Senate Committee on Finance, rendered in April of 1948, stated its like conclusions in clearer terms. This Council was composed of 17 businessmen, economics professors, labor-union representatives, insurance company executives and scientists. Its report said, in part:

"We do not agree with those who criticize this form of investment of the OASI reserve in Government bonds on the ground that the Government spends for general purposes the money received from the sale of securities to that fund.

Actually such investment is as reasonable and proper as is the investment by life insurance companies of their own reserve funds in Government securities.

"The investment of the Old Age and Survivors Insurance funds in Government securities does not mean that people have been or will be taxed twice for the same benefits, as has been charged. The following example illustrates this point: Suppose some year in the future the outgo under the old-age and survivors insurance system should exceed pay-roll tax receipts by $100,000,000 If there were then $5,000,000,000 of United States 2 percent bonds in the trust fund, they would produce interest amounting to $100,000,000 a year. This interest would, of course, have to be raised by taxation. But suppose there were no bonds in the trust fund. In that event, $100,000,000 to cover the deficit in the old-age and survivors insurance system would have to be raised by taxation; and, in addition, another $100,000,000 would have to be raised by taxation to pay interest on $5,000,000,000 of Government bonds owned by somebody else."

GOVERNMENT'S "USE" OF PENSION REVENUE

Some correspondents of this newspaper stumble over the Government's "use" of its borrowings from the OASI reserve for general purposes, which they fail to distinguish from the alleged but nonexistent "use" for such purposes of the age-pension pay-roll tax revenue. The distinction is supremely important. Without it, the Government would be merely appropriating such revenue without compensation to those for whose present or ultimate benefit the revenue is collected. But the Government makes the distinction, and makes it effectively, by issuing Treasury obligations for the moneys it borrows from the reserve.

Lately, the Brookings Institution of Washington has published a work entitled "The Cost and Financing of Social Security" which, along with a considerable amount of useful information about other sections of the Social Security Act, unfortunately repeats the now stale errors about the alleged illusion of an OASI trust fund. Its several authors—for whose conclusions a foreword disclaims the Institution's responsibility—make on page 155 the following weirdly untrue statement:

"The OASI trust fund is invested in Federal Government securities. Since the money is used by the Government in meeting its regular expenditure requirements, no real reserve is created. The obligations of the Government (liabilities) deposited in a trust account do not represent assets; they merely record future obligations which can be fulfilled only through the levy of future taxes upon the economy in general. The trust fund is thus a fiction—serving only to confuse."

Here the authors make one or both of two assertions. One is that the Government bonds in the OASI fund are different from all other parts of the national debt in having no value as assets. The other is that all the Government's obligations are worthless. If the second reading were correct, the first would of course follow.

DEBT IS ALL GOOD OR ALL BAD

Now it is impossible to divide the national debt into two categories on any such (or any other) basis of distinction. If any segregation of the debt were imaginable, the bonds in the OASI reserve would have to be assigned a superior rating as assets. They are the property of many millions of citizens, most of whom have little or nothing else to protect them from destitiution in the feebleness of their old age. If this portion of the debt has no existence as assets in the ownership of OASI beneficiaries, the remainder of a debt which the daily Treasury statement says is now more than 252 billion dollars, doesn't exist either.

The authors do not support their assertion that the Government bonds in the pension reserve have less value than fresh toilet paper. Their statement that the investment of funds in Government bonds is not "procreative in character" is true but has nothing to do with the asset value of the bonds in the pension reserve. Their value, like that of all Government issues, is assured by the power of the issuer to assess all the trade and industry of the country (including the procreative investments of the life companies and others) for whatever it takes to pay the issuer's obligations. The issuer, of course, will do that, without regard for their ownership in or outside of the reserve fund.

There is much that is open to criticism in OASI and the changes therein proposed by pending bills. But it is impossible to assert rationally that part of the national debt is rubbish and the rest is prime investment.

Mr. BROWNLOW. Thank you ever so much.

The CHAIRMAN. Thank you, Mr. Brownlow.

Let me ask you one question. You have referred in the opening of the statement you just presented and on the concluding page to the adoption of H. R. 6000 with amendments. By that do you mean the amendment which was submitted by President Green and Dr. Cruikshank? I still stick to the honorary recognition, Doctor.

Mr. BROWNLOW. That is right. I think perhaps my reason for not specifiying it——

The CHAIRMAN. You dealt with some of them.

Mr. BROWNLOW. Is that I happen to be a member of the social-security committee of the A. F. of L.

The CHAIRMAN. I thought you were referring to those.

Mr. BROWNLOW. And naturally those are the amendments that I have in mind.

Senator MILLIKIN. The statement in that last paragraph of yours is what I would call a very light once-over. It has been the subject of a lot of debate around here and I would not want to take your time to go through it. I believe the story from the Wall Street Journal is full of holes, but we do not have to settle that today.

Mr. BROWNLOW. No. I am sure, as a matter of fact, I couldn't settle it, Senator.

The CHAIRMAN. Thank you very much for your appearance, sir.

Senator MILLIKIN. If those fellows can tell you what the market is going to do tomorrow, I will agree they are pretty wise fellows.

The CHAIRMAN. That completes the schedule of witnesses for the morning. Is there anything further that you wish to submit?

Mr. CRUIKSHANK. No, thank you, Senator. We all appreciate very much your courtesy.

The CHAIRMAN. We are very glad to hear you and to have your contribution.

The committee is in recess until tomorrow morning at 10 o'clock.

(The following statement was submitted for the record:)

STATEMENT SUBMITTED BY MORRIS HORN, BUSINESS MANAGER, OF THE PROVISION SALESMEN AND DISTRIBUTORS UNION, LOCAL 627, AMALGAMATED MEAT CUTTERS AND BUTCHER WORKMEN OF NORTH AMERICA, AFFILIATED WITH THE AMERICAN FEDERATION OF LABOR

Mr. Chairman and Senators, I make this statement as business manager of the Provision Salesmen and Distributors Union, Local 627, and as special international representative of its parent organization, the Amalgamated Meat Cutters and Butcher Workmen of North America, A. F. of L., whose total membership is more than 200,000 persons. This is an appeal on behalf of thousands of workingmen throughout the country who are suffering gross inequities at the hands of their employers and the Federal Government. These victimized workers are to be found not only in the provision and meat industries, but in all fields such as processed foods, laundry, milk, bakery, soft and alcoholic beverages—in short, virtually every industry in which delivery is an element.

These men are called agent drivers. The agent driver does not want relief and assistance, but seeks social insurance as a means of eradicating economic insecurity. The granting of social insurance to the agent driver will sustain individual incentive and their mutual responsibilities under our Democratic system. Our agent drivers are employees yet they are denied all benefits of social security.

It was hoped that with the passage of H. R. 6000, the existing evils would be corrected so that an aggrieved agent driver would not be compelled to seek the aid of the courts to secure the benefits of social insurance. It was hoped that H. R. 6000, upon enactment, would provide the over-all and comprehensive base for all gainfully occupied citizens. Such legislation is in the best interest of the public.

However, H. R. 6000, as enacted by the House of Representatives, conta ambiguities which would lend themselves to the purpose of those employ who seek to deprive agent drivers from coverage. This committee undoubte knows that employers relying upon the ambiguous nature of the Social Secu Act invariably seeks to deprive their employees, engaged as drivers, from co age under the act by the subterfuge of designating more or all of their regu route salesmen into agent drivers. This was accomplished simply by tak the driver off the pay roll and putting his income solely on a commission ba Some employers went further, and required the driver to purchase his truck; others did not. In all cases, the new method was to sell merchan directly to the driver letting him keep as a commission the difference betw that price and the price at which he solds the goods.

In actual practice both the regular-route salesman and the agent driver exactly the same type of work. The agent drivers earning capacity is no grea and often a good deal less than that of salaried salesmen who perform same duties. The competition of regular drivers has made it impossible him to earn more than—at the very best—a commission of roughly 6 perce In the provision industry if he is lucky he clears $65 at the end of a wee work. The regular driver salesman meanwhile has delivered his merchand at a flat 3-percent commission to which is added a basic salary of some $ His take-home pay averages $75 a week or better and conditions in other ind tries follow the same pattern.

Both men, remember, do exactly the same type of work. Yet, if the regu driver loses his job he draws unemployment compensation. The agent dri in similar straits is out of luck, and when the regular driver reaches the of 65 he collects social-security payments. The agent driver, ineligible, is of luck again. Very often he becomes a public charge dependent upon char for his very survival. Every day more and more salesmen on fixed salar are being reclassified into this unfair category. How can they then be cal independent business men? Does this reclassification make their livelih any less dependent upon the company whose products they sell? They are ployees in every practical sense of the word.

They are indeed victimized by employers who have used them as tools for evasion and by a Government that has apparently closed it eyes to their plig

The framers of H. R. 6000, fully aware of the ambiguities contained in t existing Social Security Act and also to correct its deficiencies by broaden the definition of "employee" by specific provision (see section 210 (K) (3) a (4) of H. R. 6000). On page 81 of the House Ways and Means majority rep we find the following:

"Your committee believes that the usual common law rules for determining employer-employee relationship fall short of covering certain individuals w should be taxed at the employee rate under the old-age, survivors, and disabil insurance program. The statutory provisions set forth in paragraphs (3) a (4), (section 210 (K)) are designed to correct this deficiency in existing law extending the definition to include those individuals, who, although not employ under the usual common law rules, occupy the same status as those who a employees under such rules."

The report goes on to state that for an employee to come within the applicati of paragraph 3 he must identify himself "as one who performs services in designated occupational group. If the services are not performed in one the designated occupational groups, paragraph 3 is inapplicable with respect such services."

In addition to the necessity of identifying himself with one of the designat occupational groups, it must further be shown that "the contract of service templates that substantially all of the services (other than services by mini lessees) are to be performed personnally by such individual, there is no su stantial investment (other than the investment by a salesman in facilities transportation) in the facilities of the trade or business with respect to whi the service is performed, and the service is not in the nature of a sing transaction)."

The agent driver meets the additional requirements of paragraph 3 but bec he is not identified with one of the designated occupational groups, the pro sions of paragraph 3 of H. R. 6000 is inapplicable to him.

Representative Walter A. Lynch, one of the proponents of H. R. 6000, and member of the Ways and Means Committee, also, aware of the plight of age drivers in the course of his statement on the floor of the House, just prior to t enactment of H. R. 6000, stated the following (81st Cong., 1st sess., Co gressional Record, pp. 14192–14193, October 5, 1949):

"The bill would redefine 'employee' and would thereby restore coverage to from 500,000 to 750,000 salesmen, taxi drivers, industrial homeworkers, contract loggers, mine lessees, agent drivers and commission drivers, and other persons technically not employees at common law who were deprived of employee status by Public Law 642, Eightieth Congress, the so-called Gearhart resolution. These workers who were taken out from under the social-security program by the Eightieth Congress are dependent upon their earnings from work like other groups covered as employees under the bill."

"It is our intention to bring under coverage those who were callously thrown out of social security by the Gearhart Act and likewise to circumvent unscrupulous employers who believe that, by entering into contracts with agent drivers and commission driver salesmen and similarly situated salesmen stating that they are independent contractors, they can go behind the intent of the Social Security Act. Contract or no contract we look at the nature of the whole deal without subterfuge. * * * Many employers would like to have their salesmen designated "self-employed" and thus save their share of the tax. It is the intention of the bill to bring under coverage as many as can fairly be done so without straining the point of the employment on the one hand, and without permitting subterfuge on the other for the purpose of evading the tax."

From Congressman Lynch's statement it can be safely implied that the framers of H. R. 6000 intended to cover agent drivers. However, desptie Representative Lynch's clear and concise statement that agent drivers are entitled to the benefits of H. R. 6000, there is still a question as to whether agent drivers come within the definition of employees as contained in H. R. 6000. This is established by referring to appendix A of the analysis of definition of employee in committee print, prepared by the Committee of Ways and Means by the staff of the Joint Committee on Internal Revenue Taxation, July 22, 1949, on page 200 of Report 1300 of the House of Representatives, Eighty-first Congress, first session, where it is stated that "from testimony by representatives of groups of agent drivers before the Ways and Means Committee it would appear that many of these drivers should be treated as employees under the usual common law control test realistically applied. It is doubtful that application of the six factors listed in paragraph (3), (par. 4 of H. R. 6000) of the proposed definition would greatly improve the opportunities of these drivers to be covered as 'employees.'"

To avoid future litigation, and so that the intent of the framers of H. R. 6000 may not be left to speculation, I believe the clarifying amendments which I am submitting with this statement should be enacted. I, therefore, respectfully direct the committee's attention to these amendments and strongly urge that H. R. 6000 be clarified as therein indicated.

PROPOSED AMENDMENTS TO H. R. 6000 TO BE SUBMITTED TO SENATE FINANCE COMMITTEE

Section 210 (k) (2) should be amended as follows:

Page 49, line 4, omit "expressly."

Page 49, line 5, omit "complete."

As thereby amended, section 210 (k) (2), page 49, lines 2 through 12, would read as follows:

"* * * For purposes of this paragraph, if an individual (either alone or as a member of a group) performs service for any other person under a written contract reciting that such person shall have control over the performance of such service and that such individual is an employee, such individual with respect to such service shall, regardless of any modification not in writing, be deemed an employee of such person (or, if such person is an agent or employee with respect to the execution of such contract, the employee of the principal or employer of such person): or".

More importantly, section 210 (k) (3) should be amended as follows:

Add a new subparagraph (G), after subparagraph (F), to read as follows:

"(G) As an agent driver or as a commission driver; or".

If the Senate committee accepts the foregoing amendment, subparagraph (G), page 50, line 8, in H. R. 6000 will become "(H)".

Section 203 (k) (4) (F), appearing at lines 14 and 15 of page 51, should be amended by adding the following: "(other than the investment by a salesman or agent driver in facilities for transportation)".

(Whereupon, at 1 p. m., the hearing recessed until 10 a. m., Thursday, March 2, 1950.)

SOCIAL SECURITY REVISION

THURSDAY, MARCH 2, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

Present Senators George, Kerr, and Millikin.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

Mr. Strachan? You may come around, Mr. Strachan.

STATEMENT OF PAUL A. STRACHAN, PRESIDENT, AMERICAN FEDERATION OF THE PHYSICALLY HANDICAPPED, WASHINGTON 4, D. C., ACCOMPANIED BY WILLIAM R. LICHTENBERG, COUNSEL TO THE FEDERATION, WASHINGTON, D. C.

Mr. STRACHAN. Mr. Chairman, because of my disabilities, my being totally deaf, I ask to submit my statement; and if the committee wishes to cross-examine, our counsel, Mr. Lichtenberg, is here.

The CHAIRMAN. You may submit your statement for the record, if that is your wish. It is my understanding that you wish to present an oral statement. You may proceed.

Mr. STRACHAN. Mr. Chairman, my name is Paul A. Strachan. I am national president of the American Federation of the Physically Handicapped, an organization dedicated to advancing the welfare of our 28,000,000 handicapped citizens, and which organization is known to Members of Congress in connection with legislation for the handicapped.

In discussing H. R. 6000, I desire to concentrate upon that section of the bill—part 5, "Aid to the permanently and totally disabled"—beginning on page 186 and extending on to page 196. However, in passing, I wish to emphasize that I am not opposed to the general program proposed in H. R. 6000, except that I do not believe the benefits cited therein go far enough to meet our present economic needs.

Mr. Chairman, this is my formal statement, and I would like to submit this and discuss the matter informally from here on.

The CHAIRMAN. Yes, sir. You may do so.

(The prepared statement of Mr. Strachan follows:)

STATEMENT OF PAUL A. STRACHAN, PRESIDENT, AMERICAN FEDERATION OF TH PHYSICALLY HANDICAPPED, WASHINGTON, D. C.

My name is Paul A. Strachan. I am national president of the American Fe eration of the Physically Handicapped, an organization dedicated to advanci the welfare of our 28,000,000 handicapped citizens, and which organization known to Members of Congress in connection with legislation for handicappe

In discussing H. R. 6000 I desire to concentrate upon that section of the bill- part 5, "aid to the permanently and totally disabled," beginning on page 1 and extending onto page 196. However, in passing, I wish to emphasize that am not opposed to the general program proposed in H. R. 6000, except that do not believe the benefits cited therein go far enough to meet our prese economic needs.

But H. R. 6000 is not a bill bearing upon the processes of restoration and r generation, physically, of human beings, and which processes are commonl termed "rehabilitation."

For long years I have noted the gradual encroachment of various forms public assistance agencies into the field of rehabilitation. Today, for exampl public assistance not only handles payments to blind, but, in addition, handl the examinations of blind. Obviously, the blind are a part of the huge famil of the physically handicapped, and I believe the blind belong, as do all othe handicapped, under the original jurisdiction of the rehabilitation services, a not public assistance, and that the latter agency's sole function should be t pay off when authorized and directed to do so by the rehabilitation service which should certainly have the primary responsibility for determining th physical condition of handicapped people, not public assistance agencies.

Why do I take this position against public assistance? Simply because, pul lic assistance, in itself, produces nothing; looks forward to nothing save a co tinuance of its own feeble efforts to plug the hole in the economic dike and at best; only a stopgap, rather than a cure of a condition. Public assistanc it is true, has an important place in our scheme of government, and it is greatl needed, but not as a policy-making or operating agency, directing or controllin work outside its own natural domain.

I vigorously assert that, today, many of the officials of public and privat assistance agencies, as well as organizations representing their interests, ar busily spending their time and effort promoting programs that further involv the charity approach, by using their services. I am only concerned with thes if and when public-assistance agencies deal with various phases of rehabilita tion of the individual outside their regular orbit.

Unquestionably, the first concern of Federal, State, county, or municipa governments should and must be, in the case of the physically handicappe individual, how to get that individual onto his or her feet, if possible, and abl to earn a living, wholly, or in part. A straight-out pension proposition ha nothing to do with that, and neither this federation nor myself have ever pro posed a pension plan of that sort.

I firmly believe that the ultimate goal of all rehabilitation must be: T put the individual to work. I emphasize this because, in all the years when was physically too incapacitated to carry the ball for the handicapped, th rehabilitation agencies took the stand—and even now, in their latest monthl magazine reiterate it that, so long as medical treatment and possibly som form of vocational training was provided, that rehabilitation agencies wer under no further responsibilities to the handicapped.

I repudiate that program, horse, foot, and dragoons. I summon the hand capped, whose needs, primarily, were responsible for these rehabilitation agen cies having been established in the first place, and I ask them to tell your com mittee, Mr. Chairman, that they do not want charity, but, do want to be place in condition to earn and pay their own way, if possible, and that, emphaticall work—not idleness—is their hope and salvation.

I summon the taxpayers, whose money pays for the extravaganzas carrie on in the sweet name of "rehabilitation" by these States agencies, and I as these citizens, "Is it your intent and desire to spend your money to promot a condition of idleness on the part of individuals, which would be the logica end of the program announced by the Sanhedrin of the rehabilitation caste— the State director of rehabilitation?"

I respectfully inquire of the Members of Congress, some of whom are still with us from the days when, back in 1920, we worked to place the first Vocational Training Act, from which all subsequent rehabilitation legislation has stemmed, on the books, and I ask: Did Congress intend to promote idleness, or employment, when it established the rehabilitation program? Has it ever met with the approval of the Congress that these agencies dawdle along, as they did for some 24 years, until the iron pressures of war necessity aided by some few of us who understood the situation and demanded a change—action, instead of inaction; results, instead of alibies—from these same agencies, took steps to force installation of up-to-date methods and a program in line with the needs of the times?

I can assure you, Mr. Chairman, that those of us who worked to put the first law onto the statutes, 30 years ago, intended that law to be a powerful means of promoting employment of handicapped people. We certainly did not intend, and I am sure no one at interest at that time intended, that we merely—to use an illustration—pour the Arbuckles' coffee beans into the grinder and after a few turns, remove the grains before they were reduced to usable form. No, we intended to go through with all of the program, from medical treatment; education and training; vocational guidance and counseling, and certainly, placement of the handicapped in suitable employment. This ideal has been, and should be, the real genesis of the program, and, as fast as amendments to the original law could be obtained, the program, piecemeal, has been brought into function.

If we accept the theory, then, that rehabilitation has primary jurisdiction in the field of the handicapped, and that the ultimate end of rehabilitation should be, employment of handicapped people, we must, at the same time, consider the imperative needs of those who are condemned to misery and want, by physical defects or congenital deformities, and from disabilities arising from injury or disease, who are rendered wholly incapacitated and are termed by rehabilitation agencies "totally and permanently disabled, and unfeasible for rehabilitation, and unemployable."

In a sense, the pension provisions of H. R. 6000, part 5, deal with this problem. But, as stated, if rehabilitation is the desired end, and if new treatments, and advances in medical science, hitherto unknown, might be the means of getting the individual onto his feet, as has been the case with thousands and thousands of people, including myself, who have generally been termed "unfeasible for rehabilitation," then, we respectfully urge that the committee substitute the plan outlined below. We are certain, in the long run, that our plan will prove much more efficacious and economical than the one outlined in H. R. 6000 under part 5, as we know from our own experience and observation that many of those termed "unfeasible for rehabilitation," with proper treatment and training, can be rehabilitated, and if the committee wishes, I can furnish proof.

In our own plan we provide a means of check-up; something entirely lacking in H. R. 6000. The individual case under our plan would be handled as follows:

1. The State rehabilitation agency would make a thorough physical examination at least once each year, to determine whether the individual is still "unfeasible" or, whether or not some treatment or medicine may be the means of curing or at least improving the condition causing the total disability.

2. Upon certification by the State rehabilitation service that the individual is "totally and permanently disabled and unfeasible for rehabilitation," the public assistance agency, or whatever agency of the State is the disbursing agent, shall place the individual on the rolls to receive a Federal grant of $60 per month.

No sensible person would seriously contend that $60 per month is sufficient to care for a person who is totally and permanently disabled, and, very likely, in nearly every instance, requiring an attendant to look after them. But, we firmly believe this to be an absolute minimum which should be provided by the Federal Government. Our plan does not debar the States from adding to this sum. We do not believe the set-up, as written in H. R. 6000, is either adequate, or is as practicable a method as that we have outlined and we hope that the committee will approve our suggestion and, with whatever changes the drafting service may make, necessitated to make the language harmonize with the bill, otherwise, we respectfully urge that the following be substituted for the present part 5, "Aid to the totally and permanently disabled," page 186, H. R. 6000:

"GRANTS TO STATES FOR AID TO THE TOTALLY DISABLED, UNFEASIBLE FOR REHABILITATION

"SEC. 351. The Social Security Act is further amended by adding, after title XIII thereof the following new title:

"'TITLE XIV—GRANTS TO STATES FOR AID TO THE TOTALLY DISABLED, UNFEASIBLE FOR REHABILITATION

"'APPROPRIATION

"'SEC. 1401. For the purpose of enabling each State to furnish financial assistance to needy individuals who are physically or mentally incapacitated and certified pursuant to section 1402 to be unfeasible for rehabilitation, there is hereby authorized to be appropriated for the fiscal year ending June 30, 1951, the sum of $————, and there is hereby authorized to be appropriated for each fiscal year thereafter a sum sufficient to carry out the provisions of sections 1401–1405.

"'Sec. 1402. STATE PLANS FOR AID TO THE TOTALLY DISABLED.—(a) A State plan for aid to the totally disabled must (1) provide that it shall be in effect in all political subdivisions of the State, and, if administered by them, to be mandatory upon them; (2) either provide for the designation or establishment of a single State agency to administer the plan, utilizing present State agencies for vocational rehabilitation, as provided for in other enactments, or provide for the designation of a single State agency to supervise administration of the plan; (3) provide for payment of $60 per month to each individual certified by the State as totally and permanently disabled, unfeasible for rehabilitation, and without means of livelihood and support, provided such individual qualifies under the provisions that the benefits of this Act shall be extended only to persons who are in financial need of such assistance, and the Federal Agency responsible for rehabilitation is authorized and directed to establish by regulation qualifying standards for persons seeking such benefits: *Provided*, That nothing contained in this section shall be construed to debar any person from seeking or receiving any benefit specified herein; (4) provide for the periodic medical examination, at intervals not to exceed one year apart, of each individual certified as unfeasible for rehabilitation and receiving monthly payments of $60; (5) provide for the discontinuance of payments to, and the necessary treatment and training for rehabilitation, pursuant to the Act of June 2, 1920 (41 Stat. 735) as amended, of each individual found, after examination, to be capable of rehabilitation: *Provided*, That any individual found, after treatment or training to be incapable of self-support, shall be immediately eligible to receive the monthly payment of $60; (6) provide for granting to any individual whose claim for aid is denied, an opportunity for a fair hearing before such State agency; (7) provide such methods of administration (including methods relating to the establishment and maintenance of personnel standards on a merit basis, except that the head of the Federal agency having jurisdiction in Rehabilitation affairs shall exercise no authority with respect to the selection, tenure of office, and compensation of any individual employed in accordance with such methods) as are found by the head of the Federal agency having jurisdiction in rehabilitation affairs to be necessary for the proper and efficient operation of the plan; (8) provide that the State agency will make such reports in such form and containing such information as the head of the Federal agency having jurisdiction in rehabilitation affairs may, from time to time, require and comply with such provisions as the head of the Federal agency having jurisdiction in rehabilitation affairs may, from time to time, find necessary to assure the correctness and verification of such reports; (9) provide safeguards which restrict the use or disclosure of information concerning applicants, and recipients, to purposes directly connected with the administration of aid to the totally disabled.

"'(b) The head of the Federal agency having jurisdiction in handicapped affairs shall approve any plan which fulfills the conditions specified in subsection (a), except that he shall not approve any plan which imposes, as a condition of eligibility for aid to the totally disabled under the plan—

"'(1) any residence requirement which excludes any resident of the State, who has resided there for one year immediately preceding the application, or

"'(2) any citizenship requirement which excludes any citizen of the United States.

"SEC. 1403. PAYMENTS TO STATES.—(a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has an approved plan for aid to the totally disabled, for each quarter, beginning with the quarter commencing , (1) an amount which shall be used exclusively as aid to the totally disabled, equal to the product of $60 multiplied by the number of monthly payments made during such quarter to individuals certified by the State agency representing the Secretary, (or the head of the Federal agency having jurisdiction in handicapped affairs), pursuant to 1402, (not including any individual who had been reported by the State as capable of rehabilitation unless such individual has been subsequently found to be incapable of rehabilitation), and (2) an amount equal to the total of sums expended by the State during such quarter for medical examination of applicants and other services which are found necessary by the Secretary (or the head of the Federal agency having jurisdiction in affairs of the handicapped) for the proper and efficient administration of the State plan, which shall be used for paying the costs of administering the State plan or for aid to the totally disabled, or both, and for no other purpose.

"'(b) The method of computing and paying such amounts shall be as follows:

"'(1) The Secretary (or head of the Federal agency having jurisdiction in affairs of the handicapped) shall, prior to the beginning of each quarter, estimate the amount to be paid to the State for such quarter under the provisions of subsection (a) such estimate to be based on (A) a report filed by the State containing its estimate of the total sum to be expended in such quarter in accordance with the provisions of such subsection, (B) records showing the number of totally handicapped individuals in the States, and (C) such other investigation as the Secretary (or head of the Federal agency having jurisdiction in affairs of the handicapped) may find necessary.

"'(2) The Secretary (or head of the Federal agency having jurisdiction in affairs of the handicapped) shall then certify to the Secretary of the Treasury, the amount so estimated by the Secretary (or head of the Federal agency having jurisdiction in affairs of the handicapped), (A) reduced or increased, as the case may be, by any sum that he finds that his estimate for any prior quarter was greater or less than the amount which should have been paid to the State under subsection (a) for such quarter, and (B) reduced by the net amount recovered during a prior quarter by the State or any political subdivision thereof with respect to aid to the totally disabled furnished under the State plan; except that such increase or reduction shall not be made to the extent that such sums have been applied to make the amount certified for any prior quarter greater or less than the amount estimated by the Secretary (or the head of the Federal agency having jurisdiction in handicapped affairs) for such prior quarter; *Provided*, That any part of the amount recovered from the estate of a deceased recipient which is not in excess of the amount expended by the State or any political subdivision thereof for the funeral expenses of the deceased shall not be considered as a basis for reduction under the clause (B) of this paragraph.

"'(3) The Secretary of the Treasury shall, thereupon, through the Fiscal Service of the Treasury Department, and prior to audit or settlement by the General Accounting Office, pay to the State, at the time or times fixed by the Secretary, the amount so certified.

"'SEC. 1404. CHANGE IN OR FAILURE TO COMPLY WITH PLANS; STOPPING PAYMENTS.—In the case of any State plan for aid to the totally disabled which has been approved by the Secretary (or the head of the Federal agency having jurisdiction in affairs of the handicapped), if the Secretary (etc., etc., etc.), after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration of such plan, finds that in the administration of the plan there is a failure to comply substantially with any provisions required by section 1402 of this Act to be included in the plan, or that the plan has been so changed or administered as to impose any residency or citizenship requirement prohibited by section 1402 (b) the Secretary (or head of etc., etc.) shall notify such State agency that further payments will not be made to the State until the Secretary is satisfied that such prohibited requirement is no longer so imposed, and there is no longer any such failure to comply. Until he is so satisfied, the Secretary (or the head of, etc., etc.) shall make no further certification to the Secretary of the Treasury with respect to such State.

"'SEC. 1405. The Secretary (or head of the Federal agency having jurisdiction in affairs of the handicapped) upon compilation of reports received from State agencies administering this program, shall report to the President, and to the

Congress each year, upon the number and type of unfeasible cases, and th disposition made thereof.' "

NOTE.—The reason we have used, in the foregoing, in several places, "Th Secretary (or the head of the Federal agency having jurisdiction over affair of the handicapped)" is, because other bills are pending, enactment of whic will change the base of operations of the present rehabilitation program, from th Federal Security Agency, to the Department of Labor. Until this matter i settled, we cannot definitely state which agency, or individual, will have jurisdic tion. Hence, the reason for using the language referred to.

We firmly believe that the foregoing should be approved by the committee, and we are confident, if so, the action of the committee, thus will have tremendou bearing upon improving the whole rehabilitation and employment of handicappe program.

I thank the committee for its courtesy and consideration.

Mr. STRACHAN. I wish to enlighten the committee with the very latest comparison of statistics in the disabled field. My desire in thi matter is to emphasize to the committee the necessity of establishing what we would term rehabilitation as having priority of jurisdictio over so-called public assistance.

I dwell upon that in my formal statement, so I am not going ove it again. But I point out that H. R. 6000 is not a rehabilitation meas ure but largely a relief measure.

Now, as for the totally disabled, the committee no doubt will recal the National Health Survey of 1935–36, at which time it was found that there were 23,600,000 who were in some degree disabled, of whom 16,000,000 were between the nonbenefit social-security ages of 16 and 6

From testimony of the approximately five-hundred-odd experts who appeared to testify before the House Labor Subcommittee t Investigate Aid to the Physically Handicapped, which sat for mor than 2 years, ending its labors in 1946, it was stated by such witnesse for the various agencies and organizations in this field that, adding all numbers together, there are approximately 38,000,000 handicapped in this country.

Later, when Gen. Graves B. Erskine was Administrator of Re training and Reemployment Administration, further studies devel oped the belief that of the 38,000,000 handicapped above referred to many of them had more than one handicap. For example, a cardia might also be blind, or deaf, or have some other injury or disease and the same applies to all other types of handicapped.

So it was estimated in 1948 that there are conservatively 28,000,00 handicapped citizens, of whom, it was believed, from 5,000,000 t 7,000,000 fall into the category of the severely disabled.

For more than 30 years, Mr. Chairman, I have been trying to ge the facts, from time to time, as to the total number of disabled. There are no accurate figures available from any source. It is guesswork We have a bill, sponsored by the eminent Senator from Colorado, Mr Johnson, which would provide for a survey of handicapped, and which bill has been reported favorably to the Senate from the Com mittee on Post Office and Civil Service the past two sessions, but wa stopped on the floor by Senators Ball and Taft.

I earnestly beseech your support for that bill, on a common-sens basis, because today we are spending and are planning to spend hun dreds of millions of dollars in various phases of a health program and we do not know how many handicapped we have, what is the matter with them, or where they are. To me, that is legislating i the dark, and it is most unbusinesslike and lacking in efficiency.

On December 7, 1945, Mr. Barkev S. Sanders, Chief of the Division of Health and Disability Studies, Bureau of Research and Statistics, of the Social Security Board wrote me:

I would estimate the number of totally disabled in our population is probably as large as 3,000,000 or more.

And that was in 1945.

When representatives of the Townsend program appeared before your committee in the past few weeks, they stated, in appendix B of their statement, that the number of citizens between the ages of 18 and 60 incapacitated for employment from any cause for greater periods than 6 months totals to 2,400,000. They gave as authority for that statement the United States News and World Report of April 15, 1949, the text of an interview with Arthur J. Altmeyer, Commissioner of the Social Security Administration.

Thus, since it would appear that Mr. Sanders' letter would antedate the statement of Mr. Altmeyer, and since these gentlemen are both in the Social Security Board, it would appear to me that they should get together and agree upon some story for public consumption.

This past week, the Veterans' Administration advised me that, on June 30, 1949, there were 109,488 veterans of all wars who have service-connected total disabilities. Further, the Veterans' Administration states: On their rolls now there are 2,343,045 both service-connected and non-service-connected disabilities for all wars.

It is understood, of course, that service-connected total disabilities would be cared for by the Veterans' Administration rather than by H. R. 6000, but I am making this comparison for the committee's information.

Now we come down to the question of the advisability of rehabilitation as compared with relief. As long as there is any hope of recapturing abilities of the individual, restoring individuals to health so that he or she can earn their way fully or in part, I think that is the first consideration of any government if it is to deal with problems in this field. Therefore, our organization has always emphasized that rehabilitation as such, to be successful, must end in a job. No other proposition is really practicable.

Now, the United States Employment Service records on handicapped placements began in 1940, and from 1940 through December 31, 1949, the total was 1,797,734 placements. One interesting statistic is this: In the year 1940, the total of handicapped placements for the entire year was 27,675. Since establishment of National Employ the Physically Handicapped Week, of which I have the honor to have been the author, and for which you, Mr. Chairman, voted, the average placements in October of each year, when the "Week" is observed nationally, are many more for that 1 week than the total placements of handicapped for the year 1940.

Further, of the approximately 150,000 placements made through employment offices and the estimated 100,000 additional placements of handicapped through private sources, more than 600,000,000 has been paid to these handicapped in salaries or wages since 1945, when the "Week" first became a law, and these handicapped have paid the Federal, State, and other governments more than $150,000,000 in taxes to help support their country, and to stand upright and look every man

squarely in the eye with the grand and glorious feeling that comes from being able to earn your own way.

Mr. Chairman, that is the kind of program that our federation has been sponsoring.

In an address before the Tenth Annual Congress on Industrial Health, sponsored by the Council on Industrial Health of the American Medical Association, Mr. Ewan Clague, Commissioner of Labor Statistics, on February 21 last, stated:

> Since 1900, alone, the average life expectation at birth for white men has increased by 17 years, from about 48 years in 1900 to 65 years in 1947. Under 1900 conditions of mortality in the United States, only about 39 out of every 100 while male infants could expect to survive until age 65. At present, about 62 out of every 100 can expect to attain the conventional age of retirement.

Mr. Chairman, I would like to submit with your approval and that of the committee, Mr. Clague's entire speech for the record, because it is the most scholarly dissertation and the most accurate and up-to-date outline of this important situation that we have, and I believe the whole Congress and the general public should know about it. I tender it for your purposes if you wish to use it.

The CHAIRMAN. Yes, sir. You may put it in the record.

(The speech of Mr. Clague follows:)

SOME INDUSTRIAL ASPECTS OF AGING

Address by Commissioner Ewan Clague before the Tenth Annual Congress on Industrial Health, sponsored by the Council on Industrial Health of the American Medical Association in New York City, February 21, 1950

The problem of retirement, and many related economic and social aspects of aging, are today commanding widespread national interest. I can think of few groups before whom I would rather discuss this problem than before a group of members of the medical profession. For, in a very direct way, the magnitude of the old-age problem today reflects the tremendous gains in life conservation which have been made possible by medical science and its practitioners.

Over the years, our increased knowledge and control over disease, coupled with the great advances in living standards, have enabled a progressively greater proportion of our population to survive into old age. Thus, since 1900 alone, the average life expectation at birth for white men has increased by 17 years, from about 48 years in 1900 to 65 years in 1947. Under 1900 conditions of mortality in the United States, only about 39 out of every 100 white male infants could expect to survive until age 65. At present, about 62 out of every 100 can expect to attain the conventional age of retirement.

These sharp reductions in mortality, in combination with other population trends, have brought about an exceptionally rapid increase in the numbers and proportion of aged in the population. In 1900, only about 3,000,000 persons or one out of 25, was 65 years and over. At present, about 11½ million men and women, or about one out of 13, are found in this age group, and it is continuing to rise rapidly each year. If recent trends continue, the number of aged will more than double before the end of this century, and they will comprise a significantly greater percentage of the population than at present.

If we expand our picture of the aging population to include those persons of mature years who are approaching the period of retirement, the group between 45 and 64 years of age, the growth is also impressive. In 1900, this age group accounted for about one-seventh of the total population; at present, one out of every five persons is found in these ages, and—in all likelihood—this group will continue to grow in importance in the next several decades.

If employment opportunities for the old and near-old had kept pace with their increase in numbers, there would today be no special economic problem of the aged. But that, we know, has not been the case. In fact, the very scientific and technological advances which—in the field of medicine—have meant an extension of biological life, have operated—in the field of industry—to limit the span of working life. The great industrial transformation of the past cen-

tury, from a predominantly agrarian economy of farmers and small handicraftsmen, to a highly urbanized economy of mass-production industry and large-scale business, has effectively tended to limit the scope of employment for our growing aged population.

A few general facts and figures will serve to document this basic trend. In 1900, about two-thirds of all men 65 years and over were still engaged in a gainful occupation. By 1940, this proportion had dropped to slightly over two-fifths. At present, in the relatively more favorable postwar labor market, less than half of the men in this aged group are found in the labor force.

This trend toward earlier retirement, and toward a consequent widening in the period of old-age dependency, is also highlighted by a forthcoming study of the Bureau of Labor Statistics on the length of working life. Under the conditions prevailing at the beginning of the century, the 20-year-old white man had an average future life expectancy of 42.2 years (or to age 62), and could expect to work for an additional 39.4 years (or to age 59). He could, therefore, anticipate a gap of about 3 years between his working life and his total life span. By 1940, he could expect to live for an additional 46.8 years, a gain of about 4½ years over 1900. His remaining working-life expectancy of 41.3 years, was, however, only 2 years greater than in 1900. So, on the average, the gap between working life and total life expectancy had almost doubled in the course of these four decades.

Now this growth in the average retirement period, even when multiplied by the greatly increased numbers of persons in the aged group, would in itself be no cause for alarm. It might, in fact, be viewed with satisfaction if it simply resulted from an increasing preference of the older worker to spend the closing years of his life in retirement, and from an increasing financial ability to do so.

To some extent, this of course has been a factor. Our increased national productivity and the resultant rise in earnings and living standards, combined with the extension of social-security and pension programs, now make it economically possible for some modest proportion of our labor force to live comfortably in retirement if they so desire.

Undoubtedly, there are also present in our industrial labor force many aged workers, in their sixties and above, who have continued to work, but who, for reasons of health or otherwise, would really prefer to retire, if they were given an effective choice between continued work and retirement. Current studies of spending and savings indicate clearly, however, that very few industrial workers are in fact able to set aside any significant amount of savings during their period of working life against old-age or similar contingencies. According to Federal Reserve Board surveys, even during the prosperous year of 1948, more than one out of every three families in the United States was unable to save anything and another fourth of our families saved less than $200. Set against this record the fact that, according to insurance actuaries, a worker would require almost $15,000 in cash to be able to provide himself with a modest annuity of $100 per month, starting at age 65.

The Federal social-security program, at its present scale of benefits, also affords scant relief to the retired worker. Monthly benefits to retired persons under the Federal old-age and survivors insurance program now average $26 per month for the single worker, and about $41 for an aged couple. As a result of the gross inadequacy of these old-age insurance benefits, we have witnessed—on the one hand—a great expansion in the Federal-State programs for welfare old age assistance, and—on the other hand—a powerful drive on the part of organized labor to negotiate directly with industry for pensions. The results of this drive have been in the headlines for many months, and scarcely need elaboration at this time.

Another and, I believe, more fundamental approach to the problem of old-age security is the expansion and improvement of the Federal old-age insurance program. The amendments to the Social Security Act, passed by the House at the last session of Congress and currently pending before the Senate, provide for a very substantial expansion of coverage of this program, for a more realistic level of benefits (almost double the current scale), and for other needed improvements, including benefits for permanent and total disability prior to age 65. When these amendments are passed—and I am confident that they will be—we shall have in effect in this country a broadly expanded and revitalized Federal social-security program, which will come close to providing basic protection for retired workers and their dependents. There will still be a need for continued supplementation by assistance programs for those aged persons without any substantial period of service in covered employment. And

there will still be ample room for union and industry pension programs whic in combination with social security, may more nearly approach the standar of living which most American workers would like to maintain in their old ag

Although an expanded old-age insurance program will thus have the effe of affording many aged workers a real choice between continued work an retirement, I believe that it would be a serious error to believe that we wi have licked the economic problem of the aged. Some workers over 65 will u doubtedly prefer to retire. There is real danger, however, that others may effect be pushed into retirement. Despite the favorable wartime and postwa experience of industry with older workers, many employers, I fear, still ten to regard their elderly workers as a drag on their work force, and may b tempted to regard the expansion of retirement benefits as an occasion for i stituting or expanding compulsory retirement policies.

Yet, whatever evidence we have available on this subject suggests that the is a group of older workers—and I believe, a very large group—who do n look forward to retirement even under a moderately adequate pension, but wh want to continue working as long as they are capable, and as long as suitable jo opportunities are made available to them. For example, the Social Securit Board conducted a special field survey of persons receiving old-age insuran benefits in 1941–42, and found that only about 5 percent of those receiving ol age benefits had retired while in good health and simply because they wished t retire. More than half had been laid off by employers, while most of the othe had quite because of illness or failing health.

Other scattered information in the postwar period also reveals a simil pattern. Thus, of the nearly 24,000 coal miners who were receiving pensions o $100 per month from the Miner's Welfare Fund in mid-1949, less than one-tent had stopped work voluntarily in order to receive the pension. The others we disabled or had previously been laid off.

Even more far-reaching in scope is the situation of many workers of matu age, between their late forties and sixties, who have not yet attained retiremen age, but who are exposed to the risk of involuntary and premature separatio from the working force. In the case of workers in this age group, pensions a clearly not the solution, except for the minority of workers who are disabled f further employment. Yet the increased tempo of modern industry and its mo exacting and rigid job standards often place these workers at a serious com petitive disadvantage.

We observed this particularly during the depression of the thirties, when man older men and women, once forced out of jobs, found it increasingly difficult t secure reemployment, and formed a hard-core of unemployed. And even und relatively prosperous postwar conditions, this same problem exists, though in lesser degree.

For both the mature worker approaching retirement age, and for the old men and women who still want to continue in gainful employment, pensions o not, therefore, offer a full solution. Rather, we must focus on ways and mea to extend their span of productive and satisfying work activity.

At the outset, we must realistically face up to the fact that many older worke in industry do have certain real handicaps. The most obvious source of difficult appears to be simple physiological aging, bringing with it reduced muscul strength, slower reflexes, decreased keenness of sight and hearing, and a variet of chronic disabilities. Recent studies indicate, however, that the extent o physical impairment may be exaggerated in popular thinking. Many of th physical changes associated with age not only tend to occur more slowly than w once supposed, but also interfere less than we would expect with performanc on the job. There is evidence, for example, that experience on a given job ofte tends to maintain the particular kind of vision that the job demands after othe visual functions become impaired. Moreover, we know that psysiological an chronological age may differ greatly, so that many an oldster has keener hearin and better vision than an average man 20 or so years his junior. This emphasize the great importance of appraising the older worker as an individual, who ma be quite unlike the average man of his age.

More subtle, perhaps, than physiological aging (although related to it) are th psychological accompaniments of growing older. There is the well-know although often overestimated, reduction in learning speed, a lessened adap ability to new ways of doing things, and, in some cases, a tendency to becom cantankerous and "hard to get along with" in ordinary working relationships.

The extent to which various mental and physiological effects of aging handica the older worker vary greatly among different types of employment. In the mas

production industries, for example, we might visualize a model worker as one who is alert, fast-moving, and readily adaptable to changing situations. He has no obvious personality problems and can work smoothly in a production team. In comparison with this ideal, many older workers fare badly.

However, even in many production jobs, the picture is not one-sided. A survey made by the Bureau of Labor Statistics during the war showed that the lowest rates of absenteeism occurred in the 55–59 age group. Men over 65 had a slightly higher rate, but even so they lost much less working time than men in their twenties and teens. With respect to work injuries, the record of the older workers also compared well with that of younger employees. Disabling injuries—those involving either a permanent impairment or disability for work for at least one full shift—occurred slightly less frequently among workers over 50 than among those under 50. Nondisabling injuries—those which usually require only first aid—were much less common at age 50 and over than in the younger age groups. Once injured, however, older workers generally took longer to heal.

Moreover, as we turn from the factory production line to other fields, we find many occupations where experience and judgment are what count most. As you know, physicians often stay in practice until advanced ages, gradually reducing their patient load, rather than retiring completely. In many other jobs at the professional and managerial level, maturity is also a positive asset. This is true, too, in many of the skilled crafts and in certain types of service jobs, where reliability is especially important.

Between the relatively extreme cases of the assembly-line worker and the independent professional man, there are vast numbers of intermediate situations where the effects of age on working effectiveness are much less clear cut. It is in this area that prejudice and misinformation appear as serious complications in the older worker's employment problems. This is also the area in which a good deal already has been accomplished in adjusting employment practices to the declining powers of the older worker.

A recent story in the Wall Street Journal gives a number of examples of what individual firms have done to utilize their older people more effectively. Many companies follow the practice of shifting aging employees to lighter work: boilermakers become inspectors, carpenters are shifted to packaging, and laborers become elevator operators. In this way, there can be an unobtrusive adjustment of the job to the worker, setting the stage for full retirement when it comes.

Many labor-management agreements also operate to protect the aging worker on the job. Seniority rules, by linking job security with length of service, offer a substantial measure of protection to older employees in many industries. Some agreements even go further in attempting to promote the employment of the older workers. In the building trades, for example, a union contract may specifically require the employment of one man, age 55 or over, for each 5, 7, or 10 journeymen on the job.

There is a basic defect, however, in the protective devices of both employers and unions. As long as the worker is continuously employed by a single firm, he benefits from the employer's feeling of responsibility toward him and from formal seniority rules. In our dynamic economy, however, this continuity of employment is often broken up: individual firms go out of business, even in good times; technological developments eliminate particular jobs; or, for various reasons, older workers are in fact laid off. Once out of a job, the older man or woman has a particularly hard time getting placed. The seniority system which increased his job security when he was employed works to his disadvantage when he is on the outside. The desires of employers to take care of their own aging workers by reserving lighter jobs for them tends to freeze out the older person who no longer has an employer.

It is clear, therefore, that the employment problem of the older worker goes beyond the individual firm and the individual union. A full solution of the problem requires the development on a large scale of jobs suited to the capabilities of the older people and the working out of systematic means of getting them into these jobs.

Our entire community has an important stake in the successful solution of this problem. If the working life of older persons can be materially extended, a large and growing amount of otherwise unused manpower can contribute to our national income. Moreover, the future burden of pension costs can more easily be held down to manageable size. Finally, there are vast potential rewards in terms of the well-being of the older people themselves. If these people can reach retirement age without going through a long period of frustrating unemployment or job insecurity, they should be happier and healthier citizens.

A great deal has to be done even to approach a solution to the older workers employment problems. We, of the Department of Labor, are especially conscious of the need for much more research into the many facets of these problems. There is a great dearth of current and comprehensive data on a number of key points. We need to know more about the actual practices of employers in hiring and separating older workers, and in reassigning superannuated employees. We require more information on the actual work performance of older people. How does the quantity and quality of their work compare with that of younger people? This kind of information for various industries and occupations could indicate the kinds of work for which older persons are best adapted, and least adapted.

Once the necessary facts were assembled, it would be possible to develop a comprehensive program for dealing with older workers' employment problems. The establishment and operation of such a program requires the coordinated efforts of all major groups in the community. Although it is not easy to carry through such a project, the returns—both human and economic—should make it well worth while.

Mr. STRACHAN. Mr. Robert C. Goodwin, Director of the Bureau of Employment Security, reported to Secretary Tobin, on the Bureau's job placement and unemployment activities, that in 1949 an estimated $1,700,000,000 was paid out by State employment security agencies to approximately 7,500,000 who had lost their jobs. Incidentally, in the calendar year 1949, payments totaled $790,000,000.

Today, Mr. Chairman, the handicapped are finding it harder and harder to get and hold jobs. That is one reason why we must accelerate the rehabilitation processes to develop the full capacity of the individual physically, so as to be able to compete in the labor market against nonhandicapped.

I do not wish to burden the record any further. I have made this oral statement to try to conform with the committee's desires as to time. But if the committee wishes any further information, I will be pleased to have Mr. Lichtenberg supply it.

I wish again to emphasize one thing. A few weeks ago, Mr. Chairman, as you recall, I mentioned the matter of having a chart in preparation which showed the entire activities of the Federal Government in the handicapped field. I regret to state that as of this morning the Government Printing Office had not completed the proof on this. But I believe that every member of the committee should have it, and as quickly as it is completed I shall send it to the committee, for this reason: Not only will you be able to see, and for the first time, the extent of the whole Federal Government functions in this field, but you will see the gradual and, I say, insidious encroachments of public assistance upon other phases of the rehabilitation program.

Now, in my judgment, public assistance, Mr. Chairman, does not produce anything. It is merely a palliative rather than a remedy. And while it has a place, and an important place, in our scheme of government, I insist, Mr. Chairman, that public assistance has no business invading the rehabilitation field, because public assistance obviously is a pay-off agency. It is not one to determine whether or not this is rehabilitation or not rehabilitation. It is obviously the duty of the rehabilitation agencies of the Federal and State Governments to assume this responsibility and carry it out, because surely every member of the committee will agree on one thing: that our first job is to get people onto their feet so that they can earn a living.

Thank you very kindly.

The CHAIRMAN. Thank you. And when you get the chart, will you furnish it to the committee?

Mr. STRACHAN. Yes, Mr. Chairman.

The CHAIRMAN. We would like to have the chart to which Mr. Strachan has made reference, because it might help us to visualize this problem.

Mr. LICHTENBERG. We will be very happy to get it for you, Mr. Chairman, and send it to the committee.

The CHAIRMAN. We thank you very much for your appearance.

Mr. LICHTENBERG. Thank you very much, Mr. Chairman.

Mr. STRACHAN. Thank you.

The CHAIRMAN. Mr. Schelvis?

You may have a seat, Mr. Schelvis. Will you identify yourself for the record? You are Mr. Albert Schelvis. Is that correct?

STATEMENT OF ALBERT SCHELVIS, CHICAGO, ILL.

Mr. SCHELVIS. Mr. Chairman and members of the committee, I am Albert Schelvis, a resident of Chicago, Ill. I appreciate this opportunity of appearing before you. I am here as an individual who is totally disabled for the past 10 years and, naturally, take a great interest in the bill now pending before you.

In 1936, when the Social Security Act was passed, there was great consideration given to the aged. Our lawmakers at that time adopted a rule, taking 1937 as a base line and using quarters as a yardstick, to determine the eligibility for old-age benefits. Under this fair rule, it was made possible that an aged person with six quarters minimum at the age of 65 could draw some benefits, or he could work in easy stages, earning only $50 a quarter, until he had enough quarters according to his age, to draw his benefits at the age of 65, but unintentionally they forgot the most destitute people in this country of ours, the totally disabled.

Bill H. R. 6000 and the report of the Senate Advisory Council, now before you, includes a provision of the totally disabled. I would like to give you my version of this bill and what should be done.

I would like you gentlemen to bear in mind that total disability is worse than old age or death. When a person gets old and has no income, he becomes a burden to his family. If a person dies, it is a shock to the family and a loss of income; but if a person becomes totally disabled, it is a shock to the family, a loss of income, and a very expensive burden to his family and relatives for there are medical and doctor bills to be paid in addition to his upkeep.

To corroborate my statement, I would like to give you the facts of a family with two children that I interviewed just a week ago. In 1940 the man of this family, at the age of 32, became a victim of multiple scoliosis, a lateral curvature of the spine, which disabled him for life. His wife and their relatives carried this heavy burden until January of this year when they became so destitute that they tried to get him into some institution. They finally succeeded in getting him into Cook County Old Peoples Home, but not until his brother signed papers that he would pay $20 a month for his support. He is still a burden to the family.

The recommendation of the Advisory Council and H. R. 6000 reads, in part, as follows:

> An individual disabled before July 1948 and without quarters of coverage after that date, would not meet the insured status requirements and would not be eligible for benefits.

If this section would be written into law, it would destroy the sole purpose of the act to prevent destitution and poverty for many years to come as far as the totally disabled are concerned, especially those of middle age now reaching old age. There are many of these unfortunate people who became disabled since 1937 before they could get their requirement status for old-age pension benefits, thereby foregoing all claims to receive any benefits whatsoever. Since the present law has no provision to refund any money and these people and their employers have paid a lot of money into the fund, I sincerely believe that they should be eligible for some benefits. Otherwise they would have paid for something they will not receive, which, in my opinion, is fraudulent.

The Advisory Council and H. R. 6000 also recommend that a person should have a specified amount of quarters preceding their disability to be eligible for benefits. This would be an injustice because it would exclude some people who have paid into the fund. I assume that it would be only fair that anybody who paid into the fund should be eligible for benefits regardless of how long he or she has paid in. Let us look in on a person who signed a contract with an insurance company today and paid his first installment of the premium. He immediately becomes not only eligible for benefits, but they also assume the payments of premiums to protect the future benefits which the policy calls for.

Under the present law, the Social Security Board is entitled to pay benefits not only to the insured man but also to his dependents who, in a majority of cases, never have paid a cent toward the social security fund. I do not begrudge that they are getting some benefit, but it seems so unfair that a person who never paid anything into the fund gets benefits and the person who has paid should be pushed aside. In fairness to all, I believe our lawmakers should make some adjustment to correct the injustice that now exists and make some provision to take care of all the people who became totally disabled since 1937. This could easily be done by making the clause of disability retroactive to 1937.

This is not asking too much for the small group of totally disabled for there must be enough money in this fund since the Advisory Council and H. R. 6000 have recommended to raise the benefits for the people who already receive them and for those who will be eligible in the future.

I may say that our Government is spending billions of dollars abroad to prevent destitution and poverty but has failed to do so in many respects in our own country.

In closing my testimony, I feel that I have expressed the hope and sentiments of all totally disabled people in this country of ours.

The CHAIRMAN. Any questions?

Thank you very much. We were very glad to have you appear.

Mr. SCHELVIS. Thank you.

The CHAIRMAN. Mr. Herbert J. Weber was scheduled as the next witness. He is unable to appear in person but Senator Taylor wishes to file the following statement in lieu of Mr. Weber's appearance.

(The statement referred to follows:)

TESTIMONY OF SENATOR GLEN H. TAYLOR, OF IDAHO, BEFORE SENATE FINANCE COMMITTEE, MARCH 2, 1950, ON S. 2337, THE FULL SOCIAL SECURITY BILL OF 1949

Mr. Chairman and members of the committee, I am very happy to appear before you today in support of my bill S. 2337 which would set up a comprehensive system of unemployment and disability benefits and I'd like to make a brief explanation of what the program would do, and why it is needed.

Unemployment, with its resultant loss of income, is one of the greatest threats to our economic system. The prospect of disability or loss of jobs is a constant menace to all workers. It is impossible for them now to have a sense of security. They are confronted continually by the realization that in case of unemployment all that can be expected is a temporary pittance insufficient to meet even minimum needs. If a slump comes, those that lose their jobs will receive a few small payments, after which they must attempt to exist with absolutely no money coming in. This is one of the imperfections of our democracy that must be corrected to provide security for all workers.

Equally important is the disastrous effect such unemployment has on the entire economy. This loss of purchasing power, coming at a time when buying is already dropping off, could be responsible for turning a temporary slump into a serious depression. Another depression would be catastrophic not only to ourselves, but to the entire world, and we must take every possible step to avert it. Enactment of this legislation would mean a stable purchasing power, providing a guaranteed market for industrial and farm products. The knowledge that demand will not drop off would result in continued high production and high employment, maintaining a prosperous economy. Unemployment would consequently remain at a low level, so that the costs of this unemployment compensation program would not be large.

The provisions of the bill can be stated quite briefly and simply. Every person willing to work but unable to secure employment because of disability or lack of job openings is paid 85 percent of his previous weekly earnings until he secures employment. If he is partially disabled and can be employed only at a lower rate because of the disability, payment is made for the earnings loss suffered because of his disability. Complete safeguards are provided in the bill to insure against abuse of the program by workers who refuse suitable employment.

Here is the way the program will work. First any person who loses his job can draw compensation amounting to 85 percent of his previous weekly earnings by complying with a few necessary requirements. He must register with the Employment Service and agree to accept any suitable employment offered by the Service or an employer. The term "suitable employment" means a job that he is qualified to hold and which will pay the prevailing wage for that vicinity. He is not forced to accept a job that involves strikebreaking, dangerous working conditions, or similar unreasonable requirements, but must accept any position approved by the Service as suitable for him. If he voluntarily quits such a suitable job without valid reasons, he is ineligible for compensation for a period of 4 months. These provisions are designed to prevent abuse of the system by those who have no desire to work, and at the same time give full protection to the unemployed who are out of work through no fault of their own.

Special provision is made for our elder citizens who have reached the age of 60. They will not be required to continue in the labor market and will receive retirement benefits ranging from 40 percent to 70 percent of previous average earnings, according to the number of their dependents. For example, a man 60 years of age with a dependent wife could receive 60 percent of this previous earnings, allowing them to retire in comfort and live decently for the rest of their days.

Thus, full protection is provided for our working population, regardless of injury, unemployment, sickness, or old age. If a worker loses his job, he will continue to receive 85 percent of his normal income, sufficient to take care of his needs until a job is secured. He must accept any reasonable job offer and cannot refuse to work or quit a job without valid reasons. If he becomes ill, or is injured so that he is physically unable to work, he will receive disability compensation amounting to 85 percent of his previous earnings. All that is needed to establish his disability is a doctor's certificate or examination by the United States Public Health Service. This compensation continues until he is able to work and a job is available for him.

If an employee is partially disabled, and cannot handle his previous work because of the disability, a new job that he is qualified to fill will be given him. Loss in earning power because of his partial disability will be made up by disability payments amounting to 90 percent of the difference in pay resulting from his injury.

Opponents of unemployment insurance have always concentrated on two points—the cost of the program and the possibility of men refusing to work. As I have already pointed out, the bill contains strict requirements that unemployed workers accept suitable jobs, and payments are not made to those who voluntarily quit such jobs or refuse to work. Detailed provisions contain guaranties against such abuses.

If a large portion of the population were unemployed or disabled, it is true that the cost would be high. However, with such a program in operation, there could not be much unemployment since the continuation of high purchasing power in the hands of all the people would guarantee a steady demand for both industrial and farm products. Assurance of ready markets would mean continuous high production and full employment, making for a permanently prosperous economy with minimum unemployment.

The bill is the result of years of work, research and study by a former Washington, D. C. economist, Herbert J. Weber, now in Chicago. It is an important part of a complete economic program that Mr. Weber has developed.

The basic difference between an economy of free enterprise without full social security and an economy of free enterprise with full social security is analogous to the basic difference between atomic energy in a bomb and atomic energy in a commercial power plant. Atomic fission in a bomb cumulates to the point of explosion as neutrons from the fission of each atom bombard each surrounding atom. Atomic fission in a commercial power plant maintains its equilibrium because inert material is present in sufficient quantity that the number of neutrons absorbed by the inert material equals the number of neutrons smashing the responsive material.

Without full social security, declines in the sales of an industry or of various industries breed lay-offs while lay-offs automatically decrease purchasing power and decreased purchasing power breeds more lay-offs. With full social security, there is the same kind of compensatory mechanism preventing cumulative lay-offs as in a commercial atomic power plant. With full social security, lay-offs don't materially decrease purchasing power and with purchasing power maintained substantially unimpaired there is a transference of patronage from the weakened industry or industries to the products of or to investments in other industries.

Without full social security as without the presence of inert material in an atomic pile, the spark tends to cumulate into an explosion; with full social security as with the presence of inert material in an atomic pile, there is a compensatory action that stops cumulation of the initial spark.

With the Nation's purchasing power kept substantially unimpaired by means of full social security, one cannot construct a plausible hypothetical situation, without a decline in the Nation's productive capacity, in which declining sales of some industries would not result in transference of patronage to the products of or to investments in other industries. I ask the committee's permission to insert in the record of this hearing, at the end of this statement, an analysis of all such types of economic conditions in which declining sales occur in an industry or industries, showing that under each such condition there occurs under full social security a transference of patronage to the products of or to investments in other industries.

Full social security stops cumulative unemployment not only by maintaining the purchasing power of workers laid off from jobs in industries suffering from declining sales. Full social security stops cumulative unemployment also by preventing the lack of balance between savings and investments that curtails total available purchasing power by piling up uninvested idle savings.

Without full social security there is always the possibility that the amount of savings available for safe investments will exceed the amount of safe investments then available for savings. With the amount of savings available for investment being the fruit of industries already established and the amount of investments available for savings depending upon industries being newly established or expanded, there may be at times more savings available for safe investment than safe investments then available for savings. If that occurs, the idle savings pile up as a net decrease in total available purchasing power.

Decreases in sales, production, and employment may successively follow upon such a decrease in available purchasing power.

Under full social security, with both investors and entrepreneurs assured of the substantially full continuity of the Nation's purchasing power, it is not easy to envision a lack of safe investments for all available savings. But even if such a deficit of safe investments occurs, there is under full social security still a counterbalance to resultant decreased available purchasing power which is as automatic as clockwork. Whenever decreased available purchasing power causes increased unemployment, the social-security fund immediately has to pay out more money in unemployment compensation without having any more money simultaneously coming in to use for funds. The only way in which the social-security fund can raise the money needed for its additional unemployment-compensation payments is by selling some of the securities which it had bought at the time when money coming in from social-security taxes exceeded money then going out for social-security payments.

The moment the social-security fund sells securities, the deficit of safe investments available for savings ceases to exist. The exact selfsame idle savings the idleness of which had decreased total available purchasing power and produced unemployment are used to buy the securities which the social-security fund sells to raise money for meeting its increased unemployment compensation payments necessitated by the idleness of those very funds.

Under full social security idle savings simply cannot remain idle. The moment their idleness produces increased unemployment, they go into the social-security fund through the purchase of securities sold by the fund and are promptly paid by the fund to the recipients of unemployment compensation.

A note concerning the effects of full social security upon industrial strife: Strikes and lock-outs occur chiefly over division of the money remaining in the company treasury above wages to the workers at current wage rates for the production or distribution of goods or services by means of current methods of production or distribution. Business and labor both have their interest focused upon division of the net yield from the production and distribution of goods and services by means of current methods, business wanting the entire net yield for profits and labor wanting part of the net yield for increased wages.

But suppose that better methods of production and distribution are constantly being developed through cooperation between management and labor in developing, and employing engineers to develop, better methods with the savings from development of such better methods continuously yielding jointly increased profits and increased wages. Such cooperation becomes practicable if full social security substantially guarantees the continued full incomes of any workers whose jobs are eliminated in the development of better methods of production or distribution.

With profits and wages both advancing out of savings from development of better methods, business and labor don't have their interest focused upon division of the net yield from production and distribution by means of current methods. It is easy to bargain amicably when both businesses and workers are finding their incomes advancing continuously out of the savings from development of better methods.

A word to anyone who may state that under full social security nobody would work. In the first place, the details of this program contain elaborate safeguards around eligibility for unemployment compensation. A careful reading of these safeguards, detailed S. 2337, shows that full unemployment compensation is not made available to persons unwilling to accept suitable work and shows further that administration of these eligibility requirements is effectively geared to rules of law and is as free from administrative caprice as any of the elements of our administration of justice.

In the second place, it would be of minor importance if there were only haphazard safeguards surrounding eligibility for unemployment compensation. Under conditions entailing nearly full employment, there would under full social security be no substantial period of time during which a physically sound unemployed person failed to receive an offer of work. No one could keep on dodging offers of work recurring every other day and still make a serious claim of being involuntarily unemployed. The most crafty job dodger under the most haphazard system plausible could hardly succeed in dodging 15 job offers in a month, 45 job offers in a season, 183 job offers in a year.

There is no such thing as the cost of full social security. Full social security is a means of meeting the loss of income resulting from vicissitudes. The cost of the vicissitudes is the loss of income, which may be borne by the victims

as it occurs or may be borne through regular individual savings or regular social-security taxes. The so-called cost of full social security is only the cost of the vicissitudes which have to be paid for whether there is full social security or not but which can be profoundly reduced as well as most easily borne by means of full social security.

We may hope that the Nation's purchasing power will be substantially maintained under the policies of the Full Employment Act, but we can scarcely take such for granted. If the policies of the act are successful in operation the Government will take appropriate steps to maintain purchasing power when an apparently impending drop in the pace of economic activity threatens to bring on a business depression. But the successful operation of the act requires that the congressional majority of the time accept a forecast by economists that a drop in the pace of economic activity is in fact impending, a forecast likely to be the subject of profound disagreement among both economists and legislators, and adhere to the policy of purchasing-power maintenance adopted by the Seventy-ninth Congress, with the general policies of which that congressional majority may be far out of sympathy.

We can take the substantial continuity of purchasing power for granted only under the automatic procedures of full social security.

To summarize—

Full social security eliminates the pall of individual economic insecurity. It spreads among the whole people the cost of individual losses of income from vicissitudes. It takes from everyone the continuous present fear of future economic want.

In addition to its basic effect upon individual want in bad times and individual peace of mind in good times, full social security has basic economic effects. It facilitates continuously increasing production and prevents unemployment due to deficient purchasing power or to fear of it.

Realization of world cooperation for collective security can reasonably be expected if with full social security we make it evident to all nations that unemployment and want will never drive us to militarism for reemployment and recoupment.

Dispossessing nobody, full social security is the means to active basic objectives of labor, farmers, and businessmen alike. A means to active basic objectives of labor, farmers, and businessmen is within the limits of political practicability.

APPENDIX

Since under full social security lay-offs do not substantially diminish the purchasing power of the workers laid off, lay-offs occurring in one industry do nothing under full social security to cause producers in other industries to curtail their production. Plainly, a manufacturer who makes consumers' goods knows that the amount of goods he can sell is wholly unaffected by lay-offs in other industries if lay-offs have no effect upon consumers' purchasing power.

A manufacturer who makes producers' goods is, of course, on the other hand, materially affected by any decline in production in an industry that he sells to. Declining production in any industry is an immediate cause of declining production and employment in industries selling producers' goods to it.

But, with the Nation's total purchasing power substantially unchanged, when the sales of any particular industry decline, the sales of other industries advance. If people whose total purchasing power is substantially unchanged have stopped buying the products of one industry, they have simply economized in that direction and have money left in their pockets for purchasing the products of or making investments in other industries. The latter industries sell an increased amount of goods to the extent that the customers of the former industry transfer their patronage to them or to industries buying their product and also to the extent that these customers make investments which create additional demands for their products.

(*a*) If a consumers' goods industry retrogresses while total purchasing power remains substantially unchanged, it is a certainty that the retrogressing industry's customers will transfer their patronage to other consumers' goods industries. In all conditions normally found in life there is an incalculably large desire for goods that cannot be bought because of the limitations of the family pocketbook. If the income of a family remains unchanged while some commodity heretofore included in the family budget drops out, the normal course of action is to replace it immediately in the budget with a commodity that has been desired but could not heretofore be included in the budget.

(*b*) The retrogressing industries may be producers' goods industries. The only evident reason for the retrogression of a producers' goods industry, not caused by retrogression of an industry that it sells to or by increased cost of production unaccompanied by capacity of its market to pay higher prices for its goods, are that its customer industries no longer want or no longer need its goods or that some or all of its customer industries are letting their inventories decline.

If the customer industries no longer want or no longer need the goods of the retrogressing producers' goods industries, the customer industries have funds left over for buying the goods of other producers' goods industries, for making investments, and/or for increasing the ratio of their dividends to their profits. They also acquire funds available for distribution as dividends resulting from increased profits accompanying decreased depreciation charges consequent upon decreased expenditures for capital equipment. The funds distributed as dividends are available to the shareholders for consumer expenditures and for investments.

Consequently, under full social security a decline in the demand for capital goods is accompanied by a rise in consumer expenditures. This rise in consumer expenditures leads in turn to a demand for producers' goods for producing the newly demanded increment of consumers' goods.

It might seem at first thought that the demand for producers' goods for turning out the newly demanded consumers' goods merely offsets, in whole or in part, a lost demand for producers' goods for turning out the producers' goods no longer demanded. However, any new demand tends to require new capital goods to turn out the goods newly demanded whereas a decline in demand creates a decline in the use of capital goods already existing but creates no decline in requirements for new capital goods beyond the increment that would have been required for replacements.

If the net drop in demand for producers' goods exceeds the rise in demand for consumers' goods, the rate of interest will in the ordinary course of events drop—under full social security with investors knowing that the Nation's substantially full purchasing power will be continuously maintained. A net decrease in aggregate expenditures for consumers' and producers' goods means an increase in uninvested funds available for investment. An increase in uninvested funds available for investment compels a drop in the rate of interest in the absence of the appearance of a counterbalancing inhibition to interfere with the availability of the funds for investment at the best rate of interest obtainable. Under full social security, there is no such inhibition appearing in the ordinary course of events.

The drop in the rate of interest makes the acquisition of producers' goods more profitable to entrepreneurs. In the ordinary course of events, the drop in the rate of interest eliminates any net decrease in aggregate expenditures for consumers' and producers' goods—under full social security with entrepreneurs knowing that the Nation's substantially full purchasing power will be continuously maintained.

If there is a net decrease in aggregate expenditures for consumers' and producers' goods despite the foregoing influences, then the Nation is suffering not an economic depression but an economic decline. Such a decline could scarcely occur under full social security except as the result of abnormal political conditions entailing a flight of capital out of the country or into extreme liquidity. Under such an economic decline, if the cumulative economic and psychological adversity necessary to its existence can ever occur under full social security, substantial maintenance of the Nation's purchasing power holds the effect of the decline to the minimum by keeping it from affecting industry to any greater extent then the immediate net decrease in aggregate demand for consumers' and producers' goods.

If the customer industries are letting their inventories decline they are simultaneously increasing their cash resources and have increased cash available for buying capital equipment or for making investments either directly or through the banks in which the cash is deposited.

Suppose an extreme case of general overexpansion consequent upon a period of rising prices with general eagerness to expand inventories in anticipation of further price advances. Suppose the usual break comes, business executives ceasing to buy for inventory because of fear that they are overexpanded. Suppose the break develops to the point that business executives generally curtail buying for inventory to the extreme minimum because of fast-spreading fear that the period of rising prices is turning into a period of falling prices so that

it has now become as desirable to get rid of inventory in anticipation of price declines as it was formerly to expand inventory in anticipation of price advances.

This is a situation that has brought on business depressions. Business executives stopped buying for inventory and the concerns that they had been buying from had to lay off employees. These lay-offs brought on fear of declining purchasing power and business executives generally curtailed production and laid off more employees. In the result, the concerns that had stopped buying for inventory did not have increased cash resources in lieu of inventory because their sales had declined about as fast as their purchases.

But with full social security lay-offs do not bring on fear of declining purchasing power and business executives generally do not have cause for curtailing production and laying off more employees. The concerns that had stopped buying for inventory do have increased cash resources in lieu of inventory. Many producers' goods concerns will, of course, find their increased cash resources only partly counterbalancing their decreased inventory because of the decline in their sales that accompanied the decline in the inventories of their customer industries. Consumer goods industries, however, have been wholly shielded by the maintenance of consumer purchasing power and their cash resources do increase as much as their inventories decrease.

Whereas without full social security the effort of business executives to get rid of as much inventory as possible brings about a series of curtailed production schedules and lay-offs, with full social security the effort of business executives to get rid of as much inventory as possible brings about a series of business concerns with coffers full of cash. No more nearly perfect paradise for capital equipment salesmen, industrial contractors, and stock salesmen can well be imagined. Under full social security, a general curtailment of inventories leads not to a business depression but to expansion of capital investment.

(*c*) The retrogressing industries may be export industries. Decline in exports leads to a corresponding decline in imports. Decline in imports with the Nation's total purchasing power substantially maintained leaves funds in the pockets of people that would have been used for buying the imported goods, funds that are available for buying the products of or making investments in domestic industries. The entire American economy presumably suffers from the substitution of domestic goods for imported goods which had been considered more desirable, but nevertheless the decline of the export industries has led to a transference of patronage to the products of or investments in other industries.

(*d*) When it is war industry that has retrogressed it is wartime savings and funds that no longer have to be loaned to the Government for war uses, also funds no longer taken by the Government in taxes as wartime taxes are reduced, that become available for transference to the products of or investments in civilian production with the Nation's total purchasing power substantially maintained.

(*e*) Retrogression of an industry may be due to increased cost of production unaccompanied by capacity of its market to pay higher prices for its goods. An increase in the cost of production may be of one or more of four kinds: an increase in the rate of interest, an increase in the price of essential materials or services supplied by monopolistic suppliers seeking increased profits by means of increased prices, an increase in costs because of depletion of natural resources or because of decreased productive efficiency, or a portion of a general increase in prices and incomes. The last of these four connotes capacity of the market to pay increased prices in conjunction with the increased costs and is consequently irrelevant to retrogression from increased costs unaccompanied by increased prices.

When there is an increase in the rate of interest, the investors receiving the increased interest acquire increased funds equal to the decreased funds of the industries paying the increased interest. The decreased ability of the debtor industries to buy producers' goods is equaled by the increased ability of the investors to buy consumers' goods and to make further investments.

Consequently, when a rise in the rate of interest produces a drop in demand for producers' goods it also produces a rise in demand for consumers' goods—under full social security with lay-offs in the adversely affected producers' goods industries kept from cumulating. The rise in demand for consumers' goods leads in turn to demand for producers' goods for producing these consumers' goods.

The increased demand for consumers' goods on the part of the investors enjoying increased interest receipts, together with the demand for producers' goods for turning out these consumers' goods, is likely to but may not fully counterbalance the decreased demand for producers' goods on the part of the

industries having to pay the increased interest payments together with the decreased demand for producers' goods for turning out those producers' goods.

If there is a net decrease in aggregate expenditures for consumers' and producers' goods consequent upon the rise in the rate of interest, the rate of interest will (in the absence of a national economic decline entailing a flight of capital out of the country or into extreme liquidity) decline back to the level at which it had stood previously. The investors have more money to invest than they had before. The conditions that caused the rise in interest rates would not be able to keep interest rates up in the face of an increase in funds available for investment unaccompanied by an equal increase in demand for investment funds at that increased rate of interest—under full social security, with investors knowing that the Nation's purchasing power will be maintained substantially intact.

When there is an increase in the prices of essential materials or services supplied by monopolistic industries seeking increased profits by means of increased prices, the immediate consequences are the same as the immediate consequences of an increase in the rate of interest. There is a drop in the ability of the rest of industry to buy producers' goods and an identical rise in the aggregate ability of the monopolistic industries and their owners to buy producers' and consumers' goods. The actual decrease in purchases by the rest of industry is unlikely to exceed but may exceed the actual increase in purchases and investments on the part of the monopolistic industries and their owners together with the increased purchases of producers' goods on the part of the industries supplying the goods newly demanded.

If the decrease does exceed the increase, a drop in interest rates presumably ensues because of the same effects as described above. The monopolistic industries and their owners have in the aggregate more money than they had before while the demand for capital has dropped. In the absence of a flight of capital under abnormal political conditions, the combination of increased supply of investment funds and decreased demand for investment funds lowers the rate of interest.

It is quite likely that the monopolistic industries would before long rescind part of their arbitrary price increase in the event that they found the price increase apparently permanently associated with a decrease in the sales of their products.

Under full social security, such an arbitrary price increase is relatively unlikely to occur. With cumulation of the injury prevented, if such a price increase occurs the customer industries remain relatively prosperous and in the market for the monopolized material or service and for substitutes therefor. The combination of an arbitrary price increase in an essential material or service and the existence of comparatively prosperous customers for it or for substitutes for it affords a powerful stimulus to research and capital investment for the purpose of reducing the cost and improving the quality of potential substitutes. The likely end result of the price increase is expansion of the use of substitutes.

When there is an increase in the cost of production consequent upon depletion of natural resources or decreased productive efficiency, a serious decline in the national economy has occurred. People are putting in as much labor as before and getting less product to show for it or else people are putting in more labor than before without having any additional product to show for it. Full social security minimizes the likelihood of such disastrous developments by facilitating concentration of effort upon continuously increasing productive efficiency. If such developments do occur, however, neither full social security nor any other political institution can maintain the total of purchases and investments. If the Nation's economy becomes physically or technologically incapable of producing as much goods and service as previously, nothing can maintain the same total purchases of and investments in goods and services as previously.

Full social security prevents cumulation of such injury if it occurs, however. With the Nation's total purchasing power substantially maintained, sales of the affected products tend to continue substantially unchanged in value though diminished in quantity. The consequent increased prices of the affected products strongly stimulate research and capital investment in substitute products for sale to customers ready and able to buy. Under full social security, such basic increases in the cost of production would be likely to result in transference of patronage to inferior substitute products. Insofar as such transference did not occur, such basic increases in the cost of production would produce equivalent increases in the cost of living. In the result, under full social security

the injury to the national economy would be held to the immediate increase in the cost of production of the affected products.

It goes without saying that transference of patronage may not be instantaneous. Obviously, too, industries benefiting from the transference of patronage may not expand immediately. Producers' goods industries may feel effects of declining orders from retrogressing customer industries before they feel effects of increasing orders from the industries that benefit from the transference of patronage. Whatever time interval there may be, maintenance of the Nation's substantially full continuous purchasing power holds the effects of the time interval to the minimum, keeping the effects from injuring consumers' goods industries altogether and giving assurance that a transference of patronage is in process which can be expected to replace the lost orders for producers' goods from the adversely affected industries with increased orders from other industries.

Some industries benefiting from transference of patronage might increase their prices and then refuse to expand for fear of having to revert to the old prices in order to sell the increased production. It is alway possible that monopoly conditions might enable these industries to maintain such a policy. There would, however, still be the same transference of patronage to industries that did expand in response to it. The monopolistic industries by means of their increased prices would obtain part of the purchasing power owned by the former patrons of the declining industries but this purchasing power would have moved only for the former patrons of the declining industries to the owners of the monopolistic industries. The purchasing power would be substantially undiminished and would be transferred on to industries that did expand in response to it. The owners of the monopolistic industries would have obtained a monopoly profit—which they might well find themselves forced to share with their workers—but this would have been due to the existence of monopolistic conditions, not to full social security.

The CHAIRMAN. Mr. O'Connor?

You may be seated, sir. The committee will be very glad to hear from you on H. R. 6000. Will you identify yourself for the record please?

STATEMENT OF EDWARD H. O'CONNOR, CHICAGO, ILL., MANAGING DIRECTOR, INSURANCE ECONOMICS SOCIETY OF AMERICA

Mr. O'CONNOR. Mr. Chairman and members of the committee, my name is Edward H. O'Connor and I am appearing today on behalf of the Insurance Economics Society of America, an organization devoted to the study of all forms of social insurance. My home is in Chicago Ill.

I shall confine my statement to two provisions contained in this bill lump-sum death benefit for all insured workers and permanent and total disability.

You will agree with me that the elements of personal security and family protection are very close to the heart of the individual and especially the head of the family, not to forget the housewife. Naturally, everything the Government is doing in a compulsory way to foster and promote that security and protection cannot fail to have profound repercussions within the American family life. That is the reason the most careful attention should be given to the possibility of undermining the moral fiber which is nowhere more precious than in the American family, and which may well be the effect of further compulsory extension such as you are considering in this bill. I respectfully urge you to exercise due care and reasoning in your deliberations on the establishment of a new level of social-security benefits, lest we create a commonwealth which no longer derives its strength and in

centive from the responsibility which it owes to itself and to its families, but which is dependent upon the state.

Payment of lump-sum death benefit: The existing law provides that a lump-sum benefit equal to six times the primary insurance benefit will be paid upon the death of an insured worker if there are no survivors immediately eligible for survivors' benefits. This provision was added to the Social Security Act by the 1939 amendments on the theory that the insured worker had an equity in the system, which system prior to 1939 was funded and on a reserved basis and therefore the benefit was equivalent to what is known in insurance parlance as a "surrender value." The new provision in this bill, however, provides that a lump-sum benefit equal to three times the primary amount will be paid whenever an insured worker dies, even though there are benefits payable to his survivors which are worth many times the amount of taxes he would pay into the system. This change is completely inconsistent with and contrary to the original purposes of the limited lump-sum death benefit.

In examining this specific proposal it is necessary to refer back to the original Social Security Act of 1935. That act contemplated that in effect the employee would be building a savings account which would be used at the time of retirement to pay the workers' retirement benefit. It was quite logical, therefore, under such a theory, that there be a provision for the return to the estate of the covered worker taxes which he had paid, if they were not used for their original purpose of providing a retirement income. We have, however, departed almost entirely from the philosophy of accumulation of taxes under the present Social Security Act. The philosophy of the present act is largely taxation of present workers to provide funds to pay pensions to those retired. Under this philosophy there is no accumulation of individual savings out of which a death or funeral benefit can be paid. Any present death or funeral benefit must be paid out of the contributions of surviving workers. There is now very little matching between contributions and benefits. Current contributions from nonclaimants provide funds to pay claimants. It is illogical, therefore, to even retain the concept that the employee should get his taxes back if he has no surviving dependents. The present benefit which was included as a matter of equity, is no longer justified, and it would be entirely proper and logical to eliminate it altogether from the act.

Senator KERR. Mr. Chairman, may I ask a question?

The CHAIRMAN. Yes, Senator Kerr.

Senator KERR. Do you think that that should be eliminated from the act, or that the act should be reformed to be consistent with the original concept?

Mr. O'CONNOR. Well, I think it would have to be examined and rearranged in some way to be in line with the original concept, if we are going to retain it at all. But now that that concept no longer exists as it did in 1939, some adjustment should be made in the theory. Otherwise, I can see nothing but illogical reasoning there to follow through on it. Because we have changed the theory, changed the situation.

The introduction of death or funeral benefits to all, as provided by H. R. 6000, regardless of the payment of survivors benefits, becomes

simply an additional benefit for which a substantial charge must be included and affords relief to a worker in an area which cannot be considered within the insurance system. Any death or funeral benefit should be paid subject to a means test under the State assistance program. This would eliminate a tax on low incomes for benefits to individuals of all income brackets.

Senator MILLIKIN. Would you mind stating that again?

Mr. O'CONNOR. Any death or funeral benefit should be paid subject to a means test under the State assistance program. This would eliminate a tax on low incomes for benefits to individuals of all income brackets.

Today over 80,000,000 persons—more than the entire number that would be covered even under this bill—now have life insurance policies with total protection exceeding $213,000,000,000. Four out of five families are protected by one or more policies. One billion five hundred million dollars paid out in death benefits in 1949. This proposal appears to me to be an attempt by the Federal Government to directly invade a field now being adequately served by a form of private enterprise, a field that by no stretch of the imagination can be termed "neglected" and necessitating the benevolent and financial assistance of Government.

The argument for this proposal in H. R. 6000 is based presumably on cases where no lump-sum benefit is due because survivorship benefits were called for and paid for 1 or 2 months, with the result that the so-called insured's family received less money than would have been paid had there been no survivors. There is no merit to that argument. The liability so-called has been discharged. Why be solicitous of a certain class of beneficiaries when the act contains so many inequities of greater importance. May I mention, for example, the inequity which deprives a young girl who has been working and paying old age and survivors insurance taxes for 5 years and then gets married and loses all rights. Another example is that of depriving a man over 65 of any incentive to work by increasing his monthly benefits.

No purpose would be served by the Government entering into this field in which private enterprise has demonstrated its ability to fulfill the needs of our people. I urge this committee to reject that provision of H. R. 6000 which provides for the payment of a lump-sum death benefit for all insured workers.

Permanent and total disability insurance benefits: This is the most dangerous proposal contained in H. R. 6000 considering the aspects of administration, costs, and the future of the system insofar as the covered workers are concerned. In my humble opinion it is in this bill cloaked with the hidden motive and desire to pave the way at an early date for compulsory medical care for all, a slow inoculation and softening up of the American people for the imposition of socialized medicine.

In a recent statement on H. R. 6000 the board of trustees of the American Medical Association made this significant observation:

> To initiate a Federal disability program would represent another step toward wholesale nationalization of medical care and the socialization of the practice of medicine. The program as now proposed would not accomplish the entire nationalization of medical care but the inevitable expansion and liberalization of the program which would surely follow makes probable its eventual accomplishment.

At this point, Mr. Chairman, I would like to say that the Ways and Means Committee is to be congratulated upon the position they took as to this original bill, when they were thinking about temporary disability. I think there were many arguments brought up, there, which amply justified their throwing out that provision of temporary disability.

This provision as written in the bill contains restrictions for benefits that could not be continued by any stretch of the imagination. Hardship cases, not within the restrictions, would crop up in ever-increasing numbers eventually forcing a literal interpretation of the restrictions. It would be subject to later liberalizations like those now being considered for OASI.

You have been told by some of the witnesses appearing before you that the administration of this provision would not add a great deal of expense or increase in personnel. Unfortunately these witnesses lack the experience in this field and they fail to recognize that disability insurance cannot be administered as simply as the OASI program. And this point is rather well elaborated upon in the latest study by the Brookings Institution.

Senator MILLIKIN. Is it your contention that there is no pressing need for the Federal Government to enter the field?

Mr. O'CONNOR. Not on a cash benefits program. I have another solution to present later on, sir.

Senator MILLIKIN. All right.

Mr. O'CONNOR. In 1948 two members of the Senate Advisory Council on Social Security, the only two members of this council having had experience with this type of insurance, submitted a report opposing permanent and total disability insurance and their report indicated that permanent disability insurance cannot be provided safely by the Government on a compulsory basis, either from a political, an economic, or social point of view.

In considering "permanent and total" disability benefits let us cease wishful thinking and be practical. Most of the life insurance companies some years back included "permanent and total" disability clauses in their policies and the clauses were written in tight and restrictive language. Yet with their efficient operation, and I state that knowingly, the claim situation could not be controlled and they suffered the loss of hundreds of millions of dollars; in fact the total is between one half and a full billion dollars.

The unfavorable experience of the insurance companies with permanent and total disability was greater under group insurance where the rates of disability during the depression rose to greater proportions than did the rates under ordinary insurance. This is significant when considering total disability on a contributory basis in a social security program because group insurance was directly tied to wage earners, issued on a wholesale basis without underwriting selection, and it was free from the hazard of overinsurance.

Senator MILLIKIN. Assuming it to be correct, it would answer the proposition that the insurance companies overweighted their risks by taking in too many big rich people for big fancy policies; is that not correct?

Mr. O'CONNOR. Well, that may be, to a certain extent, but the spread was pretty well set, Senator Millikin. There were some in

there that would probably have as much as $500 or $1,000 monthly total disability if they were disabled. But then there were thousands and thousands covered under group policies, which would offset that.

Senator MILLIKIN. I am not talking about that. To me what you say about the group policies is significant, because if correct it tends to offset the argument that the reason insurance companies fell on their faces was because they put out too many policies calling for large fancy payments to persons who could afford big expensive policies.

Mr. O'CONNOR. That may have had an effect on it. I will go along with you on that thought also.

Disability is an intangible, subjective concept, it differs materially from the definite fact of death or old age. The attitude of the individual when suffering a particular condition invariably governs to some extent the degree of disability. For example, it was the depression of the 1930's that created the heavy losses that forced the insurance companies to withdraw from this field. It is also recognized that the payment of disability benefits for any length of time, even in modest amounts, undermines human personalities, destroys incentive and the will to seek work fitted to one's capabilities.

Senator KERR. Did you say that later you do have a suggestion to make?

Mr. O'CONNOR. Yes; I will come to that in a moment, sir.

At this point I would like to present a few concrete practical illustrations of what H. R. 6000 actually proposes in the field of disability. And I do this having in mind that you gentlemen probably will receive many requests from your constituents as to why this fellow isn't being paid, and so on. Because in the bill it all looks very simple as to how it might be administered.

Now, the definition of disability set forth in the bill reads:

> inability to engage in any substantially gainful activity by reason of any medically demonstrable physical or mental impairment which is permanent.

Let us consider mental disability. Mental impairment brings up squarely into the psychiatric field. Some idea as to the importance of this field is indicated by the statistics for 1947 that in State hospitals for mental illness alone there were over 450,000 inmates. I think the latest figures are about 470,000. In 1946 there were over 120,000 psychiatric first admissions to hospitals on account of general paresis, alcoholic, cerebral, arteriosclerosis, senile, manic-depressive, dementia praecox, and other causes. Commitment to a mental institution has economic consequences to the individual, the individual's family, if any, and the taxpayers supporting the institution, which differ in degree only dependent upon whether the mentally ill person is insane a few months, a few years, or the remainder of his life. H. R. 6000 apparently would provide or deny benefits, however, dependent upon whether the prognosis as to his eventual recovery is favorable or unfavorable.

A very interesting situation is presented by persons who are committed to institutions for the criminally insane. Apparently these persons would be entitled to benefits if the prognosis for their recovery is unfavorable. Thus, where an individual is charged with a crime, if the jury verdict is that the individual is sane, neither the criminal nor his family would receive benefits, though the economic consequences

of his imprisonment are the same whether or not the individual is found to be sane or insane. Presumably, if found to be insane and the prognosis of his insanity is unfavorable, monthly benefits would be paid. Truthfully, I am rather confused as to the intended purpose of these payments.

What is meant by "substantially gainful activity" as it is set forth in the bill? There is no definition of "any substantially gainful activity," nor are we enlightened as to congressional intent by any statement in the Ways and Means Committee report accompanying H. R. 6000. However, apparently, persons can qualify for benefits as "permanently and totally disabled" and still be able to engage in a considerable amount of work for pay. The effect of work on disability benefits is set out in section 220 (a) of the bill. This section states that when an individual earns more than $50 in a month as an employee, he shall forfeit a month's benefit.

One would normally think that when a person actually earned a hundred or so dollars in a month he would thereby have demonstrated that his disability did not render him "incapable of engaging in any substantially gainful activity." But apparently this is not the case, in view of the specific provision that earning in excess of $50 a month means loss of a month's benefits. It is not certain just how remunerative activities must be to be "substantially gainful."

There are also provisions as to disability benefit forfeiture for earnings in self-employment. A month's benefit is lost by the disabled person when "net earnings" of more than $50 are "charged" to him.

Net earnings in his taxable year in excess of $50 per month are "charged" only after his net earnings exceed $600. The first month is charged with the first $50 over $600, and so on. Whether or not a "permanently and totally disabled" person draws benefits during a year is thus dependent on his net profits from his activities—a kind of profit underwriting arrangement.

There is, however, one escape clause, permitting him to draw benefits regardless of his substantial net business income. No amount is charged for any month in which "such individual did not engage in self-employment." Apparently he will at least receive benefits during any vacation from his business.

Even the phrase "did not engage in self-employment" is made flexible. The individual does not so engage when "it is shown to the satisfaction of the Administrator that such individual rendered no substantial services." Here again we find the flexible and undefined term "substantial." The section directs the Administrator to "prescribe the methods and criteria for determining whether or not an individual has rendered substantial services."

Engaging in noncovered work presents an unexplained difference in forfeiture of benefits because of earnings in disability cases and benefit forfeiture in other benefit cases. In retirement and survivor cases, forfeiture because of earnings is dependent on whether these earnings were in employment subject to the OASI taxes. If not so subject, the individual's earnings are ignored, regardless of the amount. But in the case of disability, the fact that the work is in exempt work makes no difference.

I assume that the work test for the other benefits is limited to covered work because of the administrative impossibility of checking

on exempt work. I do not know how it is contemplated that in disability cases earnings in exempt work will be checked on.

H. R. 6000 in dealing with disability does so on the theory that the individual must be both disabled and retired. It awards disability benefits to individuals and then provides that work beyond $50 per month means loss of benefits. Obviously this means a very strong incentive for the disabled to stay disabled and retired. The bill, apparently in recognition of this, authorizes the administrative people to throw a person off the rolls who refuses rehabilitation. I don't like that kind of authority being vested in administrators. We have been telling people for 13 years that social-security protection is theirs as a matter of right. This tells them that it is a matter of administrative discretion if they are disabled.

The point I want to make is that H. R. 6000 itself recognizes that social insurance disability benefits are inherently inappropriate to principles of the social insurance concepts we have established over the past 13 years. Without a work test we lose justification of paying disability benefits under the program. With a work test we are defeating an important policy of persons working despite a disability. By giving administrative discretion in forcing people off the rolls we destroy the concept of "earned right" which is featured by proponents of the system.

Marginal workers can qualify for benefits larger than their annual earnings—and continue to work. For example, a woman who picks up $200 for Christmas work and $200 for summer sales in some retail store, can qualify for $300 per year in disability benefits. She can thereafter earn up to $50 in any month without affecting her benefit. If she earned her regular $200 in December and $200 in August sales she could still collect $250 disability for the remaining 10 months.

A physically handicapped odd-job man who averaged $40 per month could qualify in 5 years and continue at his insubstantial work.

Marginal workers who collect both workmen's compensation and disability present a particularly unfortunate situation. For example, John Jones, who has been averaging $100 per month, under most State laws would receive two-thirds of wages for disability under workmen's compensation. Under H. R. 6000 he would also receive $25 or more—half his $50 plus increment benefit—an aggregate of $91 per month. In addition, he has freedom to live where he wishes, do small odd jobs for extra money if he chooses, and a certain income of $91 in good times and bad. He is not subject to withholding taxes for income tax and social security, union dues, or other deducts. He escapes carfare and other work costs. What is his incentive to engage to productive work?

Gentlemen, in giving you these practical illustrations I am attempting to show what we get into when we try to provide and handle disability coverage. We have perhaps two important effects to consider: (1) the effect on the individual concerned and his family and those whose taxes must support OASI, and (2) the effect on the entire OASI system.

Using the statistics of the varous health surveys as the basis for estimation, the number of those in the labor force permanently disabled, plus those who would be in the labor force but for disability, total around 1,500,000 persons. The existence of such a class of unfortunates calls for an integrated system of dealing with the situation.

chief of which should be rehabilitation of the disabled and not cash benefits, which would result in a pension roll of huge proportions made up of individuals who would be compelled to surrender the dignity of self-support to the so-called peace of mind that comes to one who is the recipient of a monthly Government check. Have we in this country come so far that we no longer place any value on the intangibles of personal pride and individual self-determination, and the surrender of these and other rights to the physical comfort of a monthly stipend?

Experience demonstrates that cash sickness benefits operate as a deterrent to rehabilitation, diminish the incentives toward rehabilitation, and self-support and is therefore socially undesirable. As the London Economist stated some time ago, the ultimate cost and waste of a disability program not geared to incentives to recovery is "locked in the subconscious minds of millions of hypochondriacs."

I have studied the very remarkable provisions that have been made in the Scandinavian countries for 70 and 80 years for the care of the aged and permanently disabled. Their system has the triple advantage of first, providing ideal care; second, reducing the cost to a minimum by changing it from a cash to a service basis; and third, by maintaining the pride and dignity of the individual. May I, at this point, make the suggestion that the experience in such countries as Denmark, Sweden, as well as Switzerland, and Holland, would provide many worth-while ways in which the problem of caring for the aged and permanently disabled can be solved without resorting to such radical techniques as a Federal compulsory system of cash benefits, which would blanket the country with a most expensive plan.

Senator KERR. What do you mean by "changing it from a cash to a service basis"?

Mr. O'CONNOR. At one time they had mostly all cash, and then they turned around to a service basis. They set up a home, where there will probably be six of them to take care of them, and they included medical care, and so forth.

The question of caring for and rehabilitating the disabled should be left to the States.

Senator MILLIKIN. Let me back-track. What was the net result of your observation of the Scandinavian systems?

Mr. O'CONNOR. It was less costly, maintained very well, and they all maintained their dignity and were very happy in their situation.

Distribution of the disabled varies among the States, and flexibility of State systems will allow better adjustments to actual conditions. The States are administratively closer to the conditions and cases of the disabled.

Senator MILLIKIN. Let me back-track again. What Scandinavian systems did you study?

Mr. O'CONNOR. Those in Sweden and Denmark. Those were not studies conducted over there: they were studies made in this country. I was only in Europe once, and that was during the First World War. I have never been lucky enough to get back there since.

The State public assistance systems are closer to the disabled in their homes, have medical facilities or arrangements for the same, possess case-work services for treating individual cases, can engineer the retraining and rehabilitation of the disabled as well as find work for them, and can render such financial assistance as befits each case. Where institutionalization is required, State and local institutions

already care for many of the disabled and this service can be expanded to meet additional needs.

The administration of permanent and total disability benefits is more akin to the administration of old-age assistance than to old-age and survivors insurance. Under OASI you are not confronted with the various degrees of eligibility; you do not have to follow through continually checking the progress of the disability. This surveillance is similar to what is required in administering public assistance, always on the alert for false claims, misrepresentation, and malingering. In these respects, old-age assistance and disability benefits follow the same patterns, and the administration should be at the local level where the costs of such a program can be controlled.

Wisconsin since 1945 has provided a special program of public assistance for permanently and totally physically disabled persons. This is the first specific law making aid available to the totally incapacitated as a separate group. A maximum cash aid of $80 per month is provided and the local administration is in the hands of the county agencies which carry on under the supervision of the State department of public welfare.

The State, and not the Federal Government with a cash-benefits program, is the answer to the problem of permanent and total disability. The State could balance the incentives to cash benefits and to rehabilitation since these two incentives may conflict. When benefit payments are readily available as a matter of right, there may be a reluctance to enter a process of rehabilitation and also a temptation to drop it after once started. The disabled person should be encouraged to again stand on his own feet. We should not make his bed too soft. Rehabilitation is to the ultimate benefit of both the individual and society.

The Federal Government should be kept out of administering such a program because it would lead to outright political control and tremendous abuse while political interests in the States would be held to a minimum, with better care organized on a State or even on a community basis.

In the light of the fact that no one can predict just what a permanent and total disability program as called for in H. R. 6000 would cost, and in view of the many facts and arguments submitted opposing such a development in social insurance, it would seem that the most practical approach is a public assistance program for the needy disabled—a program which is provided for in other sections of H. R. 6000 through the sounder and less costly Federal grants-in-aid to the States.

I urge you therefore to remove the permanent and total disability insurance provision from the bill since it will not result in the denial of benefits to the needy permanently disabled. At the same time it will continue the responsibility in the public-assistance program where it rightfully belongs. I can visualize only confusion and grief by the adoption of the proposed permanent and total disability provision in H. R. 6000.

The CHAIRMAN. Thank you very much for your appearance.

Mr. O'CONNOR. Thank you, sir.

The CHAIRMAN. Mr. John H. Miller?

You may identify yourself for the record, Mr. Miller, and we will be glad to hear your statement.

STATEMENT OF JOHN H. MILLER, VICE PRESIDENT AND ACTUARY, MONARCH LIFE INSURANCE CO., SPRINGFIELD, MASS.

Mr. MILLER. Mr. Chairman and members of the committee, my name is John Miller. I am a vice president and actuary of the Monarch Life Insurance Co. of Springfield, Mass.

I have a written statement, which I will summarize, if I may, omitting some sections.

The CHAIRMAN. You may put your entire statement in the record if you desire to do so, and then you may refer to it, as you wish.

Mr. MILLER. I will do so, briefly, if I may.

Two years ago I served as a special consultant on disability insurance to the staff of the Advisory Council of this committee. Subsequently, I have followed the legislative developments in social security with keen interest.

My study of H. R. 6000 has been devoted primarily to the provisions for disability benefits. The advocates of these provisions contend that the qualifying requirements and the definition of disability are sufficiently strict to keep the cost at a moderate level. These requirements and definitions may possibly operate as intended in the case of a steady worker responsible for his family support, or at least for his own, but when we consider that our labor force includes millions of single men and women, many living with relatives and not wholly dependent on their own earnings, numerous examples show that even the minimum benefit proposed would often be a strong temptation to make improper claims. This is particularly true because of the possibility of supplemental earnings under the work clause.

Examples of situations which invite abuses of the benefit system fail, however, to illustrate fully the really serious issues involved. A more fundamental consideration of the disability benefits proposed requires a careful analysis of the condition of disability. How an individual reacts to an injury or disease depends upon his character and upon his circumstances. The area between good health and absolute incapacity to do any physical or mental work is so broad that the term "disability" can not be precisely defined. Thus, a man who has a high sense of responsibility will return to work as soon as possible, while the irresponsible individual will claim disability for a much longer period.

It is sometimes asserted that proper adjudication and administration of claims will avoid the abuses I have mentioned. Competent claim administration will prevent a great number of potential abuses, but it will not overcome the fact that human behavior is largely determined by incentives. If the incentive to remain disabled is strong enough, the duration of the disability will be substantially increased despite the best of claim administration.

This fact is demonstrated by the recent disability experience of the Prudential Insurance Co., which I have summarized on this chart A. This experience covers the period of 1946–48 and therefore is free from depression or wartime influences.

It shows the differing experience under three types of policies. The first bar is based upon policies providing monthly disability incomes, which in this case averaged about $39 per month. The second bar shows the experience for a similar group——

Senator MILLIKIN. That says, "policies providing disability insurance and waiver benefits." What are waiver benefits?

Mr. MILLER. The premium was waived, as well as the payment of an income provided.

Senator MILLIKIN. I see.

Mr. MILLER. In the second bar we had a similar group of policies providing the waiver benefit only, with no cash benefits; and the third bar shows experience under small intermediate policies which provided waiver of benefits for a year, followed by disability installments at the rate of about $5 a month, installments of the face amount.

The second set of bars shows the corresponding comparison after 10 years of disability.

Senator KERR. What does that mean?

Mr. MILLER. The people here [indicating] had been disabled for 10 years and 6 months. There was a 6 months' qualification period involved. These are the number of people, shown in the first set, of bars qualifying for benefits after 6 months of disability, and this second set shows how many were still disabled and drawing benefits 10 years later.

The CHAIRMAN. After a lapse of 10 years?

Mr. MILLER. Yes, sir. All comparisons are based on 100,000 policyholders of the same age distribution.

It will be noted with the cash-income benefit of $39 per month, on the average, which incidentally is less than the $50 average estimated for the H. R. 6000 benefits, more than twice as many are disabled as under policies providing little or no cash benefits.

Senator KERR. But under policies which, aside from the cash benefit, were identical, I take it?

Mr. MILLER. As to the first two, that is true. They are ordinary policies. The third bar is based on intermediate policies having an average face value of only about $500, so that this shows the effect of the difference in the amount of benefit. Here it was $5 a month, which reduced the amount of insurance payable on death. The average payment of $39 a month in the first case did not affect the death benefit.

Senator MILLIKIN. Would you mind summarizing your conclusions from that chart?

Mr. MILLER. The conclusion that I draw from this is that where there is a substantial cash benefit, in this case an average of $39 a month, there is much more disability claimed than where there is either no cash benefit but simply a waiver of premium, or where there is a very small cash benefit.

Senator KERR. And that is as between groups of people who otherwise are similar?

Mr. MILLER. Yes; the same age distribution, covering the same period of years.

The CHAIRMAN. And the same given number of people?

Mr. MILLER. Yes; all three bars, or all six actually, are based on 100,000 policyholders. That is, these are rates per hundred thousand.

Senator MILLIKIN. But are they all suffering from the same degree of disability?

Mr. MILLER. That is the point that I would like to develop now.

The definitions are substantially the same, if not precisely the same, but the incentives are different.

Senator MILLIKIN. Let us assume the same degree of disability for the occupants of all three bars there. Let us assume that. How would you know? I mean, if a fellow does not apply, how would you know? The difference between the top of your second bar and the top of your black bar reflects the people who are not getting benefits, does it not?

Mr. MILLER. That is true.

Senator MILLIKIN. And if they are not getting benefits, how are you in a position to examine them and to determine their degree of disability?

Mr. MILLER. That is a very good point. But this difference has been found in all sorts of comparisons. Now, in my own company I have on a number of occasions analyzed our experience according to the size of the benefit, and I find that where the benefit is, say, as much as $50 a week for disability, the rates are much higher than at $20 or some smaller amount. So there is a very close correlation between the size of the benefit and the amount of disability claimed.

Senator MILLIKIN. I think common sense would lead you to that conclusion. But I am just wondering about the validity of your statistical approach, there, unless you can show that everybody in all of those bars suffered from precisely the same degree of disability.

Mr. MILLER. That is the point that I am trying to bring out, or will bring out later, I trust, that the degree of disability is a very difficult thing to measure or ascertain.

Senator MILLIKIN. All right. Go ahead.

Mr. MILLER. Now, this difference in experience among the three types of benefit cannot be the result of differences in selection of the risks, for all groups represent insured policyholders in the same company selected on the basis of health, habits, occupation, and character. Indeed, it is probable that those insured for income benefits were the more carefully selected.

It also seems implausible that the higher costs under the income benefits can be accounted for by lax claim administration. All three groups were handled by the same company, and it is not reasonable to believe that more care was taken in the payment of very small claims than in those involving substantial amounts of cash.

My interpretation of these data is that the payments under the waiver and installment benefits, the second and third columns, there, represent actual disability, if you can define such a term, while under the income benefit payments were made to many individuals who, but for the incentive of a disability income, might have become reestablished as productive members of society.

I do not mean to state or imply that the difference is due to malingerers who have deliberately deluded the insurance company. Rather, I would say they have deluded themselves. Many have deluded their doctors as well, no doubt. There is little argument today over the proposition that the mental attitude and the emotions of an individual have a profound effect on his physical well-being. These apparent malingerers are, for the most part, really disabled according to any practical criterion of disability, but would not have been if there had been no disability income to rely upon. I do not believe that a Government administrator or a Government rating board would be any quicker to terminate disability benefits in such cases than the insurance claim adjuster.

Chart B shows the experience during the depression under two types of benefits. This broken line, here, shows the loss ratios on noncancellable life income disability policies. These were the fancy benefits to which Senator Millikin alluded earlier.

Senator KERR. The what?

Mr. MILLER. The fancy benefits, large amounts in many cases.

Now, the advocates of Federal disability benefits have stated that this experience, and similar experience under life-insurance disability benefits, is irrelevant, because of the nature of the selection and because of the large benefits frequently involved. But here in the solid line we have the experience under group-life-insurance benefits, showing that with small policies issued to workingmen under a plan that eliminated the effects of individual selection, we had an even worse trend and experience during the depression. In fact, as a result of that experience, most companies discontinued not only the noncancellable forms of disability benefits but also this particular form of group benefit.

Senator MILLIKIN. What system of graph paper did you use in doing your base work?

Mr. MILLER. This is a chart called a ratio chart of semilogarithmic chart. The vertical scale is a logarithmic scale, and it is used where we are comparing unlike things.

Senator MILLIKIN. It has a tendency to exaggerate your rise, does it not?

Mr. MILLER. No; it actually flattens it out.

Senator MILLIKIN. I do not mean that it is wrong mathematically, but I mean visually does it not give a larger distortion than the logic of mathematics might call for?

Mr. MILLER. On the contrary, sir, it reduces the steepness. For example, here, from 100 to 150 is this distance [indicating], whereas, going up the same distance as from the 100 line to the 150 line brings us almost to the 250 line.

Senator MILLIKIN. And how about your time element?

Mr. MILLER. The time is the same.

Senator MILLIKIN. Evenly spaced?

Mr. MILLER. Yes. That is why we call it semilogarithmic. It is arithmetic on the horizontal scale and logarithmic on the vertical scale.

Senator KERR. Apparently in 1933 there was a very sharp downturn in the line?

Mr. MILLER. That is true.

Senator KERR. What does the information show as to how long that trend continued? And to what extent did it go?

Mr. MILLER. It is impossible to give that information on these particular trends, because as to two of the five or six companies whose noncancellable lifetime benefit experience is involved here, one went out of business and the other was drastically reorganized, because they were "broke" by these benefits.

Senator KERR. Well, now, what about those who survived?

Mr. MILLER. Their experience improved right through to about 1945. The wartime experience was very favorable. Then, since the war, there has been a slight upward tendency.

Senator KERR. Can you tell us whether or not it has developed to the point where the loss ratio now is below the 100, or above it?

Mr. MILLER. On the surviving companies, involved here, I am not sure. I think the ratio is still at an unprofitable level. I would say 100 percent—near 100 percent—but I shouldn't give a figure because I haven't checked that.

Senator KERR. I would think that when the experience is along the horizontal line marked "100," it is a break-even line. Is that correct?

Mr. MILLER. That is correct for the group line, which shows the difference between actual and expected losses.

Senator KERR. I do not see any difference between actual and expected. I only see one line. Would that be the actual, or the expected?

Mr. MILLER. In the case of the group experience, the 100-percent line indicates that the actual experience was just the same as the expected; but on the noncancellable, the 100 percent indicates that the loss ratio is a hundred percent, which would mean that the company paid out just as much in claims as they took in in premiums, leaving nothing for expenses and taxes.

Senator KERR. Well, of course, they stopped writing new policies of that kind, did they not?

Mr. MILLER. That is true.

Senator KERR. Is it the case that they are still paying under their old policies to any considerable extent?

Mr. MILLER. Yes; they are, very heavily. I would be very glad to supply such information as is available on that point later, if that is desired.

The CHAIRMAN. If you will do so, we will be glad to have it.

(The information to be supplied follows:)

MONARCH LIFE INSURANCE CO.,
Springfield, Mass., March 16, 1950.

Hon. WALTER F. GEORGE,
Chairman, Senate Committee on Finance,
Senate Office Building, Washington, D. C.

DEAR SIR: In the course of my testimony concerning H. R. 6000 on March 2, 1950, you inquired as to the subsequent course of the ratios shown in chart B. This chart indicated the disability experience of certain companies under group life and noncancellable disability indemnity insurance from 1925 to 1934. I stated that comparable data could not be shown for the later years, but that I would file with the committee such information as was available. This information follows:

The group disability experience presented in chart B was based upon the business of seven companies, which, during this period, provided approximately 90 percent of all group insurance in the United States. Until 1932, group life insurance policies contained total and permanent disability clauses providing for the payment of the face amount either in one sum or in installments. Because of the very adverse experience that developed under this form of benefit, particularly during the depression, the principal group insurance companies in 1932 discontinued writing this form of benefit in new policies. Also this form of disability clause was removed from many other policies on their subsequent renewal. (Transactions of the Actuarial Society of America, vol. XLII, p. 94). Therefore, by 1935 so much of the group life insurance business had been issued with, or changed to, a more restricted form of disability provision that the subsequent experience is not comparable with that shown for the years 1925 to 1934.

The difficulty in extending the line showing the loss ratios under noncancellable disability policies providing life indemnity was occasioned by the fact that one of the companies whose experience is included was forced into reorganization and another one was liquidated and its business reinsured. In the first case, the disability policies were continued by the reorganized company after the benefits were reduced to percentages of their original amounts ranging from 20 to 90 percent, the ratio depending upon the form of policy and other

factors. In the second case, the reinsuring company agreed to pay amount varying from 25 to 100 percent of the original indemnities. In both instance the reduced indemnities were subject to restoration from future earnings. A thir company included in this group has been very successful, but changed to the sal of a different type of policy not providing life indemnity. Since separate figure are not published to show the subsequent experienec under its life indemnit policies, it was necessary to exclude the business of this company as well a that of the other two in order to show comparable figures from 1925 to date o this type of business. After excluding these three companies, there remaine six companies, none of which have written any of this noncancellable dis ability business since 1931 but all of which have continued to pay benefits unde the renewing policies in accordance with their original terms. There are show in the table below the noncancellable disability loss ratios portrayed in chart B together with the corresponding ratios for these six companies, the secon series being extended through 1949. It will be noted that while the cours of this experience has been very erratic, the losses have substantially exceede the premiums earned by the companies in every year since 1930.

Loss ratios on noncancellable life indemnity policies

Year	9 companies (PCAS XXI, p. 246)	6 companies (with no change in benefits or type of business)	Year	9 companies (PCAS XXI, p. 246)	6 companies (with no change in benefits or type of business)
	Percent	*Percent*		*Percent*	*Percent*
1925	116	85	1938		3
1926	103	125	1939		1
1927	91	84	1940		2
1928	88	89	1941		58
1929	87	91	1942		24
1930	95	97	1943		26
1931	112	125	1944		14
1932	126	149	1945		14
1933	186	185	1946		19
1934	155	178	1947		16
1935		206	1948		11
1936		365	1949		19
1937		226			

Senator Kerr also inquired whether an estimate had been made that 80 percent of the disabled persons could be rehabilitated. I replied that I had seen such an estimate in an official report and would furnish the citation later. The statement which I had in mind appears on page 5 of a report on Aid to Physically Handicapped by the Committee on Labor, Subcommittee on Aid to Physically Handicapped (pursuant to H. Res. 45, House of Representatives, 79th Cong. 2d sess.), a copy of which is attached. The statement referred to begins as follows:

"The Director of the persent Office of Vocational Rehabilitation has informed the subcommittee that nearly 80 percent of disabled persons can be rehabilitated without the use of special types of facilities."

It is further stated in this report that a large number of the remaining 20 percent can be rehabilitated either fully or partially if special additional facilities are available.

If any additional data are desired by the committee, I shall be pleased to furnish them if it is possible for me to do so. May I again express my appreciation of the opportunity of presenting my statement to the Senate Committee on Finance.

Respectfully submitted.

JOHN H. MILLER,
Vice President and Actuary.

Senator MILLIKIN. Where you have a cancellable policy, you have it within your control to keep the expectation and the practice together?

Mr. MILLER. That is right. But this is on noncancellable.

Senator MILLIKIN. In other words, if it gets too bad, you cancel

Mr. MILLER. Yes; on cancellable policies.

Now, there is a third line on this chart which shows the death rates under the Metropolitan Life's industrial policies, which I have put in to show that the general trend in mortality during the depression was not unfavorable. There was some bad experience on policies for large amounts, but on the basic industrial insurance the experience went up a little in 1929 and then improved thereafter and has continued to improve to this date.

Experience under the Government life insurance has been cited here by Mr. Altmeyer, but the record does not contain substantial proof or demonstrations of his assertion that—

> to the extent that one is able to judge, the veterans' experience has been more favorable than the experience of private insurance carriers, * * *.

Moreover, I question the bearing which the veterans' experience has on the problem at hand, since the veterans comprise a select group not representative of our entire labor force.

I have developed this comparison further in the appendix to this statement.

Charts A and B show that an assured disability income exerts a powerful influence on the behavior of the disabled person. In fact, there is reason to believe that, in many cases, a permanent disability benefit, by reducing or destroying the incentive to return to useful activity, has done the disabled individual more harm than good.

Senator MILLIKIN. Mr. Chairman, may I interrupt the witness, please?

What is the pronounced deviation between the experience with veterans and the experience generally with industrial groups?

Mr . MILLER. Comparing them over a period of years chronologically, the experiences seem to parallel each other.

Senator MILLIKIN. That is why I should perhaps put my question in a different way. Why is your experience with veterans different from your experience with a general industrial group?

Mr. MILLER. Briefly, the great bulk of the insurance on which the Government life-insurance statistics were compiled is the installment-type benefit, similar to the third group, of Prudential policies, but for larger amounts. When the veteran received a disability benefit, he was using up part of the protection which he had bought for his family. That acts as a deterrent to the drawing of the benefits, and in the appendix I have shown another example where that is quite pronounced.

Secondly, the average payment under the veterans' insurance was about $25 per month, just about half the benefits proposed for the Government insurance, and considerably less than most of the insurance company experience.

Then, as to drawing conclusions from the veterans' experience with respect to what might be done under social-security benefits, the point I make there is that the veterans were a selected group. All had good-health backgrounds, and primarily they were younger men and men of better character. This group doesn't include many of the marginal individuals, who are apt to cause most of the difficulty under this type of insurance.

Senator MILLIKIN. Now, we had testimony, I think, yesterday, to the effect that the railroad retirement system has been successful as

far as disability insurance is concerned. Have you any comment on that?

Mr. MILLER. I have never seen any data published which could be suitably compared with our insurance company experience. I am unable to give a comment on that.

Senator MILLIKIN. And the gentleman appeared for a union in the garment-making industry, and the burden of his testimony was that they had had favorable experience. Have you by any chance seen that testimony?

Mr. MILLER. No; I have not had an opportunity to as yet.

In fact, there is reason to believe that in many cases a permanent-disability benefit, by reducing or destroying the incentive to return to useful activity, has done the disabled individual more harm than good.

Therefore, I would count the cost of the extra disability shown in chart A not just in claim dollars paid out by the insurance company, but in wasted lives and prolonged disability suffered by people who should have been making a greater effort to return to their jobs or to find a new role of activity.

Permanent-disability insurance is an old institution dating to the earlier days of the British Friendly Societies. Its inclusion in the social-security plans of foreign countries has been cited as a reason for our adoption of these benefits and as proof of the feasibility of doing so. In my opinion, these arguments lose their force when we find that typical prewar benefits of foreign plants were worth only a few dollars a week.

However, in considering the problem of the disabled, it seems to me that the history of past attempts at paying cash benefits is less significant than the great gains which have been made in the past few decades in elimination of disability by treatment on the one hand and by vocational rehabilitation on the other.

Senator MILLIKIN. Mr. Chairman, after we get through with all of the malingering and all of the temptation to prolong benefits which would not be prolonged had there been, perhaps an appropriate rehabilitation, if we have genuine cases of total and permanent disability what we are going to do about them?

The CHAIRMAN. Would you care to comment on that, Mr. Miller?

Mr. MILLER. Yes. I come to that a little later, and my point is that the most adaptable method is through assistance.

The CHAIRMAN. You agree with the previous witness, Mr. O'Connor, on that point?

Mr. MILLER. Yes. I would like to develop that a little further.

Two of the most important steps ever taken by Congress in promoting social welfare were the passage of the Vocational Rehabilitation Acts of 1920 and 1943.

The opportunities in rehabilitation have been well put by Mr. Shortley, Director of the Office of Vocational Rehabilitation, whom I quote, in part:

> Most disabled persons can work efficiently if prepared for jobs compatible with their physical condition, aptitudes, and abilities. A man with a leg amputation can do anything at a bench or desk that an able-bodied man of equal skill can do. A man with an arm amputation may be a competent salesman, draftsman, or lawyer—to mention but a few occupations open to him. The deaf person is handicapped only in communication and not in the skilled use of mind and hands. Tuberculosis ex-patients and persons with heart defects are limited only in per-

forming heavy manual labor and not in the duties of lighter skilled vocations * * * In fact, nearly every disabled person has far more vocational assets than are lost through his impairments, and it is only needed to develop his remaining skills and capacities, through physical restoration and vocational training, to the point of economic usefulness.

Mr. Oscar Ewing has said:

Our disabled civilians generally are capable of becoming self-sustaining and contributing citizens of their communities * * *

Senator MILLIKIN. Mr. Chairman?

The CHAIRMAN. Senator Millikin.

Senator MILLIKIN. First of all, I think the testimony we have had here on rehabilitation is very impressive. I wonder if we do not imply too much, let us call it, will power in the average citizen, in some of our arguments, here. I know a lady who is a painter and suffered a stroke when she was 65, on her whole right side. She learned to be a painter with her left hand and was a better painter with her left hand than she had been with her right hand. But there is not one person in a million who has that kind of guts, that kind of spizzerinctum, that kind of will power.

I am wondering if we are not attributing perfectionism to a field where it does not always exist.

Mr. MILLER. I think it is undoubtedly true that that will power varies greatly among individuals. There are not many Helen Kellers or Robert Louis Stevensons——

Senator MILLIKIN. Exactly.

Senator KERR. What percent does the record show to be the effective rehabilitation among the disabled to whom the opportunity for it has been made available?

Mr. MILLER. That I believe was brought out in the annual report of the Office of Vocatioinal Rehabilitation.

Senator KERR. I am sure it is. I think it might be well to mention it at this particular point, if you know.

Mr. MILLER. I do not recall precisely. It seems to me that in the latest report something over 100,000 cases were referred, in the year. And in the fiscal year 1949, there were 58,000 successful rehabilitations, and there were about 11,000 more rehabilitations that had been completed, but the people were more or less on trial. I recall those latter two figures rather definntely. I am not sure of the first figure of total referrals.

Senator KERR. Are there figures available to indicate that they believe that 80 percent of those who have the opportunity can be effectively rehabilitated?

Mr. MILLER. There is such a statement on record. I read it just the other day. It was given before a House committee. I have that in my brief case and would be glad to look at it in a moment and give you the reference.

The proponents of disability benefits "as a matter of right" point out that the proposed law requires termination of benefits upon refusal without good cause to accept rehabilitation services. Unquestionably, the Administrator can, under threat of termination of benefits, force the disability pensioner to register at a rehabilitation center. But forcing a man into a rehabilitation center will not assure his rehabilitation any more than forcing a man to attend church will guarantee his conversion. His heart must be in the project. If his mind is fixed on the security of his disability pension payable so long as rehabilita-

tion is not successful, his doubts as to the outcome of the program and as to his future self-sufficiency will erect a psychological barrier to its success. When you hold out a reward for failure, can you expect success? If the attempt at rehabilitation fails, after the disabled person has passively gone through the motions of compliance with instructions, it will be very difficult for the Administrator to remove him or her from the disability roll. Furthermore, because of the human tendency to follow the line of least resistance, not only the patient but also the administrative official or worker in charge may be less impelled to strive for rehabilitation with a disability pension available as a matter of right.

Mr. Chairman, that would be an extension of my comments on Senator Millikin's point about will power. The will power of the individual varies, but I think we strengthen it if we don't give him this crutch of a disability pension to lean upon. He should have something to rely upon, but not——

Senator MILLIKIN. As a practical matter, let us assume that we turned this over to the field of assistance rather than insurance, where the States would share in the cost. In the end you have got to, if you are going to terminate the thing in cases where there can be rehabilitation, devise pressures to get the man to take the rehabilitation and to pursue it seriously. Now, how are you going to do that? For example, an operation might make a man rehabilitated. When you start pressuring people to take operations and to go into various forms of medical treatment and things of that kind, you are in a somewhat dangerous field. If he was not permanently disabled, you may render him permanently disabled.

Mr. MILLER. I think that is very true. And it seems to me that that could come up more often on the insurance side, or at least as often on the insurance side as the assistance side.

Senator MILLIKIN. Take it on either side. What I am trying to get is the practical picture of how we induce these people in good faith to undertake a rehabilitation program. They know on the insurance side or they know on the public assistance side, that as long as they are permanently disabled they are going to continue to get the benefits. Take it, therefore, on either side. How do you overcome that?

Mr. MILLER. I feel, Senator Millikin, that in dealing with people on any basis you can accomplish more by incentives than compulsion. We certainly find that to be true in the fields of private business, and I think it is true in all of our social endeavors.

Senator MILLIKIN. Now, just how would you apply that in this kind of a situation that we are discussing?

Mr. MILLER. I think one thing that is necessary, and I was going to allude to it briefly later, is a great deal more publicity on this program.

Senator MILLIKIN. Now, here is a fellow who is full of aches and pains. He thinks he has those aches and pains. We have had medical testimony to the effect that they may be entirely imaginary. They may be something that he just thinks he has. In any event, from the standpoint of objective tests the accuracy of those aches and pains cannot be determined. Now, how are we going to work on that fellow so that he will forget his aches and pains?

Mr. MILLER. I think a great deal can be done through publicity of this program and getting people interested in it locally.

Senator MILLIKIN. An ache and a pain that you imagine is just the same as an ache and a pain that you do not have to imagine. I mean, if you are really imagining it, really feeling it, it does not make much difference whether you can demonstrate it objectively or not. I am eliminating, now, the faker type and perhaps getting over into the neurotic field.

Mr. MILLER. Yes. That is the big problem. I feel if the rehabilitation program could be made generally as successful as it appears to be in a few States, people in this country, seeing others restored through rehabilitation, would be inspired to go through the services themselves.

Senator MILLIKIN. Is the answer that as a matter of fact rehabilitation programs are working and that they are fixing people up so that they can resume a place in economic life? Is that the answer?

Mr. MILLER. They are working, as far as I can find. And I want to bring out some figures shortly to show, however, that they are working to a very varying degree in different parts of the country. And it is that that leads me to feel that there is a great deal of promise that has not been achieved in this field.

Senator MILLIKIN. We had a young man here one time in connection with a veterans hearing that had an artificial hand. Why, he could do things with that hand that would almost shame a person who had a good hand. But again, that is probably 1 out of 10,000. I mean, he had put his mind on that. He could turn the page of a book, and he could do all sorts of things with that artificial hand. Well, he certainly had rehabilitated himself.

Mr. MILLER. Yes.

Senator MILLIKIN. Because there were quite a few things that he could not do before. I read not long ago in the paper where some fellow won a dancing prize with one artificial limb. But those things are rare.

Mr. MILLER. My feeling on this, Mr. Chairman, is that a case such as Senator Millikin cites is the type of inspiration that these other people need. If they can see right in their own community scores of cases where people who were absolutely down and out have been rehabilitated, they will get the inspiration and the will and the hope to go through with the program. There is the old saying, "Nothing succeeds like success." I think if we got this ball rolling, the results would be amazing.

Senator KERR. I take it that it is your thesis that as long as a man knows he has an insurance policy that is going to be in effect as long as he is disabled, that is an incentive to continue disability?

Mr. MILLER. That is it exactly.

Senator KERR. And that if he does not have that and his only means of help is through a means test whereby he gets temporary assistance, that is a spur to him to relieve himself of that situation?

Mr. MILLER. Yes. I talked recently with a man who had considerable experience with a rehabilitation program at the Prudential Insurance Co. some 10 years or more ago, when they were suffering very heavy losses from this disability. He proposed to the head of his claim division that they start telling these people that "we will continue your benefits for so long, if you will try to rehabilitate yourself, and if

it fails we will put you back and we will not cut your benefits off." He called these people drawing benefits "vegetables." They had to sit still and be sure they were not doing anything when the adjuster came around. So they very carefully avoided making any effort at returning to work.

Under this program they would go to the disabled policy holder and say, "Now, we will carry your benefits for so long in any event. You try to restore yourself." Or they might give them an advance payment to set them up in business or through one method or another to assist them in becoming rehabilitated. But they had to promise the individual that this was not going to cut off his benefits if it failed, in order to get his interest in the program. Otherwise he was afraid of letting go of this reed that he was hanging on to.

Senator MILLIKIN. How did that work?

Mr. MILLER. Very well, I am told. They were able to restore a good many people to active work.

The proponents of disability benefits in H. R. 6000 also argue that through this plan more people will be referred to the rehabilitation agencies. It seems to me that there are more direct methods of bringing the benefits of rehabilitation to people who can profit by it than through the process of declaring them permanently and totally disabled, a terrible and disheartening judgment to a person who needs hope and encouragement. It would seem better to attempt rehabilitation first, leaving the payment of a disability allowance as a final resort in the hopeless cases. If, today, there are needy disabled people who are not seeking the aid of the rehabilitation services, would they be any more likely to do so if in receipt of a disability income? If they have not sought rehabilitation because of ignorance of the program, the solution would appear to be a strengthening of the publicity and its relations with other agencies.

Chart C, taken from the latest annual report of the Office of Vocational Rehabilitation, shows the rates of rehabilition. This chart shows the rates of rehabilitation in terms of the number of people rehabilitated per 100,000 population. The United States average was about 39. Delaware led the list, with almost 150.

Senator KERR. Out of how many?

Mr. MILLER. Per 100,000. The actual numbers in Delaware were something over 400, out of a population of about 300,000.

Senator MILLIKIN. Do they have any special techniques in Delaware?

Mr. MILLER. I have been unable to find that, but from inquiries it seems that the program depends a good deal on the man in charge or the people in charge locally. It is something that is not self-energizing. You have to have somebody there who really sees the possibilities and is interested in making it work.

Senator KERR. That chart does not give the information as to the number of disabled, but only the number rehabilitated out of 100,000 total population?

Mr. MILLER. That is true. There may be some difference among the number disabled per 100,000 of population by States. There probably are. But I can't believe that it is enough to account for these deviations. The Delaware rate is nearly 4 times the national average, and it is over 10 times the Massachusetts average, which is at the foot

of the list. The States of Georgia, in second place, and South Carolina, in third place, also rate high in this comparison.

Senator MILLIKIN. Do you attach all that disparity to the personalities of those who are running that?

Mr. MILLER. Not all of it, but a very large part of it. I was talking yesterday with a professor at the Springfield College, who has interested himself in this problem. I asked him what the trouble was with Massachusetts, and he said, well, nobody was really getting behind it. And then he told me an instance.

Senator KERR. Now, you say that is the lowest. I have a chart here that I thought was similar to yours, which has a different location of the States.

Mr. MILLER. This is from the 1949 report of the Office of Vocational Rehabilitation.

The CHAIRMAN. That probably accounts for the difference.

Senator KERR. Yes.

The CHAIRMAN. What was it you were saying as to Massachusetts?

Mr. MILLER. This professor at Springfield College gave me an example. He said that Dr. Kesler, who is one of the pioneers in this field, set up a very excellent center in New Jersey, and he was away during the war, and he came back and found that the center was not functioning as he had left it; that it needed revitalization. The plan seems to depend very largely on the administrator at the centers and on the facilities. Now, in the western part of Massachusetts, where we have a considerable population, from the information I was able to gather, there are just three men working on this program, and in Springfield we have no real center where people can come for training. We have men who can help them and advise with them, but no adequate facilities for the purpose.

The CHAIRMAN. Does the fact that you may have a large number of disabled people in a highly industrialized State have anything to do with it?

Mr. MILLER. I tried to figure out some other answers to this, but there are too many contradictions. Now, here is Connecticut, very high on the list, and yet Massachusetts, next door, is down at the bottom. And here is Michigan, highly industrialized, very near the top, and Illinois about halfway down, and Ohio next to the bottom, and New York rather low.

Senator KERR. Michigan and Montana are right together on this chart, and there could not be any two States with a much greater difference.

The CHAIRMAN. In character of population; that is, whether rural or industrial or agricultural or what have you.

Senator KERR. There seems to be a very, very definite improvement of the program each year.

Mr. MILLER. Yes. That is very encouraging and shows up in almost every case. Nearly every State has made advances.

If the national average had been equal to the Delaware rate, the number rehabilitated in 1949 would have approached Mr. Ewing's estimate of 250,00 men and women becoming disabled every year.

At best, the proposed insurance plan can aid in the solution of only a part of the problem of disability, since many disabilities arise in childhood and others occur before the minimum employment qualifications are met.

That statement might be enlarged upon by reference to the cost estimates, which show that for 1955, a minimum of 190,000 or a maximum of 594,000 people are expected to be benefiting from the proposed disability insurance plan, and either figure is a rather small percentage of the 2,000,000 estimate that we have heard.

The rehabilitation services, on the other hand, are available to all citizens, regardless of age, occupation, or wage records. Therefore, inasmuch as the insurance plan cannot meet the entire need, and as there is danger that it may impede or inhibit full use of the rehabilitation services, would it not be better to rely on rehabilitation as the first line of attack, and secondly upon assistance by voluntary private agencies, supplemented where needed by public assistance at the local level?

The objection usually raised to such an approach is the necessity of the means test. However, since it is manifestly impossible to give everyone all that he considers to be his needs, the only apparent alternative to the means test is a system of benefits paid as a matter of right according to an arithmetic formula involving wage histories, employment records, and dependency. Now, in providing a basic floor of protection payable to the worker in his old age or to his widow and orphans, a benefit determined by formula and paid as a matter of right may be satisfactory. However, in dealing with disability with its varying degrees of severity, its varying consequences, and its varying possibilities of termination by recovery or rehabilitation, we have a most intricate problem that can best be handled through individual consideration. No formula can recognize the many elements that enter into a disability case.

Since disability insurance benefits will not help those who have not established adequate earnings or employment records, will deal very inadequately and imperfectly with many other cases, and may act, despite the best intentions to the contrary, to impede or discourage rehabilitation, it does not seem wise to adopt this system with all of its dangers.

Mr. Chairman, with the exception of the written appendix, which elaborates on some of these points, that completes my prepared testimony.

Following the testimony here last Friday, I was asked by Mr. Linton to request your permission to introduce for the record a statement answering Senator Myers' question as to the stand of the life insurance companies in 1945 regarding permanent total disability benefits.

The CHAIRMAN. Have you attached that to your statement?

Mr. MILLER. That follows, on page 12.

The CHAIRMAN. I see. Your whole statement will appear in the record.

Mr. MILLER. Yes. Shall I read this?

The CHAIRMAN. You may if you wish to.

Mr. MILLER. Mr. Linton, chairman of the companies' committee, has authorized the following statement:

In 1945 the Life Insurance Social Security Committee felt that it might be well to include a provision for total and permanent disability for those who became disabled after age 55. The discussion resulting from that recommendation and the statements about disability in the Calhoun report led to a modification of that position a year later.

In testifying before the Ways and Means Committee on April 3, 1946, Mr. Linton mentioned the Calhoun report and stated that in the judgment of the life insurance committee it would be unwise for the Government to enter the difficult administrative field of total and permanent disability. However, if after due consideration it should determine to do so, then the recommendation would be that provision be made for premature aging as represented by total and permanent disability at age 55 and over, with the amounts and condition of benefits on a basis which would discourage abuse and malingering.

Still further consideration of the problem in succeeding years convinced the committee that the issues involved were so fundamental and the hazards so great that no middle position with respect to cash disability benefits under the OASI system is tenable. Our belief that the Federal Government should not include disability in OASI has been greatly strengthened by the results that have been achieved in the field of rehabilitation. As a consequence, we are full convinced that it would be unwise for the Government to enter this field.

(During testimony on Feb. 10, 1950 (part 2, page 951), Mr. Linton was requested to furnish a further memorandum. The information requested is as follows:)

Data Relating to Questions Directed to M. Albert Linton During His Testimony on February 10, 1950

Senator Byrd requested information about the rate of disability on workers. He made the request after the statement had been made that group insurance disability rates had gone up during the depression to the same extent as those under regular policies. In order not to burden the material to be included in the record I believe it will be sufficient to refer to the testimony presented on that subject by John H. Miller on March 2 in which the second chart confirms the statement made.

Senator Kerr asked about the disability experience of the companies, and what it had cost them. Investigation of the reports made to the State insurance departments indicates that the total was about $600,000,000, and that the cost was more than double the premiums.

He also asked about current practices as compared with what had been prevalent before. At present only about 40 of more than 300 United States life insurance companies listed in the Spectator Year Book as writing ordinary insurance issue the disability income benefit in conjunction with life insurance. The coverage provided is severly restricted as compared with that granted during the 1920's and the benefit is issued only to very carefully selected risks. The result is that only a small proportion of the life insurance issued by these 40 companies includes this benefit.

An analysis of the premiums and benefits of some 38 United States companies which have continued to issue the disability income benefit reveals the following:

(1) As a rule only disabilities commencing before age 55 are covered. This is a very important limitation as the rate of commencement of disability rises sharply in the late fifties. Benefit payments generally terminate at the maturity of an endowment policy. Even with these limitations, premiums per dollar of income are from three to four times those charged in 1925.

(2) The benefit is conditioned on continuous total disability lasting 6 months. This is a "presumptive" clause—it is not necessary for the claimant to show that his disability is of a truly permanent nature but only that it has lasted continuously for 6 months. H. R. 6000 requires not only that total disability continue for 6 months, but also that it be of a permanent nature. The use by the companies of the more liberal presumptive clause is due to the tremendous dissatisfaction and litigation which arose from the use (prior to 1932) of the other type of clause which attempted to cover only disability of a truly permanent nature.

(3) The majority of these companies issue a benefit of only $5 a month per thousand dollars of life insurance. This restriction has an important effect both on the absolute size of the disability benefits provided and on their relation to the applicant's income. To illustrate, suppose a man age 35 with an income of $5,000 a year, decides to purchase such a disability benefit. What constitutes a reasonable amount of money to devote to life-insurance premiums would vary, of course, with individual circumstances. The average that is actually used by families with family income of $5,000 (excluding families that pay no life

insurance premiums) is about 3½ percent of the family income.[1] The premium for whole life insurance at age 35, including the $5 disability income benefit, varies from company to company, but averages around $32 per thousand of insurance. A premium of $175 per year would therefore buy only about $5,500 face amount of such insurance, with a disability income benefit of only about $27.50 per month.

(4) Of the 11 companies which issue benefits of $10 per month per thousand dollars of life insurance, all but four either terminate payments or reduce them to $5 per thousand when the disabled individual reaches age 65. This termination or reduction was written into the policies because the companies believed that it would have a powerful psychological effect in reducing both the number and duration of claims. Even on the scale of $10 per thousand of life insurance a substantial life insurance premium is required in connection with any sizeable disability benefit.

An analysis of the current underwriting practices of some 16 companies issuing disability-income benefits indicates that:

A. The benefit is issued only to the highest-class risks in nonhazardous occupations requiring steady attendance at a place of employment other than the home, and characterized by a steady income. Salaried people with regular income and steady employment appear to be the only satisfactory risk. Even business and professional men are viewed with caution because their income fluctuates and is not readily established. Women are usually not considered eligible.

B. Agents are apt to be quite selective in suggesting disability-income coverage to applicants for life insurance since if the company rejects the applicant for disability coverage, such action may prejudice the sale of the life-insurance policy.

C. The result of this double screening is that the companies which write this disability benefit do so on only a small proportion of the life insurance which they issue. The proportion varies in the different companies and is typically in the range from 2 percent to 10 percent.

It is of course too early to say whether in the long run the companies now writing disability-income benefits will have a satisfactory financial experience. Whatever may be the outcome in this respect, it is clear that the attitude of these companies toward disability-income benefits reflects in its own way the same healthy respect for the difficulties and dangers of disability-income insurance that prompted the great majority of companies to withdraw from the field altogether.

The CHAIRMAN. Any further questions.
We thank you for your appearance.
Mr. MILLER. I thank you for the opportunity, Mr. Chairman.
(The prepared statement of Mr. Miller follows:)

STATEMENT ON PERMANENT AND TOTAL DISABILITY INSURANCE BENEFITS IN H. R. 6000

(By John H. Miller, vice president and actuary, Monarch Life Insurance Co.)

Mr. Chairman and members of the Senate Committee on Finance, my name is John H. Miller. I am a vice president and actuary of the Monarch Life Insurance Co. of Springfield, Mass. Two years ago I served as a special consultant on disability insurance to the staff of the advisory council of this committee. Subsequently, I have followed the legislative developments in connection with social security with keen interest.

My study of H. R. 6000 has been devoted primarily to the provisions for permanent and total disability benefits. The advocates of these provisions contend that the qualifying requirements and the definition of disability are sufficiently strict to keep the cost at a moderate level. These requirements and definitions may possibly operate as intended in the case of a steady worker responsible for his family's support, or at least for his own, but when we consider that our labor force includes millions of single men and women, many living with their parents or other relatives and not wholly dependent on their own

[1] See Life Insurance Ownership Among United States Families, 1949, prepared by Survey Research Center, University of Michigan.

earnings, numerous examples can be cited to show that even the minimum benefit proposed would often be a strong temptation to make improper claims. This is particularly true because of the possibility of supplemental earnings under the provisions of the work clause.

The fundamental administrative problem of disability insurance is the impossibility of precise definition and objective determination.

Examples of situations which invite abuses of the benefit system fail, however, to illustrate fully the really serious issues involved. A more fundamental consideration of the disability benefits provided under H. R. 6000 requires a careful analysis of the condition of disability. How an individual reacts to an injury or disease depends upon his character and upon his circumstances. The area between good health and absolute incapacity to do any physical or mental work is so broad that the term "disability" cannot be precisely defined. Thus, a man who has a high sense of responsibility to those dependent upon him and to his work will return to work as soon as possible, while the irresponsible individual will claim disability for a much longer period. The individual's pecuniary situation and whether he receives a disability income or allowance also exert a tremendous influence.

The extent of disability is determined largely by incentives.

It is sometimes asserted that proper adjudication of claims and competent administration of the benefits will avoid the abuses I have mentioned. Competent claim administration will prevent a great number of potential abuses, but it will not overcome the fact that human behavior is largely determined by incentives. If the incentive to remain disabled is strong enough, the duration of disability for which compensation is paid will be substantially increased despite the best of claim administration.

This fact is demonstrated by chart A prepared from a recent analysis of the disability experience of the Prudential Insurance Co. for the years 1946 through 1948 on three types of policies, none of which were issued before July 1, 1930.[1] The first bar shows the number out of every 100,000 policyholders insured for income and waiver of premium benefits in event of total disability who are disabled at least 6 months. The second bar shows the corresponding number disabled where the policy provided waiver of premium benefits only. The third bar shows the corresponding number disabled under small policies providing waiver of premiums for 1 year followed by payment of the face amount in quarterly installments over a 10-year period. Unlike the first type of benefit, the cash payments under this so-called installment form reduce the amount subsequently payable on death. Under the income benefit the average cash payment was about $39 per month, under the waiver only benefit there was no cash income payable, and under the installment benefit the average cash payment was a little over $5 per month, the average payment being about $16 per quarter.

In this connection, it should be observed that the average income benefit under the Prudential policies, $39 per month, is less than the average of about $50 estimated by the actuary to the House Ways and Means Committee for the disability benefits of H. R. 6000,[2] although the former involves larger maximum benefits.

The second set of three bars shows the respective numbers remaining disabled after 10 years. In each case it will be noted that the amount of disability claimed under the income benefit is more than double that under the waiver only benefit or under the installment benefit. Now this difference in experience among the three types of benefit cannot be the result of differences in selection of the risks, for all groups represent insured policyholders selected on the basis of health, habits, occupation, character, and other considerations. Indeed, it is probable that those insured for income benefits were the more carefully selected.

It also seems implausible that the higher incidence of disability under the income benefits can be accounted for by lax claim administration. All three groups were handled by the same company and it is not reasonable to believe that more care was taken in the payment of claims involving the waiver of premiums averaging probably less than $50 a year or payment of installments of about $64 a year than in the payment of claims calling for substantial cash benefits.

---

[1] These comparisons were based on data from an advance release of a paper by Zehman I. Mosesson entitled "Prudential 1946–48 Disability Experience," which will appear in the Transactions of the Society of Actuaries for 1950. The comparisons shown are based on averages for ages 30 to 60 weighted according to the age distribution shown by July 1, 1946, estimates of United States population, as given in The Statistical Abstract of the United States, 1948.

[2] Myers, Robert J., Actuarial Cost Estimates for Expanded Coverage and Liberalized Benefits Proposed for the Old-Age and Survivors Insurance System by H. R. 6000. Committee on Ways and Means, table 3, p. 8, Washington, October 3, 1949.

NUMBER DISABLED AT INDICATED DURATION OF DISABILITY
PER 100,000 LIVES EXPOSED FOR ONE YEAR

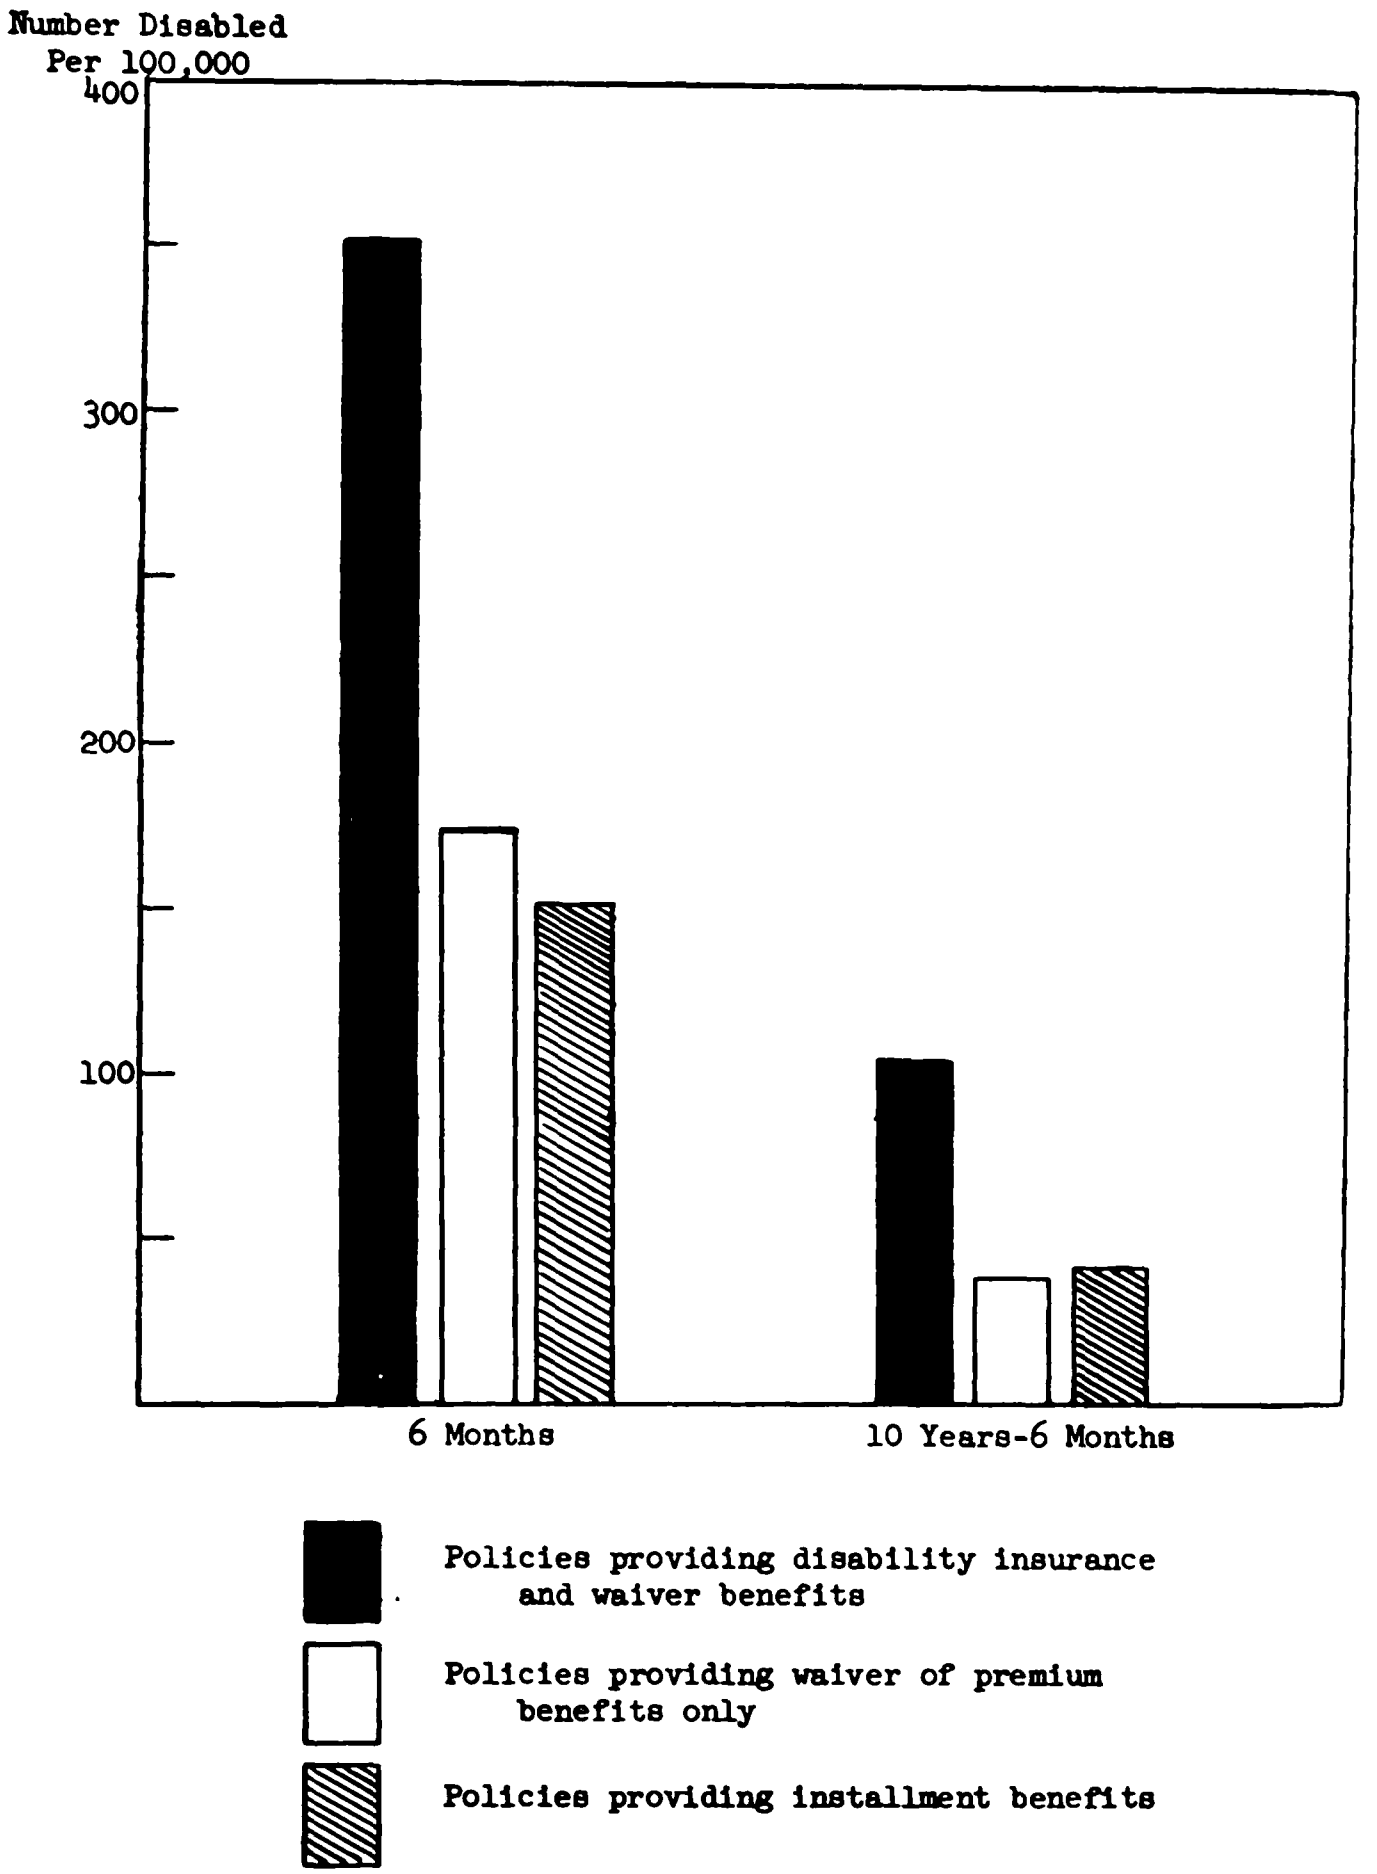


CHART A

My interpretation of these data is that the payments under the waiver and installment benefits represent actual disability while the experience under the income benefit includes payments to those individuals who, but for the incentive of a disability income, might have become reestablished as productive members of society.

I do not mean to state or imply that the difference is accounted for by deliberate malingerers who have deluded the insurance company. Rather, I believe they

have deluded themselves. No doubt many have deluded their physicians as well. There is little argument today over the proposition that the mental attitude and the emotions of an individual have a profound effect on his physical well-being. These apparent malingerers are, for the most part, really disabled according to any practical criterion of disability, but would not have been if there had been no disability income to rely upon. I do not believe that a government administrator or a government rating board would be any quicker to terminate disability benefits in such cases than the insurance claim adjuster.

Other examples can be cited to show how the disability rates are influenced by the attractiveness of the benefits provided. During the depression of the thirties disability losses increased enormously, and during the war years they dropped to levels far below normal, whereas the actual changes in general health conditions were not nearly so marked.

Chart B shows the trend in experience under two forms of disability policies.[3] The broken line indicates the loss ratios under noncancellable life-income disability policies. Some proponents of Federal disability insurance argue that this unfavorable experience is irrelevant to the consideration of social-security disability benefits because of the effects of individual selection and of benefits for very large amounts. However, the solid line, showing the ratio of actual to expected group disability claims during the same period indicates an even more adverse trend under small policies issued to the workingman under a plan that precludes individual selection. The dotted line shows the trend of mortality under industrial insurance, indicating that there was no substantial deterioration in general mortality during the depression.

The record does not contain substantial proof or demonstration of Mr. Altmeyer's assertion that "to the extent that one is able to judge, the veterans' experience has been more favorable than the experience of private-insurance carriers, * * *"[4]

In his testimony before this committee on January 18, 1950, Mr. Altmeyer stated the foregoing opinion after quoting the following from the recent book by Professor McGill. "The disability experience of USGLI has not been unfavorable. The combined experience of the two disability clauses appears to have been more favorable than commercial-insurance experience, although exact comparisons cannot be made because of differences in age limitations, qualification periods, and definitions of disability."[5]

I would like to call your attention to the author's own qualifications in the quotation just made. I have carefully reviewed Professor McGill's analysis and have studied the reports of the Veterans' Administration and have been unable to find any published data which can be properly compared with insurance companies' experience. Moreover, I question the bearing which the experience under benefits payable to veterans has on the question at hand since the veterans comprise a select group not representative of the labor force of the Nation. This rather technical problem is discussed in greater detail in the written appendix to this statement.

Cash benefits for extended disability generally have the effect of prolonging disability and deferring the return to productive activity.

Chart A shows to what extent the amount and value of the benefit affects the disability rate, while chart B shows how greatly the need, as between periods of low and high employment, affects the disability rate. As this variation occurs rather uniformly under very different methods of selection and administration, there can be no doubt but that an assured disability income exerts a powerful influence on the behavior of the disabled person. In fact, there is reason to believe that, in many cases, a permanent disability benefit, by reducing or destroying the incentive to return to useful activity, has done the disabled individual more harm than good.

---

[3] The noncancellable disability experience data were taken from History and Present Status of Noncancellable Accident and Health Insurance, by John H. Miller, vol. XXI of the proceedings of the Casualty Actuarial Society, p. 246.

The group life disability experience data were taken from a report entitled "Combined Group Mortality Experience, 1922 34," Committee on Group Mortality Investigations, E. E. Cammack, chairman.

The industrial mortality experience is presented in the form standardized mortality rates for ages 1 to 74 according to the experience of the Metropolitan Life Insurance Co. under its industrial insurance as reported in Twenty-five Years of Health Progress, by Dr. Louis I. Dublin.

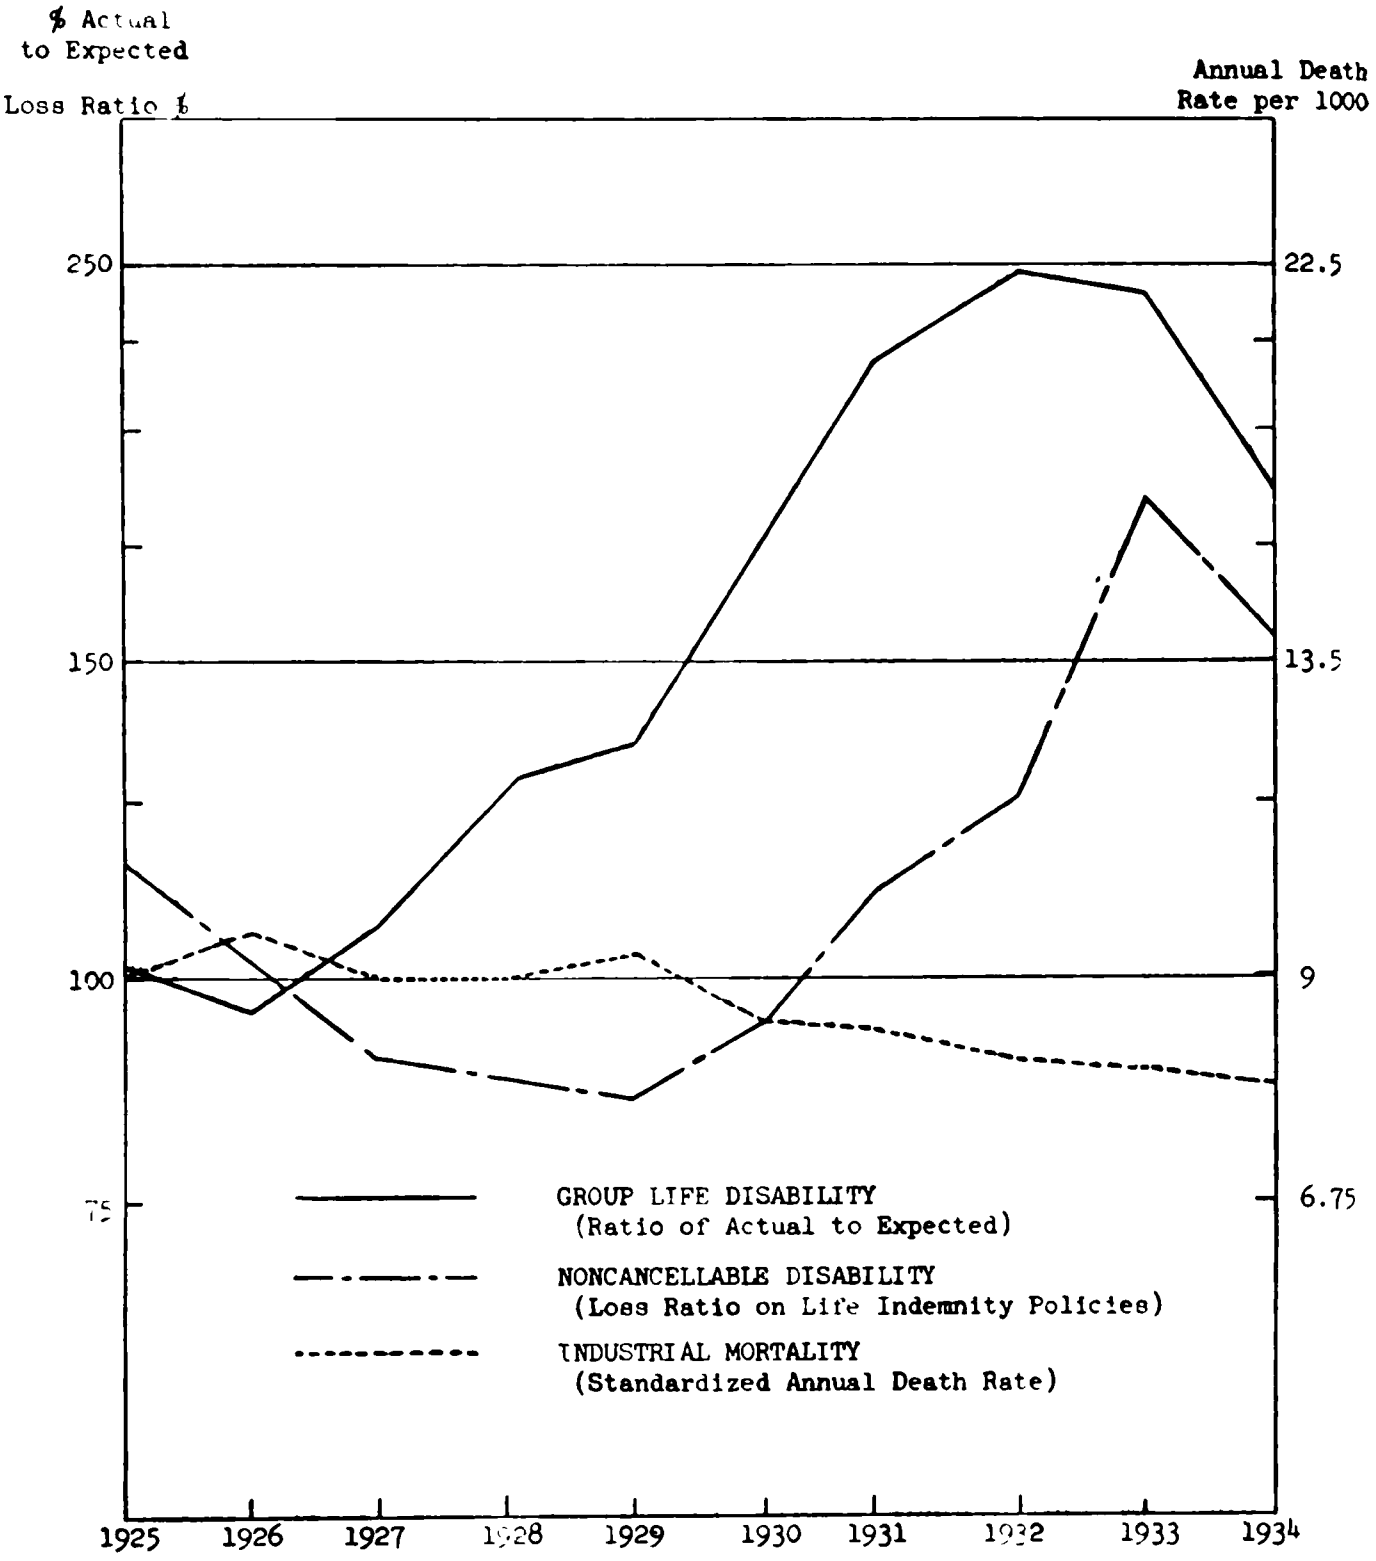
Comparison of
DISABILITY EXPERIENCE UNDER GROUP LIFE AND NONCANCELLABLE INDEMNITY INSURANCE
With
MORTALITY EXPERIENCE ON INDUSTRIAL INSURANCE*



* This is a ratio chart drawn on a logarithmic vertical scale, for the purpose of comparing trends in the experience.

CHART B

Therefore, I would count the cost of this extra disability shown in chart A not just in claim dollars paid out by the insurance company, but in wasted lives and prolonged disability suffered by people who should have been making a greater effort to return to their jobs or to find a new role of activity.

Precedents for disability experience from foreign plans should not be followed without an examination of the alternatives and a thorough appreciation of the advances made by medicine and other sciences in dealing with the problems of the disabled.

Permanent-disability insurance is an old institution dating back to the earlier days of the British friendly societies. Its inclusion in the social-security plans of foreign countries has been cited as a reason for our adoption of these benefits and as proof of the feasibility of doing so. In my opinion, these arguments lose whatever force they might have when we find, as is shown in the appendix to this

statement, that typical benefits of foreign plans, in effect before World War II, have been equivalent to only a few dollars a week. Although the British benefits, and perhaps those of other countries, have been increased subsequently, there has not been sufficient time to appraise the results under such liberalized benefits. However, in considering the problem of the disabled, it seems to me that the history of past attempts at paying cash benefits, whether successful or not, is of less significance than the tremendous gains which have been made in the past few decades in elimination of disability or its unfortunate consequences by cure or treatment on the one hand and by vocational rehabilitation on the other hand. Before accepting disability pensions as a desirable objective, it will be well to examine the developments in these fields.

The Vocational Rehabilitation Service established by Congress in 1920 and 1943 have accomplished much and offer great promise for our disabled citizens.

Two of the most important steps ever taken by Congress in promoting social welfare were the passage of the Vocational Rehabilitation Act of 1920 and the 1943 amendments to that act. A part of the Federal Security Agency, the Office of Vocational Rehabilitation has worked with State agencies, with the physicians of the Nation, and in cooperation with industrial medicine, in returning disabled and handicapped people into useful endeavors.

The opportunities in rehabilitation have been well stated by Mr. Michael J. Shortley, Director of the Office of Vocational Rehabilitation, in the following words:

"Most disabled persons can work efficiently if prepared for jobs compatible with their physical condition, aptitudes, and abilities. A man with a leg amputation can do anything at a bench or desk that an able-bodied man of equal skill can do. A man with an arm amputation may be a competent salesman, draftsman, or lawyer—to mention but a few occupations open to him. The deaf person is handicapped only in communication and not in the skilled use of mind and hands. Tuberculosis ex-patients and persons with heart defects are limited only in performing heavy manual labor and not in the duties of lighter-skilled vocations. The blind compensate their loss of vision by quickened perception, power of concentration, and manual dexterity. In fact, nearly every disabled person has far more vocational assets than are lost through his impairments, and it is only needed to develop his remaining skills and capacities, through physical restoration and vocational training, to the point of economic usefulness."[6]

Mr. Oscar Ewing has asserted, "Our disabled civilians generally are capable of becoming self-sustaining and contributing citizens of their communities; * * *"[7]

The proponents of permanent and total disability benefits "as a matter of right" point out that the proposed law (H. R. 6000) requires termination of disability benefits upon refusal without good cause to accept rehabilitation services. Unquestionably, the Administrator can, under threat of termination of benefits, force the disability pensioner to register at a rehabilitation center. But forcing a man into a rehabilitation center will not assure his rehabilitation any more than forcing a man to attend church will guarantee his conversion. His heart must be in the project. If his mind is fixed on the security of disability pension payable so long as rehabilitation is not successful, his doubts as to the outcome of rehabilitation and as to his future self-sufficiency will erect a psychological barrier to the success of the program. When you hold out a reward for failure, can you expect success? If, under these circumstances, the attempt at rehabilitation fails, after the disabled person has passively gone through the motions of compliance with instructions, it will be very difficult for the Administrator to remove him or her from the disability roll. Furthermore, because of the human tendency to follow the line of least resistance, not only the patient but also the administrative official or worker in charge may be less impelled to strive for rehabilitation, if a disability pension is available as a matter of right.

The proponents of permanent and total disability benefits also argue that through the disability insurance plan more people will be referred to the rehabilitation agencies. It seems to me that there are more direct methods of bringing the benefits of rehabilitation to people who can profit by it than through the process of declaring them permanently and totally disabled, a terrible and disheartening judgment to a person who needs hope and encouragement. It would seem better to attempt rehabilitation first, leaving the payment of a disability

[7] Office of Vocational Rehabilitation, Federal Security Agency: Brass Tacks—Vocational Rehabilitation for Civilians, Washington, June 15, 1949.

allowance as a final resort in the hopeless cases. If, today, there are needy disabled people who are not seeking the aid of the rehabilitation services, would they be any more likely to do so if in receipt of a disability income? If they have not sought rehabilitation because of ignorance of the program, the solution would appear to be a strengthening of its publicity and its relations with other agencies.

In an address before the Sixth Annual Congress on Industrial Health, Mr. Shortley expressed the opinion that "employment in ordinary industrial or agricultural pursuits would be possible for at least a million men (and as many of the million women in similar circumstances as wished to seek employment) if they obtained appropriate rehabilitation services." [8]

Mr. E. B. Whitten, executive director of the National Rehabilitation Association, in his statement before this committee on January 25, 1950, mentioned the substantial accomplishments and the still greater potentialities of the rehabilitation services. He also stressed the desirability of making the rehabilitation program the principal approach to the disability problem rather than giving it a secondary role.

Chart C,[9] reproduced from the 1949 Annual Report of the Office of Vocational Rehabilitation, suggests that in most States the opportunities for restoring the disabled to self-support have scarcely been scratched. It will be noted that, for 1949, the rate of rehabilitation in Delaware was nearly four times that for the entire Nation, and over 10 times that for Massachusetts. If the national average had been equal to the Delaware rate the number rehabilitated in 1949 would have approached Mr. Ewing's estimate of 250,000 men and women becoming disabled every year.[10]

The proposed disability insurance plan is limited in its scope and can never help certain large segments of the disabled among our population.

At best, the proposed insurance plan can aid in the solution of only a part of the problem of disability, since many disabilities arise in childhood and others occur before the minimum employment qualifications are met. The rehabilitation services, on the other hand, are available to all citizens, regardless of age, occupation, or wage records.

Therefore, inasmuch as the insurance plan cannot meet the entire need, and as there is danger that it may impede or inhibit full use of the rehabilitation services, would it not be better to rely on rehabilitation as the first line of attack and, secondly, upon assistance by private voluntary agencies, supplemented where needed by public assistance at the local level? The objection usually raised to such an approach is the necessity of the means test, which is criticized as being degrading to the individual and out of place in a modern, enlightened state. However, since it is manifestly impossible to give everyone all that he considers to be his needs, the only apparent alternative to the means test is a system of benefits paid as a matter of right according to an arithmetic formula involving factual data such as wage histories, employment records, and dependency. Now, in providing a basic floor of protection payable to the worker in his old age or to the dependents of a worker who has died, a benefit determined by a formula and paid as a matter of right may be satisfactory. However, in dealing with disability with its varying degrees of severity, its varying consequences, and its varying possibilities of terminaton by recovery or rehabilitation, we have a most intricate problem that can best be handled through individual consideration by a case worker or local administrator able to exercise some measure of discretion. No benefit formula can recognize the many elements that enter into a disability case.

Since disability insurance benefits will not help those who have not established adequate earnings or employment records, will deal very inadequately and im-

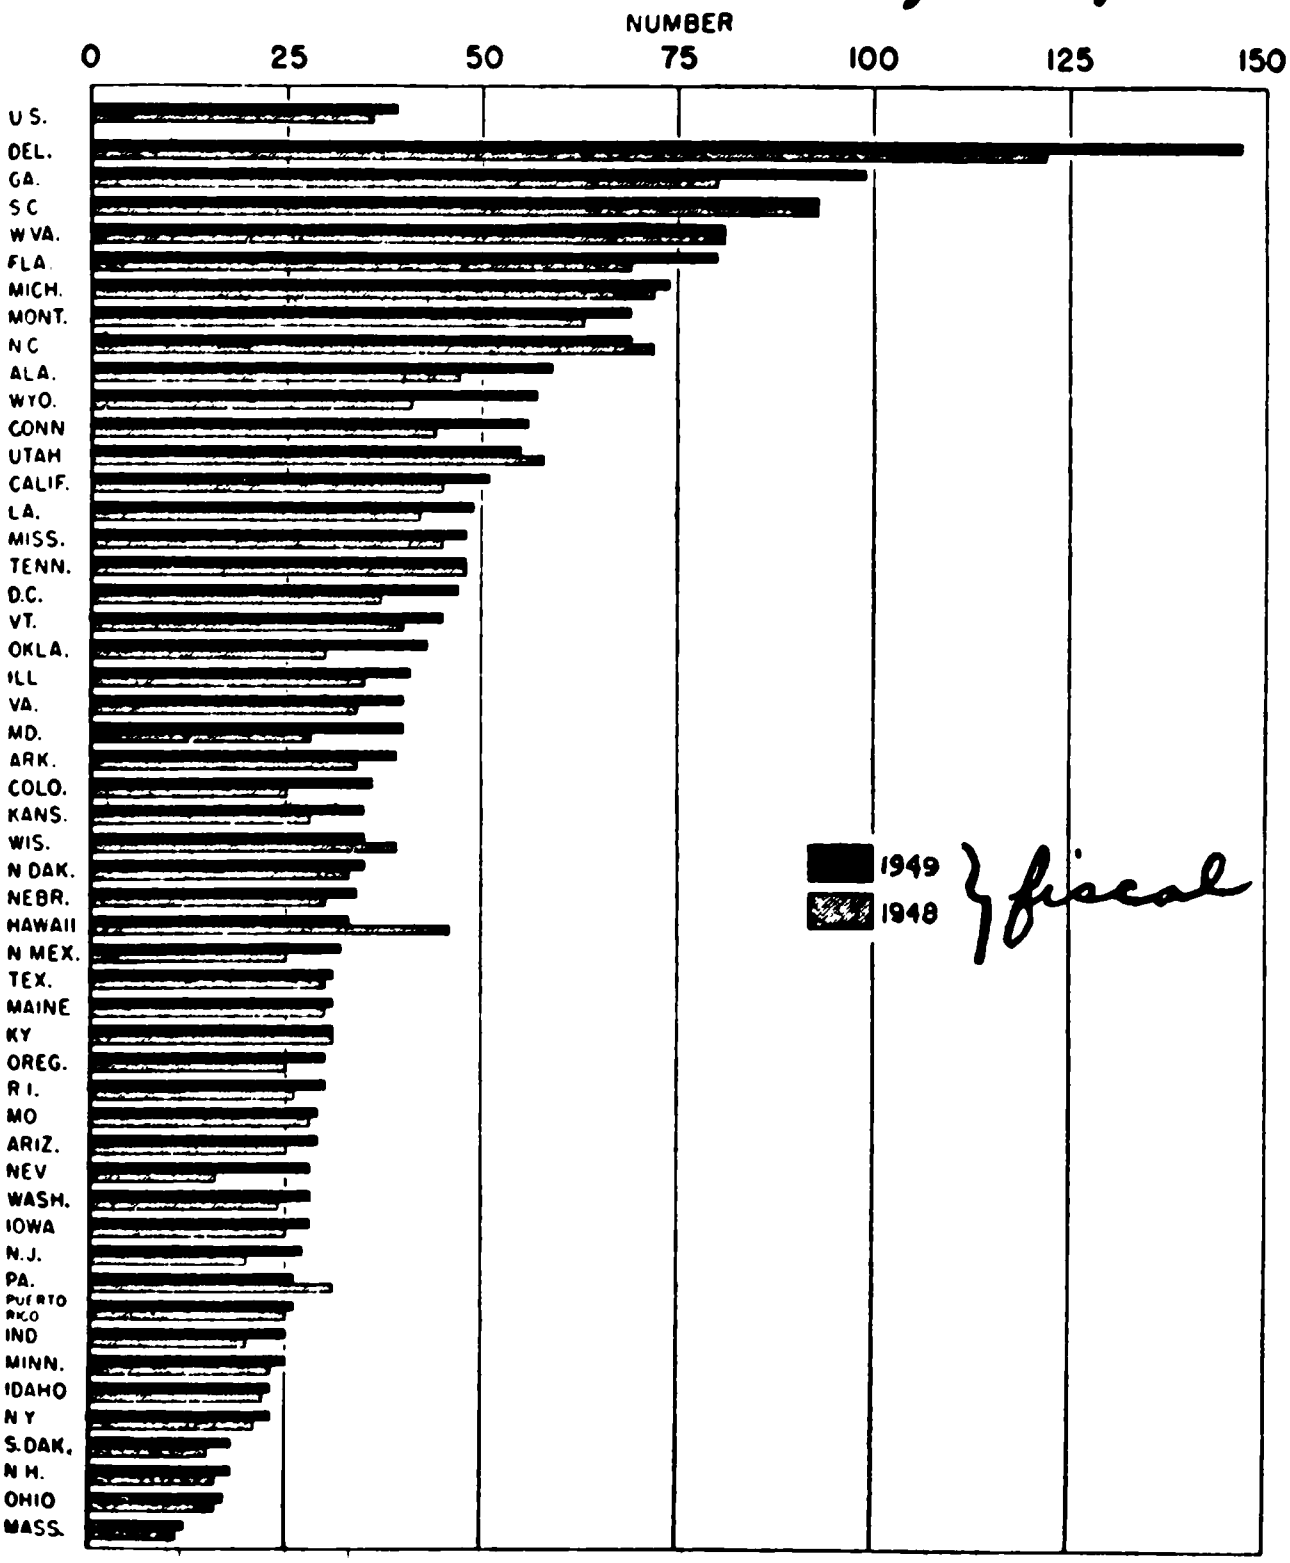
[10] Ewing, Oscar R., The Nation's Health—A Ten-Year Program—A Report to the President, Federal Security Agency, p. 21. Washington, September 1948. The statement referred to follows:

"REHABILITATION

"We have only started to meet our national needs for rehabilitating those who have been disabled by disease or injury.

"The goal: To provide rehabilitation services for the 250,000 men and women who become disabled through illness or injury every year so that they can be restored to the most nearly normal life and work of which they are individually capable."

Chart 1.—NUMBER OF PERSONS REHABILITATED Per 100,000 Population



Population estimated by Bureau of the Census, as of July 1, 1948, for continental United States and as of July 1, 1949, for Hawaii and Puerto Rico

CHART C

perfectly with many other cases and may act, despite the best intentions to the contrary, to impede or discourage rehabilitation, it does not seem wise to adopt this system with all of its dangers and with the great and difficult administrative problems involved.

Mr. Chairman, with the exception of the appendix which gives further details concerning some of the points mentioned, that completes my prepared testimony, representing the opinions and convictions which I have formed after many years of study and practice in the field of disability insurance.

Following the testimony here last Friday, I was asked by Mr. Linton to request your permission to introduce for the record a statement answering Senator Myers' question as to the stand of the life-insurance companies in 1945 regarding permanent total-disability benefits.

Mr. Linton, chairman of the companies' committee, has authorized the following statement:

"In 1945 the life-insurance social-security committee felt that it might be well to include a provision for total and permanent disability for those who became disabled after age 55. The discussion resulting from that recommendation and the statements about disability in the Calhoun report led to a modification of that position a year later.

"In testifying before the Ways and Means Committee on April 3, 1946, Mr. Linton mentioned the Calhoun report and stated that in the judgment of the life-insurance committee it would be unwise for the Government to enter the difficult administrative field of total and permanent disability. However, if after due consideration it should determine to do so, then the recommendation would be that provision be made for premature aging as represented by total and permanent disability at age 55 and over, with the amounts and condition of benefits on a basis which would discourage abuse and malingering.

"Still further consideration of the problem in succeeding years convinced the committee that the issues involved were so fundamental and the hazards so great that no middle position with respect to cash disability benefits under the OASI system in tenable. Our belief that the Federal Government should not include disability in OASI has been greatly strengthened by the results that have been achieved in the field of rehabilitation. As a consequence, we are fully convinced that it would be unwise for the Government to enter this field."

APPENDIX TO STATEMENT ON PERMANENT AND TOTAL DISABILITY BENEFITS

1. Experience under United States Government life insurance disability benefits

It has been asserted by Mr. Altmeyer that "to the extent that one is able to judge, the veterans' experience has been more favorable than the experience of private insurance carriers, not only with respect to insurance, but for compensation cases as well to which almost all veterans who are not barred by the income limits are entitled in the event of total disability."

Mr. Altmeyer's statements with regard to the Government life insurance are based upon Professor McGill's An Analysis of Government Life Insurance. It is brought out in this book that the type of policy on which at least 92 percent of this insurance was issued provided an installment benefit of $5.75 monthly per $1,000 of face amount of insurance. This is equivalent, with interest at 3½ percent, to paying the amount of insurance in installments over 20 years. To the extent of payments made, the ultimate insurance proceeds to the beneficiary are reduced; and if disability payments are made for a period of 20 years the entire insurance is consumed. However, the veteran is entitled to disability benefits as long thereafter as he lives and continues to be disabled. Since the disability income is received at the expense of the protection which he is carrying for his family or other dependents, these benefits do not have as much attraction as a straight income benefit payable without diminishing the amount of death benefits, such as was generally issued by the insurance companies. The experiences of life insurance companies with similar installment disability benefits in ordinary policies issued before the introduction of the income benefit was generally favorable. For example, the following experience of a large company on different types of benefits shows the rates of becoming disabled to be much less under installment benefits than under any form of income benefit.

Total and permanent disability experience [1]*—Benefits issued in connection with ordinary life insurance*

Type of benefit	Average rate of disability per 1,000	
	1929	First 8 months of 1933
Waiver of premium benefits, without income	0.8	0.8
Installment benefits	1.1	2.0
Total and permanent annual income benefit	1.9	4.0
90-day clause monthly income benefit, nonretroactive	5.4	7.8
90-day clause monthly income benefit, retroactive	7.3	9.0

[1] Hunter, Dr. Arthur, Transactions of the Tenth International Congress of Actuaries, vol. I, p. 422.

Furthermore, the experience cited by Mr. Altmeyer relates only to the rate of becoming disabled. No data are shown as to the rate of recovery or death following the occurrence of disability. Obviously, it is necessary to know the average length of claims as well as the rate of becoming disabled in order to compare two experiences.

Another distinguishing factor was that the monthly income under the Government policies mounted to only about $25 on the average and $57.50 at the most. Thus the hazard of overinsurance was minimized.

Considering that the Government life insurance provided the installment benefit in all but about 8 percent of the policies, provided comparatively small benefits, and that no data has been given as to the rate of termination of claims or as to their average duration, the conclusion that "the veterans' experience has been more favorable than the experience of private insurance carriers, * * *" does not appear to be supported by the evidence supplied.

Regardless, however, of the comparability of experience under Government life insurance and private insurance, it does not follow that the disability experience under the former is necessarily indicative of what might be expected under social security.

In contrast to an installment benefit with an average monthly benefit of about $25 and a maximum monthly benefit of $57.50, the proposed benefits under H. R. 6000 would be of an income type with an average monthly benefit of about $50 and a maximum of $72 to $87, depending on the number of years of employment. Judging from the comparisons of insurance experience under installment and income types and under different amounts of benefit, a much worse experience would be expected under social security than was developed under Government life insurance.

Another important factor is that these benefits were payable only to veterans who had the sense of responsibility to maintain their insurance policies in effect. Furthermore, they had all been subject to the selection exercised by the Government in recruiting a military force. The experience, therefore, deals with a select group of predominantly male lives, comparatively young and possessing a background of good physical condition. The veterans, therefore, are not representative of the population as a whole.

2. Disability benefits in foreign social-security systems

In his testimony before the Senate Committee on Finance (p. 53), Mr. Altmeyer stated, "The experience in other countries, all the countries that have old-age retirement systems—and with the exception of two, all these other countries do have permanent and total disability—has not been unfavorable."

Data presented in the Beveridge report [11] indicates that typical disability benefits in European countries amounted to about two or three dollars per week in the period just before World War I. The attached table shows the data presented in the Beveridge report and the estimates of weekly benefits derived therefrom.

Under the Brtish plan the benefit was 5 shillings per week in 1911. This was increased to 7 shillings sixpence in 1920 and to 10 shillings sixpence in 1942. The latter figure was equivalent to approximately $2.10 a week at the rate of exchange prevailing from September 1939 until 1949. Under the British national insurance scheme effective July 5, 1948, these benefits were raised to 26 shillings for a man, 16 shillings for his wife, and 7 shillings sixpence for the first child.[12] Translated into dollars at the current rate of exchange this means that a single man would have a benefit of $3.64 per week, a man with a wife, $5.88, and a man with a wife and one or more children, $6.93 per week. These are flat benefits regardless of the wage level. Despite the substantial increases in the 1948 act, these benefits approximate our minimum benefits under the proposed law. It is too early to judge the results under Britain's increased benefits for disability, but certainly the earlier experience under a benefit of only about $2.10 per week does not offer an assurance that the much more generous plan proposed for this country will prove successful.

As to the German experience, published data indicates that since the institution of sickness insurance in 1885 the average duration of illness of insured workers increased rather steadily until 1932. An improvement was recorded

[11] Beveridge, Sir William, Social Insurance and Allied Services, p. 287, London, November 1942.

[12] National Insurance Act of 1946, p. 80.

between 1932 and 1934, but the average for the latter year was still 74 percent greater than that at the commencement of the plan.[13]

In discussing the developments in German sickness insurance, Dr. Hadrich writing in Deutsches Aerzteblatt for May 1935 stated, "An explanation of the increase from year to year in the morbidity of the insured population can be found in the increased industrialization and urbanization, the entrance of women into industrial employment, *and the psychological effect on the insured members.*" [13] [Emphasis added.]

In some countries such as Italy the depreciation in the value of the currency during the 1930's was such as to render the benefits provided for disability of practically no value.

Considering the very low level of benefits payable under most of these foreign plans, the adverse record of the German plan and the turbulent conditions which have existed in Europe for so many years, the conclusion that the experience in other countries augurs well for the proposed disability benefits in the United States seems ill-founded.

Comparison of social disability insurance benefits based on typical full-time earnings of a moderately skilled male industrial worker in 1938—

BENEFITS FOR NONOCCUPATIONAL DISABILITY RESULTING IN PERMANENT INCAPACITY

Country	Weekly wage plus family allowances, if any	Approximate purchasing power of wages as percent of United Kingdom (based on comparative food prices)	Equivalent wage expressed in United States dollars at $4 to the pound	Percentage of benefits to wages and family allowances	Typical weekly benefit expressed in United States dollars
	(1)	(2)	(3)	(4)	(5)
	Single person				
United Kingdom	70 shillings	100	$14.00		$2 10
Australia	100 shillings	120	16.80	24	4 03
Denmark	70 kroner	100	14.00	19	2 66
Germany	30 deutschemarks	43	6.02	15	.90
New Zealand	100 shillings	[1]		30	
Rumania	560 lei	[1]		24	
Sweden	60 kroner	89	12.46	[2] 3	37
		114	15.96	[3] 14	2 23
	Married man with wife not gainfully occupied and 2 children under 15				
United Kingdom					$2 10
Australia	105 shillings		$17 64	27	4 76
Denmark	70 kroner		14 00	25	3 50
Germany	30 deutschemarks		6.02	29	1 75
New Zealand	108 shillings			55	
Rumania	560 lei			24	
Sweden	60 kroner		12.46	[2] 3	37
			15.96	14	2 23

[1] Figure not given.
[2] Contributory for persons with means.
[3] Contributory component plus noncontributory component for persons with means not exceeding 100 kroner a year.

Sources: Data in column (1), (2), and (4) were taken from the Beveridge report, pp. 288 and 289.

Column (3) was obtained by converting 70 shillings into United States dollars at the exchange rate of $4 to the pound, and then multiplying by the purchasing power indexes given in column (2), adjusting in the case of Australia to include family allowances.

Column (5) was obtained by multiplying column (3) by column (4) and dividing by 100, except for United Kingdom where the benefit was 10 6 from January 1942 until July 4, 1948, or $2.10 on the basis of $4 to the pound, the approximate exchange rate prevailing from September 1939 until 1949.

[13] Bureau of Medical Economics, American Medical Association: Factual Data on Medical Economics, p. 85, Chicago, 1940.

3. Disability benefits in private pension funds

Reference has also been made in the testimony before the Senate Committee on Finance to the experience with disability benefits in private pension systems. Such benefits have very little relationship to the social-security disability benefits proposed, for the reason that they are usually based upon a fairly long tenure of service on a basis of full-time, continuous employment with a single employer. Such requirements eliminate the problem of the marginal worker, the seasonal or migratory worker, the part-time employee and the marginal self-employed. Generally such benefits are administered by the employer or a pension committee which may possess rather wide discretionary powers in granting or withholding the benefits.

4. Additional information concerning the rehabilitation services provided through the Federal and State Governments

In the foregoing statement the benefits of the rehabilitation program were discussed in terms of human values and social gains. However, since Congress is concerned with the cost of the social-security program as well as with the social benefits to be derived, a financial comparison of the cost of rehabilitation with that of paying pension benefits is relevant to this discussion. According to the 1949 annual report of the Office of Vocational Rehabilitation, over 69,000 disabled persons were prepared for and placed in employment through the State rehabilitation agencies in 1949. Fifty-eight thousand of these were considered to be successful while over 11,000 were still on trial. The annual rate of earnings for those rehabilitated in 1949 was increased from $17,000,000 before rehabilitation to $93,000,000 during the first year after rehabilitation. It was estimated by the Federal Security Agency that these people will pay back into the Federal Treasury through increased Federal income taxes during a period of 5 years more than the Federal Government spent in connection with their rehabilitation.

The average cost of maintaining the rehabilitation program during 1949 was $445 per rehabilitant. This is a single cost and is very small in comparison with the cost of an average pension of say $50 per month, which, over a period of 10 years would amount to $6,000. Taking a rather extreme case, the disability benefits to an individual steadily employed from age 20 to 25 at an average wage of $300 per month could aggregate $34,000 by the time he reaches age 65. Aggregate payments to one person of $20,000 or more would not be uncommon.

Under the present law the Federal Government pays each State which has an approved plan for vocational rehabilitation the costs of administration including the administrative costs of providing guidance and placement services; one-half the cost of services neecssary to rehabilitate disabled civilians into suitable employment; and the full cost of such services to war disabled civilians. Services which are provided in all cases without direct cost include medical and psychiatric examinations to determine eligibility for services, vocational guidance, training, and placement. Payment is made for medical treatment, transportation, maintenance, occupational tools and equipment and training supplies when it is established that the disabled person is unable to pay for these.

That greater results are not being realized may be due in part to the lack of public knowledge concerning the rehabilitation services. The need of conducting "a large-scale program of information" is referred to in the above-mentioned annual report. Comment is also made on the need for more sheltered workshops and other opportunities for employment of the rehabilitated. Many employers are making special efforts to place the physically handicapped and doubtless more would do so if a stronger publicity program were in effect. This is a project of the type that can be made to appeal to the employers and community leaders in this country. Given further encouragement by Congress, I believe the rehabilitation services can eliminate the greater part of the problem of extended disability.

The CHAIRMAN. That completes the hearing this morning, and the committee will recess until 10 o'clock tomorrow.

(Whereupon, at 12:10 p. m., the committee recessed to reconvene Friday, March 3, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

FRIDAY, MARCH 3, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George, chairman, presiding.

Present: Senators George, Kerr, Millikin, Martin.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order. I hope the members of the committee will get here before we get very far into the hearing, but we will find it necessary to proceed.

The first witness is Mr. A. D. Marshall. Come around, please, Mr. Marshall. You are appearing for the Chamber of Commerce?

STATEMENT OF A. D. MARSHALL, MEMBER, SOCIAL SECURITY COMMITTEE, UNITED STATES CHAMBER OF COMMERCE, WASHINGTON, D. C.

Mr. MARSHALL. For the Chamber of Commerce, Senator.

The CHAIRMAN. On H. R. 6000.

Mr. MARSHALL. Yes, sir.

The CHAIRMAN. We will be very glad to have you begin your statement at this time. I expressed the hope that the other committee members will come in shortly. As a matter of fact, though, the members can read much faster than they can hear, you know.

Mr. MARSHALL. Mr. Chairman, I am A. D. Marshall, member of the social-security committee of the United States Chamber of Commerce, chairman of the social-security committee of the State Association of Commerce, assistant secretary of the General Electric Co., and secretary of the company's pension board. Today I am presenting the views of the United States Chamber of Commerce on H. R. 6000.

As you know, the United States Chamber of Commerce has certain established policies with respect to social security. In order not to burden this statement, we have attached copies of these policies as exhibits to this testimony.

The chamber policies are usually drafted by the appropriate chamber committee concerned, in this case the social-security committee, and these drafts are then submitted to the board of directors through the policy committee. Such policies are formally adopted by the members either by vote at the annual meeting or through referendum.

Therefore, they may reasonably be said to represent the opinions of more than 2,500 local chambers of commerce and 550 trade associations, having an underlying membership of more than 1,300,000 businesses.

The important changes in social security proposed in H. R. 6000 have been carefully reviewed, therefore, by the social-security committee in the light of these policies which have been adopted by the chamber, and my testimony will express the conclusions which have been reached with respect to those proposals.

In general, the chamber's position with respect to changes in social security can be simply expressed.

The chamber favors universal coverage under social insurance and therefore feels that H. R. 6000 does not go far enough in this respect.

The chamber believes that social insurance should provide a basic minimum layer of protection and therefore is generally in favor of increasing the benefits payable to the insured group.

The chamber believes that increasing and ultimate reliance must be placed upon our insurance program as contrasted with the relief or needs approach to the problem of the aged. For this reason, as I have said before, it favors universal coverage under the insurance field, which would make unnecessary further Federal participation in old-age assistance as proposed in H. R. 6000.

The chamber is opposed to the extension of the Federal contributory system to cover permanent and total disability. Human sympathy and pure logic would lead one to favor it in a system of universal coverage. However, the moral hazards and tremendous administrative difficulties, no matter with what guaranties it is surrounded, make such programs inadvisable.

We sincerely believe that your committee and we both have the same general objectives, namely, the establishment of a system of social security which will protect the individual from those hazards of an industrial economy against which he is, at least to a certain extent, unable to protect himself. Such a system should not destroy individual initiative but should be so designed that it will protect and revitalize that private initiative and enterprise which have made the American economy the best the world has known.

Knowing that you share this same objective, we hope that an examination of the reasons for our conclusions will lead you to agree with us that they will go a long way toward accomplishing this end.

Now, first, with respect to the chamber's position on coverage: In its social-security policy originally adopted in 1944, as revised and reaffirmed in 1949, the chamber favors the extension of coverage under old-age and survivors insurance to the greatest degree feasible. Now that it is generally agreed that administrative difficulties involved in extending this coverage to the self-employed and other groups have been solved, we believe there should be no serious obstacle to universal coverage under this program.

Universal coverage is desirable for the following reasons:

1. The nature of a person's occupation should not determine whether or not he is entitled to insurance protection or must submit to a means test to secure assistance in his old age. With limited coverage, protection is spread unevenly throughout the country especially as between industrial and rural areas.

2. The existence of noncovered types of employment means that workers who move from one job to another may at the conclusion of their working lives suffer an unjust penalty in the reduction of their benefits. Such penalties in the long run may make for decreased mobility of the labor force.

3. Since the employer's contributions are in many cases reflected in the price of his product, and hence borne by all sections of the population, inequities in the distribution of the cost of social security result when goods and services are produced in part in covered employment and in part in noncovered employment.

It has been estimated that H. R. 6000 would extend coverage to some 11,000,000 of the 25,000,000 jobs not now covered. Such a limited extension would, we feel, fall considerably short of a "feasible" degree of comprehensiveness. So long as there is limited coverage, an increase in benefits or other desirable liberalizations would increase the discriminations between the covered and noncovered groups. We believe the coverage exclusions of the bill should be most carefully reviewed, and that there should be extension insofar as feasible at this time, in the light of the prime importance of comprehensiveness for establishing the system on a sound basis, which will permit its sound future development.

The CHAIRMAN. Mr. Marshall, I think, speaking for myself, and I think it probably is the view of the majority of the committee, that we would like to extend the coverage and make it as near to universal as possible. But, of course, we are met in the first instance with a large group of employees, who are in the Federal employ, the employ of the Federal Government, and who are not covered under the system.

Mr. MARSHALL. Yes.

The CHAIRMAN. Then we are met with other excluded groups, such as those under the Railroad Retirement Act. And then we still have other groups where practical difficulties simply cannot quite be ignored. Theoretically they are entitled to the coverage as well as any one, and they need it as badly as any one. As between the rural workers and the industrial workers, the former probably need it more in one way, certainly. But there are practical difficulties. And those are the things that bother me in connection with the extension of coverage. Theoretically and logically, of course, the system ought to be practically universal. It ought to extend to everybody.

I know you have given consideration to those matters.

Mr. MARSHALL. We have, sir.

I was going to comment on that later on, when I come to the first group you mentioned, that is, the railroad workers and others in other governmental plans.

The CHAIRMAN. Yes, sir.

Mr. MARSHALL. And there, we believe that those plans, by some adjustments, could be made supplementary to social security as a base, just as industrial pension plans and other pension plans in the industrial field are supplementary to the social-security plan.

Now, with respect to the difficulties involved in covering farm labor and these other groups, there are difficulties, but I gather from the report of your Advisory Council and Mr. Folsom's testimony that the Treasury Department and the Federal Security Agency had generally agreed that feasible methods could be devised to cover most of those groups.

The CHAIRMAN. Well, I think they have. I think they hold that view in all good faith. I do not question that for a moment. But there are difficulties, and they just cannot quite be foreseen in broad, all-inclusive coverage under social security, with respect to certain of the groups.

You may proceed. I just wanted to make that observation.

Mr. MARSHALL. Then, coming to this point I just mentioned, in making coverage universal, we believe that any governmental retirement plan should have social security as its base; that other Federal governmental plans should be supplemental in the same way that private industrial pension plans are.

The CHAIRMAN. That is a quite practical suggestion, when you are thinking of Federal retirement systems, systems under Federal law. When you get into the field of your municipal and State retirement systems, I think you must recognize, of course, that there are further difficulties there. It is very hard to escape the conclusion that if you bring the members of a State retirement system, let us say, under social security, you will not have ultimately a complete loss of interest on the part of the State in perfecting and extending its own system and will not have ultimately an almost complete reliance upon the Federal system. That is particularly true when tax dollars in the States and municipalities get tight. I simply know from practical experience that those are the things that will happen.

Mr. MARSHALL. Surely. Well, I think that basically the answer to that may be in whether we conceive of social security as providing only a basic minimum level of protection, as we advocate, or whether we conceive of it as a system which will ultimately provide all of the pension program necessary for the individual.

The CHAIRMAN. I think that once you could establish that premise firmly in the minds of the people, you will have made some progress toward your universal coverage, and without doing any violent or serious harm or injury to your State or municipal retirement systems, as well. But again you are faced with the difficulty of considering this system as always more or less in politics and as always more or less dispositioned to increase benefits, even under social security.

Mr. MARSHALL. I think the establishment of the Social Security System has tended to increase the interest of industry in perfecting its pension plans, rather than decreasing the interest.

The CHAIRMAN. I think that is true. Generally speaking, however, though you have some organizations in industry that are insisting upon that, there are so many workers who are not organized. They are strictly individual operators in their own fields and their own jobs and their own businesses, and they do not have that coherence and unified purpose that you find in your industries.

Mr. MARSHALL. Of course, I was thinking primarily of our own situation, where our pension plan, you see, has been in effect since 1912, long before we had pressures from organized labor, and so forth, and we perfected that.

The CHAIRMAN. Yes; I understand that; and I appreciate that what you say is correct, that it has encouraged the improvement of the private systems and liberalization of the private systems, and I think it should. But I think that is primarily true among those well-advised and well-informed groups in certain lines of work and industry, and

particularly in the organized industrial groups, where there is always the possibility and always the desire to improve their own system.

Mr. MARSHALL. I think you are right, Senator. The thing that I would hope is that if we can get this basic layer of protection idea firmly established, the universal extension of this system to all employed groups would lead others to improve their supplemental systems, just as happened in many industries since the establishment of social security.

The CHAIRMAN. Well, I have no hesitancy in saying, for myself, that I think that should be the goal. And if we could get safely over the hurdles of the difficulty in the administration, I would have no difficulty in going to a widening of the system into a universal system. Of course, it is obvious that it would be very, very much better if it could be done.

Pardon me for interrupting you.

Mr. MARSHALL. That is all right, sir.

The next point I would like to discuss is the new definition of "employee" in H. R. 6000. This proposed new definition has no relation to any existing concept of the employer-employee relationship. It is to be borne in mind that the attempt to revise the employee regulations along substantially the lines set out in the new employee definition had as the basic reason the coverage of additional persons under the act. However, even with the extension of coverage proposed under H. R. 6000, and certainly with universal coverage, this basic reason no longer exists. With extended coverage, the sole significance of the definition would be in the determination of the tax status of individuals covered; that is, as employees or self-employed. This would seem to be an insufficient reason when measured against the confusions that would undoubtedly occur from the proposal to measure the employer-employee relationship by a completely new and untried formula, which gives virtually unlimited discretion to the Federal agencies involved.

Another point is the provision under which employers in nonprofit institutions are permitted an election in the matter of paying their share of the tax. This results in a costly and discriminatory compromise which leaves the way open for the employer and employee to profit at the expense of the OASI fund, and should be carefully examined. It creates a situation where the employee may receive as much as five-sixth of normal benefits even though his employer elects not to pay his share of the tax.

Senator KERR. Would you think that in that regard the extension of coverage into the ranks of the nonprofit organizations should be definite, and that the cleavage between those covered and those not covered should be clear and concise, and that to the extent that it is extended it should be compulsory, and that beyond the compulsory point there should be no extension?

Mr. MARSHALL. That would seem to be the logical and sound way to do it. Speaking personally, now, as head of a hospital, as president of the board of managers of a local hospital, I can say this: We have been in the throes of trying to devise a pension system for several years now. I have been advocating it. But we have always had in front of us the problem of "what are the amendments going to be to the Social Security Act?" Speaking as head of that hospital, I would very

much like to see our employees definitely included on the same basis as everyone else is.

Senator KERR. Not on a basis that would be optional with you, but on a definite basis, by the law?

Mr. MARSHALL. After examining the provisions of H. R. 6000 and seeing how we could escape half the tax and get our employees five-sixths of the benefits, I think we could take our half of the tax and go out and buy more than one-sixth of the benefits from the private institution. Selfishly, I would almost be inclined to do that, you see, if this bill goes through. And I don't think it is right to put up that kind of a choice to me. I would much rather see us included just the way any industrial establishment in Schenectady is included under this bill.

Senator KERR. And if those should be excluded by reason of the concept of the division of church and state, let them be definitely excluded?

Mr. MARSHALL. That would be my idea.

Senator MILLIKIN. Mr. Chairman, I regret that I was a few minutes late, and the witness has probably covered this point.

But are you for or against covering the self-employed?

Mr. MARSHALL. We are for universal coverage—covering the self-employed, farm labor, and everyone else.

Senator MILLIKIN. Employers of all types?

Mr. MARSHALL. Employers of all types, as well as the self-employed.

Senator MILLIKIN. I mean, are you in favor of covering the president of X corporation?

Mr. MARSHALL. Yes; I think so, Senator. It does not really make much difference whether you cover the president of the X corporation or not. If you have an adequate industrial pension system, the social security becomes a small part of the pension for the higher-paid employees. We have found it very possible to integrate our pension system with the Social Security Act. It is true that our pension plan yields less in percentage of pay for the higher-paid people than it does for the lower-paid people, but the inclusion of the few people in the executive class in the Social Security System, or not, does not add very much to either the cost or the coverage under the plan.

Senator MILLIKIN. Would you cover all professional people?

Mr. MARSHALL. All professional people; yes, sir.

Senator MILLIKIN. Without choice?

Mr. MARSHALL. Without choice.

Senator MILLIKIN. How much would you have them pay?

Mr. MARSHALL. Well, we have not discussed that to any great extent in our committee, and I can't express the chamber's views. But from the people I have talked with, the general conclusion seems to be that, for the self-employed people, the man who is paying the tax himself, the tax ought to be about one and a half times the employee tax.

Senator MILLIKIN. Why not one and a quarter or one and three-quarters or 2 percent? I mean, how do you figure one and a half?

Mr. MARSHALL. I would leave that to your actuaries. I am not an actuary, and I can't figure this out. I think he should pay something more than the employed person pays.

Senator MILLIKIN. You do not believe that this is an insurance system in the true sense of the word, do you? I mean, you speak of actuaries. What have they got to do with it?

Mr. MARSHALL. They are the people whom I go to when I want to multiply the number and get some idea of the ultimate cost. It is an astounding system of arithmetic to me. I yield to them on all of these questions.

Senator MILLIKIN. This system is not an insurance system. I do not say that in a disparaging way, but merely to keep things straight. So that when you talk about doing things on an actuarial basis, you are just dragging, shall I say, a red herring across the trail.

Mr. MARSHALL. Well, we get actuaries into all sorts of industrial problems. I think we even had actuaries in our quantity-control plan in production; so we use those experts in many ways other than pensions and insurance.

Senator MILLIKIN. I am quite sure they have usefulness in an insurance system, but I am making the point that perhaps we do not have an insurance system in the true sense of the word, and that their function is, perhaps, as you suggest, a mathematical one, where they can use a slide rule faster than we can use it.

Mr. MARSHALL. Very much faster, Senator.

May I proceed?

The CHAIRMAN. Yes; you may proceed, Mr. Marshall.

Mr. MARSHALL. H. R. 6000 provides for the coverage of Americans employed by an American employer outside the United States. We believe this is a sound provision, with one exception. We believe that it should be amended to provide that such Americans as are employed outside the United States on such a permanent basis that they are covered under foreign social-security systems should not be covered also under the proposed legislation, because of the complications that arise, both in respect to tax payments and benefits under such double coverage. International air lines particularly would be adversely affected by such double coverage.

In General Electric we have some employees who would be adversely affected by such double coverage; people who are permanently located in Latin America, for example.

We also do not believe that the proposed extension of coverage to employees in Puerto Rico and the Virgin Islands is advisable. In view of the low level of earnings in those islands the minimum-benefit provision of H. R. 6000 would result in a considerably higher scale of benefit payments in relation to earnings than on the mainland. In many cases the high minimums would cause benefits to exceed previous earnings. We would like to call to your attention the fact that the Puerto Rican Legislature in designing an unemployment-compensation system suitable for the island set up drastically lower benefit amounts than those existing in this country. We would agree with your Advisory Council in their recommendations in 1948 that it would be better to seek a type of social security particularly adapted to the circumstances of these islands, rather than to include them under this system.

Now that concludes what I have to say at the moment on coverage, but I would like to comment briefly on the benefits proposed.

Senator MILLIKIN. Mr. Chairman, may I ask Mr. Cohen a question?

The CHAIRMAN. Yes. Is Mr. Cohen present?

Mr. COHEN (Wilber J. Cohen, Special Assistant to Commissioner for Social Security). Yes.

Senator MILLIKIN. What are the statistics as to the longevity of people in Puerto Rico, for example?

Mr. COHEN. I think it is substantially less than for those in the United States. As I remember, it is something like, I think, 12 years less than the United States.

Senator MILLIKIN. So that the percentage of people reaching retirement age, under the way the law is, or as it has been suggested by H. R. 6000, would be much less than on the mainland, would it not?

Mr. COHEN. Yes. On the other hand, it is likely that the proportionate persons receiving survivors' benefits would be somewhat more than on the mainland, because the mortality rates in the younger ages are somewhat greater. And it would probably also be true that for those who receive survivors' benefits, they would get somewhat more, because the size of the family is somewhat larger. So there are pluses and minuses both ways.

Senator MILLIKIN. I see. Thank you.

Senator KERR. Well, would not the figures with reference to the expectancy of those reaching the age of 65 show considerably less difference with reference to the expectancy of similar aged in this country than the over-all expectancy of all of those born?

Mr. COHEN. I think that is true, Senator. It is very likely. I don't remember the exact figures, but I think that is true. However, there probably would be a slightly smaller proportion reaching 65. But when they do reach 65, probably their life expectancy at 65 is not much different than the mainland.

The CHAIRMAN. You might review your data and figures on that, Mr. Cohen, because when we get into executive session I expect we will be questioning you.

Mr. COHEN. All, right, Senator.

Mr. MARSHALL. With respect to benefits: The United States Chamber of Commerce believes that any increase of benefits should be accompanied by the greatest possible extension of coverage, since to increase benefits without increasing coverage would increase the already flagrant discrimination between those who receive benefits under the plan and those who do not.

The chamber believes that, even from the standpoint of providing no more than a basic level of protection, current benefit levels need to be raised in view of the advance in living costs that has taken place since the present formula was adopted.

Assuming wide extension of coverage, we favor the formula recommended by the Senate Advisory Council in its 1948 report to this committee, namely, 50 percent of the first $75 of average monthly wage and 15 percent on the excess with no increment.

With no extension of coverage, or any limited extension, consideration of costs and increased discrimination between covered and noncovered groups may well suggest a lower figure than $75 for the breaking point between the 50-percent and 15-percent factor.

We feel that the formula as presently proposed in H. R. 6000 is unsound in several essential respects.

We see no good reason for increasing the taxable wage base beyond the present $3,000 level. Any desired level of benefits can be achieved on the existing wage base. It is merely a matter of adjusting the percentage in the formula used. Increasing the wage base only results

in higher proportionate benefits to those better able to provide their own benefits.

Senator MILLIKEN. Do they not really pay more for their benefits than those in the lower wage brackets?

Mr. MARSHALL. No; the tax rate, Senator——

Senator MILLIKIN. Per dollar of payment, does not the fellow in the higher bracket get less than those in the lower bracket?

Mr. MARSHALL. Oh, yes. That is right. His tax rate remains constant, but because of the construction of the benefit formula he gets less per dollar paid in than would the fellow in the lower-income bracket.

Senator MILLIKIN. Which is another way of saying that there is an element of discrimination there, because he is paying partially for the benefits which come to those in the lower brackets.

Mr. MARSHALL. I think I remember seeing some estimate that has been made that the employee contribution alone on this extra $600 would be more than sufficient to pay the employee's pension, so that the employer's contribution on that part would wholly go to the payment of the pension of the people in the lower income brackets. So there is that element of discrimination, Senator.

Senator MILLIKIN. What is your reaction to the suggestion which has been made that we start right out, decide whom we want to be covered, start right out with full pension, whatever the amount may be, on a pay-as-you-go basis?

Mr. MARSHALL. I have a supplementary statement to this one. In this one I am expressing the chamber's views. In my supplementary statement I would like to advocate this proposal that you have just outlined.

Senator MILLIKIN. The chamber has no views on that, as such?

Mr. MARSHALL. We were confining our comments on this bill to the established chamber policies. The chamber has not yet had an opportunity to establish a policy with respect to this rather recent proposal for immediate maturity of the program.

Further, as to this change in the $3,000 wage level, it would probably result in changes in other forms, which have the same $3,000 level, such as the Federal Unemployment Tax Act. That would require corresponding revision on State laws and substantial changes in the contribution formulas under State law. These changes should not be forced on the State unless there is some compelling reason. We don't believe there is any such compelling reason, as noted. Moreover, such a change would complicate the problems of the many industrial pension systems which have already been integrated with the present social security formula under Treasury Department regulations.

Senator MILLIKIN. As you go up in the economic scale, the percentage of savings per person are greater, are they not?

Mr. MARSHALL. I think that is true, Senator. And, of course, that is one thing we believe, fundamentally: That this system should provide a basic layer of protection so that there should be every incentive on the individual and his employer to provide such supplemental systems as they wish, so that they will have an incentive to provide for themselves.

There is one other weakness in both the present formula and the proposed formula, and that is the annual increment for each year

of covered employment. We are convinced that such increments are inappropriate in a social insurance benefit formula, which aims at adequacy of protection rather than at nicely adjusted equities as between one individual and another. In this we are in accord with the conclusions and the reasons expressed by the Advisory Council of the Senate Finance Committee in its 1948 report.

The chamber is for a formula which produces a basic minimum level of protection. If benefits are adequate today they will become increasingly overliberal as time goes on by reason of the increment. If the addition of increments is necessary to make them adequate in the future, they are obviously inadequate today. So that we feel that you should establish what is an adequate benefit level today, and that should remain.

Senator MILLIKIN. What elements would you consider in establishing the test of adequacy? Subsistence level? Subsistence plus some comforts?

Mr. MARSHALL. I think that the formula proposed by your Advisory Council, as we recommend, here, is a reasonable one: 50 percent of the first $75 and 15 percent of the balance, which, as I recall, produces for the $3,000 man around $63. No; we don't think that may be adequate for comfortable living, but it nevertheless is in line with our philosophy that that is a basic level of protection for the individual.

I live out in the country, and one of my neighbors is a retired General Electric pensioner. He and his wife get $85 a month combined General Electric pension and social security. He has been retired for some years. Now, when you speak of that, he does very nicely on that. They go to Florida every winter.

Senator MILLIKIN. On $85 a month for the two of them?

Mr. MARSHALL. For the two of them. You couldn't do it in Washington. You couldn't do it in New York City.

Senator MILLIKIN. I suggest that you cannot do it in Florida.

Mr. MARSHALL. I don't know how he does it in Florida. He must have some savings over and beyond this; but he didn't make too much money, and he had no inherited wealth. Neither of them did. They had no family to bring up, and that may have been part of it.

Senator KERR. And he does go to Florida each winter?

Mr. MARSHALL. Yes. They have a car, and they have a trailer, and they go to Florida each year, and they come back and raise their vegetables and can them. It is kind of a nice existence. I sometimes look with envy on them.

Senator MILLIKIN. Well, they must have a sock that they are digging into.

Mr. MARSHALL. That is right. As a matter of fact, that is what we really would like to encourage. A tendency on the part of the individual to provide that sock for himself so that he can take that trip to Florida every year.

Senator MILLIKIN. Then you are really not talking about a subsistence level. You are talking about some kind of a level upon which further protection can be added.

Mr. MARSHALL. That is right, Senator.

Senator MILLIKIN. And that you can expect reasonably will be added.

Mr. MARSHALL. That is right, sir.

Though it is urged that the inclusion of an increment is necessary in order to provide for the more equitable treatment of those who have been under the program for long periods as contrasted with those having shorter covered employment, it is clear that there is little to this argument. It can hardly be said that an increment of one-half of 1 percent is any substantial inducement for continued work. Moreover, and particularly if universal coverage is lacking, it further adds to the discriminations existing between noncovered and covered employment. It would seem that the existing method of computing average wage gives a sufficient differential in benefit levels proportioned on length of time in covered employment.

Senator MILLIKIN. Mr. Chairman, if I may ask: What is the chamber doing toward the encouragement of elderly people who are able to work and willing to work to stay on the job and continue employment at least part of the day? What are you doing to stop the junking of people who are 40 or 45 years old.

Mr. MARSHALL. I can't answer for the chamber on that, Senator. I know they have their programs, as many industries have, to encourage the orderly retirement, and to try to get the man who is maybe forced to retire under a compulsory retirement system located well in some other work or carrying on his hobby or something like that.

Senator MILLIKIN. Just exactly what is that program? That is what I am driving at.

Mr. MARSHALL. I don't know that, Senator.

Mr. LAMBE. (Benjamin Lambe, director of publicity, United States Chamber of Commerce). I can answer your question in a general way. The chamber has a joint committee with the National Association of Manufacturers, which is working toward the employment of the aged and the handicapped, the two jointly and has received a Government award for this work.

Senator MILLIKIN. What are you getting done?

Mr. LAMBE. They are encouraging the employment of the aged and the handicapped by industries throughout the Nation.

Senator MILLIKIN. Could you give us a memo showing exactly what your plan is, who is working on it, what you hope to achieve, what you have achieved, and so forth and so on?

Mr. LAMBE. Yes, sir.

Senator MILLIKIN. All of the testimony of this hearing shows that we are going to have an enormously increased number of aged people to deal with, and obviously if we can keep them productive even for a part of the day, assuming that they are able to work and willing to work, I think we should do that, and I am not talking about making a "deduct" off of their insurance benefits by keeping them working. I would just as soon let them keep their insurance and keep working. The point is that we are increasing the age of education. We are junking people at early ages. And pretty soon we will have such a narrow segment of our productive population that you will not be able to keep this economy going, and we will not be able to make the "deducts" that are required by systems of this kind.

Mr. LAMBE. I shall see that you have that information made available to your committee.

Senator MILLIKIN. I would appreciate that very much.

The CHAIRMAN. All right, Mr. Marshall. You may proceed.

Mr. MARSHALL. With respect to the computation of the average monthly wage and the so-called continuation factor, H. R. 6000 proposes a new method for computing primary insurance benefits. Though the change was proposed to clarify and make more understandable the computation procedure and more properly to proportion benefits to the amount of time spent in covered employment, it appears, on the contrary, that greater confusion may be introduced by the more complex formula proposed, and it is demonstrable that it would work substantial inequities.

As an aside, here, I would like to say that I don't know who was responsible for drafting this, but I would have hoped that he would have had a little experience in drafting industrial contributory pension plans, which have to be simple enough so that every industrial worker to whom you wish to sell participation in the plan can understand them, so that he knows what he puts in and what he gets out of it.

I spent several days trying to understand the implications of this continuation factor. I think I have them clearly in my mind. But I am reasonably sure that if we had any such program in any industrial pension plan that I have ever seen that we had to sell to industrial workers, no industrial worker including the supervisors would ever understand it. And one of the things I would like to see in this thing is such a simple approach that all of us can really understand it, without too complicated a formula.

Senator KERR. Do you, after this study, feel that you understand the general objective?

Mr. MARSHALL. I think I do.

Senator KERR. Would you want to undertake to suggest to the committee simple language which might achieve the same objective?

Mr. MARSHALL. Yes; I think I have that suggestion in here, and I will come to it a little later.

Under existing law an individual's total elapsed time, since 1937 or age 22, is used in relation to his total covered wages in determining his average wage. Thus time not spent in covered employment reduces his so-called average monthly wage.

Under the proposed computation procedure, only the time spent in covered employment is considered in relation to total covered wages in establishing an average monthly wage. In other words, if a man works 10 quarters out of 20 quarters, you take his earnings in the 10 quarters and divide by 10, so that you haven't taken into consideration any of the time that he did not work in covered employment in getting an average. But in order to proportion benefit amounts to the time spent in covered employment, the continuation factor is used. This continuation factor is the ratio of time spent in covered employment in relation to the individual's total elapsed time. But the continuation is applied to the basic primary insurance benefit instead of to the average wage, as in the existing law. We believe that what you should do is to use the formula, to answer your question, sir, that is contained in the existing law.

Now, the inequities produced by the new method of computing average monthly wage and the application of the continuation factor are made clear by the following table:

Average monthly wage	Total elapsed time	Length of covered employment	Total aggregate wages	Primary benefit amount
	Years	*Years*		
$100	40	40	$48,000	$60
$200	40	20	48,000	36

And there I have just taken two cases. You will notice that they both have the same total aggregate wages, $48,000.

One has earned those through a period of 40 years at $100 a month. The other has worked 20 years at $200 a month, perhaps the last 20 years preceding retirement. But note what happens when you apply the continuation factor. The first gets $60 on $48,000 of aggregate wages, and the second man gets $36. We suggest that that results in inequity. It is obvious that the continuation factor completely distorts benefit amounts in relation to the contributions made by the insured. It is for this reason that it is highly probable that the continuation factor, if adopted, would soon be removed from the law when its discriminatory effects started to show up after 1956, its effective date.

Senator KERR. What would the No. 2 man get, here, under the present law?

Mr. MARSHALL. I would have to figure that one out, but it would be a higher percentage. It would be closer to the $60, you see.

As I say, I am not an actuary, and I am not able to figure these cases quickly. But you would not have the great discrepancy between these two cases. And the reason why, Senator, that discrepancy arises is because you take 50 percent of the first increment of the man's wages as the benefit. Now, if you cut that half by the use of the continuation factor, you see, you have reduced his benefit greatly; whereas if you take half his average wage, or half his total wage, because he only worked half time in covered employment, you have merely knocked off the top part of his earnings before you start computing his benefits. So we believe that what you should do is continue the formula contained in the present law for computing average wages.

Now, the present law sets up an over-all limit of $85 to the benefits that a family can draw. In line with our recommendation that benefits should be increased, which implies an increased maximum primary benefit, we feel that this over-all limit should also be increased. However, bearing in mind the chamber's stated policy that the objective of the OASI program should be to provide a minimum layer of basic protection, we feel that the increased limit should not be more than $120, or if the benefit formula recommended above is adopted, a maximum of twice the basic benefit would meet this objective. That would be around $127, on the other formula.

Also we question very much the new alternative eligibility rules set out in H. R. 6000. Contingent upon wide extension of coverage, we urge a simple eligibility formula, such as that recommended by the Advisory Council. This would result in insured status at an earlier

date for older persons not previously covered. And we suggest for your consideration the approach recommended by the Advisory Council.

With respect to lump sum death benefits, we believe that this proposal to make lump sum benefits payable at the death of any insured person, rather than just those who leave no survivors immediately entitled to monthly benefits, represents an attempt to provide benefits in an area where very adequate facilities are already available on a voluntary basis and are readily accessible to those who need and desire them. To quote from the minority report of the Ways and Means Committee:

> Today over 78,000,000 persons—more than the entire number to be covered under the social security system even when extended as this bill provides—now have life insurance policies, and we see no purpose to be served by the Government entering into this field.

It may be argued in behalf of the proposal that cases now arise in which survivorship benefits are payable for so short a period that the family receives less in the aggregate than would be forthcoming if no one were eligible for survivors' benefits and a lump sum were payable. However, this situation could quite well be met by a minimum guarantee, to take effect on the expiration of the survivors' benefits, of the amount, if any, by which the total of such benefits fall short of the lump-sum benefit that would have been available had no survivor benefits been due. This is quite a different matter from the provision of lump-sum death benefits on all insured deaths.

With respect to permanent- and total-disability benefits, the chamber is fully aware of the plight of many of the disabled and anxious that their real needs should be fully met, but we are convinced that a Federal system of cash benefits, whether in conjunction with OASI or otherwise, is not the best way to deal with this problem.

Long-continued disability is a distressing catastrophe involving serious consequences for those whom it overtakes and for their dependents. However, the pitfalls revealed by life insurance companies and other experience indicate that disability benefits could not be included in a Federal contributory social insurance program with any reasonable assurance that claims could be limited to the type of disability envisaged when the program is adopted.

Senator MILLIKIN. Do you object to handling it through the subsistence part of the program?

Mr. MARSHALL. Yes. We would like to remove the Federal Government entirely from the field of old-age assistance.

Senator KERR. You say "from old-age assistance"? Or from disability?

Mr. MARSHALL. We feel that perhaps there may be some Federal assistance necessary in this field of rehabilitation of disabled.

Senator MILLIKIN. Well, why not hit the basic problem of taking care of the disabled? Let me say by way of preface that on the assistance end of the thing you have local contribution and therefore a local vigilance directed against abuse, which is very useful.

Mr. MARSHALL. We believe very strongly that this problem of disability should be handled to the greatest extent possible at the local level, through rehabilitation programs. And the thing that we would like to urge that an attempt be made to do is to encourage incentives for the individual who is disabled to again become productive.

Senator MILLIKIN. Obviously that is meritorious. It still leaves the case where you cannot rehabilitate.

Mr. MARSHALL. Where you cannot rehabilitate.

Senator MILLIKIN. Now, what are you going to do with that case?

Mr. MARSHALL. With universal coverage under this insurance program, we believe that with the taking of the burden of the aged off the States, the States should be able to, where there is a real need, finance themselves as to the total and permanent disability and the needy aged.

Senator MILLIKIN. The pressure in the States to use this merely as a base for further State pensions, as a practical matter, will not be ended by this act.

Mr. MARSHALL. That is probably true, Senator.

Senator MILLIKIN. So we just have the same problem on an expanded scale.

Mr. MARSHALL. On the other hand, we believe that the closer you get to the tax money, to the people who are paying it out, the revenue source, the better control you have over it.

Senator MILLIKIN. That is why I asked whether you objected to handling the permanent and total disability through the assistance part of the program. Because there you have matching, with an opportunity for closer surveillance than you might otherwise have.

Mr. MARSHALL. The chief danger in that, of course, is that if the Federal part of the program becomes too great a part of it, then you have an incentive on the State to continue their payments in order to get the matching Federal funds.

Senator MILLIKIN. Well, assuming sensible limitations, then you have no objection to handling the disability through the assistance side of the program?

Mr. MARSHALL. I don't think I can answer categorically for the chamber that they would have no objection, because generally speaking, we believe that the Federal Government should withdraw from this assistance field, leaving it to the States. We believe that, given universal coverage under the insurance program and a basic level of protection, the States should be able to finance all the assistance that is necessary in their own areas.

The CHAIRMAN. Your conclusion is based upon a universal coverage in the first instance, of course?

Mr. MARSHALL. Yes, sir.

The CHAIRMAN. Otherwise you still have a problem that will have to be dealt with in some way.

Mr. MARSHALL. In some way.

Senator MILLIKIN. Do you not see that as a practical matter to the extent that we relieve the States of the cost of any part of this program that simply adds the pressure to use the same amount or a greater amount as a part of some other program?

Mr. MARSHALL. That is right.

Senator MILLIKIN. Did you ever hear of any public program that put out benefits that was ever lessened?

Mr. MARSHALL. I never have.

Senator MILLIKIN. It was tried in the Federal Government in 1933 and has never been tried since. I am talking about a matter of 25 percent in various benefits, including veterans' benefits. That was tried just once.

Mr. MARSHALL. There are very practical difficulties in the way of this program. It is one that requires most earnest study, we believe. And we would like to submit that that is something which should be studied, rather than to step out now and put permanent and total disability as a matter of right in this type of program.

Senator MILLIKIN. I merely want to suggest that you businessmen, who should be very practical where money is concerned, are kidding yourselves if you believe that by increasing the benefits on the insurance side you are going to decrease the assistance side. Theoretically, you are 100 percent right. And I would venture to say you would find very few people in my business who would disagree with my conclusions.

The CHAIRMAN. I take it you hope the benefits on the assistance side would decrease.

Mr. MARSHALL. Yes, although we are not in favor of decreasing benefits to the needy family. What we would prefer to do is to have those benefits administered on a purely needs basis by the local agency involved and the money raised as close to the local level as possible. Because we believe there is where you get the careful scrutiny. The neighbors know the family. They realize they are paying out of their pocket for the family's support.

The CHAIRMAN. That is your best check and balance.

Mr. MARSHALL. Yes, that is the best check.

Senator MILLIKIN. You have to keep in mind the practical fact that the States are progressively abdicating their own sovereignties. We have here a request for $12,000,000, not for one State but for the whole United States, to take care of crippled children. And when we reach a point in the States where all 48 will allow crippled children to suffer for the lack of $12,000,000, we have almost reached the ultimate in abdication, and the ultimate in a lot of other things that could be described with more pungent words.

Mr. MARSHALL. We are all for the taking care of these problems at the State and local level, just as much as can be accomplished.

Senator MILLIKIN. Our difficulty is that we are all for it, but we do not take care of them at the State levels, and that is why this committee is sitting around here at the present time.

Mr. MARSHALL. I see the difficulty, Senator, in my own community. I sit in meetings where all of us are for taking care of these things at the local level, but a program comes up and then somebody who is interested in that says, "Oh, maybe we can get Federal money for that."

Senator MILLIKIN. Now you are talking sense.

Mr. MARSHALL. But I for one am trying to stop it. I think more of us should do that.

In old-age and survivors insurance the determination of eligibility for benefits is largely objective, requiring but little discretionary decision. Long-term disability, on the other hand, involves a great deal of subjective consideration both on the part of the individuals concerned and of those who administer claims. Disability claims vary greatly as to types and circumstances and require widely different methods of individual treatment. Because of these subjective characteristics, disability cases can be handled far more appropriately by State and local agencies through public assistance than by the Federal Government.

While a plan might be set up originally with strict conditions as to eligibility and with limited benefits, the protection thus furnished would be so restricted that there would almost certainly be continuous pressure to liberalize the eligibility rules and to raise the benefit levels. In lieu therefore of including disability benefits in the Federal system, the wiser course would seem to lie in the encouragement of the efforts of voluntary agencies, supplemented by the State public assistance systems and by the State vocational rehabilitation agencies.

Opposition to the inclusion of total and permanent disability benefits in this program as a matter of right certainly should not be construed as opposition to any well-considered method for preserving the insured status of an individual during the period of incapacity. This might be accomplished by accruing wage credits for him during the period of his permanent and total disability.

As to the tax schedule, it is the accepted policy of the United States Chamber of Commerce that the tax rate supporting OASI should be increased appropriately to take account of any amendments that would increase prospective benefit disbursements. Otherwise there should be no increase in the tax rate until necessary to prevent diminution in the funds of the program.

Under the present law, the tax rate was increased from 1 percent to 1½ percent each on employer and employee on January 1 of this year which is the initial tax rate contemplated by H. R. 6000. Hence, that initial rate is appropriate in recognition of the increased benefits and we believe that the situation should be carefully reviewed before the increase to 2 percent is permitted to take place in either 1952 as provided in the present law or in 1951 as proposed in H. R. 6000.

With respect to public assistance, it is the established policy of the national chamber that the present system of Federal grants to States for public assistance should be recognized as a temporary expedient; that the States, in the face of growing Federal burdens, should assume an increasing proportion of the costs of public assistance as the OASI program is expanded, and that finally the entire costs of such assistance as is needed to supplement OASI should be borne by the States and their local subdivisions. This policy is based on the premise that the primary long-range protection at the Federal level should be provided through the insurance approach.

We believe it necessary at this time, in conjunction with extension of OASI coverage, to provide for an actual start in the systematic withdrawal of the Federal Government from the field of public assistance. Experience with the public assistance program, as administered during the past 14 years, has obscured and distorted the original intent of the law. During this period the public assistance provisions of the Social Security Act have been amended three times. In two of these instances the formula for Federal participation has been changed to yield a greater Federal share. The original formula provided a dollar for dollar matching up to the $30 maximum payment. Presently the formula involves a Federal share of three-fourths of the first $20 of a State's average monthly payment plus one-half of the balance within individual maximums of $50. The proposed bill further changes this ratio to provide for a Federal share equal to four-fifths of the first $25 of a State's average monthly payment plus one-half of the next $10, plus one-third of the remainder within individual maximums of $50.

The omission of specific standards, defining need, in the Social Security Act and leaving wide discretion to the States for establishment of their own standards with respect to the means test, has produced a wide range of variation among the States. The range in the percentage of persons who qualify for old-age assistance extends from less than 10 percent of those aged 65, and over, in one State to over 80 percent in another State.

Senator MILLIKIN. It is not quite all a matter of administration. A lot of it depends on the economy of the State and a lot of other things, beyond the mere question of administration.

Mr. MARSHALL. That is probably true, sir. But the present type of "unequal" matching, however, does offer a strong inducement to the State to increase the number of recipients rather than the average payment, and we believe that the proposed change in H. R. 6000 would add to this inducement.

Now, what we would like to propose is that there be studied at this time, in conjunction with the extension of the insurance coverage an actual start in the systematic withdrawal of the Federal Government from the field of old-age assistance. We believe this could be accomplished by permitting continuation of the present financing arrangement as written in the existing law for a 5-year period.

Senator MILLIKIN. Will you explain that a little more? We are going to get out of it progressively. How are we going to do it?

Mr. MARSHALL. All right. Our proposal for getting out of it is that we say that the provisions in the present act are extended for another 5 years. We won't modify them or change them. We will keep them in force for another 5 years. And, by the way, that is the period necessary for persons newly covered under the insurance program to establish full eligibility for benefits, insurance benefits. Now, at the end of the 5-year period, the Federal Government would cease to participate in the financing of any people newly added to the roll. You wouldn't give aid to the State for any people newly added to the roll at the end of that 5-year period.

Senator MILLIKIN. Supposing that had the effect in X State of reducing the pensions which people are now getting on the public-assistance side. Your answer would be that the State should raise its own additional funds to take care of that problem. It is a State problem and a State responsibility to raise the money necessary to hold up your end in the State.

Mr. MARHALL. Yes, sir. I think at that time the Federal Government could say to the States: "Now, your aged population, your population reaching the age of 65, now consists of two parts. The first part is made up of those now over 65 who are now receiving old-age assistance on a basis of need. Those we will continue to help you with. The second group consists of those who are now becoming 65. They will be now eligible for the insurance benefits and will receive, under these proposed minimums in the bill, about as much as the Federal Government is now contributing to them under the old-age insurance program. Therefore we are not going to add any more of those people to the Federal old-age assistance program. If their needs are such that their benefit payment under OASI should be supplemented, that is your problem, as it is under the old-age-assistance program."

This brings me down to the conclusions which we have, and I would just like to summarize what I have said here about the chamber's position.

We believe, first, in universal coverage, that all occupations not now covered should be included in the insurance program.

Second, that we shouldn't have this new definition of "employee" as defined in H. R. 6000.

Third, that assuming wide extension of coverage we should use the advisory council's formula for benefits of 50 percent on the first $75 of monthly average wage and 15 percent on the excess, with no increment.

Fourth, that we should retain the $3,000 tax base and the present method of determining average wage for benefit purposes.

Fifth, that the present over-all limit of $85 on family benefits be increased, but to not more than approximately $120.

Sixth, that the eligibility formula proposed by your advisory council be adopted. This would result in insured status at an earlier date for older persons not previously covered.

Seventh, that the provision for lump-sum death benefits on all insured deaths be deleted.

Eighth, that the best approach to the problem of the totally and permanently disabled lies in the rehabilitation and assistance programs of voluntary organizations and public-assistance agencies at the State and local levels.

Ninth, that in view of the recent increase in the tax rate supporting OASI, which is sufficient to take account, for the time being, of our recommendations to increase benefits, the situation should be carefully reviewed to determine when any increase in the actual tax should be effective.

And tenth, that Federal grants to States be recognized as temporary expedients; that the States, in the face of growing Federal burdens, assume an increased proportion of the cost of public assistance as the OASI program is expanded; and that, finally, the entire cost of such assistance be borne by the States and their local subdivisions.

Now, I have presented here as completely as time would permit the chamber's position with respect to these changes in the Social Security Act. But before concluding, I just want to reemphasize the hope that you will recognize that our objectives coincide with yours. And we believe that these objectives can best be accomplished by a simple system, based upon contributory principles of social insurance, easy to administer, easy for the participants and the public to understand, and uncomplicated by diversion of funds for other social purposes.

Mr. Chairman, that concludes the statement of the chamber's position on H. R. 6000. But with your permission, I would like to make a supplemental statement with respect to this whole problem.

The CHAIRMAN. Well, sir, you may do so. We have some other witnesses this morning, Mr. Marshall, but I see your statement is not very long.

Mr. MARSHALL. It is rather short.

My remarks heretofore, as I said, have been directed to the consideration of established chamber policies in relation to the specific legislative proposal before you.

However, since the original adoption and subsequent reaffirmation of chamber policy, an increasing number of people are of the opinion

that one of the underlying premises of the present system is perhaps wrong and should be thoroughly reexamined at the present time.

In essence, this thinking would provide for an immediate maturity of our social-security program, as contrasted with the present approach, wherein the full impact of the cost of the obligations which we are now legislating do not mature for at least another working generation.

It seems to us that we should be willing to provide for our present aged the minimum benefits that we now, by legislation, are asking our children to provide for us.

I may say that I thoroughly share this view, and further that many of my fellow committee members are also in accord with it. It seems elementary that in the last analysis the support of an aged population is the responsibility of the generation then at work. No one has yet been able to devise a scheme under which a government can save in advance for all the aged in its population.

With this basic principle in mind, it seems that the most favorable method of attacking this problem before us is to immediately extend benefits under the insurance plan to all persons now 65 and over not working. This in effect is doing what an industrial concern does in extending past service credits to all its workers, and granting any increase in pension credits to its already retired workers.

This would give all eligible persons a minimum amount provided in the insurance law, and those with wage credits would receive the additional amount to which such wage credits would entitle them under the formula. Those benefits, together with the other benefits under the insurance program, should be financed by us now on a contributory basis. However, a primary advantage would attach, in that current tax collections could be proportioned to the total amount of benefit payments to be made in the current year. Thus, we would be on a realistic pay-as-you-go basis.

Now, there are some immediate and obvious advantages to such a program. First, it provides universal coverage. Second, it would take the Federal Government immediately out of the public-assistance programs and would relieve the States of enough of the burden of caring for the aged so that they could make any needed supplements on a needs basis.

Of tremendous significance, in my estimate, is the fact that it would require us and all succeeding generations to face squarely up to the over-all cost of the program. Also, a safety factor or balance is provided against any unreasonable extensions, in that the Congress, which votes for increased benefits, must make provisions for increased revenue at the same time.

I would like to urge upon you gentlemen serious consideration at this opportune time of this new approach to the old-age insurance problem.

I want it also understood that this is not established chamber policy. It represents my views and those of many of the committee who have been studying this problem for many months.

I thank you, sir.

The CHAIRMAN. Thank you very much.

I would like to make this suggestion. You are assuming that we are going to abandon deficit spending when you make this last recommendation?

Mr. MARSHALL. I trust you will, sir.

The CHAIRMAN. Senator Millikin?

Senator MILLIKIN. Here is a young fellow who enters the labor force, 20 years old today. He has 45 years ahead of him before he becomes 65. How would he feel about paying full cost of that system for 45 years before he would get benefit from it?

Mr. MARSHALL. We have found under our contributory pension plan—we have a contributory pension plan in our company—that the situation is that we are forced to explain the program to that young man before we can get him to contribute; that we have to sell it to him, explain it; and that because he is contributing to the program, he understands it and is much more interested in it and appreciative of it from the age of, say, 20 to 40, than he ever was before. When we had a noncontributory plan, as we did for some 40 years, I for one was under it, and I don't remember knowing that we had a pension plan until I was 30 years old. But today I get questions in our office from people who are 25 or 30 years old. Why? Because they take out their pay checks and see something taken out of it for pension. They want to know about it. When we explain it to them, and explain that it is a fair system and a just one, we think, they are glad they are under it.

Senator KERR. They are glad, are they not, because they feel they are contributing to a pension system that will be for their individual benefit.

Mr. MARSHALL. That is right.

Senator KERR. Now, under the suggestion you have just made, he would become aware of the fact that he was contributing to a pension system for the benefit of others, and that no part of it was being kept for a system that would be for his benefit, and that he must make these contributions himself and gather such happiness as he can from the knowledge that he is paying for it for others and the hope he may have that others will be able to pay for it when his turn comes.

Mr. MARSHALL. Of course, Senator, I recognize that problem. It is largely a matter of presentation.

Senator KERR. Could a rose by some other name be presented so as to smell less sweet, or any more?

Mr. MARSHALL. On the other hand, Senator, the amount that this young man at age 20 who works for 45 years is going to get under the legislation in effect at the time will be determined by whether he does contribute for 45 years to the program or whether, during a 5-year period, he decides not to work, and goes to Florida. The ultimate benefits will be determined by the number of years which he does contribute to the program, assuming, as we all have to assume, that this program will remain in effect for the 40-year period.

Senator MILLIKIN. Well, how will you sell this: He says, "Looky, Mister. I have got to contribute 45 years to get my retirement, if I live that long. But some old Jakes 65 years of age are going into this system tomorrow at 65 years of age without contributing anything. Why should I have to contribute to keep those old fuddy-duddies enjoying Florida?"

Mr. MARSHALL. Of course, you have now that problem on the pension system. Those usually have not been on a contributory basis. The past service credits that have been granted have usually been

granted on a noncontributory basis. So the problem doesn't come up as acutely as you posed it.

But it does seem to me that I am willing to take a little bit of issue with you on whether or not even under this proposed system it cannot be truly called an insurance plan. I will admit that there is one major difference between that and what we normally think of as an insurance plan, namely, that it has no accumulated reserves. But I submit, from conversations with my friends, the actuaries, again, that a system that is based upon the credit and taxing power of the United States Government needs no reserves. That is one point. The second point is that the Federal Government cannot really have real reserves.

So, because you do not need them, and secondly because you cannot have them, I believe that you can truly call this program that we are proposing an insurance program, without a funded reserve.

Senator MILLIKIN. All right. Let us call it an insurance program. Assuming it without conceding it, let us call it that. What do you say to this young fellow that come bustling into your office and says, "Looky, Mister, do you mean to tell me that I am going to have to contribute 5 percent of my wages from now until I am 65 years old to take care of a lot of old fuddy-duddies that have been in this system 4 or 5 years and are now 65 and are commencing to get all this dough?" What do you say to him? How do you inspire him? How do you do this salesmanship job that you are talking about?

Mr. MARSHALL. No. 1, I would say to him, "Of course, that is your father and your mother and your uncle."

Senator MILLIKIN. "No," he says, "I am an orphan."

Mr. MARSHALL. And No. 2, I would say to him, "If you do that for these people, the next generation will do it for you."

Senator MILLIKIN. But he says, "Mister, listen. Where do you get this nice magic globe of yours that can enable you to say what some Congress is going to do 45 years from now for me?" What do you say to that? "Or even next year?"

Mr. MARSHALL. Well, I would present it to this fellow in this way: This is an insurance program with no funded reserve. Now, you have this situation as to pensions, under such a program, even under an industrial pension plan. I think Mr. Lattimer testified before the steel panel that with a corporation of the size and strength of the United States Steel Corp., a funded reserve was not necessary for a pension plan and all you needed to do was to pay in the interest that such a fund would have earned, plus the current contributions of the employees and the employer, and that would be sufficient for all time to come to meet the pension outgo.

Now, I submit that if it is true in the case of the United States Steel Corp. it is much more true as to the United States that you don't need a funded reserve, that no matter what you call it the cost of the pension is the interest on the funded reserve that you would otherwise have, plus the current contributions by the employer and the employee. And those must be equal to your current outgo, to your current pension payments.

So to my young man friend I would say: "Whatever you do, this is what each generation has got to pay to meet the cost of the aged who are not working."

Senator MILLIKIN. Are there not perhaps two answers? One, taking the Railroad Retirement System, the young fellow who goes into that system is paying—how much, Mr. Fauri?

Mr. FAURI. Six percent.

Senator MILLIKIN. Six percent. And he will continue to pay that until he reaches retirement. So it has been sold there.

Mr. MARSHALL. That is true.

Senator MILLIKIN. No. 2, his union representatives, who are very smart salesmen, say, "Listen, brother. You do not need to worry about that. Your boss is going to pay for it." Is that not right?

Mr. MARSHALL. That is right.

Senator MILLIKIN. And that is what will happen, is it not?

Mr. MARSHALL. Of course, that would bother me if it did happen.

Senator MILLIKIN. Of course, it is going to happen.

Mr. MARSHALL. Because I think one of the big safeguards of a program of this kind to prevent its running away into a British plan is the fact that it is contributory on the first increment, and I think it is very important that we keep it so.

Senator MILLIKIN. Of course it is going to happen. It is the business of the union to see that it does happen. That is how all "deducts" are sold: "We have 'deducts' for the taxes. And so you don't have to worry about that. That is one of our bargaining points. We are working to get you a net take-home pay that is satisfactory, and you don't have to worry about the additions. We bargain that out. That is what we are here for." And they do a good job at it.

Mr. MARSHALL. Of course, I frankly am hopeful that in the long run we will develop a generation of labor statesmen in the labor field who will really look to the long term best interests of their constituents, as you gentlemen do for our Nation, so that we will get some real statesmanship in that field, and not the crisis type of thing that we have been seeing during the past few years.

Senator MILLIKIN. I respectfully suggest to you that the job of the labor leader is to try to pass on these costs to the employer. And he does. And that is another way of saying that the public pays the bill.

The CHAIRMAN. Thank you very much, Mr. Marshall, for your contribution.

Mr. MARSHALL. Thank you. I am delighted to have had the opportunity, Senator.

(The exhibit attached to Mr. Marshall's statement follows:)

POLICY DECLARATIONS OF THE CHAMBER OF COMMERCE OF THE UNITED STATES ON SOCIAL SECURITY

Following are the applicable policy declarations of the Chamber of Commerce of the United States on social security as revised and readopted by the membership at the thirty-seventh annual meeting in May 1949. These declarations are in full force and effect and supersede all previous declarations:

Employment a prerequisite. However desirable and necessary social security may be, it is no substitute for productive employment and, therefore, every effort should be made by business and other groups to encourage high levels of production and steady employment.

Hazards to be covered. Protection against periods of job and income losses should be provided either by voluntary or by governmental action. Social security provided by governmental action should be restricted to those major hazards of life concerning which individual effort has been demonstrated to be substantially inadequate or impractical.

Level of protection. A social-security program should provided a minimum layer of basic protection against the major economic hazard with which it deals, and should be so designed and administered as to encourage additional savings and self-protection by the individual through his own efforts.

Role of State and local governments. Every effort should be made to encourage State and local governments to assume primary responsibility for social security in order to keep such activities close to the employers, to the employees, and to other taxpayers.

Coverage extension. The present system of old-age and survivors insurance should be extended to employees of nonprofit organizations, governmental employees, railroad employees, agricultural employees, and other employees not now covered thereunder, including the self-employed, to the extent feasible.

Benefit level. Any adjustment of the old-age and survivors insurance benefit level should be conditioned upon a general extension of coverage (as above) and upon appropriate adjustment in the supporting tax schedule (as below). Conditioned upon these integrally related changes, the benefit level should be adjusted so as to contniue to be in line with the program's objective of providing a minimum layer of basic protection.

Financing. The tax schedule of existing law supporting old-age and survivors insurance should be increased appropriately to take account of any amendments increasing prospective benefit disbursements; otherwise, no increase in the schedule of tax rates should be adopted until necessary to prevent diminution in the funds of the program.

Governmental employees. When governmental employees are covered under old-age and survivors insurance, the civil service retirement system and the many other Federal, State, and local systems for such employees should be revised to provide supplementary protection (if such protection is desired), just as the staff retirement plans of other employers have been revised.

Total and permanent disability benefits. Voluntary agencies and the State public assistance systems, in conjunction with the State vocational rehabilitation agencies, offer the best means of providing for the totally disabled. No Federal system of total and permanent disability benefits should be established either in connection with old-age and survivors insurance or otherwise.

Temporary Federal participation. The present system of Federal grants to States for public assistance should be recognized as a temporary expedient. The States should assume an increasing proportion of the costs of public assistance as the beneficiary rolls of the Federal old-age and survivors insurance program expand. Eventually, the entire costs of such assistance as is needed to supplement old-age and survivors insurance should be borne by the States and their local subdivisions.

The CHAIRMAN. The next witness is Mr. Herschel C. Atkinson. You may be seated if you wish, sir.

STATEMENT OF HERSCHEL C. ATKINSON, EXECUTIVE VICE PRESIDENT, OHIO CHAMBER OF COMMERCE, COLUMBUS, OHIO

Mr. ATKINSON. Thank you, sir.

Mr. Chairman and members of the Senate Finance Committee, my name is Herschel C. Atkinson. I am executive vice president of the Ohio Chamber of Commerce whose principal offices are at Columbus, Ohio. The membership of our organization consists of over 4,000 industrial and commercial firms in Ohio, from the smallest to the largest. They engage in practically every line of business in our State. The views which I am presenting today are those of our Ohio Chamber of Commerce committee on social legislation, which consists of 25 representative business executives who are specifically charged with day-to-day handling of social-security problems for their own firms. After much careful study this committee submitted a series of recommendations on H. R. 6000 which were, in turn, reviewed and voted upon by our board of directors. The board is made up of top executives of

Ohio concerns; all of which are directly affected both by the taxation provisions of the Social Security Act, and also by the benefit features thereof as they apply to their own employees and the many retirement programs set up for the workers.

I also serve as the chairman of the social-security committee of the Council of State Chambers of Commerce, a federation of 32 State Chamber organizations, all vitally interested in the proposals now before your committee. I wish to point out, however, that I do not speak as the representative of all of these organizations today, although I do have authorizations with me from the following: Connecticut Chamber of Commerce, Inc., Indiana State Chamber of Commerce, Maine Chamber of Commerce, West Virginia Chamber of Commerce, New Jersey State Chamber of Commerce, South Carolina State Chamber of Commerce, and South Texas Chamber of Commerce. There are four or five other State chambers—I recall Illinois and some others—who also have had their own witnesses before this committee.

As to the general statement of our position, the Ohio Chamber of Commerce position, our approach to the problem of revising and extending the old-age and survivors provisions of the Social Security Act is predicated on the assumption that this basic program is directed toward the provision of a minimum subsistence income upon retirement for practically every person who works for a living in our Nation. In other words, our views parallel very closely those stated by Mr. Marshall, and as a matter of fact much of this statement is quite similar in character, although there are some variations.

On the one hand, we wish to see basic retirement payments which are reasonably commensurate with the present cost of living. On the other hand, we think it would be unwise for the Nation to contract for an insurance program which would, in effect, make it "insurance poor," just as the term is applied to an individual who over-extends his private insurance obligations to the point where he is unable to meet his needs for day in and day out living. Also, we believe that there is a need to encourage private provisions for old-age retirement. The danger, as we see it, in this situation is that with the Federal OASI program, the commitments which are made in the early years of the program are deceptively low, whereas in the long run the obligations for the years ahead may be ruinous unless we temper our present desires with our known future obligations. And, of course, all you gentlemen are thoroughly familiar with the actuarial estimates, which you have had discussed many times before this committee.

One of our basic premises in developing our recommendations on the legislation now before you is our very deep realization of the demands which are being made upon our Federal budget for national defense needs, for veteran services, and for servicing the enormous public debt of our Government. A prudent and careful look at the present costs of social security must be tempered by the fact that we, as a Nation, should not assume obligations today which are only the forerunner of the fully matured cost of this program in the decades ahead. It is our view, therefore, that the present framework of the social-security system should be retained and that modifications that are made should be within that established framework, and reflect our ability to absorb and adjust to the costs.

Dealing in trends in old-age pensions as compared with OASI benefits: As a fundamental consideration in the study of social security by this committee, we are hopeful that steps will be taken which will restore the old-age and suvivors insurance program as the dominant part of the Social Security Act. The plain fact is, and you have had much testimony on this, that old-age assistance payments in the latter part of 1949 were averaging $44.50 per person per month, while the old-age and survivors insurance program was paying $22.93 per month. Moreover, the number of persons being supported on State and Federal old-age assistance numbered 2,700,000 while the old-age and survivors insurance program had absorbed only 1,683,000.

By several acts of Congress since 1939, the Federal portion of the matching program of old-age assistance has been increased. This trend has resulted in a marked increase in the so-called "free" pensions.

At our annual meeting in Columbus, last fall, Mr. R. A. Hohaus, actuary of the Metropolitan Life Insurance Co., commented upon this trend as follows:

> Because the old-age assistance developments and the proposed revision in H. R. 6000, recently passed by the House, are receiving so little attention in current discussions of that bill, and because I am convinced the great challenge now facing our citizens in social security is to deflate old-age assistance and strengthen and extend the insurance plan—a challenge which I think is as grave a domestic issue as any now before Congress—I propose to stress the weaknesses of the present and proposed old-age assistance arrangements.
>
> Federal matching of State assistance funds as practiced to date has two major defects. First, though the Federal law requires that a State, in determining need, shall take into consideration a claimant's other income and resources, it lays down no standards, not even minimum ones, of what constitutes need. This allows the State very broad discretion in determining how much Federal money is to be spent and what proportion of those in a particular category it will take on the rolls as needy.
>
> Thus the proportion now varies by States from less than 10 percent to more than 80 percent of those 65 and over. Secondly, as a result of this latitude and the nature of the matching formula, it is possible for a State to increase the amount of Federal grants it receives, with no additional expenditure on its part, or even with reduced expenditure, by simultaneously increasing the number of recipients and reducing the average payment.
>
> * * * Ohio made payments to some 190 of every 1,000 of its population aged 65 and over—less than the Federal average of 232 per 1,000. Louisiana, however, took in as many as 819 of each 1,000 of its old folk—a record for the United States if not for the world; while the figure for New Jersey was, in the light of Louisiana's record, a paltry 65 per 1,000. Of the average monthly payments in each of these States the Federal and States shares were approximately [1] as follows:

Monthly old-age assistance per recipient

State	Total	Federal share	State share
Ohio	$46.72	$27.47	$19.25
Louisiana	47.05	28.47	18.58
New Jersey	47.80	27.20	20.60

[1] In making these approximations account was taken of the fact that each of the three States made payments in excess of $50 a month. For Ohio and New Jersey the proportion of such payments was considerable. For Louisiana it was relatively small.

However, weighting those figures by the proportions of the aged receiving assistance in the respective States we arrive at the following outlays per aged inhabitant of the State:

Monthly old-age assistance per inhabitant 65 and over

State	Total	Federal share	State share
Ohio	$8.88	$5.22	$3.66
Louisiana	38.53	23.32	15.21
New Jersey	3.11	1.77	1.34

To illustrate the second defect in the type of matching formula now current, whereby the Federal Government allows more than half of the average State payment up to a stated limit, and one-half thereafter up to a higher limit, consider the following hypothetical situations:

Average monthly payment	Number of recipients	Outlay under existing law		
		Total	State	Federal
$20	20	$400	$100	$300
$30	10	300	100	200
$50	5	250	100	150

It is clear that for the same State outlay of $100 twice as much Federal money can be brought into the State by paying $20 a month to 20 recipients, as by paying $50 a month to 5 recipients, or half as much again as by paying $30 a month to 10 recipients. Accordingly, the current type of unequal matching offers strong financial inducement to a State to increase the number of recipients rather than the average payment. Indeed the average payment can be reduced with financial advantage to the State.

The possibilities here indicated are not mere theory. Mississippi reduced her average monthly old-age assistance payment from $17.50 in September of 1947 to $15.65 in September of 1948 while increasing the number of recipients from 38,431 to 52,159.

After the 1948 liberalization in Federal grants-in-aid, the number of recipients advanced further to 58,051 last June. Yet even though the average payment was increased to $18.80 (from $15.65) during that period, the State dollar total outlay actually fell, while the dollar receipts from Federal funds increased by over 50 percent. The actual figures are instructive.

	Average payment	Number of recipients	Outlay under formula effective in particular month (thousands of dollars)		
			Total	Federal	State
September 1947	$17.50	38,431	672 5	432.3	240.2
September 1948	15.65	52,159	816 5	538.6	277.9
June 1949	18.80	58,051	1,091 1	818.3	272.8

With the proposed very substantial liberalizations in the old-age insurance benefits in H. R. 6000, as passed by the House, one might have expected that there would have been coupled amendments to the old-age-assistance provisions which would reverse the trend of more and more Federal grants. But just the opposite has occurred. H. R. 6000 further liberalizes the formula by providing Federal funds equal to 80 percent of the first $25 of the average payment per recipient plus one-half of the next $10, plus one-third of the next $15.

This means that the provisions promulgated in H. R. 6000 for enlarging the Federal matching contributions is a move which, in our judgment, is in the wrong direction. We believe that it will produce even greater distortions in the comparative position between old-age and survivors insurance and the State public-assistance pro-

grams, that it will encourage the States to place a greater burden upon the Federal Treasury at a time when we are hopeful that Federal budgetary demands can be reduced and should be reduced. If the basic OASI pension amount is increased, there is every reason to believe that the States should be able to take care of the residual old-age pensioners, who are not eligible for OASI, from their own resources and funds rather than to rely upon the Federal Government for ever-increasing amounts of Federal dollars; and very similar views were reflected in the testimony of Mr. Marshall.

In view of the fact that public assistance for the aged and the dependency groups was originally intended to be a residual portion of the program, we sincerely recommend to the committee that the Federal Government take steps to strengthen the insurance program and at the same time gradually retire from public assistance. With this as a basic concept, we recommend the following major changes in the program:

As to extension of coverage: We recommend the extension of coverage of the OASI program, not only to the groups that were included in H. R. 6000 as it passed the House of Representatives but also to bring into the system other wage-earning groups. We believe that if the old-age and survivors insurance program is to provide a basic floor of protection for all gainfully employed, then a closer approach to universal coverage seems to be in order. This very broad extension of coverage is, in our opinion, a fundamental prerequisite to any change in the primary benefit formula.

Senator MILLIKIN. You are departing from the original concept that this should be a system for the benefit of the employee in the correct sense of the term "employee"? I assume that you are also for coverage of the self-employed, the business executive, professional men, and so forth?

Mr. ATKINSON. That is correct.

Senator MILLIKIN. Thank you.

Mr. ATKINSON. We recognize that a new start in OASI is extremely costly, for all of these groups, Senator Millikin, and therefore extended coverage and benefit revision should be considered simultaneously. Careful study should be given to the proposal that business, agricultural, and professional groups, employees covered by the Railroad Retirement System, and those covered by Federal and State civil-service retirement systems should come under the OASI system also. And, of course, where it is desired, and where it is possible, those systems could become supplementary, in addition to the basic Federal system—where they want to add something to that established by the employer and the employee Government contributory plan and also preserve those other systems.

We recognize that objection may come from certain of these groups on the ground that it will require revision and change in their established retirement programs. We point out, however, that if revisions are made in the OASI system, many private industrial pension programs now integrated with social-security benefits under the present law will also have to be revised. And, of course, to me the industrial and business system is the basic economic system of this country, and if they can revise those, I think the systems that depend upon the tax money produced in a private-enterprise economy certainly can also be revised.

Senator MILLIKIN. Mr. Chairman?

The CHAIRMAN. Senator Millikin.

Senator MILLIKIN. How are you folks going to tie together and coordinate all of these private pension plans? For example, the testimony indicates that the benefits of a private pension plan are not transferable. You cannot carry whatever your status is from company X to some other company. You have to stay with that particular company for life if you want to get the benefits. There is no cashable value in those plans, and there is no carry-over value which you can carry to some other company. How are you fellows going to get those things all tied together?

Mr. ATKINSON. I simply see no difference in the handling of it, Senator, as compared with the present. The basic thing would be that all of those covered would have this interchangeable eligibility and carry-over only as in the present Federal system. But these supplementary systems, such as the Railroad Retirement System, or some other such system, would be just as independent, and would be in addition to the basic Government system, as we see it.

Senator MILLIKIN. Each of those will have to rest on its own bottom for whatever it may be worth?

Mr. ATKINSON. Yes, sir.

Senator MILLIKIN. You have no private plans for integrating them and making their benefits convertible as between different employers? For example. Steel has a $100 pension, hasn't it?

Mr. ATKINSON. That is right.

Senator MILLIKIN. Sinclair, I read in the paper recently has $100 or $125. The automobile companies have their pension plans. But you have not worked out any system so far whereby a fellow working for Steel could carry his benefits over to Sinclair, or the Sinclair fellow over into the automobile business. You have nothing of that kind in mind?

Mr. ATKINSON. No. I believe that the provisions in some of those contracts, Senator, are for, say, a total amount of protection to the individual worker, and that the company will take care of the difference between the amount provided in the basic Government system and $100 or $150.

Senator MILLIKIN. Some one way, and some the other?

Mr. ATKINSON. Yes; that is correct.

Senator MILLIKIN. And, of course, those companies that have the provision whereby their pension shall be reduced by the amount of the basic Federal pension—those companies, of course, are rooting and tooting for a better level of Government pensions?

Mr. ATKINSON. Yes.

Senator MILLIKIN. Quite naturally and quite understandably.

Mr. ATKINSON. Yes; I think that those feelings are evident.

Senator MILLIKIN. The system has gained some new and strange adherents in the last year or so.

Mr. ATKINSON. I must confess that that is true, sir.

The pressure of the Federal Government has been so strongly exercised on the side of labor in labor-management negotiations affecting our big industries, where there is industry-wide bargaining, that industry has been compelled many times, in my judgment, to accept uneconomic and destructive terms—to accept things which they would

not have agreed to or which they would have resisted much more vigorously had the Government not been using great powers on the side of labor in these recent years.

Such pressures have been exerted by our Government in labor-management negotiations which involve organized labor's demand for such things as $100-a-month pensions. Escape clauses were included which provide in some cases, just as I have testified, that the industry would make up such deficiency as occurs between some fixed figure, like $100 a month, and the basic figure established by the Government old-age and survivors pension amount.

Now it is perfectly natural that managements which felt compelled to accept, under Government pressure, terms which otherwise might not have been agreed to so precipitously, are not to be found in the van of those resisting material liberalization of OASI benefit amounts. What else could be expected in a situation of this sort?

Moreover, arguments which have been put forward for many years regarding those individuals who move from covered to noncovered employment apply with equal force and effect to those who move from Government employment to private employment. Parenthetically, we hope that such a feature would be an additional incentive for reducing the number of Government employees and hasten the trend to reduce governmental employment, which has been so ably emphasized by the Senator from Virginia, Mr. Byrd.

There has been a great complaint, and I am sure the committee has heard it time and again, that people moving from Government to private systems lose their eligibility, and there is the other situation which you mentioned, also, the movement from company to company.

It is our view that the basic framework of the existing act, with respect to the tax base on individual wages and also with respect to the computation of the benefits, should remain on the $3,000 base instead of being increased to $3,600 as proposed in H. R. 6000. And that has been discussed pretty thoroughly here.

We believe that the retention of the $3,000 tax base is sound and proper in any system which seeks to provide a basic minimum layer of protection for all gainfully employed. Those who have additional earnings should be encouraged to supplement their basic social-security protection by other savings devices, whether it be by the purchase of additional insurance, by savings accounts, or by other investments. We believe that the House Ways and Means Committee minority report contained a number of cogent reasons why the tax base should be retained at $3,000. Briefly stated, they are: (1) That workers now near retirement age, earning $3,600 or more, would receive in effect a double windfall through the increased benefit formula, particularly as it applies to the extra $600 of wages. The extra benefits paid would greatly exceed the amount of taxes paid on the newly added wage amount. (2) Persons earning more than $3,000 a year ought to be encouraged to make their own individual arrangements for financial security. (3) A change in the tax base to $3,600 would unnecessarily complicate the employer reporting problems for State unemployment and Federal social-security programs.

The State systems of unemployment compensation, having been integrated at the $3,000 wage base with the $3,000 base for OASI, now

provide a minimum of employer accounting problems. We believe that appropriate tax adjustments in rates, rather than in tax base, could accomplish the same purpose. It must be remembered that the proposed increase in the benefit formula gives the greatest percentage of increase to those in the low-wage brackets—50 percent of the first $100. Thus, there is good reason to hold the tax base at the existing $3,000 level where those who receive the greatest benefits also will be asked to contribute their proportionate share to the increased cost of financing.

Liberalization of benefits: In order to make OASI more realistic in the light of present costs of living, and predicated on our parallel contention that nearly universal employment coverage should be accomplished, we favor an increase in the basic benefit formula. Recommending this increase we are constantly reminded of the fact that the intermediate cost estimates promulgated for H. R. 6000 indicate an initial cost of $1,474,000,000 and an eventual cost in 10 years of over $4,000,000,000, in 20 years of over $6,000,000,000 and by 1990—40 years—a cost of $10,300,000,000. We believe that the major stress should be placed, at this time, on the amount of the primary insurance benefit, with appropriate safeguards, rather than upon further changes in the survivors benefit program, which is a function of the primary benefit amount and will be increased as the primary base amount is raised.

Our recommendation, therefore, is that the minimum primary benefit amount should be set at $25. Because of this substantial increase, we believe that the maximum benefit amount, provided in H. R. 6000, should be modified. The formula which our committee recommends is as follows:

Fifty percent of the first $100 of average monthly wage plus 15 percent of the next $150 up to a maximum wage of $250. We recommend that in order to provide these immediate increases in benefits arising from this changed formula, the one-half percent increment for length of service now contained in H. R. 6000 should be eliminated. We know that tremendous delayed costs are involved in the future cumulative effect of this increment principle. Therefore, if we are to have an immediate increase in the primary benefit formula, the elimination of the yearly increment is the necessary financial offset. We note that the Advisory Council on Social Security to this committee was unanimously in favor of eliminating the increment provision, in view of the ever-increasing cost of future years. We believe that if primary benefits are liberalized now, some offsetting factor must be brought into play which will modify the eventual future cost. Elimination of the increment factor is one of the methods to accomplish this.

With respect to the maximum benefit amount for survivors insurance, it is our belief that the top figure should be set at not more than $125 instead of the $150 as proposed in H. R. 6000.

We believe that the easily understood definition of "average monthly wage" in the present act is much to be preferred over the revisions suggested in H. R. 6000. Undue windfalls in benefits occasioned by the new coverage will need to be controlled, but the proposed continuation factor due to its capricious effects, is not the proper approach in our opinion. Obviously the use of the continuation factor in the prepara-

tion of cost estimates has served greatly to reduce the estimates of future cost. Moreover, it should be apparent to anyone that when the continuation factor becomes effective some 5 or 6 years hence, as provided, and brings about drastic reduction of benefits along entirely inequitable lines, the continuation factor will be under pressure to be eliminated. If this happens, benefit costs will rise tremendously—far beyond the preliminary estimates. The following table, comparing effects of the new proposal and the present method of arriving at benefits will sustain these conclusions. The computations are based on the percentage formula proposed in H. R. 6000, that is, $50 for the first $100 and 10 percent of any remainder up to $300:

Benefit amounts computed on new average monthly basis and the continuation factor in H. R. 6000

$100 average monthly wage for 40 years of employment—total of $48,000 in coveraged wages—benefit amount (including increment)	$60.00
$200 average monthly wage for 20 years of employment out of a possible 40—total of $48,000 in coveraged wages—benefit amount	36.00
$300 average monthly wage for 20 years of employment out of a possible 40—total of $72,000 in covered wages—benefit amount	42.50

Benefit amounts using averaging basis in existing law

$100 average monthly wage for 40 years of employment—total of $48,000 in coveraged wages—benefit amount	$60.00
$200 average monthly wage for 20 years of employment out of a possible 40—total of $48,000 in covered wages—benefit amount	55.00
$300 average monthly wage for 20 years of employment out of a possible 40—total of $72,000 in covered wages—benefit amount	60.50

From this table it can be seen that the use of the continuation factor completely distorts the amount of benefits in relation to the contributions paid in. Hence the $300-a-month man who would have paid taxes on $72,000 gets $42.50 in benefits as contrasted with an individual who paid taxes on $48,000 and receives $60 benefit.

I believe, again, the table is somewhat similar to one that Mr. Marshall produced, although the figures are different.

Wage credits for military service: Our organization continues to recommend wage credits for veterans of World War II for time spent in military service and endorses the principles in H. R. 6000 on this point.

Maximum-earnings limitation: Our committee favors the provision in H. R. 6000 which proposes a $50 limitation upon maximum earnings before benefits are denied, in lieu of the present $15 limit which is now provided in the Social Security Act. We believe that this will encourage beneficiaries to supplement their old-age and survivors benefits by moderate earnings in employment, and by so doing add to production of goods and services of benefit to themselves and others; again, recognizing this increasing proportion of older people that has been so frequently referred to in testimony before this committee.

However, the proposal in H. R. 6000 that there be no limit upon the earnings of insured persons age 75 or over is a feature to which we do not subscribe. The arbitrary 75-year age limit might be subject to pressure for costly successive reductions. As an alternative it is our thought that a formula similar to that now used by most unemployment-compensation systems be followed. This system could provide offsets above the $50 figure so that as additional wages are earned by those over 65, in any one month, the total monthly OASI benefit would

not be canceled completely, but would be proportionately reduced. This would be comparable to "partial unemployment benefits" in State unemployment compensation systems. Under present feaures of H. R. 6000 the entire benefit would be lost by those between 65 and 75 if earnings went above $50 in any month. Under our proposal only a fair proportion would be canceled and the special provisions for those over 75 could be eliminated.

On lump-sum benefits: Our organization is in favor of retaining the present provisions of the Federal Social Security Act with respect to lump-sum payments, rather than to provide universal benefits as suggested in H. R. 6000. As has been pointed out to this committee, a very large number of covered workers already have made provision, through voluntary action, for meeting funeral and other last expenses. To add this cost to the old-age and survivors insurance system, which is primarily a benefit to the living, is a step which we do not believe should be made at this time.

Definition of employee: In view of the fact that our organization favors the extension of coverage as far as is practicable, it is our belief that the proposals contained in H. R. 6000, revising the definition of the word "employee" will be unnecessary. Our objection extends particularly to part 4 of the definition under which administrative agencies would be granted wide discretion in determining liability, particularly as it applies to persons conducting independent operations. If the law is extended to cover the self-employed, or even if it is not, we see no reason for this grant of discretionary power to any agency for reexamining hundreds of independent contractual relationships with a view to establishing liability on one employer or another. We believe that the problem of covering the new wage groups will be sufficiently difficult without further complicating the problem by bringing in a "gray zone" of administrative interpretation such as would inevitably follow such a grant of legislative authority. And it would take years and years in the courts to settle the questions that would be raised by this change of definition.

Senator MILLIKIN. How would you handle administrative problems connected with the Fuller-brush salesmen, for example?

Mr. ATKINSON. Well, I am not sure that I understand the import of that question.

Senator MILLIKIN. I am a Fuller Brush salesman, let us say. I was going to make you one for the purpose of the illustration, but I will take the job myself. Here is a fellow that is in this vast field of door-to-door salesmanship. He goes to work, buys his own stock of samples, picks roughly the territory in which he works. I personally do not believe that under any true definition of the word "employee" as we have understood it, that man is an employee. How are you going to divide the contributions of that man and the contributions of the fellow that supplies him with the goods that he sells? How are you going to work that out?

Mr. ATKINSON. Of course, it seemed to us, as it apparently does to you, that he is not an employee in the true sense of the word.

Senator MILLIKIN. That is right.

Mr. ATKINSON. Now, that comes to the matter, then, of——

Senator MILLIKIN. Therefore, will he have to pay his own insurance exclusively? Or would you say that that should be shared with the fellow that supplies him a sample kit?

Mr. ATKINSON. It seems to me that he is among the self employed. The probability is that he is carrying one or two other lines along with the Fuller Brush and doing many other things done by the independent contractor in the true sense.

Senator MILLIKIN. But you still have not told me who is going to pay. Who is going to make the contribution? Is he going to make it all? Or is he going to share it with the fellow that supplies him the sample case? How are you going to get the money?

Mr. ATKINSON. I think the formula should be the same as for the self-employed farmer or any of the others that are in that same classification. In other words, to my mind he is the employer and would come under that kind of treatment administratively.

The CHAIRMAN. He would carry the whole burden?

Mr. ATKINSON. That is right.

The CHAIRMAN. Whatever it is.

Mr. ATKINSON. Yes. That is correct.

Senator MILLIKIN. Thank you very much.

Mr. ATKINSON. Under permanent and total disability insurance: It is our recommendation that the provisions of H. R. 6000, proposing to establish permanent and total disability coverage as a part of the OASI system, ought not to be adopted. We feel it would be unwise for the Federal Government to embark on a costly permanent and total disability insurance program. It is one which cannot be effectively administered in a broad fashion because of the highly specialized nature of each case which would require great detail and staffing for administration. It is our belief that this problem should be left entirely to State jurisdiction and control. The Indiana State Chamber of Commerce has summarized our reasons as follows:

1. Except in extreme cases, few things are as difficult—or as open to abuses—as the drawing of a line as to where physical ability to work ends and where physical disability begins. Regardless of how large the Federal bureau set up to administer the program, with its branches in every community of the country, might be, the abuses could not be prevented.

2. The availability of disability benefits would cause many people who otherwise might rehabilitate themselves into self-supporting, useful citizens, to remain satisfied at doing nothing on the pension "dole."

3. The disability insurance benefits still would not solve the problems in a large share of the cases of real need among disabled persons—where disability occurred so early in life that the individual would have little or no work history and therefore would not be eligible for the disability benefits.

I think that, too, has been made perfectly clear in the testimony here, as to those reasons.

Under the question of taxes, we come here to a slight variation in position from that of the United States Chamber of Commerce. I would want to confine this strictly to the Ohio Chamber of Commerce. And as I reviewed the proposed testimony, I also reviewed the very interesting exchanges between Senator Millikin and Arthur Altmeyer on the question of the taxes and the use of the trust fund, and I agree with the Senator on the implications of a larger trust fund, that is, a partial funding, being conducive to encouraging spending and the borrowing for other governmental pur-

poses of these increased reserve funds. But there was another viewpoint pretty strongly expressed in our organization on this matter, of whether pensions are something free, or whether they are something that cost money. And so, as I say, we depart in theory from a number of the business organizations. We said: when you increase benefits you ought to increase taxes, so that then the people will realize at once that the matured cost of these great extensions of benefits ought to be paid for, has to be paid for, and is not a free device.

Having discussed a number of revisions in this program, many of which mean additional benefits and costs, I would like briefly to present our views with regard to the all-important question: Who pays the bill? Reduced to its simplest terms, we believe the following: (1) The division of the tax burden between employer and employee on a 50–50 basis should be continued. (2) Without debating the issue of whether or not we can have a true reserve fund, our Ohio employers feel that a modest reserve fund with the program essentially on a pay-as-you-go basis is the most realistic approach to financing OASI and its related benefits for survivors. (3) When new benefits are provided under the revised legislation, careful consideration should be given to a starting rate for the new program at a 2 percent tax on the employer and a 2 percent tax on the employee. While this may in the early years produce some further growth in the trust fund account, and, as I say, encourage the borrowing of that money and over-all Government spending that ought not to be encouraged—we are sorry we have to recognize that that thing has so operated—and yet it seems to us that fundamentally we ought to look at the basic principles in the old-age and survivors insurance system itself. We believe it would be sound public policy if all taxpayers were to know that when the benefits schedule is increased it also entails increased taxation. (4) A projected schedule of future benefit rates, similar to those contained in H. R. 6000, should be written into the act with the effective dates of the inevitable further increases set to go into effect when income and outgo in a particular period reach a balance.

We think it highly important that every group in the Nation, whether they be employers, employees, or beneficiaries understand clearly the inescapable fact that at any given time those individuals who are gainfully employed must not only produce goods and services for themselves and others but must also share them through the formulas of OASI system with retired workers, survivors, and dependents. A trust fund, implying that past production will supply current needs, cannot be counted upon as a major method of finance.

Extension of coverage to Puerto Rico and the Virgin Islands: It is our sincere belief that the extension of the OASI system to Puerto Rico and the Virgin Islands would produce a serious drain upon the social security program of this country. Until such time as these territories have been able to strengthen their basic economy, it would be unrealistic to transplant the United States social security structure to these territories. Their wage levels and economy would not begin to support the benefit payments contemplated. A staff man of ours was recently on the Government Commission to Establish Minimum Wages in the Virgin Islands. I recall quite vividly that some

of those minimum rates were 30 cents an hour and 50 cents an hour and similar figures much below ours. As a matter of fact, that 50 cents an hour caused great consternation in the industry where it was established, because it was so much above what seemed to be the current level of the islands. But with an economy so low that the minimum average rate is perhaps 30 cents an hour, it seems ridiculous to include the islands in this same system. We sincerely hope that the committee will see fit to delete this provision from H. R 6000 and, if special action is necessary, treat this program in the territories on a basis which will not disturb the social security system in the United States.

I wish to conclude by stating that American business knows there is no easy road for financing any retirement program, whether it be governmental or private. We must either face the cost of social security realistically and with full appreciation of the obligations which we undertake, or we will find ourselves confronted with constantly rising prices. This is merely another way of stating that we will be faced by further inflation. And there has been too much of it already. We firmly believe that costs of government involved in $40,000,000,000 annual budgets will have to come down or we will again be required, a few years hence, to make further revisions in this program in order to keep up with the cost of living. And, of course, the real reason we are here saying that the benefit formulas established in '33, '34, and '35 thinking are inadequate, is because the dollar today will only buy about 60 cents worth as related to the dollar of that time, and perhaps it is even down to 50 cents. And unfortunately and tragically, if the present trends of deficit spending go on, the benefit formulas we are trying to think of as realistic today will be wholly inadequate in terms of real living need and costs in 15 years. That is what has happened in the past 15 years, so the bigger job seems to be that of balancing the budget and removing deficit financing, as going a long way toward the maintenance of a steady flow of purchasing power and stabilizing the value of these benefits we are talking about. The greatest contribution to social security which can be made by the Federal Government is a strong financial position. This will insure continual steady purchasing power in the hands of the wage earners, as well as for the beneficiaries of social security, or private insurance, or those with savings. We sincerely hope that this committee will recommend a program which will remain within the financial ability of the American industry and wage earners. We must avoid taxation and expenses which contribute to an ever expanding spiral of higher prices and which ultimately will be paid by all—the consumers, the citizens of the United States.

The CHAIRMAN. Thank you very much, Mr. Atkinson.

Senator MILLIKIN. May I ask a question, Mr. Chairman?

The CHAIRMAN. Yes, Senator.

Senator MILLIKIN. In your opinion, do not the costs of this system enter into the costs of goods?

Mr. ATKINSON. There is no other way, in my opinion, Senator. The costs must be included. And when they are not included, that concern will fail to continue to operate.

Senator MILLIKIN. So that we have the basic problem of constantly increasing the productivity of the Nation, and the reduction of unit costs to keep up with the costs of these "deducts." Is that correct?

Mr. ATKINSON. To my mind, and I believe to every businessman I know, that is the only possible way that this system can remain solvent.

Senator MILLIKIN. Are you aware of the statistics which have been offered to the effect that during the last 8 or 9 or 10 years we have not continued the progress we used to make in individual productivity of the worker?

Mr. ATKINSON. Well, I have seen many compilations on that; and, of course, the difficulty is the intrusion of the war years and the changing conditions which were present in war-production times.

Senator MILLIKIN. Well, you have an enormous increase in production, because you have an enormous increase in your working force. There is no question but that we have more production than we had. But there seems to be some opinion that individual productivity has not kept up with the old 2 or 2½ percent per year which used to characterize our economy.

Mr. ATKINSON. I was head of the employment service in Ohio for 5 years at the beginning of the war and at the same time administrator of Ohio's unemployment compensation. When we were beginning to expand the labor force at that time, we had to draw in many classes of people not formerly in the labor market, housewives for example, the aged who had sometimes retired, youngsters whom we attracted out of the schools, many of the handicapped. We sought many classes of people who were among the less efficient types of workers. Now, it is perfectly natural that your productivity would drop, per man. And also they went onto new processes. We upgraded, because of the size of the labor force, and we took people of very moderate training and called them skilled.

So all of those things diluted productivity per man.

Now, the real measure of increased productivity can't well be made except during the last 2 or 3 years, perhaps. We are just beginning the cycle when it should begin to show in our manufacturing and production processes.

Senator MILLIKIN. I think that is a very illuminating comment. You have developed one or two points there that have not been brought out before.

What is your Chamber of Commerce doing about keeping elderly people working, if they want to work and can work?

Mr. ATKINSON. Two and a half years ago we instituted a system of retirement insurance and retirement for every person employed once they have remained with us 3 years. And, of course, that provides for a retirement schedule at 65.

Senator MILLIKIN. I am not talking about retiring people. I am talking about keeping them at work if they want to work and are able to work.

Mr. ATKINSON. Well, there is no provision that is compulsory, that compels a man to retire.

Senator MILLIKIN. Let me put it another way. Is your chamber of commerce doing anything with regard to what I consider this serious problem of junking people, in our mass-production industries particularly, at 40, 45, and 50 years, which leaves an unemployed hiatus of 10 or 15 years before a fellow gets to a pension age?

Mr. ATKINSON. I am sorry. I misunderstood. You mean are we, shall we say, in our relationships with our membership, or with those

employing the working population of the State, trying to encourage the retention of these people?

Senator MILLIKIN. That is right.

Mr. ATKINSON. Yes; we are. And yet I am compelled to say to you that each time you add these things by way of additional social-security program, or extra costs, you do emphasize the, well, I would say——

Senator KERR. Necessity?

Mr. ATKINSON. You make it almost, well, necessary, that your employment be of those who are most productive. Because, as we have said, all these costs go into your total costs. Now, you do try to increase the productivity per man, and that necessarily increases with the additional number of costs you load on to every job.

Senator MILLIKIN. That is right.

Mr. ATKINSON. Each of those things adds to the cost per job.

Senator MILLIKIN. Yes.

Mr. ATKINSON. Therefore, we are, by Government programs, very rapidly retiring people from the labor market because it is too expensive to retain them, and we make it impossible, for private enterprise, or employers of any kind, to retain those people in employment.

Senator MILLIKIN. And thus private enterprise, by the operation of the very thing you are talking about, loads those costs on to the taxpayer.

Mr. ATKINSON. That is right.

Senator MILLIKIN. And at the same time, those who are doing that are talking about reducing taxes and balancing budgets, and so forth and so on.

Mr. ATKINSON. I didn't get who you said was doing that.

Did you say we were?

Senator MILLIKIN. No; I was not talking about your company at all. As I understood you to say, the employment of these elderly may involve a certain question of additional costs, let us say per unit costs. And I think it would.

Mr. ATKINSON. It does.

Senator MILLIKIN. So that, as a businessman, thinking only of the costs of his business—and that is what he is there for, and when he stops thinking about it the stockholders will view him with a very bilious eye—he says, "It is my job to run this business at the very maximum efficiency," which means the very minimum of unit costs. So he says, "It is too bad, but a fellow who is working on my assembly lines reaches the peak of his productivity at 45, and we can get plenty of younger fellows, and the fellow of 45 has got to go." That is a part of the business process. But I thought you, yourself, made the point that when that happens, then you are passing from business to the taxpayer a great social problem, which has to be paid, in the end, out of taxes, via the thing that we are working on right here.

And then I add the perhaps irrelevant remark that, while doing that, the same gentlemen who do it are talking about less taxes and balancing budgets, and so forth and so on. Maybe we had better get our stories coordinated a little better and maybe there is a point of industrial statesmanship there that may go beyond a few of these cost factors that ought to be considered.

Mr. ATKINSON. There is another thing that always has concerned me deeply, and I want to be sure it is fully realized by these committees

of the Congress: the tragedy that I see in these added tax costs loaded on to the employment of a man hit much more seriously, as a general rule, the small business enterprise than the large. It is my observation that the larger, more efficient units are often better able to abosorb these additional costs, and that the net effect of this kind of legislation is to increase the size of the big and reduce the ability of the small to survive, and to prohibit the entry into the private-enterprise system of the little man who has a little money. And the first thing he has to do today is to hire a bookkeeper and auditor and have somebody keep his books, and he adds a cost right there that just flabbergasts him.

Senator MILLIKIN. From my unenlightened viewpoint, it seems to me you are talking sense. And it is the junking process that takes place not so much in what is called little business but in these very big businesses, which are perhaps in position to absorb some of these costs of keeping people longer in the working force, and which businesses are not doing it, which presents us with these social problems which have to be met with taxes.

Mr. ATKINSON. Your big businesses, for instance, with many divisions and lines, can shut off departments that are not paying their way. Therefore they can adjust. But your little business, your enterprise with 10 employees—the boss knows Bill and Jim, and Henry and their wives and children—and he cannot act so quickly if costs indicate that it is no longer a productively efficient thing to employ a man.

Senator MILLIKIN. And in those little businesses you have hand operations where a man can preserve his productivity to a much older age than he can where he is standing on the assembly line twisting a bolt as the car comes by. Is that not right?

Mr. ATKINSON. That is right, sir.

Senator MILLIKIN. So our problem is really not one of the little business. I think if you were to make a study of the longevity of workers in big and little business you would find that the record is pretty good for little business. But I think you would find it very bad in the very biggest businesses, where there ought to be, I suggest, a more enlightened approach toward the problem, unless they want to pay these taxes and have these unbalanced budgets which they are always bellyaching about.

Mr. ATKINSON. Well, probably I shouldn't say it, but I think you will find that the tendency is that the larger the business the more it tends to be sucked into these Federal systems of subsidies and grants and assistances, because of its very size.

Senator MILLIKIN. That is right.

The CHAIRMAN. Thank you very much, Mr. Atkinson.

Mr. ATKINSON. Thank you.

(The following statements were submitted for the record:)

REPORT OF THE SOCIAL SECURITY COMMITTEE OF THE CHAMBER OF COMMERCE OF PHILADELPHIA IN RE SOCIAL SECURITY BILL (H. R. 6000)

Gentleman, the proposed social-security bill (H. R. 6000) has been reviewed and discussed by your Social Security Committee, which presents for your consideration what the committee regards as objectionable features of the bill.

1. GRANT TO STATES UNDER TITLE I (OLD-AGE ASSISTANCE)

Comments

Although the Federal-State assistance portion of the bill is most significant, it has received very litle public consideration. This is undoubtedly due to the

fact that the moneys appropriated come out of the general tax fund and are not as obvious as a specific tax such as the old-age benefits tax. The Federal grants-in-aid were originally included in the Social Security Act as an expedient for the aged and dependent children not covered by old-age benefit insurance and it was intended as workers acquired benefit rights under the insurance program the Federal-State grants would be reduced gradually and become inconsequential.

Actually, the opposite has occurred. The benefit levels and the number of beneficiaries have increased greatly. For example: in 1939 old-age assistance benefits were about $430,000,000 whereas in 1949 they exceeded $1,300,000,000. One of the reasons for this threefold increase is ascribed to the growth of the Federal Government's share of the cost. Initially, the act provided that the Federal Government would match State government aid on a dollar-for-dollar basis, with a maximum Federal grant of $15 per month per individual. The Federal share has since been increased three times. Today Federal grants equal $15 for the first $5 of State aid and dollar for dollar on the next $30 per month or a total of $30. Federal grant out of each $50.

H. R. 6000 proposes a further increase in the Federal share. It provides that the Federal Government furnish $20 for the first $5 of State money, $5 for the next $5, and $5 more for the next $10. While the Federal portion would still total $30 in the case of a monthly benefit of $50 or more, the Federal Government would bear a substantially greater burden of the cost because the average old-age assistance is well below $50 per month.

The proposed formula would further encourage the extension of assistance to those age 65 or over and would endanger the very purpose and existence of the Federal insurance program.

Eligibility for old-age assistance is primarily based on "need" and since the States are required to raise by taxation only a relatively small amount as their share, there has been a tendency to relax the eligibility standards. Under the present and the proposed formula, States can actually reduce their cost while increasing the Federal cost by simply adding more persons to assistance rolls at low-benefit amounts.

Old age assistance costs, under the proposed bill, can reach uncontrollable levels and, therefore, the change is objectionable. Further, it is recommended that action should be taken by Congress toward the eventual elimination of Federal grants-in-aid. This could be accomplished through universal coverage under the Federal insurance program. As the newly covered qualified for insurance benefits, there would be a substantially lessened need for old-age assistance. By taking into account the time necessary for the newly covered to qualify for insurance benefits, it could be provided that by a given date, several years hence, Federal grants would cease and old-age assistance from then on could be carried by the various States.

2. CHANGE IN THE EARNING'S BASE FROM $3,000 TO $3,600

Comments

This increase is not necessary for it extends into an earning bracket where those concerned should be able to provide some degree of old-age security for themselves. If the purpose is to increase benefits and at the same time add to the total tax revenue, these can be accomplished without raising the base.

Since the base of the unemployment compensation laws is $3,000, employers in filing their tax returns with the States are now able to use carbon copies of the lists of employees and their earnings that are filed with the Federal Government for old-age benefit purposes. If the base is changed, this procedure will not be practicable, and it will complicate the administrative detail of every employer.

Once the base of $3,600 becomes effective, the pattern will be established and serve as a cue for agitation to increase the base under the various State unemployment compensation laws.

Furthermore, if the existing base is changed it would seriously affect thousands of pension plans presently operated on an integrated basis with the social security system.

3. PROVISION FOR AUTOMATIC INCREASE IN THE TAX RATE EFFECTIVE IN 1951 AND IN LATER YEARS

Comments

While it is realized that from an actuarial standpoint the social security plan is not considered sound, the advisability of the Government's accumulating large reserve funds is questioned. With substantial amounts available after current

benefits are paid, the public overlooks the potential costs and tends to seek larger benefits. Experience may prove that it is not necessary to increase the tax rate as quickly as provided in the bill, and it is our view that, before the tax rate is raised further, a thorough study of the situation should be made at the time to determine if such an increase is warranted.

4. DISABILITY BENEFITS

Comments

We are not opposed to disability benefits, but do object strenuously to a disability program administered at the Federal level.

The primary purpose of the act is to provide old-age and survivor benefits and it is believed that the program will prove too costly if disability benefits are included.

The administrative costs of the Federal Social Security Bureau would increase substantially. Investigating divisions would have to be set up all over the Nation and to a large extent they would duplicate State agencies already established for similar purposes.

It is doubtful if a Federal system could function effectively and the possibility of malingering would be extremely great.

5. LUMP-SUM BENEFITS

Comments

Under the present act lump-sum benefits are paid upon death providing no survivor is eligible for benefits. The new bill contemplates lump-sum benefits upon death irrespective of whether any survivor is eligible for benefits. Obviously, there would be an overlapping of benefits, to say nothing of the added cost burden. Therefore, it is felt this indiscriminate payment of lump-sum benefits should be opposed.

6. DEFINITION OF "EMPLOYEE"

Comments

At present, by virtue of court rulings and other legal interpretations, there exists a fairly clear understanding as to who is an employee under the social security law. Under the new definition, the status of an employee would be determined by Federal agencies on the basis of a combination of indefinite factors, and this could result in endless and costly litigation.

Proposed changes in the law provide that self-employed persons have a different tax liability than that of "employees." The new definition makes it difficult in numerous cases for the individual to determine if he is an "employee" or "self-employed." This would affect independent contractors and agents. Consequently, millions of persons would not know their tax liability until their status is established by the Federal Social Security Agency or the Treasury Department.

The time-tested common-law meaning of the term "employee" has been understood for generations and it should not be replaced by a vague and unrealistic definition.

The United States Senate Finance Committee is presently holding hearings on H. R. 6000 and, subject to your approval, your committee recommends that the chamber go on record with the Senate committe to the effect that it does not oppose the bill in principle, but does object to the foregoing features for the reasons indicated.

Respectfully submitted.

W. E. VOLLMER,
Chairman, Social Security Committee,
Chamber of Commerce of Philadelphia.

STATEMENT OF THE WISCONSIN STATE CHAMBER OF COMMERCE WITH RESPECT TO OLD AGE AND SURVIVORS' INSURANCE AND PUBLIC ASSISTANCE

The Wisconsin State Chamber of Commerce submits a plan to cope with the problems raised under the old age and survivors' insurance and public assistance program. It recommends:

1. Extend coverage under old age and survivors' insurance now even beyond that provided in bill H. R. 6000. Bring in now farmers, professional people, Federal and State employees, and those under the railroad retirement system. Only in that way can we avoid expensive windfall benefits in the future.

2. Retain the accepted common-law definition of employee. The proposal for defining an employee under H. R. 6000 is a serious delegation of congressional power to Federal departments.

3. Provide an additional eligibility qualification of 20 quarters of coverage within the last 40 quarters, but only concurrent with the general extension of coverage proposed above.

4. Continue the present method of computing average wage. The procedure in H. R. 6000 is difficult for the public to understand and susceptible to easy alteration by a future Congress, resulting in tremendous possible increases in benefit obligations.

5. Increase benefits, but less drastically than the proposal in H. R. 6000 as follows:

(*a*) Retain the $3,000 wage base.

(*b*) Compute primary benefits by taking 50 percent of the first $100 and 15 percent of the next $150 with no yearly increment.

(*c*) Set the minimum benefit at $25 per month.

(*d*) Set the top maximum family benefit at $125 per month, maintaining present law provisions relative to computing family benefits. Also limit the maximum to 80 percent of the average monthly wage or two times the primary benefit.

(*e*) Retain present provisions of the law for payment of lump-sum death benefits.

6. Allow earnings up to $50 without benefit reduction, but provide benefit reductions based on earnings beyond $50. Do not adopt provisions to pay full benefits to those over age 75, regardless of earnings.

7. Do not establish any program of permanent and total disability insurance. There is no accurate way of estimating the future cost of such a program and it could easily degenerate in a racket that would wreck the entire program.

8. Based on an increase in benefits, adopt the tax schedule proposed in H. R. 6000 limited to a $3,000 wage base, but immediately set the rate at 2 percent on employer and 2 percent on employee.

9. Do not increase Federal aids for public assistance but provide instead a program whereby each State will assume an increasing proportion of the cost of public assistance as the beneficiary rolls of old-age and survivors' insurance expand.

10. Provide for the establishment of an independent system for Puerto Rico and the Virgin Island tied to their own economies.

We believe that the incorporation of these suggestions will hold the costs of our social security program at a level that future wage earners will be able to pay.

The CHAIRMAN. We have two other witnesses, and we will see if we can finish before we have to recess at 1 o'clock.

Mr. Hawker?

You may be seated, Mr. Hawker, if you wish to. You are from the Armstrong Cork Co.?

STATEMENT OF CLIFFORD F. HAWKER, VICE PRESIDENT IN CHARGE OF MANUFACTURE, ARMSTRONG CORK CO., LANCASTER, PA.

Mr. HAWKER. That is right, Mr. Chairman.

The CHAIRMAN. Of Pennsylvania and Macon, Ga.?

Mr. HAWKER. Yes, sir.

Senator MARTIN. Of several places in the world.

The CHAIRMAN. Several places: yes.

We will be very glad to hear you, Mr. Hawker, on H. R. 6000.

Mr. HAWKER. Thank you, sir.

My name is Clifford F. Hawker. I am vice president in charge of manufacture of the Armstrong Cork Co., a manufacturing concern with principal offices in Lancaster, Pa., and 18 factories located in 11 States. The company manufactures and sells a variety of products ranging from floor coverings and building materials to glass containers and closures.

I have come here today to discuss private pension plans and their relationship to the legislative proposals this committee has under consideration. It is estimated conservatively that there are some 13,000 such private pension plans in this country, protecting about 8,000,000 employees. Most of these plans serve to supplement social security old-age benefits and their operation will be affected by the changes you are now considering.

Armstrong employees—now numbering 13,000—have been covered by a fully funded, insured pension plan since 1937—for over 13 years. This three-part plan was developed by my company based upon our more than 30 years' experience in pension administration.

The first portion of this three-part pension plan, of course, is the Federal social security old-age benefit. We regard this as basic assurance to the American citizen that he shall have food and shelter when aged. We realize that social-security benefits so far disbursed have little relation to social-security taxes previously paid by recipients. But we regard the benefit as a dividend or bonus to each elder American, paid from our increasing productivity, a protection from destitution that we can afford to give to ourselves. This point of view compels us to urge you to extend social security old-age benefits to all residents of our land wherever or however employed.

Senator MILLIKIN. Does that include housewives?

Mr. HAWKER. That is right, sir.

The second portion of our company's three-part pension plan is a free annuity, paid for entirely by the Armstrong Cork Co. It automatically covers every Armstrong employee after 1 year in our employment. It provides an income at retirement age—65 for men and 60 for women—based upon the length of service and the earnings of each employee. The same annuity formula applies to all employees, whether they be hourly paid workers or officers of the company.

We feel that this portion of our pension plan gives recognition to our men and women for their contribution to our company's growth and success. We also feel that this free annuity, when added to the basic social-security benefit, raises our pensioned employees to a level more nearly approaching the standard of living they enjoyed while actively employed.

Most important, after 5 years of membership all employees have this annuity permanently and automatically vested in them. If they later leave our employment, no matter what the reason, they take along with them a paid-up annuity policy covering their years of service with us. In unpleasant contrast, we see that the pressures and politics of collective bargaining on pension plans recently have produced many so-called retirement programs under which employees can qualify for pensions only if they can cling to their jobs until they reach retirement age. Loss of employment before age 65 under such union-negotiated plans also means loss of retirement rights.

Senator MILLIKIN. Is your plan a company plan? I mean, do you pay all of the costs or is it jointly contributory?

Mr. HAWKER. I will cover that, Senator.

We consider such plans unfair and unsound. It must be admitted, however, that they are about what we had expected from the injection of collective bargaining into this complicated field.

The third portion of our three-part pension plan is voluntary and it is contributory. After 1 year of service each employee may elect

to join the company in purchasing additional annuities for themselves—and virtually all of our employees elect to do this. They purchase a supplementary annuity aided by company payments almost as large as their own contributions and which are in addition to the company's payments of the entire cost of the free annuity I described earlier. Through this third plan employees are able to build for themselves a pension that will assure them a more comfortable and abundant way of life when retired. The company's payments under this contributory pension plan encourage employees to be thrifty and to provide for themselves. In this plan, also, the annuities accumulated by each employee vest in him after 5 years, contingent only upon his leaving his own contributions with the insurance company. He may, of course, withdraw his own contributions at any time. If, however, he elects to leave them with the insurance company when he quits our employment, he takes with him a second fully paid-up annuity—based on his own contributions and those the company has made for him.

Our three-part plan is built around Federal social security. It recognizes an additional obligation of the employer. It encourages personal thrift. We think that it is of fundamentally sound design—and we regret that this soundness is likely to be undermined within the next few years, by the rivalries and opportunistic pressures of the 23-odd unions with which we must bargain.

I believe it worth your notice that the annuities under our two private portions of this three-part pension plan are paid in addition to Federal social security. If Federal social security benefits are increased within reasonable limits—and we feel they should be increased—our annuities will not be reduced. Our employees' total retirement income will be increased. This, too, we think, is sound and equitable.

There is nothing in our two annuity plans which prevents us from employing older people. In fact, we have employed a sizable number of such persons in recent years. This is indicated by the number of employees retiring currently with from 3 to 10 years of service. It is true that these older new employees build up annuities that are proportional to their earnings and years of service—and are thus smaller than those of employees with long service—but we feel that we are fully discharging our responsibility to them. They receive Federal social security benefits and their proportionate company annuity. We have convincing proof that annuity plans such as ours do not curtail employment opportunity for those over age 40. In this country, of the total male population from age 20 to age 65, 46 percent are over 40—in our own company, of male employees age 20 to age 65, almost the same percentage, 45 percent, are over age 40.

Senator MILLIKIN. How many are over age 65?

Mr. HAWKER. In active employment?

Senator MILLIKIN. Yes.

Mr. HAWKER. It would probably be less than 10 in our entire company.

Senator MILLIKIN. You do not compel a man to retire?

Mr. HAWKER. We now have a rule requiring compulsory retirement at age 65. This was not in force during the war.

We have the same proportion of older employees as the country has older citizens. This is true despite our considerable expansion in recent years.

Our formal annuity plans were inaugurated in 1937—the same year Federal social security began. At that time an average factory employee was earning about $110 a month. Assuming about 30 years of coverage, he could then look forward to a Federal social security old-age benefit of about $30 to $35 a month. He could also anticipate a monthly income of about the same amount, $30 to $35, from the company annuity plans. This would give him a total retirement income of around 60 percent of what he had been earning while at work.

However, the retirement benefits under our annuity plans increase when wages increase since the benefits are based on the man's earnings as well as his service. Inflation in price and wage levels in recent years has, therefore, been met in considerable part by automatic increases in annuity benefits under our plans. But, I'm sure we all agree, this has not been the case with Federal social security old-age benefits. Today, our aged employees reaching retirement age receive only around 15 percent of their current earnings in the form of Federal social security benefits rather than the approximate 30 percent which held in 1939 and 1940.

Year by year, as a director of my company, I review the records of each of many employees retiring from active service. I know that for almost all of these aged men and women this percentage loss in social security benefits causes real privation.

The old-age benefit formula adopted by the House of Representatives in H. R. 6000 corrects this "inflation loss" of purchasing power for social-security benefits. At today's wage levels, the formula of H. R. 6000 provides almost the same proportionate old-age benefits as did the old law in, say, 1940, at 1940 earnings levels. If the old law's formula was right in 1940, then the H. R. 6000 formula is equally right now. We recommend its enactment by the Senate. Our employees need to recover the loss in purchasing power of their social-security benefits. We do not need to "increase" social-security benefits—we need to "restore" them.

We make this recommendation with one reservation. We urge that the social-security tax and benefit base be kept at $3,000. If the $3,000 base is changed, it may be necessary for us to revise our two annuity plans—a process that is extremely complicated for us and quite disturbing to employees. Our two annuity plans are integrated with social-security benefits—they have to be in order to comply with Treasury tax regulations. Change of one will likely call for change of the other. Such changes would have to be worked out painfully with insurance companies, stockholders, unions, and so on.

If there were convincing reasons for increasing the tax base from $3,000 to $3,600 I would not raise the issue.

However, from an equity standpoint the employee who pays tax on an extra $600 a year isn't going to get a commensurate increase in his social-security benefits. An employee earning $3,600 a year and paying tax on all of it would get a basic social-security benefit of around 26 percent of his first $3,000 of earnings but only around 10 percent of his earnings from $3,000 to $3,600. This will be hard to explain to employees.

From another viewpoint, if the tax base is raised to $3,600 those employees affected and retiring within the next 10 or 15 years will get an unwarranted and discriminatory windfall. The tax payments each such employee and his employer will pay on his earnings between $3,000 and $3,600 will pay but a fraction of the cost of the increased benefit. Giving such a free ride to individuals earnings over $3,000 a year seems of doubtful merit. The proposed increase in tax base takes us away from the ostensible objective of this whole program—subsistence benefits.

I am not a social-security expert and, consequently, I do not feel competent to discuss whether or not social-security reserves are deceptive and illusory or sound and concrete. I have read a great deal of comment in the last year or two, however, about potential social-security-tax costs. I have read, with interest, debates over whether our economy can sustain social-security costs at some time in the future. This seems to overlook entirely the fact that those companies which have followed a liberal policy in developing employee-benefit programs today are already carrying a staggering burden of cost in sustaining them. In our own company, adding together today's costs of Federal old-age benefits, unemployment compensation, workmen's compensation, our two annuity plans, group life insurance, permanent-disability insurance, temporary-disability insurance, group hospitalization and surgical benefits, we and our employees are today paying about 13 percent of our pay roll for such benefits, $13 for a social security for every hundred dollars paid in wages and salaries. If you take one of our typical hourly-paid factory employees who is married, aged in the forties and who last year earned around $3,390, the Armstrong Cork Co. paid, in addition to his wages, an amount equal to 9.5 percent of his wages for the support of these security benefits, and the employee contributed 5.5 percent of his wages. I would urge, therefore, that further increase in social-security old-age taxes be deferred until benefit payments actually require higher pay-roll taxes.

I have given you considerable detail about our private annuity plans in order to illustrate the careful thought and planning that must be given the problem of provision for aged employees before a sound private retirement plan can be developed.

In our own case, the planning and thought that went into establishment of our annuity plans has proved well warranted—the plans have operated successfully for 13 years—through a war—and the benefits today compare more than favorably with those of plans introduced recently through collective bargaining.

Judged by these years of experience with both annuity plans and social security, we feel that a sound private annuity plan is almost as complicated to set up as a Federal social-security system—even though on a considerably smaller scale—and is almost as complicated to administer.

Thus far I have presented my own views, and those of the management of our company, with respect to H. R. 6000. I have told you that we are in favor of extending social-security coverage to all citizens; that we think it is desirable to restore the purchasing power of social-security benefits to the level of 1939 and 1940; but that we oppose increasing the tax base from $3,000 to $3,600.

I have also described in detail our own private annuity plans as illustrations of the close integration between the 13,000 such programs in operation today and the Federal social-security program, and also as examples of what can be accomplished with sound, private pension plans.

Now, with your permission, I wish to discuss a matter of the utmost importance which—while it does not pertain directly to H. R. 6000—nevertheless falls definitely within the area being studied and investigated by this committee. I am referring to the United States Supreme Court decision which throws private pension programs into the arena of collective bargaining.

The honorable members of this committee have spent many months in recent years studying the Federal old-age and survivors insurance program. You have examined, weighed, and evaluated many proposals for its revision or extension. You have had much experience with the complexities and contradictions of work in this field.

Keeping in mind your own experience, let us now indulge in a bit of fantasy.

Suppose that you are convened in this room without much previous knowledge of, or experience with, social insurance; that you are told to produce final legislation covering the entire field within 10 to 15 days or face civil insurrection. Suppose also that you discover most of the recognized experts in the field are unavailable because of press of other duties; that such technical witnesses as you can obtain are of doubtful competence, disagree violently on every issue of importance, and even disagree on what the issues are. In addition, assume that you are handed assorted inconsistent excerpts from social-security laws allegedly enacted in Bulgaria, San Salvador, Nepal, and New Zealand with the order that they must be integrated into your final legislation for the United States. Furthermore, you are required to guarantee, in your legislation, exactly what social-security benefits will be paid in the future and at what tax cost, though you do not know how many will draw benefits, nor in what amount, nor for how long. You meet around the clock in a last desperate attempt to solve the problem. You are confused, irritated, angry, and exhausted.

Now, may I ask rhetorically, would the social-security legislation you enact under these conditions be sound? Would it be beneficial to the citizens of this Nation?

The conditions I outline are not exaggerations. They are typical of the conditions under which many private pension plans in this country have recently been negotiated and come into existence. How sound can we expect such pension plans to be? And yet they are being drawn up to supplement social security.

I can only repeat our own experience that design of sound private annuity plans requires much of the care that you are giving to the design of a sound Federal social-insurance system.

The United States Supreme Court's Inland Steel decision has brought about this chaotic condition. The collective-bargaining processes have recently produced benefit plans, of a sort, from just such scenes of confused, antagonistic haste as I have depicted. The plans are characterized by fundamental shortcomings; complete lack of protection for the employee discharged prior to retirement; payment of company pension benefits to short-service employees that are actually larger than to long-service employees; and likewise payment of larger

company-pension benefits to unskilled workers than to highly skilled workers; lack of reserves adequate to pay promised pensions, et cetera.

This committee has the great responsibility of assuring a sound, stable Federal social-insurance system. May I urge that you also accept some responsibility to further the cause of sound private pension plans supplementary to Federal social insurance.

Senator MILLIKIN. How do you suggest we ought to do that?

Mr. HAWKER. I cover that later, Senator.

Senator MILLIKIN. All right.

Mr. HAWKER. I submit that the greatest threat to soundness in private pension plans is their premature subjection to collective bargaining. I do not say that pension and similar benefit plans should not be suitable topics for collective bargaining—eventually—but I do state categorically the conviction that collective-bargaining processes are yet too immature in this country—too new and raw—not 10 years old in most industries, to handle effectively such extremely complicated issues as those presented by private pension and welfare plans. I recite, as proof, the pension plans produced this year by collective bargaining.

Thus, in conclusion, we earnestly request that in amending the old-age and survivors insurance program you also suspend the Supreme Court decision subjecting private welfare plans to obligatory collective bargaining. We are of the opinion that private welfare programs will evolve rapidly and soundly during the next few years if they are freed from the threats, pressure, and rivalries of union contract disputes. If they are not, the result is likely to be disastrous for countless thousands of employees and for the business firms with which they are associated.

The CHAIRMAN. Are there any questions?

Senator MARTIN. Mr. Chairman, knowing the sound approach of this company over a long period of years, and knowing the management of the company, I think it might be of value to the committee if the witness would state what effect he thinks the inflationary tendency of our country is having on the social-security program in a general way.

Mr. HAWKER. Senator Martin, I think that I covered that fairly well in my testimony. In other words, the inflationary tendency in this country has reached a point where our social-security benefits represent just about half what they did in 1939 and 1940.

Senator MARTIN. That is true. Then I wish, from your experience as an individual and from the experience of your company, you would tell us what is one of the greatest causes for this inflationary tendency in our country. I am speaking from a governmental standpoint, as to deficit financing and unbalanced budgets, and high taxes.

Mr. HAWKER. I really do not feel that I am able and competent to comment on that, although I will say that I agree they have had an effect.

Senator MARTIN. Mr. Chairman, not only the management but the employees of the Armstrong Cork Co. are a very modest group, and it has been a very successful organization, and that is one reason I think it would be helpful if the witness were to comment. Because that is a problem that has been confronting this committee and the Members of Congress and the people of the United States.

Mr. HAWKER. I might make this statement, Mr. Chairman: The question of increased productivity was discussed by one of the earlier witnesses here this morning. Frankly, in the past 3 or 4 years we have found quite a marked increase in productivity per man-hour in most of our plants. That is not the national situation, and I think we should recognize one thing that was not brought out here earlier. That is the most increases in productivity per man-hour comes about through technological change.

Our company has spent something like $46,000,000 in the last 3 or 4 years to give us additional facilities and better facilities with which to work. We have been rather fortunate in being able to assemble that amount of money for capital purposes. I think that one of the things that is preventing technological improvement to increase productivity is the lack of venture capital in this country.

I think, right along that same line, we feel very definitely that as long as the present tax rates on incomes are maintained where they are, we are going to have this continued lack of venture capital. Furthermore, this question, which I do not feel competent to discuss, of double taxation on dividends and on taxation of personal incomes, brings about a situation where a man would be practically unwarranted in investing his money in an enterprise such as ours.

Senator MILLIKIN. There was some criticism yesterday, I do not know whether it was criticism, but it was comment, on the Senate floor, from which I think the implication might have been drawn that it was a mistake for us to get rid of the excess-profits tax at a time when the Government was in a deficit position. It has always seemed to me that, had we not done that, business would not have had the capital in hand to carry this country through the transition period, for the very reason which you have mentioned, that the venture capital market is dried up. And had the corporations and the employers of the country not had the money available to install these new techniques and increase their plants and better their technologies, we would have been stymied long before this.

I have always thought that although it was a sort of a bold thing to do, Mr. Chairman, it was a very constructive thing to do.

The CHAIRMAN. I agree thoroughly.

I think, Mr. Hawker, you would also agree that in meeting the problem of constantly rising prices there is no way to do it except to increase our productive power and capacity.

Mr. HAWKER. That is right.

The CHAIRMAN. And there was no way to carry on a constantly expanding program of production as long as you had the wartime excess-profits tax piled upon all the other types of taxes that we have on business.

I agree thoroughly that it was a bold thing. I think that the present Chief Justice of the Supreme Court, who was then Secretary of the Treasury, courageously advocated the removal of the excess-profits tax at that time.

I also think for another very important reason had it not been removed at that time we would have had a most difficult time ever removing it.

Mr. Hawker, we are glad to have had you, sir, and very glad to have had your detailed experience with the plan affecting your own enterprise. It has been very helpful to the committee.

Mr. HAWKER. Thank you.

The CHAIRMAN. We have one other witness, Mr. Frank R. Lyon, Jr.

Will you have a seat, Mr. Lyon, and identify yourself for the record, unless you do so in your statement?

STATEMENT OF FRANK R. LYON, JR., ATTORNEY, CHARLESTON W. VA., APPEARING ON BEHALF OF WEST VIRGINIA COAL ASSOCIATION

Mr. LYON. If the committee please, it is in the statement, Mr Chairman.

The CHAIRMAN. All right, then. You may proceed.

Mr. LYON. Mr. Chairman and members of the committee, my name is Frank R. Lyon, Jr. I am an attorney practicing and living in Charleston, W. Va. I am appearing here on behalf of the West Virginia Coal Association. The members of that association are coal producers which normally represent 100,000,000 tons production of coal. Within it are numerous district coal associations operating in southern West Virginia. It represents many individual subscribers scattered widely over the State of West Virginia.

At the outset, I want to make clear that I am not appearing as an expert on social security as such or on all the ramifications of H. R. 6000. Many persons better qualified than I to discuss the broad aspects of the bill have preceded or will follow me. Therefore, other than to observe that in my judgment the Federal Government should recede from financing public assistance and not participate more fully therein as this bill contemplates, and that the inclusion of total and permanent disability benefits in the insurance plan as provided in the bill is dangerous and unsound, I will restrict my remarks principally to the manner in which the bill affects the coal industry.

With the light so keenly focused on this basic industry at present it becomes unnecessary to elaborate on the vital part coal plays in this country's economic structure. Likewise, it is unecessary to remind you of the part this industry has played in this country's development and particularly in the victories achieved in the two world wars.

Senator MARTIN. Might I ask a question, for information? Do any of the concerns that domicile outside of West Virginia belong to your association?

Mr. LYON. Certain concerns like the Truax-Traer Coal Co., Senator Martin.

Senator MARTIN. Take the Pittsburgh Consolidation and the Jamison. Do they belong?

Mr. LYON. No, sir.

Senator MARTIN. Mr. Chairman, take the Pittsburgh Consolidation, for example. They have a very large office of the old Consolidation at Fairmont, W. Va., and then they have their other office at Pittsburgh.

But I wanted to get at the matter of whether you represent them.

Mr. LYON. No, sir; they are not members of this association.

Senator MARTIN. All right.

Mr. LYON. West Virginia has led in the production of bituminous coal since 1931. West Virginia is built on coal. It is West Virginia's greatest natural resource. It employs approximately 120,000 men

It is the State's largest employer of labor, largest wage payer, and largest taxpayer.

That which affects coal affects everyone in the State directly or indirectly. When coal loses a market every business in West Virginia loses. The school system loses and every other governmental service loses through shrunken taxes.

Because of several factors, not the least of which is increased cost to the consumer, coal has continually lost markets to the competitive fuels, oil and gas. In 1925 coal supplied 61 percent of this country's energy. In 1948 it supplied 42 percent. Any continuation in the increase of the cost of coal is but another body blow to the coal industry in its effort to survive.

Approximately 60 percent of coal is for labor. The labor cost of producing oil to the equivalent of a ton of coal is about one half the labor cost of producing coal. The labor cost of producing natural gas to the equivalent of a ton of coal is about one-tenth to one-twelfth the labor cost of producing coal.

H. R. 6000, by the increased tax on wages and by raising the maximum taxable wages from $3,000 to $3,600, is adding additional costs to the production of coal, which must necessarily mean increased costs to the consumer, with its resultant disadvantage in a highly competitive market.

That this increase in the maximum taxable wage will more directly affect the coal industry than other industries is reflected in the report of the West Virginia Compensation Commissioner for the fiscal year ending June 30, 1949, wherein he listed the average annual wage of the coal miner, $3,530; manufacturing, $2,993; construction, $2,740; utilities, $2,759; and transportation, $2,617.

Senator MILLIKIN. I was just going to ask: Are those averages based on the assumption of a full year's work? Or is that the average of actually earned money?

Mr. LYON. That was the average of actually earned money. And I might say this, Senator: that that was for the fiscal year ending June 30, 1949. There were, of course, some shut-downs and stoppages in the first part of 1949 that would be reflected in that statement.

Senator MILLIKIN. The average wage of coal miners during the fiscal year 1949, actual take-home pay was how much?

Mr. LYON. $3,530.

Senator MARTIN. That was the same question I wanted to ask, Mr. Chairman.

Mr. LYON. None of the other wages, if the committee will observe, exceeded $3,000.

The West Virginia Department of Employment Security in its report for the fiscal year ending June 30, 1949, showed coal paying wages taxable by that department in the amount of $398,664,063. This is the latest report of that department. The figures would (*a*) be comparable to the wages on which social-security taxes were paid since both social security and unemployment taxes applied only to wages up to $3,000, but (*b*) be less than wages on which social-security taxes are paid since unemployment compensation coverage is eight or more and social security is one or more.

The 1 percent social-security tax then in effect would have amounted to approximately $4,000,000. Using the figures in that report as a basis, under H. R. 6000 the coal industry would pay approximately

$6,000,000 in taxes in 1950; approximately $8,000,000 annually in 1951 to 1959; approximately $10,000,000 annually in 1960 to 1964; approximately $12,000,000 annually in 1965 to 1969; and approximately $13,000,000 annually after 1969. I might stop here just a moment to say to Senator Martin that those figures which I have quoted from both the workmen's compensation and employment compensation represent coal production throughout the entire State of West Virginia and not just the coal produced in the southern part of the State.

The CHAIRMAN. What part of the coal is produced in the southern part of the State, if you know, roughly?

Mr. LYON. Percentage-wise, Senator?

The CHAIRMAN. Yes.

Mr. LYON. I would say 75 percent.

The CHAIRMAN. So the larger portion of your production is in the southern part of the State?

Mr. LYON. The southern part; yes, sir.

Senator MARTIN. And I guess the better quality coal is in the southern part also, is it not?

Mr. LYON. Yes, sir.

During the period when the aforesaid wages were paid by coal, approximately 163,484,689 tons of coal were mined. Social-security taxes on those wages at the rate of 1 percent amounted to approximately 2½ cents per ton. Again using those figures as a basis, under H. R. 6000 such taxes in 1950 would amount to approximately 3¾ cents per ton; 1951–59 approximately 5 cents per ton; 1960–64 approximately 6¼ cents per ton; 1965–69 approximately 7½ tons per ton; and after 1969, approximately 8⅛ cents per ton.

Senator MARTIN. Mr. Chairman, might I ask: Are these figures both on deep mining and strip mining?

Mr. LYON. Yes, sir; I believe so.

Senator MARTIN. It includes strip mining?

Mr. LYON. Yes, sir.

The foregoing taxes are based on the maximum taxable wage of $3,000, and do not take into account the additional taxes resulting from raising such wage to $3,600.

We feel that this bill commits this generation and future generations to substantial tax burdens. It would seem better in this period of transition in our economic and social structure to avoid such commitments or at least delay them until the future can be predicted with more wisdom and certainty.

Employers in the recent past have been parties to contracts providing for pension benefits. With rare exceptions these plans have supplemented social-security benefits and have been integrated therewith. The pension plan in the coal industry is one of such exceptions, probably the principal one. Benefits thereunder are entirely independent of and unrelated to benefits under the Social Security Act. Thus the coal industry must necessarily appraise the "cost effect" of H. R. 6000 with considerably more scrutiny and caution than must the other social-security subscribers. Where, by integration of their contract and the Government administered pension plans, others may stand to gain by liberalization of benefits and even increased taxation under the latter, the coal industry stands to lose thereby.

When the mines were under Government seizure in 1946, the Government first thrust upon the coal industry the miners' pension fund,

which fund is created solely by coal company contributions and is in no way correlated with the Federal social-security program to which the coal operators also contribute.

Senator MARTIN. How much does that amount to? What is it per ton?

Mr. LYON. It is 20 cents per ton now, with the present demand being for 35 cents.

Senator MARTIN. That is what I thought; yes.

Mr. LYON. In 1947 and again in 1948, under Government pressure, the amount of the coal operators' contribution to that fund was doubled.

The apparent purpose of the Social Security Act, and as amended by H. R. 6000, is to provide benefits reasonably commensurate with the cost of living. The miners' fund, created as aforesaid, has a similar purpose. If the benefits of the Social Security Act are to be liberalized and the taxes thereunder increased, in order to accomplish that purpose, it would seem that any payments thereunder should be integrated with payments under contract pension programs. Unfortunately the coal industry has been caught between two conflicting policies of the Government in that regard.

Some definite policy of the Government thereon is essential to the protection and preservation of the coal industry. The Government has been utterly inconsistent in its policy. In 1946, when the Government through its seizure powers created, and in 1947 and 1948 when through pressure it perpetuated, this fund, the Government made no tie-in with that fund and the social-security fund, leaving the coal operators no alternative but to contribute to two separate funds each created to accomplish primarily the same purpose. Subsequently the Steel Board, created by the Government, recommended that any benefits under a pension plan between the steel companies and the employees be "supplementary to the amount of security furnished by the Government."

Now the Coal Board, also Government created, the chairman thereof having also been a member of the Steel Board, is according to reports, riding the coal operators, with spurs and whip in the form of a threat of another governmental seizure, in an effort to have them increase their contribution to the miners' fund. By H. R. 6000 Congress seeks the same purpose for the social-security fund. Until such time as a definite governmental policy is established, integrating the two funds, employers should not be additionally taxed and compelled to finance or contribute to two separate pension programs.

The CHAIRMAN. All right, sir. We thank you very much, Mr. Lyon, for your appearance.

Are there any additional questions?

Senator MILLIKIN. I am continually curious as to what the role of Congress could be in an integration of these private plans with the Federal security plan.

Mr. LYON. It would be difficult for Congress, certainly through the Social Security Act, I believe, to tie in with the private pension plans, because I think that under the Social Security Act, a man is entitled to the benefits provided thereunder as a matter of right, and that they could not be reduced by reason of any other benefits. But it is our position that it amounts to letting one arm of the Government know

what the other arm is doing. One arm is compelling us to contribute to a plan and maintain a plan solely by employer contributions, which entirely disregards the social-security contribution which we have made; and on the other hand, Congress is requiring us to contribute to the social security program through these taxes, and that is substantially for the same purpose for which the miners' fund is created. These costs, as I endeavored to point out earlier, are a substantial feature of the production of coal, because of the high labor cost in coal production, which is higher I believe than in any other industry.

Senator MILLIKIN. Has the productivity per man increased in the coal-mining business?

Mr. LYON. I say this without any complete knowledge, and it amounts to little more than a guess on my part, but I don't believe it has.

Senator MARTIN. Any statement of that kind would also have to be based on the greatly improved machinery and also the improved safety methods.

Mr. LYON. That is correct. But then, of course, I might say this: that any increase in the productivity of the miner has been offset by contracts for which the operators pay for nonproductive time, such as lunch hours and travel time.

Senator MARTIN. Under portal-to-portal, I am not very familiar, Mr. Chairman, with the operations in southern West Virginia. I am familiar with that in northwest Virginia and southwestern Pennsylvania. Sometimes the man travels underground 2 or 3 miles to his work.

Mr. LYON. That is correct. And I might say that probably the natural reaction of the committee to my comments would be, "Well, that was voluntary on the part of the operators. They entered into that voluntarily." But it wasn't. In the first instance, it was put on us by the Government, and we had the opportunity to agree to it in principle or have the Government keep our mines.

Senator MILLIKIN. What I was really wondering was whether the productivity per man had kept pace with the increased wages and other benefits which are paid to the coal miner.

Mr. LYON. I am really not qualified to answer that, Senator, but it is my guess that it has not. I would be glad, when I return home, if that information is available, as I know it is, to submit a letter.

Senator MILLIKIN. It has no direct bearing on this inquiry but I was just curious about it.

Senator MARTIN. Mr. Chairman, that is pretty important, though, in the consideration of the general economy underlying this. We have got to keep these things economically sound. They must not be permitted to break down of their own weight, or it will not do the job that we hope that it will perform.

What we are trying to do is to give security to the people of our country, but if we burden the thing so that it will break down in the future, we have just destroyed what we are trying to do.

So I think that it really has some bearing.

The CHAIRMAN. We shall appreciate your supplying the answer to the question asked. You may mail it to the committee later.

Mr. LYON. I will be very glad to do so.

(The material requested follows:)

SUPPLEMENTAL STATEMENT OF FRANK R. LYON, JR.

The following table is offered in reply to Senator Millikin's question of whether productivity per man has kept pace with increased wages and other benefits which are paid to miners:

Year [1]	Average weekly wages [2]	Tons mined per day per man [3]	Year [1]	Average weekly wages [2]	Tons mined per pay per man [3]
1948	$72.12	5.79	1941	30.86	5.56
1947	66.86	5.71	1940	24.71	5.75
1946	58.03	5.95	1939	23.88	5.47
1945	52.25	5.42			
1944	51.27	5.30			
1943	41.62	5.25		*Percent*	*Percent*
1942	35.02	5.40	Increase, 1939 to 1948	202.0	5.8

[1] Calendar year.
[2] Average weekly wages for all bituminous-coal production in United States Authority: Bureau of Labor Statistics, U. S. Department of Labor.
[3] Tons mined per day per man—West Virginia deep mines. Authority: West Virginia State Department of Mines.

That table confirms my answer to Senator Millikin's question which I made at the hearing. Furthermore, it would seem obvious that advance in mechanization during the foregoing 10-year period would account for more than the 5.8-percent increase in the tons mined per day per man, and that, therefore, the efficiency of the miner has decreased during this period while his wages have increased.

The CHAIRMAN. Thank you very much for your appearance.

That finishes the schedule of witnesses for the week, I believe.

(Whereupon, at 1:05 p. m., the committee recessed to reconvene Monday, March 6, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

MONDAY, MARCH 6, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

Present: Senators George, Kerr, and Taft.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

I believe that Mr. Osherman wishes to appear first.

You may come around, Mr. Osherman. Mr. Barron, you may come around, too, if you wish, at this time. Is there anyone else to appear on this particular matter?

STATEMENTS OF J. A. OSHERMAN, OF GALLAGHER, OSHERMAN, CONNOR & BUTLER, BOWEN BUILDING, WASHINGTON, D. C.; AND THOMAS B. ROBERTS, DES MOINES, IOWA, REPRESENTING NATIONAL BALLROOM OPERATORS' ASSOCIATION

Mr. OSHERMAN. Mr. Roberts is accompanying me, sir.

Mr. BARRON. And I have with me Mr. Owens and Mr. Halliday and Mr. Scher.

The CHAIRMAN. You gentleman may all be seated. All right, Mr. Osherman, you may proceed.

Mr. OSHERMAN. This is a statement concerning the definition of "employee" in H. R. 6000.

My name is J. A. Osherman. I am a member of the law firm of Gallagher, Osherman, Connor & Butler, Bowen Building, Washington, D. C. We are the Washington counsel for the National Ballroom Operators' Association, with its principal office in Des Moines, Iowa. The National Ballroom Operators' Association is an organization composed of owners of ballrooms operating in 25 States, and the number of ballrooms so represented is approximately 200, comprising 90 percent of the important ballrooms of the entire country. The music for dancing in these ballrooms is provided mainly by "name bands."

I have with me this morning Mr. Thomas B. Roberts of Des Moines, Iowa, who has assisted me in the preparation of this statement. Mr. Roberts is the legal counsel for the association and was the principal attorney representing the plaintiff ballroom operators in the case of *Bartels* v. *Birmingham* ((1947) 332 U. S. 126).

60805—50—pt. 3——26

We are appearing in opposition to section 206 (a) of H. R. 6000, which would amend section 1426 (d) of the Internal Revenue Code so as to change the definition of "employee" to read as follows:

Employee.—The term "employee" means—

(2) Any individual who, under the usual rules applicable in determining the employer-employee relationship, has the status of an employee. For purposes of this paragraph, if an individual (either alone or as a member of a group) performs service for any other person under a written contract expressly reciting that such person shall have complete control over the performance of such service and that such individual is an employee, such individual with respect to such service shall, regardless of any modification not in writing, be deemed an employee of such person (or, if such person is an agent or employee with respect to the execution of such contract, the employee of the principal or employer of such person).

The report of the Committee on Ways and Means of the House of Representatives specifically states that the second sentence of paragraph 2, quoted about—

is designed to change the effect of the United States Supreme Court's holding in *Bartels* v. *Birmingham* (1947) 332 U. S. 126 * * *.

The National Ballroom Operators' Association is vigorously opposed to the provision in question and respectfully submits that it should be eliminated from H. R. 6000 for the following reasons:

1. Provision is grossly discriminatory because it relieves one class of employers from all responsibility of paying the taxes and keeping the records required by the Federal Insurance Contributions Act.

The Supreme Court of the United States in *Bartels* v. *Birmingham*, supra, said this concerning leaders of orchestras known in the amusement world as "name bands":

The trial court found that there is no real dispute; that the leader exercises complete control over the orchestra. He fixes the salaries of the musicians; pays them and tells them what and how to play. He provides the sheet music and arrangements, the public-address system, and uniforms. He employs and discharges the musicians, and he pays the agents' commissions, transportation, and other expenses out of the sum received from the dance-hall operators. Any excess is his profit and any deficit his personal loss.

On these facts the Supreme Court held the leader of an orchestra, and not the ballroom operators for whom the orchestra performed dance engagements, was the employer of the members of such orchestra, notwithstanding that the Form B contract of the American Federation of Musicians referred to the establishment owner using the orchestra's services as the "employer" and the orchestra members, including leader, as the "employees" and expressly recited that—

the employer shall at all times have complete control of the services which the employees will render under the specifications of this contract.

Section 206 (a), if enacted into law, would relieve orchestra leaders such as those which the Supreme Court held were employers from all responsibility as employers for the payment of social-security taxes and keeping of the pay-roll records required by the enactment imposing such taxes.

Conclusive proof of the correctness of the foregoing assertion is to be found in a statement of James C. Petrillo, president of the American Federation of Musicians, made in a letter dated October 21, 1949, to V. Dahlstrand, president, local 8, 1714 North Twelfth Street, Milwaukee 5, Wis., as follows:

While the House of Representatives and the Senate have adjourned, it is quite hopeful that the Senate will adopt this measure from the House, possibly

with some minor changes, thus alleviating many of our headaches as to musician leaders being declared employers and subject to all employer's taxes.

The burden of paying social-security tax and of keeping the records occasioned thereby has created "headaches" for many employers, but Congress has never seen fit on that account to relieve them of such burden. The provision in question accomplishes exactly that result. It permits one class of employers to retain the prerogatives of an employer, such as the right to hire and fire employees, fix and determine their compensation, furnish the tools with which the work is performed, and receive a profit from their services, without having to assume and bear any of the taxpaying and record-keeping responsibilities of an employer. Obviously, any provision producing such an unfair result is grossly discriminatory and should be removed from the act.

2. The provision in question creates a wholly new and heretofore unrecognized test for determining the relationship of employer and employee by making such relationship depend solely on what the parties say in their written contract rather than on what they do in fact under it.

The manner in which the provision in question is worded implies that it is merely a codification of the common law test for determining the employment relationship since the preceding sentence recites: "Any individual who, under the usual common law rules applicable in determining the employer-employee relationship has the status of an employee." Any such implication is universally refuted by the holdings of many courts that the status of employer and employee is not to be judged by the single evidentiary factor of the patries' form of contract but by an over-all view of all the facts and circumstances showing their true relationship. Some of these holdings were made in cases wherein members of an orchestra were determined to be the employees of the leader and not the establishment owner for social security and employment tax purposes. See:

Spillson v. *Smith* (174 F. 2d 787 (C. C. A. 7th)).
Williams v. *United States* (126 F. 2d 129 (C. C. A. 7th); certiorari denied 317 U. S. 655, 63 S. Ct. 52, 87 L. Ed. 527).
Palmer v. *Michigan Unemployment Compensation Commission* (310 Mich. 702, 18 N. W. 2d 83).
Nebraska National Hotel Co. v. *O'Malley* (63 F. Supp. 26 (Neb.)).
In re Jermyn Hotel Co. (Pa. Common Pleas, Sept. 3, 1946, C. C. H. Unemployment Ins. Service, Pa., par. 8149).

Other holdings consist of decisions of courts in social security and unemployment tax cases generally as follows:

Matcovich v. *Anglim* (134 F. 2d 834 (C. C. A. 9th); certirorai denied, 320 U. S. 744, 63 S. Ct. 46, 88 L. Ed. 441).
Anglim v. *Empire Star Mines Co.* (129 F. 2d 914 (C. C. A. 9th)).
Wabash R. R. Co. v. *Finnegan* (67 F. Supp. 94 (E. D. Missouri)).
Royal Theatre Corporation v. *United States* (66 F. Supp. 302 (Kans.)).
Millard Sugar v. *Gentsch* (59 F. Supp. 82 (N. D. Ohio)).
Jack and Jill, Inc., v. *Tone* (126 Conn. 114, 9 Atl. 2d 497).
In re Morton (284 N. Y. 167, 30 N. E. 2d 369).
Industrial Commission v. *Northwestern Mutual Life Ins. Co.* (103 Col. 550, 88 P. 2d 560).

In the last case cited, the Supreme Court of Colorado held that the written contracts between the defendant company and its agents would be considered a "slight element" in determining the nature of their relationship.

Still other holdings consist of decisions in workmen's compensat and tort cases as follows:

Gulf Refining Co. v. *Brown* (93 F. 2d 870 (C. C. A. 4th)).
Bertino v. *Marion Steam Shovel* (64 F. 2d 409 (C. C. A. 6th)).
Sanford v. *Goodridge* (234 Iowa 1036, 13 N. W. 2d 49).
Glielmi v. *Netherland Dairy Company* (254 N. Y. 60, 171 N. E. 906).
Nestle's Food Co. v. *Industrial Commission* (205 Wis. 467, 237 N. W. 117).
Brown v. *Industrial Accident Commission* (174 Cal. 457, 1063 Pac. 664)

The rule sustained by the foregoing cases is the one which has b adopted by the American Law Institute in its restatement of the l of agency. See section 220 (2).

Section 206 (a) of H. R. 6000 discards the common law test appro by the American Law Institute and the courts generally and s stitutes in its place the sole criterion of what the parties in th written contract say is the relationship between them. According it makes the relationship of employer and employee depend not what are the true facts with respect to who does the hiring and firi fixes and determines the pay, furnishes the tools for the work, etcete but on which party has the stronger bargaining power to force t other party to sign a contract reciting who is the employer and w has control over the services, notwithstanding the fact that s recital may portray an utterly unrealistic fiction.

The National Ballroom Operators' Association submits that sou legislative policy requires the rejection of any provision which mal the employment relationship and the tax incidents arising therefro dependent solely upon which party has the stronger bargaining po tion in writing a contract. In the case of the Form B contract happens to be labor who occupies that position. In another situati or at another time, it could just as well be management who occup such position.

3. The provision, if enacted into law, would sanction certain ty of contracts which have heretofore been uniformly condemned the courts as "anticipatory arrangements" designed to avoid taxes.

The district court in the Bartels case found that the Form B c tract was devised by the musicians' union with the avowed purp of protecting the leader from taxes as an employer and that "it w required by the leader to be entered into as an anticipatory arran ment to escape taxation."

Judge Donohoe in the case of *Nebraska National Hotel Comp* v. *O'Malley* (65 F. Supp. 26 (Nebr.)) found that "the Form B c tract was obviously entered into in an effort to shift the legal respo sibilities imposed by the statutes." See findings of fact filed N vember 13, 1945.

And in *Spillson* v. *Smith* ((N. D. Ind.) C. C. H. Unemployme Ins. Service, vol. I, par. 9111, affirmed 147 F. 2d 727 (C. C. A. 7th) the court found that a change in the standard form of contract pr vided by the musicians' union was made "in an obvious effort to avo liability on the part of the orchestra leaders for the payment of soci security and employment taxes."

The courts have uniformly condemned contracts devised for t purpose of avoiding liability for social security and employme taxes in cases where such contracts have been not accompanied by

change in the actual relationship of the parties. In addition to the three orchestra cases cited above, see the following:

Griffiths v. *Commissioner* (308 U. S. 355, 60 S. Ct. 277, 84 L. Ed. 319).
McDermott v. *Henrickson* (4 F. Supp. 277 (S. D. Wash)).
Electrolux Corporation v. *Board of Review* (129 N. J. L. 154, 28 A. 2d 207).

In *Griffiths* v. *Commissioner*, supra, the Supreme Court of the United States said:

Taxes cannot be escaped by anticipatory arrangements and contracts however skillfully devised.

Section 206 (a) of H. R. 6000, if enacted into law, will validate an anticipatory arrangement such as the Form B contract and thereby enable the leader of a "name band" to succeed in his effort to avoid liability for payment of social security and employment taxes on the men he hires and whose pay he fixes. Why should leaders, many of whom have a gross income from their orchestra business in excess of several hundred thousand dollars a year, be favored in this manner? Certainly the same considerations which have prompted courts to uniformly condemn contracts permitting an employer to avoid liability for social security and employment taxes should be equally determinative of a legislative policy refusing to sanction the use of such contracts.

4. The provision is not needed in order to give social-security coverage to the members of an orchestra other than the leader.

The provision is not needed in order to give social-security coverage to the side men, members other than leaders, of orchestras. If the side men are the members of so-called pick-up or nonname band, they are now covered as the employees of the establishment; that is, ballroom operator, night club, hotel, et cetera. If the side men are members of a so-called name band—being an orchestra having the characteristics described in the Bartels case—they are now covered as employees of the leader. See Treasury's Department MIM, 6187, September 25, 1947.

5. The provision will result in less, instead of greater coverage under the Social Security Act, so far as musicians are concerned, and therefore is contrary to the avowed purpose of H. R. 6000.

The National Ballroom Operators Association believes that the provision contained in section 206 (a) of the act will result in less social security coverage for musicians for the following reason:

It is a well-known fact, as was shown by the undisputed record in the Bartels case, that "name" orchestras play many one-night engagements for civic, charitable, educational, and similar engagements. If these organizations are the employers of such orchestras, as they most certainly would be under the provision in question, not 1 penny of social security tax will be paid on sums paid the side men in performing such engagements for the reason that the services performed for those organizations would be exempt from payment of social security tax under sections 202 (a) and 210 (a) (11) of the act. On the other hand, if the leader continues as the employer of his side man, as is now the case, the latter will have old-age benefit coverage with respect to all engagements for these exempt organizations.

6. The provision, if enacted into law, will result in decreased social security and employment tax payable with respect to the wages of the orchestra members.

It is impossible for a leader to state in advance how much each o his musicians will receive for a single night's work where the leade pays weekly salaries and usually doesn't know exactly how man nights in any week that his orchestra will play. Since the ballroo operator has nothing to do with fixing the pay of the side men, doe not know and has no way of determining the amount thereof, logically follows that if such operator, as the employer, is require to return the social-security tax thereon, the only amounts it ca report as wages for that purpose are sums listed by the leader or hi booking agent on the contract, which means that any amount paid b the leader in excess thereof will entirely escape taxation.

7. The provision, if enacted into law, would impose an unreasonab and costly record-keeping burden on ballroom operators.

The provision, if enacted into law, would require a ballroom ope ator to keep pay-roll records and make social-security-tax returns o hundreds of musicians. Take, for example, an operator who hold dances four nights a week using orchestras each having an averag membership of 12 musicians. This would mean that the operato would be required to keep pay-roll records and make social-securit tax returns on 2,496 musicians. This "paper work" would require th employment of additional clerical and bookkeeping employees.

Moreover, prior to the Bartels case, many leaders neglected to li their side men and their pay on the reverse side of the Form B co tract. (Only 3 out of the 12 leaders involved in the Bartels case di so.) This being true, how will a ballroom operator be able to repo the wages of the side men? He doesn't fix their pay or pay them, so l doesn't know what compensation they receive. Apparently, unde this bill, a ballroom operator would be required to trace and run dow musicians all over the country to find out the amounts the leader pa them for an evening's engagement at the operator's ballroom. Eve then, he would have to rely on the truthfulness of the side men in r porting their compensation to him. Obviously, this effect of the bi imposes a highly unreasonable burden on the ballroom operator.

8. The provision, if enacted into law, would in many instanc result in the loss of social-security benefits to musicians with respe to services they performed for a ballroom operator and the creatio of such benefits for musicians who never performed such services.

With the Form B contract in effect, the musicians who would recei the social-security benefits arising from the tax due on wages would l the musicians whose names were listed in the contract who might might not be the musicians who actually played the engagement. Th would be true because the names of the orchestra members are fille in on the Form B contract weeks in advance of the engagement co ered by the contract and, in the meantime, the personnel of the o chestra may be changed and the leader fails to notify the operat of that fact. This happened repeatedly when the Form B contra was used in contracting engagements prior to the Bartels case. If th operator is the employer, which he would be under section 206 (a of the act, and he remits the tax on the names of musicians as liste on the contract, they are the ones who get the social-security benefi and not the substituted musicians who actually were present and pe formed the engagement.

9. The provision, if enacted into law, would greatly increase th clerical and record-keeping work of the Social Security Board.

The correctness of the foregoing statement can best be illustrated by the following example: Suppose an orchestra of 10 members plays one-night engagements for 200 different establishment owners and organizations during the year, taking into account the fact that it may play more than one engagement for some of the owners and organizations. If the latter are the employers, as they would be under the provision in question, then each of the 10 musicians has 200 different employers who must report and pay social-security tax on wages paid him. Consequently, the Social Security Board will be required to build up the benefit account of each of the 10 musicians by auditing and tabulating the social-security-tax returns of 200 employers. This one instance will happen hundreds of times in varying degrees if the provision contained in section 206 (a) is permitted to become law, necessitating a tremendous amount of additional clerical work and record-keeping by the Social Security Board.

On the other hand, if the leader remains the employer of the 10 side men in his orchestra, in the example given above, the Board will be required to audit and tabulate only the information reported on the return of one employer.

10. Section 206 (a) of H. R. 6000 is in conflict with the employment concept provided for in the collection and payment of withholding and unemployment taxes.

Under the present income-tax laws and regulations the orchestra leader is charged with the responsibility of withholding income tax on the compensation which he pays the members of his orchestra. This withholding tax is reported on a combined form which provides that the social-security tax should be included on that form. It is certainly anomalous, should section 206 (a) become law, that the orchestra leader in one instance be charged with the responsibility of payment of the withholding income tax on his pay roll and at the same time be absolved of the responsibility of the payment of social-security taxes on that same pay roll. Likewise the orchestra leader under Federal and State unemployment-tax laws is now charged with the responsibility of paying whatever tax is imposed on employers by those enactments. What could be more inconsistent in the administration of our tax laws than to define an employer in one way in one instance and in another way in another instance when it was the original intent of the Congress in enacting welfare legislation that the relationship of employer and employee should be the same for both old-age benefits and unemployment insurance.

In conclusion, therefore, for all of the reasons set forth in this statement, the National Ballroom Operators' Association submits that the provision in question contained in section 206 (a) of H. R. 6000 is unsound, unwise, and unfair legislation and, accordingly, should not be enacted into law.

The CHAIRMAN. Mr. Osherman, the members of this committee, or at least some of us, do not know very much about this business. What do you call this type of a contract, for the "name band"?

Mr. OSHERMAN. The form B contract.

The CHAIRMAN. That is the contract for the name band, is it?

Mr. OSHERMAN. That is right. We have here, in the Supreme Court opinion of Mr. Justice Reed, as good a description of a "name band," I believe, as we can give you.

The CHAIRMAN. I was going to ask you just a few questions.

Mr. OSHERMAN. Surely.

The CHAIRMAN. How would you go about it if you were running a dance hall or theater and you wanted to employ a name band for one night or for 2 weeks or any given number of days?

Mr. OSHERMAN. In some instances, the leader of the name band contacts the ballroom operator directly. In most instances, however, the services of the name bands are handled by booking offices. And you would go about hiring a band for one night by contacting the booking office or contacting the leader of the name band. It might be, however, the reverse: that the leader of the name band has already contacted you.

The practice has been, prior to the Bartels case, that the booking office, or the name band leader, or instructions from the union, would submit a Form B contract; and that was the contract that was in issue in the Bartels case. Under that contract, you would have to agree, as the ballroom operator, that you were the employer and you had the right to control the services of the orchestra.

It was held in the Bartels case that the Form B contract would not control; that the true facts were that the orchestra leader was in actual control of his orchestra. He furnished the arrangements, he hired and fired the members of the orchestra, known commonly in the trade as sidemen, he supplied the stands, he supplied all the instruments that were used except the piano, and he had complete domination; as a result of which they held in that case they would look at the true facts and not the contract.

The CHAIRMAN. Yes. We are familiar with the case. I thought it was always the rule now in American courts that you would look through a contract to get to its substance.

Mr. ROBERTS. That is correct, Senator.

The CHAIRMAN. That is the practical test, the practical application. But I wanted to get the facts. How would you go about it, naming one of these name bands?

Mr. OSHERMAN. I will refer that to Mr. Roberts, who is more familiar with the actual workings of it than I.

The CHAIRMAN. All right, Mr. Roberts.

Mr. ROBERTS. Suppose you wanted to contract an engagement for Griff Williams and his orchestra, who currently happen to be playing an engagement at the Chase Hotel in St. Louis. I know that, because I happened to tune in on a broadcast from the Chase Roof when I was driving into Washington the other day.

The CHAIRMAN. Well, how would the Statler Hotel, for instance, in Washington, get that band?

Mr. ROBERTS. I happen to know that Griff Williams' orchestra has its bookings handled by the Music Corp. of America, which is one of the large booking agencies with offices in the principal cities of the United States; I mean Chicago, New York, Atlanta, and so on. The hotel would write the MCA at, probably, the nearest branch office, and they would probably have heard Griff Williams over the air or read about him in the trade journals, and they would say, depending on their requirements, if it happened to be the Statler Hotel, as the Senator suggested, "We would like to have an orchestra such as Griff Williams' for a 2- or 3-week engagement"—what the Supreme Court

in the Bartels case called a limited engagement. The MCA, the Music Corp. of America, would write back, or probably more often would call back on long-distance telephone. I have been in their offices many times and have heard them talking over the phone to different establishment owners around the country. And they would say, "We have Griff Williams available for the 2 weeks beginning April 1 at a lump-sum price." And if that was satisfactory to the Statler Hotel Corp., that is, the man here, he would say, "O. K. We will take him." And MCA would say, "We will send the contract on."

The contract would be a standard form of contract prescribed by the American Federation of Musicians, and that must be used by all federation orchestras playing engagements in this country, and also, I think, in Canada. And it must also be used by the booking agencies, because the booking agencies all have a license from the American Federation of Musicians.

The CHAIRMAN. Now, by what known authority would MCA make this contract with the Statler Hotel, for instance?

Mr. ROBERTS. I believe that at least it was brought out in the Bartels case——

The CHAIRMAN. I am speaking of how these things are practically done.

Mr. ROBERTS. Yes. They have an agreement from Griff Williams, in which Griff Williams gives an authorization to the Music Corp. of America. That is, I believe, an agency contract, and I believe that was put in the record in the Bartels case. It is a written agreement and authorizes MCA to book engagements for Griff Williams and his orchestras in various types of entertainment establishments which use their music.

The CHAIRMAN. By whom is that contract made on behalf of Griff Williams with the booking agency, or the MCA? Is it made by the leader, or by each individual?

Mr. ROBERTS. Under the Bartels case, that was with the leader. We had one of their contracts. That was back prior to 1944. And he paid the booking agency a commission, the exact amount of which I am not too familiar with. I think it ranged from 10 to 20 percent of the lump-sum price.

The CHAIRMAN. Would it be possible for anyone to obtain a name band without contracting directly through or with the leader of the band? Could you get it by going to the individual members of the band?

Mr. ROBERTS. Senator, I know of no instance where that has been done, and I represent the National Ballroom Operators' Association, and I also represent some of the large ballrooms that are in that. I have never known of an instance where a ballroom has ever gone to the individual members. They have either gone to the leader directly or to the leader's representative; namely, the booking agency.

The CHAIRMAN. That is what I was getting at. Now, is the leader any more than the bargaining agent, so to speak? Has he any financial interest in the contract?

Mr. ROBERTS. Yes. It was brought out in the Bartels case and is still true that some of these engagements he sustains a profit on. In fact, most of them he sustains a profit on, or he wouldn't be in the business. In other words, for example, we will say, an orchestra plays a 1-night engagement in a ballroom in Des Moines, Iowa. The contract price

is a thousand dollars. It may be that after the orchestra leader pays the sidemen their wages, and pays his booking commission and pays his transportation expenses—and I believe there is a union traveling cost of some small amount; I don't remember the exact figure—he would perhaps have left six or seven hundred dollars. That would be profit to him, the same as to any other entrepreneur. Now, these so-called name bands, which are the only types of orchestras with which we are concerned——

The CHAIRMAN. You are not concerned with the regular orchestra that is engaged for a fixed period of time?

Mr. ROBERTS. That is right. These name bands have developed over a period of years. The leader has built up a distinctive style, a way of presenting and rendering his particular music, which makes his music individual in the entertainment world. And that is what he is selling, and that is what, in the Bartels case, the Supreme Court in effect found regarding those name bands: That they were selling a commodity—namely, an individual style of music.

And so he is just the same as an independent entrepreneur. Guy Lombardo advertises "the sweetest music this side of heaven." Lawrence Welk, who plays through the Midwest, offers "champagne music." Someone pulls a thumb out in front of a microphone. I just happened to hear them recently. And it sounds like a cork popping out of a champagne bottle—of course, that is only hearsay as far as I am concerned. And then over the air they say, "Here comes Lawrence Welk and his champaign music." Each orchestra leader is developing that particular individualistic style. That is why he wants to pick out and control the musicians: so that they will render the type of music for which he is known throughout the entertainment world.

The CHAIRMAN. And he has a proprietary interest in their profits, or in their losses if they have losses?

Mr. ROBERTS. Yes. I should even mention this, Senator. Perhaps you might be interested in it. I do not want to take too much of the committee's time, but it was brought out that some of the orchestras own their own busses. They are large affairs, almost as large as one of the Greyhound busses, and they have every modern convenience in them. Those busses are owned by the leader individually. They are registered in his name. He even employs a driver, who does not even play in the orchestra. Many of your big orchestras, such as Guy Lombardo, Sammy Kaye, Tommy Dorsey, Jimmy Dorsey, those types of name bands, names with which you are probably familiar, carry their own manager, and he checks the gate receipts. He is also an employee of the leader. It all points to the fact that the leader is an entrapreneur the same as any other businessman who has something to sell.

The CHAIRMAN. Thank you. I wanted to get the facts.

Senator Kerr also has some questions, I think. He also wants to get the facts. And I do not think the committee would be worried about the contract. I think the committee would want to look through the contract. Because that is continually necessary, and in tax matters the Treasury would have to go out of business if it did not look through contracts and find the responsible party, the person responsible for the tax.

Senator KERR. Does this band leader have a definite commitment to the members of his band?

Mr. ROBERTS. Yes.

Senator KERR. Does he pay them a stated amount of dollars per week or per period, or does he pay them a percent of receipts, or is there a combination of the two?

Mr. ROBERTS. Usually, Senator, he pays them a weekly salary. Now, there may be some bonus arrangement with which I would not be familiar. But with the 12 orchestras involved in the Bartels case, I think we have a fairly typical group. In other words, we purposely included every type of name band, from a small territory band to a large nationally known band, such as Griff Williams, Tiny Hill, and Boyd Raeburn, who are three of the nationally known name bands. Practically all of the leaders, many of whom we put on the stand, readily admitted that they paid their men weekly salaries.

Senator KERR. I believe you said that MCA would sign this contract with the Statler?

Mr. ROBERTS. Well, they would sign as the agent for the orchestra.

Senator KERR. Would they sign as the agent for Griff Williams, or would they sign as the agent for him and the members of his band?

Mr. ROBERTS. The form of the contract recites that they sign as the agent for Griff Williams and his orchestra.

Senator KERR. Does it say how many are in his orchestra?

Mr. ROBETRS. Yes; there is a blank up near the top which says, "Consisting or 12 members, including the leader, hereinafter referred to as employees."

Senator KERR. Does the band leader have the authority, either in the terms of the contract or as a practical matter, of substituting performers in the event of illness or of a change on his part of the personnel of his band?

Mr. ROBERTS. Yes. I believe there is a recital in his contract to that effect. And, of course, he does so in fact. The operator or the establishment owner who contracts for the orchestra's services has nothing to do with that.

Senator KERR. In the event that expenses come along that are not looked for, and the management for 1 night or more turns out to be unprofitable, who sustains the loss?

Mr. ROBERTS. The leader. That was brought out in the Bartels case.

Senator KERR. In other words, the personnel of the band, the members of the band, get paid whether it makes or loses?

Mr. ROBERTS. That is correct, sir.

Senator KERR. And whatever profit or loss there is, the leader takes?

Mr. ROBERTS. That is right, Senator.

The CHAIRMAN. Thank you very much, gentlemen.

Mr. ROBERTS. Would the Senator like to have us leave the record in the Bartels case with the committee?

We have it here.

The CHAIRMAN. You mean the report of the case?

Mr. OSHERMAN. It is the entire record itself. It is voluminous, we warn you.

The CHAIRMAN. Yes; it is too formidable in appearance, I am afraid.

The committee will have access, of course, to the case and will b able to get the facts, undoubtedly.

Thank you, gentlemen.

Mr. OSTERMAN. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. Carter Barron?

Mr. Barron, you are with the Motion Picture Association of Amer ica?

STATEMENT OF CARTER T. BARRON, MANAGER, EASTERN DIVISIO OF THEATERS OF LOEW'S, INC., WASHINGTON, D. C.

Mr. BARRON. Yes, Senator George.

The CHAIRMAN. You are appearing on this same matter?

Mr. BARRON. Yes, sir. My name is Carter T. Barron, and I am manager of the eastern division of theaters of Loew's, Inc., and i this capacity have supervision of theaters in Washington, D. C. Richmond and Norfolk, Va.; Baltimore, Md.; Wilmington, Del.; an Harrisburg and Reading, Pa.

I appear in behalf of Loew's, Inc., and of the following companie interested in the operation of theaters throughout the United State National Theaters Corp.; RKO Theaters, Inc.; United Paramoun Theaters, Inc.; and Warner Bros. Theater Cos.

I shall refer to them as "operators." However, my comments ar not applicable only to them. They are also applicable to hundreds o independent theaters, to numerous radio and television broadcastin companies which employ so-called name bands, and hotels, ballroom dance halls, and other public places which from time to time use nam bands.

As accurately described by the Supreme Court of the United State in the Bartels case, which has heretofore been referred to, a nam band is a band hired to play a limited engagement.

The band is built around a leader whose name and distinctive styl in the presentation and rendition of popular music are intended t give each band a marked individuality. The leader contracts wit different operators, whether they be motion-picture exhibitors, hotel or ballrooms, to play at their establishments for a contract price. Th engagements may be for one night or for several successive nights o for a period of weeks. Rarely do the engagements run more than weeks. The leader exercises complete control of the orchestra o band. He fixes the salaries of the musicians, pays them, and tell them what and how to play. He provides the sheet music and arrange ments and usually the uniforms. He employs and discharges th musicians and he pays agents' commissions, transportation, and othe expenses out of the sum received from the operators of the place o amusement. Any excess is his profit and any deficit is his los The operator furnishes the piano but not the other instruments.

As an illustration of this, it should be pointed out that there ar several styles of music which have been made popular by one or mor of these name bands. There are the "rhumba" type bands which em phasize Latin rhythms, typified by Xavier Cugat; there are "sweet bands, typified by Guy Lombardo; and there are "hot" bands, a exemplified by Benny Goodman. There are other classification within these groups such as "Dixieland," and so forth.

Theaters, such as those I am representing, contract for these bands on the strength of the name involved. "Xavier Cugat" or "Tommy Dorsey" on a theater marquee is expected to draw patrons into our theaters, where a nameless house band might not. These bands are ordinarily contracted for as "packages," this meaning that a whole entertainment period is supplied for one inclusive price. Such bands often are paid as much as $15,000 for a week's work, plus a percentage of the theater's gross above an agreed figure.

As an example of the fact that name bands agree that they are name bands and therefore are engaged at rather large prices, I would like to refer to one line in a contract which is typical of lines found in almost every contract, in which "leader and orchestra are to receive top-headline stage billing, and no one else will be billed in equal or larger size type." That is the typical line that is found in most name-band contracts.

A name band should not be confused with musicians hired to play regularly at an establishment. This class of band or orchestra is generally called a house band. An example of this type of band is that which regularly plays at the Capitol Theater in this city. We are not concerned here with this type of band, but only with name bands.

For many years the American Federation of Musicians of which the leaders and the musicians in name bands are members, adopted a standard contract known as Form B which states that the operator of the place of amusement was the employer of the musicians and of the leader and should at all times have complete control of the services which the employees would render. This contract was adopted by the American Federation of Musicians in order to shift to the operators the burden of paying the employer's share of social security taxes with respect to the band and the burden of keeping the voluminous records which are required under the Social Security Act. The Supreme Court in the Bartels case, supra, held that the Form B contract was purely fictitious, that in fact the operators had no control over the band, that the leader was the true employer and that the burden was, therefore, upon the leader to pay the tax and make the reports with respect to the members of his band which were required by the Social Security Act.

I would like to say here that this Bartels case was brought by a ballroom operator who signed a Form B under protest. And he brought the suit against the Government to recover social-security taxes which he had paid under protest.

The bill as passed by the House of Representatives would, contrary to fact, treat the operator as the employer. This is inherent in section 206 (a) of the bill which would amend section 1426 (d) of the Internal Revenue Code to read in part as follows:

> For purposes of this paragraph, if an individual (either a line or as a member of a group) performs service for any other person under a written contract expressly reciting that such person shall have complete control over the performance of such service and that such individual is an employee, such individual with respect to such service shall, regardless of any modification not in writing, be deemed an employee of such person (or, if such person is an agent or employee with respect to the execution of such contract, the employee of the principal or employer of such person):

Gentlemen, I would like to cite here that I have read and reread that proposed amendment, and, frankly, each time I have read it I

come up more confused. I submit that it would take 40 Philadelphia lawyers to interpret that, and I think that each one would probably come up with a different answer.

It should be noted at the outset that the foregoing amendment would confer no added benefits or protection to the members of a name band. On the contrary its application may result in the loss of social-security benefits to such band members. The operator of a dance hall or ball room, for instance, may often be a person of less financial responsibility than the leader of the band, who is the actual employer of the musicians.

Many of these name bands are much sought after to play for such functions as college proms and other dances organized by school or college committees, classes, faternities, or sororities. A leading band such as that of Tommy Dorsey may play at as many as 25 colleges in a year. Under the amendment being considered, these college groups would be considered as employers and would be required to pay social security taxes for band members, covering frequently no more than one evening's work. There is a question, beyond that of financial responsibility, as to the business training of some such groups which would enable them to cope with the problems of figuring and paying social-security taxes. At the very least it would prove a nuisance.

The same problem would apply when such name bands, as they sometimes are, are contracted for to play for a social function such as a debut party. One suspects that in many such cases the social-security taxes would just not get paid. The sole effect of the amendment is to relieve the leader of the band—an entrepreneur who receives many thousands of dollars under his contracts for his band—from the customary burdens which are imposed upon employers by the Social Security Act. It would shift these burdens to the operators who do not see their alleged "employee" more than once for a limited period of a few days or a couple of weeks and who have not the slightest say as to whether he shall or shall not be employed.

Now, just to give you an idea of what big-time operators these name band leaders are: We recently paid a leader of a name band, at the local Capitol Theater, $12,500 for a single week, plus a percentage of the box office gross over a stated figure. This name-band leader had 16 musicians in his band, and as far as I can ascertain, he pays them about $125 per week per man, or some $2,000 in all. His gross profit is therefore in excess of $10,000 for a single week. This is the type of employer whom this bill would say is not an employer at all.

I could multiply these examples many times. I could tell of some band leaders who are reputed to take in more than a million dollars a year from their various activities or engagements.

It is perhaps unnecessary to tell this committee of the terrific burden of record keeping which the Social Security Act imposes upon employers. The red tape and paper work is practically endless. It is not too much to ask, therefore, that no employer be permitted to shift the burden to a third party by such formalism as the present bill would adopt as fact.

It has proved difficult in the past to get accurate information from some of these band leaders as to how much they pay each employee. They do not wish the operators to know how much they pay the members of their band and in the past, when an effort was made by

the operators to comply with the formalism of the Form B contract, they found that they could not get sufficiently accurate information to do it. Moreover, these bands travel for the most part all over the United States. They are in one State today and in another tomorrow. The Social Security Act is correlated with the various State acts. The result of the present bill would be that a given member of the band, instead of having his compensation reported and his social-security records kept in a single State which the band leader designates as his headquarters, would have his records kept in a dozen, two dozen, or three dozen States where the respective operators may have their places of business. It creates not only a problem for the operators, but also a serious problem for the musicians and for the administrators of the act. Moreover, the bill as now drawn would enable a responsible employer, by a fictitious recital in the contract, to shift his burden to an irresponsible or exempt third party with resultant complete loss of benefits by the employee. Consider, for example, a contractor who does an occasional job for a farmer. By wording his contract with the farmer so as to take advantage of this obvious loophole in the present bill, he would relieve himself of his social security obligation to his employee and shift it to the farmer who is an exempt employer or who, even if not exempt, might be financially irresponsible.

Suppose the contractor did a job for an exempt employer. There the contributions would not be paid either by the true employer or by the exempt employer. The contractor would contract himself out of the liability, while the exempt employer has unwittingly assumed a liability which obviously he will not pay.

We ask, therefore, that those provisions of the bill be eliminated and that the question as to who is the employer rest, where it has rested in the past on the facts rather than on a fiction. The courts over the years have built up a substantial body of law on these questions and it is usually easy to ascertain on the facts who the employer is. Congress should not permit the Social Security Act to be so amended when it (*a*) imposes unreasonable burdens on one who is not the employer; (*b*) relieves the highly paid band leader of the burdens imposed upon every other employer and (*c*) confuses the administration of the law and makes it more difficult to keep records and collect contributions for the benefit of those whom the act is designed to protect.

Gentlemen, we have prepared a technical brief, but the gentlemen who appeared before me, on behalf of the National Ballroom Operators' Association, did such a complete job from a technical standpoint that we will not burden your records by filing the technical briefs which we have with us.

The CHAIRMAN. Thank you very much, Mr. Barron.

Are there questions? Senator Taft? Senator Kerr?

Thank you very much for your appearance.

Mr. BARRON. Thank you, Senator.

Mr. CHAIRMAN. The next witness is Mr. William E. Jones, representing the Northwestern Mutual Life Insurance Co.

STATEMENT OF WILLIAM E. JONES, ASSISTANT GENERAL COUNSEL, ACCOMPANIED BY CLARENCE C. KLOCKSIN, LEGISLATIVE COUNSEL, THE NORTHWESTERN MUTUAL LIFE INSURANCE CO., MILWAUKEE, WIS.

Mr. JONES. I am William E. Jones, assistant general counsel of the Northwestern Mutual Life Insurance Co., and this is my associate, Mr. Clarence Klocksin, also an attorney of the Northwestern Mutual.

Gentlemen, I have no prepared statement. I wish to talk from notes.

The CHAIRMAN. Yes, sir.

Mr. JONES. I do have prepared, however, a suggested amendment, which is in prepared form, which I will hand to the committee in just a moment.

The CHAIRMAN. What is the point that you wish to cover, Mr. Jones?

Mr. JONES. I wish to discuss the suggested coverage of life-insurance agents under House Resolution 6000.

The CHAIRMAN. The definition of "employee"?

Mr. JONES. Yes. There are two aspects of H. R. 6000 that I wish to discuss, both of them dealing directly with the status of life-insurance agents under that bill and, of course, under the act.

Now, in the first place, I would like to record a very emphatic protest against the proposed definition in the act, or definitions, which are intended to include full-time life-insurance salesmen as employees of the company. In the second place, I wish to urge coverage of full-time life-insurance salesmen under the self-employment sections of the bill.

Senator KERR. Does it mean that you are opposed to the salesmen's getting under the act anyway?

Mr. JONES. No; we want him under the act, but we want him covered under the self-employment provision. We don't want him covered under the employer-employee definition.

Taking up first our objections or our protest to the definitions of the act, or the expansion of the definition of "employee," it seems necessary, here, as a sort of background, to state briefly some of the reasons which make this protest necessary.

In the first place, life-insurance agents generally, certainly Northwestern agents, are not employees in fact, and it would be necessary to make use of a fictitious arrangement or a fictitious definition if an attempt were made to cover them as employees.

Now, back in 1937, nearly 13 years ago, the Treasury Department, the Bureau of Internal Revenue, ruled that the salesmen of the Northwestern Mutual Life Insurance Co. were independent contractors and were not subject to the Social Security Act. That ruling was made after a very exhaustive investigation. There was a hearing here in Washington, witnesses were heard, and ample proof was submitted covering all phases of the matter. As a result, the Bureau of Internal Revenue made their official ruling that these life-insurance salesmen were independent contractors.

Immediately following that Northwestern ruling, which was issued in June 1937, the Bureau of Internal Revenue issued similar rulings for a large number of other companies. I do not remember the exact number of specific rulings that were made, but my recollection is that there were more than a score of them. That was also followed by a

blanket regulation by the Treasury Department, wherein they laid down the rules for coverage affecting life-insurance agents, and under that regulation it was generally held that life-insurance agents were not under the act, except perhaps in one or two instances, or in a few instances, let me say, where the facts, of course, justified it.

Now, so far as the Northwestern is concerned, and most of these other companies, that ruling has never been modified or revoked. It is still in force.

There is another thing I would like to point out to the committee, which is that the machinery of the Social Security Act is built entirely around the employer-employee relationship, or the master-servant relationship. The business of the life-insurance salesman is operated on a different basis. He is the owner of his own business, and he conducts his own business at his own expense, free from all control of the insurance company except as to the final result, of course, of the business. He has certain overhead expenses, such as office rent, telephone, stenographer, and a number of other items that might be mentioned, all of which are deductible items in income-tax returns as business expenses.

He is not on any pay roll, such as is contemplated by the Social Security Act. He doesn't receive any wages. All he receives are the commissions, which are in turn dependent upon his own time and effort. His business, the business of the life-insurance agent, is of a peculiar and special nature and needs specialized treatment. It certainly cannot be geared to the machinery of the Social Security Act.

The imposition of the social-security tax alone, if these men were to be classed as employees, would be most difficult to administer, under the machinery of the act, which is not designed, as I say, to cover independent businesses. In fact, it could not be handled at all except, as I say, by artificial machinery.

The life-insurance agent is not paid by the company. He collects the premium, and he deducts the commission due him, and only the net reaches the insurance company while his contract is in force.

Also, I would just like to point this out, briefly: That if the life-insurance salesman were to be covered as an employee under the Social Security Act, there would be a number of problems arising which could be unfortunate and which could be dealt with only with difficulty. For instance, there would be an attempt made to apply rules pertaining to wages and hours. That would almost necessarily follow, it seems to me. Workmen's compensation, tax withholding, even certain aspects of tort liability for the acts of agents, and many other matters might be suggested if time permitted, but I think that is enough to illustrate what I have in mind.

Also the State unemployment laws can't be ignored entirely here. There isn't a State or a jurisdiction in the United States where Northwestern pays any State-employment-law tax. And we do business in some 43 States. And while probably 50 percent of the States have statutory exclusions applying to life-insurance agents, there are many States where the matter rests on administrative rulings. There are a number of court decisions. But anyhow there would be probably a complete overhauling and reconsideration of those State unemployment laws. And I have never been able to figure out any satisfactory way where the State unemployment laws could be administered satisfactorily in respect to a full-time life-insurance agent.

Of course, also, if life-insurance salesmen were to be treated as employees under the act, there would be nothing to stop bringing in other independent businessmen of a similar status, and pretty soon I think the thing would get completely out of control, and certainly beyond the control of the machinery of the Social Security Act.

In H. R. 6000 there is a category set up of full-time life-insurance salesmen. There is no definition of what the full-time life-insurance salesman is. There is another provision or definition in H. R. 6000 which sets up the so-called economic reality tests along the lines announced by the Supreme Court. In my opinion those paragraphs and those parts of H. R. 6000 are simply unworkable in connection with the status of full-time life-insurance salesmen.

So much for the protest against the present definition.

As the second part of my remarks, I would like to suggest a method of handling the inclusion of full-time life-insurance salesmen under the self-employment sections of H. R. 6000. Now, in my opinion life-insurance salesmen are already under the self-employed provisions of the act. The very first section of those provisions—section 211, I believe it is, subparagraph (a)—defines the net earnings from self-employment. And that section of the present bill says that gross income, speaking now of self-employed individuals—

> shall be computed as under chapter 1 of the Internal Revenue Code, less certain deductions allowed from any trade or business carried on by such individual, less the deductions allowed under such chapter which are attributable to such trade or business.

It is my belief that those sections of section 211 of H. R. 6000 are plenty broad enough to include life-insurance agents at the present time. However, it is still unworkable, because of the peculiar nature of the life-insurance salesman's occupation.

Senator KERR. Do you say that "it is," or "if it is found to be" still unworkable? I am trying to find the basis on which you propose this amendment, whether it is on the basis that the provisions you refer to are unworkable, or whether you are saying that if they are found to be unworkable, then you make this proposal.

Mr. JONES. Well, what I spoke of as unworkable were the sections of the act which purport to deal with the salesman as an employee.

Senator KERR. But you just started another statement, and you said, I thought, "if these are still found to be unworkable."

Mr. JONES. What I meant to say was that in my opinion the provisions of the bill relating to self-employment are workable, and that they do now include full-time life insurance salesmen. What is needed here are certain implementing provisions which I shall discuss in a moment.

And I called attention, here, to the provision in section 211 (a), which is the self-employment provision. It starts out with a definition of net earnings from self-employment. It defines those as—

> the gross income less deductions allowed from any trade or business carried on by such individual, and less the deductions allowed under such chapter which are attributable to such trade or business.

Further on in the act there is a section, a page or two over, in the same section, 211 (a), which excludes certain callings, the physician, the dentist, certain engineers, chiropodists, and that class of individuals; but it does not exclude life-insurance agents. And it is my

belief that those self-employment provisions of H. R. 6000 are broad enough to cover life-insurance salesmen right now. The only thing that is necessary is to add certain implementing provisions or supplemental provisions which are necessary to take into account the peculiar nature of the life-insurance industry.

Now, there are only three main points that I would like to make in that connection, because a copy of the draft which I have prepared will be in the hands of the committee.

The first thing that I would call your attention to is: Who are the full-time life-insurance salesmen? I have tried for months, I might say for years, to get a workable definition for a full-time life-insurance salesman that would be applicable generally to all companies. I have not seen a satisfactory one yet, for the reason that differaent companies have different types of contracts. As to Northwestern Mutual, for example, we have a contract which is called a full-time contract, and we give that to agents who are making the life-insurance business their primary occupation. We also have a part-time contract which applies to the man and is given to the man who writes insurance only as a side line. He may be employed by a bank or a store or in an office or in some other concern. He writes insurance only as a side line. He is the part-time man. He isn't included here under this amendment that I have, for the simple reason that his earnings, subject to the Social Security Act, are taken care of by his regular employer—the bank, or the store, or the office for which he works.

Nevertheless, it is my opinion that even the part-timer would be under the present unemployment provisions of the Social Security Act, but he would rarely include any part of his earnings as a life-insurance agent, because usually his social-security earnings would be taken care of by the bank or the store or the office for which he works in his primary occupation.

In order to get at who shall be considered full-time life-insurance salesmen, I have put this in my amendment:

> An individual shall have the status of a full-time life-insurance salesman for a life-insurance company whether or not it is so provided in his contract if the individual is certified by the insurance company as its full-time insurance salesman in a written instrument filed with the Social Security Administration, which certificate may be revoked at any time by the company filing same.

Now, while Northwestern has what we call a full-time contract and a part-time contract, many other companies do not have any classification in their contract at all on that point. Nevertheless, those companies do have their agents classified for their own purposes. Here is a man that we claimed to be a full-time salesman. This man is not. And those companies are better able than anybody else to determine who are their full-time agents. You cannot determine it from the contracts, except in a few cases.

Senator TAFT. Mr. Jones, what is the objection, if we should take the full-time life-insurance salesman back into the self-employment clause, to just letting the department spell it out? Why is not the definition now broad enough so that the department can make the regulation, instead of our having to pass a special lot of laws about life-insurance salesmen?

Mr. JONES. That would require, Senator, investigations and hearings and the adoption of regulations, and it would always be necessary to contact the insurance company.

Senator TAFT. But why can they not draft the regulations? They have more time than we have.

Mr. JONES. I have tried to draft what I call a regulation defining the full-time salesman. I couldn't do it.

Senator TAFT. I mean if we are going to go into every self-employed category in business and try to draft special regulations as to how you are to apply your principles to them, we will be here for years covering every type of self-employment. Why is not the general definition in the law sufficient? What is the matter with it, as applied to life-insurance salesmen?

Mr. JONES. You mean the self-employed definition?

Mr. JONES. Yes; the self-employed section.

Mr. JONES. Because there are some aspects of the life-insurance business that are not covered by it. They have got to clarify them.

Senator TAFT. What are they?

Mr. JONES. One is the one I have just mentioned, to determine the full-time agents. And I think the insurance company is in a better position to certify as to who those are.

Senator KERR. Do you think the Government should be bound by the mere certification of the companies, subject to change without notice, regardless of what might be the actual fact or what might be found by the Government to be the fact?

Mr. JONES. Well, the Social Security Board has the power of review. Of course, they could also put a provision in here that the Treasury Department could investigate and could modify or question the certificate. In other words, review.

Senator KERR. Then why not, in accordance with the Senator's suggestion, proceed along that line? Would it not be wise, if he were found to be a full-time employee by the agency administering?

Mr. JONES. Well, as I say, that would require hearings, and these hearings are long and troublesome and quite an administrative problem to the departments as well as to the companies. Our plan eliminates all this.

Senator KERR. If there is contest under any provision of law, any provision that we might write, would there not still be the necessity for those hearings?

Mr. JONES. I doubt whether there would be many insurance companies, and in fact I do not believe there is an insurance company in the country, whose certificate you could not accept and rely upon. And if there was any question that arose concerning the fairness or the correctness of that statement, you can depend upon it that the agents would raise it. Only in such cases would an investigation be necessary.

Senator KERR. Did you not say a while ago that at the beginning of the present act hearings were held and findings made that had been unchanged and unchallenged for 13 years?

Mr. JONES. That is right, as to the status of the salesmen, whether or not they are employees or independent contractors.

Senator KERR. Is that not the question you are addressing yourself to?

Mr. JONES. No, I am considering at this moment the question as to whether they are full-time salesmen or part-time salesmen. This bill only purports to cover full-time salesmen, and you have to find those who are full-time salesmen and distinguish them from the part-timers.

Senator KERR. Well, if you find that they are full-time is that not a finding of the status?

Mr. JONES. Well, yes; but how are you going to find that they are full-time?

Senator KERR. You said you had been working for many years and had not been able to word it.

Mr. JONES. A definition of a full-time agent, a full-time salesmen, applicable to all companies.

Senator KERR. And the committee evidently has a question about it, and the suggestion was made as to designating someone who might have the time and the ability, with the able help of both the employer and the insurance company salesman, to determine that.

Mr. JONES. Well, for example, one definition that has had considerable consideration is one like this: That a full-time salesman is "one who devotes substantially all of his time to selling life insurance for one company," or "one who devotes substantially all of his business activities." That leaves it wide open and makes it necessary for the Social Security Administration to go back to the very contracts and practices of the company. And, if they will accept those contracts and practices of the company, why should they not accept the statement of the insurance company in the first instance: that this is the way we classify our agents, the full-timers, and the part-timers. The certificate would prevail until questioned in a proper case.

The CHAIRMAN. Would the company, Mr. Jones, under your definition, pay a part of the full-time self-employed agent's tax?

Mr. JONES. Yes. That is another point. There were, as I said, three points I wished to call attention to. The first point, as I say, is the one where we determine who are these full-time salesmen. A second point that I might take up now, although it was intended as my last point, is the determination of the tax. I have included here a separate tax schedule, which is the same as the tax schedule applicable to employers and employees. In lieu of the 2-percent schedule, let us say, now in House Resolution 6000, the suggested schedule would call for 3 percent, and the company would pay half of that. So, the company contributes. There is a contributory feature here.

So, the life-insurance company and, as I understand it, most life-insurance companies—and I had contact with a great number of them—are perfectly willing and anxious to contribute; but if they contribute on the basis of the self-employment schedule now in the act, they are contributing a smaller amount, and the agent is paying a smaller amount. They are willing to pay the fuller amount, increasing that from, say, 2 to 3 percent.

Senator TAFT. It just occurs to me: What is the status of a stenographer employed by a full-time life-insurance salesman?

Mr. JONES. Well, she is an employee of the full-time salesman.

Senator TAFT. So that, although he is an employee of the company, she is an employee of his. He is to make employer and employee returns, both, under the act, under the way this is now drafted?

Mr. JONES. Yes. He would have to make a return for his office help. And I don't know; maybe there is machinery in the act whereby they would try to make the insurance company responsible for his employees. But the correct way of handling it would be to have this full-time agent take care of his own employees, for whom he alone is responsible. The company has no control over them and has nothing

to do with their selection or their discharge. That is entirely in his hands.

Now, as I say, one of the provisions of these suggestions which I have here provides for a tax, the same tax schedule that applies to the employer-employee sections of the act. That is to be split between the company and the agent, just as if he were an employee. He pays more than the other self-employed individuals, under this plan that I have here.

The third point that I would like to make is that we have got to find out what the income of a full-time life-insurance salesman is. A full-time life-insurance salesman may be a full-time agent or representative for one company, and, yet, he may be placing his surplus business with several companies. Ordinarily, the successful life-insurance agent or any life-insurance agent is receiving compensation from two or more companies, sometimes a dozen of them. I had one agent tell me that he had some 30 commission agreements with other companies to take care of his surplus business. Of course, a full-time agent for one company would have to give that company the first choice of the applications he submitted; but, if that type of contract issued by that company did not suit the needs of his client, or if for some reason his company would not issue insurance on that application, then he has got to submit that to some other company. And so I have excluded everything but the remuneration which he receives from the company with which he is under full-time contract. And I have, therefore, included this:

> remuneration earned and received by him under said contract as a full-time life-insurance salesman: *Provided*, That after termination of said contract the receipt of commissions earned under said contract while the contract was in force shall not be included in a salesman's net earnings from self-employment for purposes of this section.

That provision includes income earned under his full-time contract only. And, if he gets income from another company, such income is not included. Now, the purpose of that is so that the insurance company, with which he is under full-time contract, which would be responsible for the tax, here, will know how much their tax is going to be.

The insurance company will know what gross commissions they have paid this salesman. The salesman, of course, would be entitled to certain deductions for business expenses. There is a provision in here that the company and the agent both can take a flat 15 percent of the self-employment income and use that in lieu of the business deduction which is otherwise available to the self-employed individual.

Now, unless the committee has some questions, that is all I have.

Senator KERR. Any questions, Senator?

Senator TAFT. No. When you get all through, you come out exactly where you started from in the House bill. The company pays 1½ percent and the man pays 1½ percent?

Mr. JONES. Well, there is a difference in the status. We get away from this record keeping that other witnesses have mentioned here this morning. We get away from that and from the wages and hours and all the headaches, as you might call them, that go with the employer-employee relationship, where the individual is in fact not an employee.

Senator TAFT. Your position is that, No. 1, he is not an employee under the rules of common law?

Mr. JONES. That is right.

Senator TAFT. But you are afraid that, if he is made an employee for the purpose of this act, that will be used as a precedent to claim he is an employee somewhere else. That is the whole reason for your objection?

Mr. JONES. That is one of the main reasons: yes.

Senator TAFT. Let me go back to one of the questions that interests me. Assuming he is not an employee, what is the status of his employees?

Mr. JONES. If he is not an employee?

Senator TAFT. Assuming that you are correct on the law; that, as a matter of fact, under the law and under the Supreme Court test he is not an employee, but that he is made an employee by this act: then what is the situation? Are his employees made employees of the company, or not?

Mr. JONES. Well, that is not certain and may be subject to conjecture. I don't know what the effect of that would be, but I would be inclined to think that it might go either way. Ordinarily, the employees of an employee, or rather the employees of a subcontractor, at least under the various State unemployment laws, are sometimes treated as employees of the principal. I don't know whether they would apply that principle or not, but there is danger of it. They should make him responsible for his own employees. As I say, the insurance company has no voice in the selection of that employee, or his continuance in the job; no voice over the compensation paid to that man. The agent, not being an employee in fact, is not subject to the control of the company in any way; and why should the company be in any way held responsible for the things that he does, even as to tort liability or the employment of other people?

Senator TAFT. Your amendment would definitely remove that possibility of the employee of the salesman being so considered?

Mr. JONES. That is right. The amendment would definitely remove that. And it would simplify the entire administration.

Senator TAFT. Why, if you do make the change, do you go back, then, and have the company pay half the tax? Is that just a concession to the insurance salesman?

Mr. JONES. Well, because the company is willing to contribute and the agents want it to contribute.

Senator TAFT. But the logic of your whole argument would be opposed to it. If they are self-employed, the payment ought to be 2¼ percent and not 3, I should think.

Mr. JONES. I think there is justification for the company making a contribution. In conection with the putting of business on the books and keeping it on the books, the company is permitted to pay certain remuneration. It could be justified as additional remuneration.

Senator TAFT. Would you do that as to any independent contractor who was working for only one company?

Mr. JONES. Would I do that for one, you say?

Senator TAFT. I mean, would you do it for any gas-station operator, or anybody else who is only contracting with one company? Is that the test? Why is the life-insurance salesman, then, different from any other self-employed person in this respect?

Mr. JONES. Well, the company is of course under obligation to pay the insurance salesman certain renewal commissions. They are governed as to that, of course, by the State laws. Now, they can pay a compensation to the agent of the company for putting business on the books or for servicing that business after it is on the books. And, if a part of that is used in this way, I certainly do not see where there could be any objection. It is just a part of his compensation.

Senator TAFT. I still do not see why he differs in that respect from any other self-employed contractor.

Mr. JONES. I think there is a difference, Senator, in the nature of the life-insurance agent's business and the methods under which the companies and the agents operate.

Senator KERR. At any rate, insofar as you and your company are concerned, you are willing, and in fact in the position of requesting, to have the law make that provision?

Mr. JONES. Yes.

There is one further comment I would like to make in connection with this tax contribution by the insurance companies. It is my understanding that most all companies expect to make such tax payment. Not only may it be considered a part of the salesman's compensation, as I have said, but in most cases the contribution is in fact integrated with and forms a part of the company's contribution under its own retirement plan for salesmen. Moreover, a statutory obligation is necessary in order to prevent such contributions from being treated as taxable income to the salesmen.

There are some companies that are in a position to operate with their salesmen on an employer-employee basis, which is permitted under our plan, and in that case the tax would be at 3 percent, with half of it contributed by the company. The great majority of the companies would probably elect to have their salesmen under the self-employment provisions of the law by filing the certificate provided for in our plan. The tax schedule should be the same in both cases.

Senator KERR (presiding). All right, Mr. Jones. We thank you.

Mr. JONES. Thank you for your consideration.

(The proposed amendment filed by Mr. Jones follows:)

AMENDMENT TO H. R. 6000—PROPOSED BY NORTHWESTERN MUTUAL LIFE INSURANCE CO., MILWAUKEE, WIS.

I. Amend section 210 (k) of H. R. 6000 by striking out subsections (3) (B) and (4).

II. At the end of section 211 of H. R. 6000, add a new paragraph to be designated section 211 (a) (9), as follows:

"(9) In computing 'net earnings from self-employment' of any individual under contract as a full-time life-insurance salesman with any company authorized to issue life-insurance and annuity contracts, or under contract as a full-time life-insurance salesman with an authorized agent of said company, there shall be deducted—

"a. All remuneration earned by said individual as a life-insurance salesman except remuneration earned and received by him under said contract as a full-time life-insurance salesman; provided, that after termination of said contract, the receipt of commissions earned under said contract while the contract was in force shall not be included in a salesman's net earnings from self-employment for purposes of this section. An individual shall have the status of a full-time life-insurance salesman for a life-insurance company, whether or not it is so provided in his contract, if the individual is certified by the company as its full-time life-insurance salesman in a written instru-

ment filed with the Social Security Administration, which certificate may be revoked at any time by the company filing same.

"b. Fifteen percent of the remuneration subject to this act under subparagraph (a), which deduction shall be in lieu of all deductions allowed for business expenses attributable to the trade or business."

III. Amend section 207 (a) of H. R. 6000 by amending section 1640 of subchapter F to read as follows:

"SEC. 1640. RATE OF TAX: (a) In addition to other taxes, there shall be levied, collected, and paid for each taxable year beginning after December 31, 1949, upon the self-employment income of every individual, except as otherwise provided in subsections (b) and (c) of this section, a tax as follows:

"(1) In the case of any taxable year beginning in 1950, the tax shall be equal to 2¼ per centum of the amount of the self-employment income for such taxable year.

"(2) In the case of any taxable year beginning after December 31, 1950, and before January 1, 1960, the tax shall be equal to 3 per centum of the amount of the self-employment income for such taxable year.

"(3) In the case of any taxable year beginning after December 31, 1959, and before January 1, 1965, the tax shall be equal to 3¾ per centum of the amount of the self-employment income for such taxable year.

"(4). In the case of any taxable year beginning after December 31, 1964, and before January 1, 1970, the tax shall be equal to 4½ per centum of the amount of the self-employment income for such taxable year.

"(5) In the case of any taxable year beginning after December 31, 1969, the tax shall be equal to 4⅞ per centum of the amount of the self-employment income for such taxable year.

"(b) RATE OF TAX ON FULL-TIME LIFE INSURANCE SALESMEN: In addition to other taxes, and in lieu of all taxes imposed by subsection (a) of this section, there shall be levied, collected, and paid each taxable year beginning after December 31, 1949, upon the self-employment income of every full-time life insurance salesman after December 31, 1949, a tax equal to the percentages and at the rates provided in section 1400 of the Internal Revenue Code (as amended by section 201 (a) of H. R. 6000).

"(c) RATE OF TAX TO BE PAID BY LIFE INSURANCE COMPANY: In addition to all other taxes, every life insurance company shall pay an excise tax with respect to having individuals under contract with it or in its behalf as full-time life insurance salesmen after December 31, 1949, which tax shall be in respect to the earnings in self-employment of such full-time life insurance salesmen after December 31, 1949, and which tax shall be equal to the same percentages and at the same rates provided in section 1410 of the Internal Revenue Code (as amended by section 201 (b) of H. R. 6000)."

IV. Amend section 207 (a) of H. R. 6000 by adding at the end of section 1641 (a) of subchapter F a new paragraph to be numbered section 1641 (a) (9), to read as follows:

"(9) In computing 'net earnings from self-employment' of any individual under contract as a full-time life insurance salesman with any company authorized to issue life insurance and annuity contracts, or under contract as a full-time life insurance salesman with an authorized agent of said company, there shall be deducted:

"a. All remuneration earned by said individual as a life insurance salesman except remuneration earned and received by him under said contract as a full-time life insurance salesman; provided, that after termination of said contract, the receipt of commissions earned under said contract while the contract was in force shall not be included in a salesman's net earnings from self-employment for purposes of this section. An individual shall have the status of a full-time life insurance salesman for a life insurance company, whether or not it is so provided in his contract, if the individual is certified by the company as its full-time life insurance salesman in a written instrument filed with the Social Security Administration, which certificate may be revoked at any time by the company filing same.

"b. Fifteen per centum of the remuneration subject to this Act under subparagraph (a) which deduction shall be in lieu of all deductions allowed for business expenses attributable to the trade or business."

(The following supplemental statement was later submitted by Mr. Jones:)

SUPPLEMENTAL STATEMENT OF WILLIAM E. JONES, ASSISTANT GENERAL COUNSEL

THE NORTHWESTERN MUTUAL LIFE INSURANCE CO.,
Milwaukee, Wis., March 24, 1950.

H. R. 6000: Full-time life-insurance salesmen.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: On March 6, 1950, I testified before the Senate Finance Committee in respect to coverage for full-time life insurance salesmen under H. R. 6000. At the same time I filed a proposed plan for coverage under the self-employment provision of the bill. In order to more fully answer questions raised by the Senators at that time, I desire to supplement my testimony with this brief statement.

In the first place, our plan would strike out of H. R. 6000 the entire subparagraph (4) of the proposed definition of "employee." This subparagraph contains the so-called economic reality provisions, and is nothing more than a blank check to the Social Security Administration in the matter of coverage.

Our plan would also strike out of H. R. 6000 subparagraph (3) (B) which extends the definition of "employee" specifically to full-time life insurance salesmen. Life insurance salesmen are not employees. That fact is established by official rulings made approximately 13 years ago, and applied to salesmen of most life insurance companies. The so-called definition proposed in H. R. 6000 is an arbitrary and artificial one. Moreover, the machinery of the Social Security Act is built around the employer-employee relationship and cannot be applied to such self-employed persons as life insurance salesmen.

Full-time life insurance salesmen should be covered under the self-employment provisions of H. R. 6000.—Some companies may be in a position to operate with their salesmen on an employee basis under the present Social Security Act. It is significant, however, that only a handful of companies, out of several hundred have elected to do so. The few companies electing to operate on an employer-employee basis had no difficulty in doing so under the present law and without the aid of such provisions as subparagraphs (3) (B) or (4) of H. R. 6000.

Our plan does not interfere with those few companies that may prefer to operate on an "employee" basis. We would not force the self-employment status upon those companies, nor would we have them force the employer-employee status upon our company or the hundreds of other companies that I believe prefer the self-employment coverage. There is no reason why the two classes of companies should be forced into any one category. Our plan allows any company to elect the coverage desired by it. It does not add any administrative burden.

Self-employment provisions of H. R. 6000 broad enough to include life insurance salesmen.—Section 211 of the bill covers all self-employed individuals except those specifically excluded (physicians, lawyers, dentists, engineers, et al.). Life insurance salesmen are not excluded. The conclusion is unavoidable that those provisions are in fact broad enough to include self-employed life insurance salesmen. It would require no change in agency contracts or practices to qualify salesmen under those provisions.

Nature of underwriting business requires certain special provisions.—The life underwriting business has certain unusual and special characteristics which do not exist in other occupations. These special characteristics require special treatment. In my opinion, therefore, these special paragraphs are unavoidable no matter what form of coverage is made applicable to full-time life insurance salesmen.

Nature of earnings of life-insurance salesman.—For example, the earnings of a life-insurance salesman are complex in their nature. They cannot be covered simply by the word "earnings." When a policy is sold, only a portion of the commission is paid to the salesman in the first year; and the remainder of the commission is received by him in the form of renewal commissions as future premiums are paid. Under Northwestern Agency contracts these renewal commissions continue for 8 years; but different periods apply with different companies.

Often, an insurance company finds it necessary to pay these renewal commissions to the estate of a deceased agent, to bankruptcy courts, and to salesmen whose contracts have become terminated under a variety of circumstances. Frequently an insurance company finds it necessary to pay renewal commissions to former agents who may now be under contract with a competing com-

pany. Moreover, because of various commission agreements relating to surplus business, most insurance salesmen are receiving commissions from several companies in addition to the one company with which they are under full-time contract.

These circumstances are not found in other occupations, and they are peculiar to the underwriting business. The machinery of the Social Security Act dealing with ordinary wages and employer-employee relationships is wholly inadequate. Even under the self-employment provisions of H. R. 6000 it becomes necessary to have some provision to define and clarify what part of this income shall constitute earnings in self-employment.

We have sought to meet this situation with a provision which seeks to limit earnings in self-employment to all earnings of every kind from the one insurance company with which the salesman is under full-time contract. All other life insurance income is excluded; and as soon as the full-time contract terminates, then further income from that source is also excluded. This matter is covered in section II (9) a on the first page of the plan we submitted on March 6. A copy of our plan is attached for convenience.

Definition of full-time life-insurance salesmen.—Another special provision that seems unavoidable in this connection is some method of determining when an individual is a full-time life insurance salesman. There is no provision on the point in H. R. 6000, either under the employer-employee provisions or those relating to self-employment.

So far as I know, no adequate definition on the point has been devised. The nearest approach coming to my attention is one that defines the full-time salesman as one required by his contract to devote substantially all of his time or substantially all of his business activities to the sale of life insurance for one insurance company. Obviously, such definitions are meaningless for all practical purposes.

Moreover, the contracts between companies and salesmen afford no solution. Some companies have contracts which are definitely labeled "full-time contracts," but many companies have no provision whatever on the subject. In spite of the difference in contracts, insurance companies nevertheless have workable classifications of their full-time and part-time salesmen.

It has been suggested that the matter of definition or classification could be left to the Social Security Administration to spell out.

Probably the matter could be left to the Social Security Administration. However, that would merely delegate to administrative authorities the power to determine the scope of coverage; and that has not always worked out satisfactorily. In fact, it was the action of administrative authorities in extending the Social Security Act beyond the intention of Congress which resulted in the adoption of the law commonly known as the Gearhart measure.

Electing self-employment coverage.—In our opinion the insurance company should be permitted to elect self-employment coverage in the first instance, and to fix a prima facie status; and for that purpose we have suggested the filing of a certificate.

In suggesting the provision for a certificate by the insurance company in the first instance—see page 1 of our plan—we assumed that full power of review and revision necessarily rested with the Social Security Administration under the machinery provided for that purpose in the present act. Owing to the great difficulty, almost impossibility, of framing an adequate definition of "full-time status" that would fit the many different forms of agency contracts, it was believed that a certificate filed by the insurance company and fixing a prima facie status would not only expedite administration but would eliminate a tremendous amount of red tape and confusion. I doubt whether administrative officials could frame a definition of universal application any more than the insurance companies.

The scope and effect of our provisions has been questioned upon the ground that it appears to be conclusive. There can be no objection to a modification that will remove any doubt. Therefore, I suggest that the particular provision in our plan be amended to read as follows:

"An individual shall have the prima facie status of a full-time life-insurance salesman for a life insurance company whenever the individual is certified as such by the insurance company in a written instrument filed with the Social Security Administration: *Provided*, That the rights of anyone affected by the filing or failure to file said certificate shall not be concluded thereby, and that said certificate and any modification or revocation thereof shall be subject to

review and revision by the Social Security Administration in the manner provided by law."

Any company wishing to elect self-employment coverage would file a certificate along the lines mentioned. Any company electing employer-employee coverage would refrain from filing the certificate.

Tax contribution by insurance company.—No particular discussion would seem necessary on the question of taxes. Our plan provides for the same tax on both insurance company and salesman as would prevail if coverage were under the employer-employee provision.

As stated earlier in this letter, some companies are in a position to operate with their salesmen on an employer-employee basis, and a few are now doing so. These companies will be required, among other things, to contribute one-half of the tax as under the employer-employee status. Since there is nothing in our plan to require these companies to switch to the self-employment coverage, it becomes necessary to have the same tax schedule applicable in both categories and thereby avoid any possible discrimination.

Summary.—Thus our plan would in fact permit companies to elect which form of coverage they prefer. The method of electing self-employment coverage would by by filing the certificate heretofore discussed; and the method of electing employer-employee coverage would be to refrain from filing that certificate. Our plan would settle the existing controversy by allowing each company to select its own category. There seems to be no sound reason why all companies should be forced into any one category.

The power and authority vested in the Social Security Administration to review and revise any certificate or lack of certificate affords complete protection to all salesmen to exactly the same extent as under employer-employee coverage.

The tax schedule set up in our plan eliminates any possible discrimination from that direction.

In short, our plan gives the salesman all the coverage he could possibly obtain if placed under the employer-employee coverage, and without the headaches and disadvantages which must inevitably follow such coverage (tax withholding; wages and hours; tort liability, etc.).

Our plan would permit both the salesman and insurance company to file social-security tax returns, on an annual basis—which is an important consideration in the underwriting business.

One very important feature of our plan is that it enables the self-employed salesman to preserve his independence. Most insurance salesmen with whom I have discussed the matter are anxious to preserve their independent status.

There are many in the insurance business, besides the Northwestern Mutual Life, who believe that the self-employment approach is sound, and who cannot possibly operate on the employer-employee basis.

Respectfully submitted.

WM. E. JONES,
Assistant General Council, Northwestern Mutual Life Insurance Co., Milwaukee, Wis.

(The following statement was submitted for the record:)

THE EQUITABLE LIFE ASSURANCE
SOCIETY OF THE UNITED STATES,
New York, March 8, 1950.

Re H. R. 6000, Social Security Act amendments.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance, United States Senate,
Washington, D. C.

DEAR SENATOR GEORGE: The Equitable Life Assurance Society of the United States supports the amendment to H. R. 6000 suggested by Mr. William E. Jones, for the Northwestern Mutual Life Insurance Co. This proposed amendment affects sections 210 and 211 of the Social Security Act and sections 1426, 1640, and 1641 of the Internal Revenue Code, all as proposed to be amended by H. R. 6000. It would strike from the bill the language which specifically includes full-time life insurance salesmen within the definition of the term "employee" and

would add provisions defining the application to such agents of the provisions of the bill relating to the self-employed. These proposed additions would also impose a tax on the full-time agent and the company at the same rates as are applicable to employees and employers.

The Equitable is in favor of coverage of its agents under the old-age and survivors insurance program. Moreover, it recognizes that the company should pay part of the tax cost of the agents' benefits under that program. Our conviction in this respect is so strong that, were there no feasible alternative, we would not oppose the proposed inclusion of full-time life insurance agents within the term "employee". We believe, however, that there is a feasible, and preferable, alternative. This alternative is expressed in the amendment proposed by Mr. Jones. It furnishes the means of effectuating the desired coverage while avoiding the serious administrative complexities and the disturbing inferences that would flow from classification of agents as employees.

The ordinary, old-line life insurance agent is not an employee of the company or of its general agent. He is an independent contractor or a self-employed person in the same category as independent contractors. This has been recognized by State courts in tort, workmen's compensation, and unemployment insurance cases. It has also been recognized by the Treasury Department in the administration of the employment tax laws. The machinery for collection of taxes by deduction from wages is not adaptable to the relationship between such agents and the companies for which they write business. These agents do not receive wages or salary, paid at regular intervals, but commissions as policies are placed and premiums paid thereon. The initial payment of commission frequently is not received from the company at all but is retained by the agent out of the initial premium paid to him by the insured. Moreover, such an agent's gross commission receipts cannot fairly be regarded as wages, since he necessarily incurs expenses in the conduct of his solicitation, frequently of substantial amounts, which are not reimbursed to him and which he does not report to the company. He frequently receives commissions from two or more sources at the same time. We have in our organization, for example, agents now attached to eastern agencies who are in receipt of renewal commissions from offices on the west coast, and vice versa. Any attempt to fit the traditional system of compensating ordinary agents into the pattern of pay-roll tax deductions is certain to encounter obstacles which have heretofore been appropriately characterized as almost insurmountable.

We also feel that an arbitrary classification of life-insurance agents as employees, even if initially limited to the old-age and survivors insurance program, will almost necessarily spread to other fields. The current administrative procedure for withholding Federal income tax at the source assumes that the wages subject to such withholding and to Federal old-age benefit taxes are the same. We may expect, therefore, that if agents are to be treated as employees for the latter purpose their commissions will also be subject to income-tax withholding. There are various State and local income-tax withholding requirements, the application of which follows the Federal pattern. If we are required to withhold Federal income taxes from agents' commissions, we shall probably also be required to withhold these State and local taxes. Withholding of income tax from agents' commissions would involve even greater administrative complexities than withholding of old-age benefit taxes. Furthermore, we have noted that a bill introduced in the House of Representatives at this current session (H. R. 6718) would adopt for Federal unemployment tax purposes the definition of "employee" contained in H. R. 6000, including the specific mention of full-time life-insurance salesmen. We do not believe that there is any demand for unemployment insurance coverage on the part of life-insurance agents, or that it would be advisable or practicable to attempt to extend such coverage to them, since it is extremely unlikely that they could actually benefit by such coverage.

We repeat that, if it were necessary to do so in order to secure old-age and survivors insurance coverage for agents, we would be prepared to face the complicated and expensive administrative problems that would be entailed by their treatment as employees. But the pending bill, H. R. 6000, contains provisions for coverage of the self-employed, with the same benefits as are available to employees. It is in this category that the agents belong. The bill's provisions in this respect are well suited to the nature of the agent's business and the manner of his receipt of income. Coverage of agents under these provisions entails no disturbance of their established relationship to the companies and form of compensation. By providing for a tax upon the company, at the same rate

applicable in the case of employees, Mr. Jones' proposal eliminates any possible complaint of inequity in the distribution of the tax burden.

Accordingly, we respectfully urge favorable consideration of the proposed amendment.

Very truly yours,

VINCENT S. WELCH,
Executive Vice President.

Senator KERR. Mr. Graves, of the Continental Can Co., will be the next witness.

All right, Mr. Graves, would you identify yourself?

STATEMENT OF EDWIN H. GRAVES, REPRESENTING CONTINENTAL CAN CO., INC., HOPEWELL, VA.

Mr. GRAVES. Mr. Chairman, I am Edwin H. Graves, of the paper manufacturing division of the Continental Can Co., Inc. The company I represent operates a pulp and paper mill located at Hopewell, Va., and our purpose in appearing before this committee is that we are specifically concerned with the application of those sections of the proposed amendments which pertain to what we believe to be a rather indefinite extension of the meaning of the term "employee," this extension being beyond the definition in the present Social Security Act. Our concern for this particular section is further confined specifically as this application will affect our relationships with our pulpwood suppliers.

We are appreciative of the privilege accorded to us to appear before this committee and we are thankful for the opportunity of expressing a real and sincere apprehension over the writing into law of definitions, the application and interpretation of which are extremely uncertain and which will require extensive litigation to clarify.

The pulpwood operations of the company I represent are relatively small. However, our relations with those from whom we buy pulpwood are quite typical of the pulpwood procurement practices in other sections and it is well to mention here that the pulpwood procurement industry spreads throughout the whole country and directly affects the livelihood and earnings of hundreds of thousands of people. Please understand that we in no way oppose the inclusion of these people in social security coverage. What we do oppose is the establishment of a law which could be loosely construed by the Treasury Department and Federal Security Agency to make these people employees of ours for the purpose of tax collection.

I shall attempt briefly to give you a picture of our relationships with these people who are engaged in the procurement of pulpwood.

A part of our pulpwood is purchased from small independent operators who buy their own stumpage, who employ labor to cut the wood, and employ labor to haul the wood to our plant or a railroad siding. We pay this independent operator so much money per cord for this wood. He will own and will operate from one to three trucks. In most cases he will drive his own truck and employ other labor to do the remainder of the work. He will furnish other tools and equipment as necessary. In some cases the stumpage which this independent operator cuts will be owned by the company; in most cases it will be purchased by the independent operator.

Senator KERR. May I ask a question, there?

Mr. GRAVES. Yes, Senator.

Senator KERR. In cases where you have these operations, is it the usual thing that you as the principal are liable either to the employees or to those from whom the stumpage is purchased, or others, in the event this independent contractor does not meet his obligations?

Mr. GRAVES. In general, Senator, the answer is "No." However, where we buy stumpage, under certain conditions, and agree to cut it in a certain manner, then we are of course liable that it be cut in that manner, regardless of whom it is cut by. But that is the only obligation that we would have.

Senator KERR. His employees do not have the privilege then, in any of the areas where you operate, of filing workmen's liens against any part of his pay or other remuneration from you?

Mr. GRAVES. I would not think so.

Often we provide assistance for cruising timber and developing proper cutting practices for reforestation purposes. We have from time to time rendered financial assistance by means of secured loans to these independent operators to buy stumpage and also to buy trucks. We exert no real control over them and as far as we are concerned they are free to do as they please. We do endeavor to keep their business. They may and do use their trucks for other hauling purposes and they may and do sell part of the timber on a given stumpage tract to sawmills where such timber will bring a higher return. Some independent operators will sell pulpwood to more than one mill.

The actual number of employees such an operator will have will vary from approximately 4 to a maximum of 20. Some of these independent operators are quite successful and from a small beginning are able to extend their operations into quite a profitable independent business. Some are moderately successful, make a good living out of their business, but because of their own limitations or desires never extend beyond a one-truck operation. Others, because of their own limitations, lose money and gradually become absorbed in the business of other operators or go out of the work entirely.

Also, there has gradually grown up in the business, due to the extended area over which any particular mill secures pulpwood, a use of dealers, or traders, in pulpwood procurement. These dealers, or traders, buy pulpwood delivered to railroad sidings from the independent operators and sell this wood to the pulp mills. It is the practice to pay these dealers, or traders, a slightly higher price for the wood than is paid to the independent operator. The relationships of the dealers, or traders, with the independent operators are very much the same as those of the mill with the independent operators where no dealer or trader is involved. Similar to the mill, the dealer, or trader, occasionally renders financial assistance to such independent operators as he does business with. Occasionally, where larger operations are involved, he may call upon the mill for financial assistance by means of secured loans. The above operations will extend over a large area. The operations of this comparatively small mill extend over one-third of the State of Virginia and reach far down into North Carolina. The turn-over of employees in this business is rather rapid. The workers are constantly changing employment and moving among the various and sundry occupations which agricultural communities provide. Many of these independent operators operate very closely on a cash out-of-pocket basis. Keeping records for tax purposes will involve considerable of an educational problem. We think

the appropriate administrative agency would not hesitate to place the burden of this tax collection upon the mills if they were at liberty to do so and we would not have any practical means of collecting such money. Our only answer would be a gradual taking over of all of the business of the independent operators. We believe this would be our only alternative if we were to be responsible for tax collection.

I would hope that it is not the intention of this Congress to extend the definition of "employee" to such an extent as to make the independent operators and their cutters and haulers the employees of the mills, but the language of subparagraph 4, paragraph K, section 210, under the proposed definition of employment, is broad enough to be so construed as to make the mill liable for the social-security taxes of these people. Subparagraph 4 states that a man shall be determined to be an employee by the "combined effect" of seven separate qualifications, and each of these qualifications are of themselves indefinite and subject to the judgment of the administrative agencies concerned. The qualifications are not possible of accurate evaluation, and also the language of the bill reads that these seven qualifications would control, even though other provisions of the bill would determine a person's status otherwise.

As applied to our relations with those from whom we buy pulpwood, the seven qualifications would be confusing in the extreme. With your indulgence, I should like to briefly examine these qualifications in the light of the relationship between ourselves as a buyer and the independent operator as a seller. Now I am not speaking about the man who actually does the cutting and other manual work, but only of the man who operates what we contend is an independent business. Yet, bear in mind that, were he deemed to be an employee of ours, then all of those cutters and haulers who work for him would likewise be deemed our employees.

Senator TAFT. You are familiar, Mr. Graves, with the House report saying he is not an employee; are you?

Mr. GRAVES. Yes, Senator.

Senator TAFT. That is on page 87 of the House report.

There is a discussion of the contract logger there. If that report is followed, would that meet your problem?

Mr. GRAVES. I didn't understand you, Senator.

Senator TAFT. If the courts follow that report, would that meet your problem?

Mr. GRAVES. I would think so.

Senator TAFT. But you are not certain that the interpretation of the House committee is correct; is that right?

Mr. GRAVES. I am not certain at all, Senator. Also, though I do not recall the particular section of the report to which I am referring, there is contained in the House report a statement that the application of the term "contract logger" as interpreted from the bill would be "extremely uncertain." (This reference is to p. 204 of H. R. Rept. 1300 under appendix A, sec. 9 of "Application of the Definition to Specific Situations.")

Senator TAFT. This gives an example, here, and the contract logger is cited, with a good deal of description, as one who is engaged in his own business and not an employee.

Mr. GRAVES. Yes, Senator.

The CHAIRMAN. Mr. Graves, is this not your situation: If the operator with whom you now contract for so many cords of wood or so many tons was held to be your employee, then you would have to become the employer also of every man down in the woods, of every logger, of everybody who touched the business; would you not?

Mr. GRAVES. That is our only concern.

The CHAIRMAN. You would have to get rid of this middleman; would you not?

Mr. GRAVES. Yes, Senator; we would.

The CHAIRMAN. You could not keep him?

Mr. GRAVES. We could not.

The CHAIRMAN. You would have to have a man there who was responsible to you, whom you could hire, if you were to be held responsible for him as your agent, your employee. That is, as to the independent operator, the dealer, you are obliged to do that if you are to protect yourself?

Mr. GRAVES. Yes, Senator.

The CHAIRMAN. I know what Senator Taft called attention to is in this report, but I am somewhat like Uncle Remus's famous character. The rabbits are more or less "in the briar patch" when you come to this furnishing of pulpwood or logs to mills. Because I have been in this line of business, myself, and have helped to finance many of these independent operators for a great number of years past. These operations take place hundreds of miles away from the paper mills or from your establishment; do they not?

Mr. GRAVES. Yes, Senator.

The CHAIRMAN. And you simply buy, at so much per cord, so much per unit. But, if the man with whom you are dealing is held to be your employee, I do not see how you could do otherwise than to make him your employee in fact and eliminate him from the business. He would go out of business. That is exactly what he would do. Or he would become a man who worked for you for salary.

Mr. GRAVES. What we would probably do would be to pick out those of this group whom we considered the best men and put them on your pay roll and buy all their equipment.

The CHAIRMAN. Of course, that is what you would do if he is willing to do it. But he may be a man who has some individual capacities of initiative. This may be just one line of his business. It generally is only one feature of his business operation. He is not dealing exclusively with providing wood for pulpwood purposes or for saw purposes or what not. He is dealing in numbers of lines of business. This is one. He carries this on. But you could not hire him for any ordinary salary that you could afford to pay him. You could get a good man to do it, but you would have to take over the whole operation, in my judgment. And do not think you could long carry on your program.

Now, there are those people who do not seem to think that it makes any difference whether the independent dealer becomes an employee. I think it makes a vast difference. It makes a difference in his character as a citizen in the community. And I do not want to see my small community converted into a number of salaried people who are simply managing for the Gulf Oil, the Standard Oil, or for the Union Bag & Paper Co. or some other paper com-

pany down in Fernandina, Fla., or down in Pensacola, Fla. That is what would happen.

I am just giving you the advantage of saying to you, as I have not said about any other controverted feature of this bill, that so far as I am concerned I am on your team. I would not say that the other members of the committee would agree with me by any means; so you had better not assume that "the court knows the law," and you had better proceed to convert the others.

Senator TAFT. My only question was whether the definition was justified. The House has said that it did not apply to you. I just wondered whether, in view of the House committee's interpretation of their own language, your fears that the language might possibly include you can be justified.

Mr. GRAVES. Well, I am not a lawyer, but I have studied the various interpretations, not only applying to this "contract logging" but to other specific applications, and I cannot follow the reasoning used. It seems that certain of the seven qualifiations are evaluated and that certain of the seven qualifications are not applied at all to the particular case, and after attempting to give the proper weight to the various qualifications, a conclusion is drawn which to me has little relation to the facts.

Senator TAFT. You think we should change the whole definition, reconsider the whole definition with the seven qualifications?

Mr. GRAVES. I have outlined in this prepared statement something of the complications of these definitions as applying to our particular operations. We can omit reading this. I would say, however, that in our opinion the so-called definition under subparagraph 4 as distinguished from the definition under subparagraph 3, to which we are not objecting, that this definition under subparagraph 4 is just a slightly restricted grant to the administrative agencies of authority to determine for themselves who shall collect the taxes rather than being a definition. I cannot read any definition into these seven qualifications. Each one of them is variable and subject to judgment. And when you consider the combined effect of these seven you may reach any conclusion which serves your purpose.

Senator KERR. I take it that you want to be very definite and certain that the language of the act conforms to the report of the House committee?

Mr. GRAVES. I am not quite familiar enough with the report of the House committee to say that.

Senator TAFT. You set forth that the men you speak of would not be employees.

The CHAIRMAN. The illustration they use, Senator, is applied to a logger.

You are not engaged in the logging business. What you are talking about now is not exactly that type of business; is it?

Mr. GRAVES. Well, I think that the term "contract logger" as commonly used applies to the pulpwood business as well.

The CHAIRMAN. It does in a general way, but it is not quite the same operation.

Mr. GRAVES. We are so closely related to the logging business that the same interpretations generally apply to logging as apply to cutting of pulpwood.

The CHAIRMAN. Of course, these workmen who do, as a rule, cut the wood, get the logs out, prepare them, snake them out of the swamps and woods, generally are under social security; are they not?

Mr. GRAVES. They are supposed to be covered, Senator.

The CHAIRMAN. That is what I say. They are covered. It is just a question of whether this middleman becomes your employee under a possible construction of the definition that concerns you?

Mr. GRAVES. Yes. You have stated the case very well. Our only concern is the interpretation among these seven variable qualifications. And they are so broad, each one of them, that it is difficult for us to see but what they may be interpreted almost anyway that happens to be the individual viewpoint.

The CHAIRMAN. I am inclined to think you are right on that point. I think they are so broad, they do include so many factors, that the decision of the Administrator practically becomes conclusive. I think it could, and without any reflection upon the Administrator. Because he could find, in the case of furnishing financial assistance: Here is the independent dealer; he must have some money with which to operate. His local bank maybe does not want to make the loan, or maybe he already has exhausted his full line of credit at his small local bank. He naturally, say, calls on Union Bag or some other company with whom he is dealing, for some financial assistance.

Mr. GRAVES. Now, we could remedy that.

The CHAIRMAN. You might be able to do that, but that is one of the illustrations that comes to my mind. And that fact would perhaps justify the administrator saying, "Here is the relationship of your employer and employee," although the employer might make him the loan just as an arm's-length transaction. But at the same time he would not be getting his financial assistance from the employer.

Mr. GRAVES. I do not know about other companies, but if this bill should become law, even modified to some extent from its present language, I am quite sure we would stop making loans. We would not want that factor to enter into it. We could quite easily cease making loans. And I agree that such practice could imply a certain amount of control; that is, when the "independent operator" had a financial obligation to the consuming mill.

The CHAIRMAN. Yes, certainly. That would be bad, if you stopped making the loan. Because this fellow out in the woods, there, might not have any other way of getting a loan. He has to buy a truck, keep it in repair, and he also has to be able to buy some timber occasionally, so that he can have the wood that he can produce. I would hate to see this broad definition enacted, so far as I am concerned, but I am just giving you my own viewpoint about it.

I think the relationship of employer and employee, while often border line, is a relationship that can be definitely determined in any given case, if you have experienced business administrators on the job to do it. You can, by a lot of fictitious reasoning, create some question of whether one falls in the class of employer or employee, but in this particular type of independent operation here described there is not a single element of employer-employee.

I have known of instances where the middleman did not make any sale of his wood, whether he was cutting it for pulp purposes or for timber purposes, until he got prices from everybody. He was not

bound to sell to any particular person. As a matter of convenience, of course, he usually makes an agreement with some well-established business company, because he simply wants to know with whom he is dealing, and he does not want to go through all that detail of getting bids when he is ready to supply a quantity of wood. And he is not employed by any particular person. He is purely an independent operator, just as independent as a man who makes cotton to sell. We who made cotton all these years and sold it to Anderson-Clayton or to Wiel Brothers or MacFadden or somebody else, just a few people who buy cotton, have often borrowed money from them. But that did not make us agents of Wiel Brothers or MacFadden or anybody else.

So I agree with you thoroughly. Somebody just went off on a detour, here, when they were fixing up a definition that could catch everybody, practically.

Mr. GRAVES. Well, we have analyzed these seven qualifications, briefly, as applied to our particular case. I don't think it is necessary to repeat them here. But I would just like to mention one: permanency of the relationship. We have permanent relations with these operators, as permanent as without customers, or with our employees in some cases. We also have many irregular suppliers. But it would seem to us that this permanency has little to do with it. It is the conditions existing at the time the man does the work, whether he works for you 1 hour or whether he works for you a year. A man can work for 1 hour and still be covered by all the laws and practices which govern employer-employee relationships. And so we think that that is a bad thing to apply.

Regularity and frequency of the service is another qualification. That falls in the same class with permanency.

And then, to go into the "integration of the individual's work in the business to which he renders service," the word "integration" is subject to lots of divisions. It is true in this case. We are absolutely dependent upon these people for a supply of pulpwood. They are absolutely dependent on the mills, and in most cases one particular mill, for a market. If our business drops off, theirs is going to drop off. But I could not say that integration exists.

Here is an independent operator many miles away in North Carolina conducting his own affairs. He has little personal contact with us since our only contact with him is limited to an occasional visit by one of our representatives. Yet all of the seven qualifications would apply to this operator in some degree. There would be argument for and argument against his status as an employee and how the courts would decide I would not know. I could examine his status and say: "Well, this man is an independent businessman, but according to these seven qualifications he is your employee." And I would be perfectly justified in doing so. And I imagine in other businesses as well the same conditions would be found.

The CHAIRMAN. I think you are right about it, Mr. Graves.

I think the committee recognizes it. And I think the committee certainly recognizes this fact: that for taxation purposes and for the purpose of collecting revenue, whereas we might put burdens on people who are not in fact employers I do not think the relationship ought to go further than exclusively for tax purposes, if that should be

done. In some instances, of course, we may find it necessary to do that in order to collect the money that is due the Government. But that is wholly a different question.

Now, under the scheme of the House bill, this independent operator would undoubtedly be under social security anyway.

Mr. GRAVES. Oh, yes. These people would be covered.

The CHAIRMAN. He would be a self-employer. He could not escape. But he would not necessarily be your employee, with your somewhat limited liability all along, from contract to tort, for his acts.

However, the main thing that worries me is that it just destroys his status as an independent businessman in the community. And there is quite a difference between that status, that of an independent businessman doing his own business, and that of a man who must necessarily either get express authority higher up or ratification of what he has done higher up about everything in his business—unless he were a general agent. And, of course, if you had a general agent down there, you would have to have a vice president in the woods, because you could not afford to run the chances otherwise.

Are there any questions?

Thank you very much, Mr. Graves.

Mr. GRAVES. Thank you, Senator George.

(The unread remainder of Mr. Graves statement follows:)

The first qualification—"Control over the individual." We would say that we exerted no control over the independent operator's business, yet we must tell him how much pulpwood we can use at any particular time. We must say what specie of tree we can use, what length and size wood we desire, and we do endeavor to educate and persuade him to cut pulpwood in a manner conducive to good forestry practice. The Federal agencies may or may not say control existed, depending upon how it may suit their purposes for tax collection.

The second qualification—"Permanency of the relationship." Our relations with many of our independent operators continue from year to year very much as our relationships with our customers continue from year to year. We also have many irregular suppliers. It would seem to us, however, that "permanency" has nothing to do with qualifying a person as an employee. A man can work for you for as much as an hour and never work for you again but during that hour he can be your employee covered by all the laws and practices pertaining to employee-employer relationships.

The third qualification—"Regularity and frequency of the service." The same remarks applying to permanency may apply to regularity and frequency. The inference is that the more permanent, the more regular, and the more frequent a service the more likely a man is to be your employee. To us this is unsound reasoning.

The fourth qualification—"Integration of the individual's work in the business to which he renders service." We do not know in what manner "integration" is here used. The individual operator can and does supply pulpwood to other mills but many deal with only one mill and thus as our business fluctuates, so does his business fluctuate. He is dependent upon us for a market; we are equally dependent upon him for a source of supply. In this case the Federal agencies could say that there was or was not integration, depending upon what meaning he wished to give the word.

The fifth qualification—"Lack of skill required of the individual." The implication here is that the more skill a man has the less apt he is to work for someone else. This point could be argued with considerable sound basis from the opposite viewpoint. I cannot see how this criterion could apply to pulpwood operations.

The sixth qualification "Lack of investment by the individual in facilities for the work." This qualification can be determined with some degree of accuracy for indeed the amount of investment a man has in a business can be measured. In the case of the pulpwood business an independent operator would be likely to own or control such trucks, tractors, and tools as are necessary for the work. It is possible, however, to go into this business in a small way with a very small

investment. I think you will agree that many people have been self-employed without any capital investment to speak of in their business. Many a Member of this Congress has no doubt started law practice owning only the shingle on the door and with rented chairs in his office.

The seventh qualification—"Lack of opportunities of the individual for profit or loss." We could have no objection to such a qualification as applying to pulpwood operations except to say that it would be difficult to actually evaluate the opportunity for profit or loss due to the many contingent factors involved.

The above few conditions are only a slight indication of the confusion that would exist in applying these seven qualifications to our relations with our pulpwood suppliers. In actual application we believe it would be extremely uncertain.

As we have indicated, we do not oppose the principle of the Social Security Act. We recognize the desirability of extending the application of the act, though I would question the increased cost to the country in view of our present financial obligations and our potential financial obligations of the future. However, we strongly object to the broad and extremely vague and uncertain language of subparagraph 4, paragraph K, section 210 of the bill which could make us tax collectors simply by administrative interpretation. It seems to us to be a misnomer to call subparagraph 4 a "definition." More accurately, it is only a slightly restricted grant to administrative agencies of authority to determine for themselves who should collect social-security taxes.

If the interpretation should be to make the mills liable for these taxes it would result in the elimination of the independent businessman in pulpwood procurement. It would throw a most confusing interpretation upon the term "employee" which could in turn and probably would become a part of other laws and practices affecting employee-employer relationships. We would urge that it be stricken from the proposed amendments.

The CHAIRMAN. Mr. Bomze? You are representing the National Licensed Beverage Association here?

STATEMENT OF NORMAN BOMZE, REPRESENTING NATIONAL LICENSED BEVERAGE ASSOCIATION, WASHINGTON, D. C.

Mr. BOMZE. I am a member of it; yes, sir.

The CHAIRMAN. You are a member of it and speaking for it?

Mr. BOMZE. Yes, sir.

The CHAIRMAN. And you are located here in Washington?

Mr. BOMZE. That is right, sir.

The CHAIRMAN. You are the last witness for the morning. We shall be happy to hear you.

Mr. BOMZE. I have a prepared statement, Senator, which I would like to submit to the committee. However, some of these things have been covered already this morning, I think, thoroughly. I would just like to go over them briefly and then refer the committee to the statement, which we will submit.

The CHAIRMAN. Yes; you may do so. You may put your statement in the record as a whole, and comment upon any part of it that you wish.

Mr. BOMZE. That is what we would like to do, with your permission.

The CHAIRMAN. The statement will be entered in the record.

Mr. BOMZE. Thank you, sir.

(The prepared statement of Mr. Bomze follows:)

STATEMENT OF THE NATIONAL LICENSED BEVERAGE ASSOCIATION

Mr. Chairman and gentlemen of the committee, my name is Norman Bomze. I am a member of the National Licensed Beverage Association, a national trade association of owners of restaurants and taverns, and speak to you on behalf of its membership. Membership in this association has had through various States and local associations of tavern and restaurant owners, a list of which local groups is appended to my statement.

I will speak, first, concerning our interests in the language used in H. R. 6000 to define the term "employee." Identical language appears in section 104 (a) at page 48–49, and section 206 (a) at page 150, that language being "the term employee means (1) * * * (2). Any individual who under the usual common law rules applicable in determining the employer-employee relationship has the status of any employee. For purposes of this paragraph if an individual (either alone or as a member of a group) performs service for any other person under a written contract expressly reciting that such person shall have complete control over the performance of such service and that such individual is an employee, such individual with respect to such service shall, regardless of any modification not in writing, be deemed an employee of such person (or if such person is an agent or employee with respect to the execution of such contract, the employee of the principal or employer of such person)."

The effect of this language is to take us back prior to 1947 to a highly (artificial) relationship which then existed between persons who furnished employment for musicians and entertainers, and those musicians or entertainers.

From the days when entertainment has furnished by wandering minstrels until recently, the relationship between musicians and those who pay them for their services was governed by the rules of the common law. Even the original Social Security Act did not attempt to change this historical situation. It was not until the Treasury Department began to administer the collection of social-security taxes that another test was substituted. The so-called Form B contract, always demanded in such employment, provides that:

"The employer shall at all times have complete control of the services which the employees will render under the specifications of this contract."

The inclusion or exclusion of this language is not a matter for negotiation and is present in every such contract. In other words, with us it is not a question as to whether our music shall be hired on the basis of this or some other contract. Our only choice is to either do without live music or sign this type of contract. Prior to 1947, the Treasury Department, by regulations, decreed that where such a contract was in force, the purchaser of the music was, in fact, the employer, and therefore, responsible for the record keeping and taxation provided for in the taxing statutes. It is true that in some instances the agents for name and itinerant bands acted as the employer and thus relieved the purchaser from this burden. However, in 1947, the Supreme Court, in *Bartels* v. *Birmingham* cut through the fiction of the Form B contract and required that the relationship between the purchaser and the musicians should be governed by the ordinary rules of the common law. They found, in fact, that the leader of the orchestra was the person actually in control and, therefore, the employer.

The situation before this decision was chaotic. A band woud arrive for a 1-night or for a 1-week engagement on the basis of a Form B contract entered into sometime previously. In some instances, the names of the musicians would be appended to the contract, and sometimes not. Even in cases where the names were furnished with the contract, the identity of the musicians in the band would have changed by the time set for its performance. The list would, therefore, be out of date. In this situation, regardless of the effort expended by the purchaser of the music, it was impossible to obtain all the information required to comply with the tax laws.

The relief of the proprietors using this type of music was manifest at the time of the Bartels case. The relief was not because they were thus allowed to avoid a tax as they continued to pay the tax by an increase in the bulk or package price paid to the leader. Their satisfaction was, instead, by reason of their being relieved of the burden of the administration involved. There was, of course, a monetary saving to them because this chaotic administration was no longer a drain on overhead.

The proposed definition would return us to the difficult situation we experienced prior to the Bartels case. Moreover, this definition would prevent the agents for traveling bands from relieving us from this burden.

From a reading of the amendments proposed by H. R. 6000, it is apparent that the intent of the legislation is to improve the benefits and extend the coverage of the basic law. We wish to invite the committee's attenion to the section here discussed because it is, in fact, contrary to the intent of H. R. 6000. We are dealing here with itinerant musicians—wandering minstrels who receive their hire from as many sources as there are weeks in the year, or in some cases days. It is obvious that if their one constant paymaster, the proprietor of the name band, does not keep the records, it will have to be done by scores of others. It appears to us, therefore, the accounting from the standpoint of the individual

will be far better under the present system than that proposed by this bill.

The members of this association do not seek to avoid their responsibilities as employers in any situation where they are, in fact, employers, and have the control necessary to adequately perform their administrative duties under the law. We do, however, object to being saddled with administrative duties in a situation where we are, in fact, not employers. The forced and artificial status of employers created by this amendment does not give us the control necessary to properly perform the duties required. We ask, therefore, that the language of subsection 2 in both definitions be stricken after the first sentence.

The members of our association are also interested in section 104 of H. R. 6000, wherein it is provided that tips received by an employee shall be considered as remuneration paid by the employer, if reported to him by the employee. We object to the language of this section because it creates the anomalous situation wherein the employe can select a tax base upon which the employer is taxed.

When this provision was first considered by our membership, the first reaction to it was that it was of no consequence because our employees will not report their tips, and our liability as to the employment taxes will not be increased. However, upon reflection, it appears to us to create a dangerous situation.

One of the enforcement problems of the Bureau of Internal Revenue has been the securing of accurate reporting of tips as income. That has not been the responsibility of the employer, although in most instances employers have gone out of their way to urge accurate reporting and, where the amount is known, have reported the same. In spite of these activities on the part of employers, it is common knowledge that this is one of the loopholes in enforcement, if not in the law. Under the present situation, it cannot be said that an employer can benefit by faulty reporting of the employee. However, if this section of H. R. 6000 becomes law, there will be a certain tax advantage to the employer whose employees fail to report their income accurately. We do not believe we should be placed in this defensive position. It is only logical that the next step in enforcement would be to place the employer in a position of responsibility for such reporting. As a matter of fact, the committee's advisory council on social security would have us estimate the tips received by our employees if they do not make an exact reporting. This is a highly unrealistic situation. There is no formula upon which any accurate estimates can be made. Although tips generally may run a certain percentage of sales, the type of customer, the personality of the waiter or waitress and even the hour of the day causes variance in the size of tips. Any such reporting will be tied in with income tax reporting and while we are willing to pay the employer's tax on any amount which we would report to the Bureau of Internal Revenue, such as salary or tips charged on the face of a food check, to embark upon a responsibility which may well force us, as employers, to become enforcement agents for the Bureau is an unreasonable imposition on our business.

The increase in tax by reasons of these two provisions would do a serious disservice not only to business but also to labor. Restaurants and taverns depend upon serving large numbers of customers (some 60,000,000 daily) at a small profit rather than small numbers at a high profit. Surveys show that the average net profit of the Nation's restaurants range between 2 and 2½ percent and also that the present trend is downward. There is at this time a high rate of business mortality in this industry.

To stay in business, restaurateurs must now watch their costs very closely in order to survive, and even minor increases in expense may throw many operations from the black side of the ledger to the red. The average restaurant with a high efficiency rating and an effective cost control system has a 50 to 55 percent food cost and the average salary in such operation is 30 to 35 percent, which leaves only 15 to 20 percent for rent, repairs, replacement, laundry, maintenance, insurance, taxes, advertising, and other operating costs. What is left is the 2 to 2½ percent profit I mentioned before. If these costs are raised by additional taxes on salaries, the only method of reimbursement to the restaurateur is to raise menu prices substantially. This, of course, is not a solution to decreasing revenues because all over the country we are trying to lower menu prices so as to attract new customers and keep the ones we have.

The increase in operating costs would be a disservice to labor: First, in the increased cost of food which they buy in restaurants; and second, in many instances the loss of their means of employment through lay-offs and closures caused by failure. When their employers are operating on such a narrow margin of profit, the security of their jobs depends upon the maintenance of that margin. Such employees are generally classed as unskilled or semiskilled labor and their

opportunities for seeking other employment is extremely limited. Our operating costs now include the social security taxes, unemployment compensation workmen's compensation, and in many operations such as my own, group hospitalization, labor unions welfare funds, and the increased bookkeeping expense incurred by reason of such taxes. For that reason, we ask that we be allowed to administer the tax collection for those whom we actually employ and that our base for unemployment taxes be limited to those amounts which we actually pay as remuneration for services rendered.

Mr. BOMZE. My name is Norman Bomze. I am a member of the National Licensed Beverage Association, a national trade association of owners of restaurants and taverns, and speak to you on behalf of its membership. The membership in this association is had through various State and local associations in some eighteen-odd States.

We are concerned with two sections of H. R. 6000, the first of which is the definition of the term "employee" in its relation to the "name band" idea which the committee has heard a good bit of testimony on this morning.

The only point that we would like to bring out is that in the Bartels case in 1947, when the Supreme Court saw fit to cut through the fiction of the American Federation of Musicians form B contract and require that the relationship between the purchaser of the music and the musicians should be governed by the ordinary rules of common law, they found in fact that the orchestra leader was the person actually in control of the orchestra and, therefore, was in fact the employer.

The situation before this was rather chaotic, in that bands would arrive for a 1-night or a 2-week, or a 1-week engagement, and in some instances the names of the musicians were not submitted prior to the date of the engagement, and, consequently, the operator would have no way of knowing who were the musicians, what their names actually would be, what their social-security numbers would be. In fact, they would arrive in some given town, some small town, and maybe be shy one or two musicians and would employ one or two musicians locally to fill in, in order to be able to satisfy the engagement.

In that respect it made it almost impossible for our type of member to keep any type of record other than the fact that he knew that he engaged John Smith, orchestra leader, paid him a price, and his re-

sponsibility ended there. And the responsibility for maintaining records and complying with the social-security law was on the leader of the orchestra. That seemed to work out, and seems to work out now, to the satisfaction of most of those concerned.

It is apparent that the intent of this act is to improve the benefits and extend the coverage under the Social Security Act. Now, we would like to invite the committee's attention to the subject discussed, because it is in fact contrary, we believe, to the intent of the act. We are dealing here with an itinerant musician, a wandering minstrel who receives his hire from more than one paymaster. The proprietor of the band, if he does not keep the records, brings about a difficult situation, because keeping the records would be almost impossible for anyone else. No one else would know the exact status of his employees, because they are in fact his employees. We feel that we are far better set up under the present system than we would be under that proposed by the bill.

Our members do not seek to avoid their responsibilities as employers in any situation where they are employers. In fact, we feel that if we are employers we should have complete control over the situation, whereby we can perform our administrative duties in conformance with the law. However, we feel that this is an unfair saddling of administrative duties in a situation where we are in fact not employers.

The other section that I would like to deal with, Mr. Chairman, is section 104 of H. R. 6000, which deals with tips or gratuities received by employees, wherein the new language says that the "tips received by an employee shall be considered as remuneration paid by the employer, if reported to him by the employee." We object to the language of this section, because it creates the anomalous situation wherein the employee can select a tax base upon which the employer is to be taxed.

I should like to invite your attention to the report of the Advisory Council to this committee, on page 29, where the language is:

> In the absence of an exact reporting of tips by persons receiving them, it would be possible to permit employers to report a reasonable estimate of the tips received by their employees, as is now done by some of the State unemployment insurance laws.

The words "reasonable estimate" present a problem to us. Who is to determine what is reasonable? Would it be the employer? And if so, would there be another authority that might say his interpretation would not be reasonable?

We feel that being saddled with the responsibility of determining what these employees make in addition to the wages we pay them is an unfair situation. Our membership is made up of mostly small restaurants and small taverns, where usually they are managed, maybe, by husband and wife, and a few employees. Probably none if any employ full-time bookkeepers or office staffs that can handle this type of administrative function.

As it is at present, we receive, some of us, from 15 to 20 reports a month that we must answer, to certain Government agencies, with the State and Federal Government, reports as to what the social security numbers now are, reports of firing an employee to the local or State unemployment compensation boards. We, of course, comply with all of these things that we possibly can, but it makes it rather

difficult for a man who is operating his own business and must actively engage in the operation of that business. His is not an administrative function; he rolls up his sleeves and goes to work. And it is rather difficult for him to have to sit down several days out of the month and handle these administrative functions.

Actually, determining the tips would be a very difficult factor. Although you may determine that they run a certain percentage of the gross sales to the customers, the factor of the customer and that of the personality of the particular waiter or waitress are most important. And even on the time of the day that they are serving would depend the amount of the gratuity they would receive. Therefore for us to embark upon a responsibility which will force us as employers to actually become enforcement agents for the Bureau of Internal Revenue we believe is an unreasonable imposition on our business and on our particular members.

As it is today, our business has been pushed rather badly. It is a business that always has had a high amount of business mortality. It is an operation that takes a careful operator who knows what he is doing. Even today, the figures now are that under a good efficient operation the cost would be from 50 to 55 percent just on the food cost, the sale of the product, with an average salary cost percentage of 30 to 35 percent, which would leave us 15 to 20 percent of the gross profit to take care of rent and utilities and all the other things. And on the basis of a recent survey, it would leave us about 2 or 2½ percent net.

We therefore feel that these additional costs that would be put upon us by having to place additional administrative people to handle the bookkeeping would be unfair and would be something that the people in our business are unable to handle.

We also feel that the increase in operating costs would be a disservice to labor, because of the increased cost in food, which would naturally have to come about, which they buy in restaurants. And in many instances this would bring about a loss of jobs to labor, and our people are either semiskilled or unskilled employees and would probably find difficulty in finding jobs in other industries.

It is for these reasons, briefly, that we ask that we be allowed to administer the tax collection for those whom we actually employ, and that our base for employment taxes be limited to those amounts which we actually pay as remuneration for services rendered.

Senator KERR. You mean to the individuals who directly receive them as their wages?

Mr. BOMZE. Yes, sir.

Senator KERR. Without the intermediary handling by independent or semi-independent operators?

Mr. BOMZE. That is true, sir.

The CHAIRMAN. Does that conclude your statement, Mr. Bomze?

Mr. BOMZE. That is all I have to submit to the committee, other than our prepared statement.

The CHAIRMAN. Thank you very much.

That completes the hearing for the morning. The committee will recess until 10 a. m. tomorrow.

(Whereupon, at 12:15 p. m., the committee recessed to reconvene Tuesday, March 7, 1950, at 10 a. m.)

[redacted]

SOCIAL SECURITY REVISION

TUESDAY, MARCH 7, 1950

UNITED STATES SENATE,
COMMITTEE OF FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George, chairman, presiding.

Present: Senators George, Byrd, Lucas, Kerr, Millikin, Taft, and Martin.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

Mr. Calhoun, you may be seated, sir. You are not a stranger here. We are very glad to see yeou. I am sorry that the full committee is not here, but it is impossible to get full attendance in any committee at this session, apparently, because every one is so busy.

STATEMENT OF LEONARD J. CALHOUN, MORGAN & CALHOUN, WASHINGTON, D. C.

Mr. CALHOUN. Thank you, Senator George. My name is Leonard J. Calhoun. To conserve the committee's time, this statement is being submitted as the joint statement of the Hon. John A. Danaher, the Hon. James M. Barnes, and myself, on behalf of clients whose names are appended hereto.

These companies have various products—nursery stock, wearing apparel, cosmetics, household articles, farm supplies, and other items—but all have a common business approach. Their products are not sold through stores, but instead by independent distributors who sell from house to house.

Typically, these distributors, from time to time, select the line or lines of goods they think will prove most profiitable. They freely shift to lines of other companies whenever they feel that they can thereby increase their profits. They lack the security of being on a pay roll, but likewise escape the fear of strikes and shut-downs. In good times or bad they are never involuntarily unemployed. They have no seniority rights, no company pensions, but, instead, have an opportunity limited only by their zeal and skill to work out their own economic destiny. Each is his own boss—he punches no time clock and is subject to no company orders. These distributors do not seek jobs, but instead select the companies whose products they will handle from among the many continually pressed upon them by advertisement and otherwise. Incidentally, any substantial list of distributors is of considerable value to any company engaged in this line of business.

The independent relationship of these distributors to the companies whose products they distribute is reflected in the advantages and disadvantages of the companies themselves. While the company has no pay roll responsibility to its distributors, and escapes the expense incidental to the careful selection which must be made of employees and the overhead of their supervision, it likewise is unable to direct and control its distributors, must face a tremendous turn-over in distributors, and must spend considerable sums in advertising and otherwise attracting new distributors. The company must also face the fact that a high percentage of the distributors will have only temporary and insubstantial dealings with it, and that it must rely only upon the law of averages to achieve a business relationship with distributors whose business proves profitable.

These advantages and disadvantages tend to balance, both for the companies and the distributors, with the advantages and disadvantages of other business relationships and methods of doing business. Otherwise direct selling would either disappear or would become the universal method of distributing goods.

I have touched on this method of doing business, this relationship between the companies we represent and their distributors, by way of background to an appreciation of consequences which would result if the definition of "employee" in H. R. 6000 were adopted and this relationship artificially twisted into an employer-employee relationship. I shall leave to subsequent witnesses the evaluation of the practical results of the adoption of this definition on their businesses, and shall limit my statement to pointing out what I conceive to be matters of principle and broad economic, social, and administrative implications of the proposal.

Your action in adopting a definition of employee will have far-reaching consequences. The field in which our clients are engaged represents only a small segment of enterprise which will be affected, and while you are amending the old-age and survivors insurance provisions of the Social Security Act, you are also setting a precedent for other social laws, and, we believe, even broader purposes. You have only to read court decisions, to see how quickly precedents as to the employer-employee relationship in any particular area are made to apply to the employer-employee relationship under other statutes and for other purposes. You can appreciate the practical results if independent distributors are deemed employees for the purposes of Wages and Hours, Labor Relations Acts, Workmen's Compensation, tort liability, separation pay, doing business in a State, and various and sundry forms of taxation and withholding and other liability under various Federal, State, and municipal ordinances hinging upon the employer-employee relationship.

In social legislation my observation that I have just given is based on what is already happening in unemployment compensation. Last November, following House adoption of H. R. 6000, the Director of the Bureau of Employment Security transmitted to State administrators a series of proposed changes in the Federal unemployment compensation laws, requiring, of course, conforming State law changes.

The official proposal E was, and I quote, 'Redefinition of 'employee' in conformity with H. R. 6000." It contains his thumbnail analysis of the definition, including his statement, "The fourth test would

apply to those who are not technically employees, but from a factual standpoint are economically dependent upon the employer under seven tests." At least three bills containing this proposal—H. R. 6718, H. R. 7331, and H. R. 5591—have already been introduced.

The practical consequences of this proposal as applied to our independent distributors will serve as an example of the effect of a distorted definition of employee not only here but in other programs, and not only on our limited area but across the whole field of independent business relationships.

It is easy to understand why unemployment compensation systems do not cover self-employed and why independent distributors, from the viewpointof administrative reality—to quote the phrase we have often heard with a little twist—must be classified as self-employed. Unemployment compensation presupposes an individual on a pay roll, his employment terminated through no fault of his own, with benefits based upon his "full-time weekly wage" and paid during a period of involuntary unemployment. These distributors have gross and net profits which cannot realistically be treated as wages. As previously mentioned, there is no employment obligation, either on the part of the company or of the individuals, and accordingly on business reason for terminating their arrangements. Instead, in good times and bad the company is anxious to continue the arrangement, so there is ever even a colorable involuntary separation of the distributor through lack of work.

Senator MILLIKIN. Mr. Chairman?

The CHAIRMAN. Senator Millikin.

Senator MILLIKIN. If you do not have it, Mr. Calhoun, I would like to ask Mr. Cohen to supply us with this series of proposed changes in the Federal unemployment compensation laws which were sent out following the adoption of H. R. 6000 in the House.

Mr. CALHOUN. I think, sir, that went out from the Labor Department. You know, Unemployment Compensation has been transferred over there.

The CHAIRMAN. You do not have copies of that, do you?

Mr. CALHOUN. I don't have them with me, sir. I can obtain them.

The CHAIRMAN. If you can get them we would be glad to have them; if you cannot, Mr. Fauri may be able to get them from the Labor Department. Those are the proposals that they send out and the suggestions and recommendations for changes in State laws and regulations; is that right?

Mr. CALHOUN. That is my understanding.

The CHAIRMAN. Following the passage by the House of H. R. 6000.

Mr. CALHOUN. Yes; that is my understanding.

(Mr. Fauri obtained the following information from Mr. C. L. Keenan, Deputy Director, Bureau of Employment Security:)

DEPARTMENT OF LABOR,
BUREAU OF EMPLOYMENT SECURITY,
Washington, D. C., November 25, 1949.

General Administration Letter No. 162

To: All State employment security agencies.
Subject: Proposed Federal legislation of the Bureau of Employment Security.

In accordance with its statutory responsibility, the Bureau of Employment Security is now considering Federal legislative amendments designed to strengthen the unemployment insurance system. We are enclosing a summary

of proposals which we have under consideration.

The Secretary, consistent with his policy of consultation with the States on major issues, has asked us to secure your views with respect to these proposals before the Department reaches its final conclusions. Please consider these proposals, both from the standpoint of policy and technical soundness.

It is necessary that we come to final conclusions with respect to legislative recommendations in the very near future. We hope, therefore, that you will be ableto give this matter your early attention so that any comments or suggestions you wish to forward will be in our hands not later than Monday, December 5. Because of the time element, please send your comments directly to this office with a copy to the appropriate regional representative.

Sincerely yours,

ROBERT C. GOODWIN, *Director*

SUMMARY OF PROPOSED FEDERAL LEGISLATIVE AMENDMENTS TO UNEMPLOYMENT INSURANCE [1]

I. MINIMUM BENEFIT STANDARDS TO BE MET IS STATE LAWS

A. Benefit amounts payable to individuals without dependents to be generally equal to 50 percent of weekly wages up to a maximum of $30 a week; for persons with dependents, benefits to be generally 60 percent of weekly wages for one dependent, 65 percent for two dependents, and 70 percent for three dependents up to a maximum of at least $42 a week—Dependents to include dependent wives, disabled husbands, and children

This proposal is designed to bring benefits up to a level that is in line with increases in wage levels and the cost of living. The growing trend to provide dependents' allowances would be made universal in recognition that this is an economical method of providing adequate benefits to an individual with a family without paying too high benefits to single persons or persons whose wives are working.

The proposed standard does not mean that every unemployed person without dependents would receive $30 a week in benefits. It means that persons earning $60 a week or more would receive $30 in benefits. A person earning $40 a week in wages would receive only $20 in benefits; a person earning $30 a week in wages would receive $15 in benefits. A State would be free to pay higher amounts The proposed amounts are minima.

B. Benefit duration of at least 26 weeks in a benefit year, uniformly available to all insured unemployed persons

This proposal is designed to bring all States up to the level of the best practice of the States. It recognizes that the shorter duration provided plus the gearing of the duration of benefits to previous wages in many States has resulted in a high ratio of exhaustion of benefits in even as prosperous a year as 1948, and the necessity of providing a more adequate duration to meet increased unemployment such as occurred in 1949.

Under this proposal, every State would pay at least 26 weeks of benefits to a person unemployed that long and meeting other requirements. The maximum benefit duration would be payable to all insured unemployed instead of varying with previous base-period earnings, as now provided in many States.

C. Qualifying requirements of not more than (1) wages equal to 30 times the benefit amount or not more than $300 as a minimum requirement, whichever is the lesser; (2) wages equal to 1½ times high-quarter earnings; or (3) 20 weeks of employment in the base period

This proposal is considered necessary to prevent unreasonably high eligibility requirements as benefits are increased. The above would be maximum qualifying requirements; lower requirements would be possible. A State would be free to choose any one of the requirements specified.

D. Waiting period of not more than 1 week of unemployment in a benefit year

This proposal is in line with the requirement in most State laws and there are no longer any administrative reasons why a 1-week waiting period is not feasible. The week of unemployment would be defined as a week during which the remuner-

---

[1] It should be understood that the proposals listed are not necessarily in legal language, and would be spelled out in more detail in the legislation.

ation payable to an individual is less than the benefits payable to him for a week of total unemployment.

E. Disqualification provisions

1. *In cases of voluntary leaving of suitable work without good personal cause, discharge for misconduct connected with the work, and refusal of suitable work without good cause, disqualification from benefits could not be longer than the week of the disqualifying act and the six following weeks with no reduction in benefits or cancellation of wage credits.*—This proposal is designed to restrict disqualifications so that no worker is disqualified who is involuntarily unemployed and to provide that benefits are to be withheld only in case of disqualification for a period of time in which his unemployment is reasonably related to the disqualifying act.

The above are the maximum disqualifying periods that could be imposed for the causes listed; a State could provide for a shorter disqualifying period or vary the disqualifying period according to the cause of disqualification up to a maximum of 6 weeks. There would be no reduction in the duration of benefits and no cancellation of wage credits earned prior to the disqualifying event. For persons able to work and available for work, these three causes plus strikes and fraud would be the only reasons for which a worker would be disqualified.

2. *Limitation of disqualification in case of labor disputes to any week of unemployment due to a stoppage of work which exists because of a strike.*—Because unemployment due to lock-outs is involuntary, unemployment due to a lock-out would not be subject to disqualification. Duration of disqualification would be for the duration of the stoppage of work. Language regarding the location of the strike and the participation or interest of the individual would be incorporated.

II. ADDITIONAL ADMINISTRATIVE REQUIREMENTS FOR GRANTS UNDER TITLE III OF THE SOCIAL SECURITY ACT

A. The addition to section 303 (a) (1) of such methods for the prevention, detection, and punishment for willful misrepresentation or nondisclosure of material facts as are found by the Secretary to be reasonably calculated to insure the payment of unemployment compensation only to individuals entitled thereto

The intent of this proposal is to give legislative recognition to the importance of preventing improper payments, the effective detection of fraud and misrepresentation, and the proper protection of the individual concerned through adequate development of the facts in connection with the recovery of improper payments and the imposition of penalties for such fraud and misrepresentation.

B. Participation in methods for the combining of wage credits earned under the State law and wage credits earned under the unemployment compensation laws of other States or the Federal Government, and for the payment of interstate claims, as are found by the Secretary of Labor to be reasonably calculated to ensure the prompt payment of benefits in such situations

This proposal is intended to give congressional recognition of the importance of uniform interstate arrangements for the payment of interstate claims, including the combining of wage credits earned in two or more States.

III. FINANCING PROVISIONS

A. Automatic appropriation of proceeds of Federal unemployment tax to Federal unemployment account in the unemployment trust fund, to be used (1) for grants to the States for administration as specified by Congress, including a contingency amount; (2) for the costs of Federal administration; and (3) for reinsurance as described under B. Continued authorization for the appropriation of the past excess of collections over Federal and State administrative expenses and such additional funds as may be necessary

This would provide for the earmarking of the collections under the Federal unemployment tax and their use exclusively for grants to the States for the administration of their unemployment insurance and employment service programs for the Federal expenses in connection with administering the Federal employment security functions and for reinsurance purposes. The money to be used for State and Federal administrative expenses would still be approved by Congress. An annual contingency amount up to the amount approved by Congress would be provided for use in the case of unforeseen conditions. The present

provision authorizing appropriation of the excess of Federal unemployment tax receipts over amounts expended for unemployment insurance expenses, due to expire December 31, 1949, would be indefinitely extended and such additional amounts as are necessary would be authorized to be appropriated by Congress.

B. Substitution of reinsurance grants for the present provision for loans to State funds provided under title XII of the Social Security Act, such as reinsurance grants to be made as follows:

1. If the State fund is smaller than the amount paid out in benefits in the two preceding quarters and the State has established a minimum rate of contributions to its fund of at least 1.2 percent of taxable wages since such time as its fund has dropped below the expenditures for benefits in the two preceding taxable years.

2. The reinsurance grant to be equal to the estimated excess in benefit expenditures under the State law over an amount equivalent to 2 percent of taxable wages.

A reinsurance fund rather than the present loan fund is proposed in recognition of the fact that the Federal Government has an obligation in the national interest to assist any State whose unemployment benefit load (due largely to national causes) is more than it can reasonably be expected to bear out of its own resources. Such a national obligation is increased if the Federal Government requires minimum benefit standards as proposed.

The reinsurance grants proposed would not be repayable. Such reinsurance grants would be paid in advance and adjusted quarterly. The grants would cease when the State fund rose above benefit expenditures in the two preceding quarters.

The requirement that a State must establish a minimum contribution rate of 1.2 percent when its fund drops below 2 years of benefit expenditures is similar to provisions in many State laws. This modest requirement and the provision that the grant be for the excess of benefit cost over 2 percent of taxable wages are designed to enable the State to avoid drastic increases in contribution rates when unemployment rises; at the same time they are designed to safeguard the Federal Government from financing State funds that have been depleted by improvident contribution rates.

IV. EXTENSION OF COVERAGE

A. Coverage under the Unemployment Tax Act of employers who have one or more individuals in employment at any time

This extension of coverage would remove the present limitation on the size of employers taxable under the Federal Unemployment Tax Act. The extension of coverage to one or more could be met automatically by most of the States not having similar coverage through provisions in most of the State laws.

B. Removal of the exemption from the Federal unemployment tax of employment in nonprofit organizations exempt from income tax, except clergymen and members of religious orders and part-time workers earning less than $100 a quarter

The exceptions would be the same as those in the social-security amendments passed by the House of Representatives in H. R. 6000.

C. Coverage of Federal civilian employees and servicemen, to be financed by the Federal Government

A new title would be added to the Social Security Act providing for benefits for Federal employees. The present exemption from the Federal unemployment tax would remain, and the benefit costs would be financed by appropriations out of general funds of the Treasury.

D. Redefinition of agricultural labor to bring it into conformity with H. R. 6000

This would add approximately 200,000 persons to the coverage of the Federal Unemployment Tax Act. The principal groups covered would be those engaged in the production or harvesting of maple sirup or maple sugar, the raising or harvesting of mushrooms, or the hatching of poultry off the farm, or employment connected with irrigation projects, as well as a delineation of excluded and covered employment in packing, processing, and transportation, etc., of agricultural commodities similar to that in effect before the 1939 social-security amendments

E. Redefinition of "employee" in conformity with H. R. 6000 and removal of exemption of insurance salesmen in section 1607 (a) (14) of the Internal Revenue Code

This new definition would bring under coverage salesmen and certain other employees who were deprived of status as employees by Public Law 642, Eightieth Congress, the so-called Gearhart resolution. H. R. 6000 provides four separate and independent tests for determining who are employees, and those tests are spelled out in detail. The first test covers officers of a corporation; the second those covered under the common-law master-servant rule; the third lists the following as covered: outside salesmen in manufacturing or wholesale trade, full-time life-insurance salesmen, driver-lessees of taxicabs, home workers, contract loggers, lessees of space within a mine and house-to-house salesmen under certain conditions. The fourth test would apply to those who are not technically employees, but from a factual standpoint are economically dependent upon the employer under seven tests. For more detail, see H. R. 6000, Report No. 1300.

F. Puerto Rico to be defined as a State under title III and the Federal Unemployment Tax Act

It may be necessary to make some exceptions to the requirements of the Federal Unemployment Tax Act as proposed to make coverage of Puerto Rico practicable. This would include taking into consideration the present unemployment-insurance system for sugar workers in Puerto Rico.

V. DEFINITION OF WAGES

A. The taxable wage limit under the Federal Unemployment Tax Act to be increased to the same amount as may be provided for old-age and survivors insurance

H. R. 6000 as passed by the House of Representatives raises the taxable wage base from $3,000 to $3,600. The taxable wage limit for unemployment insurance should be the same as that for old-age and survivors insurance. The increase would also help finance the higher benefits proposed.

B. Gratuities to be defined as wages under the Federal Unemployment Tax Act

This definition would give statutory recognition to at least what is now covered by regulation by the Bureau of Internal Revenue.

NOTE.—H. R. 6000 provides for amendments to section 1607 (b) of the Internal Revenue Code to bring the definition of wages under the Federal Unemployment Tax Act into conformity with the changes under the Federal Insurance Contributions Act, except for the amendments proposed under A and B above.

VI. EFFECTIVE DATES

The effective date for benefit standards would be July 1, 1952; for extension of coverage, January 1, 1951, for Federal workers, and January 1, 1952, for other workers; for the earmarking of the Federal unemployment tax, January 1, 1951; and for the reinsurance fund, January 1, 1950.

The effective date of July 1, 1952, for benefit standards is designed to give all the States an opportunity to amend their laws to bring them into conformity with the Federal legislation at the regular sessions of their State legislatures in 1950 and 1951. On the other hand, it would be feasible to extend coverage as of January 1, 1952, since employers could be covered retroactively or by voluntary election in the few States whose legislatures do not meet until 1952. The other proposals do not require State legislative action and could be made effective at earlier dates.

Mr. CALHOUN. Unemployment benefits are paid on separation through no fault of the employee and presuppose a separation by an employer who is in a position to report whether there has been a separation, a voluntary "quit," or no separation at all. Thus in the case of the independent distributor and other self-employed, the preliminary requirements of unemployment compensation cannot be met.

Furthermore, the normal unemployent-copensation procedure is to offer a claiant "suitable work," which obviously includes work of the kind he has been doing. But in our clients' business, a multitude of firms are always ready and eager to enter into the identical type of

arrangement that the distributor has abandoned. Accordingly, sel employed do not fit into and cannot qualify for benefits under norm unemployment-compensation techniques and procedures.

Similar limitations apply to cash sickness benefits, as was admitte by Mr. Altmeyer before the Committee on Ways and Means. He state in substance that there were compelling practical reasons for limitin cash sickness coverage to employees. In response to questions, he state that the main practical objections were that the self-employed did n have the same type of establishable wage loss as employees, and, mo important, that the system required an employer interested in t employee's recovery and acquainted with the reason for his not bein at work.

The factual situation of free-lance distributors and other self-em ployed who would become employees under the definition in H. F 6000 makes clear that considerations which exclude self-employed i general are applicable to them. There is no magic in definition whic could change the facts I have above referred to or result in feasibl coverage of these self-employed individuals as employees.

The measure you have before you has a social purpose—affordin protection on retirement or death when earnings cease. The partic ular measure is not necessarily limited to employees but can appl to self-employed and can cover them as such. Would it not be ironica in such a measure to deprive some self-employed of their present op portunity to earn a living by artificially and unnecessarily classifyin them as employees?

For many door-to-door distributors, the artificial employer-em ployee definition would have this effect. Today anyone who desire to try his hand at selling has a wide-open field. Because there is n employer-employee responsibility a company is willing to do busines with these independent distributors without the normal considera tions—and they are quite important—of adding a person to the pay rolls. Consequently the field is wide open, in good times and bad to everyone. Persons with limited time to devote to it may try thei hands at selling since they do not have to keep company rules or hour or undertake other normal incidents of employment. Thus the house wife, the person with a regular job, the individual who cannot obtai employment, and others are all given an opportunity which is limite only by their own ability and which is terminated only by their own volition. Imposing the obligations of the employer-employee rela tionship in this field would impose such expensive obligations o firms as to, in effect, outlaw a vital field of opportunity for many per sons with small means and limited work opportunity, to be gainfully employed. Subsequent witnesses will spell out what these require ments will be and why the necessary effect would be for them to aban don any use of the occasional short-term seller.

Restated in terms of the effect on a broad area of business relations the issue with which you are faced is whether it is the present desire of Congress—notwithstanding the position it has previously taken—that many independent self-employed shall be deemed employees and the methods of doing business of thousands of businesses destroyed. Do you really believe that established business must be made to con form to some new standard which will have the effects of terminating the opportunity of persons to be self-employed? Is the Congress to

reorder the plan of operations of our clients and of thousands of other business enterprises?

We submit that H. R. 6000 gives an opportunity to keep the present interpretation of the employer-employee relationship out of an otherwise ever-deepening twilight zone. Heretofore, because self-employed persons needed coverage, attempts have been made to define "employee" artificially to cover them. This bill makes a great forward step toward fulfilling this need for coverage by providing for the coverage of self-employed as such.

Mr. MILLIKIN. Mr. Chairman, may I ask a question?

The CHAIRMAN. Yes, Senator.

Senator MILLIKIN. Do you believe, Mr. Calhoun, that it would be workable to give the self-employed the option of coming under the system; as distinguished from compulsory inclusion?

Mr. CALHOUN. That poses a rather difficult question, Senator; I think that insofar as people's ability to elect is concerned a great mass of them would come in. That, to me, is somewhat conjectural. The principal thing that one has to worry about, it seems to me, is a justification of a system that is compulsory for one group and elective for another group. I worry considerably about it. I have heard actuaries say, of course, that there would be a considerable election against the system. I think that that is a presupposition, that a great many most likely to be a later relief problem would stay out; but, as I have said, the thing that troubles me most would be if we were to have a system which is, to paraphrase Lincoln, half slave and half free, half compulsory and half elective.

We favor the broad purpose of H. R. 6000 in extending coverage to groups not presently protected by old-age and survivors insurance, including self-employed persons such as these free-lance salesmen. The purpose of the system will not be fulfilled completely so long as people needing its protection are excluded. The definition of "employee" in H. R. 6000 may be traced back to what might be termed "an initially benovolent ingenuity" in attempting to broaden the meaning of "employee" to extend coverage—a "purpose of the act" theory. At the outset of the program, the Treasury and the Social Security Board promulgated regulations defining "employee" as it had been defined for the past 200 years. With the desire to have broader coverage and with no other method for doing so, so long as coverage was limited to employees, subsequent attempts were made to classify an ever-increasing number of self-employed as "employees." Had the self-employed been included originally there would have been no colorable legal theory or practical reason for attempting to create an artificial employer-employee relationship. The purpose of the act theory would not have bene even a colorable basis for broadening the normal meaning of "employee," for the purpose of the act would have been to cover self-employed as such and employees as such. We would not have heard of the factor approach, and we would not today be discussing this definition. Nor is there any reason to create an artificial relationship of employer and employee today, for H. R. 6000 provides for the coverage of the self-employed as such.

Coverage, not only of this group but of the other self-employed, is the real question that is before you. We favor coverage. The current issue raised by the definition of "employee" in H. R. 6000 is not

a question of covering people, but solely of how certain self-employed shall be covered.

This purely tax issue of who shall be taxed as self-employed and who as employed has never been before any court or any administrative agency, for only Congress can provide for covering self-employed. A couple of years ago a different issue was raised of extending coverage by the interpretative broadening of the term "employee," under a "purpose of the act" doctrine, to cover an undefined number of self-employed as employees. The long-established regulations and a multitude of tax rulings would have been scrapped. But that issue was at least temporarily resolved by status quo legislation anticipatory of the congressional consideration of extending coverage, which is presently in process. That was in fact an issue of who should write the coverage provisions of the act.

The wisdom of that status quo legislation has since been demonstrated. Besides preserving the common law as reflected in the long-established regulations and rulings, the legislation settled difficult equities of noncontributory retroactive wage credits which had been established by the Federal Security Agency. It also settled the question of financing benefits based on such credits. The legislation so satisfactorily disposed of these questions that H. R. 6000 contains no change in existing law on the subject.

The first sentence of the second paragraph of the definition of "employee" in H. R. 6000 recognizes the wisdom of the existing common-law definition of "employee." It preserves the status of persons who are employees under existing law, thereby repudiating any inference in the Silk and Greyvan cases that their status should be redetermined on the basis of a series of so-called factors referred to by the court.

The second sentence in the second paragraph of the definition, which incidentally, may be used to deprive people of coverage, repudiates the Supreme Court holding in the Bartels case.

The third and fourth paragraphs of the definition represent two diametrically opposite methods of extension of the term "employee" to cover some individuals who are not employees under the present regulations and social-security-tax rulings which are based on common law.

The approach of paragraph (3) is to specify certain categories such as full-time life insurance salesmen, to be treated as employees where stated conditions exist. I shall call this the category approach.

You will note that paragraph (3) describes the principal groups which Treasury and Federal Security testified 2 years ago before you would be employees under the factor approach.

The approach of paragraph (4) of the definition of "employee" authorizes administrative rulings as to the employer-employee relationship on the basis of several so-called factors of the kind the Supreme Court indicated might be pertinent evidentiary considerations in determining whether an individual is an economic dependent under its "purpose of the act" theory. It applies only to persons not employees under paragraph (1), (2), or (3) of the definition. This paragraph (4) basically revives the issue of 2 years ago as to whether Congress shall write the actual tax coverage provisions or delegate this important function. I shall call this paragraph the administrative blank-check approach, in view of considerations I shall mention later

The vast uncharted effect of the new definition of "employee" in H. R. 6000 may be inferred from the new exception, numbered (18), on page 43 of the bill, to the definition of covered employment. "Employment" applies only to service "by an employee for the person employing him," in contrast with self-employment—defined on page 51 of the bill—and the new exception (18) contains a very limited shelter against the blank-check paragraph of the definition of "employee." The new paragraph (18) excludes:

> Service performed by an individual in the sale or distribution of goods for another person, off the premises of such person, under an arrangement whereby such individual receives his entire remuneration (other than prizes) for such service directly from the purchasers of such goods or commodities, if such person makes no provision (other than by correspondence) with respect to the training of such individual for the performance of such service and imposes no requirement upon such individual with respect to (A) the fitness of such individual to perform such service, (B) the geographical area in which such service is to be performed, (C) the volume of goods or commodities to be sold or distributed, or (D) the selection or solicitation of customers.

Obviously, if the definition of "employee" is so broad as to include individuals meeting all the above requirements, it may apply to almost everyone having any kind of business relationship with a firm. The individual here described receives no compensation, even by way of a contingent commission, from any firm, but instead his sole remuneration is profits made in dealing with his own customers, and paid by those customers. He is not subject to such control as might be inferred from his working on a firm's premises or from calling on customers designated by the firm, or such remote controls as might be inferred from his having to meet a quota, or even the still more ephemeral control incidental to operating within the limits of some specified town or county. His relationship with the firm must be so casual that such firm does not afford even preliminary instruction as to demonstrating the product, or inquire into the distributor's honesty or prior work history. It is almost inconceivable that any manufacturer would deal with any distributor, individual or corporate, without running afoul of some of these manifold conditions, yet here is an exception to the definition of covered employment that assumes that some individuals are employees even though all these conditions are met. Persons ruled to be employees under the new definition would be treated as self-employed—under the paragraph numbered (2) relating to self-employment on page 159 of the bill—where, and only where, the firm's relations with them do not violate any of these unrealistic conditions.

I have referred to paragraph (4) of the definition of "employee" in H. R. 6000 as the administrative blank check. This paragraph is as follows:

> (4) any individual who is not an employee under paragraph (1), (2), or (3) of this subsection but who, in the performance of service for any person for remuneration, has, with respect to such service, the status of an employee, as determined by the combined effect of (A) control over the individual, (B) permanency of the relationship, (C) regularity and frequency of performance of the service, (D) integration of the individual's work in the business to which he renders service, (E) lack of skill required of the individual, (F) lack of investment by the individual in facilities for work, and (G) lack of opportunities of the individual for profit or loss.

After reviewing the regulations proposed 2 years ago by the Treasury, the language of paragraph (4) of H. R. 6000, and the committee

report accompanying H. R. 6000, including the comments of your Joint Tax Committee staff, I have concluded that paragraph (4) gives even more of a blank check, if possible, than did those rejected regulations.

Those regulations would have substituted for the common-law rule for determining the employer-employee relationship a key determination of whether—

> an individual in a service relationship with a business * * * is dependent as a matter of economic reality, upon the business to which he renders service.

If determined so dependent he would have been classed as an employee. Those rejected regulations enumerated a series of evidentiary considerations for arriving at this key determination, and stated that no one was controlling nor was the list complete.

Paragraph (4) of the proposed definition of "employee" in H. R. 6000, broadly speaking, sets out evidentiary considerations specified in the rejected regulations, though with some modifications. "Degree of control over the individual" in the regulations, is changed to "control over the individual." "Investment of the individual in facilities for work" is changed to "lack of investment by the individual in facilities for work," and "opportunities of the individual for profit or loss" is changed to "lack of opportunities of the individual for profit or loss." An additional consideration, permissible under, though not specified in, the rejected regulations, "regularity and frequency of performance of the service," is also specified in paragraph (4) of the definition.

Paragraph (4) does not state whether or not any of the considerations are controlling. This would seem to give blanket authority to evaluate them according to administrative pleasure. The requirement as to combined effect contains no direction as to what evaluation is to be placed on the respective factors. Nor does this paragraph follow the rejected Treasury regulations in providing some frame of reference, some key determination to be reached after reviewing the various considerations. Obviously the key determination is not to be whether there is control or right to control the means, methods, and details of the performance of the work—the common law key determination. For paragraph (2) of the definition covers common law determinations, while paragraph (4) applies to persons excluded as employees under the common law determinations under paragraph (2). Furthermore, the key determination is not necessarily the "economic reality" determination of the rejected regulations of 2 years ago. For that determination is not required although it seems to me to be clearly permissible under paragraph (4).

Then what is the key determination upon which the employer-employee relationship is to be predicated? Since none is prescribed under paragraph (4), my opinion is that any administrative conceptions that may be from time to time evolved can be administratively prescribed as the key determination. The administrative discretion in selecting the key determination would not even be limited to the nebulous conception of "economic dependent." That is why I feel that giving an administrative free rein to determine status according to whatever conception may be evolved of the combined effect" of enumerated evidentiary considerations, is an even broader administrative blank check than was in the proposed regulations you have previously rejected.

My guess—and it is only a guess—is that the considerations enumerated in paragraph (4) will be used as a series of indicators pointing to employee status or independent status. It would be difficult to conceive of a business relationship where a number of these considerations would not be interpreted to point toward an employee status.

It is said of the control consideration that "control of the type pertinent to the first factor may in particular cases be evidenced by one or more of a variety of circumstances." Some of these are enumerated. One is "the right to terminate the service of the individual without cause or on short notice." In an example on page 90 the right to terminate a dealership arrangement on 60 days' notice was stated to be "evidence of some degree of control of the type contemplated by pargaraph (4)." Presumably any typical contractual arrangement terminable at will would be considered as even stronger evidence of control.

One would be inclined to think that an arrangement terminable at will or on short notice would not be considered "permanent." But in this very same example the relationship is also held to be "permanent"—a second factor to the employee relationship.

The factor "regularity and frequency of performance," according to the report, "is intended to be read in conjunction with and in contradistinction to the factor 'permanency of the relationship.'" This is rather confusing information to persons who contradistinguish permanency and temporariness. Apparently anyone who chooses to work regularly thereby has two factors, "regularity" and "permanency," automatically indicating that he is an employee. This was the conclusion reached in the four examples in the report where the individual worked regularly.

The skill factor is uniquely described in the report:

> Lack of skill is ordinarily indicative of the employer-employee relationship, but a requirement of a high degree of skill is not necessarily * * * inconsistent with the * * * relationship.

The integration factor, indicative of the employee relationship, seems to be regularly present. In the seven examples of the report involving various kinds of independent business, it was always concluded to be present, though incidentally six of those held people not to be employees. It is rather indicative of the fact that integration is not a phenomena peculiar to the employer-employee relationship. And yet we find that integration is treated as an indicator of the employee relationship.

The investment factor is described as applicable only to investment in equipment and premises, and the opportunity for profit and loss factor is described in terms of loss "through the use of capital." It seems that an individual doing business on a shoestring is quite likely to end up in an employee status, for the report states that lack of investment and lack of opportunity for profit and loss each indicate an employee status.

You will find by comparison that a great deal of the material in the committee report descriptive of the significance of the several so-called factors is derived from the rejected Treasury regulations of 1948. The principal change in the report seems to be a consistent elimination of recurring phrases such as "dependence as a matter of economic reality." The descriptions in the committee report are also

much shorter, and are even less informative than those in the rejected regulations.

Only the administrative agencies can state with certainty the original source of the several examples in the report of the application of the factors to specific situations. However, in one illustration (No. (7)), you will find that perhaps 90 percent of the verbiage is identical with the example which Mr. DeWind read to your committee at the hearings on the status quo legislation in 1948. You will find this illustration on page 24 of these hearings, and the conclusions on page 27. This identity would seem to indicate that both were from a common source, presumably unpublished material developed in anticipation of the promulgation of the rejected regulations. It also illustrates the fact that paragraph (4) of the proposed definition will delegate to the administrative agencies authority to make the very kind of rulings you restrained them from making in 1948.

Before concluding, I should like to point out that affected business is not alone in its appraisal of the consequences of paragraph (4) of the definition. You will find our appraisal supported by a nonpartisan technical analysis incorporated as appendix B to the report accompanying H. R. 6000.

There can be no question as to the objectivity and experience of the staff of the Joint Committee on Internal Revenue. This staff was the author of this analysis. Nor can there be any question as to the weight which should be accorded staff conclusions regarding paragraph (4) of the definition of "employee." The definition apparently was somewhat changed after the staff analysis was made, for on page 189 of the committee report, at the beginning of the staff's analysis of the definition, it is stated that:

> Paragraph (2) of the definition of "employee" in H. R. 6000 was written in accordance with the suggestions made in this analysis. As finally drafted, paragraph (3) referred to in this analysis, appears as paragraph (4) in H. R. 6000 with the addition of a new factor (regularity and frequency of performance of the service) and drafting perfections.

I mention this because the staff refers in its conclusions to paragraph (3), which is now numbered "paragraph (4)."

The conclusion of the staff will be found at page 195 of the report. I should like to read a part of it at this point:

> It is the opinion of the staff that paragraph (3) of the definition adopts a method of extending the definition of "employee" which is basically undesirable because it is too uncertain in its scope and because it will extend the definition of employee to include groups for whom it would be impractical, if not impossible, to demand an accounting for remuneration or tax withholding from it.

And I think this is extremely important:

> Assurances by present administrators of the voluntary limits which they will place on interpretations of the broad provisions of paragraph (3) will not be binding for the future, and the Federal Security Agency and the Treasury will not be in a position to limit the scope of paragraph (3) if the courts decide to place a wider interpretation on it. The issue could be litigated, in spite of the attitude of the administrative agencies, by individuals suing for benefits or for establishment of wage credits or to avoid a tax on the self-employed.
>
> Even if paragraph (3) is construed as being no broader than the economic-dependency test outlined in the proposed regulations published to interpret the Silk and Greyvan cases, its scope would be virtually unknown.

Following this opinion you will find a comprehensive survey of the probable application of the paragraph to various and sundry businesses.

I shall conclude my remarks by inviting your attention to three exhibits.

Mr. Chairman, these three exhibits are placed on an easel for your convenience. You will also find those same exhibits in mimeographed form at the end of the statement.

Now, in exhibit 1, we have set out the factors of paragraph (4), found on page 152 of H. R. 6000, preceded by the statement:

An individual who is an independent-business man may be made an employee by administrative officials if they think he should be an employee from the combined effect of the following factors:

Senator MILLIKIN. A combined and unweighted effect.

Mr. CALHOUN. Thank you for that observation, sir. "Unweighted" certainly is descriptive.

The first is "control over the individual"; the second, "permanency of the relationship"; the third, "regularity and frequency of the performance of the service"; the fourth, "intergration of the individual's work in the business to which he renders service"; the fifth, "lack of skill required of the individual."

I don't understand the change from "skill" to "lack of skill," but perhaps I am quibbling over words.

The sixth is "lack of investment of the individual in facilities for work" and the seventh factor, "lack of opportunities of the individual for profit or loss."

Now, the second exhibit is a comparison of facts relating to the nursery-stock salesman and the household-products salesman under the examples (4) and (7) in the report of the Committee on Ways and Means.

You will notice that the questions and answers are under two headings. The first heading is "Nursery-stock salesman" and the second heading "Household-products salesman."

Then we come to the questions. "How long does the contract with the salesman run?"

For the nursery-stock salesman we put "Terminable at will." As a matter of fact, in the example it was merely said that they entered into an arrangement thus making it perfectly plain that the example applied to whether the arrangement was or was not terminable at will.

In the case of the household-products salesman, the contract was terminable only on 60 days' notice by the company. As I remember, it was terminable at will by the individual, because there was no 60-day limitation stated as to him.

To the question: "Does salesman receive any training?" the answer in both cases was "Yes."

The question as to whether he was required to accept training was not answered in either example. So we might assume that each example covers cases, where it is solely the salesman's idea to learn something about the products as well as cases where the company requires the training.

Then: "Does salesman have a quota?" The answer in both of those cases was "No."

"Does salesman have a territory?" For the nursery-stock salesman the example did not answer the question. I assume the example applies whether he had a territory or did not have one. The fact about territory would have been stated, had it been of any significance. The

answer as to territory in the household-products-salesman example was "Yes."

"How is salesman compensated?" As to the nursery-stock salesman it was "by commissions." As to the household-products salesman it was "By profits from his mark-up on the goods that he bought from the company."

On the question: "Is the salesman subject to control by the company whose products he sells?" the answer was "No." in both cases. But I must "star" the second "No," because the House committee report states that the right of the household-products company to terminate the relationship on short notice (60 days) is evidence of some degree of control of the type contemplated in paragraph (4) of the definition. No similar statement is made with respect to the right of the nursery-products company to terminate their relationship with their salesman at will.

To the question "Is salesman required to work any specified time?" the answer was "No" in both cases. On the question of "How much time does he actually elect to work?" in the case of the nursery stock salesman it was "Irregularly." In the case of the household products salesman it was "full time." Any company has some distributors working full time and some part time as the companies don't control how much these salesmen work.

Now, the last question is "What is the 'legal conclusion' to be drawn from these facts?" For the nursery stock salesman, the conclusion, and we put it in quotes because of the humor of it, was "Clearly not an employee." For the household products salesman it was "Clearly an employee."

Now let us move over to the third exhibit, which also uses the two examples. This exhibit deals with the application of the "factors."

The control factor as applied to the nursery stock salesman: "No control, but company has right to terminate relationship at any time." The control factor as applied to the household products salesman: "No control, but committee report states that company's right to terminate relationship on 60 days' notice is evidence of some control of the type contemplated by paragraph (4) of definition."

"Permanency of relationship," as applied to the nursery stock salesman: "Relationship can be terminated at any time," and for the household products salesman: "Relationship can be terminated on 60 days' notice."

"Regularity and frequency of service," applied to the nursery stock salesman: "Company makes no requirement as to extent of services. Services in fact performed at irregular intervals." The same thing is true in requirement as to extent of service for the household products salesman, but he elected to work full time.

Under "integration in the business," as I mentioned, you always find here and in all the other examples, that the individual's services were integrated in the business.

Under the factor "lack of skill" there is, in the case of the nursery stock salesman, "little skill, if any," and in the case of the household products salesman, "some skill." While I don't think that goes to the essence, quite possibly it would take a more skillful man to intelligently sell fruit trees than household products or vice versa. There are, of course, some products that require more skill to sell than fruit trees.

"Under "lack of investment," there was no investment in each case. Under "lack of opportunity for profit or loss," in each case there was "opportunity for profit but no risk of loss." That was stated in both of the conclusions.

And again, under "legal result," for the nursery stock salesman it is "clearly not an employee" and for the household products salesman "clearly an employee."

I think, gentlemen, that is about as near the proof of the pudding as we could hope to come. I don't think that anything that we could say by way of observation would add to what these examples themselves demonstrate.

We feel confident that from your own consideration and study of these exhibits you will concur in our opinion and in the opinion of your joint committee staff that provisions such as those in paragraph (4) of the definition of "employee" are inappropriate in tax legislation.

The CHAIRMAN. Any questions? Senator Lucas?

Senator LUCAS. I would like to ask one question, Mr. Chairman.

If I understand your position correctly, you state that if the scope of paragraph (4) is virtually unknown, then, I take it, there would be interminable difficulties in the proper administration, assuming you position is correct?

Mr. CALHOUN. Senator, I don't think there is any question about it. When an administrative agency is pulled and hauled by different interests, you need certainty in the law for the protection of that very agency, you need a firm statute for them to lean back on. Suppose it was a matter of administrative grace and determination by a series of considerations as to whether an individual should be given or denied a benefit. You know and I know that administering a system of benefits where you would give or deny a benefit on the basis of some vague considerations such as are set out in the definition would lead to administrative chaos if not to worse situations.

Senator LUCAS. One other question along that same line: If the scope of paragraph (4) is virtually unknown, as contended by you in this manuscript that has been presented here, then the issues to be litigated in court are also virtually unknown and interminable as far as the future is concerned.

Mr. CALHOUN. I think, sir, that enactment of this definition would be the greatest lawyer-unemployment compensation you could possibly pass.

Senator LUCAS. Some of you lawyers are against it.

Mr. CALHOUN. Yes, sir; we are firmly against it. I think that any lawyer would rather resent his livelihood depending on a deliberate uncertainty of the law. I think we have that much ethics.

Senator LUCAS. That is all, Mr. Chairman.

The CHAIRMAN. Thank you very much, Mr. Calhoun.

Is there anything further from any of those associated with you?

Mr. CALHOUN. No, sir; I believe that is all.

(The remainder of Mr. Calhoun's prepared statement follows:)

An individual who is an independent businessman may be made an employee by administrative officials, if they think he should be an employee from the combined effect of the following factors:

(*a*) Control over the individual.

(*b*) Permanency of the relationship.

(*c*) Regularity and frequency of the performance of the service.

(*d*) Integration of the individual's work in the business to which he renders service.

(*e*) Lack of skill required of the individual.

(*f*) Lack of investment of the individual in facilities for work.

(*g*) Lack of opportunities of the individual for profit or loss.

Comparison of facts relating to the nursery stock salesman and the household products salesman under the two examples given by Committee on Ways and Means

	Nursery stock salesman	Household products salesman
How long does the contract with the salesman run?	Terminable at will	Terminable on 60 days' notice.
Does salesman receive any training?	Yes	Yes.
Does salesman have a quota?	No	No.
Does salesman have a territory?	Not stated	Yes.
How is salesman compensated?	By commissions	By profits from his mark-up on the goods that he bought from the company.
Is the salesman subject to control by the company whose products he sells?	No	No. [1]
Does the company actually exercise any control?	No	No.
Is salesman required to work any specified time?	No	No.
How much time does he actually elect to work?	Irregularly	Full time.
What is the "legal conclusion"?	Clearly not an employee	Clearly an employee.

[1] House committee report (p. 90) states that the right of the household products company to terminate the relationship on short notice (60 days) is evidence of some degree of control of the type contemplated in paragraph (4) of the definition. No similar statement is made with respect to the right of the nursery products company to terminate their relationship with their salesman at will.

Two examples of how new definition of employee is supposed to operate, together with the results that are supposed to be reached [1]

	Factor							Legal result
	Control	Permanency of relationship	Regularity and frequency of services	Integration in the business	Lack of skill	Lack of investment	Lack of opportunity for profit or loss	
Nursery stock salesman.	No control, but company has right to terminate relationship at any time.	Relationship can be terminated at any time	Company makes no requirement as to extent of services. Services in fact performed at irregular intervals	The salesman's work is integrated in the business of the company.	Little skill, if any.	No investment.	Opportunity for profit but no risk of loss.	Clearly not an employee.
Household products salesman.	No control, but committee report states that company's right to terminate relationship on 60 days' notice is evidence of some control of the type contemplated by paragraph (4) of definition.	Relationship can be terminated on 60 days' notice.	Company makes no requirement as to extent of services. Services in fact performed regularly full time.	do	Some skill	do	do	Clearly an employee.

[1] The two examples in this chart are examples Nos. (4) and (7) on pp. 88 and 90 of the report of the Committee on Ways and Means on H. R. 6000.

The CHAIRMAN. Mr. J. M. George is the next witness. Have a seat, Mr. George, please. You may identify yourself for the record, if you will, sir.

STATEMENT OF J. M. GEORGE, WINONA, MINN., APPEARING ON BEHALF OF NATIONAL ASSOCIATION OF DIRECT SELLING COMPANIES

Mr. GEORGE. My name is J. M. George, of Winona, Minn. I am appearing on behalf of the National Association of Direct Selling Companies, a trade association of companies operating in the house-to-house selling field.

The CHAIRMAN. It is an association, you say?

Mr. GEORGE. Yes. It is incorporated under the laws of the State of Minnesota, and the headquarters are at Winona, Minn.

The association has approximately 170 members. Based largely upon estimate there are upward of 3,000 concerns, possibly as high as 4,500, carrying on a distributive business of this kind. While we have in our membership a minority of such concerns in number we do have a high percentage in volume. We have probably 20 percent of the total volume.

The great majority of the concerns that deal with persons engaged in house-to-house selling are small. Probably none can be classified as big business and definitely a great majority of them are in the category of small business.

Merchandise handled through their method of distribution covers a wide range and is limited only by adaptability of the product to this type of selling.

It is the common method of distribution which furnishes the community of interest of all of these concerns.

The distinguishing feature between house-to-house selling and retail sales at a store is that sales are made by the personal contact of an individual with the customer or prospective customer at his home.

From a technical standpoint there is a variety of methods of house-to-house distribution operations. In all cases, however, the end result is the same. There is a manufacturer at the production end and there is an individual contacting the consumer at the other end. In some cases the individual's arrangement is that he takes an order and collects his reward by way of a down payment made him by his customer. In other cases he is a dealer, in fact a small merchant purchasing his requirements from the firm and reselling to his consumers at such profit mark-up as he chooses.

These independent individuals contacting the consumer are variously known as dealers, salespersons, or distributors.

Because of coverage in the bill, H. R. 6000, of self-employed persons as such there is no social question involved in respect to the definition of employee.

The principal issue so far as our group or category is concerned, is whether or not there is a justification for including as employees individuals who are not such in fact and with respect to whom the normal elements or principles of a pay-roll relationship are absent.

Senator MILLIKIN. That all comes down to who pays the bill, does it not?

Mr. GEORGE. Yes. Here there is only a tax question but the principles and implications are profoundly important.

We take the position that no group of individuals should be brought under an employee status unless there is present in their relationship with the operators of the business the elements normally present in a pay-roll relationship.

Because of the nature of the remote relationship between persons operating direct selling companies and the individuals contacting the consumer there is a great turn-over of salespersons coming in and going out of the operation. Frequently in order to maintain a list of, for instance, a thousand of these individuals, the operator must, during a year's time, put on a thousand or more new names.

These individuals are not on any operator's pay roll. The operator maintains simply a card index list of their names and addresses, and this list is changing rapidly and daily.

The average age according to cross-section tests made in the past few years is about 45 and a very considerable percentage are over the ordinary statutory retirement age.

These individuals come from various positions in life: Housewives who because of being such are unemployable and find it necessary and helpful to augment other sources of income: persons beyond the statutory retirement age; young persons while going to school and working during vacations or otherwise, not yet regularly into the commercial or industrial picture; persons unemployable because of some physical disability; those who find it difficult to get employment because of having passed their working prime; employed persons seeking needed additional income; and pensioners who can't live on their pensions.

In this field there is no unemployment and suitable connections and suitable work are always available.

It might be of interest to note here that many of these individuals who have built up retirement benefits under employed activities outside of the direct selling field have, in order to augment the retirement benefits, gone into direct selling. This in the past few years was forcefully called to our attention by reason of the fact that in a number of instances the Security Agency, upon finding that these people in some cases earned $15 or more per month, had their benefits discontinued upon an Agency ruling that they were employees in direct selling and, therefore, had not discontinued their employment status. These rulings did not stand up, as they were not employees.

Historically, legally, and otherwise, these individuals have never been classed as employees. Years of experience have shown that they are, in fact, free-lance operators and not controllable.

In view of this clear-cut history I am not going to take time to point out in detail the supporting facts. However, I will refer to the absence of the pay-roll elements in this relationship, which makes it impossible to do business with them on a pay-roll basis or comply with requirements predicated on a pay-roll relationship.

Now, as to normal pay-roll elements: The maintenance of a pay roll presupposes and must be based upon a number of elements.

(1) The services must be performed under or subject to the observation of the firm for whom performed.

(2) There must be available to the firm a means of first-hand knowledge necessary for the establishment of the amount of compensation and the time it was earned.

(3) The firm must have first-hand information for the making and keeping of records required by law of employers.

(4) The firm must have first-hand information as to whether or not the individual is working and if so, for whom.

(5) The individual must be subject to the supervision and control of the firm in the performance of the service involved.

In our case or any other case, where these elements are absent the artificially created employer-employee relationship leads to harmful results and impossibilities. These difficulties and impossibilities will arise under other laws as well as under the legislation we are considering.

Now let us consider direct-selling operation from the standpoint of normal pay-roll requirements. The distributor operates totally away from the possible observation of the firm, he is totally uncontrolled and uncontrollable as to time put in, as to when he works, and as to whose products he distributes.

The firm has no information and can get no accurate information as to the amount of his gross income. Manifestly it cannot know his net or taxable income, as the individual operates entirely at his own expense and himself controls the amount of net or gross profit that he may make on a large number of small transactions.

As a matter of fact, in the house-to-house selling relationship the firm has none of the necessary pay-roll information, and can have none except from the self-serving declarations of the individual himself.

The firm does not have power under its contract or in fact to even require the individual to furnish pay-roll information.

Such information, if furnished, would be the basis of the firm's tax return and the firm receiving it has no means of knowing or compelling its accuracy.

Putting this sort of obligation on a firm constitutes the very same thing as if all firms were required to let each individual employee furnish his own pay-roll data which the firm would be obliged to use without regard to accuracy.

It must not be lost sight of that if these individuals refuse to make their reports no punishment is involved. Furthermore, even if some of them make reports there is nothing that the firm can do if such reports are willfully inaccurate or fraudulent.

Only the Government has the power to compel the making of accurate reports and to punish for failure or for inaccuracy or for fraud in tax reporting.

This fact alone should be sufficient to indicate that these distributors must be taxed only on a self-employed basis where the Government has the machinery and the power to obtain returns and to compel their accuracy.

Not only would the definition of employee in H. R. 6000 create this impossible condition but if these individuals are distorted into employees under this act they will be similarly brought in under other acts, both Federal and State.

At this point I should like to make some remarks about the destructive byproducts of wrongful coverage of these distributors as employees. By distortedly bringing them under this act as employees.

the destructive byproducts beyond the scope of this act will include:

(*a*) The inducement of the same distortions into all other social legislation by the adoption of a similar definition or by court determination to that effect. This includes Federal unemployment compensation, wage-and-hour legislation, prospective cash sick-benefit legislation, State and Federal, and prospective health and medical legislation.

(*b*) Federal income-tax withholding.

(*c*) State and municipal income-tax withholding; and, by the way, there are many States making this sort of a requirement in their income-tax laws, and many municipalities have income-tax laws in which they make withholding necessary.

(*d*) State unemployment compensation insurance.

(*e*) State workmen's compensation laws, involving among other things a very heavy insurance premium load, and an enormous amount of record-keeping.

(*f*) State minimum-wage acts, creating a certain and positive impossibility of continuance in our present business.

(*g*) Coverage under foreign corporation statutes involving numerous new tax and other burdens and obligations.

(*h*) Eventual broadening of the common law relating to employer's liability for torts.

There are undoubtedly other results and impacts which presently cannot be foreseen.

Our objection to this definition is thus not an objection to the payment of Federal taxes. Our objection is to the impact that comes to us in one way or another as a result of a distorted coverage definition.

We cannot fully estimate the increased costs of operations coming from the getting of reports, handling of reports, keeping of books and records, reporting and returning information to Federal, State, and municipal agencies, and the procurement of insurance which would become necessary under some of these laws.

We, from experience, know that it is impossible to get anything like a satisfactory percentage of these individuals to make reports of any kind.

It would be much worse trying to get them to make a more difficult report of the kind which would be involved here.

We have no power to compel or punish failure or refusal to report.

The average annual turn-over in personnel is close to 100 percent. Much over one-half of these people carry lines of a number of companies, further complicating the situation and increasing the amount of report and bookkeeping burden, and difficulties to these individuals.

Compelling our concerns to abandon their historic methods of business and bringing them under foreign corporation statutes would not only increase their reporting and book work but would bring into application new local taxes and other burdens.

In the absence of a compelling social purpose requiring it, no justification can be made for subjecting our companies to the destructive byproducts resulting from creating an artificial "employment" relationship with distributors.

If these independent distributors are brought in as employees it will be a great disservice to them. Many of them, though being required to report and pay taxes, will never be eligible for the benefits, because of their low incomes.

Inclusion of the individuals as employees stops any chance for them to earn more than a stated maximum monthly from this source without losing old-age benefits.

Individuals who are better-than-average producers, if placed on an employment basis, might very well find themselves confronted with necessity on the part of the firm to fix the amount of income for the services performed and in those cases the amount of income would be less than the amount they would earn on a free-lance self-employed basis.

This kind of disadvantage applies in many fields of activity, and would probably be severe in the case of some of the other groups.

In the event the proposed definition were adopted those operators who try to go ahead under the new status will find it absolutely necessary to deny earnings opportunities to probably one half or more of the casual, part-time, and intermittent individuals seeking to augment their income.

The required reduction in the number of such individuals will be promptly reflected by reduction of employed executive, administrative, office and production personnel.

These reductions will be further reflected in reduced volume of business and less revenue to the Government from incomes.

It is difficult to see how anyone can profit by the definition of employer which we are objecting to.

Our operators under this definition would be required to pay taxes on the basis of guesswork. A separate formula would have to be set up in the case of each firm and a formula allotted to a given firm would not be applicable on a fair basis to many of the distributors involved.

No formula can be set up which can be a substitute for necessary facts. And that certainly should be a ruling consideration in tax legislation. In the case of each individual it is impossible for the operator to know the time when earnings were made—and this is a tax-reporting requirement—or the amount of the gross or net earnings which are to be translated into wages. The operator has no way of getting this information or enforcing the making of reports or of having such reports made accurately.

The operator would be required to report and pay the employee social-security tax even though never received from the distributor. Add to this the difficulties arising from the various tax laws and ordinances which require withholding.

These considerations alone are enough to compel a determination that these self-employed individuals should stay in that category.

Senator MILLIKIN. Mr. Chairman, may I ask this. Assuming that it should be the judgment of the Congress to give coverage to the self-employed, what would be a practical method for getting the contributions from the self-employed and for the Government to know what they are doing?

Mr. GEORGE. Well, I have never given any particular study to that. It would seem to me that, so far as people in the income tax brackets are concerned, that could be covered in income-tax returns.

Senator MILLIKIN. Well, many of these people do not report.

Mr. GEORGE. I think this bill itself sets a $400 limit, does it not? And, if their income is under $400, they are out. Now a lot of these people that will be brought in will be under a total annual of $400.

Senator MILLIKIN. Well, your point is that you have no practical suggestions as to that?

Mr. GEORGE. No; I have not.

Senator MILLIKIN. My question does not imply any burden on you to give the answer to that.

Mr. GEORGE. Now I would like to refer briefly to legal history in this field.

The Congress in its first piece of modern social legislation, the National Labor Standards Act, exempted outside salespersons. Some of the considerations that we are raising here were reasons why Congress decided to make that exemption.

The Congress in 1935, though making no definition of the term "employee," showed clearly then and thereafter its intention to stand by the common law as to which there is the certainty resulting from thousands of court decisions.

Many of the States have had minimum-wage laws over a long period of time, and in no case have they ever brought this type of persons under coverage. The question has occasionally come up, and still the result has remained the same—no coverage.

So for as I know, none of the Statees have yet passed laws patterned after the Federal Wages and Hours Act, yet hundreds of such bills have been introduced, and in practically every instance these bills contained originally or by amendment an exemption for outside salespersons.

During the depression of the early thirties the National Recovery Act was passed and put into operation, and it involved wage and hour controls over "employees." This act was never construed or used to apply to house-to-house distributors.

There are compelling reasons why there is a legal history of this kind over so many years.

How would they be affected by the definition that is proposed in H. R. 6000?

In this definition the first sentence of subsection (2) sets up the only sensible line of demarcation between employed and self-employed persons. This line has been supported by many court decisions not only in the social-law field but in all other fields where the question of master and servant is involved.

The status based upon this rule of demarcation is well understood not only in the courts but by businessmen and the public generally.

Court decisions dealing with factual situations have established a yardstick by which people affected can almost in all cases themselves determine whether or not they are employees or self-employed.

Since the amendment of this act in 1948, the court decisions have been nonconflicting. The chaos and confusion which came up after the Silk case has almost completely disappeared.

Subsection (3) of the definition which sets up categories of employees would be justifiable only in the case of groups whose relations with the operator of the business creates a preponderance of normal pay-roll elements.

Subparagraph (4) of the definitions is, of course, an old story. It is an attempt to validate the proposed regulations of 1947 which were condemned by an almost unanimous vote of both Houses of Congress, and it should be remembered that such vote occurred even at a time when there was no coverage of self-employed persons.

This subsection (4) is based upon a misconception of the meaning of United States Supreme Court decisions and dicta in the Silk and other similar cases. It is often referred to as the economic-reality concept.

Senator MILLIKIN. I notice you say:

> It is an attempt to validate the proposed regulations of 1947 which were condemned by an almost unanimous vote of both Houses of Congress, and it should be remembered that such vote occurred even at a time when there was no coverage of self-employed persons.

But at that time the social-security end of the game was giving erroneous coverage to self-employed persons.

Mr. GEORGE. That is right—noncontributory coverage.

Senator MILLIKIN. They were in violent disagreement with the Treasury over it.

Mr. GEORGE. Yes.

Senator MILLIKIN. And we have a report from Social Security as to the amount of money that was involved in that erroneous coverage, which in brief constituted a raid on the trust fund built up by those who were employees.

Mr. GEORGE. This subsection also lays the basis for deals between groups and categories and the agencies. The power granted is practically unlimited. It makes every other part of the definition mere window dressing.

This subsection constitutes the most unnecessary and the most unwarranted delegation of legislative power to administrative agencies of which I can conceive. The Congress and not the agencies should by legislation determine who is or who is not an employee. The only practical method of doing this which has ever been found is the long-standing usual common-law rule, which is well stated in the first paragraph of subsection (2) of the definition.

We urge this committee not to depart from that rule, but in case of a desire to reach out beyond a true employee relationship the departure should be so clear as to be free from blank-check powers given to an agency, and no departure should be made of that kind where a preponderance of necessary pay-roll elements are absent; that is, absent from the actual relationship involved.

A person who may be subjected to taxation and other burdens and difficulties should be put in position by the law itself to know with reasonable certainty whether he is in or out.

No party platform, no campaign promise, has ever been written or offered at any time which has proposed that the Congress should surrender its normal legislative powers to any agency or agencies, so paragraph (4) is not a political issue.

Never have I elsewhere seen a serious proposal asking for such unconditional surrender of the legislative power to an administrative body as is evidenced by proposed subsection (4).

We urge you to eliminate subsection (4) entirely, thus retaining control of taxation by Congress.

Our objections to the proposed definition of "employee" are not in conflict with the broader coverage purposes of this legislation. By resolving our difficulties, no reduction of coverage will result, since the bill provides for coverage of self-employed, which is where these persons rightfully belong.

How, then, can there be any justification of a definition crucifying any group or category or destroying it or compelling it in a major way to depart from its historical practices or to give up its business necessities.

I shall conclude with a few remarks. I hope I have been able to convey to you the extent of the danger and destruction that adoption of this definition would bring to the persons whom I represent, who typically operate with substantially a complete absence of the nromal pay-roll elements in dealing with individauls in a status even further removed from employment than independent contractors.

We ask you to bear in mind the great added cost, the loss of volume of business, the necessity for making major changes in historical operations which paragraph (4) would require.

We believe you appreciate the difficulties and disasters which would result as the byproducts of distorted inclusion.

The individuals in our field are properly classifiable as self-employed persons, and so classifying them is the only reasonable solution to this particular issue that we are facing.

We therefore respectfully urge you to consider the rewriting of this definition so that the same shall include subsection (1) relating to officers of corporations and the first sentence of subsection (2) setting up a definite rule that everybody is familiar with.

I thank you.

The CHAIRMAN. Thank you very much.

Are there any questions?

We appreciate your appearance, here, sir.

Mr. GEORGE. Thank you.

The CHAIRMAN. Mr. Campbell? You may have a seat here, Mr. Campbell. Will you identify yourself for the record? You are representing the Fuller Brush Co., are you?

STATEMENT OF WALLACE E. CAMPBELL, VICE PRESIDENT, THE FULLER BRUSH CO., HARTFORD, CONN.

Mr. CAMPBELL. Yes, sir.

The CHAIRMAN. You are a man we have heard a lot about, or one of them.

Mr. CAMPBELL. Well, we are frankly very proud of the fact that our name carries with it a certain amount of prestige.

The CHAIRMAN. Indeed it does. That is right.

Mr. CAMPBELL. I might say for the benefit of the Senator from Colorado that I have a few replica samples of typical Fuller brushes here in my pocket.

Senator MILLIKIN. Your samples get smaller every year. I want to say, also, that that hair brush you gave me last year has not done any good.

Mr. CAMPBELL. Well, I don't think it would be advisable for me to enter into a technical discussion with you on the effectiveness of a hair brush.

Mr. Chairman and members of the committee, my name is Wallace E. Campbell, and I am vice president of the Fuller Brush Co., of Hartford, Conn. Actually, the divisions coming under my supervision involve the purchasing of all of our materials, our industrial

relation, and also our public relations. And as to that last assignment, you have the reason I am appearing for our company.

And I do appear in favor of a plan to extend social-security coverage to the self-employed.

As you know, our company manufactures all kinds of brushes—tooth brushes, hair brushes, furniture brushes, brooms, wet and dry mops—in short, more than 50 varieties available for use from cellar to attic and from head to foot. Moreover, our company is also engaged in the sale of cosmetics products. Our household products and cosmetics are sold to the housewives of America.

I was privileged last year to appear before the Committee on Ways and Means in the House of Representatives when H. R. 2893 was under consideration. At that time I demonstrated for the record the course of our dealings with Fuller dealers, the type of contract in use, correspondence with the Treasury Department over a number of years, and otherwise submitted a complete record for the consideration of the committee and its staff. I would respectfully direct your attention to pages 2415 and pages following up to 2429 in part II of the House hearings. In view of the complete detail then offered, it is not now my purpose to extend my remarks beyond the issue raised by the definition of the term "employee" contained in H. R. 6000.

At the time of the House hearings, Mr. Chairman, we had no knowledge of the form of the bill which later was to be reported by the committee and passed upon by the House. I sought to make it clear that our company is definitely in favor of the extension of the benefits of old-age and survivors insurance to those who are self-employed. Those who are in fact independent contractors and not employees under the common-law rule clearly can be covered by this bill if Congress, as a matter of policy, should so decide. I stress the words "as a matter of policy" particularly, since at page 57 of the bill in lines 1 to 7, inclusive, we find the legislation excludes physicians, lawyers, dentists, certain engineers, and a few others. And yet, Mr. Chairman, this very section does include all others receiving self-employment income or net earnings from self-employment. Why, as a matter of policy, certain categories of service are deemed to yield self-employment income when at the same time comparable and almost identical categories are not so included, it seems impossible to tell. Clearly, coverage on the one hand and exclusion on the other turns on congressional policy.

It had been my hope when I appeared before the House committee that our dealers could be covered as self-employed, which they actually are. Had the bill been so written, I most certainly would not have been here today.

But, Mr. Chairman, what has happened? The House bill clearly defines as employees those who are officers of corporations and those who are employees by the application of the usual tests embodied in the common-law rules. Certainly that is clear enough. The House bill also in subparagraph (3) of subsection (k) appearing at pages 49 and 50 of the bill includes certain defined categories. Any "employee," if I may borrow a term, or any employer is able to read subparagraph (3) and glean some understanding of its application.

But then we turn to subparagraph (4) on page 51, and again at page 152. There we read that a person who is not an employee under paragraphs 1, 2, or 3 of subsection (k) may have the status of an

employee "as determined by the combined effect" of the application of certain factors. And right there is where we get into trouble, where our difficulty arises.

Mr. Chairman, who is going to do the determining? Is it this committee? Is it the employer who, at his peril, decides that he does not maintain an employer-employee relationship? Is it the so-called employee?

It must be that the language contemplates that certain officials in the administrative agencies are to do the determining. They apparently will be authorized to withhold coverage from people who are just as much entitled to benefits as those who are decided to be covered. Who is going to draw the line? What is the congressional policy?

Now, Mr. Chairman, I suppose it is possible for this committee to write into a bill a provision that the employer shall not be liable for the withholding of taxes due from our dealers in the event that we never have any of their funds in our hands upon which to effectuate withholding. I suppose it is possible for Congress to say that the employer under no circumstances shall be liable for withholding until—affirmatively—and prospectively—a ruling shall have been made which determines such liability. The bill affords the employers no protection in these respects, any more than it gives the "employee" (so defined) any assurance of coverage. We submit that it is definitely unfair and inequitable that the businessmen of the country whose methods of doing business may bring them within the operation of subparagraph (4) shall be subject to liability solely at the arbitrary exercise of discretion by administrative officers of the Government. Tax liability, we feel, should be definitely ascertainable.

Because of this undefined "factors test," a new problem has arisen, and possibly it may not yet have come to your notice. In the case of one who is an employee at common law, such as a production worker in our factory or one who is employed in our various warehouses, naturally, the unemployment compensation laws provide for coverage. Such laws do not include our dealers who are independent contractors. If an employee by the common-law rules becomes unemployed, we must file a separation notice. Depending upon the laws of the various States, we must file such a separation notice within a period of from 5 to 7 days.

But, Mr. Chairman, the Fuller Brush Co. has over 19,000 dealers, strung all over this great Nation of ours. How can we possibly tell whether one of our dealers is working or not? How can we possibly know when he decides to quit selling Fuller products, or how long he has been unemployed? Whoever is responsible for the definition of "employee" contained in H. R. 6000, now under consideration, already plans the extension of that very definition to unemployment-compensation cases. Perhaps some of you gentlemen on this committee have not yet had an opportunity to examine H. R. 6718, a copy of which I have right here, a bill to extend and improve the unemployment-compensation program, but on pages 25, 26, 27, and 28 of that bill appears a definition of the term "employee." It is identical, word for word, with that proposed in the bill you are now considering. Surely you will recognize that Federal coverage will become the basis for coverage in each of the 48 States. Can you imagine what the problems of keeping records will be—not to mention the factual conflicts in thousands

of cases every day—if this so-called "factors test" should be adopted in H. R. 6000 and thereafter be extended to the unemployment-compensation field? I mention the matter only to emphasize the importance of the definition of "employee" as it appears in the House bill.

Incidentally, I have another bill, House Resolution 7331, introduced by Congressman Young February 16, 1950, and on pages 12 and 15 is the same definition of "employment" as contained in House bill 6000. Therefore, we have two of them already set up for following coverage on State unemployment compensation.

None of these difficulties mentioned by me or by people similarly situated need arise. It is perfectly possible that the social purpose to be sought under this legislation can be achieved if you will but cover these very people as self-employed, which they actually are.

As a matter of fact, Mr. Chairman, there have been many conferences among the officers of our company and between our representatives and those of various Government departments to the end that a complete accord might be reached. What we ought to accomplish is a definite basis upon which our dealers might properly receive the benefits of the proposed legislation. We had hoped that we could work out a solution of our difficulties and gain a clear understanding of our status, and then along came this unemployment-compensation bill. Mr. Chairman, surely you can see the endless hardship, the needless difficulty which might result from that type of legislation.

We even read the House report with great care in an effort to apply the explanations there given to our situation. If you would examine House Report No. 1300 at page 88 you will see example (4) in which the committee applies the "factors test" to a nursery-stock salesman, as demonstrated by Mr. Calhoun. After reciting the basis upon which the nursery-stock salesman does business, the committee advises the House that "the combined effect of all the factors * * * clearly shows that A is not an employee of the X company." Now turn to page 90 of the same report where you find example (7) as applied to a door-to-door salesman. It might have been a Fuller Brush man. The committee there told the House that "* * * the combined effect of the factors clearly shows that the salesman is an employee." I respectfully ask that you read both of those examples and tell me whether or not our dealers, our Fuller Brush men, clearly are covered in the one case or in the other and, how you—or we—can know. And how can you or we tell? Frankly, I can't tell, myself. It can apply either way in either case.

If Congress says that it is turning over to the administrative agencies the decision as to who shall bear the burden or receive the benefits of Federal legislation and who shall not, it's bad enough. It was because of efforts in the proposed regulations of 1947 to exercise such authority that Congress passd House Joint Resolution 296, on which I appeared before this committee. At least, under House Joint Resolution 296—still in full force and effect—we all can tell whether we are covered or not—and, gentlemen, Congress made the rule.

What is really involved in the "factors test" is the creation of an absentee-employer control over a Nation-wide dealership. What really is at stake is an uneconomic and antisocial effort to make employees out of people who never were and never have been considered to be employees. This legislation would make the independent contractor

in Hannibal, Ill., the employee of some concern in Pittsburgh or New York or Hartford. It would take the small independent businessman who is the backbone of economic growth in this great America of ours and say to him: "You may have thought yourself to be independent, living out there in Colorado Springs, or Athens, Ga., or Raleigh, N. C., or wherever, but you're not. You are an employee of the X company. You are subject to all of the laws which govern the employer-employee relationship."

Mr. Chairman, there are thousands of individuals in this broad land who have now become established in their own independent businesses. It is possible to extend to them the benefits of old-age and survivors insurance without producing this chaotic situation. It is possible to treat them as just exactly what they are without widespread confusion, hardship, and injustice. On the other hand, it is entirely likely that if this language in subparagraph (4) should stand, it will take 10 to 12 to 15 years of court rulings to decide what the combined effect of these factors really means.

And on the record, when our company was litigating with Treasury on a redetermination in 1943, it took about 4 years to come to a conclusive agreement on the way the case would go into court. In the fall of 1948 the Government asked us to withdraw our suit for recovery of a token payment made and redetermine it is independent contractors.

I dare say every man on this committee knows a small independent businessman—probably lots of them—who have built up their businesses right in their own home towns. Take the case of Mr. A. C. Fuller, the founder of our business. He is exactly 65 years of age. He has two sons in the business, one the president, and the other the general sales manager. Mr. Fuller started manufacturing brushes in the cellar of his sister's home in Somerville, Mass., about 1906. He did this work at night. During the day he personally went out to sell his brushes. He called upon the housewives of America, he walked from house to house, as he demonstrated his own wares. He believed that it was possible to permit a housewife to examine his wares and to interest her in their purchase with greater success than to try to market the same product from the shelf of some storekeeper who had no interest in pushing the Fuller product. When he found out that he could sell brushes, he enlisted the aid of other individuals who might also become interested in selling his product. From the very outset, the entire Fuller business stemmed from Mr. Fuller's fundamental idea that his dealers should be independent home-town businessmen. Mr. Chairman, it is a matter of personal fact, that I commenced selling Fuller products in 1916 to pay my way through college. When I landed in college I washed dishes and worked for a night watch and burglar alarm company for $150 a month. My first summer netted me $316; and that wasn't hay in 1916. I found out that selling Fuller products a few hours every afternoon eliminated the need for washing dishes or working 6 nights a week for the night watch and burglar alarm outfit. I put myself through school, and when I got out, I decided to stay in the business.

It is only 44 years ago that Mr. Fuller founded this business. Its success has depended entirely on the fact that a dealer in Fuller products has decided to enlarge his own opportunity and to establish

his own place in his own community. Actually, Mr. Chairman, in the development of the American economic system, whether the goods went across the Nation in wagon trains or down the coast in clipper ships, the sale of merchandise on a direct basis was undertaken by people who sought opportunity, to be independent, to work as much or as little as they liked, to gain a reward which fairly measured the amount of reward they expended. The first merchandise sold in this country was sold by the Yankee peddler, the Massachusetts or Rhode Island peddler, who went out with a pack on his back and sold pins and needles and kitchenware and bolts and cloth. They didn't even have brushes in those days. He went from the pack on his back to a wagon, a force and then the wagon trains, and the clipper ships. And so we have our American economic system, built on the Yankee peddler—on which a book has been written, by the way.

The sale of merchandise on a direct basis was undertaken by people who sought opportunity to be independent, to work as much or as little as they like, to gain a reward which fairly measured the amount of which they expended.

What I'm talking about is what we call the American way. Is it to survive? That is what is at stake in this type of definition, which would artificially and unrealistically define as an employee, a person who never was and who never intended to be anything but an independent businessman.

Therefore, Mr. Chairman, we ask that our dealers be classified as self-employed. We think that every individual should be able to learn from the statute itself that he is self-employed. We believe that tax liability should be clearly defined and not be made to depend upon a determination by the agencies of the Government. Of at least equal importance, we feel that our dealers should retain their independent status, to continue as they now are; a substantial factor in the well-being of American enterprise.

I would like to add just one more comment, having spent about 4 years in the legislative halls of my own State, that small but mighty State of Connecticut, which had the first charter granted in America, from which charter and our own State constitution stemmed many of the principles of our American Constitution. We are very jealous of our representatives in the halls of Congress and their prerogatives, and we want them to write the laws, and not have departmental workers decide how the laws should be written or handed down to us.

The CHAIRMAN. We thank you very much, Mr. Campbell. We were very glad to have you.

Mr. CAMPBELL. Mr. Chairman, I thank you very much for the courtesy and the pleasure of coming here.

The CHAIRMAN. Mr. E. J. Sievers? You may have a seat, sir. You represent the J. R. Watkins Co., of Winona, Minn.?

STATEMENT OF E. J. SIEVERS, VICE PRESIDENT, THE J. R. WATKINS CO., WINONA, MINN.

Mr. SIEVERS. That is correct, Mr. Chairman.

The CHAIRMAN. We will be very glad to hear you on H. R. 6000. I presume you are directing your remarks to the definition of "employee" in part at least?

Mr. SIEVERS. That is correct.

I am E. J. Sievers, vice president of the J. R. Watkins Co., Winona, Minn., in whose behalf I am appearing for relief from certain provisions of the proposed Social Security Act amendments contained in H. R. 6000.

The J. R. Watkins Co. was established in 1868 as a manufacturer and wholesaler of household and farm supplies. Included in this line of merchandise are household and farm disinfectants, insecticides, fungicides, mineral and vitamin feeding supplements for livestock and poultry, spices, packaged goods, flavoring extracts, toilet preparations, household and veterinary remedies, cleansers, waxes, and polishes, as part of an extensive line intended principally for the farm family. The Watkins dealer provides a valuable service to the farmer and residents of rural areas through his personalized service in the supply and delivery of these household and farm necessities.

The principal activity of this company over a period of 82 years has been the manufacture of this merchandise for sale to independent dealers ,trading for and on their own account directly to consumers on a house-to-house and farm-to-farm basis. This merchandise is sold f. o. b. our plants or warehouses and becomes the property, unconditionally, of the dealer to deal in or dispose of as he sees fit.

We sell this merchandise to these dealers principally on credit involving deferred payment running over long periods of time. We sell to others on the basis of cash with purchase and to still others on a monthly discounting payment basis. We never have any money or credits belonging to them. The situation is reversed in that the great majority of them always owe us money. Hence the company never has in its possession or under its control any funds belonging to the individual from which social-security or any other taxes could be withheld.

Dealers to whom Watkins sells products are entirely independent in their operations and are free by agreement, and in fact, from control by this company in all respects.

The dealer's net income represents the difference between the wholesale cost of the merchandise purchased either from this company, or from others, and their retail prices which they alone establish, less their cost of operations which, generally speaking, include advertising, travel expense, insurance, taxes, bad debt losses and inventory losses, and possibly other items.

Each dealer carries substantial stocks of merchandise, provides his own storage facilities and his own travel and delivery equipment, entirely at his own expense. Most of these dealers extend substantial credit to their customers with the intent of collecting on a trip-to-trip or crop-to-crop basis. Any resulting bad debt losses are borne entirely by the dealer himself. These dealers advertise at their own expense in their local newspapers, in social programs, school periodicals, and through local radio announcements and otherwise. Many of them also maintain booths for product displays at local county fairs, all at their own expense and their own choice.

Each dealer now reports to his State or municipality for sales taxes, personal property taxes, State excise taxes, license and occupational fees, and to the Federal Government for excise taxes. He is also personally responsible for compliance in any other field that might relate to his business under State, Federal, or local laws or regulations.

The net earnings of these individuals vary substantially due to large variances in transportation costs and population densities between different localities, different travel conditions, and differences in the skill and efficiency of the individual in the management of his business and the collection of his accounts.

Neither the wholesale value of merchandise shipped to a dealer nor the amounts of cash remittances received from a dealer by the company would give any approximation of either the gross or net income of any individual.

Our dealers include highly successful merchandisers who are reputed to earn between $6,000 and $10,000 annually. Many of these dealers have dealt with us continuously for over 40 years. We also deal with many individuals who operate on a limited part-time basis to supplement other income, and with individuals who operate only to the extent of satisfying their day-to-day financial needs. The extremes and variances are too wide and numerous to permit the use of any averages or to permit the determination of any equitable formula.

The use of purchases as a measure of cash income for any period would create a distortion by the amount of merchandise retained in stock, the amount put out by the dealer on credit, the extent merchandise is given away or sold below cost or without profit in sales promotion deals and the value of self-consumed merchandise. Dealer remittances would likewise be unsatisfactory as an income determination basis because of the absence of any relationship to dealer sales and collections. In many instances the repurchase of unsold goods by the company at termination of the relationship results in refund by the company to the dealer.

This occurred in 729 credit accounts settled during 1949 involving refunds by the company up to $2,700 in a single case. The use of either purchase or remittances in these cases as a factor in estimating dealer net income would have resulted in the overpayment of taxes by both the dealer and the company, necessitating the establishment of new tax-refund procedure by the Government.

Further complication would result in cases where we are unable to collect the dealer's account or the collection of the account extends over many years. During 1949 we charged off to bad debts in full or in part a total of 694 accounts. We also collected on 590 accounts where the dealer discontinued his operations prior to 1949 and as far back as the year 1931.

Neither the company nor any administrative agency of the Government could accurately estimate the true income of any individual or determine the amount of any taxes payable by either the company or the individual under the circumstances I have outlined. Any attempts to require reports of net income by the dealer to the company would be unworkable due to the company's inability to compel the filing of any reports or to determine their accuracy if filed. The interests of the dealer would be adverse to that of the company in reporting, putting the company entirely at the mercy of the individual with respect to the amount of tax involved.

The problem of estimating the taxable net income of any individual would be further complicated by the fact that many dealers handle everything from bobby pins to tombstones in addition to Watkins

products. The problem of allocating income and expense to the companies from which he makes purchases would involve an exceedingly difficult bookkeeping problem for him. Under the proposed definition of an employee in H. R. 6000, it is highly probable that a dealer might be retailing merchandise from one source of supply under which he would be classified as a self-employed person, while at the same time he could be classified as an employee with respect to his purchases from other companies.

Despite the compelling circumstances of independence surrounding these dealers in their relations with the company, it is probable that certain of the proposed amendments to the Social Security Act would permit interpretations that would artificially establish an employment relationship with these individuals that would be extremely injurious to this company and would, at the same time, create a situation detrimental to the type of individual which the act intends to benefit.

In addition to the overwhelming clerical burden that would be imposed on the company in an attempt at compliance following an employee classification to dealers for the purpose of this act, the following additional burdens would arise, without any doubt.

We would be required to come under the various State unemployment acts, although any idleness by a dealer would be self-inflicted and in many States disqualify him, for the reason that merchandise is always available either from our company or from any of the many companies engaged in wholesaling to such individuals. Suitable work is always available.

Our major problem in this business is the recruiting and turn-over of dealers, and it is our practice to do everything possible to keep them. Nevertheless, during the year 1949, we would have been required to report earnings, maintain records, and pay taxes for 24,637 dealers, though the actual number of dealers at the end of the year numbered only 10,130.

A similar classification would naturally follow for the purpose of workmen's compensation insurance, minimum wages, and wage-and-hour regulations, although we would never know the number of hours worked or if the individual was ill or on vacation. Frequently many months elapse before we even learn of a dealer's death.

The comany instead of the dealer would become responsible for the collection and payment of State and municipal sales taxes, license taxes, and Federal excise taxes. It might also become responsible for personal-property taxes on the dealer's stock of goods, although it is off the company premises and beyond its control and belongs to the dealer unconditionally. It would very likely follow that the company would be required to become domiciled in all of the 48 States with resulting complications in connection with corporate income taxes and various other reports and burdens required of and imposed upon corporations.

Under an employee classification, the company would become liable for torts involving these individuals. We would be entirely defenseless inasmuch as we could not require the carrying of liability insurance on a dealer's automobile or truck, nor could we supervise or control any of his acts in connection with the conduct of his business.

Our relationship with these dealers is based entirely on the profit incentive to them. Many of the dealers undertake this business with visions of permanency. The amount of a dealer's income is dependent

entirely upon his efficiency as a businessman and upon the amount of time he devotes to his business. Many of these dealers in rural areas to whom we sell merchandise are enjoying profits equal to or in excess of those earned by the average small storekeeper. The only control factor now existent is the profit motive of the dealer, and he furnishes that motive himself.

Our dealer organization now includes many high-school and college students, housewives, the temporarily unemployed, and retired persons attempting to supplement their pensions or savings. The necessity for control and supervision, which the proposed definition would require, would make many of these individuals unacceptable to the company and in many cases would make us unacceptable to the individual, resulting in lost volume to the company and depriving the individuals of their present opportunity for livelihood or supplemental income.

The impact of all the adverse factors referred to would be ruinous to this company. Our present pay-roll recording expense would be multiplied. Substantial increases in correspondence and stenographic costs would result from attempts to secure reports required. The magnitude of these increases is measurable by the fact that our present pay roll would be multiplied, increasing from 1,562 to 26,199 based on 1949 records, if the present definition of "employee" were permitted to remain in the bill. Costs of workmen's compensation insurance and unemployment taxes would likewise be pyramided. The cost of employers' liability and fleet auto liability insurance would be prohibitive if available at all, considering the impossibility of control by the company over these individuals. The cost of attempting to collect and account for State and local sales taxes, Federal excise taxes, and State, local, and Federal withholding taxes and the preparation and filing of additional State and local reports is beyond the powers of the imagination to estimate. We deal in merchandise that is already highly competitive and it is inconceivable that we could continue to compete with manufacturers or wholesalers who will not be required to assume pay-roll tax, and legal responsibilities for their retail outlets.

The CHAIRMAN. Senator Millikin?

Senator MILLIKIN. From the standpoint of the net result, you would have either to go out of business or go into the conventional manufacturing business, using jobbers and wholesalers in the conventional way for the distribution of goods?

Mr. SIEVERS. That is right.

Senator MILLIKIN. And you are not organized to do business that way?

Mr. SIEVERS. We do not have the organization or the know-how.

Senator MILLIKIN. And you have developed your skills in the way in which you now employ them?

Mr. SIEVERS. That is right.

Senator MILLIKIN. Is that not roughly true of all of these other gentlemen who have testified as to their businesses?

Mr. SIEVERS. I would think so; yes.

Either as a result of inability of compliance or because of prohibitive costs this 82-year-old company would have to restrict its activities and lay off employees, causing unemployment in the communities where it maintains branches, warehouses, and manufacturing plants.

The Federal, State, and local governments would lose substantial tax revenues and at the same time take on the added expense of caring for these unemployed.

We have tried to point out the disastrous results and the impractical situations that would naturally follow under the proposed definition of "employee." These adverse results would apply not only to our company but would also operate to the detriment of those individuals for whom it is claimed the proposed definition will provide benefits.

These individuals are definitely self-employed. The bill covers self-employed persons. This is the classification where they belong.

Section 4 of the definition of "employee" should be eliminated entirely and paragraph G of subsection 3 should likewise be dropped.

This will bring these individuals under the act as self-employed individuals and will eliminate the possibility of administrative or judicial legislation creating an artificial employee relationship that would result in the curtailment or elimination of an important industry, increase unemployment, decrease tax revenues, and destroy the opportunity for thousands of self-reliant individuals to earn a livelihood or to augment an otherwise insufficient income.

The CHAIRMAN. Any questions?

Senator KERR. You do not have a suggestion as to how these persons, if under the act as self-employed, could be made to provide the necessary reports, to pay the necessary taxes?

Mr. SIEVERS. That I would not know, except in connection with the filing of their regular income-tax returns. The filing on the quarterly basis, I would say, would be extremely difficult, because he operates on a cost-of-sales basis. It would almost have to be on an annual basis.

Senator KERR. For the great majority of them who might need the benefits most, would not the administrative problem be almost as difficult to handle them as self-employed, as you have described it to be if they are classified as employees?

Mr. SIEVERS. Well, the matter of their reports has been testified to by the Treasury. Those that probably would have income sufficient to entitle them to benefits would be required to file ordinary income-tax returns anyway.

Senator KERR. But for those who do not file an income-tax return, you do not have a suggestion?

Mr. SIEVERS. No, sir.

The CHAIRMAN. Thank you very much for your appearance.

Mr. SIEVERS. You are entirely welcome.

The CHAIRMAN. Mr. L. B. Whitehouse?

Mr. Whitehouse, you are appearing here for Charles F. Myers?

STATEMENT OF L. B. WHITEHOUSE, VICE PRESIDENT, MORTON MANUFACTURING CORP., LYNCHBURG, VA., TRADING AS BLAIR OF VIRGINIA

Mr. WHITEHOUSE. I am substituting for him. I was out of the city at the time the list was originally made up.

The CHAIRMAN. I see. You are representing the Blair Laboratories, are you?

Mr. WHITEHOUSE. Yes, sir. I am vice president of the Morton Manufacturing Corp., trading as Blair of Virginia.

The CHAIRMAN. You may proceed, sir.

Mr. WHITEHOUSE. Mr. Chairman and members of the committee. My name is L. B. Whitehouse. I am vice president of Morton Manufacturing Corp., Lynchburg, Va., and one of the original founders of the business.

Our business was established in 1919—31 years ago. Trading as Blair of Virginia, we manufacture and sell a general line of toilet preparations, food specialties, flavorings, household products, and simple home remedies.

We give regular, full-time employment to about 225 people, and have a pay roll in excess of one-half million dollars annually.

Our products are distributed through the direct-selling method, commonly referred to as house-to-house canvassing. This system of selling is the first and original way of distribution of merchandise by the manufacturer to the consumer.

The successful operation of a small business such as ours is essential to the economic and social life of the community in which we live, but in a bill now before Congress we see a threat to the stability of the business we have built over the past 30 years, and it is for this reason that I am today standing before the most important committee of the world's most important legislative body, seeking relief from the regulations as set forth in a certain section of the now pending Social Security Act, and which we believe would classify as employees the people to whom we ship our goods. We take the position that there independent dealers are not employees, and that any word or words in the act making them employees should be deleted from the bill.

The dealers who buy products from us are secured through the use of mailing lists, magazine and radio advertising. When their replies to our advertising are received, we furnish them with a sample outfit of products and pertinent literature to help them establish a small business of their own. The sales of our 200 or more products, to these independent dealers, is the lifeblood of our business. We sell to them at wholesale and they in turn sell on their own account to consumers through house-to-house canvass. Orders are received from approximately 35 States each month, and our volume of sales is about two and one-half million dollars a year.

Our annual list of dealers consists of over 60,000 names. Approximately 65 percent are women and 35 percent men. We receive an average of 2½ orders per dealer per year and the average size of the order is $12. Our daily average of orders received is slightly above 600.

We receive one order only from many of these people and never hear from them again. We have in our files the names of approximately 20,000 dealers who made their last purchase—in many cases their only one—during the last 3 months of 1948 and the first month of 1949.

These dealers fix their own prices at which to sell the merchandise they buy from us. We have no knowledge of the gross profit made on their sales nor do we have any knowledge of the dealers' expenses nor time devoted to selling our products.

In the case of our company, and in practically all other house-to-house or direct selling companies, dealers and sales persons handle other lines and there is no way of even guessing how much of their effort and how much of their time is given to the various lines that

they sell, to say nothing of expenses incurred in securing the orders and later making deliveries. These dealers pay their own expenses and we have no control over this subject and no ability to control it if we wanted to. The nature of the relationship of these people to our business precludes any possibility of control of any of their activities, however much we might desire to do so.

Most of them sell in spare time only and with a few exceptions they are people who have never been engaged in the conduct of a business that requires the keeping of books or other accounts, and such a thing as accurately figuring profits from sales would be completely foreign to them.

The setting up of a formula for determining their profits as a basis for determining taxes would be pure guesswork. Is the collection of taxes by guess a legal procedure?

To make even an estimate of the profit on an order, each item on the order would have to be figured separately and all figures on the order such as credits, transportation, et cetera, would have to be considered in the calculations.

The resulting estimated profit—which we know would not be accurate—would have to be further reduced by the dealer's selling expenses, and the value he placed on his time which is devoted to selling our line, eliminating the time he devotes to the sales of other lines. It is impossible to determine such expenses. If some magic formula should be set up to fix the dealer's profit which is subject to the tax, we would then have to prepare a social-security card record—name, address, social-security number, et cetera—record this figure, calculate the tax involved thereon, and enter the tax.

During the course of a year we would have to prepare over 60,000 different social-security records and make approximately 150,000 postings of the dealers' estimated profit and the tax applicable to this figure. This is at the rate of approximately 600 postings per day—that would be the equivalent of a pay roll of 600 people each day—this after all the preponderous accounting previously done. As previously mentioned, 20,000 dealers stopped buying from us in one 4 months' period. Thousands of these records would have had one posting only of the estimated profit on which the tax is based and the amount of tax. Assume, for the sake of illustration, that the dealer's net profit on a $12 order is 30 percent, or $3.60. We would be required to charge on the dealer's bill the amount of 5 cents, and we would be required to pay an additional 5 cents. Please consider the figuring incident to such a transaction.

Many thousands of these social-security records covering dealers who reorder would reflect taxes of less than $1 per year, not per quarter.

The cost to the Government as well as to this company of administering such records would be many, many times the amount of taxes involved.

Should this bill be passed as written, these dealers, who are not employees, would be wrongfully so classified, resulting in either our having to go out of the direct-selling business or be compelled to set up a new system of doing business which would make it so expensive that the new system would not be worth undertaking.

It would take an army of field supervisors and a terrific increase in our office administrative costs to properly supervise these dealers and

record their earnings when they are working in practically all of the various States.

Because of the nature of our business, orders must be completely processed each day so that the dealer may secure his merchandise promptly and make delivery to his customers. This prompt service to dealers is of vital importance to the successful operation of our business.

The details required for social-security records would slow down our flow of orders to the extent that good service to customers would be impaired—with the resulting loss of business.

Furthermore, if we had to operate on an employee basis, we would have to screen out all marginal operators (those who buy infrequently or in small amounts) and history has proven that if this has to be done, the profit disappears. We would have a heavy increase in expenses and a drop in volume of business which would be destructive. And we mean by "destructive" that our business would be destroyed.

To arbitrarily put these dealers on an employee basis would destroy the opportunity of thousands of housewives to augment their husbands' incomes, as well as many unemployable persons who are small producers and need supplemental income.

The Nation is now experiencing a definite decline in sales and an increase in unemployment. Our experience over many years shows that as unemployment increases, more people turn to direct selling as a means of livelihood. Since there is no unemployment in house-to-house selling, there is always an opportunity to make some money.

What about the minimum wage of 75 cents per hour now required under Federal law for all employees?

Should these dealers be classed as employees, they would logically come under Federal and State minimum-wage laws. Every dealer, whether part time or not, would have to be cut off if their volume of business is not sufficient to justify the payment of minimum wages. This would mean that when things finally settle down there would be considerably less than one-half of our dealers and salespersons selling Blair products. The minimum-wage element alone would precipitate a condition that would without question mean the total destruction of our way of doing business.

Should these dealers be classed as employees, our company would have to comply with State foreign corporation laws, eventual establishment of tort liability, compliance with the States' workmen's compensation laws, again adding another new force of office employees as well as the payment of insurance premiums under tort liability and under workmen's compensation laws.

Should these people be classed as employees, the various States having withholding provisions in their income-tax laws, similar to the Federal withholding-tax laws, would add further and unreasonable burden of compiling data and accounting, all of which would be unreliable.

Should the proposed bill become law and our self-employed Blair dealers be classed as our employees, we would be unable to determine the taxable earnings of the dealers as a basis for establishing the amount of tax we should pay and the amount to be charged to the dealers for future collection when and if he pays his bill.

Almost 72 percent of our business was done on credit in 1949. And that would mean an added loss to the loss of our charges to our dealers.

We respectfully request deletion in its entirety of subsection 4 of section K of the proposed law, which gives the administrative agencies complete power of determining inclusion or exclusion and also the deletion of any provision in the bill which would make these dealers our employees.

We favor and advocate the extension of social-security benefits to independent dealers, strictly as self-employed individuals.

We ask that the long accepted and usual common law rule defining "employee" continue to be recognized as the determining factor.

We ask that you—not some department of the Government, but you—a Congress of the people, by the people, and for the people, lift from this bill in its entirety that provision which would put a strangle hold upon, and sound the deathknell of, an important industry now enjoying the freedom of the greatest Nation on God's green earth.

Thank you, gentlemen.

The CHAIRMAN. Are there any questions

If not, we thank you very much for your appearance.

Mr. WHITEHOUSE. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. Calhoun?

Mr. Calhoun, you have had long experience in dealing with social security and social-security problems, and in the conduct of the hearings in the House.

Will you please explain to the committee, so that they might get a fair conception of it, how the taxes may be collected on the self-employed, particularly those smaller people who do not make returns, tax returns, ordinarily?

TESTIMONY OF LEONARD J. CALHOUN, MORGAN & CALHOUN, WASHINGTON, D. C.—Resumed

Mr. CALHOUN. I would say, sir, that as far as this bill goes it does not affect those with "self-employment income" below $400.

The CHAIRMAN. $400 a year?

Mr. CALHOUN. I believe that is the figure.

The CHAIRMAN. I see. Well, is that a net $400?

Mr. CALHOUN. It is the social security net income, which is in general net income from business or profession.

The CHAIRMAN. I understand they have a different definition.

Mr. CALHOUN. That is correct. The bill would add a new subchapter F to the Internal Revenue Code.

Senator Kerr has suggested that I give him a memorandum on the problem of covering persons with relatively small earnings. If you desire I would be glad to give it to the committee in memorandum form, or orally.

The CHAIRMAN. We would be pleased to have you prepare it in memorandum form, if you will, and we will be glad to put it into the record.

We would be glad to have you present it when you have prepared it.

Mr. CALHOUN. Yes, sir.

The CHAIRMAN. I believe that under the Federal income tax each taxpayer who earns $600 is required to make a return, is he not?

Mr. CALHOUN. That is correct, sir.

The CHAIRMAN. Whether he is liable for any tax or not.

Mr. CALHOUN. That is correct, yes.

The CHAIRMAN. But, as a matter of fact, we know that a lot of people do not make returns.

Mr. CALHOUN. I think, sir, you will possibly, if you cover self-employment, somewhat improve lower income tax returns if people genuinely want social security. In other words, they will have an incentive, if they want protection, to file income-tax returns.

The CHAIRMAN. That is true. But if they are brought under the system whether they want to come or not, they might still elect not to make returns.

Mr. CALHOUN. That is correct, sir.

The CHAIRMAN. However, if they were put on a voluntary basis, then certainly they would come in.

Mr. CALHOUN. That might well be.

The CHAIRMAN. I did not know that you were going to prepare a memorandum, but when you do so, please let us have it so that we may have the benefit of it.

Mr. CALHOUN. All right, sir. I will be glad to do so.

(The memorandum to be supplied follows:)

MEMORANDUM RE COVERAGE OF PERSONS WITH SMALL SELF-EMPLOYMENT EARNINGS

H. R. 6000 proposes to cover for the first time, under old-age and survivors insurance, some categories of self-employed individuals. It does this first by imposing a social-security tax on individuals with self-employment income of $400 or more in their taxable year, and second by giving them credits for benefit purposes with respect to the income so taxed. Self-employment income is different from gross income under the income tax, because self-employment business expenses are taken out in arriving at self-employment income (and also, of course, because there is not included in self-employment income income that is unrelated to the self-employed activities). For this reason it is reasonable to assume that most persons with self-employment income of $400 will have gross incomes of at least $600. But there will doubtless be some persons having self-employment income of $400 but a gross income below the $600 level, and hence exempt from the requirement of filing ordinary Federal income tax returns. In the case of such persons the annual self-employment tax would be relatively small (varying from $12 to $18 at a 3 percent rate), but this amount, payable at one time, would have a considerable impact on taxpayers whose income averages no more than $34 to $50 per month.

The proposed tax on self-employment is in general the counterpart of the employee tax presently imposed on earnings from "employment" as defined for social-security purposes. Like the employee tax, it does not apply to income in excess of a specified annual amount ($3,600 under H. R. 6000) and does not apply to income from certain work—for example, from agriculture. Like the employee pay-roll tax, neither liability for tax nor rate of tax is affected by the presence or absence of family dependents.

A principal difference between earnings subject to the social-security pay-roll taxes on wages, and earnings subject to the self-employment taxes, is that wages, no matter how small, are subject to the tax—both the withholding tax and the employer tax—while no tax is imposed on self-employment earnings where the aggregate for the year is less than $400. Indeed, employee taxes are imposed on earnings so small in aggregate that they are ignored for benefit purposes.

In appraising the social-security benefit and tax provisions, as applied to persons with insubstantial earnings over the year or the calendar quarter, it is important that we keep in mind two principal things: (1) Administrative and other practical considerations involved in tax collections, where small

earnings are concerned; and (2) The effect of the exclusion or inclusion of small earnings on eligibility for benefits and on the benefit amounts, in the case of the individuals concerned.

In broad theory, as presently conceived of, old-age and survivors insurance bases eligibility and monthly amount of benefits on earnings, and imposes supporting taxes on those same earnings. Both under existing law and under H. R. 6000 there are limitations on, and departures from, this broad theory.

One limitation is that of disregarding for social security purposes any part of earnings above a certain annual amount--$3,000 under existing law, $3,600 under H. R. 6000. This limitation is in general predicated on the, at least originally intended, purpose of the act—to provide only a floor of protection for individuals. OASI was conceived of as a device for reducing the likelihood that an individual's old age or death would result in creating a public relief problem. The maximum earnings counted for benefits are based on the idea that there is no social justification for providing persons whose incomes have been above the specified annual maximum with larger retirement and survivor benefits than are provided individuals and families whose earnings have been at the $3,000 or $3,600 maximum. In dealing with annual wages above this ceiling the tax and benefit provisions are identical. Each excludes the earnings above the ceiling.

This uniformity of treatment does not exist, however, in the tax and benefit provisions dealing with very small earnings. As a matter of fact, the benefit provisions themselves are not uniform in defining amounts of small earnings which shall be disregarded.

EARNINGS THAT ARE DISREGARDED FOR BENEFIT PURPOSES

Under H. R. 6000, "small earnings" are defined in somewhat larger amounts than in existing law, and the variance in amounts to be disregarded for various benefits purposes is also broader.

In determining whether an individual is "retired," "wages" of $50 or less per month are disregarded. In determining benefit amounts of an individual whose average wage and years of coverage are sufficient to make him eligible for some benefits, if his average wage is actually less than $50 per month it is "deemed" to be $50, and hence the actual amount of small average earnings is disregarded, provided, of course, that they are sufficient to afford "eligibility." I shall come to this in a moment. As for a self-employed individual, in determining whether he is "retired," earnings, regardless of amount per month, are to be disregarded unless the aggregate for the year exceeds $600. There are certain other variances between earnings as an employee and as a self-employed person.

Oddly enough, another figure—$400 per year, an average of $33.33 per month—is used in defining "year of coverage." Earnings below this figure in a year are ignored, whether from employment or self-employment, or a combination of the two. Under the bill a benefit is computed on the basis of average wages and then increased one-half of 1 percent per "year of coverage." Even more important, the bill reduces benefits in direct proportion to years which are not "years of coverage."

Still other size amounts of small earnings are disregarded for determining eligibility. Eligibility is conditioned on an individual having a sufficient number of "quarters of coverage." In the case of earnings as an employee, if wages are less than $100 in a calendar quarter, these wages are disregarded, but if $100 or more the individual has a quarter of coverage toward eligibility. Thus with less than $100 wages in a year an individual has no quarter of coverage toward eligibility; with amounts between $100 and $200 in a year he can have one quarter of coverage at the most, and may have none; with between $200 and $300 he may have none, one or two quarters of coverage, and with amounts between $300 and $400 he may have none, one, two, or three quarters of coverage, and with amounts of $400 or more, he may have one, two, three, or four quarters, depending on when he receives his pay and the amounts received.

In the case of self-employed persons, it is difficult, if not impossible, to determine the particular calendar quarter in which self-employed income was received, so the bill prescribes a special rule for the self-employed. In this case, $200, but less than $400, in earnings in a year is defined to mean one quarter of coverage; $400, but less than $600, is two quarters of coverage; $600, but less than $800 is three quarters of coverage, and $800 and more is four quarters of coverage. However, in cases where self-employed income is less than $400 it is not taxed or counted for benefit purposes. Less than $400 self-employment income would

be taxed and credited only in cases where both (*a*) $400 or more such income was earned, and (*b*) the earner had over $3,200 in wages in covered employment, as well as self-employment. In such case he is taxed and credited only with such self-employment income as will bring up his total covered earnings to $3,600.

It is somewhat baffling to find these varying concepts of "insubstantial wages" which are to be disregarded for various benefit purposes. In this connection, it might be noted that it would be possible to adopt one definition of "substantial earnings" for employment and self-employment, making both of them apply to earnings in a year, and utilizing a single figure which includes all covered earnings for purposes of eligibility and benefit amount. In fact, this was the approach in the 1939 legislation as it passed the House. The quarters of coverage device was introduced by Senate amendment, principally as a method of quickly qualifying people then old and with insubstantial periods of coverage. When the amendments went into effect no one had been covered more than 3 years. If it is found desirable to give fractional years' credit for small earnings, the approach of H. R. 6000 in dealing with self-employment could be followed. It would be of significance only in a comparatively narrow margin of cases where individuals had been intermittently in covered work, or had worked only intermittently. Such a change would permit annual instead of quarterly reporting, and annual posting in Baltimore of the details of each employee's earnings in as wide an area of cases as such a procedure would be feasible and to the mutual interest of the Government and the taxpayers.

EARNINGS DISREGARDED FOR TAX PURPOSES

As has been pointed out, overceiling earnings ($3,000 under existing law, $3,600 under H. R. 6000) are uniformly disregarded for tax and benefit purposes. In instances where an excess is collected (because the individual had two or more employers and in combination they paid taxes on over $3,000 wages) the individual receives a tax rebate of the excess taxes. Under the proposed self-employment tax provisions, no tax will be paid if, or to the extent, it would result, in combination with any taxed wages, in more than a total of $3,600 taxed earnings.

However, in the case of small earnings disregarded for benefit purposes, there is a disparity in the tax treatment afforded employees and self-employed persons under H. R. 6000. Under existing law benefits are based on total wages averaged out over the period in question, so all taxed wages, whether large or small, have significance (assuming that the individual is eligible) in the monthly benefit amount. Under H. R. 6000 they have no benefit amount significance where the amount paid in the year is less than $400. As has been indicated, their significance, if any, toward eligibility is limited to a rather narrow area of cases, and in those cases is further dependent on the quarterly distribution of wage credits over the year in question.

From the viewpoint of OASI being considered a contributory system, it is somewhat difficult to justify tax rebates being denied where the taxed wages have no benefit significance because they are under the floor of wages regarded for benefit purposes, particularly in view of the treatment afforded overceiling taxes. The disparity is emphasized by the fact that self-employment taxes have a $400 per year floor under H. R. 6000, and no tax is paid where earnings from self-employment are below this floor.

It might be noted that both "overceiling" and "underfloor" tax collections are incidents of the withholding technique of the pay-roll taxes, and one could be corrected by rebates as well as the other if the same tax policy applies to both

THE "FLOOR" FOR SELF-EMPLOYMENT TAXES

The foregoing has been largely by way of background in dealing with the question of an appropriate floor ($400 in H. R. 6000) for self-employment earnings. Quite obviously, if administratively feasible, self-employment earnings and employee earnings should have the same floor, just as they have the same ceiling.

But the minimum feasible floor in the case of self-employment, if taxes are to be assessed and collected as provided in H. R. 6000, is limited by the capabilities of the individual taxpayer in question. It is my understanding that there is statistical indication that an extremely high percentage of individuals with $400 or more in earnings from self-employment have gross incomes of at least $600 and hence are required to make income-tax returns under existing law. If this

is in fact the case, the $400 floor for social security self-employment income would add no substantial addition to the number of individuals required to file individual returns under existing law.

This, of course, is no guaranty as to the accuracy of the returns which may be filed by persons with insubstantial earnings. If total income is $674, no Federal income tax is due even for an individual with no dependents, and with $25 more income he owes only $3 tax. But the difference between $399 and $400 social security income is $12 in tax at the proposed 1951 rate. An individual with $1,324 total income and a dependent owes no Federal income tax, but at proposed 1951 rates would owe $30 for social security taxes if $1,000 were social security self-employment income.

It is difficult to evaluate the impact of these amounts of tax on the correctness of reporting both ordinary income taxes and social security self-employment taxes by persons with modest incomes. Presumably this may be considerably influenced by the particular taxpayer's attitude toward social-security protection. Border-line small social security self-employment income cases would frequently involve gross incomes of considerably under $100 per month average, and a multitude of very small transactions and expense items. It is probably unusual for any accurate records, either of income or expenses, to be kept in cases of this kind. My guess is that there will be a considerable area of what might be termed "voluntary coverage" whether the minimum social security self-employment income tax has a floor of $400 or a somewhat higher figure. As a matter of fact, a higher floor, say $800, would require a $24 payment if the person concerned decided his social security income to be $800 instead of $799. The $400 floor would make a $12 difference between paying and not paying.

If it were decided to impose only the employee rate on those with small incomes, perhaps it might make a substantial difference in the border-line cases where the taxpayer decides his social security income is above the floor amount. The 1½-percent rate is, of course, a compromise between the employer-employee rate and the employee rate alone, and is not necessarily the correct rate.

Consideration might be given to extending an option to individuals with some wages or self-employment income, say a minimum of $100 in the current year or perhaps in the previous year, to pay the self-employment tax necessary to bring their current social security wage credits up to the $400 minimum floor. While in theory this option would not be compatible with the general compulsory system, perhaps it might prove a fairly workable solution to the problem of individuals with earnings just below the floor.

To summarize:

(1) The problem of persons with small earnings—whether in employment or self-employment—is an important problem, for their coverage is a very real part of the purpose of the act if it can be feasibly accomplished.

(2) The system should be simplified as much as possible with a single definition of earnings to small to be recognized, and this definition should apply both for tax and benefit purposes, and apply both to earnings from employment and earnings from self-employment.

(3) The definition should be on an annual instead of a quarterly basis so as to permit annual reporting and posting—which will be the case for self-employment in any event.

(4) Consideration should be given to giving elasticity to border-line cases of very small income by permitting some option in such cases.

(5) The tax forfeitures implicit in H. R. 6000 where very small earnings from employment are taxed but no wage credit given should be eliminated by tax rebates on the same basis as applies to overceiling payments.

The foregoing suggestions are made on the assumption that the H. R. 6000 definition of "average wage" will be adopted despite the several rather serious objections to its adoption, and that accordingly a very considerable amount of wages, though taxed, will be ignored for benefit purposes.

The suggestions do not deal with the definition of "insubstantial earnings" to be applied to covered wages earned before the effective date of H. R. 6000. As is the case in H. R. 6000, the existing law as to "quarters of coverage" could remain applicable to these wages. Four of these "quarters of coverage" could be made equal to one "year of coverage" in determining eligibility.

Nor do the suggestions make necessary any radical change from that proposed in H. R. 6000 for "currently insured" status.

The suggestions are also written on the assumption that the committee is not prepared at this time to make a complete or virtually complete extension of

coverage to all gainful employment. Were such extension to be made, the problem of specifying minimum earnings for eligibility would disappear, and the problem of persons with small earnings would be limited merely to the problem of determining the level below which no taxes would be imposed. As has been indicated by some witnesses, universal coverage would permit removal of a series of basic inequities while the foregoing suggestions are principally to correct minor inequities and simplify the system.

The CHAIRMAN. Mr. Harry Minchin? You may have a seat, sir, if you will, please. You are Mr. Harry Minchin of the Specialty Salesman magazine?

STATEMENT OF HARRY W. MINCHIN, CHICAGO, ILL., MANAGING EDITOR, THE SPECIALTY SALESMAN MAGAZINE

Mr. MINCHIN. That is right, sir.

The CHAIRMAN. We will be glad to hear you, Mr. Minchin.

Mr. MINCHIN. Thank you, sir.

My name is Harry W. Minchin. I live in Chicago, Ill. It is my privilege to be the managing editor of Specialty Salesman magazine, the 34-year-old pioneer trade publication of what is known as the direct or independent selling field. I have been identified with this business for over 30 years.

This trade publication, which is distributed throughout nearly the entire country on newsstands by the American News Co., world's largest distributors of magazines, also goes to thousands of our subscribers.

In addition, house-to-house salespersons have an organization known as the Direct Selling Legion and it has thousands of members throughout the country. These members also each receive a copy of our publication monthly. The Direct Selling Legion, in fact, was founded in 1934 and is solely sponsored by our publication and it operates on a dues-free basis.

Through our close connection with our entire readership, including these members of the Direct Selling Legion, we have hundreds of personal contacts with salespersons, we know their problems, and we hear their gripes.

Our magazine specialize in the outside salesperson field and reaches upward of a quarter of a million of such self-employed men and women—mostly men—each month, and these independent self-employed distributors or salespeople, sell items which are used by virtually every segment of our population.

Very few of these independent salespersons handle merely one line—they sell anywhere from one to a half dozen or more. It is very important for this committee to know definitely that these people are totally uncontrolled as to time put in, choice of customers, volume of business, routes or places of travel. They are not required to report for work, are not furnished a place to work, and are totally dependent upon their own action for this business income.

It should also be clearly understood they operate entirely at their own expense and that the company itself has no knowledge of the amount of their expenses, no control of the same and hence, no information as to the amount of their net income, nor the time when it is determined.

These elements, which are entirely absent in the relationship involved, are all very important items which are always present under

a pay-roll situation. The absence of these pay-roll elements in this relationship precludes any conclusion that they are employed persons and makes definite and certain the fact that they are not controlled and furthermore, not controllable.

Our contacts personally and by volumes of correspondence with these people, is such that if they wanted to be put into an employed status, we certainly should have heard of it. We have never received from any of these persons, a verbal or written expression of their desire to be covered. The free-lance character of their relationship does not suggest to them any idea of an employment status.

No direct selling salesman need ever be unemployed except as a matter of his own choice. If a salesperson should give up a selling connection, there are always dozens and dozens of other connections involving the same type of work ready and available without delay. Since suitable work is always available there can be nothing but self-inflicted unemployment in this field.

We mention this for the reason that if the definition in the bill should be enacted into law, the very next legislative step would be to bring these people under unemployment compensation. Furthermore, without regard to whether or not Congress would so act, the labeling of these persons as employees would result very shortly in having them covered under the State acts.

It would be a ridiculous situation to impose taxation for unemployment compensation for the benefit of individuals who would not be eligible to receive such benefits. Our own surveys indicate that their average is 45. Obviously, such an age group of citizens is unable to endure the demands of modern production with its high-speed tempo. Without a freely available selling field to fall back on, they not being first-class employables, would have no place to go for a living.

Are these fine self-employed, self-supporting citizens to be told "you must stop work or become employees. You may no longer pursue your livelihood as self-employed people"?

This type of salesman is not to be confused with the so-called traveling salesman or drummer type of salesperson who does not sell merchandise to consumers but rather to the retail or other trades. In this latter field the elements of the relationship are so different that there is no comparison and ordinarily the drummer or traveling salesman type have always been considered as employees because of the presence of control and employment elements.

Senator MILLIKIN. Do you have any statistics available to you as to increasing sales resistance in this door-to-door business, or is it harder to make sales now than, say, a year ago or 2 years ago?

Mr. MINCHIN. We think not, Senator. There have always been sporadically throughout the country so-called local ordinances to try and prevent a salesperson calling upon people without first having a request to do so. Generally, they are the result of some agitation, and then there is the result of a little enforcement and then a forgetting of it.

Senator MILLIKIN. No; I am not talking about the restrictions on the person who is doing the selling. And I am not so sure that my question is relevant to your testimony, but I am just wondering whether the salesmen are meeting with greater customer resistance, say, now, than they did a year ago.

Mr. MINCHIN. I get your point, Senator; and our correspondence indicates that they do not. Does that answer the question, sir?

Senator MILLIKIN. Yes; that answers the question.

Mr. MINCHIN. Let us also keep in mind the sharp difference between the self-employed persons to whom our publication is dedicated and a person hired to operate a regular route and serve customers of some laundry, dry-cleaning establishment, dairy, bakery, bottling company, or similar establishment. He checks in and checks out, works when and where he is directed, and is fired in the same sense whether he is on a salary or on a commission basis. His required coverage of the assigned route will mark within close limits what his pay will be, regardless of how it is fixed.

Neither the traveling salesmen nor the route drivers handle any side line as a rule, and cannot do so without their firms' consent, but must devote all their time and efforts to the sale of the services furnished or product or products manufactured or distributed by their employer. It is my understanding that the drummers or salesmen just described are already held to be employees when the true facts are disclosed, because the employer directs, and accordingly knows, exactly what they are doing, what they make net, when they make it, and how they make it, and where they are, and is, therefore, in a position to properly make social-security reports.

The case of the independent, self-employed salesperson, for whom we speak, is utterly different. He selects the firm or firms whose products he chooses to sell. He makes no promises as to what time he will devote, what volume he will produce, or how long he will continue to handle the line. Being self-employed, he is free to drop any line he carries at any time he chooses. No one tells him where to go or to whom he may or may not sell. He reports neither time put in, nor earnings, nor expenses.

While I can understand the dividing line between these people and distributors of direct-selling companies, I cannot understand either the so-called factors in the new definition of "employee" in H. R. 6000, or the examples of how they will be applied to distributors in the direct-selling field.

I read the seven illustrations of who will be an employee in the committee report to this bill. Though two of these seven illustrations were of specialty salesmen in the direct-selling field, I am still very confused even in that field. One illustration dealt with nursery-stock salesmen and they were said not to be employees. That was the example numbered 4. Example 7 was of a household-products salesman. He was said to be an employee. I noticed that the nursery company arranged with the salesman to handle its products on a commission basis, gave him a catalog and order blanks, and perhaps gave him some instructions as to sales techniques. This describes what a great many direct-selling companies do. The illustration stated that—

> the performance of the service is neither regular nor frequent; nor is the relationship permanent.

I think this is typical of every firm's experience with a large percent of the salesmen with whom they deal. For these salesmen work when they want to and pick up and drop lines very frequently. A firm never can know, except by subsequent orders, whether a particular distributor will send in substantial business for a long period or small orders for a short time.

The salesman held to be an employee in example 7 was one who decided to devote full time to selling one company's products. This was strictly his own decision. They were careful to say in the illustration that he was not required to meet any sales quota, but only got quantity discounts, which is a rather typical arrangement. It is stated also in the illustration that this salesman was free to handle other products, and to choose his own routes and customers, and that the company had no right to control him in any way. So the decision to work full time and handle only one line was this salesman's decision and not the company's. Of course, no company limits the volume of business it will do with a distributor, and any distributor can work full time or part time as he chooses.

I am still puzzled why illustration 7 states:

> The factors clearly show that the salesman is an employee.

It is not clear to me, for common sense leads to the exactly opposite conclusion. Perhaps I don't understand the factors. This man or woman sells shoes or brushes or some other lines, and the man in example 7 sells fruit trees and is also a farmer, and I don't see anything in the factors about fruit trees or farmers.

I think you are going to confuse and mystify a lot of people if you adopt this definition of employee, judging from these two examples of what we can expect by way of rulings. I also wonder how a company would know whether a particular distributor is working full time, if this is the intended dividing line of what is an employee, or whether he is selling no other products, if this is the dividing line of who is an employee. Whether he is working full time or part time, or whether he is handling one line or more than one line, is solely the decision of the distributor—not that of the firm. The contractual arrangement between him and the firm leaves him perfectly free to decide both questions. Furthermore, he can change either decision at any time. He can take on an additional line or lines of products whenever he desires, or can decide to change from selling any particular product full time to part time, or vice versa. Will these decisions of the distributor, which may not even be known to a firm whose product he handles, have the effect of creating or destroying a payroll tax obligation of that firm, or of shifting the distributor's social-security tax obligation from that of employee to that of a self-employed person?

It would be an utter physical impossibility for the various firms to keep track of and make proper social-security returns on their distributors. Most certainly the self-employed men and women of direct or independent selling would have this source of livelihood torn from them were they distortedly to be forced into the social-security picture as employees. They are not employees. Quite frequently they carry the merchandise of several firms. The resultant attempt to keep track of their activities and arrange proper withholding to conform to the law would result in such chaos and needless expense that many manufacturers would necessarily have to discontinue this traditional form of doing business.

I read a while back that a big cooperative, G. L. F., I believe it was, gave up its income-tax exemption rather than keep up detailed bookkeeping of transactions with customers which were costing it nearly half a million dollars a year. What do you think will happen

to direct-selling companies if they are required to assume an even more expensive bookkeeping and reporting operation?

The firms distributing products which reach the consumer through self-employed distributors come under the heading of small business. Yet, in the aggregate, these small firms have hundreds of thousands of factory and office employees whose wages mean much to the well-being of the respective communities in which they make their living. To deprive these firms of their business arrangements with these self-employed distributors, which you do automatically if you determine to treat these self-employed people as employees, means that by so doing you are crippling the firm and throwing their actual employees out of work.

In view of the foregoing, I am here, as I have said, to speak for the many hundreds of thousands of men and women who would be most adversely affected if they are classed as employees under H. R. 6000, and on their behalf I earnestly urge upon the committee that all provisions in the bill which might affect their independent status be completely eliminated, and that you retain the usual common-law rule so far as these people are concerned.

It is my sincere belief that if they are classed as employees a most harmful situation would be created. As I have already indicated, I have read the new definition of employee and I don't know to whom it applies. I have been told by our attorney that no one knows just who would be in and who would not be in. This sounds like giving the enforcement agencies what virtually amounts to a blank check and the sole discretion as to whom they would include.

The definition would leave numerous large segments of business containing thousands of concerns, in a position where they would not know whether or not they had an employment relationship with independent contractor-type persons until some administrative employee of the Government made up his mind as to the classification.

It is already a well-known fact that the present law has eliminated this uncertainty and the chaotic condition, which existed for a few years after the enforcement agencies had abandoned the original regulations set up for the control of administration action.

Reestablishment of the former uncertainties and chaos would bring about another wave of litigation which would become necessary because of there being no certain or fixed criteria or yardsticks.

In closing this urgent appeal for a realistic view of the situation by this committee, we cannot too emphatically, urge your most conscientious consideration of the far-reaching ill effects of attempting to class these people as employees. Not only would it deprive thousands of these distributors of their present means of livelihood, but stemming back to the firms whose products they buy and sell, would also have the effect of causing these firms to close up their businesses, thus causing unemployment in the ranks of their actual employees, both in the shop and office. No injustice is done to either the distributor or manufacturer under the present definition of employee, but widespread and unnecessary harm can and will be done the industry if the H. R. 6000 definition is adopted.

Thank you very much.

The CHAIRMAN. We will proceed, gentlemen, as far as we can, until there is another call for us or until we find it necessary to recess, if that is agreeable with the committee. I think maybe we can finish.

Mr. Charles J. Brooks? Mr. Brooks, you are appearing here on H. R. 6000.

STATEMENT OF CHARLES J. BROOKS, VICE PRESIDENT, THE C & D CO., GRAND RAPIDS, MICH.

Mr. BROOKS. Yes, sir.

The CHAIRMAN. You may be seated, if you wish to; and please identify yourself for the record.

Mr. BROOKS. Mr. Chairman and members of the committee, I am grateful for the opportunity to appear before you. My name is Charles J. Brooks. I am vice president of the C & D Co. of Grand Rapids, Mich.

My company has been in business for 39 years, selling dresses, lingerie, underwear and hosiery direct to the consumer, throughout the United States. This is done through personal solicitation on the part of approximately 10,000 salespeople. This method of distribution is sometimes known as house to house.

We would like to see all of these salespeople covered by social security—as self-employees, which is what they are. We are vitally concerned, however, over the possibility that they might be brought under social security as our employees which, in actual fact, they are not.

First, I would like to show why our salespeople are not employees, and, secondly, why it would be impossible for us to operate under our present plan of organization if they should ever be declared to be employees.

We have no control over these salespeople. They work when they please. They might put in 10 hours a week or only 2 hours in an entire month; or they might not work at all. They call upon whom they please, when they please. Many of them send in orders only for members of their own families. Many take orders only from friends and neighbors. We send merchandise portfolios and other materials to hundreds of persons every year who never send us a single order.

We require no purchase of samples or other investment. If they order merchandise to wear, or to carry as samples, they pay for it. They pay all of their own expenses.

At no time do we have any of their funds, nor do they receive any compensation on their sales direct from us. We quote a price to the customer and a deposit for the salesperson on each item. The salespeople are supposed to collect the deposit as their profit on each sale. We have no knowledge as to whether the full amount of the deposit, or any deposit at all, is actually collected. Frequently they get on our mailing list just to buy for themselves and close friends, less the deposit.

They work out of their own homes. In most instances they also carry the lines of other companies. It is not uncommon for independent contractors to carry as many as seven or eight lines. Our relationships with them are carried on through the mails. Their earning results are dependent entirely upon their own uncontrolled efforts.

It is not necessary to adopt the pretext that these people are employees of the C. & D. Co., purely for social-security purposes, since

this bill provides them with social-security coverage as self-employed persons. I believe you will consider that the following facts also prove that it would be impractical to consider them as employees.

On January 1, 1949, there were 10,248 people on our mailing list. At the end of the year there were 8,750. During the year we added 10,695 more to our mailing list. In other words, we added over 10,000 people to maintain an average mailing list of less than 10,000. Since we started with 10,248, and sent outfits to 10,695 more during the year, we had on our mailing list, sometime during the year, a total of 20,943.

The approximate 21,000 salespeople on our mailing list last year sold an average of less than $91 each during the entire year. Since their gross receipts (deposits) amount to approximately 17 percent they could not have made more than an average of $15.50 each for the year. From their gross receipts they must deduct their transportation and other costs of doing business, in determining their net profits or earnings.

Each month there were approximately 10,000 people on the mailing list, because each month we were not only adding new ones but discontinuing those from whom we had received no orders for a period of months. In this respect, our operation is similar to that of Sears Roebuck, Montgomery Ward, and other mail-order companies that send catalogs only to those customers from whom they receive some business. There was no month last year when as many as half of the people on our mailing list each month, sent us orders. In July only 3 percent of the people on our mailing list sent us one or more orders. Our best month was December, when we received one or more orders from 49.6 percent of the people on our list.

You can see from these facts that there is not the slightest chance of controlling these people. You will also see that there is a complete absence of any incidence of employment such as a chance to observe the worker while working, the opportunity to check hours put in and to check diligence, loyalty, et cetera.

Under the common-law concept, as covered by the first sentence of section 2, the definition of employees clearly indicates that people selling C & D. merchandise would not be considered employees on account of the complete lack of controllability. In fact, under the common-law concept, we have a ruling from the Treasury Department that these salespeople are not employees but are independent contractors.

While it is certain that our salespeople would be considered as independent contractors under section 2, we are very fearful that they might be declared to be employees under section 4 because, under this section, no one can tell who is an employee and who is not an employee. This, as you know, is the so-called economic-reality section of the bill under which a person is declared to have the status of an employee as determined by the combined effect of (A) control over the individual (B) permanency of relationship, (C) regularity and frequency of performance of the service, (D) integration of the individual's work in the business to which he renders service, (E) lack of skill required of the individual, (F) lack of investment by the individual in facilities for work, and (G) lack of opportunities of the individual for profit or loss.

I am going to interject there that many of those things can be interpreted. As for the integration of the salespeople in our business, certainly we couldn't do without them. It is the sole means of distributing our merchandise.

In this section of the bill there is no clear definition by law as to who is an employee and who is not. Such decisions become a matter of judgment on the part of men in charge of administration which is government by man as distinguished from government by law.

There is a grave likelihood that, if this section is included in H. R. 6000, regulations might be issued by the Treasury and Social Security Departments which would result in all of these 21,000 part-time workers being classified as employees. In fact, as you know, some time ago such regulations were under consideration, but were deferred when Congress continued the common-law concept in which controllability is the main factor.

Under the common-law concept, the line of demarcation between the self-employed and the employed is clear-cut. It stabilizes the question of status and there are hundreds of court decisions which form the precedent of such stabilization.

Under section 4, there is no stability, no certainty. People could be held to be employees or not employees, dependent entirely upon the judgment of administrative agencies.

You can imagine the situation we would be in if all of these people were declared to be employees of the C. & D. Co. For example, many States will pass laws setting up employee disability cash allowances. Such laws are already on the books of California, New Jersey, Rhode Island, and New York. Such a situation would be terrible. An actual employer has a chance to see whether an employee has a disability, upon which a claim can be based and amounts paid. We would never have any such opportunity and certainly could expect a multitude of claims of this kind with no chance to show lack of foundation therefor.

And consider the fact that several States and a number of municipalities have local income-tax laws which contain withholding provisions. In those areas we would not only have to handle the withholding for the Federal tax, but for the State and municipal taxes as well, which would be an impossible job.

There is also a probability that, if these persons were declared to be employees, we would be under the necessity of qualifying under the foreign corporation statutes of the various States.

We would, in practically every State, come under the unemployment-compensation requirements of such States. How could we possibly handle unemployment-compensation coverage when there is no unemployment in our business? If these people do not want to send orders for our merchandise, there are hundreds of other companies with whom they can make connections merely by writing a letter. Suitable employment is always available to them since there is never any unemployment, except that which they make themselves.

We would be held responsible for personal injuries, property damages, and death claims. There would be no way to protect ourselves against fraudulent accident claims, from all over the country, except at prohibitive expense. We would have to carry liability insurance on hundreds of people, to whom we send order-taking equipment each year without receiving an order. Our cost of carrying insurance would be excessive, amounting to more than the taxes.

The cost of setting up compliance machinery would be prohibitive. Even if it were financially possible, we do not believe we could secure the efficient cooperation of 21,000 people, scattered throughout the United States, in supplying all of the information required by law on the small amounts of net earnings that would be involved per individual. We have no power to compel them to report to us or to remit to us their part of any tax.

It is a matter of common knowledge that, if these salespersons are held to be employees, the Treasury Department will require the company to make withholdings, for income-tax purposes, despite the fact that the company has no funds of the salesperson in its possession, and would have, by some means or other, to get the salesperson to remit to the company the necessary amount.

If we had attempted last year to make quarterly social-security reports, covering the entire 21,000 people that were on our mailing list during the year, we estimate that we would have submitted approximately 50,000 reports to the Treasury Department. Considering that the average gross reecipts, of these people, amounted to only $15.50 for the entire year, and many of them had operating expenses that were legally deductible, the average amount per report for all of these 50,000 reports would have amounted to less than $4. The social-security tax, on such an amount, would be so small that both the Treasury Department and my company would have handling costs amounting to many times the actual tax involved.

The social-security tax at 3 percent on an amount of $4 would be 12 cents. We estimate that it would cost us at least $2 to maintain all of the records necessary to submit each quarterly report; so that our costs of submitting reports would amount roughly to 16 times the amount of the tax involved, based upon our average sales and earnings of last year.

We also estimate that it would undoubtedly cost the Government an amount as large as the $2 that it would cost us, in which case the Government would have paper costs amounting to 16 times the amount of tax collected.

From my personal experience, for many years in operating as an independent contractor, I can testify that I do not know how I could accurately report my true net earnings to any company.

Four times a year I would have to deduct, from my gross earnings, my transportation costs and other legally deductible expenses, including such items as annual depreciation on my car. Since I always represented more than one company, these costs would have to be broken down in some manner and a proportionate part charged against my earnings from each company. Reporting could be done by following the exact procedure used in making an income-tax report. If I were to be considered an employee, however, my quarterly report to each company would be much more difficult and cumbersome than filling out a Form 1040 income-tax return. Many of my allocations of expenses would have to be based on personal judgment or guess work.

In reference to using the income tax as a basis for paying social-security taxes for self-employed people, I believe that would be a very practical procedure if there was one minor change made in the method of reporting taxes. That would be, rather than reporting gross receipts, to report gross receipts less deductible expenses, as you do in

your income-tax returns. And while the amount varies in the income-tax requirement and the social-security requirement, varying from $500 to $400, the gross amount, the gross receipts, of a person who would have net earnings of $400 would amount to more than $500. Because anyone involved in business as an independent contractor has a number of expenses. As has been mentioned here this morning, there are the expenses of advertising, telephone, the use of an automobile, and many other things that should properly be deducted from their gross receipts in figuring their net income.

So far as my company is concerned, however, it would create an absolutely impossible situation if we were required to secure and report the accurate information that would be necessary in submitting 50,000 or more reports a year. I am positive that we could not continue to operate under our present business structure, as we have been doing since 1941. At the estimated cost of $2 per return, that means that our costs would be raised $100,000, at a minimum, if we were to attempt to follow that procedure in section 4, and our percentage of profit and our total dollar volume of sales do not include such an amount.

Remember, too, that there are literally thousands, probably hundreds of thousands, of people who don't want to work full time; who don't want to be employees; who want to be independent contractors just as they are now; who want to work a little now and then when they need a little extra money; folks who consider themselves independent; who pride themselves on their independence and self-reliance; who are not dependent upon us or anyone else. If this bill, including section 4, should be passed, then we doubt if any company could continue to work through such people.

Last year I had the privilege of testifying before the House Ways and Means Committee when this bill was originally considered, and the members of that committee seemingly were in complete agreement that it was not designed to cover people such as we have, classifying them as salespersons. They seemed to be in complete agreement. And I believe that section 18 was written into the bill in an effort to exclude such people from coverage. But on the other hand, section 4, subject to interpretation by administrative agencies, could very well cause us to be included, as has been cited here this morning in the case of the household-products salesman.

Selling direct to the consumer is the oldest form of distribution, and people have been working in this manner since time immemorial. We believe that the only practical thing to do is to maintain the status of these people, to continue to consider them as independent contractors under the common-law concept.

We wish to repeat that we are not objecting in any way to coverage for social-security benefits of these people as self-employed. Our objection is to the coverage as employees of these persons who are not in an employed status. The mention of independent contractors in section 3 and the language of section 4 could conceivably result in our people being classified by administrative agencies, as employees.

We respectfully urge that these parts be stricken from H. R. 6000 and that the common-law concept be continued as covered by section 2.

I think you, Mr. Chairman and members of the committee, for the privilege of making this statement.

The CHAIRMAN. Thank you very much, Mr. Brooks.

Mr. BROOKS. Thank you.

The CHAIRMAN. Mr. Luhn?

Mr. GEORGE. I don't believe Mr. Luhn is here, and I don't think he has sent any substitute. He is on a mission for the Government overseas on the matter of exchanging of trade information.

The CHAIRMAN. Is there anyone here who can substitute for Mr. Luhn?

Mr. GEORGE. I think not. There are two witnesses left on this list, Mr. Chairman, and neither will take more than 5 minutes.

The CHAIRMAN. We will, then, call Mr. Arthur Miller.

STATEMENT OF F. S. BENNETT, ASSISTANT TREASURER, THE ALUMINUM COOKING UTENSIL CO., NEW KENSINGTON, PA.

Mr. BENNETT. Mr. Chairman, my name is F. S. Bennett. Mr. Miller was to have been here but missed a connection and was not able to be present. I should like, with your permission, to substitute for him.

The CHAIRMAN. Yes, sir. You may do so. Are you representing the same company?

Mr. BENNETT. That is right.

The CHAIRMAN. Will you give the reporter your full name and identify yourself for the record?

Mr. BENNETT. My name is F. S. Bennett. I am assistant treasurer of the Aluminum Cooking Utensil Co., of New Kensington, Pa.

The CHAIRMAN. All right, sir. We will be very glad to hear you.

Mr. BENNETT. Mr. Chairman and gentlemen of the committee, this is the statement of the Aluminum Cooking Utensil Co. with reference to H. R. 6000. The statement was made by the president of our company, Mr. E. M. Grable.

I desire to voice the objection of my company to H. R. 6000 in its present form, with particular reference to the definition of the terms "employee" and "employment." Specifically, we are opposed to the inclusion of paragraphs 3 (G) and 4 of section 210, together with subsection 18 of section 205, or to any definition of "employee" or "employment" which distorts the accepted common-law rule of determining the meaning of "employee." As H. R. 6000 is presently worded, these definitions would make it necessary for us to cancel the contracts of a large number of individuals who now handle our specialty products as independent distributors. This would cause unemployment and would deprive several thousand people of the means of a livelihood, thereby throwing them onto Government relief rolls.

The company, for the past 50 years, has disposed of a large portion of its products through independent distributors who, under a written contract, sell our merchandise direct to consumers in any manner they choose and at their own expense. The distributor collects a deposit on the order at the time it is taken. He keeps the deposit as a partial or a full settlement of his commission on the sale. The company is, therefore, seldom in possession of funds belonging to the distributor from which pay-roll taxes could be deducted, not to mention withholding taxes which would logically follow. The company exercises no direction or control over the manner or means of the distributors'

operations. It would be futile to attempt such control because many are signed up by mail and have little or no contact with the company except through correspondence. Many of these individuals spend only a part of their time taking orders for our products inasmuch as they may carry several lines of merchandise supplied by different manufacturers. Others, for various reasons, spend only a minor part of their time at this work during a given week or month. As they are in reality self-employed, they are free to work when they choose and to remain idle when it pleases them.

Under the common-law rule of determining employer-employee relationship, our distributors have been held to be independent contractors and not employees by the Department of Internal Revenue, the Supreme Court of Illinois, the New York Court of Appeals, and by unemployment compensation commissions in 15 different States. H. R. 6000 in its present form would repeal the common-law rule for the determination of employee status and would substitute therefor language that is so vague and indefinite that endless litigation would ensue. Therefore, we urge that H. R. 6000 be modified to retain the customary common-law definition of "employee."

There are numerous reasons why the provisions of H. R. 6000 in its present form would be ruinous to direct-to-consumer selling and contrary to the interests of the individuals now engaged in that field. Some of these reasons are enumerated below:

1. The geographical distribution of our distributors throughout the United States and Hawaii makes it impossible to exercise any effective check on their time for pay-roll purposes. Seldom, except in large cities, is it practicable to have more than one distributor in a county or groups of counties. Distributors thus dispersed must necessarily be on their own and operate as independent contractors, free from our direction and control as to the details of their work.

2. Many of our distributors handle merchandise of other suppliers and we have no way of knowing how much time they spend selling our products and how much time they devote to other lines. Although it is impossible to determine with any degree of accuracy who are part-time and who are full-time distributors, it is a well-known fact that an overwhelming majority are part-time operators who spend a good share of their time earning income from sources other than the sale of our specialty products. The high rate of turn-over and the great distance at which many are located from our office would make pay-roll administration of their earnings utterly impracticable.

3. A substantial number of our distributors are individuals who, on account of impaired health, physical handicap, or other circumstances, are unable to accept a job with regular hours. Today we have widows, housewives, ex-GI's in school, and the partially disabled who find it necessary to earn a living, but who cannot accept employment which ties them down to a definite schedule of working hours. These people look upon their connection with this company, in the capacity of independent operators, as the answer to their financial problems. Many of these unemployables have no other source of income and if this bill should pass, all of these people, who are largely low-producer units, would have to be dropped and their sole source of income destroyed.

4. The freedom from long hours and exacting work schedules makes an independent distributorship an ideal occupation for men in their last sixties and early seventies who have retired from more strenuous activities and who need some moderate form of diversion to preserve their health and interest in life. Today, we have many such men among our distributors. The proposed definition of "employee" and "employment" in H. R. 6000 would close the door of opportunity to this class of elderly persons.

5. To avoid adding large numbers of intermittent business producers to our pay rolls, involving the details of making deductions for old-age benefits, unemployment compensation, workmen's compensation, State and Federal income taxes, and the like, we would be forced to eliminate more than one-half of the individuals now under contract with us. This would not only deny the means of making an honest living to several thousand men and women in all parts of the country who now act as our distributors, but would also throw out of employment a large number of factory workers and office employees whose jobs depend upon servicing the sales made by these independent distributors.

6. The expense involved in administering the collection of pay-roll and withholding taxes from these independent distributors would add prohibitive costs to our present method of selling our products, requiring a substantial price increase to the public. The consequent reduction of sales volume in turn would adversely affect the company's net income and thus reduce revenue to the Government from income taxes. We seriously believe that if we were compelled to treat these free lance operators as employees, the revenue loss to the Government on the income tax basis would amount to many times the slight difference in pay-roll taxes received by the Government under an employee coverage over the amount received on a self-employed basis.

This company contends that the common law doctrine in determining who is and who is not an employee should be followed, and that its distributors, if brought under social security, should be brought in strictly as self-employed individuals.

The CHAIRMAN. We thank you for your appearance, sir.

Mr. BENNETT. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. N. S. Walbridge?

STATEMENT OF NORTON S. WALBRIDGE, PRESIDENT, BEAUTY COUNSELORS, INC., GROSSE POINTE, MICH.

Mr. WALBRIDGE. Mr. Chairman and members of the committee, my name is Norton S. Walbridge. I am president of Beauty Counselors, Inc., of Grosse Point, Mich.

The reading time on my statement, here, is 20 minutes. The vast majority of the information in it would be merely repetition of what you have already heard, and I would like to respectfully request, therefore, that I be permitted to abridge my comments, and that the statement in its entirety be entered in the record, if I have your permission.

The CHAIRMAN. You may enter it into the record; yes.

(The prepared statement of Mr. Walbridge follows:)

STATEMENT OF NORTON S. WALBRIDGE, PRESIDENT OF BEAUTY COUNSELORS, INC., GROSSE POINTE, MICH., CONCERNING THE DEFINITION OF "EMPLOYEE"

My name is Norton S. Walbridge. I live in Grosse Pointe, Mich., and am president of Beauty Counselors, Inc., Grosse Point, Mich.

Our company favors the extension of social security to self-employed persons, but we are gravely concerned at the prospect of the very serious difficulties with which our company might be faced under the terms of the definition of "employee" as it appears in R. H. 6000.

Beauty Counselors was founded in 1931, and has shown regular volume growth each year. The business has, from its inception, been based upon the in-the-home sale of a line of cosmetic and toiletry preparations. Currently more than 10,000 women throughout the 48 States purchase Beauty Counselor preparations from our company at wholesale and sell them to their customers at retail. These dealers, who distribute Beauty Counselor products, make appliaction for a franchise to sell the products on an application form which reads as follows:

"I hereby make application for franchise to buy and sell preparations of Beauty Counselors, Inc., hereafter designated as the 'Company.'

"I ask to be placed on the mailing list of the Company, so I will be able to take advantage of such information pertaining to its preparations as may be available.

"I further understand that the Company will sell me a set of Beauty Counselor products for the sum of $————, which I am purchasing for resale.

"I will make purchases of preparations of the Company for my own account, payable cash in advance, or c. o. d., according to the wholesale prices effective on the mailing dates of my respective orders and in connection with orders totaling less than $20 net wholesale, I understand that it will be incumbent upon me to accompany such orders with 25 cents postage. Special delivery handling charge, 45 cents. No return or exchanges allowed. Delays or failures to ship orders are excused when occasioned by causes beyond the control of the Company. Title to all merchandise purchased hereinunder shall pass in Michigan regardless of the manner or method of shipment.

"I further understand that I am in business for myself as an independent retail merchant and that as such I am not in the United States Social Security Act (old-age benefits), the State Unemployment Act, Disability Benefits Act, or the State Workmen's Compensation Act."

It is our sincere belief that the individual who buys and sells our merchandise has the same conception of her position relative to "employment" as does the company; namely, that she is an independent distributor or retail merchant. She is free to fix her own resale prices. She is free to handle the sale of merchandise of other companies; is not required to meet a quota of sales, or to furnish reports, or to make calls on specific customers or prospects, or to follow a prescribed route in her calls. The purchasers from her are her customers and some are regular customers and others are not. They are not our customers, and she has complete freedom in dealing with her customers. The company does not know the names or addresses of the dealer's customers, and has no contact or relation with them whatsoever.

Periodically, in the larger centers, meetings are arranged to which dealers in the district are invited, but attendance is not required.

From 1931 until 1946, Beauty Counselors, Inc., acted entirely as distributors, the products being manufactured by private-label houses. Starting in 1946, manufacturing operations were undertaken by the company, and currently the manufacturing and shipping operations occupy more than 30,000 square feet of property in Detroit in addition to the company's office and sales headquarters located in Grosse Pointe, Mich.

Due to the growth of the business, the company is at the present time contemplating a substantial addition to its manufacturing facilities. Currently, the company has approximately 200 employees in its main office, manufacturing division, and its west coast distributing center in San Francisco, Calif.

Due to the loose, free lance, and casual nature of our connections with dealers handling our products, we definitely feel that they don't consider themselves to be employees and don't have any desire or expectation to be converted into employees or to come under the Social Security Act as employees. We have never had any demands, requests, or intimation from these dealers that they consider that they should be covered as our employees. We feel that the company would encounter very serious problems and would be retarded in its growth should their status be distorted to that of employees.

To appreciate the problems which would be posed by such a concept, it is necessary to visualize the fact that with approximately 10,000 of these distributor dealers on the company's mailing list, we receive only about 10,000 orders per month, or an average of 1 order per dealer; and, since many individuals send several orders in a given month, others obviously do not send orders as frequently as once a month. The company retains the names of these dealers on its mailing list until 3 months without an order have elapsed; at which time the individuals's addressograph plate is removed from the active file, to be reinstated there subsequently only upon receipts of an order.

As has already been mentioned, the size of the order received from the individual does not give any indication of the dealer's earnings, because the company has no way of knowing whether the merchandise has been sold by the dealer, or if it has been sold, at what price.

We are convinced that few of these dealers would send us the "employee's" share of the tax. Therefore, the company would have to pay the entire tax, based on some artificial and arbitrary method of computing the possible earnings of the individual dealer. The same problem would be posed in connection with the withholding tax provisions of the Internal Revenue Act, since it is only logical to assume that if these individuals were classified as "employees" for Social Security Act purposes, they would be so classed also in connection with Federal income taxes, State income taxes, municipal income taxes, State workmen's compensation acts, State minimum wage laws, foreign corporation statutes of the States, and the company would eventually be considered liable for their torts.

It is not difficult to visualize the enormous task of back-and-forth correspondence with these 10,000 women in attempting to ascertain their earnings and to collect the various contributions and taxes to be withheld by the company.

Fully to appreciate the difficulties and expense involved, it is essential to take cognizance of the turn-over factor. Currently, approximately 10,000 new dealers undertake the selling of Beauty Counselor products each year. However, about 9,500 dealers discontinue their selling of the products each year. It is easy to see that this turn-over factor practically doubles the amounts of records and reports that the company would have to make.

Since it would not be known in advance which of these dealers were going to discontinue their sales activities a short time after making application for dealership, nor which of them would have other earnings during the period in which they were dealers, the company would be faced with the necessity of attempting to keep complete records on all dealers in connection not only with social-security requirements, but the other Federal, State, county, and local regulations involved. In effect, the turn-over factor would make the cost of attempted compliance way out of line with the taxes accrued to the social-security fund.

With no control whatsoever over the acts of these individuals on the part of the company, it can readily be seen that the company would be spending a large share of its energies, and would be going to terrific expense in connection with the accounting, correspondence, and legal problems which would appear in a never-ending stream; and that proper compliance with all of the local, county, State, and Federal acts and regulations would become a virtual impossibility, as well as a tremendous financial burden to the company, placing it in a most unfavorable competitive position.

We have attempted to analyze the expense of attempting compliance and frankly, gentlemen, we were unable to come up with a figure which we could consider realistic. We were able to make rough estimates of the actual out-of-pocket expenses of setting up a department to attempt to gather the information which would be necessary for the filing of our quarterly reports under the Social Security Act should these ten-thousand-odd dealers have their status altered to that of "employees," but we were unable to follow the cost through to the total which would be involved should compliance be necessary in connection with the local, county, and State regulations and acts. Our best guess—and frankly, it is a guess—is that the cost of compliance could and would run in the neighborhood of $100,000 per year. If accurate, this would represent 40 to 50 percent of our total profit and would, of course, materially lessen our Federal income-tax payments.

We would have to build an addition to our Grosse Pointe offices, purchase additional bookkeeping machinery, employ a group of clerks and correspondents for the sole purpose of attempting compliance. And, all of these problems and this terrific expense seem so wasteful and unnecessary when these dealers can come under the act as self-employed merely by avoiding the distortion of their status which may be effected by what seems to us very unnecessary inclusions

in the "employee" definition of H. R. 6000. We refer particularly to the wording of subsection (4), particularly (C) and (D) relating to regularity and frequency of performance of the service, and to integration of the individaul's work in the business. These are both loose terms which lend themselves to most any interpretation.

These dealers are homemakers; probably 75 percent of them with children. We do not exercise or attempt to exercise control; they, in fact and in experience, are uncontrollable. They have been specifically ruled as being independent contractors by the Treasury Department, and it is of vital importance to us that, after 19 years of building our business, it may be jeopardized by what seems an altogether unnecessary changing of the rules of the game in the middle of the race, through arbitrarily and artificially distorting the long accepted status of these individuals.

Of almost as great importance to us is the fact that so large a portion of our time, thinking, and energy would be directed toward our efforts of attempting compliance, rather than toward the energetic upbuilding of our business.

Possibly, we are prejudiced in this respect; but it is our humble and sincere believe that the direct selling companies, like our own, have played, and do, and will play, a considerable part in the upgrading of the American standard of living; and act as a strong counterbalance in the American economy in times of lesser prosperity.

Experience has clearly demonstrated the fact that in times of depression, many persons losing their regular employment drop in temporarily to selling from home to home. By so doing, they not only benefit financially themselves, but help to stimlate business revival.

Surely, the history of American business in the last two centuries is crammed with the examples of companies who beat a path of the customer's door to educate the American people to new products, and new uses for old products, as could hardly have been accomplished had the merchants waited for the customers to beat a path to their doors. So-called direct selling and national advertising have both played vital parts in creating the awareness to and desire for a higher standard of living, which have overcome the early doubts as to the effect of mechanization and so-called technocracy in industry, which many felt would lead to wide unemployment.

Surely, no direct-selling company would offer this point in attempting to establish that its motives for selecting this channel of merchandise were altruistic; but, we believe, in all sincerity, that properly conducted direct-selling businesses stimulate American business, and that the sales of these companies do not represent business subtracted from customary retail channels because direct-selling companies are constantly educating the public to the use of new products to the benefit of store-sold competing lines, as well as their own.

By the same token, direct selling has given initial sales experience to a large segment of the American sales force, with countless of our leading sales executives today, throughout American business, tracing their experience back to "door-bell ringing." This point is emphasized only because we are convinced that the entire direct-selling industry will be in jeopardy under the "employee" concept of H. R. 6000.

The individual who wishes to supplement the family income, or to earn money for luxuries which the normal family income cannot provide, can turn to this field of activity, as tens of thousands do each year in selling our products and those of other concerns. Because there is no employer-employee responsibility, a company is willing to do business with these independent distributors without the normal procedure of employment. They may sell without incurring the obligation of keeping company hours or rules, or other normal incidents of employment. Thus, in the case of the dealers in our products, a housewife, or a woman with a regular job, or one who cannot obtain employment, is given an opportunity which is limited only by her own ability, and which is terminated only by her own volition. She works when, as, and where she pleases.

The nub of the whole matter seems to lie in the fact of the impossibility of control, no matter how much the desire or preparation for control may be, which would make an artificial employee status an almost insurmountable hardship on a concern such as ours. This is not on account of the tax, but on account of the incidents of classifying these people as employees, making us responsible for everything they do and for the collection of their income taxes and the other factors mentioned earlier in this testimony.

We sincerely believe that it is in the best interest of the people of this country, and of the Federal Government, as well as our company, that an independent

distributor status of these people, as established in the amendment of 1948, b continued, and that they be brought under the Social Security Act as self employed.

Mr. WALBRIDGE. The factors which have applied to the companie represented by the gentleman who have preceded me apply quit universally to our own situation, involving 10,000 women who sell ou products as dealers and are known as beauty counselors.

I would like to jump, if I may, to the subject of the cost which w estimate attempted compliance would involve. I have used the figur in my statement of $200,000, and I would like, if I may, to mentio the fact that we estimate that the loss in revenue to the Treasur would be $106,000: this, of course, involving our Federal income ta payment on the basis of our compliance attempt, including dividend taxed at an average of 40 percent on 50 percent of our net profit afte taxes. I have a break-down of that, which I won't take your time fo but I think that since the factor has been mentioned of the possibl escape from the payment of personal income taxes, which I realiz is not the major issue here, by people who would be considered self employed and might refrain from reporting either their self-employ ment for social security purposes or their Federal income tax—sinc that, as I say, has been mentioned as a possible source of loss to th Treasury, I think this other aspect should be considered as being very serious one also.

And I should like, too, to mention another point which has not bee covered extensively, namely, that I think the history of business show quite clearly that particularly in times of lesser prosperity direct sel ing companies are important to this economy. Our own compan started in 1931, so that we had first hand experience with the cond tions that existed then. And since the direct seller tends to stimulat purchasing among people who might not voluntarily appear in store the effect I believe of these possibly 750,000 people whose position ma be in jeopardy here is very important to the economy of this countr

I would like to suggest, too, that I think, if it were possible—an this may be out of order—if the self-employed came in at $500 instea of $400 the difficulties of securing compliance would be, I think, con siderably lessened. Because I think the fear of being caught, sha we say, on nonreporting of income tax is far greater than would exi in those people's minds concerning social security should they n wish to come under it for any reason.

I think, too, that the companies represented here would gladly send form with their application to a dealer stating that his position wit regard to social security was as follows, and at the end of the first yea when filing his income-tax report, he should also file this return, copy of which might be attached, indicating the advantages whic would subsequently accrue to that individual in later life as a resu of conformance now.

I realize that would still leave loopholes, but I suggest it as bein possibly helpful in this respect.

Our company feels that two-thirds of the dealers we subsequentl have on our list would, of necessity, have to be dismissed if our peopl dealers, were considered to be employees, because of the economics o the cost of handling the paper work with the State, county, municip regulations which we feel sure would follow in addition to the proble

that we are discussing here, as a primary issue, the Federal social security.

I appreciate very much the opportunity of appearing and hope that I have not been out of order in also including some factors here which were not included in my official statement.

Thank you, sir.

The CHAIRMAN. Yes, sir. We appreciate your appearance. Thank you.

The committee will recess until tomorrow morning at 10 o'clock.

(Whereupon, at 1:25 p. m., the committee recessed to reconvene Wednesday, March 8, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

WEDNESDAY, MARCH 8, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George (chairman) presiding.

Present: Senators George, Byrd, Hoey, Kerr, and Taft.

Also present: Senator Dworshak; Mrs. Elizabeth B. Springer, chief clerk; and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

We are honored to have you with us this morning, Senator Tobey.

STATEMENT OF HON. CHARLES W. TOBEY, A UNITED STATES SENATOR FROM THE STATE OF NEW HAMPSHIRE

Senator TOBEY. I esteem it an honor to be here, Mr. Chairman.

You and I are somewhat familiar with the hymnology of our earlier days, and there is an old hymn, the second stanza of which begins:

A cloud of witnesses around hold thee in full survey.

And making application of that in speaking to you this morning—these witnesses, invisible but real, are small-business men in our State of New Hampshire and throughout New England, who feel very keenly about this definition of "employee" in this proposed legislation.

In connection with the committee's consideration of the Social Security Act amendments, H. R. 6000, I wish to present the views of the lumber industry of my State of New Hampshire with respect to the provisions of this bill, which would change the existing definition of "employee."

New Hampshire lumber and pulpwood operators object strongly to any change in the present common-law rules applicable in determining the employer-employee relationship. The new definition of "employee" contained in this bill would jeopardize the status of independent contractors under the present law.

In New Hampshire much of the forest industry is operated by small independent contractors or subcontractors who engage in any one or combination of the following: logging, chopping, hauling, skidding, sawing, and stacking of lumber, pulp, or cordwood. The independent contractor or logger hires his own men to do this work, has complete charge of these men, including hiring and firing, and directs their work, including methods which may be used to obtain the de-

sired results. The men he hires are his employees. He is on the job with them, knows what is going on each day, makes the necessary deductions from their pay for withholding taxes and social security deductions, keeps the necessary records of hours worked and wages paid—but the owner of the business who hires this independent contractor has no right to hire or fire any of the men working under such contractor: neither has the owner the right to direct the contractor's men in any way as to the peformance of their work.

The industry fears that if these new definitions are permitted to remain in H. R. 6000, thousands of small independent businessmen would be eliminated, because they and their employees would become employees of the larger companies that contract for their services. Independent contractors will lose their status under the new definitions proposed in subsection (k) (s) and (4) of the proposed new definition and become "employees" of the companies for whom they now perform services as independent contractors. In addition, the status of many will remain in doubt, requiring burdensome litigation and administrative interpretation if the well-understood common law test of the employer-employee reationship is abandoned.

My constituents argue that the adoption of such legislation would be in diametric opposition to the policy of Congress to encourage small business, and would result in further strengthening the economic power of big companies. The Senate Special Committee to Study Problems of American Small Business (Rept. No. 46, 81st Cong.) reported that "during the last decade the only way a man has been able to accumulate any substantial estate has been to build up the value of a business equity; to start or take a small business and build it up to some substantial value." The committee found as a plain fact that "a stable economy and kind of competition which will benefit the public requires not only growing small businesses but the steady creation of new ones." So by arbitrarily classifying as an "employee" a person hitherto regarded at law as an "independent contractor"—merely for administrative convenience in collection of social-security tax—would serve only to discourage that person from developing the spirit of competitive enterprise and in individualism which characterizes the American small-business man, whose activities are essential to a healthy economy.

The question of coverage under the Social Security Act is not at issue here. The employees of independent contractors are now fully covered, or they and the contractor himself will be covered by other provisions of this bill. The big contractors do not want this change, and the "little" businessmen do not want it.

To repeat, the lumber industry in New Hampshire, and I join emphatically in their view, protest any definition of "employee" which would tend to force contractors and subcontractors on the pay rolls of the larger companies by whom they are engaged in a contractual relationship. The effect of such a procedure would be to concentrate operations in the hands of a relatively small number of large companies and would materially increase the cost of doing business for these concerns, resulting in a higher cost to the consumer.

The effect of this definition, of course, is not limited to the lumber industry. Analogous situations are to be found in every industry which operate through independent contractors. For instance, in the

oil industry the distributor for a large company, as well as the independent station operators who lease their facilities from the company, and the employees of the independent station operators, could all become employees of the parent company under this proposed law. It would become a very involved, not to say impossible, bookkeeping problem. At a time when the American people are crying for reduced taxes, it would result in materially increasing taxes for many businesses, not through tax legislation but through the indirect route of a changed definition.

In my judgment it would constitute harassment.

The proposed change in the definition of "employee" provided for in section 104 (a) and 206 (a) of the present bill is detrimental to a free economy, a menace to small business enterprises. So I wish to go on record in behalf of the New Hampshire lumber industry in protesting against these sections of the bill and urge that the common-law rules for determining the employer-employee relationship be retained.

The committee's consideration is appreciated.

And I might add one more word. I sit in the Banking and Currency Committee and, as you know, by action of the Senate the Vice President has recently been authorized to appoint a committee of 15 as a Small Business Committee, not a legislative committee but an advisory and research body. That committee is about to be appointed by the Vice President, as I understand it. So the hearts and interest of the Senate are behind the small-business men of this country. And here we are building up constructively efficient help for the small-business men, on the one hand, by Senate action, and on the other hand some agency of the Government, in this case the Treasury Department, by this desire of theirs, seeks to pull down, harass, or make it harder for small-business men to do business.

Somebody has said: "Consistency, thou art a jewel." And I make the point that there is inconsistency here in our regard for small-business men if we permit this definition to stand.

I thank the committee for their courtesy.

The CHAIRMAN. I thank you very much, Senator Tobey. You have very much the same problems that we have down in Georgia.

Senator TOBEY. I am very sure of that.

The CHAIRMAN. Especially in the lumber business, in connection with getting timber out for any purposes, logging for milling purposes, pulpwood, paper, what have you.

Senator TOBEY. Well, Walter, sometimes I am constrained to feel, without any malice at all or vituperation but just regarding it as a fair statement, that this Government of ours, which has so grown and multiplied and increased and mushroomed, has now become titanic in a way. It is far-flung and widespread. But what is the Government, after all? What are these agencies of Government? Call them by rote if you want to; we know what they are. But they are all the creation of Congress, for better government in this country. However, they are the creation and the creature of Congress and not the master of Congress. Whom do we represent? We represent everybody, 150,000,000 people. When these small-business men, in this case and others I might mention, cry out for relief and earnestly seek it, they turn to us. And, in my judgment, the interests of these people are paramount and far transcend the convenience or the efficiency or

the time-saving efforts of a Government bureau, whatever it may be None of them are sacrosanct.

I get back to that thesis that what we need in this country is to demonstrate to little people, after all, that we care something more about them than to get their votes at election time. And one of the reasons that we only had a half, 50 percent, of the people of this country, including both parties, vote in the last election was that people have become a little bit cynical out in the hinterlands of this country about how much we are interested in them.

We can do no finer service toward the strengthening of democracy and toward repelling the inroads of any subversive movement in our country than by demonstrating that we in this Government have a real heart interest in the problems of little men. I think you will agree with me.

I thank you for your courtesy.

Senator KERR. Senator, I gather that your position is that the additional language other than that in the orignial act, but now in H. R 6000, should be eliminated?

Senator TOBEY. That is exactly correct, sir.

Senator KERR. And the definition of "employee" continued in the future?

Senator TOBEY. The status quo.

Senator KERR. As it has been in the past.

Senator TOBEY. I could not express it better, Senator; and thank you for that help.

The CHAIRMAN. Thank you very much, Senator, for your appearance.

Senator TOBEY. Thank you, Mr. Chairman.

The CHAIRMAN. The next witness is Mr. John B. Veach.

Mr. VEACH. You are representing the National Lumber Manufacturers Association?

STATEMENT OF JOHN B. VEACH, PRESIDENT, HARDWOOD CORPORATION OF AMERICA, AND ASSOCIATED COMPANIES, APPEARING ON BEHALF OF NATIONAL LUMBER MANUFACTURERS ASSOCIATION, WASHINGTON, D. C.

Mr. VEACH. Yes; Senator.

The CHAIRMAN. You may be seated if you wish, Mr. Veach, and proceed with your statement.

Mr. VEACH. My name is John B. Veach, and I am president of the Hardwood Corp. of America and associated companies which operate in western North Carolina, northern Georgia, and eastern Tennessee. I appear here in behalf of the National Lumber Manufacturers Association, a federation of 16 regional associations representing lumber manufacturers in all parts of the United States, and they have honored me with the office of vice president and treasurer of that association.

I would like to speak particularly, this morning, on behalf of the Southern Pine Association, which represents about 20,000 small sawmills in the South from Texas to Virginia, the Southern Hardwood Producers, Inc., which represents the hardwood part of that industry in the South, the Appalachian Hardwood Manufacturers, Inc., which

represents the hardwood industry in North and South Carolina, northern Georgia, Tennessee, Kentucky, West Virginia, and Virginia, and the Northeastern Lumber Manufacturers Association, which is in the New England States and the Northern Hemlock and Hardwood Manufacturers Association, which is in Michigan and Wisconsin. In order to conserve your time, I am not going to try to give you the picture from each one of these districts, because they are practically all the same.

All of the sawmills in the East are practically small business. There aren't, with possibly few exceptions, any really large operators in this entire territory. We are all faced with exactly the same problem. Senator Tobey has expressed to you the feeling of the sawmill men up in New Hampshire and New England. I don't know of a single sawmill man or logger or anybody else that I have any contact with who is in favor of this definition of an employee in H. R. 6000, as it is written.

Senator George, we operate, down at Ellijay and Jasper, Ga., and I know you are very familiar with that particular country down there.

The CHAIRMAN. Yes, I am.

Mr. VEACH. You can go all the way from Mineral Bluff through Blue Ridge and on down to Marietta and Atlanta, and you will find 300 different kinds of small mill operators.

The CHAIRMAN. Yes, I am very familiar with that.

Mr. VEACH. They are all doing the same thing in a different way. There is no way in the world that I know of that you can actually describe what a contract logger or a small sawmill operator is doing.

I had the honor and privilege during the war of serving our Government in the procurement of hardwood lumber and softwood lumber for the armed services. On one occasion we tried to help the Office of Price Administration to define what green lumber was—just the words "green lumber." What is the difference between green lumber and dry lumber? We worked on it for 4 years, and we never did come out with a satisfactory answer of what was green lumber and what was dry lumber. I feel that this situation here, on the matter of trying to define an employee is almost as complicated as trying to define green lumber. We have had occasion in our operations to go before the Supreme Court of the State of North Carolina to determine what an independent contractor was and what an employee was. As a result of our experience I think that we can safely determine today in our contracts whom we are responsible for and whom we are not responsible for.

Now, here is the thing that worries me about this whole proposition. What liability do I assume as a sawmill operator in doing business with a man who I consider as a small-independent businessman with whom I am doing business? I can cite you examples of people like John Rogers, now living at Ellijay, Ga., today, who started out with me 15 years ago without a nickel, but with, however, a knowledge of the logging business. Today he has developed to where I suppose he has $25,000 worth of equipment, caterpillar tractors, bulldozers, teams, a trained organization, and so forth. If he were to start out today under this new definition, because of the liabilities involved, he would never be able to get started.

Let us take Ellijay, Ga. We own a little land down near Ellijay, but it is pretty widely scattered. As a practical matter, we find it necessary to make a contract with a logger to go in and produce logs and lumber and deliver it to the railroad track in Ellijay for, we will say, a price of $30 a thousand. We know from our experience that if he is a good logger and a good sawmill man and he uses reasonable intelligence and works hard, he can make a profit on the operation. It is entirely up to him who he hires, when he hires him, in what weather conditions he will operate, whether road conditions are reasonable for the use of his trucks, or whether he does his own trucking or gets somebody else who is in the trucking business to haul the lumber into the railroad siding at Ellijay. Under the definition of an employee in H. R. 6000, I will be darned if I know what sort of a liability I have as a businessman in doing business with this man. Will I be responsible under the Social Security Act for a tax on the full $30 that we are paying this man? Do we have to get an accountant to sit down and figure out what his profit would be as a self-employed man, you might say? Just what definition would you use to determine the amount of money that the social security would be paid on? On all of the people that he has working for him, be it one, two, three, four, or five, there would be actual salaries or wages on which he would pay anyway into social security. But just whom do we assume responsibility for?

According to the definition in H. R. 6000, even though our contractor is completely independent and operating beyond our control, the fact that his business is integrated with ours and is an essential part of our business, so to speak, in that he is manufacturing lumber and turning it over to us, would seem to make us responsible for social security taxes if somebody in the Treasury Department came down and investigated the matter and so decided.

For another example, a man might come to us and say that he knows where there is a piece of timber that he can buy from a farmer. He tells us he wants to cut that piece of timber and he wants us to buy the timber for him. He takes all of the risk as to whether or not there is 150,000 feet or 200,000 feet of pine and hardwood on the particular tract. We advance him the money to buy this piece of timber, which he pays back to us on, we will say, at the rate of $10 a thousand.

According to the definition of employee in H. R. 6000 that I see in this book, here, he probably would be held not to have sufficient capital to be an independent contractor. We would practically be prohibited from helping this small independent man because under this definition we wouldn't know what our liability was, and they might come back on us later for any number of years and say, that our liability is on the full $30 a thousand that this man received for what he delivered in to us. As I see it, it would force all of us in the entire eastern part of the United States to discontinue doing business with anybody as an independent contractor because of the terrific risk and liability that we would be up against.

Senator Hoey has the same problem in North Carolina that Senator Tobey has in New Hampshire and your constituents have down in Georgia. I am sure Senator Hoey is familiar with the section around Murphy and Robbinsville and Bryson City and on into Asheville, N. C., where we have our operations. We do some business in pulpwood in that area. A man comes to us frequently and says "You have

some pulpwood over here on your land, and I would like to cut that pulpwood and deliver it in here." And you say, "Well, we will give you $10 per cord for this pulpwood and charge you a dollar for the stumpage which belongs to us. The rest of it is entirely up to you. You deliver the pulpwood whenever you want to. You load it on cars whenever you want to, and we will pay you for it at that time." If the weather is good, he works on his tobacco. If the weather isn't good, he goes out and works on this pulpwood.

Now, we couldn't do that under the new definition, as I see it, because we wouldn't know what our liability is. We will not know whether we are responsible for paying social-security taxes and all the rest of the taxes and liabilities that would be added on by the other bureaus of the Government if they are successful in getting this definition in. We couldn't do business with that man, and he would be deprived of the privilege of earning that additional money.

Certainly in any ordinary understanding of the terms of business, in all the years I have been in business, he is very clearly an independent operator; but he would be clearly construed as an employee if they turn the definition around the way it is here. They say there are seven criteria that you can use in determining whether this man is an employee or not. Well, who is going to do the determining? The only person that can do the determining is the Federal Administrator, for this particular act, who would come out to Robbinsville, or come down to Ellijay, Ga., and say that in his opinion we have been wrong, we have guessed wrong, and we are liable for some certain amount. There is no way of our determining what that is. Well, it would change our operations completely.

Senator HOEY. Is that the method by which you obtain most of the pulpwood for the paper mills and other lumber plants?

Mr. VEACH. In Graham County, N. C., which is the particular territory in which we operate on pulpwood, practically all of our operations are confined to individuals, mostly farmers, or cattlemen, or something like that, who want to go on our land, cut pulpwood, and deliver it to our railroad siding. And we in turn act as an agent for the Champion Paper & Fiber Co. and deliver the pulpwood to them.

Under this definition, I am sure that the Treasury intends to call that man an employee. Otherwise they would not have him in there as a contract logger.

The CHAIRMAN. At least, they could call him an employee.

Mr. VEACH. That is it.

Senator, I apologize for wandering from my statement here, because my statement sets out to illustrate the difficulties we would have and the reasons therefor, if H. R. 6000 defined an employee in this way. But I listened to testimony here yesterday, and I listened to Senator Tobey's testimony here this morning, and the thing that bothered me and the thing that I would like to have you honorable gentlemen think with me about for a few minutes is this problem that we are faced with in trying to operate under such an uncertainty. The problem was recognized in 1948 when the Gearhart resolution was passed. Congress went to the trouble at that particular time to state that the common-law definition of an employee and an independent contractor should obtain. Now the Treasury is trying to go back again and again and again and put in a definition which would so interfere with the

rules of the game that we wouldn't be able to play the game. I can't understand why it is that these people are trying to change the rules and completely rewrite definitions that the Supreme Court of the United States and all of our other courts have worked for 150 years to establish.

I don't know of anybody, Senator George, who would not be affected, in north Georgia, or in all of Georgia as far as that is concerned, in these hundreds and hundreds of small logging and timber and cutting and pulpwood operations, by this change. I haven't talked to a single one of them who isn't disturbed about this definition, or anyone who is in favor of having the definition go into the law as you have written it.

I am not trying to discuss with you this morning the problem of the over-all coverage, who should be covered and who should not be covered. I am trying to discuss the matter of the percentage that should be collected from the pay rolls to take care of this old-age insurance. Other people who know far more about it than I do have discussed that phase of it with you at length. I am trying to discuss this definition with you from the standpoint of the territory that you and Senator Hoey are familiar with, and have you try to visualize the problems that we would be faced with if this law should go through.

I think, sir, that is all I have to say.

The CHAIRMAN. Are there any questions?

Thank you very, very much, Mr. Veach.

Mr. VEACH. Thank you, Senator.

(The prepared statement of Mr. Veach follows:)

STATEMENT OF JOHN B. VEACH IN BEHALF OF NATIONAL LUMBER MANUFACTURERS ASSOCIATION

My name is John B. Veach. I am president of the Hardwood Corp. of America and associated companies which operate in western North Carolina, northern Georgia, and eastern Tennessee. I appear here in behalf of the National Lumber Manufacturers Association, Washington, D. C., a federation of 16 regional associations representing lumber manufacturers in all parts of the United States. I am vice president and treasurer of that organization.

The lumber industry as a whole, as well as my own little operations, is strongly opposed to the definition of "employee" which H. R. 6000 proposes to insert in the Social Security Act and in the Internal Revenue Code, and to the repeal of Public Law 642 of the Eightieth Congress (the so-called Gearhart resolution). We believe this new definition is unnecessary and, from my own personal experience, I believe that it will have many serious and undesirable consequences.

The proposed new definition of "employee" tries to go far beyond any accepted present concept of the term and would, in effect, adopt the interpretation which the Bureau of Internal Revenue in its proposed regulations in 1947 tried to force on industry by administrative interpretation—and which the Congress rejected when it enacted the Gearhart resolution. The new definition embodies the so-called economic-reality test for determining whether a person is an employee or an independent contractor. This economic-reality type of test is one that the courts dislike but the bureaucrats like because of the latitude they are given.

The new definition would not only create serious uncertainties, but would result in serious retroactive tax liability in cases where an operator guessed wrong. The new definition would force all thinking companies to forget the independent contractor and put him out of business.

By virtue of Public Law 642 of the Eightieth Congress we have a fairly clear understanding at the present time of who is an employee under the social-security law. The proposed definition would destroy this understanding and leave the determination of employee status almost entirely to the judgment or whim of Federal administrative officials. Thousands of persons will not know their tax liability until it is determined for them by the Treasury Department; and when it is determined, it probably will be retroactive.

The new definition of "employee" leaves unsolved the very problems which brought about enactment of Public Law 642 of the Eightieth Congress (familiarly known as the Gearhart resolution). This law provides that an individual who is an independent contractor under the usual common-law rules is not an "employee" as the term is used in the Social Security Act and the Internal Revenue Code. It is the present law, which H. R. 6000 proposes to change by redefining "employee." How can the average businessman operate when someone is always thinking up ways to change the rules of the game?

Looking back 2 years, it was passage of the Gearhart resolution which prevented the Treasury Department from issuing regulations applying the so-called economic-reality test in determining the employer-employee relationship. The proposed Treasury regulations were intended to extend the Social Security Act to a class of employees not then covered and to simplify the collection of taxes by imposing that collection on the person who did business with independent contractors.

The arguments we advanced at that time favoring enactment of the Gearhart resolution are the same we advance today in opposing the proposed new definition of "employee' contained in H. R. 6000. Our fundamental objection was so ably expressed by the then chairman of this committee, Senator Millikin, in discussing this same matter with the representative of the Treasury Department, that we would like to quote him here. Senator Millikin said: "* * * you [that is, the Treasury Department] are completely in the field of discretion and you do not have dependable criteria on which to base a sensible solution."

The quotation of Senator Millikin follows his questioning of the Treasury representative on a problem of our own industry—that is, When is a timber cutter an employee and when is he an independent contractor? Senator Millikin endeavored without success to get an opinion, suggesting finally, "So if he has a little saw he is [an employee], and if he has a big saw he is not?" The Treasury representative avoided the question. The attempted definition of a contract logger contained in H. R. 6000 still does not answer the question, and it is not clarified by the House hearings or report.

I refer to subsection (k) (3) (E) under section 210 of the Social Security Act, as amended by H. R. 6000. What exactly is a contract logger? What does "performed personally" mean with reference to his contractual services? What would be a "substantial investment"? Would it have to be a sawmill as implied by the representative of the Treasury? What exactly is the "continuing relationship" referred to in the definition? What exactly is "integration of the individual's work in the business to which he renders service"? I submit that these little words will lead to much uncertainty and litigation as a result of administrative interpretation. The industry has much to fear from administrative interpretations, a fact recognized by this committee during the Gearhart resolution hearings.

Administrative discretion and lack of definition and reliable criteria are the very grounds upon which we oppose the definition of employee contained in H. R. 6000. The Federal agency is left a wide-open field of discretion; there are no dependable criteria. H. R. 6000 would abandon a long history involving the common-law test in determining the employer-employee relationship. Thousands of borderline cases determining whether one is an employee or an indepedent contractor now serve the employer as guideposts in figuring out his legal and economic responsibilities, which he must know with great dependability to carry on his business. H. R. 6000's definition of "employee" would junk these guideposts for the so-called economic-reality test which is untried and has had very little judicial application to serve as a guide for administrative interpretation.

As stated earlier, our arguments in favor of the Gearhart resolution are equally valid against the definition of "employee" in H. R. 6000. Conversely, the arguments which the Treasury Department used against the passage of the present law have lost most of their force and logic.

The Department's major premise was that adoption of the common-law test in determining the employer employee relationship would deprive several hundred thousand persons of social-security coverage. The question of coverage is no longer at issue; probably the majority of these several hundred thousand will be covered under the self-employed provision of H. R. 6000. There being no real question as to coverage involved, then we submit that if the common-law test is abandoned for the new definition of "employee," many independent contractors will lose their status as independent American small businessmen and become "employees" of those with whom they now have contracts. Enactment

of the new definition in H. R. 6000 would contravene the policy of Congress and help small business.

The second reason urged by the Treasury Department against the common-law test during the Gearhart resolution hearings has also lost its effectiveness. The extended coverage of the Socal Security Act embodied in other provisions of H. R. 6000 would not require the courts and administrative agencies to ignore the purposes of social-security legislation (as the Department urged the common-law test would). Millions more are brought under its provisions by legislative direction, and not by changing the legal and economic status of the self-employed and independent contractors by juggling word definitions.

A third argument the Treasury used against the common-law test applied by the Gearhart resolution was that "to legislate these workers into a self-employed status might forever deprive them of unemployment-insurance benefits." (You may recall that the Treasury had doubt as to the feasibility of including self-employed under an unemployment-insurance program.) That seems to me to be the most absurd argument against the common-law test which we would like to see retained. Our argument is that to legislate independent contractors into an "employee" status will (and not might) forever deprive them of their status as independent American small-business men in their own right. Show me the American citizen who has so little faith in the future that he will trade a benefit which he presently enjoys for a future benefit—that is, unemployment insurance—he hopes never to depend upon.

Summarizing what I have said earlier, the Treasury Department opposed the common-law test in determining the employer-employee relationship. Their reasons have lost their force, but still the definition of "employee" in H. R. 6000 is essentially the same as the definition the Department sought to apply by administrative regulation. We favored the common-law test then; and our argument we believe still has its same validity, which the Congress recognized by enacting Public Law 642. We believe the present law as it relates to the definition of "employee" should remain unchanged.

The CHAIRMAN. Mr. Beardmore? Mr. George W. Beardmore, of the National Lumber Manufacturers Association?

STATEMENT OF GEORGE W. BEARDMORE, ATTORNEY AND LABOR-RELATIONS ADVISER, POTLATCH FORESTS, INC., LEWISTON, IDAHO, APPEARING ON BEHALF OF NATIONAL LUMBER MANUFACTURERS ASSOCIATION

Mr. BEARDMORE. Mr. Chairman, my name is George W. Breadmore. I appear here in behalf of the National Lumber Manufacturers Association. I am an attorney and labor-relations adviser for Potlatch Forests, Inc., Lewiston, Idaho. I have been associated with the lumber industry most of my life.

My purpose in appearing here today is not to discuss the technical ramifications of this detailed, 201-page bill. There have been or will be many other witnesses far more qualified than I to speak on the mechanics of the social-security system and who have gone into or will go into these complex, though nevertheless highly important, phases of the bill. My remarks will be limited to a consideration of the proposed definition of "employee" contained in sections 104 (a) and 206 (a) of the bill (sec. 210 (k) of the Social Security Act and sec. 1426 (d) of the Internal Revenue Code, as amended by the bill).

Public Law 642 of the Eightieth Congress (the Gearhart resolution) specifically provides that the term "employee" as used in the Social Security Act does not include a person who has the status of an independent contractor under the usual common-law rules applicable in determining the employer-employee relationship.

The purpose of Congress in enacting this law was to maintain the status quo of certain emyployment taxes and social-security benefits

pending consideration and determination of the need or desirability of extended social-security coverage. It followed a flagrant attempt by the Bureau of Internal Revenue, through its own interpretation of the law, and without any authorization from the Congress, to extend the coverage of the Social Security Act by promulgating regulations which, in effect, would have abandoned the ordinary common-law test used in determining the employer-employee relationship.

Such regulations, if their issuance had not been forestalled by act of Congress, would have arbitrarily brought within the coverage of the Social Security Act, by administrative interpretation, "independent contractors" and would have made those independent contractors "employees" of the persons who had contracted for their services so that the persons who had contracted for their services would be liable to pay social-security taxes on their contract earnings.

H. R. 6000 would very substantially extend the coverage of the Social Security Act by direct congressional action. We believe that everyone whom the Commissioner of Internal Revenue sought to include by his proposed regulations in 1947 will be covered under H. R. 6000 without reference to the definition of employee. The issue here, therefore, is not one of coverage, but as to how taxes will be collected.

The definition of employee contained in sections 104 (a) and 206 (a) would permit the Commissioner of Internal Revenue to collect taxes on the earnings of independent contractors and their employees from the person with whom they have entered into contract. Industries like the lumber industry which make extensive use of independent contractors would then become liable for social-security taxes on many persons they have never seen and with whom they have no direct contact.

The proposed new definition of employee, in addition to applying the common-law test in determining whether or not a person is an "employee," would classify individuals in certain occupational groups as "employees" for the purposes of the act, under certain conditions, and would also classify as "employees" persons who are considered to have that status under the combined effect of seven enumerated factors—the so-called economic reality test. It is to those parts of the definition that we address ourselves and show their peculiar applicability to the lumber industry and their effect.

According to the definition, any contract logger would be an "employee" if his contract of service contemplates that substantially all of his services are to be performed by him personally, unless he has a "substantial" investment in the logging facilities or unless there is continuity in the performance of services and they are not in the nature of a single transaction.

What is a substantial investment in logging facilities? What would constitute a continuing relationship, as distinguished from a single transaction? Anyone with experience in dealing with Federal administrative agencies knows that it will take extensive interpretation to define and delimit these expressions. And even after such interpretations have been made, there is certain to be much misunderstanding and litigation.

In the economic reality test, seven different criteria are provided and the status of a person as an employee or independent contractor is to be determined by the combined effect of these seven factors. It is

difficult to imagine a more confusing set-up. There will be thousands of cases where the taxpayers will be in conflict with the Treasury Department as to what the "combined effect" is. On the basis of past experience, there can be little doubt, however, that the Bureau of Internal Revenue will classify as "employees" many thousands of persons who are not employees of those for whom they perform services, but who are actually, in fact and at law, now regarded as independent contractors.

The question of whether or not independent contractors are to be brought under the coverage of the Social Security Act is not in issue here. Many independent contractors and their employees are already covered by social security—or will be under the self-employed provisions contained elsewhere in H. R. 6000.

Federal agencies have estimated that of the special group of more than a million not now covered by social security who are to be brought under coverage, only 17,500 are contract loggers. They have further estimated that eight or nine thousand will be affected by the economic reality test which in substance is set forth in the proposed new definition of "employee." In view of the fact that there are approximately 60,000 sawmills in this country, we have no way to check the figures used by these agencies, but we believe they have grossly underestimated the number. It appears that this definition is proposed for no other reason than administrative convenience in collecting the social security tax, because—as pointed out earlier—the question of coverage is not at issue here.

If this is the reason for this legislation, it should not be accomplished by changing the definition of the word "employee." Let us be forthright and direct and say that substantial companies which make use of the services of independent contractors, or suppliers of any other kind, shall guarantee to the United States Government that social-security taxes will be collected and paid on those contract earnings and on the wages the independent contractor pays his own employees.

I merely say that as a matter of being direct and forthright about the legislation, and not to indicate any approval of that type of collection. However, we would much rather that people would come in the front door and not try to come in the back door, as we believe is being attempted by this particular section of the legislation.

Let me give you an idea of the effect of this proposed definition through a typical example in my home State which occurred prior to passage of the Gearhart resolution. A small sawmill operator in northern Idaho had some logs to be hauled to his mill. He contracted with some men who had their own trucks to haul these logs from the woods to the mill at a stated price per thousand board feet. The mill operator was interested only in the result to be accomplished. He wanted the logs delivered at his mill within a given time. The men commenced hauling the logs and considered themselves independent contractors, as in the past and as was customary. In order to take advantage of the short seasonal hauling weather, they worked long hours and their contract earnings were substantial.

The Internal Revenue Bureau first demanded that a 3 percent transportation tax be paid on the theory that these men were engaged in the transportation business as independent contractors and sub-

ject to that tax. Then another branch of the Internal Revenue Bureau claimed that these men were "employees" and demanded that the sawmill operator pay 2 percent old-age-benefit tax on the "wages" paid, and the 3 percent tax for unemployment compensation administration. The State director of the unemployment division then demanded the 2.7 percent tax on the "wages" for the State unemployment-benefit fund. To add further confusion, the Wage-Hour Division, when making a routine inspection of the mill owner, demanded the men to be paid time and one-half for the hours in excess of 40 worked per week on the theory they were "employees." That was a severe penalty because of their high earnings but, in addition, under the Fair Labor Standards Act, the employer was liable for an equal amount in liquidated damages. When you consider the bulk of production in the lumber industry comes from small operators who do not have an attorney at their elbow, the confusion was confounding and compounded to the extreme. And it will be so if H. R. 6000 is passed with the present definition of "employee" in it.

What did this operator do? He did what every red-blooded American would do when forced to it. A small operator with limited means had to stand up and fight three governmental agencies with unlimited means and talent. The Gearhart resolution adopting the common-law principles and definition have clarified the situation.

There will be many cases like this again if the definition in H. R. 6000 is now adopted. The end result will be that the new definition of employee in the Social Security Act will be a great deterrent to the establishment of small businesses. The express policy of the Congress and of the American people to aid and encourage small business will be overlooked.

In stating the opposition of the lumber industry to the proposed new definition of "employee," I would like to emphasize the danger of classifying as "employers," for no other reason than administrative convenience, persons who up to now have been regarded as independent contractors. I would like to urge upon the committee the fact that such a proposal is potentially dangerous to those people in our forest areas and several million farm wood lots who are dependent upon the forest products industries for all or a part of their living. The proposed definition would disturb a long and established pattern of relationship, economic and legal, which has existed in the forest products industries and in and among those communities which are directly dependent upon such industries. While it is readily understood that competitive private enterprise is often a hazardous undertaking, it is one from which we all benefit in better service and high living standards—and it should not be made more difficult by legislation which envisions burdensome administrative detail which is over and above normal business hazards.

The proposed change in the definition of "employee" would create an impossible situation for many businesses. For example, with reference to contracts that are already in existence and which are drawn under the common-law concept of the "independent contractor," in what position is the company contracting for the services of the independent contractor in attempting to abide with the definition of "employee" contained in H. R. 6000? What are the company's liabilities and obligations? The independent contractor, because of his rela-

tionship with the company which contracts for his services, can refuse to allow inspection of his books and accounts. He can refuse to disclose his own earnings and what he pays his own employees. There is no way the company using his services can determine his pay roll and its own tax liability on his pay roll.

In conclusion let me urge again that you do not change the common-law concept of the employer-employee relationship nor destroy the concept of an independent contractor for the administrative convenience of a Government agency. To do so will cause great confusion and will severely discourage the thousands of men who are establishing themselves in their own businesses with small beginnings as independent contractors. In the final analysis, it would serve no useful purpose.

The CHAIRMAN. Thank you very much, sir, for your appearance.

Mr. BEARDMORE. Thank you, Mr. Chairman.

The CHAIRMAN. Mr. George M. Fuller? You may be seated, Mr. Fuller, if you wish.

STATEMENT OF GEORGE M. FULLER, VICE PRESIDENT, NATIONAL LUMBER MANUFACTURERS ASSOCIATION, WASHINGTON, D. C.

Mr. FULLER. Thank you, Senator.

Mr. Chairman, my name is George M. Fuller. I am vice president of the National Lumber Manufacturers Association.

For the record, I would like to submit several statements submitted by the regional associations affiliated with the National Lumber Manufacturers Association. I have one here from the Northern Hemlock and Hardwood Manufacturers Association, of Oshkosh, Wis., another from the Southern Pine Industry Committee, covering 12 Southern States, and a third from the Southern Hardwood Producers, Inc., of Memphis, Tenn.

I would like to submit these for the record, Mr. Chairman.

The CHAIRMAN. You may do so.

(The statements referred to follow:)

STATEMENT OF O. T. SWAN, SECRETARY-MANAGER OF THE NORTHERN HEMLOCK AND HARDWOOD MANUFACTURERS ASSOCIATION, OSHKOSH, WIS.

The Northern Hemlock and Hardwood Manufacturers Association is a regional organization of small sawmill men in the Lake States. Most of its members are very small operators. This association now is entering its fortieth year.

We are opposed to those portions of sections 104 (a) and 206 (a) of H. R. 6000 which will arbitrarily make employees of many contractors and subcontractors in the widely scattered timber operations of this region and take them out from under the common-law classifications under which these small businesses have long successfully developed.

In the Lake States of Michigan, Wisconsin, and Minnesota, the extensive unbroken forests of virgin timber are gone and with them the old time sawmills which operated for many years with sawlogs from their own contiguous timberlands. These large timber holdings were adapted to the operation of large company camps where sawlogs were produced by company employees under supervision by the company.

Today we have more than 3,000 small sawmills in the Lake States and of these, the smaller classifications produce two-thirds of the lumber output. The sawmill of today is sustained by sawlogs from numerous small scattered tracts of timber. The ownership of these tracts is widely dispersed. A few of the larger companies own timberland but even this is scattered over a considerable area. The bulk of the holdings are owned by settlers and farmers, by the State or Federal Government and by outside parties who hold land as an investment.

The usual farm wood lot or timber tract is so small and the amount of timber thereon is so limited in quantity as to preclude the expense of erecting a company camp. The number of men, frequently from 2 to 10, which can be employed on such small holdings is too small to justify the expense of maintaining a regular company supervisor on the job. Often the location of the operation is too remote from the sawmill to justify moving company equipment to the operation to obtain the small supply of logs which will be produced.

The only feasible method of logging such a tract of land is to contract for the entire operation with an independent contractor in the neighborhood who will assume the entire responsibility. He may be a local farmer or settler who regularly adds to his income by working away from his own land during the winter season or he may be a person who earns his entire livelihood from contract logging jobs.

This arrangement works to the advantage of all parties concerned. The logger can earn his living and profit according to his ability without surrendering his independence. People in the local community obtain work near home. The sawmill operator is freed from exorbitant camp and record keeping costs and very expensive supervision. The consumer is able to buy the finished product at a lower price because unnecessary costs are eliminated. The general economy is strengthened by the building up of a class of small independent businessmen who serve as a further bulwark to the system of private enterprise.

In many parts of northern Wisconsin, Michigan, and Minnesota where there are no manufacturing establishments and where farming and resort activities are at a standstill during the winter, the work resulting from these scattered contract logging jobs and other local timber contract work is of tremendous importance to people who live in the local communities. The proposed aribtrary rearrangement of our employees and independent contractors establishes a precedent which is likely to be used in the administration of other Federal laws and by the States themselves because it seems to simplify their administrative problems. Perhaps the proponents do not see the tremendous complications which this inflicts upon local small industry.

If this proposal becomes law we may expect that through broad interpretation by field agents and interpretation on a policy level by the agency involved it will eventually result in many small independent operators being classified as employees of one company or another. If one agency so classifies them it is reasonable to expect others to do so until one company, for example, would be the bookkeeper and tax collector for every small operation within a radius of 100 miles. The primary operator thus burdened under the law could not supervise these many small businesses over a wide area and would have to eliminate many of them and reorganize his work in more concentrated form with higher costs. It would make it especially miserable for the very small operators who also have contractors because of the complications involved in keeping records and understanding the law. There are many small jobs especially in logging, where a contractor or jobber subcontracts to even the farmer from whom the wood lot is purchased, that would make the small operator feel buried under a mass of technicalities.

We believe the proposed definition of employee in H. R. 6000 would harass and eliminate many of the small logging contractors who qualify as independent contractors under common-law tests.

In the final development of these processes it appears that those engaged in these scattered small operations in the Lake States would eventually have the obligation of withholding income taxes, paying workmen's compensation benefits, making unemployment compensation contributions and paying benefits, making social security contributions, observing the requirements of the Fair Labor Standards Act including the determination of overtime compensation and also bargaining with a secondary group of so-called employees under the Labor-Management Relations Act. The exorbitant expense of maintaining supervision and control over such scattered operations in the Lake States is apparent. A small sawmill may be dependent upon 20 to 30 such operations scattered over considerable distances.

The sawmill operator would necessarily have to reorganize his work. He might cancel or give up contract work and handle the jobs by means of a roving crew from sawmill headquarters. This would be costly and deprive local people of employment. Or he could curtail operations and eliminate the more remote and smaller timber tracts and farm wood lots from the scope of his operation. Some will fear to begin. No matter what choice is forced upon the sawmill operator some segment of society will be injured without compensating benefits.

In Michigan, Wisconsin, and Minnesota we have more than 3,000 very small sawmills, a very large number of independent loggers, and a great many independent truckers who take contracts to haul logs or lumber. The sawmill will have a number of contracts with loggers and the loggers will have contracts with truckers and many of these contractors are not tied up with one firm but have contracts with two or more. The lumber industry is but part of this local picture. The products of these same forests through the work of many other presently independent people maintain important sections of the pulp and paper industry, the veneer and plywood industry, raw material for wood chemical plants, cross ties for the railroads, and timbers for the great iron ore and copper mines of Michigan and Minnesota.

The following list is not complete but indicates the field of operations frequently taken care of by independent contractors:

Jobbers who contract to cut timber and skid and load logs on trucks in the woods.
Independent truckers handling logs or lumber, material, or supplies.
Road-building and gravel contractors.
Bridge-building contractors.
Commission men or lumber brokers.
Some farmer loggers who take pulp-wood-cutting and clean-up jobs in the woods.

Many substantial citizens and men of broad affairs in the local timber industries made their first successes as independent contractors where they obtained a knowledge of management requirements as an executive and developed self-reliance.

This association has received many letters of protest on this part of H. R. 6000. The attached letter from the Ahonen Lumber Co., of Ironwood, Mich., well summarizes what is being said in the local industry.

(The letter mentioned above was read by Mr. Fuller in his oral testimony.)

STATEMENT OF SOUTHERN PINE INDUSTRY COMMITTEE

EFFECTS OF SECTION 210 (K) (4) OF H. R. 6000 UPON THE SOUTHERN PINE INDUSTRY

The adoption of any more general and flexible standards than now apply under the common law for determining the status of a person as an "employee" will lead, in the southern pine industry, to—

(1) The destruction of many small enterprises with consequent loss of freedom and independence of such employers to operate businesses of their own;

(2) A disturbance in relationships that have existed for many years;

(3) A probable increase in the production costs of logs and lumber which, if not absorbed by home builders and other lumber consumers, must necessarily lead to the closing of plants and to unemployment; and

(4) An intolerable burden of administration in the collection of social-security taxes that would be almost impossible of application from the Government standpoint and which would compound the confusion already surrounding businessmen in the determination of the status of the people with whom they deal by contract.

To understand how the southern pine industry will be affected by an administrative agency authorized to determine the status of an "employee" under flexible and variable factors as those named in section 210 (k) (4) of H. R. 6000 (passed by the House at the last session of Congress), it is necessary to examine the structure of the industry and its method of operation.

The sawmilling phase of the industry includes, according to the Bureau of the Census, 20,000 units in the area from Virginia to Florida and to Texas and Oklahoma. A relatively small proportion of these operations own large tracts of timber and usually have their own logging crews. Many others, however, do all or some of their logging through independent contractors. The operators then perform the entire manufacturing process on the trees thus removed.

Besides this type of sawmilling operation, there are approximately 1,500 concentration plants which either buy rough, green lumber on the open market or make contracts with operators of small mills to cut and deliver timber owned or being purchased by the concentration plant.

The remainder of the 20,000-plus units in the southern pine industry are small mills, with a vast range in equipment, managerial skill, capital, and operating methods. They are described by the United States Forest Service thusly: "Most

of these cut less than 10,000 board feet a day and less than 2,000 M feet a year. The typical small mill is a portable mill, employing 6 to 10 men in the mill and about as many in the woods. It works more or less intermittently, seldom more than 200 days a year. These mills cut lumber either on their own account, or under contract for concentration yards or other operators who take the rough lumber, finish it, and put it on the market."

"Few of the small-mill operators own timberland. Many of them buy stumpage from farmers or other landowners, but in many instances the stumpage is purchased by the concentration-yard operators who employ the small-mill men to cut it for them."

"Although some operators keep careful and accurate records, accounting methods at most mills are crude. Many keep no written records at all and have only a vague idea of their costs and earnings."

This description of sawmilling in the southern pine industry has been simplified for quick and easy understanding, but the variety of operating methods, arrangements, and relationships among people in the industry practically defies accurate description.

However, it is in logging operations that most independent contractors perform in the southern pine industry. While some mills log with their own personnel and equipment or buy logs on the open market, thousands of others depend on independent contractors for their woods operations.

There are logging contractors who own but one truck, a limited amount of equipment, and a few employees. On the other hand there are other logging contractors whose investments exceed $25,000 and who employ a dozen or more men. Some contractors have sufficient money to finance equipment purchases: others finance their purchases through banks or other lending institutions; and still others induce the lumber companies with which they deal to lend them money for trucks or equipment, to be amortized from the contractor's earnings.

There are contractors whose arrangements are covered by written agreements, while others have informal understandings with the companies without sacrifice of their independence.

Some contractors perform for the same company for several years with little or no interruptions, while others work for several companies at one time or on different occasions. In still other cases, farmers, during their off seasons, use their labor, tractors, and teams to log as independent contractors.

With most experienced logging contractors, the only degree of what might be termed "supervision" is in connection with the timber to be cut and what conditions will be observed in the cutting. There is no hour-to-hour or day-to-day supervision, but a company representative may visit the woods every few days, not to instruct the contracotr and his employees in methods of doing their work, but to see that the conditions of the oral or written agreement are being observed and that the timber and land are not being damaged.

It is the universal custom that contractors hire and fire their own men and have complete control over pay rates and methods, hours of work, and conditions of employment.

Since most State laws in the South render the principal liable, lumber companies for their own protection, often require evidence from the contractors that compensation insurance is carried or the companies will receive or make the contractor's pay rolls in order to guarantee insurance coverage and make premium payments.

It is evident that with the almost limitless range in contractual arrangements and operating relationships in the southern pine industry, were any administrative agency granted the power to apply the standards of section 210 (k) (4) of H. R. 6000 in its own discretion they would be impossible of practical application to empolyer-contractors who are small and transitory and who keep little, if any, records and operate in rural areas.

If the question of the status of an independent contractor must be resolved in each case under a different set of rules, the uncertainties and confusion will multiply, and the incentive to continue in business will be threatened.

While manufacturers of southern pine must face the taks of accurately judging who is an independent contractor and who is an employee for the purposes of damage suits and social-security taxes, the problem would become further complicated when the operator remembers that the Wage-Hour Division and the National Labor Relations Board, as well as the branch of the Bureau of Internal Revenue collecting the transportation tax, will make their own determinations of each contractor's status independently of the decisions of other Government agencies.

It is only realistic to assume that, if independent contratoers are classified as "employees" in order to alleviate the difficulties of collecting social-security taxes, other Government agencies, in support of their own policies, would regard the social-security determination to be persuasive. Indeed, it is probable that even where contractors have been determined to be employers at common law, they would eventually lose their status under those rules also.

To ascertain the effects on the southern pine manufacturing industry of flexible standards such as those in section 210 (k) (4), H. R. 6000, for the determination of "employee" there are submitted, as exhibit A attached, comments from letters writetn shortly before the end of 1949, direct from lumber producers.

The difficulties of administering the law if it includes a definition of "employee" such as that proposed will be insuperable. To consider contractors and their employees as employees of lumber companies is the equivalent of asking the producers to collect taxes on the compensation of people they don't know, don't pay, and never see.

The proposed definition of "employee," if enacted, would mean the disruption of successful, happy, and practical relationships and a disturbance in the employment pattern of areas in the South.

This statement does not concern itself with the application of social-security benefits to the employees of its contractors, but the southern pine industry contends that, in the administration of the system, the responsibility for the collection of the taxes should rest with those contractors who have always been considered to be employers in their own right.

The southern pine industry does not think that Congress is justified in adopting the definition of "employee" proposed in H. R. 6000 simply to expedite the tasks of an administrative agency when such action would only aggravate an already badly confused situation.

EXHIBIT A

EXCERPTS FROM LETTERS FROM SOUTHERN PINE MANUFACTURERS REFERRING TO EFFECTS OF "EMPLOYEE" DEFINITION IN H. R. 6000

"* * * At present all of our logging is being done by independent contractors with from one to three trucks each. This change would seem to make it necessary to discontinue the contract logging business altogether and do our logging with company equipment and personnel at a higher cost. It is easily understood why personnel will take better care of their own equipment than they will of company-owned equipment, and put forth more effort on contract work than on an hourly basis. There is also less supervision on our part required in connection with the contract logging.

"Should our contract logging be continued under such changed legislation, this would materially affect the amount of clerical work to be done; in other words, it would increase the number on our pay roll by at least 20 percent and all other clerical work accordingly. * * *"

"* * * It is absolutely physically impossible to regulate the affairs of independent contractors. They are men who are in business for themselves and are scattered over a wide area, making it absolutely impossible to regulate their activities in the way of employment. Other than this, if they were taken away from the status of independent contractors, there would be utter confusion as to their contract obligations, securing of materials, what they did in the way of workmen's compensation, and so on. It would destroy a number of small businesses. Independent contractors have the status of a small-business man at this time, but if the law should go into effect, there would be no other alternative than for the mill operators to take over these activities so that they could have a close line on their operation. They would have to spend considerable amounts of money for equipment, and it would materially raise the cost of the products sold due to the extra cost that would be involved in supervision, both men and equipment. * * *"

"* * * The most important other effects this proposal would have on our business would be that, immediately after we were required to report independent contractors and their employees for social security, surely to follow would be employment-compensation commissions of the various States would rule we were responsible to them for independent contractors and their employees. Then would come the necessity of reporting all of these men under

our workmen's compensation insurance and in our case this would not be 1 percent, or 0.5 percent, such as we are now paying the social security and the employment compensation, but it would be an average of around $7 per hundred. Too, there would be no earthly way for us to even know who was working for us until after they reported an accident, making it impossible for them to have a physical check-up before hiring them and no control over them, and the up-shot of this would be we would pay for all of the accidents of these men regardless of where they got hurt—hence our rate would go up steadily from year to year. In some operations where they are widely scattered, it would be possible to have men in hospitals that we would not even know about, as well as have employees reporting accidents, say, 6 months after working for one of the independent contractors, claiming that he sustained permanent injuries while working for some contractor on one of our jobs.

"* * * There will not be one industry who has work done by contractors who will even know where they stand and how much liability is outstanding against them and from what angle it will show up and certainly the cost would certainly skyrocket when you go to paying $7 per hundred on all pay rolls for workmen's compensation insurance, and if this is paid on the contractor, you would be paying on any profit he has and on 50 percent of the gross amount trucks and mules make—so you can see what this would do to logging contractors. * * *"

"* * * We contract with loggers to cut our timber, load it, and haul it to our mills. Our timber is in small scattered stands and it pays us better to have a group of small independent contractors to do this work rather than try to maintain our own logging crew and do it ourselves. In a larger operation, with bigger stands of timber, it might be more inexpensive to do the work with our own crew supervised by experienced men, but since this situation does not exist we find that an independent logger will work side by side with his men and do a better job than we could hope to do if we hired men to supervise these small gangs. It is natural that these contractors take more interest in the efficiency of their operations than they possibly could if they were working for us on a salary basis. The maintenance of their equipment means more to them, as the equipment represents a considerable investment and is important to their very livelihood. If it were company equipment, they would never have the same interest. * * *"

"* * * This would be disastrous in our business as we now operate since a large amount of our sawmilling and all of our logging is carried on by independent contractors. It would mean the end of independent contractors as I see no way that we could still operate after this manner and assume responsibility for practically everything he did. In fact, it would eliminate the need for such contractors. It would mean that we would have to start company operations for all sawmilling and all logging and assuming that everyone did this, as they would probably have to do, it would mean in the long run higher prices in lumber products to the consumer, as the independent contractors can definitely render cheaper services in some instances than can be done by company operations and usually the customer finally pays the bill. * * *"

"* * * Should we be required to treat these independent contractors and their employees as our own, it would be necessary to include these names in our regular weekly pay roll, deducting social security, withholding taxes, etc. This would mean that the number of employees on our regular pay roll would be increased from approximately 120 to at least 150. In addition to our responsibility for the social-security and withholding taxes, a more different feature would be in connection with keeping an accurate record of their social-security numbers, as a number of these employees of the logging contractors are on the job 1 week and gone the next and most difficult to locate. * * *"

"* * * It would not be so bad if we could know definitely just what employees of independent contractos are engaged and engaged solely on work for us, if we could know exactly what such employees are paid, but we have no way of verifying the wage rates, hours of employment, or determining what part of the employees' time is spent on work for us, and because we cannot determine these things accurately, by that very fact we incur a liability for which we cannot very well hold the contractors responsible. * * *"

"* * * It would mean almost the elimination of the market in small amounts produced by farmers. * * *"

"* * * To absorb such small operators (logging contractors) means lowering the incentive basis of good men, who are experts in a small way. * * *"

"* * * It would deny the small operator the privilege of having an independent business. By making the companies responsible for employees of an independent contractor, they are eliminating that contractor. The contract, which has been used so successfully down through the years, has been a stepping stone to bigger things for most of the successful businessmen in the country today. Passage of this legislation, it appears to me, indirectly destroys one of the basic rights of all men, that is the right to make a contract. * * *"

"* * * We are at present using approximately 25 small contractors at our two mills which covers all types of contract logging from those cutting on the company's timber to those cutting timber bought for them by the company and which timber really belongs to them but is carried in the company's name until it is paid out, to those from whom the company buys logs and over which the mill had no control or no connection with whatsoever, the only contact with this contractor being at the skidway where his logs were bought. * * *"

STATEMENT OF SOUTHERN HARDWOOD PRODUCERS, INC., IN OPPOSITION TO H. R. 6000

The Southern Hardwood Producers, Inc., located at Memphis, Tenn., is an association of hardwood lumber mills operating in all or part of 16 Southern States and shipping their lumber and other mill products throughout the world.

The southern hardwood industry is opposed to much of the expanded social-security program represented by H. R. 6000, as it firmly believes this program throws an undue tax burden on industry and represents another step toward socialization of our economy. However, as many witnesses will appear before the committee and discuss fully all phases of the bill, this statement will be confined to a consideration of section 104 (a) and 206 (a), amending the definition of "employee" and more specifically to paragraph (3) (E) of these sections which define a "contract logger" as an "employee."

This proposed definition of "employee" is highly objectionable as it is contrary to the accepted meaning of the term which has been established and recognized under common law for hundreds of years and in many hundreds of court cases. We cannot believe it is the wish or intent of Congress to completely reverse the findings under common law and thereby legislate many small legitimate businessmen out of business. However, this is exactly what will happen if section 104 (a) and 206 (a) of the bill are approved in their present form.

If these Sections, as now drafted, are enacted into law, the Federal Security Agency and the Treasury Department would be empowered to change the status of many persons that are presently self-employed, by simply classifying them as "employees" of the companies with which they have contractual agreements. In many cases, such as a "contract logger," the reversed status becomes mandatory and the administrative agencies are given no choice as to classification, but in other instances the decision is apparently left up to the whim of the Administrator to be announced at such time and under such conditions as he chooses.

To fully appreciate the impact it would have on both the sawmill operators and their independent loggers if the existing relationship between the mills and the loggers is disrupted, a clear understanding of the operations of the industry is necessary. It should be kept in mind that a mill may draw its logs from one or more sources and from a wide area—either from company-owned timberlands, or from timberlands on which they own cutting rights, or by purchasing logs delivered at the mill or some designated site, or from all three sources. Also, these timber tracts can be, and possibly are, located in different localities great distances apart. Few, if any, mills are able to concentrate their woods operations in an immediate locality.

The manner in which the woods work is handled varies with the individual mill. Some mills own their own equipment and do all of their own logging, other mills do part of their own logging and use independent contractors for the balance, while still other mills, representing by far the greatest majority, rely entirely on contract loggers for their supply of logs. There is a number of reasons for these different methods of operations. One mill may decide it is more economical to own and operate its own logging equipment, while another mill may feel it can get the job done better and cheaper through independent contractors. Or, as is frequently the case, the mill simply does not have managerial

personnel to properly look after both the sawmill and the woods operation. Regardless of the reasons prompting the mill to contract for its logging, the arrangements conform with normal contractual relationships.

The provisions of this bill, which would invalidate bona fide independent contractor relationships that now exist between manufacturers of lumber and lumber products and self-employed loggers, would be a death blow to many hundreds of individuals who have, through their own initiative and effort, climbed from a wage earner to the management of their own business. These are not fly-by-night or dummy organizations set up with ulterior motives or for the purpose of evading any laws. They are typical American "small business," which we are given to understand Congress and the Federal Government are sponsoring and encouraging.

The present system of logging through independent contractors or, as termed in H. R. 6000, "contract loggers," is not of recent origin. It has been a practice for a long time and antedates the Social Security Act, many, many years. It represents a mutual satisfactory arrangement which need not and should not be disturbed.

Just as in other lines of business, the size of the contract logger and his scope of activities range from a small operator whose investments in equipment may be less than $10,000 and who employs only a few men, to the larger operator whose investments total more than $50,000 and who employs as many as 50 or more men. Why should these independent-business men who offer employment to many in their territory and who look upon themselves as being self-employed, be forced by law into the uncertain and embarrassing status of an "employee" of the firms with whom they do business?

To illustrate the type of individuals who will be affected by sections 104 (a) and 206 (a) of this bill, we cite the case of a "contract logger" located in a small Mississippi town. Seven years ago this person was on the pay roll of the local sawmill at the prevailing hourly wage rate and his weekly earning averaged around $35. Ownership of the mill changed hands and the new proprietors, being impressed with his initiative and business judgment, assisted him in getting started as a contract logger. Today, this former wage earner has many thousands of dollars invested in equipment, gives employment to 25 or more men and has built for himself and family a comfortable seven-room house. Certainly this committee, or Congress, is not in favor of promoting legislation that will have the effect of putting this man out of business, but under this bill he is a "contract logger" and as such, an "employee" of whatever company he deals with. In other words, if the bill becomes law he reverts to the same status he held 7 years ago—a wage earner on the pay roll of someone else.

In almost all cases the contract logger enters into a negotiated written contract with the mill for cutting and hauling designated tracts of timber at a specified rate per thousand feet. The contractor employs and has complete charge of the men working for him. He is responsible for their wage and is the only one who can terminate their employment. The mill has no direct contact with the contractor's employees, no knowledge of the wages he pays or the hours he works. They do not know or want to know the profit he makes. He is an independent-business man, by every recognized standard, and he is proud of it.

This, of course, would change if, by Federal law, these independent suppliers and the men whom they employ become employees of the company with which they deal. The company would then have to decide between two courses of action. One, to keep complete and detailed records on each of the contractor's employees, including rate of pay, hours worked, and weekly earnings, and also on the profits or losses of the contractor. To withhold social-security tax payments from the wages of the employees and the profits of the contractor. Or two, to cancel the contract the company now has with the logger, buy their own logging equipment, and do all their own logging with employees under their direct supervision and management.

In either case, the independent business of the contractor is destroyed and, therefore, it is believed most companies will adopt the latter course. They will not want to assume the employer's obligations and responsibilities to and for employees, as set forth in the social-security laws, wage-and-hour laws, income-tax law, etc., unless such employees, are, in fact, their employees.

The contract logger is an integral part of the southern hardwood industry. He plays an important role in the production of its products. He is a good citizen of his community and a responsible businessman. He has every right

to expect the Federal Government to recognize and protect the lawful business enterprise he has established.

We reiterate, there is no need or reason for the changes proposed in sections 104 (a) and 206 (a), so in the interest of the self-employed, the independent contract logger, the company with which he deals and the lumber industry, we respectfully ask that the committee amend the wording of these sections to conform with the Gearhart resolution.

Mr. FULLER. In addition to that, Senator, I would like to read a letter from a lumber manufacturer in Ironwood, Mich., which I believe covers this subject quite thoroughly, if that is agreeable to you.

The CHAIRMAN. Yes; you may do so.

Mr. FULLER. This is from Mr. Arvey Ahonen of the Ahonen Lumber Co. of Ironwood, Mich.:

The particular part to which I object is section 210 (k) (4) and its companion amendment to the Internal Revenue Code (206 (d) (4) (as proposed in sec. 104 (a) and 206 (a) of H. R. 6000)).

As you know, there are a large number of independent contractors presently engaged in woods and mill operations. The following list may not be complete, but if it isn't it will give you a very good idea of the variety of operations which are now taken care of by independent contractors.

We have, of course, the jobbers of the class involved in the recent litigation with the Michigan Public Service Commission. Even under section 210 (k) (4) I doubt if any one could conjure these operators into an employee status. In addition to jobbers we have independent truckers, road building and gravel contractors, bridge building contractors, jobbers who take contracts to cut, skid, and load on trucks in woods, small farmer-loggers who take pulp cutting and clean up jobs and work with small crews composed of members of their family or neighbors, and last but not least, commission men or lumber brokers.

In my opinion, the statute in question would make it extremely easy for the Social Security Administration and the courts to classify all of these persons as employees—a situation which would not be particularly desirable from our viewpoint or from the viewpoint of our communities.

We can divide independent truckers into two possible classifications: (1) those who haul logs and forest products from the woods to point of delivery and (2) those who haul finished lumber from the mill to market. In Michigan, and I think in most other States, these independent truckers are required to secure certificates as either limited or general common carriers from the public service commission, and do so. It is possible under the Michigan law for them to secure permits as contract carriers but few if any elect to secure this limited certification. Since the Michigan Public Service Commission at least requires applicants for common carrier certificates, either limited or general, to furnish financial statements, certificates of insurance coverage and general information showing how long they have been in the trucking business, it would seem these men are definitely in a business of their own and might not be classed as employees under section 210 (k) (4). However, in view of the general tendency to make every one possible into an employee I do not think it advisable to take any unnecessary chances with this statute if its passage can be prevented.

These truckers, being common carriers of one kind or another, haul for different concerns at different times and are seldom, if ever, connected with any one concern for very long consecutive periods of time. However, if they should be classified as employees for the purpose of the H. R. 6000 this would furnish considerable argument for getting them classified as employees for other purposes and would create a very undesirable situation so far as liability for negligence is concerned, as well as a very unsatisfactory situation as far as bookkeeping and records are concerned.

In the discussion so far I have seen little reference to commission men and lumber brokers. As you know, these men work on a commission basis. As a general rule they have little or no investment in the facilities for work and little or no capital invested. Their work can easily be said to be integrated in the lumber business and frequently lumber companies make use of the services of a particular commission man or broker over long periods of time, thus creating what might be called "permanency of the relationship." While it is undoubtedly true that the lumber companies exercise no control over these commission men or brokers, as that term is generally understood, it would seem that under the seven tests set out in section 210 (k) (4) it would be entirely

possible to classify these men as employees, at least for the purpose of the Social Security Act, with the same unfavorable results mentioned above for independent truckers.

Road-building and graveling contractors may or may not have a substantial investment in equipment, although they usually do own one or more trucks, scrapers and other tools, and possibly a shovel or clam to get the gravel out of the pit. They would need a considerable degree of skill in the performance of their jobs, but possibly not enough to satisfy the Social Security Administrator. Contract builders of bridges, particularly small bridges, do not need a great deal of equipment and perform their work by themselves or with small crews. However, by all present tests road-building and graveling contractors and contract bridge builders are independent contractors, and for the benefit of the industry should so remain.

Under present practice small jobbers or gypos who contract to cut, skid, and load, and small farmer operators may be able to operate and do operate with few tools other than axes, saws, et cetera—the tools commonly supplied to employee sawyers—plus a horse or team or a small tractor. Their investment in equipment is not usually very large and they have little or no capital invested in the operation. These men would, in my opinion, be particularly susceptible to classification of emplyoees under section 210 (k) (4).

Most of these men prefer to work as independent contractors because as such they are not subject to close supervision by the operator and they do have a chance to make more money than they would working for wages. Often their operations are irregular due to any number of conditions with which you are undoubtedly familiar.

It seems to me one of the main points involved in this controversy is that making employees out of a large number of individuals who at present are independent contractors will have a bad economic effect on the community in which these persons live and do business. Independent contractors, as a general rule, spread their business among a large number of establishments. This is particularly true with regard to truckers and garages and filling stations. If a lumber company owns and operates its own trucks it has a tendency to stick to one make which has proved satisfactory, buy all its gasoline and oil from one distributor and maintain a garage or machine shop of its own for repairs. Local banks also get considerable desirable business financing independent trucks and jobbers, large and small, which business they would lose if these men are employees, as the financing would be taken care of by the companies involved. A man starting out as a small independent contractor has an opportunity to develop into a larger operator. You can readily supply any number of illustrations. Making every one an employee would greatly discourage this tendency, to the general economic and political detriment of the country which operates on the free-enterprise system.

In the House committee report on H. R. 6000, page 84, the committee refers to *United States* v. *Silk* and *Harrison* v. *Gregran Lines, Inc.* (331 U. S. 704, 67 Sup. Ct. 1463), and expresses a little dissatisfaction with that opinion. It is interesting to note that this opinion held independent truckers of the kind with which we are concerned to be independent contractors, although Justices Black, Douglas, and Murphy dissented and Justice Rutledge was not so sure. In view of this it would look as though the authors of H. R. 6000 intended to create a situation under which our independent trucks could be held to be employees.

As I see it, the objectionable parts of H. R. 6000 are just another step in a general attempt on the part of our social-welfare element to force a division of most of our population into two classes—employers and employees on the erroneous assumption that such procedure is somehow for the best interests of the "employees." Such theory is entirely foreign to the whole experience of our country which has operated on the assumption that the faster an individual could work up to being his own boss and having his own business, the better it is for all concerned.

His postscript is:

Concerning farmer-loggers, I think we should also stress the point that these men often take care of their farm work during the same period they are working in the woods. As independent contractors they can start in at 9 o'clock and quit at 3 or 4, as they so desire. Also, they can stay home half a day and work half a day, or if their farm work requires, they can stay home all day. They could not do these things if they were employees.

Thank you, Mr. Chairman.

The CHAIRMAN. Are there any questions?

If not, we thank you very much; and you may leave with the reporter the documents you wish to go into the record.

Mr. FULLER. Thank you.

The CHAIRMAN. Mr. Pringle? You may be seated, sir. Please identify yourself, if you will, for the benefit of the record.

STATEMENT OF WALTER PRINGLE 3D, PRINGLE LUMBER CO., CHARLESTON, S. C.

Mr. PRINGLE. My name is Walter Pringle 3d, and I represent the Pringle Lumber Co., in Charleston, S. C.

Senator George, I do not have a printed statement, as the situation with respect to my company is so simple that I will not have to take up much of your time.

I was at one time an independent contractor, and made a little money, and now I am using independent contractors in my operation.

The CHAIRMAN. Are you in the lumber business?

Mr. PRINGLE. Yes, sir, selling and manufacturing pine, and located in Charleston, S. C.

We have on our list of producers approximately 50 men, of which I doubt seriously whether over 30 or 35 work each week. The others have made enough the previous week not to have to work, or to use their own prerogative. They go fishing, and so forth. Some of them bring in less than $200 worth of logs per week. Others go as high as $3,000 or $3,500.

It would put an impossible administrative task on my office if we were forced to keep up with the wanderings of these "employees."

At times we help them buy timber, and they would definitely be construed as employees under the new definition. It would be impossible for us to do an honest job of interpreting the number of hours that these men work, or where they work. We feel that it would put a hazard on our business operation that might throw us out of business. That is, we would be forced to reduce the market, as we call it, for free logs to the point where it was 4 years ago, before we started our operation.

We produce southern pine lumber, about 50 to 60 thousand feet a day. This operation has been built up from one producing 10,000 feet a day during the past 4 to 5 years. In the meantime, we have given jobs and created a market for up to 250,000 to 300,000 feet of pine logs per week, and we have added to our community $12,000 worth of good American dollars per week. But we feel we could not honestly abide by the new rules if they were adopted. It is that simple with us.

The CHAIRMAN. Those who furnish you with the logs are in no sense your employees, in any ordinary understanding of that term?

Mr. PRINGLE. That is correct. At times, if they are out of timber, my log buyer and wood superintendent will help them purchase timber. If they find attractive timber and say, "Well, I can trade on that for $15," we will buy it for them, put up the money for them, or assure the landowner they will pay at that rate.

The CHAIRMAN. Well, they might go to the bank if they had credit at the bank.

Mr. PRINGLE. Yes, sir.

The CHAIRMAN. But they prefer to deal with you?

Mr. PRINGLE. They prefer to deal with us. But our producers are so small, both white and colored, that lots of them have no credit other than with our company.

The CHAIRMAN. That is true.

Mr. PRINGLE. So it would be an impossible situation, and they can't, lots of them, even persuade the landowner to sell to them; because the landowner fears he might not get the stumpage. They want to have the company purchasing the raw material at the destination agree to deduct the stumpage from the prevailing market price on the logs and mail it to them.

Under the new ruling, we feel that we would have them termed as our employees, and we would be responsible for the social security, the wages and hours, the withholding tax. We don't think we could do it. It is just that simple. And not having the working capital that some of the larger producers in the South have, we are unable to purchase our timber in big blocks. As every one is aware, stumpage is $20 a thousand. To operate anything the size of our mill would require approximately a half to three-quarters of a million dollars of working capital. We don't have it.

So, in lieu of that, we have established what we call a log market for spot logs, the same situation, you might say, as related to spot cotton, throughout the South. In other words, we have destinations within 75 miles of Charleston, where we will pay so much per thousand for logs landed at our siding or at our mill, taking the freight rates into consideration.

Therefore we are able to limit the necessary working capital for raw materials from half a million dollars down to, say, $25,000 or $30,000 by only having our raw material in inventory at our plant.

The CHAIRMAN. Has the old-style shingle mill gone out of use? Nobody has mentioned it.

Mr. PRINGLE. It is very small. There used to be a lot of shingle mills up in Horry County, 100 miles or so north of us, but now the west coast fir mills get most of that business.

The CHAIRMAN. I was just wondering if anyone was still in that line of business. Of course, I can very well recall when, each Monday morning, I usually made contracts with 15 or 20 small shingle mills scattered all over my county and in adjoining counties for their products for that week, or as long as they wished to send me their shingles, at so much per thousand. I used to assist them. Of course, this was long before social security. I used to assist them in buying their timber, or sometimes would arrange at the banks for them to get loans to buy timber, buy their mill, buy their equipment. But they were in no sense employees of mine. They were operators on their own. And if they brought me the shingles, I was glad to get them. If they did not, I did not get them. That process went on from day to day. And they could very clearly be covered under this proposed definition.

Mr. PRINGLE. That is correct.

The CHAIRMAN. I am not so sure but what the operators of naval stores would be covered under the present method of operating naval stores production in the South. I do not see how they could hardly escape. We used to take the gum from the tree, and each turpentine

operator or naval stores operator did his own distilling. But now practically everything is sent to a central mill. It may be sent a hundred miles away. Much of it comes out of Florida to some one of the plants in Georgia. They get certain financial assistance if they need it. They certainly sell their gum to them. And the central plant converts the gum into the resin and turpentine and other byproducts.

I think they might very well come under this, with all their vast operations, as independent operators, scattered all over the whole Southeast, particularly in Georgia and Florida now, where some four-fifths of all naval stores are produced.

Mr. PRINGLE. There is one thing, sir, that I might add. We feel that in the interest of free enterprise if this interpretation or this new ruling would be allowed to go through we would be eliminating, and when I say "we," I mean the country, the possibility for a great many men who have the desire and the initiative, but lack capital, of becoming independent producers and men of stature in their communities.

The CHAIRMAN. I think I have called attention to that. That is the thing that has impressed me so strongly from the first. In my town I doubt if there would be anybody there who would be classed as an independent operator unless he would be the school superintendent or the preacher. Because, invariably, he is representing somebody else in handling his products. He is an independent operator, and he wants to be an independent operator. He occupies that status as a citizen. And there is quite a difference between that status and that of the hired man. The hired man may be just as good a man, but he occupies a different status. He does not have the same roots in the community as the independent operator, who is an independent businessman and who is there on his job 24 hours a day. He does not work on any hourly basis. He is not of that type, and therefore he is an independent business man in one line or another. You could count them all up. I live in a small town with some two or three thousand people, but I do not think there is anybody there that could be said to be an independent operator outside of just a mere handful of people in the town.

Mr. PRINGLE. It would further the taking away of the privilege of using these small men. It would eliminate a market for the small landowner for his timber that the large mills could not buy. For instance, if we were forced to go under this new ruling, I would have to set up a logging operation in which I would have to have at least 100 or 150 thousand dollars worth of logging equipment, to produce 300,000 or 350,000 logs per week. It would eliminate entirely my using small tracts of timber, because I could not move my equipment to a small tract.

So the small farmer, the small tenant in the county, who has 10 or 15 thousand feet of timber, or 10 or 15 trees, would not be able to sell his logs. As it is now, he merely goes to his neighbor, a close neighbor, who is an independent contractor or producer, arranges for the mill to buy it, and that independent producer might produce only 15 loads off of a tract. I have known them to produce as small an amount as 3,000 feet. Now, that did not bring more than $35 or $40 to the family owning those trees, but that was $35 or $40 that they got

that they would not have gotten; and which goes into the general economic situation in our county.

The CHAIRMAN. Well, sir, we thank you very much for your appearance.

Mr. PRINGLE. Thank you for the time, sir.

The CHAIRMAN. If there are no questions, I believe that concludes the testimony for the morning.

Senator BYRD. I want to compliment the witness for making a very clear statement.

The CHAIRMAN. Thank you very much, Mr. Pringle.

The committee will recess until 10 o'clock tomorrow.

(Whereupon, at 11:15 a. m., the committee recessed to reconvene Thursday, March 9, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

THURSDAY, MARCH 9, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George, chairman, presiding.

Present: Senators George, Johnson of Colorado, Kerr, and Millikin.

Also present: Senator Dworshak; Mrs. Elizabeth B. Springer, chief clerk; and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order. Before we hear the first witness we will insert a letter from our colleague, Hon. Pat McCarran, of Nevada.

(The letter referred to is as follows:)

UNITED STATES SENATE,
March 2, 1950.

Senator WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

MY DEAR SENATOR GEORGE: The mining industry of my home State is alarmed over a provision in H. R. 6000, an act to extend the Federal old-age and survivors insurance system. This bill is now before your committee for consideration.

The provision on lines 4 through 7 of page 50 of the bill as passed by the House is the one that has occasioned the apprehension. It defines a lessee as an employee of the lessor.

The provision is interpreted to mean that mine owners must guarantee lessees at least the minimum legal wage (presumably 75 cents an hour) when entering into contracts. It is also interpreted as making a mine owner responsible for all the social-security taxes of the lessee or licensee, regardless of the size of the operation. Those who have examined the bill believe it also may have other grave ramifications in regard to taxation.

The inclusion of such a provision in the social-security bill would drive another nail in the mining industry's coffin. The industry is already hard hit by over-taxation and a falling market situation. This added burden would be just the "straw that broken the camel's back" insofar as many leasing operations are concerned.

There are very few owners of mining properties who are prepared to guarantee a lessee a salary. The very nature of the mining industry involves operations which make such a guarantee impossible. The operation of a mining property under lease is traditionally an independent enterprise.

The provision would also have a grave and detrimental effect on existing contracts and could work undue hardship and burden on mine owners. The result can only be cancellations of mine leases, confusion, and stagnation in the mining industry.

Unfortunately, this provision was overlooked when it passed the House, or, I am sure, it never would have been included in the bill. It is definitely a mistake.

I hope that your committee will see fit to strike this provision from the bill. I respectfully recommend that your committee carefully review the new classifi-

cations defined as employees under the bill. I am afraid many of these would pu undue hardship on other branches of industry. I do not believe this is the inten of the bill.

Kindest personal regards,

PAT MCCARRAN.

The CHAIRMAN. Mr. Robert M. Searls? You may have a seat at this table, if you wish, Mr. Searls.

STATEMENT OF ROBERT M. SEARLS, ATTORNEY, SAN FRANCISCO CALIF., APPEARING IN BEHALF OF THE AMERICAN MINING CONGRESS

Mr. SEARLS. Mr. Chairman, the presentation for the mining industry this morning is made through arrangements with the American Mining Congress, although the presentations will be made individually for the mine operators and for the leasers, in the States of California, Utah, and Colorado.

The CHAIRMAN. Yes, sir.

Mr. SEARLS. I will speak for the entire industry, and I will then be followed by the leasers from California and then the representatives from Colorado and Utah.

The CHAIRMAN. Very well, Mr. Searls.

Mr. SEARLS. My name is Robert M. Searls. I am an attorney at law, practicing in San Francisco, Calif., where I reside. I am appearing in behalf of the American Mining Congress, and particularly the California chapter of the American Mining Congress, in support of the position taken by these organizations in opposition to the extension of social security insurance to cover mine block leasers. The opposition of the American Mining Congress was evidenced by resolution unanimously adopted at the convention held in Spokane, Wash., last September, copies of which have been furnished to each Member of Congress.

Provisions of the bill to which exception is taken: The mining industry, expressing its views through its industrial association, the American Mining Congress, takes specific exception to the proposals in H. R. 6000 which provide for the reclassification as "employees" of self-employed mine leasers, who hold independent contract relationships with the mine owners. For reasons which will appear in this statement, the industry is opposed to the imposition of social-security taxes on the mine owners covering these independent leasers as newly defined employees of mine owners in whose properties their leases are held. By the terms of the bill mine block leasers would be included in the latter category under the specific definition contained in sections 210 (K) (3) (F) and 206 (d) (3) (F) of the bill, pages 50, lines 4 to 7, and 151, lines 6 to 9, and they would probably be included in the category of employees under the vague and shadowy standard prescribed for the determination of employment in sections 210 (K) (4) on page 51, lines 4 to 16, and 206 (4) (2) on page 152 of the bill. This latter section classifies as employee:

> (4) any individual who is not an employee under paragraph (1), (2), or (3) of this subsection but who, in the performance of service for any person for remuneration, has, with respect to such service, the status of an employee, as determined by the combined effect of (A) control over the individual, (B) permanency of the relationship, (C) regularity and frequency of performance

of the service, (D) integration of the individual's work in the business to which he renders service, (E) lack of skill required of the individual, (F) lack of investment by the individual in facilities for work, and (G) lack of opportunities of the individual for profit or loss.

We feel, as do others that have expressed their views here, that it is shadowy, uncertain language that would permit the Social Security Administrator to classify as an employee practically any independent worker in the United States, and we feel it is in the nature of an administrative blank check. I think Mr. Calhoun used that language last Tuesday.

I am aware that the language just quoted is a codification of certain language used by courts in classifying workers in individual cases involving application of social-security laws, and that one main purpose of the Gearhart resolution passed by the 1948 Congress was to clarify these definitions. I am not here to either attack or defend the Gearhart resolution. The mining industry does object, however, to the legislative enactment of vague and indefinite language such as that above quoted which might have the effect of reversing previous adjudications that mine leasers are independent workers and are not employees. Our objection goes both to the specific and to the general inclusion of mine block leaders as employees under the language of the bill above referred to, and I will submit to the committee with this statement a suggestion of the specific amendments to the bill which would overcome our objections.

It seems very significant to us that the Advisory Council of the Senate Finance Committee appointed to study needed Social Security Act revisions did not recommend enactment of any of the sections of the bill to which our objections are made (hearings report, page 6, item M). The Advisory Council would have left the present law unchanged.

The reasons for the objections which the mining industry has to the bill in question are as follows:

(1) Mine block leasing has been judicially determined not to be employment within the meaning of the Social Security Act by both the Circuit Court of Appeals for the Ninth Circuit, and by the Supreme Court of the State of California. The former determination was in the case of *Anglim* v. *Empire Star Mines Company, Limited* (129 Fed. (2) 914), involving directly the application of social-security taxes to mine leasers; and the determination with respect to the State unemployment tax on these same leasers was made by the Supreme Court of California in *Empire Star Mines Company, Limited*, v. *California Employment Commission* (28 Cal. (2d) 33; 168 Pac. (2d) 686). Both of these cases held that block leasers at the Empire Star Mine at Grass Valley, Calif., were independent contractors not subject to social-security or unemployment taxes. This determination was made some time, in fact, 2 or 3 years prior to the adoption of the Gearhart resolution and has been accepted up to the present time by the Social Security Administrator as an adjudication of the leasers' independent status. His office is now seeking by congressional legislation to again saddle the mine owners and mine leasers with this tax burden.

(2) Mine leasers are in fact independent contractors.

I think I can summarize the next two paragraphs of this paper, briefly, by saying that mine leasing in California was brought over by

the old Cornish miners from Cornwall and has been an institution in that State since the earliest days. At Grass Valley, Calif., it has been particularly in effect since the high cost of mining and the 1933 price of gold have rendered gold mining pretty much an unprofitable venture. There are mines there which had produced in past history over a hundred millions of dollars each in gold. There are 300 miles of workings, I think, in the Empire Star group. They extend for more than a mile vertically below the earth and in all directions. They cover an area 2 miles wide by 3 miles long. They comprise a tremendous cubical section of ground in which valuable gold deposits existed, but at long distances from the shafts. Now, the chance for the old-time prospector to go out and locate a vein on the surface and then prospect for it and get the ore out have pretty much disappeared, but there are a lot of these skilled miners who know how to mine those narrow, high-grade Grass Valley veins, who are only too glad to get an opportunity to form a little group and take written leases on cubical blocks of this ground. Instead of going out on the surface, they would take a cubical block of ground maybe between the 8,600 and 9,000 levels of the North Star and between certain mine coordinates, all defined. They are given the exclusive right to mine-map that block for a period of not less than 6 months. Those leases are renewed from time to time if the men want them.

The men take a gamble. They go in there and gamble their time and labor against the chance of making a killing. Some of the leasers, here, show what they can do sometimes. There is a real attraction in it. From the owner's point of view, these people working for themselves will go in there and mine very carefully, making openings no larger than necessary to get at these narrow high-grade veins, will carefully select the ore from the waste and put it into the ore chutes and tram it out to the shaft. Then the company takes over and hoists the ore up the shaft for them, keeping each leaser's ore separate, dumps it into a separate bin at the mill, and each leaser's batch of ore is run through the mill separately.

The leaser does not have to send his ore to the company mill as a matter of contract, but as a matter of convenience he does, because it is the only mill there that really could handle it, and the cost to him is about half of the normal custom milling charge. He gets it milled at less than cost, really. The company does not make any profit on his operations, except the company's share of the gross income from his lease, which is 50 percent, and which covers not only the company's profit but covers the cost of keeping the mine opened, timbered, unwatered, running the hoist and shaft, the mill, and all of that necessary overhead. It is the cost of giving him access to his work much in the same way that a logging company might maintain a logging-train service for contract loggers.

As I stated, each leaser's ore is kept separate as it goes through the mill, is continuously and accurately sampled, so that every dollar of value in it is known as it goes through. The free gold is caught on the plates, melted into bullion, and sent to the mint, with a separate mark carrying the number of the leaser's bar, to show that it is his gold. Then the company gets the mint check and gives him his share of it, and they keep their own.

The concentrates, that is, the part of the ore which does not get caught on the mill plates as free gold, having been continuously

sampled, are bought by the company, because they have to be commingled and put through flotation and then cyanidation, and cyanide precipitate bars are produced. You couldn't keep each leaser's concentrate separate in this process, but the values of each leaser's batch are kept separate through sampling as above stated.

The net result is that the leaser has received his net share of his output. And if he has mined good ore and made a rich haul, he gets everything that he can make on it.

How much does he make? Well, we don't have any record of it. All we know is the amounts that we pay the head leaser. But from information we have, we know that some of these leasers have averaged as high as $11,000 per man per year, others $8,000, probably $5,000 as the ordinary run, and at all times they make much more than miners' wages and are therefore very anxious to keep this independent status. If we had to do the thing on an employment basis, we couldn't do it, because we would have to have shift bosses and superintendents and bookkeepers and accountants and safety engineers and everybody to see that they did the work just right. Even then, the size of the holes they would shoot and the amount of the ore they would bring down and the amount of waste that would get into the ore bins would cause the mill heads to drop to a point where it just wouldn't be profitable.

Senator MILLIKIN. That is the reason you have the leasing system?

Mr. SEARLS. That is the reason we have leases. But from the leaser's point of view, the reason they have the lease is that they can make a stake in life for themselves just as well as they could if they owned an independent property, probably better. And it has meant a great deal to these men. There are 28 groups of leasers at the Empire Star mines and nine at the Idaho-Maryland in Grass Valley. Those in the Empire Star mines are divided between the North Star Mine and the Empire Star mine proper. These leasers will tell you about their position in the matter, but they are anxious to keep it where they can make this income and not be put back on an employee status.

Now, the reduction of these independent workers to employee status is impracticable. In the first place, unless the method of operation is entirely changed the company would have no means of telling what the income of individual leasers was as a basis for social-security taxation. The company simply delivers each leaser group's share of mint returns from bullion produced from gold shipped to the mint for them, or the value of concentrates assayed and purchased from them, to the head leaser of the group and division is made by each group according to its own rules. Sometimes the groups themselves hire men on a day's pay basis to get certain development work done. They impose penalties on each other for failure to join in the operation or for certain classes of absences or for violation of the safety laws. There is therefore no basis on which the company could compute and return social-security taxes on the individual leasers. For all practical purposes it would have to reduce the leasers to employee status to meet the requirements of this bill.

I have already pointed out that it would wreck the company's operations, inasmuch as all of the production at the Grass Valley mines is now being done on a lease basis, and it would mean those mines would have to shut down. They would be filled with water and caved in, and they never would be reopened again, because they are too deep and it would be too expensive. The loss to these little mining

communities like Grass Valley would be practically crushing. I don't think they could survive.

Senator MILLIKIN. In California, what other metals are associated with gold?

Mr. SEARLS. Practically none, Senator. California has some copper mines, but they are small. They, too, have been operated to some extent on a lease basis. But the California mines are practically all gold mines, with small amounts of silver.

Conversion of leases to employment arrangements would wreck many companies' operations: It is undoubtedly not news to this committee that the gold mines of the United States have not been prospering under present labor costs and gold price conditions. Labor cost is a very large percentage of the total cost of underground mine operation. This is also true in non-ferrous-metal mines. If the leasers are made employees by the definition of this act, the companies believe that the mutual advantages of the leaser relationship, for all effective purposes, will be lost to both parties. If Congress makes the leasers employees for social-security taxes, the Wage and Hour Administrator will want to call them employees. The National Labor Relations Board will want to call them employees. The companies will be faced with supervisory obligations, with labor-relations problems, and worst of all, with operating problems in mining clean ore which it does not now have under the leasing system. The managements believe that the increased expenses would so far destroy the margin of profit as to render the operations in question nonremunerative. This in turn would necessitate closing down large sections of several mines and allowing them to cave or fill with water. Several hundred leasers would be deprived of their means of livelihood and the disaster to the already slender economy of these mining communities is not hard to predict.

The consequences of our suggested amendments: I believe the committee will be interested in considering the other side of the picture. What will be the effect on the leasers' welfare if the amendments to the bill requested here are adopted? They will remain as they have been, independent operators. Familiar as most of them are with the traditions and practices of the prospectors and early miners who found, prospected, and developed in the initial stages the great gold mines and oil fields of California, these leasers will continue to use their skill, initiative, and ability to follow the veins in accumulating a modest competence for their retiring years. The groups carry their own compensation insurance with the State of California so that injuries are taken care of. It is obviously a matter of little concern to the owners whether or not the leasers are taxed as self-employed persons. That is contemplated for other groups by the bill in question. However, the leasers themselves will speak on that subject. Their earnings should enable them to make provision for their later years out of their savings.

I only wish to make it clear to the committee that the position which the mine owners are taking through the American Mining Congress in this matter conforms with the position of their lessees, and that if the amendments which we ask are made, Congress will not be deciding in favor of one side or against the other. The effect on the social-security funds in the National Treasury from the lack of contributions from

the few hundred leasers now engaged in mining in the United States would certainly be negligible. The situation is one which does not require the intervention of the Federal Government in the interest of security or protection for groups of individual citizens who are perfectly able to take care of themselves and their wants. On the other hand, the insertion and retention of the amendments which the industry requests will conform with present judicial decisions as to the independent status of the leasers, and it will greatly help in enabling the mining industry to meet, without expense to the Government, some of the major financial and economic problems with which it is confronted.

Even more important than that, I think, Senators, the adoption of these amendments, particularly the elimination of section 4, will be a pronouncement to administrative Washington that in carrying on the social-security program, which nobody disputes is a desirable program for those who need it, the Government must not wreck the independent businessman of the United States. There must be an opportunity for the small-business man to go on his own, to make his own way. And these amendments to the act to which we object, if carried to their possible extents, would result in untold difficulties in administration. There are so many who perform services for half a dozen or more people in a month that you would have everybody in the United States filing quarterly social-security forms and slowly going crazy over the obligation.

If they are taxed as self-employed, it is another story. I think in California the leasers would rather have that an optional privilege. On the other hand, in Utah and Colorado they may have other ideas. But if they are taxed as self-employed that can be done by a simple amendment to the income-tax forms, and have them report their social-security taxes on the same form as the income taxes. Each of them knows what he makes. The owners do not know. In that way the administrative difficulties could be avoided.

In behalf of the gold-mining industry and of the nonferrous-metal-mining industry of the United States, I must respectfully urge your committee to adopt the amendments which we propose which would strike out the specific classification of leasers as employees and would eliminate the generalized uncertain language from section 206 (d) (4) and 210 (K) (4) of the act under which no operator or person holding contractual relations with him could know for certain whether that person occupied an employee's status or not.

I thank your committee for your time and attention.

I would ask that Mr. Carino if possible be called as the next witness.

The CHAIRMAN. Are there any questions of Mr. Searls?

Thank you, Mr. Searls.

Mr. SEARLS. Thank you, Senator.

(The exhibit attached to Mr. Searls' prepared statement follows:)

SPECIFIC AMENDMENTS TO H. R. 6000 SUGGESTED TO THE SENATE FINANCE COMMITTEE BY REPRESENTATIVES OF THE AMERICAN MINING CONGRESS, AND REASONS THEREFOR

1. On page 151 amend section 206 (d) (3) by striking out clause (3) (F), page 151, lines 6 to 9, of the bill, reading as follows: "(F) as a lessee or licensee of space within a mine when substantially all of the product of such services is required to be sold or turned over to the lessor or licensor."

2. On page 50, lines 4 to 7, strike out clause (K) (3) (F) of the bill.

The effect of these two amendments will be to automatically eliminate block leasers in mines from the definition of the term "employee" as used in the bill.

3. Strike out the parenthetical statements in lines 17 and 18, page 50, and in lines 19 and 20, page 151, reading as follows: "(other than the services described in subparagraph (F))." This language becomes unnecessary if paragraph (F) is stricken.

4. Strike out sections 210 (K) (4) on page 51, and section 206 (d) (4) on page 152 of the bill, both sections reading as follows: "(4) any individual who is not an employee under paragraph (1), (2) or (3) of this subsection but who, in the performance of service for any person for remuneration, has, with respect to such service, the status of any employee, as determined by the combined effect of (A) control over the individual, (B) permanency of the relationship, (C) regularity and frequency of performance of the service, (D) integration of the individual's work in the business to which he renders service, (E) lack of skill required of the individual, (F) lack of investment by the individual in facilities for work, and (G) lack of opportunities of the individual for profit or loss."

The reason for this exclusion is to prevent the classification as employees under the act of persons who are not and have not been considered as employees under accepted common-law definitions so that mine leasers and similar classes of independent workers could not be classified as employees under the act merely because their leases may continue for a long period of time or they may perform the work under the leases with regularity and frequency or because the production of ore under the leases is usually an identical type of business to that in which the leaser is engaged, and because a mine-block lessee does not normally have a large investment in facilities for work, most of which are owned by the lessor and furnished to the leaser either as a part of the fixtures covered by his lease or as facilities necessary to his use in operating under the same.

5. Insert in the list of exceptions from the definition of employment on page 35 of the bill, following section 210 (a) (1), and on page 137 of the bill, following section 205 (b) (1), the following: "(2) A lessee of mining property or of a block or segment of mining property held under a written lease for a term of not less than 6 months and where no control over lessee's operation is reserved or in fact exercised by the lessor: Provided, That furnishing access, supplies, equipment, transportation, ore storage, milling and/or smelting facilities, the requirement that the premises be worked with diligence and in a minerlike manner, the compliance with safety rules and regulations, the carrying of Workmen's Compensation and Occupational Disease Insurance as permitted or authorized by law, the settlement with the lessor for taxes resulting from the lessee's operations in the leased premises, shall not be considered as reserving or exercising control over lessee's operations sufficient to constitute him an employee."

The purpose of this amendment is to specifically exclude mine leasers, along with agricultural labor, certain types of domestic servants and other services excluded from classification as employment under sections 205 and 210.

6. Renumber the subsections of sections 210 (a) and 205 (b) following subsection (1) to conform with the above insertions.

The CHAIRMAN. We shall be glad to hear from you, Mr. Carino, at this time.

STATEMENT OF AUGUST CARINO, REPRESENTING GRASS VALLEY LEASERS ORGANIZATION, GRASS VALLEY MINES, GRASS VALLEY, CALIF.

Mr. CARINO. I am August Carino, a head leaser of Grass Valley mines.

I, August Carino, have been selected by the Grass Valley Leasers Organization of the Grass Valley mines to represent them in bringing to your attention our hope that you will amend bill H. R. 6000, and I have the authorization paper here and wish to file it.

The CHAIRMAN. Yes, sir. You may do so. We would, of course, accept your word for it in any event.

You wish to file this for the record?

Mr. CARINO. Yes, sir.

The CHAIRMAN. Very well.

(The material referred to follows:)

The undersigned, constituting the head leasers of various leaser groups operating at the Empire, North Star, Pennsylvania, Idaho, and Brunswick mines at Grass Valley, Calif., and the Dannebroge mine at Browns Valley, Calif., hereby authorize August Carino, Chester C. Butler, and Albert J. Straub, who are members of the leaser groups, to constitute and represent the undersigned as a committee in presenting the opposition of each and all of the undersigned leasers to the proposal in H. R. 6000 now pending before the United States Senate which would (*a*) define and constitute the undersigned as "employees" of the mining companies from whom they respectively hold leases, and (*b*) from the provisions of said bill which would levy social-security taxes on the undersigned, either as employees or as independent self-employed persons.

Our reasons for this opposition are based on the fact that (1) we wish to maintain our independent status and opportunities for making a stake for ourselves as independent leasers of mining property, and (2) because we realize that if that status were converted by law from its independent character to an employee's classification, the additional burdens placed upon the lessor companies as employers, coupled with the lack of incentive to the leasers, would result in the entire destruction of the leasing system, with great loss to ourselves and to the communities in which we live.

Dated January 31, 1950.

(Signed by the following head leasers:) August Carino, Geo. W. Little,[1] C. A. Barton, J. H. Heather, Leslie Elliott, Ralph C. Atkinson, H. A. Sukis, G. E. Bowers, Herbert C. Launius, Guy E. Whitehead, A. Giovanola, T. M. Wade, J. M. Slouber, J. B. Manley, Norman Wasley, Thomas B. Gau, Ed Yarborough, Alfred R. Daniels.

Mr. CARINO. We have three main reasons for requesting you to consider our desire for amendment of this bill.

First, the bill changes our status from self-employed leaser to employees. This is a backward step to us, as a leaser must be a master miner—knowing his trade, with years of experience in hard rock quartz mining behind him. I am a lead leaser. In order for me to have the ability to head a partnership lease and do it successfully, I must be more than just a miner. I have worked in gold mines since my early youth. First with pick and shovel, machine, then underforeman and foreman. I graduated to a leaser, then head leaser. To now classify me as an employee is to return me from a master of my trade to an apprentice. This point is very important to all of us who lease. It is only through the lease system that those of us who are highly skilled in mining can use our experience and know-how to best serve ourselves, our families and our community.

Second, gold stands almost alone in all industry. It has a positive fixed price. The costs of mining equipment have risen sharply in the last few years, but the price we receive for gold remains at its fixed level. This has a tremendous effect upon the actual mining of gold. To illustrate: from 1930 to 1940 I was able to work ore assaying $10 per ton. On $20 per ton ore I earned a very good living. Now, due to the greater cost of mining, I must bypass this ore. I must have ore assaying $30 upward. For this reason the leasers cannot carry additional tax. The mining companies cannot work their properties profitably with employees who do not have the incentive or the initiative of independent men. So this bill would force the companies to close the mines, as neither they nor the leasers can assume a greater expense with gold at its present level and the cost of mining the gold at its present high rate.

[1] Lease held in Dannebroge mine; all others held lease in Empire.

Third, the closing of the Grass Valley mines would mortally hurt our community which is almost wholly dependent upon the earnings of the leasers. We are not transitory workers. We own our homes and support our town. We are proud of our ability to be self-employed, independent men; good citizens in a good town. In changing our status from leasers to employees and so closing the mines, this bill, H. R. 6000, takes from us the means by which we earn our living. It causes us to leave our homes and community to look elsewhere for jobs. This is unthinkable to us.

In putting this petition before you, I have endeavored to show you why we, the Grass Valley Leasers Organization, do not want to be classified as employees. The bill, instead of giving us security, takes from us the security we can earn for ourselves as self-employed leasers.

Now, I have here a specimen of ore that was found in the Butler lease in the Empire mine [showing committee specimen of high-grade gold ore].

Mr. SEARLS. That is what gives them their initiative to dig.

The CHAIRMAN. Senator Johnson?

Senator JOHNSON. I would like to know what the difference is between a leaser and a head leaser.

Mr. CARINO. Well, a head leaser is responsible, in other words, for transacting all the business between the company and the leaser. Now I have 12 men on my lease. If each one of these 12 men goes to the company for something, you would never get anywhere. But I transact the business between the company and my group of men, with whom I work as a partnership. We divide equally our money. The only thing is that we penalize each other if one loses time. If one stays home a day, well, naturally, if he doesn't work he can't produce his share of production, and therefore we penalize each other in that respect.

Senator MILLIKIN. You make your own rules as to that?

Mr. CARINO. Not exactly my own, Senator.

Senator MILLIKIN. I mean your group.

Mr. CARINO. It is between the group; yes.

The CHAIRMAN. The company has nothing to do with your rules?

Mr. CARINO. The company has nothing to do with them. When I get a lease from the company for a certain block of ground—I am leasing now merely a mile and a half down and about 3 miles from the main shaft in remote places of the mine—all the company does is give me that lease for that block of ground, setting forth specifically so many feet this way and so many feet that way to a certain point. It begins from the survey point, so we know our definite line, where we can mine and where we cannot. And the company doesn't interfere with our work in any way whatsoever. The head leaser is responsible for his lease. The company holds the head leaser responsible, because they cannot deal with everybody in the lease. If they did that they never would get any work done. By doing so, we try to work our block of ground in a miner-like manner. We have the safety engineer come down and visit our block of ground, and we have our safety meeting every month, so that we can carry on safely and to the best of our ability.

Senator MILLIKIN. You do not find much ore like that which you just showed us, do you?

Mr. CARINO. Well, once in a while. Not that big, but you see a small piece that is like that almost every day. But our veins are very small. In our Grass Valley mines the veins are on the average 4, 5, or 6 inches. Therefore we have to make a breakage, there, in the waste rock of 4 feet, in order to work. Of course, we could get by on 3 feet, but if the company were working they would take 4 or better.

We pick our ore very closely. Everyone has the initiative and the interest to work it as clean and as fast as possible. That is why the company can handle the ore that we leasers can produce at a profit.

Mr. SEARLS. There is about $300 of gold in that piece of ore.

Senator MILLIKIN. It is a beautiful specimen.

Mr. CARINO. Yes, it is, Senator.

Mr. SEARLS. Mr. Straub of the Idaho Maryland Co., will be next, Mr. Chairman.

The CHAIRMAN. All right, Mr. Straub. You may be seated, and we will be very glad to hear you.

STATEMENT OF ALBERT J. STRAUB, LEASER, IDAHO MINE, IDAHO MARYLAND MINES CORP., GRASS VALLEY, CALIF.

Mr. STRAUB. My name is Albert J. Straub.

I have been leasing a portion of the Idaho mine of the Idaho Maryland Mines Corp. at Grass Valley, Calif. I have leased portions of mines or small mines over a period of 25 years in the States of California and Nevada. There are other leasers besides myself in both the Idaho and Brunswick mines of this corporation, totaling 104 men in all, and I come to Washington as a representative of all these men.

I have a petition here signed by these men authorizing me to speak for them.

The CHAIRMAN. Yes, sir. We will put it into the record.

(The petition referred to follows:)

PETITION

The undersigned, constituting the head leasers of various leaser groups operating at the Empire, North Star, Pennsylvania, Idaho, and Brunswick Mines at Grass Valley, Calif., and the Dannebroge Mine at Browns Valley, Calif., hereby authorize August Carino, Chester C. Butler, and Albert J. Straub, who are members of the leaser group, to constitute and represent the undersigned as a committee in presenting the opposition of each and all of the undersigned leasers to the proposal in H. R. 6000 now pending before the United States Senate which would, (a) define and constitute the undersigned as "employees" of the mining companies from whom they respectively hold leases, and (b) from the provisions of said bill which would levy social-security taxes on the undersigned, either as employees or as independent self-employed persons.

Our reasons for this opposition are based on the fact that—

(1) We wish to maintain our independent status and opportunities for making a stake for ourselves as independent leasers of mining property; and

(2) Because we realize that if that status were converted by law from its independent character to an employee's classification, the additional burdens placed upon the lessor companies as employers, coupled with the lack of incentive to the leasers, would result in the entire destruction of the leasing system, with great loss to ourselves and to the communities in which we live.

Dated January 11, 1950.

(Signed by the following, all of whom hold leases with Idaho Maryland Mines Corp.:) Samuel Veale, Alfred W. Williams, Arnold L. Silicani, Leon D. Bird, Edwin E. Lampiae, Thos. L. Carter, F. W. Cartwright, Albert J. Staub.

Mr. STRAUB. I come to protest the definition of "mine leasers" or "block leasers" as employees as described in H. R. 6000. Our reason for objecting is that we are not mine employees at all, but independent groups of men in partnership mining blocks of ground under lease. Under the present system we do not work for the company. We form a group or partnership and the company does not know any of the men in the group outside the man who holds the lease. We go to work and we quit anytime it suits our plan of operation.

The block-leasing system as now in force has a definite advantage for us in that we can make better than a day's pay usually and there is always the possibility of striking unusually rich ore. The men on my lease have received as the smallest check $365 per month and the largest was $1,065 per month. Our average monthly pay as employees would be about $300 per month. We prefer the block-leasing system now in force, therefore, for two reasons: First, we are our own bosses, and, secondly, because we can earn more per month on the average year in and year out.

This block-leasing system is one which requires special skill. We are old miners and are able to carry on this type of work successfully. It offers us a means of livelihood as we grow older and we do not wish to see this system abandoned.

I think that the company could not operate this system where we are both leasers and employees at the same time, so I foresee the abandonment of the leasing system if we are by law classified as employees.

We wish therefore that you would amend H. R. 6000 and specifically exclude "block leasers" from classification as employees.

I wish to thank you for listening to our request.

The CHAIRMAN. We are very glad to have you, sir.

Let me ask you one question. Are your leases limited as to time? When you take a lease from your company, is it limited to months or years?

Mr. STRAUB. It is limited to 6 months, with a provision for renewal provided the company is satisfied with our operations; that is, that we have not wasted ground. If we would "bury ore," in other words, pass ore by that the company never could recover again, they might not renew our lease. But if we mine on a fair and equitable basis, we have renewal every 6 months.

The CHAIRMAN. It is optional with you whether you do renew your lease?

Mr. STRAUB. That is right.

The CHAIRMAN. You are not obliged to renew your lease?

Mr. STRAUB. No.

The CHAIRMAN. Are there any questions by any of the Senators? Thank you very much, Mr. Straub.

Mr. STRAUB. Thank you, sir.

Mr. SEARLS. Would the committee permit Mr. Butler to read a paper of the same length as this, from the North Star Mine?

The CHAIRMAN. Yes, sir.

Mr. SEARLS. He is the lucky gentleman who found this piece of "high grade" that you just saw.

The CHAIRMAN. Mr. Butler, you may be seated.

STATEMENT OF CHESTER C. BUTLER, LEASER, EMPIRE STAR MINE, GRASS VALLEY, CALIF.

Mr. BUTLER. My name is Chester C. Butler. Since 1932 I have earned my living by mining and leasing in the Grass Valley, Calif., mining district and nearby districts. Before the war I worked for the Empire Star Mining Co., starting out as a mucker and working my way up to shift boss and later to mine foreman. Even with shift boss' and foreman's wages I was unable to get ahead appreciably. I have been voted by our local leasing organization to make this statement on their behalf. I wish to file this authorization with the committee.

The CHAIRMAN. Yes, sir. You may file it, and it will go into the record.

(The material referred to follows:)

The undersigned, constituting the head leasers of various leaser groups operating at the Empire, North Star, Pennsylvania, Idaho, and Brunswick mines at Grass Valley, Calif., and the Dannebroge mine at Browns Valley, Calif., hereby authorize August Carino, Chester C. Butler, and Albert J. Straub, who are members of the leaser group, to constitute and represent the undersigned as a committee in presenting the opposition of each and all of the undersigned leasers to the proposal in H. R. 6000 now pending before the United States Senate which would (*a*) define and constitute the undersigned as "employees" of the mining companies from whom they respectively hold leases, and (*b*) from the provisions of said bill which would levy social-security taxes on the undersigned, either as employees or as independent self-employed persons.

Our reasons for this opposition are based on the fact that—

(1) We wish to maintain our independent status and opportunities for making a stake for ourselves as independent leasers of mining property; and

(2) Because we realize that if that status were converted by law from its independent character to an employee's classification, the additional burdens placed upon the lessor companies as employers, coupled with the lack of incentive to the leasers, would result in the entire destruction of the leasing system, with great loss to ourselves and to the communities in which we live.

Dated January 13, 1950.

(Signed by the following head leasers:) A. D. McConnell, W. H. Stein, L. S. Yates, C. W. Forsythe, D. B. Perkins, C. H. Peterson, A. W. Austin, M. Moneta, R. J. Stump, G. H. Cantrell, R. C. Dutton, Charles C. Butler.[1]

AMENDMENT TO H. R. 6000 SUGGESTED TO THE SENATE FINANCE COMMITTEE BY REPRESENTATIVES OF GRASS VALLEY GOLD MINE LEASERS

I. The leasers concur in the amendments proposed by the representatives of the American Mining Congress excluding them from the classification as "employees" and their income from these leases being classified as "wages." In addition the leasers request that their income be excluded from the term "self-employment income" as used in the act by adding to section 1641, subdivision (b), page 178, line 5, a new subsection to be numbered (3), reading as follows:

"(3) The amount or value of or returns from ore, metal, bullion, amalgam, or concentrates received or derived by a mine leaser or a group or partnership of mine leasers from their mining operations."

Mr. BUTLER. After the war I returned to leasing in the Grass Valley district at the Empire Star mine, hoping to earn better than day's wages. I leased a block of ground in the Rowe shaft area from the 900 level to the surface, a block which had been closed down in 1917 because the company could not make it pay.

---

[1] Mr. Butler holds lease with Rowe Shaft; all others hold leases with North Star.

There are 14 men on my lease, sharing equally in the profits from production. With the incentive that we might make a stake, we have through hard work, careful planning, and selective mining made the lease pay far better than wages. In the last 2 years each man on the lease has received approximately $15,000, or an average of $7,500 per year, which is far more than could have been earned working for wages.

These men have spent their earnings for homes, cars, and other necessities of life, thus contributing to the economy of the community in general. Their production has also profited the company and helped the company to fulfill their obligations to the leasers in supplying equipment and materials.

This much-favored system of mining will cease if your H. R. 6000 bill is made a law. Mine executives have informed us they will have no other alternative than to close the mines if this bill passes. Under present conditions of high cost of materials, high wages, and the set price of gold it is impossible—except for the very high grade gold mines, which are very few—to operate in any other way than the present leasing system. Therefore, if the bill passes we will be out of work.

Consequently we oppose those portions of this bill that would make us employees. We wish to be left alone as free and independent leasers under the present leasing system with the chance to make a stake for ourselves, and the opportunity to make our own future security in a good American way without having to fall back on the Government for social security. The leasers in this district are well satisfied and are getting ahead under the present leasing system. The interests of the leasers and the company are profiting by this system because the leasers are able to make a stake for themselves and the company in getting ground mined that could not profitably be mined by day's pay miners.

For the above reasons I urge you to amend bill H. R. 6000 so as to exclude block leasers from the bill.

Thank you.

Senator MILLIKIN. Mr. Chairman, may I ask the witness: What are the principal towns in the Grass Valley, Calif., mining district?

Mr. BUTLER. Well, there is Nevada City, Downieville, Sierra City, Auburn, Newcastle, Browns Valley, Alleghany, Smartsville.

Senator MILLIKIN. Those towns are held together by your mining activities?

Mr. BUTLER. That is practically what keeps those towns in existence.

Senator MILLIKIN. They would fold up if you could not continue your leasing system?

Mr. BUTLER. They would undoubtedly.

Senator MILLIKIN. And the miners have their homes there and are raising their children in schools there?

Mr. BUTLER. That is right.

Senator MILLIKIN. You belong to lodges there and enter fully into the life of the communities?

Mr. BUTLER. That is correct.

Senator MILLIKIN. Would you know what the average age of the miners is who work under these systems in your part of the country?

Mr. BUTLER. The average age?

Senator MILLIKIN. Yes; just take a rough shot at it.

Mr. BUTLER. Oh, I would say between 45 and 55. And there are some a lot older.

Senator MILLIKIN. The elderly man under this system has a chance of keeping going longer than if he worked as a straight employee for a mining company; is that not correct?

Mr. BUTLER. That is true. Because some of the old men become crippled up, and their health is broken down to a certain extent, where they can't work under company regulations; and when they are under the leasing system, they can more or less work at their own leisure, and there is nobody to bother them.

Senator MILLIKIN. They may not be able to do as much physical work, but they can bring to bear the skill which they have acquired during a long life of experience?

Mr. BUTLER. That is right; they have the experience, and if they have some younger men under them they can go around and more or less supervise the younger fellows and teach them their knowledge.

The CHAIRMAN. May I ask: Do you own your own equipment, or do you get it from the company?

Mr. BUTLER. There is some equipment that the leasers do own themselves, and if they have not got it themselves, the company does furnish it.

The CHAIRMAN. On a rental basis? Or how?

Mr. BUTLER. Well, it is furnished. The company furnishes the materials as part of their leasing contract if the leaser doesn't have them available himself. However, there are instances where the leasers do furnish part of their own equipment. But in most cases those fellows are not financially able to get started on their own, and the company loans them this equipment to work with. However, as they go along and they make a little money and they need another tugger or another machine or something, that is not available from the company, they can buy it themselves; which they do, in some instances.

The CHAIRMAN. Does the miner have very much investment in his equipment—the leaser? Where he furnishes his own equipment, where he procures it?

Mr. BUTLER. Himself?

The CHAIRMAN. Yes, sir.

Mr. BUTLER. In some instances not an extreme lot of money. The machinery at the present time, with the cost of materials, runs into a pretty considerable sum of money, too, for an individual.

Senator JOHNSON. How much money?

Mr. BUTLER. Well, he used to be able to buy a machine for about $250, and at the present cost of machines a new machine will cost anywhere from $550 to $1,000.

Senator MILLIKIN. A machine? What kind of a machine?

Mr. BUTLER. A drilling machine.

Senator MILLIKIN. The leasers would not be able, even if someone had the power to change the system, to furnish the air, to keep the whole mine timbered, to run the trackage and the cartage necessary to conduct these operations, would they?

Mr. BUTLER. No; not as large as the mines are in Grass Valley. The company almost has to keep those mines open, because it would be too much for any one individual.

Senator MILLIKIN. From the standpoint of the self-interest of the company, they have to keep their mine free from water?

Mr. BUTLER. That is right.

Senator MILLIKIN. And I assume that you have air operations to keep your workings in good condition?

Mr. BUTLER. That is right.

Senator MILLIKIN. That is a very elaborate procedure involving a lot of machinery?

Mr. BUTLER. That is correct.

Senator MILLIKIN. Carrying pipes and so forth and so on. That would be beyond the reasources of an individual miner; would it not?

Mr. BUTLER. Yes: it would, unless he had a lot of capital.

Senator MILLIKIN. And there is no reason why the individual miner should undertake the responsibility for keeping the whole mine timbered so that he can work on a small part of the mine?

Mr. BUTLER. That is right; he couldn't do it.

Senator MILLIKIN. No; he could not do it if he wanted to. So that this practice that you have is fitted to the necessities of the business; is that not correct?

Mr. BUTLER. That is correct.

The CHAIRMAN. Any further questions?

Thank you very much, sir, for your appearance.

Mr. BUTLER. Thank you.

Mr. SEARLS. Mr. Chairman, before turning the presentation over to the Colorado delegation, Mr. Hopkins R. Fitzpatrick, the general manager of the Empire Star Mines Co., has a paper which would take about 3 minutes to read. However, if the committee does not care to hear it, we would like to have the privilege of filing it.

The CHAIRMAN. I think we will be able to hear Mr. Fitzpatrick.

Come around, Mr. Fitzpatrick. Identify yourself, if you will, for the record.

STATEMENT OF HOPKINS R. FITZPATRICK, GENERAL MANAGER, EMPIRE STAR MINES CO., LTD., GRASS VALLEY, CALIF.

Mr. FITZPATRICK. My name is Hopkins R. Fitzpatrick. I am a mining engineer employed as general manager of Empire Star Mines Co., Ltd., a company owing and operating several gold mines at Grass Valley, Calif., where I live. The purpose of this statement is to protest inclusion of mine block leasers as employees under the proposed extension of social security insurance.

The Empire Star Mines Co., Ltd., has leased 34 underground blocks of ground in its mines to 28 leasers, each of whom develops and mines his block or blocks of ground as he pleases with his own crew. The leased blocks of ground lie at various depths, some lying more than a mile below the surface. Most of the leaser blocks lie a mile or two from the nearest hoisting shaft. Only a small percentage of the lease ground could be profitably mined by company employees due to the small size of the veins, remoteness from operating shafts, and prohibitive cost of supervision.

During the nearly 100 years of continuous operations of the Grass Valley mines, development has often opened veins too low grade or too small to be profitably mined by the operating companies. Also, there have been other economic periods, as at present, when the fixed

price for gold would not offset high operating costs. Always in the past, the operating companies have resorted to block leasing those areas that it could not profitably mine with its employees. By that I mean about a hundred years in California, and I think the same length of time in Oklahoma, 60 to 75 years in Colorado and Arizona, 50 years in Utah, 35 years in Idaho.

Past experience has amply demonstrated that skilled miners working for their own account can profitably mine ore that companies can only mine at a loss. Experience has also demonstrated that the most workable method of block leasing is to grant the leaser the widest possible latitude in his leasing operations. This means that the leaser must have the right to assemble his own crew, decide the scale of operations warranted in their particular lease block, decide what ore can be profitably mined, decide what prospecting risks can be taken in the search for new ore, and how the profits of their operation should be divided among his men according to their individual contracts.

The system of block leasing as presently practiced in the Grass Valley district gives to the block leaser the same opportunity to make a stake mining ore from underground that the old-time prospector had on the surface. The block leaser is a skilled miner who combines his skill with initiative, resourcefulness, and a nose for ore so that as a general rule he makes substantially more than miners working for pay, and has the further possibility of striking it rich by encountering bonanza ore. Mine block leasers are, in fact, independent contractors and are not employees of any company. The block-leasing system in the gold mines of Grass Valley has its origin in practices derived from the Cornish tin mines of England, and are essentially the same as the system practiced in the metal mines of the Western States. That means all the Western States where any leasing is done.

As in the past, the present leasing system is tiding the gold mining industry over hard times, thus allowing the mines to be kept open so that they may again give thousands of men jobs should a changing economic cycle again make company operation of gold mines profitable.

There is no difference of opinion between the mining companies and the block leasers regarding the desire not to have block leasers classified as employees.

Senator MILLIKIN. Mr. Chairman, may I ask the witness a question?

The CHAIRMAN. Yes, Senator.

Senator MILLIKIN. Many people who have never lived in the mining country think that you can turn a mine on or off like you would an electric switch for the lights in this room. Would you make a few observations on the hazards of losing a mine by caving of timbering, by the mine going to water; to the point, if you agree with my observation, that the problem is entirely different, and that if you want to save a mine you have to keep it open and keep it operating.

Mr. FITZPATRICK. That is true, Senator. If I follow your reasoning, what you have in mind is that if you shut down a factory, all you have to do is to put a watchman there and 10 years later a little bit of maintenance work would have your property intact.

Senator MILLIKIN. That is right.

Mr. FITZPATRICK. Whereas, with a mine, even a short shut-down, as short as 6 months or a year, would have serious consequences. The timber is rotting all the time, due to fungus and oxidation. Water percolating in through various seams in the ground causes oxidation of the rock, softening it and allowing it to cave. In the meantime, the water that seeps into a mine completely fills it.

The damage to underground machinery, trackage, pipes, access chutes, anything of metal, is almost totally ruinous, so that even a short shut-down in a mine relegates a mine to a worked out hole. It takes an enormous amount of capital to ever rehabilitate a mine once it has been shut down.

Senator MILLIKIN. And if you allow mines to be shut down, you cause a dispersal of the men who are skilled in the operation of the mine.

Mr. FITZPATRICK. Quite true.

Senator MILLIKIN. And even if you decided to open, you might not be able to assemble the necessary skills to do the job. Is that not correct?

Mr. FITZPATRICK. That is quite true, Senator, particularly so in different kinds of mining. Various factories are able to set up certain standards of production and various forms and methods of producing various parts by small changes in technique and procedure. Mines are not so easily adaptable. You have to adapt a mining method to the conditions in which ore is found in any particular locality, with the result that no two mines even remotely approach each other. There are hundreds of different mining methods that have been worked out to make possible mining in very difficult natural deposits. In nature you have to take advantage of conditions as you find them, if you want to make a profit. For that reason skilled miners who are familiar with a certain district are able to work more profitably in the particular conditions from which they derive their skill.

Senator MILLIKIN. Thank you very much.

Mr. FITZPATRICK. The mining companies do not want block leasers classed as employees as it would raise the tax load on an already hard-pressed industry and would almost certainly open up other costly employer liabilities. The leasers do not want to be classified as employees as they cherish their independence and their right to be self-employed.

I most respectfully urge your committee to consider amending H. R. 6000 so that mine block leasers may retain their present independent contractor status and not be reclassified as employees.

I thank your committee for your time and consideration.

The CHAIRMAN. Thank you very much, Mr. Fitzpatrick.

Mr. SEARLS. I think Mr. Shoup and Mr. Burgess will take over for Colorado, now.

The CHAIRMAN. Will you gentlemen come forward and be seated?

STATEMENT OF MERRILL E. SHOUP, PRESIDENT, GOLDEN CYCLE CORP., COLORADO SPRINGS, COLO.

Mr. SHOUP. Thank you.

My name is Merrill E. Shoup. I am president of the Golden Cycle Corp. and its numerous interrelated and affiliated companies. I reside in Colorado Springs, El Paso County, Colo. The principal busi-

ness offices of the Golden Cycle Corp. and its affiliates are maintained in the city of Colorado Springs, and their principal business is the mining and reduction of gold ore in the Cripple Creek mining district, Teller County, Colo. I have been associated with these companies for more than 17 years—first as their attorney, and now as their principal officer. I have been closely associated with the gold-mining industry as a whole during that entire period of time, and am a member of the board of directors of the American Mining Congress.

I am appearing in behalf of the American Mining Congress, and particularly for the gold-mining industry of the Cripple Creek mining district, Teller County, Colo. It is my intention to state some of the business reasons for our objections to including "split-check" lessees as employees under the Social Security Act, as proposed in H. R. 6000.

In the first place, the "split-check" lessee, as we know him, is a very high-class miner, who has the ambition and desire to make a stake for himself, rather than to work for wages as an employee. In many instances, the "split-check" lessee first works in the mine as an employed wage earner. He saves his wages carefully, and, at the same time, is constantly checking the mine for a possible block of ground which appears to him to have the appearance of a possible strike from which he can make a large sum of money for himself. When he has sufficient wages saved and has selected his block of ground, he takes a "split-check" lease and proceeds to operate as a self-employed person. He considers himself to be independent and to be working for his own benefit.

The "split-check" lessee ordinarily makes much more than a wage earner, and, in many instances, has a very large annual income. Because of this fact, it is my belief that there is no economic reason for including "split-check" lessees as employees under the Social Security Act. This is particularly true because of the fact that if the "split-check" lessee does not make better than wages on his lease, or if he fails to make any profit at all, he then goes back into the mine as a wage earner, and, at that time, becomes subject to the Social Security Act.

I have had prepared certain statistical information which is illustrative, and may be of interest to the committee.

The gold mine closing order known as L–208, promulgated in the fall of 1942, either closed the gold mines or seriously impaired their activities. There has been no normal mining activity in the Cripple Creek mining district since that time. In February 1949, the Midland Terminal Railroad, which handled ore from the Cripple Creek district to the reduction mill in Colorado Springs, was abandoned and dismantled. The reduction mill in Colorado Springs was dismantled, and a new mill is now in the process of construction near Cripple Creek in the center of the mining industry. In the meantime, there is no mining in the Cripple Creek district.

The statistics which I have to present must, therefore, date back to the year 1941 and prior years.

The largest "split-check" operator in the district is the Cresson mine, which, in its lifetime, has so far produced more than $40,000,000 in gold bullion. Because of the size and record of its "split-check" leasing operations, I have taken my statistics from the records of that mine. I am also the president of the Cresson Consolidated Gold Min-

ing & Milling Co., which is the owner and operator of the Cresson mine.

I have started the statistics with the year 1935, and give the information for each year thereafter through the year 1941. The first exhibit is a comparative statement, showing the company ore produced and lessee ore produced for each of the years mentioned, with a comparison of total tons, gross value, freight and treatment charges, net value on company ore produced, the company royalty on leases, the lessee royalty, or earnings, on lease, and the average value of the ore per gross ton.

On this exhibit, I particularly invite your attention to the fact that the net amount received by "split-check" lessees is almost as much as the company received from its own operations.

I also call your attention to the fact that the lessees, for the 7-year period, received more for their share of the ore produced by them than the company received from its own operations.

I am not going to read all of the statistics, which are attached, but I would like to call your attention to the fact that for the period 1935 to 1941 on the Cresson Mine the company produced 417,520 tons of ore, the lessees 466,064 tons. The total value of the company ore was $3,179,826.11 and for the lessees it was $5,413,107.07. On net return the company got $1,677,755.72, while the lessees got $1,755,266.77. They got more returns than the company did during that period of time.

During this same period of time, there were from 40 to 61 underground company employees and from 35 to 41 "split-check" lessees operating on the Cresson property.

As my next exhibit, I have had prepared a statement, for the same years, showing the earnings of some of the principal "split-check" lessees. Bear in mind that these are individual operators who hire some employees of their own, but who, as "split-check" lessees, would be defined as employees under H. R. 6000.

You will note that none of these lessees received less than approximately $1,000 per month from their "split-check" lease, and Hansen & Co., in 1941, received $65,997.48. I submit that you would hardly call those men employees, nor would it be probable that economic circumstances would ever require these men to call for social security benefits.

I am not going to take the Senator's time by reading the list, but we have set out, for example, this Hansen company, which consists of two or three men. What we paid them in 1937 was $15,453.35; in '38, $24,707.66; in '39, $33,576.83; and in '41, $65,997.48.

In that connection, if I may just take a minute, we had a discharged GI who got a lease on the Portland Mine in Cripple Creek just after he was out of the service, and in 2 months he made $35,000 net for himself, and he had continued leasing, and presently we would like to have brought him back. He is sojourning in Rio de Janeiro until we open the mines so that he can come back to work. Now, I submit that that is hardly an ordinary employee.

I have also had prepared, by the Golden Cycle Mill Department, exact copies of actual settlement sheets on shipments of ore from "split-check" leases. You will note from these settlement sheets that one shipment of ore ran as high as $6,000 as the share of the lessee, and none of these individual shipments show a payment of less than $1,200 as the share of the lessee for one shipment.

It is true that not all "split-check" lessees are fortunate enough to obtain these results. On the other hand, these statistics are not taken from isolated cases and could be duplicated from the records of the company from many "split-check" lessees.

For your information, I have also brought with me copies of the printed forms of "split-check" leases and copies of the printed forms of royalty leases as used by our companies. A comparison of these forms may be useful in establishing the same independent nature of the operations as between a "split-check" lessee and a royalty mining operator.

We subscribe to the amendments to H. R. 6000 as heretofore proposed by the American Mining Congress, and I respectfully urge your committee to adopt those amendments.

I wish to thank your committee for your time and attention.

The CHAIRMAN. Thank you very much for your appearance.

Are there any questions?

Senator MILLIKIN. Mr. Chairman, Mr. Shoup is one of our leading Colorado citizens and is a son of one of our great Governors out there, a highly respected man in our State. His wisdom in this business has been demonstrated.

There is only one thing, Merrill. It looks to me from these figures that you have given that your company is the "employee."

Mr. SHOUP. I think we are, Senator.

I might add one thing. We are presently engaged in moving the mill to Cripple Creek. We are taking quite a gamble. Cripple Creek is wholly and entirely dependent upon the gold-mining industry. That is certainly one section of the United States that is completely dependent upon gold mining. Its elevation is from nine to eleven thousand feet. Nothing grows there, there is nothing but gold which can be produced, and we have at stake the retention and maintaining of a community which will support four or five thousand people. Our companies are all in the red. We have not made any money for 8 or 9 years. But we feel if we can contribute and keep a community self-supporting and keep it in existence we are doing our part in the over-all national picture. With us, I think, it is primarily sentiment and the desire to see that a lot of people have good jobs that are in this. It would be far simpler to quit. It would have been simpler in 1942 just to have thrown in the sponge. But Cripple Creek is an old community, established in 1893, and it will afford livelihood and work for a large number of self-respecting people.

Senator JOHNSON. I want to welcome Merrill Shoup here, too. He is an old friend of mine also, as was his father before him.

We are glad to have your support. We know we can depend on what you say, and we know that your conclusions are in the best interests of everyone concerned.

Mr. SHOUP. Thank you, Senator.

The CHAIRMAN. Thank you very much for your appearance.

Mr. SHOUP. Thank you, Mr. Chairman.

(The table attached to Mr. Shoup's prepared statement follows:)

Cresson Consolidated Gold Mining & Milling Co.—Company and lessees' ore production for years 1935 to 1941, inclusive

	Net tons	Gross value	Freight and treatment	Net value	Company ore	Royalty		Paid lessees	Average value per net ton
						Split-check lessees	Royalty lessees		
1935—Company ore	73,000	$537,959 27	$261,536 04	$276,423 23	$276,423 23				$7 37
Lessees' ore	58,389	652,479 33	258,026 41	394,452 92		$189,879 15	$6,203 90	$198,369 87	11 17

The CHAIRMAN. Mr. Burgess?

STATEMENT OF THOMAS M. BURGESS, ATTORNEY AT LAW, COLORADO SPRINGS, COLO., APPEARING IN BEHALF OF THE AMERICAN MINING CONGRESS AND GOLDEN CYCLE CORP. AND AFFILIATED COMPANIES, CRIPPLE CREEK MINING DISTRICT, TELLER COUNTY, COLO.

Mr. BURGESS. My name is Thomas M. Burgess. I am an attorney at law, practicing in Colorado Springs, El Paso County, Colo. I have been representing the Golden Cycle Corp. and its related companies for the past 12 years.

I am appearing in behalf of the American Mining Congress, and particularly the Golden Cycle Corp. and its affiliated companies, all engaged in the gold-mining industry in the Cripple Creek mining district, Teller County, Colo., which is approximately 50 miles west of the city of Colorado Springs.

I understand that there have been previous statements made which apprise the committee of the reasons for the general, as well as some of the specific, objections of the mining industry to certain sections of H. R. 6000.

I do not wish to repeat the information which the committee already has before it, but I do endorse the statement as made by Mr. Robert M. Searls, of California, and wish to state briefly the position of the mining industry in the Cripple Creek mining district of Colorado in regard to some sections of H. R. 6000.

It is our position that a lessee of a block of ground in a mine should not be defined as an employee under the Social Security Act. By the terms of the proposed bill, mine block lessees would be defined as employees under section 210 (k) (3)–(F), page 50, and section 206 (d) (3) (F), page 151.

In these subsections an employee is defined—

(F) as a lessee or licensee of space within a mine when substantially all of the product of such services is required to be sold or turned over to the lessor or licensor.

If this particular subsection was removed, mine block lessees would, in all probability, still be included in the general catch-all clauses,

and in definite standards contained in sections 210 (k) (4) on page and section 206 (4) (2) on page 152 of the bill.

I believe that our opposition to these sections of the bill requir an understanding of the block-leasing system or "split check lease as we identify them in the Cripple Creek mining district.

The "split check" leasing system has been in use in the Cripp Creek district for approximately 50 years. It has consistently i creased in popularity and demand.

It is simple in operation. The various mining companies gra leases on blocks of ground in an operating mine, with each blo being leased to one or more miners. A block is ordinarily about 2 feet square and extending upward from one level to the next. The may be any number of split-check leases in the same mine, and t company also has its own independent operations.

I might say here that in the Cripple Creek mining district we do n have the "head leaser" situation such as was described as to the Cal fornia area. The leasing in the Cripple Creek district is from t company direct to the split-check lessee and there is no intervenin head leaser on any part of the mine.

Senator KERR. Your split-check lessee, as you call him, is permitte to take partners or associates, is he not?

Mr. BURGESS. Yes. He may have partners in with him that t mine knows nothing about.

Senator KERR. Is that not about the same as the head leaser system

Mr. BURGESS. My understanding of the description of the Californ system was that a head leaser would take a very large block of min ground and then sublease that out to other miners under him. Ou system is that we lease to a split-check lessee a certain block of groun which is relatively small from one level of the mine to the othe He does not grant any additional subleases under him. He may tak in a partner to work with him. And in some instances, even, the spli check lessee, we know, actually becomes grub-staked by the grocer man or by the hardware store as to his small supplies, and they take a interest in that lease with him, which is almost wholly unknown t the company itself.

There are also at times leases taken by men who don't even go nea the operations themselves. They hire the workmen to go in for the and do all the work, and they simply carry their responsibility of th pay roll and collect the proceeds.

Under this system, the lessee furnishes his labor and any workme who may be employed by him, together with his machines, hose, an small tools.

The company, or lessor, furnishes the supplies, such as powde fuze, caps, drill steel, timber, and operates the hoist. The storage bin are maintained by the lessor on the surface so that the ore of eac lessee is kept separate and shipped separately.

The ore is ordinarily held in storage bins until a sufficient quantit has been obtained for shipment. It is then sent to a gold-reductio mill in the name of the lessor and is handled by the mill under a instruction agreement signed by the lessor and the lessee.

In substance, the mill is instructed to first deduct the transportatio and treatment charges from the gross value of the ore. The instruc tions then provide that the remaining value, or the net value, of th

ore shall be divided 49 percent to the lessee, 50 percent to the lessor, and 1 percent additional to the lesser to apply on State production taxes. The mill checks are issued direct to the lessor and to the lessee for their respective shares of the net proceeds.

This, in brief, is the system of operation under a split-check lease.

We object to the inclusion of split-check lessees as employees under the Social Security Act for the following reasons:

First, on the Cripple Creek district operations, the Commissioner, at least 10 years ago, ruled that split-check lessees were independent contractors, and not subject to the Social Security Act as it now exists. Unless it is now the intent and purpose to include every self-employed person under the act as an employee then there is no excuse for singling out block or split-check mining lessees for special class treatment and inclusion.

It is my understanding that self-employed farmers, agricultural labor, and crop-share farmers are not intended to be covered under H. R. 6000. The split-check leasing system for mines is copied after the share-crop leasing system on farms. If the share cropper is to be an independent contractor, then the split-check mining lessee should be an independent contractor.

Second, there is no reason for drawing a distinction between a royalty mining lessee and a split-check lessee.

On a royalty lease, the lessor negotiates a lease on an entire mining claim, with its shafts, hoist and other equipment. The lessor has nothing to do with the operation. The lessee must provide all of his supplies, workmen, hoisting costs, and all other expenses that go with the operation of the mine. The ore is shipped in the name of the lessee. The settlement instructions filed by the parties with the mill provide for the split of the net proceeds according to the leasing agreement between the parties. The lessee, of course, gets a larger percentage and the lessor a smaller percentage than under a split-check lease. In the final analysis, however, there is a definite split of the net between the lessor and the lessee.

At the outset, of course, a royalty lessee must have financial backing to open and operate the mine. He may finish with less than a split-check lessee because he has risked more in capital.

Under the terms of this proposed act, the royalty lessee, who operates the mine on his own account and ships the ore in his own name, would not be required to pay social-security taxes, for he still would be recognized as an independent contractor. On the other hand, this split-check lessee, who risks nothing but his time and labor and stands to make more in profit from his operation than does the royalty lessee, would be subject to the Social Security Act and required to pay taxes. I submit that there is no equity in such a provision.

Third, it would be impossible to determine and compute the amount of tax which should be paid for the split-check lessee and for the lessor.

The 49 percent of the net value of the ore as received by the lessee is not the net earnings of the lessee. He must pay for his machines, his additional workmen, if any, workmen's compensation insurance on his employees and other incidental items of expense, the amount and nature of which the lessor has no knowledge and the lessee keeps

inaccurate records. Certainly the amount upon which the social-security tax should be paid would be the net amount to the lessee after he pays all of his incidental expenses, and that sum is wholly impossible for the lessor to determine. I take it, however, that it would be the duty of the lessor, as the employer, to accurately determine the amount of those net earnings and pay the tax accordingly. This the lessor could not do.

The inclusion of split-check lessees, is, therefore, wholly impractical in operation. Such inclusion would, I believe, spell the end of a long-used and highly advantageous leasing system.

We heartily endorse the amendments presented on behalf of the American Mining Congress, and respectfully urge your committee to adopt those amendments.

I thank you for your attention, gentlemen.

The CHAIRMAN. We thank you, sir, for your appearance. We were glad to have you.

Are there any questions?

Senator MILLIKIN. I might say, Mr. Chairman, that Mr. Burgess is one of our great lawyers out in that country. He was president of our State bar association. He is a specialist in mining law, and he is an inheritor of great traditions in Colorado, which he maintains steadfastly and ably. The old-timers in the law made a lot of money when they had a lot of mining litigation out there, and when they were not engaged in the foolishness of politics they were spending their earnings sinking holes in the ground to find that "picture" ore that the gentleman showed us a while ago. I know Mr. Burgess is more conservative than that.

The CHAIRMAN. Thang you very much, Mr. Burgess.

Mr. BURGESS. Thank you, Senator.

The CHAIRMAN. Mr. James K. Richardson.

You may be seated, Mr. Richardson, if you wish.

STATEMENT OF JAMES K. RICHARDSON, MANAGER, UTAH MINING ASSOCIATION, SALT LAKE CITY, UTAH, ACCOMPANIED BY T. P. BILLINGS, CONSULTING ENGINEER, SALT LAKE CITY, UTAH

Mr. RICHARDSON. Mr. Chairman, I have asked Mr. T. P. Billings, a consulting engineer from Utah, to come up with me. In the event you want to ask any questions, he is one of the most experienced men in this field of mine leasing that I know.

The CHAIRMAN. Mr. Billings, we are very glad to have you here.

Mr. RICHARDSON. My name is James K. Richardson. I am a graduate mining engineer who has worked in various capacities in the mines of the western United States. At present, I am the manager of the Utah Mining Association and reside in Salt Lake City, Utah.

This association's membership accounts for the production of approximately 90 percent of the nonferrous metals credited to Utah each year. It is the considered opinion of the members of the association that if the definition of "employee" currently embodied in H. R. 6000 is adopted it will kill leasing in Utah mines. That is the reason I am appearing, in behalf of the association, in opposition to that portion of the act.

Our association has concurred in the resolution adopted by the western division of the American Mining Congress at its 1949 meeting in Spokane, Wash., on this subject. This resolution, in part, reads as follows:

> We strongly oppose such changes in the definition of "employee" as are contained in H. R. 6000 of the Eighty-first Congress, or any departure from the common law criteria for determining employee-employer relationship.

The question, naturally, rises in your minds as to why we are so firmly convinced that the classification of leasers as "employees" would terminate the leasing system. During 1940 mine leasing virtually stopped in Utah. The interruption resulted in loss to all parties involved. The owner lost profits and their mines were impaired; the leasers and their families suffered loss of earnings; farmers lost a market for their products; and merchants lost customers. There was a loss of tonnage for railroads and processors of the ore; school, city, county, State, and Federal taxing units lost tax dollars; and finally the Nation lost production of vital metals necessary for its domestic economy and at that time—the war effort.

This interruption of mine leasing was due to certain rulings holding that a mine leaser was not an independent contractor but an employee of the mine owner. In May 1940 the Supreme Court of Utah in *National Tunnel and Mines Company* v. *The Industrial Commission of Utah, et al* (102 Pac. (2d) 508) held that a mine leaser was an employee and eligible for benefits under the Utah Unemployment Compensation Act. It followed that the mine owner was obligated to make unemployment tax payments on so-called wages of the leaser.

In August 1940, the United States Department of Labor, Wage and Hour Division, issued an administrative ruling, citing the Utah unemployment case, indicating that the Division might find a mine leaser to be an employee and subject to the minimum wage and overtime provisions of the Wage and Hours Act. Finally, in November of 1940, the Bureau of Internal Revenue in Washington, D. C., ruled that operations under a mine lease created an employment relationship between the mine owner and leaser for Federal employment tax purposes. If a leaser was an employee, the mine owner was required to keep a record of his time worked, was obligated to pay him minimum wages and time and one-half his average rate of pay for overtime, notwithstanding there was no basis for determining the rate of pay; and the owner was obligated to pay taxes on the leaser's so-called wages under the Utah Unemployment Compensation Act, the Federal Insurance Contribution Act, and the Federal Unemployment Tax Act. Moreover, the creation of this relationship and these obligations destroyed the leaser's incentive which is the key to success of lease operations, since it assured him going wages irrespective of the economic success of his lease operations and imposed on the mine owner obligations with which it was impracticable and usually impossible for him to comply. The very basis of mine leasing is the ability of skilled leasers to conduct their operations free from the supervision and consequent overhead costs of owner operations.

Because of losses due to the interruption of mine leasing, previously referred to, and because of the need for additional production of critical metals for World War II, a concerted effort was made by governmental agencies, leasers and owners to effect changes in the

rulings which would permit normal resumption of the mine leasing system. This involved:

(1) Amendment of the Utah Unemployment Compensation Act, so as to exclude mine leasers from coverage under the act, unless the lease agreement or operations under it would constitute the leaser an employee of the mine owner at common law. In 1949 the Utah act was further amended to condition exemption upon the leaser being also exempt under the Federal Unemployment Tax Act;

(2) The drafting of a standard form of mine lease, which is now in common use in Utah;

(3) The issuance of a policy statement by the Wage and Hour Division to the effect that leases which followed the standard form created an independent contractor relationship and the leasers were not covered by the Wages and Hours Act;

(4) The issuance of a ruling by the Commissioner of Internal Revenue of the United States that operations under the standard form of lease, if carried out in keeping with the independent contractor character of the lease, would constitute a relationship of independent contractor between the mine owner and leaser, rather than an employment relationship for Federal Employment Tax purposes; and finally

(5) After the District Court of the United States for the District of Utah, in the case of *Combined Metals Reduction Company* v. *The United States of America* held that a mine leaser under a lease similar to the standard form of lease was not an employee, but an independent contractor, and that the mine owner was not obligated to pay social security taxes, the Federal Security Agency agreed that it would follow the Utah case and the *Empire Star Mines Company, Limited*, v. *California Employment Commission* (28 Cal. (2d) 33; 168 Pac (2d) 686) case in the ninth and tenth judicial circuits of the United States.

After a period of 4 years, during which time there had been virtually no leasing in Utah, in reliance on the rulings and decisions refered to, leasing operations in Utah were resumed on a substantial scale in 1944 and are now continuing.

Even though a leaser is an independent contractor at common law, he probably would be an "employee" under H. R. 6000. This would make the mine owner subject to the Federal Insurance Contributions Act, the Federal Unemployment Tax Act, and also the Employment Security Act of Utah—I have referred previously to that, sir, as the Utah Unemployment Compensation Act, but the new amendment that I referred to in 1949 gives that a new name—since exclusion of leasers from coverage under the latter is conditioned upon their being exempt under the Federal Unemployment Tax Act. It also follows that mine leasing would find itself in the same situation that faced it in 1940. This, we believe, would inevitably result in killing of the mine leasing system.

Leasers are self-employed, independent businessmen. An accepted concept of an independent businessman embodies two criteria. (1) Freedom to hazard one's credit, capital, or capital goods on his knowledge, judgment, and skills; and (2) the opportunity for profit or loss as a result of exercising this independent, individual, action. These criteria, in my humble opinion, are fundamental factors in the definition of a mine leaser.

Drawing upon my own personal experience as a miner and a mining engineer, I look back upon leasers and their stories which stirred my imagination and opened to me the door of economic opportunity. My personal failure to walk through these portals cannot be laid entirely to fear of the unknown, but rather to that love of payroll security which besets the vast majority of Americans. Fortunately for America this spirit, which I describe as my own, does not control all Americans. Within many there exists a spark of daring—a gambler's instinct, if you please—which spurs imaginative and daring men on to deeds and activities which, more often than not, are contrary to the attitudes and opinions of their fellowmen. It is these actions which have, cumulatively, made America a strong and progressive member of the family of nations.

Mine leasers, that I have known, have possessed this singular spark of independence and free thinking. They want no boss other than their own limitations. In most instances they have acquired skills within and outside of the mines wherein they lease. Perhaps, as an employee, they saw a vein of ore which they felt should be developed but which a supervisor, pressed for tonnage, felt was uneconomical to follow. The potential leaser saw, therein, an opportunity and sought a lease, on his own initiative, in order to pursue this will-o'-the-wisp even as the legendary Jason sought the Golden Fleece. They were willing to pit their resources, their abilities, and their knowledge against the forces of nature. Often their search led them to the lush valley of success—often they were lured on to the abyss of failure where nature laughs at man's puny efforts. Despite the outcome these men knew that there is always a "next time" and that today's failure may be tomorrow's success.

I have attempted to convey to you my personal opinion that these mine leasers are not ordinary men. The vast majority of them could easily be supervisors in any mine in which they lease due to their imaginative and skillful abilities. Most of them have had a vast underground experience extending over many years under varied geological and mineralogical circumstances. Many leasers train their sons to follow in their footsteps—and train them far better than is possible in our own academic or industrial training programs. Fathers know that the ability to profitably follow a narrow lead to a hoped for bonanza means hand sorting of ore; judicious and skillfull drilling and blasting; and a practical knowledge of geology and mineralizing characteristics. Their fathers know, too, the pain of failure and the joys of success.

There is nothing mysterious or sinister about a mine lease. Ordinarily the potential leaser goes to a mine owner and seeks a lease to explore and mine in a specified area. More often than not these areas are isolated or abandoned. If the man is well and favorably known as a responsible and able individual, the owner may grant a lease if he does not contemplate further work in the area or mine. The owner has certain moral and legal responsibilities which cannot be abandoned and as a result must insist that the contemplated work be done in accordance with the mining safety codes of the State and in such a manner as not to endanger the balance of the mine workings. When several leaser groups seek the same area the owner must insist that

the successful applicant perform certain work minimums to maintain his lease and not merely hold for speculation.

The contention has been made that leasers are forced to ship their ores to designated mills or smelters. This is not so. The higher price a leaser gets for his ore means a better royalty to the owner. Mines A and B, whose lease production is indicated on exhibit C, which is attached to this report, are owned by a smelting company.

Mr. Chairman, I would like to have those exhibits made a part of the record. I won't bother to read them in their entirety.

The CHAIRMAN. Yes, sir. You may do so.

Mr. RICHARDSON. However, in 1948 only 53 percent of the total lease production went to their smelter and in 1949 only 41 percent went there. The balance, in each case, went to the smelting company offering the best price for that particular ore. Ordinarily, however, a leaser can get a better dollar return when his ores are shipped to a plant which treats the owner's ore. This is due to the over-all desirability of large lots for mill and smelter feeds when compared to the small tonnages ordinarily produced by the individual leaser.

Senator MILLIKIN. Is it not true also that oftentimes the owner's mill is the only one that is available?

Mr. RICHARDSON. It is often the only one that is available. That is right, sir.

I might say, however, that in Utah we have this situation, which is the reason that I brought that out, sir: We do have three smelting companies in the Salt Lake Valley, and though the leasing operations were going on at these mines, the leasers' ores were not sent to the company smelter in their entirety. The contention is often made that the leasers are forced to ship their ores to a certain smelter. But I have two leasers here from different areas and I think they can bring out, better than I can, how independent they are in their selling actions.

The mine owner, in an effort to insure work performance must inquire into the available equipment the leaser owns or make arrangements to rent such to him. Services to the leaser such as hoisting, compressed air for drills, blacksmithing, assaying, transportation, timber, dynamite, and such similar items are charged for at or near cost. Often the leaser's workmen's compensation insurance is covered by the owner but the leaser pays for such coverage. These are all operating details contained in the lease. When the lease has been signed the leaser is in business—on his own.

Leasers' investment: Exhibit A, of the attached material, will give you a concrete idea as to the amount leasers have invested in capital goods in one Utah operation. These investments vary from $250 to $60,000. Where they have no equipment the owner or some other individual must "grubstake" them by extending credit or rent them sufficient equipment with which to work.

Many leasers have told me that they would purchase more equipment if they knew that "the rules wouldn't be changed" by Government agencies and they could rely on being recognized as independent, self-employed individuals. During the past 10 years they, like the mine owners, have been continually harassed by legislative and judicial threats as well as administrative rulings relative to their status.

These leasers know from past experience that the owner cannot obtain from regular employees the same careful, industrious workmanship which a leaser, working for himself gives. This is illustrated by the experience of one Utah company owning a mine which, since 1935, has been regarded as "worked out," in the sense that company operations were no longer profitable. Leasers working in that same mine between 1935 and 1940 produced over 300,000 tons of ore. The owner stopped giving leases in 1940, as previously stated, but due to the success of this operation the same men who had been leasing from him were put on the pay roll at the going union wage. These men worked in the identical areas in which they had been leasing. While leasing they had used such care in mining and sorting of ore that shipments had averaged from $8 to $10 a ton in value. After they were put on the pay roll of the owner, shipments fell to an average value of $4 per ton, due to careless mining and sorting. The result was not only an adulteration of the ore, but also an increased smelting and railroad expense due to handling of waste. The owners have not forgotten, nor have the leasers, this experience. The leaser knows that had the mine owner been able to economically do leased work with "days' pay employees" he would have done so and thus never resorted to the leasing system.

The question, naturally, arises as to whether there truly exists an opportunity for profit or loss to such leasers or whether the system is merely a subterfuge to avoid existing wage scales. Exhibit B gives such details as are available at several operations on the profits or losses of leasers. At mine A we find variations from individual lease annual net profits of $28,675.83 in 1948 to losses of $3,506.26 in 1949. In this same mine we find that in 1948 the leasers' profits aggregated $106,685.01 while in 1949 (a period of low metal prices and high costs) they dropped to $33,836.51. The same type story is told by the data on mine B. Mine C, however, rents some equipment and provides certain services on a daily basis to leasers, and accordingly, keeps a record of the shifts worked. From their data we can look at the average earnings per shift worked. We find a high of $60.80 per shift worked in 1946 to a loss per shift worked of $3.88 in 1949. Incidentally the same individual was involved in these examples. The miners' wage rate, at this same mine, was $8.93 per 8-hour shift during the 1946 period and $10.85 per day in the 1949 period.

A study of these exhibits will, I believe, conclusively show that the leaser is the owner of credit, capital, or capital goods and through hazarding them he is presented with an opportunity for profit or loss. I am firmly convinced, therefore, that the leaser meets an accepted concept of an independent businessman.

There is no question in my mind that leasing provides the most practical means of conserving, through use and production, our national mineral resources. As indicated earlier, the ores in the leased area would have been lost as they would never have been mined by the owner. Yet these same areas under leasing arrangements have gone on to yield substantial tonnages of vital nonferrous metals which could never have been produced had the openings been permitted to cave and the mines fill with water. These facts were equally true during the emergency war periods of the past and during industry's conversion to peacetime operations.

Exhibit C indicates the importance of lease production in comparison with owner operations. We feel certain, for example, that the Big and Little Cottonwood districts in Utah would shut down altogether. This area has approximately 40 leasers at work and their 1948 production amounted to approximately $232,172. Virtually the same can be said of the American Fork district which, in 1948, created $218,351 in new wealth. Almost all of Beaver County, Utah's $233,280 production in 1948 would be lost.

Senator MILLIKIN. What kind of production is that?

Mr. RICHARDSON. This is copper, lead, and zinc basically. There is some gold, some silver. But we are not quite in the same category as California or Cripple Creek district, where they are speaking primarily in terms of gold.

I estimate that leasers produced, from these various and sundry nonferrous metals, during 1948 in excess of $1,000,000 in new taxable wealth in Utah!

Individuals within and without Government have often expressed real concern over the status of the known domestic reserves of nonferrous metals. Various means of stimulating the search for new ore bodies have been proposed and considered. In this connection it is right that you should know that leasers, in Utah, are almost wholly responsible for disclosing, through their work, geological information which led to the development of the two foremost lead-zinc mines in our State. These two mines, since their development, have produced millions of pounds of strategic metals which assisted materially in our Nation having successfully prosecuted and terminated World War II. These are not isolated examples but I offer them to substantiate our opinion that the leaser is vital to the national welfare and safety.

The leasing system has provided work for miners who, in many cases, could not have found employment in other mining operations due to physical disabilities or infirmities and who might otherwise have become objects of charity. Their leasing operations provide farm markets and support service industries and resulting jobs in their communities and in areas outside the immediate mining district. The new wealth created provides tax support to Government and keeps on the tax rolls much real property which would have to be abandoned.

I wish that I could state accurately how many leasers will be affected. I feel that the over-all number, at present, is not particularly impressive nationally. I estimate that there are a total of approximately 250 individuals doing business as mine leasers at present in Utah. An increase in metal prices would greatly add to this number. The abandonment of the leasing system would throw onto the local unemployment rolls a significant number of skilled miners who could not, today, be absorbed in our local depressed mining operations.

I would be remiss in my responsibilities to this Nation, as well as to my conscience, if I neglected to call your attention to the importance of mine leasing to our national safety. This honorable body should be apprised of the fact that a substantial portion of the uranium ores produced in the Colorado Plateau area result from the leasing system. Well informed engineers in this area have estimated that approximately 75 percent of the carnotite production in Utah

is mined by leasers. The same figure, I believe, could safely be applied to Colorado's production. Substantiation of these estimates could, I am sure, be obtained from the Atomic Energy Commission.

As an engineer, I seriously question whether any scheme of operation, other than the accepted leasing system now in use could be economically adapted to the mining of these uranium ores. This conclusion is reached due to the nature of such ore bodies and their known occurrence in remote and isolated areas. I feel certain that the financial incentives and independent opportunities offered the uranium leaser are the things that stimulate his search for and production of these extremely critical ores. Therefore, I believe that the adoption of a definition whereby they would be classified as "employees" would seriously jeopardize the Nation's production of fissionable raw materials.

In summary, it is our sincere conviction that the adoption of the definition of "employee," as currently embodied in H. R. 6000, will stop the mine leasing system and thereby:

(*a*) Shamefully waste those national mineral resources which can only be produced under the concepts of a leasing system.

(*b*) Jeopardize the production of fissionable materials whose raw materials are, largely, a result of the efforts of independent mine leasers.

(*c*) Lose to the Nation and the State of Utah taxable income and taxable real property which now exist under the leasing system.

(*d*) Lose to the people of the United States new wealth which provides markets and jobs in community areas often far removed from the immediate leasing operators.

(*e*) Create a further employment and welfare problem in mining areas where leasing is now being practiced.

(*f*) Relegate to anonymity mine leasers who are a segment of independent small business whose continued existence Congress has sought to assure by various means.

In the light of these factors we respectfully urge this honorable body to amend H. R. 6000 so that self-employed, independent small-business men are not classified as "employees" under the act.

I would like to say, sir, that I have, since preparing this statement, read the proposed amendments as suggested to you by the American Mining Congress spokesman, and we would concur in those wholeheartedly.

The CHAIRMAN. All right, Mr. Richardson.

You wish to have the exhibits attached to your brief incorporated in the record?

Mr. RICHARDSON. Yes, sir.

The CHAIRMAN. Very well. If there are no questions, we thank you, sir, for your appearance.

Is there anything you wish to add, Mr. Billings?

Mr. BILLINGS. I would like to add one thing.

Mr. Richardson refers to the profits of the leasers. Those don't include his day's pay, which he turns in as a cost for net proceeds tax, so that in addition to the $28,000 this lessee receives $12 a day, and in case of a loss of $3,000, that $3,000 would be reduced by the $12 a day for each day that he worked, as to his net proceeds.

The CHAIRMAN. Thank you, sir.

(The exhibits attached to Mr. Richardson's prepared statement follow:)

EXHIBIT A

Mine A: Equipment owned by lessees and used on leases

Lease group	Equipment	Approximate value
1	Drilling machines and small tools	$600
2	Drilling machine and small tools	600
3	2 drill machines, slusher hoist, small tools	1,700
4 [1]	2 trucks, small tools (rents some equipment)	1,800
5	2 fans, slusher hoist, 2 drills, small tools	4,200
6	Drill machines and small tools	500
7	Drill machine, slusher hoist, small tools	3,700
8	Drill machine and small tools	500
9	2 drill machines, slusher hoist, small tools	3,500
10	Drill machine and small tools	600
11	do	500
12	Drill machine, small tools (rents some equipment)	600
13	2 hoists (1 tugger), 2 drill machines, small tools	4,700
14	Drill machine and small tools	570
15 [1]	Dragline, traxcavator, caterpillar, trucks (see note 1)	25,000
16	2 slusher hoists, 2 drill machines, small tools	3,500
17	Slusher hoist, drill machine, small tools	3,100
18 [2]	Small gas pump, small tools	300
19	Drill machine and small tools	500
20	do	500
21	(Same as lease group 15)	
22	Drill machine and small tools	500
23	Slusher hoist, 2 drill machines, small tools	2,500

[1] Surface dump leases.
[2] Surface placer lease.

All others are underground leases.

NOTE.—Lease group 15 has contracted truck haulage for some time, also loads ore for lessees at mine B. His entire outfit at present is conservatively estimated at $85,000.

Rental and company service charges

Compressed air	$0.25 per dry ton.
Tramming	$1 per wet ton.
Transportation	$0.05 per passenger.
Cap lamps	$1 per month.
Assaying	$1 per 3 determinations.
Blacksmithing and shop work	$2 per hour.
Sharpening axes	$0.25 each.
Sharpening picks	$0.15 each.
Sharpening and setting saws	$1 each.
Shanking steel	$0.75 each.
Timber and other supplies	Cost to company plus 10 percent handling charges.

Mine B: Equipment owned by lessees and used on leases

Lease group	Equipment	Approximate value
1	2 drill machines, mine car, small tools	$1,500
2	Compressor, 2 drill machines, small tools, etc	3,500
3	Drill machine and small tools	600
4	Compressor, traxcavator, pick-up truck, 2 drill machines	10,000
5	Compressor, bulldozer, 2 drill machines, small tools	17,000
6	Drill machine and some small tools	400
7–8	Mine car, drill machine, small tools	1,000
9–12	Compressor, bulldozer, traxcavator, truck, 5 drill machines, various small tools, all leasing tools necessary.	60,000
13	Drill machine and small tools	200
14	Compressor, bulldozer, mine car, truck, 3 drill machines, small tools	15,000
15	Compressor, drill machine, small tools	2,100
16–18	Compressor, pick-up truck, 2 drill machines, small tools	5,100
19–20	2 drill machines, mine car, small tools	1,000

Mine B: Equipment owned by lessees and used on leases—Continued

Lease group	Equipment	Approximate value
21	Drill machines and rents balance of equipment	
22	Drill machine and small tools	$400
23	2 drill machines, tugger hoist, mine car, small tools	1,300
24	Drill machine, small tools	400
25	2 drill machines and small tools	800
26	do	800
27	Drill machine, small tools	500
28	Hoist, drill machines, small tools	1,000
29	Drill machine, small tools	300
30	do	400
31	do	600
32	do	300
33-34	2 drill machines, small tools	800
35	do	800
36	Drill machine, small tools	300
37	Same as group 1	
38	Same as group 2	
39	Drill machine, small tools	400
40	do	500
41	Truck, drill machine, small tools, mine car	1,700
42	Mine car, drill machines, small tools	800
43	Drill machine, small tools	350
44	2 drill machines, small tools	700
45	Drill machine, small tools	400
46	do	250
47	do	300
48	Same as group 44	
49	Drill machine, small tools	300
50	Same as group 1	
51	Drill machine, small tools	450
52	Same as group 23	
53	Drill machine and small tools	300
54	Same as group 33-34	
55	Compressor, drill machine, small tools	2,800

NOTE.—Rental and company service charges are the same as for mine A.

EXHIBIT B. MONETARY RETURNS TO LESSEES

Mine A lessees: 1948 and 1949 net smelter returns, costs, and net profit or loss

Year and leaser group	Net smelter returns	Lessees' costs [1]	Net profit or loss (—) to lessees
1948			
1	$30,909.91	$21,459.10	$9,450.84
2	32,691.02	19,948.09	12,742.93
3	29,013.22	20,607.44	8,405.78
4	21,947.61	12,573.42	9,374.19
5	39,851.84	21,838.00	18,013.84
6	5,842.31	4,704.25	1,138.06
7	37,346.51	31,714.94	5,631.57
8	6,044.67	5,554.97	489.70
9	35,291.04	31,057.54	4,233.50
10	709.82	1,128.25	−418.43
11	602.03	2,049.18	−1,447.15
12	18,768.69	13,230.11	5,538.58
13	13,155.25	11,299.86	1,855.39
14	1,568.51	4,211.15	357.36
15	47,905.62	19,299.79	28,675.83
16	23,523.07	20,880.05	2,643.02
Total	348,171.15	241,486.14	106,685.01
1949			
1	$9,782.50	$5,832.75	$3,949.75
5	44,564.30	27,732.41	16,831.89
7	16,156.50	17,439.68	−1,283.18
8	4,201.76	2,862.29	1,339.47
9	1,246.18	2,406.93	−1,160.75
12	18,346.07	14,560.39	3,785.68
15	28,413.15	14,663.78	13,749.37
16	8,242.06	11,748.32	−3,506.26
17	14,018.58	15,006.31	−987.73
18	201.05	819.96	−618.91
19	3,277.54	4,137.25	−859.71
20	404.94	1,529.59	−1,124.65
21	12,131.09	7,851.42	4,279.67
22	3,580.38	5,271.20	−1,690.82
23	8,628.12	7,495.43	1,132.69
Total	173,194.22	139,357.71	33,836.51

[1] Includes lessees' expenditures (as reported by them for the purpose of computing their proportion of the property taxes and compensation insurance), royalties, compensation insurance, occupation, and property taxes, and charges for services or equipment furnished by the lessor at lessees' request (such as hoisting, trimming, etc.) and for any supplies purchased from the lessor. Expenditures reported by lessees, principally for labor and supplies, include allowance for wages of working lessees equivalent to the customary wages paid for similar or substantially similar work.

Mine B lessees: 1948 net smelter returns, costs, and net profit or loss

The CHAIRMAN. Mr. Dumont? You may be seated, Mr. Dumont, if you wish, and the committee will be very glad to have your statement.

STATEMENT OF JOE DUMONT, BUTTERFIELD CANYON, NEAR LARK, UTAH; LEASER, LARK MINE

Mr. DUMONT. Mr. Chairman, they have me listed, here, as "Mr. Joe Dumont, United States Smelting, Refining & Mining Co." I am not an employee of that company. I am an independent contractor of that company.

My name is Joe Dumont. I reside in Butterfield Canyon, near Lark, Utah. I am a miner and have been regularly employed in mining since 1914. During much of that time, I have been operating

mine leases. I have had leases at eight different mines in Montana, three different mines in Utah, and one mine in Idaho. On two occasions, I worked for wages so that I could stake another leaser. I have been working on the same lease since July 1945. It is in the Lark section of the United States and Lark mine at Lark, Utah. The company discontinued operations in the general area of my lease more than 20 years ago. I have invested approximately $5,000 in equipment used in my lease operation. I have had as many as four employees, but now only have one. He is a skilled miner and I pay him a little more than the going wage in the district.

I have produced approximately 12,000 tons of ore under this lease. My yearly net earnings during the period of this lease are as follows:

1945	$3,066.44	1948	$10,206.88
1946	9,594.97	1949	885.15
1947	9,294.21		

The CHAIRMAN. What happened to you in 1949, Mr. Dumont?

Mr. DUMONT. In 1949, due to the low metal prices, I had to hunt for different ores, which I just found late in December.

The CHAIRMAN. I see.

Mr. DUMONT. I am on a different type of ore now.

Senator KERR. Might I ask a question, Mr. Chairman?

The CHAIRMAN. Yes, Senator Kerr.

Senator KERR. Are these figures over and above a fixed amount as a monthly salary, or is that the total?

Mr. DUMONT. I have allowed myself a wage besides this. I have allowed myself $12 a day, and these figures represent what I cleared above that.

The ore that I am mining is low grade and must be carefully mined and sorted. Metal prices dropped in 1949. This required more work in selecting and sorting out a product which could be shipped profitably and resulted in increased cost and lower profit, my earnings for the year being considerably less than the wages paid my employee.

In mines where I have worked there are usually corners and remnants of ore bodies in stopes and many small detached ore showings and lean ore showings which the mining company cannot profitably mine under day's pay operation, and which for this reason were abandoned so far as being mined by company operation. These ore bodies and showings may be in idle properties or in sections of operating mines now remote from the company's operations. I mentioned that the company discontinued operations in the general area of my lease more than 20 years ago. The reason the company cannot mine these ores profitably is the extra cost of supervision and overhead and the low output per man-shift when they are mined by company operation. Most leasers have had much experience in mining before they start leasing. They know how to mine these ores with the least effort. They know how to drill, blast, select, and sort the ore so as to avoid its dilution with material that is waste rock and finally get the most ore of profitable grade at the lowest costs, and they have the personal interest and initiative that comes from an opportunity for profit in doing so.

Like most men, I have looked for opportunities to make more money and have tried to save something for my old age. Leasing does not assure me the regular income that day's pay or a salary would. As

is the case with many of my fellow leasers, I quit a shift boss job, for which I was paid a salary, to take a lease. Over the years, I have made considerably more at leasing than I would have at day's pay, and I believe also more than I would have earned on any salaried job to which I might have been promoted. Then there is always the hope and possibility that I will hit it big and make a real stake. I get a lot of satisfaction in being a small-business man and my own boss, owning my own equipment, and being an employer, although I have only one man now. I work right with my employee and do most of the planning, arranging for supplies, and looking after the details relating to my business either before or after the usual working hours. This is not a burden to me; in fact, I enjoy it. There is a certain satisfaction in not having to follow a definite work schedule. I can come and go about as I please, although actually I am nearly always on the job. I belong to the local Lions Club and from association with other members of the club, I have concluded that many of the problems in my business are common to most small-business men.

The possibility of leasing being stopped has created a personal problem for me. I have engaged in mining for 36 years. I cannot do as much physical work as I could 30 years ago, but I believe that the knowledge I have acquired about geology, planning, and proper mining methods required to obtain the best results under different conditions, and the application of the skill I have developed in doing mining work in those 36 years more than compensate in my business for the loss of physical strength. I am afraid that I would have difficulty in passing a company preemployment physical examination, and even if I could, I would find it hard to fit in with company operations as a steady vocation. I have given considerable thought as to what I could do if mine leasing were stopped, but I haven't found the answer. After engaging in one kind of work for 36 years, it isn't easy to shift to other work.

The comments which I have made about my leasing operation apply generally to leasers I have known. In appearing here, I represent the leasers in the Bingham district of Utah, and will leave with you a petition which 36 of my fellow leasers and I have signed, asking that the definition of "employee" as now written in H. R. 6000 be changed so that it will not include us.

If you have any questions, I will be glad to try to answer them.

The CHAIRMAN. Thank you very much, Mr. Dumont.

Mr. DUMONT. Thank you, Mr. Chairman.

The CHAIRMAN. This statement signed by leasers of the State of Utah will be placed in the record.

(The statement referred to follows:)

SENATE FINANCE COMMITTEE,
Senate Building, Washington, D. C.

GENTLEMEN: We, the undersigned leasers, having been advised that you are now considering H. R. 6000, which would amend the Social Security Act, respectfully petition as follows:

That we are experienced in the work of mining ores containing copper, lead, zinc, gold, and silver.

That we are engaged in the business of mining such ores in the Bingham district, State of Utah.

That we operate under leases granted by mining companies, which permit us to conduct an independent mining operation with the usual freedom and risk incident to an independent business venture.

That we have accumulated equipment and facilities for use in our leasing operations—in some cases of modest value and in other cases having very substantial value.

That sometimes the earnings from our lease operations are less than they would be if we were engaged in mining work in the district at day's pay, but generally our earnings are more and in some cases much more than day's pay.

That in most cases the blocks or areas which we hold under lease could not be worked profitably by the company, either because of the narrow vein or peculiar operating conditions which require special skills and a personal interest in the mining operation.

That the definition of an "employee" under H. R. 6000 would probably make us an "employee" under the Social Security Act, and that if we are so classified, probably all mine leasing in the district will be continued.

That this would stop us from engaging in an independent business which many of us have followed for many years.

That some of us will find it difficult to secure other work.

That we could get back only a small part of the money we have invested in the equipment we now own and are using on our leases.

That much of the ore which could be mined under leases would be lost, since it could not profitably be mined by the company.

We, therefore, respectfully ask that the definition of "employee" as now written in H. R. 6000 be changed so that it will not include us; and we appoint Joe Dumont, one of our fellow leasers, as our representative to appear before you and explain the problems of mine leasing and urge you to amend the definition of "employee" so that it will not include us.

Dated this 22d day of February 1950.

Leno P. Morandi, A. N. Cole, A. I. Coombs, A. O. Jacobson, John T. Bowles, George J. Usher, Tony Stelenovich, Vel Reed, Albin L. Holt, Martin Kannikar, Anton Kannikar, Peter Cuevas, C. B. ————, Mark Zano, Giovanni Ren, Archie E. Parry, Jesus Avilar, Curin Heinede, Tony Bullock, George Heinecke, O. E. Yates, Don Palmer, Angelo Kostopolo, Robert Ren, Frank Bullock, Ross H. Dansie.

The CHAIRMAN. We have one more witness, Mr. Ralph Hopes, and I believe that will complete the call of the witnesses.

All right, Mr. Hopes. You may have a seat, if you will.

STATEMENT OF RALPH HOPES, EUREKA, UTAH, MINE LEASER, APPEARING IN HIS OWN BEHALF AND AS REPRESENTATIVE OF THE TINTIC SMALL MINE OPERATORS AND PROSPECTORS ASSOCIATION OF EUREKA, UTAH

Mr. HOPES. Mr. Chairman and members of the committee, my name is Ralph Hopes and I reside at Eureka, Utah. I am what is commonly called a mine leaser, and I am appearing here in behalf of myself and the Tintic Small Mine Operators and Prospectors Association of Eureka, Utah.

In order that the committee may be informed as to the actual operations of the leasers and their problems, I will review my personal history, because it is typical. I am 64 years old and have been in the business of mine leasing for 44 years. During this period I have regularly worked with my hands and I am now engaged in training my son as a leaser. I first leased from the Eureka Hill Mining Co. in 1906–1907. Then I leased in the Bullion Beck mine about 1909–1911. Later I leased in the Beck tunnel until 1913. Then I leased from the McCrystal Co., working in the Gemini and Ridge and Valley mines. In 1929 I was leasing on the dumps of the Victoria and the Eagle

and Blue Bell mines. During 1935, 1936, and 1937 I leased underground in the Eagle and Blue Bell mine. In 1939 I began leasing at the Colorado and I am presently engaged in leasing at that mine. During these periods of time I have had partners and at one time I have employed as high as six men. My present lease at the Colorado is on a basis where my son and I are partners. We have no employees. We drill our own rounds, muck our own ore, and tram it.

Leasing presents all the problems of a small business. Leasing, like any other independent business, has its ups and downs. At times I have been quite successful financially and at other times I have sustained substantial losses. Because of the low price of metals now prevailing, my present lease is not too profitable, but I recognize that this is the uncertainty which attends all business and I hope for better metal prices.

Leasers are skilled men with substantial investments in equipment. Shortly after my son returned from service in the Second World War, he became my partner and I have tried to teach him to distinguish ore from waste and to identify leads which might open up ore bodies as distinguished from those which my experience has taught me are not associated with ore deposits. My son and I have our own equipment, consisting of a compressor, drills, fittings, and hoses, our investment being approximately $3,000. We go to work and leave work as we wish. Many weeks go by without a visit from the officials or employees of the company which owns the property. The surveyor of the company enters our working place probably not oftener than once a year. The opportunity for profit when prices are not depressed exceeds that of working for wages, provided the leaser has a background of mining, is somewhat of a student of geology, and is willing to work. Mine leasing, like any small business, to be successful requires initiative, judgment, and foresight. It also has its moments of excitement. The possibility of blasting a round which may open a large ore body is constantly present.

Interference with leasing will cause great hardship to leasers and their families. The committee should keep in mind that many successful leasers have reached an age in life where they cannot pass the preemployment physical examinations required by the companies of prospective employees and that any legislation which would interfere with or result in the discontinuance of mine leasing will throw many men out of work. In the Tintic district in Utah there are probably 100 leasers. Many of these men are old-time miners familiar with the district and at this time fully able to support themselves under mine leasing. These men take leases in abandoned or marginal mines where their experience leads them to believe shipping ore may be available. By leasing they are able to work as hard or as little as they wish. They do not have to meet rigid company time schedules and may stay away from work without embarrassment or censure.

Leasers do not want a repetition of their 1940–44 experience. In 1940 or 1941 there was an attempt by governmental agencies to compel the mining companies to classify leasers as employees. The result was that the mining companies in Utah refused to renew leases until this situation was clarified. Many men were thrown out of work during this period. Ultimately a model lease was worked out which the mining companies and the governmental agencies felt would protect

the company from claims under the wage and hour law, the Social Security Act, and other legislation. Mine leasing was then resumed. The leasers in the Tintic district do not want a repetition of the 1940–44 incident.

If it is feasible, the leasers in the Tintic district desire that the social security law be amended so they may continue as independent operators but permitted to come within the benefits of the Social Security Act as self-employed individuals, the cost of such coverage to be borne by the leasers as an operating expense. The leasers do not desire this status, however, if it must be done at the cost of stopping all mine leasing. The alternative that the leasers suggest is namely a provision permitting them to carry their own social security.

Senator KERR. May I ask you a question there? Do you think that provision should be one that gave them the opportunity and made it optional with them, or which identified them as self-employed independent operators but which compelled them to come under the provisions of social security?

Mr. HOPES. I don't understand, Senator.

Senator KERR. Well, the law could be passed so that either they would have the option of doing it or, although they were self-employed, they would be compelled to do that?

Mr. HOPES. Well, that is possible, too, Senator.

Senator KERR. Now, the reason I ask you the question is that you make the statement, here, that "the alternative that the leasers suggest is namely a provision permitting them to carry their own social security." I gather from that that your recommendation is that the law be written so as to make it optional with them.

Mr. HOPES. Yes; that is, it, Senator.

The CHAIRMAN. You do not think it wise to make it compulsory on the leasers?

Mr. HOPES. No, Senator; I don't.

The CHAIRMAN. Well, sir, you know more about the conditions of your fellow citizens who engage in this kind of work than I do, at least, and perhaps other members of the committee.

You may proceed with your statement.

Mr. HOPES. The Tintic Small Mine Operators and Prospectors Association, of which I am a director and for which I am authorized to speak, has filed with the committee a resolution in this regard.

In summary, mine leasing has existed in the Tintic district for more than a half century. It has worked well, both for the company and for the leasers. It provides work for men who might be physically disabled and unable to obtain work as employees. It results in the recovery of ore which otherwise would be lost to the economy. Leasing should be recognized as an independent business. It offers an opportunity for large profits, as well as substantial losses. We leasers know that if we are classified as employees of the company, leasing will not continue and that many of our best men will join the ranks of the unemployed. The model lease now in use fully protects the leasers from exploitation. The present system is working well and we urge that there be no legislation which will curtail or injure mine leasing.

The CHAIRMAN. Thank you very much, Mr. Hopes, for your statement to the committee.

That completes the call of the witnesses for this morning.

Senator DWORSHAK. Mr. Chairman, before you recess, I should like to ask permission to have placed in the record at this point a letter which I have received from Mr. Donald A. Callahan of Wallace, Idaho, outlining the views of Idaho mine operators on the proposal to change the definition of the term "employee" in H. R. 6000.

The CHAIRMAN. Thank you, Senator Dworshak. It will be entered in the record.

(The letter referred to follows:)

FEBRUARY 25, 1950.

Hon. HENRY C. DWORSHAK,
Senate Office Building, Washington, D. C.

MY DEAR HENRY: I am writing you concerning H. R. 6000, which has passed the House and is now pending in the Senate. I understand that committee hearings on this bill will commence early in March.

This bill, as you know, provides for certain amendments to the social-security law. I am not writing at this time concerning the purpose of the bill in general but only as to one feature of it which is of great importance to the mining industry and also to the entire economy of the country. This is true because the production of minerals and metals means so much to our economy and the national defense.

The feature of the bill to which we take exception, particularly, is that provision which would change the present definition of the term "employee" to include "a lessee or licensee of space in a mine when substantially all of the product of such services is required to be sold or turned over to the lessor or licensor."

The effect of this provision would be to make mine leasers, in effect, company employees. For years the Social Security Administration has been endeavoring to bring this about and have been restrained by the passage of the so-called Gearhart resolution, which defined "employee" in this regard.

This is clearly an attempt of a Federal Bureau to interfere with the natural relationships existing between owner and lessee solely for the purpose of adding new power to their bureau—and also new revenue. Such trends in Government should be definitely checked if for no other reason than to restrain the bright chaps in the bureaus from seeking to create new and unnatural busines relationships and to harass industry. Men who are engaged in the business of producing metals have plenty to do and sufficient problems to face without trying to cope with swivel-chair bureaucrats, thinking up new schemes to enhance the importance of their bureaus.

I say this because the passage of the bill containing the above interpretation would, in the language of one of our operators, have the following effect: "If the proposed legislation should be enacted into law, all mining operations of this nature [meaning leasing] would cease, resulting in the loss of a very large tonnage in mineable ore which could not otherwise be exploited and in addition the loss of employment to thousands of men now engaged in this type of mining operations throughout the country."

This statement is true because the leasing system in this district is used either in abandoned workings of a mine which is presently being operated or in mines entirely abandoned by the owner company. These are marginal operations and do not warrant any added cost, such as social-security and unemployment-insurance payments. The lessee in such operations must be kept upon the basis of an independent contractor, taking all the risks and costs due to the operation, or the owner must refuse to enter into the agreement. Besides, it is fundamental that the owner must have entire charge of the operation if he is to bear these burdens. Result: He will not lease the premises. It may be that the contracts call for settlement for ore shipped in the name of the owner but this is merely to insure that the owner will collect the royalties due on the ore mined and shipped. These usually are provisions to permit the owner to inspect the operations but these are only for the purpose of insuring good mining practices and safety.

In this particular district there is no block leasing. I presume the provisions referred to in the bill is intended to cover this type of leasing, particularly; however, the same argument applies against inclusion of block leasing as against any other type. The provision of the bill to which we object attempts to create a relationship of employer and employee where none exists and seriously retards

the orderly operation of a leasing system which is annually providing ton after ton of minerals and metals to be added to the national stock and providing employment to labor.

I hope that you will consult with the American Mining Congress concerning this bill. Mr. Robert Searls of San Francisco will be in charge of the Mining Congress's presentation before the committee. I am asking you to cooperate, even to the extent of appearing before the committee, personally, to present the views of our industry which I have set forth in this letter.

Thanking you and with personal regards, I am

Sincerely yours,

DONALD A. CALLAHAN.

The CHAIRMAN. Is the position taken by the Idaho Mine Operators substantially in accordance with the position which has been expressed this morning?

Senator DWORSHAK. I so understand, Mr. Chairman.

Mr. SEARLS. I would like to express to the chairman and to the committee our appreciation for the courtesy which has been extended this morning to the members of the mining industry and the American Mining Congress.

The CHAIRMAN. We were very glad to have the opportunity to hear you.

(Whereupon, at 12:20 p. m., the committee recessed to reconvene Friday, March 10, 1950, at 10 a. m.)

SOCIAL SECURITY REVISION

FRIDAY, MARCH 10, 1950

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C

The committee met at 10 a. m., pursuant to recess, in room 312, Senate Office Building, Senator Walter F. George, chairman, presiding.

Present: Senators George, Connally, Byrd, Kerr, and Millikin.

Also present: Mrs. Elizabeth B. Springer, chief clerk, and F. F. Fauri, Legislative Reference Service, Library of Congress.

The CHAIRMAN. The committee will come to order.

Mr. Weiss, you are the first witness? You may be seated if you wish.

Senator CONNALLY. Mr. Chairman, may I intervene for just a minute?

The CHAIRMAN. Yes, Senator.

Senator CONNALY. Mr. Weiss is a prominent citizen of Paris, Tex., a businessman, who has been personally known to me for many years. He is thoroughly reliable, and I commend him to the committee.

STATEMENT OF SAM WEISS, WHOLESALE DISTRIBUTOR OF PETROLEUM PRODUCTS, PARIS, TEX., APPEARING ON HIS OWN BEHALF AND AS REPRESENTATIVE OF THE PETROLEUM MARKETERS' ASSOCIATION OF TEXAS

Mr. WEISS. Thank you, Senator.

The CHAIRMAN. We are very glad to have you, Mr. Weiss. We will be glad to hear you now on H. R. 6000.

Mr. WEISS. My name is Sam Weiss. I am engaged as a wholesale distributor of petroleum products in Paris, Lamar County, Tex. I appear today as a representative of myself and of the recently organized Petroleum Marketers' Association of Texas. By the way, this association represents Gulf, Texas, Magnolia, St. Clair, Continental, Phillips, Skelly, Cosden, Cities Service, Humble, Standard of Texas, Panhandle, Independent, and several other oil companies operating in the State of Texas.

A few weeks ago I heard that the House of Representatives had passed a bill to expand the coverage of social security and that the bill was so written that independent businessmen like myself would probably be included as employees of the company who supplied most of our products. I talked to several others who are in the same position as I am, and I learned that legal authorities believed that the definition of "employee" in the bill as it passed the House would make oil distributors and consignees, like myself, as well as perhaps service-

station operators, employees of the oil companies whose products they handle.

Several independent businessmen engaged in the distribution of petroleum products met in Fort Worth, Tex., on February 24, 1950, at which time the Petroleum Marketers' Association of Texas was organized. Although that association is less than 1 month old, it already has a membership of approximately 400. We expect to have a membership of at least 2,000 within the next few months.

At this meeting in Fort Worth the association discussed the definition of "employee" as contained in the bill H. R. 6000 and unanimously adopted the following resolution:

> That this association go on record as strongly opposing H. R. 6000 in its present form, and particularly that portion thereof wherein the definition of "employee" is so vague and uncertain that it is most likely to be construed that distributors such as we will be considered employees of our suppliers; that this bill be so amended that the definition of "employee" be so clear that there can be no question but that the distributors will not be included therein, but will be able to maintain his present status as an independent businessman.

The members of our association have no objection to social-security benefits. As a matter of fact, we have and are now paying the social-security tax on all of our employees. We are, however, very much opposed to that portion of the bill which attempts to define the term "employee," for the reason that we feel that the vague and uncertain language used in defining "employee" will be construed by those charged with the enforcement of the act to mean that we wholesale distributors of gasoline and oil are "employees" of our suppliers. We definitely do not want to be considered "employees" of our supplying companies for any purpose.

If I may digress for a minute, Mr. Chairman: I worked for the Gulf Oil Corp. I started with them soon after I was discharged from World War I. I left their employ, and at that time I held an executive position with them. I left in '27, because I did not want to be an employee of the company. I wanted to be in business for myself. And I have been operating my business since then. I hope I can continue as such, and not as an employee of the corporation.

Some of us have been distributors for oil suppliers for as long as 35 or 40 years. We have been able to use our own initiative, business judgment, and energies to build up a sound and substantial business for ourselves and our families. Many of us are engaged in other businesses separate and distinct from the distribution of petroleum products.

Incidentally, I am in the bottling business in addition to being distributor for an oil company.

We have in our association large, small, and medium-sized distributors, but each has the right and privilege of exercising his best efforts to increase his business, based on keen competition, which is as it should be under any free enterprise. I am representing a large group of individual businessmen who are not, in any sense of the word, "employees" of their suppliers.

We are the bosses of our businesses. The people who work for us are chosen by us and we direct their activities. None of them has any responsibility, directly or indirectly, to our suppliers. Their salaries and hours of work are set by us. Their vacations, sick leaves, and other matters concerning their working conditions are agreed upon between

us and them. Those of us who are engaged in other businesses devote whatever time we deem necessary for the efficient management of these other businesses and if and when we find it necessary we can and do use certain of our employees in these other businesses in which we are engaged.

Some members of our association own their bulk plants. In most instances, however, the distributor leases his bulk plant from his supplier. The lease contract with the supplier is for a definite period and for a stated consideration. We have made considerable investment in our business. We pay all of the operating costs in connection with the distribution of our products. We are entirely responsible for the success or failure, the profit or the sale, that we make out of this business.

I realize that all of the facts I have just mentioned which show that I am an independent businessman may cause one to wonder why we in our association are fearful that we might be considerd as "employees" under this bill. In the first place, I remember that under the original social-security law oil consignees like myself were at first considered "employees" by the Administrator. After considerable litigation, the court finally ruled that we were not "employees."

And, incidentally, while we paid throughout those years to social security, we finally received a refund for 4 years that we paid in, and lost the rest, because the Government claimed it was out of date. About 2 years ago the Government again tried to treat us distributors as employees, and it was necessary for Congress to pass a law to prevent that. It is clear to me that they are trying again by this bill to include bulk-oil distributors, like myself, as employees of the supplying company. I have read the definition of "employee" in the bill, but I am unable to understand it. I do understand, however, what the Ways and Means Committee, House Report No. 1300, says on page 206, which I quote:

> The proposed definition may result in defining employer-employee status to include a wide range of service relationships, in addition to those listed above, which have heretofore been considered independent contractor relationships. Among these are the following:
>
> * * * (b) Bulk oil plant operators:
>
> Wholesale distributors of oil products may have quite extensive investments and may hire numerous employees, but they are subject to some regulation by the oil companies whose products they distribute. There is permanency in their relationship with the oil companies, and they are closely integrated in the business of the oil companies, since they perform the integral function of serving as outlets for oil-company products.

There are several facts in the relationship between the supplying company and the oil distributor which have been developed through practices of the past which, as the above quotation from the report indicates, may cause the Government to rule that we should be called "employees" under this bill.

I do not want to burden the members of the committee by going into details regarding these practices, but it seems sufficient to me to say that they are all based upon good business practices and have been followed for many years. I might add that, with knowledge of all of these practices, the Federal courts in numerous cases have ruled that we are nevertheless independent contractors and are not employees under the social-security law; that is, without the amendments that are contained in H. R. 6000. The desire of the association

and myself is that Congress not write any new legislation which will disturb that situation.

We have worked hard and devoted the best that we have in trying to develop these distributorships in sound businesses of which we can be justly proud. We feel that we should be able to continue in the pursuit of this business, which has been entirely satisfactory to all of us, under our present manner of operation.

May I say, Mr. Chairman, that the bewildering thing to us, to me and to others, is that we constantly hear from all sources, including the Chief Executive of our Nation, that the small-business man in the Nation is the one that counts so much, that he needs all the protection he can get, and that he will be protected and given every aid. And yet certain bureaus and departments are constantly fostering legislation that, in this instance, for example, would wipe us out completely. Because if this law and other similar legislation that is being sponsored and is to come up would pass, our suppliers would find it profitable to handle these distributorships on a straight salary basis instead of the commission basis on which we are operating today.

We therefore urge your honorable committee to amend the present bill so that the term "employee" shall be defined so clearly that I, as a citizen, can read and understand whether it covers me, without having to consult a lawyer or go through litigation and get the Federal courts to decide if I am covered by that law.

The CHAIRMAN. Thank you very much.

Mr. Weiss, the quotation that you read is not a part of the report of the majority of the Ways and Means Committee, but it is found in the minority report. However, that does indicate that there is a difference of viewpoint and a difference of opinion and therefore possible difference of construction of the actual language contained in the bill.

The House majority indicated rather clearly that in your position you would not be covered. They do not go, however, very much beyond the case where the bulk distributor himself is the owner of his plant and the owner of his trucks and vehicles. What the agency might insist and what the Treasury might conclude if the bulk distributor was not the owner of his trucks but was the mere lessee from the supplier, I am not able myself to say. I just call attention to the fact, however, that it would seem that the majority opinion does not construe your case to fall within that of "employee."

Mr. WEISS. Thank you, Senator. Of course, the thing that we are afraid of is the fact that if it was left to the judgment or interpretation of the Administrator we will have trouble constantly in trying to clear it up, unless, you know, we go to court and get a court decision.

The CHAIRMAN. The committee understands your position.

Senator Connally?

Senator CONNALLY. Your position is that as long as it is nebulous and uncertain, the Administrator might make such a construction.

Mr. WEISS. That is right.

Senator CONNALLY. You are urging that the act be made so clear that there cannot be any doubt about it; is that the point?

Mr. WEISS. That is right. That is what we are asking.

Senator CONNALLY. Now, Mr. Weiss, in beginning your statement you said that your association, these handlers, represent several oil

companies; and you named them. What you meant was, was it not, that the association was composed of people who were distributors for those companies? They do not represent the companies as such.

Mr. WEISS. No, sir. They are distributors handling the products of these different companies.

Senator CONNALLY. What is the basis of your handling them? You get a commission, do you?

Mr. WEISS. Yes, sir.

Senator CONNALLY. In your case, do you own a lot of equipment and things of that kind?

Mr. WEISS. Well, I own all the rolling stock, trucks, because it is necessary to deliver; and I lease my warehouse from the Gulf Oil Corp. and pay them monthly rent for that.

Senator CONNALLY. In other words, with your own equipment you carry on, and you naturally pay the expenses of that equipment and things of that kind.

Mr. WEISS. That is right.

Senator CONNALLY. Is there anything else you want to submit, sir?

Mr. WEISS. I would like to ask this, Mr. Chairman, if you will permit me: Our association has another member present, Mr. E. B. Chapman. If you will permit it, sir, he would like to make a short statement.

Senator MILLIKIN. Might I ask the witness a brief question, Mr. Chairman?

The CHAIRMAN. Yes, Senator Millikin.

Senator MILLIKIN. Does the oil company send you the oil products on consignment, or do you pay for them as you get them?

Mr. WEISS. It is on consignment, Senator?

Senator KERR. In that connection, you either have to send it back or pay for it?

Mr. WEISS. That is right. I am responsible for it. I have to pay for it.

Senator KERR. Or return it?

Mr. WEISS. Or return it.

The CHAIRMAN. Thank you very much, Mr. Weiss.

Mr. WEISS. Thank you, Mr. Chairman.

The CHAIRMAN. All right, Mr. Chapman. We will be glad to hear from you. You are from Sherman, Tex.?

STATEMENT OF E. B. CHAPMAN, DISTRIBUTOR FOR THE TEXAS CO., SHERMAN, TEX.

Mr. CHAPMAN. Yes, sir. My name is E. B. Chapman. I am from Sherman, Tex., Grayson County. I am a distributor for the Texas Co. and have been for 18 years. I own my own equipment. The Texas Co. owns the warehouse in which I do business, but the products are consigned to me.

I also am interested in two other businesses. And if we were termed as "employees" under this bill, we are afraid that we would not be able to participate in these other businesses that we are interested in.

Now, I am interested in an International Harvester dealership, and if we were termed as "employees," it might be possible that I could only be considered as an employee of each company. We would like

to remain as independent businessmen, which we are now. We direct our own activities, we hire our own people, and we take what time off we deem necessary. We don't ask anybody about what we should do. We like this relationship much better. In fact, we would not be able to operate, I don't believe, if we were termed as employees, because they would just go ahead and take us over. They would operate it themselves.

Senator CONNALLY. You hire your own people?

Mr. CHAPMAN. Yes, sir.

Senator CONNALLY. And you pay them?

Mr. CHAPMAN. Yes, sir.

The CHAIRMAN. And your workers employed in other departments of your businesses may be called upon to serve in any one of your businesses?

Mr. CHAPMAN. That is correct.

The CHAIRMAN. That is the general custom, practiced throughout the country.

Mr. CHAPMAN. Yes, sir. We are permitted to expand our businesses. We own service stations, over which we have absolute control. They are not leased to the companies. We are really independent businessmen, the way we operate now, and we are afraid if this thing happens we will lose that status. And that is what we certainly don't want to see happen.

Senator CONNALLY. May I ask a question, Mr. Chairman?

The CHAIRMAN. Senator Connally.

Senator CONNALLY. You say you are independent businessmen. In other words, if you are going to deal in oil, however, you have to get it from oil people?

Mr. CHAPMAN. That is right, sir.

Senator CONNALLY. You do not produce it?

Mr. CHAPMAN. That is correct, sir.

Senator CONNALLY. So that you are merely an intermediary, as it were, independent as to your own expenses and your own help and all of the apparatus that goes along with the business. Is that correct?

Mr. CHAPMAN. That is correct, sir.

The CHAIRMAN. Thank you very much.

Mr. CHAPMAN. Thank you.

Senator CONNALLY. We are glad to have had you.

The CHAIRMAN. Mrs. Olga Ross?

STATEMENT OF OLGA S. ROSS, EXECUTIVE SECRETARY, NATIONAL COUNCIL OF SALESMEN'S ORGANIZATIONS, INC., NEW YORK, N. Y.

Mrs. Ross. Mr. Chairman and gentlemen of the committee, I realize that you are pressed for time, that a great many people are petitioning you for an opportunity to be heard, and consequently with your permission I would like to ask you gentlemen simply for time to identify myself and to have included in the record this statement, copies of which have been furnished to you and your clerk, Mrs. Springer. Naturally, if you prefer, I will read the statement.

The CHAIRMAN. If it is agreeable to you, you may include it in the record as a whole and make such statement as you wish.

Mrs. Ross. I think that actually this statement, Senator George, will speak for itself, and I feel sure that it will have your complete consideration.

I should also like to ask that it be included as part of these hearings.

The CHAIRMAN. It will be included as your statement in the record of the hearings.

Mrs. Ross. Thank you.

May I just say this: My name is Olga Ross. I am the executive secretary of the National Council of Salesmen's Organizations, Inc., with headquarters at 80 West Fortieth Street, in New York City. We are a nonprofit organization of affiliated salesmen's associations.

We would like to ask only your favorable consideration of paragraph 3, lines 17 and 18 of H. R. 6000, which covers outside salesmen in the manufacturing and wholesale trades, to the end that they may be identified as employees. That is the burden of our statement.

The CHAIRMAN. We were very glad to have you, and your statement will be included in the record.

Mrs. Ross. Thank you.

(The statement referred to follows:)

STATEMENT OF THE NATIONAL COUNCIL OF SALESMEN'S ORGANIZATIONS, INC.

IDENTITY

Mr. Chairman, gentlemen of the committee, my name is Olga Ross. I am the executive secretary of the National Council of Salesmen's Organizations, Inc., which represents the largest single groups of affiliated wholesale salesmen's associations in America. Chartered under the laws of New York State, ours is a nonprofit, voluntary organization; our main objectives to foster, promote, and advance the welfare of salesmen, to improve their working conditions and employer relationships, and to advance their opportunities for profitable employment.

FOR WHOM WE SPEAK

I am here today to plead the cause, not only of our members but that of an estimated 3,000,000 wholesale salesmen throughout the country—that vast group whom the editors of Fortune magazine recently designated "the biggest man-made force working to keep the economy going." Save for the spokesmanship of our organization and that of a kindred group, these men have no other voice in matters of national concern that directly relate to their own well-being.

TWO YEARS AGO

Two years ago my organization had the privilege of addressing itself to this most important committee—at that time as the sole spokesman for the salesmen—on the very matter that brings us here today. I refer to the Gearhart resolution and the legislation H. R. 6000 now before this committee for consideration.

THE GEARHART RESOLUTION

On our previous appearance here we came to voice our protest against enactment of the Gearhart resolution, which served to deprive many thousands of salesmen of the benefits and protection afforded those who enjoy coverage under the Social Security Act.

Today we are here to urge your favorable consideration of that particular section of H. R. 6000, paragraph 3[1] (a), covering outside salesmen in the manufacturing and wholesale trades. This would nullify the Gearhart resolution and restore to salesmen full assurance of their rights to social-security coverage. It will further clear away any remaining doubts as to their genuine status as employees.

---

[1] P. 49, lines 17–18.

NOT SPECIALISTS

National council is not here to argue the pros and cons of social-security legislation. We are neither specialists nor authorities in this field. As laymen, we believe that it is wise and good legislation, that it should be extended, and its benefits increased in order that the people of America may face the future with the serenity that only a feeling of some economic security can provide.

WHY LEAVE SALESMEN OUT?

What principally concerns us here is why the salesman should be singled out from his fellow citizens and coworkers to be deprived of the same protections they are afforded under the Social Security Act. Wherein does he differ?

Are his employment opportunities any greater? No; because the salesman, who is the first to feel the effects of business off-years, is also the last to benefit in boom times when his services are least essential.

Are his rewards so much greater? No; because they are far less stable and the maximum of his best earning periods will barely offset his losses when goods are hard to move.

WRONG ASSUMPTIONS ON SALESMAN STATUS

Too many false assumptions exist regarding the economic position of the salesman and his status as an employee. The truth of the matter is that while this status is as variable as the weather, it is much more easily shifted to suit the employer's convenience. In plain language, when a salesman is hired—when he is being trained—when the terms and conditions of his employment and the rate of his commission are under discussion—he is an employee. When his services are no longer wanted, he was an independent contractor.

EMPLOYER-SALESMAN RELATIONSHIP

The relationship between the salesman and his employer is neither easy to understand nor easily defined. The variations in this relationship are multiple because of the complex structure of our economy and because the salesman epitomizes the very spirit of our free, competitive enterprise. Choice of and control over the factors that govern this relationship are never the salesman's own.

TERMS AND CONDITIONS

Salesmen are hired under all sorts of terms and conditions; under written contracts or the loosest forms of verbal agreements. But however they may be hired or under whatever terms they may work, the incontrovertible fact remains that the great mass of salesmen are most literally "employees," if that term is to be determined by the criteria of control and supervision exercised by the employers.

THE POINT OF SUPERVISION AND CONTROL

We make this point of supervision and control and will strive to prove our point because, during the past 2 years, this has been the continuous source of debate in discussion of social-security coverage for salesmen.

REVIEW OF FACTS—SUPREME COURT DECISIONS

To review briefly facts of which this committee is undoubtedly well aware: Determination of the status of salesmen for purposes of title II of the Social Security Act was always obscure until in June 1947 the Supreme Court of the United States handed down decisions in the now famous Silk, Greyvan, and Bartels cases, which found that "an employee is an individual who, as a matter of economic reality, is dependent upon the business to which he renders service."

GEARHART RESOLUTION

But with enactment, in June 1948, of the Gearhart resolution, the salesman's status again reverted to the twilight zone and it became necessary to establish degree of supervision and control exercised before he was entitled to coverage, as a bona fide employee.

DEGREE OF CONTROL AND THE MASTER-SERVANT RELATIONSHIP

The point is invariably raised that the degree of control exercised by employers over salesmen does not conform, as stipulated by the Gearhart resolution, to the usual common-law concept of the master and servant relationship. But, by the very nature of the work salesmen perform, such control must deviate from this narrow, legalistic concept.

NOT THE DEGREE BUT ITS MANIFESTATION

As a matter of fact, it is not the degree of control, but its manifestation which, in the case of the wholesale or "outside" salesmen, differs from that of other employees. Obviously, these salesmen must work away from the premises of their employers.

EXERCISE OF CONTROL BY THE EMPLOYER

Nevertheless, the employer retains direction, supervision, and control over their activities. He does this when he assigns the territories they may cover and the accounts they may solicit; the products they sell and the quantities, terms, and methods by which these products are to be sold. He assumes direction when he trains them in his methods of selling; when he provides them with the samples and advertising matter that are the "tools of their trade"; and he further assumes control when he dictates to them what "side lines"—if any—they may carry; and when he summarily decides to cut their commission rates—often retroactively—and on a take-it-or-leave-it basis. Most important of all, he reserves to himself the right to hire and fire "at will."

FACTUAL MANIFESTATION ACCEPTED BY THE LOWER COURTS

These are the factual manifestations repeatedly established in numerous State courts and upon which these courts have based their decisions that determined the salesmen's status as employees. As example of two such cases, I respectfully refer this committee to the case of *Margaret Morton* v. *Spirella Co.*, decided by the New York State Court of Appeals on November 19, 1940, and that of *John F. Goeber* v. *H. Busch & Co.*, decided by this court on October 1, 1941.

DETAILS OF THE SALESMAN'S WORKING CONDITIONS

With the committee's permission, I should like to go briefly into some detail of the salesman's employer-employee relationships. In actuality, he is far less well off than his counterpart among other professional employee groups. He has no job tenure; he can be told he is "through" without so much as a day's notice; his earnings can be and are reduced at the whim of his employer; he is required to share the credit risks of his firm. He is paid only for business that he has already produced and not upon a reasonable evaluation of his continued worth to his company.

A CASE HISTORY

I have here a post card that came unsolicited to the office of national council. It is only one of hundreds we receive, and was selected solely because it is both current and concise. This penny post card, dated February 27, 1950, is addressed "National Council of Salesmen's Organizations, 80 West Fortieth Street, New York City," and it reads:

GENTLEMEN: Can you advise me whether or not there is a law protecting an outside commission salesman from being discharged, thereby losing all commissions on future incoming business, that had been built up over a period of 14 years?

I omit the name of the sender, but offer the card in evidence.

THERE IS NO ANSWER

Gentlemen, there is no satisfactory answer the national council can offer this salesman, as you yourselves must be aware.

THE PLIGHT OF THIS SALESMAN

While I have not as yet had an opportunity to interview this salesman, I would like to venture a guess—that I am pretty sure is a good one—that this man's

employer did not assume social-security tax liability for him; that if the salesman is close to retirement age he will experience almost insurmountable difficulties in obtaining another connection; and that in the years he has worked he has managed to save very little to provide for himself and his dependents should he fail to get a job or should he have passed the normal retirement age.

OTHER EXAMPLES

I could cite to you innumerable instances of this nature—of men 72 and older—still job-hunting, as salesmen, still desperately needing these jobs, after years in a single firm's employ. Nor are these exceptional cases. Rather, they are the general rule.

STRAIGHT COMMISSIONS

Let me give you the prevailing circumstances under which straight commission salesmen are hired and the conditions under which they work. Incidentally, the practice of hiring salesmen on this straight commission basis has become increasingly widespread during recent years.

SALESMEN'S COMPENSATION FORMS

These salesmen's compensation is based solely upon the payment of a flat commission on those orders they secure which are accepted and shipped by the employer. It remains, however, within the employer's discretion as to what orders or what percentage of any order he may elect to fill. Furthermore, the salesmen's commissions are figured upon a net basis—which means after the deduction of every possible loss that might accrue to the employer such as credit losses, cancellations, returns, discounts, etc.

DRAWING ACCOUNT—OVERDRAWING AGAINST COMMISSIONS

These same conditions apply also to the salesmen who work on a drawing account. This means that they are "guaranteed" a certain weekly amount, but this is solely as an advance against their anticipated earnings. Should the salesman fall too far behind they are, of course, "let out," even though future orders may be pending as a result of their work. Some employers have gone so far as to bring suit to recover the "advances" made to dismissed salesmen. But we know a few instances where employers have voluntarily offered to salesmen the commissions due them on orders that have come in after they have been dismissed.

THE SHORT-SIGHTED EMPLOYER

One might well ask, what is there in the relationship between salesmen and their employers that brings about this disregard for accepted and standard practices to maintain good employer-employee relationships?

THE GOOD EMPLOYER IS ALSO PENALIZED

The national council believes that it is not genuine callousness upon the part of employers but a normal—if thoughtless and short-sighted—expression of our strongly competitive enterprise system. The salesman is in the one spot where the employer can cut corners, reduce costs, and hence outdistance his competitors.

A word must be said here for the many conscientious employers who willingly accept the social-security tax for their salesmen. Should these employers too be penalized by loopholes in the law which provide their competitors with a useful method of evading their like responsibility?

SUMMARY

SALESMEN NEED OLD-AGE INSURANCE

For the many valid reasons I have cited national council believes that social-security coverage is a vital necessity for both the young salesman beginning his career in selling and for the older man who is facing the downgrade. Federal old-age and survivors insurance—and unemployment compensation as well—is as great a need for all categories of salesmen as for those workers who are now clearly covered.

THE ASSOCIATION'S EXPERIENCE

Every salesmen's association can attest to this, for each is forced to maintain sickness, unemployment, and death benefit funds for its members and their dependents. And there is seldom a time when these funds remain idle. At great cost, these associations can, to a limited extent, provide for the emergencies of life which befall their members.

BENEFIT FUNDS NOT EXTENSIVE ENOUGH

But this can nowhere near begin to help the thousands of salesmen who have no associations within their own industries or who may not be able to afford membership in existing associations.

The National Council of Salesmen's Organizations respectfully submits that the majority of salesmen—save those who can be clearly identified as independent contractors—differ in no other way from other types of employees included under the Social Security Act, except insofar as one type of job may differ from another; that it is not the degree of control exercised by the employer but its manifestation that is different; that the salesmen provedly stand greatly in need of this economic protection; and that as long as the Social Security Act stands they are equally entitled to participate in its benefits.

Furthermore, we firmly believe that the definition of employee as set forth in H. R. 6000 is reasonable, fair, and protective both of the salesmen's rights and his employer's interests. We must heartily endorse its enactment and urge that this august committee give it due and favorable consideration.

May I thank you in behalf of my organization for the courtesy you have extended to it in granting us the privilege of placing our views before you.

Respectfully submitted.

OLGA S. ROSS,
Executive Secretary.

(For the National Council of Salesmen's Organizations, Inc.)

Representing: Allied Textile Association, Inc.; Associated Millinery Men; Fabric Salesmen's Association for Boston; Fabric Salesmen's Club of Chicago; Garment Salesmen's Guild of New York, Inc.; Infant and Children's War Salesmen's Guild, Inc.; Luggage and Leather Goods Salesmen's Association of America, Inc.; National Handbag and Accessories Association, Inc.; New York Candy Club; New York Corset Club; New York-Penn.-Ohio Travelers Association, Inc.; National Paint Salesmen's Association of the United States; Philadelphia Textile Salesmen's Association; Sales Representatives, Inc.—plumbing and heating division; Southern Travelers' Association, Inc.; Sportswear Salesmen's Association, Inc.; the Far Western Travelers Association, Inc.; the Piece Goods Salesmen's Association, Inc.; Toy Knights of America; Underwear-Negligee Associates, Inc.; Work Clothes and Sportswear Salesmen's Group; Wash Frock Salesmen's Association, Inc.

The CHAIRMAN. Mr. Mantler? Mr. Marshall J. Mantler?

STATEMENTS OF MARSHALL J. MANTLER, MANAGING DIRECTOR; ANDREW FEDERLINE, WASHINGTON COUNSEL, BUREAU OF SALESMEN'S NATIONAL ASSOCIATIONS, WASHINGTON, D. C.; AND JACK WENCK, VICE PRESIDENT AND GENERAL SALES MANAGER, "PIONEER, U. S. A." DARBY, PA.

Mr. MANTLER. Mr. Chairman, I have with me Mr. Jack Wenck, the president of our bureau, and Mr. Andrew Federline, Washington counsel for our bureau, who will say a few words when I am through.

The CHAIRMAN. Yes, sir.

Mr. MANTLER. My name is Marshall Mantler, and my home is in Atlanta, Ga. I am here today in my dual capacity as managing director of the Bureau of Salesmen's National Associations and executive di-

rector of the National Association of Women's and Children's Apparel Salesmen. The latter organization is one of the three Nation-wide organizations of salesmen which make up the bureau. The other two are the National Association of Men's Apparel Clubs and the National Shoe Travelers' Association.

These three organizations have a combined membership of approximately 20,000 commission salesmen selling at wholesale to retailers for resale. These members cover all parts of the United States and reside in every State of the Union. The three national groups maintain among them 86 State, regional, and territorial organizations to which their respective members belong. During the course of a year, practically every major city in the country witnesses a convention, trade show, or exhibitors' market sponsored by these member groups.

For your information, the bureau is a service organization or joint staff set up by the three national associations named. One of our main objectives is to foster good will and cooperation between manufacturers and their salesmen. Our employment service helps manufacturers obtain qualified salesmen to carry their lines, and does this without charge. We help both manufacturers and their salesmen to settle differences about commissions. Only national organizations of salesmen are eligible to belong. Let me add that a basic principle of the bureau is to advocate only those things which are in the best interest of all traveling salesmen, not just those of its members. It is in this spirit that we approach your honored committee today.

Getting down to H. R. 6000, our particular concern is for retaining in the bill an adequate provision which will eliminate any doubt that commission salesmen selling at wholesale to retailers for resale are "employees" for purposes of social security taxation and benefits. The wording of H. R. 6000 as it now stands and as it applies "to an outside salesman in the manufacturing or wholesale trade" appears to meet this need. You will find the specific language in sections 104 (A) and 206 (A) of the bill. These provisions appear on pages 49 and 150 of H. R. 6000. (Specifically, these provisions are par. 3 (A) of subsec. 210 (K) of the proposed new language to be added to title II of the Social Security Act when sec. 209 of that act is repealed; and par. 3 (A) of the proposed amendment of sec. 1426 (D) of the Internal Revenue Code.)

The CHAIRMAN. Let me ask you: Are you not now classified as employees?

Mr. MANTLER. Yes, sir. We are classified as such. But under the present wording of the bill——

The CHAIRMAN. I am not speaking of the bill. I am speaking of the present law.

Mr. MANTLER. Under the present law we are classified as such.

The CHAIRMAN. All right.

Mr. MANTLER. We are interested in seeing such provisions become law because they would clearly define the status of the wholesale commission salesman as an employee within the meaning of the act, and would clarify once and for all his right to old-age and survivors' insurance, disability, and other benefits.

There may be some question in your minds as to why a specific definition is needed to protect the salesmen's rights. You may be amazed

to learn that more than half of all the salesmen who are members of our three national organizations are regarded as "employees" by their companies, and have social security deductions taken from their commissions, while the remainder, who perform the same duties and answer to the same degree of control, are regarded as exempt by their employers. Many of our members have traveled the same territory for the same firm since long before 1937, but have never had one dollar deducted for this purpose. I believe the same could be said of wholesale salesmen in every line—that roughly half are without the protection of social security, although their duties, responsibilities, and conditions of work differ not one iota from those who are covered and who can now look forward without dread to age 65.

As you may well understand, the salesman who is not covered wonders why the law cannot be made definite enough to eliminate any question about coverage. He does not feel that it is proper to leave his social-security status to the discretion of his employer, which is the condition that prevails today. He is an employee in every reasonable sense of the word, and does not feel that he should be subjected to the embarrassment of pleading with his employer or resorting to filing a formal complaint with the Bureau of Internal Revenue on account of his employer's failure or refusal to take proper action. In many cases brought to our attention, employers who are not complying with their obligations toward their commission salesmen selling at wholesale are acting under advice of their accountants, whose viewpoint is not that of a lawyer and who have been influenced by the publicity surrounding the Gearhart resolution. There are also some employers who deliberately disregard their salesmen's rights to social security.

I use the word "rights" advisedly, because our Bureau, shortly after passage of the Gearhart amendment, consulted with both Treasury and social-security officials, and received assurance that salesmen working under the conditions that generally prevail among traveling men in our industries are entitled to social security, because their relationship to their firms is clearly and definitely that of employees. But when we asked how to obtain the compliance of recalcitrant employers on this point, we were told it was up to each individual salesman to obtain redress by filing Social Security Form No. 8, whereupon an official decision would be made as to whether or not he is eligible.

While this may seem like a solution, we submit that it is not a safe one for the average salesman, who is open in many ways to retaliation.

The present situation not only works a hardship on these uncovered salesmen but also is a discriminatory burden on those employers who do pay the social-security tax.

We are not going to burden your committee with a lot of legal jargon concerning the technicalities of the master-and-servant law, about which large volumes have been written and regarding which the courts themselves have disagreed for many centuries. We are more concerned with the spirit of the act.

We stressed this viewpoint at the hearing of the House Ways and Means Committee on this same bill. That testimony, along with other pertinent details, is printed in pages 1643–52 of the printed record. We were very pleased, therefore, when the committee announced its

decision to insert a specific definition of the traveling salesman as an "employee" in section 210 of the bill which is now before you.

As the Ways and Means Committee pointed out, and I quote:

> The usual common-law rules for determining the employer-employee relationship falls short of covering certain individuals who should be taxed at the employee rate under the old-age and survivors and disability insurance program. The statutory provisions set forth in paragraphs (3) and (4) are designed to correct this deficiency in existing law by extending the definition to include these individuals who, although not employees under the common-law rules, occupy the same status as those who are employees under such rules.

In applying this principle to outside salesmen in the manufacturing and wholesale trade, the staff of the Joint Committee on Internal Revenue Taxation observed as follows in appendix B of the Ways and Means Committee report, and I quote:

> The outside wholesale salesmen who are not treated as employees under the usual common-law rules are the city and traveling salesmen who sell at wholesale to retailers, operate off the company's premises, and are compensated on a commission basis. These salesmen are ordinarily assigned to specific territories, are required to sell merchandise at the price set by the company, and their relationship with the company may be terminated at short notice. The company reserves the right to accept or reject orders sent in by the salesmen. The company fills the salesmen's orders by shipping directly to the customers and billing the customers directly. The salesmen receive their compensation from the company. The salesmen are not controlled as to the details and means by which they cover their territories, but in the ordinary case they are expected to call on regular customers with a fair degree of regularity, and if their sales fail to meet the expectations of the company they may expect the relationship to be terminated. These salesmen may in some cases be required to make periodic reports to the company on their own activities, and they may be required to attend sales meetings and to report at the company's offices periodically.
>
> Salesmen of the type described above are subject to a considerable degree of control, although it may not be sufficient to meet the usual common-law rules. Permanency of the relationship is contemplated and in the ordinary case it may be assumed that they are closely integrated in the business of the company they serve.

Senator MILLIKIN. Mr. Chairman, may I ask a question, please?

The CHAIRMAN. Yes, Senator.

Senator MILLIKIN. I do not want to involve you in a technical discussion on the common-law rule, but in what respects does this relationship that you are describing fall short of the requirements of the common-law rule?

Mr. MANTLER. Sir, under the common-law rule they try to establish the master-servant relationship, and in simplified test cases they ask: does this man have to punch a time clock every morning? Or: if this man wants to go fishing on Thursday afternoon, does he have to ask his boss? Those things are not applicable to a salesman who is covering an entire territory, because he might well come into Washington in the morning to call on one account here, and have the buyer say, "I can't see you until 4 o'clock in the afternoon." That man doesn't have to punch a time clock at 8:30 in the morning. He may be able to sleep until noon if he wants to.

Mr. FEDERLINE. May I answer that question, Senator?

It falls short in that outside commission salesmen, generally speaking, are not within the master-and-servant rule insofar as their employers are not liable for torts committed by the salesmen. In other words, when the tort test is applied as the basis for social security coverage, there may be instances where the employer is not liable. In every other respect they are employees.

Senator MILLIKIN. Well, let us take this particular category that you are referring to. A salesman of the type described here gets careless with his car and injures someone. Is the salesman responsible, or is the employer responsible, under the decisions that have come down?

Mr. FEDERLINE. My opinion is that the salesman is responsible.

Senator KERR. And that the company is not?

Mr. FEDERLINE. Ordinarily the company is not. But because there might be question about it some cases, companies frequently require their salesmen to be coverd by insurance; so that the situation is taken care of in that way.

I made an inquiry recently as to whether or not the companies themselves provide automobile liability insurance for their outside commission salesmen and I understand that they do in some instances at their own expense.

The CHAIRMAN. Well, I suppose the company might not be held liable in all tort actions, or for all torts; because the employee—and it seems to me you are employees; I do not think there is any doubt about that, under your statement of fact—is left the discretion of means by which to accomplish his end. He does not have to use a car. He might walk or take a train.

Mr. MANTLER. He might take a train or take a plane, yes, sir.

The CHAIRMAN. And he is an employee still, but he is given discretion as to the means that he will employ in doing the job.

Mr. MANTLER. Yes, sir.

The CHAIRMAN. But otherwise, it seems to me that your people under present law are employees.

Mr. MANTLER. That is the way we feel, sir. We are employees, and yet our men are not getting the coverage, sir.

The CHAIRMAN. Some of them?

Mr. MANTLER. Some of them are not.

The CHAIRMAN. Well, we can understand that, of course. But your position is that you want it made clear that you are employees?

Mr. MANTLER. Yes, sir, so that there is no loophole whatsoever; I mean, so that there is no question of doubt, no legal hodge podge, there. What is needed is a provision stating that every salesman meeting these specifications is an employee—period. It should not be up to the employer to make the decision. When Congress decides that outside commission salesmen are employees, it is not up to the employer to make that decision, sir. We want such decisions taken out of employers' hands.

The CHAIRMAN. I should think a fair disposition of it would be to say that for social security purposes, old-age and survivors insurance purposes, under this act, you are employees.

Mr. MANTLER. Yes, sir. That would be excellent.

The CHAIRMAN. And leave the courts, and the employer, and the agents to fight it out in the case of torts, and libels, and slanders, and other things of that kind. We do not want to upset the whole plan of salvation, here, just to cover the social security aspects.

Senator MILLIKIN. May I ask this question: Do all the salesmen for whom you are speaking operate under the same type of contract?

Mr. MANTLER. Written contract, sir?

Senator MILLIKIN. Whatever the contract may be.

Mr. MANTLER. No.

Senator MILLIKIN. I was curious about this statement you made a while ago about the Bureau asking each salesman to put in his own report. Under some aspects of it, that is obviously impractical, and I tried to think why they would ask that that be done, and it occurred to me that perhaps these salesmen operate under so many different types of contracts that they felt they could not make an over-all rule.

Mr. MANTLER. Do you mean when I referred to social security Form 8 as a means of redress, sir?

Senator MILLIKIN. I am a little allergic to forms, but I was interested to learn the reason for the Bureau asking each salesman to put in his own report.

The CHAIRMAN. You are referring to the fact that the Social Security Agency itself requested that this be filled out if they thought they should come under it?

Senator MILLIKIN. Yes. I have been trying to think why they did that. It seems unfair to me on the face of it, but I have been groping around, wondering why they wanted that done, and it occurred to me that perhaps there are so many different types of contracts that they would say to themselves, "We have to decide each one of these on its own bottom." Is that true?

Mr. MANTLER. Well, there are different types. One salesman may have a written contract with his firm; another salesman may have an oral contract with his firm.

Senator MILLIKIN. All right. Let us assume that is correct. Does the contract, whether written or oral, follow the same substance?

Mr. MANTLER. Basically, yes, sir. In principle it would. There may be little variations. One salesman may get 5 percent and another 6 percent. One may have complete territorial rights, and another may have house accounts pulled out. But in principle, the contracts for employment among all salesmen are the same.

The CHAIRMAN. Do you represent here broadly what we used to know as drummers in the old days?

Mr. MANTLER. Yes, sir. That is an expression, of course, that we resent very strongly, Senator George, because we feel we are professional businessmen in an honest calling. But that is what we are called, unfortunately.

Senator MILLIKIN. What is the matter with it?

Mr. MANTLER. There was a connotation, there, that tied in too closely with the farmer's daughter, that we didn't appreciate.

Senator MILLIKIN. Well, what is the matter with that?

Senator KERR. Was it the connotation, or the condition, that you resented?

Mr. MANTLER. You see, sir, in answer to the Senator's question, too many of our salesmen are married and their wives don't appreciate such jokes very much.

The CHAIRMAN. Somewhat on the same principle as a pullman porter does not want to be called "George"?

Mr. MANTLER. Yes, sir, Senator George.

Senator MILLIKIN. Or like a real estate man wants to be called a "realtor" or an undertaker a "mortician."

Mr. MANTLER. Yes, sir. In fact, some of our salesmen want to be called "merchandise consultants."

Senator MILLIKIN. That is pretty fancy.

Senator KERR. I imagine that some of their customers would like for them to attain that status.

Mr. MANTLER. That is true.

The CHAIRMAN. All right, Mr. Mantler. You may proceed.

Mr. MANTLER. The joint committee also points out that the average salesman in this category has little investment, other than perhaps an automobile, in the facilities for work, and that the employer's right to reassign territories, alter prices, or reduce commissions acts as a brake on the salesman's opportunity for profit. Incidentally, this same committee also cites the statistics of the Federal Security Agency to the effect that 220,000 outside salesmen in the manufacturing and wholesale trades not now subject to social-security taxes will come under the act if the definition and philosophy of section 210 are enacted into law. I think I may also add, without fear of contradiction, that all 220,000 will be glad to be included. To our knowledge, no objection was raised by any of the manufacturers concerned during the hearings before the House Ways and Means Committee. We believe no such objection will be voiced before your committee.

With your permission, I would like to voice one caution. We are concerned over a possible confusion of wholesale salesmen in the manufacturing and wholesale trades with door-to-door salesmen, certain types of whom are covered in the new language proposed as paragraph (3) (G) of section 210 We respectfully urge you gentlemen to keep in mind that door-to-door salesmen perform a retail function, while our members and the other salesmen for whom we speak are purely wholesale. This distinction, while easily lost sight of by persons unacquainted with distribution and marketing, is tremendously important because of the different circumstances and conditions of work involved. To appreciate this is to understand why the House enacted separate definitions for these two entirely different types of salesmen.

In degree of control, in expectancy of tenure, in the requirement of reports, and in many other ways these two classifications of salesmen are as far apart as day and night We have no argument for or against coverage of door-to-door salesmen: housewives earning pin money by selling dresses or hosiery to their neighbors and friends; itinerant subscription salesmen, or any other groups. Our point is that outside salesmen in the manufacturing or wholesale trade occupy an entirely different status. Yet, lacking such specific treatment as is accorded them in the proposed new wording of section 210 (3) (G), wholesale salesmen in the manufacturing and wholesale trades might easily fall victims to a chain reaction following upon a court decision or regulatory interpretation aimed originally at door-to-door salesmen or the other types mentioned above. Hence, we urge you to retain the definition of "employee" in this section, as phrased in the bill which passed the House, as it applies to outside salesmen in the manufacturing and wholesale trade.

In closing, let me say that never before has social security been so important and necessary to the salesmen in the fields we represent. The buyers' market has depressed the salesmen's incomes, because prices are down and orders are smaller. The average retailer is buying on a hand-to-mouth basis, which means that the salesman must make more frequent trips around his territory. At the same time,

costs of travel, of hotel accommodations, and other expenses have gone higher and continue to rise. The resulting squeeze means slimmer savings; in many cases, none at all. So you can well imagine how important social security has become to these hundreds of thousands of employees, especially so in view of the enlarged benefits contemplated in this bill.

Thank you very much for your consideration of our plea.

The CHAIRMAN. Are there any questions?

Thank you very much.

Mr. MANTLER. This is Mr. Wenck, Senator George.

The CHAIRMAN. We will be glad to hear from you, Mr. Wenck. You may be seated, if you wish.

Mr. WENCK. Senator, my name is Jack Wenck. My home is in Philadelphia. I am president of the National Association of Men's Apparel Clubs, president of the Bureau of Salesmen's National Associations, and vice president and general sales manager of Pioneer, U. S. A., of Darby, Pa., manufacturers of men's accessories. I was a salesman for 25 years.

In requesting you to include a specific provision in the amendments to the social-security laws stating that commission salesmen selling at wholesale to retailers for resale—or equivalent language—are employees, we are not asking your committee to add a new group for social-security coverage. These men not only are employees, but are entitled now as a matter of right to social-security coverage under existing law. By mentioning them categorically in the amendments you will not be stretching the common-law concept of the employer-employee relationship, but you will dispel any doubt in any employer's mind that he must pay the social-security tax on these employees.

More than half of the employees we represent have social-security coverage, and the remainder probably would have had it long ago if the publicity concerning the exclusion of door-to-door and certain other commission salespersons had been less confusing.

The root of our problem lies in the failure of many persons to differentiate between classes of salesmen within the large category of commission salesmen. Reasons given by employers for excluding door-to-door salesmen and certain other groups under existing law, have never applied to the type of commission salesmen we represent, and frankly I don't believe any employer in the fields we cover would want to appear before your committee and maintain that his outside commission salesmen were not employees for social-security purposes.
