In view of recognition as mobile housing by the various agencies of the Government, and in view of the fact that evidence shows trailer coaches today are being used as mobile homes, we respectfully submit that the Federal excise tax on trailer coaches should be repealed. The simplest way to remove this discrimination is to amend section 3403 (b) by adding the words "trailer coaches" after the words "except tractors" in said paragraph.

Senator BYRD. Thank you very much.

Mr. RAYMOND. Thank you.

Senator BYRD. In lieu of an appearance the Chair inserts the statement of the Trailercoach Dealers National Association at this point.

STATEMENT OF JOHN C. WILLIAMSON, WASHINGTON COUNSEL, TRAILERCOACH DEALERS NATIONAL ASSOCIATION

Mr. Chairman and members of the committee, I am grateful for this opportunity to testify in behalf of the Trailercoach Dealers National Association in opposition to the retention in the pending tax bill, H. R. 4473, of the excise tax on mobile housing.

I would first like to state that the present 7 percent excise tax on trailercoaches, or mobile housing, which the present bill would continue, came about more as a result of a misapplication of the law than by the specific intent of the Congress. The reason is quite obvious. In the 1941 Revenue Act (sec. 3403 (b)) an excise tax of 7 percent was imposed on trailercoaches because of their affinity to the automobile—because, to employ the language of the statute, they were "suitable for use in connection with passenger automobiles." Since 1941, however, experience has proven that the relationship of the trailercoach to the automobile is only incidental, and that there is a much closer and more clearly defined affinity of the trailercoach to a family dwelling unit. Trailercoaches have become mobile housing and the automobile serves only, what has proven to be, the infrequent application of the unit's mobile characteristic.

The best evidence of the need for a general reorientation in the public as well as congressional approach to the trailercoach as a taxable commodity is the fact that over 93 percent of the house-trailer units sold during the past several years are used as family dwelling units and for all practical purposes are permanent on-site housing. We submit therefore that the present excise tax which singles out house trailers as the only housing subject to an excise tax is unwarranted, discriminatory, and, therefore, in violation of a most fundamental precept of our revenue system.

The experience of our industry during the past several years reveals that the owner-occupants of trailercoaches in the thousands of trailer parks throughout the country are assuming more and more the burden of local taxes for the support of local government and community services; and that these taxes compare most favorably with those levied against conventional housing. In many instances the owner of a $4,000 trailercoach pays more in local taxes (including licensing fees, etc.) than the owner of a conventional house with the same assessment value.

The 7-percent excise tax, therefore, becomes an added burden to the trailercoach owner, giving rise to an injustice which this committee and the Congress should and ought to remedy once and for all in this 1951 tax bill.

Several things have occurred in the past year which serve to emphasize the housing characteristic of the trailercoach as distinguished from the so-called automotive characteristic, the primary basis on which rests the present 7-percent excise tax.

Three months ago the Senate passed the bill S. 349, the defense-housing bill which authorizes the Housing and Finance Agency to acquire mobile housing units for defense workers to defense areas, and also authorizes direct loans to facilitate the manufacture and distribution of mobile housing in order to enhance the defense housing effort. The above two provisions of this housing legislation also relate to prefabricated housing which is not subject to the excise tax. Doesn't this rather point up the injustice of continuing to impose the burden of an excise tax on a mobile housing unit?

Again, on July 10, 1951, the Senate Preparedness Subcommittee issued a report on the deplorable housing situation to which our servicemen are subjected around military installations. The subcommittee noted that the use of trailercoaches and trailer parks, both on and off military reservations, were assuming a prominent role in meeting the temporary need for decent housing of servicemen and their families; and the subcommittee recommended that the Department of Defense take early steps to expend trailer park facilities in and around military installations to accommodate more mobile housing.

The present excise-tax increases by 7 percent the cost of such housing to these same servicemen.

We hope that we have been successful in bringing about a new approach to the question of taxing mobile housing. We are not here as advocates of a special tax-exempt status for our industry; rather are we here as pleaders for a more sound classification of the trailercoach as a taxable item. If the Congress in its wisdom decrees the taxation of housing units, whether they be conventional, prefabricated, demountable, portable, or mobile, then the mobile housing industry would be the last to contend that its burden was unjust.

However, in this instance mobile housing has been singled out for special tax treatment, singled out as something other than housing when in truth and in fact it is housing.

We ask, therefore, that the committee eliminate the present 7-percent excise tax as it affects mobile housing by amending section 3403 (b) by adding after the words "except tractors" in such subsection the words "trailercoaches designed for use as housing."

Senator BYRD. Mr. Bollum, President of the American Transit Association.

STATEMENT OF H. L. BOLLUM, PRESIDENT, AMERICAN TRANSIT ASSOCIATION

Mr. BOLLUM. I am H. L. Bollum, president of the American Transit Association, 292 Madison Avenue, New York.

Mr. Chairman and members of the committee, I am president of the Springfield Street Railway Co. which furnishes local transit service in Springfield, Mass., and vicinity.

I am appearing here before you today as president of the American Transit Association of 292 Madison Avenue, New York, N. Y., to express the views of the members of the association with respect to the taxes proposed in H. R. 4473.

We are particularly concerned about the effect of those providing for increased manufacturers' taxes on new business and on automotive parts and accessories used in busses; an increased tax on gasoline and liquefied petroleum gases, and in imposition of taxes on fuel used in Diesel-propelled power highway vehicles.

These additional excise taxes would add about $6 million to the industry's already heavy tax burden.

The members of your committee have been furnished with copies of a statement setting out fully the position of the members of the American Transit Association with respect to specific taxes mentioned above and, I understand that this complete statement will be made a part of the record of these hearings and will be given the same consideration as though presented here at this time.

However, on account of the 10-minute time limitation which I have been asked to observe, I will present at this time only a brief statement identifying the industry which I represent, and the summary and conclusions found on pages 4 and 5 of our complete statement.

The American Transit Association is a voluntary trade association whose member companies transport over 80 percent of the more than 17 billion persons using local transit facilities in the United States each year.

These companies operate in cities and towns of various sizes throughout the United States, including the major cities. The operations of most transit companies are confined to city streets and these streets are generally not part of our State-aid highway system.

Thirty-five of the approximately one thousand, four-hundred transit systems operating in the United States are publicly owned and operated, including those systems which serve some of our major cities, such as, New York, Chicago, Detroit, Cleveland, Boston, San Francisco, and Seattle.

These publicly owned and operated systems are exempted from the payment of the present proposed and the present existing excise taxes as stated above.

Summary: We vigorously oppose the imposition of additional taxes on gasoline and liquid peroleum gases, busses and bus parts, or accessories, as well as the proposed new tax on Diesel fuel, since all are obviously special taxes designed to increase general revenues, yet are limited in their application, and are thus discriminatory.

In addition, we firmly believe that the transit industry is entitled to complete exemption, or a substantial measure of relief from even the present Federal tax on gasoline and liquefied gases and from the manufacturers' excise taxes on busses and their parts or accessories for the following reasons:

1. Transit operations, unlike those of most other highway users, are almost exclusively confined to those city streets which are largely built and maintain with municipal funds, although State funds may be used, in part, to build or maintain a limited number of such streets which comprise extensions of through routes.

2. Transit operators, unlike most other highway users, pay substantial amounts in the form of franchise fees and other imposts into the municipal funds used for street purposes, and, in addition, like other highway users, make substantial tax payments to the States for general highway purposes.

3. Transit service is not in the luxury category but is essential to the business and social life of a community in normal times and is generally recognized as being one of the most important defense-supporting industries in an emergency.

4. Transit is the poor man's transportation and any tax imposed upon it becomes a burden on the lower-income groups.

5. Appendix B shows the depressed financial position of the industry which makes it necessary for transit companies to endeavor to pass taxes, as well as all other costs, on to the transit rider in the form of higher fares; while appendix A shows the continuing decline in transit riding since VJ-day, which is indicative of rider resistance to higher fares.

Finally, we urge that any future taxes levied on gasoline, liquefied petroleum gases, or Diesel fuel be made applicable to all users of such fuel in order that the necessary revenue can be produced by applying the smallest possible tax rate per gallon to the widest possible base. We also urge that the same principle be applied with respect to any future taxes on busses or their parts and accessories by imposing similar taxes on a great variety of other products or services which are no more essential to the defense effort than the service furnished by transit companies. We believe that past history also makes it imperative that any legislation passed at this time to increase the present level of taxes, or to impose new taxes, should contain specific provisions for their automatic termination when the emergency which gives rise to them has ceased to exist.

Senator BYRD. Thank you very much.

Mr. BOLLUM. Thank you very much, sir.

(The prepared statement referred to is as follows:)

STATEMENT OF H. L. BOLLUM

Mr. Chairman and members of the committee, my name is H. L. Bollum. I am president of the Sprinfield Street Railway Co., which furnishes local transit service in Springfield, Mass., and vicinity. I appear before you today as president of the American Transit Association of 202 Madison Avenue, New York 17, N. Y., to express the views of members of the association with respect to some of the taxes proposed in H. R. 4473, particularly those providing for increased manufacturers' excise taxes on new busses and on automotive parts or accessories used in busses; an increased tax on gasoline and the imposition of a tax on fuel used in Diesel-powered highway vehicles. These additional excise taxes would add about $6,000,000 to the industry's present heavy tax burden.

The American Transit Association is a voluntary trade association whose operating member companies transport over 80 percent of the more than 17 billion persons using local transit facilities in the United States each year. These companies operate in cities and towns of various sizes throughout the United States, including the major cities. The operations of most transit companies are confined to city streets and these streets are generally not part of our State-aid highway system. Thirty-five of the approximately one thousand four hundred transit systems operating in the United States are publicly owned and operated, including those systems which serve some of our major cities, such as New York, Chicago, Detroit, Cleveland, Boston, San Francisco, and Seattle.

The local transit industry is essential to the business and social life of communities in normal times and in times of emergency is generally recognized as one of the most important defense-supporting industries.

Since the latter part of 1946 the transit industry has suffered a substantial and continuing decline in the volume of its business. This is clearly shown on the chart, appendix A. At the same time, the industry's operating expenses have risen steadily and very substantially. The combined effect of these two trends is a sharp reduction in the industry's earnings and in the rate of return on the money invested in the business, despite the fact that nearly all transit companies have increased their fares one or more times since 1946. As indicated in the table, appendix B, it is estimated the industry earned less than 1½ percent on its investment in the year 1950.

These facts prove that it is necessary for the industry to endeavor to pass any additional costs on to the riding public and are indicative of the difficulty in doing so.

TAX ON GASOLINE AND LIQUID PETROLEUM GASES

Certainly gasoline and liquid petroleum gases used in furnishing transit service are not luxuries, yet transit and other commercial highway users have been a favorite target of public administrators seeking sources of additional tax revenues for the past 20 years. We join other highway users in supporting the proposition that each class of highway users should pay special fees and taxes sufficient to cover their fair share of the cost of building and maintaining our highway systems. However, we believe it to be inequitable to expect transit operators to pay into the general revenue funds of both the Federal and State Governments the same special taxes paid by other highway users since transit operations are largely confined to city streets which, in all States are largely, if not entirely, constructed and maintained with municipal funds to which transit operators also make substantial payments in the form of special taxes or fees. The State of Michigan recognized the soundness of this principle recently by exempting transit companies from the payment of higher gasoline taxes and from certain other levies.

Since highway users generally paid special highway taxes to State and Federal governments in 1949 which were almost double the total expenditures on State-administered highways, the proposed taxes on gasoline, liquid petroleum gases, and Diesel fuels, new vehicles and their parts or accessories, cannot be justified except as a general revenue measure and, as such, are discriminatory. The total special tax payments by the transit industry in the form of State and Federal fuel taxes, franchise taxes, license fees, and manufacturers' excise taxes on new vehicles and parts or accessories are estimated to be about 9 to 10 percent of its total revenues.

It should be noted that publicly owned and operated transit systems are exempt from the payment of all such taxes, and while such systems generally do not compete with privately owned and operated transit systems, such competition does exist to a degree in our two largest cities. In addition, these tax-exempt systems generally set the pace for privately operated systems in the matter of wages and working conditions, a problem of considerable importance in view of the fact that direct wage costs in the transit industry represent almost 60 percent of gross revenues.

The report of the House Ways and Means Committee on H. R. 4473 refers to the fact that a reduction in the present tax on domestic telegraph service is justified on the basis that the industry is in a depressed financial condition and is essential to the civilian economy and to national security. The table attached hereto as appendix B shows clearly the depressed financial condition of the transit industry. We submit that transit service is also likewise essential to the civilian economy and to national security, and we believe its declining financial position provides equal justification for the granting of relief from even the present Federal tax of 1½ cents per gallon on gasoline and liquid petroleum gases.

H. R. 4473 proposes the repeal of the present tax on electric energy consumed by residential and commercial users. The report of the House Ways and Means Committee indicates that said repeal is proposed, in part, because it is believed to be one of the most burdensome excise taxes with respect to the lower-income groups. Any excise taxes levied on transit companies are also particularly burdensome to the lower income groups which generally must depend upon transit service for transportation to and from their jobs as well as for other travel by themselves and their families.

The decline in transit riding shown on appendix A is indicative of the difficulty of passing higher costs on to the riding public in the form of higher fares irrespective of whether they result from higher labor costs, higher material costs, or higher taxes. Therefore, we submit that there are as many sound reasons for repealing all of the present excise taxes which directly affect transit companies as there are for repealing the tax on electric energy.

The proposed increase of one-half cent per gallon on gasoline and liquid petroleum gases would add almost $1,500,000 to the already serious financial burden of privately operated transit companies struggling to maintain their place in our system of private enterprise.

TAX ON DIESEL FUEL

The proposed 2 cent per gallon tax on fuel used in Diesel-powered highway vehicles is obviously a special user tax since it would not apply to Diesel fuel used for any off-the-highway purpose such as industrial, commercial, or residential heating, railroad operation, and many other uses.

The report of the House Ways and Means Committee states that it is necessary to tax Diesel fuel in order to prevent discrimination against vehicles powered by gasoline. While the present law provides some measure of discrimination between vehicles using gasoline or liquid petroleum gases and those using Diesel fuel, it is even more discriminatory to tax only the Diesel fuel used for highway purposes while leaving Diesel fuel used for a variety of other no more essential purposes untaxed. This is especially true since the present and proposed tax on gasoline and liquid petroleum gases applies to such fuel used for the propulsion of motorboats or airplanes as well as motor vehicles, while the proposed tax on Diesel fuel applies only to that used in highway vehicles.

The transit industry, which now pays at least its fair share of special highway user taxes, urges that any Federal tax levied on gasoline, liquid petroleum gases, or Diesel fuel should apply irrespective of whether the fuel is used for highway or any other purposes. This, we submit, would be far more equitable and would require a much lower rate per gallon to produce the same aggregate amount for general revenue purposes.

The proposed tax of 2 cents per gallon on Diesel fuel would also increase the present serious financial burdens of privately operated companies by about $1,500,000 per year.

TAX ON NEW BUSES AND PARTS OR ACCESSORIES

The proposal to increase the present excise tax on new busses from 5 percent to 8 percent on the approximately 6,000 new busses which the industry buys each year to replace obsolete and worn-out vehicles would add more than $2,000,000 per year to the present heavy tax burden of privately operated companies. This is obviously another tax for general revenue purposes since it cannot be justified as a special user tax.

The report of the House Ways and Means Committee refers to this 60-percent increase in the present excise tax on new busses as a moderate increase and infers that it would be absorbed and not passed on to the transit rider. This proposal is not considered to be moderate by an industry in serious financial circumstances and whose present earnings force it to attempt to pass the resulting higher costs on to the transit riders by charging higher fares. This is particularly true in view of the other proposed taxes on fuels and parts or accessories. It is true that the proposed tax on new busses would remain less than the 10 percent tax on new automobiles, but the increase on busses would be 60 percent while that proposed for new automobiles is about 43 percent.

Excise taxes are generally levied only on those items in the so-called luxury category. We believe it to be highly discriminatory and inequitable to subject the local transit industry, "the poor man's transportation," to taxes not applicable to many other products or services of a less essential nature.

H. R. 4473 provides for a uniform increase of from 5 percent to 8 percent in the excise tax on automotive parts or accessories whether used in automobiles, busses, or trucks, since in many cases the parts or accessories are interchangeable. This change will add approximately $1,000,000 to the present heavy tax burden of privately operated transit companies. Like the tax on new vehicles, it is obviously a general revenue measure and is discriminatory. The report of the House Ways and Means Committee explains that the proposed tax on parts or accessories is lower than the proposed tax on new automobiles because the bulk of such parts or accessories is purchased by owners of old or second hand cars who are largely the lower income groups.

We submit that lower income groups which, in many cases, cannot afford an automobile and must depend exclusively on local transit, should also be given consideration by exempting parts or accessories used in busses from this tax. It may be contended that it is difficult to administer the tax if certain exemptions are provided. This, we believe, is not a very convincing argument since the new law proposes to continue the complete exemption from the tax of most automotive parts and accessories for all new or used farm equipment.

SUMMARY AND CONCLUSIONS

We vigorously oppose the imposition of additional taxes on gasoline and liquid petroleum gases, busses and bus parts or accessories, as well as the proposed new tax on Diesel fuel, since all are obviously special taxes designed to increase general revenues, yet are limited in their application and are thus discriminatory.

In addition, we firmly believe that the transit industry is entitled to complete exemption or a substantial measure of relief from even the present Federal tax on gasoline and liquid petroleum gases and from the manufacturers' excise taxes on busses and their parts or accessories for the following reasons:

1. Transit operations, unlike those of most other highway users, are almost exclusively confined to those city streets which are largely built and maintained with municipal funds, although State funds may be used, in part, to build or maintain a limited number of such streets which comprise extensions of through routes.

2. Transit operators, unlike most other highway users, pay substantial amounts in the form of franchise fees and other imposts into the municipal funds used for street purposes and, in addition, like other highway users, make substantial tax payments to the States for general highway purposes.

3. Transit service is not in the luxury category but is essential to the business and social life of a community in normal times and is generally recognized as being one of the most important defense-supporting industries in an emergency.

4. Transit is "the poor man's transportation" and any tax imposed upon it becomes a burden on the lower-income groups.

5. Appendix B shows the depressed financial position of the industry which makes it necessary for transit companies to endeavor to pass taxes, as well as all other costs, on to the transit rider in the form of higher fares, while appendix A shows the continuing decline in transit riding since VJ-day which is indicative of rider resistance to higher fares.

Finally, we urge that any future taxes levied on gasoline, liquid petroleum gases, or Diesel fuel be made applicable to all users of such fuel in order that the necessary revenue can be produced by applying the smallest possible tax rate per gallon to the widest possible base. We also urge that the same principle be applied with respect to any future taxes on busses or their parts and accessories by imposing similar taxes on a great variety of other products or services which are no more essential to the defense effort than the service furnished by transit companies. We believe that past history also makes it imperative that any legislation passed at this time to increase the present level of taxes, or to impose new taxes, should contain specific provisions for their automatic termination when the emergency which gives rise to them has ceased to exist.

1950 [1]	1,474,400	484,600	88,000	901,800	847,000	54,800	3,950,000	1.39

[1] Preliminary, subject to revision.

Senator BYRD. Our next witness is Mr. Idol.

STATEMENT OF EDGAR S. IDOL, GENERAL COUNSEL, AMERICAN TRUCKING ASSOCIATIONS, INC.

Mr. IDOL. Mr. Chairman and gentlemen of the committee, my name is Edgar S. Idol, and I am general counsel of the American Trucking Associations, Inc., the trade association of the trucking industry.

We represent a federation of State associations including as their members substantially all of the 19,000 for hire motor carriers of the country, and also the bulk of the local 300,000 for hire operators.

Our State associations also represent many thousands of private motor carriers. Our offices are at 1424 Sixteenth Street NW., Washington, D. C.

Mr. Chairman, the question of discrimination, and most of the other matters connected with excise taxation on gasoline, automobile and automotive equipment, and Diesel fuels have been covered by other witnesses very largely.

I will attempt to avoid repetition. There are only one or two points that I would like to bring out. I would like to have my statement filed as part of the record, but——

Senator BYRD. That will be done.

Mr. IDOL. I believe the question of discrimination has been pretty fully treated by other witnesses.

There is one point I would like to direct to your particular attention and that is the extent to which other levels of Government use taxes of this type for revenue measures.

During the last 6 months, 11 States have increased gasoline and Diesel fuels by amounts ranging from 1 to 2 cents a gallon, and 14

States have increased charges for the operation of commercial trucks, principally through increasing registration fees.

Our industry, as you would note from that, is faced by continuing increases in its tax costs, some of which are justified on the ground of highway use payment, but many of which are not.

I think at this time our Federal tax has absolutely no justification on that ground. Currently the Federal Government collects more than a billion dollars a year in special-use taxes more than it pays in aid of highway construction.

Senator BYRD. You mean that is the gasoline tax, the Diesel and fuel tax, and what else? You said that they collect over a billion dollars——

Mr. IDOL. The Federal Government collects over a billion dollars——

Senator BYRD. I say what are these other taxes?

Mr. IDOL. The gasoline and automotive tax—the gasoline and automotive excise taxes.

Senator KERR. And lubricating oil taxes?

Mr. IDOL. Yes, sir; correct. I have some figures in my statement on total collections for the year 1949.

Senator BYRD. I think the gasoline taxes are nearly returned in full to the States, are they not?

Mr. IDOL. Are almost what, sir?

Senator BYRD. Gasoline taxes are returned in full to the States?

Mr. IDOL. No; I do not believe so, sir. You have Federal aid payments of something in the neighborhood of a billion dollars annually.

Senator TAFT. Between five and six hundred million?

Mr. IDOL. And your total Federal tax collections in special highway uses are very substantially in excess of that amount.

Senator WILLIAMS. Do you have the figures on gasoline tax revenue?

Mr. IDOL. Not separated in this statement, sir, but I will be glad to furnish them.

Senator KERR. They are in the neighborhood of a half billion dollars.

Mr. IDOL. From the Federal collection?

Senator KERR. Yes.

Senator MARTIN. Why not just get the exact figures, and also what the Federal Government grants to the States for highway construction.

Mr. IDOL. I would be very happy to furnish that to you.

One other point which I would like to call to your attention, sir, is the fact that the House recommendation for a tax on Diesel fuel is so clearly discriminatory and particularly against the commercial truck operators, because of the fact that it is limited in its application to that which is used in highway equipment, and we can see no possible equitable ground for that action.

It appears to us that if it is desired to remove some type of commodity discrimination, the appropriate method of doing it would be to enact the same tax in effect which is applicable to gasoline, and make it applicable to all Diesel fuel sales.

We have one other thing on the subject of excise taxation, which I would like to bring to your attention. The Committee for Economic Development has made what we believe to be the best recommendation to this Congress for taxation that we have seen.

They include in that recommendation a statement that after this bill is passed, the Joint Committee on Internal Revenue Taxation initiate a study of Federal excise taxes with a view to rationalizing the structure at the earliest appropriate time.

We have been trying, Mr. Chairman, and gentlemen, for some time to persuade the Congress to eliminate what we conceive to be all of these discriminatory taxes against highway operations.

We do not expect you to take any such action here on this bill, because we do not think circumstances will permit a reduction of present excise taxes, but we do urge your consideration of the CED recommendation, and we add our hope that you will order a complete investigation of this excise-tax situation with a view to eliminating discrimination.

I should like to take whatever time I may have left, Mr. Chairman, for a very brief discussion of the excess-profits-tax situation as the House bill would revise it.

Senator BYRD. All right, sir.

Mr. IDOL. There are three points in the House bill which would particularly affect the industry. They are all indirect increases in the excess-profits tax.

One consists of lowering the average income credit from 85 to 75 percent of base period.

Another is the increase in the ceiling rate, over-all taxation, from 62 to 72 percent.

The third is the provision which would limit the surtax exemption in the minimum excess-profits credit of related corporations to a single unit.

All of those are simply indirect methods of increasing the amount of excess-profits taxes which are collected.

Senator KERR. Does your industry in the business of operating transportation in many States find it necessary to incorporate sometimes in more than one State?

Mr. IDOL. Very frequently, sir.

That is not——

Senator KERR. All right, go ahead.

Mr. IDOL. An essential to operation in some cases, but in many States it is compelled as a method of securing the normal registration fees.

It gets to be a rather complicated subject to attempt to described exactly, but that situation does exist in a number of localities.

I have attached to my statement an exhibit which shows income statistics for class I intercity motor carriers of property for the years 1939 through 1950, the last being estimated.

The balance of them are all taken from official figures of the Interstate Commerce Commission.

I would like you to note particularly that in the year 1945 this industry, as a class, lost money. Our class payment to the Government decreased—this is not, by the way, a complete statement of the whole industry, of course, it is much larger than that, but it does list all so-called class I carriers of property regulated by the Commission, so I think you can take it as being a representative statement.

In 1942, the carriers—this group of carriers—paid something over 12 millions in taxes to the Government.

In 1945 that payment had been cut to under $4 million, and the industry was in a deficit position after those taxes were paid.

In 1949 under relief from excess taxation and, of course, with the ability to obtain equipment, supplies, which were short during World War II, our tax payments came up to $31,000,000 and we estimate them at $62 million for that same group in 1950.

I think there is no question but that the motor carrier industry will pay the Government more tax revenues at rates under 50 percent than it will at rates over 50 percent.

We have very little of investment capital in our business. It is made up almost entirely of relatively small companies who have had to plow back any earnings they get into the business, and their growth is limited by that ability to supply out of earnings the capital necessary to expand.

You have given in the last tax bill special treatment to all public utilities, including the transportation of property by motor vehicle. That is found in, I believe, section 448 of the 1950 act. I have the exact reference in my statement somewhere.

But, in any event, that is of absolutely no use to the common carrier by motor vehicle.

It is useful, I believe, to every other type of public utility, and all of the rest of them have investments which range from three to four times their annual revenues.

To keep 6 cents out of their revenue dollar after taxes, they must keep about 30 to 40 cents out of their revenue dollar. I mean, to keep 6 percent on their investment, they must keep about 30 to 40 cents out of their revenue dollar.

The motor carrier, on the other hand, has an average annual revenue of from 4, 5, to 10 times his investment. To measure his proper rate of return by a return on investment is an impossibility.

It has been recognized by the Interstate Commerce Commission and a number of State commissions in fixing rates of return, and they look first to the ratio of revenue to expense, rather than to any fixed rate of return on investment.

The motor carrier industry can be very prosperous by keeping from 10 to 15 cents out of its revenue dollar, before taxes. We urge that we get the same, in effect, the same relief you have given other public utilities in very slightly different form.

I have suggested the exact language for an addition to section 448, which will allow motor carriers to measure their normal profits by the ratio of expense to total revenue.

I hope that you gentlemen will consider that in the revision of this tax situation.

Thank you very much.

Senator Byrd. Thank you very much.

(The prepared statement follows:)

STATEMENT OF EDGAR S. IDOL

Mr. Chairman and gentlemen of the committee, my name is Edgar S. Idol. I am general counsel of the American Trucking Associations, Inc., the national trade association of the trucking industry. ATA is a federation of State associations, which include as their members substantially all of the 19,000 for-hire carriers under the jurisdiction of the Interstate Commerce Commission, and also the bulk of the some 300,000 local for-hire operators. ATA, through its State associations, also represents many thousands of private motor carriers. Our offices are at 1424 Sixteenth Street NW., Washington 6, D. C.

EXCISE TAXATION

Eminent authorities on tax questions have recommended to the Congress that a large percentage of the revenue required to put the country on a pay-as-you-go basis be raised from excise taxes. We have no argument with these recommendations on general policy. In fact, we strongly favor the recommendations of the Committee for Economic Development, which urges the enactment of a general 5-percent excise tax, with no increases on items currently subject to excise taxation above that figure.

But we are very much concerned by the action of the Ways and Means Committee of the House in proposing an increase of one-half cent per gallon in the current Federal gasoline tax, an increase of from 5 to 8 percent in Federal excise taxes on trucks and accessories, and the establishment of a 2-cent tax on Diesel fuel used in highway vehicles only. At page 42 of the report of the Committee on Ways and Means, it is indicated that the increase of one-half cent per gallon in gasoline tax is based upon the theory that the 1939 ratio of tax to the retail price should be restored. The committee says "Although in 1950 the tax was 6 percent of the retail price, including tax, in 1940 it was 8½ percent of the retail price." The committee further states that "Under these conditions, it appears probable that an increase in the gasoline tax of the size provided by this bill can readily be passed on to the consumers of gasoline" although it is further admitted that "too substantial an increase in the gasoline tax by the Federal Government might affect the use of this revenue source by the States."

The proposed 2-cent-per-gallon tax on Diesel fuel is explained by the statement "Your committee believes that the taxation of Diesel fuel used on the highways on the same basis as gasoline is necessary in order to prevent discrimination against vehicles powered by gasoline."

I would first like to direct this committee's attention to the fact that there is no attempt to justify either the increase in the gasoline tax or the new tax on Diesel fuel on any equitable ground. To repeat, the only statement we have by the House committee with respect to the equity of the situation is that "an increase in the gasoline tax of the size provided by this bill can readily be passed on to the consumers of gasoline." The House committee itself recognized that the tax was inequitable. At page 42 of the report appears the following statement: "Payments for gasoline represent costs of doing business in the case of gasoline consumed by trucks." We pointed out to the House committee that there was no equitable ground for any Federal tax on gasoline.

There seems to be a general impression that special taxes by the Federal Government on users of highways may be justified by Federal contributions to highway construction and maintenance; I shall not take the time of this committee to argue that point. So far as any increase in present Federal excise taxation is concerned, it is only necessary to point out that Federal excise collections from highway users currently exceed Federal aid to highway construction by more than $1,000,000,000 annually. Proposed increases in highway-use taxes are justified only on the ground of expediency and ease of collection.

We urge this committee to examine the equities of the situation more closely before acting on the House proposals. As we have already shown, the Federal Government is doing nothing for highway users which justifies increased excise taxation on the basis of benefits received. We ask that this committee take a further look at the extent to which State governments have tapped highway users as a source of general revenue.

During the year 1949, the last for which complete figures are available, highway users paid to State and Federal Governments a total of $3,010,620,000 in special highway taxes. These collections exceeded expenditures on State-administered highways by more than one and one-half billion dollars. Of the total special taxes collected from highway users, the Federal Government took as its share $1,304,500,000, of which $332,000,000 was collected from the truck and bus industry. Collections by State governments amounted to $2,306,120,000, of which the truck and bus industries contributed $730,180,000.

During the last 6 months the several States have substantially increased their special taxes on highway users, particularly commercial trucks. Eleven States have increased their gasoline and Diesel fuel taxes by amounts ranging from 1 to 2 cents per gallon. Fourteen States have increased charges for the operation of commercial trucks, principally through increased registration fees. An outstanding example is noted in the legislation adopted by New York, where a special ton-mile tax was enacted, which, for heavy commercial trucks, is the equivalent of an additional gasoline tax of from 10 to 12 cents per gallon.

For the past 20 years, highway users, and particularly commercial trucks, have been a favorite target for legislators seeking new tax revenue. Unfortunately, for the trucking industry, the fact that special taxes have heretofore been levied upon and paid by the industry seems to be regarded as sound precedent for levying and collecting still more special taxes. The only justification for special taxes on highway users is found in the cost of constructing and maintaining highways. There is no justification for any Federal tax on this basis.

The House committee explains its proposed tax on Diesel fuel on the ground that it is "necessary in order to prevent discrimination against vehicles powered by gasoline." That argument cannot stand analysis. The House proposal does not remove a discrimination; it simply extends a discrimination to a slightly larger group of users. All users of gasoline are now being unjustly discriminated against. To now enact a tax on Diesel fuel, limited to that which is used in highway equipment, is to simply emphasize and narrow the present discriminatory practice. If the Congress decides that, because of ease of collection, a Federal tax should be laid upon users of Diesel fuel, there should be no limitation to use in commercial highway vehicles. There is certainly no more reason for Federal taxation of Diesel fuel consumed by highway motor vehicles than for Diesel fuel consumed by railroad locomotives. The gasoline tax contains no such discriminatory limitation. It is applicable to gasoline sold, without regard to its use. If the purpose of the Congress is to remove a discrimination against gasoline, then the proper course is to apply the current 1½-cent Federal tax to all sales of Diesel fuel, regardless of whether it is consumed in highway vehicles or in other industrial engines.

The proposal to increase excise taxation on automobile trucks, buses, and truck trailers is covered at page 44 of the House committee's report. The inflationary angle, given as the reason for increasing the gasoline tax, is not applicable here since the tax rate is related to sales price. The committee gives no real reason for this increase. The application of an increased percentage rate to the equipment in question is excused rather than explained by the language "It is believed * * * desirable * * * (because of) the anticipated highway demand for this type of automotive transportation coupled with the likelihood of a curtailment in the supply available."

There will be no drastic curtailment of the supply of equipment available. Representations of commercial highway users to the National Production Authority have assured a reasonably adequate supply of equipment for the essential services of highway carriers. In short, the only real reason for the House committee proposal is that the tax can be collected from a group of users who have already borne a discriminatory tax for a considerable period of time and managed to survive.

The only reason given for the increased rate of tax on automotive parts and accessories is, as stated at page 44 of the House committee's report, "This will retain a uniform rate of tax for these two types of items, as is provided by present law." In other words, the House committee feels that it is better to have uniform discrimination than nonuniform discrimination.

Under the present political and economic situation, the motor carrier industry recognizes the impracticability of seeking relief from present discriminatory excise taxation. But we think there is no excuse for increasing the measure of discriminatory treatment under which we suffer. And we strongly urge adoption by the Congress of the recommendation made by the Committee for Economic Development: "After this bill is passed the Joint Committee on Internal Revenue Taxation initiate a study of Federal excises with a view to rationalizing the structure at the earliest appropriate time."

The CED cannot be considered a pressure group for any particular line of business activity. Its membership crosses all industrial lines, and its policies are directed by outstanding men from every branch of industrial life. We think their approach to the current tax problem is the soundest of any that we have seen, and we urge careful consideration by this committee of their recommendations.

EXCESS PROFITS TAXATION

We have previously brought to the attention of this committee, and to the attention of the House Ways and Means Committee, the tremendous impact of so-called excess profits taxation on the motor carrier industry. Exhibit I, attached hereto, gives a graphic picture of what happened to the trucking industry under the excess profits tax law of World War II, and of the subsequent recovery of the industry under normal taxation. Except for 1950 estimates, for which final figures are not yet available, the exhibit reflects only official figures compiled from the reports to the Interstate Commerce Commission by class I intercity motor carriers of property. Gross revenue of these carriers increased fom $378 million in 1939 to $746 million in 1945, but taxable income decreased from over $17 million in 1939 to less than $2 million in 1945. Average net income after taxes decreased from over $18,000 in 1939 to a deficit of $1,500 in 1945. Since the war, under less drastic tax rates, these carriers have increased their business more than three times and tax payments of less than $4 million in 1945 increased to over $62 million in 1950.

With income-tax rates under 50 percent, the industry can continue to grow and the Government's tax income will continue to grow. At tax rates exceeding 50 percent growth will be stifled and at rates beyond 60 percent the industry is bound to shrivel.

None of the growth or relief provisions of the 1950 revenue bill give adequate relief to motor carriers. The need of public utilities generally for relief from excess taxation was recognized by the Congress in the enactment of a special provision, section 448 of the 1950 act, under which all forms of transportation as well as the gas, telephone, and electric utilities are given treatment which recognizes their special position. But, as we told both the House and Senate committees, the provision is of absolutely no benefit to motor carriers.

The reason is that this special treatment for utilities consists of eliminating excess profits taxation from a fixed percentage of involvement, but gives no recognition to the ratio of expense to revenue. For most utilities whose rates are regulated in the public interest by State or Federal agencies, a return of 6 or 7 percent on investment is recognized as adequate. The railroad industry, for example, shows an average rate of return of less than 4 percent under normal conditions. But all of these utilities, excepting only the common carrier by motor vhicle, have investments three to four times annual revenues, and must retain 30 to 40 cents out of every revenue dollar as profit before taxes in order to show a 6 to 7 percent rate of return. Motor carriers, on the contrary, have annual revenues ranging from 3 to 10 times investment, and without excess taxation can maintain a reasonably healthy financial condition on operating ratios of 85 to 90 percent.

The Interstate Commerce Commission, and a number of State commissions, have recognized this essential difference between motor carriers and other utilities, and fixed reasonable rates of return on the basis of operating ratios rather than on the basis of a return on investment.

We urgently renew our request of this committee for consideration of our special need. Appropriate revision is simple. We suggest the addition to subparagraph (a) of section 448 of the following language: "or subsection (f) whichever amount is the larger.", and the addition of a new subsection (f) reading as follows:

"(f) ALTERNATIVE COMPUTATION.—For motor carriers described in subparagraph (c) (1) (C), the amount referred to in subsection (a) shall be 6 per centum of operating revenue."

The enactment of such legislation would do no more than give to common carriers by motor vehicle recognition of their special public-service status similar to that which has been given other utilities. Unless the industry can retain 6 cents out of it revenue dollar after taxes, it will not long be able to provide the service to the public essential to both the defense program and the normal growth of the country.

Three changes are proposed in the present tax law by the House committee, which will have a throttling effect upon the motor-carrier industry. They are:

1. Restriction of the surtax exemption and the minimum excess-profits credit of related corporations;
2. The reduction of excess-profits credit from 85 percent to 75 percent of average base period net income;
3. The increase in the ceiling on total corporate taxation from 62 to 70 percent.

If, as a matter of policy, the committee decides not to revise the 1950 law so far as it relates to excess taxation, the changes will not, of course, be given consideration. But if revision is undertaken at this session of the Congress, we earnestly urge that these amendments be rejected. All three are nothing more or less than a roundabout method of increasing taxes on so-called excess profits. Because the excess-profits tax strikes with unusual force against growing businesses, any increase in the rate of tax or of the total charge hits the growing business just that much harder.

Exhibit I, attached hereto, shows clearly how vulnerable the trucking industry is to so-called excess-profits taxation. Earnings disappeared entirely under the World War II law; both the carriers and the Federal Treasury suffered as a result. Freed of excessive tax burdens in 1946, the business rebounded with all the vigor to be expected of a young industry, but still lagged behind the normal demand for transportation service by highway even in pre-Korea days.

Because of the normal growth of his business, the average class I carrier had taxable income in 1950 which exceeded his credit by 38 percent. He therefore must pay excess taxes on 38 percent of his income. That taxable income is neither excessive, nor is it income attributable to the defense program.

We urge the committee not to subject our vital industry to the kind of taxation which almost put us in bankruptcy during World War II. The best argument which can be made on this point has been very forceably presented to the committee by Mr. J. Cameron Thomson for the CED. We fully endorse that presentation and urge its acceptance by this committee.

EXHIBIT I.—*Income, statistics—Class I intercity motor carriers of property, 1939–50*

	1939	1940	1941	1942	1943	1944
Number of carriers	957	991	1,076	1,083	1,165	1,337
Revenues	$378,473,829	$431,052,674	$560,166,612	$587,869,636	$645,673,297	$710,909,895
Average per carrier	$395,479	$434,967	$520,601	$542,816	$554,226	$531,720
Taxable income	$17,597,783	$17,461,406	$25,272,871	$29,882,920	$18,728,766	$14,894,618
Average per carrier	$18,388	$17,620	$23,411	$27,593	$16,076	$11,140
Income taxes	$2,703,649	$4,199,879	$7,685,547	$12,625,023	$9,290,948	$7,116,329
Average per carrier	$2,825	$4,238	$7,143	$11,665	$7,980	$5,323
Operating ratio	95.1	95.6	95.2	94.7	96.9	97.9
Ratio of net income to revenue	3.9	3.1	3.1	3.0	1.5	1.1

	1945	1946	1947	1948	1949	1950, estimated
Number of carriers	1,445	1,516	1,603	1,825	1,817	1,817
Revenues	$746,393,799	$883,806,303	$1,232,546,162	$1,662,881,090	$1,857,919,516	$2,322,399,395
Average per carrier	$516,536	$582,986	$768,900	$922,542	$1,022,520	$1,278,150
Taxable income	$1,655,801	$30,047,911	$54,428,622	$107,424,005	$94,977,987	$139,343,964
Average per carrier	$1,146	$19,821	$33,954	$58,863	$52,272	$76,689
Income taxes	$3,883,092	$9,027,803	$17,416,594	$35,240,906	$31,546,162	$62,704,784
Average per carrier	$2,687	$5,955	$10,865	$19,551	$17,362	$34,510
Operating ratio	99.8	96.4	95.3	93.4	94.7	94.0
Ratio of net income to revenue	−3.0	2.4	3.0	4.3	3.4	3.5

Source: 1939–49—Official Report of Carriers to Interstate Commerce Commission; 1950—estimate based on trend indicated in first half.

Senator BYRD. Our next witness is Alfred Krebs. Will you please identify yourself, Mr. Krebs.

STATEMENT OF ALFRED U. KREBS, COUNSEL, NATIONAL FEDERATION OF AMERICAN SHIPPING, INC.

Mr. KREBS. Mr. Chairman, my statement is very short, so if you have no objection, I would like to read it rather than summarize it.

My name is Alfred U. Krebs. I am general counsel for the National Federation of American Shipping, Inc., an organization representing a majority of all deep-water privately owned dry-cargo American-flag shipping and a large segment of the American-flag tanker fleet.

I am appearing in opposition to section 493 of H. R. 4473, Revenue Act of 1951, which would impose a 3-percent tax on the "fair charge" for the transportation of petroleum and petroleum products between points in the United States where such products are transported by oil companies in their own tankers.

The "fair charge" for such transportation would be computed on (1) the basis of the charge for such transportation made by persons performing like transportation for hire, as determined by the Secretary of the Treasury; or (2) if no such charge exists, then on the basis of a reasonable charge for such transportation, also as determined by the Secretary.

The proposed tax would be highly discriminatory with respect to the tanker industry. Numerous other shippers transport their own property in their own vehicles and are not subject to any such tax. The tanker companies should not, under such circumstances, be required to pay for the privilege of transporting their own property in their own vessels. If a tax of this nature is to be imposed, it should be levied on all transportation of all property by the owners.

The Committee on Ways and Means of the House attempts to justify imposition of the proposed tax by pointing out in its report on the bill that a similar tax is levied on the private transportation of oil by pipeline.

Senator KERR. Let me ask a question there. A transportation tax is levied on coal where it is hauled by public utilities, is it not?

Mr. KREBS. Yes, sir; that is for hire, I believe.

Senator KERR. Well, that is the same as pipelines for hire.

Mr. KREBS. Yes, sir; that is true. I go into the distinction between the pipeline situation——

Senator KERR. If a fellow owns a coal mine and hauls coal, he would not be taxed?

Mr. KREBS. Not to my knowledge. There is no tax on such transportation at the present time if he transports his own products.

Senator KERR. So that any competitor who produces any commodity whether it is coal or limestone or gravel, has a tax charged on the transportation of it if the railroad carries it, but does not have it if he transports it himself.

Mr. KREBS. Yes, sir; that is correct.

Senator KERR. You position is that if they are going to pick those commodities that are privately transported they should pick them all out?

Mr. KREBS. That is correct. We would not like to see that occur, but if a tax of this nature is imposed, it should be imposed on all private transportation of this nature.

There is little, if any similarity between the transportation of oil by pipeline and by tanker. The companies owning and operating the pipelines are "common carriers" within the meaning of the Interstate Commerce Act, and as such are subject to regulation by the Interstate Commerce Commission. They are required to file tariffs and to furnish transportation upon request. This is not so in the case of the tanker companies.

These differences between the two forms of transportation would be responsible for considerable difficulty in administering the tax on movements by water.

In contast to fixed pipeline tariffs, tanker rates are based upon conditions prevailing at the particular time for the carriage of the particular type of product.

There are "winter" rates and "summer" rates. There are rates based upon the size, type, and speed of the vessel, as well as upon the quantity, grade, and type of product to be transported. Fluctuations in the oil market alone result in sharp changes in tanker rates.

We believe that administration of the proposed tax would require the Secretary to have an army of experts who would be familiar with charges for the transportation of petroleum and its liquid products by water at all times and under all conditions.

Even if this were possible, we think that proper administration of the proposed tax would constitute an almost impossible task.

In that connection, I would like to refer to a statement that has been referred to by a previous witness on this subject, which appears in the data on proposed revenue bill of 1942 submitted to the Ways and Means Committee by the Treasury Department and the staff of the Joint Committee on Internal Revenue Taxation April 24 to June 27, 1942.

The statement that I am going to refer to appears on page 442, exhibit 212, transportation of property tax. This is the statement:

> It would be administratively impractical to extend the tax to cover those businesses that conduct their own transportation service. In the absence of published rate schedules, it probably would be necessary to base the tax on the cost of conducting such service. This determination, for literally hundreds of thousands of taxpayers, seems an almost impossible task.

That is the end of the statement appearing in the data, the data on the proposed revenue bill of 1942.

Senator KERR. Is that a statement made by the Treasury itself?

Mr. KREBS. Yes, sir.

Their statement was referred to by a previous witness testifying on this particular section of the bill.

Senator BYRD. Made by the Treasury Department?

Mr. KREBS. Yes, sir; it was taken from the data on proposed revenue bill of 1942 submitted to the Ways and Means Committee by the Treasury Department and the staff of the Joint Committee on Internal Revenue Taxation, April 24 to June 27, 1942.

The fact that the proposed tax singles out the private transportation of petroleum and its products by water to the exclusion of all other products which are privately transported, is justification enough for deleting section 493 from H. R. 4473, and we respectfully urge that your committee do so.

Senator BYRD. Thank you very much, Mr. Krebs.

Mr. KREBS. Thank you, sir.

Senator BYRD. Mr. Freed?

STATEMENT OF CHARLES C. FREED, NATIONAL AUTOMOBILE DEALERS ASSOCIATION

Mr. FREED. Mr. Chairman and members of the Finance Committee, my name is Charles C. Freed.

I am a DeSoto-Plymouth dealer in Salt Lake City, Utah.

I am appearing here at this hearing in my capacity as chairman of the Public Affairs Committee of the National Automobile Dealers Association.

The 34,000 members of our association employ approximately 800,000 people who serve 50 million car and truck owners of this country. Our members sell more than 90 percent of the new cars and trucks sold.

We are close to the motorists of the Nation. We think it necessary to bring certain salient facts—which we have learned from them—to your attention today as this committee studies the complex problem of finding ways and means to finance an increased program of spending for national defense.

We are grateful that you are hearing our testimony. We speak not so much for ourselves as small-business men, but for our customers—the 50 million motorists who buy their cars and trucks from us—who will all be seriously affected if the proposed tax increases become law.

Mr. Chairman, in the interest of time, I am going to deviate some from my prepared statement, and make it as brief as possible and ask kindly that our full statement that you have become part of the record.

Senator BYRD. Yes, that will be done.

Mr. FREED. Even under the present law there are obvious injustices to the motorist; under the proposed law even greater burdens are placed upon him.

In order to weigh the wisdom of imposing any increased taxes on automobiles, trucks, parts, and accessories and gasoline, we believe that it is necessary to ask ourselves these questions:

First, has there been any change in the original and basic philosophy that excise taxes were to be imposed on luxuries and luxuries alone?

Second, is the automobile essential—necessary to our way of living and to our economy?

If it is, and if excise taxes are for luxuries alone, then automobiles should not be subjected to any increased excise tax.

Senator TAFT. I think you can take out the theory that it is on luxuries.

Mr. FREED. Thank you, sir.

Senator TAFT. There are so many of these taxes which are not on luxuries—I mean, take telegraph and telephone taxes——

Mr. FREED. That is right.

Senator TAFT. A whole series of others that there is no theory of with respect to the excise tax.

Mr. FREED. We wondered about that because of champange and perfume.

Senator TAFT. There is no theory underlying that that I know of.

Senator KERR. Excise taxes are one thing that would conform to the principle that it is not a theory, but a reality.

Mr. FREED. Yes; that is right.

Senator WILLIAMS. It is considered a little bit more diplomatic than calling it a sales tax.

Mr. FREED. That is right.

Transportation by passenger cars is so important to defense workers that one Senator in a recent debate on the Senate floor called the automobile a "war necessity." Surveys conducted during World War II showed that at one aircraft plant, 92 percent of the employees used the automobile for transportation to and from work; at a naval ordance plant 95 percent depended on the automobile for transportation.

Today, decentralization is encouraged as expedient to defense and health. Workers and plants are moving from many cities to localities which have no public-transportation facilities. A look at the new census figures will show that in Pittsburgh, for example, the population growth has been only 2 percent in the city to 98 percent in the outlying sections.

Workers in many newly developed areas must rely solely on the passenger car for their transportation. For example, gentlemen, in my home town in Salt Lake City, the mines and defense plans now being worked to capacity in this emergency can be reached only by automobile transportation.

When public transportation is at a standstill—as was recently proved in the 3-day strike in Washington and in the 59-day strike in Detroit—the people of this country were able to carry on their activities, necessary to living, through passenger automobiles.

What happened in Washington and Detroit is a daily occurrence in many towns and cities in this country. There are 25,000 communities without any rail service whatsoever. There are 2,074 communities which are solely dependent on the automobile for transportation, as they have no public transportation at all.

Before even considering what the proposed increases in automotive excises would mean to the average car buyer, let us look at the taxes which he already pays under present rates.

First, let us look at these taxes through the eyes of the average worker, the way he must look at them, in terms of the dollars and cents they add to his car's costs rather than as the astronomical figures which they yield to the Treasury. We will discuss these taxes from the standpoint of their yield later.

Let me remind you that the automobile differs from the other products on which a Federal excise tax is imposed, not only because of its essential usefulness, but because the automobile represents a continuing source of tax revenue to Federal, State, and local governments.

It is the average worker who constitutes a majority of the Nation's car owners. According to statistics released by the Federal Reserve Board, he earns less than $77 a week before taxes. Yet, when our average worker buys a new lower-priced car delivered in Detroit, Mich., taxes constitute an estimated $475 of its total cost of $2,000.

Senator BYRD. Let me ask you, does that include the income tax?

Mr. FREED. Yes, sir. We have an explanatory note on that.

That, Senators, is 24 cents out of every car buyer's dollar, and that is the current tax without a single cent of the additional levies included in the House bill.

Throughout the life of his car, he must pay both Federal and State sales taxes on all future purchases of gasoline and oil. Whenever his car needs repairs involving replacement parts or new tires and tubes, he will be paying additional excise taxes on these.

Each year, of course, he will pay State gasoline taxes, license fees, and in many States sizable property taxes on his essential vehicle.

The worker in Hartsville, S. C., for example, must pay even under present tax rates, a total of $560.15 in taxes when he buys a $2,000 automobile. That is more than 28 cents out of every dollar expended on a new car by a South Carolina worker. And he, too, is only beginning to pay taxes on his car and its operation.

The $560.15 tax cost of his new car includes, of course, not only current excise taxes on the automobile, its tires, oil, gas, radio, and heater but many State and some city levies and the proportionate part of manufacturer's and dealer's taxes. All of these taxes, directly or indirectly, come out of the car buyer's pockets.

For the purchase of a product as essential as the automobile, $560 is a terrific tax burden for the average worker who makes only $77 a week before taxes.

If the automotive and gasoline tax excise increases proposed in the House bill should become law, this same Hartsville worker would have to pay nearly $610 in taxes for the same car which currently retails at $2,000. Naturally, the retail price would have to reflect the full amount of these tax increases.

These increases would result from raising the excise tax on automobiles from 7 to 10 percent and the tax on automotive parts and accessories from 5 to 8 percent—both of which are included in the House bill.

Senator TAFT. What was the theory of the House bill? Was it some theory that the use or the sales of automobiles should be cut down during the defense program?

Mr. FREED. I think that was the original theory, Senator Taft, and it certainly would accomplish this.

We are almost priced out of the market now, we believe.

I submit, Senators, that present levies already impose an unjust and discriminatory burden on the car buyer, forcing him to bear far more than his just share of the tax load.

This is equally true of the truck buyer, who under the House bill would be confronted with a 60 percent increase in his already high Federal excise taxes—a boost from 5 to 8 percent.

The same tax increase would apply likewise to the automotive repair parts and accessories he requires to keep his truck operating. Finally, he would also be affected by the proposed increase in the Federal gasoline taxes.

The automobile is without doubt the most heavily taxed essential possession of the average American today. Where Federal taxes stop, State and city taxes begin and the automobile and the truck are taxed again and again.

During the current year, motor-vehicle owners will hand over to the States alone a record $3,000,000,000 for the ownership and use of their essential vehicles. This is almost as much as the States derived from all taxes just a decade ago.

Now, let us consider the estimated Federal revenue expected from the proposed changes in manufacturers' excises under both the present law and the House bill. Since Secretary of the Treasury Snyder's estimates of revenue to be realized under both the current and House bill rates are extremely conservative, we will use the estimates he presented to this committee on June 28.

Manufacturers' excise taxes are grouped in 11 product categories, with the present and House bill tax rates and the estimated revenue from each, under table 3, item III in Secretary Snyder's presentation.

For your convenience a copy of that portion of the Secretary's presentation is attached to your copy of my testimony. It covers all the manufacturers' excises with which we are concerned, and I want to call your attention to the fact that Secretary Snyder's own figures conclusively prove:

First, the current automotive-tax rates discriminate unfairly against the car or truck buyer and owner in that they far exceed in both rate and yield excises levied on even the comparatively few other types of products, many of them less essential than cars and trucks, subjected to such a tax.

This is shown by the fact that the five excises levied on cars and trucks and their operation—the present 1½-cent-a-gallon tax on gasoline, the 7-percent excise on automobiles, the 5-percent levy on automotive parts and accessories, the 5-percent levy on trucks and busses, and the 5 cents and 9 cents per pound tax on tires and tubes—yield more than 82 percent of the total revenue obtained from current manufacturers' excise-tax levies.

In dollars and cents, the automotive levies under the present law place an estimated——

Senator KERR. Just a minute.

You say will yield more than 82 percent of the total revenue obtained from current manufacturers' excise-tax levies.

Mr. FREES. That is correct, sir.

Senator KERR. What you are telling us there is that the automobile owner——

Mr. FREES. Yes, sir; as such, pays——

Senator KERR. Eighty-two percent of the total amount of excise tax being collected.

Mr. FREES. That is right.

Senator KERR. By the Federal Government?

Mr. FREES. Yes, sir. We go into that a little more thoroughly later on.

In dollars and cents the automotive levies under the present law place an estimated $1,425,000,000 in the Treasury while the manufacturers' excises, applying to nonautomotive products, bring in a total of only $310,500,000.

Second, and this is particularly important, the House bill would make this present discrimination against the motorist and truck operator even far greater by increasing automotive excises so that they would yield an estimated $502,000,000 more annually than under current rates.

At the same time, the House bill eliminates and reduces more levies on nonautomotive items than it increases. As a result of this reshuffling, it actually lowers the over-all tax yield from nonautomotive items a total of $90,800,000. When this revenue loss on nonautomotive items is subtracted from substantial proposed increases in the automotive levies, the net gain to the Treasury will be $411,200,000. But the fact remains, Senators, that car and truck owners would be taxed an additional $502,000,000 to obtain the $411,200,000 gain.

I hasten to add that the automobile dealers of this country certainly do not object to the reduction in manufacturers' excises provided in the House bill on the nonautomotive products that have been taxed at varying rates.

But, we do object, on behalf of the Nation's car buyers and owners, to increasing the obviously discriminatory excises against our customers. Maintaining automotive excises at current levies would simply continue the discriminatory taxing of two of our country's most essential and most tax-burdened products, the family car and the truck.

Moreover, past experience has proven that when taxes are increased, even though the increases are adopted as "emergency" and "temporary" measures, the tax increases long outlive the Congressmen who originally voted for them.

Senator KERR. You are not dramatizing the lack of longevity on the part of the Congressmen?

Mr. FREED. We have in mind the luxury tax on automobiles in 1917, Senator.

Senator KERR. I did not understand you to say that luxury taxes were on the Congress but——

Mr. FREED. No; that is definitely right.

Senator KERR. All right.

Senator WILLIAMS. You say that the automobile industry accounts for 82 percent of the excise taxes?

Mr. FREED. Of the total excise taxes.

Senator TAFT. Manufacturers'.

Mr. FREED. That is right.

Senator WILLIAMS. You are excluding the tobacco and liquor taxes?

Mr. FREED. Yes, sir; that is right. That was in Secretary Snyder's testimony, and we took the figures from that.

This is a particularly serious matter when the product is also the main revenue producer for the States.

In addition you gentlemen know even better than we do that when you tax a product and its use beyond the ability of the public to pay, you have also reached the point of diminishing returns from tax levies.

Although wages are at high levels today, it is also true that many essential workers have fewer dollars for spending since both income-tax rates and the prices of virtually all essential items, particularly food, have risen sharply.

Senator BYRD. Mr. Freed, let me ask you this question: There have been four increases in taxes on automobiles before.

Which ones do you think—which one is the most objectionable?

Mr. FREED. I think the increase on passenger cars and trucks and excise——

Senator BYRD. In other words, the increase from 7 percent to 10 percent?

Mr. FREED. To 10 percent.

Senator BYRD. Which brings in $196 million.

Mr. FREED. Yes.

Senator BYRD. You think that is the most objectionable?

Mr. FREED. I certainly do.

I think it is extremely objectionable, because on the average low-priced car it will mean an increase of approximately $50 in the buyer's price of the car, and we additionally think that the increase from 5 to 8 percent on essential parts, necessary parts to keep the man's car operating, is certainly most objectionable.

Senator BYRD. That brings in $56 million?

Mr. FREED. Yes.

Senator BYRD. And the increase on trucks, busses, and trailers—that has been increased from 5 to 8 percent.

Mr. FREED. Yes. We are astounded on that 60-percent increase there on a certainly highly essential and necessary product.

Senator BYRD. In other words, you think the gasoline tax can be better absorbed than the other excise taxes?

Mr. FREED. Yes; because it is spread out all over on so many more people.

Senator Byrd. And that is in proportion to the use of the car, also?

Mr. Fagen. Yes, sir; that is correct.

Depriving these large groups of the dependable cars and even necessary repair parts for their present vehicles through excessive taxation certainly will not add to Federal revenue, and at the same time will cut into the principal revenue of most, if not all, States.

It is gratifying to note that this Congress has been seeking ways and means to curtail Federal expenditures. We are, of course, interested and appreciative of your work in cutting nondefense spending.

We have also been impressed with the consideration this committee is giving to closing further loopholes in the present tax program. To us, the defense program is everybody's job. It is everybody's responsibility. To make it so, everyone should pay his share. To accomplish this, we would suggest that other sources of revenue be obtained from fields of business not now taxed.

Perhaps this committee will also find it expedient to give further consideration, as has been proposed by others appearing here, to some form of a general manufacturers' tax across the board. A tax of this type would prove, we feel, more equitable, fairer to everybody.

Such a tax might mean that it would be possible to reduce some of the more objectionable features of the proposed tax bill which you are considering. I refer specifically to the excess profits tax and the increase on personal income.

Senators, let us always remember that there is a grave danger in going beyond, in taxation, what our private enterprise system can stand. Taxes can—and already are threatening—to destroy all initiative to produce.

No selected segments of American industry nor of the Nation's population should at any time—in an emergency or otherwise—be called upon to bear an inequitable share of the excise, or any, tax burden.

That applies with equal force to the excess-profits tax. Inequities in the present excess-profits-tax law are working a serious hardship on thousands of businessmen, including a great many automobile dealers.

In addition, even greater inequities and increased hardship would result from certain changes in the House bill, if it should be enacted into law.

We are seriously concerned and want to take this opportunity to endorse the testimony of representative automobile dealers, who have already testified before this committee. They have explained to you from their own experience the great need for equalizing the excess-profits-tax burden and removing its inequities so that all businessmen will be treated fairly.

As they explained, comparatively new corporations, both those which commenced business during the base period years and others launched since then, and those that are attempting to expand are placed under a severe and unfair tax handicap by the present law and by provisions of the House bill.

We will sincerely appreciate any corrective measures which this committee recommends that will remove these inequities and assure that the intent of Congress is followed in applying the excess-profits tax.

To summarize briefly, we have shown in our presentation on proposed automotive excise taxes:

First, that the average car buyer under present excise tax rates is paying from 21 to 28 cents in total taxes out of every automobile dollar expended.

Second, that the proposed increases in automotive excise taxes would add substantially to the inequitable and terrific tax load already heaped by the Federal Government, States, and even many cities on a highly essential product upon which the average worker and farmer must depend.

Third, that current automotive tax rates discriminate unfairly against the car or truck buyer also in that they far exceed in rate and yield similar manufacturers' excises on comparable products, many of them less essential.

Fourth, that the present discrimination against the car buyer would be made far greater under the House bill in that it would add one-half billion dollars to automotive excise levies while reducing the manufacturers' excise tax yield from nonautomotive items by more than $300,000,000.

Finally, we urge this committee to make whatever tax program it adopts temporary by stipulating a definite expiration date. On behalf of the Nation's workers and farmers, we further urge this committee to find a more equitable tax than automotive excise taxes and to make sure that the already overburdened motorist is not saddled with additional excise taxes far out of proportion to this just share. We urge Congress to continue to curtail Government expenditures, to close loopholes in the present tax laws, and to protect the public's mobility by removing harsh and discriminatory taxes.

That concludes my statement.

Senator KERR. Mr. Chairman, the Senator was asking for the yield of the present gasoline tax, and this witness has given that information on this exhibit.

Mr. FREED. I think I have given it.

Senator KERR. You have it here?

Mr. FREED. Yes, sir.

Senator KERR. $525 million?

Mr. FREED. Yes, sir.

Thank you, sir, very much.

(The prepared statement of Mr. Freed is as follows:)

STATEMENT OF CHARLES C. FREED ON BEHALF OF THE NATIONAL AUTOMOBILE DEALERS ASSOCIATION

Mr. Chairman and members of the committee, my name is Charles C. Freed. I am a De Soto-Plymouth dealer in Salt Lake City, Utah. I appear at this hearing in my capacity as chairman of the public affairs committee of the National Automobile Dealers Association. The 34,000 members of our association employ approximately 800,000 people who serve 50,000,000 car and truck owners of this country. Our members sell more than 90 percent of the new cars and trucks sold.

We are close to the motorists of the Nation. We think it necessary to bring certain salient facts—which we have learned from them—to your attention today as this committee studies the complex problem of finding ways and means to finance an increased program of spending for national defense. We are grateful that you are hearing our testimony. We speak not so much for ourselves as small-business men, but for our customers—the 50,000,000 motorists who buy their cars and trucks from us—who will all be seriously affected if the proposed tax increases become law.

Automobile dealers in this country—as well as the majority of our customers—accept the fact that there is a pressing need for a continued expansion of our defense program. We know that it will cost a great deal of money.

Yet we do not feel that the motorist should be singled out to bear the greatest proportion of the increased tax burden.

Even under the present law there are obvious injustices to the motorist: under the proposed law even greater burdens are placed upon him.

In order to weigh the wisdom of imposing any increased taxes on automobiles, trucks, parts and accessories, and gasoline, we believe that it is necessary to ask ourselves these questions:

> First, has there been any change in the original and basic philosophy that excise taxes were to be imposed on luxuries and luxuries alone?
>
> Second, is the automobile essential—necessary to our way of living and to our economy?
>
> If it is, and if excise taxes are for luxuries alone, then automobiles should not be subjected to any excise tax, let alone an increased excise tax.

There can be no question of the essentiality of the automobile today. We believe you will be interested in some facts which recent surveys have disclosed. For example, 50,000,000 people—54 percent of the adult population—ride in an automobile or truck daily. For what reason? "Transportation to work" is what 70 percent of the people who ride in automobiles say is their purpose of owning and driving a car.

Let me give you additional facts. Of the mileage traveled, 55 percent is for the purpose of livelihood or shopping. Of the trips taken, 77 percent is for livelihood or shopping.

Our experience with customers bears out the finding of the surveys—that 95 percent of those who buy automobiles use them wholly or in large part as essential tools.

Transportation by passenger cars is so important to defense workers that one Senator in a recent debate on the Senate floor called the automobile a war necessity. Surveys conducted during World War II showed that at one aircraft plant, 92 percent of the employees used the automobile for transportation to and from work; at a naval ordnance plant 95 percent depended on the automobile for transportation.

Today, decentralization is encouraged as expedient to defense and health. Workers and plants are moving from many cities to localities which have no public transportation facilities. A look at the new census figures will show that in Pittsburgh, for example, the population growth has been only 2 percent in the city to 98 percent in the outlying sections. In Chicago and Detroit the ratio has been 35 percent growth for the city to 65 percent for their metropolitan areas.

Workers in many newly developed areas must rely solely on the passenger car for their transportation. For example, Senators, in Salt Lake City the mines and defense plants now being worked to capacity in this emergency can be reached only by automobile transportation.

When public transportation is at a standstill—as was recently proved in the 8-day strike in Washington and in the 59-day strike in Detroit—the people of this country were able to carry on their activities, necessary to living, through passenger automobiles. What happened in Washington and Detroit is a daily occurrence in many towns and cities in this country. There are 25,000 communities without any rail service whatsoever. There are 2,074 communities which are solely dependent on the automobile for transportation, as they have no public transportation at all.

The surveys showed further that the use of the automobile is not restricted to specific income groups, nor is it restricted to any occupational groups. No, gentlemen, the automobile is an essential product—essential to the cotton-mill worker in the South, the farmer in the Middle West, and the miner in the far West.

Before even considering what the proposed increases in automotive excises would mean to the average car buyer, let us look at the taxes which he already pays under present rates. First, let's view these taxes through the eyes of the average worker, the way he must look at them, in terms of the dollars and cents they add to his car's costs rather than as the astronomical figures which they yield to the Treasury. We will discuss these taxes from the standpoint of their yield later.

Let me remind you that the automobile differs from other products on which a Federal excise tax is imposed not only because of its essential usefulness but because the automobile represents a continuing source of tax revenue to Federal, State, and local governments.

It is the average worker who constitutes a majority of the Nation's car owners. According to statistics released by the Federal Reserve Board, he earns less than $77 a week before taxes. Yet when our average worker buys a new lower-priced car delivered in the automobile capital, Detroit, Mich., taxes constitute an estimated $475 of its total cost of $2,000. That, Senators, is 24 cents out of every car buyer's dollar, and that is the current tax without a single cent of the additional levies included in the House bill.

Moreover, when our average Detroit worker pays this tremendous tax bill in purchasing this essential product, he digs into his pocketbook for only the first 40 cents of Federal and State sales tax, levied on his initial 5 gallons of gasoline and 6 quarts of oil needed to power his new vehicle home.

Throughout the life of his car he must pay both Federal and State sales taxes on all future purchases of gasoline and oil. Whenever his car needs repairs involving replacement parts or new tires and tubes he will be paying additional excise taxes on these. Each year, of course, he will pay State gasoline taxes, license fees, and in many States sizable property taxes on his essential vehicle. Yes; the new car he purchases will be loaded with taxes not only when he buys it but also throughout its operation.

Even so, the Detroit worker buying a new car is confronted with less of a tax burden than the typical car buyer in many other States. The worker in Hartsville, S. C., for example, must pay, even under present tax rates, a total of $560.15 in taxes when he buys a $2,000 automobile. That is more than 28 cents out of every dollar expended on a new car by a South Carolina worker. And he, too, is only beginning to pay taxes on his car and its operation.

The $560.15 tax cost of his new car includes, of course, not only current excise taxes on the automobile, its tires, oil, gas, radio, and heater, but many State and some city levies and the proportionate part of manufacturer's and dealer's taxes. All of these taxes, directly or indirectly, come out of the car buyer's pockets.

For the purchase of a product as essential as the automobile, $560 is a terrific tax burden for the average worker who makes only $77 a week before taxes. But that is what he must pay under the present high automotive tax rates. Moreover, if the automotive and gasoline tax excise increases proposed in the House bill should become law, this same Hartsville worker would have to pay nearly $610 in taxes for the same car which currently retails at $2,000. Naturally the retail price would have to reflect the full amount of these tax increases.

These increases would result from raising the excise tax on automobiles from 7 to 10 percent and the tax on automotive parts and accessories from 5 to 8 percent, both of which are included in the House bill.

But, that is only part of the additional tax burden that would be placed on the average worker under the House bill. The 5 gallons of gasoline and the 6 quarts of oil required for our worker's first miles of driving and all subsequent purchases of gasoline and repair parts would be more costly due solely to increased tax levies. The tax on gasoline would be raised from the current Federal rate of 1½ cents a gallon to 2 cents a gallon and all replacement and accessory purchases in the future would carry an 8-percent excise levy instead of the current 5-percent tax. That's a 33⅓-percent increase in Federal gasoline tax and a 60-percent increase in the parts and accessories tax rates—terrific increases for an already heavily tax-burdened product so essential to the Nation's workers.

I submit, Senators, that present levies already impose an unjust and discriminatory burden on the car buyer, forcing him to bear far more than his just share of the tax load.

This is equally true of the truck buyer, who under the House bill would be confronted with a 70-percent increase in his already high Federal excise taxes—a boost from 5 percent to 8 percent. The same tax increase would apply likewise to the automotive repair parts and accessories he requires to keep his truck serving our country. Finally, he would also be affected by the proposed increase in the Federal gasoline taxes.

The automobile is without doubt the most heavily taxed essential possession of the average American today. Where Federal taxes stop, State and city taxes begin and the automobile and the truck are taxed again and again.

Moreover, many cities are now taking an additional tax bite out of the car owner's funds through the issuance of city licenses for which varying amounts are collected. Car owners in these cities are continually paying taxes to the Federal Government, to the State and to the city for the privilege of buying and driving a vehicle on which they must depend. The time has long since past when the impositon of even greater tax burdens on the motorist can be justified as fair and equitable.

During the current year, motor-vehicle owners will hand over to the States alone a record $3 billion for the ownership and use of their essential motor vehicles. This is almost as much as the States derived from all taxes just a decade ago.

Now, let's consider the estimated Federal revenue expected from the proposed changes in manufacturers' excises under both the present law and the House bill. Since Secretary of the Treasury Snyder's estimates of revenue to be realized under both the current and House bill rates are extremely conservative, we will use the estimates he presented to this committee on June 28.

Manufacturers' excise taxes are grouped in 11 product categories, with the present and House bill tax rates and the estimated revenue from each, under table 8, item III, in Secretary Snyder's presentation.

For your convenience a copy of that portion of the Secretary's presentation is attached to your copy of my testimony. It covers all the manufacturers' excises with which we are concerned and I want to call your attention to the fact that Secretary Snyder's own figures conclusively prove:

First, the current automotive tax rates discriminate unfairly against the car or truck buyer and owner in that they far exceed in both rate and yield excises levied on even the comparatively few other types of products, many of them less essential than cars and trucks, subjected to such a tax. This is shown by the fact that the five excises levied on cars and trucks and their operation—the present 1½-cent-a-gallon tax on gasoline, the 7-percent excise on automobiles, the 5-percent levy on automotive parts and accessories, the 5-percent levy on trucks and busses, and the 5-cents- and 9-cents-per-pound tax on tires and tubes—yield more than 82 percent of the total revenue obtained from current manufacturers' excise-tax levies. In dollars and cents, the automotive levies under the present law place an estimated $1,425,000,000 in the Treasury while the manufacturers' excises, applying to nonautomotive products, bring in a total of only $310,500,000.

Included in these nonautomotive products are the levies on electric, gas, and oil appliances, electrical energy, radios, and television sets, sporting goods, fountain pens and pencils, and photographic apparatus and films. Millions of other products are not subjected to 1 cent of excise tax.

Second, and this is particularly important, the House bill would make this present discrimination against the motorist and truck operator even far greater by increasing automotive excises so that they would yield an estimated $502,000,000 more annually than under current rates. At the same time, the House bill eliminates and reduces more levies on nonautomotive items than it increases. As a result of this reshuffling it actually lowers the over-all tax yield from nonautomotive items a total of $90,800,000. When this revenue loss in nonautomotive items is subtracted from substantial proposed increases in the automotive levies, the net gain to the Treasury will be $411,200,000. But the fact remains, Senators, that car and truck owners would be taxed an additional $502,000,000 to obtain the $411,200,000 gain.

I hasten to add that the automobile dealers of this country certainly do not object to the reduction in manufacturers' excises provided in the House bill on the nonautomotive products that have been taxed at varying rates. But, we do object, on behalf of the Nation's car buyers and owners, to increasing the obviously discriminatory excises against our customers. Maintaining automotive excises at current levies would simply continue the discriminatory taxing of two of our country's most essential and most tax-burdened products, the family car and the truck. Increasing these excises as provided in the House bill would compound an already grave injustice to the workingman and the farmer, in fact everyone who depends on his car or truck directly or indirectly for his livelihood.

The current automotive excises are already depriving many essential workers of dependable transportation. Increasing these excises would add materially to this number.

Moreover, past experience has proven that when taxes are increased, even though the increases are adopted as emergency and temporary measures, the tax increases long outlive the Congressmen who originally voted for them. This is a particularly serious matter when the product is also the main revenue producer for the States.

In addition, you gentlemen know even better than we do that when you tax a product and its use beyond the ability of the public to pay, you have also reached the point of diminishing returns from tax levies. Although wages are at high levels today, it is also true that many essential workers have fewer dollars for spending since both income tax rates and the prices of virtually all essential items, particularly food, have risen sharply. Depriving these large groups of the dependable cars and even necessary repair parts for their present vehicles through excessive taxation certainly will not add to Federal revenue, and at the same time will cut into the principal revenue of most, if not all, States.

The remarkable automotive development of this country in the past which accounts for the fact that with only 6 percent of the total world population today Americans own over 75 percent of the world's automobiles has been due to reasonable prices made possible by mass production. In our country the automobile has been placed within the reach of modest income groups. As I pointed out earlier, however, taxes have steadily been increased in recent years until today they take from 24 to 28 cents out of every automobile dollar and, in the case of gasoline, amount to about one-third of the retail price. If this dangerous trend is carried to excess, as the proposed tax increases would do, the purpose of automotive taxation will be defeated, production crippled, and the automobile returned to its early-day status as a product only for the wealthy. Let's take a lesson from Europe's unfortunate experience with excessive automotive and gasoline taxation and remove the burden of unjust, unreasonable automotive taxes from the Nation's workers and farmers.

It is gratifying to note that this Congress has been seeking ways and means to curtail Federal expenditures. We are specially interested and appreciative of your work in cutting nondefense spending.

We have also been impressed with the consideration this committee is giving to closing further loopholes in the present tax program. To us, the defense program is everybody's job. It is everybody's responsibility. To make it so, everyone should pay his share. To accomplish this, we would suggest that other sources of revenue be obtained from fields of business not now taxed.

Perhaps this committee will also find it expedient to give further consideration, as has been proposed by others appearing here, to some form of a general manufacturers' tax across the board. A tax of this type would prove, we feel, more equitable, fairer to everybody.

Such a tax might mean that it would be possible to reduce some of the more objectionable features of the proposed tax bill which you are considering. I refer specifically to the excess-profits tax and the increases on personal income.

Senators, let us always remember that there is a grave danger in going beyond, in taxation, what our private enterprise system can stand. Taxes can—and already are threatening to—destroy all initiative to produce.

No selected segments of American industry nor of the Nation's population should at any time—in an emergency or otherwise—be called upon to bear an inequitable share of the excise—or any—tax burden.

That applies with equal force to the excess-profits tax. Inequities in the present excess-profits tax law are working a serious hardship on thousands of businessmen, including many automobile dealers. In addition, even greater inequities and increased hardship would result from certain changes in the House bill, if it should be enacted into law. Naturally, as representatives of the Nation's enfranchised passenger car and truck dealers, we are seriously concerned and want to take this opportunity to endorse the testimony of representative automobile dealers, who have already testified before this committee. They have explained to you from their own experience the great need for equalizing the excess-profits-tax burden and removing its inequities so that all businessmen will be treated fairly.

As they explained, comparatively new corporations, both those which commenced business during the base period years and others launched since then, are placed under a severe and unfair tax handicap by the present law and by provisions of the House bill. We urgently recommend that you give the most careful consideration to these and other excess-profits tax inequities which representative member-dealers of our association presented to this committee. We will sincerely appreciate any corrective measures which this committee recommends that will remove these inequities and assure that the intent of Congress is followed in applying the excess-profits tax.

To summarize briefly, we have shown in our presentation on proposed automotive excise taxes:

First, that the average car buyer under present excise-tax rates is paying from 24 to 28 cents in taxes out of every automobile dollar expended.

Second, that the proposed increases in automotive excise taxes would add substantially to the inequitable and terrific tax load already heaped by the Federal Government, States, and even many cities on a highly essential product upon which the average worker and farmer must depend.

Third, that current automotive tax rates discriminate unfairly against the car or truck buyer also in that they far exceed in rate and yield similar manufacturers' excises on comparable products, many of them less essential.

Fourth, that the present discrimination against the car buyer would be made far greater under the House bill in that it would add one-half billion dollars to automotive excise levies while reducing the manufacturers' excise tax yield from nonautomotive items by more than $90,000,000.

Finally, we urge this committee to make whatever tax program it adopts temporary by stipulating a definite expiration date. On behalf of the Nation's workers and farmers, we further urge this committee to find a more equitable tax than automotive excises and to make sure that the already overburdened motorist is not saddled with additional excise taxes far out of proportion to his just share. We urge Congress to continue to curtail Government expenditures, to close loopholes in the present tax laws, and to protect the public's mobility by removing harsh and discriminatory taxes.

NADA breakdown of revenue changes under House bill

Manufacturers' excises	Tax base	Present rate	Rate under House bill	Estimated revenue [1]	
				Present law	Increase under House bill
Automotive excises:				*Millions*	*Millions*
Gasoline	Gallon	1½ cents	2 cents	$625.0	$208.8
Automobiles	Manufacturers price.	7 percent	10 percent [2]	415.0	174.2
Auto parts and accessories	do	5 percent	8 percent [3]	95.0	56.0
Trucks and busses	do	do	do	115.0	69.0
Tires and tubes	Pound	5 and 9 cents	No change [4]	175.0	−1.0
Increase					502.0
Nonautomotive excises:					
Electric, gas, and oil appliances.	Manufacturers price.	10 percent	No change [5]	75.0	17.9
Electrical energy	Charge	3⅓ percent	Repealed	103.0	−103.0
Fountain pens and pencils.	Manufacturers price.	No tax [6]	20 percent [6]	0	17.6
Radios and television sets.	do	10 percent	No change [7]	83.0	Negligible
Photographic apparatus and film.	do	25 and 15 percent	20 percent [8]	38.0	−22.0
Sporting goods	do	10 percent	15 percent [9]	[10] 11.5	[10] −1.3
Total, manufacturers excises.				1,735.5	411.2
Decrease					−90.8
Net increase					411.2

[1] Full year effect at estimated fiscal 1952 levels of income.
[2] Tax on house trailers retained at 7 percent of manufacturers' price.
[3] Credit or refund of tax granted for certain replacement parts if sold for use on farm equipment and tractors. Excludes from tax the fair market value of parts traded in for rebuilt parts.
[4] Exempts tires with internal wire fasteners and all-rubber tires if not more than 20 inches in diameter and 1¾ inches in cross section.
[5] Includes the following household types of appliances: Power lawn mowers, electric or gas clothes driers, and electric belt-driven fans, door chimes, dehumidifiers, dishwashers, floor polishers and waxers, food choppers and grinders, hedge trimmers, ice-cream freezers, mangles, motion-picture and slide projectors, pants pressers, and shavers. Exempts heating pads and includes electric sheets and spreads.
[6] Pens and pencils ornamented with precious metals are currently subject to the 20 percent retail tax on jewelry. Under the proposal they would continue to be taxed at the retail level.
[7] Exempts communication and navigation receivers of the type used in commercial, military, or marine installations when sold to the United States for its exclusive use.
[8] Exempts business type photographic apparatus and film.
[9] Exempts basketballs, boxing gloves and other boxing equipment, footballs and other football equipment, cricket balls and bats, fencing equipment, gymnasium equipment and apparatus, hockey equipment, lacrosse equipment, mass balls, push balls, skates, snow toboggans and sleds, soccer balls, soft balls and other softball equipment, track hurdles, vaulting equipment, volley balls and other volley ball equipment, water polo equipment, indoor baseballs and other indoor baseball equipment, and wrestling head harness.
[10] Excludes collections from the tax on fishing equipment.

Senator KERR. Our next witness is Mr. Charles Collins.

STATEMENT OF CHARLES COLLINS, GENERAL COUNSEL, AMERICAN AUTOMOBILE ASSOCIATION

Mr. COLLINS. Mr. Chairman, my name is Charles Collins, and I appear as general counsel for the American Automobile Association, which is a Nation-wide federation of automobile clubs with a membership of more than 3,300,000.

We have prepared a detailed statement in opposition to certain of the Treasury's excise-tax proposals, which I would like to offer for the record. In the next few minutes, however, I will present a summary of our position.

Because the American Automobile Association is a consumer organization, representing the interests of all passenger-car owners, we must oppose these two proposals of the Treasury Department:

1. To increase the Federal excise tax on gasoline from 1½ to 3 cents per gallon;

2. To increase the Federal excise tax on new automobiles from the present 7 to 20 percent.

We strongly believe that enactment of these two proposals would not be in the public interest, for three major reasons: First, they place an unduly heavy burden on the automobile which is an essential and not a luxury; second, they would visit hardship on low-income groups dependent on the passenger car for transportation; and third, they would constitute a further serious invasion of the motor vehicle tax field by the Federal Government.

The American Automobile Association has always been opposed to the principle of Federal automotive excise taxation and our representatives have made this position clear to the Congress over the years. However, we have also recognized the enormous revenue problems faced by the Congress and because of these problems we suspended our opposition during World War II.

However, the motoring public today is being taxed to the hilt. In 1949 alone, the total of all road-user taxes paid into Federal, State, and local governments amounted to almost $4 billion. As if that were not enough, the motorist would bring the total road-user tax bill to the staggering sum of $5,600,000,000, and this is shown by chart B attached to our statement.

Senator KERR. Can you tell the committee the total amount spent on roads by the States and local communities and the Federal Government?

Mr. COLLINS. I believe that—no, I cannot give you that figure. I can give you the Federal Government figure which shows about half a billion dollars, sir.

Senator KERR. Well, the total amount is less than this figure by a good deal.

Mr. COLLINS. That may be true, sir, but we take the position that the amount that the Federal Government spends for the roads, comes from the general tax funds and has no relationship to the gasoline tax.

Senator KERR. I understand, but just as a matter of, perhaps, my academic curiosity, I wondered whether you knew that.

Mr. COLLINS. I know the Federal figure, but I cannot give you the State figure.

Senator KERR. You do not have that?

Mr. COLLINS. No, sir; I do not have that. As a matter of fact, the motorist is being asked to carry more than 40 percent of the entire proposed excise increase of $3,035,000,000. And why? Because, as Secretary Snyder stated to the House Ways and Means Committee:

The taxes on tobacco, liquor, and gasoline are the most productive of our excises. These items provide the basis for substantial additional revenue.

Significantly, Mr. Snyder did not put the matter so bluntly when he appeared before this Senate committee, but he did propose the same measure of increase in these taxes and failed to justify them on any other grounds. The American Automobile Association cannot agree with the Treasury Department that just because a tax is already costing the motoring public dearly, there is any sound justification to increase it still further.

This is a good time to remember that during World War II, 77 percent of all automobile trips were for essential purposes and that 95 percent of all passenger cars were used wholly or partly for essential purposes. A study of 749 war plants showed that 75 percent of the employees went to and from work in automobiles. And at aircraft plants, navy yards, and tank factories, the figure was upward of 90 percent.

Now, gentlemen, the essentiality of the passenger car has greatly increased since then. In the past 5 years, car ownership has risen from 25,700,000 to 40,000,000. But more important, the great population growth of the last decade has been primarily in suburban areas. This, with the accompanying decentralization of industry, particularly defense industry, has created a condition of extreme dependence on passenger cars as a transportation medium. That is why we insist the passenger car cannot be classified as a nonessential item.

We are also convinced the burden of the excise would be borne by low-income groups; for, according to the Federal Reserve Board, 59 percent of all passenger cars are owned by families or individuals earning less than $4,000 annually, while only 9 percent are owned by those earning over $7,500, and there is a chart attached to our long statement which will give the committee those figures.

In evaluating the burden on the low-income groups, there is a circumstance which your committee would do well to keep in mind; because of the gap in production during the last war, the persons who normally would buy used cars, 5 to 8 years old, are being forced into the higher-priced used- and new-car market.

In addition, the increased gasoline tax would create a distinct hardship on this income group, since its burden would be imposed on motorists without any consideration for their ability to pay.

Further, we oppose the automotive excise program because it would all but preclude the raising of additional badly needed highway funds by the States, which now get about $3,000,000,000 in road-user taxes—as compared with the $2,600,000,000 which the Federal Government would get under the Treasury proposal.

These taxes would have the definite effect of raising the average American's cost of living, nor could it be otherwise when the tax on a new car is raised from $100 to $300 and the tax on gasoline is boosted 1½ cents per gallon.

Senator KERR. Would you wait right there a minute, please?

Mr. COLLINS. Yes, sir.

Senator KERR. The figures here would show that with this new tax total that they pay, the motorists pay to the States and Federal Government, would be $5.6 billion.

Mr. COLLINS. If the Senator will refer to our chart B on the long statement, it is the next to the last page, you will find that a chart——

Senator KERR. I did not misquote your statement, then, did I?

Mr. COLLINS. No, sir. You will find a chart which will set that forth, sir.

Senator KERR. Didn't you just set it forth in what you have just read?

Mr. COLLINS. I think so; yes, sir.

Senator KERR. What I was wondering about was the figure on page 2 where you said that——

Senator TAFT. $5.6 billion.

Senator MARTIN. Mr. Chairman, may I ask Mr. Collins—you state the boost in gasoline is 1½ cents. Do you have any idea what the boost is in the average on the State level?

Mr. COLLINS. No; I do not believe I can answer that, either, sir.

Senator KERR. The present State level is given in that exhibit of Mr. Freed's statement, Senator—wait a minute, it is right here in this pamphlet of this committee.

Senator MARTIN. What I wanted to get was the increase by the States, we will say, in the last couple of years, because a good many States have also increased the gasoline tax.

Mr. COLLINS. Well, Senator, may I be permitted to furnish that, too? Let me see if I understand you correctly. You would like to know the actual amount of increase of the gasoline tax in the various States last——

Senator MARTIN. Maybe we have it here. I guess we do have it here, so you need not bother about it. We have a table showing that.

Mr. COLLINS. Thank you, sir.

Senator MARTIN. Yes; thank you.

Mr. COLLINS. Is there anything else, Senator Kerr?

Senator KERR. No, sir.

Mr. COLLINS. May I conclude then?

Mr. Chairman, in conclusion, the American Automobile Association reiterates its policy of opposition to Federal automotive excise taxes as a method of raising revenue in normal times. This source of revenue should be left to the States.

2. The association wishes to compliment the House Ways and Means Committee for its refusal to go along with the proposals of the Treasury Department, but it is our feeling that even the amount of increase approved by the House committee is unwarranted under existing conditions, especially in view of the latest figures on tax returns, which show that the Government is in a much better position than was anticipated when these proposals were first submitted by the Treasury.

3. In conclusion, I wish to state that the association strongly opposes any increase whatever in present rates of Federal automotive taxes.

Senator BYRD. Thank you, Mr. Collins.

(The prepared paper of Mr. Collins is as follows:)

STATEMENT BY CHARLES C. COLLINS, GENERAL COUNSEL, AMERICAN AUTOMOBILE ASSOCIATION

Mr. Chairman, I should first like to express our very real appreciation for the courtesy you have shown us in arranging this opportunity to appear before your honorable committee to discuss certain aspects of the Treasury's proposal relating to the Federal excise-tax schedule.

The American Automobile Association is a federation of motor clubs having at the present time a total of over 3,300,000 members. It is our earnest endeavor at all times to represent the interests not only of our own membership, but the interests of all passenger-car owners. Because we are essentially a consumer organization, our interest is primarily in the people who must pay these taxes.

The American Automobile Association is vitally interested in two phases of the Treasury's excise-tax proposals: First, the proposed increase in the Federal excise tax on gasoline from 1½ cents per gallon to 3 cents per gallon; and, second, the proposed increase in the Federal excise tax on new automobiles from the present 7 percent to 20 percent.

We consider these proposals to be against public interest for three major reasons: (1) They place an unduly heavy burden on the automobile, which is an essential and not a luxury; (2) they would visit hardship on low-income groups dependent on the passenger car for transportation; and (3) they would constitute a further serious invasion of the motor-vehicle-tax field by the Federal Government.

Federal automotive excise taxes are not wartime taxes. They have been imposed since 1932. The present levels were established as a part of revenue measures enacted in 1940 and 1941 to finance the all-out national war effort. They have remained unchanged since that time, even though the war ended in 1945.

The position of the American Automobile Association is a historical one in opposition to Federal automotive excise taxes. Representatives of our organization have appeared before committees of the Congress on a number of occasions over a period of many years and presented statements setting forth the policies of the American Automobile Association.

We have tried to take into consideration the enormous revenue problems faced by the Congress. This is evidenced, I believe, by the fact that, when it was necessary on account of World War II to increase automotive excise taxes, we voiced no opposition. However, today the situation is different.

At the present time, Federal automotive tax rates are as follows: Passenger automobiles, 7 percent of manufacturers' price; trucks and busses, 5 percent of manufacturers' price; parts and accessories, 5 percent of manufacturers' price; gasoline, 1½ cents per gallon; lubricating oils, 6 cents per gallon; tires, 5 cents per pound; and tubes, 9 cents per pound.

Collections from these various levies in 1949 amounted to: Automobiles, $448,-100,000; trucks and busses, $111,700,000; parts and accessories, $93,300,000; gasoline, $469,500,000; oil, $39,100,000; and tires and tubes, $142,800,000; for a total of $1,304,500,000 (see chart A).

EFFECT OF THE TREASURY'S PROPOSALS

One can only conclude that the Treasury Department has singled out the motorist as target A in its new excise-tax proposals. The entire schedule of proposed excise increases would bring in an estimated $3,035,000,000 in additional revenue and the $1,265,000,000 share assessed vehicle owners would represent more than 40 percent of the entire increase.

The fact that many other items in the excise-tax structure remain unchanged, some of them clearly less essential than the automobile, is in itself the strongest possible evidence of discrimination against the motorist.

Secretary Snyder stated to the House Ways and Means Committee, "The taxes on tobacco, liquor, and gasoline are the most productive of our excises. These items provide the basis for substantial additional revenue." Significantly, Mr. Snyder did not put the matter so bluntly when he appeared before this Senate committee, but he did propose the same measure of increase in these taxes and failed to justify them on any other grounds. The American Automobile Association cannot agree with the Treasury Department that just because a tax is already costing the motoring public dearly, there is any sound justification to increase it still further.

The proposals also appear to overlook the fact that motor-vehicle owners already are heavily taxed by other units of Government. In 1949, the total of all road-user taxes paid into Federal, State, and local governments, plus the amounts paid into toll-road turnstiles, amounted to almost $4 billion. We have estimated that the new schedule if adopted would bring the total road-users tax bill, Federal, State, and local, to the staggering sum of $5,600,000,000. The picture appears in chart B.

ESSENTIALITY OF THE PASSENGER CAR IS DISREGARDED

These proposals ignore the fact that transportation, as provided by the private passenger car, has reached a level of essentiality to the large majority of American families approaching that of such well-recognized needs as food, housing, and clothing. Discriminatory taxation is always undesirable, but when it affects the necessities of life, it strikes at the very foundation of our way of living.

The suggested program ignores the fact that the weight of the tax would fall most heavily on lower-income groups who are dependent on the passenger car and who can ill afford a further increase in their transportation or any other costs.

From the standpoint of both current and future Federal taxation, the most disturbing feature of the new tax proposals is that the Treasury Department apparently considers the private passenger car as a luxury or a nonessential which, along with tobacco and liquor, can be heavily taxed as a continuing source of Government revenue. It is our considered opinion, and we hope your committee will agree with us, that this thinking is not only unrealistic, but is fraught with the greatest danger to the future of highway transportation in the United States.

Aside from the long-range viewpoint, this line of thinking could very well defeat the mobilization effort itself because the passenger car is an essential tool in this Nation's productive effort.

In addition, it is all too similar to the thinking that so nearly caused disaster during World War II. Typical was the viewpoint of the then Administrator of the Office of Price Administration, who took the position that 20,000,000 of the Nation's then 27,000,000 passenger cars could well go off the road. It eventually developed that 25,400,000 passenger cars had to be kept in operation to prevent a transportation breakdown and the resultant collapse of the war effort. The Administrator of OPA, at a later date, was frank enough to state to a Senate committee:

"The reliance on the automobile or rubber-borne transportation is considerably more than even the loftiest statement made by the industries connected with the making of automobiles and tires, and of the various associations like the great AAA and their State organizations. In other words, what might seem to have been a matter of trade booming as to the importance of automobiles by interested trade associations or business was a considerable understatement, as we have come to know."

This is a good time to remember that during World War II an automobile manufacturers association survey revealed that 55 percent of passenger-car mileage was for essential purposes; 77 percent of the trips were for essential purposes and 95 percent of all passenger cars were used partly or wholly for essential purposes. War workers were particularly dependent on passenger cars; a study of 749 war plants revealed that 75 percent of the employees went to and from work in automobiles. In aircraft plants, navy yards, and tank factories upward of 90 percent of all employees drove to work.

Now, gentlemen, the essentiality of the private passenger car has very greatly increased since World War II. Car ownership has risen from 25,700,000 to 40,000,000. Even in cities, three-fourths of all vehicular travel is done by private automobiles. There are 2,074 United States cities having no public transit systems. Even where there are such facilities, they are operating near capacity.

There has been a tremendous growth in population during the past decade: from 130,000,000 to 150,000,000. Most of this growth has taken place in suburban areas. While population in central cities increased 13 percent during the 10-year period, population in the suburbs soared 35 percent. This migration of families to the suburbs together with decentralization of industry, particularly defense industry, has greatly increased dependence on passenger cars as a vital transportation medium.

HARDSHIP ON LOW-INCOME FAMILIES

These tax proposals appear to be based on the premise that the weight of these taxes would rest largely on the upper income groups. As a matter of fact, a recent study by the Federal Reserve Board showed that 59 percent of the cars in operation were owned by families or individuals ("spending units" in the Board's terminology) earning less than $4,000 a year. Only 9 percent of the cars were found to be owned by units making $7,500 and over. Chart C attached presents a breakdown of car ownership by income groups.

The increased tax on new cars would impose a more-than-normal hardship on the lower-income groups at the present time. The suspension of passenger-car production during the 4-year period beginning in 1942 caused a gap in the supply of good and moderately priced used cars on which industrial workers, farmers, and others in need of economical transportation generally depend for their essential transportation needs. The continued strong demand for new cars during the past 2 years indicates that, because of the lack of used cars in the 5- to 8-year-age bracket, many buyers normally purchasing used cars have been virtually forced into the new car market. The increased gasoline tax would be highly regressive in that its burden would be distributed among all income groups and related to the amount of necessary driving done rather than to ability to pay.

EFFECT ON STATE HIGHWAY FINANCES

The states now levy road user taxes in the amount of about $2,100,000,000 annually. The proposed increase in Federal automotive excise tax would bring the Federal levy on the highway user to a total of $2,600,000,000 annually. This represents an invasion of the States' principal source of highway funds so substantial as to all but preclude the raising of additional badly needed highway funds at the State level.

EFFECT ON COST OF LIVING

The Treasury Department, in its proposal, said the suggested taxes "will not add much to business costs or push up the cost of living materially."

The facts are that Federal taxes on both gasoline and passenger cars are passed on to the consumer. The Federal tax on an automobile cannot be raised from about $100 to $300 without exerting pressure on the sales price, nor can it be assumed that a 1½-cent increase in the tax on gasoline will be absorbed by anyone except the ultimate purchaser. Transportation already is a major item in the average family's budget and the Treasury's proposals would unquestionably result in greatly increased costs of car ownership and operation.

CONCLUSION

1. The American Automobile Association reiterates its policy of opposition to the Federal automotive excise taxes as a method of raising revenue, except in most unusual circumstances. This source of revenue should be left to the States.

2. The association wishes to compliment the House Ways and Means Committee for its refusal to go along with the proposals of the Treasury Department, but it is our feeling that even the amount of increase approved by the House committee is unwarranted under existing conditions, especially in view of the latest figures on tax returns, which show that the Government is in a much better position than was anticipated when these proposals were first submitted by the Treasury.

3. The association is strongly opposed to any increase whatever in the present rates of Federal automotive taxes because (a) a disproportionate share of the increased excise burden would be placed on the private passenger car which is an indispensable necessity and not a luxury; (b) hardship would be visited on car owners in the lower-income groups; (c) State highway financing programs would be disrupted; (d) the effect would be to further increase the cost of living.

Senator BYRD. Mr. Barit.

STATEMENT OF A. E. BARIT, CHAIRMAN, TAXATION COMMITTEE, AUTOMOBILE MANUFACTURERS ASSOCIATION, ACCOMPANIED BY HARLAN V. HADLEY, SECRETARY, AUTOMOBILE MANUFACTURERS ASSOCIATION

Mr. BARIT. Mr. Chairman, and members of the committee, my name is A. Edward Barit.

I am president of the Hudson Motor Car Co. I appear here today before you in my capacity as chairman of the taxation committee of the Automobile Manufacturers Association.

We have filed a brief with you, and in order to conserve your time, I plan to read only parts of it, and I beg your indulgence long enough to give you a little of the thinking which led up to the conclusions that are contained in this brief.

Senator BYRD. Yes, sir; go right ahead.

Mr. BARIT. With your permission, Mr. Chairman, I would like to finish my testimony before I am questioned.

Senator BYRD. Very good.

Mr. BARIT. The automotive industry is profoundly disturbed by some of the glaring inequities of the pending revenue bill as adopted by the House.

It is particularly disturbed because that bill widens instead of equalizing existing excise taxation discriminations among goods which compete for the consumers' favor.

Our industry—and I am sure you know we have 912,000 employees and 45,000 dealers—is perfectly willing to pay its fair share of any taxes that may be necessary, after nondefense and nonessential Government expenditures are cut to minimum levels to meet the higher governmental costs resulting from the defense effort.

Our "fair share" it seems to us in the automobile industry, should be defined as the result of the application of a uniform excise tax rate to all manufactured end products except food and shelter.

Further, we think that such taxes should be levied only for the period of the emergency, and that they should carry an automatic termination clause.

As producers of automobiles and as American citizens we would fail in our duty if we did not call your attention to the tremendous burden of taxation already imposed upon automotive products at the present time, with the excise tax rate on passenger cars 7 percent, the total tax burden amounts to 29 percent of the total price of the automobile.

Taxes of all kinds—Federal, State, and local—amount to $584 of the $2,000 total price of a typical new lower-priced car.

Discriminatory taxes limit free choice. In view of the tremendous burden of over-all taxation now being carried by our people, the matter of public preference as to method of taxation becomes more than usually important.

Consequently, we desire to register our belief that the majority of the people would prefer the general excise tax—except on foods and shelter—to the present method of applying excise taxes only to a selected list of articles.

The reason for our belief is that the general excise tax plan would tend to minimize the tax on each individual article, and to thus avoid a prohibitively high tax on any particular item.

Few things could irritate a taxpayer more than to learn that the very thing he wants to purchase carries a disproportionate excise levy—perhaps beyond his ability to pay. We are sure he would much rather we spread the total excise take over all articles so that it would not put any particular article beyond his reach.

He could then choose between the various articles he might like to buy.

As you probably know, there are 40 million people in this country who are interested in what happens to the price of automobiles; there are that many cars now registered.

If I may give you a little of the thinking back of that, we know that there is opposition in some congressional circles to the general tax plan, and we feel that if the original concept of that plan was reviewed in the light of events which have occurred since that day, it would result in a change of attitude, we know that the original attitude toward the plan was prompted by a desire to help low-income people and to, perhaps, make the over-all tax bill more palatable to the masses.

But, gentlemen, think of the tremendous changes that have occurred since that day. A great many of the very people whom you sought to protect are today feeling seriously the pinch of excise taxes.

Think of the fact that the distribution of automobiles has broadened tremendously. Today you find automobile owners in practically every income bracket, and I dare say that in the lower-income brackets you will find a larger percentage of the people are absolutely dependent upon the private car for transportation to their jobs.

Gentlemen, it has been the policy of the Nation to foster a high standard of living, to encourage volume production; as a result, the people in practically all walks of life aspire to the ownership of the automobile, and of the things which carry heavy excise taxes today.

Those people who cannot afford those articles are taken care of in the concept of the general excise tax plan by the elimination of food and shelter, which certainly represents the great majority of their purchases.

Now, another thing, it seems to me, to consider is the fact that the excise tax, which used to be very small in amount, has grown to very large proportions.

I wonder if you realize that if the 10-percent tax contained in the House bill becomes law, it will mean that the prospective purchaser of an automobile will be required to pay, if he wants a car in the lowest-price field, about $140 in excise tax alone, and in the medium-priced class, $225, and, of course, in addition to that, there are numerous, innumerable, taxes that find their way into the price of an automobile, and the total of those taxes under the 7-percent tax for excise represents about 20 percent of the total purchase price of the average car.

Gentlemen, when you touch the selling price of an automobile, you touch the pocketbook of a great percentage of the people, and when you touch the selling price of trucks and refrigerators and the few other articles that today carry excise taxes, you touch the pocketbook of many more—I dare say, a great majority of the people.

Now, you can picture the dissatisfaction that enters the mind of the prospective purchaser of a car when he finds that he must pay such a disproportionate share of the excise tax when he attempts to purchase what to him is a necessity.

His dissatisfaction is very little relieved if you tell him there is no tax on a great many other things that he does not care to buy.

I am sure, under those circumstances, he would vote very readily for a plan which would tax a great many articles a little, rather than a few popular articles a lot.

I thought I would read a little history on the subject, and I consulted, among other things, the Encyclopedia Britannica, which work, as you know, attempts to record the human reactions to this and that through the ages.

Senator KERR. You will not attempt to quote it verbatim for the record?

Mr. BARIT. These pages are very short, Senator, and I think they are enlightening and I think might be of interest to the committee, if I have your permission to read them.

Listen to what they say under "Excise taxes," and now I quote:

> This form of taxation interferes so directly with the industry and liberty of the subject that it has seldom been introduced save in some prime financial exigency and has seldom been borne, even after long usage, with less than the ordinary impatience of taxation.

Now, listen to this from the pen of an eminent economist, Dr. A. T. Hadley, who, as you know, was president of Yale University at the turn of the century.

This is very brief:

> Excises or internal-revenue charges, when fixed at small amounts are often hardly distinguishable from fees. When they are large in amount they constitute a tax on the consumers of the articles so obvious as to be quite unpopular.

Now, gentlemen, it would appear from that that excise taxes through the years have been more unpopular than other types of taxes, and if you can get anything from this history, it would appear to be the part of wisdom to keep the excise tax on any particular articles as low as possible.

Now, to resume the brief: Automobiles are an essential in war as in peace.

This tax burden becomes very important when you consider the essentiality of motor vehicles. Surveys repeatedly have shown that more than half of all passenger-car mileage is necessary, with 77 percent of all trips connected with earning a living or other economic activity, and with 95 percent of the Nation's 40,000,000 passenger cars used wholly or partly for essential purposes.

This is one small facet of the story of the essentiality of the passenger car, contained in the document, Automobiles and National Defense, which we offer as part of our brief.

Gentlemen, I might say there parenthetically that we have gathered together a great deal of information, some of it in chart form, that I think would interest you. They are contained in the booklets which are attached to our brief.

We give such interesting information as the essentiality of the car to the individual by States. We think you will find them interesting and if there is any other datum that you desire, we should be happy to see that it is at your disposal.

Few persons realize that motortrucks carry three times as much freight as the combined total hauled by all other forms of transportation.

This is one of the interesting facts contained in the document, Motor Trucks and National Defense, which we offer as part of our brief.

Thus, these taxes on automotive products represent a levy on instrumentalities essential to the economic life of the people, clearly essential to the economy in war as well as in peace.

Further, in the case of the tax on replacement parts, which the House bill would raise to 8 percent from 5 percent, the excise is a tax on misfortune. Today's average car is nearly 8 years old, against a prewar average of 5.5 years.

When you remember that most old cars are owned by people in lower income brackets, the inequity of this tax becomes apparent.

I might add, again parenthetically, another point to remember in this connection is that the current restriction being placed on automobile buying of cars will have again to be used beyond the average age. It will mean more frequent repair bills, more emergency repairs, and this tax will make it even more difficult for those who have no other way of helping themselves.

The congressional committees have agreed from time to time that automobile taxes are unfair. They recognize them as temporary or emergency measures, and agree that they should be eliminated as early as possible.

In our appearance earlier this year before the House Ways and Means Committee, no mention was made of the effect on the Nation's 8,600,000 truck owners of the proposed increases in automotive excises for the reason that no proposal existed at that time for increasing the Federal tax on trucks.

In view of the intent of the House to increase truck excise taxes by 60 percent, or to 8 percent from 5 percent, we believe your committee should consider the following facts:

1. Recognizing that trucks are essential in the defense production, the Defense Production Administration has authorized almost maximum truck production.

Senator KERR. I wonder if you would be offended if I interrupted you, although I recognize you asked not to be interrupted until you concluded?

Mr. BARIT. Senator, I would be very happy to have you do so.

Senator KERR. I read on page 8 where you give the number of passenger cars at 40 million.

Mr. BARIT. Yes, sir.

Senator KERR. As of what date was that?

Mr. BARIT. As of the end of 1950. There were that many registered; and trucks, 8,000,000.

Senator KERR. 8,000,000 trucks?

Mr. BARIT. Yes, sir.

Senator KERR. Then my "guesstimate" of a while ago of the number of passenger cars and trucks as of today being in excess of 50 million would not be too far off?

Mr. BARIT. It was quite correct.

Senator KERR. Thank you, sir.

The 40 million was accurate but for passenger cars.

Mr. BARIT. For passenger cars; yes, sir.

Senator KERR. It doesn't include trucks?

Mr. BARIT. And since then that has probably been increased. That was at the end of 1950.

Senator KERR. Haven't there been about 3 million units manufactured since then?

Mr. BARIT. A little more than that.

Senator KERR. A little more than that?

Mr. BARIT. Yes, sir.

(2) As pointed out in the booklet, Motor Trucks and National Defense, appended, the Nation's trucking services are essentially unlike the services other freight haulers render, and these services are necessary, not only to defense production, but also to the efficient operation of all other freight carriers.

(3) Most trucks are owned by individuals, or by small-business firms, so that discriminatory taxes on trucks are a direct burden on small operators.

Senator KERR. May I interrupt right there?

This figure does not include the tractors?

Mr. BARIT. No, sir; it does not.

Senator KERR. Can you tell us approximately what that is, or is that further?

Mr. BARIT. I think you may find that in the charts in that booklet. Can you tell me, Mr. Hadley?

Mr. HADLEY. Our figures do not show the tractors.

Senator KERR. Do you have an estimate?

Mr. HADLEY. No, sir; we do not.

Mr. BARIT. We could get that, could we not?

Mr. HADLEY. By contacting the tractor industry, sir.

Mr. BARIT. If you would like to have us do that, we will do it.

Senator KERR. Yes, sir.

Mr. BARIT. Will you do that, Mr. Hadley?

Mr. HADLEY. Yes, sir.

(The information referred to follows:)

AUTOMOBILE MANUFACTURERS ASSOCIATION,
Washington, D. C., *August 1, 1951.*

Hon. ROBERT S. KERR,
United States Senate, Washington, D. C.

DEAR SENATOR KERR: Yesterday during Mr. Barit's testimony before the Senate Finance Committee, you asked him to obtain the figures on the number of tractors in use in the United States.

A careful check of pertinent sources inside and outside Government discloses that there are no reliable statistics on this product.

However, one source in the Department of Agriculture unofficially estimates that there are roughly 5,000,000 tractors in use in the United States, as of January 1, last. This figure was represented to us as being as accurate as could be obtained. I hope this answer is satisfactory.

Sincerely yours,

HARLAN V. HADLEY,
Secretary, Committee on Taxation.

Mr. BARIT. Farmers, for example, are the Nation's largest class of truck owners; they have more than doubled their use of trucks in the last decade in their production and marketing operations. Approximately 3 million trucks are used by farmers.

(4) No other vehicle for freight transportation, and no other tool of production or marketing, bears any Federal excise tax. Since the truck must be classed with farm tractors, industrial machine tools, and similar tools necessary to farm and factory production for military and vital civilian purposes, a special tax on trucks appears justified only under a general manufacturers' excise levy for emergency revenue.

In previous appearances before, and statements filed with, the Senate and House committees engaged in writing tax legislation, we have repeatedly opposed the existing structure of automotive excise taxes, for the reasons that:

1. They impede commerce by increasing the cost of moving goods and people;
2. They are increasing threats to production and employment in the motor-vehicle industry and in supplying industries;
3. They are taxes that affect lower-income groups relatively more than other income groups;
4. They are discriminatory, since they are not imposed on competitive forms of transportation, on other goods which compete with motor vehicle sales, or on other productive equipment;
5. They are unfair, as they place a relatively greater tax on farmers, small-town people, and others who necessarily depend mainly or solely on automotive transportation;
6. They are an extreme example of multiple taxation.

By ending these taxes with the end of the emergency, purchasing power would be increased, demand for consumer goods would be increased, production and employment would be increased and a solid base would be provided for a strong postemergency economy.

The automobile industry is particularly conscious of its actual and potential impact on commerce and industry generally, as one of every seven persons normally employed in the United States earns his living from the production, distribution, service, or use of the passenger car, truck, and bus.

It seems clear that excessive taxation on passenger cars and trucks, busses, replacement parts, tires and tubes, gasoline, and oil not only weakens the mobility of the people, which is one of the basic advantages we have over most other of the world's people, but it also tends to defeat its purpose.

This is because it tends to limit the use of an instrumentality which in itself generates activities which create income and provide wider sources for tax revenue.

Despite our willingness to support a general manufacturers' excise tax for the emergency period, the automotive industry would like to go on record to make it clear that it continues to oppose the discriminations and inequities of the present excise taxes.

The arguments we have advanced for repeal of existing emergency and temporary taxes on cars and trucks, on repair parts and accessories, on tires and tubes, and on gasoline and oil, have never been successfully challenged. We believe they are beyond challenge.

Now, gentlemen, in conclusion——

Senator MARTIN. Mr. Chairman, I just want to suggest that we have other witnesses coming, and while this is all very interesting, it is kind of unfair to men who have come a long distance, and we are getting limited as to time.

Mr. BARIT. If I may have 2 minutes more, I will be through.

Senator BYRD. All right.

Mr. BARIT. May I remind you that our people have been asked, as the people of the country have been asked, to accept sacrifices with a view to stemming inflationary tendencies, and I believe that people are apt to take their cue from you.

If through raising excise taxes you show not too much concern about rising selling prices, we can hardly expect the maximum effort on the part of people who supply material and labor that go into manufactured articles to accept sacrifices in the interests of selling prices.

Senator BYRD. Mr. Barit, I would like to ask you this question: You have got three increases in excise taxes here, in addition to the tax on gasoline. One increases the tax from 7 to 10 percent on passenger cars and motorcycles, and another is an increase in the tax on trucks from 5 to 8 percent, and another is an increase in the tax of automotive parts and accessories from 5 to 8 percent.

Which of those would you say was the most objectionable?

Mr. BARIT. Well, Senator, it is difficult to distinguish between them. They all represent an extreme burden and, I think, if I may suggest, with all humility, that that example illustrates as well as anything can, the extremely difficult situation that we have gotten into in this country from the standpoint of taxes.

There is almost no phase of it that you can touch but that it demonstrates very forcibly the extreme burden of taxation that our people are laboring with.

Senator BYRD. Of course, we are scraping the bottom of the barrel right now in all these taxes, we realize that.

Mr. BARIT. Senator, we did that sometime back, and yet we have——

Senator BYRD. This is scraping it a little further, we are getting into the bone and muscle of the business, we know that.

Mr. BARIT. Yes; and I think, as the result of that, we are bringing about a very serious situation.

I know a question has been raised here this morning about the impact on the lower-income group concerning this general excise-tax plan.

But, gentlemen, I think that it would be even more unfair to the people in the lower-income groups if through unwise taxation we weakened the economy and made it difficult for them to get jobs.

Senator BYRD. You would regard any of these three as being equally objectionable?

Mr. BARIT. I think they are all about objectionable——

Senator BYRD. In the same class, but are they more objectionable or less objectionable than the increase in the gasoline tax?

Mr. BARIT. Well, there again we have an extraordinarily high levy on gasoline and oil, and I feel that by going to a general levy we can perhaps relieve the situation in all of those cases, have——

Senator BYRD. A general levy is very difficult under this bill, as you know. It would take a long investigation, a long study, if we went into a general levy, and we would have to change drastically this present bill, that is, this excise part of it, I imagine.

Mr. BARIT. I am sorry to hear that. I was not aware of it.

Senator BYRD. Well, that is just my personal opinion. I may be wrong about it, but a general levy would certainly drastically change the whole tax structure of this bill as applied to excise taxes. It was not adopted by the House, and, therefore, this committee would have to go into long hearings on it.

Mr. BARIT. Of course, you may feel that through my ignorance I speak freely, but I feel so strongly about this particular situation with regard to these taxes that I would say that a delay in the tax bill would be warranted if it would result in a lessening of the levies on these individual items that we speak of.

Senator KERR. I would like to ask Mr. Stam: Was that considered by the House, the general levy?

Mr. STAM. No; the House did not go into the general levy.

Senator BYRD. What would be the revenue, Mr. Stam, from a general levy of 5-percent excise taxes?

Senator KERR. Manufacturers' excise tax, other than food, Mr. Chairman?

Senator BYRD. Other than food, what would be the exemption?

Mr. STAM. Of course, I say it would all depend on what exemptions you had.

Senator BYRD. Take it completely first, without any exemptions.

Senator MARTIN. Take it straight across the board.

Mr. STAM. Well, I do not think that you would get, for instance, on a 10 percent levy, much over 6 or 7 billion dollars out of it. I mean that is just a rough guess, the way things are running.

Senator BYRD. The plan as I understand it, is to limit it to 5 percent; in other words, it would be a reduction in certain excise taxes, is that correct?

Mr. BARIT. Yes; I visualize that.

Senator BYRD. What would be the effect to the Treasury, Mr. Stam, if we had a 5 percent over-the-board, across-the-board excise tax, and reduced those excise taxes that are above 5 percent? That is what you are discussing, is it not?

Mr. BARIT. Yes, seeking a reduction in the present levies.

Senator BYRD. To make them all 5 percent.

Mr. BARIT. I did not hit upon the exact figure, Senator, I was hopeful that it might result in even a greater reduction than that, but if it is 5 percent, it would help that much.

Senaor BYRD. Could you give the committee some rough idea, if that plan should be adopted, what would be the effect of the plan, Mr. Stam?

Mr. STAM. I do not believe I could give it to you right now, but it certainly would be some reduction in that figure I gave you. Of course, I might say on this point that Canada, for example, levies a general sales tax and, in addition to that, they have selective excise taxes at much higher rates on certain articles, but those articles that are subject to the excise-tax rate in Canada, also bear the sales tax so that when you are figuring the total tax burden on those particular articles, you have to add to your selective excise tax your general sales-tax rate, so that some of those articles are taxed pretty heavily.

Mr. BARIT. May I point out, Mr. Stam, that the Canadian situation is hardly analagous to our own, as we are a producing nation to a much greater extent than they are, and we have something of extrordinary importance to protect.

We have to protect the jobs of people, and unless we can handle our taxation so that the people can afford to buy the articles we produce, it is going to mean a reduction in production; that is, we have to protect trade to a much greater extent than Canada does.

Trade, as you know, is a very sensitive element of prosperity. It is easily discouraged. You can discourage it by overburdening selling prices, and I think, if I may be permitted to say so, that is the one "must" before us today. We must protect the economy of this Nation because we have a tremendous program. It requires enormous sums of money.

I know of no way, no safe way, of getting that money except through the creation of new wealth, and if we do not protect that, and go ahead willy-nilly, and do not recognize the importance of productivity. I see no hope for us, gentlemen.

I think there is another point to remember in that connection, and that is, that even though people are willing to buy—let us assume that we do have lower taxes, and that people are willing to buy—you still cannot have production, you cannot have that creation of wealth, unless the producers who are required to establish the productive facilities see a reasonable business risk in so doing.

Now, I think that is the nub of our problem, I think there is a wealth of meaning in that, and something that we should study, so that I think our situation is far different from that of Canada.

I do not know of any country that is quite analagous to the situation in this country.

Senator BYRD. Let me ask you about this excise tax now. As I understand it, what you mean by a general excise tax is a manufacturers' sales tax equivalent to that. In other words, it is a tax on a product to be sold at the manufacturing level. It is not a sales tax, a retail sales tax, in that sense.

Mr. BARIT. No; it is a general manufacturers' tax levy, eliminating food and shelter for the purpose of protecting the very low income people.

Senator BYRD. You would eliminate all building materials from it?

Mr. BARIT. Not necessarily. I was thinking of rents more than I was——

Senator BYRD. That is shelter.

Mr. BARIT. Building materials.

Senator KERR. The manufacturers' excise tax would not cover rents. I think if you exclude——

Mr. BARIT. I mentioned——

Senator KERR. I think if you excluded food, you would accomplish what you had in mind.

Mr. BARIT. Yes. I mentioned shelter, Senator, more to point out that the two things that represent the great bulk of the purchases of the very low income people, whom we should always keep in mind, are food and shelter.

Senator KERR. Food and rent.

Mr. BARIT. Yes, food and rent. And if they are taken care of——

Senator BYRD. You mean by that there would not be an excise tax on those products that went into building?

Senator KERR. No.

Mr. BARIT. That is not what I mean.

Senator MARTIN. You could make an exception there, Mr. Chairman, where it is individually owned homes; but if you get into apartment houses and things of that kind, you get into a lot of trouble; but if it would be individually owned homes which we should encourage in America—we are getting a little away from that.

Mr. BARIT. Senator, I did not get as far as that. I am aware of the point that Mr. Stam made that you should not exempt too much or it will defeat its purpose.

I feel that anyone who can purchase a home is somewhere beyond the class of very low-income people, whom I think we must always protect.

Senator MARTIN. But we have had in America very low-income bracket people who have owned their own homes, and that has been one of the things that make up the greatness of the American economy and the strength of American citizenship.

For example, in the city of Philadelphia, 50 years ago, we prided ourselves in the fact that 90 percent of the people owned their own homes, or had title to them. There might have been some indebtedness against them but they prided themselves on owning their properties, and that was the strength of that great city.

Mr. BARIT. I certainly subscribe to that, Senator.

May I again point out that that distinguishing statement of yours indicates how serious the situation is. You can scarcely turn in any direction—I will say you cannot turn in any direction—without feeling the weight of this terrible situation that we face.

That must be taxed, important as it is. The only exemption you can make is the very low-income fellow who could not think of buying a house. He is just able to buy food and shelter, and you should not make that too difficult for him.

Senator MARTIN. Of course, you could go to making exemptions in this kind of thing, and we will get into very serious trouble, because there will be, just like here this morning, no fellow who wants his own things taxed. We are all human——

Mr. BARIT. It depends on whose ox is being gored.

Well, suppose I eliminate shelter, which is somewhat difficult to understand, and controversial, and simply say food, because as the Chairman pointed out——

Senator MARTIN. Yes.

Mr. BARIT. Rents are not taxed under a manufacturers' excise tax, so we get down to food as the only exemption.

Senator BYRD. Your idea is that everything that is manufactured excepting food would be taxed?

Mr. BARIT. Yes, sir.

Senator BYRD. And that it would only be taxed after it was a finished product?

Mr. BARIT. Yes.

Senator BYRD. Suppose a man would cut timber and, say, sell that timber? Would that be taxed or not?

Mr. BARIT. No, just manufactured end products.

Senator BYRD. It would have to be a manufactured product?

Mr. BARIT. Finished product.

Senator BYRD. I see.

Senator MARTIN. As I understand, the sheets of steel and so on that you put in the automobile, they are not to be taxed until they are to be—until they are put into the finished product.

Mr. BARIT. And then it will be taxed because it goes to make up and swell the selling price, which carries the excise tax. You have a double taxation if you do the opposite.

Senator MARTIN. Yes.

Senator BYRD. Raw materials, so to speak, would not be taxed?

Mr. BARIT. Not until it becomes a finished product.

Senator BYRD. Not until it becomes a finished product, such as a finished automobile. Of course, there would be some difficulty, because some parts are not completely finished. They would be partially finished?

Mr. BARIT. But at some point or other, Senator, if we are interested in them, they find their way into a finished product, and then they are taxed, because they go to make up the total selling price which determines the amount of tax.

Senator BYRD. Senator Kerr, do you have a question?

Senator KERR. No, Mr. Chairman.

Mr. STAM. That is what we have now, Mr. Chairman. We have these sales for further manufacture under the present system that we have, where we have these manufacturers' excise taxes, where an article is going to be manufactured into a finished product—it is not taxed today.

Senator MARTIN. Yes.

Mr. STAM. And I suppose that would carry out the same principle.

Mr. BARIT. You could not have double taxation. I do not think you would want it.

Senator BYRD. Mr. Stam, if such a tax should be substituted for excise taxes in this bill, what difference would it make in the revenue up or down by leveling them off 5 percent—that is what you mean, is to level all excise taxes to 5 percent. Do you mean that on liquor, too?

Mr. BARIT. Liquor and tobacco have always been put in a separate category.

Senator BYRD. You would have to exempt those, too?

Mr. BARIT. I suppose you would retain the present levies on those articles.

Senator WILLIAMS. I think the Secretary of the Treasury testified that for each 1 percent, it would account for a billion dollars, minus food and from that amount you would have to subtract those taxes which we are now getting.

Senator BYRD. All right, Mr. Barit, thank you very much, sir.

Mr. BARIT. Thank you for listening to me so patiently.

(The prepared statement of A. E. Barit previously referred to follows:)

STATEMENT OF A. E. BARIT, PRESIDENT, HUDSON MOTOR CAR CO., AND CHAIRMAN, TAXATION COMMITTEE, AUTOMOBILE MANUFACTURERS ASSOCIATION

INDUSTRY DISTURBED BY WIDENED INEQUITIES

The automobile industry is profoundly disturbed by some of the glaring inequities of the pending revenue bill as adopted by the House. It is particularly disturbed because that bill widens instead of equalizing existing excise taxation discriminations among goods which compete for the consumers' favor.

Our industry—and I'm sure you know we have 912,000 employees and 45,000 dealers—is perfectly willing to pay its fair share of any taxes that may be necessary, after nondefense and nonessential Government expenditures are cut to minimum levels, to meet the higher governmental costs resulting from the defense effort.

Our "fair share," it seems to us in the automobile industry, should be defined as the result of the application of a uniform excise-tax rate to all manufactured end products except food and shelter. We think further that such taxes should be levied only for the period of the emergency and that they should carry an automatic termination clause.

As producers of automobiles and as American citizens we would fail in our duty if we did not call your attention to the tremendous burden of taxation already imposed upon automotive products. At the present time, with the excise-tax rate on passenger cars 7 percent, the total tax burden amounts to 20 percent of the total price of the automobile. Taxes of all kinds, Federal, State, and local, amount to $384 of the $2,000 total price of a typical new lower-priced car.

DISCRIMINATORY TAXES LIMIT FREE CHOICE

In view of the tremendous burden of over-all taxation now being carried by our people, the matter of public preference as to method of taxation becomes more than usually important.

Consequently we desire to register our belief that the majority of people would prefer the general excise tax (except on foods and shelter) to the present method of applying excise taxes only to a selected list of articles.

The reason for our belief is that the general excise-tax plan would tend to minimize the tax on each individual article and to thus avoid a prohibitively high tax on any particular item.

Few things could irritate a taxpayer more than to learn that the very thing he wants to purchase carries a disproportionate excise levy—perhaps beyond his ability to pay. We are sure he would much rather we spread the total excise take over all articles so that it would not put any particular article beyond his reach. He could then choose between the various articles he might like to buy.

As you probably know, there are 40,000,000 people in this country who are interested in what happens to the price of automobiles—there are that many cars now registered.

AUTOMOBILES AN ESSENTIAL IN WAR AS IN PEACE

This tax burden becomes doubly important when you consider the essentiality of motor vehicles. Surveys repeatedly have shown that more than half of all passenger car mileage is necessary, with 77 percent of all trips connected with earning a living or other economic activity, and with 95 percent of the Nation's 40,000,000 passenger cars used wholly or partly for essential purposes. This is one small facet of the story of the essentiality of the passenger car, contained in the document Automobiles and National Defense which we offer as part of our brief.

Few persons realize that motortrucks carry three times as much freight as the combined total hauled by all other forms of transportation. This is one of the interesting facts contained in the document Motor Trucks and National Defense which we also offer as part of our brief.[1]

Thus these taxes on automotive products represents a levy on instrumentalities clearly essential to the economic life of the people, clearly essential to the economy in war as well as in peace.

Further, in the case of the tax on replacement parts, which the House bill would raise to 8 percent from 5 percent, the excise is a tax on misfortune. Today's average car is nearly 8 years old, against a prewar average of 5.5 years.

[1] On file with the committee.

When you remember that most old cars are owned by people in lower-income groups, the inequity of this tax becomes apparent.

CONGRESSIONAL COMMITTEES AGREE AUTO TAXES UNFAIR

Our statement of willingness to pay our fair share of Federal taxes does not in any way change our position on the already existing high rates of excise taxes on automotive products. These taxes, when first imposed and again when they were increased, were labeled in official congressional reports to be unfair, discriminatory, and regressive. Your committee, as well as the counterpart committee of the House, accepted them reluctantly as "temporary" or emergency measures to meet then-current needs for revenue.

In our appearance earlier this year before the House Ways and Means Committee, no mention was made of the effect on the Nation's 8,000,000 truck owners of the proposed increases in automotive excises, for the reason that no proposal existed at that time for increasing the Federal tax on trucks.

In view of the intent of the House to increase truck excise taxes by 60 percent, or to 8 percent from 5 percent, we believe your committee should consider the following facts:

1. Recognizing that motortrucks are essential in the defense production, the Defense Production Administration has authorized almost maximum truck production.

2. As pointed out in the booklet Motor Trucks and National Defense, appended,[1] the Nation's trucking services are essentially unlike the services of other freight haulers, and these services are necessary not only to defense production but also to the efficient operation of all other freight carriers.

3. Most trucks are owned by individuals, or by small-business firms, so that discriminatory taxes on trucks are a direct burden on small operators. Farmers, for example, are the Nation's largest class of truck owners; they have more than doubled their use of trucks in the last decade in their production and marketing operations. Approximately 3,000,000 trucks are used by farmers.

4. No other vehicle for freight transportation, and no other tool of production or marketing, bears any Federal excise tax. Since the truck must be classed with farm tractors, industrial machine tools and similar tools necessary to farm and factory production for military and vital civilian purposes, a special tax on trucks appears justified only under a general manufacturers' excise levy for emergency revenue.

OPPOSITION TO DISCRIMINATION HAS BEEN CONSISTENT

In previous appearances before, and statements filed with, the Senate and House committees engaged in writing tax legislation, we have repeatedly opposed the existing structure of automotive excise taxes, for the reasons that—

1. They impede commerce by increasing the cost of moving goods and people;
2. They are an increasing threat to production and employment in the motor vehicle industry and in supplying industries;
3. They are taxes that affect lower-income groups relatively more than other income groups;
4. They are discriminatory, since they are not imposed on competitive forms of transportation, on other goods which compete with motor vehicle sales, or on other productive equipment;
5. They are unfair, as they place a relatively greater tax load on farmers, small town people and others who necessarily depend mainly or solely on automotive transportation; and
6. They are an extreme example of multiple taxation.

These obviously are sound reasons for opposing the existing automotive excises. The automotive industry in this emergency period nevertheless is not opposing excise taxes as such—provided the new schedule of excise taxes eliminates the present inequities and discriminations and provided that the emergency rates will be terminated automatically with the end of the emergency.

By ending these taxes with the end of the emergency, purchasing power would be increased, demand for consumer goods would be increased, production and employment would be increased and a solid base would be provided for a strong postemergency economy.

---

[1] On file with the committee.

HOW AUTOMOBILES GENERATE ECONOMIC ACTIVITY AND TAXES

The automobile industry is particularly conscious of its actual and potential impact on commerce and industry generally, as one of every seven persons normally employed in the United States earns his living from the production, distribution, service, or use of the passenger car, truck, and bus.

The economic activity thus generated in turn stimulates the whole economy and has an incalculably important effect upon the profitable employment of the funds and services of all citizens with money or skills to employ.

It seems clear that excessive taxation on passenger cars and trucks, busses, replacement parts, tires and tubes, gasoline and oil not only weakens the mobility of the people, which is one of the basic advantages we have over most other of the world's people, but it also tends to defeat its purpose. This is because it tends to limit the use of an instrumentality which in itself generates activities which create income and thus provide wider sources for tax revenue.

Despite our willingness to support a general manufacturers' excise tax for the emergency period, the automobile industry wants the record to be clear that it continues to oppose the discriminations and inequities of the present excise taxes. The arguments we have advanced for repeal of the existing "emergency" and "temporary" taxes on cars and trucks, on repair parts and accessories, on tires and tubes, and on gasoline and oil have never been successfully challenged. We believe they are beyond challenge.

Senator BYRD. Mr. McPherson.

STATEMENT OF L. D. McPHERSON, WASHINGTON, D. C.

Mr. McPHERSON. Mr. Chairman and members of the committee, I would like to expedite this. This will take 8 minutes.

This is a supplemental statement before the Senate Finance Committee on the trailer-coach tax that was testified about here this morning.

I offer a prepared statement printed in seven pages as exhibit K of this supplement. The document clerk has that prepared statement.

I offer exhibits L, and M, and N, which the document clerk has.

I offer copies of the report of the coordinating committee for a national plumbing code, 1951, Domestic Commerce Series No. 28, issued jointly by the United States Department of Commerce and the Housing and Home Finance Agency.

Exhibit L of this booklet includes pages 111 to 118, inclusive; and is Appendix TC, Trailer Coach Plumbing Standards; and exhibit M consists of pages 119 to 121, inclusive, which is Appendix TP, Trailer Park Plumbing Standards.

The remainder of the booklet, exhibit N contains other parts of the National Plumbing Code.

House trailers have this apparent official recognition as sanitary dwelling units through recent competent sanitary research therein.

The families owning and/or occupying such house trailers throughout the year as their permanent dwellings are the real and principal parties interested in repeal of this 7-percent tax, having been in the position of absorbing its payment in its being passed on to them from the manufacturer.

Some 290,000 house trailers are reported as occupied by families as their dwellings throughout the year by the 1950 United States census as of April 1950.

Of those, 267,000 are owners or purchasers, and the others are tenants.

The history of the enactment of this tax appears on pages 2 and 3 of exhibit K which is before you.

Did the Congress mean to single out these house trailers as the only dwelling units of the many classes and cause to be subjected to the payment of such excise tax?

From this history, the relative ability to pay and the typical court decisions in such cases, as recited on pages 5 and 6 of exhibit K, this tax seems vulnerable.

In the interests of the Members of the Congress who might have participated in its enactment in 1941, or those who might now become responsible for continuing this tax, I hope they will consider freeing themselves of any intention so to tax.

I thank you, gentlemen.

(The prepared statement referred to (exhibit K) and exhibits are as follows:)

EXHIBIT K

STATEMENT OF L. D. MCPHERSON

I appreciate the privilege to appear to present the results of my considerable research since 1947 in health and sanitation laws and ordinances and scientific literature relating thereto, especially as affecting trailer dwellers.

This will be the briefest summary I can make of the material facts relating to the history of the 7 percent of the wholesale price of mobile housing collected as a Federal excise tax since October 1, 1941, pursuant to section 544, subsection (b), of the Internal Revenue Code (H. R. 5417), approved September 20, 1941.

I cannot find that this matter has ever before been presented for review in any hearings or debates of a revenue act.

I was engaged in the fall of 1948 by members of the American Society of Sanitary Engineering, serving them on its newly formed committee to survey the standards of sanitation thought to be necessary by the society for recommendation in regulating living in house trailers and trailer parks or courts.

Such standards are about ready to be prescribed, national in scope, for the first time, in two sections, one for trailer coaches, the other for trailer parks, by the coordinating committee for a National Plumbing Code sponsored by the United States Department of Commerce and the Housing and Home Finance Agency, as completed and approved in collaboration with and by some 38 specialists and technicians, representative of all interested groups—as an advisory committee, or delegates to the coordinating committee—jointly cooperating for the past 2 years.

An edition of 10,000 such codes is expected to start in circulation within about 60 days. Some 200 cities and other organizations have already signified their intention to adopt such code.

The scope of my survey or research, first herein mentioned, is indicated on the inner side of the flyleaf of a booklet containing 110 pages, published and copyrighted by me in 1949, entitled: "Regulation of: I. House Trailers and Their Locations; II. Plumbing in House Trailers, Trailer Parks, or Buildings Anywhere for Any Use." A copy of that booklet is here offered in evident as exhibit A of this paper.

Similar booklets of other legal and scientific sanitary research made by me soon thereafter are: Prevention of Water-Borne Diseases; Part I, Sewage, Its Treatment and Disposal; II, Water, Pollution and Purification—in 48 pages, here offered as exhibit B; and Some Provisions of the Statutes of the States Relating to Public Health and Sanitation, Including Plumbing. The reading of the latter, compiled in tabular form, requires a study of the inner side of the flyleaf thereof, in 67 pages, which is hereoffered as exhibit C.

Pursuing further such sanitary research, I bought a rare complete set of all volumes of Proceedings (yearbooks) of the American Society of Sanitary Engineering, and its predecessor, the American Society of Inspectors of Plumbing and Sanitary Engineers, for its 45 annual conventions, 1906 to 1950, inclusive, and compiled therefrom a comprehensive index of the sanitary literature produced and preserved by the society for 45 years through appearance of its members and other specialists serving on research committees as health laboratory technicians, in sanitary institutions, and public-health offices.

The American Society of Sanitary Engineering, of which I am a member, asked me for the privilege of publishing this comprehensive index of all their literature as an appendix to its 1950 convention yearbook or proceedings, which will appear in their edition of some 3,000 volumes. This index makes available for the first time the wealth of this rare literature.

I wish to make available to this committee all data I have gathered relating to mobile housing.

The effort I make before you is to help you bring into harmony the administration of subsection (b), section 544 of Public Law 250 (H. R. 5417), chapter 412, Seventy-seventh Congress, first session, relating to the 7-percent excise tax being collected on sale of mobile housing, house trailers, or trailer coaches with the Federal policy on public housing as manifested in the Resettlement Administration of 1935 and 1936 and other contemporaneous Federal public housing agencies, the Public Housing Authority, created and implemented by the National Housing Act of 1937, Seventy-fifth Congress, first session (ch. 896, United States Statutes at Large, pt. 1 (1937) pp. 888–889) and the Housing Act of 1949 (Pub. Law 171, ch. 338, 81st Cong., 1st sess., approved July 15, 1949) as to grants, contributions, and loans for public housing.

I offer as exhibit D a release by the Bureau of Census from its 1950 decennial enumeration of population and housing, dated February 15, 1951. I was instrumental in getting Census to include homes maintained in automotive trailers. This census shows 290,000 such homes, meaning year-round occupancy thereof. This figure does not include other trailer coaches used for business, offices, seasonal or recreational, vacation, occupancy, nor trailers made in United States. and sold in export trade, without payment of said 7-percent excise tax, pursuant to reciprocal treaties with the countries into which export is made.

I offer as exhibit E Public Law 250, chapter 412 (H. R. 5417), Seventy-seventh Congress, first session, Revenue Act of 1941, approved September 20, 1941, and specifically refer to said subsection (d), section 544, amending subsection (b), section 3403, of the Internal Revenue Code to read (p. 28): "(b) Other automobile chassis and bodies for trailers or semitrailers suitable for use in connection with passenger automobiles, and motorcycles (including in each case parts or accessories thereof sold on or in connection therewith or with the sale thereof), except tractors, 7 percent. A sale of an automobile, trailer, or semitrailer shall, for the purpose of this subsection, be considered to be a sale of the chassis and of the body."

I suggest an amendment to this subsection (b), section 544, Public Law 250, approved September 20, 1941, in substance, inserted after the words, "passenger automobiles," equivalent words "except trailer coaches, house trailers or mobile housing, which is hereby relieved from payment of such or any other rate of excise tax as referred to in said subsection (b), section 544."

The Commissioner of Internal Revenue may not resolve the doubt of legislative intent to tax against the sovereign and thereby lose public revenue when the courts exist to relieve taxpayers from illegal taxation.

I have read the 324 pages of debates in Congress prior to enactment of H. R. 5417 (Pub. Law. 250, ch. 412, 77th Cong., 1st sess., approved September 20, 1941, Revenue Act of 1941), examined the 1,592 pages printed of the hearings before the Senate Committee on Finance and the 1,846 pages of hearings before the House Ways and Means Committee.

In none of these was found any mention of mobile housing, house trailers, or trailer coaches.

A national revenue measure is necessarily an omnibus bill and largely generalizes, rather than classifies, objects or persons for taxation, unless strong remonstrances were made by affected groups through hearings or otherwise.

During the debates on this act a rule was applied depriving Members of the right of offering amendments on the floor.

Among the items of comment in the debates pertinent to the excise tax, here complained of, was the following from Congressman West, of Texas:

"Personally it appears to me that orderly procedure in the House should require a point of order to lie against any item in a tax bill when it is brought to the attention of the House membership that such item is reported without hearings having been held thereon"; and by Senator Clark, of Missouri: "I defy anyone * * * to take this bill and run right through it and tell what everything in it means, * * * because it it a patchwork system."

The house-trailer industry and the house-trailer dwellers at the time this tax was imposed on them were so relatively few and so unorganized that no representation for either appeared during the consideration of passage of this Revenue Act for 1941.

Under the application of said subsection (b) in collecting the 7 percent excise tax on trailer-coach housing for nearly 10 years many of the some three-fourths million trailer dwellers are becoming familiar with having paid this excise tax on their small homes and are becoming resentful of the discrimination they suffer under it.

I refer to National Housing Act of 1937, Seventy-fifth Congress, first session (ch. 896, U. S. Statutes at Large, pt. I, pp. 888-899) for elimination of slums and in aid of families of low income and creating a United States Housing Authority.

This act provided loans of 90 percent of cost of dwelling units, authorized the Authority to contract to contribute toward operation of the public housing projects for as long as 60 years "from any money in the United States Treasury not otherwise appropriated"; authorized capital grants of 25 percent of the slum clearance or low-rental housing development or acquisition costs; authorized capital grants of $20,000,000, $10,000,000 of which was payable in each of the fiscal years 1938 and 1939; specifically appropriated other funds, $5,000,000 * * * and for the fiscal years 1938 and 1939, $7,500,000 each or a total of $20,000,000; and appropriated as of June 30, 1938, $26,000,000 or a grand total of $66,000,000; limited the costs of dwelling units to $4,000 or $1,000 to $1,250 per room for families, authorized a capital stock for the Authority of $1,000,000 to be subscribed for by the United States and authorized issuance by the Authority for the fiscal years 1938 and 1939 obligations in the amount of $100,000,000 and $200,000,000 respectively.

I offer as exhibit F Public Law 171, chapter 338, Eighty-first Congress, first session, Housing Act of 1949 (H. R. 4009; S. 1070), approved July 15, 1949.

Pursuant to the provisions of this act, Federal aids, capital grants, loans, and annual contributions, the latter extending long into the future, are made to assist local housing authorities in slum clearance and maintaining low-rent public housing.

Under this act local housing authorities have been organized to avail themselves of the privileges of the act to the number of some 600.

Such local authorities, 216 in number, contracted with the Bureau of Census in its decennial enumeration of 1950 for early report of houses defined by the Public Housing Administrator as substandard or dilapidated dwelling units.

I summarized these two latter classes as they appeared in the first 46 reports for as many local housing authorities and found about 574,000 reported as substandard. Of these about an average of 30 percent were reported as dilapidated.

I here offer as exhibit G 200 of these 216 apparent applicants for benefits under this act, being mainly local housing authorities organized since its passage. An estimate has been made that approximately 1,565,000 such substandard dwelling units, including the dilapidated units, are contained in this 216 local housing authorities reports from Bureau of Census. Surveys being made by others for local housing authorities are estimated to raise the number to about 400.

Other communities considering and yet eligible for applying for benefits to local groups under this act may raise the total to share under the act to 600 communities or groups.

A provision of this act restricts the number of dwelling units to be aided by it at "not to exceed 810,000" the beginning of construction being authorized by the act for that many, financed by aids by fiscal years in amounts as follows: $135,000,000 per year for each of the years 1949 to 1954, inclusive, "not over $200,000,000 to be expended in any one fiscal year." Obviously the 600 potential applicants to share under this act contain more than 810,000 dilapidated dwelling units.

Under section 513 of the act, capital grants are authorized to pay interest on borrowing by fiscal years:

1949	$2,000,000
1950	5,000,000
1951	8,000,000
1952	10,000,000
Total	25,000,000

Under section 305 of the act authority is given to contract to make annual contributions by fiscal years:

1949	$85,000,000
1950	55,000,000
1951	55,000,000
1952	55,000,000
1953	58,000,000
Total	308,000,000

plus $55,000,000 contingent allocation any time 10 percent of the total to be allotted to farm area.

Under section 512 contributions are authorized by fiscal years:

1949	$500,000
1950	1,500,000
1951	2,000,000
1952	2,500,000
Total	6,500,000

Under section 511 of this act "For housing and buildings of 'potentially adequate farms'" loans for fiscal years:

1949	$50,000,000
1950	75,000,000
1951	75,000,000
1952	100,000,000
Total	300,000,000

Evidence introduced at the hearings before the House Committee on Banking and Currency on H. R. 1272, Eighty-second Congress, first session, on defense housing and community facilities was that 38 percent of the 1950 peak year of production of dwelling units, amounting to more than 1,100,000 such units were financed by direct Federal funds appropriated or federally insured housing loans. Among these was between 135,000 and 200,000 units provided for construction in any one fiscal year.

Under section 303, subsection 15 (5), page 13 (exhibit F) is a recital of cost limits for construction of low-rent public housing, from $1,750 to $2,500 per room therein, unfurnished, or practically as high per room as the full cost of a modernly equipped and relatively luxuriously furnished trailercoach, having full complement of all modern sanitary plumbing fixtures.

I offer as exhibit H, series HC-1: 1950 United States Census of Housing, Preliminary Counts, and as exhibit I, series PC-2: 1950 Census of Population, Preliminary Counts.

The PC-2 and HC-1 series shows the change in numbers of dwelling units and of population State by State, county by county, and city by city is that, despite the tremendous increase in population, particularly the very rapid rise in birth rate from 1940-50, and the rationing of materials for dwelling-unit construction in the first half of the decennial period that dwelling units had been produced, mostly in the last half of the decennial period, approximately twice as fast as the birth rate throughout the whole 10 years.

Reverting to page 4 as to provisions of Housing Act of 1949 omitted, references to section 103 thereof authorizes capital grants for slum clearance and redevelopment by fiscal years: 1949 to 1953, inclusive, $100,000,000 per year, plus a contingent grant of $100,000,000; total, $600,000,000.

Under subsection (e), section 10, said act provides loans, by fiscal years: 1949, $25,000,000; 1950, $225,000,000; 1951, $250,000,000; 1952, $250,000,000; 1953, $250,000,000; total, $1,000,000,000.

This Housing Act of 1949 provides dwelling units costing, unfurnished, three or more times as much as the trailer dwellers enjoy while paying this 7 percent excise tax on his own mobile housing toward providing the more expensive housing for families of no lower income than his own, resulting in a double discrimination against the trailer dweller.

These trailer dwellers have not, and do not ask more of their Government than to be given the chance due them to be free of Federal excise tax in providing their own safe, sanitary, and economical homes within their ability to do so.

This mode of housing assures a home free of debt within about 7 to 9 years as against a 40-year period provided for in the Housing Act of 1949.

Redefining a house trailer as an automobile accessory for taxation violates sound legal principles of classification in that a house trailer partakes of no primary characteristic or function of an automobile, whose only service to it is to tow it from the place it is made to a more or less permanent place of use. If it was a load of hay so towed, it would still be hay and of no different characteristic or function.

A house trailer has much distinction in function and little in common with a freight or express trailer. The freight or express trailer has to remain constantly moving on the highway to gain earnings as to leave no comparison of the governmental services it enjoys with a house trailer, and is almost constantly connected to the automobile serving it. House trailers while being towed are most often out of the use for which they are designed.

Excerpt decisions of the State and Federal courts of last resort rendered from 1936 to 1946 follow:

"Under constitutional provisions that 'all taxes' shall be uniform on the same class of subjects of the words 'all taxes' include property tax, inheritance tax, succession tax, and all kinds of taxes, the subjects of which are susceptible of just and proper classification.

"Statutes including those providing for general and excise taxes, to be valid, must operate equally upon all persons of the same class" (6 A. 2d, 826. 59 N. E. 2d, 924).

"'Uniformity of taxation' means equality of tax burden and a tax to be uniform must operate alike on the classes of things or property subject to it" (33 A. 2d 320). "* * * Means all property of the same class must be taxed alike" (14 S. E. 2d 395).

"In classifying persons for taxation an obligation on the part of the taxing power to make available some benefit to them must exist" (31 A., 2d 289, 320 U. S. 741).

"Legislature * * * should not act * * * without consideration of ability to pay or benefits of government received" (135 P., 2d 523).

"* * * but classification must be based on differences furnishing a reasonable ground for distinction and not so wanting in substance as to permit one class to escape burden imposed on another class under substantially similar conditions" (15 N. W. 2d, 598).

"A tax measure, to be valid, must lay its burdens uniformly upon all those who come within a proper classification of persons to be subjected to its burden and such classification must have some reason for differentiation between those who are and who are not to be taxed and must be founded upon some natural, intrinsic, or constitutional distinction" (103 P. 2d 740).

"Taxpayers may be treated differently if they are of different classes * * * if it acts uniformly upon the whole of any single class of individuals or objects, and the classification is founded upon some natural, intrinsic, or constitutional distinction" (119 P. 2d, 197, 101 P. 2d, 244).

"A tax becomes offensive to the principles of equality when some individuals of a class, fairly arranged, are selected to carry a burden not similarly operative on all of the class" (195 So. 222).

"The use to which property is devoted, and its productivity constitute the measuring stick in determining its proper classification for taxation" (73 P. 2d 209).

"Test in determining whether classification within a tax statute may be upheld is, Does the classification rest upon a relative rational basis and is the tax uniform in respect to those similarly situated?" (308 U. S. 516.)

"To avoid unconstitutionality, a statute which applies only to those persons that fall within its specified path, must be reasonable and not arbitrary in classification, and must rest on some ground of difference having a fair and substantial relation to the object of the legislation" (36 A. 2d 666).

"The difference upon which a classification for tax purposes is made must be substantial" (128 S. W. 2d 581).

"The principle adopted by the legislature in classifying subjects for taxation must have reasonable justification" (165 S. W. 2d 632).

"Classification of persons for taxation must be based on reasonable difference or distinctions which distinguish members of a class from those of another class in respects germane to some general and public purpose or object of the particular legislation" (271 N. W. 2d 68).

"Classification as to subject matter is permissible, if there is a reasonable ground for making a distinction, that is, some substantial difference between the subjects classified and if the classification made bears a reasonable relation to the permitted end of government action" (12 N. W. 2d 625).

"The legislature cannot arbitrarily fix the measure of a tax by a fiction, and there must always be some reason based on fact for imposing a particular tax on a particular class" (309 U. S. 580).

"A discriminatory tax cannot be sustained against complaint if classification appears to be altogether illusory" (176 Md. 423).

"Taxation which applies to a portion of a class and omits a portion is not uniform and equal within the Federal Constitution" (13 A. 2d 703, 771).

"A nonuniform distribution of taxes is violative of the constitutional provision requiring uniformity on the same class of subjects" (7 N. W. 2d 753).

Sanitation for house trailer dwellers, within or without trailer parks has progressed under aggressive, scientific research from Anchorage, Alaska, to Miami, Fla., in Purdue University, Lafayette, Ind., in National Bureau of Standards, Washington, D. C., through tests in health laboratories operating under laboratory technicians of American Society of Sanitary Engineering until no type of housing can justify a claim of higher freedom from health hazards than a modernly equipped trailer coach.

Senator BYRD. Our next witness is Mr. Granville S. Borden.

STATEMENT OF GRANVILLE S. BORDEN, STANDARD OIL CO.

Mr. BORDEN. My name is Granville S. Borden. My office is in the building of the Standard Oil Co., of California, 225 Bush Street, San Francisco, Calif., where I serve this company as an employee in their tax organization.

I am elated at the privilege of being here, and I am very humble and profoundly grateful.

Although I appear here on behalf of my employer and on my own behalf as a patriotic American citizen, the matters which I shall present relate to basic national legislative tax policy and are more specifically of profound importance to every corporate taxpayer which has the privilege of electing to file its returns of income as a member of a group of affiliated corporations.

First, I shall state my petition and then in the time remaining I shall state reasons why I believe you should grant my request.

In the Excess Profits Tax Act of 1950, Congress granted relief or benefits to corporations which had unusual experiences in the base period such as accelerated growth, abnormalities, changes in products or services, increases in capacity for production or operation and depressed industries, during the base period.

Congress was particularly lenient also to those corporations which had deficits in the base period by providing that "in no case shall the net income be less than zero"—in other words, all deficits in the base period are eliminated.

On June 27, 1951, the Secretary prescribed the consolidated regulations pertaining to the Excess Profits Tax Act of 1950. Under the provisions of these regulations, qualified members of a consolidated group are effectively denied these benefits which Congress extended to every taxpayer. Under these regulations, if a member of a consolidated group elects to file its returns in consolidations, its deficits in the base period income even though under the Congressional mandate that "in no case shall the net income" of a "taxpayer" "be less than zero." Under these regulations if a corporate member is qualified for growth or qualified for relief under any of the other relief provisions it loses its benefits unless all other members of the group which commenced business prior to January 2, 1946, can collectively qualify for the same relief.

Thus the Secretary by regulations has imposed penalties or entrance fees in addition to the 2 percent penalty for the privilege of entering into consolidation, and these regulations may be said to have the force and effect of law.

Senators, I came here to implore you to state whether or not Congress intended to impose these penalties in addition to the penalty of a 2 percent increase in the surtax rate for the privilege of filing consolidated returns.

Senator KERR. Right there, Mr. Borden, it is very clear in the statute that Congress did not intend to do that, is it not?

Mr. BORDEN. That is our view, Senator. We feel very strongly about that, but the regulations are written so that——

Senator KERR. I am not talking about the regulations. You have read the statutes, have you not?

Mr. BORDEN. Yes, sir.

Senator KERR. Can you find in there any language whereby Congress said that in addition to the 2 percent added tax to be paid by those filing the consolidated return, that if any of the units have a credit or a base under the provisions of this act, that the inclusion of that unit in a group filing the consolidated return will take that base or that credit away from them?

Mr. BORDEN. No, there was not a word about that to that effect, and contrary, it is our construction, by reason of the fact that the words "the taxpayer" are used in every passage where they extend these benefits, the word "taxpayer" is defined in the code as every person subject to a tax, and the word "person" defined in the code as including every corporation.

Senator KERR. Whether it is a part of the group filing the consolidated return, or not?

Mr. BORDEN. Yes, Senator.

Senator KERR. Is not the hook they use to string you on here the one that says that to have a consolidated return accepted, you thereby waive objection to regulations that may have been imposed upon you by the Treasury?

Mr. BORDEN. Yes, sir; I am coming to that in my explanation.

Senator KERR. All right.

Mr. BORDEN. If it was not congressional intention to impose these additional penalties, then these corporate taxpayers should be informed by a simple clarifying sentence to supplement section 141 (c) of the Internal Revenue Code.

I have prepared such a proposed amendment, and I ask permission to insert it now in the record.

Senator BYRD. Yes, sir.

Mr. BORDEN. Now, I have stated my petition, and during the few minutes of my remaining time, I shall state the reasons why I believe my petition should be granted.

My reasons are based upon legal grounds, equitable grounds, and upon the grounds of sound legislative policy.

First from a legal standpoint—I believe that the Secretary has trespassed beyond the boundaries of the authority which you delegated to him; that he has prescribed regulations which contravene clear unambiguous provisions of the Excess Profits Tax Act.

I do not claim that his utter disregard of corporate entities is not compatible with good tax policy provided the cost of admission to consolidation were reduced below the 2 percent penalty, but I do claim that Congress did not intend to deny these benefits and relief as an additional penalty to the 2 percent increase in surtax which is specifically imposed.

Time will not permit me to argue the legal points supporting my claim that the Secretary's regulations contravene congressional intent, so now I ask permission to file a brief supplemental statement which will incorporate these arguments.

Mr. Chairman, may I submit that?

Senator BYRD. Yes.

Mr. BORDEN. Secondly, from an equitable standpoint—consider the current dilemma of these corporate taxpayers. Congress has provided that each corporation must consent to the regulations as a condition to filing in consolidation.

Congress has also provided that the taxes shall be determined, assessed, and collected in accordance with those regulations. Now, the regulations have been prescribed, and they appear to these corporations to be in derogation of the provisions of the statute.

Corporation returns are due and installments of the taxes must be paid now. Currently there may be no remedy at law to test their validity. Under these circumstances, it seems to me that these corporate taxpayers are entitled to know through a clarifying amendment in the Revenue Act of 1951, by language that cannot be misconstrued, whether Congress intended to impose these additional penalties as a condition to the privilege of filing consolidated returns.

Senator KERR. Let me interrupt.

As I understand your complaint, it is directed to the operation of the excess-profits tax.

Mr. BORDEN. To the computation of the tax under consolidation.

Senator KERR. You recognize that when a group of units file an income tax return, that with reference to their normal and their regular tax rates, the losses of one are offset by the gains of another, and that they cannot escape—they must, under the normal and the surtax, bring about the consolidation and offset losses with gains?

Mr. BORDEN. That is right.

Senator KERR. But your problem is in connection with bases and credits for the computation of excess-profits taxes, and you take the position that where Congress has given that to a corporate identity, that that should not be lost by reason of the fact that it is one of a group that files a consolidated return.

Mr. BORDEN. Exactly, Senator.

Senator KERR. All right.

Mr. BORDEN. Now, one more point from the standpoint of equity: Let us assume that Congress intended that this question of penalties should be resolved through the Secretary's regulations. Let us assume that the Secretary could select legally one of three roads: First, the antitaxpayer road, which would construe all points against the taxpayer; secondly, the protaxpayer road, which would permit the excess-profits credit of each member to be determined upon a separate return basis; by that I mean they could select invested capital or base period, whichever was the better, and so on; and third, a middle course under which no special penalties or special benefits would be extended to the taxpayer.

I claim that the Secretary has followed the antitaxpayer road; that he should have followed the middle course, and I claim that our proposed amendment leads down that road.

Finally, I urge you to clarify the law on the grounds of sound legislative policy.

Obviously, if you adopt a clarifying amendment, you will eliminate the necessity of much potential litigation. You will alleviate the congestion of tax cases in the United States Tax Court and in the Federal courts.

Moreover, you will be acquiescing in part to the strong public demand which is growing at accelerating rates for clarification and simplification of our tax laws and regulations.

From the enactment of the sixteenth amendment to date, there has been a most commendable attribute in the minds and in the hearts of our American people to self-assess themselves for the full amount of tax that they believe our Congress intended to impose upon them. The percentage of the revenue collected by self-assessment as compared with the amount collected by deficiency assessments, negligence or fraud penalties, is conclusive proof of the foregoing assertion. This commendable spirit inducing self-assessment must not be impaired. Our taxes cannot be collected simply by investigations and a threat of penalties or incarceration. We must, as a condition to the preservation of our national economy, preserve in the minds and in the hearts of our American people this patriotic spirit of honest dealing with its Government.

Now, as the burden of taxation increases, the demand from our citizens for knowledge of the basis upon which they are being taxed and the formulas for the computation of their taxes become more voluminous and more vociferous.

But, Senators, here is what is happening in America today. While the tax burden is being increased to maximum heights, the rules for its determination and computation become more complex and confusing. The ability to explain the "why" and the "how" become more and more difficult—and as a consequence, this commendable spirit is being impaired. If it takes too much concentration and study to unravel the complicated knots in our tax laws and regulations, many taxpayers may refuse to make the effort.

I am sure you will agree with me that there is no tax law more confusing than the Excess Profits Tax Act of 1950.

Senator BYRD. What about the proposed bill of 1951? Is that more or less confusing?

Mr. BORDEN. The 1951 bill?

Senator BYRD. The one we are considering now. Is it more or less confusing than the one of 1950?

Mr. BORDEN. Well, I have not gone into the House bill too thoroughly, Senator. I know this has got me bewildered. I spent half of my life on consolidations and I cannot understand it.

Senator BYRD. It is more confusing than the 1950 act.

Mr. BORDEN. It is confusing not only to the taxpayers, but to the multitude of competent Bureau examining agents throughout the United States. This confusion engenders inefficient administration all to the detriment of the Federal revenue.

Compared, however, to the Excess Profits Tax Act, the consolidated regulations are awful. I claim that no person of normal intelligence can understand them, and that this confusion has been engendered in a large measure by the desire of the authors of the regulation to impose these additional penalties on the privilege of filing consolidated returns.

In conclusion, therefore, I urge you to be ever mindful of this public demand for simplification and clarity and, as one step in answer to such public petitions, adopt the clarifying amendment which I have proposed. I urge you to tell these corporate taxpayers what Congress had in mind.

As a matter of fundamental justice, they are entitled to have their taxes imposed by the Congress and not by administrative decrees.

Thank you, gentlemen, for the privilege of making this appearance, and for your courtesy in permitting me to appear.

(The supplement to the statement of Granville S. Borden follows:)

SUPPLEMENT TO STATEMENT OF GRANVILLE S. BORDEN

This memorandum is submitted to supplement my statement before the Committee on Finance on July 31, 1951, in support of an amendment to the Internal Revenue Code clarifying section 141 in cases where members of an affiliated group filing consolidated returns are entitled to the benefits of the so-called relief provision of the excess profits tax.

Under the Excess Profits Tax of 1950, Congress provided special formulas for computing the excess-profits credit of average earnings companies in special circumstances. Growing companies, deficit companies, companies with increased capacity or new products, new companies and certain depressed industry groups were allowed to increase their credit to what Congress regarded as a fair measure of what normal profits should be.

Congress also provided that certain groups of corporations could file consolidated returns on payment of a 2 percent additional tax for the privilege. The law also authorized the Secretary of the Treasury to prescribe such consolidated return regulations "as he may deem necessary in order that the tax liability of any affiliated group of corporations making a consolidated return and of each corporation in the group may be returned * * * in such manner as clearly to reflect the income-and-excess-profits-tax liability and the various factors necessary for the determination of such liability, and in order to prevent avoidance of such tax liability" (sec. 141 (b) I. R. C.) As a condition of filing consolidated returns each corporation joining in the group must consent to the regulations prescribed by the Secretary.

On June 27, 1951, the Secretary prescribed his regulations. These regulations, in my opinion, effectively deny the relief I believe Congress intended to give to the individual corporations joining in filing consolidated returns. They do this by requiring the whole consolidated group to qualify under the particular relief provision (Regs. 129).

One of our subsidiary companies started the manufacture and sale of a new product, detergents, during the base period. It qualifies for relief under section 435 (e) because of its increased sales of this new product. Its credit would be computed with the benefit of the formula contained therein. In a consolidated return one would think that its credit is its credit as computed under the applicable provision of the statute. But that is not the case. Under the Secretary's regulations, if it chooses to file a consolidated return no account is given of its growth. Only when all the corporations taken together qualify by having new products may the growth formula be applied (Regs. 129, sec. 24.31 (b) (15) (ii) and sec. 24.31 (b) (16)).

Let me cite another example. Another of our subsidiary companies, about January 1, 1946, entered the highly competitive field of retail marketing of petroleum products in a new territory. It naturally had losses during the development period in the base period. Now it is profitable. The company had so-called deficits during the base period. Under section 435 (d) of the code it is expressly provided that "in no case shall the excess profits net income of any month be less than zero." From that one would think that in computing its credit, zero is to be used rather than the minus figure of its loss. But no. The regulations (sec. 24.31 (a) (64)) provide: "The consolidated section 433 (b) excess profits net income for any month shall be an amount equal to the excess of the combined net income of the affiliated corporation for such month over the combined deficits in excess profits net income for such month determined under section 433 (c)." So, the result is that this company's losses are counted in full and its part of the excess-profits credit is reduced and the consolidated excess-profits credit is reduced. It is only where the whole consolidated group has a deficit that the deficit is counted at zero under the regulations.

May I remind you that under the World War II excess-profits tax deficit (loss) years were subtracted from gain years to determine the average. In the 1950 act that rule was expressly rejected, and both committee reports emphasize the change and point out that the provision is designed to reduce the need for specific relief. (See S. Rept. No. 2679, 81st Cong., 2d sess., pp. 6 and 18.)

I can point to similar illustrations involving all the various relief provisions relating to the computation of the credit in the excess-profits tax. I am certain that other corporations will find themselves faced with other aspects of this very problem.

It is my belief that had the specific question to which my remarks are addressed been put to you gentlemen in the formulation of the Excess Profits Tax Act of 1950 you would have amended it as I propose rather than the way the regulations provide.

Let me put the question again. If a corporation is entitled to the benefits of growth on its own, shall it be deprived of those benefits in computing its credit when it joins in with others in filing a consolidated return? No reason of policy or administrative convenience requires a positive answer. Congress was, and I trust still is, trying to find what is a fair credit to measure what profits are excessive and should be taxed up to a rate of 72 percent in the case of consolidated return corporation. If a corporation meets the tests which Congress has determined qualify it for relief, is it any the less not entitled to relief if it files a consolidated return? It is submitted that the credit of the consolidated group attributable to that corporation is the amount of its own credit. That segment of the base-period earnings represented by the earnings of the subsidiary is entitled to be raised to a fair standard of earnings when brought into the earnings base of the affiliated group to measure excess profits.

It is no answer to our problem to state that the benefits of the relief provisions are not allowed to the respective departments of a business operated as a single corporate entity—that when a consolidated return is filed the whole group elects to be treated the same as a single corporation. It must be pointed out that the single corporate entity does no pay a 2-percent additional penalty, either. The real question is, What does Congress believe to be the right rule? The law gives a subsidiary of a corporation the same relief as its competitor across the street similarly circumstanced. And since it does, should the fact that the subsidiary files a consolidated return with its parent destroy that relief? We submit that it should not. The actual earnings of the subsidiary are just as inadequate a measure of the earnings during the base period, whether they are used as a measure of the earnings of the single corporation or as a part of the measure of the whole group of which it is a member. The fact that it may be either impractical or undesirable to grant relief to the departments of a single corporate taxpayer does not require its denial where it is both practical and just to grant it to the separate corporate entities on payment of the 2-percent fee for filing consolidated returns.

The subject of consolidated returns is a complicated one. Congress has left to administrative determination the myriad details of how the computation should be made. The problem here is not a detail. It is a major question of policy which Congress must determine. Believing as I do that the interpretation placed upon the statute in the regulations does not properly reflect the intention of Congress, I believe that Congress should specifically legislate on the matter to correct that interpretation.

We urge clarification now for the reason that the high tax rates compel a very difficult choice. That choice is to consent to the regulations, pay the tax and then seek to upset the regulations by litigation in the courts. At best, this is an expensive lengthy process involving uncertainty, hardship, and delay. It is highly desirable to avoid the confusion and litigation which will ensue over whether the position taken herein is the intention of Congress or whether the Treasury position carries out that intention.

I have proposed a simple nontechnical amendment which I submit for your consideration. It is almost self-explanatory (a bit unusual for an excess profits tax amendment).

Amend section 141 (e) (relating to consolidated returns) by adding the following new sentence:

"For the purposes of the tax imposed by section 430 (the excess profits tax), if any member of the affiliated group is entitled to the benefits of section 435 (d) (deficits), 435 (e) (growth), 422 (abnormalities), 443 (change in products or services), 444 (increase in capacity), 445 (new corporation), or 446 (depressed industry subgroups), the amount included with respect to such member in the average base period net income of the affiliated group shall be the amount computed with respect to such member under whichever of such provisions is applicable to it." This amendment is effective with respect to taxable years ending after June 30, 1950.

The proposed amendment, I submit is right as a matter of policy. I also believe that such was the intention of Congress when the present excess profits tax was enacted. I earnestly urge its adoption.

Senator BYRD. In lieu of appearance there will be inserted in the record a statement by the Southwestern Public Service Co., W. F. Stanley, vice president and secretary of the firm.

(The document referred to follows:)

SOUTHWESTERN PUBLIC SERVICE CO.,
Dallas 1 Tex., July 26, 1951.

CHAIRMAN AND MEMBERS OF SENATE FINANCE COMMITTEE,
Senate Office Building, Washington, D. C.

GENTLEMEN: This brief is submitted in behalf of Southwestern Public Service Co., an electric utility operating in Texas, New Mexico, and Oklahoma with its executive office at Dallas, Tex.

THE PROPOSED AMENDMENT

Your committee is respectfully urged to consider incorporating in the pending Federal tax legislation an amendment to section 26 of the Internal Revenue Code to provide for the deductibility for the purpose of corporation normal tax and surtax of dividends paid by regulated public utilities (as now defined in said section) on the preferred stocks of such companies to the extent of 100 percent of the amount of the dividends so paid, such provision to apply to all preferred stocks of such companies now outstanding, as well as to preferred stocks which may be hereafter issued by such companies for the purpose of financing expansion or to refund indebtedness or other preferred stock.

LEGISLATIVE HISTORY

The present provisions of section 26 permit deduction for normal and surtax purposes of 31 percent of the amount of dividends paid by public utilities (as defined) on preferred stocks issued prior to October 1, 1942, and on preferred stocks issued to refund indebtedness or other preferred stock issued prior to such date.

This deductibility of preferred stock dividends was originally incorporated in the code by the Revenue Act of 1942, at which time the permitted deduction was 100 percent of such preferred stock dividends, but for surtax purposes only. In the Revenue Act adopted in September 1950, the deduction was made applicable both to normal and surtax, but the amount deductible was decreased from 100 percent of such dividends to 31 percent thereof, the purpose of this change being apparently to make the deduction with respect to normal and surtax at the new rate equivalent in amount to the 100 percent deduction previously permitted for the purpose of the 14 percent surtax only. In the new revenue bill as passed by the House which provides for a combined normal and surtax rate of 52 percent, the deductible percentage of such dividends is reduced to 27 percent, this percentage of the new rate again being equivalent to a 100 percent deduction of the original 14 percent surtax.

NEED FOR FURTHER TAX RELIEF FOR THE ELECTRIC UTILITY INDUSTRY

The electric utility industry as well as the other regulated utilities have received fair and reasonable treatment with respect to liability for excess-profits tax. Also the provision contained in the current House tax bill for the repeal of the 3⅓ percent tax on sales of electric energy for residential and commercial purposes (in which repeal it is hoped your committee will concur) will also be beneficial to the electric utilities in offsetting at least a portion of the impact of the higher tax rates.

However, the electric utility industry still sorely needs further relief from the impact of any increase in tax rates above the present 47 percent level, if it is to continue to finance the expansion of its facilities which is essential to the defense effort.

Shortly before representatives of the Edison Electric Institute testified before the House Ways and Means Committee in November 1950, in the matter of excess profits tax, inquiry was made by the institute of all the electric utility companies which were members, as to the relative impact on their earnings of the excess profits tax measure as originally presented by the Treasury Department, as against an increase in the normal and surtax rates to an aggregate of 50 percent. The majority of the responses indicated that a 50-percent rate would reduce earnings further than the relatively drastic provisions of the excess profits tax proposal made by the Treasury Department.

The figures for 1950 now show that the electric utility industry was able, by virtue of new business from the defense effort and normal increase in the civilian economy, to offset in that year, the impact of the increase in tax rate from 38 to 42 percent.

However, in the first 3 months of 1951, during which the 47-percent rate was effective, earnings have fallen below the preceding year. For the month of April 1951 (the latest month for which figures are available) net income of electric utilities was 5.2 percent below the same month in 1950, and after giving effect to the issuance of additional shares of common stock to finance expansion, it is estimated that per share earnings of the common stock of electric utilities were 10 percent below the figure for April 1950.

Per share earnings are the only figures which will give a true earnings comparison, for while net income of the industry may rise as new facilities are installed, and new business transacted, the per share earnings are being constantly diluted by the issuance of additional shares of common stock upon sale to the public to finance expansion. And the ability to sell common-stock equity in the market depends upon its ability to increase, or at least maintain, its earnings per share of stock outstanding.

Repeal of the electrical energy tax will be helpful in offsetting a portion of this decrease in per share earnings. The effect of such repeal in dollars of income is somewhat difficult to determine, but at best it is not anticipated it would do more than offset about one half of the 10-percent decrease in per share earnings indicated by the results of April operations.

Therefore, if it were assumed earnings would continue on the basis of the April 1951 figures, an increase in the normal and surtax rates from an aggregate of 47 to 52 percent, as provided in the House bill, would probably result, (even after giving effect to the benefit of the repeal of the electrical energy tax) in a decrease of 12 percent in per share earnings of the common stock of the industry for the period after the new 52-percent tax rate became effective.

In 1950 the proportion of earnings paid out in dividends by the electric utility industry was about 74 percent. Giving effect to a 12-percent decrease in per share earings, the over-all average dividend pay-out would rise to about 84 percent.

However, a recent statistical tabulation made by a New York investment house shows that of 71 electric utilities included, 16 had a dividend payout of 80 percent or more, with an average of about 85 percent. A 12-percent decrease in per share earnings with respect to these companies would increase their average pay-out to about 97 percent.

In 1950 the electric utilities raised through the sale of additional common stock to the investing public, including their stockholders, over 50 percent of all new equity money raised by American corporations, and this, despite the fact that their share of the national corporate taxable income was probably around 3 percent. This includes sales of preferred stock as well as common stock. Figures do not appear to be available for sale of common stock by all corporations, but it is believed that the proportion of the electric utilities would be much greater than 50 percent—perhaps two-thirds or 75 percent. The necessity of continuing to sell large amounts of common stock to finance the equity portion of their expansion program therefore, puts electric utility industry in a unique position.

It is estimated that the industry must expend over $7 billion within the next 3 years to finance further expansion which is essential for the defense effort and the civilian economy. Of this amount probably $1 billion will have to be in the form of additional common stock.

Common stocks of electric utilities customarily sell primarily on an investment basis. Most of the purchasers of these securities are interested primarily in stable and continuous income rather than in speculative profits. For this reason, the maintenance of dividends on these stocks is extremely important. Electric utilities have generally followed a liberal policy in the payment of dividends, and because of the relative stability of the industry and the recognition of the fact that more generous dividends will best attract investment at a reasonable rate, they have in recent years increased the proportion of earnings distributed in dividends to a point believed to be higher than any other industry. Investors, security analysts and institutions now generally feel that a payout of from 75 to 80 percent, or even somewhat higher is adequately protected by the earnings power, so long as future prospects are reasonably good. But where the dividend payout rises, or threatens to rise to over 90 percent, as would be the case as to a considerable segment of the industry under the impact of the increased tax rate provided in the new House bill, the maintenance of present dividends by these companies would be endangered.

Any reductions in dividend rates, or even the fear of such reductions in the minds of the investing public and security analysts, as a result of prospective reduced earnings because of higher taxes, might well undermine the confidence of the investing public in the industry and reduce prive levels to a point where the common stock financing necessary for expansion could be accomplished only at a prohibitive cost, if at all.

Many of the companies with high dividend pay-outs are those in the most rapidly expanding areas where it is imperative that they continue to sell common stock to meet their unusually high expansion needs, because of the rapid growth of the territory, both as to defense work and civilian economy.

While rate increases may ultimately restore all or part of the reduced earnings, these rate proceedings may be protracted, and until the increases are actually granted, the investing public will have no assurance that earnings and dividends can be maintained.

It is submitted that these unusual factors make it advisable in the interest of the defense effort and the national economy that some further relief be extended to the electric utility industry in the pending tax legislation.

It should be emphasized that the liberal dividend policy followed by the electric utility industry has resulted in the collection of substantially greater taxes by the Treasury, and will continue to so result, so long as these dividends can be maintained.

It is believed that American corporations generally paid out in dividends in 1950 something less than 50 percent of their earnings, as against the 74 percent of earnings distributed by the electric utility industry.

The following table gives a comparison of the total taxes receivable by the Treasury from each dollar of taxable income of the electric utilities and of all American corporations, based on dividend distributions for 1950, and on the average rates to recipients of dividends reflecting the increased individual rates proposed in the House bill:

	All corporations	Electric utilities
Taxable income	$1,000	$1,000
Corporate tax (present rate)	$470	$470
	$530	$530
Dividends paid	[1] $264	[2] $392
Average tax on recipient at assumed rate of 44 percent	$117	$172
Total taxes paid by corporations and recipients of dividends	$587	$642
Percent thereof to taxable income	58.7	64.2

[1] 50 percent.
[2] 74 percent.

On the foregoing basis, the Treasury will collect additional taxes aggregating over 5 percent of corporate taxable income in the case of electric utility companies, as compared with other corporations, due to the liberal dividend policy followed by the electric utility industry.

PREFERRED STOCK DIVIDENDS OF UTILITIES ARE IN EFFECT FIXED CHARGES

It is respectfully submitted that preferred stock dividends, while not legally obligations of regulated utilities, have come to be regarded as the equivalent of fixed charges on the income of utilities. Preferred stock is now generally recognized as a normal component part of the capitalization of operating utility companies. In the so-called El Paso case, the Securities and Exchange Commission set a formula for normal capitalization of utilities of 50 percent debt, 25 percent preferred stock, and a minimum of 25 percent in common stock equity. The Commission has at times approved of a somewhat larger debt percentage, and has considered the 25 percent common stock equity ratio as a minimum, favoring a somewhat higher percentage wherever possible.

At December 31, 1950, the capitalization of the electric utilities of the United States consisted of approximately 50 percent in bonds and other long term debt, approximately 14 percent in preferred stock, and the balance of about 36 percent in common stock equity.

That preferred stocks are today a normal component of the capital structure of electric-utility industries is evidenced by the fact that of 87 electric utilities covered by a recent statistical tabulation made by one of the leading investment banking houses in New York (which tabulation includes practically all the leading electric utilities of the country) 77 of these companies had preferred stock outstanding (in substantial amounts), and only 10 had no preferred stock outstanding. Of the 10 companies having no preferred stock, the majority consisted of large companies located in the centers of population, and where the rate of expansion of their properties to meet increased demands have not, in the past 5 years, been as great as in smaller communities located in the rapidly growing sections of the country. These larger companies, because of their strong credit position and lower rate of expansion, do not have the same need of tax relief as the smaller and rapidly expanding utilities.

In 1948 and 1949, when the market for utility preferred stocks was depressed by general conditions, institutional and other purchasers of the preferred stocks required a sinking fund or purchase fund to retire the issue in annual installments. Due to the depressed price of Government bonds and to the high-grade corporate-debt securities since the spring of this year, the market for utility preferred stocks has been adversely affected to a substantial degree, with the result that in order to market such securities today it is understood that substantial annual sinking or purchase funds may be required, in many cases running as high possibly as 3 percent, 4 percent, or 5 percent per annum.

While these payments are not obligations in the sense of debt payments, they are a condition to the payment of any common-stock dividend, and therefore, for practical purposes, are as binding on the company as an unconditional legal obligation, since it would be impossible to finance expansion if common-stock dividends were interrupted. Such sinking-fund provisions would require the retirement of preferred stock more rapidly than sinking-fund provisions with respect to bonds or long-term unsecured debentures. An anomalous situation would thus be created whereby dividends on preferred stock, which would have to be fully retired in annual installments over a 20-to-30-year period, would not be deductible for normal or surtax purposes, whereas interest on bonds or other debt securities, having lower sinking-fund requirements, would be deductible for tax purposes.

TEMPTATION TO INCREASE DEBT

Quite apart from the need of electric utilities for some further relief from mounting Federal taxes is the steadily increasing inducement to the industry to finance expansion to a larger degree by issuing bonds or unsecured debt instead of preferred stock. This inducement arises from the increasing "spread" between the cost of money raised by the sale of unsecured debentures and the cost of preferred-stock money.

Fifteen months ago, before Korea, an average electric utility could have issued unsecured debentures at a cost of about 3 percent per annum. After deducting taxes of 38 percent, the net cost of the money would have been 1.86 percent. At the same time, it could have sold preferred stock at about a 4-percent dividend rate, but since it could not deduct the dividends for tax purposes the difference in cost at that time would have been about 2.14 percent.

In other words, the cost of the preferred stock money would have been a little more than twice that of unsecured-debt money. Since then, the cost of money has increased substantially (due primarily in the break of prices of United States Government bonds), and there has also been an increase in tax rates.

Accordingly, at the present time, the same company would probably have to pay 3.6 percent per annum for unsecured debenture money (or 20 percent more than before Korea), and after deducting taxes at a 52-percent rate (as in the House bill) the net cost would be only 1.73 percent. Thus, the net cost of the debenture money, after taxes, would be slightly lower than before Korea. On the other hand, the present cost of preferred-stock money would range from 4.8 to 5 percent. Assuming a rate of 4.9 percent for preferred stock, and without the benefit of any tax deduction for the dividends, the difference in cost would be 3.17 percent per annum. This difference is nearly 50 percent higher than it was 15 months ago, so that preferred-stock money would now cost almost three times as much as the net cost of unsecured-debt money, after taking into consideration the benefit of the tax deduction.

Obviously, this increasing excess in the cost of preferred-stock money over debt money is a strong temptation to electric utilities to finance through debt securities to the greatest possible extent.

While issuance of such securities requires approval of Federal or State commissions in most cases, and while trust indentures of many companies contain limitations on the proportion of debt to total capitalization, nevertheless, a considerable increase in the percentage of debt above present limits is entirely possible. Management of the electric utilities would be loath to adopt such a financial policy, but might feel there was no satisfactory alternative under the impact of higher taxes and before any rate increases could become effective.

Such a development would weaken the credit standing of the electric-utility industry and tend to weaken its capital structure, thus reversing the trend toward sounder and more conservative capital structures which has developed over the past 10 years.

If provision were made for the deduction of dividends on preferred stock issued for purpose of expansion, the tax saving at the 52-percent rate would reduce the net cost of preferred-stock money in the present market to 2.35 percent, or only about one-third more than the net cost of unsecured-debt money, as compared with the present differential of about 280 percent.

Such a provision would therefore greatly lessen the inducement to finance through a larger amount of debt securities and would thus be helpful in maintaining sound capital structures for the electric-utility industry, and thus facilitate the common-stock equity financing of the industry which is essential to expansion.

CONCLUSION

In 1950 the electric-utility industry paid $112,000,000 in perefered-stock dividends. It is estimated that about two-thirds of this amount related to preferred stock issued prior to October 1, 1942 (or issued to refund such latter stock), and which is therefore presently entitled to the deduction of dividends for tax purposes to the extent of 31 percent (or 27 percent of the dividends under the House bill).

Accordingly, under the present law, about $23,000,000 of such dividends would be so deductible, leaving about $89,000,000 not deductible.

If this latter amount of dividends were made deductible, this would be a saving to the electric-utility industry in taxes of about $45,000,000. On the other hand, such tax relief should assure the maintenance of dividends on the common stock of electric utilities at present rates and thus assure continuance of necessary equity financing for the heavy expansion program required for the next 3 years.

Furthermore, maintenance of such dividends would also maintain the collection of revenue by the Treasury from taxes on the recipients of such dividends, for, if it became necessary for any substantial part of the industry to reduce dividends because of lower earnings due to the impact of the increased tax rates, the Treasury Department might suffer considerably through reduction in taxes collected.

As pointed out above, the liberal dividend policy followed by the electric-utility industry, and the consequent collection of larger amounts of taxes from recipients of the dividends, has resulted, and is now resulting, in the collection by the Treasury of taxes on the taxable income of the electric-utility industry at an aggregate rate 5 percent greater than that collected on the taxable income of American corporations generally; i. e., 64 percent versus 59 percent. This 5-percent increase in rate, when applied to taxable income of the electric-utility industry, woud almost exactly offset the increase in tax rate from 47 percent to 52 percent proposed in the House bill. It considerably exceeds the relief which would be granted to the industry by the proposed full deductibility of preferred-stock dividends, taking into account the loss in revenues to the Treasury which might result from the reduction in common-stock dividends if adequate relief is not afforded.

It is respectfully submitted that to rely solely upon rate increases to restore the reduction in earnings of the electric-utility industry due to an increased tax rate is to embark on a very serious gamble with the expansion program of the industry. This program, so necessary to the defense effort and the continuance of civilian economy at maximum levels, is dependent upon successfully raising from the investing public a very substantial annual amount of equity funds by the sale of common stocks. Unlike most industrial corporations, the rate of expansion of electric utilities has been and will continue to be so great that they cannot provide the portion of the new financing necessary to maintain proper common-stock equity ratios in relation to total capitalization by retaining a portion of their earnings, but must go to the investing public for new money at frequent intervals.

Reduction in dividends by even a few companies, under the impact of the higher taxes, might undermine confidence in the maintenance of dividends on the common stocks of other companies to such an extent as to create a chaotic market in which the necessary equity financing could not be accomplished.

Also, leaving aside the uncertainties and delay incident to proceedings for rate increases, it seems inequitable that utility consumers should be required to restore by rate increases the amount of additional taxes resulting from the increased tax rate when the stockholders of the electric utilities are already paying a like amount into the Treasury as additional taxes on the dividends received by them because of the liberal dividend policy which the industry has been following, and as to which it is unique among American industries.

Under the circumstances outlined above, it is hoped that your committee will give serious consideration to the unique problems of the electric-utility industry and will find it equitable and feasible to provide for the relief requested in the pending tax legislation.

Southwestern Public Service Co. operates an interconnected electric system in the States of Texas, New Mexico, and Oklahoma in a territory comprising the Texas and Oklahoma Panhandles, the so-called South Plains region of Texas and the Pecos River Valley in New Mexico. The population of this territory is about 625,000, and the area served is larger than the States of Pennsylvania and Rhode Island combined. This territory has been experiencing a rate of growth believed to be as high as that of any other electric utility in the United States. The company's plant and property have increased from about $38,000,000 at the end of World War II to almost $120,000,000 today, almost entirely through the construction of new facilities to meet the increasing demands. To finance this expansion, the company has made five offerings of common stock to its stockholders—one in each of the 5 years from 1947 through 1951. It has consistently followed a policy of paying liberal dividends, and the proportion of its earnings paid in dividends for its fiscal year ending August 31, 1951, is estimated at about 86 percent. It is, therefore, itself sorely in need of relief from the impact of further increases in the Federal tax rates. The relief afforded by the amendment hereinabove proposed would contribute substantially toward assuring maintenance of the company's present dividend rates, and in creating confidence in the security market that the dividend can be maintained. The proposed relief is, therefore, most respectfully urged in behalf of the undersigned company, as well as that of the electric-utility industry as a whole.

W. F. STANLEY,
Vice President and Secretary, Southwestern Public Service Co., Dallas, Tex.

Senator BYRD. In lieu of appearance, there will be inserted into the record the statement of Arthur Kuiper, treasurer and comptroller of the Continental Foundry & Machine Co., of East Chicago, Ind.

(The statement referred to follows:)

STATEMENT OF ARTHUR KUIPER, TREASURER AND COMPTROLLER OF CONTINENTAL FOUNDRY & MACHINE CO.

My name is Arthur Kuiper, and I am treasurer and comptroller of Continental Foundry & Machine Co., a Delaware corporation which has its principal place of business in East Chicago, Ind. Continental is a relatively small manufacturer of metal working machinery, including rolling mills, steel-plant equipment and rolls, castings of various types, etc.

Continental is in a period of rapid growth in the volume of its business. Because of this fact, its excess-profits-tax credit computed under the normal earnings on invested capital method bears an abnormally low ratio to the volume of its business. We believe that Congress intended to afford relief for companies such as Continental under section 435 (e) of the Internal Revenue Code, included in the Excess Profits Tax Act of 1950, which provides an alternative based on growth for computing the average base period net income. Indeed, Congress has provided effective relief, unless certain United States Treasury tax-saving notes held by Continental on January 1, 1946, for the discharge of its abnormal World War II tax and renegotiation liabilities, are considered to be assets of the company within the meaning of section 435 (e).

One of the tests of eligibility for relief under that section provides that total assets of the taxpayer shall not exceed $20,000,000 on January 1, 1946, and total assets are defined as an amount equal to the sum of the cash and property other than cash held by the taxpayer for the purposes of the business. On January 1, 1946, the total assets of Continental, carried on the assets side of its balance sheet, were approximately $14,000,000. On that date, Continental held United States Treasury tax-saving notes in the amount of $12,000,000, $4,000,000 of which were carried on the assets side of the balance sheet. In accordance with accounting research bulletin No. 14, prepared by the committee of accounting practice of the American Institute of Accountants, the remaining $8,000,000 of tax notes were carried on the liabilities side of the balance sheet as a credit against Continental's liability for renegotiation refunds and for income- and excess-profits-tax payments. In purchasing such tax notes, Continental undertook to discharge insofar as possible its abnormally high liability for past wartime obligations to the Government. These tax notes were not held for usual business purposes.

Nor do the $8,000,000 of tax notes in any way reflect the size of the company. Early in 1946, Continental began to apply the notes in payment of taxes, and from mid-1946 through 1949, the end of the base period, Continental's total assets, even including tax notes, never reached $20,000,000. Thus it is clear that at no time prior to the end of 1949 was Continental actually a $20,000,000 corporation. The tax notes were acquired and held simply in an effort to discharge the wartime tax and renegotiation liability accrued during 1945, prior to the beginning of the base period. We believe that in enacting section 435 (e), the Congress clearly intended to provide relief for relatively small corporations such as Continental, whose assets held for normal-business purposes amounted to less than $20,000,000. The $20,000,000 limitation was imposed in order to maintain a competitive balance between such corporations and corporations with larger resources available for their operations. These tax notes were not funds available for Continental's usual business operations.

We have recently requested the Commissioner of Internal Revenue to rule that Continental is eligible to compute its average base period net income for the purposes of the Excess Profits Tax Act of 1950 in accordance with the provisions of section 435 (e), and we hope to receive a favorable ruling in the near future. However, time was too short to expect a ruling before the date set for my appearance here, and we felt it desirable to outline to you the problem, should it become necessary, as we sincerely hope it will not, to ask for legislative clarification of the coverage under section 435 (e).

Senator BYRD. Mr. Main?

STATEMENT OF FRANK WILBUR MAIN, SENIOR PARTNER, AND M. C. CONICK, EXECUTIVE PARTNER, MAIN & CO., CERTIFIED PUBLIC ACCOUNTANTS

Mr. MAIN. Mr. Chairman and members of the committee, this presentation is entitled, "Federal Taxation and Inflation—the Law of the Take."

I am Frank Wilbur Main, senior partner of Main & Co., certified public accountants.

Very briefly, I should like to give you certain views concerning Federal taxes and inflation.

These are based on close acquaintance with tax problems over a period of years in a professional capacity and particularly on much careful research and specialized study in the field of Federal taxes which my associates and I have conducted during the past 8 years.

My chief associate in this work has been Mr. M. C. Conick, executive partner of Main & Co., who is here with me.

The original purpose of our special studies was to simplify the tax structure. Later we saw the need to provide incentives, and both these objectives were achieved in the Federal incentive income-tax plan which we introduced to Congress in 1945, and which we continue to advocate. During the past 12 months, however, we have come to realize that even more important than simplification of the tax structure and provision of incentives is the necessity for the Federal Government to level off the present inflation.

Inflation can never be leveled off by increasing taxes, no matter how the taxes are distributed, whether in a hodgepodge of income taxes, corporation taxes, and excess-profits taxes as at present, or by using a new tax, such as a sales tax, to take up part of the load.

We know that many persons assert that high taxes prevent inflation, by mopping up purchasing power, but the record of the 5 years since World War II should be enough to disprove this.

Senator KERR. Let me ask a question about this, Mr. Main: Suppose you had governmental income of $60 billion and suppose that your budgetary requirements for domestic and defense expenditures are $75 billion.

Is it more inflationary or less inflationary to secure that additional $15 billion by the selling of bonds or borrowing the money, or by increasing the tax take to $75 billion and thereby fixing it so that that additional billion dollars of spending power which, if not taxed, would be in competition with the Government, but which if taxed would be used to get the funds with which to pay for that additional $15 billion in expenditures, instead of creating the new money, which is what you do when you issue bonds and get it that way—which of those two would be more inflationary or less inflationary?

Mr. MAIN. It would be more inflationary to increase the taxes and, as we go along, I think that we can explain that.

Senator KERR. All right. You are going to have quite a job selling me on that——

Mr. MAIN. I realize that, because our viewpoint is entirely contrary to the accepted belief, if we might call it that, that high taxes mop up inflation. As we go along, I think that we will begin to answer——

Senator KERR. I do not subscribe to the view that high taxes alone are anti-inflationary, and I did not ask you a question based on either the accuracy or the inaccuracy of that principle.

I asked you a question based on the alternative method of securing the additional money which we will assume, for the purposes of this question, the Government must have.

Mr. MAIN. In times of emergency, where it is necessary to have more money than can be taken out without puffing up the national income, it is less inflationary to borrow in our opinion.

Senator KERR. It is your opinion then that it would be inflationary to leave that additional $15 billion of purchasing power in the hands of citizens with which they can be trying to buy production that did not exist, and then have the Government issue $15 billion in new money to be competing against that excess purchasing power which the people have to buy products with, which are either in limited supply, or nonexistent.

You think that is less inflationary, then—in other words, you think it is less inflationary to have $80 billion with which to buy $15 billion worth of goods; is that what you are saying?

Mr. MAIN. In our opinion, there is no surplus or untapped reservoir of income which can be taken without increasing costs.

Senator KERR. That is another question.

Mr. MAIN. We do not believe that it is possible——

Senator KERR. That was not the question I asked you. I asked you which was less inflationary if the Government has to have an additional $15 billion worth of money, whether it should be obtained by the Government's issuing new money, or whether it should be obtained by the Government's taking that amount of money presently available to people who, unless it is taken from them, will use it to buy those same products.

Mr. MAIN. Well, if it was possible to take it without inflation, I would prefer to take it.

Senator KERR. I do not think it is possible to use it either way without inflation.

I did not ask you that. I asked you which would be less inflationary.

Mr. MAIN. The borrowing would be less inflationary.

Senator KERR. All right. I am going to listen to you now with great interest to see how you demonstrate that.

Mr. MAIN. All right.

During this period the Federal tax take was at the highest point in history—even higher than during World War II.

Senator KERR. Was it higher percentagewise?

Mr. MAIN. Yes.

Senator KERR. Be very careful about that because I am going to cross-examine you on that.

Mr. MAIN. I am ready.

Senator KERR. What was the national income in 1945?

Mr. MAIN. In 1945?

Senator KERR. You said you had an expert here now to help you answer these questions.

Mr. MAIN. I think the national income in 1945 was about $160 billion. Mr. Conick will know.

Senator KERR. Let us get it because I am going to find out how much you know or how little I know.

You understand that you have said that during the period since World War II the Federal tax take was at the highest point in history, even higher than during World War II, and I asked you if that was correct percentagewise, and you have said, "Yes."

Mr. MAIN. I think it was about 17 percent.

Senator KERR. I say, you have said "Yes"; is that correct?

Mr. MAIN. We give the figures a little later.

Senator KERR. I say, Am I correct on that?

Mr. MAIN. Yes; that is right.

Senator KERR. All right. That is fine.

What was the national income in 1945?

Mr. CONICK. $182.6 billion.

Senator KERR. $182 billion?

Mr. CONICK. Yes.

Senator KERR. What was the total tax take that year?

Mr. CONICK. The net receipts were 44.7 billion.

Senator KERR. What do you mean, "net receipts"?

Mr. CONICK. You report—the Government reports net receipts and total receipts. Net receipts were 44 billion.

Senator KERR. What were the total receipts?

Mr. CONICK. 47.7 billion.

Senator KERR. 47 billion?

Mr. CONICK. Yes, sir.

Senator KERR. That net was derived from rebate of taxes that were overpaid?

Mr. CONICK. Yes, sir.

Senator KERR. That did not affect the tax in the 47 billion because of the fact that they took part of it and paid it back, paid back what they overpaid, in the form of rebates for previous years; is that not correct?

Mr. CONICK. That is right.

Senator KERR. All right. Now, what percentage is 47 billion 750 million of 182 billion?

Mr. CONICK. About 30 percent.

Senator KERR. How much?

Mr. CONICK. About 30 percent. I beg your pardon. Just a moment.

Senator KERR. I would figure 30 percent about 54 billion. I am not a certified public accountant, but I can figure that.

Mr. CONICK. About 26 percent.

Senator KERR. That is fine. That is the way I would figure it.

What was the 1950 total income?

Mr. CONICK. The national income in 1950 was about 239 billion.

Senator KERR. Would you say 240 billion, roughly?

Mr. CONICK. I think so.

Senator KERR. What was the total tax take?

Mr. CONICK. The total tax take?

Senator KERR. In 1950.

Mr. CONICK. The total receipts were 41 billion; net receipts 37 billion.

Senator KERR. Forty-one billion was the same figure we used awhile ago; was it not?

Mr. CONICK. That is right.

Senator KERR. What percent is that of 240 billion?

Mr. CONICK. About 17.

Senator KERR. About 17 percent. Well, then, 17 is not nearly 26; is it?

Mr. CONICK. Senator, I do not think it is fair to take 1 year.

Senator KERR. I say, 17 percent is not nearly 26 percent; is it?

Mr. CONICK. No, sir.

Senator KERR. Then, the take for 1950 percentagewise was not higher than it was percentagewise during World War II; was it?

Mr. CONICK. That is 1945 as against 1950, but if you take the war period from 1940 to 1945, and the period from 1946 to 1950, you get a different story.

Mr. MAIN. The total tax——

Senator KERR. 1945 was the last war year; was it not?

Mr. CONICK. We took 1 year instead of the total.

Senator KERR. I say, it was; was it?

Mr. CONICK. Yes.

Senator KERR. What was it in 1944?

Mr. CONICK. It was 183.8, national income.

Senator KERR. All right. What was the total tax take?

Mr. CONICK. About 44 billion.

Senator KERR. 44 billion? Is that the total?

Mr. CONICK. 43.0 billion is the net, and 45 is the total.

Senator KERR. What was the total? That is the figure that we have been using.

Mr. CONICK. Forty-five.

Senator KERR. All right. What percentage of 183 is that?

Mr. CONICK. Senator, I have it worked out for the 5 years.

Senator KERR. I am cross-examining you.

Mr. CONICK. I will make the calculation.

Senator KERR. He said you were an expert.

Mr. MAIN. I said he was the executive partner in Main & Co.

Senator KERR. Well, you said he was here to help you answer questions.

Mr. MAIN. That is right, and he has shared in the preparation of the statement.

Senator KERR. All right.

Mr. CONICK. About 25 percent.

Senator KERR. Was the national income in 1945 as much as it was for 1946?

Mr. CONICK. In 1946 it was——

Senator KERR. I mean in 1944 was it as much as it was in 1945?

Mr. CONICK. It was more.

Senator KERR. It was more in 1944 than it was in 1945?

Mr. CONICK. Slightly.

Senator KERR. All right. In 1944 the tax take was 25 percent?

Mr. CONICK. About 25 percent.

Senator KERR. All right. What was the national income in 1949?

Mr. CONICK. 216.8 billion.

Senator KERR. What was the Federal tax on that?

Mr. CONICK. Total receipts were 42.7 billion.

Senator KERR. What is that percent?

Mr. CONICK. About 20 percent.

Senator KERR. About 20 percent.

Thus far, percentagewise 1944 was 25 percent, 1945 was 26 percent, and 1949 was 20 percent; 1950 was 17 percent. We do not have it higher percentagewise yet than it was in World War II, have we?

Mr. CONICK. Not for those 2 years.

Senator KERR. All right. What was 1943?

Mr. CONICK. National income was 169 billion.

Senator KERR. What was the Federal tax take that year?

Mr. CONICK. The total receipts, we are figuring on total, not net——

Senator KERR. Yes, sir.

Mr. CONICK. Total were 23 billion 402 million.

Senator KERR. All right.

Mr. CONICK. About 14 percent.

Senator KERR. Fourteen percent in 1943. What was the total in 1948?

Mr. CONICK. In 1948, 223.4 billion.

Senator KERR. In 1948 it was 223.4 billion?

Mr. CONICK. Yes.

Senator KERR. What was the tax take that year?

Mr. CONICK. Total receipts were 46 billion, about 20 percent.

Senator KERR. Now, let us add those 3 years together, and let us add the total income for 1943, 1944, 1945——

Mr. CONICK. The total national income from 1943 to 1945 was 535 billion.

Senator KERR. 535 billion?

Mr. CONICK. 535 billion.

Senator KERR. What was the total tax take for those 3 years?

Mr. CONICK. 116.5 billion.

Senator KERR. What was that percentagewise?

Mr. CONICK. About 22 percent.

Senator KERR. Let us take the 3 years, 1948, 1949, and 1950.

Mr. CONICK. 676 billion.

Senator KERR. Does that include the—that is not total individual——

Mr. CONICK. Total national income.

Senator KERR. How much?

Mr. CONICK. I beg your pardon; 679 billion. These are round figures.

Senator KERR. Well, let us say 680 billion. What was the total tax take for those 3 years?

Mr. CONICK. 130 billion.

Senator KERR. What percentage is the of 680 billion?

Mr. CONICK. Just about 20 percent, or a little under; in round figures, 20 percent.

Senator KERR. Then certainly with reference to 1943, 1944, and 1945, when the tax take was a little over 22, and 1948, 1949, and 1950, when it was a little under 20, it has not been the highest percentagewise; has it?

Mr. CONICK. For those 3 years, it has not.

Senator KERR. All right.

Mr. MAIN. We based our calculations on the entire war period, and the 5 years after the war period.

But, as you gentlemen well know, inflation is worse today than at any time since the turn of the century.

As opposed to such a fallacious theory, we would ask you to consider what we call the law of the take. This, very simply, is that the Federal Government can take any amount of taxes it desires—whether the $71.6 billion requested by President Truman or $80 billion or $90 billion or $100 billion—but that an excessive take automatically puffs up the national income; in other words, causes inflation.

We ask that you think on that carefully, because we believe it explains a very surprising change in public attitude in recent years. The American public used to be very much opposed to payment of Federal taxes, but seemed to show little concern at the size of the Federal debt. An increase in taxes was a thing a man felt directly in the region of his pocketbook; public debt was something the economists talked about, but beyond the comprehension of the so-called man in the street. Now, suddenly, everyone seems debt-conscious and says learnedly that we should "pay as we go."

But, except for a bit of grumbling at the time a tax jump is mentioned, most of our people seem convinced that they can take such increases in stride.

If this meant that each taxpayer planned to pull in his belt a bit tighter, or to tap surplus funds to carry him through, increased taxes might have some effect in lessening inflation. But things are not working out that way. Most of our people have a slim margin between a comfortable life and what they consider a mere existence. The reason they don't grumble more about increased taxes is that they have found a cushion to absorb the blow.

That cushion, of course, is inflation, which puffs up the national income in dollar terms out of all proportions to goods produced and services rendered. The man hit by excessive taxes passes them on, in one way or another, by a higher price for his labor. The business hit by excessive taxes hands them on through higher prices for its merchandise or services. Because this has gone on again and again, the belief seems to exist in many quarters that it can go on forever.

If everybody received double wages, doubling the cost of living would not be too bad. But we know that it does not work that way. Many are confronted with increased living costs and with no compensating increase in revenue. For the elderly, and all others on fixed income, the situation already approaches catastrophe.

From the practical standpoint of Congress, as it seeks to provide for the Government's needs, each additional degree of inflation lessens the purchasing power of the tax dollar. Thus an excessive tax take which, as we have said, increases inflation, defeats its very own ends and at the same time endangers our whole economy.

There have been many warnings lately that we are "approaching the danger point" in taxation. We believe that point is past, and that the danger becomes greater each day the present inflationary trend goes unchecked. A tax take becomes excessive and dangerous when it either destroys incentives to produce, to save, and to invest, or when the tax is passed on as part of an inflationary spiral. So far the latter condition has obtained and production has increased. But at the same time investments in new and risk-taking ventures have fallen off.

When our people feel that their dollars are losing value, they rush to exchange them for goods, causing undue pressure on our production facilities. The buying spree of last fall, and the slump that followed in many fields, are warning signals of the dangers of inflation.

An alllowable tax take, one that will not add to inflation and may cause it to level off, is certainly not more than 17 percent of the national income.

Senator KERR. How do you arrive at that figure?

Mr. MAIN. We arrived at that through the experience of this country and through studying what had happened in other countries. I might say this, if I can take the time, that in 1945 when we presented what was known as the Federal incentive income tax plan, it was presented as a result of 2 years' study, and it was in April 1945, when we were still at war with Japan and Germany.

At that time all the other plans were based on a postwar revenue of a hundred billion, which was much in excess of what we had prior to 1941.

Senator KERR. Postwar revenue?

Mr. MAIN. It was based on a postwar national income of a hundred billion.

Senator KERR. Let us stop right there.

Mr. MAIN. And a Federal budget of 16 to 18 billion.

Senator KERR. I say, would you just let me ask you a question?

Mr. MAIN. Pardon me, Senator.

Senator KERR. Was it your considered judgment in 1945 that postwar national income would be $100 billion?

Mr. MAIN. $160 billion. We were the only—

Senator KERR. I thought you said it was based on a postwar income on $100 billion.

Mr. MAIN. We said all other plans of that day were based on a $100 billion postwar.

Senator MARTIN. Mr. Main's group, Senator Kerr, felt that it would be $160 billion.

Mr. MAIN. 160 billion.

Senator MARTIN. That is what they claimed. All of us thought you were off the thing. I used to argue it with Mr. Main and I just thought that was all silly to think of 160 billion, because it would be so inflationary—that was my argument.

Go ahead. I am sorry.

Mr. MAIN. I said the postwar budget would be at least 25½ billion. We were accused at that time of advocating waste in Government, because all the other plans were 16 billion to 18 billion.

Our arithmetic said it would be at least 25½ billion, and we reasoned that it would be impossible to carry 25½ billion with a postwar national income of 160 billion.

Senator KERR. I thought you just said that would be the reasonable amount to expect on the 160 billion.

Mr. MAIN. We said that it would be at least 160 billion.

Senator KERR. And that 17 percent was a reasonble percentage.

Mr. MAIN. Yes, sir.

Senator KERR. And that 17 percent of 160 billion would be 25 billion?

Mr. MAIN. Yes, sir.

Senator KERR. Approximately?

Mr. MAIN. Yes. We based it on 25½ billion.

At that date, the New York Sun of June 1, 1945, had an editorial on our proposed plan, and commended a private citizen for interesting himself in this problem, but said in polite words that it was out the window because there could never be 160 billion in the postwar period.

Senator KERR. I want to commend you not only for taking the interest, but having the interest and doing the work in making the estimate, and I want to commend you for being one man who was not hamstrung by pessimism in trying to gage the future by specifications of the past.

But you are happy to have lived to see that even your most optimistic estimates may now be considered as having been conservative.

Mr. MAIN. Yes.

Senator KERR. All right.

Mr. MAIN. Thank you, Senator; thank you for your commendation, because, in those days, as Senator Martin knows, we had plenty of criticism on every side, and Mr. Stam was familiar with what we were doing at that time. I will say this, that Mr. Stam never criticized our estimates, at least to us.

Senator KERR. Well, Mr. Stam has a record that has proven him not only to be one of the ablest, but one of the most effective diplomatic public servants that I know of. [Laughter.] He has demonstrated that he can get along not only with this committee, but even with the House Ways and Means Committee, and with the run-of-the-mill taxpayers, and that is something.

Mr. MAIN. We have had a great deal to do with Mr. Stam and we commend him most highly.

Senator KERR. Fine.

Mr. MAIN. This is much lower than the present take; it is much lower than many people believe can be taken without causing inflation. But a 17-percent take is safe only with an entirely different tax structure, such as the Federal incentive income tax plan.

With reference to budget requests before you, we urge that Congress lop off every item that does not contribute directly and provably to defense or to efficient Government operation. Federal departments have no more excuse than any individual for unnecessary spending. It is our belief that approximately 9 to 10 billion dollars could be cut from the President's proposed $71.6 billion budget.

To such an extent that anticipated revenue from taxes, on either the present or on a lowered basis, does not meet the needs of your curtailed budget, we recommend that you allow the difference to stand as an increase in the national debt.

This contradicts the present belief that we must "pay as we go," but we consider it the least inflationary plan under present circumstances.

Debt, whether of a nation or of an individual, is to be avoided whenever possible, but is dangerous only when it becomes too large in relation to anticipated income.

Our national debt of approximately $257 billion seems high in comparison with the 1941 prewar $49 billion, but largely represents the cost of fighting and winning World War II without bankrupting our economy.

Senator KERR. You take some comfort in the knowledge that it is now about 252.5?

Mr. MAIN. Yes.

It largely represents the result of fighting and winning World War II without bankrupting our economy. It is not a dangerous level for a Government with a present national income at the rate of $269 billion or the $300 billion we expect to reach in the not too distant future.

Senator BYRD. Suppose the national income went down, what then?

Mr. MAIN. Well, the national income is bound to ebb and flow. The economic forces are like all tides, they ebb and flow, so that there is nothing which ever moves in a straight line.

Senator BYRD. What you are stating seems to me to be the wrong premise. You are taking the debt, which seems to be a stationary figure, unless we pay it off, and saying it is all right to have that debt if the national income continues to rise. Suppose the national income does not do it, then is the debt dangerous or not?

Mr. MAIN. From our studies we believe there will be current ebbs and flows in the national income. We do not believe that there can be any great inflation; we do not believe there can be any great deflation with our present wage level, which is going to go higher, in our opinion——

Senator BYRD. That was what everyone believed in 1929; was that not true?

Mr. MAIN. Yes.

Senator BYRD. Ninety percent of the country believed it in 1929, and we had one of the worst collapses and depressions that we ever had.

Mr. MAIN. Certain of the wages went down, but many of the wages, Senator, did not go down.

If we take the cost of manufacture, the cost of services, and we add to that the cost of taxes, we add a very definite load.

Senator BYRD. In other words, you see ahead of us a permanent level of high prosperity; is that right, or not?

Mr. MAIN. I do not say that inflation means prosperity, Senator.

Senator BYRD. I know, but you are basing our debt on the income, the national income, which is now at an inflationary level. You say that that debt is not dangerous at that level. Well, I contend that that is not sound logic because that level may change, and that it will change.

Mr. MAIN. Senator, in 1946 there was a point, as I recall it, when the national income was $180 billion. At that time the debt represented 2 years' national income. At the present time our debt represents less than 1 year's income, and as our inflation continues, the debt is being reduced.

Senator KERR. Mr. Main, you may be losing the chairman, but you are very rapidly getting one of the members in your corner. You are getting him very rapidly. [Laughter.]

Senator BYRD. That is the first time I have heard it suggested that the debt is not undesirable. You are apparently——

Senator KERR. He did not say that.

Senator BYRD. He says it is not dangerous.

Senator KERR. He calls attention to the fact that we have arrived at the position where our national income per year exceeds our total debt, and what he is saying to you is that we are in a healthier position by far insofar as the national debt is concerned when our annual income is 20 percent above the total national debt than we were when our annual income was about half of the national debt.

Senator BYRD. I still say that is on the presumption that the national income will continue either at the present level or rise higher; that as the national income goes down, then your logic is not sound. Never in the history of this country have we had long periods of prosperity without some dips and depressions, some very serious and some not so serious, and this national income is based on inflation——

Senator KERR. We will have some dips.

Senator BYRD. Because the dollar today will only purchase 52 cents as compared to 1940, and in the building trades it only purchases 40 cents. So we will have an inflationary basis which will go so high that it may collapse.

Senator KERR. I want to join this witness in saying that the trend is up, and that we will be on a national income of $400 billion before we will ever be back——

Senator BYRD. That is the most dangerous condition if based on an increasing inflation.

Senator KERR. Let me finish.

Senator BYRD. If we go up by inflation.

Senator KERR. Let me finish. Let me finish making the prediction—we will be at a national income of $400 billion before we will go back to an income of $200 billion.

Mr. MAIN. I agree with you.

Senator BYRD. None of us know; this is all conjecture.

Senator MARTIN. I would like to know how high will the income go when we have the blow-out at the top?

Senator KERR. We are not going to have the blow-out at the top.

Senator MARTIN. Wait a minute. One of the greatest countries in the world was Germany. The people had the know-how, they were educated, they were industrious, they were thrifty, and still they had it, and I am taking that as an illustration. I have great admiration for Mr. Main. He has done a lot of grand things.

Senator KERR. I am having more and more as I go along.

Senator MARTIN. I have a great deal of admiration for him, but I do not agree with him at all.

Of course, he and I have had many arguments. I do not agree with him at all; but I would like for you to venture the prophecy of how much will our income be when we blow out at the top like Germany did.

Mr. MAIN. I think that the time may well come when, if something is not done, if sound efforts are not made to level off inflation, I am looking forward to the time when our income will reach a trillion, and I might say [laughter]——

Senator MARTIN. But it will be an inflationary income.

Mr. MAIN. Yes, sir; absolutely; we have got an inflated income now.

Let us look for just a minute at what happened in France after the First World War. France won the First World War. Of course, we helped, I mean, and the Senator was a valiant soldier in that war, but we came in rather late.

Senator MARTIN. I will not get into that argument.

Mr. MAIN. That is true, Senator Martin, that you and I have been friends——

Senator BYRD. You will not deny that.

Senator MARTIN. But I feel that it was a great economy, the soundest economy of the United States that won World War I and World War II.

Now, then, I want to keep us a sound economy, so that we can win world war III if we are unfortunate enough to get into it. That is what I am interested in.

Mr. MAIN. Let me just finish now and tell you what happened in France.

At least, the French helped win that World War, and they made——

Senator MARTIN. The Frenchman is a great soldier, there is no question about that——

Mr. MAIN. The franc prior to the First World War——

Senator MARTIN. But France was licked and so was Great Britain——

Mr. MAIN. Until we got into it.

Senator MARTIN. Until we got into it.

Mr. MAIN. I agree with that.

The franc was worth 20 cents prior to World War I. A good job was done in controls in France, because in 1919 the range of the franc was from 18 cents to 9 cents. That meant that they had held the franc very well. Nine cents meant a hundred percent inflation, because we are looking at it from the reverse.

France wanted security; they wanted to help their neighbors; they wanted to do a lot of things, and they did a lot of things, and they built the Maginot Line, and the franc kept on going down, and I think it was in 1925, Senator, and if I am wrong in that date, please excuse me—I think it was 1925 that the French Parliament passed a law stabilizing the franc at 3.92. That is practically a 500 percent inflation.

Of course, unfortunately, these economic laws do not understand French or they do not understand any language except their own language, and the franc now, of course, due to other circumstances, is worth just a fraction of a cent.

It would be a fine thing if it were possible for a government to do all that it wanted to do, to be a Santa Claus, and give out all good things. But a government cannot do it because when they take more than a certain percentage of the national income, inflation results, and the income is puffed up.

Shall I go on?

Senator BYRD. Yes.

Senator MARTIN. Mr. Chairman, I am awfully sorry, but I am one-half hour late for another meeting, and, Mr. Chairman, I will have to be excused.

It is most unfair to——

Senator KERR. Mr. Main, I want to tell you that I am one man on the committee who agrees with part of what you have to say, and I am going to stay and listen to the rest of it.

Mr. MAIN. Mr. Chairman, I would just like to express to you again my friendship for Senator Martin over 30 years, and I want to say that we often disagree, so that I do not think that the friendship is based on agreement.

Senator MARTIN. Off the record.

(Discussion was continued off the record.)

Senator BYRD. I am sorry that I must leave, Mr. Main. I will read your colloquy with the Senator from Oklahoma in the record.

Mr. MAIN. Yes, sir.

Senator BYRD. There is just one more comment that I want to make about national income and get your consideration of it.

I think a national income that is based on inflation is a very dangerous standard to take. I would be much more convinced of what you say if you based your premise on national production, but these things that were sold for a dollar in 1940 are costing in terms of articles and not in actual dollars twice that much now, and you are putting it on a dollar basis instead of putting it on a national production basis of material and so forth, and you are saying then that this debt that we now have can be carried safely on that, not knowing how much further inflation we are going to have.

It is perfectly possible that in the next 10 years the dollar is only going to be worth 25 cents compared to 1940. If we go down as much in the next 10 years as we went down in the past 10 years, the American dollar will be worth only 25 cents in purchasing power as compared with 1940. You do not question that?

Mr. MAIN. No. Our Federal debt will be worth very little in that event.

Senator BYRD. I know, but some day the Federal debt has got to be either paid off or we must continue to pay the interest, and it may have to eventually be paid off in dollars having much more value than they have today, and the Government may have to do that. That is the fallacy, if you will permit me to say it, of what you have said, that this national debt is nothing to worry about, on account of an income which is an inflated income, not a natural income, not a normal income, but inflated under certain conditions that have occurred since the last war.

I just wanted to express my thought on that.

It might not be worth anything at all——

Mr. MAIN. Thank you very much for your courtesy.

Senator BYRD. I regret that it is necessary for me to leave. You converted this gentleman here on my right.

Mr. MAIN. Not entirely. Nobody agrees entirely with us, Senator, and that is one reason we think that we may be partly right because nobody agrees entirely with us.

Senator BYRD. I would like to put Senator Kerr in charge of the committee at this point.

(Senator Kerr assumed the chair.)

Senator KERR. All right, Mr. Main, you go ahead and finish your statement.

Mr. MAIN. In fact, we can think of no better yardstick of allowable debt than the amount of national income in one year.

To summarize, an excessive tax "take" cannot help but cause inflation. The "take" is already excessive and any increase will add to the present dangerous inflation. We urge that the Finance Committee use its influence to avoid any increase in the "take." After the budget is cut as much as practicable, we recommend that the Government temporarily borrow any sums required.

It was my understanding and intention to have Mr. Conick follow me.

Senator KERR. All right, sir.

Mr. MAIN. If that is all right with you.

Senator KERR. All right, Mr. Conick.

Mr. CONICK. My name is M. C. Conick, and I am an executive partner of Main & Co., Pittsburgh.

Your committee has before it at present, the House bill, which, it is estimated, will add about $7 billion to the tax "take." We think this is a low estimate of its yield. And there are indications that if this becomes law, requests will be made for more or other new taxes. Comments are being made that the income tax has been "milked dry" and that what is needed is some other kind of a tax, such as a general sales tax, to spread the burden.

We declare that the burden is already excessive and no manner of distributing it can prevent the operations of the "law of the take."

From 1922 to 1930, Federal spending averaged approximately $3,500,000,000 a year and receipts averaged $4,000,000,000. Between 1931 and 1940, when deficit financing was being utilized as a depression antidote, Federal spending rose to an average of $7,000,000,000 yearly, or about 11 percent of the national income. Receipts, however, accounted for only an average of $4,000,000,000 yearly, a "take" of 6½ percent of the national income, so that the Federal debt was allowed to rise from $16,000,000,000 in 1930 to $49,000,000,000 by the time we entered World War II.

Taxes rose to unprecedented levels, the net Federal "take" being 17 percent of national income, or nearly three times the prewar percentage; that is, taking the years of 1941 up to 1945.

Presumably Congress at that time believed that such taxes were as high as our economy could stand, for they allowed the Nation to go in debt for the balance of our needs, the Federal debt zooming up to $257,000,000,000.

During the war, public sentiment backed very tight controls, as well as very high taxes, so that inflation was fairly well restrained. Prices were held at reasonable levels. But when the fighting was over and the war ended and controls were relaxed, the pent-up inflation was unloosed.

Senator KERR. Would you say the pent-up demand was unloosed that resulted in inflation?

Mr. CONICK. I think that is a better word than inflation.

Senator KERR. All right.

Mr. MAIN. That is right.

Mr. CONICK. In April 1945, when we first presented to Congress our proposed Federal incentive income-tax plan, the United States was at war with both Germany and Japan. For the postwar period we estimated a national income of $160,000,000,000 and a Federal budget of $25,500,000,000 which would have required a tax "take" of about 16 percent of the national income. Other plans of that day were based upon an estimated income of $100 billion and a Federal budget of $16 to $18 billion, a consequent tax "take" of about 17 percent.

We were criticized for our high forecasts, but insisted that the budget of $25½ billion was inevitable and that it could not be taken from a national income of less than $160 billion. As you are aware, both national income and Federal budgets have climbed far above our then high estimates, in dollars as well as in the percentage of tax "take."

During 1950, the national income reached a total of about $239 billion. At present it is over $269 billion. If all this were represented by increased national production, we might all be proud. But through the operation of inflationary factors including the "law of the take," it is largely a puffed-up income. We become aware of that whenever we pay $2 for meat for which we formerly paid $1 or when we pay $6.98 for a shirt for which we formerly paid $3.50. The Government becomes aware of it when it pays out an increasing number of its tax dollars for each gun, tank, or plane it requires for the defense program.

If, as many persons would have us believe, high taxes prevent inflation, the inflation caused by World War II should have been leveled off or at least slowed down by now. For the net Federal tax "take" in the 5 years since the war has been 19 percent; even higher than the 17 percent during the war.

Based on our present rate of national income of more than $269 billion, President Truman's proposed budget of $71.6 billion, if financed on a pay-as-we-go basis, would represent an unprecedented Federal "take" of 26.6 percent. Under the operations of the "law of the take," it would result in further drastic puffing up of the national income.

Bearing in mind that an excessive "take" automatically puffs up the national income, in determining a safe tax "take" we must first determine how much more puffing-up can be risked without too great a danger to our economy.

It goes without saying that the Federal Reserve Board and the Treasury Department should agree on sound fiscal policies, but even these policies cannot offset the price-raising effect of a too drastic tax "take." Such taxes automatically boost costs, both directly and indirectly, and these, in turn, determine prices.

We believe it is relatively safe to risk the further rise of national income to as high a level as $300 billion, in which case there will be $48 billion, or more, of corporate compiled net profits before taxes. Under such conditions a tax "take" of $58 billion, or approximately 17 percent, can be borne, we believe. But we do not believe that even such a burden can be borne under the present hodge-podge tax structure.

The next remarks will be made by Mr. Main, and if you will bear with him, he will conclude his paper.

Senator KERR. Go ahead.

Mr. MAIN. We were supposed to have a certain amount of time—

Senator KERR. That is all right. We were responsible for part of the increased time.

Mr. MAIN. We appreciate it very much, Senator Kerr.

Senator KERR. So it may be we have taken some of your time as well as your having taken our time.

Go ahead.

Mr. MAIN. There has been considerable discussion of late to the effect that the income tax has outlived its usefulnesses and must be supplemented by some new kind of Federal tax, such as a general sales tax.

We feel that an income tax, properly applied, is the fairest form of taxation yet devised. It is the easiest to collect. But the original act of 1913 has been so patched up and so supplemented by an excess-profits tax, a corporation tax, and taxes on dividends and undistributed surplus, that our tax system now serves as a series of penalties, rather than as an encouragement to greater efforts.

We are subjected to: (1) An income tax so drastic as to penalize hard work; (2) an excess-profits tax penalty for skilled management; and, (3) a dividend tax penalty for investing in productive enterprises.

Added to these, a general sales tax would constitute a fourth penalty, one on the purchase of any goods produced, and thus would extend the effects of the penalties to the last humble household.

We have long felt that what is needed is an entirely new system, based on the income-tax principle, but designed to encourage production rather than to penalize it at every turn. It is generally recognized that greater production is our only means of protecting ourselves against enemies overseas and of counteracting inflation at home.

Our limited time, and yours, does not permit us to give an adequate discussion of our proposed Federal incentive income-tax plan, but we should like to take a minute to indicate its salient features. This plan is the result of careful thinking by men who have spent most of their lives working with tax accounting, and other economic problems of corporations and individuals.

We believe that time has confirmed the soundness of its principles.

Reduced to simplest form and terms, the Federal incentive income tax plan is: (1) Taxes income as income, whether received by an individual, partnership, or corporation; (2) fixes exemptions as high as possible, in order to leave as much income as practicable under the taxpayer's own control; (3) has a graduated-rate structure, rising to a maximum of 50 percent of taxable income; (4) eliminates such double and therefore unfair taxes as those on dividends and on undisturbed surplus.

As mentioned, this plan places a maximum tax on corporations and individuals of 50 percent of net taxable income. It eliminates the excess-profits tax, a source of countless inequities every time it has been imposed and a cause of much wasteful and extravagant spending under the theory that "otherwise the tax collector will get it."

Because the rates of the Federal incentive income-tax plan are so much more reasonable than those in the House bill—in which some corporation profits are taxed as high as 83 percent—with an over-all limitation of 67 percent—it is logical for you to wonder if the plan will produce the funds required for our defense needs and for other Government necessities. Our answer is that, with some sensible budget trimming and some temporary borrowing, it will, and with the present miscellaneous revenues.

We are not attempting to touch the excises or the estate taxes, or customs, or any of the miscellaneous revenues.

An even stronger answer is that the Federal incentive income-tax plan with the rates proposed, will produce the greatest revenue possible without forcing inflation to new and ever more dangerous heights.

Details of the plan are given in a leaflet which has been placed on your desks. We shall, of course, be pleased to give you any other information you may require.

Senator KERR. Well, thank you very kindly, Mr. Main.

I must say that there are some of the statements that you made that I agree with thoroughly.

I think personally your statement is very provocative. I would be glad to study your plan, but I cannot get away from the basic disagreement I started out with you on, and that is, if you have to have an additional amount of money, and if a situation exists where the production is limited, the inflationary pressure of taking the money which would otherwise be used to spend for what you have to have, and using it to buy what the Government has to have, the inflationary pressure will be less than if you leave it in the hands of the people who seek to use what is available and the Government, at the same time, issuing new money, which would compete with the money in the hands in which you leave that amount of purchasing power.

Mr. MAIN. I am only in favor, Senator, of borrowing when we are under an extreme emergency. I am not in favor——

Senator KERR. I am only in favor of borrowing when we cannot get it otherwise.

Well, I want to say that I have enjoyed what you said very much. I am sorry you took as much time as you did, but we had a good time here.

Mr. MAIN. If you go into it, and if you find any questions, if you will drop us a line, we will be glad to furnish you with the information.

We have carried on this research for 8 years. We have a lot of data and if what we have will be of any help, we will let you have it.

Senator KERR. You are very kind. I want to say you have given me enough to keep me busy for a while.

Mr. MAIN. Thank you.

Senator KERR. We will recess now until 10 o'clock tomorrow morning.

(Whereupon at 1:10 p. m., the committee recessed to reconvene at 10 a. m., Wednesday, August 1, 1951.)

REVENUE ACT OF 1951

WEDNESDAY, AUGUST 1, 1951

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met, pursuant to recess, at 10 a. m., in room 312, Senate Office Building, Senator Harry F. Byrd, presiding.

Present: Senators Byrd, Connally, Hoey, Kerr, Frear, Millikin, Martin, and Williams.

Also present: Elizabeth B. Springer, chief clerk, Colin F. Stam, chief of staff, Joint Committee on Internal Revenue Taxation.

Senator BYRD. The committee will come to order.

Our first witness is Mr. John Fitzpatrick.

Senator HOEY. Mr. Chairman, before the witness begins his testimony, the other day Mr. John W. Hanes, president of the Ecusta Paper Co., of North Carolina, testified, and at that time Senator Taft wanted some additional information, and Mr. Hanes said that he would write a letter giving that additional information and additional facts.

I would like to present that, and ask that it be incorporated in the record.

Senator BYRD. It will be incorporated in the record.

Senator HOEY. Together with the supplementary statement of Mr. Hanes?

Senator BYRD. Yes.

(The documents referred to will be found at the end of the presentation heretofore made by Mr. Hanes at p. 1677.)

Senator BYRD. All right, Mr. Fitzpatrick.

STATEMENT OF JOHN F. FITZPATRICK, MAYOR, BOROUGH OF SOUTH RIVER, MIDDLESEX COUNTY, N. J.

Mr. FITZPATRICK. Mr. Chairman and members of the committee, the residents of the borough of South River, N. J., join with me in extending our thanks and appreciation to you for arranging for this conference and permitting me to say a few words in opposition to the proposed tax upon our municipally owned power and light plant. I am filing with your secretary a short written memorandum containing some of our objections to the proposed legislation. May I supplement that with a few words?

South River is a small town—less than three square miles in area. It has a population of about 10,000 people.

We are not blessed with a single large industry with high ratables. We have only a few small factories in the needlework industry, giving employment mostly to women. The male population gets its employment in nearby communities, making South River virtually and truly a residential town for working people, blessed with large families of children.

It is certain that our number of school children is greater than that of any other municipality in our county in proportion to adult population.

Therefore, our general public-school expense is very high and realizing that we could not look to income from large industries, we built our electric light and power plant some years ago principally to assist in meeting school expenses. These expenses are constantly growing. Extensive repairs are needed to some buildings, and the erection of new school buildings is rapidly approaching a necessity.

To lose any part of the revenue of our electric plant is more than can be afforded. Such loss will have its effect upon our schools as they now exist, and will delay further expansion.

If the proposed tax is levied against the funds collected from the sale of light and power to our residents, we will lose about $12,000 a year. This is money we have earmarked for payment of interest and for bond retirement. This is money we are depending upon, and in a small community every thousand dollars is mighty important.

Thank you again for permitting me to appear here.

We earnestly hope that the proposed tax levy will not be enacted into law.

Gentlemen, may I say again that during trying times, the only thing that kept this small city going in the heart of Middlesex County, was our needle industries, as far as the women are concerned.

We have surrounding towns with large industries, such as du Pont, Titan, Johnson & Johnson, and there is a struggle; for instance, now we are trying to put in a large water line because a certain part of our borough needs more water pressure, and this little plant—an amount of money of $12,000 or $13,000 may not mean a thing to some people, and it may be just a drop in the bucket, but it means a lot to us.

I am down here—I know there is an old saying that perspiration is a cooling process. It was hard for me even to get a hotel room in this Capital of ours last night. However, I am here, and I want to get back to an underprivileged camp of which I am in charge, and I just want to bring this up to you, that none of us are paid. We do not get any salary, and sometimes we wonder why we more or less take the punishment as officials.

I want to say it is no more than civic pride. We are a small community as stated here, of 12,000, and I feel that—I understand Senator Smith's office—this bill has been from the House floor, and I ask you men, without taking a lot of your time because I see you are going to have quite a number of witnesses here today—I wish you would keep this bill out so that we can save this twelve or thirteen thousand dollars, because we are going ahead and trying to give this little town a good administration, and we do not have many industries to see our way through.

I want to thank you gentlemen and Mrs. Springer for the wonderful cooperation I have received in correspondence and telegrams and all, and I want to say that everyone has been very fine about it and I want to thank you all very much.

Senator BYRD. Thank you, sir. Your statement will be made a part of the record.

(The memorandum referred to follows:)

STATEMENT OF JOHN F. FITZPATRICK, MAYOR, BOROUGH OF SOUTH RIVER, N. J.

The borough of South River, in Middlesex County, N. J., is one of those small American communities which, along with many of its counterparts, has been termed, perhaps not without justification, the backbone of the Nation. A municipality whose total area does not exceed three square miles and whose population is slightly less than 12,000 would indeed be honored in being so regarded.

Within its boundaries are ten churches of various denominations, five schools, a theater and two ponds where the kids seem to have a fine time during the summer months. It has two banks, three building and loan associations, the usual assortment of social and fraternal groups and two political parties, known locally as Democrats and Republicans, respectively. In addition to the foregoing assets, it lists the operation of a power and water plant which is owned by its loyal, hardworking taxpayers.

These facts are not enumerated in a spirit of jest or irrelevance, but I cite them to you in the hope that you will conclude from them that South River is primarily a residential community engaged, incidentally, in the business of selling water and power to as many consumers as possible. I would like you to know further that the figures show conclusively that the business is operated the way Americans like to see any business operated—at a profit. A major portion of the annual surplus is transmitted to the governing body of the municipality and is included in its annual budget as an item of revenue. I need hardly tell you that the sum so transmitted goes a long way toward paying for the operation and maintenance of our police and fire departments, roads, public buildings, and all the various housekeeping chores expected in a progressive municipality.

What would it mean to South River, whose total assessed valuations amount to $6,700,000, to have a 3⅓ percent excise tax imposed on gross sales by its power plant? Taking last year's gross sales, which amounted to $347,000, the loss in revenue to the borough would be in excess of $12,000. The latter figure may appear insignificant, but when it is considered in conjunction with other pertinent statistics it assumes an unavoidable importance.

Our local-purpose tax rate is $1.48 per $100 and a $670 loss in revenue is equivalent to a 1 point or 1 cent rise in the tax rate. Consequently, the imposition of the proposed excise tax would signify an approximately 18 point or 12 percent increase in our local tax rate.

My choice of terms may be questioned, but I am moved to state that such an increase would constitute an almost intolerable burden on the residents of this community. They, along with millions of others, are sorely pressed today to meet the current cost of living which, incidentally, all of us hope to see decline. Taxes—municipal, State and Federal—are an ever-present problem and no relief appears to be in sight. Indeed, the prospect seems to be a gloomy one in that we are told to prepare for new and increased imposts, and this hearing but confirms that fact.

In this instance it does not matter that the tax will nominally be imposed upon the municipality, because its effect will be noticed swiftly by a corresponding depletion in the individual taxpayer's assets. It is my opinion that the time has come for a measure of respite and stock-taking. The taxpayer has suffered increasing burdens with the passage of the years and vast amounts contributed by him have been nobly spent on the security of his country and in behalf of the less fortunate throughout the world. The taxpayer understands this and has gladly acquiesced in the expenditures. However, there must come a time when the American citizen will cease to confine his complaints to grumbling and will raise his voice, demanding a precise audit, and I am very much afraid that any delay in the process will not be tolerated.

Last year the borough of South River collected 94.11 percent of the taxes assessed by it on individuals, business, and industry within its jurisdiction. I consider this response, the best in our community's recent history, not only remarkable but intensely reflective of the honesty and purpose which composes the character of the average American taxpayer. In these circumstances, and in the light of the effect which the proposed tax would have on our municipal economy, I do not relish informing my neighbors that the Senate is determined to proceed with the proposed tax.

The sum of $12,000, which will be removed from the governing body's prime source of revenue, will depart irrevocably, and as mayor of the municipality I have no intention of asking the people of South River to supply the deficiency by assenting to higher assessments on their real and personal property.

I earnestly hope that statement of facts contained herein will receive the equally earnest consideration of this honorable body and that its eventual decision will be to exempt municipalities from the proposed tax—just as it has in the past.

Senator BYRD. Mr. Charles E. Oakes.

STATEMENT OF CHARLES E. OAKES, CHAIRMAN, SPECIAL TAX POLICY COMMITTEE, EDISON ELECTRIC INSTITUTE

Mr. OAKES. Thank you, sir.

My name is Charles E. Oakes. I live at Allentown, Pa., and am president of Pennsylvania Power & Light Co. I am appearing as chairman of the special tax policy committee of the Edison Electric Institute, a trade organization representing 82 percent of the privately owned electric utility companies. These companies will pay well over a billion dollars of taxes in 1951, and consequently, we are vitally interested in the tax measure now before you.

Senator BYRD. Sit down, sir, if you care to do so.

Mr. OAKES. Thank you, sir.

I am reading a summary, gentlemen, of the statement that is before you.

At your request I have filed my statement and accompanying charts with you. It is my purpose to summarize this statement briefly, and then with the aid of the large-size reproductions of the illustrative charts which you have before you, answer such questions as you may wish to ask. The complete statement with accompanying charts is submitted here to be printed in the official records.

The electric companies appreciate the difficult task confronting this committee, and we want you to know that we seek no special privilege apart from other industries in paying any additional taxes that may be required during the national emergency.

We believe that as far as possible national defense should be on a pay-as-we-go basis if inflation is not to destroy our American economic system. We also believe that with the heavy burden of present and proposed taxation, every effort should be made to remove inequities from our tax laws.

The elimination of the 3⅓ percent Federal electrical energy tax is long overdue and its repeal as proposed in the House bill is entirely justified. The tax unfairly discriminates against the customers of the private utility company, to whom the tax is ultimately passed on, as against the customers of the publicly owned electric plants who pay no tax. The tax is burdensome on the low-income groups and is levied on one of their necessities of life. Also, the tax is extraordinarily difficult and expensive to administer with its cumbersome distinction between residential and commercial customers who are taxed, and industrial customers who are exempt.

The House report on the bill amplifies the reasons for the repeal of the Federal electrical-energy tax, but is incomplete in one respect; the annual loss of revenue is estimated at $104 million. This estimate overlooks the fact that the tax is an allowable deduction in determining income and excess-profits taxes. Considering the effect of the proposed 52 percent corporation income tax alone, the net loss of revenue to the Government is reduced from $104 million to $50 million.

To meet the electrical needs of our Nation and its expanding defense program, our industry is currently engaged in its greatest expansion effort. Electric companies will spend over $7 billion in the next 3 years, and we estimate that $4 billion of this huge sum must be raised through the sale of our securities to the investing public. The sale of these securities will depend largely on our future earnings. If these earnings are seriously impaired, the prospects are poor——

Senator MARTIN. How will the other three billion be raised? $4 billion from the sale of securities. How will the other three be raised?

Mr. OAKES. The other three will come from retained earnings, namely, cash.

Senator MARTIN. Plowing back in?

Mr. OAKES. That is right. Plowing back in our earnings and reserves from depreciation.

Senator MARTIN. That was not clear.

Mr. OAKES. Oh, all right, sir.

If these earnings are seriously impaired, the prospects are poor, of raising the new capital we so urgently need to finance our construction program.

As a regulated industry, our earnings are small compared with our capital investment and are vulnerable to any sudden increase in expenses. Consequently, a tax increase will place us in a dilemma; either our earnings will be impaired and our construction program slowed down or halted or we must increase the price of electricity. When such a deficiency in net earnings is recovered by a rate increase the customers—if the tax rate is 50 percent—must pay twice the amount of the deficiency. This is a burden which customers of regulated businesses should not be asked to stand.

A retroactive tax increase such as that provided by the House bill would be especially adverse to the utility industry. Our small margin over expenses cannot readily absorb such an increase, and because so much of the year is already gone we cannot pass the tax on to our customers. As a matter of fact, the regulatory process through which electric rates to our customers are fixed is not adaptable to recover retroactive changes in taxes.

For these reasons, we are gravely concerned about the proposal to increase further the already high corporation income tax. The present and proposed high rates threaten the existence of the private enterprise system, and their continuance for even a short time may seriously damage the entire economy. They threaten particularly the ability of our industry to raise risk capital.

Senator MARTIN. Right there, you speak about the high taxes that you are paying. Just how much are they?

Mr. OAKES. Well, I brought some charts along which are an enlargement of the charts before you. I believe I can answer that question by referring to these charts, Senator.

Senator MARTIN. All right.

Mr. OAKES. Would you kindly turn over to chart 1. We show here a record covering a 15-year period of the taxes paid by electric companies. The red is the Federal tax and the yellow is the State tax.

In this 15-year period there are——

Senator CONNALLY. Is that yellow on top of the red, or just——

Mr. OAKES. It is the sum of the two which is the total tax paid.

For example, in 1950 it says $948 million. The red is $558 million in Federal taxes that were paid and State and local taxes amount to $390 million.

Senator CONNALLY. In addition?

Mr. OAKES. That is in addition.

Senator CONNALLY. Is that the total of the State and local taxes of all the 48 States?

Mr. OAKES. That is right. This is for the whole taxpaying industry.

Senator MARTIN. How much does that amount to in dollars?

Mr. OAKES. That is $948,000,000 in 1950; and on the basis of the pending tax bill, that total will increase to $1,162,000,000 most of it coming, of course, from Federal taxes.

Now, I would like to point out—you can see it right on the chart—that, on the basis of the 1951 pending tax bill, the Federal tax for 1951 is 60 percent greater than the highest war year, 1943, which is a measure of the taxes that would be paid by the utility industry, compared with war years. Thus you see the burden is really great.

Senator WILLIAMS. Is that increase on the basis of a percentage increase in the rates or just on the basis of the increase in dollars?

Mr. OAKES. The increase comes about from three sources: First, the increase in the rates themselves, and next, the increase in business we have had, generating larger taxable revenue; an the third—there is really a third—is the rate increases which have been made, particularly in the past year and a half, arising out of tax increases, and the increase in commodity prices, thus again making more corporate income to tax, so from those three sources you have that very large increase in Federal taxes.

Now, of course, particularly in our business, there is just no possibility of absorbing taxes; we have got to pass them on. So I would like to show you the impact on our customers by taxation.

If you take and measure these taxes in cents per average dollar paid by the customers for electricity, in 1949 the Federal taxes took 10.74 cents, State taxes 8.56 cents; and there was a total of 19.30 cents out of the dollar paid.

Going to 1951, the pending tax bill will increase Federal taxes to 14.47 cents, and the total will rise then to 23.23 cents out of a dollar.

Thus, we will be paying in this situation almost a quarter of our total income that we collect per dollar in taxes.

Senator MARTIN. That is your gross income?

Mr. OAKES. That is our gross; that is what the customer pays.

We have another comparison which distinguishes our industry from all other industries. Let us have this one first, gentlemen.

Here is an analysis which I think is quite pertinent. In 1949 the Federal income taxes were 8.53 cents; the electrical-energy tax was 2.02 cents—this is in cents per dollar paid by customers, and the miscellaneous small Federal taxes were 0.19 cents, making a total of 10.74 cents.

The removal of the 3⅓ percent electrical-energy tax, as provided in the House bill, means that 1.08 cents of that 2.02 cents goes back into our tax bill because the $104 million collected through the 3⅓ percent tax is a deduction for income-tax purposes. The increase, therefore in our taxable revenues because of that removal becomes taxable, and the income taxes on it would amount to 1.08 cents per customer, or 54 millions of dollars. This explains further the point I make a minute ago when I read that $104 million are the *gross* collections at the present time of the 8½ percent electrical-energy tax, and when eliminated actually 54 millions of it comes back into the Federal Treasury as income taxes.

Senator FREAR. Mr. Oakes, is that not assuming that you will leave the rate the same as it is now with that 1.08?

Mr. OAKES. That is assuming that the revenues are as they are now, sir, that is true.

Senator FREAR. If the 8½ percent electrical-energy tax is deducted from the consumer, you will not pay that difference; will you?

Mr. OAKES. Yes, we will because a little later I will arrive at a point here which will show that the increase in taxes has lowered our rate of return so great on 95 percent of the industry that all of us have to go to the commissions and ask for rate increases.

Now, the net reduction in expenses of 50 million, of course, will be considered by the commissions in allowing any rate increases, so, in effect, the consumers get the benefit of the reduction; it is really passed on to the consumer.

Senator BYRD. I understand that you have already started proceedings over the country to increase the rates.

Mr. OAKES. Many companies have already applied for rate increases. You see, the increase to 47 percent has affected so many of them that it was necessary, to get these rate increases. Some of them are just waiting to see what this final tax bill will be in order to institute rate increases, because they did not want to have one rate proceeding on top of another.

Senator BYRD. If you are successful in these applications, the final result will be that the consumer will pay the tax bill; is that correct?

Mr. OAKES. The consumer pays the tax bill in every case, Senator; that is true.

Senator BYRD. The increased taxes will be passed on to the consumer.

Mr. OAKES. By doing it through the Federal income-tax proceeding, as we will show in our presentation here, when there is a deficiency in net earnings below an allowable rate of return, we have to go to a rate process to restore it. We must impose $2 in rate increases for every dollar of deficiency that comes about because of increased taxes, and that calculation I will be glad to show you.

Now, that is what I meant when I said awhile ago that such a burden on our customers is an unfair burden.

Senator FREAR. Mr. Chairman, did I understand the witness to say that for every dollar of increase in taxes, the consumer would have to pay $2?

Mr. OAKES. That is correct.

Senator FREAR. What do you mean by that?

Mr. OAKES. I will be glad to explain that, sir.

Will you turn to those charts, gentlemen? The explanation is—I have a chart here which is simplified, and the explanation can be made in this way:

The 38 percent level of taxes obtained in 1939. Take a dollar of revenue—a hundred cents—as shown by that left-hand stack. The tax deductions from revenue which, of course, means our expenses, our State and local taxes, depreciation, and so forth, are 75 cents. We have left taxable income. Then we compute the income tax at the 38-percent level, and we would find that we have a 9½-cent amount of that dollar of gross revenue paid as Federal income taxes, leaving a net income of 15.50 cents which pays the rent on capital and the amount that we retain as earnings. That is the amount we need to insure a going business.

Now, suppose the income tax is increased to 52 percent. We still have the same deductions, 75 cents, and then if we make a calculation on the remaining net taxable income at 52 percent, we will find that we have 13 cents out of that dollar required for income tax, an apparent increase from the 9½ cents of 36.8 percent, and our net income reduces to 12 cents as compared with a required income of 15.5 cents.

We, therefore, must go to the regulatory bodies, and ask for an increase back to the 15½ cents; to restore 3½ cents, in other words.

Now, what is required in the way of an increase in gross to do that? We need 15½ cents. If the rate is at 52 percent, we divide the 15½ cents by 1 minus 52, which amounts to 32.29, which is the net taxable income required to pay Federal income taxes at 52 percent and leave the required net income of 15½ cents.

Therefore, the Federal income taxes required are 16.79 cents, the deductions, of course, being the same as they were in the other cases, so the increase in revenues from our customers is 7.29 cents, not the 3½ cents that would be apparent by merely applying the rate of 52 percent to our present taxable income and that increase of 7.29 cents goes to the Federal Government. Not a cent of it is retained by the companies.

Senator BYRD. You mean by that, if you had $100,000 increase in taxes, that then you would have to obtain $200,000?

Mr. OAKES. Yes, sir.

At the 52 percent rate that is exactly what would happen.

Senator BYRD. You have no increased costs? Why should you ask for $200,000?

Mr. OAKES. Because, let us go at it in a little different way—if we had an increase of $100 that is necessary to pay, say, at a 50-percent rate——

Senator BYRD. Leave the rate out. Let us deal in dollars. Leave out all percentages, and let us assume you are going to be increased $100,000 in taxes, and you are going to ask for a $200,000 increase in rates.

Mr. OAKES. In other words, that our net revenues remain the same. We would have to ask for $200,000 in a rate increase.

Senator BYRD. How is that?

Mr. OAKES. Let us go at it this way. $100,000 is the apparent increase. If we increase our revenues by that amount, to attempt to restore that $100,000 of tax increase, immediately our taxable income increases by $100,000 and half of that must be paid over as taxes above what is alread paid, so $50,000 of that would go to the Federal Government and $50,000 would be retained by the company, to bring its——

Senator BYRD. You are getting off the premise. We are assuming you are going to pay $100,000 additional taxes.

Mr. OAKES. Yes, sir.

Senator BYRD. Then you say you are going to the rate commissions and ask for $200,000 increase in rates.

Mr. OAKES. In order to pay the $100,000 increase, and in order to pay another $100,000——

Senator BYRD. But you are going on a percentage basis. I am speaking not of percentage, but a flat increase of $100,000.

Mr. OAKES. That is true.

Senator BYRD. Why do you need $200,000 to pay $100,000?

Mr. OAKES. All right. I will attempt to explain it this way. As soon as we increase the taxes the $100,000 increase reduces our net income remaining by $100,000. That has to be restored. When we restore it, suppose we restore it by adding on $100,000 in gross.

When we do that we also increase our taxable income by $100,000 and half of that goes to the Government so we therefore can only retain half of it.

We have half of the goal obtained.

In order to get the whole $100,000 restored in net, we have to again ask for another $100,000, and half of that goes to the Government, and half is retained.

Senator BYRD. Of the $200,000 you take in, you pay half in taxes.

Mr. OAKES. That is right.

Senator MARTIN. I see it.

Mr. OAKES. You have to do it twice because the Government always takes a half every time you raise it.

Senator MARTIN. I could not get it before.

Senator HOEY. It is just the same thing. I was going to say that when you get $100,000 additional, you increase the taxes, so it takes another $100,000 to meet the taxes that are involved.

Mr. OAKES. That is right.

Senator BYRD. That is right.

Mr. OAKES. As I said, the savings of the American people are the source of creative capital.

We are gravely concerned over the adverse effect of increased personal income taxes on the savings of individuals.

We offer evidence that higher Federal income tax rates, both personal and corporate, will further dry up this source of equity capital.

As a source of additional revenue, we urge that you apply the corporate income tax to the presently exempt publicly owned power projects. In 1951 under the pending tax bill we estimate that additional tax revenues of $107 million can be so obtained, a source not now tapped at all.

In time of national emergency, it is improvident to overlook this expanding source of revenue. Publicly owned projects have grown prodigiously during the past 15 years. And there is now under construction, or proposed, enough capacity to make the publicly owned plants comparable in size and output with the present taxpaying utilities. Some of the growth has been at the expense of private utilities through outright transfer of ownership or the competitive invasion of the private market. During the last 15 years, 47 electric companies have been taken over in their entirety and 23 have lost large segments of their property to public ownership. Public power should be a source of substantial tax revenue to the Federal Government. If it continues to grow at the expense of taxpaying utilities, the tax revenue now obtained from our industry will gradually disappear.

In addition, the tax exemption now enjoyed by public power is rank discrimination against the customer of the private utility company.

Under the regulatory processes to which private utilities are subject, it is the customer who pays the tax levied on the utility. For the year 1950, taxpaying electric utilities paid $558 million in Federal taxes—that is the point I just made—and under the pending House bill will pay approximately $724 million in 1951. These taxes amounted to 12½ cents out of every dollar collected from our customers in 1950, and will total 14½ cents on the basis of the pending bill.

Thus, a substantial part of the amounts charged our customers goes for Federal taxes. By contrast, the publicly owned electric projects pay no Federal tax. In effect, their customers are relieved of a substantial tax burden, while the customers of the privately owned utilities bear a heavy load. The time to end this discrimination is now.

In conclusion, we—

1. Ask you to confirm the action of the House in eliminating the inequitable and burdensome 8⅓-percent electrical energy tax.

2. Suggest that small investors be encouraged to save and invest in American enterprise by allowing a small exemption for dividends received.

3. Request that any changes made in the tax laws not be made retroactive, particularly for our industry.

4. Ask you to put an end to the existing unfair discrimination against the taxpaying electric light and power companies by removing the tax exemption now enjoyed by public bodies engaged in the power business.

5. Ask that the Congress reduce spending for nondefense items and limit corporate tax rates to present levels.

Senator HOEY. What portion of the increase has there been in public power in recent years in the United States; that is, tax-free? Of course, all public power is.

Mr. OAKES. Yes; that is correct. We have a couple of charts on that which I think will explain the point.

In 1930 the percentage of the total energy generated in the Nation by public bodies was 5.5 percent of the total. In 1950 it had grown to 18.9 percent.

This increase is almost 2½ times in the 20 years. Now, if you turn to the next one——

Senator HOEY. Of course, all of that power is tax-free.

Mr. OAKES. That is all tax-free; absolutely.

Senator MARTIN. Might I ask a question there? If that publicly owned power was taxed at the same rate as the privately owned electric organizations, how much tax would that be for the Federal Government? Have you had a calculation made of that?

Mr. OAKES. Yes, sir.

If the Federal corporate taxes under the House bill were applied to the earning estimates of public-power enterprises, the Government would collect $107 million and the collections would be divided as follows: Municipalities, 60½ millions; Federal authorities, 35½ millions; and non-Federal authorities, 11 millions. The impact, Senator, is most striking.

Turn to the next chart, please. This $107 million—this is corporate income taxes we are talking about—is more than the corporate income tax which is collected in 10 States all added together. There are the States and there are the amounts.

Senator WILLIAMS. That $107 million is, in effect, a subsidy for the companies in that area.

Mr. OAKES. What is that, sir?

Senator WILLIAMS. I say, it is a subsidy in effect for the industries in that area.

Mr. OAKES. Certainly, in part, to the extent that it would come from industry, that is true; and the rest of it is a subsidy which the general residential and commercial customers all over the Nation are paying, by paying the taxes that these customers in these areas are relieved of.

Now, also that $107 million, by comparison, is more than the corporate income taxes collected in each of 28 States in this Nation. So, you see, it is really a substantial amount.

Senator MARTIN. Mr. Chairman, I know our time is going, but I was not just quite clear on a statement the witness made.

You made mention of the repeal of the 3⅓ electrical-energy tax—how that would increase the Federal tax. I am not just clear on that.

Mr. OAKES. Will you turn back to that chart, please, sir?

Senator MARTIN. Because if there is any way we can get more revenue, that is the interesting thing to us right now.

Mr. OAKES. The 3⅓-percent energy tax is about 2 cents out of the revenue dollar that we receive today. Federal taxes are almost 10.2 cents. This 3⅓-percent energy tax is a tax deduction for the purpose of computing the Federal income tax. Therefore, if we are relieved of the 3⅓-percent energy tax, our taxable net income for corporation tax purposes increases. Therefore, half of the amount of the 3⅓-percent energy tax that we pay now comes back to the Government through the corporate tax.

Senator BYRD. This 104 million is the total?

Mr. OAKES. Total gross received from the 3⅓-percent energy tax.

Senator BYRD. And is no longer a deduction as part of your expenses, and then you pay an income tax on that of 52 percent?

Mr. OAKES. That is correct.

Senator BYRD. So you pay more than half of it back?

Mr. OAKES. That is correct.

Senator BYRD. That is not allowed—that deduction is not allowed and is not made in this $104 million estimate?

Mr. OAKES. No; that is right.

Senator BYRD. Is there anything further, Mr. Oakes?

Mr. OAKES. Thank you very, very much, sir. I appreciate this opportunity to appear before you.

Senator CONNALLY. I want to ask one question.

Mr. OAKES. Yes, sir.

Senator CONNALLY. Is one of your chief difficulties the getting of additional capital? That is one of them; is it not?

Mr. OAKES. Yes, sir.

Senator CONNALLY. One of your difficulties is attracting investment into these companies?

Mr. OAKES. That is correct. That is a very, very——

Senator CONNALLY. What effect on that does the high tax have?

Mr. OAKES. We have a couple of charts on it which I think are——

Senator KERR. You can just make a statement.

Mr. OAKES. Well, I can make it from these charts quite easily.

This industry of ours is unique compared with all other industries. We have made a study of the capital required for expansion—new money—since the end of the war, and we find that 75 percent of all the new money that was obtained for industries in general came from retained earnings, and 25 percent was obtained by the sale of securities.

Now, the reverse of that is true for the electric power and light companies. Only 39 percent came from retained earnings. We did not earn enough to finance all our expansion from internal sources; and so 61 percent came from the sale of stocks and bonds.

Therefore, any change in our net earnings position is immediately reflected in our ability to sell our securities.

If you will turn to the next chart you will see that the margins left over to us after paying all expenses, including taxes, have been going down very markedly since 1939.

In 1939 we had left over for, say, wages of capital—that means interest and dividends and that sort of thing—and the amount retained in our business, about 35 percent of the dollar received from the customer. It had gone down to 21½ percent by 1950 and on the basis of this pending tax bill will again reduce to 20 percent.

Now, those margins are reflected immediately in the prices of securities in the market, and therefore any change in taxes is immediately reflected in net, and in our ability, of course, to finance.

If you turn to the next chart we will show you what the effect has been on the companies.

Now, this margin that I just talked about, if you divide what we have left after all expenses into the plant account of the companies, you have a percentage which is a measure of the earnings position of the companies.

I have taken the entire industry and broken it up into four parts. I have adjusted the data to reflect the pending tax bill. By assembling the plant account of those companies which would earn between 5 and 6 percent, that is one-third of the industry.

Those companies that would earn between 4 and 5 percent are 26 percent of the industry; and those companies which would earn on plant account less than 4 percent are 37 percent of the industry, so by just looking at those figures—these are not rates of return allowed by regulatory bodies, but they are very close to that; they are a real measure of the situation.

Now a survey of those figures indicates that our ability to sell our securities would be impaired by the pending bill. That is why I said a bit ago that any changes in taxes today, any further increase, will immediately require all of us to go to the regulatory bodies, so that we can at least approximate the earnings rate of return that we now have—ask them to restore them.

Thank you very much.

Senator FREAR. Well, you can go to a regulatory body and get your additional increase in rate for those taxes; can you not?

Mr. OAKES. Yes; generally, I think they would grant it. They are under obligation to grant it.

But, as I said a bit ago, when we go to them because of increase in Federal income taxation, we have to ask the customer for twice as much——

Senator FREAR. Yes.

Mr. OAKES. And we think that is inflation; the cycle that goes on and on.

Senator FREAR. I think I understood that.

Senator MILLIKIN. Mr. Chairman, I did not hear all of this testimony.

What is your point? What do you want?

Mr. OAKES. We would like first, Senator, to have the Senate go along with the House and eliminate the inequitable and burdensome 3⅓ percent electrical energy tax.

We would like to suggest that small investors—and this applies directly to the point I am making just now——

Senator CONNALLY. You point to me as indicating that I am a very small investor.

Mr. OAKES. I did not mean to point to you, Senator, at all. [Laughter.]

Senator CONNALLY. You said a small investor, and pointed at me.

Mr. OAKES. I did it by way of emphasis, sir.

We suggest that small investors be encouraged to save and invest in American enterprise by allowing a small exemption for dividends received—and by "small," I mean very small.

Senator CONNALLY. Mighty near nothing?

Mr. OAKES. Yes. $200 would encourage—would bring in thousands of new investors to which we could go to sell our securities.

We request that any changes made in the tax laws not be made retroactive—that is another of the requests that we made, Senator—and we also request that you put an end to the existing unfair discrimination against the taxpaying electric light and power companies by removing the tax exemption now enjoyed by public bodies engaged in the power business; and the last one of our suggestions was we reduce spending for nonessential or nondefense items and limit corporate tax rates to present levels, if it can possibly be done.

Senator MILLIKIN. Thank you very much.

Senator BYRD. Thank you, sir.

Senator CONNALLY. Do you represent all of the electric privately owned companies?

Mr. OAKES. Yes, sir.

Senator CONNALLY. Your association covers them all?

Mr. OAKES. Yes, sir.

Senator CONNALLY. The Edison Electric Institute——

Mr. OAKES. Yes, sir.

Senator CONNALLY. That is a trade institute, I suppose?

Mr. OAKES. Yes, sir; and covers practically every public utility in the country. There are very few that are not members.

Senator CONNALLY. So, you are speaking for all of them.

Mr. OAKES. I am speaking for all of them.

Senator CONNALLY. And the difficulties that you pointed out as to financing and all of that apply to all of them?

Mr. OAKES. Yes, sir; it applies to all of them. Let me remark: The expansion program that we have had since the war period, if carried on through the year 1953, as we now plan it, will mean that we have expanded by $15 billion, and our plant account at the end of 1953, in my opinion, will pass that which the railroads of the country now have.

In other words, our industry in 1953 will be a bigger industry than it is now so far as plant account goes; so, we are really a large industry.

Senator BYRD. What is the amount you expect to increase it by?

Mr. OAKES. We expect in the next 3 years that 7 billions in new money will be required, and we must raise at least 4 billions of that. The other three will come from internal sources.

Senator BYRD. Thank you very much, Mr. Oakes.

Mr. OAKES. Thank you very, very much.

Senator CONNALLY. I am glad to have heard you, Mr. Oakes. We are all interested in these problems.

(The prepared text and charts of Mr. Oakes and a statement of the American Public Power Association follow:)

STATEMENT OF CHARLES E. OAKES, PRESIDENT, PENNSYLVANIA POWER & LIGHT CO. AND CHAIRMAN OF SPECIAL TAX POLICY COMMITTEE OF EDISON ELECTRIC INSTITUTE

My name is Charles E. Oakes. I live at Allentown, Pa. I am president of Pennsylvania Power & Light Co., which serves a portion of eastern Pennsylvania and which is wholly and directly owned by the general public.

I appear before this committee as chairman of the special tax policy committee of the Edison Electric Institute, to present its views with respect to the effect of the pending tax bill upon the electric-light and power companies of this country. The Edison Electric Institute is a trade association representing 82 percent of the taxpaying electric-utility industry of our Nation. This industry has over $19,500,000,000 of plant and property, receives gross revenues of over $5,000,000,000 per year, and will pay well over a billion dollars of taxes in 1951.

The electric companies appreciate the difficult task confronting this committee. We are concerned about the future of our country with respect to both national defense and inflation. We believe, like businessmen generally, that we should pay for national defense as we go along.

To conserve the time of this committee, I have prepared some charts to illustrate the impact of taxation on electric-power and light companies, and the suggestions we are making at this time. The latest available statistics have been used throughout.

In my opinion, it is essential to consider taxes not only from the viewpoint of their impact on our industry and its customers but also in relation to their effect on national welfare either through higher rates, impaired service, or lack of sufficient electric power.

Chart I shows the 15-year record of dollars paid by the electric-light and power companies for taxes. In the period shown they have aggregated the considerable sum of $9,500,000,000. This amount of money is greater than the total Federal taxes collected in 1941—Pearl Harbor year.

The 1951 Federal taxes shown are estimated on the basis of the pending tax bill as it passed the House, and are over 60 percent greater than the highest annual Federal tax payments ever made by the industry during World War II.

Like all industry, the electric-light and power companies include taxes in the rates charged for their product, for they have no other source of funds. Therefore, taxes imposed directly on the electric companies become taxes on the consumers of electricity. So, I am speaking for our customers as well as for the companies.

For this reason, chart II is not in dollars paid by the companies. Instead, it shows the cents of the average dollar paid by the customers of the companies, which must be set aside for taxes. It shows the actual taxes so paid in 1949, when the Federal corporate-tax rate was 38 percent; in 1950, when the effective corporate rate was 42 percent, and as estimated for 1951 under the provisions of the pending bill. This is the most effective way of showing how heavy a tax burden is placed on our customers. On the average, nearly one-quarter of the amount the customers of the electric companies will pay for electricity in 1951 will go for taxes.

Chart III shows only the Federal taxes for the last 8 years, broken down as to kind. The 1951 tax bill as passed by the House eliminated the 3⅓-percent electrical energy tax. To illustrate the relative change in the situation, I have shown 1951 without the 3⅓-percent tax. Actually, under the provisions of the pending bill, it would not be removed until the new tax bill is passed, and thus there would be an "overlap" for a portion of the year.

The 3⅓ percent electrical-energy tax was deductible in its entirety, just like operating expenses, before determining the income subject to Federal income taxes. Its removal will, therefore, increase our Federal income taxes because it will increase the income subject to such taxes.

The Report of the Committee on Ways and Means of the House of Representatives, page 50, stated:

"It is estimated that in a full year of operation the repeal of this 3⅓ percent electrical-energy tax will reduce revenues by $104 million annually."

This $104 million is the gross amount of the reduction for the entire year. However, the Federal income tax on it will be $54 million, leaving $50 million as the net reduction in tax revenues of the Federal Government by reason of the repeal of the 3⅓-percent electrical-energy tax.

The 3⅓-percent electrical-energy tax applied only to residential and commercial customers and thus discriminated in large measure against low-income groups. It also discriminated against the customers of the electric-light and power companies, as public bodies in the power business did not pay the tax. The administration of this tax was costly to both the electric companies and the Treasury of the United States. It involved the repeated examination of millions of accounts, and periodic review of the status of many of them. Its elimination by the House was wise.

Proportionately, the electric companies pay a much heavier burden of Federal income taxes than the average American business. This is illustrated by chart IV. The proportions are for the fiscal year 1948, the latest for which the information is available. Although the electric companies had less than 1 percent of the total compiled receipts of corporations filing income-tax returns, they paid over 2½ percent of the total corporation income taxes.

Chart V is concerned only with Federal income taxes. It contrasts the electric companies with representative companies in the various industries shown in terms of the proportion of the average dollar paid by customers which must be set aside for taxes.

A much larger proportion of the electric customers' dollar must be set aside for taxes than in the other cases. It is evident that the amount needed as a price increase to the customer to cover any tax increase is far less for such nonutility companies than it is for the electric-utility companies.

It is obvious that Federal income taxes bear much more heavily upon the customers of the electric companies than upon those of most other businesses.

Chart VI illustrates another of the other important differences between businesses. It shows the large amount of investment required by the electric companies to obtain $1 of annual revenue, as compared with the same businesses shown on the preceding chart. The electric companies' average requirement of $4.09 for each dollar of annual revenue is 45 times greater than the 9-cent requirement of the retail grocery chain. Federal income taxes on corporations are levied on the wages of risk capital and preferred stock. As a result, when large investments are required to produce annual revenue, as is the case in respect to the electric light and power companies, Federal income taxes are a heavy burden.

There is a great difference between the electric companies and nonutility businesses in their ability to absorb a tax increase, and in the ease with which it can be passed on to the customer.

The electric-utility companies are regulated businesses, with their rates fixed by law. To obtain rate increases requires regulatory commission action, and this takes time. This lag in itself is serious; but, if it is further compounded by the enactment of a retroactive tax bill, the resulting maladjustment in our industry could well be critical.

While part of our economy is now subject to wartime regulation, the greater part is not; and, in any event, changes in the price charged for goods by an ordinary business is a much more simple process than it is for a regulated utility.

The business of the electric-light and power companies is expanding rapidly. They must finance and build, for what they supply is a national necessity.

Immediately upon the close of World War II, the electric companies embarked upon a vast postwar expansion program to meet the power needs of our Nation. This program will cost $15 billion through through 1953, and there is no end in sight to the increase in the power requirements of the United States beyond that arbitrary date.

The electric companies will spend over $7 billion on new construction in the next 3 years. Even with this vast sum, the companies will barely keep ahead of the growing demands for national defense. An adequate supply of power is essential to the safety and welfare of the Nation.

Money for expansion comes from two sources: internal and external. Many businesses can secure most or all the capital they need from the revenues of the enterprises. Chart VII illustrates what took place during the postwar period. It shows that industry as a whole obtained three-quarters of its new capital requirements from internal sources, whereas the electric companies could obtain only 39 percent in this way, and had to secure the other 61 percent in the competitive money markets of this country.

In 1950, the electric-light and power companies did over 27 percent of all the new money corporate financing in this country, although on a receipts basis they are less than 1 percent of the total of all corporations in this country.

In order to secure new money at favorable rates, the companies must demonstrate that their present earnings and future prospects are good. If earnings show evidence of deteriorating, the cost of new money will go up, and, in the end, will cease to be available at any reasonable price. Such a result would be disastrous to the welfare of our country.

The Nation is experiencing a serious inflation. Its extent is illustrated by chart VIII, which shows the "all commodity" index by months from 1940 to date. The index shows that prices of "all commodities" have more than doubled since 1940. In common with everyone else, the electric companies have to pay increased commodity prices and wages.

The effect of this inflation and increased taxes upon the electric-light and power companies is shown by chart IX.

The margin remaining after expenses is the amount available for rent of capital and for the earnings which must be retained if the businesses are to remain on a sound, conservative basis and be able to attract the new money needed by an expanding industry.

The figures are average for the entire business-managed electric utility industry. Of course, individual companies vary from this mean.

Inflation and high taxes had crowded in on this margin to a serious extent by 1950. The pending tax bill would encroach still further upon it. To offset the loss, wholesale rate increases will be necessary if disaster is to be avoided.

Chart X is based on 1950 figures for the individual electric-light and power companies, adjusted to reflect the effect of the pending tax bill. It shows the ratios of the earnings of the companies after depreciation and taxes, to plant accounts. Less than 5 percent of the industry had margins greater than 6 percent. Nearly two-thirds had margins less than 5 percent.

I want to make it very plain that the figures I have shown above are not the returns on a "rate base" which would be used in fixing rates. These are set by regulatory commissions after hearings and consideration of all factors involved. The figures on the chart do indicate however, that under the pending tax bill most electric companies would have a margin below the levels generally allowed by regulatory bodies.

Should the pending bill become law electric companies all over the Nation would be forced to apply to their regulatory bodies for increased rates. Delays would be unavoidable. Earnings would be impaired, thus making financing difficult or impossible, and slowing down or halting essential portions of the construction program. This would be a national disaster.

Earnings must be maintained at levels high enough to secure new risk money at reasonable rates of hire. To raise rates to do this will put an extra burden upon our customers, which I believe to be unfair.

I would like to explain what I mean by the simplified example shown on chart XI, as the point is hard to see at first glance.

In 1949 the corporate-income tax rate was 38 percent. The pending tax bill provides a 52-percent rate. This represents an apparent 36.8-percent increase in 2 years. But it is not the true increase if the net earnings are to remain at the 1949 level, as they must in most instances if the electric companies are to obtain the needed new money at reasonable prices. The true increase in taxes will be 76.7 percent.

The first stack shows the situation in 1949, when the corporate income tax rate was 38 percent. The top section shows the deductions made for income-tax purposes in order to get a base for calculating the Federal income tax.

The next section shows the Federal income tax at 38 percent. The bottom section shows the resulting net income after taxes, which is at the minimum level consistent with the needs of the company for raising new capital.

Now move to the center stack. This shows what happens when the Federal income tax rate is increased to 52 percent. On the face of the figures, this would represent an increase of 30.8 percent in taxes. Such an increase would take an additional 3.5 cents from each dollar of revenue, and would cut down the net income by a corresponding amount.

Now, at first glance it would seem that in order to meet this increase in taxes by increasing rates, all that would be necessary would be to charge the customer an additional 3.5 cents on each dollar paid.

The Federal income tax, however, does not work that way. The stack on the right shows what would really happen if the net income of 15.5 cents is to remain intact. In order to collect a Federal income tax of 52 percent, and still have 15.5 cents of net income remaining, a net taxable income of 32.29 cents would be required, and the income tax would be 16.79 cents. Thus the increase in taxes over the 38 percent would be 7.29 cents, which is a boost of 76.7 percent over the 1949 rate level, instead of the 30.8 percent which was indicated by the increase in the income-tax rate.

Thus the customers would have to pay 7.29 cents more to take care of a Federal income tax increase that on its face amounted to only 3.5 cents. Said another way, the customers must pay over twice the apparent tax increase.

The electric companies would not get a cent of this added amount. It would all go to the tax-collecting agencies.

We believe that corporate-income taxes and personal-income taxes are higher than is good for industry and the general public. Specifically, we believe that the 47-percent rate now in effect is higher than industry can long endure without serious adverse results, and that the proposed increase would be disastrous to our economy. The effect which I have just been illustrating would be extremely inflationary, and the weight of these taxes is so great as to destroy by indirection our American economic system.

We are gravely concerned by the retroactive provisions of the pending tax bill. We are a regulated industry, with rates established on the situation which now exists. Regulatory bodies do not grant retroactive rate increases. So, it will be impossible for the companies to recover retroactive taxes. Dividends have been paid, and financing has been undertaken on the basis of existing tax rates. We ask you to make any changes in tax rates which you may find to be necessary effective after the passage of the tax bill.

I appreciate that suggestions are in order as to the course which might be followed to avoid the adverse effects which I have been describing.

The first suggestion would be, of course, to reduce the need for additional taxes by eliminating nonessential Government expenditures. A businessman is apt to judge such matters by what he himself knows to be true in his line of endeavor. The Federal budget for the fiscal year 1952 contained requests for appropriations for Federal bureaus engaged in the power business totaling well over 1¼ billion dollars. Part was to be used to initiate new power projects that could not be ready for years to come. Part was to complete projects that have just been started, and which could not possibly be ready for several years. Part was for duplicating existing transmission lines. Part was for power facilities which the electric companies, if given a chance, would build.

The Congress made extensive cuts in such appropriations for the fiscal year 1952, but a great deal more money could be removed without any adverse effects on our economy. On the contrary, such a step would improve it.

The new capital required by American business comes from the savings of its citizens. The increases in corporate and personal-income tax rates which have taken place in recent years are "drying up" the source of creative capital. Let me show you what is taking place.

Chart XII reproduces an advertisement which appeared recently in a New York newspaper. It promotes the sale of tax-free securities by emphasizing the tax discrimination which exists against the electric-light and power companies. You will note that it "plays up" the pending tax bill, implying that the proposed increase in personal-income tax rates should impel the investor to buy the tax-free bonds.

Chart XIII shows that the percent of income of individuals in every income bracket, attributable to dividends, had fallen greatly in the period 1935–47, and the evidence at hand shows that it is still going down.

The pending bill, should it become law, will still further restrict the creation of new capital by diverting current savings to pay personal taxes. Additional increases which may be necessary would again reduce the money available for investment in corporate securities.

The man with large income evidently has been getting out of investments in corporate equities. The only reason for such a person to own stock is for pure speculation where gains are subject to the capital-gains tax. He is not interested in the income from dividends, for such income is almost entirely taxed away.

Chart XIV illustrates what happens to the investor in various income brackets. I have started with an earning of $5 per share before Federal income taxes. My chart is based on a dividend payment of 75 percent of earnings available after payment of Federal income taxes. Let me start with the little fellow first—the one with $3,000 adjusted gross income. In 1949 the company, out of the $5, would have paid $1.90 in Federal income taxes. This would have left $3.10 for the investors. The company would retain a quarter of this or 77 cents, leaving $2.33 as income to the investor. He would have paid 39 cents in personal income taxes at his marginal rate (16.6 percent), leaving him with $1.94 out of the $5 earned for him by the company.

Under the pending tax bill, this little fellow's net share would be cut to $1.89.

Now look at the rear stacks—the big fellow. In 1949, his net share out of the $5 would have been only 42 cents. Under the pending tax bill, this share, small as it was, would shrink to only 10 cents.

It is no wonder that all investors are losing interest in common stock.

An analysis of the stock ownership of a number of large American corporations shows that more than 80 percent of their stockholders own less than 100 shares each. These investors of moderate means are becoming more and more aware of how their savings are being reduced through extortionate double taxation. In the face of mounting taxes, it is astonishing with what tenacity individual investors have sought to retain their ownership in Amercan enterprise.

If the new tax law could be so drafted as to encourage savings by the citizens of moderate means and their investment in American industry, a great step forward would have been taken. A way to accomplish this would be to give the little fellow a specified exemption for dividends received.

Now, I want to talk about tax discrimination.

The electric utility industry in America is in three parts. The larger portion consists of the electric light and power companies. They pay a heavy and full burden of Federal, State, and local taxes. The next portion in size, and growing rapidly in extent, consists of various public bodies—Federal, State, and municipal. This portion pays very little or no Federal taxes, and an insignificant amount in lieu of State and local taxes. The third, and smallest portion, consists of the rural electric cooperatives.

Freedom from Federal taxation is only one of the many special privileges enjoyed by electric power enterprises operated by political bodies, but it is the most unjust.

Tax discrimination not only hurts; it threatens the very existence of the electric companies.

President Truman, in his tax message of January 23, 1950, expressed the gravity of such a situation better than I can, when he said:

"A tax concession to a favored few is always unfair, but it becomes a gross injustice against the rest of the population when tax rates are high. The case for the elimination of these inequities would be strong even if there were no need for replacement revenue."

No Federal taxes are paid by Federal, State, and municipal power enterprises except excise taxes on purchased materials and services. The discrimination is almost complete in this field.

When the Federal tax exemption was first granted to public bodies engaged in the power business the taxes on the electric companies were so small in relation to revenues that the discrimination was negligible. But now it has become extremely serious, and the pending tax bill will make matters worse.

Due to these tax advantages, which during the last 15 years have steadily increased in extent and significance, 47 electric companies have been taken over in their entirety, 23 electric companies have lost large and important segments of their property, and a considerable number of others have lost minor segments to power enterprises owned and operated by public bodies. This trend is a serious matter to the electric companies.

Chart XV illustrates extent of the growth of public bodies in the power business by showing the amount of energy generated by enterprises that pay very little or no Federal taxes.

Serious as it is, what has taken place to date is insignificant in the light of what may be ahead. The map which is chart XVI shows the portion of the Federal electric generating plant program that we know about, including certain State projects which have been financed in whole or in part by the Federal Government. The map shows a total of 631 power projects in service, under construction and proposed, with a total ultimate installed capacity of over 56,300,000 kilowatts. We believe that the plants shown on this map will produce on the order of 250 billion kilowatt-hours a year of power free of Federal taxes. The total generation of the taxpaying utilities for 1950 was only slightly more than this figure.

I have shown you these charts, and quoted these figures, to show the great scope of the tax-free power business of the future if this favored segment of the power industry continues to enjoy this profitable special privilege.

I have in my hand a copy of the report of the legislative committee to investigate the power situation in South Carolina, both public and private, as it was printed in the Journal of the House of Representatives of the State of South Carolina, Tuesday, February 13, 1951. I quote from it as follows:

"* * * we conclude that the private power companies are carrying the vast tax load and that public power is all but exempt from all taxes. In the light of this, we feel that private companies are being discriminated against for most certainly public power with less than a half million for all taxes can sell power cheaper than private companies, when they are paying in the neighborhood of 18 million in taxes.

That is enough to give any citizen who has his State's welfare at heart pause for thought. For we do not want a welfare or socialistic state in South Carolina. * * * The private companies * * * carry a terrific tax load which constitutes unfair competition; it is not fair for our lawmakers to discriminate one against the other."

We appreciate that the Senate Finance Committee can deal only with Federal taxes, but the removal of this part of the discrimination against the electric light and power companies would go far toward correcting this unjust situation.

The time to end this tax discrimination is now. It is only human nature to object violently to losing some special privilege which gives to its owner a big advantage over his neighbor. If the public power empire is to grow in size and political strength, it will be increasingly difficult to right this wrong.

The extension of Federal taxes to power businesses conducted by public bodies would bring in badly needed tax revenues from a segment of our people which is not paying its full share of the cost of the Federal Government.

Chart XVII shows total estimated additional Federal tax revenues which could be obtained by taxing electric businesses owned and operated by public bodies in 1951 under the pending tax bill, to be about $107,000,000. Much of the revenue from municipalities would come from cities that are also beneficiaries of subsidized Federal power.

This amount of tax revenue is a considerable sum as is shown by chart XVIII. It is greater than the corporation income tax that was collected from any one of 28 States in the fiscal year 1950. It is greater than the total corporation income tax collected from 10 States in the same year.

Chart XIX shows that over one-half of this tax revenue loss takes place in four States—California, Tennessee, Washington, and Nebraska. These same four States, however, paid only 10½ percent of the total personal and corporate income taxes paid in the United States.

In conclusion, we—

1. Ask you to confirm the action of the House in eliminating the inequitable and burdensome 3⅓-percent electrical energy tax.
2. Suggest that small investors be encouraged to save and invest in American enterprise by allowing a small exemption for dividends received.
3. Request that any changes made in the tax laws, not be made retroactive.
4. Ask you to put an end to the existing unfair discrimination against the taxpaying electric light and power companies by removing the tax exemption now enjoyed by public bodies engaged in the power business.
5. Ask that the Congress reduce spending for nondefense items and limit corporate tax rates to present levels.

I thank you for your attention.

THERE is still time to reduce your taxable income before amending your 1951 tax estimate.

The interest on State and Municipal bonds is exempt from all present Federal Income Taxes (normal and surtax).

A husband and wife in the $8 12,000 surtax net income bracket must secure a yield from corporate securities of over 4½% to equal the *tax-exempt* 3½% yield of a municipal bond. *Those in the $44-52,000 bracket must purchase taxable securities yielding over 7½% to secure the equivalent net return of a municipal bond yielding 3½%.* And there are many indications that income tax rates will go higher thus increasing the advantage in owning State and Municipal obligations. Corporations also enjoy distinct advantages in owning *tax-exempt* securities.

Here is an unusual opportunity to purchase well secured, *tax-exempt* bonds issued for the purpose of supplying more electric energy to the power-hungry Northwest.

STATEMENT BY BOARD OF DIRECTORS OF AMERICAN PUBLIC POWER ASSOCIATION[1]

The American Public Power Association, representing over 700 local publicly owned electric utilities in 33 States, appreciates the opportunity to insert this statement in the record of the hearings by the Senate Finance Committee on H. R. 4473, the Revenue Act of 1951.

In his statement before this committee on August 1, Mr. Charles E. Oakes, chairman of the special tax policy committee of the Edison Electric Institute, asked that the Federal corporate income tax be extended to the publicly owned electric utilities.

The American Public Power Association is fully sympathetic with the need of the Congress to seek additional sources of revenue at this time. However, we cannot believe that the need for additional revenue is so great that the Congress would endanger one of the basic tenets of our Constitution in order to obtain this revenue. Yet that is precisely what would result if the Congress sought to impose the Federal corporate income tax on the publicly owned electric systems. Such a tax would strike a blow directly at the historic principle of reciprocal immunity from taxation, one of the fundamental principles of our form of government. Whether, as Chief Justice Marshall said, "the power to tax is the power to destroy," the power to tax is surely the power to control, and the establishment of a precedent of Federal taxation on State and local governments would be a Federal power to control the lifeblood of local government. At a time when there has already been a serious invasion of the prerogatives of State and local governments, these local governmental units cannot afford a further weakening of their powers.

Aside from the doubtful constitutionality of a Federal tax on publicly owned electric systems, there are other compelling reasons why such a tax would be unwise. Local governmental units today are in dire financial condition. In some 2,700 communities throughout the country the financial condtion of the local governmental units is being alleviated to some extent by the contribution to the local governments by the municipally owned electric plants. The extent of this contribution to local governments was indicated in a study made in 1948 by the American Public Power Association.[2] This study showed that the publicly owned elec-

[1] Adopted at meeting in Washington, D. C., August 6.
[2] Public Power Pays! Copyright 1948 by the American Public Power Association.

tric systems were already making substantial contributions to local government, and in many communities this contribution greatly exceeded the 10 cents in taxes of all types which Mr. Oakes said the privately owned utilities were paying, in 1949, out of each dollar of revenue. The contribution of municipal utilities to local government even exceeded the 23.23 cents out of each dollar of revenue which Mr. Oakes said the privately owned utilities would pay in taxes under the pending bill. This fact removes the foundation from Mr. Oakes' charge that the customers of the privately owned utilities are being discriminated against, insofar as the burden of taxation is concerned.

Contrary to Mr. Oakes' charge of tax discrimination the customers of the privately owned companies might well claim that they suffer from a different kind of discrimination since they generally pay more for the electricity they use, and the profits of the system go to private individuals, rather than to the communities which are served by the electric properties. Mr. Oakes does not ask Congress for relief for the customers of the privately owned utilities from this form of discrimination, because presumably the people involved prefer that kind of service.

Of course, Mr. Oakes' charge that the alleged tax discrimination threatens the very existence of the electric companies is fantastic. Public bodies which have bought privately owned electric utilities have done so by exercising their choice based on good and sufficient reasons. This is an exercise of self-government by local subdivision which constitutionally has always been free from taxation by the Federal Government. It should remain so.

It is noted that, following Mr. Oakes' testimony, Mr. John H. Hessey, representing the National Association of Railroad and Utilities Commissioners, also testified before this committee, and requested that a Federal excise tax be levied against the customers of all utilities, regardless of their type of ownership. The House Ways and Means Committee, in its consideration of H. R. 4473, eliminated the 3⅓-percent Federal electric energy excise tax from the privately owned utilities. It also reversed an earlier tentative action in which it recommended that this tax be extended to the publicly owned utilities. We ask the Senate Finance Committee to sustain the action of the House in not extending this excise tax to the publicly owned electric utilities, for the reason that such a tax, like a Federal corporate income tax, would seriously threaten the separation of powers between the Federal Government, on the one hand, and State and local governments on the other.

We also ask this committee to reject the recommendation made July 18 by Mr. Herschel D. Newsom, master of the National Grange, that the Federal income tax be applied to earnings from State and local bonds. The position of our association on such a tax is stated in detail in the accompanying statement which was presented on February 27, 1951, by Mr. Northcutt Ely, general counsel of APPA, before the House Ways and Means Committee.

Senator BYRD. Mr. Burton P. Smith.

STATEMENT OF BURTON P. SMITH, AMERICAN GAS ASSOCIATION

Mr. SMITH. Mr. Chairman and gentlemen, my name is Burton P. Smith. I reside in Shreveport, La. I am the in-coming chairman of the taxation committee of the American Gas Association.

I appear before this committee on the behalf of the American Gas Association, an organization that represents over 90 percent of the manufactured and natural gas public utility and gas pipeline companies in this country.

In the interest of conserving time—the time of your committee—we respectfully request that there be inserted in the record of these hearings a copy of a letter with respect to H.R. 4473.

This letter is addressed to your chairman, Senator George, by Mr. George S. Young, acting chairman of the national defense committee of the American Gas Association.

Senator BYRD. Thank you, Mr. Smith.

Mr. SMITH. Thank you very much.

(The letter referred to follows:)

AMERICAN GAS ASSOCIATION,
New York 17, N. Y., August 1, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senator Finance Committee,
Washington, D. C.

SIR: The American Gas Association is an industry organization that represents over 90 percent of the manufactured and natural gas public utilities and gas pipeline companies in this country. This industry, as a whole, serves approximately 24 million customers, employs 176,400 workers and has assets amounting to $9.3 billion.

There is now before you H. R. 4473, the Revenue Act of 1951. We have carefully examined this bill and will limit our comments to those sections of the bill that we believe directly affect our industry. In stating our views, we wish to make it clear that we seek no special consideration or preferential treatment apart from other industries in general.

Specifically, our comments are as follows:

INCREASE IN CORPORATE RATE (SEC. 121 OF H. R. 4473)

We are particularly concerned with the proposed increase in the corporation income tax rate to 52 percent. The present 47-percent rate represents a 24-percent increase over the 38-percent rate effective in 1949, just 2 years ago. The proposed rate of 52 percent would be a 37-percent increase over the 1949 rate.

Such substantial increases gravely disturb existing economic conditions in the gas industry. In our industry retained earnings are small and it has already been necessary for many gas utilities to seek increased rates from their customers as a result of the rise in corporate income taxes levied by the Revenue Act of 1950. A further increase in the corporate rate to 52 percent as in H. R. 4473 will force most of the industry to petition the regulatory authorities for an increase in customers' rates. The only alternative would be to reduce the amounts available to workers or to investors. Neither is a practical solution. Inflationary pressures on the workers make any reductions in their wages impossible. On the other hand, to reduce payments to investors would make it more difficult for the industry to secure adequate amounts of capital required by our currently large construction programs.

In cases where regulatory authorities permit an increase in rates to customers to compensate the utility for higher income tax, the rate increase must be almost double the amount of the higher tax. For example, with the present 47 percent rate it takes, exclusive of the effect of local and State taxes, $1.89 of taxable income to produce $1 of net income. Should the rate be increased to 52 percent, $2.08 of taxable income would be needed to pay the tax and leave $1 of net income. Thus the proposed rise of 5 percentage points in the tax rate would mean adding 19 cents to the customers' bill for each $1 of net income of the corporation. For this reason we believe that the corporation income-tax rate should not be increased above 47 percent except as a last resort.

Our comments with respect to the increase in the corporation income tax apply also to the proposed increase in the excess-profits tax through the reduction in the credit based on income from 85 to 75 percent of average earnings (sec. 502 of H. R. 4473).

RETROACTIVE INCREASE IN CORPORATE RATE

The gas business is largely seasonal with large sales during the winter months and lower sales during the summer. Much of 1951 has already passed and with it most of the winter weather of the calendar year 1951. The taxable income that will be produced during the remaining months of the year is only a small part of the total income for the year. If the corporation income-tax rate is increased retrocatively to January 1, 1951, the amount of income that will be produced in our industry in the last few months of the year will be heavily burdened to provide for such retrocative increases. In most cases the rates that we are now charging our customers have not been adjusted to provide for the tax increases that have already occurred. A retroactive tax increase at this time would only aggravate this situation.

SURTAX EXEMPTION TO CORPORATIONS (SEC. 123 OF H. R. 4473)

The proposed limitation of one surtax exemption of $25,000 for all members of a controlled group of corporations is primarily aimed at removing the incentive for the artificial splitting of corporations to obtain additional surtax exemptions. Corporations not created for this purpose should not be penalized. It is, therefore, suggested that where corporations of a controlled group exist or are created for valid business purposes, this limitation should not be applicable.

COLLECTION OF INCOME TAX AT SOURCE ON DIVIDENDS, INTEREST, AND ROYALTIES (SEC. 201 OF H. R. 4473)

(*a*) *Acceleration of refunds*

Many of our security holders are people with incomes that are less than their personal exemptions and allowable deductions. Withholding on dividend and interest payments to these individuals may cause severe hardship and we strongly urge that some means be provided to accelerate the refunds of withholdings to these people.

(*b*) *Intercorporate dividends*

Withholding on dividends, certain interest, and royalties (including lease rentals and bonuses) is proposed under this section to prevent the loss of tax through unreported income. Exemption from withholding is provided where the dividends or interest are paid by a corporation to another affiliated corporation, but only if both corporations are included in a consolidated return for the preceding taxable year. Exemption should also apply to all intercorporate payments of dividends and interest since there is no loss of tax from this source; also the withholding exceeds the tax liability in the case of dividends. If such a withholding provision is to be included in the bill, the corporation receiving the dividend should be permitted to take an immediate credit (approximately 13 percent at the present 47-percent income-tax rate) equal to the excess withholding against any internal revenue tax due.

Respectfully submitted.

GEORGE S. YOUNG,
Acting Chairman, National Defense Committee.

Senator BYRD. Mr. Hessey, will you please identify yourself?

STATEMENT OF JOHN HESSEY, CHAIRMAN, MARYLAND PUBLIC SERVICE COMMISSION

Mr. HESSEY. Yes, sir.

My name is John Hessey, chairman of the Public Service Commission of Maryland. My office is in the Munsey Building, Baltimore, Md.

I appear here on behalf of the National Association of Railroad and Utility Commissioners of the United States, generally referred to as NARUC, representing all of the State commissions which are members of our body.

I do not speak on behalf of any of the Federal commissions; I am speaking only on behalf of all the State regulatory bodies.

Now, the executive committee of the national association adopted a resolution on March 2, 1951, advocating that additional taxes levied by Congress upon the operations or services of regulated public utilities take the form of an excise tax, in order that existing rate structures might be continued; and that such taxes fall alike upon all users of the services of all utilities, regardless of the nature of their ownership or operating organization.

Now, I have attached to this copy of my statement a copy of the resolution which has been adopted.

This national association, of course, is fully cognizant of the need which the Congress faces to raise revenue by taxation, and it does not oppose its efforts to raise the necessary funds.

But, of course, the Association of Regulatory Commission, which, of course, has to regulate the rate charged to the public by all companies, such as gas, electric, communications, water, and all other public utilities, is nevertheless very vitally interested in the method by which that money is obtained.

I might say that patrons of utility companies have in the last few years, of necessity, been subjected to an increase in rates, chiefly because of increased labor costs and material costs, and also because of higher taxes.

We feel that the time has come when that mounting spiral should cease and that the commission should not be required, as a matter of law, to increase rates.

It is, of course, primarily the duty of the commissions to serve the people in their respective jurisdictions, and to render decisions primarily for the benefit of the people.

You may, therefore, say we should not increase rates. I want to say that there is also a corresponding duty which requires the commissions to allow a regulated utility a reasonable return on the fair value of its property, used and useful, in the interest of the public.

If we fail in that duty, we would be exercising unconstitutional authority, and what we would be doing would amount to the taking of private property without just compensation, and that we are not permitted to do.

Any additional tax imposed upon regulated public utilities will, generally speaking, reduce their net income below the amount which the State regulatory commissions have fixed as a fair and reasonable return to the utility.

Therefore, if an increased income-tax rate is made applicable to regulated utilities, it would be mandatory—mind you, we would have no discretion—it would be mandatory on the several State commissions to allow an increase in rates in order to enable them to earn enougth to pay the taxes and to make a reasonable return.

Now, upon a failure to do so, we are immediately taken to court, and the courts overrule us and direct us to do it. We, of course, are not unmindful of the duties imposed upon Congress, but we respectfully submit that Congress, by its action, should not create a situation whereby customers would be saddled with rate increases throughout the Nation.

Commissions, of course, are directly responsible to the public whom they serve and you naturally can understand that great criticism is thrust upon the commission each time they increase the rates.

They do not understand that the action is made necessary by the action of Congress. All they see is an increased rate, and the commissions in the several States have to bear the brunt of it.

Now, we favor an excise tax to be paid by the patrons of all utilities.

If you do that, then we would not have to increase the rates. That seems to us to be a just and fair solution.

To assess additional taxes against regulated utilities would require them to collect more than double the amount of taxes from their customers, and all of this additional sum would be paid to the Government.

Senator MILLIKIN. Will you make that a little clearer?

Mr. HESSEY. Yes, sir. I will be glad to.

I have an illustration attached to the prepared statement which has been filed.

Senator MILLIKIN. In other words, the question suggests itself whether there is any difference between raising the rate by the local utilities commissions so far as the consumer is concerned, and requiring the consumer to pay an excise tax?

Mr. HESSEY. Well, if you raise the rates, he has to pay double. If you have an excise tax he can pay singly, that is all.

Senator MILLIKIN. That is what I would like to have explained.

Mr. HESSEY. If the rate is increased—let us assume that the corporation had to pay or the utility had to pay $1 million more in taxes. That would reduce the net earnings by 1 million.

In other word, to get back that $1 million we would have to increase the rates $2 million.

Senator MILLIKIN. Why?

Mr. HESSEY. Because, assuming that they had earned 10 million, if you make the rate 50 percent and they earned 2 million more, they pay 1 million in additional taxes, and that, with the 1 million that you make them pay because of an increased rate on the prior 10 million, requires us to double, to raise the rates double.

There is no escape from that proposition, none whatsoever, sir. And I will give you the analysis of it, sir.

If you increase the rate--you understand, when you increase the rates, you subject that increase also to the State taxes, as well as to the Federal taxes.

Senator MILLIKIN. I understand that this has been gone into with the previous witness, so I shall not pursue it any further.

Senator MARTIN. No, wait a minute; it is well worth while.

Mr. HESSEY. I am in here in the other position. Do not put me in with the utilities. We are the fellows who have to fix the rate.

Senator BYRD. Your explanation is the same as that of the other gentleman.

Mr. HESSEY. It could not be otherwise.

Senator WILLIAMS. If you reverse this procedure and strike this 3⅓ off, does that mean that the rates will go down 6 percent?

Mr. HESSEY. Assuming, sir—let me say this to you, sir, assuming—you do not increase the tax, we will see that the public gets the benefit of it, sir.

Senator WILLIAMS. I mean, does it work in reverse? Does it work that way?

Mr. HESSEY. It works in reverse and it helps us tremendously, if you take that off, because it increases the earnings by that amount of money and you can rest assured that the several regulatory bodies are looking for all the increased earnings that they can get so we do not have to raise the rates, and it would be a happy day if we could decrease the rates at the present time.

Senator BYRD. I have not understood yet--I was called out—about an excise tax. What did you mean by that?

Mr. HESSEY. I mean a tax levied upon the consumer. Instead of saying, "Mr. Consumer, here you have been paying $10 on your bill—instead of paying $20, you pay an excise tax of $12," which would be the amount necessary, we will say, because of the increased rate, "you will pay an excise tax of $1." Then, there is no additional earning there to the corporation on which they pay taxes.

You give it to the corporation—it is an increased earning, and then you just take it away in taxes.

Senator MILLIKIN. What excise taxes of that character does the consumer now pay for in the States?

Mr. HESSEY. I do not believe there are any, sir, of the kind that the consumer pays. I know of none at the moment.

I am talking about now the State excise taxes. Of course you well know of all the excise taxes they pay for the benefit of the Government on the various articles, and things of that kind.

Senator MILLIKIN. I am talking about State and local excise taxes on this same commodity.

Mr. HESSEY. There is, I believe, some excise tax paid by the utilities perhaps, in a few instances to the counties or the cities, some tax, but it is not paid directly.

Senator MILLIKIN. I am talking about that paid by the consumers.

Mr. HESSEY. You mean the customers themselves?

Senator MILLIKIN. The consumers.

Mr. HESSEY. I know of none at the moment. Of course, I have followed here with reference—I was leading up there to the question of showing what the increased rates would have to be, and as we have discussed that, I will omit that reference to it.

Now, our argument is, why force regulated public utilities to apply to State regulatory bodies for mandatory increases requiring the customers to pay more than double the tax which Congress seeks to secure by an increase in the income-tax rate? We say the answer is obvious.

Now we, therefore, most respectfully urge that the income-tax rates for public utilities be not increased, but that an excise tax be levied upon the consumer who, in the final analysis, furnishes the money with which the income tax is paid.

We are saying that for the benefit of the consumer and the public——

Senator BYRD. That excise tax would be on a percentage basis?

Mr. HESSEY. Yes, sir.

Senator BYRD. In other words, if you had a $10 bill you would pay how much tax?

Mr. HESSEY. Well, that is the question that I would assume that the experts of this committee would be in a better position to judge the amount of it than I.

Anticipating, however, that such a question might be asked, I have had a number of computations made, and they, generally speaking, average three-fourths of 1 percent for each 1-percent increase in the tax rate, so that if you increased from 47 to 52, it would be about a 1½-percent excise tax.

Senator BYRD. You tax the consumer directly?

Mr. HESSEY. Direct. Instead of making him——

Senator BYRD. And that avoids a tax on the corporation.

Mr. HESSEY. I am not thinking about avoiding a tax on the corporation. I am thinking about our duty from a regulatory standpoint.

Senator BYRD. It avoids an increase of rates on the corporation, on which the corporation would have to pay a 52-percent tax.

Mr. HESSEY. No doubt about that, sir.

Senator BYRD. You think that is a better plan that increasing the rates, the excise tax would be a better plan?

Mr. HESSEY. Well, I do, in that it makes the task of the commissioners of all these States much easier, and I think the question was asked of the previous witness whether or not applications had been made already.

I might say that before our own commission we already have one from our telephone company, and in that they have referred to the pending tax bill, and they have gotten it in there in the hope that they can have a hearing upon it immediately after action by Congress so that there will not be the apparent lag between the time the tax is imposed and the time it could become effective—the rate increases could become effective.

Senator HOEY. Your position is that it would cost the consumer just half as much?

Mr. HESSEY. Just half as much; yes, sir.

Senator MILLIKIN. Would the utilities collect the tax for the Government?

Mr. HESSEY. Yes, sir. I see no other way. They would have to put it on the bill and collect it and remit it.

Senator BYRD. Could it be a uniform tax? It could not be a uniform tax. Your idea is for the Federal Government to authorize a tax, and a percentage of that tax be fixed by the local commission?

Mr. HESSEY. No, sir; not at all. That tax must be fixed by Congress; that is not our prerogative.

Senator BYRD. How could you fix a uniform tax?

Mr. HESSEY. Well, on——

Senator HOEY. On a percentage basis?

Mr. HESSEY. As I say, I have made only a few checks on it, and they seem to indicate, as I say, three-tenths of 1 percent.

Now those are, I think, three different industries. It may not apply to all, but an excise tax—I was coming to my next point—if you levy an excise tax, you get the customers of all cooperatives and all Government-owned utilites paying a tax.

If you just impose a tax upon the utilities without placing it on the customers, then you make many customers over the country pay double, and you let customers of special interests pay nothing.

Senator BYRD. I see a good deal of merit to it, but I do not just see how you can have a uniform tax for the electric companies and telephone companies, and all the others.

Mr. HESSEY. I think, when you find the facts, if a study is made, that, perhaps you can come up with the appropriate answer. I think that one of those that I had was a telephone company; one was a gas company; I think that one was a water company, and the variation was less than one-half of 1 percent when you went up to a tax rate of 55 percent. So, we are suggesting that, instead of increasing the rate on regulated public utilities, you require their consumers to pay or their customers to pay.

Senator BYRD. Of course, the Federal Government would now lose its share that they are now getting of increased taxes.

Mr. HESSEY. What is that?

Senator BYRD. The Federal Government would lose——

Mr. HESSEY. They would not lose anything if they did that.

Senator BYRD. I mean, they would lose their share of revenue that would be permitted by the utilities commissions; they would lose the 52 percent that you are speaking of.

Mr. HESSEY. They would not lose anything.

Senator BYRD. They would not lose anything right now. If you have got to raise the rates $1,000,000, for example, then the Federal Government gets $500,000 of it.

Mr. HESSEY. That is right.

Senator BYRD. You are trying to avoid that and, therefore, the Government would lose its share of these new rate increases that would be allowed; is that not correct?

Mr. HESSEY. No; I am giving you enough—as much by excise taxes as you would get by the increased rates so you cannot lose anything if you get as much one way as you would get the other.

The only thing is that you make the customers of the public utilties pay; that is all I am saying that you do. They pay double, whereas, if you put an excise tax on it, you would get the same amount of the tax.

Senator FREAR. Where does that money go if you are going to collect $2,000,000 from the customer and the Government gets only $1,000,000? That other million must go somewhere.

Mr. HESSEY. Well, of course, the Government gets it all. You could figure out what the Government is entitled to receive. The Government is trying to get the taxes on the earnings of the corporation.

Now, then, by the action of the Government it gets that money, but it forces those to come back to us, and then, after that, we increase rates and it keeps on pyramiding all the time; that is what happens.

Senator HOEY. What Senator Byrd meant was that, if you increase the amount to make $1,000,000, then you say it is necessary to increase it by $2,000,000.

Mr. HESSEY. That is right.

Senator HOEY. Of course, the Government gets both of those 2 million dollars?

Mr. HESSEY. Yes, sir.

Senator HOEY. It costs the consumer quite a lot more—twice as much, but the Government does get it.

Mr. HESSEY. It does get it, but I do not think the Government should require all the regulated utilities to do it. You are passing it on to the public, and that is the only instance that I can think of where it goes directly——

Senator BYRD. It makes the Government lose its whole share.

Mr. HESSEY. I think the answer to that is that there is discrimination with respect to that particular class of people, and there should not be any discrimination.

Senator BYRD. I am not talking about that, but I just want to get the whole picture of what you propose to do.

Mr. HESSEY. I agree with you.

Senator BYRD. The Government, or someone, has got to come in with this 50 percent that you are talking about. The Government loses this 50 percent.

Mr. HESSEY. Yes, sir, but you see, these other companies that are earning money, the difference is this: The regulated utility is only permitted by law to earn a certain rate of return.

All these other corporations that you read about are making the fabulous sums and, perhaps, they will not like my saying it, but they can well stand it out of that, their earnings; but these companies cannot, and that is the difference.

Senator BYRD. What do you mean by "these"?

Mr. HESSEY. I mean the public-utility companies cannot; that is what I mean. That is all I am thinking about.

Public utility companies; those that we regulate, and I am speaking from that standpoint, and that standpoint only.

Senator BYRD. Thank you very much, Mr. Hessey.

Your statement will be placed in the record.

(The prepared statement referred to follows:)

STATEMENT OF JOHN H. HESSEY, CHAIRMAN, MARYLAND PUBLIC SERVICE COMMISSION

My name is John H. Hessey. I am chairman of the Public Service Commission of Maryland. My office is in the Munsey Building, Baltimore, Md.

I appear here today on behalf of the National Association of Railroad and Utilities Commissioners of the United States, generally referred to as NARUC, representing all of the State commissions which are members of our body.

The executive committee of the national association adopted a resolution on March 2, 1951, advocating that additional taxes levied by Congress upon the operations or services of regulated public utilities take the form of an excise tax, in order that existing rate structures might be continued, and that such taxes fall alike upon all users of the services of all utilities, regardless of the nature of their ownership or operating organization. Attached hereto is a copy of the resolution to which your attention is invited.

The national association is fully cognizant of the current need which Congress faces to raise revenue by taxation, and it does not oppose its efforts to raise the necessary funds. As the National Association of Railroad and Utilities Commissioners is an association of regulatory commissions of this country, which are empowered to regulate the rates charged to the public by the gas, electric, communications, water, steam-heating, transportation, and other public utilities serving the American public, it is, nevertheless, vitally interested in the method by which those funds are obtained.

As the patrons of utility companies have, of necessity, already been subjected to numerous increases in rates, chiefly because of increased labor and material costs and higher taxes, it is imperative that no further increases be allowed. The mounting spiral of increased costs must cease.

It is the duty of the commissions to serve the people in their respective jurisdictions and to render decisions primarily for the benefit of the people, but there is a corresponding duty which requires the commissions to allow a regulated utility a reasonable return on the fair value of its property, used and useful in the interest of the public. To fail in this latter duty would be exercising unconstitutional authority, and would amount to taking private property without just compensation.

Any additional tax imposed upon regulated public utilities will, generally speaking, reduce their net income below the amount which the several State regulatory commissions have fixed as a fair and reasonable return to the utility. Therefore, if an increased income-tax rate is made applicable to regulated utilities, it would be mandatory on the several State commissions to allow an increase in rates, in order to enable them to earn a reasonable return. Upon a failure of the commissions to do so, resort could be had to the State and Federal courts, and such courts would be compelled to reverse the commissions.

We are not unmindful of the duty imposed upon Congress, but we respectfully submit that Congress, by its action, should not create a situation whereby consumers would be saddled with rate increases throughout the Nation. The commissions are responsible directly to the public, whom they serve, and criticism for the rate increases would be heaped upon the heads of the Commissioners who are forced to raise rates. The public would not understand that the action of the Commissioners was necessary because Congress has increased the tax rate.

The commissions favor an excise tax to be paid by patrons of all utilities. Such a tax would not require them to increase rates. This is a just and fair solution. To assess additional taxes against the regulated utilities would require them to collect more than double the amount of taxes from their customers, and all of this additional sum would be paid to the Government. This is unjust discrimination against regulated utilities; rather, it imposes a double obligation on the people (customers) themselves.

Illustrations are legion, but one will suffice.

Taking one public utility, The Chesapeake & Potomac Telephone Co. of Baltimore City, as an example, a tabulation has been prepared and is attached hereto, showing the additional gross revenues required to offset the effect of the various increases in the Federal income-tax rate from 47 percent to 55 percent. It will be noted therefrom that the additional gross revenues required to offset the effect of the increase in taxes is more than double the increased Federal income tax, when the income tax is increased to 49 percent. It will be further noted that, as the tax rate is increased upward from 50 percent, the additional gross revenues required to offset the effect of the increase in taxes goes up in greater proportion.

Why force regulated public utilities to apply to State regulatory bodies for mandatory increases requiring that customers pay more than double the tax which Congress seeks to secure by an increase in the income-tax rate? The answer is obvious. An excise tax levied upon the consumer in an amount sufficient to meet the estimated income to be derived from the public utilities is the answer.

I therefore most respectfully urge that the income-tax rates for regulated public utilities be not increased, but that an excise tax be levied upon the consumer who, in the final analysis, furnishes the money with which the income tax is paid.

The national association also takes the position that an excise tax should fall alike on all users of the services of all utilities, regardless of the nature of the ownership or operating organization of the utilities. If a tax is to be imposed upon one public utility, it should be imposed upon all. If it is not, then the customers of a cooperative group or a Government-owned utility would be favored, for neither such utility nor the consumer would pay any part of an increased income tax imposed for the welfare and defense of this country. There should be no discrimination between utilities, whatever their character, nor between the customers of any utilities.

The imposition of an excise tax would reach customers of cooperatives and Government-owned utilities, and those now paying nothing by way of income or excise tax would be subjected to a fair share of the tax and some of the discrimination which now exists would be eliminated.

Resolution Relating to Increases in Federal Corporate Income Tax

Whereas it has been necessary for the Congress of the United States to make substantial increases in corporation taxes, and further and greater increases are under consideration and seem probable; and

Whereas such taxes if levied would completely disrupt and destroy the present rate structures of the regulated public utilities of the country, and make it necessary to hold many thousands of hearings by regulatory authorities, with a consequent waste of time and money that would amount in total to a tremendous expenditure; and

Whereas regulated utilities are allowed to earn a reasonable return upon their investment, and no more, and all taxes are a deductible operating expense that is passed on to the users of the service; and

Whereas the present and proposed extremely high taxes dedicated largely to the national defense should be borne equally and impartially by all users of utility services: Therefore be it

Resolved, That additional taxes levied by Congress upon the operations or services of regulated public utilities take the form of an excise tax, in order that existing rate structures may be continued, and that such taxes fall alike upon all users of the services of all utilities, regardless of the nature of their ownership or operating organization.

Adopted March 2, 1951, at a regular meeting of the executive committee of the National Association of Railroad and Utilities Commissioners held at Washington, D. C.

The Chesapeake & Potomac Telephone Co. of Baltimore City—Additional gross revenues required to offset effect of various increases in Federal income-tax rate

A. Taxable income, first 6 months 1951, annual basis: $14,533,000.
B. Additional gross revenues required to offset effect of increases in tax rates:

	Increase in tax rate From— (a)	Increase in tax rate To— (b)	Increase in Federal income tax (c)	Portion of additional gross revenues retained as not operating income (d)	Additional gross revenues required to offset effect of increase in taxes (e)=(c+d)
	Percent	*Percent*		*Percent*	
1	47	48	$145,000	50.29	$288,000
2	47	49	291,000	49.32	590,000
3	47	50	436,000	48.35	902,000
4	47	51	581,000	47.39	1,226,000
5	47	52	727,000	46.42	1,566,000
6	47	53	872,000	45.45	1,919,000
7	47	54	1,017,000	44.49	2,286,000
8	47	55	1,163,000	43.52	2,672,000

Senator BYRD. Mr. H. A. Schumacher.
Will you please identify yourself, Mr. Schumacher.

STATEMENT OF H. A. SCHUMACHER, VICE PRESIDENT, GRAFLEX, INC., ROCHESTER, N. Y.

Mr. SCHUMACHER. Mr. Chairman, I thank you for the privilege of appearing here.

My name is Howard A. Schumacher. I am vice president of Graflex, Inc., Rochester, N. Y.

I represent the National Association of Photographic Manufacturers, Inc., whose member companies produce more than 90 percent of the total volume of photographic products manufactured in the United States.

Permit me to summarize four vital points with respect to H. R. 4473. These points, together with other pertinent information, are more fully developed in our documented brief, which, with your permission, Mr. Chairman, I submit for inclusion in the record.

As you know, section 485 rewords the photographic excise section to accomplish three things:

First, it applies an increased rate of 20 percent on amateur films now taxed at 1 percent, and reduces the excessive 25-percent rate on presently taxed cameras to 20 percent.

Second, it substitutes clear, understandable language which eliminates present inequities and administrative difficulties, and

Third, it excludes those essential users who, it is our belief, were never intended to be taxed.

Let's examine these points more closely:

1. Excessive rates: Our industry's experience has proven that any mild business recession produces a very serious depression in such a heavily taxed area. You may remember our testimony of last year; in 1949 when general manufacturing employment fell off about 9 percent, the 25 percent taxed photographic equipment industry suffered a loss in employment of nearly 45 percent.

The tax bill passed by the House affords some correction of this high rate, namely, reducing it to 20 percent, although concurrently increasing the rate on taxed film from 15 to 20 percent.

Chart A which is in the material before each of you, shows that the photographic excises would then still be twice the rate of the other generally prevailing manufacturers' excises.

Then if revenue needs dictate the imposition of a 20-percent tax for the present, we will acquiesce in view of the fact that the technical rewording of the bill accomplishes other urgently needed changes.

2. Ambiguity. A damaging defect of the present photographic excise tax law is its ambiguous language. This defect is twofold:

First, the basis for determining which products fall within its scope is so intangible that it is impossible, even after 9 years, for the industry or the Government to determine a clear line between taxable and exempt products.

This has caused continuous administrative difficulty, rulings and reversal of rulings, confusion and inequity.

Secondly, the wording of the present law places photographic manufacturers in an unfair competitive situation in that it taxes many products at 25 percent if made by a photographic manufacturer even when sold for a nonphotographic use, but does not tax the same or similar articles when made by a nonphotographic manufacturer even when sold for photographic use. As a very portable example, I have here two print rollers. They are as alike as two peas in a pod—this one made by a photographic manufacturer, 25 percent tax; this one made by a nonphotographic manufacturer, tax-free.

Similarly, focusing cloths which you men may remember seeing before; here are two of them. One is taxed 25 percent, the other is tax-free.

What is the difference? One of them is hemmed.

Senator KERR. One of them is what?

Mr. SCHUMACHER. Hemmed; it has a hem sewed along the edge of it. The other one is unhemmed. The hemmed one is 25 percent; the other one is tax-free.

The provisions of the House bill will correct these two serious defects by substituting for the present law, language which by clean-cut definition limits the tax to those cameras, lenses, and films which were intended to be taxed.

Senator HOEY. Are you in favor of the tax bill as passed—this measure?

Mr. SCHUMACHER. Yes, sir, section 485.

Senator HOEY. You want the same thing?

Senator KERR. You are improving the language, but you are making a case against the amount of the tax?

Mr. SCHUMACHER. May I cover that for you in just a moment, sir? The third aspect of this revised bill relates to the business of Government cost items. When the wartime photographic excise taxes were imposed, it appears from the record that they were thought of as "luxury" taxes. The fact is that this tax is principally borne by users in such fields as industry, science, Government, medicine, education, training, publishing, law enforcement, and like essential activities.

About two-thirds of the sales of this industry are for such end use, as shown on chart B, which again, each of you men have.

The Ways and Means Committee in its bill has excluded from the base of the photographic tax the business cost items, stating that it believes that a tax on such photographic items is likely to be shifted forward as an operating expense and thus appear in the price of commodities generally.

Gentlemen, the present photographic excise tax stands alone as the one single manufacturers' excise which is imposed repetitively—time and time again throughout the production process.

This tax applies on both the major production equipment, and on the materials used to make a usable or salable product. As an example, let's look at a typical piece of printed material designed to do a high-priority job of disseminating important knowledge, including reproductions of photographs vital to the story.

Here is a copy of the handbook What You Should Know About the Atomic Bomb, an informative 55-page book issued by the Surgeon General, Army Medical Department.

It is illustrated with photographs including microphotographs; and some are not pretty—but they transmit vital medical knowledge visually, accurately. In the material before you is a condensed photo story of the taking of a picture and the conversion of that picture into a usable printing plate.

While the picture-taking camera shown in that illustration, which is identical to the ones the working press have here, is tax-free, because it is a professional instrument weighing more than 4 pounds, many of the items with which it must be used are taxed, as are the materials and equipment used at the several stages to produce a usable reproducible photograph, and finally, the printing plate itself. In all, believe it or not, the photographic excise tax under present law, is encountered a minimum of 84 times before just one of these illustrations can appear in this book—or in any textbook, scientific journal, magazine or newspaper.

What we show you is a repetititous cumulative tax-after-tax-after-tax, all of which become a part of the production costs of all such material. If published by industry, the tax becomes a cost of doing business and, therefore, is either pyramided in the selling price or taken as a direct reduction from corporate income and excess-profits taxes. If published by the Government, as in this instance, the tax becomes a cost of Government.

This brings out a further important consideration, namely, that the Government on its own substantial purchases of photographic products directly pays in normal times about 5 percent of the total collections. Presently, however, Government purchases for defense have been steadily mounting to the point where its direct payment of these taxes in fiscal 1951 amounted to approximately 10 percent of collections, with the rate still increasing.

Currently, the photographic industry has substantially increased its deliveries to defense industry where, of course, the taxes inflate rearmament cost.

We bring out the foregoing in view of the House report re H. R. 4473 which unanimously approves both the revised wording and revised tax base for the photographic industry, and the attendant indicated decrease of $23 million in revenue yield.

I say "indicated" decrease since a realistic conservative estimate of the prospective net loss in revenue to the Government is much less——

Senator BYRD. The suggestion you now make, how much will that increase that estimated loss of $23 million?

Mr. SCHUMACHER. We submit, sir, that the prospective net loss to the Government is nearer $6 million, and on page 19 of our brief——

Senator BYRD. What difference would it make? The proposal that you make to change the House provision, how much further loss would there be?

Mr. SCHUMACHER. Our proposal, as opposed to the House proposal?

We recommend the House proposal.

Senator BYRD. I know you do, but I say, don't you recommend something in addition to that?

Mr. SCHUMACHER. Yes, sir. We have one further recommendation.

Senator BYRD. What will that cost?

Mr. SCHUMACHER. Well, the additional recommendation, sir, deals with another section of the House bill, not with this section.

Senator BYRD. Are you satisfied with the House section?

Mr. SCHUMACHER. Of 485?

Senator BYRD. No. 12 on page 64.

Mr. SCHUMAKER. Section 485, that is a technical revision of the present law, and that, sir, will accomplish these beneficial changes in terms of affording equity to the industry.

Senator BYRD. Then you are also suggesting another change?

Mr. SCHUMAKER. One further change.

Senator BYRD. What is that one?

Mr. SCHUMAKER. On the basis of the foregoing, gentlemen, we submit that the revised wording of section 3406 (a) (4) as submitted to you by the House will do these things: It will restore reasonable equity to the photographic industry, which it has not had for 9 years.

It will assure us future job-making capacity, which was so obviously jeopardized in the little recession in 1949, and it will prove constructively deflationary as to the prices of the industry's products and services.

We commend it to you and respectfully request your support of it.

There is, however, one further problem with respect to the House bill which we believe you would wish us to bring to your attention. In section 484 the House would add certain household-type appliances to section 3406 (a) (3) of the Internal Revenue Code, which imposes a 10-percent manufacturers' excise tax on electric, gas, and oil appliances.

One of the items listed is "electric motion- or still-picture projectors" of the household type. We respectfully request that this item be eliminated from the final bill for the following reasons:

(1) Cameras and projectors are essentially complementary units and normally, for personal use, one is not purchased without the eventual purchase of the other. Under section 485 the user would be subjected to a 20-percent tax on the camera and again on each roll of film he buys.

If projectors were therefore to be taxed, under section 484 then the accumulative tax on the camera, plus film—plus projector would be much greater than that applicable to other competitive means of home entertainment.

Remember, these competitive products can be enjoyed without the repeated payments of tax which are involved in the use of a camera.

(2) The phraseology "electric motion- or still-picture projectors" of the household type is so indefinite that it certainly would create the same type of administrative problems and inequities which have plagued the industry under the present excise-tax law on photographic products.

Projectors, both still and motion picture, are vital keystones to visual education and training. They are used extensively in schools, colleges, industry, Government, the armed services, institutions, churches, and in farm groups and other organizations for the quick and accurate dissemination of information. Certain types of projectors are used entirely or principally for these important purposes and are seldom, if ever, used in the home.

In the light of these facts, we respectfully request and recommend that projectors not be subjected to a manufacturers' excise-tax. In the event that this request cannot be granted, we then urge the importance of developing a clear definition to be inserted at the appropriate point in section 484, to the end that the types of projectors which are entirely, principally, or importantly, used for essential purposes, be exempt from tax.

In behalf of the photographic industry as a whole, permit me to thank you for the opportunity to be heard and for the consideration we know you will afford our very unenviable present situation as to which major correction will be afforded by your approval of section 485 of H. R. 4473.

Thank you.

Senator BYRD. Thank you.

(The summary of information pertinent to the committee's consideration follows:)

[From the Sunday Star, August 27, 1950]

CAMERAS NOW AMONG WAR'S MOST LETHAL WEAPONS—INTERPRETATION OF PHOTOS BECOMES VITAL TO MILITARY

(By L. Edgar Prina)

"You can't win a war without pictures." That's the warning of Navy Capt. Robert S. Quackenbush, one of the Armed Forces' top photographers.

A former member of the staff of the Joint Chiefs and the founder of the first photographic interpretation school in the United States, the captain was convinced early that Gen. Werner von Fritsch, one time chief of the German general staff, was right when he said in 1938:

"The nation with the best photo interpretation will win the next war."

That goes for world war III, if and when it comes, Captain Quackenbush says.

America's military chiefs apparently agree. They are preparing a mass espionage effort to be ready for M-day. And they are relying upon three tools to do the job: Aircraft, cameras, and a highly specialized corps of photographic interpreters, scientific spies who extract intelligence from pictures of enemy holdings.

Should war come between this country and the Soviet Union, fleets of giant reconnaissance planes, including intercontinental B-36's and 650-mile-an-hour B-47's, would take off from bases all along the ring that encloses Russia. Sometimes they would precede the bombers, sometimes follow.

SUPERCAMERAS USED

From Alaska over the polar wastes; from Japan, Great Britain, France, Italy, the Middle East, and Africa they would swarm. Red coastal cities would come under the cameras of the jet aircraft from the decks of the Navy's fast carrier tasks forces.

Manned by expert crews, the planes would be loaded with the latest photographic equipment; cameras that click off pictures at the rate of 2,000 a second, television gear, facsimile machines to send pictures developed by the amazing Polaroid-Land process back to base in a matter of minutes, and radarscope recording cameras to pick out targets from unprecedented heights on the blackest of nights.

Available, too, would be 100-inch-lens cameras to snap targets as far as 25 miles away; triple-unit (tri-metrogon) machines to capture an image from horizon to horizon, and new color film to unmask the cleverest camouflage.

Working with the aerial force would be dozens of snorkel submarines popping their periscopes up through the ocean's surface to get additional pictures of enemy activity.

Military planners, of course, refuse to discuss target studies, but with the cold war waxing ever hotter, it is not difficult to guess whose cities are getting top attention. Obviously, our aerial warfare experts will want all the information they can get on the great industrial Moscow area, railroad hub of the U. S. S. R., and on Leningrad, with its shipyards, synthetic rubber, and diesel engine plants.

The oil fields, refineries and tank farms of Baku on the Caspian, greatest petroleum center in the Soviet Union, may rank high in priority, as well as the vast steel plants of Magnitogorsk. Sverdlovsk's machinery and machine tool factories are other points of great interest.

KEY ROLE OUTLINED

There are new cities in the U. S. S. R.—behind the Urals and deep in Siberia—that will become familiar overnight in the event of war. One is Stalinsk, in the rich Kuznetsk basin. It has big steel mills and a booming chemical industry. The others, Kandalaksha and Zvanska, are aluminum centers, key factors for the expanding Red Air Force.

Important too, are the uranium mines of the Sayan Mountains and the Chiatury manganese mines in Georgia. Irkutsk, with its aircraft engine and machine tool plants, and Saratov, with its vital ball-bearing factory, are other cities of increasing importance.

Captain Quackenbush, a solidly built man of 46, whose florid face is dominated by a slightly bashed in nose—a memento of his days as a member of a championship Annapolis boxing team—elaborated on his warning concerning photography's key role in war in an interview at the Pentagon.

"Before our forces can go anywhere they will need maps. And maps must come from pictures. The territory of our potential enemy is largely unfamiliar. We cannot depend upon existing charts and information," he asserted.

"Vital, too," he continued, "is bomb-damage assessment. It is the key to successful air operations. The only feasible method of accomplishing this accurately and quickly is by pictures. They will answer the two critical questions: Did the planes get through? What damage was inflicted?"

The Photographic Interpretation Center at the United States Naval Receiving Station, Washington, is the somewhat more pretentious successor to Captain Quackenbush's original school, which was established in a lean-to outside a hangar at the Naval Air Station, Anacostia, January 4, 1942.

Located in a massive quonset-type building whose ugly black frame sprouts a short rectangular wing, the PIC is the one military unit which has maintained a continuity of interpretation research since the war.

During the last 5 years it has concentrated on these tasks: Research and development in interpretation, photogrammetry (mapping) and terrain model building; training of personnel and operational jobs such as the study of some 10,000 top secret photographs taken at the Bikini atomic bomb tests.

When an officer student finishes the 40-week course at the center he is able to distinguish a ball-bearing plant from an atomic energy installation on a photo taken by a jet plane streaking at 600 miles an hour at 50,000 feet.

By studying pictures, interpreters (P-Eyes) can tell what an enemy has done, is doing, and is likely to do. They collect facts, analyze situations, and prepare reports from the caliber of a beach-defense gun to the over-all view of the enemy's economy and military potential.

Armed with a stereoscope for three-dimensional views, a magnifying glass, rules, scales, and proportional dividers, the student-officer hunches over his drawing board and works out the three elements of interpretation:

1. Plotting: The determination of exactly what area of enemy-occupied territory is covered by the photograph.
2. Identification, by consideration of sizes, shapes, patterns, shadow, tones, continuity, and tracks or lack of them.
3. Comparison with the last photos of the same area and existing maps.

BEST TYPES FOR JOB

Of great help are photographic "keys"—sample aerial-view pictures of every conceivable type of building, ship, terrain, installation, gun emplacement, etc. If the interpreter gets stuck, he compares the problem photo with the "keys."

PI is not a simple task. For instance, an interpreter, in noting coastal defenses of an enemy, is expected to determine among many other items, the number of guns, their types and locations, the sectors of fire and range, location and description of beach defenses, including fire trenches, barbed wire, exit barriers, tank traps, and pill boxes.

Wartime experience has shown that the best men for PI and photogrammetry are architects, geologists, city planners, industrial engineers, urban geographers, and forecasters—men with plan-view training. This was not an immediate discovery. In fact, lawyers at first were thought to be the best bets.

"But," explained Captain Quackenbush, who now commands the Naval Air Station at Key West, Fla., "we found they weren't so hot."

Almost every kind of technical man may be found on the PIC staff, or may be called in for his special skills when necessary.

The student is not overwhelmed with interpretation techniques. He is lectured by authorities on such subjects as guided missiles, strategic bombing, geopolitics, and atomic intelligence. He learns also how rubberized terrain models are made in the PIC's laboratory and ovens.

Selectivity of personnel and thoroughness of training are stressed because, as Captain Quackenbush is ready to concede, interpreters commit, as well as avert, blunders.

A wartime case in point involved the invasion of Hollandia. Interpreters mistook a silted river bed—a morass of fetid, oozing earth—for a broad road which would provide easy and rapid exit for the assault troops. The result was that the men had to be reembarked and landed on another beach many miles away. Fortunately there was no enemy opposition, and the withdrawal was successful.

The PIC is making great strides in research and development, thanks to its staff of experts and its liaison with university groups, the Naval Research Laboratory, and other military-scientific organizations.

Improvements of television photography for military use is one of its top postwar projects. Progress has been so great that pictures are almost as good as those taken by a conventional camera.

TV has been successfully employed on two operations—Bikini and Antarctica—and, according to Captain Quackenbush, its potentialities are almost unlimited. The captain envisions ground or carrier-control robot planes, whose television cameras can record the scene below and send it back to receiving screens at headquarters. There, conventional photographs may be taken for more leisurely and detailed study. Television-equipped rockets also may be close at hand, he believes.

Another high-priority project is the development of radarscope and instrumentation photography and interpretation. Cameras, of course, have limitations. One is that they can't pierce cloud banks to get pictures. The Navy refused to bow to the whims of nature and plunged into radar photography.

Development of infrared and color photography for night work and anticamouflage jobs is being pressed. Also, it is possible with color film to study a factory's waste products and thereby identify the plant.

Great advances are being made in precision mountings and stabilization of cameras in aircraft. Some planes—like the RB-36, the supersnooper, with a range of more than 10,000 miles, will carry a dozen or more cameras, all controlled at a master switchboard. A simple flick of the finger will swing the lenses to the desired angle and take the pictures.

MOST WORK SECRET

As for PIC's postwar operational work, most of it is secret. A great deal involved its role in Operations Crossroads at Bikini. Also several PIC men accompanied Admiral Byrd to the South Pole for Operation Highjump. They helped in permafrost research and in studies to determine how thick the ice must be to hold certain weight planes, etc. Scores of pictures were sent 10,000 miles back to Washington in a matter of a few minutes via the magic of facsimile.

Photographic interpreters were on the staffs of the contending forces in almost all postwar training maneuvers and are now proving their indispensability to adequate intelligence on the fighting fronts of Korea.

The newly matured science has come a long way since Captain Quackenbush and his naval school staff grappled with their first problem print more than 8 years ago. The impact of PI on the military mind during the recent war, although not immediate, was great.

Success of P-Eyes in plotting underwater obstacles and beach gradients at Normandy and Okinawa, in discovering the first operational German jets and the V-1 and V-2 rocket-launching sites and testing grounds, won over a lot of skeptical and critical commanders. Photographic interpretation's role in future warfare is assured, and it will be a big one.

NATIONAL ASSOCIATION OF PHOTOGRAPHIC MANUFACTURERS, INC.,

New York, N. Y., August 1, 1951.

In the matter of the manufacturers' excise taxes on photographic apparatus (sec. 3406 (a) (4)) and on electric appliances (sec. 3406 (a) (3))—sections 485 and 484, respectively, of H. R. 4473.

COMMITTEE ON FINANCE,
United States Senate, Washington, D. C.

GENTLEMEN: This association, whose member companies, according to the best available information, produce more than 90 percent of the total volume of photographic products of all kinds and types manufactured in the United States, respectfully presents information concerning the extremely harmful and repressive effects of the present excise-tax law applicable to photographic products, and in support of the provisions of section 485 of H. R. 4473 as approved and reported by the Committee on Ways and Means and passed by the House of Representatives.

In its report, that committee points out that section 485 of its "bill makes two changes" in section 3406 (a) (4), the photographic excises, namely:

(1) "A uniform 20-percent rate is substituted for the 25-percent tax on photographic apparatus and the 15-percent tax on film.

(2) "Second, the bases of these taxes are revised so that the tax is imposed only on film, cameras, and lenses which, insofar as is administratively possible, do not represent a cost of doing business."

Also, in section 484 of the bill, in adding new products to section 3406 (a) (3), under electric appliances, "household" type, projectors have been included.

The following material undertakes to provide pertinent information as to the importance of and necessity for the changes provided in section 485 and the undesirability of the particular change in section 484.

I. FACTS ABOUT THE PHOTOGRAPHIC INDUSTRY

The following information about the photographic industry, its products and their applications, may be of interest to the committee:

1. Nature of the industry

The photographic manufacturing industry is relatively small. Because of the very highly specialized nature of its products and their exceptional essentiality in wartime it is one of the key strategic industries.

Most of the companies in the industry are small, but their continued success is of the greatest importance to the strength of the industry and to its ability to serve in both peacetime and wartime.

There are, according to the best information available to us, about 150 companies in the United States engaged wholly or importantly in the manufacture of photographic products, or which, though not principally so engaged nevertheless produce in significant volume one or more photographic products. The 1947 Census of Manufacturers records 366 establishments with a then total of 50,911 employees and a total value of products shipped of $440,184,000.

Photographic manufacturing plants are principally located in these States: California, Connecticut, Delaware, Illinois, Indiana, Iowa, Massachusetts, Michigan, Minnesota, Missouri, New Jersey, New York, Ohio, Pennsylvania, Wisconsin, with scattered plants in some other States.

There are thousands of establishments in other branches of the photographic industry, namely, photographic distributors, photographic retailers, photofinishers, commercial, industrial, and professional photographers, and such related industries as photoengraving, photolithography, and others. These other branches of the photographic industry and related customer industries provide gainful employment to thousands of persons in every State in the Union.

2. Nature of products and applications

This industry is principally engaged in the manufacture of photographic products which, in dollar volume and in application, are preponderantly (nearly two-thirds) for commercial, industrial, educational, scientific, professional, governmental, and similar uses. A brief, illustrative listing of some of these uses is provided on page 203 of the Senate hearings on H. R. 8920, Eighty-first Congress.

It should not be overlooked, however, that sales to amateur photographers are also very important to this industry and its continued success. In fact, certain plants which are key precision plants in wartime depend substantially upon this market for their peacetime operation and, therefore, for their availability to serve in wartime. In this connection it should be emphasized that these precision photographic manufacturers with their highly skilled and specialized personnel and machinery are a major national asset which cannot be expanded rapidly to meet a national emergency.

3. Industry of key strategic importance

It cannot be too strongly emphasized that the photographic manufacturing industry is one of the Nation's most essential key strategic industries. Its photographic products in tremendous volume are absolutely essential to successful military operations in modern warfare before, during, and after combat, for essential industrial uses in the production of other war material, and for many essential noncombat military needs. A brief listing of some of these key uses is provided on pages 203–205 of the previous Senate hearings.

As just one example of defense industry use of photographic methods in development, production, inspection, testing, plant protection, and a myriad of uses, it might be well to recall that it was photographic methods that broke the production bottleneck in the aircraft industry and made and still do make large production goals attainable both in quantity of planes and in speed of getting newly developed planes into the air.

Most photographic products can be made during wartime only by the photographic industry because of the highly specialized skills and facilities required for their manufacture. It is to be remembered that most wartime photographic products are the same as or are modifications of regular peacetime photographic products.

An example of the conversion of a regular peacetime product to an essential wartime product is the gun-sight aiming point camera required in every combat aircraft. The gun-sight camera was produced in volume during the war by manufacturers of high-precision civilian 16-millimeter motion-picture cameras and are a simple modification thereof. It uses the same film magazine as the civilian camera. Obviously only peacetime production of these civilian cameras and magazines assures wartime availability of this military camera.

As another example, take a 500-foot roll of film for aerial photography. This film is made by the same employees and on the same basic equipment as civilian roll film. You can visualize why the military uses so much film since a single aerial roll contains enough film to make up to 5,000 rolls of the civilian types, yet it would be used up in a few minutes in photo reconnaissance work.

In addition to the foregoing, because of the peacetime-developed skills of its employees, the photographic industry was also called upon during World War II to produce large quantities of high-precision, complex war equipment of a nonphotographic nature.

A War Munitions Board report (March 1948) stated that during World War II 72 percent of the products of the photographic industry went to essential military claimants. Half of these products for military uses were regular photographic products. The remaining 28 percent of the industry's wartime production went to nonmilitary claimants. This included materials for use by war industries in military production, by scientific laboratories, by local government units, and by civilians.

A vigorous peacetime photographic industry is essential to national security. There is no substitute for its military products.

II. GENERAL COMMENTS AS TO TAX

Since October 1, 1941, the photographic manufacturing industry, its sales outlets, its customer industries and other product users, have been handicapped seriously by an inequitable, discriminatory, unclear, and unduly burdensome excise-tax law. At that time, in the Revenue Act of 1941, 10 percent manufacturers' excise taxes were applied to various products including photographic equipment and sensitized goods.

Then in the Revenue Act of 1942 photographic excises were singled out for heavy increases, while such taxes on other manufactured products were either eliminated (7 instances) or maintained at 1941 levels (19 instances). As a result, since November 1, 1942, this industry and those it serves have been burdened with excessively high excise rates—25 percent on equipment, machinery, and apparatus, and 15 percent on sensitized materials, films, papers, and plates.

In the Eightieth Congress, we appeared before the Ways and Means Committee and submitted evidence in support of our contention that these high rates of taxes had already caused some injury to the industry. Our greatest concern, however, was that the conditions complained of would become progressively worse unless the requested relief was promptly provided. We also pointed out that these high rates of tax would greatly accentuate the effect on this industry of any period of recession such as, in our opinion, we could then foresee.

In a unanimous report that committee, after extensive hearings on excises, recommended to the House of Representatives the passage of bill H. R. 4259, stating that the amendments to the photographic excise tax law provided therein would relieve one of the most acute excise tax hardship cases that had come to its attention. Although the bill was passed by the House, it did not come up for vote in the Senate. This industry therefore, remained in the unenviable position of being subjected, in a wide product area, to special discrimination and inequity.

In the Eighty-first Congress, we again appeared before the Ways and Means Committee, and before your committee, this time to show how our actual experience had far-exceeded our previously expressed fears of serious injury, especially in the 25-percent-taxed areas. In particular, our evidence (see pp. 268–276, Hearings Before the Committee on Finance, 81st Cong., on H. R. 8920) showed:

(1) That what was a mild recession (1949) for manufacturing industries in general, which suffered a loss in employment of about 9 percent, was a deep depression for the photographic manufacturing industry. The 25-percent-taxed area suffered a 45 percent loss in employment and sales.

(2) That losses were much greater than would be expected as judged against the experience of this industry in previous periods of recession, according to informed industry opinion.

(3) That a number of small- and medium-size concerns largely or wholly dependent upon photographic markets had either failed or were in severe financial difficulties with the ultimate outcome in doubt.

(4) That a composite tax and profit and loss statement (provided confidentially to the committee) showed as to companies whose products are principally or wholly subject to the 25-percent rate of tax that these companies as a group had gone from a satisfactory profit position to a loss position. These data indicated also, from the 25-percent-taxed area, that there was a drop in payments to the Federal Government, 1949, as compared with 1948, in Federal corporate income, withholding, old-age benefit, and photographic excise taxes, of more than $16 million. This probably equaled, and thus might be thought of as having canceled out, the total excise collections at that rate.

(5) That purchases of photographic equipment both for new plant and for expansion or replacement in important customer industries (especially the graphic arts industries) had been and were continuing to be discouraged by the large amounts of tax involved.

(6) That entry into industries or occupations requiring photographic equipment had been made very difficult especially because of the taxing of livelihood tools and production equipment at 25 percent.

As just one example, you will recall the complaints as to the 25-percent tax which you received from veterans seeking to establish or to reestablish themselves in one of the industries or occupations requiring photographic equipment. On the typical capital equipment required to set up a very modest establishment, an excise tax of $2,000 or more is involved. This, they pointed out, is almost prohibitive and constitutes a terrific syphoning off of their limited capital.

(7) That the losses already experienced had clearly endangered the ability of this industry to serve with full effectiveness in the event of a national emergency.

This condition, as a result of the Korean situation, has since been temporarily relieved by a combination of scare buying—which has long since disappeared—and by expansion of the defense preparations with resultant important increases in the requirements of the Government and of defense industries for photographic products. However, the repressive effects of the present law and its excessive rates are still clearly taking their toll.

Although in the Eighty-first Congress the Ways and Means Committee again strongly recommended and the House of Representatives in H. R. 8920 passed a correction of the photographic excise-tax law, your committee was forced by circumstances to greatly alter the House bill. As one result, greatly needed changes in the photographic excise-tax law were again postponed.

Now, in the present Congress we have once more called to the attention of the Ways and Means Committee and we now call to your attention the need for corrections in the photographic excise-tax law. The House of Representatives has again approved the major technical revision which, except for the 20-percent rate, is the same as that contained in H. R. 8920 of the last Congress on which we appeared before your committee last year.

The following material discusses the pertinent provisions of the House bill, provides additional factual material with respect to them and respectfully requests favorable action on the part of your committee and the Senate.

III. SECTION 485, H. R. 4473

Section 485 of H. R. 4473, as stated in the report of the Ways and Means Committee makes two major changes in the present manufacturers' excise on photographic products (sec. 3406 (a) (4) I. R. C.) the second of which is greatly needed and much overdue, namely:

(1) "A uniform 20-percent rate is substituted for the 25-percent tax on photographic apparatus and the 15-percent tax on film.

(2) "The bases of these taxes are revised so that the tax is imposed only on film, cameras, and lenses which, insofar as is administratively possible, do not represent a cost of doing business."

The present photographic excise-tax law has two very serious defects, (1) poor phraseology and (2) excessive rates. To discuss these in reference to section 485 of H. R. 4473:

1. Phraseology is discriminatory and unclear in present law

Your attention is again called to the real need for the technical revision of the present law which is provided in section 485 of the House bill. The phraseology of the present law (sec. 3406 (a) (4) I. R. C.) makes inequity, discriminatory application and uncertainty inevitable.

In the first place, it undertakes to tax "photographic apparatus and equipment and any apparatus or equipment designed especially for use in the taking of photographs or motion pictures, or in developing, printing, or enlarging photographs or motion pictures," but fails to provide any definite or adequate basis for determining which articles may be classified as photographic. In fact, the factors which the law offers for determining which products fall within its scope are so intangible, that it is impossible, even at this late date, for the industry or the Government to determine a clear line between taxable and exempt products.

Hundreds of rulings have been issued by the Bureau of Internal Revenue with respect to the application of the photographic excise tax to specific products. However, numerous articles remain in a doubtful position with respect to the tax and many serious inequities remain.

In the second place, and even more importantly, in many product areas, the application of the tax has placed the photographic manufacturer in a most inequitable competitive position. In fact, a major reason given by the Committee on Ways and Means for the amendments made by section 485 is to correct this serious situation, the report pointing out that—

"* * * difficulty has arisen in the case of the tax on photographic equipment, because apparatus made by photographic manufacturers frequently has been held to be designed especially for photographic use, even when sold for nonphotographic purposes. Similar equipment sold by nonphotographic manufacturers has been held not to be subject to the photographic tax because it was not designed especially for photographic use. As a result manufacturers of photographic equipment have frequently been placed at a competitive disadvantage."

This serious and most inequitable competitive situation is inherent in the phraseology of the present law. Except for a few products that are basically photographic, such as cameras and sensitized materials, the items taxed under the photographic excise tax law are not unique to the photographic field but are used extensively in other occupations and trades.

For example, products such as tripods, trays, rollers, tanks, sinks, timers, squeegees, and lighting equipment are widely marketed for nonphotographic purposes. When such items are sold by the nonphotographic manufacturers they are free from tax, even though they may be sold for photographic use, but when sold by the acknowledged manufacturer of photographic products they are subject to the 25 percent excise tax even though sold for a nonphotographic use.

The acknowledged manufacturer of photographic products is, therefore, placed at a tremendous, if not impossible, competitive disadvantage when he must try to sell his products, taxed at 25 percent, in photographic or nonphotographic fields against the competition of untaxed products of a like nature marketed by the nonphotographic manufacturer in these same fields of use.

This grossly unjust competitive situation and the uncertainty of the present law would both be corrected by section 485 of H. R. 4473. It would substitute clear, precise language which would be easy to understand and apply and which we believe would eliminate the present administrative difficulties. In fact, the only solution to this serious problem is through amendment of the present law.

2. Business cost items

In the rewording of the law provided in section 485, the Committee on Ways and Means stated that one of the reasons why it has excluded business-cost items from the photographic excise-tax base was because taxes on these items are likely to be shifted forward as an operating expense and thus appear in the price of commodities in general. This is indeed particularly and peculiarly true as to the photographic excises.

Some of the principal considerations are:

(1) The applications of photography are very widespread. It is no overstatement to say that the photographic industry today affects the life of every person in the Nation. It is vital to the country's safety, progress, and welfare. It is important to the Nation's economy. A listing of some of the important uses of photography in industry, in the community, in Government and in other highly essential needs, both peacetime and wartime, has already been provided to you. (See pp. 263–266, Revenue Revisions of 1950 Hearings before the Committee on Finance.)

(2) Nearly two-thirds of the sales of this industry are for commercial, industrial, educational, training, publishing, medical, governmental, scientific, and similar essential uses. (See exhibit B.)

(3) Over 60 percent of the collections of the photographic excises represent cost of operations to the taxpayer and are so reflected in the income-tax returns of thousands of businesses throughout the country.

(4) An especially undesirable aspect of these excises as a business cost is the fact that they apply to livelihood tools, production equipment and materials, and operating supplies used by many thousands of establishments throughout the country.

(5) One of the peculiarities of the photographic excise-tax law which, insofar as we know, is not true of any other excise tax is the fact that it taxes both the equipment on which a salable product is made and the materials from which the product is made. Thus, whether for business or personal use, users feel the repeated impact of photographic excises.

With most excise-taxed products, once the product is purchased and the excise is paid its use can then be enjoyed without payment of further excises. Not so with the photographic excises. First, the camera and other equipment and accessories involved in taking the picture is taxed. Then the camera must be supplied with film or plates which are taxed. Then the film or plates must be processed in equipment that is taxed; then, if prints are involved, they must be made on paper or film which is taxed. Then, in turn, these must be processed in equipment which is taxed.

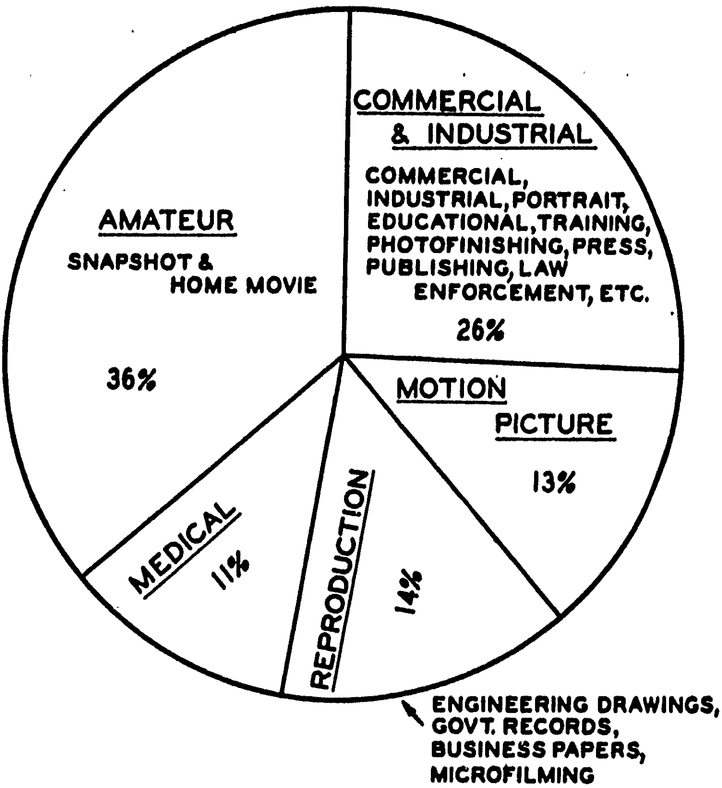
As brought out in our testimony, just as one example, the photographic excises are encountered a minimum of 34 times in the preparation of a photographic illustration such as would be used in a textbook, journal, magazine, catalog, newspaper, or other publication.

This necessity of providing other taxed equipment and constantly providing taxed supplies in order to make use of the original taxed product thus places

PHOTOGRAPHIC PRODUCTS

DISTRIBUTION BY CONSUMER USE IN U.S.

1950 ESTIMATE



NATIONAL ASSOCIATION of PHOTOGRAPHIC MANUFACTURERS, INC.

a further inequitable and discriminatory burden on this industry and its millions of customers. This, plus the high rates, serves to emphasize and explain the special sales-deterrent characteristics of the photographic excises, and also why these taxes tend to pyramid in business costs.

3. Government cost items

Business-cost items might well also have been labeled "Government cost items," since te Federal Government itself is without doubt by far the largest payer of the photographic excises. The provisions of section 485 will thus serve to save the Government several million dollars a year in its direct payments of these taxes on its now substantial purchases of photographic products.

Government purchases of photographic products for defense needs have been steadily mounting. At the same time, as might be expected, the demands of defense industries for photographic products have similarly increased, the photographic excises thus serving to increase defense costs.

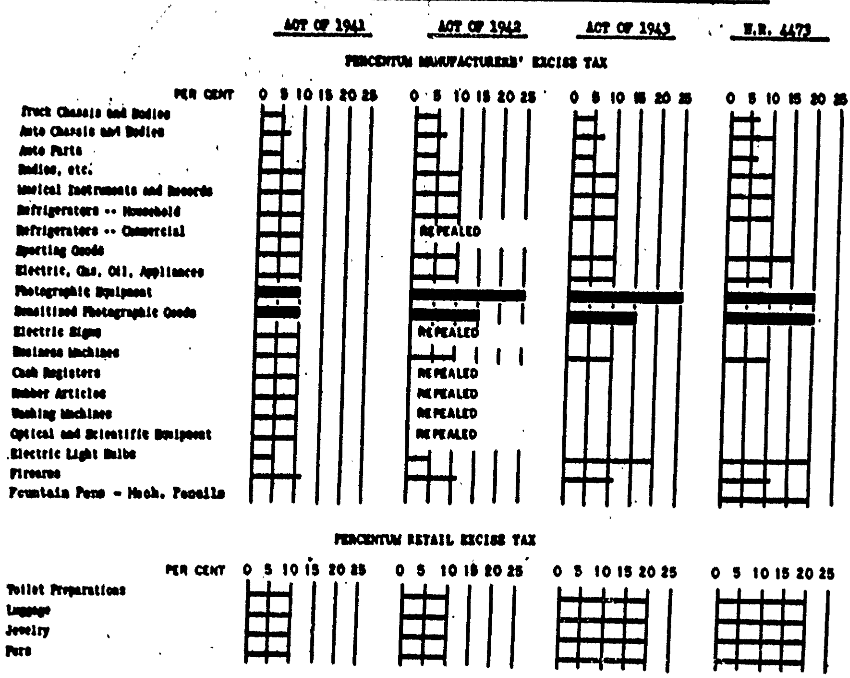
As we have pointed out, no one knows just how much the photographic excises represent an added cost to the Government because of their inclusion and pyramiding in defense product costs. However, even under present conditions, it must be a very substantial sum and may easily exceed the amount of this tax which the Government pays directly.

Section 485 of the House bill will eliminate, almost 100 percent, the photographic excises paid directly or indirectly by the Government.

4. Present rates regressive and discriminatory

The present rates of photographic excises, namely, 25 percent on apparatus, machinery, and equipment, and 15 percent on sensitized papers, plates, and film—are clearly excessive. As brought out in the bar chart, herewith, these rates are much higher than the generally prevailing 10-percent rate of manufacturers' excises.

EXCISE TAXES PENALIZE PHOTOGRAPHIC INDUSTRY IN RELATION TO OTHER INDUSTRIES



SPECIFIC MANUFACTURERS' EXCISE TAX

Tires	$.05 per lb.	No Change	No Change	No Change
Tubes	$.09 per lb.	No Change	No Change	No Change
Matches -- Plain	$.02 per 1,000	No Change	No Change	No Change
Matches -- Fancy Wood	$.055 per 1,000	No Change	No Change	No Change

NOTE: In the case of several of the above tax classifications, there have been changes in coverage by either adding or excluding certain items, the details of which are set forth in the Report accompanying H.R. 4473.

As we have previously reminded the committee, (1) the present high rates were the first of the penalty, regulatory wartime excises intended to reduce consumer demand and assure adequate supplies for the Armed Forces and (2) photographic products were alone singled out to bear these excessive rates.

You are also aware of the fact that from the time they were imposed these rates helped in part to force involuntary conversion of the industry to nonphotographic products and that the resulting lack of ability to obtain photographic products in their required quantities was one of the most serious situations faced by the armed services in the early part of World War II.

The high rates, in addition to their regressive effect on sales and employment in this, a key defense industry, also have served to intensify the extent of injury arising from the other bad characteristics of the photographic excises. The 25-percent rate in particular, as we have demonstrated, has been so harmful as, we believe, must clearly brand it as an unwise and unprofitable tax.

These taxes principally add to the cost of science, research, education, government, business, and other essential activities. They are unduly burdensome and inequitable.

For this industry, they have turned what for industry in general was a mild recession into a deep depression, and, if retained, will evidently do so again. In fact, it appears that currently they may have started to do so again.

These high rates often result in very large dollar amounts of tax per unit. It is not uncommon for a piece of equipment to involve an excise tax of from $1,000 to $10,000. Since this for the most part is production equipment, these taxes therefore constitute a substantial drain on working capital and operating funds and curtail employment opportunities not only in the photographic manufacturing industry but in the many industries which use photographic methods and processes.

The provisions of H. R. 4473 would reduce the 25-percent tax on equipment to 20 percent, but in doing so would increase the 15-percent tax on film to 20 percent. While pointing out that the proposed 20-percent rate is still double that of most manufacturers' excises, nevertheless the important corrections in the base which have been adopted by the House represent such meritorious and urgently needed improvements in the present law that, in view of present circumstances, we merely call this fact to the attention of the committee.

5. Microfilm

One of the important business-cost items which the House bill is designed to eliminate from the tax base is microfilm. This is widely used by banks, insurance companies, railroads, libraries, medical institutions, retailing establishments, and business generally. It has numerous important applications in Government. Today it is even possible to subscribe for such publications as the Federal Register and many important daily newspapers in microfilm form.

Microfilming provides an exceptional means for the preservation of records and for most extraordinary conservation of storage space. One example given of space saving shows a huge pile of 28,000 blueprints, weighing nearly 8,800 pounds. These were reduced to 92 rolls of microfilm weighing a total of 52 pounds.

Beginning especially with the last war, many concerns have made extra prints of microfilms of important records, drawings, formulas, contracts, and other essential documents and information, and have stored these at some safe distant point. In fact, the Government has again been emphasizing the importance of this means of safeguarding essential information against loss through destruction of the originals which might otherwise have crippling effects.

In Section 485 of H. R. 4473 the exclusion of microfilm from the tax base is accomplished in general by the fact that microfilm exceeds the length limitation of taxable film as set forth in the bill. It has come to our attention, however, that microfilm in the form required for use in certain microfilm equipment of two of the manufacturers does not exceed such length limitations and therefore, entirely through oversight, would be subject to the tax which is intended to apply to amateur roll film only. While this is a very minor defect in section 485, it is evident that it would place these two manufacturers at a substantial competitive disadvantage and that it would continue to tax in part a business-cost item in which it was intended to eliminate completely from the tax base.

This inadvertent defect could be corrected by adding the words "to unperforated microfilm," immediately following the words "X-ray film," in line 1, page 140, of H. R. 4473, making the portion read:

"* * * The tax imposed under this paragraph shall not apply to * * * X-ray film, *to unperforated microfilm*, to film more than one hundred and fifty feet in length, or to film more than twenty-five feet in length and thirty millimeters in width. Any person who acquires unexposed photographic film not subject to tax under this paragraph and sells such unexposed film in form and dimensions subject to tax hereunder (or in connection with a sale cuts such film to form and dimensions subject to tax hereunder) shall for the purposes of this subsection be considered the manufacturer of the film so sold by him."

The reason for using the word "unperforated" is to avoid any possibility of tax-free sales of perforated 16-millimeter amateur-type motion-picture film under the name "microfilm." Amateur motion-picture cameras will not accept unperforated film nor would it be possible or feasible or economical for any person to undertake to perforate or have such film perforated for his use as a means of seeking to avoid tax. It will be noted that, in the language of section 485, once the film in question is perforated it would become subject to tax.

By way of further comment, it might be stated that film intended for microfilming use differs greatly both in contrast and in emulsion speed from that which would be used for motion-picture work. In fact, the contrast would be much too great and the speed of emulsion much too slow to make such film usable for purposes of motion pictures. As evidence of this fact, it will be noted that the film ratings for speed of emulsion as provided by the American Standards Association for the various types of black-and-white motion-picture film run from 10 to 100, while those applicable to microfilm run from 2 to 8.

From the standpoint of contrast, the emulsion of microfilm is so prepared as to accentuate blacks and whites; in other words, to produce a sharp, high-contrast black and white result. Film suitable for use in motion-picture cameras is exactly the opposite; namely, the emulsion is designed to pick up with the greatest possible refinement all of the minor gradations of gray which run between white and black. Furthermore, insofar as attempting to use microfilm for motion pictures is concerned, the film when exposed and developed would result in a negative. It would then be necessary to go to the added expense of obtaining a positive print for projection purposes. The amateur avoids this expense by using a special reversal-type film in his camera which is returned to him after processing as a positive ready for projection. The use of microfilm for ordinary photographic purposes thus would be too costly as well as entirely unsatisfactory and unacceptable.

Accordingly, since it appears that the correction as above suggested is fully in harmony with the intent of the House, and therefore in no way affects expected revenue from the revision of section 3406 (a) (4), which is provided in section 485 of the House bill, and since it corrects a most undesirable competitive inequity which would otherwise result, we respectfully request the committee to adopt this correction.

6. Loss of revenue would be slight

The gross collections of the photographic excises are misleading in that they furnish no reliable indication of actual revenue. The net revenue is in fact much less than collection figures would indicate.

Turning to the matter of the net loss of revenue to the Government which would result from the enactment of section 485, H. R. 4473, we estimate this will be only about $6 million. This estimate, as you will note from the details below, is on a very conservative basis. For example, it makes no allowance for the effect of any of the improvements in sales in the photographic industry which we believe would be certain to result.

This $6 million estimated net loss of revenue contrasts sharply with the $23 million gross loss of revenue indicated in the House report. Even though the Ways and Means Committee and the House were willing to approve this $23 million loss of revenue, may we suggest that it is the indicated $6 million net loss of revenue which should be kept in mind.

For example, of the $44 to $48 million indicated collections (fiscal 1952) from this tax, our data indicate that the Government will directly pay $5 million—$6 million and indirectly, as an added cost of defense production, may pay at least as much more. Why should these substantial sums, paid out by the Government with one hand and then in time received with the other hand, be considered as revenue, or why should the elimination of these tax transactions with their attendant costs be considered a loss of revenue, in any realistic sense?

Then, to, about 60 percent of the present collections of these taxes are a cost-of-operation item. Under section 485 the tax would be removed from these items. Accordingly, a reduction should be made in the $23 million estimated loss to recognize the fact that the photographic excises will be almost 100 percent eliminated as a deduction from income in determining taxes based on income.

Photographic excises, as mentioned above, which are a part of defense production costs, together with any pyramiding which may occur, become a cost to the Government. However, we have here taken these into consideration only in our business-cost calculation (see item 2 in table below) where only 50 percent of the total amount of tax is taken into account. Accordingly, this means that our estimated net revenue reduction of $6 million is too high. Further, if defense-production levels increase, there will be a further increase in tax cost to the Government and, therefore, this estimated net tax loss would be further cut and could even be eliminated.

The details of our estimate are as follows:

Estimate of net revenue reduction under sec. 485, H. R. 473

[Millions of dollars]

1. Estimated gross yield for fiscal year 1952 under the present law (sec. 3406) (a) (4) I. R. C.)	48.0
2. Of this amount, at least $23.8[1] would become a business cost. If the average normal- and excess-profits-tax rate were only 50 percent, the net return to the Treasury with respect to this portion of gross collections would be reduced by about	11.9
3. Of the $48 million gross yield, the Government itself would pay on its direct purchases photographic excise tax of between $5 to $6 million	5.0
4. If there is deducted from the indicated gross revenue, the sum of these two amounts, or	16.9
5. It is clear that instead of $48 million, the maximum net revenue for fiscal year 1952 under the present law would be	31.1
6. Whereas the estimated revenue under sec. 485 of the proposed law would be	25.0
7. Giving an estimated net revenue reduction under sec. 485, H. R. 4473, of only	6.1

[1] 60 percent of $48 million, or $28.8 million, less $5 million of Government self-payments, resulting in $23.8 million.

IV. SECTION 484, H. R. 4473

The Ways and Means Committee, in expanding the coverage of section 3406 (a) (3), I. R. C. (sec. 484, H. R. 4473), electric, gas, and oil appliances, has added, under the heading "Appliances of the household type," an item "Electric motion or still picture projectors." This was not under consideration at the time and therefore not a subject of hearing before the Ways and Means Committee.

May we therefore call to your attention the uncertainties and inequities in this proposal.

1. Importance of projectors

To begin with, projectors, both still and motion picture, are the most important single tool in visual education and training. As such, they are used very extensively in schools, colleges, industry, government, and by the armed services, churches, libraries, hospitals, and other institutions, by communities and farm groups and similar organizations. The accompanying page lists a few of the important uses of projected pictures.

Projected pictures provide for the quick and accurate dissemination of information and greatly accelerate and intensify the learning process. In fact, tests by the armed services have established that through visual means approximately 35 percent more is learned in a given time and the information learned is remembered up to 55 percent longer. As might be expected, therefore, the requirements of the services for such equipment are very great and their applications are both numerous and important. We are told that every member of every branch of the Armed Forces receives training by means of projected pictures.

Certain types of projectors are used entirely or principally for the important purposes outlined briefly above and are seldom, if ever, used in the home. A study recently made by the National Audio Visual Association for the United States Office of Education indicates that 93 percent of the sales of such projectors as 16 mm. sound projectors, film-strip projectors, sound-slide projectors, time-study projectors, X-ray projectors, overhead projectors, opaque projectors, and microscopic projectors go to these essential users.

2. Involves problem of definition

As to the present proposal, first of all, the description "electric motion- or still-picture projectors of the household type" is of such an indefinite and indecisive nature that to retain this designation would be certain to result in the same type of administrative problems and difficulties which have been so persistently troublesome with respect to the present excise-tax law on photographic products.

It should be noted that in general there is nothing inherent in a still- or motion-picture projector which limits its use to the home as contrasted with some other location, uses, or vice versa. As might be expected, there are some projectors which may be thought of as "household type" which, nevertheless, are employed importantly in essential uses. This is especially true as to instructional uses by schools and churches where substantial use is made of some of the same types of projectors which are also generally purchased for home use. In this connection, the committee is aware of the fact that tax-supported schools at the expense of some paper work and delay can purchase excise-taxed equipment tax-free through the use of tax-exemption certificates. However, churches and the numerous private and parochial schools and universities which are not tax supported cannot do so, but must pay the excise taxes applicable to their purchases.

It will also be noted that the various types of projectors are each designed to serve a projection need. They will be used, therefore, where the particular need exists, thus:

Projected pictures are working tools for—

Industrial plants
Banks
Granges
Farm bureaus
Service stations
Hospitals
Medical schools
Research centers
Adult educational groups
Graduate professional schools
Colleges
High schools
Junior high schools
Vocational and trade schools
Elementary schools
Consolidated schools
Church groups
Fraternal groups
Civic groups
Veterans groups
Community groups
YMCA
YWCA
YMHA
YWHA
Boy Scouts
Girl Scouts
Signal Corps
Army Pictorial Service
Information and Education Division
Army Service Forces training centers
Army engineers
Infantry battalions
Armored divisions
Tank destroyers
Campfire Girls
4-H groups
Health agencies
Social agencies
Government agencies
Gunnery officers' ordnance school
Fire control school
Gunner's mates school
Electric hydraulic school
Optical school
Instructor training schools
Marines
Coast Guard
Aviation service schools
Naval air stations
Bureau of aeronautics
Instrument flight training
Medical Corps
Army Air Forces
Army Service and Ground Forces and special arms
Quartermaster Corps
Coast Artillery

Wherever GI's train, fight, and rest.

The ceiling projector is one of many examples of a projector which may be used in the home or elsewhere—in this case in the hospital or wherever a helpless person may be. Its purpose is to project the pages of a book onto the ceiling so that a bedridden person, otherwise unable to read, may be able to do so, requiring no more assistance than that of having the projector set up for him, since he can then operate it. This type of projector is being used importantly in veterans' hospitals and is a project frequently sponsored by a local service club. It would be highly undesirable that such a projector be made subject to tax.

We believe, for reasons which are evident in the above discussion and for further reasons which will now be brought out, that projectors should not be made subject to a manufacturers excise tax. However, in the event that this request cannot be granted we then call attention to the importance of developing a clear definition of taxable projectors, this to be inserted at the appropriate point in section 484. We would further respectfully urge that instructions be given that this definition shall be so prepared that the types of projectors which are entirely, principally, or even importantly used for essential purposes shall not be made subject to tax.

2. Would be inequitable and burdensome

A second important consideration in connection with this proposed tax is the matter of equity, namely, that it would place a further tax on an already overtaxed area, and would place the products involved at a competitive disadvantage.

Cameras and projectors are complementary units. Normally, for personal use, a projector is not purchased except with or following the purchase of a camera. If the projector is taxed, the total cost of the necessary equipment will be importantly increased. This will place photographic products at a further competitive disadvantage with other home entertainment products with which they compete for the consumers' dollar. These other products either are not taxed or are taxed at half the rate which would be applicable to the taxed cameras and film. Furthermore, unlike photographic products, once the tax has been paid on those other items (as for example, on a television set) they can then be enjoyed without further payment of excises. With still or motion picture equipment there is a continuing tax on the supplies of film.

We submit that when the amateur photographer pays taxes on his photographic equipment and then *each time*, on the film which he uses, at present rates or all at a 20-percent rate (as proposed in the House bill) he will already have paid more than his share of excise tax, without also making his projector subject to tax.

3. Would act as sales deterrent and cause some loss of other revenue

A third important consideration is that to increase the tax burden and thus the total cost of a still or motion picture camera and projector by taxing the projector will evidently further thin out the market for camera and film sales, with indicated loss of tax revenue on these products, as well as acting as a deterrent on projector sales. Please note carefully the interdependence of these products, and the fact that anything which discourages the sale of one will prevent the sale of all the related equipment or supplies. This is a characteristic of the present photographic excises and, coupled with excessive rates, explains their especially regressive nature.

This industry has done an outstanding job of bringing personal motion and slide film pictures well within the reach of the majority of families. The equipment to record and project treasured scenes from family history is a source of great and lasting value and pleasure. To increase the total tax load on such equipment will in some measure undo the years of effort on the part of the manufacturers to bring the cost of this equipment down.

You will readily appreciate why we feel that to place a tax on "household type" projectors would be singling out an already overtaxed area for still further tax such as will place all of these products, not merely the projectors, under a still greater sales deterrent and at a still greater competitive disadvantage than now exists.

We, therefore, respectfully request that the proposed taxing of projectors be eliminated.

V. IN RESPECT TO BROADLY BASED EXCISES

Your committee has received various proposals suggesting that you consider establishing excise taxes on a very much broader base than at present and at much more bearable and much less hazardous and regressive rates than that of 25 percent or even 10 percent. In view of the fact that it seems that excise taxes will be a part of our tax structure for quite some time to come, may we respectfully suggest that this is an opportune time to reappraise the impact of excise taxes on the presently selected industries and to develop an excise tax structure which will fall much more equitably and with much less discrimination on a very broad base. Regardless of their merits at the time imposed, we believe it is evident that today the present excises do not represent a fair selection of so-called luxuries nor do they in general represent any other reasonable or equitable basis of selection.

If your committee should decide to recommend a fairer spreading of the excise tax burden by adopting a very broad base and a much more bearable rate of tax at the manufacturers level, we especially ask, in equity, that the level of the photographic excises be reduced to this lower rate. If, on the other hand, your decision should be that broadly based excise taxes should be imposed at the retail level, we submit that in all fairness photogrophic excises (among others) at the manufacturers level should be repealed. Again, may we emphasize that our plea is for equitable treatment.

VI. CONCLUSION

In this brief we have presented information concerning the especially adverse, discriminatory and inequitable characteristics of the photographic excise tax law, and the great need for the technical amendment to section 3406 (a) (4) Internal Revenue Code which is provided in section 485 of H. R. 4473.

In doing so we have sought not to burden you by repeating supporting data and details which were fully brought out in our testimony and brief of July 7, 1950 (p. 250 et seq., hearings before the Committee on Finance, 81st Cong., on H. R. 8920). Attention, however, is called to the fact that this material is still pertinent to your present consideration of this matter.

We have reminded you of the key strategic importance of the photographic industry and photographic products and that in time of war the main impact of the photographic excises is on the armed services and on defense-supporting effort, adding importantly to the cost thereof.

In more normal times these taxes principally add to the cost of education, business, research, science, government, and similar important activities. They are an adverse discriminatory force preventing the photographic industry from fully enjoying its reasonable and proper markets and placing it under serious special hazards of a most inequitable and undesirable nature.

The present rates, established in 1942, are discriminatory and excessive. These rates, coupled with the seriously deficient wording of the present law, have caused injury and hardship above and beyond those normally associated with excises.

It is to be remembered that any failure to revise the faulty language of the existing law would leave the industry and the Internal Revenue Bureau still plagued with the administrative and interpretative difficulties which persist even at this late date.

It would still leave important segments of this industry exposed to the unfair competitive situation wherein their taxed products must compete with the same or similar products which nonphotographic manufacturers can sell without tax. It would still continue to act as a drain on the working capital and add to the cost of doing business of the many thousands for whom photographic products are livelihood tools, production machinery, and equipment or operating supplies. It would still continue to adversely affect sales and thus seriously limit employment opportunities throughout the entire photographic industry.

Section 485 of H. R. 4473 contains a very thoroughly considered technical revision of the wording of the present law. It would provide a much needed simplification of the application of this tax and would relieve the industry of the uncertainty and the unfair competitive situations of the present law and the Internal Revenue Bureau of the almost impossible task of equitable interpretation and administration presently encountered.

We believe, that it would be overburdening the industry to make projectors also subject to tax as is proposed in section 484, and therefore have requested the elimination of this item.

We believe that section 485 of the proposed bill is fair, in view of the need for revenue, although we do wish to point out that the tax to be levied on the amateur photographer is still in excess of that which is proposed for practically all other goods at the manufacturers level. It is difficult to understand how the home use of photographic products can be considered more of a luxury than that of numerous other products which either are not taxed or which are proposed to be taxed at only 10 or 15 percent. If it seems necessary, however, for revenue purposes, to retain the 20 percent rate of section 485, we will not object to it in view of the fact that the technical rewording provided by this section accomplishes such urgently needed change.

In view of the known discrimination against this industry as to the rates and the inequitable imposition of this tax, we believe your committee will recognize that it is entirely warranted in acceding to our requests at this time. Despite the very small net loss of revenue which would result, such corrective action would provide a very great stimulus and desirable measure of reasonable security to an industry which promises to become of even greater vital importance to the security of the country.

We, therefore, respectfully urge the importance of favorable action by your committee with respect to our requests.

Respectfully submitted.

NATIONAL ASSOCIATION OF PHOTOGRAPHIC MANUFACTURERS, INC.,
By WILLIAM C. BABBITT, *Managing Director*.

Senator BYRD. Mr. Crowell; Mr. Alan W. Crowell, will you please identify yourself.

STATEMENT OF ALAN W. CROWELL, SALES MANAGER, ZIPPO MANUFACTURING CO.

Mr. CROWELL. Mr. Chairman, I am Alan W. Crowell, of the Zippo Manufacturing Co., of Bradford, Pa., appearing on behalf of the flint lighter manufacturers' group in opposition to the proposed 20-percent excise tax on all mechanical lighters.

We feel wholly justified in opposing a 20-percent retail excise tax on mechanical lighters as provided in H. R. 4473.

The manufacturers of lighters were not afforded an opportunity to be heard by the House Ways and Means Committee; we, therefore, rely on the members of the Senate Finance Committee to decide whether or not this tax will be more harmful than beneficial to the Government, public, and the industry.

We respectfully submit the following eight points which outline our position in opposing this 20-percent excise tax:

1. Lighters are a smokers' accessory: Lighters are strictly utilitarian smokers' accessory which are rightfully regarded by the general public and the Armed Forces as a necessity from the standpoint of use and economy. Thus, mechanical lighters will be the only smokers' accessory bearing an excise tax.

2. Some lighters are already taxed: We would like to call your attention to a portion of the report of the Committee on Ways and Means, House of Representatives, accompanying H. R. 4473 (p. 50, pt. D-1), which reads, in part, as follows:

> Many of the more expensive types of lighters escape taxation under the present law, while some of the relatively less expensive ones are subject to tax. For this reason, section 431 of the bill extends the 20-percent retail tax on jewelry and related items to all mechanical lighters for cigarettes, cigars, or pipes.

Senator BYRD. You bring in about $2,000,000, do you not?

Mr. CROWELL. Yes; it is estimated that it would.

Senator BYRD. Did they have hearings on this in the House?

Mr. CROWELL. No; there were no hearings, no opportunity for hearings.

Senator BYRD. All right.

Mr. CROWELL. The point I wanted to make there was that the price-list catalogs of any lighter manufacturer would quickly prove the inaccuracy of this statement upon which this proposed tax is predicated.

Senator MARTIN. Mr. Chairman, I am not just clear on that. Maybe the witness will explain. Some lighters are now taxable, and why it would be that extending it to all would be unfair. That is just the thing I do not understand. I would like to have a further explanation of that.

Mr. CROWELL. I would be glad to submit here the price lists of a number of manufacturers indicating the items that are taxed, because they are ornamented with precious metals or plated with precious metals.

(The price lists submitted were made a part of the committee file.)

Senator MILLIKIN. The theory is that it is a luxury tax.

Mr. CROWELL. A luxury tax. Those that do not carry a tax—all other lighters except those adorned with precious metals do not carry a tax, and they make up the bulk of the lighters sold.

Senator MARTIN. That makes it clear. I did not quite understand it.

Senator KERR. Just like fountain pens and pencils.

Mr. STAM. That is jewelry.

Senator KERR. If they have ornaments on them, they are taxed, and those that do not have them are not taxed.

Mr. CROWELL. That is right; and the implication in the House bill is mystifying. It does not point it out that way.

Lighters made of or ornamented with precious metals already bear a 20 percent tax. We do not protest the continuance of this tax. However, we strongly feel that it is wholly unfair to broaden this tax classification to include all mechanical lighters.

3. Materials shortages: Production and sales of mechanical lighters are materially reduced already by restrictive Government orders on the use of critical materials.

4. Tariff favor imports: American lighter production and sales are seriously threatened by the importation of inexpensive foreign lighters which are favored by low tariff rates.

Senator MILLIKIN. Where do they come from?

Mr. CROWELL. From Austria and Japan.

In fact, that is referred to in this next statement here. I think it would be clearer to finish the statement and we will have time for any questions then.

A. Imported copies of American lighters are being sold now at prices which make it impossible for the American producer to compete. A great many of these imported lighters are brought in from Europe and Japan by a subterfuge. On low-priced pocket lighters there is a duty of 110 percent, but on table lighters the duty is only 30 percent. Large quantities of pocket lighters are now being imported to which cheap temporary bases are attached, so that they may be declared as table lighters and thus be brought in under the lower 30 percent duty. Consequently, the Government is losing 80 percent of the duty it is entitled to collect.

Senator MILLIKIN. What are you folks doing about that?

Mr. CROWELL. We have not been able to accomplish any relief.

Senator MILLIKIN. Have you tried?

Mr. CROWELL. We have tried, and I would submit a letter to the Collector of Customs, which expands the situation on import duties, for the table lighter, the so-called lighter, is coming in now as a table lighter. In other words, it changes from a table lighter very readily through the attachment of a base which can be thrown away.

Senator MILLIKIN. We have just finished passing a law which gives relief against misclassification.

Mr. CROWELL. Yes, and point B here says that the provisions made at the Torquay Conference, further lowering the import duty on pocket lighters, are expected to increase this flood of cheap imported lighters.

Senator MILLIKIN. All I am trying to suggest to you is you have got more relief possibilities than you have ever had before, and I am wondering what you are doing about it. You have got relief against misclassification, and you now have escape clause provisions you did not have before. I wondered if you knew about it and what you are doing about it. I am making a friendly inquiry, trying to help you.

Mr. CROWELL. You may have some suggestions on that.

Senator MILLIKIN. I have made all that I am going to make.

Mr. CROWELL. We can get that.

To further point out this subterfuge, there is a letter received by one of our members recently, where they point out specifically that, incidentally, the base is only put on to avoid higher duty.

The duty on table lighters is 80 percent and on ordinary lighters 110 percent.

We learned that this base will be thrown away in America.

As further evidence, here is a Macy's advertisement which specifically states in the text, "Remove the base and it is a pocket lighter."

Senator MILLIKIN. It is an obvious trick to get a favorable classification, and we have just recently restored relief against that very kind of practice.

So I am just dropping you a hint.

Mr. CROWELL. I thank you, sir, and we will put that into the record.

Senator MILLIKIN. We also have new authority for quota provisions. You get an import situation with a country like Japan, and they can put stuff in here with such a low price that you cannot reach it with tariffs.

Maybe the only way you can reach it is by quotas. I am giving you another hint.

Mr. CROWELL. That is very good, because at that low price it is still competition that cannot be met adequately by American-made products.

Senator MARTIN. The big difference in cost is wages, is that right?

Mr. CROWELL. Low wages on the other side, but in addition——

Senator MARTIN. What Senator Millikin has suggested I think, if American industry would give cognizance to a lot of these things in this session of Congress and the previous session, we have been trying to eliminate those inequalities, and to eliminate where there is trickery, and of course, we have got the Tariff Commission to regulate rates.

I can see where an industry like yours can be very greatly damaged by importations from other countries where the wage rate is probably not more than one-fourth to one-tenth of what ours is in America.

Mr. CROWELL. That is very significant. Another factor allied to this is that foreign producers can supply lighters to this country made with basic and finishing materials that are barred or restricted to American manufacturers.

One illustration: All of these are illustrations of imports. They still have the privilege of using the critical materials.

Senator MARTIN. Has any of your industry—have any of your factories any place—has it been necessary to curtail your production by reason of importation?

Mr. CROWELL. Yes; it has.

Senator MARTIN. That has affected employment?

Mr. CROWELL. A case in point there is indicated by the volume of imports dating from 1946 on. In 1946 approximately 16,000 lighters were imported; 80,000 lighters were imported at a value of $16,000, and during the year 1950, about 6,000,000 lighters were imported, valued at approximately $1,275,000.

Senator MILLIKIN. What is the total domestic market on lighters, how many million?

Mr. CROWELL. There are not any facts accumulated to indicate what that is. They just are not available. Each company knows its own, but there has never been an accumulation.

Senator MARTIN. The companies making lighters, I guess, are usually rather small local concerns.

Mr. CROWELL. That is right.

Senator MARTIN. Like the one in Bradford, Pa.?

Mr. CROWELL. We are a small company in a relatively small industry.

Senator MARTIN. But it means a great deal in employment to a community of that size.

Mr. CROWELL. Yes, sir.

Senator MILLIKIN. As another test as to whether you are entitled to relief, it is whether imports are hogging an undue share of our domestic market; so you had better be getting some statistics together on that.

Mr. CROWELL. It would be very helpful. The company feels the impact when we meet the wholesaler and meet the retailer and see the volume of lighters that he has on imports versus the volume he is buying from us.

Senator MILLIKIN. You have a job for your legal eagle.

Get your legal eagle busy and he will get you out of a lot of your troubles.

Mr. CROWELL. You bet.

Now, No. 5, the significance of tax yield: The framers of the 1951 tax bill have estimated that a 20-percent retail excise tax on all mechanical lighters will provide $2,000,000 annually. This is in addition to the present tax on lighters made of and/or ornamented with precious metals. This $2,000,000 represents less than three one-hundredths of 1 percent of the total of $7.2 billions sought. Recognizing materials shortages and the adverse effects of the tariff, this tax, small as is the yield, may very well have a crippling effect upon the American lighter industry.

6. Effect on trade channels: Mechanical lighters are distributed and sold through about 6,000 wholesalers and 300,000 retail outlets. Of these retailers, a large segment—particularly the neighborhood store—does not traditionally handle merchandise on which an excise tax must be collected. Hence, many retail stores will discontinue handling lighters rather than be bothered with record keeping and making excise-tax remittances. This will adversely affect the wholesaler.

7. Effect on employment: Our industry employs nearly 15,000 people. Their employment depends upon our ability to maintain production and sales of mechanical lighters at adequate levels.

8. Contribution to defense: Our mechanical facilities and the know-how of our employees served during the last war and are again active in the present program. Even a partial curtailment of this industry's ability to produce will, in effect, impair our value to the defense effort. If our volume decreases, the industry will not be able to sustain a sufficient and sound financial condition to undertake defense work.

Senator MARTIN. I understand that you are a great deal like the watch industry. You train a great many men with the know-how to do certain things in defense work, and if these men are not employed, they get into something else, and you lose them.

Mr. CROWELL. We have a number of women in the industry, most of the companies have a number of women, many of them older women who can do certain light work, and they do not fit into other types of heavier work.

The reserve is there to be used as needed in something that can be handled.

In summing up, I would just like to——

Senator MARTIN. I would like to make this suggestion. I do not think you can put on a high enough tariff to make up the difference between the wage scale, we will say, in Japan, and our country. This would have to be by quotas. You have to take advantage of those.

Mr. CROWELL. Even the 110 percent would not solve the problem, but during this period when that has been available, it has sapped income that justifiably belonged in the Treasury. So, to sum up, for the above eight reasons, this industry opposes the 20-percent retail excise tax on all mechanical lighters. May I remind you again that the estimated yield of $2,000,000 represents three one-hundredths of 1 percent of the $7,200,000,000 sought.

The lighter industry is a relatively small industry made up largely of owner-managed firms, whose employment and payroll play a significant part in the economic life of the communities in which they are located.

For this reason we urge serious consideration of the effect of a tax which would disturb the stability of the small communities dependent on these small industries.

Now, we have purposely kept that written brief to a minimum to cover any other questions that might come up.

Senator BYRD. You have taken about 20 minutes.

Mr. CROWELL. Really?

Senator BYRD. Most of it was questions.

Mr. CROWELL. I would not have believed it.

Senator BYRD. Thank you very much, indeed.

Mr. CROWELL. Thank you.

(The documents referred to by Mr. Crowell are as follows:)

THE FLINT LIGHTER MANUFACTURERS GROUP,
New York 16, N. Y., July 12, 1950.

Mr. FRANK LAUGHLIN,
Deputy Collector of Customs, New York.

DEAR SIR: The Flint Lighter Manufacturers Group founded in 1942 and representing approximately 90 percent of the volume of cigarette lighters produced in the United States herewith makes formal application for a change of practice and for the proper assessment of import duties on imported cigar and cigarette lighters now being erroneously designated at "tablé lighters' by the customs service.

Taking the criterion of the Customs Bureau that an item which is designed to be used or worn about the person" is subject to a duty of 110 percent we submit that the vast majority of lighters now being imported as "table lighters" are so designed only because of the practice of skillful but obvious subterfuges, if not actual fraud and deceit. The resultant loss of revenue to the Government caused therefrom must be tremendous.

We admit that there are some lighters which have been designed as table lighters and which are correctly assessed at the 30 percent import duty. These lighters have obviously been designed and manufactured as table lighters, by virtue of a substantially heavy base, the base being an intrinsic and necessary part of the lighter and being permanently attached thereto.

However, this application is made for a change of practice in regards to the vast number of pocket lighters which were designed as such and to which an inexpensive and readily detachable base has been added solely for the purpose of avoiding the legitimate 110 percent import duty.

The exhibits which are being submitted herewith and made a part hereto are typical.

As to these lighters and many like them which have a detachable base, we contend that by no stretch of the imagination can they be considered as table lighters because—

1. These lighters were designed as pocket lighters and are sold in their country of origin as well as exported from there to contries other than the United States as pocket lighters.

2. The surveys made by the members of our industry showed that the retailer rarely offers, sells, or exhibits them as table lighters or even supplies the base along with the lighter. And where bases are supplied it is done so merely in continuing the fiction established by the importer.

3. When the base is still on the lighter it is not possible to service the lighter with flint or fluid without removing the base.

4. It is obvious that in most cases the base is so cheaply constructed as to negate its use upon a desk or table, because the sharp edges would quickly scratch a finished surface.

5. To further substantiate our allegations as to the subterfuge and deceit, we submit a photostat of a letter from England wherein it is openly stated that the base is only put on to avoid the higher duty assessed against pocket lighters.

It may be contended that the determination reached in *Hecht-Pearl Co.* v. *U. S. A. C. C. P. A.* (171 T. D. 44875) grants the blanket authority to consider any lighter a table lighter as long as some pretense is made of attaching a base to a lighter.

We submit that such is not the intention of the ruling. The decision was only dispositive of the issue under judication at the time and only as to the item which was the subject of complaint then made.

To construe that decision to apply to all lighters, which by subterfuge and fiction only masquerade as table lighters for the sole purpose of escaping proper duties would be a mockery of justice and at variance with common sense procedures.

Very truly yours,

FLINT LIGHTER MANUFACTURERS GROUP,
BERNARD RING, *Secretary.*

THE FLINT LIGHTER MANUFACTURERS GROUP,
New York 16, N. Y., July 12, 1950.

Mr. FRANK LAUGHLIN,
Deputy Collector of Customs, New York.

DEAR SIR: Together with our letter of the same date we are submitting herewith exhibits as enumerated below. In connection therewith we wish to say that a table lighter is usually an ornamental piece and if it is produced as a table lighter, then the base is at least of the same material and the same finish as the body of the lighter itself. These exhibits will show that neither one of these points holds true in the case of the imported lighters.

Exhibit A.—A pocket lighter manufactured by Bowers Tool & Die Co., of Kalamazoo, Mich., with a ring on the bottom to permit attaching it to a key chain.

Exhibit B.—A copy thereof manufactured in Japan and shipped to the United States with a base to escape paying the proper duty.

Exhibit C.—A pocket lighter manufactured by Dzaman Machine Shop, of Bordentown, N. J.

Exhibit D.—A copy thereof manufactured in Japan and shipped to the United States with a base to escape paying the proper duty.

Exhibit E.—A pocket lighter manufactured by Regens Lighter Corp., of New York, N. Y.

Exhibit F.—A copy thereof manufactured in Vienna, Austria, and shipped to the United States with a base to escape paying the proper duty.

Exhibit G.—An additional copy thereof manufactured in Japan and shipped to the United States with a base to escape paying the proper duty.

Exhibit H.—A pocket lighter manufactured by Aladdin Lighter Co., of New York, N. Y., with a ring permitting attaching it to a key chain. This lighter by virtue of its size cannot be considered a table lighter if imported with a base.

Yet samples of this lighter have been shown to obtain orders for later delivery with a base attached thereto to escape paying the proper duty.

Another model of this lighter, slightly larger, with a chain and bell attached have also been shown.

We trust that these exhibits will clearly indicate our case.

Very truly yours,

FLINT LIGHTER MANUFACTURERS GROUP,
BERNARD RING, *Secretary.*

BENLOW, LTD.,
Hayes, Middx., June 7, 1950.

Mr. and Mrs. JULIUS KOHN,
% the IMCO Manufacturing Corp.,
New York 11, N. Y.

DEAR MR. AND MRS. KOHN: I thank you for your congratulations on my marriage, and wish to convey the thanks and best regards from Mrs. Lowenthal.

Re Fishberg: I have taken note of your opinion and quite agree with you.

Thank you for the details you have given us regarding the pipe covers. You will hear from us as soon as we have the offers in hand.

Yours truly,

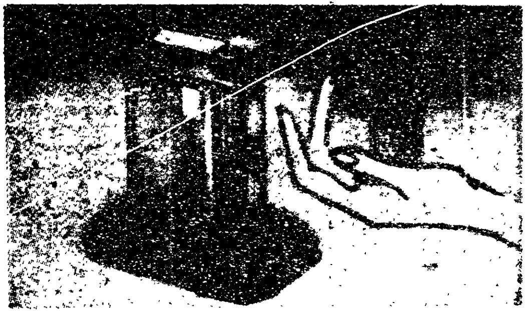
BENNO LOWENTHAL, *Managing Director.*

P. S.—We have just heard that Fishberg has bought 100,000 roller lighters made out of brass nickel, polished engine turned, with a small basin underneath at 1s. 9d., but this line gives no pleasure or profit to anyone over here. We have just spoken to the manufacturer and he said that after the first 100,000 they can make them themselves in America because business without profit is uninteresting. This is only for your information. Incidentally, the basin is only put on to avoid higher duty. The duty on table lighters is [illegible] percent and on ordinary lighters 110 percent. We learn that the basin will be thrown away in America.

B. L.

DAILY NEWS, FRIDAY, MAY 26, 1950

ENGLISH LIGHTER FOR TABLE, FOR POCKET



98c SALE

Macy's price would have been 2.79, if not specially purchased

Only Macy's has this handsome lighter in chrome plated metal. Well made for long life. It's convertible. Use it on the table . . . remove the base, it's a pocket lighter. Fine for home—wonderful for gifts. Write, phone (LAckawanna 4-6000) for 3 or more. Tobacco Shop, Street Floor and Table 34.

(Dept. 36)

HOME STYLE COOKIES IN COLORFUL TIN BOX

IMPORT OF MECHANICAL CIGARETTE LIGHTERS UNDER THE INCORRECT CLASSIFICATION OF TABLE LIGHTERS PAYING A 30-PERCENT IMPORT DUTY INSTEAD OF THE 110-PERCENT IMPORT DUTY APPLYING TO POCKET LIGHTERS

The following figures were compiled from the Import Bulletin published by the Journal of Commerce, New York, and listing the arrival each week of dutiable imports.

The Import Bulletin lists the arrivals in cases. We have taken as an average that each case contains 5 gross of lighters and that the average price of each lighter is approximately $0.20. From this we arrive at the following figures:

Year	Cases	Amount	Year	Cases	Amount
1946	111	$15,984	1949	686	$98,784
1947	185	26,640	1950	8,159	1,275,996
1948	630	90,720	1951, to May 31	1,856	267,264

Senator BYRD. Mr. Poteet.

STATEMENT OF J. R. POTEET, VICE CHAIRMAN, EXCISE TAX ADVISORY COMMITTEE OF THE NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION

Mr. POTEET. Senator, in the front of our brief I have a summary, but I would like to support it with a few remarks in the brief itself, if I may.

Senator BYRD. Very well.

Mr. POTEET. I am J. R. Poteet, vice chairman of the excise tax advisory committee of the National Electrical Manufacturers Association, whose member companies produce at least 80 percent of the total output of the electrical-manufacturing industry.

Eighty-two of the member companies make products which are subject to a manufacturers' excise tax under sections 3405 (a) and (b) and section 3406 (a) 3 of the present Internal Revenue Code. These products include ranges, water heaters, refrigerators, farm and home freezers, commercial cooking equipment, air circulators, air heaters, fans, and many houseware items, such as toasters, coffee makers, food mixers, roasters, flat irons, warming pads, and so forth. Some of the member companies also manufacture dishwashers, garbage disposal, and other electrical appliances upon which it has been proposed to levy an excise tax. Seventy-five to eighty percent of the total sales of these electrical products are accounted for by these 82 manufacturing companies.

The rising standard of living of our country has been marked by the transition of the products of our economy from luxuries to necessities.

For example, the overwhelming adoption of mechanical refrigeration has practically removed the old ice wagon from the streets, any any attempt to return to earlier ways of refrigeration would produce widespread inconvenience and economic upset.

Therefore, mechanical refrigeration—a luxury 20 years ago—has become a necessity and does an immensely better job of safe and lower cost preservation of food and prevention of spoilage.

Take another example; practically every home in this country has a cook stove. Cook-stove purchases are usually for replacement of equipment that is obsolete, inefficient, and hazardous. Nine million, or 25 percent, of American homes cook with electricity and 60 percent cook with gas. To replace electric, gas, or oil stoves, as they wear out, with untaxed cook stoves, would require a complete economic reorientation of the method of supplying cooking heat and would be obviously impractical. Good, old untaxed wood and coal stoves have become expensive luxuries.

One more example; hot water, and plenty of it, is necessary in every home, for sanitation and to prevent infection and disease. The automatic hot water heater, which makes hot water immediately available upon demand, is essential for healthful living.

Most modern home builders install these three major appliances, a range, water heater, and refrigerator, as part of the basic household equipment, just as they install heating, lighting, and plumbing systems.

The electric flatiron used in 95 percent of the homes in the United States has long been recognized as essential. Electric blankets are now being prescribed for arthritic patients and the elderly. Fans provide necessary ventilation in apartments and other dwellings that otherwise would be like July in Washington.

These are but a few examples of household appliances which have long since ceased to be luxuries and have become household necessities.

It should be emphasized that the timesaving which electrical appliances provide is of increasing importance for the release of women for work in the many areas of usefulness, that have opened up to them—and this does not exclude work in defense industry and on the farm which require efficiency in the home and the minimizing of the time devoted to household duties.

The enormous contribution and the essential nature of electric appliances is, therefore, amply evident. If the taxation of luxuries were an objective, then electric appliances should be exempt.

However, it is not our endeavor to ask exemptions for the products we represent, for we know full well that defense requires substantial sums of money and that excise taxes should yield a fair share of the revenue for defense. We believe, however, that the present method of imposing excise taxes on a selective basis has created serious inequities.

Here's why:

1. Many items of considerably less essentiality are tax-exempt. Selective taxes penalize many newly formed families and low-income families who thus have to buy household appliances at higher costs.

2. Selective excise taxes have placed manufacturers of taxed items at an inequitable competitive disadvantage with manufacturers of untaxed items.

3. The thousands and thousands of small businesses, much of whose livelihood depends on the sale and servicing of these necessary household appliances in their communities, find their income inequitably curtailed by selective taxes as compared with their brother merchants handling untaxed items.

Faced as your committee is with the responsibilities of providing for adequate defense revenue, we wish to commend to you, in the light of the foregoing comments, the following suggestions:

First, we recommend broadening the base of excise taxes to include coverage of other consumer goods which are at present classified by the Department of Commerce under or as household operations.

This includes such items as furniture, drapes, floor coverings, china, glassware, etc. It does not include food, food products, drugs, medicines, and medical supplies.

Second, we recommend that the broader based tax be imposed at a uniform rate. Here are some cogent reasons for this recommendation.

1. Substantial amounts of revenue can be obtained from such a tax without excessive and discriminatory rates on any individual item.

In 1950 consumer expenditures for typical household goods were as follows (Department of Commerce classifications are used):

[Billions of dollars]

Furniture	3.3
Semidurable house furnishings	2.0
China, glassware, tableware, and utensils	1.5
Durable house furnishings	1.4
Floor coverings	1.0
Radio, television, pianos, musical instruments	2.8
Electric, gas, and oil appliances	3.0
Total	15.0

Current taxed items in the above account for approximately a third—nearly two-thirds are exempt from tax.

Just as an illustration, a 3-percent tax on all these items would produce revenue of $450,000,000. This is a greater yield than originally requested under the selective taxes proposed by the Treasury Department for collection at the manufacturers' level.

2. Under a broader tax base the consumer can buy what he needs without suffering a discriminatory penalty. On the other hand, under the present selective tax system, if a hot-water heater fails, the user has to buy a new water heater with a tax penalty, while his neighbor pays no tax on a $1,000 rug.

3. The tax will bear less heavily on low-income groups since their expenditures for the items now exempt, like food, normally constitute a greater portion of their income, than for those with larger incomes.

4. All household equipment industries and trades competing for consumer dollars will be placed on an equal footing.

5. Under a broadened tax base, present rates could be reduced without loss in total revenue from this group of products.

So, a uniform rate of tax appears to be both feasible and desirable.

Third, we recommend that the emergency excise tax, on a broader list of items, be imposed at the retail level and based on the cash retail price to the ultimate consumer.

This recommendation is amply supported by the following advantages:

1. With a retail excise tax the consumer pays the minimum and total net tax, and no more than the actual tax is collected. In its testimony before the Ways and Means Committee, the American Retail Federation pointed out that since a manufacturers' excise tax is an item of cost—here I quote—

> and must be financed at each stage of distribution, the tax is of necessity pyramided and produces additions to the retail price far in excess of the tax imposed. Thus the impact upon the price level is far greater than the amount of revenue produced by the tax. Because it is hidden in the price, at the various levels of trade, it has an impact on the cost of living, and on the consumer price index, greater than that of the tax itself.

2. Under a manufacturers' excise tax, wholesalers and retailers possess inventories on which a tax has been paid. So that when the Congress decides upon tax relief the very difficult problem of refund on floor stocks arises. The amount of tax greatly exceeds wholesalers' and retailers' net profit on appliances.

These businesses, most of which are modest in size and with limited capital, are thus faced with a serious financial threat, whether they attempt to absorb the tax, or accept the loss of business because consumers wait for the tax removal to be reflected in retail prices. Imposition of the tax at the retail level eliminates this problem.

3. As revenue needs change, the rate of the retail excise tax can be readily adjusted with minimum confusion and without hazard to wholesalers or retailers.

4. The tax is not hidden. We believe with the American Retail Federation, and I quote—

that it is sound policy to bring out all taxes into the open where they can be seen and recognized.

Opposition to a tax assessed at the retail level is usually based on an assumed high cost of administration and difficulty of enforcing compliance. Here is factual support for the contrary view.

1. The last significant tabulation of administrative costs in collecting State sales taxes was published by the Public Administration Service in 1945 and covered the years 1935 to 1941 inclusive. The highest percentages were 11 percent in Louisiana and 9½ percent in Connecticut during the first year of tax.

This was subsequently reduced to 5.7 percent in both cases. The average for 23 States having sales taxes for the period ranged between 2 and 2½ percent.

In 1948, 22 States and the City of New York had taxes at retail. Thus, a large number of retailers are equipped to handle retail excise taxes. This should help to reduce collection costs.

2. In 1943 the National Association of Tax Administrators recommended methods for effecting economies through joint efforts of local, State, and Federal Government in the event of a Federal retail tax. We believe that these methods bear consideration and further investigation.

3. Costs of administration, of course, include cost of enforcing compliance. A simple check on compliance is readily available, since remittances of funds collected by retailers under a retail tax imposed at a uniform rate, can be checked against the company's sales report for income-tax purposes.

4. Also, stamps have been used as a very successful method of collection.

Fourth, we urge that this uniform, broader based, tax be clearly identified as an emergency tax and that a definite date of termination be designated, subject to extension, if necessary. Emergency excise taxes always adversely affect peacetime consumption, employment, and business activity. Delay and uncertainty as to their repeal or modification upsets dealer and consumer purchases. The Revenue Act of 1943 provided for termination of emergency excise taxes.

Fifth, we recommend that section 3406 (a) (3) of the present Internal Revenue Code be changed to refer specifically to products of the household type.

Under the present interpretation, commercial cooking equipment used in hospitals, hotels, restaurants, cafeterias, schools, and industrial in-plant feeding facilities and air-heating equipment of the industrial type are taxed. Since these are tools of business, which under the intent of previous congressional action were not to be subject to tax, we believe the above revision should be made.

Now, may I summarize my recommendations? They are five in number.

1. Broaden the base to include most household items.
2. Assess the tax at a uniform rate.
3. Impose the tax on the cash retail price at the retail level.
4. Identify the tax as an emergency excise tax.
5. Revise section 3406 (a) (3) to make it applicable to appliances of the household type only.

We believe such a five-point program will create favorable results as follows:

1. Substantial revenue will be collected without excessive rates on any one item.
2. The consumer will not pay a discriminatory tax on items he has to buy as compared to the present selective tax system.
3. No more than the actual tax will be taken from the consumer because he pays an unmarked-up amount.
4. The exemptions for food, medicines, etc., reduce the impact of the tax on low-income groups.
5. The program reduces to a minimum the price-inflation effect which is inherent in an excise tax imposed at the manufacturing level.
6. The recommended program offers Congress a simple method for adjustment of the rate to suit changing revenue needs without hazard to wholesalers and retailers.
7. With the adoption of such an excise tax progrem as an emergency measure, and the establishment of a repeal date, much confusion and year-to-year disruption of business activity will be avoided.

It has been a privilege and a pleasure to appear before you today. May I take this opportunity to thank you for the privilege of appearing here and ask that you consider our proposals and recommendations as a serious effort to meet your estimated revenue requirements and provide the degree of excise-tax equity required for the protection of this important segment of American business and the living standard of our people.

Senator BYRD. Thank you very much.

Mr. POTEET. Thank you.

Senator BYRD. Mr. Kelly.

STATEMENT OF THOMAS F. KELLY, REPRESENTING THE VACUUM CLEANER MANUFACTURERS' ASSOCIATION

Mr. KELLY. Mr. Chairman, my name is Thomas F. Kelly, and I represent the Vacuum Cleaner Manufacturers' Association, comprising 18 of the 22 manufacturers of vacuum cleaners in the United States and on behalf of this important industry respectfully request that no excise tax be imposed on vacuum cleaners.

We want to remind you that an excise tax of 10 percent was placed on vacuum cleaners in the Revenue Act of 1941, but that this committee—that is the Senate Finance Committee—in its wisdom removed this tax in the Revenue Act of 1948, for the reasons set forth at that time and which are still applicable.

It was our desire then, as it is now, to sell vacuum cleaners at the lowest price possible so that this great labor- and health-saving utility could be made available to the greatest number of people who should have a vacuum cleaner in their home.

According to the most recent information, 48.5 percent or 16,996,000 wired homes of this country are today without this appliance and a recent survey indicates the principal reason is its first cost.

The Treasury Department recommended a manufacturers' excise tax of 25 percent on vacuum cleaners; however, the Committee on Ways and Means of the House of Representatives have decided that no excise tax should be imposed on vacuum cleaners and we are requesting that you concur in their decision.

An excise tax of 25 percent would put in beyond the reach of most of the people who do not now own a vacuum cleaner located in every city, town, and village and along the rural electrification lines of this country.

Congress should not impose this tax to deprive these people of this great necessity as it is not only a great labor-saving appliance, but a safeguard to the health of our people.

We would like to point out the reasons briefly that a vacuum cleaner is an absolute necessity in every home and nothing should be done to increase its price.

First, it saves the time and energy of every housewife: The use of a broom or carpet sweeper, rather than an electric cleaner, more than doubles the time required for house cleaning. Using a broom to sweep a rug requires more strenuous work for a longer period than is spent with a vacuum cleaner and the dusting operations which of necessity follow the sweeping adds another time period probably equal to that spent in sweeping.

We, of course, want to point out that even a broom will not clean floor coverings that have now for many years been designed for vacuum cleaning—a dust-raising broom simply moves the surface dirt from one place to another and does not touch the disease-laden deeply imbedded grit.

As we progress further in a defense economy such savings of time will become even more important. More and more women will be called upon to play two roles—housewife and defense workers. No woman can help serve such national needs and simultaneously give necessary care to her home without the aid of such appliances as the vacuum sweeper and cleaner.

The people who do not now own a vacuum cleaner do their own housework and nothing should be done to deprive any housewife from purchasing a vacuum cleaner by adding this exorbitant tax.

It helps to protect human health: One gram of ordinary household dust collected by a vacuum cleaner—an amount equivalent to about a teaspoonful—was found to contain as many as 5,000,000 germs by Dr. Murray P. Horwood, associate professor of bacteriology and public health, Massachusetts Institute of Technology, Cambridge, Mass.

It is the lurking germs in household dirts that many times account for the occasional and otherwise unexplainable breaking out of some illnesses amongst the members of a family.

Tuberculosis has been very properly diagnosed as a house disease and the treatment prescribed for it well proves this fact. It seems reasonable to assume that the decline in the rate of tuberculosis victims is due partly at least, to the use of vacuum cleaners in about 50 percent of the wired homes.

Household dirt is well recognized as being both destructive to furnishings and a menace to health. Dirt imbedded in floor coverings unexposed to air and sunlight soon decomposes into filth in which disease germs of many kinds are propagated.

Let us picture a young mother with a baby that crawls on the floor—do not do anything to force up the price of a vacuum cleaner so that she cannot keep her floor coverings free of disease-laden dirt.

Are you going to deprive her of buying a vacuum cleaner—we are sure that your answer will be "No" and that you will decide, along with the Committee on Ways and Means, not to place an excise tax on vacuum cleaners.

Now about moth damage: It is a well-known fact that damage done by moths in the homes of our country is greater than the damage done by fires. It is also well-known that moths thrive best in dust- and dirt-infested fabrics.

Eternal vigilance in the removal of dust and dirt is the best moth protection that a home can have and without the aid of a vacuum cleaner, a satisfactory job in this regard cannot be done and hence an unavoidable exposure to expensive and distressing moth damage.

It is our understanding that the suggestion that an excise tax be imposed on vacuum cleaners, is to curtail the use of critical materials; gentlemen, a tax is not necessary for that purpose. The National Production Authority is doing a splendid job along this line.

The vacuum-cleaner industry is meeting this situation by substituting other less critical materials and we will continue to do so to help this great emergency.

In addition, the sale of vacuum cleaners has and will continue to be restricted by the credit regulations of the Federal Reserve System.

The vacuum cleaner is not a luxury. No other appliance has done more to relieve drudgery in the home, save the time of the busy housewife, help solve the moth problem, preserve home furnishings, and contribute to the health of the family and the Nation than the vacuum cleaner.

A vacuum cleaner is needed in every home—the home cannot be kept clean otherwise. There is no substitute for a vacuum cleaner because there is no place where a housewife can send her home to be cleaned.

Every home without a vacuum cleaner should be able to get one as reasonable as possible. Think of the farmers served with electricity through the REA. These people need and want vacuum cleaners. Are you going to force them and other people to pay greatly increased prices because of an exorbitant excise tax when they do not pay excise taxes on other comparable articles?

Why discriminate against this labor-saving appliance when there is no tax on brooms, carpet sweepers, mops, or any other appliance used in helping to keep the home clean?

It is a fact that the imposing of an excise tax of 25 percent on a vacuum cleaner raises the retail price sufficiently to materially affect its sale and overencourage the purchase of other appliances not threatened with this excise tax.

The average retail price of a vacuum cleaner in 1950 was approximately $79.50 and an excise tax of 25 percent would increase this to approximately $99.50, and would definitely place it out of reach of most of the 16,900,000 wired homes without a vacuum cleaner.

The manufacturer's price on the above-average retail price of 1950, would be approximately $39.75, therefore, the tax of 25 percent would be $9.94 on each average-priced cleaner but as the distributor or wholesaler and retailer is entitled to his mark-up on this new price—the customer has to pay an extra $19.88 to enable the Government to collect this 25-percent tax.

To indicate how important it is to have a vacuum cleaner to clean floor coverings and even bare floors, I want to tell you what happened during World War II.

When the production of vacuum cleaners was discontinued—the Federal Government immediately froze all vacuum cleaners in manufacturers' warehouse stocks and none were released until they determined what they considered sufficient for their requirements.

The United States Government understands the great need of having a vacuum cleaner from a labor-saving and health standpoint.

In closing we respectfully request that you will concur with the Committee on Ways and Means, and will see that no excise tax is applied to vacuum cleaners for these reasons:

1. It will increase the price of a vacuum cleaner to such an extent as to prevent it being purchased.

2. This great labor-saving appliance should be made available at as reasonable a price as possible.

3. A vacuum cleaner is a disease preventative and should be made available at a minimum cost to a customer.

4. There should be no discrimination—there is no tax on brooms, carpet sweepers, mops, and other appliances used in helping to keep the home clean.

5. While a vacuum cleaner is often referred to as an appliance—it is really a necessary utility in the home or wherever there are carpets or rugs or other homefurnishings, and, gentlemen, you are not taxing other utilities in a home such as the heating system, etc.

6. There has been no thought to impose a tax on homefurnishings and, therefore, no tax should be placed on vacuum cleaners that keep them clean.

7. Above all, do not put a tax on cleanliness and sanitation. There is no tax on soap, etc., and therefore, you should not place one on vacuum cleaners. The American housewife has an inherent desire to be clean and to have her home clean—do not do anything to make it more difficult for her to obtain a vacuum cleaner.

8. And, gentlemen, it is not needed to curtail the use of critical materials—the National Production Authority and the Federal Reserve System have and will continue to take care of that for the Government.

The Senate Finance Committee and Congress removed the excise tax on vacuum cleaners in the Revenue Act of 1948 and, for the same reasons, please concur with the Committee on Ways and Means of the House of Representatives and grant our request not to impose an excise tax on vacuum cleaners in the Revenue Act of 1951.

Thank you very much.

Senator BYRD. Thank you very much.
Next is Mr. Farr.

STATEMENT OF MORT FARR, PRESIDENT, NATIONAL APPLIANCE AND RADIO DEALERS ASSOCIATION

Mr. FARR. My name is Mort Farr. I am a retailer from Upper Darby, Pa., and have been in the retail appliance business for over 30 years but I appear here today as president of the National Appliance and Radio Dealers Association, to represent over 100,000 retailers and dealers who are employers of several hundred thousand salesmen and servicemen.

When you look to a source of revenue, just as when we look to a source of business, it is important to get some basic information about that source.

Our television business is an industry which while healthy and prosperous a few months ago, is now being harassed by a most unfortunate parlay of troubles causing consumer resistance or inability to buy.

Simultaneously we have been hit by:

(1) A 10-percent excise tax on television effective November 1, 1950;

(2) The Federal Reserve Board's interpretation of regulation "W," which created a clot in our arteries of commerce—while we were partially relieved from this by Congress recently, it will be months before we fully recover from the ill effects of this period. Many retailers can never recover.

(3) Income taxes which draw a larger than ever portion of our net profits and our customers' spending money; and

(4) New developments in television that have created a "wait and see" thinking among prospects.

Retail sales in July were off 50 to 60 percent from July of 1950. Sales to dealers in June 1951 were 58 percent below June of 1950 and 75 percent below first quarter of 1951 average. Factory inventories which a year ago never equaled a 1-week supply are now over 750,000 sets or over 18 weeks' supply at current sales. At manufacturers' prices this indicates a value of 125 millions. Inventories at dealer level are probably double that figure and at current rate of sales will be sufficient for 4 to 5 months' business. In my own case, we have over 400 sets on hand and it could take at least that long to dispose of them.

I have here a few ads which I would like to add to the record, clipped at random from newspapers around the country indicating that the present excise tax, which has been paid by the manufacturer to the Government and has been passed along to the retailer, is being paid by the retailer and not by the consumer. The manufacturer is not paying the tax. Neither is the consumer.

I submit to you gentlemen that prices such as these—one-half the original price, and ads reading 35 to 50 percent off—and you gentlemen in Washington, I suppose, are more conscious than some other cities of that—here is another at 40 percent off—that, I submit, is below the cost of the dealer for this merchandise, and it indicates that that tax, which was put on last November, and which started this slow-down hasn't been paid by the consumer to date.

It has been paid by the retailer, however.

These low prices represent heavy losses to the dealer and many times sets are being sold below cost in order to move inventory to obtain cash to run their businesses and to pay the taxes on last year's profits. If this trend continues, many dealers will be bankrupt. Bankruptcies among our dealers in the first 6 months of 1951 were 222 percent over 1950, whereas the rate among retail establishments generally has remained virtually unchanged.

We believe that any increase in the excise tax on radios and televisions will result in a net loss of revenue to the Government. Appliance and television retailers paid substantial income taxes in the last few years but in the 3 months past, indications are that because of reduced volume and selling at reduced or no profits most of them are operating at a loss and if the present trend continues, will not pay any income taxes this year and may have loss carry-backs. Manufacturers and distributors as well as other segments of the business such as broadcasters and entertainers will also pay much more taxes if not hampered by this proposed additional tax.

It has been proposed to you that the excise taxes against the appliance and television industry be increased beyond the present burdensome 10 percent to 25 percent.

The action of Congress in loosening regulation W consumer credit restrictions will serve to partially correct a horrible injustice against one phase of our economy. On behalf of the Nation's appliance and retail dealers, I am imploring you not to supplant this with another injustice which has comparable capacity for destruction.

We recognize that you do have a responsibility to the public and the Government to find revenues somewhere. We have made a sampling of thousands of dealers to learn their answer to this.

We sent them a card simply addressed that we were going to represent them here at our hearing, and asking them what we would say to the Senate.

I think you gentlemen will be interested if we leave this to find some of the comments from the folks back home, who are businessmen. They are men who run businesses, not just the average run of the American public.

I would like to leave these here as part of my statement, because I think you will be very much interested in some of the comments they have made.

We have made a sampling of thousands of them. By far the largest number of respondents urged that in the name of equality that the many business enterprises which are tax free—the cooperatives and the businesses owned and operated in behalf of theological and academic institutions which compete with those of taxpaying small-business men—be required to make their just contributions to the Federal revenue as do the rest of us.

Coming from Pennsylvania, I am not as conscious of these cooperatives, but apparently in the Middle West, where we have a lot of members, it is a real competitive threat to them, and they really feel it.

By imposing such taxes you would secure a comparable amount of revenue, you would be making more equitable distribution of the tax load, and you would avoid singling out one segment of our economy on which to impose additional tax burdens, thus cutting back on the contributions that are being made to the Federal Treasury from the present high, multiple taxes already being leveled against it.

Senator BYRD. Thank you very much.

(The appendix to Mr. Farr's statement follows.)

APPENDIX A

SAMPLE INSTRUCTIONS TO MORT FARR, PRESIDENT, NARDA, FROM INDIVIDUAL DEALERS

DEAR MORT: Tell the Senate this: This industry is sick enough—an additional tax would floor it.

PRICES, INC., *Norfolk, Va.*

DEAR MORT: Tell the Senate this: In our opinion the appliance industry by recent directives has been curtailed in the promotion of the industry far enough. This excise tax on appliances and TV would create a hardship on the appliance industry which is made up for the most part of small-business men who have invested their life savings in this business. It is my opinion if the Congress is really interested in seeking an avenue for further taxes they should look into the cooperatives, mutuals, and other non-tax-paying groups. Our industry is already taxed and to place a further hardship on individuals who need these appliances to preserve their present standard of living would certainly be a mistake.

GABLES, INC., *Harrisburg, Pa.*

DEAR MORTS: Tell the Senator this: Considering (1) present business conditions, (2) restrictive legislation, (3) present tax burden in the industy are compared with some others, an increase in excise tax would do terrific damage to the industry.

HOME APPLIANCE CO.,
Charlotte, N. C.

DEAR MORT: Tell the Senate this: Put on the 25-percent tax that will surely put 50 percent of us dealers out of business.

BIGALTE ELECTRIC CO.,
St. Louis, Mo.

DEAR MORT: Tell the Senate this: To levy a 25-percent excise tax on TV, would be to deal the death blow to an already staggering industry. Even a 10-percent tax is too much on an item priced in the range of that of TV. The gentlemen in Washington have got to realize that the public is carrying all that it can in the form of taxes. This present business recline in TV and other items is due to the fact that people have spent their limit—not buyers resistance.

DIRKSE ELECTRIC CO.,
Grand Haven, Mich.

DEAR MORT: Tell the Senate this: Once upon a time there was a window tax in England, so windows were left out or reduced. There is just as much sense in putting a penalty on appliances as distinguished from other necessities. Let's play taxes across the board, and there is no reason to discriminate.

SIMON HALLE,
Colorado Springs, Colo.

DEAR MORT: Tell the Senate this: Tell them, Mort, that television sales are almost nil now. With an added tax it will be finis for sure. They killed building and automotive, the lifeblood of the Nation, during each hard time. How are they going to raise the 60 billion taxes being spent without "good business."

THE ECLIPSE ELECTRIC CO.,
Canton, Ohio.

DEAR MORT: Tell the Senate this: That we feel the appliance and television business is penalized enough with high prices caused by hidden Federal taxes. There are other untaxed sources to be tapped.

BROCKTON PUBLIC MARKET, INC.,
Brockton, Mass.

Senator BYRD. Mr. Ingraham, please.

STATEMENT OF EDWARD INGRAHAM, PRESIDENT, THE E. INGRAHAM CO.

Mr. INGRAHAM. Mr. Chairman, and members of the committee, I am Edward Ingraham, president of The E. Ingraham Co. I am appearing on behalf of the Clock Manufacturers Association of America, Inc., of which our company is a member.

I have submitted a prepared statement, but with your permission I will not read it and will not follow it too religiously, but would like to have it made part of the record.

Senator BYRD. Very well.

Mr. INGRAHAM. I know you are all watching the clock. I have been watching it, so I will be as brief as possible.

I ran across a little statement the other day, I cannot help but bring to your attention.

Senator MILLIKIN. If you and others did not watch the clock, people in your business would be in a devil of a fix.

Mr. INGRAHAM. Yes; I would.

The statement I thought summarized things pretty well was: "Without timepieces punctuality would be practically nonexistent."

I do not think I have to go into any detail as to how much we look to timepieces, clocks, and watches, to measure our time, our schedules, and how necessary they are to all people. I will not elaborate on that at all.

The reason we are here is, of course, the Treasury Department has recommended an increase in excise taxes, and we certainly hope that the Senate Finance Committee will not consider that as far as clocks and watches are concerned, timepieces generally; in fact, we are going to ask that they consider repealing the present excise taxes.

The taxes are 20 percent on timepieces—that is, clocks—timepieces, with an exemption of alarm clocks selling under $5, they take a 10-percent excise tax; but all of the clocks take a 20-percent excise tax; whereas, the wrist watches and pocket watches take a 10-percent excise tax. They have been classified as jewelry.

At one time they were actually classified as jewelry, now they are under section 2400, the same section as jewelry. I want to show you a few examples, if I may, of a few comparisons.

Here, for instance, is a somewhat familiar wall clock, which you might have up here on your wall, which has an excise tax of 20 percent. Now you might compare that in your minds with a diamond ring, for instance, which is also taxed 10 percent.

Senator KERR. Taxed how much?

Mr. INGRAHAM. Taxed 10 percent.

Senator KERR. The diamond ring is also taxed 10 percent?

Mr. INGRAHAM. Twenty percent.

Perhaps an elephant might wear that for an ornament, but I do not think the human being would. I think that it is a useful piece of merchandise.

Here are two clocks which are somewhat familiar; I am not putting in plugs for my competitors necessarily, but these are Baby Bens with which my company has to compete. One has a radium dial; the maker feels he has to sell at over $5. It is priced at $5.75 and takes a 20-percent tax. It is the same as a faultless or flawless pearl.

I object as a competitor to putting my competitor's merchandise in the classification of flawless pearls. I do not think they are.

This clock, however, sells for $4.95 and, therefore, only takes a 10-percent tax.

But you can recognize the discrimination between the two categories when one clock, because it has a radium dial, takes a 20-percent tax, and another clock, because it has a plain dial and, therefore, can be made at a lower cost, takes a 10-percent tax. There is a great deal of confusion in the trade among sales people and merchants, and so forth, in distinguishing between the two classes of clocks. Here is 10 percent, and here is 20 percent for the same item except for the price brackets.

Here is another item, the ordinary kitchen clock, which the housewife has. That takes a 20-percent tax. That takes the same tax as a lorgnette.

Senator BYRD. What does that sell for?

Mr. INGRAHAM. I am not sure of the retail price, but ordinarily a clock like that would sell under $5. Some are $3.98, some $4.50, some higher. But that takes a 20-percent tax.

Senator BYRD. This 20 percent is in the existing law?

Mr. INGRAHAM. Yes; that is in the existing law. What we would like to see done——

Senator BYRD. Did the House make any change in the taxation of clocks?

Mr. INGRAHAM. It has not. At one time I understand that they were about to completely remove the tax, but they have not at present.

Senator KERR. They missed it.

Mr. INGRAHAM. Unfortunately for us.

Now, we have, for instance, a common cheap pocket watch, a low-priced watch. That will sell for perhaps two and a quarter. It is the old dollar watch, but unfortunately that has gone like the 5-cent cigar. That watch is taxed 10 percent.

You take these little slide rules you stick in your pocket, the same as you would this. They have no tax. This is just for illustration. That is a rugged durable watch. Would you like to see what I am talking about? [Tosses watches to committee members.]

Senator KERR. This must be your competitor's watch the way you are throwing it around.

Mr. INGRAHAM. These watches are what we happen to make, but we have all types, sizes, and styles.

Senator BYRD. Does it keep good time?

Senator KERR. This fell apart.

Mr. INGRAHAM. That must be a competitor's. Yes; it is.

Senator KERR. You better take this.

Mr. INGRAHAM. It won't hurt, I am sure. That is a competitor's watch.

We have these low-priced——

Senator MILLIKIN. I have witnesses that I am returning this to you.

Mr. INGRAHAM. We have these low-priced watches. Here is a Mickey Mouse, somewhat familiar—more of a toy watch.

Senator BYRD. What does the wrist watch sell for?

Mr. INGRAHAM. A watch like this sells for 98 cents up, all kinds of prices. Here is the Mickey Mouse at $5.95.

This watch I have on my wrist is $4.95, one of our make. They take a 10-percent tax. But you take a fountain pen if it does not have precious metal on it, there is no tax at all on it.

Senator KERR. Have you read the House bill?

Mr. INGRAHAM. Not in detail; no, sir.

Senator KERR. I think that takes care of that fountain-pen deal.

Mr. INGRAHAM. I say, without precious metals. I do not know the last word on that. Again I want to emphasize the point that we think the tax is discriminatory between the different brackets.

Senator KERR. You think it should be made 20 percent on all of them?

Mr. INGRAHAM. We would hardly like that. I went into a haberdashery the other day near the shop and asked the haberdasher what he paid excise taxes on. He said:

> I don't pay any excise taxes. I only pay excise taxes when I get men's costume jewelry for the Christmas trade. Then I have to pay excise taxes on it, on gold-filled and gold-rolled costume jewelry. On neckties, shorts, and so forth, there is no tax.

I had to go buy some lamp bulbs to the store of Charley Underprice, who handles everything under the sun in the way of appliances, kitchenware, curtains, cheap merchandise. I said, "What is your excise tax problem?" He said, "I pay excise taxes on clocks and lamp bulbs."

We do urge that you consider the repeal of excise taxes on clocks and watches. We consider the measuring of time a necessity today in this economy of ours.

Actually our salesmen tell us that their wholesalers tell them they are finding outlets that refuse to handle clocks and watches today because they are the only things that are taxed in the lines they handle, and they don't want to get mixed up in the excise tax on a few limited items. They say they have some dealers who will not bother with taxes—they will not bother with clocks and watches because of the excise taxes on them.

What we ask for, as I say, is the repeal of the tax on clocks and watches. We think it is improperly classified as getting into any section 2400. It should be classified, we feel, along with many other necessities of life, and either go scot-free from excise taxes or, if later on, it is essential that taxes be placed on all merchandise, they certainly should not go scot-free then.

We would like to have you consider in any event the removal of the 20-percent excise tax on timepieces generally and put them in the same category as clocks selling under $5.

In other words, a straight 10 percent if it is impossible because of revenue requirements to repeal the statute.

Certainly, we hope under no circumstances will you consider any increase in excises on clocks and watches, because we think the burden has been heavy enough already.

Actually the tax was put on as a wartime measure to discourage buying in 1941 when there was a shortage of clocks, and actually also the War Production Board authorized the production of these war alarms, which some of you may remember during the war, because there was such a demand for them from the consumer, and clocks at that time were rationed to the people. They had to get them on a certificate of priority.

But the War Production Board recognized them as a necessity despite the fact that they took steel and brass, and they authorized production. They also begged us for pocket watches. We supplied some pocket watches, but we were out of business and could not go into extensive manufacture. We also supplied wrist watches for the nurses after we had gone out of production. The War Production Board begged for it.

Thank you very much, gentlemen.

Senator BYRD. Thank you.

(Mr. Ingraham's prepared statement follows:)

Statement of Edward Ingraham on behalf of Clock Manufacturers Association of America, Inc.

Mr. Chairman and members of the committee:

My name is Edward Ingraham. I reside in Bristol, Conn., and am the president of the E. Ingraham Co. Today I am testifying on behalf of Clock Manufacturers Association of America, of which our company is a member.

This trade association is composed of 12 companies:

The E. Ingraham Co., Bristol, Conn.
General Time Corp., New York, N. Y.
The William L. Gilbert Clock Corp., Winsted, Conn.
General Electric Co., Bridgeport, Conn.
The Herschede Hall Clock Co., Cincinnati, Ohio.
The Lux Clock Manufacturing Co., Waterbury, Conn.
The Sessions Clock Co., Forestville, Conn.
Seth Thomas Clock Division of General Time Corp., Thomaston, Conn.
Telechron, Inc., Ashland, Mass.
Westclox Division of General Time Corp., LaSalle, Ill.
U. S. Time Corp., Middlebury, Conn.
The New Haven Clock & Watch Co., New Haven, Conn.

These 12 companies manufacture substantially all of the spring-powered and electric clocks produced in the United States. Four of these companies—Ingraham, Westclox, U. S. Time and New Haven—manufacture 100 percent of the nonjeweled, or clock-type, watches produced in the United States. Timers and other items are also manufactured by this industry, but household clocks and personal timepieces are its principal products.

We are altogether separate and distinct from the manufacturers of jeweled watches such as Elgin, Hamilton, and Waltham, who have their own special problems with respect to excise taxes. My testimony is strictly limited to our own clocks and nonjeweled wrist and pocket watches, and has nothing whatever to do with jeweled watches.

Federal excise taxes first became effective as to clock and watches on October 1, 1941 (title 26, U. S. Code, sec. 2400). The rate then was 10 percent. It was a burden on our industry at the time. However, on July 1, 1942, a WPB limitation order stopped the production of clocks for civilian use and the entire industry was completely converted to the mass production of war goods, including war alarms produced by three manufacturers under WPB orders. After July 30, 1942, and during all of 1943, 1944, and most of 1945 our production of clocks and watches ceased except for the production of war alarms and nurses' watches. These were sold on priorities for essential civilian use. Clocks and watches came to be in exceedingly tight supply.

In 1944 the excise-tax rate on clocks was raised to 20 percent except that the 10-percent rate was retained as to alarm clocks retailing at not more than $5 (title 26, U. S. Code, sec. 1650). At that time we were so fully preoccupied with war production that the industry felt little direct effect from these taxes. We noted the express provision in the revenue act that these were war taxes which would be automatically repealed at the end of 6 months after the termination of hostilities.

VE-day and VJ-day came and passed. On December 31, 1946, the President officially proclaimed the end of hostilities. Under the time limitation fixed in the 1944 revenue act these wartime excise taxes should have expired on June 30, 1947. But they did not. With an eye to the Government's fiscal position, the Congress adopted a resolution continuing excise taxes in effect indefinitely. The effect of this resolution was to change these onerous and discriminatory taxes from a necessary wartime expedient into an ordinary source of revenue.

That was over 4 years ago. The special wartime excises are still with us. Congress has not told us what "indefinitely" means, and when or whether we may expect relief from the excise-tax burden. It profoundly disturbs the clock and watch industry—and probably all others who are affected—to learn that the administration has asked that these selective and discriminatory excises be increased instead of repealed.

In brief, our industry's position is this:

(a) Excise taxes on clocks and nonjeweled watches should be repealed altogether.

(b) If not repealed, there certainly should be no increase in excises on these articles.

(c) If the Congress concludes that excise taxes on clocks and nonjeweled watches are not to be repealed outright, then the rates should be equalized in order to eliminate the confusion at the retail level which the present variable rates have brought about.

1. Clocks and inexpensive nonjeweled watches are necessaries which should not be subjected to discriminatory luxury-type taxes.

(a) *Necessaries.*—I want to show you examples of clocks and nonjeweled watches which are affected by the present excises. They are functional and utilitarian, designed for service and not for ornamentation. Manufactured of base metals, the clocks retail at from perhaps $2.25 for the simplest model to about $8 for the higher grades of ordinary clocks. Style models of the best quality may retail for much more. Standard models of nonjeweled wrist watches manufactured by this industry range in price generally from $3.98 to $14.95, with the bulk of sales centering around $5.95 to $9.95. Our pocket watches retail at even lower prices, from $2.25 to about $4.25.

These are all practical, commonplace, serviceable items of everyday use. The tempo of modern living makes all of us acutely aware of the demands of time, and more and more dependent on timepieces. In its special study entitled "Federal Retail Excise Taxes" (October 1947) the Treasury Department itself pointed out that "* * * most adults need some sort of clock or watch." The clocks and watches I have shown you are sturdy, accurate, and dependable, but are inexpensively priced to meet the limitations of the average purse. They are primarily designed and primarily used as timepieces, and are obviously not in the jewelry class. Nearly everyone uses an alarm clock to awaken him in the morning. No housewife could operate her kitchen or regulate her household without the help of clocks. Every office, shop, factory, school, and laboratory is dependent on clocks and watches for efficient operations. Watches are of vital importance in all forms of transportation; even every bus driver and streetcar operator needs one in order to follow his carefully timed schedule. To bring it still closer home, I doubt that there is a person in this room who is not wearing or carrying a watch. It is indispensable to his activities.

World War II showed just how essential alarm clocks are. In April 1944 the Office of Civilian Requirements made a survey to determine what essential civilian goods were in short supply. It found that of all the items surveyed clocks were in greatest demand. Nearly 12 million families were in immediate need of alarm clocks. It also found that the greatest majority of families attempting to buy alarm clocks suffered real hardship and inconvenience because they could not be obtained. As a result the War Production Board issued a special order [1] authorizing the production and distribution of new alarm clocks. The preamble to this order read in part as follows:

"The fulfillment of requirements for defense of the United States has created a shortage in the supply of alarm clocks and materials and facilities for producing them; and the following order is deemed necessary and appropriate in the public interest and to promote the national defense."

---

[1] Limitation Order L–275, issued April 14, 1944, reported in vol. 9, Federal Register, No. 76, April 15, 1944, pp. 4008–4009.

There follows the authorization to produce a substantial volume of alarm clocks in the very midst of an intensive war-production program.

The same situation developed in the next year, 1945, when a further survey was made by the Office of Civilian Requirements. It disclosed an undiminished demand for alarm clocks, and continued hardship and inconvenience to the civilian economy because they were not available. The shortage was considered so critical that scarce materials were allocated for the production of alarm clocks. In its press releases of March 16, 1945 (No. 7524) and of May 22, 1945 (No. 8100) the War Production Board said:

"Despite tightening of the copper and steel supply, alarm-clock manufacturers are expected to be allocated sufficient material in the second quarter of 1945 to produce as many clocks as they can make without using facilities or manpower needed for war production in their plants * * *.

* * * * * * *

"In alarm clocks, for example, the Nation's buying intentions, if supply were ample, showed a walk in (demand) of 12,580,000 as against a demand for 12,-425,000 reported a year ago in a similar Office of Civilian Requirements survey. The extent of the shortages in the 12 articles is shown by the experience of families that actually tried to buy them in the first quarter of 1945. *The percentage of families reporting real inconvenience or hardship from their inability to purchase is just about the same for the corresponding items as it was a year ago. This percentage is the highest in window screening (70 percent), alarm clocks (71 percent)* * * *." [Italics supplied.]

Peacetime needs for clocks and watches are relatively no less acute than those of wartime. Our entire economy is geared to time, and personal timepieces are indispensable tools to every individual.

(*b*) *Not luxuries.*—Many years ago clocks and watches were distributed largely by the jewelry trade, as they had facilities for servicing the product. Clocks and watches were then perhaps logically put in the same category as jewelry. Thus it came about that they were classified with totally dissimilar items under the heading "Jewelry, etc." (sec. 2400) for excise-tax purposes. Other items grouped in this section include jewelry, pearls, precious stones, opera glasses, and lorgnettes. The same excise tax is applied to all of these articles. But how can you justify taxing a workingman's base metal pocket watch on the same basis as pearls and precious stones? What kinship is there between a lorgnette and a kitchen clock? None, so far as I can see, except that the same luxury-type tax is imposed on both.

The clocks and nonjeweled watches which I have exhibited to you are not luxuries by any stretch of the imagination. It is absurd to put this nearly 2-foot-wide electric wall clock, set up for the public's convenience, in the same class as a flawless pearl for tax purposes. But that is exactly what has been done; even this alarm clock and a perfect blue-white diamond are both "Jewelry, etc." for excise-tax purposes.

In classifying articles for excise-tax purposes Congress evidently adopted the Census Bureau grouping, which at the time included clocks and watches with jewelry items. Prior to 1950 the Census Bureau's classification of manufacturing activities listed "Watches and clocks" in a miscellaneous list (list No. 17) of product classes with "Jewelry and silverware" and other items. But beginning with its 1950 Annual Survey of Manufacturers, the Bureau has transferred watches and clocks to a new classification (list No. 16) entitled "Instruments; photographic and optical goods; watches and clocks." (See the pamphlet of instructions accompanying form MA-100 for the 1950 Annual Survey of Manufacturers.) Similarly, the 1950 edition of the Statistical Abstract of the United States lists watches and clocks under the classification, "Instruments and related products" and not under the "Miscellaneous manufactures" which includes jewelry.

I submit that Congress ought to reexamine its classifications of items selected to carry the special burden of excise taxes. Clocks and watches are basic implements of everyday use which do not belong in any of the excise-tax classifications. Specifically, they are not "jewelry" and should not be taxed as such. To put it in other words, an ordinary article should not be subjected to an extraordinary tax when like articles are not similarly taxed.

(*c*) *Discrimination.*—It follows that the excise tax is discriminatory because it applies to clocks and watches but not to other items of like character and of no greater essentiality. Our industry is penalized while others are favored by the unequal and illogical application of the tax.

In his special message to Congress early this year on the subject of new revenues the President said:

"I recommend, third, increases in selective excise taxes to yield 3 billion dollars. Under present circumstances, *these increases should be concentrated upon less essential consumer goods*, and upon goods that will be in short supply." [Italics added.]

It was proposed by the Treasury Department, however, that, among others, excises on clocks and watches should be increased. Any such increase would greatly aggravate the already unjustified discrimination against our products and our industry. The House of Representatives did not increase the rates in its bill, and we urge that the Senate should not under any circumstances consider an increase.

Comparisons are always invidious, and I will not list the many articles which are less essential than clocks and watches—or no more essential—and which are not burdened with Federal excise taxes. It is glaringly inequitable to select ordinary timepieces as the objects of taxes out of a great many other necessary items which remain untaxed.

I cannot refrain from pointing out that clocks and watches are, after all, useful measuring devices. Their important function is to measure time. But there is, to my knowledge, no other measuring device on which the Congress has levied excise taxes. Thermometers to measure temperature, scales to measure weight, rulers to measure distance, ammeters and voltmeters to measure electricity—even jiggers to measure whisky—all are exempt from excise taxes. Even the clock's primitive antecedent, the hourglass, enjoys freedom from Federal excises. Some of these tax-free articles are highly ornamented. But the practical, workaday, inexpensive clock and watch bear the full brunt of excise taxes.

I have had a photograph prepared which is attached to this statement. It illustrates what I have just pointed out—that clocks and watches are the only measuring devices on which excise taxes are levied. You will be interested in the display of a desk barometer and humidity recorder, a weather thermometer, a jigger for measuring liquor, a collapsible steel measuring tape, and other measuring devices which are not subject to the excise taxes which Congress has levied on mundane articles such as clocks and inexpensive watches. What distinction can be made in support of this discrimination?

The instances of other untaxed items—no more utilitarian or essential than clocks and watches, and many of them less so—could be multiplied manifold. They would only serve to emphasize the discrimination against our industry and our products, with the attendant problems of pricing and marketing.

We contend that Congress should give careful consideration to this situation, and should eliminate the discrimination by repealing excise taxes on clocks and watches.

2. Excise taxes are a special burden on the clock and watch industry

Our industry has experienced all of the typical problems and hardships which excise taxes have brought about. These—notably the curtailment of sales—have been thoroughly discussed by representatives of other affected industries. But we have one problem which we believe is peculiar to the clock-and-watch industry.

Our products are sold through a wide variety of outlets. Jewelry stores account for only a very small percentage of our retailers. Most drug stores, hardware stores, specialty shops, and even tobacconists and newsstands, have carried clocks and watches as standard merchandise. In some instances, particular stores have stocked no other article on which an excise tax must be collected. In other cases only a few such articles have been carried in stock. We have found instances where retailers are discontinuing the sale of clocks and watches. They are doing so because of the trouble and expense involved in collecting and remitting the tax on a few items and keeping the necessary records, and because of mistakes on the part of sales clerks. The result is that we have lost retail outlets solely because of the fact that our products are subject to an onerous excise tax. We are seriously concerned with such incidents because they suggest the possibility of a trend which might impair our facilities for retail distribution, primarily because of the effect of excise taxes.

This situation also illustrates again, and perfectly, the point which I made earlier in this statement—that so far as clocks and watches are concerned excise taxes are harmfully discriminatory and ought to be repealed.

3. The differential in excise-tax rates should be corrected

Originally, the excise-tax rate, under the 1941 Revenue Act, was 10 percent on all clocks and watches. In 1944 the rate on clocks was increased to 20 percent, except that alarm clocks retailing at $5 or less continued to carry a 10-percent tax. These are the rates which are in effect at this time. They have produced untold confusion at the retail level.

Under these rates an alarm clock retailing at $4.95 carries an excise tax of 10 percent, or 50 cents, and sells for a total price of $5.45. An ordinary clock without an alarm—such as an electric kitchen clock—also priced at $4.95, carries a 20 percent tax, or $1, for a total of $5.95. Here are two clocks, both with the same $4.95 price tag, on which the sales clerk must collect different amounts from the customer. The opportunity for confusion is evident, and it is not surprising that retailers are continually plagued with sales errors.

To make the situation worse, an alarm clock priced at $5.50 carries a 20-percent tax of $1.10, and a total price of $6.60, as against a 10-percent tax of 50 cents on a $4.95 alarm and a total price of $5.45. We have no doubt but that errors in collection of the tax have occurred in a large percentage of sales.

In another aspect the same problem presents a headache for the manufacturer, since in repricing an alarm clock he must have regard to whether it will move from the 10-percent excise-tax bracket into the 20 percent bracket.

We strongly request the committee and the Congress to eliminate this disparity in excise-tax rates. If it is decided that excise taxes must be continued as to clocks, only one rate should be applicable; it should be 10 percent on all clocks, instead of 10 percent on some and 20 percent on others. We ask that the committee give special consideration to our request on this point. If it is not deemed possible to repeal all excises on clocks, then we urge that the present law be amended to make the same rate of tax, to wit, 10 percent, applicable to all clocks of every type and price.

CONCLUSION

Summarizing the points I have made, in the first place clocks and inexpensive nonjeweled watches do not properly belong in the excise-tax structure at all. They are necessaries, and in no sense luxuries or "jewelry, etc." The excise tax has been described as "selective," but it is in fact indefensibly discriminatory against clocks and watches and the industry which produces them. It is an especially troublesome burden which we and our products should no longer be required to carry. We insist, therefore, that as to clocks and watches excise taxes should be entirely repealed; to consider an increase, as proposed by the Treasury Department, would be unthinkable.

Finally, if continuance of excises is unavoidable, it is our position that the confusion arising out of the existing double rate on clocks should be eliminated. There should be only one rate of tax applicable to clocks; that rate should not in any case exceed 10 percent, and the present law should be amended accordingly.

On behalf of Clock Manufacturers Association of America I urge the committee to repeal excise taxes on clocks and nonjeweled watches and thereby to relieve our industry of the special problems which they have created.

Senator BYRD. The Chair desires to put two insertions in the record in lieu of appearances, one from Mr. Floyd E. Jacobs, general counsel for the American Reciprocal Insurance Association, and one from Lester Smiley, of the American Chicle Co., of Long Island City, N. Y.

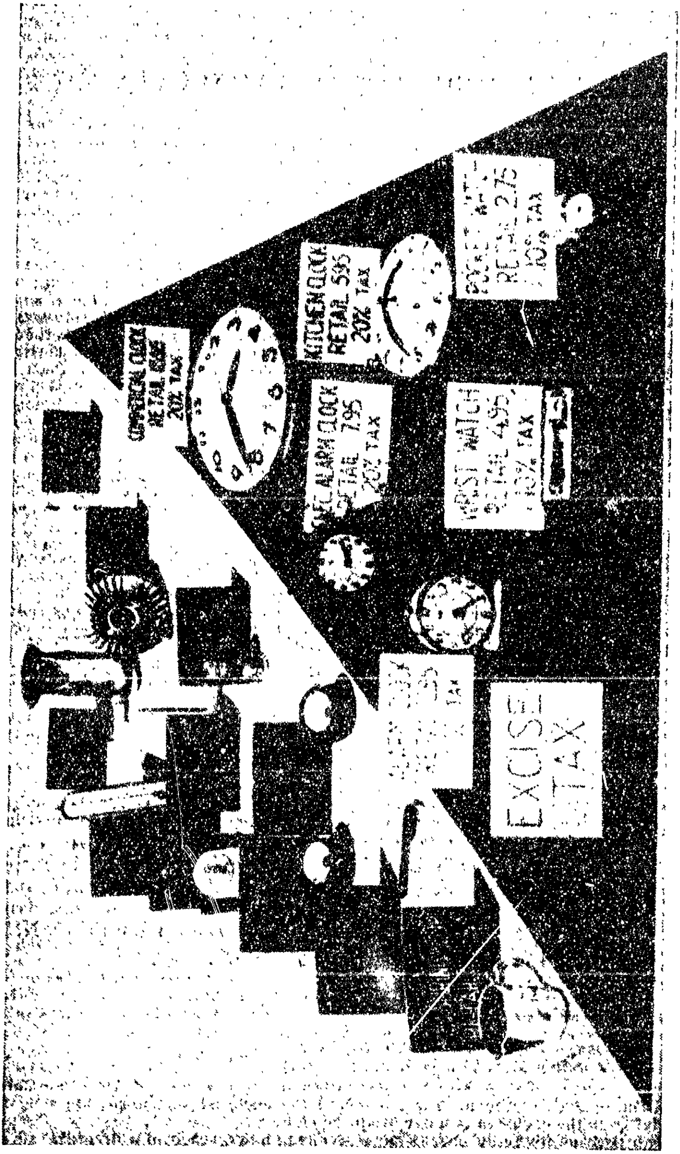
(The statements referred to are as follows:)

AMERICAN CHICLE CO.,
Long Island City, N. Y., July 31, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington 25, D.C.
(Attention Miss Elizabeth B. Springer.)

HONORABLE AND DEAR SIR: I respectfully request on behalf of American Chicle Co. the opportunity to file for the record the enclosed statement, applying for relief from the excise tax on our product Sen-Sen.

Our petition for relief has, as our statement shows, received a favorable report from the Treasury Department which indicates not only that our product has been discriminated against, as contrasted with similar products in its field, but



COMMERCIAL CLOCK
20% TAX
ELEC. ALARM CLOCK
RETAIL 7.95
20% TAX
KITCHEN CLOCK
RETAIL 5.95
20% TAX
WRIST WATCH
RETAIL 4.95
10% TAX
RETAIL 2.75
10% TAX
EXCISE
TAX

also that administrative difficulties would be greatly decreased if the tax were removed. In view of the fact that the House Ways and Means Committee has twice favorably acted upon this matter, we did not feel justified in asking time from your committee, but request permission to file our statement so that the matter may come before you for consideration.

Thanking you for any consideration that you may be able to give this matter, I am,

Very truly yours,

L. H. SMILEY,
Brand Manager.

STATEMENT OF LESTER H. SMILEY, OF THE AMERICAN CHICLE CO., OF LONG ISLAND CITY, N. Y.

My name is Lester H. Smiley and I reside in Jackson Heights, New York City. I am the brand manager of American Chicle Co., of Long Island City, N. Y., manufacturers of Sen-Sen confection.

We respectfully ask that the excise tax on Sen-Sen be repealed for the reasons that —

(1) Sen-Sen is being actually discriminated against in its own field.
(2) The loss of revenue would be negligible.
(3) The Treasury Department offers no objection.

Under the present Internal Revenue Code in section 2042 (a) the words "aromatic cachous" are interpreted by the Internal Revenue Bureau as including our product Sen-Sen. An "aromatic cachou" is technically defined as a silver-coated aromatic pellet made of licorice, cashew nut, gum, etc., for sweetening the breath. Our product Sen-Sen is not silver-coated, but it is in pellet form and has a licorice base. I know of no product upon the market today, or which has been on the market within the 23 years of my experience, which meets the definition of aromatic cachou. My research indicates that there has been no such product on the market since the turn of the present century. The nearest approach to the definition is our product Sen-Sen.

The reasonablenes of our contention that the tax should be repealed is evidenced by the fact that in the Eightieth Congress the House of Representatives passed a bill, H. R. 958, introduced by Hon. Walter A. Lynch, of New York, a member of the Committee on Ways and Means, which granted us the relief requested herein. Unfortunately, the bill reached the Senate too late in the session for action by your body. Again, in the Eighty-first Congress, the Committee on Ways and Means took favorable action on our request and gave us relief under the tax-reduction bill passed by the House in 1950. Again we were stymied when the Korean outbreak occurred and the tenor of the tax-reduction bill was necessarily changed by the Senate to a tax-raising bill.

In connection with H. R. 958, which gave us the relief sought, the Committee on Ways and Means made the following favorable report:

[H. Rept. No. 934, 80th Cong., 1st sess.]

The Committee on Ways and Means, to whom was referred the bill (H. R. 958) to amend section 2402 (a) of the Internal Revenue Code, having considered the same, report favorably thereon without amendment and recommend that the bill do pass.

The purpose of this bill is to exempt aromatic cachous from the retailers' excise tax on toilet preparations. Under existing law a tax of 20 percent is imposed upon such articles sold at retail. Aromatic cachous include Sen-Sen and other breath-sweetening pellets other than chewing gum or candy. The other articles subject to the excise tax on toilet preparations normally are applied externally. Moreover, aromatic cachous frequently are sold in competition with confections which are not subject to tax. As a result, administrative problems have arisen which would be eliminated with but minor loss of revenue by deleting aromatic cachous from the scope of the tax. The following favorable report was received from the Treasury Department:

TREASURY DEPARTMENT
Washington, D. C., June 24, 1947.

HON. HAROLD KNUTSON,
Chairman, Committee on Ways and Means,
House of Representatives, Washington, D. C.

MY DEAR MR. CHAIRMAN: Further reference is made to your letter, dated May 13, 1947, enclosing two copies of H. R. 958 (80th Cong. 1st sess.), a bill to amend section 2402 (a) of the Internal Revenue Code by striking from that section the words "aromatic cachous.' You request comments and recommendations of the Treasury Department on this proposed legislation.

Section 2402(a) of the code imposes an excise tax upon the sale at retail of certain specifically named products, including perfumes, cosmetics, hair dressings, toilet powders, aromatic cachous, etc., and any similar substance, article, or preparation; any of which are used or applied or intended to be used or applied for toilet purposes.

All products enumerated under section 2402 (a), with the exception of aromatic cachous, are customarily used and intended to be used for external application, whereas aromatic cachous are designed to be placed in the mouth and eventually swallowed.

It appears that an aromatic cachou, being a silvered aromatic pellet made of licorice, cashew nut, gum, etc., for sweetening the breath, is more in the nature of nontaxable competitive products such as mouth washes, liquid breath sweeteners, candy mints, etc., which are advertised and used for sweetening the breath.

Insofar as aromatic cachous and the latter-named nontaxable products are used for similar purposes, a discrimination results from application of the retailers' tax to aromatic cachous.

The removal of aromatic cachous from the class of taxable products would tend to decrease the difficulties of administration and it is believed would result in a negligible loss of revenue. No objection is therefore offered by this department to enactment of H. R. 958.

The Director, Bureau of the Budget, has advised the Treasury Department that there is no objection to the presentation of this report.

Very truly yours,

A. L. M. WIGGINS,
Acting Secretary of the Treasury.

Another identical bill, H. R. 257, was introduced in the Eighty-first Congress by Representative Lynch. A report in substantially the same phraseology as the letter of Acting Secretary of the Treasury Wiggins of June 24, 1947, was received by Hon. Robert L. Doughton, chairman of the committee, from Thomas J. Lynch, then Acting Secretary of the Treasury, dated March 17, 1949. Upon the strength of these reports I am advised that the Committee on Ways and Means incorporated the provisions of Representative Lynch's bill, H. R. 257, into the general revenue bill of the Eighty-first Congress.

Speculating as to how the term "aromatic cachous" happened to appear in the toilet preparations section of the present law, we think it may have been continued, more or less by accident, after its first and possibly second appearance during the Civil and Spanish-American Wars respectively. We base this upon the following history of the appearance of this term, starting with an act of July 1, 1862, reading in part as follows:

"PERFUMERY AND COSMETICS: For and upon every packet, box, bottle, pot, phial, or other enclosure, containing any essence, extract, toilet water, cosmetic hair oil, pomade, hair dressing, hair restorative, hair dye, toothwash, dentifrice, tooth paste, aromatic cachous, or any similar articles, by whatsoever name the same heretofore have been, now are, or may hereafter be called, known, or distinguished, used or applied, or to be used or applied as perfumes or applications to the hair, mouth, or skin, made, prepared, and sold or removed for consumption and sale in the United States where such packet, box, bottle, pot phial, or other enclosure, with its contents, shall not exceed at the retail price or value the sum of twenty-five cents, one cent."

A similar stamp tax employing essentially the same language was imposed during the Spanish-American War by an act of June 13, 1898.

The next appearance of this tax was in the Revenue Act of 1917, then in the manufacturers' excise tax of 1932 and finally in the Federal excise tax of 1941 and 1944.

Originally, this tax was directed at imported breath-sweetening silvered pellets sold lavishly and often at fancy prices in phials and even in bulk form. In those days, there were a variety of products of this nature and all were taxed uniformly. Today, as stressed in Mr. A. L. M. Wiggins' letter, most items used for so-called breath protection are put up either in liquid or tablet form and thus do not fall within the meaning of the term "aromatic cachous." This results in a competitive disadvantage to our product Sen-Sen, which, to our knowledge, is the only product that is taxed under the present law. Sen-Sen is not a silvered aromatic pellet. However, it is in pellet form and is made with a licorice base and is perhaps the only product sold today that comes even close to the definition of the term "aromatic cachous."

Sen-Sen has always been sold principally at candy counters. Candy and cigar stores carry nothing other than Sen-Sen on which they are required to collect the Federal tax and thus this tax has had a crippling effect upon the retail distribution of the product, many stores preferring not to handle it at all rather than tabulate sales and fill out tax forms on Sen-Sen which is not important to their total business. Sen-Sen is a 5-cent product, making the amount of tax revenue derived therefrom more bother than it is worth to collect.

Candy and cigar stores in large numbers have discontinued the product and drug stores have removed it from the candy counter, where it belongs, to the cosmetic section where other taxable products are sold. The result has been that sales have suffered in relation to other products which we manufacture, by as much as 70 percent annually. The retailers who refuse to handle Sen-Sen or elect to display it in a department foreign to its nature are not prompted to do this because the tax is 20 percent, but because they refuse to be bothered collecting it. Hence a reduction in the amount of the tax would not rectify the situation under discussion. Outright elimination is all that will restore our product to its rightful competitive position.

Before departing from the history of the appearance of this term in excise-tax legislation, it should be pointed out that when it made its first appearance toothwash, dentifrice, and tooth paste were also embraced in the law, as were all perfumes applied to the mouth. The present law specifically names only products which are customarily used and intended to be used for external application, aromatic cachous—being interpreted as Sen-Sen—is the sole exception to this.

We trust that we have been able to establish to your complete satisfaction that the tax presently imposed on Sen-Sen—alone of all breath-sweetening products on the market—is (1) discriminatory against us and in favor of nontaxable breath-sweetening products; (2) that the loss of revenue will be negligible and (3) that the removal of this lone item designated as an aromatic cachou, would, in the words of the Acting Secretary of the Treasury Wiggins, "tend to decrease the difficulties of administration."

I wish to thank the committee for giving me the opportunity to present this statement.

Statement of Floyd E. Jacobs, General Counsel for the American Reciprocal Insurance Association

Reciprocal exchanges are taxed on the 1942 Revenue Act as amended in 1950, effective 1951, and in H. R. 4473 subparagraph (a) (3) of section 207. Section 207 related generally to the taxation of mutual insurance companies other than life or marine, and reciprocal exchanges are separately treated in the subparagraph above referred to.

In 1942 the Treasury Department made an independent investigation of reciprocal underwriting for the purpose of taxation, and as a result thereof the foregoing subparagraphs of section 207 of the internal revenue laws were enacted.

Reciprocal exchanges, under section 207, are taxed as such; however, a reciprocal exchange is not an entity, it is a mere place at which subscriber policyholders exchange, one with the other, contracts of indemnity. This is effected through the medium of an attorney in fact who acts under specific written terms of a power of attorney, or subscriber's agreement, signed by each individual subscriber policyholder, such attorney in fact acting specifically under such power of attorney for the subscriber policyholders. The subscriber policyholder at a reciprocal exchange is at once an insured and an insurer. A reciprocal exchange is not an insurer; indeed, it is not an entity and, therefore, cannot and does not own anything. It is a mere place at which the subscribers exchange contracts of indemnity.

There is no joint fund in the hands of the attorney-in-fact for subscribers at a reciprocal exchange. Each subscriber policyholder makes a deposit measured by the normal manual premium rates for the particular kind of fire and casualty insurance involved. This deposit is credited to the specific account of the depositing subscriber policyholder. Title remains in him and such deposit, at no time, becomes part of a joint fund. There is no joint liability on the part of the subscriber policyholder, but he authorizes his attorney-in-fact to pay out of his deposit his proportionate part of losses and expenses, and the remainder constitutes an unused deposit, or saving, to the specific depositing subscriber policyholder.

The subscriber policyholder who is an insurer, pays taxes on the moneys which he deposits and upon any interest earned on that money while in the hands of his attorney-in-fact. When he makes the deposit, if under the statute he is permitted to deduct same from his income-tax return as a reasonable business expense, and the expense of the year does not consume all his deposit so that he has an unused portion, or a saving, he is then required to list such unused portion and the interest earnings on his deposit in his tax return as an additional income.

Under section 207, the Reciprocal Exchange, though a nonentity which owns nothing and can own nothing, pays taxes upon investment earnings. We have no particular quarrel with this provision, although the reciprocal exchange does not own the money and pays taxes on such investment earnings upon which the insurer subscriber policyholder also pays taxes.

Section 207; part II, of H. R. 4473 recently passed by the House of Representatives, after extended hearings before the House Ways and Means Committee was insofar as its essential provisions are concerned, left undisturbed. There was some substitution by the repeal of subparagraphs A and B of section (a) (3) of 207 and in the reenactment of subparagraphs A and B some changes were made with regard to the substitution of percentages in one or two instances instead of references for returns to other sections of the revenue law. In addition thereto, in paragraph A originally, that is in the 1942 revenue act, there was a 48 percent tax rate provided. In the 1950 act, effective 1951, that percentage was raised to 50 percent, and in the present H. R. 4473 was increased to 60 percent.

In paragraph B relating to surtax, the 33 percent referred to therein was increased from 30 percent, as provided in the 1942 act, to 33 percent in the 1950 amendment, and so left in the present law.

Reciprocal underwriting with respect to volume of business is comparatively small. It constitutes only a very small percentage of volume of fire and casualty underwriting in this country. Since the insurers in reciprocal underwriting may be individuals, partnerships, or corporations, that is, the subscriber policyholders, it is technically impossible to tax them as an insuring corporate entity if the general theory of internal revenue taxation is followed, and it is certainly technically illogical to tax a reciprocal exchange, which is not an entity and which owns nothing.

Indeed, it was sufficiently inconsequential that no person making a statement either before the House Ways and Means Committee or thus far before the Senate Committee on Finance has mentioned reciprocal exchanges or their taxation.

This is particularly true, as hereinbefore pointed out, since the individual subscriber policyholders are paying taxes upon exactly the same money and more, upon which reciprocal exchanges are paying taxes; that is, the deposit made by the subscriber policyholder, as it came into the hands of such subscriber, was the subject of income taxation. If the subscriber was an individual then upon rates applicable to individuals, if a corporation then upon corporate rates.

Thus, taxes having been fully paid upon the money which represents a deposit, and then if interest is earned upon same while in the hands of the attorney-in-fact, that interest belongs to the subscriber and the subscriber pays taxes upon the same as well as upon any saving or unused portion of the deposit.

At the same time the reciprocal exchange which does not and could not have any ownership in the money, likewise pays taxes upon interest or investment earnings upon such money.

As stated, however, we have accepted without objection the revenue law as passed in 1942 and as since amended, and we now request that this honorable committee accept section 207 of part II of H. R. 4473.

When the Revenue Act was considered by the Ways and Means Committee it was decided by that committee and accepted by the House that section 207 of the internal revenue law, with the exception of the changes relating to increases in rates heretofore referred to, should be retained in the new H. R. 4473. That since the question of insurance taxation was highly technical the matter of insurance taxation should be and was referred to the staff of the Joint Committee on Internal Revenue for careful study and analysis, such investigation to begin this September. The wisdom of the Congress of the United States in creating the staff of the Joint Committee on Internal Revenue to investigate highly technical matters and reports its findings to Congress has been clearly established by past experience. Indeed, in connection with the passage of appropriation bills the Senate Committee on Expenditures has now, in recognition of the wisdom of creating a body for the investigation of technical matters in behalf of Congress, recommended passage of a bill sponsored by its chairman, Senator McClellan, creating a Joint Committee on the Budget composed of members of the House and Senate Committee on Appropriations and the Committees on Expenditures in the Executive Departments.

This creation would be a counterpart of the Joint Committee on Internal Revenue taxation and is a recognition of the value of the idea which prompted the creation of this latter staff.

Reciprocal subscribers at reciprocal exchanges, through their attorneys-in-fact, have filed a formal statement with the staff of the Joint Committee on Internal Revenue and with the Treasury Department, which is to act in conjunction with the staff in its technical study of insurance taxation beginning in September, a promise of the fullest cooperation.

At such time as the staff of the Joint Committee on Internal Revenue and the Treasury Department deems convenient, all information will be submitted to them concerning reciprocal underwriting.

May we then request, on behalf of subscribers at reciprocal exchanges, that section 207 of part II of H. R. 4473 be accepted by the Senate Committee on Finance pending the technical investigation heretofore referred to, to be begun in September by both the staff of the Joint Committee on Internal Revenue and the Treasury Department?

Senator BYRD. Mr. Hedges.

STATEMENT OF MERTLAND M. HEDGES, PRESIDENT, M. M. HEDGES MANUFACTURING CO., INC.

Mr. HEDGES. I am Mertland M. Hedges, president of the M. M. Hedges Co., of Chattanooga, Tenn., a small manufacturer of automatic water heaters for the home and farm. I have requested a hearing before your committee to recommend that the electric, gas, and oil-fired water heaters of the automatic-storage type be excused from the burden of an excise tax.

Senator KERR. What do you mean by "storage type"?

Mr. HEDGES. It is an insulated tank with automatic controls.

Senator KERR. To heat hot water for the bath?

Mr. HEDGES. Yes.

Senator KERR. I thought you had an——

Mr. HEDGES. It is for your bath, your washing——

Senator KERR. Yes, I know.

Mr. HEDGES. I have filed a brief with the secretary of your committee explaining in detail the reasons for this recommendation. I will not take your time to read this brief since your acting chairman has informed me that you are pressed for time. I appear before you only to present the following short summary and to answer any questions which may arise.

First: The water heater is an integral part and component of household sanitary and plumbing equipment. It is so recognized by the Department of Commerce, FHA, NPA, and the Federal Reserve Board in their regulations on consumer-credit restrictions. It is the source of hot water for personal cleanliness, sanitary food preparation, clothes washing, and the maintenance of health. It is basic for the bath, the shower, the sink, and the laundry. It is as important as the commode or the kitchen sink. It is not an appliance or luxury.

Second: There are two general types of equipment for heating water in the home or on the farm. The old combination of a range boiler with a furnace coil or bucket-a-day stove is inefficient in fuel consumption, unsatisfactory in delivery of water at proper temperature, and hazardous in design. The modern storage type of insulated water heater, fired by electricity, gas or oil, is dependable, safe, efficient, and uses the minimum of critical materials. Yet the range boiler, furnace coil and bucket-a-day stove are not taxed and the automatic type is taxed.

Third: The purchase of water-heating equipment, original or for replacement is mandatory and unavoidable. In new homes a water heater is as basic as wiring, piping, and central heating. A water heater failure necessitates almost without exception, a completely new piece of equipment. No one purchases a new water heater for reasons of obsolescence or appearance-design change any more than they put new pipes in a home until absolutely necessary. It is estimated that replacement requirements alone are now running at over 2½ million units per year.

In conclusion, I submit that an automatic storage-type water heater is a sanitary and plumbing-equipment item. It is the only modern, dependable and safe equipment for heating water and its purchase is unavoidable. Excise taxes are not applied on other plumbing items, not even on an obsolete design of water heater.

I submit, gentlemen, that it is inconsistent to conclude that plumbing equipment in general not be taxed except for the water heater. I further submit that it is not just to levy a tax on a piece of equipment essential to health which must be purchased by home owners without warning or choice. It must be remembered that the large majority of these home owners are in the low-income groups—those least able to pay the tax.

I greatly appreciate the time which you have allowed me and have been very honored to appear before your committee.

Thank you very much.

Senator KERR. Mr. Chairman, I notice he has attached a statement by Mr. Hedges. Do you want all of it in the record?

Mr. HEDGES. Yes, sir. The actual statement—in other words, I consider that first one I just read as a summary of the actual statement.

Senator BYRD. That will be inserted in the record.

(The statement is as follows:)

STATEMENT OF MERTLAND M. HEDGES, PRESIDENT, M. M. HEDGES MANUFACTURING CO., INC., CHATTANOOGA, TENN.

I am Mertland Hedges, president of a small company in Chattanooga, Tenn., making automatic water heaters, used almost entirely in homes and farms. I am a small-business man.

Although I am here to represent our company and its employees, I feel that I speak for the other members of the water-heating industry. There are approximately 120 manufacturers of automatic insulated water heaters scattered throughout the United States. These manufacturers produce almost 3,500,000 automatic water heaters a year. Most of them are also small manufacturers, employing less than 400 people. A tremendous number of small wholesale, retail, installation, and service organizations are dependent wholly or in part on water-heater sales, installation, and service. They are located in every city, town, and village throughout the entire United States.

First, I should like to invite your attention to the several ways in which water can be heated for use in the home or on the farm. Skipping over the obvious means of heating water by a kettle on the stove or a metal pot over a fire, we come to the system where a tank of water, called a range boiler in our trade, is heated by coils or linings in the furnace and other indirect methods. There is no tax on coils or linings or tanks. This system produces hot water during the home-heating season. Sometimes it is too cold, sometimes dangerously hot, and always it is a wasteful and expensive method. But when we combine this tank with a self-contained method of heating and add insulation for efficiency and automatic controls for dependably uniform temperature, then the product becomes subject to a 10-percent excise tax. Thus, there is a tax on the efficient self-contained water heater but no tax on competitive and less-efficient means of heating water.

Few people realize the fuel and labor saved by the automatic insulated water heater. Currently a great deal is being said about the necessity for conserving fuel. It has been definitely established by research laboratories that water-heating systems such as furnace coils and the usual uninsulated range boiler soak up one-seventh of the fuel used. If you use coal as your fuel, one shovel in seven goes to heat water. If you use gas or fuel oil, that same one-seventh of your fuel goes to heat water under this obsolete and inefficient system.

The automatic insulated water heater is far more efficient and uses much less fuel. It is thoroughly insulated. It is designed to put the maximum amount of generated heat into the water and hold it there.

There is another great conservation angle to the automatic water heater. That angle is the time and labor saved. One of our industry's slogans is that you can install an automatic water heater and forget it. It will provide water at just the right temperature at the turn of the faucet at any hour of the day or night.

If you do not have an automatic system for heating water and maintaining it at the proper temperature, you waste a lot of time, fuel, and labor. For example, consider a farmer who must have hot water in his dairy barn in order to produce sanitary milk. To get the required hot water he has to fire up a boiler or monkey stove, fuel it, clean it, and waste a lot of time every day. Even then the water may be too hot or too cold for efficient use. Or picture the mother who needs hot water to keep her baby clean and healthy. If she has a monkey stove in the basement, it means constant trips up and down stairs, dust, soot, ashes, cleaning the basement and herself in addition to cleaning the baby. And again she will get water that is too hot or too cold, seldom just right.

Thus, it is our viewpoint, and I believe that you can readily agree, that providing adequate hot water of dependably uniform temperature is an American necessity. It has become as much a part of American sanitary plumbing as the water pipe which brings in clean water, the toilet, wash bowl, tub, shower, or sink, or the soil pipe which takes waste water away.

There is no excise tax on water pipe, no excise tax on toilets or wash bowls, no excise tax on tubs, shower, sink, or soil pipe. The only part of our basic plumbing and sanitary system which bears an excise tax is the automatic water heater. If you heat water for your home in a wasteful, inefficient, and unstable manner through a furnace coil and range boiler there is no excise tax. But when you add efficiency, economy, convenience, and 24-hour-a-day dependable uniformity of temperature, you have a product which is taxed. From our viewpoint, this is inequitable.

Excise taxes appear to have been applied to automatic water heaters because they were, for tax purposes, considered to be appliances. There are several compelling reasons why water heaters should not be classed as appliances for tax purposes.

On this point, please consider the fact that it is a normal custom, in selling a home, for the seller to remove his furnishings and appliance, but his water heater is considered an integral part of the plumbing and is not removed.

Many divisions of our National Government have agreed with the viewpoint which I am presenting on behalf of small-business men.

The Department of Commerce, Bureau of the Census, publishes statistical facts for industry. These statistical facts are presented by product groups. In this Department of Commerce compilation of figures, water heaters are not grouped with appliances. Water heaters are grouped with range boilers and hot-water-storage tanks, which are competitive but untaxed ways to heat water. We submit that this is the proper grouping.

Regulation W was enacted by the Federal Reserve Board to control credit terms. Regulation W applies to appliances. It does not apply to water heaters. We submit this fact as further evidence that water heaters are a necessary part of our sanitary system and not an appliance.

Under the Defense Production Act which you gentlemen passed in 1950, the National Production Authority, through its controlled-materials plan, has allocated scarce materials. Under this plan, materials for appliances have been cut back but materials for water heaters have been specifically provided. Again, this is an example of Federal recognition of the fact that the water heater is a basic plumbing and sanitary essential and not an appliance.

One of the purposes of the excise tax is sometimes stated as a measure for controlling the consumption of critical materials in short supply. Since materials for water heaters are provided under CMP, it is evident that the excise tax on water heaters cannot properly be defended on the basis of controlling the consumption of materials.

Another stated purpose of the excise tax is to reduce the consumption of "those consumer goods which are less essential or are classified as luxuries." It is estimated that for necessary replacement alone, 2½ million units will be required this year.

As further emphasis on the point of basic necessity, I suggest that we consider briefly some of the uses of water heaters.

Many States have laws which require that adequate hot water be available at all times for employees handling food. This law has caused the installation of water heaters in countless small food businesses, including lunch stands, restaurants, and grocery stores. Hot water is thus, by law, a necessity.

Hot water is virtually a necessity for every farm. Milking, for example, under accepted sanitary codes, requires hot water of a dependably even temperature. That is one reason why so many water heaters are being installed on American farms. If this Nation is to have the abundant and clean, safe food it requires, then tools must be made available to our farmers with minimum handicap of discriminatory excise taxes applied to their working tools. Definitely, the modern farmer knows that a water heater is a necessary tool in his business.

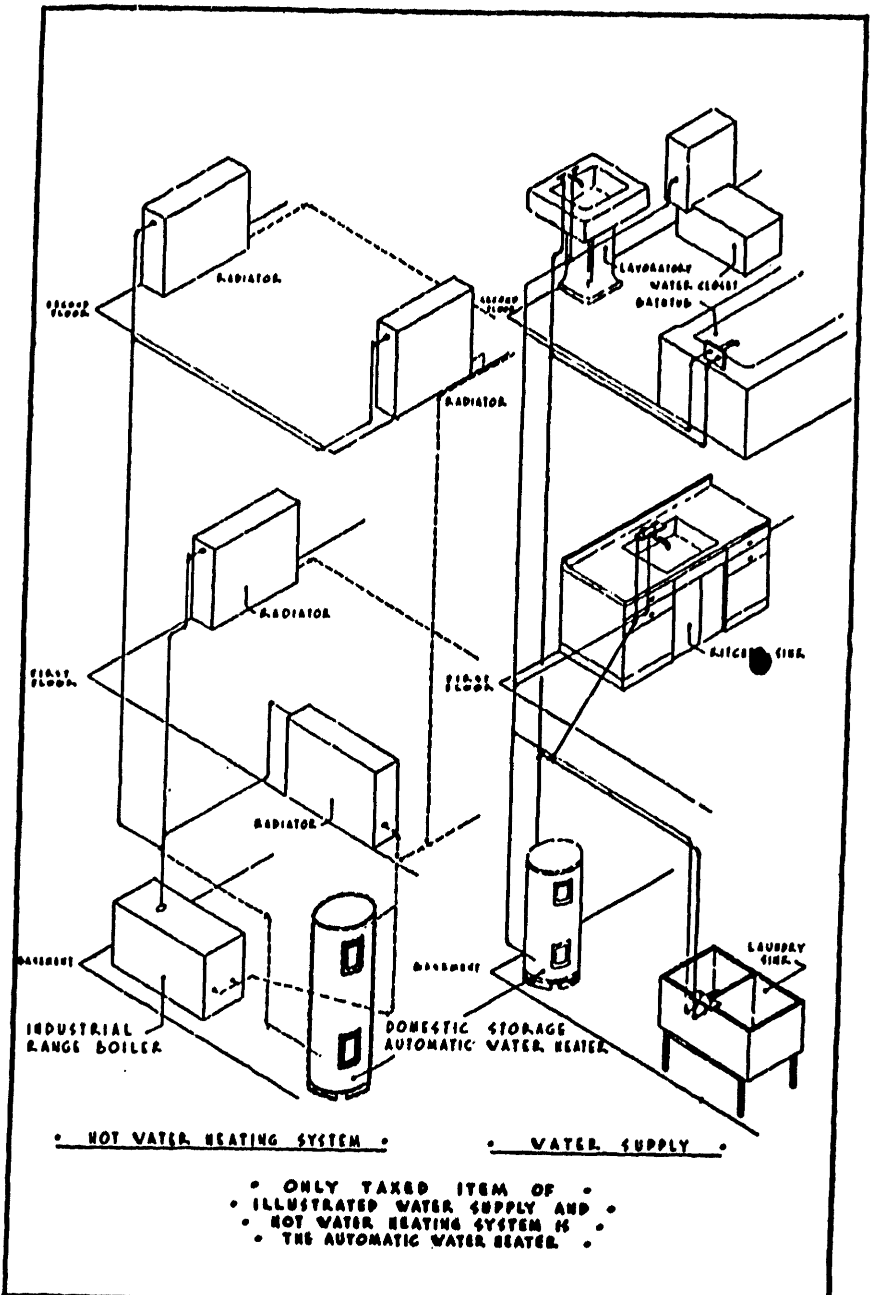
And if you gentlemen still do not agree that water heaters are a basic household necessity, I beg that you will individually assume for 24 hours the care of a home with small children in it. The mothers of America have of necessity learned to do without many things. But every mother will place the water heater high up on her list of absolute basic necessities.

And have any of you gentlemen faced sickness or accident in a place where hot water was not available? Have you ever had sickness in your family in the small hours of the night and found no hot water available? Yet the excise tax on water heaters bears most brutally on our low-income families. Our low-income families have the largest number of children, the greatest need for water heaters. The excise tax withholds this basic necessity from lower-income families.

You gentlemen have provided special consideration for mothers and farmers in many bills. Taxes on baby powder and baby oils have been withdrawn. It seems evident that hot water is a necessary tool for farmers * * * and certainly is a basic necessity for healthy and happy babies.

I hope that these thoughts which I present as a representative of a considerable group of small-business men will lead you to agree with us that water heaters are a basic part of our American plumbing and sanitary system and thus not within the scope of the excise tax.

Please see next page for schematic drawing for typical plumbing arrangements in the home.



Senator BYRD. Mr. Muhlbach, of the Institute of Cooking and Heating Appliances.

STATEMENT OF WALTER F. MUHLBACH, PRESIDENT, THE INSTITUTE OF COOKING AND HEATING APPLIANCE MANUFACTURERS

Mr. MUHLBACH. Mr. Chairman, in accordance with your request, Mr. E. A. Lindemann, who was scheduled to follow me as president of the A. J. Lindemann & Hoverson Co., will not present his brief, nor will I read the brief that we have prepared.

Senator BYRD. Do you have Mr. Lindemann's brief to include in the record?

Mr. MUHLBACH. Yes, sir; it is available here.

Senator BYRD. All right, sir.

Mr. MUHLBACH. My name is Walter F. Muhlbach. I speak on behalf of approximately 150 manufacturing members of the Institute of Cooking and Heating Appliance Manufacturers, of which I am president and of which my company is a member.

In 1942 a 10 percent excise tax was placed on cooking stoves, using oil, gas, and electricity as a fuel, and on water-heaters.

That was an emergency tax designed primarily to restrict the manufacture of these appliances.

The Secretary of the Treasury, Mr. Snyder, has recommended an increase from 20 to 25 percent. We are appearing, not only to protest the increase, but to request a repeal of the original 10 percent tax.

Now, without going into detail, the details which we have included in the brief, I would like to show you, and ask your attention to a chart which I have supplied the members of the committee in smaller form.

This chart presents sales of all types of stoves in 1950. The straight line is the average monthly sales in 1937, a year in which there was an amount of unemployment, of about 5 million. The solid black line represents the monthly sales of 1951.

Now, the most startling thing about that chart as a whole is not the fact that what has happened in 1951 is that sales are below the level of the depression years, but what I consider the most important aspect of this chart—I am not a magician, but if you will look at this chart with your mind as well as your eye, this line will appear to be below this one because, keep in mind, there are over 10 million more families today than there were in 1937.

The disposable income has gone up nearly three times what it was in 1937.

Senator KERR. What is the total number of family units today?

Mr. MUHLBACH. Between 44 million and 43 million. There were a little over 33 million in 1937.

Senator KERR. What is the source of that information?

Mr. MUHLBACH. The Census Bureau.

Senator KERR. 44 million today?

Mr. MUHLBACH. Yes, sir.

Senator KERR. 33 million in 1937?

Mr. MUHLBACH. That is right. 33,285,000 in 1937, 43,468,000 in 1950, an increase of somewhat over 30 percent.

Senator KERR. In 13 years?

Mr. MUHLBACH. Yes. Disposable personal income has gone up from a little over 71 billion to over 204 billion.

In 1937 there were 336,000 homes, nonfarm dwelling units built. In 1950 there were over a million more, 1,396,000. The number of homes constructed in 1950 was more than four times the number constructed in 1937.

The number of stoves of all kinds sold in 1950 was only 25 per cent higher than in 1937.

Senator KERR. How do you account for that?

Mr. MUHLBACH. There are a number of reasons for it, but we are convinced that one of the major reasons is the fact that stoves are now, for reasons beyond our control, considerably more expensive than they were in 1937.

The average gas range in 1937 had a retail value of approximately $75. The average price today is about $150.

Senator KERR. All these homes have something in them that they cook with, do they not?

Mr. MUHLBACH. That is right, but stoves wear out and stoves are improved.

The average stove today is a much different type of cooking appliance than it was even 10 years ago.

Senator KERR. What I am trying to figure out is how 1,433,000 family units built in 1950——

Mr. MUHLBACH. That is right.

Senator KERR. How many stoves were sold?

Mr. MUHLBACH. There were a total of 5,000,000 stoves sold in 1950, because the largest market for stoves is the replacement market; stoves wear out, they become obsolete. We estimate that the average gas range has a usable life of approximately 15 years. If a stove is used beyond its life it introduces a hazard.

Senator KERR. Now, if there are 44 million units and you sell 5 million, that is 11 percent—that is about a 9-year life.

You have the problem of a million and a half of them in new homes.

Mr. MUHLBACH. Yes, sir. Also there has been a definite trend away from the old coal and wood stove, which is no longer usable in many types of homes. The Government itself has tried to encourage through REA the substitution of electric ranges for coal.

Senator KERR. These figures you represent to us do not include the electric stoves?

Mr. MUHLBACH. These are stoves of all fuels—electricity, gas, wood, coal, and oil.

Gentlemen, Sunday I passed with my family through the little town of Plymouth, Mass. We stopped to examine a reproduction of one of the first homes built by the Pilgrims.

I was interested in observing nothing in that home that was not absolutely essential, but basically there were only two items in that home.

There was a bed on which the householder rested after working to produce or to find his food, and a place in which that food could be prepared.

Those are the two essential items.

Today the bed is not taxed, but the stove is.

Senator BYRD. It is not a new tax, is it?

Mr. MUHLBACH. This is a tax that has been in existence since 1942.

The first kitchen I recall, my mother's kitchen, had no kitchen sink. It had no water heater. It had a table and a cupboard and a stove. There is nothing, we submit, more essential, than the cooking stove in the kitchen. In fact, there is no reason for a kitchen unless you plan to prepare food in it. The stove is the most essential of any household appliance, and that is one of the few items that are subject to excise tax. You do not tax the food, but you do tax the stove.

It appears to us entirely illogical. The tax is discriminatory. We are not today helping the average American maintain the same standard of living that he enjoyed in 1937.

We are not replacing the stoves in use that are now over-age at the rate that we were producing and replacing during the latter half of the depression of the thirties.

We urge, as strongly as we know how, that you not only do not increase the tax on stoves, but that you repeal the present tax and if you find it necessary to continue a consumption tax, that you place a tax on all products on an equal basis.

Thank you very much.

Senator BYRD. Thank you very much, sir.

(The statements of Mr. Muhlbach and Mr. Lindemann are as follows:)

STATEMENT BY WALTER F. MUHLBACH, PRESIDENT, THE INSTITUTE OF COOKING AND HEATING APPLIANCE MANUFACTURERS, AND DIRECTOR, DISTRIBUTION AND RESEARCH, THE FLORENCE STOVE CO., GARDNER, MASS., REPRESENTING PRODUCERS OF ELECTRIC, GAS, AND OIL COOKING AND WATER HEATING APPLIANCES

Mr. Chairman and members of the Finance Committee, my name is Walter F. Muhlbach and I speak on behalf of the approximately 150 manufacturing members of the Institute of Cooking and Heating Appliance Manufacturers, of which I am president, and of which my company, the Florence Stove Co., is a member.

The manufacturers in the institute produce electric, gas, and oil appliances for cooking and water-heating purposes. These appliances are currently subject to a 10-percent excise tax under section 3406 (a) (3) of the Internal Revenue Code. Secretary of the Treasury John W. Snyder, in his statement before the House Ways and Means Committee on February 5 of this year, recommended, among other things, that the tax on these appliances be raised from 10 percent to 25 percent of the manufacturer's selling price, a raise of 150 percent. The House, recognizing the fallacy of this discriminatory tax on a prime necessity of life, refused to increase the 10-percent rate, but did not recommend the complete repeal of the tax, which we urgently request your committee to do.

The trade association for which I speak represents about 80 percent of the productive capacity of the cooking and water-heating-appliance industry in the United States. This industry operates in 28 States and employs over 100,000 persons. The sale of our products also gives work to a tremendous number of employees in an estimated 5,000 distributor and 85,000 dealer establishments. For the most part the industry is made up of small individual enterprises employing less than 500 persons.

It is grossly unfair to the American public and to the manufacturers of the most essential of all household appliances to impose even a 10-percent tax on gas-, electric-, and oil-cooking appliances and water heaters, and immeasurably worse to consider increasing that tax.

Briefly our position is this:

1. Cooking ranges and water heaters are the most essential of all household appliances. A tax on them is in effect a tax on food and bodily comfort, a tax which no Congress can afford to impose.

1. The tax is discriminatory because it does not apply equally to all kinds of consumer goods. Both durable and nondurable goods are in competition with each other. When Congress imposes an exorbitant tax on the purchase of one commodity and fails to tax all other consumer goods, it is not necessarily restricting the total of consumer purchases. It is simply diverting the purchase from one type of product to another, perhaps less essential. You will not have aided the fight against inflation, nor helped to solve the fiscal problem of the Government, since a substantial part of the planned purchases of taxed items will merely be diverted to the purchase of untaxed items.

3. The suggestion made by Secretary Snyder that excise taxes could be used as a weapon for conserving materials is improper. Material conservation is now

effectively handled through NPA orders and is not a function of tax legislation nor does his proposal give due consideration to the relative essentiality of various products.

4. Secretary Snyder has estimated that $425,000,000 in additional revenue would be derived from the tax which he proposes on consumer durable goods. We question the accuracy of that estimate for two basic reasons:

> First, NPA curtailment orders already issued have restricted production of these items at least 35 percent from recent levels, with sharper cut-backs still to come, and
>
> Second, the high rate of the tax after it is pyramided in the channels of distribution, has proved a distinct sales deterrent and will, in my opinion, further reduce sales of the taxed items.

5. The discriminatory nature of the proposed tax will disrupt competitive conditions in the affected industries and threaten employment and business solvency. Congress in passing the Defense Production Act of 1950 wisely took precautions to avoid, as far as possible, a defense-mobilization program which would unnecessarily or arbitrarily convert the American system into a planned economy. Rather, you specifically charged the defense agencies with the responsibility of giving consideration to the needs of business, particularly of small business, and of the civilian economy.

6. The excise tax has drastically restricted the American people from acquiring cooking stoves at a rate sufficient to maintain even the standard of living which prevailed in the depression period of the late thirties.

A brief examination of the attached chart will indicate the sharp decline in cooking-stove sales in recent months—a decline much greater than planned by the National Production Authority when controls on scarce metals were imposed. Although stove sales in 1950 appear greater than in the prewar period, actually they were lower in relation to the needs of the American consumer when you remember that the number of homes has increased more than 30 percent, general standards of living have risen sharply, and financial ability to buy is greater than in the late thirties when we still had a high degree of unemployment.

7. The postponement of the purchase of a new cooking range or water heater to replace a worn-out appliance may result in actual hazard to health and property.

8. Even veterans' and Government-subsidized military housing projects are burdened by this tax.

9. The cost to the public of a pyramided manufacturer's tax is prohibitive. Tax authorities agree that any tax is bad if it bears most heavily on those least able to pay, or if the cost to the taxpayer is out of proportion to the net return to the Government. In our presentation to congressional committees last year, we pointed out that the consumer in 1949 paid approximately $86 million as a result of the excise tax on gas, electric, and oil appliances, although the Government received only $50 million in revenue. In other words, consumers paid approximately 72 percent more than the Government collected.

No excise tax should ever have been imposed on cooking ranges and water heaters. They are essential to life and bodily comfort. They are not luxuries. We therefore again request the repeal of section 3406 (a) (3).

Our positive proposals to meet the temporary emergency fiscal needs of the Government include:

1. That an emergency tax be imposed at the lowest possible rate on all manufactured consumer goods, except food and medicine. This emergency tax could be in addition to excise taxes, which have traditionally been imposed on such products as alcohol and tobacco.

2. That this emergency tax be imposed on a year-to-year basis so that Congress will have an opportunity to reconsider the amount of revenue needed for each fiscal year. It will thus be possible for Congress to permit the tax to expire at the end of any fiscal year when the tax revenue is no longer urgently needed.

The tax on cooking- and water-heating appliances imposed in 1941 as a conservation measure on scarce metals, continued in a postwar period when production should have been encouraged, not discouraged. The same mistake must not be made again. The House's repeal action last year recognized the validity of that statement.

3. That the need for increased revenue be held to an absolute minimum by careful study of the Federal budget to effect all possible savings and by more widespread adoption of the efficiency and economy measures proposed in the report of the Hoover Commission. All items in the nondefense budget not essential to the times should be eliminated and all extravagances taken out of

the military appropriations so long as the economies do not affect the strength of our military machine.

By substituting an emergency tax on all manufactured consumer goods, for the present selective and discriminatory excise tax, the Government will be able to collect the $3 billion in additional revenue which the administration says is required, and at the same time spread the burden more broadly and more equitably. If Congress should determine that the emergency tax be imposed at the manufacturing level rather than at the retail level a specific provision should be written into the law that the tax must be passed along without mark-up so that the consumer will be paying only the exact amount of the tax collected by the Government.

In conclusion and summary, we request that the present excise tax on gas, electric, and oil appliances be repealed, and the needed revenue be raised by an emergency tax on all manufactured consumer goods, except food and medicine, at the lowest possible rate.

We have appreciated this opportunity to present our case to you again and shall be glad to supplement this brief either by answering questions from committee members or by submitting further written statements upon request.

STATEMENT BY EUGENE A. LINDEMANN, PRESIDENT, A. J. LINDEMANN & HOVERSON CO.

Mr. Chairman and members of the Finance Committee, my name is Eugene A. Lindemann, and I am president of the A. J. Lindemann & Hoverson Co., of Milwaukee, manufacturers and sellers of electric ranges, electric water heaters, kerosene stoves and ranges, household refrigerators, and freezers.

On February 20, 1950, I appeared before the House Ways and Means Committee to urge the repeal of the 10 percent manufacturer's excise tax, particularly as it, at that time, related to cook stoves and water heaters. The arguments given in favor of repeal then are still valid arguments, and they are made in detail on page 1838 of the record of the proceedings of the Ways and Means Committee in those hearings.

At that time also I was supported in my arguments by local No. 330 of the UAW-CIO, whose supporting letter is also in the record.

We and many of our associates in the industry are unalterably opposed to excise taxes on our products, and will continue to be so opposed. Our contention was upheld by vote of the House of Representatives which voted to repeal these taxes last year, but the outbreak of war in Korea caused the Senate to drop its consideration of the repeal measure.

Knowing the state of the Nation, and the emergency confronting us, we now believe that an emergency tax should be substituted for the present excise tax. This emergency tax should have the following features:

1. It should have a definite limitation of term for a stated time—say 1 or 2 years—and should not be automatically renewable except by action of Congress at the expiration of that term.

2. Since the practice in the industry has been for distributors and dealers to pyramid these taxes, the consumer pays an added cost for the product far greater than the Government collects in taxes—sometimes as much as 100 percent more. The tax should be carried forward in dollar amount, and the percentages of overheads of the dealers and distributors should not be allowed to be applicable on the amount of the tax. This will serve two purposes: (*a*) to keep the cost of the appliance lower; and (*b*) as a deterrent to inflation.

3. The general base of this type of emergency tax should be broadened to include such manufactured consumer items as are not presently under excise taxes. To do otherwise would be to continue the discriminatory feature of this tax against this industry and this line of products.

I have had conversations with the executives of the union in our shop, and they agree wholeheartedly with the above outline, just as they previously agreed with the testimony given before the House Ways and Means Committee a year ago. The members of the union feel that to have a tax as high as the one proposed will in the future be seriously detrimental to their jobs, and I agree with that thought. It will also be detrimental to our own business, since the tax in the amount proposed would raise the prices of our products so high above those of other household items that the purchase of ours would be deferred in favor of appliances which might not be so expensive.

Thank you for giving me this privilege of presenting my views to the committee.

Senator BYRD. The Chair inserts in the record at this point numerous statements in lieu of personal appearances.

(The statements are as follows:)

STATEMENT OF RALPH W. BUTTON, OF THE NATIONAL RETAIL DRY GOODS ASSOCIATION

This statement is submitted by Ralph W. Button, assistant secretary, Allied Stores Corp., and chairman of the taxation committee of the National Retail Dry Goods Association. The National Retail Dry Goods Association is a voluntary organization that is registered under the Lobbying Act. The association's registered agent in Washington is John C. Hazen. The National Retail Dry Goods Association is composed of approximately 7,000 department and specialty stores throughout the United States. The annual sales of the members of this association exceed $10 billion.

We are addressing ourselves in this paper to the question of excise taxes and the part they should play in our tax structure at the present time.

The N. R. D. G. A. and retailing generally have historically taken a stand in opposition to any and all taxes on consumption. The argument that these taxes are regressive and fall more harshly on the lower-income groups needs little amplification.

The introduction of selective excise taxes in our revenue system is based solely on the need for revenue without regard to the economic effect of such taxes on the producers of the products so taxed or the workers engaged in those taxed industries. The inequities of selective excise taxes ought to be apparent. The arguments against discriminatory excise taxation has been previously brought to the attention of this committee last year and needs no enlargement at this time.

Arguments have been heard that selective excise taxes prevent the use in civilian production of materials needed for the military effort. We do not believe that this is the proper way to deal with this problem. Curtailment of the manufacture of certain products, if necessary, because materials are needed for the military effort should be left to those agencies which are now in existence and have the required authority to allocate materials. We are certain that in this way ample protection will be given to all necessary military requirements.

What selective excises accomplish in great part is not the curtailment of manufactured products which are required by the military, but rather the elimination of the small-income earner as a potential customer. It seems to us inequitable that the product should be available to only those people who can pay higher prices. Rationing should not be something for the poor alone. The N. R. D. G. A. has from time to time departed from its opposition to excise taxes because it felt that in a wartime economy there was no alternative but to use every avenue available for the raising of the huge sums of money necessary to meet both our domestic and military requirements.

Retailers have approached the problem of raising revenue on the premise of what's good for the country is good for retailing. We recognize that the great need for revenue requires the use of some form of excise taxes. We have accordingly supported the imposition of excise taxes to a limited number of items.

We have stated in our testimony before this committee, that if Congress broadens the base of the present manufacturers' excise taxes and the retailers' excise to such an extent that they amount to a national manufacturers' excise tax then we would advocate the enactment of a national retail sales tax.

Your committee has heard many arguments for and against a broad manufacturers' excise tax and for and against a national retail sales tax.

The proponents of broad manufacturers' excise tax have presented the following arguments:

1. A manufacturers' excise tax is easier to administer since there are a smaller number of manufacturers than there are retailers.

It is admitted that there are a greater number of retailers than manufacturers. We are not ready to admit that this problem of administration is an insurmountable obstacle. Every person, firm, or company engaged in the business of selling merchandise is required to file an income-tax return. It would be a very simple matter to provide for a schedule in such income-tax returns showing total sales and the amount of tax collected. This would provide a simple check on the sales tax collected and paid over to the Government.

2. It is stated by the proponents that pyramiding is not likely to be very substantial and Canada's experience is used as an illustration.

We are not familiar with Canada's tax laws. But we do know that a manufacturers' excise tax is as much a part of the cost of merchandise as any other element of cost. To the extent that a margin of profit is figured on cost then to that extent there is pyramiding involved. Belittling this importance of pyramiding is being naive indeed.

8. Twenty-nine States and a number of cities now have retail sales taxes and it is said that the National Government should not impose an additional sales tax on top thereof.

This does not appear to be a valid argument. Thirty States and a number of cities impose income taxes. Should not the Federal income tax on individuals be repealed for this same reason.

Overlapping of revenue sources by Federal, State, and local governments is a problem of long standing. Many studies have been made and no satisfactory solution has been found.

The Federal revenue needs must be given first preference in this hour of emergency. Determination of the spheres of taxation should be left to a more propitious time.

One argument against a broad manufacturers' excise tax which should receive serious consideration is the effect that such a tax has on the cost of living. A manufacturer's excise tax will be taken into account in the compilation of cost-of-living indexes. There are many wage agreements which provide for increases in wages based on the cost-of-living index. This means then that a broad manufacturers' excise tax will result in demands for salary and wage boosts thus increasing inflationary pressures. Such salary and wage demands will not be limited to wage agreements but will spill over into the entire wage structure. A national retail sales tax does not have this effect.

Retailers, in advocating a national retail sales tax in lieu of a broad manufacturers' excise tax, do so with the full knowledge that they are taking on additional burdens and increasing their costs of doing business. They will be taking on the job of the tax collector. We do this because we sincerely believe that our economy and our people will be better off in the long run.

One of the underlying reasons against a national retail sales tax is that such a tax is politically unpopular. We are in an emergency period. I have faith and confidence that our people would accept a national retail sales tax in lieu of a broad manufacturers' excise tax if the facts of the problem were laid before them in a straight-forward manner.

CENTRAL PREMIX CONCRETE CO.,
Spokane, Wash., July 25, 1951.

Senator HARRY P. CAIN,
Senate Office Building, Washington, D. C.

DEAR SENATOR CAIN: It comes to our attention that in the hearings on the new tax bill now before the Senate Finance Committee that the matter of percentage depletion for sand and gravel deposits is being considered.

You probably know that the House Ways and Means Committee and the House of Representatives have approved a 5-percent depletion for sand and gravel. Similarly a year ago such a provision was in the tax bill passed by both the Senate and House, but which was revised when the Korean War started.

I believe it is well established that the theory of percentage depletion for industries with wasting assets is for the national good.

You may not understand why percentage depletion is necessary for the sand and gravel industry both Nation-wide and more particularly in the Pacific Northwest.

Our industry obviously is basic in all construction. Vast quantities of it are necessary, and it is produced by a large number of producers, most of whom are small. These producers must meet varied specifications of Federal, State, county, and municipal governments. These specifications are not static but constantly changing. A deposit being used today may have to be abandoned tomorrow because of a change in specification.

One of the greatest obstacles facing our industry today is that of zoning restrictions. Sand and gravel plants are objectionable when near residential areas and hence are zoned out of many areas which, of course, are the areas near the potential market. Sand and gravel is a low-cost product. Generally the cost of transportation exceeds the selling price f. o. b. plant. It is thus important that deposits be found as close as possible to the point of use.

In most areas of the United States and certainly in the Spokane area known reserves of commercially usable sand and gravel are too low. Yet the cost of exploring and developing new deposits is extremely high—too expensive for the ordinary small producer unless he would have the assistance of percentage depletion.

To assure a continuing supply of sand and gravel at a reasonable price to the national economy it is essential that our products be given the same consideration given others with wasting assets. We hope we can count on your support.

Very truly yours,

CENTRAL PREMIX CONCRETE CO.,
H. D. SULLIVAN, *President.*

RECOMMENDATIONS FOR MODIFICATION OF THE INTERNAL REVENUE CODE

(Submitted by the Committee on Federal Taxation of the New York State Society of Certified Public Accountants)

1. Annuities

Need for change.—Under section 22 (b) (2), Internal Revenue Code a taxpayer receiving an annuity is taxed on an amount equal to 3 percent of the cost, the remainder being treated as a recovery of capital. In the case of an annuitant well advanced in age when the annuity payments commence, the chance of his recovering his capital tax-free during his lifetime is therefore remote.

Recommendation.—Section 22 (b) (2), Internal Revenue Code should be amended to provide that the principal of the annuity payments shall be computed by spreading the cost of the annuity over the life expectancy beginning with the commencement of the annuity payments, and only that portion of each annuity payment which is in excess of that applicable to principal shall be included in gross income.

2. Time for replacement of involuntary liquidations of LIFO inventories

Need for change.—Section 22 (d) (6) (A), Internal Revenue Code contains the requirement that involuntary liquidations of LIFO inventories which occurred in taxable years 1947 or prior must be replaced in a taxable year which ends prior to January 1, 1953, while such liquidations in a taxable year ended after June 30, 1950, and prior to January 1, 1954, may be replaced in a taxable year ending prior to January 1, 1956. Since partial replacements are considered, in the order of acquisition, as replacements of the most recent liquidations, taxpayers which have not at some time completely replaced their pre-1948 liquidations get no benefit from the additional 3 years permitted for replacement of 1950-53 liquidations.

Recommendation.—Section 22 (d) (6) (A), Internal Revenue Code should be amended to provide that replacements of pre-1948 liquidations should be permitted at least until 1955.

3. Pension trust for professionals and other self-employed individuals

Need for change.—Sections 23 (p) and 165 Internal Revenue Code made no provision for pension trusts for self-employed professional and other individuals, with an obvious resulting discrimination against such classes of taxpayers, who are as much entitled to invoke the application of these provisions as employees of the various business groups.

Recommendation.—The principle of the Keogh bill, H. R. 4371, the Reed bill, H. R. 4373, and the Coudert bill, H. R. 3456, should be enacted with the following limitations:

(1) A self-employed professional person employing nominal or no capital should have his entire net professional income for the year as the measure of the 15 percent of net professional income that may be contributed for that year to the pension trust. As provided in the bills, professional employees should also be permitted to contribute to such pension trusts to supplement their old-age benefits.

(2) The situation of sole proprietors and members of firms employing more than nominal capital is already provided for in the said bills.

4. Payments into nonexempt pension trust

Need for change.—If a pension trust does not qualify under section 165, an employer's contribution thereto is not deductible unless the rights of the employee are nonforfeitable at the time the amount is paid. The regulations hold that, if the employee's right become nonforfeitable subsequent to the making of the contribution, no deduction for such payment is allowable at any time. This places the employer who funds his nonexempt plan with a trustee at a disadvantage compared with the employer who simply retains complete control of the funds involved in a nonexempt plan, since the latter is allowed a deduction under section 23 (p) (1) (D) when the benefits are paid out or the employee's rights otherwise become nonforfeitable.

Recommendation.—Section 23 (p) (1) (D) should be amended to permit the employer making a contribution to a nonexempt pension trust, in which the employee's rights are forfeitable at the time the contribution is made, to deduct such amounts as are income to the employee, in the year in which the employee is required to include such amounts as income.

5. Rates of normal depreciation

Need for change.—Minor changes in depreciation rates under section 23 (l), Internal Revenue Code, have been an administrative problem for many years, causing unnecessary controversy between taxpayers and the Bureau of Internal Revenue at a substantial cost to both. At best, an estimate results and in the long run no appreciable increase in revenue is derived by the changes since deductions are merely shifted between years.

Recommendation.—Rates of normal depreciation for as many classes of fixed assets as possible should be published and taxpayers permitted to make a binding election of depreciation rates as to such classes of assets within 25 percent, either way, of the published rates. In other cases, such as claims for depreciation rates more than 25 percent in excess of published rates, or for additional depreciation for obsolescence or abnormal usage, or for depreciation on classes of assets not included in the published list, the burden of proof should remain on the taxpayer, as at present.

6. Gain or loss to creditor on mortgage foreclosures

Need for change.—Where a creditor buys in mortgaged or pledged property, his loss or gain is measured by the difference between the amount of the obligations of the debtor which are applied to the purchase or bid price of the property (to the extent that such obligations constitute capital or represent income of the creditor) and the fair market value of the property. Section 29.23 (k) (3) of regulations 111 states that the creditor may thereby have a bad debt as well as a capital gain or loss and that "the fair market value of the property shall be presumed to be the amount for which it is bid in by the taxpayer in the absence of clear and convincing proof to the contrary." The bid price is often no indication of the fair market value and the rule may be used to the disadvantage of either the taxpayer or the Government.

Recommendation.—The code should be amended to provide that where a creditor buys in mortgaged or pledged property, his income or deduction shall be the difference between the obligations of the debtor and the fair market value of the property; that the price for which it is bid in by the creditor shall be disregarded for this purpose; and that the income or deduction shall be ordinary income or deduction (i. e., not capital gain or loss).

7. Methods of accounting

Need for change.—Many of the recognized accounting principles have been gradually adopted by Congress, the Treasury Department, and the courts. In the interests of sound economy more of these principles should be adopted, and where court decisions are in conflict with these principles, this should be corrected by the Congress.

Recommendation.—Sections 23, 41, 42, and 43 of the Internal Revenue Code should embody recognized accounting principles or practices.

In relation to income, only income attributable to a particular taxable period under recognized accounting principles should be taxed in that period. If income covers more than one taxable period it should be properly apportioned over the periods to which it is attributable. A taxpayer, whether on a cash basis or accrual basis, should be permitted to account for rents and other income received in advance over the period to which the payment applies, provided he keeps books of account clearly reflecting the income on such basis.

Correlatively, deductions should be allowed so that they are matched against the related income.

Where income is received involving an obligation to perform services or incur costs and expenses in the future, the taxpayer on the accrual basis should be permitted to set up a reasonable reserve in accordance with recognized accounting principles to cover services and expenses related to such income. Likewise, there should be allowed as deductions, reasonable reserves for costs and expenses to make good warranties and guaranties and for customers' discounts. These reserves should be permitted only if the taxpayer keeps books of account clearly reflecting such deductions.

Where income is deferred to later years, or a reserve or accrual is deducted, the taxpayer should, however, be required to increase the income of the subsequent years for the deferred income applicable thereto, and for reserves and accruals no longer required.

8. Expenses payable to related interests

Need for change.—Section 24 (c), Internal Revenue Code, disallows to a taxpayer on the accrual basis all deductions for unpaid expenses and interest which are payable to related interests who are on a cash basis unless the payment is made during the taxpayer's taxable year or within 2½ months after the close of such year. The purpose of this section is to prevent a taxpayer claiming a deduction for expenses or interest payable to a related interest where the latter is not required to include the items as income.

It has been held in a number of cases that the deduction was not allowable even though the related interest, on a cash basis, was required to include the expenses as income under the doctrine of "constructively received."

Recommendation.—Section 24 (c), Internal Revenue Code, should be amended to provide that such section shall not apply where the person to whom the payment is made elects to include such payment in his return for a taxable year ending within which ends the payor's taxable year. This would be analogous to the consent dividend provision in section 28, Internal Revenue Code.

9. Proposed section 123, H. R. 4473—Surtax exemptions and certain credits of related corporations

Need for change.—This is a new section proposed in the House bill. The provisions of the section are extremely technical and involved. In substance, they provide both for class A and for class B affiliations a single $25,000 surtax exemption under section 26, Internal Revenue Code, and likewise a single minimum excess profits tax credit under section 431, Internal Revenue Code, to all companies in the related group. For all practical purposes, the section has the effect of computing the tax on the basis of the equivalent of a consolidated return, without the privilege of offsetting profits of one corporation against losses of another, and without eliminating intercompany profits. Its object is to implement quite widely the purpose of section 129 of the code. The provision has apparently been worked out hurriedly, and may affect adversely many companies that should not be included within its scope.

Recommendation.—Since it appears that the Revenue Act of 1951 will be confined primarily to provisions of the code other than those relating to excess-profits taxes, and since only a limited study appears to have been given to this section, and since many inequalities will result from the enactment of the section in its present form, the proposed section should be referred back for further study and should not be included in the Revenue Act of 1951. On the other hand, if the section is finally enacted and appropriately limited, companies embraced within its provisions, whether as class A or class B affiliations, should be given the right to file consolidated returns.

10. Taxable year

Need for change.—Tax returns must be filed on the basis of a calendar year, or at the election of the taxpayer, on a fiscal year. The courts have held that a taxpayer has not elected a fiscal year where the tax return is based on a period ending on any day other than the last day of a month. In such case the calendar year must be used in disregard of the actual accounting period.

It has long been the accepted practice of many taxpayers to keep bookkeeping records on the basis of 13, 4-week periods, or four quarterly annual periods, each consisting of 13 weeks, instead of a 12-month period, because they find it more convenient to close their books on a Saturday rather than on the last day of a month. Where the annual accounting period does not end on the last day of the month, these taxpayers, in order to file on a fiscal year, are therefore forced to keep records to reflect the result of operations on a 12-month basis. In the long run, there is no advantage or disadvantage in permitting taxpayers to prepare their tax returns so that the year necessarily ends at the end of a month.

Recommendation.—Section 48, Internal Revenue Code, should be amended so that where a taxpayer consistently keeps his records on the basis of any recognized accounting "year" even though said year does not necessarily end on the last day of a month, he be permitted to file his tax return on the same basis.

11. Extension of time for filing returns

Need for change.—The Commissioner is authorized by section 53 (a) (2), Internal Revenue Code, to grant a reasonable extension of time for filing returns under such rules and regulations as he shall prescribe with the approval of the Secretary of the Treasury. Authority for granting extensions is delegated by the regulations to the various collectors of internal revenue.

In many cases undue hardship is imposed on the taxpayer, as well as on his accountant, where it is impossible to determine the correct income for the taxable year within 2½ months following the close of the year. Where an extension of time is not granted by the collector, the taxpayer is liable to the assessment of a delinquency penalty even though it is not possible to file a timely return.

Recommendation.—The Internal Revenue Code should be amended to provide that unless the Commissioner finds that a request for an extension is made for the purpose of delaying the payment of the tax, an extension for a period not exceeding 6 months to file an income-tax return shall be granted upon application of the taxpayer or his representative, provided a tentative return is filed showing the estimated tax and payments of the tax are made as in the case of regular returns.

12. Surtax on corporations improperly accumulating surplus

Need for change.—The administration of section 102, Internal Revenue Code, has resulted in many difficulties. In order to minimize some of these, taxpayers should have the option to claim a credit in computing undistributed section 102 net income for dividends paid after the end of the taxable year, but before the due date of the tax return, whether original or extended. Also, upon the imposition of a surtax under section 102 the corporation should be permitted to relieve itself of such tax in whole or in part through deficiency dividend procedure under the revision as proposed herein for personal holding companies or through appropriate consent dividend.

Recommendation.—Section 102 should be amended to provide:

(*a*) At taxpayer's option, dividends paid after the end of the taxable year, but before the due date (original or extended) of the tax return, should be allowed as a credit in computing undistributed section 102 net income.

(*b*) In the event of imposition of surtax under section 102, the corporation should be permitted to relieve itself of such tax, in whole or in part, by a deficiency dividend under conditions and procedure now prescribed in section 506 for personal holding companies, or, alternatively, by filing consent dividend papers, as provided in section 28, effective as of the original taxable year.

13. Income from fiscal-year partnerships and trusts

Need for change.—The bill, in common with the Revenue Act of 1950, increases the tax of fiscal-year individual and fiduciary taxpayers on a prorata basis. This affects very few taxpayers, since most individuals and taxpaying trusts report on a calendar-year basis. However, many individuals derive income from partnerships and trusts reporting on a fiscal-year basis. Neither the 1950 act nor the 1951 bill makes provision for allocating such partnership or fiduciary income. Accordingly, income earned in 1950 is taxed at the higher 1951 rates, and income earned in 1949 was taxed at the higher 1950 rates. This inequity requires a correction, in view of the sharp increase in individual tax rates from 1949 to 1951.

Recommendation.—Section 108, Internal Revenue Code, should be amended to provide that in taxing the next income of an individual from a trust or partnership having a fiscal period commencing in 1950 and ending in 1951, the prorata portion of such income applicable to 1950 should be eliminated from tax at 1951 rates, and should be taxed instead at the appropriate level of 1950 rates in the same manner as was applied in the corresponding provision of the Revenue Act of 1924 (section 207 (b)). This amendment should be effective as of January 1, 1950.

14. Disposition of property to creditor

Need for change.—The courts have held that where a creditor forgives in whole or in part the obligation of a debtor, no taxable income is realized by the debtor if he is insolvent immediately before and immediately after the forgiveness; and that if immediately after the forgiveness he is solvent, the amount forgiven, if not a gift, is realized only to the extent that the value of the assets are freed from the claims of creditors as a result of the transaction.

It has been further held, however, that the payment of a debt by the transfer of property to the creditor may result in taxable income to the debtor regardless of his financial condition; the transaction is treated as a sale of property for a consideration equal to the debt discharged.

Recommendation.—Section 111, Internal Revenue Code, should be amended to relieve taxpayers who are in unsound financial condition from tax on gain on the transfer of property to a creditor in settlement of a debt incurred in acquiring the property. The taxable gain (to the extent not a gift) should be limited to the value of the net assets which are freed from claims of creditors as a result of the settlement.

15. Gain from sale or exchange of taxpayer's residence

Need for change.—Section 303 of the House bill amends section 112, Internal Revenue Code, by adding a new subdivision (n), which provides for nonrecognition of gain on sale of a taxpayer's residence under certain conditions. Subsection 2 (F) of the proposed 112 (n) provides that in order to obtain the benefit of such nonrecognition, the taxpayer must acquire another residence within 1 year of the date of the sale resulting in the gain. Our attention has been directed to situations of taxpayers who have sold their homes and may not be able to purchase a new one within the 1-year limitation because of having been inducted into the Armed Forces, or having accepted temporary Government or defense-work employment in a city other than that of their normal residence.

Recommendation.—Section 112 (n) (2) (F), Internal Revenue Code, as proposed, should also provide that in such cases recognition of the gain shall be deferred with appropriate protection to the Government in the same manner as provided in section 112 (f) in other cases of involuntary conversion, where replacement is deferred.

16. Continuity of net losses, etc., in corporate reorganizations

Need for change.—Under sections 112 and 113, Internal Revenue Code, property acquired by a corporation in certain types of corporate reorganizations has the same basis for tax purposes as in the hands of the predecessor company. The underlying theory is that the successor steps into the "tax shoes" of the predecessor company. This theory, however, has not been extended beyond the basis of property except with respect to the status of life insurance as provided in section 110 of the Revenue Act of 1942. For example, net operating losses of the predecessor cannot be carried forward against income of the successor or vice versa. Interest paid on additional taxes asserted against the predecessor can be deducted by the successor only to the extent accrued since the date of the reorganization, and except possibly in the case of statutory mergers or consolidations. The tax-benefit rules provided in sections 22 (b) (12) and 127 of the code with respect to recoveries on bad debts or taxes or losses or other items previously claimed or allowable to the predecessor are not extended to the successor. Other items of expenses paid by the successor for the account of the predecessor, which would have been deductible by the predecessor, had it continued in existence, are not allowed as deductions to the successor. Likewise, certain classes of prepayments by the predecessor are not allowed as deductions to the successor.

Recommendation.—Where a corporation is formed or availed of to acquire the assets and become the successor, in a tax-free reorganization, of a predecessor corporation, which, in pursuance of the plan, is liquidated and dissolved, the successor corporation should step into the tax shoes of the predecessor corporation for all purposes, so as to permit the carry-back and carry-forward of net operating losses from one to the other, to continue the accounting methods and period of the predecessor and the application of the tax-benefit rule to recoveries by the successor of losses or deductions previously claimed or allowable to the predecessor, and so as to permit full deductibility by the successor of any payments which would have been deductible by the predecessor had the predecessor continued in existence.

17. Election as to recognition of gain in certain corporate liquidations

Need for change.—Section 112 (b) (7), Internal Revenue Code, provides for an election as to recognition of gain in certain corporate liquidations when the distributions in liquidation were made in 1951. The necessity for such an election is equally present in all years.

Recommendation.—Section 112 (b) (7), Internal Revenue Code, should be amended to include liquidations made after 1951.

18. Involuntary conversions

Need for change.—The interpretations given by the courts and the Commissioner to section 112 (f), Internal Revenue Code, dealing with involuntary conversions has unduly limited its scope. The regulations provide, for example, that the money spent for replacement must be from the actual proceeds. Under this rule it would not be possible to obtain the benefit of this section when, for example, condemnation or insurance proceeds resulting from the conversion of property are used to liquidate a mortgage on such property and new construction is financed by a new mortgage. Under these and similar circumstances the intended relief may be denied to those who need it most. Relief is also denied to a taxpayer who used his own general funds to replace converted property before the receipt of the conversion proceeds.

Recommendation.—Section 112 (f), Internal Revenue Code, should be amended specifically to extend its provisions to cover later acquisition of property to replace that involuntarily converted even if the proceeds of the conversion have in the meantime been used for general purposes; and to cover replacements of property in anticipation of the condemnation, or requisition, or the receipt of the proceeds.

19. Reorganizations

Need for change.—The provisions of section 112 (g) (1), Internal Revenue Code, have been rendered uncertain by a series of judicial decisions in cases involving reorganizations which have added such extrastatutory requirements as the so-called business-purpose test, with resulting discouragement of necessary corporate reorganization.

Recommendation.—Section 112 (g) (1), Internal Revenue Code, should be amended to remove the confusion and uncertainty as to the application of its provisions, particularly by defining the terms "business purpose," "continuity of interest," "securities," and "party to a reorganization."

20. Party to a reorganization

Need for change.—A common form of reorganization is the acquisition of substantially all the assets of one corporation by another through the issuance of voting stock by the acquiring corporation. For business reasons it is often desirable for the acquiring corporation to segregate the assets thus acquired into a controlled subsidiary. However, in such cases it has been held that the parent corporation is not a "party to a reorganization" within the meaning of section 112 (g) (2), Internal Revenue Code, with the result that the transaction does not qualify as a reorganization. There is no purpose or policy of the reorganization provisions which would be violated by recognition of the parent corporation as a "party to a reorganization" in this type of case.

Recommendation.—The definition of term "party to a reorganization" in section 112 (g) (2), Internal Revenue Code, should be amended to provide in substance that the term includes a corporation which issues its stock for stock or properties of another, whether such stock or properties are acquired directly by the stock-issuing corporation or by its controlled subsidiary.

21. Basis of property acquired by intervivos gift or through joint and survivorship ownership

Need for change.—Under section 113 (a) (2), Internal Revenue Code, where property is acquired by intervivos gift, the tax basis of the property to the donee is generally the same as the basis to the donor. Under section 113 (a) (5), if the property was acquired by bequest, the basis is that used in the donor's estate-tax return (sec. 811 (c) and (d)). Where an intervivos gift is included in the donor's estate-tax return, because made in contemplation of death, it is valued for estate-tax purposes as at date of death, yet the donee's basis remains that of the donor.

Likewise, in the case of the jointly owned property which is taxed in whole or in part for estate-tax purposes, the original cost and not the value for estate-tax purposes at the date of death remains the tax basis to the surviving owner.

Recommendation.—Section 113 (a) (2), Internal Revenue Code, should be amended to provide that where property acquired by gift is included in the estate of a donor for estate-tax purposes, the basis to the donee of the property with respect to depreciation, or gain and loss, for any period after date of death shall be the value included in the donor's estate-tax return.

Likewise, in the case of jointly owned property to the extent that the property was valued for estate-tax purposes, that portion of the value should be substituted for the same portion of the original cost as the basis to the survivor.

22. Capital gains and losses through fiscal-year partnerships

Need for change.—Section 305 of the bill proposes to make changes in the offset of net long- and short-term capital gains and losses under section 117, Internal Revenue Code, to be effective in the case of taxable years beginning after the enactment of the bill. No provision has been made with respect to the effective date of such transactions to fiscal-year partnerships. Apparently, as a result of the impact of sections 182 and 183, Internal Revenue Code, the application of the new provisions will become retroactive to transactions of partnerships as early as February 1, 1951. Since it appears to be the intent of the bill to avoid such retroactive effect, the provision should be properly worded to accomplish that purpose.

Recommendation.—The amendment proposed in section 305 of the bill should be changed so as to be applicable only to transactions of fiscal-year partnerships with taxable years beginning on and after the enactment of the bill.

23. Gains and losses on sales of capital assets

Need for change.—Sections 117 (a) (1) and 117 (j) (1), Internal Revenue Code, make a distinction between real property and depreciable property used in business, on the one hand, and intangible personal property or choses in action used in business, on the other. This despite the express intent of the Senate Finance Committee (Rept. No. 1083 dated October 2, 1942, p. 110) that "it considers it more appropriate to treat all property used in the trade or business alike and not to distinguish between land and other property used in the trade or business." Compare Rockford Varnish Co. (9 T. C. 171), and Carter-Colton Cigar Co. (9 T. C. 219).

There has been considerable uncertainty and attendant controversy over transactions in commodity futures reasonably necessary to the conduct of a taxpayer's business. The Commissioner has frequently urged that such futures are capital assets, although transactions in futures are necessary hedges for the protection or ordinary commercial transactions, with consequent ordinary income or deductions instead of capital gains or losses. See, however, Stewart Silk Corp. (9 T. C. 174).

Recommendation.—Sections 117 (a) (1) and 117 (j) (1), Internal Revenue Code, should be amended by adding the words "or intangible personal property or choses in action" after the words "real property." The amendments to both sections 117 (a) (1) and 117 (j) (1) will have the effect of allowing net losses on these added classes of property as ordinary deductions and taxing net gains on sales of such property held over 6 months as capital gains, and conform with similar treatment accorded real property and depreciable property.

Section 117 (a) (1) should exclude from the term "capital assets" any contract for future delivery of a commodity purchased or sold through a board of trade or on a commodity exchange or in a similar transaction necessary to the conduct by the taxpayer of his regular trade or business.

24. Partnership taxable year

Need for change.—When a partnership is dissolved by death of a partner the return of the deceased partner for his last taxable year includes his share of the partnership income for the period ending with the date of his death. As a result, the final return of a decedent often may include his share of more than 12 months' income of the partnership. For example, if the decedent is on a calendar-year basis and the partnership is on a fiscal-year basis ending May 31, and the decedent died on November 30, there would have to be included in his final return his share of the income of the partnership for the 12 months ended May 31 and also his share of the income for the 6 months ended November 30.

The problem has also arisen as to the effect of the death of a partner on the partnership income of the remaining partners, i. e., does the partnership terminate because of the death and does it require the remaining partners to include their share of more than 12 months' income. Although the courts have held in many cases, for example, where the partnership is continued for the purpose of liquidation and under other circumstances, that the death of a partner does not terminate the taxable year of the partnership with respect to the remaining partners, the question nevertheless should be definitely settled by statute.

Recommendation.—Sections 126, 183, and 187, Internal Revenue Code, should be amended to provide that the death of a partner shall not be deemed to change the taxable year of the partnership and that the share of the income of the deceased partner to date of death and the share of the income of all other partners, shall be reported in the taxable year within which the partnership year would have ended if there had been no death.

The foregoing amendments should be made retroactive to all years not closed by the statute of limitations.

25. Election to file consolidated return

Need for change.—Since 1940 corporations, generally, have had the option of filing consolidated returns. The regulations promulgated by the Commissioner under section 141, Internal Revenue Code, require that corporations, which file a consolidated return for 1 year, must continue to file on that basis unless the Commissioner rules that a new option is available. In all but 1 year since 1940, the Commissioner has given corporations a new option. The situation, however, has been uncertain during this period. In order to remove that uncertainty, and in order not to bind corporations with an election that may prove to be inequitable, corporations should have an annual option to file either consolidated or separate returns.

Recommendation.—Section 141, Internal Revenue Code, should be amended to give corporations an annual election to file consolidated or separate returns.

26. Taxability of income of trust which may be used for payment of insurance premiums on the life of the grantor

Need for change.—Following the Supreme Court decision in *Helvering* v. *Stuart* (317 U. S. 154), making a grantor taxable on the income of a trust which could be used for the support of a minor child, section 167 (c) was enacted, limiting such grantor-taxability to the amount of the income actually expended for such purpose. A similar limitation should be provided in the case of trusts with life insurance provisions, as to which it is now provided, in section 167 (a) (3), that the income of such a trust is taxable to the grantor if it may be expended on premiums on insurance on the grantor's life, irrespective of whether or not it is so expended.

Recommendation.—In the case of trusts, the income of which may be used to pay life insurance premiums on the life of the grantor, such income should be taxable to the grantor only to the extent that the income is actually expended for such purpose.

27. Offset of overpayment of tax against related deficiency

Need for change.—The code often fails to offset a deficiency under section 271, Internal Revenue Code, of one class of tax against an overpayment of another class of tax although the two classes of taxes are related or interdependent. This situation was cured in connection with the excess profits tax under the Excess Profits Tax Act of 1950 by having such taxes a part of the corporation income tax and not an independent tax. The situation still exists with respect to the income tax and related personal holding company surtax under section 500, Internal Revenue Code, and has not been corrected in connection with most related taxes for prior years.

Recommendation.—The code should be amended to provide that where a deficiency is offset by an overpayment of a related tax which has been determined by the Commissioner, the taxpayer may file a claim for credit of the overpayment against the deficiency, and the collection of the deficiency shall be suspended until the claim is acted upon by the Commissioner. Consideration should also be given to applying this provision retroactively in order to eliminate excess interest collected on deficiencies to the extent that it is administratively practical to do so.

28. Waiver of restrictions on assessment and collection of deficiency in tax

Need for change.—Section 272 (d), Internal Revenue Code, covers waivers on assessment and collection of "the whole or any part" of a deficiency. It is often difficult, if not impossible, for the taxpayer to obtain a waiver of partial deficiencies. The Commissioner's regulations and administration also tend to narrow the section by requiring the waiver to be filed with the Commissioner and acted upon by him.

Present administrative procedure in this respect costs the taxpayer additional interest, and wastes the time of the taxpayer and his representatives as well as that of Bureau personnel and the courts.

Recommendation.—Section 272(d), Internal Revenue Code, should make it mandatory upon the Commissioner to accept waivers on assessments and collection of all or any part of a proposed deficiency.

29. Consent fixing period of limitation upon assessment of income and profits tax

Need for change.—Section 276(b), Internal Revenue Code, covering waivers extending the limitation period upon assessments is based on mutuality of agreement. In practice, the mutality is often more apparent than real, for in the event of a taxpayer's refusal to sign the waiver, an arbitrary deficiency by the Commissioner may immediately follow. The present attitude of casualness in requesting the waiver from the taxpayer operates to make the statute of limitations meaningless.

Recommendation.—Section 276(b), Internal Revenue Code, should make it mandatory upon the Commissioner to sign the waiver for a period of 1 year on the written request of the taxpayer. Request for a waiver by the Commissioner or his agent should be in writing. Requests for a waiver should state the reasons for the requests. If made by the taxpayer, a request should be submitted directly to the Commissioner; if made by the Government, it should be made by the Commissioner or his designated assistant.

30. Elections to file joint or separate returns, standard deduction, etc.

Need for change.—A taxpayer must make many elections that are irrevocable, for example, the election to file joint or separate returns. As a proper election requires informed tax knowledge of existing law and future interpretations of the law, not possessed by the average person, the election may result in a substantially excessive tax. The elections with respect to at least joint or separate returns, taxation under section 400, Internal Revenue Code, supplement T and standard deduction should be revocable.

Recommendation.—Elections as to (a) joint or separate returns of husband and wife and (b) taxation under supplement T and (c) standard deduction should be revocable within the period during which a refund claim may be filed. The taxpayer should be permitted to file a refund claim within such period based on the changed election.

31. Recommendations with respect to personal holding companies

Need for change.—A deficiency dividend is impossible where the corporation has previously been liquidated. It is also impractical where the finances of the personal holding company do not permit it. Consent dividend procedure is a practical solution. Deficiency dividend procedure is permitted only in the case of timely returns where failure to file a timely return is established to be due to reasonable cause and not to willful neglect. This denial should be confined to fraud cases, since the technical provisions applicable to personal holding companies have been found to be so difficult of administrative or judicial interpretation that many companies have inadvertently and innocently failed to file such returns on time.

In computing the income of a personal holding company which is subject to tax under subchapter A, a deduction is allowed under section 505 (a), Internal Revenue Code, for the Federal income tax paid or accrued during the taxable year. The purpose of this deduction is to avoid the imposition of the income tax and the personal holding-company tax on the same income. This purpose is accomplished where the taxpayer is on the accrual basis, because the income tax accrued is that for the year subject to the personal holding-company tax. The purpose is not accomplished where the taxpayer is on the cash receipts and disbursements basis, for it is required to deduct the income tax paid, which is the tax imposed on income of the previous year.

Recommendation.—(*a*) Effectuation of deficiency dividends by consent dividend procedure should be authorized.

(*b*) Deficiency dividend procedure should not be denied in cases of nonfraudulent delinquency in filing personal holding-company tax returns.

(*c*) The deduction of the Federal income tax, in computing undistributed subchapter A net income, should be the tax for the taxable year, whether the corporation is on the cash basis or the accrual basis.

32. Estate tax: Credit for gift tax on inter vivos gifts

Need for change.—Under sections 811 (c) and (d), Internal Revenue Code, an inter vivos gift included in the estate-tax return of the donor, increases the estate in the highest tax bracket, although the credit against the estate tax for gift tax is, under section 813 (a), Internal Revenue Code, computed on an average basis.

Recommendation.—Section 813 (a), Internal Revenue Code, should be amended to provide that the credit for gift tax allowable against the estate tax shall be the amount by which the donor's total gift-tax liability was increased by inclusion of the property for gift-tax purposes.

33. Estate tax on remainders to charity subject to a power of invasion of principal, etc., should be determined by the ultimate event

Need for Change.—Ordinarily a bequest to a charitable or educational organization, etc., whether outright or as a remainder after an intervening life or lives, is exempt from estate tax (sec. 812 (d) I. R. C.). However, a Supreme Court decision (*Merchants Bank* v. *Commissioner*, 320 U. S. 256) holds that where the gift is of a remainedr interest and, where, during the intervening life or lives, the principal may be invaded for the benefit of the life beneficiary, the amount of the gift to charity is not determinable and, hence, no deduction therefor may be allowed in computing the net taxable estate—with the result that no part of the gift to charity is exempt, even though the power of invasion is never exercised. A similar situation is produced where the remainder bequest to charity is contingent.

Recommendation.—The degree of exemption should be determined by the ultimate event and the exemption allowed should be reduced only to the extent to which the power of invasion of principal is actually exercised or, in the case of contingent remainders, the exemption should be allowed in accordance with the actual occurrence of the events upon which the bequest to charity is conditioned. The Government can be amply protected, in the meanwhile, by requiring either immediate payment of the tax, or the posting of a bond, with refund, or final settlement under the bond, to be made upon the occurrence of the events which finally determine the amount of the gift of the remainder to the charitable or similar organizations.

34. Mitigation of effect of limitation

Need for change.—Section 3801, relating to mitigation of the effect of limitations, does not relieve the hardship in many meritorious situations. For example, if the Commissioner shifts an item of income from a barred year to an open year, or a deduction from an open year to a barred year, the taxpayer in equity and good conscience should be entitled to a refund for the barred year. The Commissioner at present has no power to grant the refund.

Recommendation.—Section 3801 (b), Internal Revenue Code, should be amended to cover the following additional situations:

(1) When a deduction is made in good faith on the tax return of 1 year and is disallowed by the Commissioner on the ground that it was deductible in a return of a different year.

(2) When income is included by the taxpayer in good faith in 1 year and is held by the Commissioner to be taxable in another year.

(3) When the basis of an asset claimed by taxpayer is reduced by the Commissioner for the purpose of computing net income of 1 year on the ground that the reduction of the basis should have been made in another year.

(4) When income or deductions are included or deducted by one member of an affiliated group, as defined in section 141 (d), Internal Revenue Code, and are allocated by the Commissioner to another member of the group.

35 Elections under the Excess Profits Tax Act of 1950

Need for change.—Numerous elections are provided under the Excess Profits Tax Act of 1950, many of which are irrevocable. The technical provisions of the act, the uncertainties of the application of these provisions, the limited time that has elapsed since the act was passed, the comparative newness of the rulings under the act, and under the regulations, make the exercise of such elections a gamble. Consequently, two corporations which have precisely identical net income and available credits may have different tax liabilities solely as a result of exercising or failure to exercise certain elections.

Recommendation.—The exercise or failure to exercise elections under the Excess Profits Tax Act of 1950 by corporate taxpayers shall not be irrevocable but may be changed at any time up to the running of the limitations for the determination of the tax.

36. Unused excess profits credit carry-over—Effect of carry-back to preceding short taxable year

Need for change.—Section 432 (c) requires that an unused excess-profits credit must first be carried back. In the case of a prior short taxable year, the carry-forward, if any, is reduced by the annualized adjusted excess profits net income of the preceding short taxable year. This requirement is inequitable as it uses up more of the unused credit than it properly should.

Recommendation.—Section 432 (c) (2) should be amended to provide that a carry-over of unused excess-profits credit shall be reduced by the lesser of (a) the amount provided in section 432 (c) or (b) such portion of the unused excess profits credit carry-back to the short taxable year as the number of days in the short taxable year is of the number of days in the 12 months ending with the close of the short taxable year.

37. Section 433 (a) (1) (J)—Net operating loss deduction adjustment

Need for change.—Sections 122 (b) (2) (B) (ii) and 433 (a) (1) (J) require that where there is a net income in 1949, an elective base-period loss under section 433 (a) (1) (J) and a net loss in 1950 that the loss carry-overs to 1951 be reduced by the 1949 income both under section 122 (b) (2) (B) (ii) and section 433 (a) (1) (J).

Recommendation.—Section 433 (a) (1) (J) should be amended to eliminate this duplication in the adjustment of net operating losses because of income in the year 1949.

38. Abnormal deduction in base period

Need for change.—Section 433 (b) (9) Internal Revenue Code provides for the adjustment of income of base-period years by way of disallowance of abnormal deductions. The relief, which it appears this section was intended to afford, has been emasculated by the 5-percent rule of section 433 (b) (10) (B), which provides that no adjustment shall be made for an abnormal deduction of any class unless the amount of such adjustment exceeds 5 percent of the average excess profits net income for all taxable years in the base period. A taxpayer may have a number of abnormal deductions, the adjustment for all of which would increase the average excess profits net income for the base-period years. But unless each adjustment exceeds 5 percent, no adjustment is permitted. The corresponding relief provision of the prior excess profits tax law (sec. 711 (b) (1) (J) I. R. C.) did not have the 5-percent limitation.

The relief is further emasculated by the requirement of section 433 (b) (10) (C) (i) that no adjustment for an abnormal deduction shall be made unless the taxpayer establishes that the increase in the deduction is not "a cause or a consequence of an increase in gross income * * * or a decrease in the amount of some other deduction * * *." It is almost impossible for taxpayers to establish that a particular deduction was not a cause of an increase in income or decrease in some other deduction. Section 711 (b) (1) (J) did not have the cause test.

Recommendation.—Section 433 (b) (10) (B) should be amended to eliminate the 5-percent rule. Section 433 (b) (10) (C) (i) should be amended to eliminate the cause test.

39. Average base period net income—abnormalities during base period

Need for change.—The base period income credit generally is based upon the income of the best 36 months out of the 4 years, 1946–49. This result is accomplished by eliminating the poorest 12-month period. Provision is made in section 442 Internal Revenue Code for adjusting the base-period income when certain abnormalities exist. However the adjustment is limited to the 36 months remaining after the poorest 12-month period is eliminated. Situations have developed in which all or part of abnormality is in the poorest 12-month period. A more equitable result would be obtained by adjusting the income for each month of the base period for abnormalities and then eliminating the resulting poorest 12-month period.

Recommendation.—Section 442 Internal Revenue Code should be amended to provide that the income of each month of the entire base period should first be adjusted for abnormalities, and the resulting poorest 12 months eliminated.

40. Average base-period net income—new corporations

Need for change.—Section 435 (d), Internal Revenue Code, provides that if a corporation was not in existence during the entire base period then, in computing its average base-period net income, the excess-profits net income for any month of the base period that it was not in existence shall be taken as zero. Such a corporation, as a "new corporation," may receive a greater credit under section 445 through the use of a credit computed on industry averages. However, in many cases section 445 affords no relief. Equitably a new corporation should be permitted to compute its average base-period net income by using its actual net income for such months of the base period as it was in existence, plus a constructive income for the months that it was not in existence.

Recommendation.—Section 435 (d) (1), Internal Revenue Code should be amended to provide that a corporation that was not in existence during the entire base period can compute for the period that it was not in existence constructive earnings measured by one of the following:

(*a*) The industry experience for the particular period;

(*b*) A credit of 12 percent of the average of its invested capital during the remainder of the base period;

(*c*) The earnings of the portion of the base period that the company was in existence converted to the prior portion on the basis of economic factors applicable either to the particular industry or the economy of the country as a whole. The method of such conversion can be stated in the code in order to minimize administrative difficulties.

41. Average base-period net income, alternative based on growth

Need for change.—Section 435 (e), Internal Revenue Code is limited to companies that were in business at the beginning of the base period and thereby rules out many companies whose operations began early in 1946. As noted in the discussion in the prior item under section 435 (d), many new companies receive no benefit from the relief provisions and their excess profit credit has been impaired by the general average provisions.

Recommendation.—In order to be reasonably applied, the growth provisions should be extended to such new companies through reconstructing the company's operations for that portion of the base period for which it was not in existence in determining sales, wages, and net income. This would place such companies on a par with companies that were in existence throughout the base period under the growth provisions.

42. Capital addition in base period

Need for change.—A capital addition is allowed in section 435 (f) Internal Revenue Code for retained earnings during the last two taxable periods preceding the first excess-profits tax year. Such last two taxable years of some companies, as a result of a change in fiscal year, may have been less than 24 months and their base-period capital addition is accordingly inadequate.

Recommendation.—Section 435 (f) Internal Revenue Code should be amended to provide that where the last two taxable periods prior to the first excess-profits tax year cover a period of less than 24 months, the taxpayer may, for the purpose of computing the base-period capital addition, prorate the income of a sufficient period of the preceding 12 months to make up the full 24 months.

43. Excess-profits credit, based on income-effect of reduction in inadmissible assets upon net capital addition and reduction

Need for change.—An increase in inadmissible assets during the last 2 years of the base period reduces the base-period capital addition with a corresponding decrease in the excess-profits credit. On the other hand, a reduction after the base period in the inadmissible assets does not form part of the net capital additions under section 435 (g) Internal Revenue Code and, therefore, does not increase the excess-profits credit, except to the very limited extent that such reduction in inadmissible assets is subtracted from capital reductions.

Recommendation.—A reduction in inadmissible assets after the base period should be part of the capital addition in computing the excess-profits credit.

44. Net capital addition or reduction—Loans to members of a controlled group

Need for change.—Section 435 (g) (7) requires a reduction under section 435 (g) (4) (E) for the increase on any day during the taxable year in loans to members of a controlled group. It does not, however, provide that the increase on such day may be reduced by a subsequent decrease during the taxable year.

Recommendation.—Section 435 (g) (7) should be amended to provide that the reduction under section 435 (g) (4) (E) shall be determined by the excess of the average amount of loans to members of a controlled group during the year over the corresponding amount at the beginning of the first taxable year under the subchapter.

45. Relief provisions

Need for change.—Sections 443, 444, and 445 Internal Revenue Code embody formulas for the determination of relief through the use of a percentage of total assets determined by the Commissioner after a study of base-period returns of companies in the same industry. Experience has indicated that the use of the industry percentages required by the above sections, and as preliminarily determined by the Commissioner, have developed the following inequities:

(*a*) The average of 4 years has been used. This includes loss years and years of poor results. Companies not using the industry figures may use the best 36 months of the 48 months of the base period, and are not required to reduce earnings by losses, which are never figured below zero. Even the application of the average of the 3 best years of an industry as a whole is not comparable to the use by a company of its own three best years out of 4, since inevitably some companies in an industry will do better in one year of the base period and other companies will do better in a different year. A comparable line-up of industry figures would require, if it is feasible, an aggregation for all companies in an industry, of the best 3 years for each company out of 4. In the alternative, at least the poorest industry year should be eliminated in the application of industry figures.

(*b*) The industry figures are based upon the tax returns as filed, with no adjustment for either changes resulting from Treasury Department examinations or elimination of inadmissible assets, both of which are given effect in the case of companies to whom the relief provisions are not applied. The Treasury Department's experience with corporations as a whole for the base period should be applied to the industry figures in order that they be more realistic in regard to the aforesaid items.

(*c*) The industry classifications appear to be too limited in number and do not generally reflect the larger number of industries so as to afford appropriate application of these sections.

(*d*) The base-period capital addition is permitted only in the case of companies with abnormalities during the base period qualifying under section 442. Such additions are not permitted in the case of companies qualifying under the other relief sections, namely 443 through 446 of the code. In order that all companies receive equality of treatment, the base period capital addition should be applied, regardless of whether the tax is computed under the general average or under any of the sections 442 through 446.

16. Abnormalities in income in taxable period

Need for change.—Section 456 (a) (2) (C) Internal Revenue Code lists as a separate class of abnormal income the income from the sale of patents, formulas, or processes, but does not include as abnormal income the income from research or development of such items or of tangible property. The result is that abnormal income from research and development is completely subject to the excess-profit tax, even though it may have resulted from research and development extending over a period of more than 12 months during periods other than the excess-profits tax years. Under the prior excess-profits tax (sec. 721 (a) (2) (C) I. R. C.), such income was recognized as a class of abnormal income.

Recommendation.—Section 456 (a) (2) (C) should be amended to include income from research and development, in the same manner as under section 721 (a) (2) (C) of the prior excess-profits tax law.

Statement of Air Transport Association of America, Washington, D. C.

The Air Transport Association of America, which represents virtually all of the certificated airlines operating under the American flag, urges the committee not to impose an additional gasoline tax on the airlines. Gasoline used by the airlines is not a commodity which, under tests prescribed by Secretary Snyder, should be taxed at an increased rate. The proposed increase not only would have a serious impact on the industry, but would discriminate among the airlines, falling particularly heavily on the smaller airlines.

In the hearings before the Ways and Means Committee, Secretary Snyder made two tax proposals which directly affect the airlines. He suggested that the corporate income tax be raised by 8 percentage points, and that the present 1½-cent gasoline tax be increased to 3 cents per gallon.

H. R. 4473, as passed by the House, would increase corporation income taxes by 5 percentage points and, due to changes made in the excess profits tax, would produce approximately as much income tax revenue from corporations as recommended by the President. We do not raise any question with respect to the proposed increases in income taxes on corporations since they will apply to business generally. They will not be levied so directly and specifically against the airlines as is the proposed increase in the gasoline tax.

H. R. 4473 would increase the gasoline tax from 1½ cents to 2 cents per gallon. In his testimony before this committee, the Secretary pointed out that the net yield of H. R. 4473 is about $7 billion, or roughly $3 billion less than the goal set by the President. The Secretary urged that this gap be closed, and that approximately $2 billion extra revenue be obtained by further increases in "selected excise taxes," including an increase in the gasoline tax from 1½ to 3 cents, as originally proposed to the House committee.

We are greatly concerned with the Secretary's proposal to double the tax on gasoline. The air transport industry operates on gasoline. It is the heart of our business. It is our basic raw material, as is coal to the steel mills. The domestic airlines will use an estimated 425,000,000 gallons of aviation gasoline during 1951. Consequently, they would be hit particularly hard by such an increase in this tax.

There are three principal reasons why the Congress should not increase the tax on gasoline used by the airlines.

1. Gasoline used by the airlines is not a commodity which, under tests prescribed by Secretary Snyder, should be taxed at an increased rate.

In his statement before the Ways and Means Committee, the Secretary pointed out that additional revenue was to be raised from excise taxes "on those consumer goods which are less essential or which use materials that will be in short supply." The gasoline used by the airlines clearly does not fall in either of those categories.

There can be no question but that continued operation and rapid expansion of the airlines is a prime essential. The Nation's economy has become more and more reliant upon the speed and services of air transportation. Moreover, the increasing tempo of our production machine is going to require rapid expansion of the airline industry. An even further expansion is required by the fact that military plans for airlift requirements generally are hinged upon the use of a high percentage of the commercial airlines' fleet. In a speech in the fall of 1950, the Secretary of the Air Force, in speaking of the requirements for air transport in times of emergency, stated in part: "When we * * * take into consideration * * * not only the military planes available but a practicable percentage of the civilian airlines which might be taken over in the event of war, we find a very substantial deficit." Thus, for both business and military uses the airlines must expand, and the use of gasoline is essential to that expansion.

Nor does the Secretary's reference to materials which are in short supply apply to the gasoline used by the airlines. Presumably he had in mind that a tax imposed on such materials would discourage their purchase and use. But, as stated, it is quite clear that the public interest does not require a reduction in the use of gasoline by the airlines—it requires just the opposite.

2. The proposed increase would have a serious impact on the industry.

If the proposed increase is adopted, our conservative estimate is that the industry would pay to the Federal Government in the neighborhood of $13 million a year in gasoline taxes alone, based on 1951 figures. An item of $13 million does not create much of an impression any more, but this amount of money is a very heavy burden to the air transport industry. The total amount of gasoline taxes which the airlines would pay to the Federal Government under the Treasury Department's proposal would mount to more than their total net profits in 1949, and about 50 percent of those for 1950 and 1951.

There is attached to my statement a table which shows, for each domestic airline, the percentage which the proposed additional gasoline tax it would have to pay, bears to its net operating income, before income taxes.

A review of that table reveals that of the 32 airlines listed, 7 operated at a loss in 1950. That even for the airlines with the largest net operating income, the increase in gasoline taxes alone would constitute 5.2 percent of that income. In one case the increase in tax would be more than seven times the net operating income. Generally, for airlines with comparatively small net operating income, the new tax would virtually wipe out anticipated small profits.

The total tax increase would be 9.8 percent of the total net operating income of the domestic airlines. Thus, the airlines would be subject not only to the proposed additional income taxes, but also to an additional similar burden which is even higher.

Even if it were possible for the airlines to require the air traveler to absorb every bit of the additional gasoline tax—and we do not think it is—it seems unfair and inequitable to impose an additional burden of taxation upon him. He is already paying very substantial taxes for the privilege of riding on an airplane. In the year 1949 the air traveler paid $46,700,000 in transportation taxes. In 1950 he paid $53,200,000, and it is estimated that in 1951, his tax bill will be increased to $66,500,000. It seems to us that the air traveler is paying enough. Apparently the Secretary thought so, too, since he proposed no increase in the transportation tax rate.

Most Federal taxes, unlike the gasoline tax, are expressed as percentages of the tax base. While a tax of 3 cents per gallon, at first blush, sounds rather innocuous, the full burden of the tax can be appreciated when it is expressed as a percentage of the price of the article taxed. The airlines buy their gasoline at prices in the neighborhood of 17 to 19 cents per gallon. A 3-cent tax on a gallon of gasoline purchased at 17 cents amounts to a tax of approximately 18 percent. That is a "luxury tax rate," as witnessed by the fact that the excises on jewelry, furs, cosmetics, and cabaret checks are only 20 percent. But gasoline is no "luxury" to the airlines—it is their lifeblood.

3. The tax would discriminate among airlines

An even greater objection to the proposed gasoline-tax increase is the fact that the heavy burden which it would impose is not, and cannot, be spread evenly over the industry. It is the small airline that is particularly hurt. As a matter of fact, the smaller and weaker the airline, the more heavy the burden of the tax.

Some airlines have a high percentage of long-haul traffic between major traffic centers; others, particularly the feeder lines, serve primarily the smaller cities where the traffic volume is very small. For this reason, the percentage of seats occupied on the airplanes of the various companies will vary from 70 percent down to as low as 25 percent.

The gasoline tax, which is an arbitrary figure assessed against the purchase of each gallon of gasoline, bears no relationship to the ability of the particular airline to pay the tax. No consideration is given to the earning capacity of the airline, the traffic-producing potentialities of its route, or to the passengers or other cargo that it carries. Most of the smaller airlines operate DC-3's, which consume about 100 gallons of gasoline an hour. On the basis of the proposed tax, they would have to pay $3 tax for each hour a DC-3 is operated. They would have to pay this same $3 even though they were actually carrying only six or seven passengers in the airplane. These smaller airlines, who fill only 25 to 35 percent of their seats, have no way of mitigating the discriminatory effects of the tax except by applying to the Government for subsidy, and it is clearly unsound policy to impose a tax upon an airline and promptly increase Government subsidy payments in amounts sufficient to offset the tax.

For all of the reasons we have stated, we hope that the committee will not impose any additional gasoline tax on the airlines. We do not believe that such a tax increase is necessary in order to insure that air transportation makes its proper contribution to the additional revenues required. The 15-percent transportation tax, for instance, which is collected for the Government by the airlines, will increase from $53,200,000 in 1950 to about $66,500,000 in 1951, thus providing additional revenue of $13.3 million. This increase is twice the amount which would be collected by a 1½-cent increase in the gasoline tax.

Relationship of proposed increase in gas tax of 1½ cents to net operating income, before taxes, of carriers in 1950

1 Proposed increase in gas tax would be $443,415, or more than 7 times the net operating income.

MEMORANDUM OF R. E. DU MONT, ASSISTANT TREASURER OF THE DUKE ENDOWMENT, NEW YORK CITY

In connection with the proposed tax withholding at source from dividends and interest, consultations have been held with religious, charitable, and educational organizations and pension-fund organization, seven banking institutions in connection with their corporate divisions, trust divisions, pension divisions, and banking divisions, also with a number of the larger religious denominations, and all expressed hope that this proposed withholding will not be adopted and will not become part of our tax law.

Some certain reasons why this withholding will adversely affect tax-exempt entities are as follows:

1. Millions of dollars will be constantly frozen in the hands of the Treasury Department.

2. Income will be diminished due to loss of income on funds frozen with the Treasury Department.

3. Application of funds to the specific purposes for which they have been dedicated will be retarded. This will have a chain effect upon beneficiaries who rely upon current distributions to meet current operations.

4. Actuarial basis of pension trusts will be seriously disturbed. (Payments made into pension funds are partially based upon prompt investment of income.)

5. When dividends are paid other than in cash (taxable stock dividends), tax-exempt entities will be required to furnish the paying corporation with an amount equal to 20 percent of the market value of the stock dividends.

6. Additional expenses will be incurred in maintaining necessary records and in requisitioning refunds.

Some complications which will present themselves if this withholding proposed becomes effective are as follows:

1. Many of the tax-exempt entities hold securities registered in the name of registered nominee corporations, and the paying entity does not know who the actual owners are and, therefore, could not furnish the Treasury Department with this information. This would complicate exemption at source should that method be considered. This would also be true in connection with stock purchased or sold but not actually transferred on the books of a corporation before the payment date of record. These situations would also complicate the checking of refunds unless the books of the tax-exempt entities are relied upon for checking purposes.

2. Bonds held by pension funds are to a large extent held in coupon form, and the complications mentioned under item 1, above, will also prevail in connection with coupon bonds.

3. When bonds are traded in between interest dates, the seller will receive from the buyer accrued interest to date of sales, but the buyer will have to retain 20 percent of the accrued interest to cover part of the tax which will be withheld at source on the next regular interest payment date. This may have some effect upon the market, because the buyer will have temporary use of the tax put up in advance by the seller.

4. Many securities are originally issued on a true discount basis and, therefore, carry no fixed interest rates, which presents the problem of determining the income on which the tax should be withheld.

5. Auditing of refunds will be a considerable problem to the Treasury Department. It will be a very sizable task and a costly one in dollars and in time both to the Government and the tax-exempt entities. Records of all tax-exempt entities will at all times have to be available for examination by the Treasury Department. This is presently necessary concerning organizations exempt under section 101 (6), Internal Revenue Code, which have to file form 990 annually, but this has not been the case concerning tax-exempt entities organized solely for religious or educational purposes.

6. Accounting records of tax-exempt entities usually reflect the amortized earned-interest income (often on an accrued basis). Therefore, in order for the Treasury Department to determine the amount of interest received on which the 20-percent tax has been withheld, the earned income as shown by the books will have to be converted back into cash-interest income.

Being mindful of the adverse effect this withholding would have upon tax-exempt entities and readily vizualizing the many difficulties which might be encountered in obtaining a refund, a refund procedure was developed which, if adopted, would enable refunds of tax withheld to be obtained currently and at the same time provide the Treasury Department with a considerable amount of certified evidence to support the accuracy of the refund. This method might go a long way in relieving the Treasury Department of the vast amount of checking which will be necessary, such as delving into voluminous records or obtaining a vast amount of information at source. (As stated heretofore, it is just about impossible to obtain complete information at source.) The refund procedure has been worked out in cooperation with five large New York City banks and two suburban banks, and meets with their approval, and it could be put into operation without much disturbance to the bookkeeping methods presently employed by the banks.

The procedure outlined below would relieve tax-exempt entities of some of the burden this proposed tax withholding at source would impose and provide all such entities with a means of obtaining a tax refund each month. The Ways and Means Committee of the House of Representatives, recognizing that refunds should be made to tax-exempt entities as quickly as possible, has proposed that such entities able to do so be permitted each month to offset, against funds held by them representing taxes withheld from wages for social security, etc., the tax withheld at source from dividends and interest. There are many tax-exempt entities which will not be able to obtain a tax refund in this manner; however, if the procedure suggested below is permitted, all tax-exempt entities would receive like consideration.

SUGGESTED PROCEDURE

1. The tax-exempt entity would file with its depositary or depositaries a certification, verified by the Treasury Department, of its tax-exempt status. An acceptable form would be prescribed by the Treasury Department.

2. A dividend payment or interest-payment order would be filed with corporations or their paying agents for all stocks and bonds registered in the name of the tax-exempt entity, so that all dividends and interest on such investments would be received through a depositary. All income on stocks and bonds owned by such an entity, but registered in the name of a nominee, etc., would be collected through the depositary, as would all interest on bonds held in coupon or bearer form. This procedure is suggested as a means of proof of receipt of income.

3. The depositaries, upon receipt of dividends and interest, representing 80 percent of the amount due, would credit the proper account of the tax-exempt entity. Depositaries would be looked to for the correctness only of the dividends and interest on stocks and bonds held by them in custody. The correctness of all other income would be determined by the tax-exempt entity, with all necessary adjustments made through the proper account with its depositary.

4. Each month, the tax-exempt entity would file with its depositary a certification (in duplicate), in such detail and form as prescribed by the Treasury Department, of the income its depositary has received and credited to its account during the month. This detailed certification would set forth the income due, the refundable tax withheld, and the net amount received, and would be checked by the depositary against its control records.

5. Attached to the certification statement submitted by the tax-exempt entity to the depositary would be a draft on the Federal Reserve bank by the tax-exempt entity payable to the depositary for the account of such entity in the amount of the tax refundable. This draft would be in a form prescribed by the Treasury Department and would contain the endorsement and guaranty of the depositary similar to the following, or in a form to be prescribed by the Treasury Department:

"By endorsement of this draft, the depositary bank guarantees—

"1. That the drawer has filed with the depositary bank a Treasury certificate evidencing its tax-exempt status.

"2. That the draft has been signed by a duly authorized officer of the drawer.

"3. That the proceeds have been credited to the drawer's account.

"4. That the amount of the draft does not exceed 25 percent of the total interest and divided payments credited to the drawer's account in the depositary bank during the preceding calendar month."

The draft would be presented by the depositary to the Federal Reserve bank accompanied by the duplicate copy of the tax-exempt entity's certification. If the Treasury Department would honor these drafts, it will result in the tax-exempt entities obtaining each month a refund of the tax withheld at source during previous month.

A form of draft which might be considered is as follows:

WITHHELD-TAX REFUND DRAFT

NEW YORK..............19 1-120
210

Pay to the order of.. $..........

For account of..

.... Dollars

To: Federal Reserve Bank of New York,
Fiscal Agent for
Treasurer of the United States

(Authorized signature)

Concerning interest on bonds, notes, etc., traded in between interest dates, the certification will always agree with the depositary's control if tax is withheld only on regular interest-payment dates. If tax withholding on accrued interest is taken into account by buyer and seller on between-interest-date transactions, there will be certain instances where tax refunds requested in the certifications will be less than 25 percent of amount shows by the depositary's control as collected. For example:

(a) Where a tax-exempt entity buys a bond, etc., between interest dates and holds the security at the next regular interest date, the refund requested would be based on the period such entity held the security.

(b) Where a tax-exempt entity sells a bond, etc., between interest dates, providing such entity held the security on the previous regular interest payment date, the tax refund requested will be 25 percent of the amount the depositary would show as collected, but if the security was not held on the previous regular interest payment date the refund requested would be based on the period the tax-exempt entity held security.

(c) It is recognized that where a tax-exempt entity sells bonds, notes, etc., between interest dates with adjustments made for tax withholdings, should such entity include in its certification for the month in which the sale took place a request for refund, such refund might be in advance of the month when the Treasury Department will collect the tax at source. In such instances, these items could be included in the certification for the month in which the regular interest date occurs.

(d) Regarding tax withholding on true discount notes, bills, etc., the method as to how the Government will want this income treated for tax withholding will first have to be determined and, based upon that determination, such amounts could be satisfactorily worked into the certification.

SUGGESTED PROCEDURE FOR THE SMALLER TAX-EXEMPT ENTITIES

The tax-exempt entity would deposit dividend payments, interest payments, etc., from which a 20-percent tax has been withheld in its local bank and simultaneously hand said bank a draft drawn on the Federal Reserve bank as fiscal agent for the Treasury of the United States in the amount of the tax withheld at source from these specific dividend and interest payments, etc. This draft would contain endorsements similar to the following:

(a) "By endorsement of this draft the drawer certifies—

"1. That it holds a good and valid ruling from the Treasury Department evidencing its tax-exempt status.

"2. That the proceeds have been credited to the account of the drawer.

"3. That the amount of the draft does not exceed 25 percent of the total interest and dividends, etc., from which tax has been withheld at source, which has been credited to the drawer's account simultaneously with this draft."

(b) "By endorsement of this draft the bank certifies—

"1. That the amount of interest, dividends, etc., noted above have been credited to the account of the drawer."

Discussions with the various tax-exempt entities indicates that use of this refund procedure would be a method preferable to the proposal contained in H. R. 4473 whereby entities able to do so could offset the tax withheld from dividends and interest against the tax withheld from wages, etc., and funds held for social-security payments.

It seems inconceivable that the Treasury Department would think along lines of paying out millions of dollars in refunds without first having something in hand to substantiate same. Therefore, it is seriously doubted that the final

WITHHELD TAX REFUND DRAFT

Pay to the Order of
for Account of

$ ______

______ Dollars

TO - Federal Reserve Bank of New York
Fiscal Agent for
Treasurer of the United States

______ Authorized Signature

By Endorsement of this Draft the Drawer certifies
1-That it holds a good and valid ruling from the Treasury Department evidencing its tax-exempt status
2-That the proceeds have been credited to the account of the Drawer.
3-That the amount of this Draft does not exceed 25% of the total interest, dividends, etc. from which a 20% tax has been withheld at source and which have been credited to the account of the Drawer simultaneously with this Draft.

Dividend, Interest Payments, etc. Received From	Amount of Dividends, Interest etc. deposited simultaneously with this Draft 80% of Income Receivable	
Total		
25% of Total - Tax Refund also the amount of this Draft		

______ Authorized Signature

By endorsement of this Draft the Bank certifies that the amount of Interest, Dividends, etc. listed above have been credited to the account of the Drawer.

______ Authorized Signature

decision of the Treasury Department will be to make refunds solely on the basis of requisitions. Unless a method is adopted similar to the refund procedure, there will be, of necessity, a long delay in the payment of refunds due to the time required to enable the Treasury Department to ascertain that refunds requested are properly refundable.

R. E. DuMont.

30 Rockefeller Plaza, New York City.

Senator Byrd. The committee will recess until 10 o'clock tomorrow morning.

(Whereupon, at 12:35 p. m., the committee recessed to reconvene at 10 a. m. Thursday, August 2, 1951.)

REVENUE ACT OF 1951

THURSDAY, AUGUST 9, 1951

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met, pursuant to recess, at 10 a. m., in room 312 Senate Office Building, Senator Harry F. Byrd, presiding.

Present: Senator Byrd (presiding), Johnson (Colorado), Hoey, Kerr, Frear, Millikin, Martin, and Williams.

Also present: Elizabeth B. Springer, chief clerk, and Colin F. Stam, chief of Staff, Joint Committee on Internal Revenue Taxation.

Senator BYRD. The committee will be in order.

Congressman MORANO. You may be seated, Congressman.

STATEMENT OF HON. ALBERT P. MORANO, A MEMBER OF THE HOUSE OF REPRESENTATIVES FROM THE FOURTH CONGRESSIONAL DISTRICT OF THE STATE OF CONNECTICUT

Mr. MORANO. Mr. Chairman, first of all, I wish to express my gratitude to the Senate Finance Committee for giving me the opportunity to appear here in behalf of a very important industry in my district. This industry is the electric shaver manufacturing industry, and it employs between 2,000 and 2,200 men and women, some of whom are members of labor organizations, and other white-collared workers.

The revenue act as passed by the House, includes an excise tax on the manufacture of electric razors in the classification of electric appliances.

On May 14, 1951, the House Ways and Means Committee voted to include electric shavers as taxable electrical appliances. I was disturbed by that vote for the reason that I believe it was discriminatory in that it did not include other appliances of a nonelectric nature such as safety and straight razors.

So I approached several members of the House Ways and Means Committee, and pointed out that fact to them. As a result of that, on May 24, 1951, the House Ways and Means Committee again voted on the question of taxing razors, and voted to include safety razors and other types of shaving equipment as taxable.

On June 14, 1951, the question was again raised in the committee, as a result of the committee's having voted to include all razors, and some influence unknown to me brought about the reconsideration of the entire matter.

The House Ways and Means Committee on June 14 began to vote on the matter again.

Having reached one section of the bill which had this language in it, they voted to rescind the action they had taken on May 21, thereby eliminating safety razors and other shaving equipment from taxation.

I understand that before they could reach the question of electric razors, a dispute and a wrangle broke out and nothing was done about eliminating that discriminatory feature from the tax bill.

As a result it came to the floor of the House of Representatives with a provision that would tax the electric shavers. As you gentlemen know, under the rules of the House, as this bill was reported, the rule precluded the offering of an amendment to correct this discriminatory feature; consequently, I was unable to do anything more about it, except to follow the only recourse and come before your committee and ask for relief.

It is my contention that the imposition of an excise-tax on electric razors, sometimes called electric shavers, is discriminatory and will create an unfair competitive position and situation in the razor industry in favor of safety razors and the straight razor segment of that industry.

This is not the first time that this matter has come before the Congress. In 1941, a similar recommendation was made by the Treasury Department with respect to excise taxes in the 1941 Revenue Act on electrical appliances.

An excise-tax on electric razors was included in the bill reported by the House Way and Means Committee, passed by the House and was amended in the Senate to exclude electric razors; went to conference and on the conference report the House receded.

Consequently, electric razors were not subject to the imposition of excise taxes in World War II. In order not to discriminate and not to create an unfair competitive situation, logic would impel the inclusion of all razors or none.

For example, in the 1941 Revenue Act, the Treasury Department recommended an excise-tax of 10 percent upon the manufacture and sale of electric appliances. I quote from the Senate report of this committee No. 673:

> The House bill imposes a tax of 10 percent upon the manufacture and sale of electric appliances. It was pointed out that the exclusion of gas and oil water heaters and cooking appliances, created an unfair competitive situation. Consequently, these gas and oil appliances are included in the tax category and are taxed at the 10-percent rate.

Electric gas and oil appliances were included in the bill as enacted.

I just want to refer you to a statement from Assistant Secretary John L. Sullivan, who spoke to the committee in regard to the proposed new excise-tax, in a prepared statement appearing on page 50 wherein he said:

> In the field of excise taxation it is proposed that a number of new taxes be imposed and the rates of some existing taxes be increased.

This is the important thing he said—he said:

> We have endeavored to avoid excise taxes which would fall on the basic necessities of life—

and certainly a shave is a basic necessity of life.

Senator FREAR. Electric shaver?

Mr. MORANO. Electric shaver, and I will point out why I believe it to be so. There are blind veterans and older people who cannot shave with a straight razor or a safety razor and necessarily must use the more effective and safer electric razor.

Senator FREAR. What percentage of the blind and old use electric razors now?

Mr. MORANO. Well, I am not sure I have that figure, but if I do find it, I will put it in the record.

Senator FREAR. All right.

Senator MILLIKIN. Let me ask you this. Do you think that shaving itself is a basic necessity? [Laughter.]

Mr. MORANO. I think that in this modern civilization, shaving might be considered a basic necessity.

Senator WILLIAMS. At least it is not a luxury, is it?

Mr. MORANO. It is not a luxury, no; certainly not. Now there was a colloquy between Representative Woodruff and John Sullivan. I will not go into it in detail, but I just want to read Sullivan's reply to a question directed to him by Mr. Woodruff, "As long as the other fellow in the same line of business is paying the same tax, I believe it is so," applying to equity and so on.

A formal statement by Colin Stam, the chief of staff of the Joint Committee on Internal Revenue Taxation, before the House Ways and Means Committee made six points as a fundamental test to be considered in the sound manufacturers' tax. I will not read all six of them, but I will read one of them. It said, and this is No. 4, "The tax must be imposed uniformly and without discrimination."

This is explained by saying that it was the desire of each member of a competitive group that he pay taxes upon substantially the same base as his competitor.

Now, certainly I represent a district; I have the great honor to represent a district in the great State of Connecticut, that manufactures about 85 percent of all the electric shavers that are made in the world.

In addition to its being incumbent upon me to appear before this committee in an attempt to adequately represent my district, I think that the principle involved here is important.

The distinguished Senator from Virginia made a very profound observation yesterday in which he was quoted as having said that we are scraping the bottom of the barrel so far as present taxation methods are concerned—in other words, orthodox methods of taxation.

I think that this provision in the House bill is basically an unorthodox method of taxation, because it would tend to destroy competition, and in the question of my district, it would unstabilize employment very much in an important segment of the industry in my district, and harm the economy of my district, including the peace and tranquility and prosperity of many laboring people.

Furthermore, I want to say to you gentlemen that electric shavers are used by women. I am sure that you will agree with me that we Members of the Congress do not wish to further incur the wrath of women.

The legislation in the House, as passed in the House, provides that hair dryers should be taxed. I think you are going a little bit too far if you tax the hair dryers and then tax their electric shavers. [Laughter]

To get down to the revenue involved in this provision, it is estimated that a 10 percent tax imposed on the manufacturer of razors and razor blades in the whole razor industry would result in the collection of $6 million in taxes as compared to only $2 million if you just tax the electric shaver.

The consequence of this discrimination in the razor industry is apparent, both as to competition and as to tax revenue.

Excise taxes paid by the electric razor segment of the razor industry upon a commodity which is recognized to be not a luxury item any more than is a safety razor or a straight razor, should be taxed upon the same base as its competitor manufacturing safety razors or straight razors, otherwise the tax is not imposed uniformly and without discrimination, which is what Colin Stam's statement—what the House Ways and Means Committee said.

Here is the practical matter which I respectfully urge you Senators to consider. If this language is not changed in the bill there is no disagreement in the language when it goes to conference, and if it goes to conference, there is no basis for a discussion of whether or not it is fair and without discrimination and there is no basis for the Senators to determine what the House's reasoning is in imposing this kind of a tax.

Senator MILLIKIN. How much revenue do they expect to get out of it?

Mr. MORANO. It is $2 million.

I urge you that there are two ways of getting it into conference; one, to strike out the language, or, two, to strike out the language and include all razors so that there is a difference between the Houses and a discussion is permitted.

That closes my statement. I respectfully urge, in view of the small amount of revenue to be raised and the most important principle involved, that we not forsake or leave the principle of fairness and justness—open the door to a creeping-in of violations of that principle. We should not do that, in my opinion.

With that, Mr. Chairman, I conclude my statement.

Senator BYRD. Thank you very much.

Mr. MORANO. If I may make a brief statement, I am a great opera lover, and I understand that the Metropolitan Opera people are here, and I would respectfully urge that the tax-exemption language that was inserted in the House bill be retained in the interest of culture and happiness to so many people of the United States.

Thank you very much.

There will be inserted in the record a letter from Senator William Benton, a letter from Francis J. McNamara, general counsel of the Remington Rand Co., and a proposal to amend section 127 of the code, relating to foreign-war losses submitted by the Gillette Safety Razor Co.

(The letters referred to follow:)

UNITED SATES SENATE,
Washington, D. C., August 2, 1951.

HON. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: It is my understanding that your committee is considering a luxury tax upon electric razors. This is contained, I understand, in the House tax bill.

It has come to my attention that originally in this House bill all types of safety shaving devices were taxed, but that the tax on all but electric razors was removed by the House.

I have been told that you had the same problem a few years ago and at that time the committee removed the tax also upon electric razors. I hope that your committee will be able to do something about this discriminatory tax as it stands in the House bill so that all razors are either taxed equally or not taxed at all.

You may be interested to know that 85 percent of all the electric razors in the United States are made in my State of Connecticut. Thank you very much for any consideration you are able to give this matter.

Very sincerely yours,

WILLIAM BENTON,
United States Senate.

REMINGTON RAND, INC.
New York, N. Y., August 1, 1951.

Hon. WALTER F. GEORGE,
United States Senate, Washington, D. C.

MY DEAR SENATOR: Enclosed is a copy of a letter which I have today sent to Elizabeth B. Springer, chief clerk of the United States Senate Finance Committee.

I am advised that the hearing will be held on August 2 with respect to the phase of the Revenue Act which imposes a 10-percent manufacturers' excise tax on "electrical appliances," including electric razors.

I ask that you give your usual careful consideration to the position taken by this company with respect thereto.

Respectfully,

FRANCIS J. MCNAMARA,
General Counsel.

AUGUST 1, 1951.

SENATE FINANCE COMMITTEE,
United States Senate, Washington, D. C.
(Attention Elizabeth B. Springer, chief clerk.)

GENTLEMEN: The revenue act as passed by the House includes an excise tax on the manufacture of electric razors in the classification of electric appliances.

The chronology of the action of the House Ways and Means Committee was as follows:

May 14, 1951, voted to include electric shavers as taxable electric appliances.

May 24, 1951, voted to include safety razors and other types of shaving equipment as taxable.

June 14, 1951, action of May 24, 1951, rescinded. The revenue act as it passed the House provided for an excise tax of 10 percent on electric appliances including electric shavers.

It is my contention that the imposition of an excise tax upon electric razors (sometimes called electric shavers) is discriminatory and will create an unfair competitive situation in the razor industry in favor of the safety and straight razor segment thereof.

A survey by American Legion magazine reflected—

	Percent
Type razor used: [1]	
Safety	81.3
Electric	23.3
Straight	4.4

Shaving habits—Makes of razors used:	
Safety:	
Gillette	48.1
Schick	18.0
Gem	7.1
Rolls	1.0
Electric:	
Remington Rand	8.3
Schick	7.4
Sunbeam	5.4
Others	4.3
No preference	.4
	100.0

[1] Adds up to more than 100 percent because of multiple mention.

Remington Rand, Inc., as you will observe from the above survey, will be affected by the imposition of a 10-percent excise tax as included in the bill as it passed the House, and together with other manufacturers of electric razors, will be the subject of discrimination through the exclusion of other makes of razors, creating an unfair competitive situation.

A similar recommendation was made by the Treasury Department with respect to excise taxes in the 1941 Revenue Act, on electric appliances. An excise tax on electric razors was included in the bill reported by the House Ways and Means Committee; passed the House; was amended in the Senate to exclude electric razors; went to conference, and on the conference report the House receded. Consequently, electric razors were not subject to the imposition of excise taxes in World War II.

In order not to discriminate, and not to create an unfair competitive situation, logic would impel the inclusion of all razors, or none. For example in the 1941 Revenue Act, the Treasury Department recommended an excise tax of 10 percent upon the manufacturers' sale of electric appliances. I quote from the Senate Report No. 673:

"The House bill imposes a tax of 10 percent upon the manufacturers' sale of electric appliances. It was pointed out that the exclusion of gas and oil water heaters and cooking appliances created an unfair competitive situation. Consequently these gas and oil appliances are included in the taxable category and are taxed at the 10-percent rate."

"Electric, gas, and oil appliances" were included in the bill as enacted.

Relevant portions of the legislative history of the 1941 Revenue Act follow:

(*a*) The Treasury opened the hearings before the House Ways and Means Committee (77th Cong., 1st sess., revised vol. 1). After Secretary Morgenthau testified, Assistant Secretary John L. Sullivan spoke to the committee in regard to the proposed new excise taxes in a prepared statement appearing at page 50, he said (inter alia):

"In the field of excise taxation it is proposed that a number of new taxes be imposed and the rates of some existing taxes be increased. *We have endeavored to avoid excises which would fall on the basic necessities of life* and excises which, while productive, would constitute an increase in the cost of doing business and thus would be passed on to the Government and to the public in general price increases. *We have, however, selected certain luxury articles which, though widely used, are not necessities.* It is suggested that in the light of our over-all revenue requirements the users of these articles may now be asked to pay additional taxes. The list of these excises is limited by the difficulty of finding commodities consumed in sufficient quantities to bring in revenue commensurate with the expense of administration. Undoubtedly the committee will want to consider the possibility of adding other commodities to the list." [Emphasis supplied.]

After this formal statement Representative Woodruff questioned Sullivan on the matter of corporate taxes. The principle involved, is in my opinion, worth mention in relation to certain statements herein following by Colin F. Stam, Chief of Staff, Joint Committee on Internal Revenue Taxation, at page 72:

"Mr. WOODRUFF. Well, now, Mr. Sullivan, referring to the corporation taxes; competition in this country is rather keen, is it not, between different businesses of like kind?

"Mr. SULLIVAN. Yes, sir; I think that it should be.

"Mr. WOODRUFF. And when taxes are placed on corporations, that does not in any degree, does it, change the competitive-business conditions as between the different competitive organizations, if the law is applied to all alike?

"Mr. SULLIVAN. There might be some situation in which it did, but I cannot think of them. I would say generally the answer is "No."

"Mr. WOODRUFF. That is my opinion, and as a matter of fact, it is not a matter of some indifference, not complete indifference but some indifference, to corporations as to how high the tax placed on them is, so long as they know exactly what that tax is?

"Mr. SULLIVAN. *As long as the other fellow in the same line of business is paying the same tax, I believe that that is so.*" [Emphasis supplied.]

(*b*) Formal statement of Colin F. Stam, Chief of Staff of the Joint Committee on Internal Revenue Taxation, before the Ways and Means Committee pages 82 and 87:

"The Committee on Ways and Means set up, as six fundamental tests of a sound manufacturer's tax, the following (Rept. No. 708, 72d Cong., 1st sess.):

"(1) The rate should be low, so that undue burdens will not be imposed.

"(2) Certainty, both as to liability and amount, must be attainable in advance of sale.

"(3) Pyramiding must be prevented.

"(4) The tax must be imposed uniformly and without discrimination.

"(a) This is explained: 'It was desired that each member of a competitive group pay tax upon substantially the same base as his competitors.'

"(5) Provisions must be made for the least administrative difficulty (such as classifications arising in connection with exemptions).

"(6) Adequate authority must be granted to assure a sound, smoothly functioning, and flexible administration."

In considering the House bill, I ask that you give due weight to the factors presented in the enclosed statement of Mr. H. C. Landsiedel, manager of the Shaver division of Remington Rand, Inc., which employs approximately 1,200 persons in the manufacture of electric shavers, which are now sold at retail in almost every city and town in the United States.

I invite your attention specifically to Mr. Landsiedel's estimate that the same tax of 10 percent imposed upon the manufacture of razors and blades in the razor industry would result in the collection of $6,000,000 in taxes as compared to $2,000,000 available from the manufacture of electric shavers. The consequence of the discrimination in the razor industry is apparent; both as to competition and taxes.

Excise taxes paid by the electric-razor segment of the razor industry upon a commodity which is recognized to be not a luxury item any more than is a safety razor or a straight razor should be taxed upon the same base as is its competitor manufacturing safety razors or straight razors. Otherwise the tax is not imposed uniformly and without discrimination.

Respectfully,

FRANCIS J. MCNAMARA, *General Counsel.*

BRIDGEPORT, CONN., *July 27, 1951.*

Memorandum: In connection with the proposed manufacturers excise tax as it relates to electric shaving.

The law as proposed represents, in our opinion, a discriminatory measure against at least 25 percent of shaving men in America, who over the past 15 years have been converted to this modern, speedy method of performing what is to all of us a social necessity in the American way of life.

The figure of 25 percent set forth above is not a figure used glibly without substantiation. Detailed below are four of several surveys conducted by independent organizations showing the percentage of use by the shaving public of electric shavers.

	Percent
City of Spokane, Spokane Spokesman's Review	30.7
City of Seattle, Seattle Times	32.2
City of St. Paul, St. Paul Dispatch and Pioneer Press	24.3
City of Sacramento, the Sacramento Bee	24.3

The percentages expressed above are, of course, percentages of consumers using an electric shaver and all of the analyses were made during 1950.

A survey just issued by Drug Topics, in their issue dated July 30, 1951, shows that civilian retail spending for electric shavers in 1950 was $45,404,000. This figure is considered by some manufacturers to be excessive and they conservatively place the amount of retail spending for electric shavers at $40,000,000. On the basis of the present discounts in the trade, one-half of this sum goes to the manufacturer, or about $20,000,000, upon which the Government, on the basis of the proposed excise tax, would collect something less than $2,000,000.

In the same survey retail sales of razors and blades are estimated at $10,049,000 and $95,571,000, respectively, a total of $105,620,000, of which approximately $60,000,000 goes to the manufacturer; and were razors and razor blades included in the proposed law, $6,000,000 in taxes would be collected.

Obviously, from the above figures, the proposed law would collect $2,000,000 by taxing the electric dry shaver and forego a tax of $6,000,000 by not taxing the razor and razor-blade industry.

If the users of dry shavers represented 6, 5, or 10 percent of the total shaving public, the percentage of users would, obviously, be in the minority. The situation is, however, exactly the opposite, 25 to 30 percent of the shaving public use the dry-shaving method.

Actually, retail sales of shaving products of all kinds represents a $255,000,000 industry, of which the dry shaver represents $45,000,000 and, in addition to razors and blades, there is about $95,000,000 spent for lathers, soaps, powders, lotions, strops, etc. If we understand the proposed law, none of these items have been included in the excise tax.

A poll of the Members of the Congress quite possibly would show that at least 25 percent use dry shavers. Surveys to the general public by outstanding publications such as American Legion magazine, Collier's Weekly, Milwaukee Journal, confirm the percentage figures of 25 to 30 percent.

The most recent survey which has come to light has just been published by Boy's Life, the national magazine published by the Boy Scouts of America, and the survey shows that 24 percent of the boys who shave between the ages of 13 and 18 use the dry-shaving method. Hundreds of thousands of boys and young men, who have started shaving since 1935, have never used a razor blade.

The dry-shaving industry received great impetus during and after the war from men in the services. As a matter of fact, during World War II priorities were issued to enable servicemen not only to continue to use the dry-shaving method but to progress to this new, modern method. The dry shaver has been a boon of inestimable value to veterans' hospitals, where disabled veterans have been afflicted with face wounds. Thousands upon thousands of individuals can use only the dry-shaving method because of skin disorders and the fact that the nature of their skin is such that it cannot be subjected to the daily scraping of a knife.

In many instances the electric dry shaver has been maligned as a luxury item. Incontrovertible proof exists to dispel this allegation. Actually, the initial cost of the electric shaver is the only major expense involved. Consolidated Edison Co., of New York, has stated publicly that shaving by electricity consumes only 5 cents worth of electricity in 4 years. The average life of a good electric dry shaver is between 4 and 5 years and, during the same period, the average man using a safety razor will consume a minimum of 400 razor blades, 48 tubes of shaving cream, 48 bottles of shaving lotion, and possibly several styptic sticks.

Actually, the end use of critical materials, such as steel, in the dry shaver is considerably less than that of wet shaving. The amount of steel in one electric shaver approximates 7.8 ounces—whereas the safety razor together with a blade approximates 1.7 ounces. The amount of steel consumed in 400 razor blades is 45.5 times greater than that used in an electric shaver.

The main purpose of an excise tax is to produce revenue for the Government without discrimination. Dry shavers are sold in drug, jewelry, hardware, and department stores.

They are used by men in all walks of life—professional men, businessmen, farmers, laborers, etc.

They are a necessity for the blind, for many of our maimed veterans, for the aged, who can no longer trust themselves to use a sharp razor with their weakened reflexes. Some manufacturers have gone out of their way to present reconditioned dry shavers to thousands of our blind veterans and has serviced, gratis, shavers for the men overseas for the past 10 years.

It is an industry that is growing and, in my opinion, an excise tax against them at this time is discriminatory; it would also be an additional burden in cost for 25 percent of our men—and, it would definitely retard an industry that is now providing a healthy revenue in income tax to the Treasury Department that would be substantially diminished by imposing on it this excise tax.

H. C. LANDSIEDEL,
Manager, Shaver Division, Remington-Rand, Inc.

A PROPOSAL TO AMEND SECTION 127 OF THE CODE, RELATING TO FOREIGN WAR LOSSES

This memorandum is submitted on behalf of Gillette Safety Razor Co. in regard to section 127 of the Internal Revenue Code. Section 127 deals with the tax treatment of war losses and the recovery of such losses. This memorandum recommends an amendment of that section which would eliminate a serious inequity.

Generally speaking, section 127 authorized a war loss deduction for property in enemy hands when the United States entered the war in 1941. This deduction was, of course, limited to the taxpayer's cost of the property. However, section 127 also provided that if any of the property was recovered, the fair market value of the recovered property—not the amount deducted—was to be taxed as ordinary income to the extent that the deduction resulted in a reduction of tax.[1] In addition, section 127 set forth a governing rule where the war losses embraced more than one property. In that case the war losses of all the properties were to be treated as a single deduction, and any later recovery of a particular property was to be taxed at its fair market value to the extent that the over-all eduction reduced the tax. In other words, if a recovered property was worth more than the deduction previously taken for the same property, the difference was to be taxed as ordinary income merely because the taxpayer took a war loss deduction on some other property which was not recovered. As a result, section 127 produced very harsh tax consequences.

These harsh results are well illustrated by Gillette's situation. In 1941 Gillette had properties in a number of invaded European countries, and hence took war loss deductions in computing its 1941 tax. These deductions were based on Gillette's cost of the properties, and were as follows on a country-by-country basis:

Properties:	Deduction
Germany	$2,471,510.07
Poland	53,954.24
Netherlands	51,200.00
Belgium	76,648.07
Denmark	395,240.85
Italy	451,906.07
Norway	24,259.88
France	640,040.26
	4,164,764.94

In 1945 Gillette recovered these properties except those located in Germany and Poland. As indicated above, the German and Polish properties were represented by a deduction of $2,525,464.31 and the other properties by a deduction of $1,639,300.63. On the basis of section 127 the Bureau now holds that the aggregate fair market value of all the recovered properties in 1945 was not less than the total war loss deduction of $4,164,764.94, and therefore proposes to treat the $4,164,764.94 as ordinary income to Gillette for 1945 because in 1941 there was a total war loss deduction in the same amount.

We respectfully submit that this result is extremely unjust. Obviously the net effect of the recoveries in 1945 was that Gillette had only reacquired its properties in the Netherlands, Belgium, Denmark, Italy, Norway, and France, for which it had deducted the much smaller amount of $1,639,300.63, representing Gillette's remaining cost for those properties. At the same time the German and Polish properties, representing an aggregate deduction of $2,525,464.31, were still unrecovered. In short, at the end of 1945 Gillette had recovered less than 40 percent of its investment in the properties involved, but the company is now being taxed as if it had recovered its entire investment. Or to put the matter differently, section 127, as it now stands, taxes the mere appreciation in value of a recovered property merely because of a deduction taken on some other unrecovered property which still constitutes a loss. Needless to say, it is a basic principle of income-tax law that gains are not taxable until they are realized, and a mere appreciation in the value of property is a far cry from a realized gain.

Section 127 sanctions such harsh results because it taxes the fair market value of a recovered property rather than the lower cost of the property previously deducted. Several years ago the Treasury agreed that section 127 operated unfairly and therefore requested this committee to amend the statute. In a letter dated February 26, 1948, addressed to the chairman of the committee, Under Secretary Wiggins wrote:

It is recommended that the present income-tax treatment of war loss recoveries be revised and that there be substituted a rule under which the tax upon recovery of property for which a deduction was taken should be equal to the tax saving that resulted from the related deduction. In the interest of administrative simplicity the recommended revision would also eliminate the present rule requiring all property recovered to be aggregated in determining the tax

[1] In this connection sec. 127 established a number of rules for the situation where only part of the war loss deduction reduced the tax. For present purposes these rules need not be considered.

upon recovery and would provide that recovered property be taken in either at its former adjusted basis or the fair market value, at the election of the taxpayer."

As the Treasury has pointed out, the injustice discussed in this memorandum may be easily eliminated by providing that the taxable amount on a recovery is the fair market value of the recovered property or the previously deducted cost, whichever is lower. On the other hand, the committee may consider it more desirable to recompute the tax for the loss year by treating any recovered property as if it had been recovered in the loss year. Under this alternative, the recovery would similarly be taken in at its undepreciated cost on the date of loss or its fair market value on the date of recovery, whichever was lower.

Senator BYRD. Mr. Blair.

STATEMENT OF FLOYD G. BLAIR, PRESIDENT AND TREASURER, THE PHILHARMONIC SYMPHONY SOCIETY OF NEW YORK

Mr. BLAIR. I am afraid, Mr. Chairman, that I have to briskly take the committee from the realm of hair into the realm of music. That illustrates the versatility of Congress.

Mr. Chairman, I am the president and treasurer of the Philharmonic Symphony Society of New York. In my private capacity I am vice president of the National City Bank of New York. I am here to discuss the impact of the Federal admissions tax of 20 percent on charitable nonprofit organizations such as symphony orchestras.

In order to conserve the time of the committee, I have been requested to represent a number of the other major symphony orchestras of the country, as well as our own philharmonic symphony in New York.

Mrs. Thompson, of the American Symphony Orchestra League, who will follow me, will tell you something of the problems of some of the smaller orchestras of the country.

Senator BYRD. Mr. Sloan is going to testify, too, for the Metropolitan Opera and he follows you.

Mr. BLAIR. Yes. Mrs. Thompson will follow after that.

I shall try to be brief but, as the interests of millions are deeply affected, I do want to try to call your attention as forcefully as I can to several important facts.

At the outset, I would like to say, Senator Byrd, it is a great pleasure for me to appear before this committee again.

When I was in the Treasury 25 years ago, acting as legal adviser to Secretary Mellon, from time to time I had the honor of appearing here with him.

Senator Smoot was then chairman. I am sure that all of you can understand how thrilled I was when, under a special rule, I was allowed the privileges of the floor, and for some weeks, when the war debt settlements were under discussion in 1926, sat on a small seat between Senator Smoot and Senator Lenroot, right in front of Senator Borah and Senator Norris. It was an unusual experience for a young man in those days, and made a deep and lasting impression on me.

In the interest of brevity, and to save your time, I cannot go into great detail. I am going to push on as fast as I can.

Without going into personal details, I assure you that no one is more deeply concerned than I to see that the finances of our Government are kept on a sound basis, and that serious inflation is avoided, and that the value of the dollar is maintained.

While I realize that it is not the direct responsibility of the Finance Committee to control the expenditure of money by the Government, working with the Ways and Means Committee of the House of Representatives, it is your duty to see that the required funds are available and, in so doing, to safeguard as best you can what this country has fought for and cherished, generation after generation.

Certainly, there is no group of public officials here in Washington with a higher sense of responsibility than this committee.

The people of the United States have the greatest confidence in the sound judgment and high purpose of your distinguished chairman, Senator George, and of the other members of this committee, and know that each one of you may always be counted upon to do what is wise and best for the country as a whole.

When the tax bill was before you a year ago, I filed a statement with the committee giving many detailed facts about symphony orchestras and orchestral groups across the country. That statement appears on pages 131 to 135 of the hearings before this committee a year ago on H. R. 8920.

I am not going to refer to those detailed figures again, and I do not propose to file any new ones with you.

However, I have filed with the committee a simple condensed budget of our own orchestra, which I trust is before each one of you. It is at the outset of my statement. This was prepared during the course of the past concert year, and was filed with the Ways and Means Committee when I testified before it last March.

Our budget in New York is typical of the budgets of the other major symphony orchestras, except that relatively our position, though bad, is better than that of most. This is because the Philharmonic Symphony Orchestra has a much larger income from radio broadcasting than any other orchestra, and a greater income from record royalties than all other orchestras with the exception of the Boston Symphony Orchestra and the Philadelphia Orchestra.

Now, a word with respect to the Philharmonic. The Philharmonic Symphony is the oldest symphony in the country. We just closed our one hundred and ninth season, as a matter of fact.

We have more than 7,000 regular ticket subscribers. During the season our audiences in the concert hall number more than a quarter of a million. On Sunday afternoons our concerts are broadcast throughout the Nation, attracting from 10 to 15 million listeners to each concert.

Individuals from every State in the Union have become radio members of the society, and countless thousands buy more than a million of our recordings each year.

In addition to regular concerts, we also conduct a series of concerts for young school children, and another for the older high-school group.

During the summer, operating through a separate organization known as the Stadium Concerts, concerts are given at the Lewisohn Stadium to audiences, in New York, running from 300,000 to 500,000 for the series.

This year, in August, the orchestra will go to Scotland where it will be the mainstay of the Edinburgh Festival from August 22 to September 24, all our expenses being paid by our Scotch friends.

The fundamental facts of a symphony orchestra are known to all of you. They all operate at a loss, differing only in the size of the deficit.

Formerly our deficits were met year after year by large donations chiefly from a few public-spirited citizens of great wealth. Due to the impact of taxation, such donations have shrunk to the vanishing point.

In our estimated budget for the season just closed, you will note that we have a deficit from operations of something over $200,000 and a final deficit of $150,000.

Despite the fact that the society is a purely cultural, educational organization, certainly not operated for profit, nor experiencing a profit, it was required to collect from its subscribers and purchasers of tickets and pay over to the Federal Government admissions taxes aggregating just under $110,000.

Mr. Chairman, this is a burden which we and many other orchestras of the country can no longer sustain. If you wish us to continue to exist, it is vital that our former exemption be restored to us, and restored without delay.

In addition to the larger orchestras, there are probably 20 to 25 minor symphony orchestras in the country, which are in a relatively much worse position than we. Beyond them, come, perhaps, 600 school, semiprofessional, and amateur orchestras scattered across the country, mostly in smaller communities.

These are made up from 60 to 100 players who, with their families, represent a cross section of American life at its best.

There are also probably more than 2,000 community and civic concert groups operating all over the United States. Series of concerts are organized and our best artists are brought before audiences in cities and towns, large and small, from North to South and East to West.

Audiences in these concert halls number many millions. The radio audiences for the Philharmonic and for the opera add millions more. Millions of recordings of our great orchestras are sold each year, and are played at home and by our radio stations over and over again.

During the summer, countless millions of music lovers sit under the stars and drink in great music from orchestra after orchestra from the Hollywood Bowl of southern California, with an audience of 25,000 people, to the Lewisohn Stadium in New York with audiences running from ten to twenty thousand.

The distinguished Senator from Colorado can tell us about the summer concerts which mean so much to the people in Denver and the Rocky Mountain area, and which draw thousands to a natural amphitheater of red rocks nestled at the edge of the towering Rocky Mountains.

And of course, there are numerous music festivals, such as the famous Berkshire Festival in Massachusetts, which for weeks draw music lovers, teachers, and students to their respective centers.

What does all this mean to the American people? Is good music something they need? Is it something that in times of stress and anxiety people had better do without? Is it something we should deny our youth? Is it something which should be grouped with the movies and perhaps, prize fights and night clubs, or is it part of the cultural heritage of America, something that touches the soul, something which with many approaches the realm of religion?

If you have any doubt as to the answers to these questions I can quickly resolve them.

As I have said, each Sunday during the concert season we broadcast to the Nation. A hundred radio stations carry broadcasts. Each Sunday we appeal to the radio audience for help. We receive thousands of letters from people all over the country, and in all walks of life.

As so often happens, those who can least afford it, make the greatest sacrifice to help us. I am going to read you a few excerpts from just one or two of these letters. I hope they will remain in your minds when you consider our problem.

The first is from a listener in California.

So far back as I can remember, no Sunday was complete without the New York Philharmonic Broadcast. If only more such programs were available to the public, how much fuller our lives would be.

This is from a listener in Erie, Pa. It came in some months ago, apparently just after the individual arrived in the United States.

Every Sunday afternoon I listen with pleasure to your fine programs. Since I only live in America for 4 weeks, I couldn't become a member of your society earlier. I regret deeply that I cannot give you more than this one single dollar.

A worker in St. Meinrad, Ind., wrote as follows:

Being a workingman here at the abbey, and also having several other good causes toward which I regularly contribute, I cannot send to you the amount I should like to. Even so, I could never begin to show you, even in terms of money, how much your fine orchestra means to me and to all of us who listen.

He sent us $1.

From upstate New York:

If I did not send you this $1 I would feel I had stolen my way into Carnegie Hall today. I keep an envelope in which I place names and addresses of things religious and otherwise which I appreciate, and would like to help with my limited means. I am now a retired teacher.

From Detroit, Mich.:

I am 12 years old and a violinist in the Jewish Center Symphony Orchestra. I listen to your broadcast every Sunday when I get home from rehearsal. The New York Philharmonic Symphony Orchestra is not only a national institution, it is a household word. It would be a great loss to America were it to disband. This dollar I am sending is in memory of the ill-fated Detroit Symphony. Please enroll me as a radio member of the society and send me all the paraphernalia that goes with it.

A young boy of eleven wrote from Minneapolis:

Whenever I can I listen to your beautiful music. I am listening to your program as I am writing this letter. I have enough to send you $1.

From Bay City, Mich.:

Please accept my enclosed contribution of $1 to aid in your financial campaign. I am sending all I can afford as I am saving what money I can to finish college at the University of Michigan.

From Telford, Pa.:

We have long cherished your afternoon concerts and hope that they may continue for the benefit of our children who have few opportunities to see and hear fine music performed.

From Chicago, Ill.:

Many of us can afford very little, but the New York Philharmonic has been a vital part of our lives for years, and we look forward to our quiet happy Sundays and the music we love each week as one of the bright spots of our week. My husband is in school and we have a precious baby, so our funds are quite limited.

From Rome, N. Y.:

I am enclosing $1 for the society. Wish it were many times that amount but we have to live upon the salary of a minister of a small church and salaries have not risen with the cost-of-living rise. We love music and hope it can continue.

From Allentown, Pa.:

I've received many thousands of dollars worth of priceless intangibles through the years from your series. Even though a modest pay check does not go far with a wife and two kids, an invalid father and an exorbitant rent, I'd like to do what I can.

From Washington itself:

The enclosed really pinches my budget, but as I am 72 years old, I feel that I cannot afford to let any opportunity pass when I can hear good music.

From a young girl of seven who lives in Cincinnati, Ohio—and I am sorry Senator Taft is not here:

I like the symphony. I am sending a quarter to you.

This young girl sent in 25 cents with a little letter scrawled in her own handwriting and a picture of herself that she drew.

From a mother in Indiana:

I am enclosing this dollar in memory of our son, Patrick who died October 9. He was only 16 years old and never missed one of your broadcasts, if it were at all possible for him to listen. Thank you for the pleasure and beauty you brought into the life of our boy, and I wish the money might be more, but he died suddenly of bulbar polio, and we feel that we should contribute what is possible to the National Foundation.

Now, finally, I am going to read from a letter that came sometime ago from Vancouver, Canada. I shall summarize the first part—it is a little long. This gentleman sent in $1, a United States dollar which he got from his son. Somebody gave his son a United States dollar, and he said he gave him more in Canadian money. It was a birthday gift to his son. He told us that he was suffering from multiple-sclerosis and had been suffering for the past 20 years; that he was living on borrowed time.

He said that fortunately he learned the touch system on the typewriter, and while he had only 8 percent vision, he wrote a letter, which was filled with typographical errors. He still had his hearing. He said:

I have been living on borrowed time for the past 8 years but I differ from the late Lou Gehrig in continuing to wish to live much longer, even in pain.

He said he wanted to live on, and he ended his letter in this way:

So here is my small contribution to your current campaign for support. Would that I might do more, but it is all I can do to keep alive, but life for me is richer and warmer because of a great music which you send to me, and untold thousands more all over this continent. Please do not let this note excite your sympathy. On the other hand, you should congratulate me because I am able to hear, assimilate, and appreciate the diet of great music which you give us all.

Thanking you with a whole heart, I remain,

Yours very truly.

Gentlemen, you have the answer to the question: What does music mean to the people of this country and, I should add, of Canada.

Next, you must answer the question: What should you here in the Finance Committee of the United States Senate do about it?

Do you want us to continue to function? Are we the sort of a charitable, nonprofit organization that should be encouraged, particularly in these difficult dark days which once more have brought grief and despair into so many American homes? Must this great country of ours, sometimes careless in its spending, giving away billions abroad, through unjust taxation smother such organizations, every one of which operates at a loss and struggles to survive through public charity?

I leave the problem with you. I am confident that you will confirm the action taken by the House of Representatives, and see that a wrong is put right, and that justice is done.

The Philharmonic Symphony has just completed 109 years of public service. We have survived five wars and many financial crises.

In all that time, gentlemen, we have missed only two scheduled performances, those caused by the deaths of Abraham Lincoln and the late President Roosevelt. What happens to us and to others like us will be profoundly affected by what you do.

I appreciate, Senator Byrd, the opportunity to appear before you and, of course, shall be glad to answer any questions, if any of you have any to ask me.

Senator BYRD. Thank you very much, Mr. Blair.

Mr. BLAIR. Thank you, sir.

(The budget estimates referred to follow:)

The Philharmonic-Symphony Society of New York budget, 1950–51

ESTIMATED EXPENSES

	Amount	Percentages based on total expenses
Salaries to conductors, orchestra players, extra musicians, extra rehearsals and overtime	$534,000	
Rental of halls and box office	101,500	
Program annotations and printing; printing tickets, subscription notices, advertising and publicity; soloists, choruses for special works, royalties and rental fees for music; all expenses of Young People's and Membership Concerts	128,800	
Expenses incurred by conductors and orchestra, workmen's compensation, insurance of musical instruments, and rent of orchestra room	16,000	
Total direct concert charges	780,300	75
Pension plans, pensions, special activities	134,000	13
Managers, assistants, auditors, staff and rent of offices, telegraph, telephone, postage, and incidental expenses	101,500	10
Radio memberships, booklets, program notes, postage	18,000	2
Total estimated cost	1,033,800	100

ESTIMATED RECEIPTS

Subscription and single sales: Thursday, Friday, Saturday, and Sunday concerts	$570,000	
Young People's series	30,000	
	600,000	
Less Federal admission tax paid to Collector of Internal Revenue	100,000	
Total net receipts from ticket sales	500,000	48
Broadcasting, phonograph recording, program advertising	198,000	20
Pension plans, investments, special activities	102,000	10
Total receipts from above activities	800,000	78
Deficit from operations	233,800	
Investment income	25,000	
Radio memberships, Women's Auxiliary Board and Guarantors' Fund	59,000	
Total	84,000	8
Total estimated receipts	884,000	
Net deficit	149,800	14

Senator BYRD. Mr. George Sloan.

STATEMENT OF GEORGE A. SLOAN, CHAIRMAN OF THE BOARD, METROPOLITAN OPERA ASSOCIATION

Mr. SLOAN. Senator Byrd, and gentlemen of the committee, I appear before your committee as chairman of the board of the Metropolitan Opera Association.

Perhaps, the best way I can show my appreciation for this opportunity of addressing you is to be brief, and I shall be very brief.

In all earnestness and in all seriousness, I wish to state to the committee that if the admissions tax now charged against nonprofit musical organizations is continued, the Metropolitan Opera Association will be compelled to close its doors when we have exhausted the funds from our present fund-raising campaign, which I will describe briefly in a moment.

The Metropolitan Opera Association, gentlemen of the committee, is not a local organization. In addition to approximately 20 weeks of performance given in New York City, we also each year make a tour of from 5 to 8 weeks to other important cities from coast to coast, including the South, Southwest, and indeed all sections of our country.

The broadcasts of our performances in New York each Saturday go out over a national radio system to all parts of the United States and to Canada. And, as in the case of the Philharmonic; they are listened to by many millions of people.

We have tests made each year to see the extent of our radio audience, and this past year the test showed approximately 15 million people.

We receive letters each year from every section of the country testifying to the pleasure and educational value that these broadcasts bring to the homes of countless Americans. Our letters are quite similar to those that have been read to you by Mr. Blair, president of the Philharmonic Orchestra.

We also receive letters of appreciation from music clubs that have been organized as listening groups in many cities, and from music departments of schools and colleges from servicemen in military hospitals and recreational centers.

There have been 70,000 such letters this past season.

Now, despite the full houses, both at home and on tour, the Metropolitan Opera sustained a deficit for the season just concluded, that is, the 1950–51 season of $461,000. That was slightly under the $500,000 paid in Federal admission taxes.

In order to meet the deficit and to provide funds to get the new season 1951–52 underway, we have conducted an intensive drive to secure the sum of $750,000 in contributions from the general public.

This campaign has been carried on over a period of 7 months, beginning last December, and we have utilized every available method of approach, radio broadcasts, benefit performances, personal solicitations, and the campaign is still underway.

If we are successful in reaching our goal the funds derived from this campaign will, in my opinion, be used up under present conditions—at the end of the 1951–52 season.

The greater part of this fund will go toward the deficit of our past season.

I might say, Mr. Chairman, that I have served as chairman of this fund-raising committee, as I have on many other occasions during the past 10 years for the Metropolitan opera. It is a very time-consuming effort, I can assure you. It is a labor of love, as it is with all of our directors, and as in the case of the symphony orchestras the raising of funds becomes more difficult each year.

We have been obliged to beg for these funds since the beginning of the application of the Federal admissions tax.

We are constantly striving to have the Metropolitan Opera recognized as a democratic institution, drawing its patronage, in large measure, from those who love good music, but who are not persons of great wealth.

In this present campaign, for example, there is something over $700,000 that has thus far been contributed—and those gifts average under $10. Approximately a quarter of a million dollars of this money came from our radio audience averaging approximately $3 a gift.

We have made tremendous progress in making the institution more democratic, and we feel, therefore, that any further increase in the cost of our admissions would be harmful.

As an educational institution the Metropolitan Opera is distinguished from theatrical companies that operate for a profit, and has been ruled exempt from the Federal income taxes, from Federal social-security taxes, Federal capital-stock tax, New York franchise tax, New York unemployment-insurance tax, New York real-estate tax, and New York City gross-receipts tax, and occupancy tax, and prior to 1941 it had been exempt from the Federal admissions tax.

I might add, Senators, that we have voluntarily accepted, of course, the Federal social security, and New York unemployment insurance. The point I wish to emphasize is that we are legally exempt from all such taxes.

Many persons compare the plight of opera in this country to that of European countries where opera is supported in whole or in part by Government subsidy.

I know something about that subject, having looked into it carefully.

I was abroad this summer with the International Chamber of Commerce, working on rearmament problems, trying to encourage our business friends abroad to step up their production, and their productivity. A fine meeting we had, gentlemen, in Lisbon, with some 31 nations represented and some 550 businessmen from all over the world.

While over there I looked into some of these musical organizations, and I found in Paris, for example, that the two opera houses, the Opera Comique and the Paris Grand Opera received together slightly over the equivalent of a million dollars in subsidy for this past year.

Now, the Metropolitan has never believed in direct Government subsidy for operating in this country, and we are certainly not seeking it at this time. We submit, however, that there is a definite inconsistency, if not an unfairness, in taxing our own people for opera produced by nonprofit organizations in this country while we, as a nation, at the same time are contributing to the rehabilitation of some of those countries that are continuing to support opera by direct subsidy.

The tax bill as passed by the House, H. R. 4473, in section 402, contains a provision that will exempt the Metropolitan Opera as an educational organization——

Senator MILLIKIN. Mr. Sloan, do you know whether we are via counterpart funds, or otherwise, assisting in the reconstruction of any opera houses that were destroyed in Europe?

Mr. SLOAN. That I do not know, Senator Millikin. I know that such reconstruction is going on.

For example, in passing through Madrid—I was there 2 or 3 days where I had the pleasure of visiting with our Ambassador, Stanton Griffis. Subsequently, I spent an hour and a half with Col. Joseph Hartfield in going through the old Royal Opera House which was paritally destroyed during Spain's terrible civil war when over 2,000,000 people were killed.

An ammunition dump stored inside the opera house blew up during the war, and they are now rebuilding it at a considerable cost. I do not know how it is being financed.

This tax bill, H. R. 4473, as I say, contains a provision that will exempt the Metropolitan Opera and these other nonprofit musical organizations, as an educational organization receiving substantial support from voluntary contributions, from the Federal tax on admissions.

Unless this provision is permitted to stay in the law, gentlemen, not only the Metropolitan Opera but other fine musical organizations, large and small, in other parts of this country, which operate without profit—and there are many such organizations that I have been in close touch with during these difficult times, and have tried to help them as they have helped us—I can say to you positively that many of them will have to go out of business. If that is the case, I feel, and all of us connected with these nonprofit institutions feel, that a vital artistic, educational, and morale-sustaining factor would be endangered at a time when the benefits of its influence are most needed in our country.

Senator BYRD. Thank you very much, Mr. Sloan.

Mr. SLOAN. Thank you, sir, and the other members of the committee.

Senator BYRD. Mrs. Helen Thompson.

STATEMENT OF HELEN THOMPSON, EXECUTIVE SECRETARY-TREASURER, AMERICAN SYMPHONY ORCHESTRA LEAGUE, INC.

Mrs. THOMPSON. Senator Byrd, and members of the Finance Committee, I am very grateful to you as are our orchestras, for this chance to bring to you our problems, and to tell you a little of our work.

As Mr. Blair explained, there are, generally speaking, two groups of orchestras in the country. He spoke of the Philharmonic, which is one of 25 professional symphonies. You might liken them just a little bit to the big league baseball clubs, except that the orchestras do not and cannot operate for profit, of course.

That group of 25 orchestras has an organization, and the chairman of that organization is Mr. Arthur Gaines, manager of the Minneapolis Symphony Orchestra. Mr. Gaines has prepared an additional statement which we would like to file with the committee and give this time over to a little discussion of our community orchestras.

You have been hearing about music in terms of millions of dollars and millions of listeners. Our symphonies, our language, is couched in hundreds and thousands, and it is only by multiplying our total number, which is about 650, that we get into the terms of millions.

Now, these community orchestras exist in every State in the Union. They exist in small towns, hamlets, bigger towns and even the large cities.

Within the membership of this committee, the 11 States, I believe, represented, there are 153 of these community orchestras among your own States.

Ohio alone, has about 38, Pennsylvania 51, and Texas has 32, and so on through the whole group of them.

These orchestras exist largely through volunteer work. Some of you men probably know from personal experience how the people of the community go out and serve as fund-raisers, as administrators, as bassoon players, as fiddle players, in order to have their music.

Senator KERR. You think the fellows who raise this money do it voluntarily?

Mrs. THOMPSON. There is always a question about that, Senator Kerr.

Senator KERR. Do you think it is voluntary to respond to something after the second 50 come in and tell you that if you do not do it, they are going to run you out of town?

Mrs. THOMPSON. If it is for a good cause.

Senator KERR. I understand it is a wonderful cause, but I just want to know if you really think these fund raisers operated voluntarily.

Mrs. THOMPSON. The fund raisers do. Maybe the fund giver does not. [Laughter.]

Senator KERR. Oh, the fund giver has it easy. [Laughter.]

I would be glad to have him pay for what he contributes.

I tell you right now, I want his identity accurately before the committee and before you. I think you have got a wonderful proposition, and I am not sure but that I am for it, but I hate for you to think that I was under the delusion that these fund raisers worked voluntarily. [Laughter.]

Mrs. THOMPSON. Thank you, Senator Kerr.

In addition to raising money voluntarily and playing voluntarily [laughter] our orchestras do a lot of other things. They, of course, play music; that is why they exist, but they link up with all kinds of community activities, which are very interesting.

For instance, out of Pocatello, Idaho, that little orchestra got together and helped send their high school band to the Rose Bowl to play in a concert, to help out, of course.

In Norwalk, Conn., they give free children's concerts. Up in Williamsport, Pa., they take part of their orchestra money and give scholarships to their talented high school musicians, not to study locally, but to go to the best conservatories of the country.

Down in Bluefield, W. Va., in the hills, they do the same thing with their local college.

In the town of Babylon, Long Island, they helped raise money for the polio fund.

Out in Wichita, Kans., they have a young people's or youth orchestra—in fact, two of them—to train them to come up through the group. So, you see, our orchestras can sort of be likened to the sandlot baseball outfits.

Now, gentlemen, in all of these works, we find that the tax, the excise tax, gives us a trio of troubles, financial troubles, which you hear about constantly, psychological troubles, and cultural difficulties.

Senator Martin, Mr. Eugene Reichenfeld, from Wilkinsburg, Pa., who is the conductor of that orchestra over there and also public school music director, sent me a letter recently, and I want to read just a little bit of it because he tells the story even better. He said—

Here in Wilkinsburg we have all worked and slaved for our orchestra for years, because we love it and because our community so desperately needs it, but we cannot surmount this tax problem much longer. This year we raised only $4,000 and for the third year in succession we paid $1,200 in excise taxes. Also for the third year in succession our deficit was $1,200. Financially, we just keep falling farther and farther back, and our people are becoming so disheartened and discouraged over what appears to be a hopeless situation that if we do not get some relief we are going to have to give up our orchestra. And, Mrs. Thompson, he added—

you know that we are not hiring in musicians from all over the place. We take our own Wilkinsburg boys, and girls, and adults and teach them to become symphony musicians. Surely, if our Government understood what we are doing and knew our problems it would feel that our $1,200 would be better spent right here in Wilkinsburg making our city a better place in which to live—providing a finer community in which to raise our children.

Senator KERR. Let me ask you a question on that, Mrs. Thompson. Suppose we cut the tax off, would you raise the price of admission by that amount?

Mrs. THOMPSON. That is just what I wanted to explain, Senator Kerr.

Senator KERR. You do not aim for us to go ahead and collect the tax and give it to you?

Mrs. THOMPSON. No; we would just as soon keep it in the first place.

Senator KERR. I cannot figure out how you are going to be helped by that $1,200 unless either we collect it and give it to you or you raise the price.

Mrs. THOMPSON. This is the way we figure we are going to be helped out. In these smaller cities people will pay only so much money for symphony music, and especially for hometown symphony music. I mean, there is a gross over which they will not go.

Now, if part of that does come into Washington we have that much less to operate with. If part of that does not come into Washington we can just about make it.

Senator KERR. Well, you see, as I understand it, the tax just goes on the admission that you charge?

Mrs. THOMPSON. That is right, but that is 20 percent of our take, gross.

Senator KERR. What you are going to do if the tax goes off is, you are going to increase your admission 20 percent.

Mrs. THOMPSON. We are going to keep the same gross price as it is now. This has been going on——

Senator KERR. I want to say that you are the first one of those who have asked to have the tax removed who has been that fair and frank about it.

I think all of them have been——

Mrs. THOMPSON. Well, that is what will happen, and the reason we feel it is going to help is this: In our community orchestras, the deficits nearly always are equivalent to this tax bill, within just a few dollars.

You will notice that Mr. Reichenfeld mentioned a $1,200 deficit, and a $1,200 tax bill.

In Charleston, W. Va., my orchestra, we had a $1,600 deficit and a $1,675 tax bill.

Grand Rapids, Mich., reports also a deficit between two and three thousand dollars and a tax bill of $2,500, so we feel that in our orchestras if we can keep that gross take, retain that 20 percent, we can just about balance our books.

Senator KERR. You think you can take as much as both you and the Government are taking now?

Mrs. THOMPSON. I am sure of it. For that reason, Senator Kerr, we feel that lifting the tax will be of material benefit to us financially, and it will get rid of discouragement and a feeling of community failure.

This business of its being an obstacle to cultural growth, here is the way that thing works. Some of these orchestras have constituted themselves as closed societies. In that way they do not pay the tax, and everybody belongs to the society. Every society member can go to all rehearsals, concerts, business functions, social functions and all that kind of thing. But not being able to sell tickets means that they cannot do some other things they would like to do.

Senator Hoey, down in Winston-Salem, you have probably heard the story that they want to give concerts and make concerts available to the large colored population of the city.

The Winston-Salem Orchestra is a closed society; they cannot sell tickets, and they are saying, "Would it not be better if we were doing something of this sort than worrying about whether we can or are able to pay a few hundred dollars in excise taxes?"

Gentlemen, these community orchestras serve as a training ground for American instrumentalists, American composers, American conductors. They have to learn their business someplace. They cannot learn it with the Philharmonic, with the Boston, or with the Philadelphia orchestras. They have to know it when they get there.

They learn it with us. It is the place where this tremendous treasury of American music and American talent learns how to operate, and we hope desperately that we can expand those opportunities rather than cut them out.

We are not talking about subsidization. What we are saying is, please do not handicap us, please do not weigh us down; let us retain the total amount that our local people put into these orchestras, and then we believe we can operate without always having our hands out.

I would like to leave with the committee the names of America's 670 orchestras, Mr. Chairman.

It is in the names of all of us that we ask your consideration and hope that we may have relief from the tax.

Thank you very much.

Senator BYRD. Thank you very much.

Mrs. THOMPSON. Senator Byrd, if there are questions about the major symphony orchestras' operations that I cannot answer, Mr. John Edwards, manager of the Washington Symphony is here with me, and will assist.

Senator BYRD. Thank you very much. The papers that you wish inserted in the record will be inserted at this point.

(The prepared statement of Mrs. Thompson, the prepared statement of Arthur J. Gaines, and the list of American symphony orchestras referred to follow:)

STATEMENT OF ARTHUR J. GAINES, MANAGER OF THE MINNEAPOLIS SYMPHONY ORCHESTRA AND CHAIRMAN OF COMMITTEE REPRESENTING 25 MAJOR SYMPHONY ORCHESTRAS OF THE UNITED STATES

My committee has been authorized to present this statement to your honorable committee on behalf of the orchestral associations and symphony societies which maintain major symphony orchestras of the highest quality in 25 cities of the United States. The cities represented are: Atlanta, Baltimore, Boston, Buffalo, Chicago, Cincinnati, Cleveland, Dallas, Denver, Houston, Indianapolis, Kansas City, Los Angeles, Minneapolis, Washington, D. C., New Orleans, Oklahoma City, New York, Philadelphia, Pittsburgh, Rochester, N. Y., St. Louis, San Antonio, San Francisco, Salt Lake City.

First of all, we wish to make it clear that the organizations here represented are maintained solely for artistic and educational purposes; that no symphony association in America is nor ever has been operated at a financial profit; and that we are all dependent on the contributions of private citizens of the communities in which we operate to bridge the annual gap between our earned income and our operating expense.

In recent years, our operating expenses, consisting very largely of the salaries of orchestra musicians, conductors, and artists, have increased by leaps and bounds. Earned income, on the contrary, has remained almost static, due to limitations both in the seating capacities of our concert halls and in the number of concerts that a symphony orchestra can adequately rehearse and present in the course of a concert season. This situation has, therefore, resulted in greatly increased operating deficits. A study of the operating deficits of the orchestras for the concert season of 1944-45, in comparison with season 1950-51, discloses the alarming fact that operating deficits show an increase of more than 85 percent. Under the pressure of these conditions the Detroit Symphony and the Columbus Philharmonic were forced to abandon their activities. There is grave danger that further casualties may be expected unless these trends can be changed. The loss to the musical world through the abandonment of any fine symphony orchestra is incalculable.

The difficult problem of symphony-orchestra finance must and will be dealt with by the boards of directors of our supporting associations. We have never had, nor do we now request, governmental subsidy such as is almost universally accorded such projects in other countries. There is a way, however, in which our Government can remove a burden from our shoulders, the release of which will be of infinite help in working out a solution of our problems.

Under the present regulations 20 percent of every dollar collected from the public from the sale of tickets for symphony concerts must be paid over to the Government as an excise tax. We are convinced that this excise tax is a great deterrent to symphony concert attendance. We also know that we have little chance of adjusting our admission prices to conform to greatly increased operating costs as long as this 20 percent excise tax on our admissions remains in effect.

During World War I the Government first levied a war tax on admissions of all kinds. At the conclusion of that war the Internal Revenue Code was amended to read: "No tax shall be levied in respect of societies or organizations conducted for the sole purpose of maintaining symphony orchestras and receiving substantial support from voluntary contributions * * * and no part of the net earnings thereof inures to the benefit of any private stockholder or individual." This specific exemption remained in effect until the beginning of World War II; then in 1941 this exemption was repealed and a tax of 10 percent was imposed. In 1943 this tax was increased to 20 percent as a wartime revenue measure and with the assurance openly given by Government officials that it "shall continue only until approximately 6 months after the termination of the war."

We appeal to this honorable committee and to the Congress to restore the same exemption that the symphony orchestra associations and societies enjoyed during the period from 1919 to 1941. We believe the Congress should follow the precedent established at the end of World War I, and we further believe this procedure is justified for the following reasons:

WHY THIS TAX BURDEN SHOULD BE LIFTED

1. Taxation of the receipts of a symphony orchestra association is inconsistent with the Government's entire attitude toward the institution with respect to all other taxes. Symphony associations are not subject to income or other taxes, and the same philosophy which makes them exempt from such taxation justifies their exemption from the admissions tax.

2. There is further inconsistency in the Government's tax position. On the one hand, the Government permits contributors to deduct from income and other taxes their contributions to symphonic institutions. On the other hand, the Government still is imposing an indirect tax—on admissions—on the operation of the same institution.

3. In practically all other countries, symphony associations not only enjoy tax exemption but they are almost wholly supported by governmental funds. Our symphony associations are not appealing to the Government for a subsidy. Symphony organizations are hard pressed to meet the annually recurring deficits through solicitations from the public. The public should not be subjected to the additional burden of tax on admissions.

4. The problem of symphony deficits is not limited to a small number of cities nor to the small number of people in the upper-income brackets. At least 500

communities of varying size recognize the same acute dilemma in their symphony societies, and the audiences which attend their concerts represent a complete cross section, at every income level, of those who enjoy and appreciate the inspiration of symphonic music. Relief from the burden of the admissions tax would be of relatively greater value to the smaller orchestral associations throughout the country, whose maintenance is in delicate balance from year to year because of financial deficits in communities of middle-class incomes.

5. The directors of these musical institutions have not sat back lazily and waited for relief from the Government repeal of the admissions tax. Every effort already has been made to tap sources of additional income—radio broadcasts, phonograph-record royalties, and other activities. Still the deficits are increasing because symphony payrolls have increased on the same pattern as all other operating costs in industry.

6. The total amount of the annual tax on symphony admissions, while large in terms of orchestra financing, is negligible in terms of the national budget. The total admissions tax collected from the country's leading 25 orchestras in the year 1947–48 amounted to slightly more than $1,000,000. For the same period, the total operating deficits for those 25 orchestras was more than 3½ million dollars. These figures represent a year of great prosperity when ticket sales reached a high level.

CONCLUSION

Symphony orchestras are the fount and mainspring of all musical life and acitivity in America. This Nation has taken world-leadership in this form of the musical art, and no other nation has so many nor such fine symphony orchestras. Millions of Americans across the Nation enjoy the concerts given by our more than 500 symphony orchestras in communities of every size. The symphony concerts given exclusively for children at nominal cost, or often without charge, form an integral part of the musical program of our schools. Symphony-orchestra members are the source for teaching staffs of our schools and colleges.

Therefore, the restoration of the exemption from admission taxes, as it existed during the years 1919 to 1941, is urged upon Congress as a step to be taken to make possible the continuance of the invaluable cultural and educational benefits flowing from the maintenance of symphony orchestras in the United States, and to insure the continued employment of thousands of the world's finest musicians.

We respectfully request that the foregoing statement be made a part of the record of the public hearings on H. R. 4473, now under consideration by the Finance Committee of the United States Senate, Eighty-second Congress, first session.

STATEMENT OF MRS. HELEN M. THOMPSON, EXECUTIVE SECRETARY-TREASURER OF THE AMERICAN SYMPHONY ORCHESTRA LEAGUE, INC.

Mr. Chairman and members of the committee, I am grateful for the opportunity of appearing before you today on behalf of the American Symphony Orchestra League, a nonprofit service organization composed of the community or so-called amateur symphony orchestras throughout the Nation.

Before presenting my statement on behalf of this group, however, I desire to offer for the record the statement of Mr. Arthur J. Gaines, manager of the Minneapolis Symphony Orchestra and chairman of a committee of larger symphonies who have long advocated the repeal of the admissions tax. The statement by Mr. Gaines is presented for the record, and the waiving of his verbal testimony is a desire on our part to cooperate with your committee in speeding these hearings to a conclusion.

Mr. Gaines is not present today, but with me at the witness table is Mr. John Edwards, manager of the National Symphony Orchestra here in Washington, who will be glad to answer any questions which members of the committee might desire to propound concerning the work of the larger orchestras, at the conclusion of my testimony.

The statement of Mr. Gaines adequately describes the effect of the 20 percent excise tax on some 30 of the Nation's symphonies whose names all of you know. I want to tell you a bit about the effect of that tax on our orchestras.

The names of most of the 600 orchestras which I represent are neither famous nor are they often known beyond their own communities or States, but they are vitally important, and for a very simple reason. They provide opportunities for our American people actually to make great music—to develop their community's cultural life.

True culture is a living, vital process. It is not produced by purchasing a few concerts a year on a one-night-stand basis. Culture means weaving music and the other arts into the warp and woof of daily living. It is a way of life. And when you have adults, college and high-school students drawn from all social and economic strata of a community voluntarily meeting together week after week to learn great music; when you have the elevator boy and the town banker sitting side by side playing the same notes from a sheet of music; when you have the women of a community, the business and professional interests, skilled and unskilled workers, industry's leaders and the labor unions joining together in working and contributing toward the support of that music; when you have thousands of men, women, and children regularly attending concerts played by their fellow townspeople, then you have culture putting down strong roots in a community.

That, gentlemen, is exactly what is happening in the 600 American cities and towns where our nonprofessional and so-called amateur orchestras are established. In those communities, Beethoven becomes a recognized competitor of bebop. Boogie-woogie and the juke boxes begin to lose out to the sonata form, the rehearsal and concert halls. Yet, these very same community ventures in better living, music education, and culture are subjected to the crippling Federal excise tax.

When compared to the professional symphonies, our community symphony financial operations are modest. Our orchestras exist solely because men and women contribute their time and talents as musicians, conductors, administrators, and fund raisers. They do it so that there will be live music of the finest order in their own communities for themselves and their children.

But, regardless of all this contributed help, our orchestras must pay for certain goods and services, including music, rehearsal and concert-hall rentals, stage hands, trucking services, printing, etc. All of that money must be obtained from sale of tickets and contributions. Our orchestras can't help finance themselves through broadcasts, recordings, television contracts, and tours because they aren't professional groups. After careful study and analysis of our orchestras' operations, we know that a modestly organized community orchestra can reasonably expect to raise a gross income of about 25 cents per capita for the corporate population of its city.

Also, we find there is a very definite limit to the total price which can be charged for symphony tickets in these small cities, regardless of how that price is broken down as to admission costs and taxes. It's the total amount which the purchaser has to reckon with. If the Federal Government gets 20 percent of the total, it simply means that the orchestra has that much less money to work with. Additional increases to cover rising costs and taxes cannot be passed on to your patrons as is the prevailing habit in business. Such costs have to be absorbed by the organization. More often than not, the orchestras' gross incomes fall short of meeting minimum operation costs. Deficits occur, then pile up, and the orchestra, having no borrowing power nor capital assets, is forced to find a check-writing "angel" at the end of the season, or disband. And check-writing "angels" have almost ceased to exist. I can cite orchestra after orchestra throughout the Nation where, over a period of several years, the operating deficits are just about equivalent to the Federal excise-tax bills which they pay.

For instance, during the 1950–51 season, my own orchestra in Charleston, W. Va., operated on a total of $30,000, for it pays its conductor and some of its musicians. The deficit is $1,675. The year's excise-tax bill is $1,600.

In Grand Rapids, Mich., the orchestra pays an annual tax bill of $2,500; suffers operating deficits of between $2,000 and $3,000 each year. The orchestra's women's auxiliary has been putting on all kinds of benefits to try and make up the difference. Recently that orchestra stated that the Federal admissions tax will probably be the deciding factor between continuance or disbandment of that community orchestra.

Eugene Reichenfeld, conductor of the Wilkinsburg, Pa., orchestra, recently called me to discuss their difficulties. "Here in Wilkinsburg," he said, "we have all worked and slaved for our orchestra for years, because we love it and because our community so desperately needs it, but we cannot surmount this tax problem much longer. This year we raised only $4,000, and for the third year in succession we paid $1,200 in excise tax. Also for the third year in succession our deficit was $1,200. Financially, we just keep falling farther and farther back, and our people are becoming so disheartened and discouraged over what appears to be a hopeless situation that if we don't get some relief we are going to give up our orchestra. And Mrs. Thompson," he added, "you know that we aren't hiring in musicians from all over the place. We take our own Wilkinsburg boys and girls and adults and teach them to become symphony musicians. What will happen to their music if we disband? Surely, if our Government understood what we are doing and knew our problems, it would feel that our $1,200 would be better spent right here in Wilkinsburg, making our city a better place in which to live, providing a finer community in which to raise our children."

Mr. Reichenfeld's story is repeated all around the Nation.

In Bangor, Maine, in 1896, 10 musicians gathered together to play fine music on a volunteer basis. Their work has been continued and expanded until now, in 1951, 70 musicians gather together to present several full-scale symphony concerts each season in Bangor, a city of 30,000 population.

That orchestra has developed Bangor's musical talent all these years and today many of its former orchestra members are helping develop music in other Maine communities. In addition to the Bangor orchestra's concert and music education work, it operates a music center as a community service; provides space and facilities for the Bangor community chorus, the city band, the musicians' association, music clubs, and for the music branch of the Bangor Public Library.

Not a single one of the Bangor symphony musicians has ever received any remuneration for playing in the orchestra during its 55 years of operation. This last season, the orchestra's total cash income was about $1,500 and it paid out $450 in Federal excise taxes—a tax, gentlemen, not on a profit-making entertainment venture, but on a community, educational undertaking carried on through volunteer efforts and contributions of Bangor's citizens.

In Winston-Salem, N. C., there is a 5-year-old orchestra. That orchestra pays its conductor, a young college professor, about $1,000 or $1,500 a year and pays the musicians a dollar or two for each rehearsal in order to cover their transportation expenses.

The orchestra is very concerned about its obligation to make fine music available to the colored people in Winston-Salem and is trying to figure out ways and means of financing it. The orchestra faces difficulty in doing so because of the Federal excise tax. It operates on only about $8,000 a year and, not being able to meet a tax bill, constituted itself as a membership society whereby all members are entitled to attend all concerts and other orchestra social and business functions. It can't sell any tickets under this set-up and so is placed in a very difficult position in trying to carry on a fine civic project which would offer distinct advantages to all the citizens of Winston-Salem while at the same time meeting the requirements of its Federal Government.

So, in this case, we find the Federal Government, through its present excise-tax provisions relating to nonprofit symphony orchestras, is presenting an obstacle to civic advancement—all for a cash consideration to the Government of about $1,000 a year. Gentlemen, I ask you, wouldn't the results of increased good will between our two great American races in a fine southern city be worth a great deal more to national unity than is a matter of $1,000 cash in excise-tax collections?

In Williamsport, Pa., a city of about 45,000 population, there is a symphony orchestra. Its musicians are the townspeople and students. Its president is one of the city's leading druggists. The orchestra conductor is the high-school music director.

Practically none of the Williamsport musicians receives any money for playing or rehearsing. That orchestra spends what money it has on music education. Outstanding young student musicians are offered cash scholarships to enable them to attend the Nation's finest conservatories and so enhance our national cultural resources. Six scholarships were awarded this year.

In order to finance these scholarships, Williamsport citizens contribute money to the Williamsport Symphony and buy tickets to its concerts. The symphony must pay 20 percent of the gross ticket income to the Federal Government. Each year that tax payment would enable two or three more young people to develop a talent which is theirs only through heritage. Instead, those two or three young people are denied that opportunity and this country may be denied a great musician, all because of the payment of a few hundred dollars in excise taxes levied on a nonprofit, cultural, and educational community project.

Delaware, being on the eastern seaboard and close to several of the Nation's great cultural centers, has many finely trained professional musicians, as well as the advanced amateur or nonprofessional musicians. For several years there has been a community orchestra in Wilmington.

In order to extend the cultural opportunities in the State and provide seriously needed employment for the professional musicians, the Delaware Philharmonic Orchestra was formed a couple of years ago, but the burden of financial problems, plus the 20-percent excise tax, has proven almost too much for it and its program is falling far short of the wonderful goals it set out to reach.

Nebraska believes in fine music too. That State, with only 9 cities having populations of 10,000 or more, has at least 4 symphony orchestras. They all operate on a community basis, with musicians and citizens volunteering all or part of the time and talent needed by the orchestras, but they are all having a bitter struggle financially. Again, in Nebraska, we find the orchestra deficits paralleling their excise-tax bill. They just can't seem to raise that additional amount of money needed in order to pay both the Government taxes and operating costs. Eventually something will have to give or the orchestras will cease operations. The Hastings (Nebr.) Symphony feels so strongly the need for tax relief that it recently sent one of the board members here to Washington to discuss the matter with Congressmen from Nebraska and neighboring states.

Colorado and Oklahoma each have their own orchestras, both professional and nonprofessional. In Colorado there are the Denver Symphony, the Denver Businessmen's Symphony, the Colorado Springs, Fort Collins, Greeley, Pueblo, and the college and university orchestras. Also, there is the Arkansas Valley Symphony at La Junta, 8,000 population. This orchestra was formed 2 years ago when a college music instructor first came to the community and discovered that most of the people in the community had never had a chance to attend a symphony concert, much less play in a symphony orchestra.

In order to exist at all, this orchestra draws its players from 10 different small communities in the valley. Many of the musicians drive as far as 50 miles one way in order to attend rehearsals and concerts, and a large percentage of them are high-school boys and girls. None of the musicians nor the conductor receives any remuneration from the orchestra, but still the Government requires that orchestra to pay a 20-percent Federal excise tax on its tickets just the same as if it were a dazzling circus operated for personal profit.

Oklahoma has at least five symphonies and its Oklahoma City Symphony, a very modestly financed professional orchestra, performed one of the Nation's outstanding cultural services last year when it played an entire series of sustaining radio broadcasts beamed to the iron curtain. These concerts high lighted contemporary music of the countries of the world. In these concerts, men spoke to each other the world over through music—the language of the heart—and understanding between diverse peoples was enhanced.

Yet, this orchestra, supported by Oklahoma City citizens, must constantly reckon with the provisions of the 20 percent Federal excise-tax statutes which now include levies on nonprofit, educational, and cultural organizations. In desperation, it constituted itself as a closed membership society.

Georgia boasts of at least three or four symphony orchestras. Ohio, Texas, and Virginia has theirs—both professional and community orchestras. Within these states are to be found symphonies whose names you well know: the Atlanta, Cincinnati, Cleveland, Houston, Dallas, and San Antonio Symphonies. Also you will find the less well known orchestras, such as the Lima Ohio Little Symphony, the Doctor's Orchestra in Akron, the Columbiana County Symphony in Lisbon, Ohio, the Waco, Lubbock, and Wichita Falls Symphonies in Texas, the Richmond and Norfolk orchestras in Virginia.

All are carrying on projects which increase the cultural resources of these cities. They play music written by their own local composers. They present soloists drawn from their own areas. They sponsor youth symphonies. They play children's concerts. They play for the Christmas Messiah performances given each year by church and community choirs. They provide an opportunity for the formal music education offered in public schools and colleges to be translated into community assets as adults continue playing music after their school years are over. These orchestras discover, encourage and nurture creative talents to be found among our own American people. They are maintained through the faith, vision, hard work, and personal sacrifices of the people in their communities and all of these orchestras are burdened down by impossible excise-tax bills which the citizens consider grossly unjust. Each year the financial struggle is greater. Each year a little more of the joy, spontaniety, and creative spirit of these community efforts are crushed out of them because of the tax structure.

Yet these same orchestras are the only medium through which Cross Roads Americans can participate in developing a truly American treasury of symphonic music; the only medium through which American composers, American solo artists, American instrumentalities, and American conductors can learn their craft and develop their art. Just as America's skilled trade guilds provide apprentice training, so do our community orchestras provide training centers for America's world of music and culture.

Gentlemen, because of these things, we earnestly beseech you not to weigh down these orchestras with a continuation of the excise-tax levy. Instead, we respectfully ask you to free our orchestras from this burden. By so doing you will in effect be saying, "Yes, America must have food for its heart and soul—especially in these trying times, and the Congress of the United States notes with pride that her people are providing that cultural life for themselves with no request for governmental subsidies. In recognition of their work, in recognition of the national need to nourish creative talent, the United States Government frees America's nonprofit symphony orchestras from a prostrating tax burden conceived during a former war economy and established as a temporary measure."

And now, gentlemen of the Senate Finance Committee, and to file with you a list of America's 670 symphony orchestras, and in the name of these orchestras, to thank you for this opportunity to tell you of our problems and needs. We hereby trustfully place them in your hands.

Listing of professional, nonprofessional, civic, amateur, college, and college-civic symphony orchestras in the United States, Aug. 1, 1951

[NOTE.—This list is known to be incomplete inasmuch as new orchestras constantly are being established The list does not include high school orchestras.]

State	City	Orchestra
Alabama	Auburn	Alabama Polytechnic Institute Symphony.
	Birmingham	Birmingham Civic Symphony.
	Jacksonville	Jacksonville State College Orchestra.
	Mobile	Mobile Chamber Orchestra.
	Montevallo	Alabama College Orchestra.
	Montgomery	Montgomery Civic Symphony.
	Tuscaloosa	University of Alabama Symphony.
Arizona	Phoenix	Phoenix Symphony.
	Tucson	Tucson Symphony Orchestra.
Arkansas	Conway	Hendrix Symphony.
	Fayetteville	University Orchestra.
	Fort Smith	Fort Smith Symphony Orchestra.
	Little Rock	Arkansas State Symphony Association.
California	Angwin	Pacific Union College Concert Orchestra.
	Arcata	Humboldt Little Symphony.
	Arlington	La Sierra College Concert Orchestra.
	Bakersfield	Kern Philharmonic Society.
	Berkeley	Armstrong College Symphony.
	do	(The) Musicians' Union Orchestra.
	do	University of California Symphony Orchestra.
	Burbank	Burbank Symphony Association.
	Chico	Chico State College—Community Little Symphony.
	Claremont	Orchestra of Pomona College.
	Davis	California Aggie Orchestra.
	Fresno	Fresno State College Symphony Orchestra.
	Glendale	Glendale Symphony Orchestra.
	Huntington Park	Huntington Park Symphony Orchestra.
	Inglewood	Inglewood Symphony Orchestra.
	Long Beach	Little Symphony Orchestra of Long Beach.
	do	Long Beach Philharmonic Symphony.
	do	Woman's Symphony Orchestra.
	Los Angeles	Los Angeles Junior Philharmonic.
	do	Los Angeles Philharmonic Orchestra.
	do	Los Angeles String Orchestra.

Senator BYRD. Mr. Myers.

STATEMENT OF ABRAM F. MYERS, COUNCIL OF MOTION PICTURE ORGANIZATIONS, WASHINGTON, D. C.

Mr. MYERS. Mr. Chairman, and gentlemen of the committee, my name is Abram F. Myers. I reside in Washington, D. C., and I represent the Council of Motion Picture Organizations. The Council of Motion Picture Organizations is an all-industry organization, representing all branches of the motion-picture industry.

A number of witnesses from our industry registered to be heard, and in response to your request, we have consolidated them into one and I have undertaken——

Senator BYRD. You will make the presentation?

Mr. MYERS. Yes, sir; except as Mr. Thalhimer might want to supplement my statement or pick up some point that I miss.

From now on, the act is going to be a little different because you now have a witness who is going to advocate the elimination from the bill of provisions which would cost the Government a great deal of revenue, instead of asking for special favors for our business.

I appear in opposition to section 402 of this bill, H. R. 4473.

The declared purpose of that section is to reinstate certain prewar exemptions from the admissions tax. We shall later see how misleading that declaration is.

Section 402, if enacted, would enable every religious institution, that is, every church, Sunday School or organization thereof, every educational institution, every school and college in the United States, every charitable institution, every society for the prevention of cruelty to children or animals, every society conducted for the sole purpose of maintaining a symphony orchestra, every national guard or Reserve officers organization, every organization and post of war veterans and the auxiliaries or societies thereof, and the police and fire departments of every city, town, village, or municipality to conduct amusement enterprises, including motion-picture shows, without having to add to the price of admission the 20 percent Federal admissions tax.

By far, the most serious provision—and this is the unkindest cut of all—is the one which would grant immunity from the admissions tax of societies or organizations conducted for the sole purpose of maintaing a cooperative or community moving-picture theater.

The committee will note that there is no requirement that such an organization or society shall have any connection with any religious, educational, or charitable activity. The only limitation is with respect to participation in the net earnings, which may not inure to the benefit of any stockholder or individual.

That same limitation applies to the exemptions to be granted to the religious, educational, and charitable organizations, and so forth, but it is wholly ineffective.

In fact, the section if adopted, will open up a promoters' paradise. I need not remind the committee that before there can be any net earnings, costs and expenses must be paid. The main items of cost invariably are the promoters' fees and expenses. They must be deducted from the moneys received, and the remainder, if any, would inure wholly for the benefit of the institutions involved, in literal compliance with the section.

Let me cite a possible example which will bring this point home to the committee. I hope with all my heart and soul this will not happen, but it could.

A hard-pressed motion-picture exhibitor, struggling to remain in business—and most of them still are—might welcome the chance to turn his theater over to some religious, educational, or charitable institution or a group organized to maintain a cooperative or community center moving-picture theater in return for a satisfactory employment contract as manager.

His salary, plus a net profit to the beneficiary, may be secured out of the tax savings afforded by this bill. That is the kind of competition to which the established motion-picture theaters would be subjected—pardon me; is there a limitation that you want me to observe especially?

Senator BYRD. We do not want to limit you unreasonably but be as concise as you can.

Mr. MYERS. I know one never makes any progress by overstepping his bounds.

Senator BYRD. Take sufficient time. You have an important presentation.

Mr. MYERS. Thank you, sir.

His salary, plus a net profit to the beneficiary, might easily be secured out of the tax savings afforded by this bill. That is the kind of competition to which the established motion-picture theaters would be subjected by the provisions of this bill.

Let us not mince words; this is a proposal to grant a Federal subsidy to all manner of entertainment enterprises conducted in large measure for the enrichment of promoters, to all manner of fly-by-night operators in order to give them a competitive advantage equal to 20 percent of the price of every ticket sold, over the legitimate, established business.

The provisions in question are vicious for two reasons: They would grant subsidies to favored enterprises—favored entertainment enterprises in violation of fundamental principles of our Government, and at the same time, would oppress and threaten legitimate enterprises, and endanger the revenue now being derived from taxpayers—and this at the moment when the Government needs all of the revenue that it can lay its hands on for the national emergency.

I was refreshed by the candor of the last witness. She said very frankly that the savings resulting from the granting of these exemptions would be pocketed by these institutions. Now, whose money is it? They do not pay—the amusement enterprises do not pay this tax; it is paid by the person who buys the admission to the place of entertainment.

I have been before the Ways and Means Committee and before this committee a good many times with respect to this amusement tax, and always I have been confronted with this question, "What do you propose to do with that money? Are you going to pass on the benefit of a reduction or repeal of the tax to the customers whose money it is, or are you going to pocket it?"

Last year, when the motion-picture industry was in the direst extremities, and I was before this committee and the House committee, asking for relief, I had to answer that question and I prepared myself in advance in this way: All the major theater circuits agreed they would pass on the benefit to their customers, and the great majority of the smaller theaters through their theater associations pledged the same thing, but here there is no such suggestion.

We hear much said in praise of private enterprise, individual initiative and free and open competition.

These sentiments are even voiced by the public-spirited men who organize uplift societies and the fund-raising schemes for their support; that is to say, they utter those sentiments in reference to their own private business operations, and rather lose sight of them when their hobbies are affected.

Yet, what is here proposed is that religious, educational, and charitable institutions, all manner of veterans' organizations, and local and police and fire departments in the conduct of commercial enterprises shall be given a bounty.

I want to deal briefly with the declared purpose of section 402 to reinstate certain exemptions formerly contained in the Internal Revenue Code; that heading affords the text for the arguments in support of the section, namely, that this is not an innovation, but a mere restoration; that since the movies survived under the unfair competition thereby created before the war, they can do so again.

While the provisions of section 402 are similar to those formerly contained in the code, with one notable embellishment and change in wording and arrangement, there is no compensating general exemption of all admissions, including movie admissions, below a certain sum, such as that which prevailed throughout this time that the special exemptions were in operation.

I have prepared a formal statement which goes into this matter in detail. The time allotted to me will permit but a brief summary, and I respectfully ask that the formal statement be inserted into the record immediately following my testimony.

Senator BYRD. That will be done, Mr. Myers.

Mr. MYERS. For present purposes, it will suffice to say that at the time these special exemptions were first adopted, and that was in 1924, the Congress, in order to avoid discrimination, exempted from the tax all admissions of 50 cents or less including movie admissions.

In those days of silent pictures, low production, and operating costs, and sound money, there were few, if any, movie admissions of more than 50 cents, except an occasional road show.

In succeeding years the exemption was raised to 75 cents and then to $3 so that for a number of years the movies were wholly exempt, and the special exemption meant nothing competitively.

In 1932, in order to raise revenue for pump-priming purposes, Congress lowered the general exemptions to include only tickets of less than 41 cents.

This affected a good many big-city downtown theaters, but even so, it left most neighborhood and small-town theaters, a majority of the theaters, untaxed.

In 1941, in the teeth of World War II, Congress abolished all exemptions, both general and special. The sound idea back of this was that all diversion seekers should bear their fair share of the tax burden, and that there should be special favors to none.

The loss of the 40-cent exemption hit a lot of small theaters but attendance then was at its peak.

In 1943 the tax rate was doubled from 10 percent to 20 percent, but business was still good, and with the country in the midst of a desperate war, no one protested.

Now, it is proposed to restore the special exemptions with an embellishment, at a time when the movies, in common with all other spectator amusements, are suffering, when the tax is double what it was when the special exemptions were formerly in force, and without any compensating general exemption such as prevailed throughout the time that the special exemptions were in effect.

Senator BYRD. Have you got any figures on the loss of business by the motion-picture industry?

Mr. MYERS. Not combined figures but they are best reflected in the constantly dwindling receipts from the admissions tax.

Senator BYRD. I mean, what percentage do you think it is?

Mr. MYERS. Oh, anywhere from 25 to 45 percent over the wartime peak. The Internal Revenue Bureau's tax figures cover all spectator amusements, but they reflect the trend generally. Baseball also is badly hit.

The constantly dwindling revenue from admissions taxes tells the story.

I was amused to read in the Wall Street Journal that an official of the St. Louis Cardinals baseball team, in view of the dwindling purchase price of the dollar, said: "The public would evidently rather see a meat plate than a home plate."

Senator BYRD. Has television expansion hurt the movies?

Mr. MYERS. It has undoubtedly hurt all spectator amusements. Television carries no admissions tax.

I have heard the word "embellishment," and perhaps I had better explain that.

Prior to 1941 there was an exemption in favor of members of fire and police departments, their families and heirs. Obviously, that was to cover, or intended to cover, benefit performances for pension funds, relief funds, and the like.

Now, that is changed in the present bill—and this is noteworthy—so as to exempt shows and entertainments for the benefit of the fire department and the police department themselves.

Thus, under this provision, we would be treated to the spectacle of the Federal Government granting a subsidy to a local fire department in the form of tax exemption to enable it to buy a new fire engine; this, if the committee, pleases, in the teeth of all the outcries against Federal encroachment or State abdication, however you want to view it, and is shocking to those of us who feel that the Federal Government should remain within the reasonable limits of its delegated powers.

In considering the special plans made in behalf of those who would benefit from the passage of this bill, this committee should not overlook the fact that the motion pictures also are worthy and make an important contribution to the general welfare.

They afford high-grade entertainment not merely to the intelligentsia and the dilettante, but to the masses and at a prices the masses can afford to pay.

There is something incongruous to my mind about taxing a child's 25-cent admission to a theater and exempting a $20 opera ticket, much as I should like to see culture spread over the length and breadth of the land.

Senator KERR. Did I understand you to say which of these groups you thought Congress was in? Is that what you said?

Mr. MYERS. I beg your pardon, sir?

Senator KERR. Did I understand you to say which of these groups you thought Congress came under?

Mr. MYERS. I think definitely in the eleemosynary institutions class.

Senator KERR. You are talking about the institution now, not the Members.

MYERS. That is right. [Laughter.]

Motion pictures are fashioned to the public taste, and include in the yearly programs western, mystery plays, comedies, drama, and musicals.

Much also has been said about the diffusion of culture by operas and symphonies. I detract nothing from their value in that respect.

I remind the committee now, though, that what used to be Lem Underdunk's Silver Cornet Band in the village now has blossomed out into a symphony orchestra and the exemptions here will probably be greater than you anticipate.

There have been a number of picture featuring symphony orchestras and opera singers. Mario Lanza's rendition of operatic arias in that magnificent picture, The Great Caruso, probably did more to stimulate the love for good music than—but I forbear to be invidious.

On the cover of Time magazine this week you will see Mr. Lanza's picture and a big article about that feature film.

The motion-picture industry's great contributions to the war effort in two World Wars and its support of all manner of worthy causes and charities have been described to this committee on other occasions and need not be repeated here.

In contributing to the entertainment of the Armed Forces, our industry donated its product and talent, while others sold their wares for a price.

Despite a popular impression, the motion-picture industry and Hollywood are not synonymous.

Hollywood's accomplishments speak for themselves, and no criticism is implied by this distinction, but more important are the thousands of motion-picture theaters scattered throughout the length and breadth of the land.

These retail outlets are located in 9,600 cities and towns in the country. Over one-third of the movie theaters are located in small towns and villages of 25,000 population and under. This is sound, everyday American business. It is also small business.

The average seating capacity of theaters in the United States is 648. Over half of the theaters have 500 or less seats, and those in the small towns average only 339 seats.

These theaters represent 94 percent of the total investment in the motion-picture industry. They employ upwards of 140,000 people.

The motion-picture exhibitor is like every other Main Street merchant. As a citizen, taxpayer, employer, he is indistinguishable from the corner druggist or grocer. There is no more reason to discriminate against him and subsidize his competitors than there is to accord like shabby treatment to other merchants.

In conclusion, we ask that the unfair and discriminatory provisions in question be stricken from the bill; or, in the alternative, that equal treatment be accorded to the motion-picture theaters by including them in the exemption.

Thank you.

Senator KERR. You want them either to take down the tent or make it big enough for you to get into, too?

Mr. MYERS. Yes, sir.

But times being what they are and the Government's necessities being what they are, it might be better to take down the tent.

Senator BYRD. Thank you, sir.

(Mr. Myers' prepared statement follows:)

STATEMENT BY ABRAM F. MYERS IN BEHALF OF COUNCIL OF MOTION PICTURE ORGANIZATIONS

EXPLANATORY NOTE

I appear as the authorized spokesman for the Council of Motion Picture Organizations. The council, commonly called COMPO, is an all-industry organization representing in the public-relations field all industry branches—production, distribution, and exhibition.[1]

In the preparation of this statement I have had the advice and assistance of an able and experienced advisory committee, thoughtfully provided by COMPO, whose suggestions and views are reflected herein.[2]

Our position is that section 402 granting special exemptions from the admissions tax to certain favored organizations and institutions should be stricken from the bill. If that is not done, then we ask that the motion-picture theaters also be freed from the tax.

Just a little over a year ago (July 7, 1950) Gael Sullivan and I appeared before the Finance Committee seeking relief from the admissions tax for the motion-picture theaters. We presented ample proof of the depressed state of the motion-picture business and, as we thought, made out an iron-clad case for the theaters.[3] But when the seriousness of the Korean situation became known, and it became apparent that taxes would have to be increased instead of lowered, the motion-picture industry decided that it would be unpatriotic to continue the struggle for relief. Thereupon the effort was abandoned, the Senators and Congressmen who had offered encouragement were thanked for their interest, and the COMPO tax committee, of which I was chairman, was disbanded.

For this we received numerous letters of appreciation and commendation, and we felt that we had followed the proper course.

Since then conditions in the motion-picture business have improved but little, and in some areas conditions are worse. If the Congress is now going to grant special exemptions from the admissions tax on grounds of economic need, then motion pictures qualify for first consideration. Indeed, if it were not for the grave dangers which beset the Nation, with the resulting drain on its resources in providing for the national defense, the motion-picture industry would now be renewing its pleas for abatement of the admissions tax.

Other interests in the field of entertainment have not felt the same compunction about seeking special consideration in time of national peril. As a result there have been written into H. R. 4473 provisions for exempting a variety of such enterprises from the admissions tax. These special exemptions, if enacted into law, would give those enterprises an unfair competitive advantage over the established motion-picture theater. They constitute rank discrimination and lead to the inference that, in the view of Congress, motion pictures—the Nation's basic entertainment—are less essential to the public interest than these specially favored enterprises.

THE OBJECTIONABLE PROVISIONS

Our objections center upon the provisions of section 402 (pp. 104–106 of the Senate print) which, according to the heading, are designed to reinstate the prewar exemptions from the admissions tax.

These exemptions were added piecemeal to the Internal Revenue Code between World War I and World War II as special groups pressed their claims upon Congress. They are to be found in section 1701 of the code, subsections (a) to (c) inclusive (26 U. S. C. A., sec. 1701).[4]

[4] Derivations—Subsec. (a): Religious, educational, or charitable entertainments from Revenue Act of 1924 (26 U. S. C. A., volume containing Internal Revenue Acts 1924 to 1939, pp. 90–91). Subsec. (b): Agricultural fairs from same source as above. Subsec. (c): Certain concerts added by Revenue Act of 1932 (26 U. S. C. A., volume containing Internal Revenue Acts 1924 to 1939, p. 956).

With one notable addition and one omission, and with minor changes in wording and arrangement, the exemptions conform to those formerly contained in section 1701 of the code.

These accumulated exemptions were terminated by the Revenue Act of 1941.[5] The obvious purpose of the repeal was to ease upon the patrons of all forms of entertainment their fair share of the tax burden incident to the preparation for war, the Nation then, as now, being in a state of crisis. Also it is reasonable to suppose that Congress took into account the fact that, by the same act, the exemption of all admissions of less than 41 cents, which had prevailed since 1933, also was terminated.

By section 402 of the bill section 1701 (a) of the Revenue Code would be amended to exempt from the tax any admissions all the proceeds of which inure—

"(A) exclusively to the benefit of religious, educational, or charitable institutions, societies, or organizations, societies for the prevention of cruelty to children or animals, or societies or organizations conducted for the sole purpose of maintaining symphony orchestras and receiving substantial support from voluntary contributions or of maintaining a cooperative or community center moving-picture theater—if no part of the net earnings thereof inures to the benefit of any private stockholder or individual.

"(B) exclusively to the benefit of National Guard organizations, Reserve Officers' associations or organizations, posts or organizations of war veterans, auxiliary units or societies of any such posts or organizations, if such posts, organizations, units, or societies are organized in the United States or any of its possessions, and if no part of their net earnings inures to the benefit of any private stockholder or individual; or

"(C) exclusively to the benefit of a police or fire department of any city, town, village, or other municipality, or exclusively to a fund for the sole benefit of members of such a police or fire department or the dependents or heirs of such members.

"(D) (New.) Any admissions to swimming pools, bathing beaches, skating rinks, or other places providing facilities for physical exercise, operated by any State or political subdivision thereof or by the United States or any agency or instrumentality thereof if the proceeds therefrom inure exclusively to the benefit of the State, political subdivision, United States agency, or instrumentality. For the purpose of this subsection the term 'State' includes Alaska and Hawaii and the District of Columbia."[6]

The vast number of institutions and individuals who, under these provisions, could carry on enterprises involving the charging of admission fees without collecting an admission tax, and wide variety of tax-free entertainment and recreational enterprises that would be encouraged to enter into competition with the theaters, will be discussed under a subsequent heading. The only enterprises to which the exemption would not apply are—

"(A) any athletic game or exhibition unless the proceeds inure exclusively to the benefit of an elementary or secondary school;

"(B) wrestling matches, prize fights, or boxing, sparring or other pugilistic matches or exhibitions; or

"(C) carnivals, rodeos, or circuses in which any performer or operator participates for compensation."[7]

Except for these three enumerated classes, the fortunate beneficiaries of the Government's bounty will be free to carry on any form of entertainment or recreational enterprise in competition with the motion-picture theaters and will not be hampered by the requirement that they add 20 percent to the price of every ticket sold as an admission tax.

A BLOW TO PRIVATE ENTERPRISE

The admission tax, it must be remembered, is paid by the person paying for the admission.[8]

When the theaters sought relief from the tax their representatives informed the Congress that the great circuits directly, and most of the independent theaters through their associations, had agreed to pass on the benefit of the

[5] 26 U. S. C. A., volume containing Internal Revenue Acts beginning 1945, pp. 123–124.

[6] By sec. 403 these exemptions will become effective on the first day of the first month which begins more than 10 days after date of the bill's enactment—about the time that staggering increases in individual and corporate income taxes go into effect.

[7] These exceptions to the proposed exemption are set forth in par. (2) of sec. 402 (b).

[8] Sec. 1700 (a) (2), Internal Revenue Code.

repeal of the tax or lowering of the rate to their customers. In other words, it was recognized that the tax money was the patrons' money and that it would not be proper for the theaters to take advantage of such congressional action by raising admission prices, thus absorbing all the benefit.

The position of the theaters was that repeal of the tax would result in a 20 percent decrease in the total cost of an admission and that this would attract more patrons into the theaters.

The position of those who have caused the exemptions to be written into the present bill and will be the beneficiaries thereof is in strange contrast to that taken by the theaters. To the extent that they are now regularly engaged in conducting amusement enterprises and have established admission prices, their arguments plainly imply that they themselves propose to take advantage of their exemption from the tax and thus increase their gross box-office receipts by 20 percent. If there has been a disavowal of such purpose it has not come to our attention.

As regards the other prospective beneficiaries not now regularly engaged in such enterprises, they admittedly are out to raise money for their religious institutions and favorite charitable and welfare organizations, for their National Guard and veterans' organizations, and for their police and fire departments. What they want, and what under this bill they will receive, is a Government subsidy—a 20 percent advantage in the total admission charged over the private enterprises which must compete with them.

The religious, educational, and welfare organizations which will receive this subsidy are of the class that traditionally are supported by voluntary contributions. The fire and police departments in the past have been and properly should be supported by local assessments.[9] When these organizations invade the field of commerce and compete for the leisure time and patronage of the diversion-seeking public, they should pay the same taxes and assume the same burdens as others so engaged.

Lip service is constantly being paid to those foundation stones of the American way of life—private enterprise, individual initiative, and the competitive system—even by the public-spirited men and women who organize these fund-raising schemes. Yet they are in effect proposing that religious and educational institutions, local charities and welfare organizations, all manner of veterans' organizations and activities, and municipal services shall become the beneficiaries of a Federal bounty.

If it be thought that we are overstressing this matter, let me pose this question to any member of the committee: What would be your feeling if you were dependent upon a motion-picture theater for your livelihood and, perhaps, had your life's savings invested in it, and in the conduct of your business you were required by the Government to collect from every patron and remit to it a sum equal to 20 percent of the admission price paid, and then the Government decided that every church, school, and college, every charitable, welfare, and veterans' organization, and the police and fire departments should have the right to engage in competition with you by selling entertainment in your community without adding the tax to the admission prices charged by them?

The unkindest cut of all is the exemption granted to any organization or society conducted "for the sole purpose * * * of maintaining a cooperative or community center moving picture theater." There is no requirement that such an organization or society shall have any connection with any religious, educational, or charitable activity. The only limitation is with respect to participation in the "net earnings" which may not inure to the benefit of any stockholder or individual. But this intended protection, as we shall later see, is a mere chimera; this provision is, in fact, commercialism rampant.

Justification for these special favors cannot be found in the worthiness of the putative beneficiaries. Congress has approached with the greatest caution the problem of Federal support for schools. That subject involves serious difficulties and perhaps is fraught with grave dangers. The schools are tax-supported now on a local or State level. The theaters by paying their taxes already bear their share of the burden. By what reasoning can a Federal subsidy be added

[9] Sec. 402 (b) contains an innovation, the significance of which should not be overlooked. Prior to 1941 the code provided an exemption for admissions "exclusively for the benefit of members of the police or fire department" of any city, town, village, etc. This limited the exemption to entertainments given in the interest of pension and relief funds, etc. Under the bill it would extend to shows "exclusively for the benefit of a police or fire department" as well as the members of such department. Thus a tax-free show could be given for the purpose of buying a new fire engine.

to this help, especially when it works rank discrimination against legitimate commercial enterprises? Delicate questions also are involved in the granting of special favors to churches and private charities. But no matter how worthy the ultimate beneficiaries may be (assuming there are any benefits after costs and expenses have been paid), the proposed exemptions constitute a blow to private enterprise and deserve to be repudiated on that ground alone.

INVITATION TO FLY-BY-NIGHTS

However high-minded the purposes of the supporters of these exemptions, there lurks behind them a group of greedy promoters who expect to and will reap rich pecuniary rewards notwithstanding the protective language written into the bill.

All of us in show business know as a practical matter and on the basis of experience that fund-raising schemes more often than not are organized and carried on in the name and (in varying degrees) for the benefit of religious, educational, and charitable institutions by professional promoters.

Disregarding Sunday school and grade and high school performances put on by the scholars themselves, it is accurate to say that no entertainment worthy of an admission price can be presented without the assistance and know-how of persons experienced in such matters. The "proceeds" of these affairs may inure wholly to the benefit of the institution in question and no part of the "net earnings" will go to any stockholder or individual—all as provided in the bill. "Proceeds" as used in the bill quite obviously is not synonymous with gross receipts. If it were, then the concluding clause to each paragraph, referring to "net earnings," would be meaningless. Moreover, any such enterprise necessarily incurs expenses, and these must be deducted before there can be any proceeds. Therefore, the bill allows ample scope for profitable promotional operations.

Take a typical example such as most of us have encountered in our experience. The telephone rings and an attractive voice informs us that some church, school, or charitable institution or veterans' post is giving an entertainment and "won't you please buy some tickets?" Back of that solicitation stands a professional promoter with an organization skilled in this sort of work. The promoter first approached the institution and proposed to stage an affair for its benefit. He supplies the entertainers, the solicitors, and the equipment and paraphernalia and stages the performance. He is paid out of the gross receipts—that is the "cost" of the undertaking and whatever is left over inures to the benefit of the institution.

There are many variations of the routine but the schemes all boil down to the same thing—the enrichment of the professional promoters.

They operated profitably under the exemption when the admission tax was only 10 percent of the admission price. The practice decreased noticeably when all exemptions were repealed. Since then the tax has been doubled and so will be the temptation to promote tax-exempt shows. A 20 percent price advantage is a compelling force. While I hope that the motion-picture exhibitors will engage in no such shenanigans, it must be recognized that the bill offers strong inducements for them to make certain business arrangements which would bring their theaters within the tax-exempt class.

A hard-pressed exhibitor, struggling to remain in business, might welcome the chance to turn his theater over to some religious, educational, or charitable institution, or to a group organized to maintain a cooperative or community center moving-picture theater, in return for a satisfactory employment contract as manager. His salary plus a net profit to the statutory beneficiary doubtless could be insured out of the tax savings afforded by the provisions of the bill. As the agency of such an institution, it is conceivable that the theater would also be relieved of the burden of paying property taxes and other local assessments.

It is the established businesses, not the itinerants, fly-by-nights, and once-in-awhile operators, who bear the tax burden and insure the solvency of the local, State, and National Governments. Motion-picture theaters are taxed far beyond most businesses. They are paying all the taxes levied on business enterprises in general, plus special taxes, fees, and assessments peculiar to their business. It is unnecessary to recount to this committee the many Federal taxes, direct and indirect, which they must pay. In addition they must pay all or part of the 12 State and local taxes listed at the bottom of the page.[10]

---

[10] (1) Income, (2) real estate, (3) personal property and intangibles, (4) unemployment, (5) occupational taxes and licenses, (6) special assessments, (7) school, (8) road, (9) fire inspection, (10) signs and marquees, (11) billboards, (12) State excises.

The admission taxes to be relinquished to the beneficiaries described in the bill are not an accurate measure of the loss of tax revenue that will ensue if the bill is passed. When patronage is drained from the theaters by tax-free competitors, the public revenues—local, State, and national—all suffer. And when a theater fails, there only remains a diminishing real estate tax as theaters are so constructed that they cannot be readily converted to other uses.

THE DANGER IS REAL, NOT IMAGINARY

While exact figures are not available to us, we cannot resist challenging the estimate of $16,000,000 as the amount of revenue which will be lost to the Government if these proposed exemptions are enacted into law. It is quite obvious, we think, that much more than $80,000,000 a year is spent on so-called nonprofit amusements. Even so, $16,000,000 would come in handy for building warplanes at a time when the Government so badly needs every penny of revenue it can lay its hands upon.

Moreover, the estimate applies only to existing nonprofit entertainments, it does not take into account the many such enterprises that will be stimulated into activity once the exemptions become effective.

We have not had the time, nor do we have the facilities, for a complete Nation-wide survey of the theaters and auditoriums owned or operated by institutions of the kind that would become tax-exempt under the bill. The results of such a survey, should it be made, would be startling and would surely give pause to those who have the interests of the Government at heart and are devoted to the principle of free enterprise.

A report which we have received from New Jersey lists the following affairs which have taken place in Hudson County and which would be tax-exempt under the bill:

1. Sister Kenny Fund, roller-skating derby, Jersey City Armory, capacity 5,000.
2. Jersey City Symphony, five concerts each year, subscription price $10 a year.
3. Sacred Heart Church, vaudeville, Snyder High School, capacity 2,000, admission price $1.
4. St. Michaels Church, vaudeville, Public School No. 37, capacity 1,200, admission price 75 cents.
5. Church of Christ the King, vaudeville, Snyder High School, capacity 2,000, admission $1.
6. St. Patricks Church, vaudeville, Snyder High School, capacity 2,000, admission $1.
7. Catholic Youth Organization, horse show, Roosevelt Stadium, capacity 15,000, prices 50 cents and $1.
8. Mount Carmel Church, vaudeville, Public School No. 23, capacity 1,200, price 75 cents.
9. Albert Quinn Post, AWV, carnival, Roosevelt Stadium, capacity 15,000, percentage basis.
10. High-school-football games, school fields, students admission 25 cents, adults $1.
11. High-school championship (1 game), Roosevelt Stadium, capacity 15,000, admission $1.
12. St. Paul's of the Cross Church, auditorium, capacity 1,000, admission $1.

The foregoing is a random report from the many sent in by motion-picture personnel located in the cities dealt with in the reports. The facts stated are a matter of every day observation in every city and town in the country. Next we come to a frightening statement based upon the returns to questionnaires sent to 536 colleges and universities inquiring about motion-picture shows given in their auditorium. Three hundred and sixty-four replied.

I have the report with me but it is too long to set forth in this memorandum. It shows that the total number of seats contained in these auditoriums is 137,882. The total number of shows given during the school year was 1,590. One hundred and thirty-nine institutions reported that they now limit attendance to students only. The remaining two-thirds admitted others than members of the faculty and the student body. Many of these colleges are located in small towns and, therefore, close to existing theaters.

Who knows how many church, grade school, and high school auditoriums there are which, if not already presenting shows of one kind or another, will attempt to do so if the admissions tax is lifted from their shoulders and is allowed to remain a burden upon the motion-picture theaters. The danger is imminent and real both to private enterprise and to the Government's revenues and is not to be shrugged off by proponents of the exemptions, jubilant over their great expectations.

TIMES HAVE CHANGED

The proponents of these exemptions argue that the same constitute a mere restoration, not an innovation; that since the motion-picture business survived the unfair competition imposed thereby in the past, it can continue to survive in the future.

While the proposed exemptions are pretty much the same as those that were in effect between 1924 and 1941, conditions within the motion-picture business and generally have so changed that reinstatement of the exemptions now would threaten the very existence of the motion-picture business.

In 1924 when the exemptions were first granted motion pictures were a fast-growing, healthy, happy business, sitting on top of the world. The admission tax then, and up until 1943, was only 10 percent. Not only was the rate only half what it is today, but all admissions of 50 cents or less, including movie admissions, were exempted.[11]

In those early days of silent pictures, low production and operating costs and sound money, admission prices were considerably lower than they are today. It is fair to say, therefore, that that exemption included all movie admissions except those charged for a small number of road shows and special attractions.

In other words, when Congress first granted these special exemptions to religious, educational, and charitable institutions, and to the members of police and fire departments, it was careful also to exempt movie admissions, to all intents and purposes.

In 1926 Congress raised the general exemption to include all admissions, including movie admissions, of 75 cents or less.[12]

And in 1928 the general exemption was raised so as to include all admissions of $3 or less.[13]

Thus the movies enjoyed a practical immunity from the admissions tax from the time the special exemptions were first adopted until 1932.

In 1932, in the midst of the depression, Congress was compelled to increase taxes in order to support the pump-priming program, and one of the expedients was to lower the general exemption to include admissions of less than 41 cents, but the rate remained at 10 percent.[14] But even with this lowered general exemption, most movie admissions were still included therein, as admissions of more than 40 cents usually were confined to the downtown theaters in the larger cities.

In 1941, in the teeth of World War II, Congress abolished the general exemption, except as to children's admissions of less than 10 cents, and at the same time abolished all the special exemptions, including the exemption of admissions to the national parks and monuments.[15]

This wiped the slate clean of all exemptions, with the single exemption above noted, and the tax was made to apply to the first penny of admission price paid. The loss of the exemption of 40-cent admissions was a serious one for the small theaters, but it came at a time when theater attendance was at the peak and, good citizens that they are, the exhibitors accepted it without a whimper.

In 1943 Congress added the war rates to the various excises and the admissions tax was doubled (from 10 to 20 percent). This also came at a time when the picture business was enjoying a high degree of prosperity, and for our encouragement (and subsequent disappointment), the act provided that the war rates should end 6 months "after the date of the termination of hostilities in the present war." [16] U. S. C. A. volume, Internal Revenue Acts, beginning 1940, p. 470. This promise of postwar relief was withdrawn by the Excise Tax Act of 1947, 26 U. S. C. A., volume Internal Revenue Acts, beginning 1940, Supp. p. 16.

The war rates we still have with us, notwithstanding movie attendance has declined to the lowest ebb in many years. The conditions which proponents of these special exemptions cite in support of their demands are the very same conditions which are affecting the movies. They urge changed conditions as regards increasing costs and declining receipts as a reason for bestowing on them a competitive advantage over the movies, but ignore the fact that those changed conditions have affected the movies as much as themselves.

The remarkable fact revealed by this review is that throughout the history of the admissions tax Congress has scrupulously avoided discriminating against the motion-picture business insofar as exemptions are concerned. The present bill, if enacted, would constitute a departure from Congress' traditional policy of fair treatment for all in this regard. Reinstatement of the special exemptions, without raising the general exemption to include movie admissions, would not be a restoration of conditions prior to 1941 but on the contrary would be a violent innovation violative of American principles of free enterprise and fair play.

PANDORA'S BOX

The demands of the State and local governments and of various causes for Federal aid have increased to a point that is alarming to those who think that Congress should operate within the boundaries of its delegated powers.

The provisions of section 402 of the present bill, viewed in the light of present conditions, portend a new and even more mischievous trend toward Federal encroachment or State abdication (whichever way one chooses to regard it) than any we have thus far encountered.

Special tax favors cannot be granted to a few without injuring or exciting the cupidity or jealousy of others. Moreover, the conditions mentioned under the preceding heading are adversely affecting virtually all spectator amusements. This is shown by the gradual decline in admission tax receipts. A special article in the Wall Street Journal for July 30, headed "Ball park attendance continues to drop," shows that last year baseball attendance dropped 16 percent from the peak of 1948 and that present indications are there will be a drop of 10 percent this year from last.

An official of the St. Louis Cardinals is quoted as saying: "As the dollar value drops people would rather see a meat plate than a home plate."

We will not belabor this statement by speculating on the causes for the falling off in attendance at the movies, at the ball parks, at the circus and at the so-called highbrow entertainments. Our only purpose is to illustrate that these enterprises, whether carried on for a pecuniary profit or the compensations of conscious virtue, are in the same boat; and that, if Congress now grants relief to a favored few, it will soon hear from the neglected many. Enact this bill in its present form and beyond a shadow of doubt all other amusements will also be clamoring for exemption from the admissions tax.

The case of the municipalities and their fire and police departments calls for special attention. The mayors long have sought repeal of the Federal admissions tax so as to clear the way for the imposition of local admissions taxes. In this attempt they have been unsuccessful. Now they are seeking the same benefit in another way. They want to support their police and fire departments from the profits of tax-free shows and games. In substance, that amounts to appropriating money out of the United States Treasury to support local police and fire departments; and Congress should concern itself with the substance of the proposal and not be misled by the enticing garb in which it is clothed.

And if the municipalities continue to expand their activities and costs continue to mount and the purchasing power of the dollar continues to fall, it is inevitable that the mayors will be back on the doorstep of Congress asking for the exemption of entertainments and all manner of enterprises maintained and carried on for the support of other departments and services, possibly for the support of the municipal corporations without regard to any particular department or service.

SECTION 401 IS UNOBJECTIONABLE

Section 401 would have the effect to remove from section 1700 of the Internal Revenue Code the requirement that when a person is admitted free or at a reduced rate to any place where an admission fee is charged, there shall nevertheless be collected from such person an admission tax which is equivalent to the tax which would apply to one paying the established admission price for the same or similar accommodations.

It has never been clear why the Government should want to collect an admissions tax on money that is not spent, or more than the proportionate tax on the amount actually spent. The requirement is an unwarranted deterrent to the admission of students and men and women in the Armed Forces at reduced rates.

To illustrate, if the established price for an orchestra seat is 50 cents, the tax comes to 10 cents, making the total charge 60 cents. If the theater owner sees fit to admit a soldier or sailor free, he must nevertheless collect 10 cents from him and turn it into the Treasury. And if he sees fit to admit members of the Armed Forces or students for 25 cents, he must also collect a 10-cent tax instead of the proportionate 5 cents.

Sections 401 and 402 are not geared together in any way and we should like to see the former retained and the latter stricken.

MOTION PICTURES' CONTRIBUTION TO THE GENERAL WELFARE

In considering the special claims made in behalf of those who would benefit from the passage of the bill, this committee should not overlook the fact that motion pictures also are worthy and make important contributions to the general welfare.

They afford high-grade entertainment, not merely to the intelligentsia and the dilettanti, but to the masses, and at a price the masses can afford to pay.

Motion pictures are fashioned to the public taste and included in the yearly program are westerns, mystery plays, dramas, comedies, and musicals. Much has been said about the diffusion of culture by operas and symphonies. There have been a number of pictures featuring symphony orchestras and opera singers. Mario Lanza's rendition of operatic airs in that magnificent picture The Great Caruso probably did more to stimulate a love for good music than—but we forbear to be invidious.

The motion-picture industry's great contributions to the war effort in two world wars, and its support of all manner of worthy causes and charities have been described to this committee on other occasions and need not be repeated here. In contributing to the entertainment of the Armed Forces our industry donated its products and talent whilst others sold their wares for a price.

Despite a popular impression, the motion-picture industry and Hollywood are not synonymous. Hollywood's accomplishments speak for themselves and no criticism is implied by this distinction. But more important are the thousands of motion-picture theaters scattered throughout the length and breadth of the land. These retail outlets are located in 9,039 towns and cities. Over one-third of the movie theaters are located in small towns and villages of 25,000 population and under.

This is sound, every-day American business. Also it is small business. The average seating capacity of theaters in the United States is 643. Over half of the theaters (51.9 percent) have 500 seats or less, and those in the small towns average only 339 seats.

These theaters represent 94 percent of the total investment in the motion-picture industry. They employ upward of 140,000 people. The motion-picture exhibitor is like every other Main Street merchant. As a citizen, taxpayer, employer he is indistinguishable from the corner druggist or grocer. There is no more reason to discriminate against him and subsidize his competitors than there is to accord like shabby treatment to other merchants.

In conclusion, we ask that the unfair and discriminatory provisions in question be stricken from the bill or, in the alternative, that equal treatment be accorded the motion-picture theaters by including them in the exemption.

Senator BYRD. The next witness is an important citizen from Virginia, Mr. Morton G. Thalhimer, representing the Virginia Motion Picture Association.

Mr. Thalhimer, do you desire to address the committee? We will be delighted to hear from you.

STATEMENT OF MORTON G. THALHIMER, VIRGINIA MOTION PICTURE ASSOCIATION

Mr. THALHIMER. Senator Byrd, and gentlemen of the committee, we would like to file a written statement with the committee.

I would like to state, also, that we concur with Mr. Abram Myers' statement.

My remarks will be limited to, perhaps, 3 minutes.

Senator BYRD. Take what time you please.

Mr. THALHIMER. There are approximately 20,000 motion-picture theaters in the United States, and from the figures of 1949 they represent an investment of $2,700,000. The total investment in Hollywood in the production of movies represents less than $350,000,000.

These 20,000 theaters are owned in the vast majority by the citizens of the towns and cities in which they are located. They pay their full share of local and city taxes.

The company that I represent has paid to the Government in taxes which we have collected, admissions taxes, in the last 9 years, $4,246,000.

That represents an average over that period of time of about 30 theaters, all in Virginia.

It is very unpopular to say anything that would cast a reflection on churches or charities or metropolitan operas. However, if we are to continue as a free enterprise—I will not burden the committee with the terrific competition that these theaters have.

In Virginia, their business is down 28 percent from the 1945–49 figure of admissions. There have been closed in Virginia in the last 6 months over 25 theaters and it is anticipated that others will be closed.

Now, our objection in Virginia, gentlemen, is due entirely to the fact that the American public, after they pay their taxes and their rent and food and clothing, have a certain amount of dollars left over for amusement.

They have the free privilege of going to operas or symphony orchestras, rodeos or baseball games or anything they want. But if you exempt certain amusements from the payment of Federal admission taxes, you are definitely placing a great penalty on the amusement business that is not exempted.

I repeat what Mr. Myers said: It will encourage fly-by-night promotion, people who come to the town in the name of sweet charity to give the net admission receipts, and it is net after what? Not after the payment of salaries to these people, not after payment of rent to some landlord, and the small amount that they leave with this charity is out of all proportion to the large amount which they take away from the community.

I do not believe that Mr. Petrillo is going to reduce the wages of the musicians if the Government waives admission taxes for symphonies and metropolitan operas any more than labor would reduce the cost of its operators and union employees in theaters if you took the admission tax off the theaters.

You would simply create a condition that, in my opinion, would have a tendency toward bankrupting legitimate amusements, and in the final anlysis, without benefiting the orchestras, the operas, and the charities that think that they would be benefited; because, as I say, if the show is worth seeing they will go to see it, and if it is not worth seeing, they will not go to see it because of charity.

So the Virginia association appeals to this Finance Committee on the ground that it would be a discriminatory thing for you to do, that it would be an un-American and undemocratic thing to do, and it would be a great injustice to those people who have invested their life savings in various legitimate amusement enterprises.

They would be the ones who would be hurt.

Thank you very much.

Senator BYRD. Thank you very much.

Now, Mr. Thalhimer, I have two statements, one of Mr. Crockett and one of Mr. Barton.

Do you desire them inserted?

Mr. THALHIMER. I would like that inserted and the one by Mr. Barton on section 123.

Senator BYRD. Thank you very much, sir.

(The prepared statements of Robert T. Barton, Jr., and William Crockett, referred to, are as follows:)

STATEMENT OF WILLIAM F. CROCKETT, IN BEHALF OF THE VIRGINIA MOTION PICTURE THEATRE ASSOCIATION

My name is William F. Crockett. I am from Virginia Beach, Va., and I speak on behalf of the 240 members of the Virginia Motion Picture Theatre Association (of which association I am president), who are opposed to sections 123 and 402 of the pending tax bill.

Section 123 will increase the tax burden of the so-called control groups, which have developed not for the purpose of avoiding or evading taxes but for sound business reasons by between 100 and 200 percent. I am informed that the opposition to section 123 has been fully aired by many others very adversely affected by this measure. For that reason I will not elaborate our opposition but will file with the clerk of the committee a statement.

The remainder of my remarks will be devoted to our opposition to section 402 of the pending tax bill. The Virginia association opposes this proposal because the exempted activities are in direct competition with motion pictures which not only pay admission taxes but also pay many other taxes which make the exempted activities possible in considerable part. Furthermore, the exemptions will accomplish no good but will lead to many "promotions" in the name of "charity."

This is not the time to discuss the unfairness of the 20 percent admissions tax and the burden it imposes upon the motion-picture exhibitor who, in the final analysis, pays the tax because of its adverse effect on admissions. Let me state here that Virginia exhibitors stand ready and willing to bear their fair share of the tax burden but they do not like to be singled out to pay a tax akin to a luxury tax. Movies are a necessity, especially in these difficult times. The tax falls heaviest on those least able to pay it; the people whose principal source of amusement is the movies are the people in the lower-income tax group. We still live in the hope that when the emergency revenue needs of our country are met, you will repeal this discriminating tax. We repeat—we know from costly experience that admission taxes directly affect attendance. Entertainments which do not have to charge admission taxes have an advantage over entertainments that do have to collect admission taxes.

Let us analyze proposed section 402 and detail some our reasons for our opposition to this section.

Paragraph (c) excepts "any admissions all the proceeds of which inure" to certain organizations designated in subparagraphs (A), (B), and (C). We take it that the amount of the "proceeds" is something different from the amount of "admissions" and this is borne out by the fact that each of subparagraphs (A) and (B) concludes with the proviso: "if no part of the net earnings thereof inures to the benefit of any private stockholder or individual." This can only mean that the several organizations listed are exempted from the admission tax, if after paying all expenses including salaries and promotion fees, the organizations receive all of the "net earnings." We know from experience how clever promoters will go to charities and veterans' organizations (two of the exempted organizations) and promise all the "net earnings" if the organizations will permit the use of their names, and after the expenses and promoter's fees are deducted, the "net earnings" are extremely meager. The organizations have sold their names for a song—their birthright for a mess of pottage.

If people want to do something for such organizations, let them make direct contributions and secure the full benefit of tax deductions.

Some symphony orchestras, another exempted organization, masquerade under the guise of civic organizations, taking thousands of the tax amusement dollars from communities and after the promoters get their take, little, if anything is left as "net earnings." The well-to-do symphony audience is far better able to pay admission taxes than the lower-income-group movie goers.

Cooperative and community center moving-picture centers are in direct competition with commercial movies. The license and real-estate taxes paid by the commercial movies indirectly help to finance such organizations. If they are exempted from the admission tax and people can see the same movies at lower prices at the community movie house than at the commercial houses, they will not go to the commercial movies. What is going to happen to the latter? This measure will destroy the very source from which you expect to attain revenue.

Subparagraph (C) exempting entertainments for the benefit of police and fire departments, their members and the members' dependents and heirs, does not carry the "net earnings" phrase for some reason, although, obviously, such entertainments cannot be held without expense and the "proceeds" will not be the full amount of the "admissions." Here again the promoters will operate under the auspices of the fire and police departments and after getting their most generous take, will turn over to the organizations the "net proceeds" left over, if any.

While paragraph (2) excludes from the exemption "carnivals, rodeos, or circuses in which any professional performer or operator participates for compensation," there are plenty of entertainments in the country which cannot be so classified and which now are giving exhibitions under the guise of sweet charity or for one or the other exempted organizations who will profit by these exemptions to the benefit of the promoters and at the expense of the commercial movies.

The difference in the cost of admission made by the tax makes a world of difference to the patron, especially the patron who wants to take his family. We know this from costly experience. If this were not true, we would not be here protesting the tax.

While elementary and secondary athletic contests are less liable to this sort of tax evasion, now that many of such contests are held at night, they take their share of the amusement dollar, compete directly with the movies, so if the movies are taxed, such contests should also be taxed.

Subsection (D) exempts publicly operated swimming pools, bathing beaches, skating rinks, and other places for physical exercise "if the proceeds therefrom inure exclusively to the benefit" of the governmental instrumentality operating the facility. Here again "proceeds" must mean something less than the total "admissions" because these facilities cannot be operated without expense. Often they are leased by the governmental instrumentality so the proceeds are the rentals. The lessee-promoter makes a substantial profit and uses the Government instrumentality to avoid collecting an admission tax, although he is in direct competition with commercially operated entertainments, which have to collect admission taxes.

We trust we have made it clear that not only do the proposed exemptions further discriminate against the movies but they also open wide the door for tax evasion and avoidance. We speak from bitter experience.

The exempted organizations have gotten on pretty well since 1941 when many of the now proposed exemptions were removed from the tax law. Why now reinstate these exemptions? Increased legitimate competition is now giving the movies a battle for their lives; why add to their difficulties?

If it is fair to tax most people for their amusement, it would be unfair and un-American to make the exemptions as called for in section 402.

As long as the amusement taxes are needed for the defense effort, we sincerely believe there should be no exemptions and that section 402 should be stricken from the bill in its entirety.

STATEMENT OF ROBERT T. BARTON, JR.

My name is Robert T. Barton, Jr., and I am counsel for the Virginia Motion Picture Theater Association which is opposed to the provisions of section 123 of the proposed tax measure; this is the section which limits the surtax exemption and the excess-profits credit of a so-called controlled group of corporations.

The Virginia Motion Picture Theater Association is an organization of substantially all of the motion picture theater owners and operators in Virginia. The association opposes this section for the following reasons:

For sound, practical business reasons the motion-picture business is conducted by corporations. The motion-picture pioneers, in order to limit the risk of venture capital and the risks of catastrophe, because theaters in the earlier days were not as safe as now, opened and operated motion-picture houses as separate corporate entities. For the same sound business reasons and since one cannot always be certain that a motion-picture house in any one location or in any one town, or city will be or continue to be a success, separate theaters are usually operated by separate corporations. Sometimes, and for the same reasons, two or three theaters may be grouped under one corporation. A successful theater today due to competition, may be a failure tomorrow. I doubt if the tax angle was often considered when these corporations were organized, because the capital risked had first to be turned into a profitable venture before any tax questions arose.

A lot of people have gone into the motion-picture business thinking that all one had to do to make a fortune was to build or lease a theater, exhibit films, and take in the money. Some succeeded; others failed and desired to sell out or turn their operations over to the more successful exhibitors, often on a percentage-of-earnings lease basis. The more successful exhibitors took over the corporations of the sellers or organized new corporations to take over because if one exhibitor had made a failure, there was no reason to be sure that the successor would make a success of the business and the successor did not want his other business tied into the new venture in the event it failed. Some successful operators wearied of the business, became sick, grew old, or died and so their operations came on the market and were acquired by other operators often through the purchase of the outstanding stock in the operating corporations.

It is on this situation, brought about, not to avoid taxes, but to protect venture capital, that this proposed tax will unjustly fall, increasing the tax burden in many instances over 100 percent.

Theaters are now paying a 20-percent amusement tax, a tax not paid by ordinary commercial enterprises. There has been no increase in the price of admissions comparable to the increase in everything else, in spite of the fact that movies' expenses have greatly increased; and movie attendance is down at least 20 percent from the high of 1946 and on this unhappy situation would be imposed another inequitable tax.

Not only is the tax unjust and unfair to these corporations but it also will discourage further venture capital. I may be willing to risk my money in a project if I am sure that should it fail, I will only lose my investment, but I am unwilling to venture part of my capital, if the rest of my capital may be involved in the failure. If, on the other hand, I am going to be penalized taxwise in the event the venture is a success, because I own all the stock of the new corporation and of other corporations where I have successfully ventured capital, I am not going into new enterprises.

Enough has been done already taxwise and otherwise to discourage free enterprise and the taking of business risks. I urge you not to do more by enacting section 123 into law.

Senator BYRD. In lieu of appearance, the Chair will insert in the record a brief by Morris A. Schapiro in respect to certain sections.

(The document referred to follows:)

HOW COMMERCIAL BANKS ARE AFFECTED BY FEDERAL TAXATION

(Statement of Morris A. Schapiro, M. A. Schapiro & Co., Inc.)

To help banks in their need for new capital, certain penalty features in existing tax laws require correction.

Normal or nonexcessive earnings of 6 percent (i. e. before excess profits tax but after regular corporate taxes, now at 47 percent) require a definition of 12 percent on all invested capital, not on just the first $5 million.

Further, to encourage the flow of new capital, banks should be permitted to hold without penalty tax-exempt securities in an amount equal to their total invested capital, including of course any new capital. Only those holdings in excess of this amount should be made cause for reduction of the invested capital credit.

Taxing authorities should examine and remove inequities and technical difficulties, particularly those which prevent banks from using the average-earnings method.

In this way alone, will the case for bank capital be strengthened in the eyes of investors, and banks once again have access to the capital they need.

INEQUITIES BLOCK ACCESS TO NEW CAPITAL

Commercial banks are essential to our dynamic economy. They give efficient service at low cost to individuals, to business, and to Government. As a result of the inflationary trend of our times, banks have experienced an unprecedented growth of deposit liabilities and risk assets. Thus, in 1950 loans of insured banks expanded $11.0 billion or nearly 22 percent. At the end of 1950, their total loans had reached $51.6 billion, an expansion of $31.2 billion or 102 percent in 5 years. These changes in the banking scene increase the importance of capital for all commercial banks.

These banks are subject to the same Federal income tax laws as other privately owned corporate enterprises. In banks, however, compared with other businesses, the rate of return on capital after taxes is low. Because of this low return, investors are not attracted to banking, and banks, therefore, are finding new capital difficult to obtain.

Federal taxation denies investors fair hire for the very money which enables commercial banks to operate as private enterprises. The withdrawal of existing capital is actually place, as evidenced by the increasing number of bank mergers throughout the country. Tax laws allow little incentive for shareholders to approve proposals for additional capital, now of increasing importance to banks serving an expanding economy.

The adverse effect of Federal taxation bears heaviest today on those banks in greatest need of capital. These are banks whose growth in loans and deposits has been greater than average. Country banks and city banks alike, they are the banks which have developed the broadest contact with the public, merchandising their services most effectively and generally providing a retail type of operation. "Brown derby banks," they serve individuals and small businesses as well as larger customers. Expanding business has placed them in this need of new capital, and their problems, therefore, are of concern to bank managements as well as Government banking authorities.

Federal taxation blocks many large and small banks from access to new capital and seriously handicaps others. Nevertheless, State and Federal banking authorities, alert to the shrinking capital ratios resulting from the increased deposits and loans of today, are properly recommending additional capital for many banks. The problem centers in the same market place where prime bank shares of unquestioned asset value still continue to sell at discounts from book values. The dominant reason for "banks at a discount" has been, and is today, their low earning power.

TAXES FORCE THE DISCOUNT

True, expanded business of the banks has increased their gross income. But salaries, wages, and related benefits are higher. There are pension costs. The total of interest paid, rents, supplies, and other expenses are up. Exclusive of State and Federal income taxes, operating costs of all insured commercial banks in 1951 are expected to be 73 percent above 1945.

In competition for deposits and loans, banks have had little to say over the price of their services. Since 1945, they maintained their income by doing more business each year. Banks steadily increased their risk assets, but also reduced their liquidity. Most of the added income merely overcame the added costs.

Now with the full impact of Federal taxation, the rate of earnings on stockholders' money is unfairly low despite the expanded services and risk assets which the banks have had to assume. It is a case, as the Red Queen remarked to Alice, of "taking all the running you can do to keep in the same place." But from these low and hard-won earnings, one must deduct the losses which the future alone will disclose. When these are known, the extent to which banks are now living on their capital will then be told.

Banks have not been as successful as industry in passing on to their customers the rising costs which all have experienced. Under these circumstances, taxes force the discount on stockholders' money, thereby penalizing all stockholders.

NEW CAPITAL UNPROFITABLE

New financing can only be effected at or below these depressed quotations. To obtain additional capital, banks are compelled to accept less than fair value for their shares, and then the pro-rata rights to subscribe at these low prices are traded in pennies, if not quoted as worthless. Current and prospective earnings, not asset values, create this difficulty.

Recently, in the case of a nationally prominent bank where additional shares were offered to stockholders, the price was set at 70 percent of book value. To the extent that stockholders were unable or unwilling to take up their subscription rights, new partners were taken in through the sale of shares at a discount from book value. In addition to sacrificing part of their equity, the old shareholders found their earnings diluted.

To attract new stockholders, the cash dividend return or yield for these new partners was nearly 5 percent, whereas the rate received by old stockholders on their book value had been less than 4 percent. This was clearly a penalty, a general acknowledgment that bank earnings are too small. In other bank financings, old stockholders were penalized even further. Moreover, in many banks they will soon discover that Federal tax laws prevent this new capital from earning its dividend requirement and that they will, in effect, be making good the dividend on the newly issued shares.

Stockholders who approve proposals for capital increases do so believing that the future of their banks and the needs of the community are being served by this strengthening of capital. But the limitations of present Federal income and excess profits tax laws on earnings make these proposals unprofitable. They are only now becoming alerted to this costly situation. Government taxing authorities must recognize bank capital as worthy of its hire, if demands of the banking authorities for stronger capital structures are to be met. New financing to meet these demands will have to wait for favorable conditions.

BANKS IN CRITICAL IMPASSE

Banks seek capital to keep pace with expanding business. The importance of this new capital is recognized. Bank capital functions in the public interest because it is a guaranty fund protecting the people's deposits against impairment. By making loans to individuals and business possible, bank capital keeps commerce free and flowing. Bank capital needs every encouragement and safeguard to assure its sound and steady growth.

To attract and retain capital, banks must have adequate earning power on their stockholders' investment. This they do not now have. If they did, their shares would not be quoted at less than book value. The effect of Federal taxation is penalizing. Low earning power continues "banks at a discount." This discount which the market places on stockholders' money makes proposals for new capital costly, and often prohibitive, and creates a critical impasse for banks.

Federal tax laws define excess profits. Banks are paying taxes on their excess profits. The question is asked, How can banks have excess profits when their shares are quoted at heavy discounts? The answer is, banks do not have profits which are excessive, and the excess-profits taxes they are compelled to pay keep them at this discount. This is true.

First, because of their low earnings on book values, bank shares were quoted at discounts in the years prior to the excess-profits-tax law of 1950. Poor base period average earnings and technical inequities place banks at a basic disadvantage in comparison with other industries. Banks generally did not have high "average earnings" for their base-period years as did industrial and manufacturing corporations. Most banks must therefore use the alternative invested-capital method in computing their exemption from excess-profits taxes. Under this method corporate earnings are defined "excessive" when they exceed certain rates on invested capital. The basic exemption from excess-profits taxes for banks, unlike most industrial corporations using average earnings, is small in relation to book value or invested capital. Hence bank stocks continue at their discount from book value.

Second, normal or nonexcessive bank earnings, which are not subject to excess-profits taxes, are subject to combined normal and surtaxes of 47 percent. Such normal or nonexcessive earnings as defined by the tax laws are calculated before taxes. But in the eyes of investors, and in the market place, meaning is given only to what is left of normal earnings after taxes. The rates allowed on invested capital of 12, 10, and 8 percent appear adequate, but after regular taxes of 47 percent, the net of 6, 5, and 4 percent is no longer adequate. This earning rate of 4 percent is too low to hold capital, let alone attract new investors. Investors making comparisons with the regulated public utilities, know that public service commissions have always recognized 5½ percent after taxes, and often 6 percent and more, as a fair return on capital.

Third, in the case of large banks with capital in excess of $10 million, this 4 percent rate means that the law establishes in principle a normal return fixed under Federal enactment of not more than $4 of recurring earnings per $100 of book value. This low return for banking capital would have to be appraised in the investment market at 25 times to support quotations equal to book value, a valuation admittedly out of line and unreal in the market for equities. Hence, the discount on stockholders' money.

The so-called excess profits of banks—the amount over and above these low normal earnings—are in effect taxed at a rate of 77 percent, the total of normal and surtaxes of 47 percent and excess-profits taxes of 30 percent. It is a serious question indeed whether shareholders, understanding this impact of Federal taxes, would want their banks to assume banking risks while subject to this 77 percent rate.

The ability of commercial banks to grow with the expanding needs of industry and to furnish the essential services demanded by a defense economy is therefore retarded. Already, State and Federal banking authorities are concerned with the level of risk assets, high in relation to existing capital. Except for the few who would want all credit functions taken over by the Government, the implications of this difficult situation are serious and demand a realistic approach to bank earnings.

SMALL INVESTOR SUFFERS

The present exemption allowed of 12 percent on the first $5 million, 10 percent on the second $5 million and 8 percent on additional invested capital is a penalty on the larger banks. But these are the banks with widely distributed ownership. Therefore, these penalty rates on large banks hurt the small investor.

The question has been asked, To what extent does the 8 percent rate on invested capital apply? The 8 percent rate applies to banks with invested capital in excess of $10 million. These are the banks which hold half of the $11.3 billion capital and half of the $163.5 billion deposits of the 13,446 insured commercial banks. Including banks with invested capital of between $5 million to $10 million, the penalty rates of 10 percent and 8 percent, before regular income taxes, affect the major part of the banking assets throughout the country, and hurt the great majority of bank shareholders everywhere.

MINIMUM WAGE FOR CAPITAL

The proposal to increase the regular corporate tax rate from 47 to 52 percent would cut investment returns even further. This makes a realistic definition of "excess profits" more pressing, since the rates allowed of 12, 10, and 8 percent on invested capital lose meaning with each increase in regular taxes. To be realistic, a definition of "excess profits" must allow investors incentive to continue as shareholders and to approve proposals for capital increases. The investor will not accept too low a figure; the source of new funds will dry up.

If fair hire for bank capital is taken to mean cash dividends at the rate of 4 percent of principal, or book value, then the recurring earning power of banks after taxes should be protected at not less than 6 percent of book value. To secure a net of 6 percent after regular corporate taxes, now at 47 percent, normal or nonexcessive earnings should be defined at 12 percent of all invested capital. This is the minimum required to relieve the critical impasse now facing banks.

Provisions affecting bank holdings of wholly and partially exempt investment securities, described by existing tax law as "inadmissible" assets, are basically necessary. However, the present limitations should be reconsidered and changed to correct obvious inequities. To relate such holdings to amounts held on January 1, 1950 imposes an unjustifiable hardship on a great many of the 13,446 insured commercial banks, all of which are now operating under radically changed conditions. To encourage the flow of new capital, it is only fair that these new funds be made free for investment in tax-exempt securities without reducing the invested capital credit used to determine normal or nonexcessive earnings. Further, banks should be permitted to hold without penalty "inadmissibles" in amount equal to their invested capital. Only holdings in excess of this amount should be cause for appropriate reduction of the invested capital credit.

RESERVES MUST BE EARNED

Earning power, the source of cash dividends, means net current operating earnings—the result of day-to-day bread and butter items of operating income, less operating expenses, less applicable State and Federal income taxes. It does not mean profits or losses on sale of securities, charge-offs or recoveries on loans, transfers to reserves, or other capital transactions, or the tax credits or tax liabilities to which these sometimes give rise.

Banks must retain a portion of their recurring earnings, first, to create reserves for losses, thereby protecting their present capital from erosion, and second, to add to their capital funds—necessary because of the tremendous growth in their deposit liabilities and risk assets.

It should be remembered that earning power of 6 percent net after taxes is calculated before provision for losses. Banks differ from public utilities. At the year end, the results for an electric power company are known, but in the case of a bank, only interest income, fees and expenses are known. The losses are unknown. In banks, the returns do not come in together. It is basic to banking that provision for losses be made out of sufficiently adequate current earnings, not out of existing capital funds. Therefore, in defining normal earnings not subject to excess-profits taxes, it should be possible for banks to set aside out of recurring earnings the added cushion for losses. Hence, earning power at 6 percent is not enough for banks in good times when the risk factor is in the ascendance.

TAXES PENALIZE GROWTH

This is particularly applicable to undercapitalized banks where a higher rate of earnings is essential, first to provide adequately for losses; and second, to justify and support additional capital. But the adverse effect of excess-profits taxes is heaviest on those banks which are in the greatest need of capital. Growing banks where invested capital is small in relation to deposit liabilities and risk assets exceed the statutory limits of "non-excessive" earnings—12, 10, and 8 percent of invested capital—sooner than banks where there are no capital problems. Undercapitalized banks are now paying excess-profits taxes while heavily capitalized banks are not. Thus, excess-profits taxes deny undercapitalized banks the earning power required to build up their capital through retention of recurring earnings after payment of cash dividends, or through sale of additional shares on a basis equitable to both old and new stockholders.

The proposal to raise the regular corporate tax rate from 47 to 52 percent means that the effective rate of earnings, before excess-profits taxes, on invested capital in excess of $10 million would be less than 4 percent after regular taxes. This acts to depress bank shares even further and to widen the discount at which they have been quoted. Federal taxation is a factor prompting the withdrawal of private capital from commercial banking—a development which can be seen in the increasing number of bank mergers throughout the country.

Shareholders find merger proposals irresistable. This is quite understandable. During these years of great prosperity and high level of financial activity, shareholders see their banks with record totals of loans and deposits. They note the progressively higher interest rates on loans and securities. Stockholders are unable to reconcile these evidences of prosperity with their banks at a discount. As one investor observed, "For 18 years, banks have been quoted at a discount. During most of these years, there was not enough business to make banking profitable. Now banks have plenty of business, but Federal taxes cancel out this prosperity."

If independent banks are to continue, they must be profitable to shareholders. All bank managements throughout the country have the obligation to state their shareholders' case to our taxing authorities. Present conditions are no recommendation to private capital for investment in banks. If access to new capital remains blocked, and withdrawal of existing capital continues, how can eventual recourse to public funds to take the place of private bank capital be avoided?

Senator BYRD. In lieu of appearance, the Chair will insert into the record a memorandum submitted by the Mid-Continent Oil and Gas Association, Independent Petroleum Association of America, the Western Oil and Gas Association, American Petroleum Institute and Rocky Mountain Oil and Gas Association.

(The document referred to follows:)

MEMORANDUM SUBMITTED BY MID-CONTINENT OIL AND GAS ASSOCIATION, INDEPENDENT PETROLEUM ASSOCIATION OF AMERICA, WESTERN OIL AND GAS ASSOCIATION, AMERICAN PETROLEUM INSTITUTE AND ROCKY MOUNTAIN OIL AND GAS ASSOCIATION

The Internal Revenue Code provides for withholding of tax at the source on wages, income payments to nonresident aliens, and interest on tax-free covenant bonds. Section 201 of House bill 4473 provides for extension of the withholding requirement to include 20 percent of all payments of dividends, interest, and royalties. The term "royalty" is defined in the proposed law to include "any rent or royalty in respect of mines, oil and gas wells, and other natural deposits, including any delay rental and any minimum royalty, whether or not measured by production or by a share of gross or net income therefrom, and any payment representing a share of the gross or net income derived from the extraction and sale of any natural deposit, but only if the recipient of such rent, royalty, or payment is not personally obligated to pay a proportionate share of development or operating expenses."

This all-inclusive definition of royalties would require withholding on a substantial portion of the payments made by oil and gas purchasers and producers. In addition to true royalties, oil producers would be required to withhold on many payments which are not royalties at all, such as: delay rentals, payments under net-profit contracts, carried-interest contracts, in-oil-payment contracts, and overriding royalties, all of which are payable out of the working interest as distinguished from the true royalty interest.

This proposed amendment to the revenue code would result in an expense to oil and gas purchasers and producers and to the Government greatly exceeding the additional revenue which it is estimated will be collected and retained therefrom. It would impose unjust, discriminatory, and otherwise unconstitutional penalties on producers unequaled in the history of the income-tax laws. Many of the practices and procedures of oil and gas producers and most of their deeds, instruments, and other forms would have to be completely revised if the proposed withholding provision is adopted. The status of many valuable properties and the relationships of producer, landowner, lease broker, and other interested parties involved in oil and gas production would be rendered uncertain.

DELAY RENTALS

It seems evident that those who proposed that the withholding provisions of the House bill be extended to delay rentals were not fully aware of the significance of such a proposal. It must be assumed that they did not know that the requirement could result in the unconstitutional taking of the property of the withholding agent.

Practically all oil and gas leases today provide that the lease shall terminate on a specified date, unless on or before said date the lessee shall pay to the lessor or deposit to lessor's credit in the depository named a stated amount of money (usually called a delay rental) which shall defer for a designated period the necessity of commencing drilling operations. Payment of delay rental as stipulated is a condition upon which the continuation of the lease depends and thereby it differs distinctly from the customary rental payment. The lessor has no right of action in court to sue for delay rental payment because nonpayment results in the termination of the lease. The courts have held that failure to pay the full amount of the rental on or before the rental payment date at the place designated in the lease and to the payee therein designated terminates the lease. When once terminated, the lease cannot be revived. The courts have even held that the lease terminates through the failure of the payee to receive the delay rental was due to no fault or failure on the part of the person obligated to pay the delay rentals. Legislation which would undertake to change the lease contract by requiring the lessee to pay any part of the delay rental to a person other than the one named in the lease could constitute an impairment of the obligation of the contract.

Obviously, if the withholding provisions of the proposed bill are enacted, the lessee will be seriously penalized. If lessees withhold the tax and pay 80 percent of the rentals provided for in the leases, it may be urged by the lessors that lessees have failed to comply with the plain provisions of the leases, and lessors may insist that the leases are terminated. If they fail to withhold the tax, lessees will incur the penalties imposed upon them for a willful disregard of the withholding provisions of the tax law. In order to insure validity of their leases and at the same time to avoid the tax penalties for willful failure to withhold tax, the lessees, as an alternative, may be forced into the position of paying their lessors the full amount of the rentals called for in their leases, and paying out of their own pockets the amount of withholding called for by the statute. This would necessitate payment of rentals approximating 125 percent of those called for in the lease contracts. No other withholding agent is subjected to such an unjust and discriminatory burden upon penalty of possible forfeiture of his property for failure to assume such burden. For example, in the case of a lease calling for a delay rental of $100, the lessee would have to pay $100 to the lessor and then pay the Government $25 (which would represent a 20-percent withholding on the total payment of $125). It is respectfully submitted that the withholding provisions of the proposed bill, if applied to delay rental payments, may result in the taking of the property of the lessee without due process of law, which is clearly in violation of the protection afforded by the Constitution.

Even if Congress could by some device remove the penalties above noted, it is submitted that the administrative burden which would ensue from withholding of tax as to delay rentals is disproportionately high in the light of the small amount of tax revenue, if any, which the Government would ultimately derive.

To comply with the act and to avoid this penalty on leases executed in the future would require the industry to scrap all present lease forms and set up a completely new procedure of leasing, thereby incurring a tremendous amount of administrative costs. The hundreds of thousands of existing leases could not be changed except by mutual consent of each party.

One of the principal administrative objections to withholding with respect to delay rental payments arises from the circumstances under which leases are ordinarily acquired. Oil and gas leases are usually obtained without any previous title examination of the property and the party negotiating for the lease attempts to procure execution by every person who is believed to have any interest in the property. As a result, approximately 85 percent of the leases obtained provide for payments to multiple payees. Because of these circumstances, the oil and gas lessee does not know the amount of the payment to which each of the multiple payees is entitled. Furthermore, the delay rental payments are more often than not paid to a depository bank for the account of the multiple payees and the bank holds the rental payments until the various payees either agree among themselves as to the proper division or by proper court proceedings establish their respective rights. The oil operator paying the delay rental to a depository bank has no way of ascertaining the address of the several payees or of insuring delivery of the anual withholding receipt called for in H. R. 4473 to the proper persons.

LEASE BONUSES

Bonus payments in the case of oil and gas leases are usually one-time payments. Ordinarily the lease is either developed for oil and gas or it is surrendered and no subsequent bonus payments are made. Bonus payments, therefore, are not regular and recurring and should not be the subject of withohlding. Most oil producers extensively use the services of independent lease brokers in securing oil and gas leases. In some instances these brokers purchase as agents for the producer. In many other instances, the brokers assemble blocks of leases for their own account and subsequently resell these leases at a profit to oil producers. Frequently an assembled block of acreage consists of leases acquired by the broker both as principal and agent. In such cases it is impossible to determine at the time payment is made what portion of the payment represents bonus subject to withholding and what portion is consideration for the leases owned by the broker, no part of which would be subject to withholding. Most leases are forwarded from the field accompanied by a bank draft. At the time of payment of the draft it is impossible for the producer to determine what portion represents broker's commission, broker's selling price, or landowner's bonus, if any.

Since oil and gas leases are ordinarily obtained without title examination, the person taking the lease does not have actual knowledge of the ownership of the property at the time the lease is taken. Consequently, an attempt is made to obtain the signature of all persons who may possibly have any interest in the lease and the bonus payment is made to the individuals jointly. In many cases corporations (exempt from withholding) are parties to the lease along with individuals. Since the division of interest is not known and since corporations are frequently involved as lessors, the lease broker or oil company, as the case may be, has no knowledge at the time the bonus payment is paid what portion of the payment is subject to withholding, if any, or the amount payable to any particular lessor.

The education of landowners to withholding will be virtually impossible in many areas. Farmers and other landowners will insist on a bonus price after taxes which will conform generally to bonuses previously paid in their areas. As a consequence, the tax will, in most cases, have to be absorbed by the oil producer, thus materially increasing the direct costs of acquiring oil and gas leases.

ADMINISTRATIVE DIFFICULTIES—OIL INDUSTRY

The current proposal of the House Ways and Means Committee directly conflicts with the explanation given by the Senate Finance Committee for rejecting the 1950 proposal to collect income tax at source on dividends because "it would increase unduly the work of the withholding agents." The problems relating to the withholding from royalties, bonuses, delay rentals, and production payments far surpass those which would have been encountered in withholding from dividends as proposed in the 1950 bill.

The oil and gas industry through experience has developed contractual relationships and methods of doing business unlike those of any other industry. The proposed withholding provisions would require radical and costly changes in these proven operating practices.

The requirement to withhold on royalties would discriminate against the extractive industries because in no other instance is withholding required on the gross proceeds received from the sale of property or on the payment of rents. A substantial portion of the records and forms used by the industry would be rendered obsolete. New records and forms would have to be designed and printed to account for the tax withheld.

It would be necessary for the withholding agents to ascertain whether any of the interest owners are corporations, because payments to corporations would be exempt from withholding. The withholding agent would also be required to ascertain whether individual owners of each separate interest are personally obligated to pay a share of the operating expenses. This information cannot be secured without correspondence with hundreds of thousands of interest owners, particularly in the case of withholding by oil or gas purchasers who have no interest in the producing property.

A very substantial number of the payments for oil and gas royalties are made to banks as trustees for several beneficiaries or jointly to more than one person. In most of these cases it would be impossible for the withholding agent to furnish the Treasury Department with a report showing the amount paid to each person or to furnish each individual beneficiary a receipt for taxes withheld as provided in the bill.

The bill would require the withholding of tax and remittance to the Government for royalty payments where the payee is unknown. Royalty payments are always held in suspense pending determination of the legal interest owners. To withhold and pay tax to the Government under such circumstances would result in confusion in that withholding statements could not show the royalty owners' names. In many instances the income would not be properly reportable in the current year by royalty owners. Consequently, the annual withholding statements supplied by payors could not be matched up with the returns filed for the year of withholding. Furthermore, in such instances the tax would be erroneously withheld from corporations, working interest owners, and so forth.

The present practice of the oil or gas producer or purchaser is to deduct the entire amount of State severance tax and other proper charges from the value of all of the production from a particular lease. Thereafter the distribution between the royalty owner and the working-interest owner is made on the basis of the net value of the production after the deductions mentioned above. H. R. 4473 would require the withholding to be based upon the gross value of the royalty owner's share of production. Such a requirement will impose upon the oil producer or purchaser the added administrative burden of calculating the royalty owner's share of the gross value of the production, although the payment has been made upon the net value of such production. The calculation of withholding on the basis of gross value as compared with net value would impose a very substantial additional administrative cost upon the withholding agent.

It will not be possible, except by costly manual methods, for oil producers to comply with the withholding requirements unless additional accounting machines and equipment can be secured before the effective date of the act. Currently, required machines and equipment cannot be secured in less than 18 months to 2 years because of the very heavy demands of the Federal Government and restrictions on material.

The oil industry has a vital responsibility to provide an abundant supply of oil both for peace and wartime needs. Its efforts and manpower should be concentrated on this goal and not diverted by forced changes in industry practices and procedures.

ADMINISTRATIVE DIFFICULTIES—TREASURY DEPARTMENT

It is logical to assume that the Treasury Department would be saddled with the burden of making a much larger number of refunds and with other administrative details involved in giving taxpayers proper credit for amounts withheld in excess of their liability. The additional number of refunds to be made could run into the millions. Additional work would be placed on the Treasury Department in connection with suspense accounts that would have to be maintained by the Government for taxes required to be withheld and remitted to the Government before the payee is ascertained. In such situations, the tax withheld will be remitted to the Government in one year, whereas the royalty income is properly included in taxable income of the payee in another year. The Treasury Department would also be burdened with the task of auditing and matching the records and reports of withholding agents and payees. Certainly the Treasury Department's administrative job will not be simplified by withholding income taxes from royalties, delay rentals, lease bonuses, and production payments.

NET LOSS TO THE GOVERNMENT

The House Ways and Means Committee report states: "It is estimated that for the calendar year 1951 underreporting may amount to as much as $1.1 billion in the case of dividends, $1.9 billion in the case of interest, and $40 million in the case of royalties." This estimated underreporting totals $3,040 million. In table 12, appearing on page 62 of the report, it is estimated that adoption of withholding on dividends, interest, and royalties would increase the Government's revenues by $323 million, or 100 percent of such income unreported. Based on these estimates of the committee, approximately $4,240,000 is the maximum additional tax that could be realized through withholding on the $40,000,000 of underreported royalties, which includes an unspecified amount of unreported royalties on patents, copyrights, et cetera. The most recent Minerals Yearbook released by the United States Department of the Interior indicates that oil and gas accounts for only 44 percent of the total dollar value of minerals produced in the United States. It would thus appear that only 44 percent of that part of the $4,240,000 which represents the additional tax to be recovered by withholding on royalties other than on patents and copyrights would be recovered from withholding on oil and gas. This amount would conceivably not exceed $1,000,000.

The tremendous cost to the producers of oil and gas of withholding on delay rentals, bonuses, royalties, and production payments has been pointed out above. The increased cost of personnel and equipment, the larger lease bonus payments, as well as the penalty payments under delay rental clauses, would all constitute deductions for the oil and gas producers in computing their taxable net income. Since, most of the expenses will be incurred by corporations subject to taxes at rates ranging from 52 to 82 percent under the new bill, net tax revenues will be reduced rather than increased.

The cost to the Government of administering the proposed withholding on delay rentals, bonuses, royalties, and production payments would be greatly disproportionate to the additional tax which it has been stated will be recovered from this source. Since recipients of both royalties and bonuses will make various deductions authorized by law in arriving at their tax liability for the year, a very large percentage of them will be entitled to a refund. The Government would have the cost of processing these claims for refund, in addition to the cost of processing an estimated 3,000,000 withholding statements on delay rentals, bonuses, royalties, and production payments which must be identified with the tax returns of the recipients. Also, the withholding records of both the producers and the income recipients must be audited by revenue agents.

CONSTITUTIONAL QUESTIONS

There is a serious question whether Congress has the constitutional power to require the withholding of income tax on royalty payments. The sixteenth amendment gives Congress the power to levy taxes on income. It does not give Congress the power to levy any tax, even for a temporary period, on capital. Oil, gas, and mineral royalties differ vastly from dividends and interest. Dividends and interest are inherently income and could be paid indefinitely without impairing the capital out of which they grow. Such is not the case where royalties are concerned. The capital out of which royalty payments grow is represented by the total number of barrels of oil, cubic feet of gas, or tons of ore under the mineral property. Consequently, every barrel of oil, cubic foot of gas, or ton of ore produced for the royalty's owner account represents a return to him of a part of his capital. The value of the royalty owner's share of production is never income subject to tax in its entirety. Where the royalty owner's capital investment is small the portion of his share of the production constituting income may be relatively high, and where his capital investment is large the income portion will be low. Occasionally his cost is so high that it exceeds the entire value of his share of production so that he will never recover his capital through the royalty payments. Under the existing law the royalty owner calculates the portion of his rolayties representing a return of capital and the portion representing income and in his annual return reports, as being subject to tax, the income portion of his receipts from royalties. Under the proposed bill the entire royalty will be regarded as constituting income and income tax at 20 percent will be withheld at the time the royalty is paid. Accordingly, it is evident that by withholding the Government will be levying a tax on the portion of the royalty which is not income at all but is truly a return of the royalty owner's capital. In this connection withholding cannot be justified on the ground that the royalty owner can seek a refund or credit for the portion of the tax withheld on capital because the sixteenth amendment did not give Congress any power to levy a tax on capital for any period of time.

Furthermore, royalties as defined in H. R. 4478 include payments reflecting a share of the gross or net income derived from the extraction and sale of any natural deposit. The income-tax law has always provided that the tax is imposed upon net income, that is to say, where goods are sold the vendor is always entitled to deduct and treat as a return of his capital the cost of the goods and he is also entitled to deduct the expenses incurred in connection with the sale. In other words, the income tax is not imposed upon the gross receipts from the sale of goods. H. R. 4478 clearly discloses that the withholding will be based upon the gross receipts from the sale of natural resources sold by or on behalf of the owner. Congress has no more constitutional power to tax the capital represented by the cost of oil, gas, or other natural resources sold than it would have to tax the capital represented by the cost of shoes, cattle, or gumdrops sold.

The requirement that withholding be based upon the gross value of the natural resource extracted and sold raises the additional question of the right of Congress to levy an income tax upon that portion of gross value which the royalty owner cannot possibly receive. Almost every State in which oil or gas is produced, and many States in which other minerals are produced levy a special tax (usually called a gross production or severance tax) which attaches to the mineral on severance and must be paid before any distribution is made to the royalty owner. The withholding of income tax at the source upon that portion of the royalty owner's gross proceeds which are collected on behalf of the State before any amount is distributed to him would represent an attempt to tax him upon his expense as well as upon his income. It is submitted that the sixteenth amendment conferred no such power on Congress.

If withholding is required with respect to delay rentals, the effect may be to impose upon the withholding agent the penalty of either forfeiting his lease or paying an additional rental equal to the tax withheld. Either of these penalties would constitute the taking of lessee's property without due process of law.

It is inevitable that the constitutionality of the withholding provision with respect to royalties, bonuses, delay rentals, and production payments would be contested in the courts. The confusion which would result while such litigation was pending would completely disrupt the oil and gas industry. Title to mineral leases would be so uncertain oil producers would hesitate to drill; the status of valuable producing properties would be subject to extended litigation; tax refunds would be claimed by hundreds of thousands of owners of mineral interests. The experience of the Government and taxpayers more than a decade ago after the Agricultural Adjustment Act was declared invalid suggests a few of the problems that would be encountered if the proposed withholding of tax on royalties should be adopted and subsequently declared unconstitutional.

Senator BYRD. Our next witness is Mr. Dodds.

STATEMENT OF BLIGH A. DODDS, CHAIRMAN, GOVERNMENT RELATIONS COMMITTEE, INTERNATIONAL ASSOCIATION OF FAIRS AND EXPOSITIONS

Mr. DODDS. Mr. Chairman, Senator Byrd, and members of the committee, my name is Bligh A. Dodds, of Gouverneur, N. Y.

I am chairman of the Government relations committee and past president of the Internal Association of Fairs and Expositions; also past president of the New York State Association of Agricultural Fairs, and a former director of the New York State Fair, Syracuse, N. Y.

I am presently secretary-manager of the combined operation of two successful St. Lawrence County fairs at Gouverneur, N. Y.

Senator KERR. I did not understand that last statement.

Mr. DODDS. Presently secretary and manager of the combined operation of two successful St. Lawrence County Fairs at Gouverneur, N. Y.

Senator KERR. Thank you.

Mr. DODDS. Mr. J. S. Dorton, manager of the North Carolina State Fair, at Raleigh, N. C., who is now president of the International Association of Fairs and Expositions, and Mr. Frank Kingman, Brockton, Mass., secretary-treasurer of this association, are in complete accord and fully endorse the statement which is here submitted.

We represent, Senator, the 2,500 agricultural fairs in the United States.

We greatly appreciate the approval in 1947 and again in 1950 by the Ways and Means Committee of the House of Representatives, and the subsequent approval by the House, of a bill in those years to do the very thing that we are seeking at this time; although there is much more factual information to present in behalf of our case, yet we have full confidence that your attitude will be a kindly one, and that if consistent with the Nation's best interests, you will decide favorably on our request which is here submitted.

In behalf of our association, and those gentlemen whom I have mentioned, I feel that is is not necessary to take more of your time. Our record is clear. It is in the hearing of the House Ways and Means Committee in 1947 and 1950, and if I may ask that the testimony which I have prepared be included in the official record——

Senator BYRD. That will be done, sir.

Mr. DODDS. I will desist from taking more of your time, except to mention that I also represent the New York State Association of Agricultural Fairs and that I have a very short brief in their behalf which I would also like included in the record.

Senator BYRD. That will be inserted in the record.

Mr. DODDS. We greatly appreciate the opportunity in speaking on behalf of Dr. Dorton and Mr. Kingman, to appear before this committee and for the generosity of your consideration in appearing here this morning.

Thank you very much.

Senator BYRD. We are glad to have you, Mr. Dodds.

(The statements previously referred to follow:)

STATEMENT OF BLIGH A. DODDS, GOUVERNEUR, N. Y., CHAIRMAN OF THE GOVERNMENT RELATIONS COMMITTEE, INTERNATIONAL ASSOCIATION OF FAIRS AND EXPOSITIONS

My name is Bligh A. Dodds, Gouverneur, N. Y. I am chairman of the Government Relations Committee and past president of the International Association of Fairs and Expositions. Also past president of the New York State Association of Agricultural Fairs, and a former director of the New York State Fair, Syracuse, N. Y. I am presently secretary-manager of the combined operation of two successful St. Lawrence County Fairs at Gouverneur, N. Y. Mr. J. S. Dorton, manager of the North Carolina State Fair, at Raleigh, who is now president of the International Association of Fairs and Expositions, and Mr. Frank Kingman, Brocton, Mass., secretary-treasurer of this association, are in complete accord and fully endorse the statement which is herewith submitted. We represent the 2,500 agricultural fairs in the United States.

Most of these fairs are from 50 to 150 years old. They have filled a need in American rural life, otherwise they could not have existed through this country's history. For generations, farmers of the United States have been given much valuable information about the newest developments in farm methods and machinery by visiting these annual expositions. A substantial percentage of these fairs are owned or operated by States, counties or communities, which also finance or subsidize a majority of them. This practice in itself is proof of the belief by the State, counties or communities in the educational value of these fairs.

In some States, the counties levy a millage tax on every citizen in the county to help finance their fair while State aid for fairs has been in effect for a great many years. Agricultural fairs are nonprofit organizations. They are basically educational, in fact one of the oldest institutions in American rural life.

If they were not, States, counties, communities and cities would not continue to finance their operations. If they were not, the Federal and State Governments would not take part in supporting them as they do through every form of youth organizations such as the 4-H clubs and the Future Farmers of America with their more than 8 million members, through the State colleges of agriculture and the extension services.

Agricultural fairs are exempt from real estate taxation and for many years have had exemption from other principal forms of taxation. It was, I believe, in recognition of the fact that fairs are nonprofit organizations and leading factors in the development of a better agriculture and better standard of living, not only on the farms but in the communities where held, that the Federal Government, State, county and town governments have exempted them from taxation.

It is pertinent to remind the committee at this point that fairs are a civic enterprise, that they operate in a majority of cases only 1 week or a part thereof during the year. They cannot be classified in any sense as a commercial enterprise.

During World War I President Wilson urged that fairs be continued to encourage greater food production. Railroads, then operated by the Government, lifted embargoes to permit transportation of exhibits to fairs. During World War II President Roosevelt emphasized the importance of agricultural fairs and the United States Government gave them permits to operate. The United States Department of Agriculture sent out special advertising to emphasize the importance of continuing the activities of these fairs. During World War II many departments of the Federal Government used the fairs as a means of reaching large masses of the people quickly. It is a matter of record that millions of dollars in war bond sales were directly traceable to the agricultural fairs.

For the last 30 years, the Interstate Commerce Commission has recognized the value of fairs. The present tariffs permit exhibits to move at one-half the regular tariff rates. This is but one example. For a long period of years the United States Department of Agriculture has had exhibits at fairs to disseminate agricultural information.

We cannot be classified as an amusement enterprise. Until 1941 and World War II, Congress exempted fairs from the Federal admission tax even while other events were taxed. They were exempted because they were educational and supported by State, county, and town governments. This condition has not changed.

Fairs provide a veritable university for their patrons. They serve the very worth-while purpose of attracting more people than any other public gatherings held in America offering the greatest opportunity for mass education. The present tax hits hardest the family man and thereby millions of American boys and girls. Admissions are the largest source of revenue for every fair. Any drop in this revenue quickly affects every department of the fair through the lowering of prize money—the discouraging of competition and therefore the reduction of the effectiveness of the fairs.

The admission tax is a tax on children, 12 years old or over, and this practice prevents the extension by fair managements the country over of providing either free or reduced prices of admission to large numbers of underprivileged children.

It is a tax on small business. Although the fairs in the aggregate are big business, to the individual fair unit it is small business. The average fair operates but 4 days out of 365.

It is double taxation. One-half of the States and many communities already charge an admission tax. In most of the States the rate usually ranges from 1 to 3 percent of gross receipts but in four States, 1 cent for each 10 cents.

Fairs are already caught between decreased revenues and increased costs. Long-term contracts have already been made for this fall's operations, which are now under way. Fair men have expected and planned on the elimination of this tax which we were told was placed on the fairs only for the war period.

Fairs are important factors in the economic and social life of our country. Here is an outlet providing for the display of the creative work of both young and old for the year. The agricultural fair is the show window for such efforts. The ability of the management to offer attractive awards and surroundings should not be hampered by taxation of this outlet for the accomplishment of rural youth.

Show me a boy or a girl who raises and fits a calf, a pony, a sheep, or a pig, who raises his own crops, who makes her own clothes, all for exhibit at the fair, and I will show you a boy or a girl who is too busy to attend juvenile court.

So in conclusion, gentlemen of the committee, we contend that no tax should be paid to see agricultural fairs.

We greatly appreciated the approval in 1947 and again in 1950 by the Ways and Means Committee of the House of Representatives and the subsequent approval by the House of a bill to do the very thing we are seeking at this time. There is much more factual information to present in behalf of our case, yet we have full confidence that your attitude toward us will be a kindly one and that if consistent with the Nation's best interest you will decide favorably on our request herewith submitted.

In behalf of President J. S. Dorton, and Secretary-Treasurer Frank H. Kingman, as well as the 2,500 member fairs of our association, I wish to thank you very much for the opportunity of presenting this testimony.

I respectfully request that this testimony be included in the official record of this hearing.

STATEMENT OF BLIGH A. DODDS, GOUVERNEUR, N. Y., CHAIRMAN OF THE EXECUTIVE COMMITTEE AND PRESIDENT EMERITUS OF THE NEW YORK STATE ASSOCIATION OF AGRICULTURAL FAIRS

The fairs of America vividly recall the difficulties with which we were beset during the years of World War II and the worries which we had in the beginning of that war as to whether we could continue our operations. It is a matter of record that we were finally given the green light and it is also a matter of record that the fairs, generally speaking, proved of great value in the successful prosecution of that war. Since last June we have been embroiled in another war of vastly different nature, yet because of this emergency and the necessity of mobilizing for national defense, the fairs have this time taken the initiative and early this year a resolution was passed at the annual convention in Albany, N. Y., of the New York State Association of Agricultural Fairs indicating to the Federal Government what our feelings are along this line. The resolution follows and may I respectfully request that it be included in the record of this hearing as a declaration of the policy in this emergency of the agricultural fairs of the State of New York.

"Whereas aggression by vast Communist forces in the world, and the threat of aggression by other forces, have made necessary the mobilization of all the country's resources for defense; and

"Whereas the New York State Association of Agricultural Societies, representing the 51 agricultural fairs of this State, have grounds, buildings, and housing facilities strategically located for serving the defense program of this State; and

"Whereas these facilities are well adapted to the mass education of our people, the dissemination of important information and encouragement of increased agricultural production: Now, therefore, be it

"*Resolved*, That this association, and the fairs here represented unqualifiedly offer their facilities to the local, State and national defense authorities and pledge their complete support to the preparedness program in this emergency."

Senator BYRD. Mr. Lanier.

Senator HOEY. Mr. Chairman, Mr. Lanier comes from North Carolina and represents tobacco people generally. I might say I do not know of a better informed man in the United States on the tobacco situation.

There are a number of North Carolina farmers up here, not expecting to be heard, but they did want to manifest their interest in the tobacco situation. They came themselves and paid their own expenses.

I would like for the men from North Carolina to stand. They represent the various farm organizations, the Farm Bureau, the Grange, and other farm organizations; and the tobacco growers of the State are interested vitally in this.

Senator BYRD. I would like the Virginians to stand up to see which are the best looking.

Senator MARTIN. Mr. Chairman, I am sorry we don't have our great tobacco growers from Pennsylvania here represented.

Senator HOEY. We have a representative from Pennsylvania out there. I met him a while ago.

Senator BYRD. Let's have him stand up, too.

Senator MARTIN. People don't generally realize that we produce an enormous amount of tobacco in the State of Pennsylvania. It is one of our great products.

Senator KERR. I do not believe that there are any Oklahoma producers here. They wouldn't have to stand up. They would not want to stand up in a contest as to who was the best producer, but that proposition the chairman laid down as to who was the best looking, I am sorry they are not here in order to eliminate any controversy in that regard.

Senator MARTIN. Mr. Chairman, I think our Pennsylvania fellows would look like they are very well fed men. They are Pennsylvania Germans.

Senator BYRD. We are sorry they are not here. You may proceed, Mr. Lanier.

STATEMENT OF J. C. LANIER, PITT COUNTY, N. C.

Mr. LANIER. Mr. Chairman, and gentlemen of the committee, my name is J. C. Lanier, and I live in Pitt County in North Carolina. My county is the largest tobacco producing county in the world. In 1950 it produced approximately 50 million pounds of flue cured leaf tobacco from 37,600 acres. Nearly all of this tobacco is the kind of tobacco used in the manufacture of cigarettes. My principal business is the growing of flue cured tobacco.

Cigarette tobacco is grown in the States of Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, West Virginia, Ohio, Indiana, Maryland, and Missouri. More than 700,000 farm families are engaged in the production of this type of tobacco, and derive their major cash income from its sale. In my own particular area, tobacco is the pivotal crop; we are dependent upon it for our economic existence. We produce some corn, mostly for home consumption, a little cotton and a few potatoes, but tobacco is the basis of our economic life.

In my particular area tobacco is the heart and core of our economic existence. It is the big crop, the big industry; it is centralized and we depend upon it for the money to carry on and to live.

I want to make it clear to this committee that I do not appear as a paid representative of any segment of the tobacco industry. I am receiving no compensation directly or indirectly or in anywise whatsoever. I am appearing before you as a tobacco grower, as a member of the North Carolina State Grange Tobacco Committee, and as the chosen spokesman of the tobacco growers from all the States that product cigarette tobacco.

It is a great honor, but it is a great responsibility, and I just hope that I can today, before this committee, measure up to this responsibility by presenting to you gentlemen fairly and honestly the arguments that we have against this tax proposal.

If I can do that, I am more than well paid.

I am here today specifically to oppose the Treasury proposal to increase the Federal excise taxes on cigarettes from $3.50 per thousand to $5 per thousand.

In terms of a pack of cigarettes, the proposal is to increase the tax from 7 cents a pack to 10 cents a pack.

In terms of a pound of tobacco, which I have here in my hand, it means that the tax on that pound of tobacco will go from $1.17 a pound, which it now is, to $1.67 a pound.

The grower for that pound of tobacco gets 50 cents. That is the average over the past 3 years.

The Government now takes an excise tax on that pound of tobacco 2⅓ times the total gross return of the farmer, and if Mr. Synder's proposal is accepted, the Government will get 333 percent times the amount of money that the grower got for producing that pound of tobacco.

Senator BYRD. Will you repeat that, please?

Mr. LANIER. At the present rate of tax the Government gets $1.17 tax on that pound of tobacco going into cigarettes. The farmer gets 50 cents gross for all his work in producing that pound of tobacco.

If the Treasury proposal were adopted and the tax should go up to $5 a thousand, the Government then will get 333 percent times the amount the farmer got for growing the tobacco.

I say to you from the standpoint of 2 million people living on the farms, and producing this tobacco, that no other commodity in this country has ever been taxed, or proposed to be taxed in that monstrous, fantastic proposal, and in that proportion.

We tobacco growers are willing to pay more taxes. We know the country has to be rearmed. I am a veteran of the First World War, and I am willing to pay more taxes. I want the country armed to the teeth. But I think that taxes ought not to be levied on one particular little industry like tobacco. I think that it should be spread across the board, and then if you increase our income taxes or any other taxes that go across the board, we are more than willing to pay our part, but we do not think that this Congress should single out tobacco, that already carries the fantastic tax load that it now carries, $2 billion a year now, and add more to it, because we know if you do that, you are going to lessen our ability, the people who grow tobacco, these people who came up here today at their own expense, to pay any further tax.

In every single crisis, gentlemen, tobacco has been singled out to bear more than its share of taxes. Once a tax is proposed on tobacco and levied, Senator Hoey, it becomes as fixed and immutable as the laws of the Medes and the Persians.

In every war beginning in 1914, they have added, pyramided these taxes on cigarettes, and not one has ever been reduced in peacetime, and now in this twilight zone of war and peace, they propose to add a 40-percent tax on top of the tax that we are now paying on this tobacco.

I want to put this in terms of the grower. As I said the tobacco that goes into one pack of cigarettes, for that tobacco the grower now receives 3 cents. That is the total take for that tobacco. The Federal Government now gets 7 cents for that same tobacco and there is no complicated manufacturing process whereby you take a raw commodity and work on it and build up the value like in an automobile, a hundred dollars worth of steel makes a $3,000 automobile.

A cigarette is just tobacco wrapped up in a piece of paper, that is all it is. Yet they more than double at the present rate of taxation what the farmer got for the raw commodity—already.

Let us apply this, and I want to read this because it has got some figures I want to get correct—let's apply this to the production of a tenant farmer. He is what we referred to in the past as a one gallus man. Now, the average acreage of a tenant family of tobacco in the flue-cured area, is something less than 4 acres. In the burley area, in the Tennessee area, it is less than that.

Senator KERR. I wonder if you would explain to me the difference between those two terms.

Mr. LANIER. Which two terms, Senator?

Senator KERR. You talk about flue-cured and burley.

Mr. LANIER. The flue-cured tobacco is grown in Virginia, North and South Carolina, Georgia, and Florida, and that is cured by putting it in a barn and applying heat about 5 days and nights. You cure it by heat with flues in a barn. That is called flue-cured tobacco.

In the burley area of West Virginia, Ohio, Kentucky, Tennessee, and Indiana, they cure it by hanging it in an open shed and let the air cure it. They don't use heat.

Senator KERR. Is it about the same products when they start?

Mr. LANIER. Yes, sir; it is a different variety, but it looks much like that. They are commingled to make the so-called American standard-brand cigarette.

Senator KERR. The reason I was asking that, I gathered that you said in the flue-cured area they could farm about 4 acres, and in the other I gathered you said about 3 acres.

Mr. LANIER. Less than three; yes, sir.

Senator KERR. Is that caused by other conditions than the manner in which they cure the tobacco?

Mr. LANIER. Yes, sir; it is because, in the burley areas, in the mountains of Tennessee and Kentucky, the average grower does not have as much tobacco acreage as they do down in the old flue-cured area.

Senator KERR. If he could get the acreage, he could take care of four as easily as the other fellow does; is that right?

Mr. LANIER. That is right.

The average cash value of tobacco produced by a tenant family on 3 acres is $1,875. That is the average over the past 8 years.

Senator BYRD. Is that the total cost?

Mr. LANIER. That is the total gross selling price, Senator, of which the tenant farmer gets one half, or $937.50.

Of course, he has got some other litle crops—pigs, a little corn, a little cotton—but tobacco is what he depends on to pay for his fertilizer, to pay his taxes, to pay his living expenses, and buy the necessities of life. It comes from tobacco.

At the present rate of excise taxes now, the Government collects $1,455 from every acre of this tobacco that goes into the making of cigarettes, $1,455.

On a tenant farmer's crop of 3 acres, now collects, if it goes into cigarettes—and most of it does, practically all of it does—the Government collects $6,242 off of the production of tobacco, Senator, on one tenant farmer.

Senator MILLIKIN. Let me ask you this: The higher the tax on the finished product, does that not back up on the grower and have a tendency to reduce his price, or what is the economics of that?

Mr. LANIER. I was coming to that in just a moment.

Senator MILLIKIN. All right.

Mr. LANIER. I hope that these figures will be imbedded in the minds of you gentlemen because never has a condition like this faced an industry. If tobacco had not been taxed up until now and you gentlemen were looking for new sources of revenue now and someone came across tobacco and someone would suggest that it be taxed as fur coats are, taxed 20 percent of its value, you might adopt it, or 50 or 100, but if it came as a new thing and someone said, "Let's tax it 300 percent of its value," I believe it would shock the conscience of the committee.

Let me relate this tax to my own operations in growing tobacco. I am not a large grower, but last year I produced on the farms that I have 72,000 pounds of tobacco and it sold for around $40,000.

Eleven farm families participated in that production.

The Government, off of the tobacco I produced last year collected in cigarettes $85,000 on my own crop of tobacco, and if the Secretary's proposal were adopted, it means they would tax my tobacco $120,000 in one crop.

One other illustration. Last year Pitt County produced 50,000,000 pounds of tobacco, a purely agricultural county. The Government collected on that tobacco $60,000,000 and if the proposal that the Secretary makes is adopted, they would collect $85,000,000. That is nearly twice the assessed valuation of every bit of property in that country.

Of course, the producer does not pay this tax. Even a magician could not take 50 cents and pay $1.17 tax, let alone $1.67.

But what this tax does is to put a terrific burden upon the flow of our tobacco into normal channels of commerce. We are operating now under a restricted acreage.

Up until this year we had been cultivating only 70 percent of our basic acreage in this type tobacco. It was raised to 84 this year, but we have yet not gotten to a normal production, 100 percent of our allotted acreage.

We believe that if this tax should be increased, it will have a terrific impact upon the use of cigarettes in this country; and if by reason of the tax the consumption of cigarettes should be diminished, then it means economic disaster to us who, in the last 15 or 20 years have gotten somewhat away from Tobacco Road.

Should any considerable segment of the smoking population go to pipes or roll-your-owns, the impact will be terrific, not only upon us, the producers, but upon the Treasury of the United States.

The Federal Treasury stands to lose and not gain by the imposition of this 3 cents extra, or any part of it, because every time that 1 man out of 10 who smokes cigarettes quits, it costs the Government over a hundred million dollars, and every time a smoker smokes 1 pack less out of 10, the Treasury will lose over a hundred million dollars.

Gentlemen, this tax singles out one particular farm commodity for the most onerous tax ever levied. It is the only farm commodity that carries any tax except the grains that go into liquors and the grapes that go into wine. No tax is levied on wheat grown in Kansas or cotton in Mississippi or fruits in California or corn in Iowa or Ohio.

None of those farm commodities bears any tax, and I certainly am not speaking to indicate that there should be.

But here they pick out tobacco and in the face of the fact that it carries now a load of taxation of over $2,000,000 a year, they want to add another 40-percent increase on this tax.

Senator MILLIKIN. From the standpoint of the grower you contend, first, that the weight of this tax may lessen the market for the end product, No. 1, is that right?

Mr. LANIER. Yes, sir.

Senator MILLIKIN. No. 2, it exercises a pressure against the price that the producer might otherwise get if there were not such heavy taxes on the end product; is that correct?

Mr. LANIER. Yes, sir; that is right. Those are two of the very straight points that I am trying to make.

Gentlemen, this tobacco industry has had a great growth, and along with the growth the Treasury has benefited, the taxes have increased until now last year the Federal Government collected over $1,300 million on cigarettes.

Is this to be the situation? Are we to be harassed because we have a growing industry and because we have been able to make a reasonable living out of this? We sometimes think and ask whether or not the power to tax is not being used to destroy us who are engaged in the production of tobacco.

There are a thousand commodities in the category with tobacco—coffee, tea, golf balls, hunting equipment—a thousand articles that are in the same category, but they bear no such burden as we bear.

Tea and coffee are very comparable to tobacco, but not a cent of tax is collected on coffee or on tea.

Why is it that the Brazilian coffee growers' product is tax-exempt?

Why is it that the Java tea growers' product is tax exempt? And yet the product of the tobacco grower is taxed, and taxed and taxed until it seems there is no limit to where they are trying to go.

There is one other point I would like to make, and that is that this tax lays a heavy hand upon the family budget of the people least able to pay. At the present rate of taxation a man who smokes one pack a day pays $25.55 a year in excise taxes on his smokes.

If the taxes increase, he will pay $10 more, and if an average family worker with a wife and two children, using a pack of cigarettes a day, he would then pay under this Treasury proposal twice as much in tobacco excise taxes as he pays in income taxes.

Senator BYRD. You are speaking only of Federal taxes?

Mr. LANIER. Yes, sir, Federal only.

Senator BYRD. Do you have any figures as to the State and local taxes on tobacco?

Mr. LANIER. Yes, sir.

The best computation we had last year indicated tobacco paid $1,800,000,000-some-odd in excise taxes to Mr. Snyder and paid over $500,000,000 in State, county, and municipal taxes.

If this proposal were to be adopted, gentlemen, the tax load on tobacco per year would be over $2,500,000,000.

This tax follows the path of least resistance, but it does not stretch across the board. I hold no commission for the wage earner nor the laboring man to present his side of the matter. I think it should be pointed out that the impact of the taxes would be tremendous on the household budget of these people in the low-income bracket.

At a recent referendum in Oregon as to the question of putting in a tax on cigarettes, it was overwhelmingly defeated by the voters of Oregon.

There is an area known as the area of diminishing returns, and when prices reach a certain level, they inevitably drop off.

Last year in South Carolina the legislature increased the tax on cigarettes from 2 cents to 5 cents. They tried it 1 year, and the next year they repealed it because it did not yield the revenue. It resulted in a decrease in smoking, and so the legislature, after 1 year, cut it out and went back to the 2 cents.

There is already, gentlemen, increasing evidence that the point of diminishing returns has been reached in the taxing of tobacco. For nearly half a century the consumption of cigarettes in this country has mounted steadily, but now it has leveled off.

From 1900 to 1910 the consumption doubled; from 1910 to 1920 the consumption increased over 500 percent; from 1920 to 1930 it nearly doubled again, and from 1930 to 1940, it again doubled.

But since 1943, when they put on this last increase, the rate per capita has been smaller—that is, the rate of increase per capita has been smaller than any similar period since 1900, and in the last 2 or 3 years it has almost leveled off entirely.

This has come about when national income, individual incomes, have skyrocketed.

Since 1943 personal incomes have increased 60 percent, but the per capita consumption of tobacco, cigarettes, has increased only 10 percent.

In the last 3 years there has been practically no increase whatever.

In the face of these facts, I think it fair to assume that from now on the consumption of cigarettes will increase in sensitivity to prices and any price increase will meet with increased sales resistance.

Under any fair appraisal of this situation, gentlemen of this committee, I think the committee and Congress should look at this proposal from a business standpoint.

Tobacco is one of the most fruitful sources of revenue that the Government has.

Is the Congress willing now to take a chance on pricing this product out of the market? Is it willing to jeopardize the rights and the best interests of the growers on this wild-goose chase for additional revenue, and is it willing to crucify the tobacco farmers upon this cross of inequitable taxation?

Gentlemen, there are two other segments of the industry, the wholesale distributor, the retail cigarette dealer, who are bitterly opposed to this tax.

There are thousands upon thousands of firms engaged in wholesaling and 2,000,000 retail outlets.

But I will not take the time to argue that point of view, because I am not too familiar with it, and I therefore request permission to insert into the record a statement by Mr. Eric Calamia, the managing director of the Retail Tobacco Dealers of America, Inc., and a statement by Mr. Claude Harrison, the past president of the National Association of Tobacco Distributors.

I will request permission to insert in the record a table showing the existing State and Federal and municipal taxes in the several States; second, the yield of Federal cigarette tax and the amount of tax per capita; third, cigarette tax-rate increases imposed by the Federal Government since 1901; fourth, Federal and State cigarette taxes compared with the Federal income tax liability; fifth, chart showing division of retail price of a pack of cigarettes; and sixth, a graph showing the rate of increase of cigarettes since 1900.

That is my statement, gentlemen. I appreciate highly the honor that I have had to come before this committee and the privilege of speaking in behalf of all these people, who have come up here today of their own accord. You have given me a very nice hearing. I appreciate it and I believe you will heed our plea against this tax.

Senator BYRD. Thank you, sir. The insertions will be made in the record.

(The documents referred to follow:)

RETAIL TOBACCO DEALERS OF AMERICA, INC.,
New York, N. Y., August 9, 1951.

Re: A solemn protest against any increase in Federal Excise taxes on cigarettes

To the Members of the Senate Finance Committee:

This association, speaking for thousands of tobacco retailers of the country, begs to register herewith its protest against any increase in the Federal excise tax on cigarettes, and respectfully submits the following facts and data which we feel clearly demonstrate the devastating effects of the present overburdensome cigarette taxes.

AN ENORMOUS BURDEN ON THE CONSUMER

Inasmuch as the millions of smokers in the country are our customers, we feel entitled, moreover impelled, to speak also in their behalf. The fact is that every package of 20 cigarettes is subject today to a Federal tax of 7 cents. To this must be added various State taxes ranging from 1 cent per package to 8 cents, and this onerous State tax burden is borne by the consumer in 41 States.

The average smoker purchases one pack a day. Thus, he already pays an annual cigarette tax to the Federal Government of 7 cents a day, amounting to $25.55, a large amount in itself. The disproportion of it becomes even more apparent when we realize that the Government buys these cigarettes from the manufacturer for $3.55 a thousand upon which the present Federal tax alone is $3.50 a thousand.

When taxes climb until the consumer pays more to the collector than he pays for the product, they become not only unfair but ridiculous. The very fact that an increase in excise taxes was imposed in World War II which has never been rescinded, makes the imposition of an additional tax at this time without reason and unconscionable.

In a great many families there are several members who smoke, in which case the aggregate Federal cigarette tax amounting to $50 a year or more exceeds their Federal income-tax payment—truly an excessively heavy tax drain on the middle- and low-income family budget.

Considering the enormity of this tax burden, is it any wonder we anticipate that the consumer will eventually rebel against this disproportionate burden and curtail his smokes? When this well-known point of diminishing returns is reached the tremendous cigarette revenue accruing to the Government will be affected as will our businesses.

TAX DISREGARDS ABILITY TO PAY

We dealers know the havoc worked upon our business by the difference of a single penny in the price of a package of cigarettes. On such an everday item the saving of a penny a day is vitally important to the great mass of consumers, and they will go to extreme lengths to make that saving. In fact, experience has all too clearly demonstrated that it is almost certain business suicide for a cigarette dealer to charge a penny more per package than his competitors.

It is easy to understand why, for the fact is that about 90 percent of the cigarettes sold are bought by poor or middle-income-bracket families. Then too, it must be remembered that an article so universally used and which affords the comfort and solace so much needed in these times, is in no sense a luxury. This is not an idle assertion, for in the military and naval services, tobacco next to food and clothing is considered of greatest importance to the maintenance of morale. In peaceful civilian pursuits it plays a similar role, and in these times of heavy taxation the retailers will be faced with great consumer resentment if there is any advance in price due to an increased tax.

EFFECT OF THE PROPOSED INCREASE ON TOBACCO RETAILERS

The vast number of small tobacco retailers today barely eke out a living on the sale of tobacco products. Of all items we vend, cigarettes provide the smallest mark-up, namely 17½ percent on our cost or 14½ percent gross profit. According to a survey conducted by Dun & Bradstreet the cost of doing business for a retail tobacco store ranges from 20.2 to 30.1 percent. On the face of these figures a tobacco retailer could not continue in business if he did not augment the sale of cigarettes by more profitable items. Thus the retailer actually carries cigarettes because of their value as a traffic builder.

Any increase in the present Federal excise tax will affect the volume of business we enjoy through the sale of cigarettes. Experience has proved that the cigarette purchaser is more price conscious than any other consumer and that he will shop for this commodity in those establishments where he can save 1 or 2 pennies per package. If we lose our cigarette customers to the cut-price practitioner who carries tobacco products as side lines and sells cigarettes at cost as loss leaders, we lose a customer for the other items we vend. It is the loss of these sales, in addition to a sharp decline of our cigarette volume which makes us extremely apprehensive as to the results of an increase in the Federal excise tax.

One other point we wish to commnd to your attention in considering any increase in this tax is that of the credit position of the small independent retailer. Because of the small margin of gross profit on the sale of cigarettes, which is actually insufficient to cover our cost of doing business, the average independent retail dealer is ill prepared to invest another $5 on every case of cigarettes he purchases. Muy thousands of small retailers would be badly hit by this factor alone, and the entire economic structure of the independent retailer will be dislocated with resultant hardship on the distributors as well.

In justice to the masses of consumers and the many thousands of tobacco dealers and their families, who are largely dependent upon the volume of their cigarette business, we most urgently and respectfully request that the proposed increase in Federal excise tax on cigarettes be abandoned.

RETAIL TOBACCO DEALERS OF AMERICA, INC.,
By ERIC CALAMIA, *Managing Director.*

STATEMENT OF CLAUDE HARRISON, OUACHITA CIGAR & TOBACCO CO., MONROE, LA., PRESIDENT OF THE NATIONAL ASSOCIATION OF TOBACCO DISTRIBUTORS

Mr. Chairman and members of the committee, I appear as president of the National Association of Tobacco Distributors. I am also president of the Ouachita Cigar & Tobacco Co., of Monroe, La.

I come from a State where per capita we spoke more hand-made cigarettes and more different brands of cheap-type roll-your-own than any other State in the 48, because our State collects the highest State tax in the Nation. In addition to the present Federal tax of 7 cents per package.

Every loyal and patriotic American citizen, of course, realizes that building and sustaining a large national defense program to preserve our precious American way of life requires the expenditure of enormous sums of money. In addition, each of us appreciates the fact that taxes in divers forms must be levied by our Government to secure the needed revenue. However, in speaking for the Nation's several thousand wholesale tobacco distributors and their million and a quarter retailer-customers, we wish to point out to this committee the inevitable pitfalls and inequities in the proposed increase of Federal excise tax rates on cigarettes and cigars.

It is scarcely necessary to point out that cigarettes and cigars are already dangerously saddled with exorbitant Federal, State, county, municipal, and other local taxes.

What is puzzling to us is that there seems to be an insatiable desire by some to repeatedly pick on cigarettes as the scapegoat to bear the brunt of more and more taxation. We sometimes wonder why even some officials constantly single out for discriminatory treatment a product that (1) provides so much pleasure to millions of persons in this country and all over the world; (2) yields close to $2 billion annually in taxes; (3) is growing in public acceptance and as such should be helped and safeguarded instead of placing roadblocks in its way; (4) helps so many people to earn a livelihood, so many farmers to operate with a reasonable measure of success, and so many small merchants to conduct modest businesses; (5) is responsible for investments in taxes alone of millions and millions of dollars; (6) provides so wonderful a "lift" and gives so much deserved pleasure to the men in the armed services; (7) already groans under a tax system whereby stamps must be purchased for cash and manufacturers and wholesalers are required to carry substantial inventories of such stamps and extend credit which includes the cost of the stamps; in fact, purchasers of these stamps act as "bankers" for the Federal and State Governments. Lest we forget, may I point out that there are very few other products which can make this claim: Nothwithstanding an increase of 80 percent in the cost of the basic material (in this case tobacco) and substantial increases in the manufacturer's, wholesaler's, and retailer's over-all cost of operation, the price of cigarettes, exclusive of additional taxes, has risen only a penny a package. That certainly speaks well for the efficiency and skill of a progressive industry. Why penalize it?

What are we in the tobacco industry confronted with now? The Treasury has recommended that cigarette taxes be hiked by more than 40 percent, thereby endeavoring to saddle us with the staggering burden of obtaining 40 percent additional capital to operate a $4,000,000,000 business. It is not difficult to visualize what this condition would mean to the small distributor with a capital investment of $15,000. He would be required to try to find $10,000 of additional capital, which is a burdensome task for a businessman who is already operating on a shoestring. The retailer whose investment is, say, $1,500 would have to scrape the barrel to stay in business. What havoc it would create with our entire credit structure, especially among the hundreds of thousands of small accounts who are devoid of mercantile ratings and who are already hard put to obtain essential credit to subsist in business.

Various congressional committees have spent years and untold sincere efforts to devise ways and means of preserving the small merchant as a symbol of the American way of life. Should the proposed 40 percent increase in the cigarette tax become law, it would be crippling to the businesses of the hundreds of thousands of small merchants in this country, who, generally speaking, are constantly skirting business insecurity. The net effect would be that Congress would thereby be tossing into the hands of the large chains and other giant enterprises the businesses of these small merchants. It is only too tragically obvious that this would further complicate the already challenging problem of preserving the small merchants in our economy.

We are fully cognizant, as already stated, that huge amounts of revenue will be necessary to operate our Government in the trying period ahead. But in all fairness and equity we ask whether the tobacco industry isn't already doing more than its share. It has consistently been the second largest revenue producer and it does not object to paying its fair share of taxes, but it is distressed at any suggestion that more and more taxes should be imposed on its products merely because it has been an expanding industry. Frankly we have always felt that it is inherent in our American way of life to encourage the growth of industry. Let us not overlook the fact that the tobacco industry's greatness is in effect the sum total of 2,000,000 tobacco farmers who by and large, are modest citizens; a million and a quarter retailers who are, in the main, small merchants; and 6,000 wholesalers most of whom are small-business men.

We believe if small-business men are to survive, that they should not be expected to bear the financial burden involved in an inequitably high additional tax.

With respect to the proposed increase of the Federal excise tax on cigarettes from \$3.50 to \$5 per thousand—or an additional 3 cents per package—the tobacco wholesaler would find himself on the horns of a dilemma.

Since he must pay the Federal tax direct to the manufacturer as part of his invoice cost of the cigarettes, it would require that he invest additional capital to enable him to purchase the same quantity of cigarettes. In accordance with trade policy, wholesalers are required to pay their invoices on a basis that virtually is tantamount to cash. This necessary additional capital investment would, in most cases, disrupt the normal financial condition of numerous firms. This is so because, as a matter of sound wholesale business procedure, there is a direct relationship between the amount of capital in a business and the volume of sales, which is recognized as a safe operating ratio. For example: The average tobacco wholesaler capitalized at \$15,000 tries to maintain a sales volume of approximately \$500,000 and would consider it hazardous were his sales to exceed that amount by any great extent. Therefore, the requirement for greater capital, if unavailable, could have the effect of forcing the wholesaler to curtail his unit volume of sales in order to maintain the same dollar volume, with the probability of reduced yields at a time when costs of operation continue to skyrocket.

There is still another serious problem that would confront the tobacco wholesaler in the event of an increased Federal cigarette tax. I refer to the matter of credit extension. It is a the policy to tobacco wholesalers to extend credit to their retailer customers on sales of cigarettes for periods of 30 days and more. Since an additional tax would increase the amount of credit extended by the wholesaler for the same quantity of merchandise, the wholesaler would be further jeopardizing his business by increasing his credit risk, unless he chose to sell less merchandise to his customers with a consequent diminution of revenue.

Let us examine the amount of additional capital that a typical wholesale tobacco distributor would have to obtain were the new tax to go into effect. Such a wholesaler having a gross volume of \$500,000 annually would probably average 75 percent of his total sales in cigarettes, or \$7,500 per week. This represents approximately 77 cases of cigarettes per week. The proposed excise tax would increase the cost to the wholsaler by \$17 per case. This would mean that the small wholesaler would have to invest over \$1,300 additional capital in order to maintain his present volume of cigarette sales.

Since he must maintain credit for the retailer on an average of 4 weeks' duration, it means that the wholesaler would have to have available \$5,200 additional capital to maintain the additional capital to maintain the additional credit required by the increased taxation. In addition to this credit extension, the wholesaler normally has 1 week's supply of cigarettes on hand at all times. This capital investment would also have to be increased by \$1,300 to maintain the additional cost of Federal excise-tax stamps, thus entailing \$6,500 added capital. Accordingly, a wholesaler with an investment of \$15,000 in his entire business would find himself faced with the necessity of increasing his capital investment to accommodate the tax increase of over 40 percent, at a time when credit restrictions are becoming more and more evident and little cash is available to him.

Assuming that he were fortunate enough to be able to obtain a commercial loan of \$6,500, the wholesaler would have to pay an interest rate of 6 percent, or \$390 per year, on this additional capital. In view of the fact that the wholesaler's total net profit for the year on this volume of cigarettes averages less than $800, it is obvious that the interest rate alone on the additional necessary capital would take away almost 50 percent of the wholesaler's net profit from his total cigarette volume.

Observing the picture from a broad national standpoint, wholesale tobacco distributors sell $2.1 billion worth of cigarettes at wholesale annually. Since the proposed tax hike would increase the dollar volume of cigarettes by more than 21 percent at wholesale, tobacco wholesalers generally would have to obtain over $40,000,000 in additional capital to finance their increased inventory cost and the cost of carrying their accounts receivable, which would be inflated by the amount of the proposed tax increase.

Still another effect of an increased tax on the tobacco wholesaler's business would be an increase in other operating costs. These would include increased insurance rates due to the higher value that would be placed on his inventory, State inventory taxes, and kindred expenditures. By the same token the impact on the hundreds of thousands of retailers would be just as severe.

Thus, it can be readily seen that there would be painful dislocations in the wholesaler's business due to an increased cigarette tax. He would have to invest huge additional amounts of capital in order to do the same amount of business. He would have to assume greater credit risks to the extent of the additional tax, and his operating costs would increase substantially.

May I, in passing, also note that the manufacturers of cigarettes, too, whose permanent investment in cigarette stamps approximates $70,000,000, would similarly be confronted with an acute refinancing problem.

On the question of the proposed increase in the Federal excise tax on cigars from $2.50-$20 to $1.50-$37.50, we wish to point out to this committee certain facts concerning the effect of such a tax increase on wholesale distributors.

Since the cigar industry has been declining for many years and is an industry which is uppermost among those which are least able to bear higher taxes, the plight of the tobacco wholesaler who depends in great measure upon cigars for a livelihood is a serious one. Because of the extremely low profits on other tobacco products generally, the wholesaler depends to a great extent upon the sale of cigars to enable him to sustain in business and to continue serving the more than 1,250,000 retailers who keep the Nation's consumers uninterruptedly supplied with tobacco products and other merchandise.

Among the ills attributed to the cigar industry is the fact that the product has been virtually priced out of the market. Experience has shown that even slight price increases on cigars are sharply repulsed by smokers. To advance further the cost of cigars to the consumer by increasing the tax rate would have dire consequences on the industry at all levels—the manufacturers, retailers, and the farmers who grow cigar-leaf tobacco, as well as the wholesalers.

In short, the cigar industry has reached a critical state, whereby this committee will have to decide whether to increase the tax and actually crucify it or reduce the tax and give the industry a chance for survival.

We therefore urge that this committee carefully weigh the consequences of the proposed increase in Federal excise tobacco-tax rates, both on cigarettes and cigars, in order to avoid irreparable harm to the tobacco industry and dislocation to the businesses of the Nation's wholesalers and retailers of cigarettes and cigars, the preponderant majority of whom typify small business, the bulwark of the free-enterprise system.

BILLIONS OF CIGARETTES CONSUMED BY YEAR-1900-1950

—3—

Senator HOEY. Mr. Chairman, Mr. Perry Caldwell, master of the Grange in North Carolina, and Mr. Flake Shaw, executive vice president of the Farm Bureau, would like to insert a statement. They will not ask the time of the committee to make a statement here, but Mr. Caldwell, will you come up, and Mr. Shaw. We would like to have their statements.

Senator BYRD. We will be very glad to have those insertions made.

STATEMENT OF PERRY CALDWELL, MASTER OF THE GRANGE, STATE OF NORTH CAROLINA

Mr. CALDWELL. Mr. Chairman, Mr. J. C. Lanier, a member of our tobacco committee, spoke for the North Carolina State Grange here today.

In addition to representing all the different interests, he was officially speaking for the North Carolina State Grange, and we appreciate very much the courteous consideration you have extended to him.

I will not leave the statement, since Mr. Lanier presented our statement.

STATEMENT OF FLAKE SHAW, EXECUTIVE VICE PRESIDENT, THE FARM BUREAU

Mr. SHAW. Mr. Chairman, and gentlemen of the committee, this statement is filed on behalf of Mr. Carl T. Hicks, who is chairman of the Tobacco Cooperative Stabilization Corp. that serves the entire interests of the flue-cured growers. He could not be here.

I would like to make one point, Senator, if I may.

Senator BYRD. Yes, sir.

Mr. SHAW. The people who produce flue-cured tobacco have to contribute 400 man-hours to each acre of flue-cured tobacco that is grown. That is the most man labor that goes into the production of any commodity grown in this country.

There is one other point. The total acres of flue-cured is less than one-half of 1 percent of the total acreage of tobacco, cultivated acres, in the country. So we are working on an industry here, Senator, that is very small, with no possibility of being able to expand a great deal. I think that should carry some weight in the consideration of the program.

Senator BYRD. Thank you very much. We will receive the statement of Mr. Hicks which you have presented.

(The statement of Carl T. Hicks is as follows:)

STATEMENT OF CARL T. HICKS, CHAIRMAN, TOBACCO COMMITTEE, NORTH CAROLINA FARM BUREAU FEDERATION, AND PRESIDENT, FLUE-CURED TOBACCO COOPERATIVE STABILIZATION CORP., WALSTONBURG, N. C.

Mr. Chairman and gentlemen of the committee, my name is Carl T. Hicks. I am chairman of the tobacco committee of the North Carolina Farm Bureau Federation, an organization of 74,000 voluntary farm families, 70 percent of whom are growers of tobacco, either flue-cured or burely. I am also president of the Flue-Cured Tobacco Cooperative Stabilization Corp., serving farmers throughout the five flue-cured tobacco States. In 1950, there were 390,000 growers participating in this program.

I am here to plead against the proposal to increase the Federal excise tax against cigarettes.

There are nearly 2,000,000 tobacco farmers. There are thousands of processors who cure and pack tobacco. The welfare and survival of these many people is wholly dependent upon tobacco. Continued tax assaults against tobacco can only result in ultimate disaster to us. Already we are carrying a tax burden the likes of which is not shared by any other American product.

The amount of excise taxes from cigarettes now paid to the Federal Government alone is the largest paid by any American product except liquor. I apologize, Mr. Chairman, for the necessity of repetition on some of these statements, but we all think along the same lines.

The current excise tax of \$3.50 per 1,000 cigarettes amounts to 3½ times as much as the value added by manufacture, according to figures in the manufacturing census of 1947, published by the United States Department of Commerce. These same figures show that Federal cigarette taxes today represent an amount nearly three times as much as the tobacco farmer receives for his cigarette tobacco crop. Is not this evidence enough that tobacco is now bearing its share of the tax burden?

For the purpose of taxation, cigarettes are always classified as a luxury by those empowered to levy a tax against them. It hardly seems fair to classify as a luxury a product for which the American consuming public pays nearly \$5 billion annually. The Secretary of the Treasury definitely stamped cigarettes as an item of daily necessity in his statement before the House Ways and Means Committee on February 5, thus officially taking them out of the luxury class.

Besides the Federal tax on cigarettes, 41 States levy an additional tax averaging 3½ cents per package. Superimposed upon the Federal and State tax is still another levy by at least 100 municipalities throughout the Nation. The consumer, when purchasing his package of cigarettes today is faced with a tax burden ranging anywhere from 8 to 10 cents per package. In the face of this, how can you possibly justify an additional tax burden against cigarettes?

It is easy to pass off the responsibility in the matter by saying that eventually the tax is passed on to the consumer. If it were not in some measure passed on to the consumer, the cigarette industry would cease to exist, because the present Federal cigarette tax is equivalent to the amount received by the manufacturer for the packaged product before the tax is added.

The tobacco farmers are aware of the need for additional finances in the program of national defense. We are also aware of the fact that for more than a century, tobacco has been a consistent producer of vast revenues to the Federal Treasury. We welcome the opportunity to do our share in financing the Government. However, we feel that the interests of both the Government and the tobacco farmers will be best served if the consumer is encouraged to continue buying the finished product instead of being discouraged to continue its use, due to excessive taxation. We therefore urge this committee not to recommend an increase in the Federal excise tax now levied against cigarettes.

Senator BYRD. The Chair recognizes Senator Holland of Florida, to make a statement to the committee.

STATEMENT OF HON. SPESSARD L. HOLLAND, A UNITED STATES SENATOR FROM THE STATE OF FLORIDA

Senator HOLLAND. Thank you, Mr. Chairman, and member of the committee.

I appreciate this opportunity to appear briefly at this hearing on H. R. 4473 to strongly oppose the imposition of any added excise taxes on cigars, whether in the form proposed by the Secretary of the Treasury, or otherwise, and also to oppose the change in classification proposed by the Secretary.

I have been requested to appear by the cigar production workers of Tampa, Fla., and also by the Cigar Manufacturers Association of Tampa. I attach for the record telegram dated yesterday from Frank Diez, chairman, Tampa Cigar Makers Joint Advisory Board.

(The telegram referred to follows:)

TAMPA, FLA., *August 1, 1951.*

Hon. SPESSARD HOLLAND,
United States Senator, Senate Office Building,
Washington, D. C.:

On behalf of 4,000 organized Tampa cigar workers I strongly urge you to appear before the Senate Finance Committee and oppose any new tax on cigars. Any additional tax on cigars will reduce sales of cigars and kill Tampa's already sick cigar industry curtailing opportunity for employment of thousands of cigar workers.

FRANK DIEZ,
Chairman, Tampa Cigar Makers Joint Advisory Board.

Senator HOLLAND. The request from the manufacturers association came through Mr. Ray C. Brown, attorney for the association, and Mr. Francis M. Sack, its secretary.

Senator KERR. I would like to ask the distinguished Senator, if I may interrupt, to say that he has mentioned the name of a very great American. Ray Brown was contributed to Florida by the State of Oklahoma, and I must say that while you had a great gain there in that regard, we had an equal loss. The position of the Senator is enhanced by the fact that his statement here is backed up by such a distinguished citizen.

Senator HOLLAND. I thank the Senator from Oklahoma, and Florida is certainly happy to have Mr. Brown as one of its distinguished citizens.

Senator KERR. We have still got a hope that some of these days, when he has served enough of a term down there in your very fine State, that he will come back to Oklahoma.

Senator HOLLAND. We appreciate your position, but we do not share your hope.

Senator KERR. I can understand that.

Senator HOLLAND. In 1950 the 14 association factories in Tampa produced 231 million cigars. This was only 4.17 percent of the total output of the Nation, but it required the payment of excise taxes amounting to 7.33 percent of the total of Federal excise taxes paid. It thus appears that this segment of the Tampa cigar industry pays nearly twice as much in excise tax per cigar as is true for the cigar industry of the Nation as a whole. The reason for this is that a large proportion of the Tampa cigars are high-grade cigars and more than 100 million of them are cigars which are all hand-made. Tampa is the only remaining area in the Nation where cigars are made by hand for national distribution.

Of the 41,000 cigar production workers in the United States, Tampa has about 5,500 of whom between 3,000 and 4,000 are producers of all hand-made cigars and the rest are machine operators, or in other working classifications.

It is very clear to me from the record that what the cigar industry needs is a decrease of excise taxes and that an increase as proposed would be ruinous. I have carefully examined the able statement which is being filed today with the committee by Mr. Francis M. Sack and Mr. Ray C. Brown for the Cigar Manufacturers Association of Tampa. I have also carefully examined the able statement made by Mr. O. R. Strackbein before the Ways and Means Committee of the House of Representatives on March 12, 1951, in behalf of the Cigar Makers International Union.

I am glad to hear Mr. Strackbein will also file a statement before this committee.

I think it is completely clear from an examination of those two statements that the cigar industry is already carrying heavier taxes than it should bear, and that the taxes imposed in 1942 have operated to materially diminish the prosperity of the cigar industry, cut down the consumption of cigars and reduce the number of workers and producers.

In 1942 the total volume of cigars produced was 5,840,000,000 which was heavily reduced in the following years but has built back up gradually to 5,538,000,000.

In other words, it is still materially below the volume of 1942 and on a per-capita consumption is much more reduced than those total figures.

While every other industry of consequence in the Nation has been expanding its production including most of the other industries affected by excise taxation, the cigar industry has been staggering along under a heavier tax burden than it can bear. We deeply appreciated that the Ways and Means Committee of the House refused to increase the excise tax load of the cigar industry and sent the pending bill over without such an increase and we strongly hope that this able Finance Committee of the Senate will reach the same conclusion.

The impact upon Tampa of further blows at the prosperity of the cigar industry would be very grave indeed. Most of the workers are of middle age or over, and they simply could not adjust themselves to any new industry. They have lived in Tampa for many years, most of them throughout their lives, and most of them own their homes there. To throw them out employment now would be to put them on the welfare rolls.

The blow to the 5,500 cigar workers of Tampa would also constitute a major blow to the prosperity of the entire city and area of our State.

I firmly believe that the impact of an increase of excise taxes in the cigar industry is both unwise, inequitable, and destructive, and though I have mentioned specifically the effect in the Tampa area, I am sure that similar effects of varying degrees would be produced elsewhere in the Nation. The excise tax load on cigars has already reached the point of diminishing returns as shown by the collections for 1947, 1949, and 1950, for which years the figures of taxes collected were as follows: $47,100,000 in 1947; $43,500,000 in 1949; $42,700,000 in 1950.

There has been no better illustration in recent years of the truth of the statement by John Marshall, that the power to tax is the power to destroy.

I realize that the time factor today does not permit my making a more extended statement, and I will deeply appreciate the opportunity to appear before the committee in executive session after the hearings are closed.

Senator BYRD. Very well.

The next witness is Edward J. Regensburg.

STATEMENT OF EDWARD J. REGENSBURG, PRESIDENT, CIGAR MANUFACTURERS ASSOCIATION OF AMERICA, INC.

Mr. REGENSBURG. Mr. Chairman, and gentlemen of the Finance Committee, my name is Edward J. Regensburg and I am the vice president of E. Regensburg & Sons, Inc., manufacturers of cigars since 1867.

I appear here as president of the Cigar Manufacturers Association of America, a trade association, national in scope, and whose members manufacture in unit and dollar volume approximately 75 percent of the total United States production of cigars.

I should like to say at the outset that although ours is an industry steeped in the traditions and economy of this Nation, it is a small industry. The wholesale value of our product is less than $325 million annually. Dut to a number of causes, of which excise taxes is surely one, this industry has been unable to keep pace with the rest of our economy. Today the per capita consumption of cigars is not only less than it was in 1920, but also unit sales are only about 70 percent of what they were 30 years ago. Our profit on sales is less than 3 percent. It is almost unbelievable that our sales in each of the last 4 years have been less than they were in 1946, the first postwar year. They continue low and in the first 5 months of this year when dollar volume in other industries rose to the highest level in history, the cigar industry shows a fall in sales of almost 5 percent from the corresponding period in 1946.

Senator MILLIKIN. How much is the tax on a 10-cent cigar?

Mr. REGENSBURG. Exactly 10 percent on a 10-cent cigar.

Senator MILLIKIN. On a two-for-a-quarter cigar, how much is it?

Mr. REGENSBURG. Two for a quarter, it is in the same tax bracket. They have a bracket system.

Senator MILLIKIN. On a two-bit cigar?

Mr. REGENSBURG. It would be a little less than 10 per cent on a two-for-a-quarter cigar, and on a 15-cent cigar it would slope down.

But on a 10-cent cigar it figures exactly 10 percent.

In view of this decline in sales, it appears neither reasonable nor economic for the Secretary of the Treasury to be thinking at this time of adding to our present heavy tax burden.

In early 1950 we brought our situation to the attention of the Ways and Means Committee of the House. They were so impressed with the adverse conditions prevailing in the cigar industry that they recommended in the original revenue bill of June 1950, a reduction in cigar exese taxes of approximately one-third. This rate reduction, they said, was desirable in order to increase cigar sales relative to other tobacco products or at least aid the cigar industry in maintaining its present relative position.

We appeared again before the Ways and Means Committee this year pleading our inability to absorb a greater tax burden. When they voted against the imposition of any further cigar excise tax we experienced a sense of temporary relief. The Secretary of Treasury again singles out our industry for an increase in cigar excise taxes.

With minor exceptions, commodities scheduled for reduction in excise tax in the original revnue bill of 1950 are not now included for an increase.

We wish we were in a position, gentlemen, where we did not have to come to your committee and plead poverty, but the plain fact is that the cigar industry cannot afford any increase in its tax burden.

As a dramatic indication of the industry's condition, may I point out to you that for the first time in history, the Department of Agriculture has proclaimed marketing quotas on domestic cigar leaf tobaccos because the Secretary of Agriculture found that the cigar industry was not able to absorb the available supply of cigar leaf tobacco. Further to curtail our industry's potential sales volume would intensify the adverse condition in which the cigar leaf tobacco farmer now finds himself.

When Secretary Morgenthau appeared before this committee in 1942——

Senator MILLIKIN. Is your product a different product from the cigarettes?

Mr. REGENSBURG. It is in this respect; it uses different tobaccos, and it has no paper. It is all leaf tobacco.

Senator MILLIKIN. You fall in the classification of burley or flue-cured, or both, or what?

Mr. REGENSBURG. Very little burley or cured; very little burley or flue-cured tobacco is used in these cigars, except with certain low-priced cigars where they use it in the scrap blend.

But for the most part, our tobaccos are grown—I shall in a later part state where they are grown.

Senator MILLIKIN. I do not want to go into it now.

Mr. REGENSBURG. They are grown in a great many States, but they are cigar types of tobacco.

New York, Connecticut, Pennsylvania, Massachusetts, Georgia. I will go into that in a minute.

Senator MILLIKIN. I do not want to go into that now.

Mr. REGENSBURG. When Secretary Morgenthau appeared before this committee in 1942, requesting additional emergency wartime revenue, he stated that his proposal would yield an additional $13 million in revenue from the cigar industry. He, in effect, asked for a doubling of the tax rate on cigars bringing the anticipated total collections to $26 million.

We willingly consented to this doubling of the tax load, but pointed out that the method of taxation proposed by him was unadaptable to the characteristics of the cigar industry.

What happened was that instead of doubling the cigar industry's tax load as an emergency wartime measure, it has more than tripled the industry's tax load during each of the postwar years. We have all these years, and still are, staggering under this emergency wartime tax load.

The Secretary of the Treasury now asks for an additional $25 million annually on top of a tax load already too high. His recommendation would not only nullify the Ways and Means Committee's recognition of our problem, but would so reduce our sales that we feel no additional revenue at all would be produced.

I cannot emphasize too strongly the error of an assumption that cigar sales would continue without decrease in unit and dollar volume in the event that taxes are upped even slightly. For every 1 percent increase in the tax rate the total cigar volume will decline in millions of units. Therefore the proposed increase, which effectually will double our present rates, will not produce the revenue contemplated, but would destroy capital investment in plants, jobs, for cigar workers, and the livelihood for other cigar leaf farmers.

Please allow me briefly to touch upon the inequities of the Secretary of the Treasury's proposal as it now stands.

It would result in extremely uneven tax increases. For example, the 6-cent cigar would suffer a 140-percent increase in tax while the 10-cent cigar would be increased by 50 percent.

Similar discrepancies can be found throughout the schedule. The uneven tax increases would necessitate uneven price adjustments. There would ensue marketing distortions with corresponding harmful effect competitively on the manufacturers, wholesalers, and retail dealers.

The same erroneous thinking that hurt our industry in the past applies to the present proposal. The Secretary has estimated that his proposal would produce $25 million more revenue from our industry. I respectively point out that this is a mistake, and that the practical application of the Secretary's proposal would penalize our industry to the extent of $35 million or more, providing unit sales volume remains the same. That sales volume would remain the same is an assumption which is false, erroneous, and will not be borne out by any competent market research.

As I stated before, our industry is steeped in the traditions of our Nation. Though small in comparison with our great industries, nevertheless it is important to the hundreds of thousands who are directly or indirectly dependent upon it for their livelihood.

The welfare of thousands of cigar tobacco farmers in the States of New York, Connecticut, Pennsylvania, Massachusetts, Florida, Georgia, Wisconsin, Ohio, Minnesota, North Carolina, Tennessee, Kentucky, Virginia, Maryland, West Virginia, and Missouri, and their hundred-thousand-odd acres of tillable land with investments of upwards of $75 million; the forty-odd thousand workers in cigar factories; the thousands of distributors and the hundreds of thousands of independent retail tobacco merchants, not to mention the thousands of cigar manufacturers, hinges upon this committee's rejection of this improvident tax proposal.

I have been asked by the National Association of Tobacco Distributors to submit a brief in support of the statement I have just made in behalf of the industry. I am also submitting a brief of the Cigar Manufacturers Association of America which I would like to have entered into the record of this hearing.

May I have your permission to file before Tuesday of next week supporting statements by the Cigar Manufacturers Association of Tampa, Cigar Makers International Union of America, AFL, the Lancaster Tobacco Board of Trade, the New York Leaf Tobacco Board of Trade, the Georgia-Florida Tobacco Growers Association, the Pennsylvania Tobacco Growers Association, Connecticut Valley Shade Grown Tobacco Association, and the Retail Tobacco Dealers Association of America, these to be made part of this record.

Senator BYRD. Very well.

Thank you very much.

Mr. REGENSBURG. Thank you, gentlemen.

(The documents referred to above and a statement of O. R. Strackbein in lieu of an appearance are as follows:)

MEMORANDUM SUBMITTED BY THE NATIONAL ASSOCIATION OF TOBACCO DISTRIBUTORS IN OPPOSITION TO ANY INCREASE IN TAXATION UPON CIGARS

This memorandum is submitted by the National Association of Tobacco Distributors, representing the wholesale tobacco trade throughout the United States, and whose membership is engaged in the distribution of cigars to more than a million retail outlets. The wholesale tobacco trade is keenly concerned with the economic well-being of the cigar industry because of the declining character of cigar consumption which is due primarily to (*a*) a sharp diminution of cigar consumers and (*b*) to the fact that the present excises on cigars are so heavy that they are a millstone around the neck of the industry.

At present, cigars are offered and sold at prices which militate against any expansion of this static industry, and to levy heavier taxes on cigars would be tantamount to crucifying an already retrogressive industry. The sharp drop in cigar consumption since 1920 is a matter of statistical record. Although the population increase between 1920 and 1950 was 23.5 percent, the unit production of cigars in the same period declined approximately 31 percent, and the per capita consumption fell off from 77 cigars in 1920 to 38 cigars in 1950. As a consequence, economic roadblocks have been placed in the paths of several thousand wholesalers and more than a million retailers.

Traditionally, cigars—in addition to providing a reasonable yield on sales—have also served as a sort of yardstick in measuring the standing of wholesaler and retailer. Their status in the community and commercial world has been largely influenced by the brands and assortment of cigars they carried and handled. In the instance of the wholesaler, the size of his sales staff, the frequency of trade canvassing, his credit policy, and his mercantile standing were largely governed and influenced by his cigar business.

In recent years, owing to the decline of cigar consumption, caused mainly by a burdensome tax schedule, coupled with a change of public smoking habits, a complete change in the wholesale distributor's mode of operation has been necessitated. To survive in business he was obliged to diversify his lines and devote more attention to other products, thereby even further handicapping the struggling cigar industry.

As it pertains to the customer of the wholesaler, the retail merchant, his traditional cigar case has been shrinking in size and the space formerly allocated to cigars has been turned over to other products. These factors, born of economic necessity, have further conspired to throttle the cigar industry, with the consequence that even fewer cigars are being sold and the tax yield to the Government has declined in similar proportion.

In the dynamic processes which stimulate the growth of America, a number of industries are submerged or eclipsed. This may be ascribed to the inability to gear or attune the industry to the exactitudes of the assembly lines or machine production. Until such industries can evolve a method of adapting their operations to the economics wrought by modern technological inventions, they should be aided and not injured. The cigar industry happens to be in that unfortunate category.

It was not so many years ago that all cigars were hand-made. The industry is still in the process of transferring to machine operation. The generic nature of the product renders such transition exceedingly slow and tortuous. With the present high cost of living, the average consumer can ill afford to pay even the present high prices for cigars, and a higher price—which would be necessitated by an increase in the tax schedule—would inevitably further reduce cigar consumption.

We believe that the best interests of Government, the public, the more than a million retailers, and the several thousand wholesalers would actually be much better served by reducing the tax on cigars and thereby provide an opportunity for the industry to get back on its feet. The static nature of the cigar industry has tended to weaken the economic fabric of the wholesalers and retailers, and that is utterly unhealthy for America and the American way of life.

We join the Cigar Manufacturers Association in pleading for the exclusion of cigars from any heavier taxation and thereby aid in the reactivation and revitalization of a basic American industry.

STATEMENT SUBMITTED ON BEHALF OF THE CIGAR INDUSTRY BY THE CIGAR MANUFACTURERS ASSOCIATION OF AMERICA, INC., NEW YORK, N. Y.

This association comprises cigar manufacturers located in all cigar manufacturing centers of the United States who produce collectively in excess of 75 percent of the total unit and dollar volume of cigars. Its members include small, medium-sized and large firms making cigars retailing at prices in all seven of the present revenue classes. This association is the only national association of cigar manufacturers and is truly representative of the entire cigar industry.

I

The cigar industry is unalterably opposed to the proposal of the Secretary of the Treasury which seeks a further increase in cigar excise taxes. It opposes both an increase in cigar taxes and the method of revising the tax brackets, because—

(1) Conditions in the cigar industry have deteriorated since the time when the present cigar excise tax schedule was imposed and sales have declined continuously since 1946, the end of World War II.

(2) Economic changes have occurred since June 1950, when the House voted a 30 percent reduction in cigar excise taxes, which impair the cigar industry's profit margins.

(3) Of the many commodities for which a reduction in excise taxes was proposed in H. R. 8920 (81st Cong.), cigars almost alone are now singled out by the Secretary of the Treasury for an increase.

(4) The cigar industry is still paying a wartime emergency tax.

(5) The bracket system proposed by the Secretary of the Treasury imposes unequal burdens on competitively priced cigars.

II

When the Ways and Means Committee recommended a reduction in cigar excise taxes last June, it said in its report:

"Cigar sales have fallen off rapidly in the last few years, and it is anticipated that the rate reduction provided for cigars in your committee's bill will increase

cigar sales relative to other tobacco products or at least aid the cigar industry in maintaining its present relative position."

Cigar sales have declined continuously since 1946, the first postwar year. Moreover, in spite of business activity in the first 5 months of 1951, cigar sales are still 5 percent lower than in the corresponding period of 1946.

Consumer resistance to present cigar prices is still manifest in that the average retail price of cigars in 1950 was lower than in 1946. Cigar retail prices, as well as wholesale prices, have been raised very moderately, if at all, since the termination of the Office of Price Administration in 1946.

Since June 1950, when the House voted a reduction in our tax, cost of leaf tobacco and labor have risen sharply. Both are major factors in the cost of making cigars. Leaf-tobacco costs will undoubtedly rise further, particularly domestic tobaccos which are not under price ceiling (because of the parity adjustment provisions in the Defense Production Act). In addition to these basic costs, cost of supplies, transportation, and distribution have risen substantially. The cigar industry has absorbed, practically in their entirety, these increased costs because of consumer resistance to current cigar prices.

As a result, profit margins in the cigar industry have been substantially impaired and the imposition of a tax increase would so imperil the industry as to force many small and medium-sized firms to liquidate.

III

The Secretary of the Treasury's proposal puts the Government and the cigar industry on the horns of a dilemma. When the Anderson Act became law in 1950, the parity price on cigar leaf tobacco was raised to a greater degree than any other agricultural commodity. Under this law parity prices on most types of cigar leaf tobacco are approximately 80 percent higher than they would have been under the original Agricultural Adjustment Act formula. The full impact of this increase in parity price has not yet been measured.

The cigar industry did not oppose this change in the parity formula because it was fully cognizant of the necessity of maintaining the stability of the agricultural segment of the Nation's economy. On the other hand, the Government's price support to the tobacco farmer will become an empty gesture if the cigar industry is unable to process leaf tobacco and market the finished product.

For the first time in history, the Secretary of Agriculture proclaimed marketing quotas on cigar leaf tobaccos—he having found that the supply of these tobaccos exceeded demand.

Any increase in the tax burden of the cigar industry will undoubtedly result in a decline in cigar sales with a concomitant shrinkage in both farmers' income and Government revenue, thus defeating the desired ends of both the Department of Agriculture and the Treasury Department.

IV

A further increase in cigar prices will undoubtedly meet further consumer resistance. The proposal of the Secretary of the Treasury would necessitate an average price increase of about 7 percent on the retail price of cigars; this is more than twice the cigar industry's net profit margin in 1950. It is self-evident that such a tax increase can only result in irreparable injury to the industry.

With minor exceptions, the Secretary of the Treasury proposes no increase on any commodity as to which the House voted a decrease in the original 1950 revenue bill (H. R. 8920). No increase is recommended by him for snuff, plug, and twist chewing tobacco whose economic status is no worse than that of the cigar industry.

To single out cigars (which shows no improvement in its economic status) for an increase in tax from all other commodities scheduled in June 1950 for a reduction in tax, is discriminatory, unjust, and oppressive.

V

For many years the cigar industry has suffered under the yoke of the 1942 wartime emergency tax burden. It has paid, as a result of a mathematical error made in 1942 by the then Secretary of the Treasury, twice as much of an increase in tax revenue as sought. The then Secretary of the Treasury, in seeking this increase, termed it an "emergency tax."

The cigar industry did not oppose that increase because it was willing to bear its share of the war burden. It did, however, point out the inaccuracy of the Secretary's estimate and made recommendations which would have avoided the difficulties under which the cigar industry has labored ever since. The cigar industry is still paying at the 1942 wartime tax level.

The present Secretary of the Treasury now proposes another emergency tax, the effect of which would be to add an emergency tax upon an emergency tax. Moreover, not only would the present Secretary of the Treasury perpetuate the error committed in 1942, but would compound that error with another error.

In 1942 the Secretary of the Treasury estimated that his proposed cigar excise tax schedule would add increased revenue from the cigar industry at the rate of $13 million per annum; in fact, it has added increased revenue in excess of $25 million per annum.

The present Secretary of the Treasury estimates that his proposal will add another $25 million tax to the cigar industry's present annual tax load. The Secretary's estimate is based on the assumption that unit sales will continue at present levels. Stated otherwise, the Secretary of the Treasury assumes either that cigar manufacturers will and can absorb the entire increased tax burden, or that the increased tax can be passed on in its entirety to the consumer.

Even assuming, without conceding its accuracy, that cigar sales would continue at present unit levels, an increase in the tax burden must necessarily result in an increase in the price of the cigar. In practically every instance, the Secretary of the Treasury's proposal necessitates an increase in the retail price of the cigar, throwing it into a higher price bracket. The higher the tax bracket, the higher the tax under the Secretary's proposal. Based on his erroneous assumption, instead of an increase of $25 million per annum in revenue, the Secretary's proposal would yield approximately $35 million per annum in additional revenue.

We completely reject the assumption that his proposal would result in additional revenue to the Government, but respectfully submit that it would be so burdensome upon the cigar industry as to cause diminishing returns through the crippling of an already depressed industry.

VI

The Secretary of the Treasury's proposal as it now stands would cause great inequities in the incidence of the tax increases. For example, the 6-cent cigar would suffer a 140-percent increase in tax while the 10-cent cigar would be increased by 50 percent. Similar discrepancies can be found throughout the schedule. The uneven tax increases would necessitate uneven price adjustments. There would ensue marketing distortions with corresponding harmful effect competitively on the manufacturers affected.

The same erroneous thinking that hurt our industry in the past applies to the present proposal. The Secretary has estimated that his proposal would produce $25 million more revenue from our industry. It is respectfully pointed out that this is a mistake and that the practical application of the Secretary's proposal would penalize our industry to the extent of $35 million or more, providing unit sales volume remains the same. This is an assumption which is false and erroneous.

It is therefore urged that the Secretary of the Treasury's schedule be rejected as being utterly incompatible with the competitive price groupings which the cigar industry has found essential to the marketing of its product.

VII

In conclusion, it is respectfully submitted that (1) in the light of declining cigar volume, (2) consumer resistance to present cigar prices, and (3) rising leaf tobacco, labor, and materials costs, any increase in the cigar industry's tax burden will jeopardize the welfare of the thousands of farmers who produce cigar leaf tobacco, and the thousands and thousands of workers employed directly and indirectly by and in the cigar industry.

The bracket system proposed by the Secretary is completely incompatible with present pricing practices and is highly discriminatory.

For all of the foregoing reasons, we urge that the proposal of the Secretary of the Treasury for an increase in the cigar industry's tax rate be rejected in its entirety.

Respectfully submitted.

CIGAR MANUFACTURERS ASSOCIATION OF AMERICA, INC.,
By EDWARD J. REGENSBURG, *President*.
BLUMBERG, MILLER, SINGER & HEPPEN,
General Counsel.
By LEON SINGER.

STATEMENT OF O. R. STRACKBEIN, REPRESENTING THE CIGAR MAKERS INTERNATIONAL UNION

The Cigar Makers International Union, an affiliate of the American Federation of Labor, is vitally interested in the future of the cigar industry of this country. Anything that adversely affects the cigar industry affects the welfare of our membership.

The proposed increase in the tax rates on cigars would, in our judgment, injure the cigar industry by either reducing the consumption of cigars or preventing the expansion of the industry in keeping with the growth of our population and the general expansion of our economy.

As is well known, the cigar industry has for 30 years struggled for its existence, against what, nearly 20 years ago, appeared as a sure demise. The employees have borne the brunt of this struggle above all others. One phase of their difficulty lay in the advance of the automatic machine, the progressive introduction of which displaced many thousands of cigar makers. By contrast, many companies were able to save themselves by the very process of displacing hand workers by machines; but this did not save the cigar makers who became surplus manpower under the circumstances.

Today we join the cigar manufacturers in calling attention to the further danger to this industry contained in the sharp increase in taxes now proposed. Our interests are fully as vital as those of our employers and in this instance our concern is mutual.

Conceding, as we must, the need of increased revenue by the Government, we respectfully suggest that the proposed new rates on cigars are exorbitant and would result in but little more revenue while crippling the cigar industry. Whereas the industry has barely survived the change in smoking habits of the public during the past 20 years, and while it was not destroyed by the increased tax rates of 1942, it is clear that the industry is bearing about all that it can in the continuing race for survival. To increase its handicap materially at this time would be an act that could turn the tide against any hopes of the industry for a healthy future.

Thirty years ago—i. e., in 1921—the production of cigars in this country amounted to 6,726,000,000. The population of the United States at that time was 105,710,000. In 1950, cigar production amounted to 5,538,000,000; i. e., over a billion fewer cigars than in 1921. The population in the meantime had increased to approximately 115,000,000. In other words, consumption of cigars declined from 63.6 cigars per capita in 1921 to approximately 37 cigars in 1950.

We do not suggest that this decline was the result of high taxes. We merely note the downward sweep as a fact and as one mark of the unhappy conditions through which the industry has passed. Employment in the industry has suffered even more of a shrinkage since 1921 than has cigar production. According to the United States census of manufactures, 119,000 wage earners were employed in the cigar industry in 1921. In 1937, employment was 55,787 or somewhat less than half the 1921 figures. In 1950, the number employed was lower still, or about 40,000, having in March of 1950 dropped as low as 38,800, according to figures released by the Bureau of Labor Statistics. In other words, employment in 1950 had dropped to about one-third of the 1921 figure.

In summary, production of cigars from 1921 to 1950 declined 17.7 percent, while population increased 43 percent. Per capita consumption of cigars during the same period declined approximately 42 percent. By contrast, employment declined 66.5 percent or about two-thirds.

The following table will show these trends in statistical form:

	Cigar production	Percent decline from 1921	Per capita consumption	Percent decline from 1921	Number of workers	Percent decline from 1921
Year 1921	6,726,000,000		63.6 cigars		119,000	
Year 1933	4,300,000,000	36.1	34.2 cigars	46.2	54,600	54.1
Year 1937	5,310,000,000	21.0	41.2 cigars	35.2	55,789	53.1
Year 1950	5,530,000,000	17.7	36.7 cigars	42.3	41,000	66.4

NOTE.—Population estimates of the United States by Bureau of the Census, published in the Statistical Abstract of the United States, 1949, p. 7, are: 1921, 108,541,000; 1933, 125,579,000; 1937, 128,825,000; 1950, 150,697,000.

These figures are but an abstract reflection of a story of hardship, distress, and despair for thousands of people—of warm-blooded people, of aging people, of Americans. They were beset by relentless economic forces that ground all rekindling hopes to pieces as the years passed. In the midst of the downward grind came the distressful depression of the early years of the 1930–40 decade. Combined with the encroaching advancement of the cigar-making machine, the outlook for the employees became gloomier than ever. Cigar production fell to a low of 4,300,000,000 cigars in 1933. These were mostly cigars that retailed for 5 cents each or less, classified in the lowest revenue value bracket or class A.

Thereafter a slow revival set in, and by 1937 production had reached a total of 5,317,000,000 cigars. Since that time output has remained above the 5-billion-per-year level but has never again reached 6 billion cigars in any one 12-month period.

In 1942 the tax rate on cigars was increased to the present level and annual production has in no year since that time regained the level of that year, which was the highest since 1930, or 5.84 billion cigars. The following table tells the story:

[In billions of cigars]

Year	Production	Year	Production
1929	6.52	1941	5.61
1930	5.89	1942	5.84
1931	5.34	1943	5.36
1933	4.30	1944	5.19
1935	4.76	1945	5.27
1937	5.31	1947	5.48
1939	5.19	1949	5.58
1940	5.23	1950	5.53

While it is difficult to determine the exact percentage of increase in the tax rates of 1942 over the rates which they superseded, an approximation of the increased burden can be attained by comparing the internal revenue collections before and after 1942. By comparing the average annual tax collections per 1,000 cigars before and after 1942, the changing burden upon the industry will be reflected. The next table will show this change in the average tax burden per 1,000 cigars:

Year	Production (thousands of cigars)	Taxes collected	Amount of tax per 1,000 cigars
1939	5,197,627	$12,800,000	$2.45
1940	5,235,271	13,000,000	2.48
1941	5,610,176	14,000,000	2.49
1942	5,840,805	16,800,000	2.87
1943	5,363,027	27,600,000	5.14
1944	5,196,679	33,500,000	6.44
1945	5,274,675	38,100,000	7.22
1947	5,487,656	47,100,000	8.58
1949	5,586,768	43,500,000	7.78
1950	5,538,152	42,700,000	7.71

Other products on which internal taxes have been collected have, by contrast with the cigar industry, enjoyed a healthy expansion since 1942. The next tables show the upward trends of these products:

Product	Production				
	1942	1945	1947	1949	1950
Fermented malt liquor..............million barrels..	63.7	86.6	87.8	89.7	88.8
Distilled spirits....................million gallons..	157.9	128.2	316.1	266.5	208.2
Still wines..................................do....	313.7	314.9	515.3	425.9	297.8
Cigarettes..............................billions..	257.5	332.1	369.8	384.9	[1] 391.9

[1] Preliminary.

The striking difference between the production trend in these products since 1942 and the trend in cigar production is easily observed. Without exception the production of the listed products has expanded substantially whereas cigar production has declined.

Here, in the case of cigars, is a good example of saturation taxation or the point of diminishing returns.

Although the characteristic economy of the United States (as illustrated in the foregoing table) has been one of increasing production in the past 10 years, the cigar industry has done little better than hold its own. It did increase from 1939 to 1942 but declined after the increase in the tax rates went into effect.

To be sure, the Treasury did collect a large revenue after 1943 on cigars—in fact, more than tripled its collections—but the blighting and stagnating effects of heavy taxation could hardly be demonstrated more clearly than in this case.

Thus in 1942, with the first opportunity of revival and at the first signs of growing with the expanding business of the country and its industrial activity, after two or three decades of almost unrelieved discouragement, the cigar industry and its cigarmakers felt the heavy hand of taxation laying its restraining grip upon their shoulders. The uptrend in cigar production was not only halted in its tracks but reversed.

But that was not enough.

Today we find another drastic tax increase proposed by the Treasury Department. Before the industry has recovered the ground lost since 1942, it is asked to carry a still heavier burden. The retail prices of cigars, already very high, would be forced higher still; and consumption unquestionably would decline. Again, the Government might collect more revenue. It would indeed do so unless the decline in consumption should carry the volume of cigars well below the 5,000,000,000 mark.

The question, however, arises whether it is sound and wise tax policy that leads to a higher revenue collection at so high a cost to production, employment, and consumption. We do not believe that it is, nor can we convince ourselves that the Treasury Department subscribes to such a policy. We prefer to believe that their calculations have erred out of a failure to assess fully the effects of the 1942 increase in rates on cigar production and consumption, and that this error led the Department to a lack of appreciation of the crushing impact that the yet higher rates now proposed would produce.

We again call attention to the difference in the production trend between cigars on the one hand and other products on which similar taxes are levied, since 1942, as reflected in tables previously presented herein, on the other.

The Treasury has estimated that the proposed new rates would result in the collection of an additional $25,000,000 per year from the cigar industry. This would mean increasing the present burden by more than 50 percent. Collections in 1949 amounted to $43.5 million and in 1950 to $42.7 million. This is an average of $43.1 million per year. An increase of $25 million over $43 million would bring the annual burden to $68 million, an increase of approximately 60 percent over the average burden of the past 2 years.

In view of the record of the cigar industry since 1942, especially as it contrasts with the general economic trend, it seems incredible that a 60-percent increase in the tax burden would be proposed now. Every indicator, on the contrary, points to the conclusion that the existing rates are already too high and that the increase of 1942 was excessive. If all tax rates had begotten the results of the increased tax rates on cigars, our postwar economy, instead of expanding, would have stood still or receded. Such results would have condemned the tax measures that brought them about, just as they should condemn the 1942 increase in the rates on cigars.

There is an ostensible decrease in the lower levels of the proposed tax rate, brought about by reducing the rates on the cheapest cigars. Since, however, few cheap cigars are manufactured, this proposed rate reduction would be meaningless. Below are shown the 1926-42 rates, the rates enacted in 1942, and the proposed rates:

	Tax rate per thousand
1926 rates:	
Class A (not over 5 cents each)	$2.00
Class B (over 5 cents, not over 8 cents each)	3.00
Class C (over 8 cents, not over 15 cents each)	5.00
Class D (over 15 cents, not over 20 cents each)	10.50
Class E (over 20 cents each)	13.50
1942 rates:	
Class A (2½ cents each or less)	2.50
Class B (over 2½ cents, not over 4 cents each)	3.00
Class C (over 4 cents, not over 6 cents each)	4.00
Class D (over 6 cents, not over 8 cents each)	7.00
Class E (over 8 cents, not over 15 cents each)	10.00
Class F (over 15 cents, not over 20 cents each)	15.00
Class G (over 20 cents each)	20.00
Proposed rates:	
Class A (not over 2 cents each)	1.50
Class B (over 2 cents, not over 4 cents each)	3.50
Class C (over 4 cents, not over 6 cents each)	6.50
Class D (over 6 cents, not over 8 cents each)	9.75
Class E (over 8 cents, not over 10 cents each)	12.75
Class F (over 10 cents, not over 12 cents each)	15.75
Class G (over 12 cents, not over 14 cents each)	18.75
Class H (over 14 cents, not over 16 cents each)	21.75
Class I (over 16 cents, not over 18 cents each)	24.75
Class J (over 18 cents, not over 20 cents each)	27.75
Class K (over 20 cents each)	37.50

Today the production of cigars in the lower classifications is relatively small. The trend toward cheap cigars became marked after 1921. In that year, 30.2 percent of all cigars fell into class A. By 1929 the portion had risen to 54.0 percent; by 1933, to 84.9 percent; and by 1935, to 87.5 percent. This included the 5-cent cigar. The trend was reversed after the outbreak of World War II.

In 1950, cigars selling at 4 cents each or less represented only 4.1 percent of total tax-paid withdrawals, as indicated by the sale of internal revenue stamps. Cigars retailing at more than 6 cents each but not over 15 cents represented 57.4 percent of total withdrawals. Those selling at more than 4 cents but not over 6 cents accounted for 38.2 percent of all withdrawals. Thus the great predominance of the cigars selling at 5 cents or less each has disappeared. Nearly half of the total in 1950 were cigars selling from 8 to 15 cents each (or 47.1 percent).

The present rate on cigars in this price range is $10 per thousand (class E). The proposed rates range from $12.75 to $21.75 per thousand (classes E through H) on cigars of virtually same price range (the proposed class H carries through 16 cents each).

The effect of the proposed tax would be to drive many cigars into the next higher bracket with its higher tax rate. Should the present 10-cent cigar be driven into the next bracket—i. e., into class F of the proposed schedule—the tax rate would increase from the present rate of $10 per thousand to $15.75 per thousand or by $5.75 per thousand. If this were resisted, the cigar industry, from leaf-tobacco producers through cigar maker, manufacturer, jobber, and retailer, would have to absorb the $2.75 per thousand increase in the tax. Should the retail price be raised from 10 cents to 11 cents, the tax rate would go from $10 to $15.75, as stated above, instead of merely to $12.75, which would be the new rate on a 10-cent cigar. There would therefore be a penalty of $3 per thousand against passing even a fraction of the increased tax on to the consumer. A similar penalty would be incurred in passing from a lower to a higher bracket.

For example, the 6-cent cigar today pays a tax of $4 per thousand. The new tax would be $6.50 or an increase of $2.50 per thousand. Should this additional burden of $2.50 per thousand force the 6-cent cigar into the 7-cent retail bracket, the new tax would be not $9.50 per thousand but $9.75, since the 7-cent price would lift the cigar into the next higher class (into class D of the proposed rates). This would represent an increase of 143.75 percent (i. e., from the present $4 per thousand to $9.75 per thousand) instead of the apparent increase from $4 to $9.50, which would be an increase of 92.5 percent.

CONCLUSION

All the foregoing: The decline of cigar production since 1942, a trend in reverse of the general one of the economy as a whole; the magnitude of the increase now proposed, both in the total burden and in particular rates; the penalty against passing on to the consumer any of the increased tax on cigars now retailing at the top level of existing price brackets, as just described — these considerations as well as other economic factors mentioned herein unite to characterize the newly proposed tax as violative of the sound principles of taxation and as crossing the dividing line that separates sound taxes from oppressive ones.

We therefore urge this committee not to approve the proposed increase in taxes on cigars. No minor change from the proposed new tax schedule as set forth above would alter the merits of the case.

Senator BYRD. Mr. Horney.

STATEMENT OF LEO G. HORNEY, ASSISTANT TO THE GENERAL MANAGER OF BENDIX AVIATION CORP.

Mr. HORNEY. My name is Leo G. Horney. I am assistant to the general manager of the Bendix radio division of Bendix Aviation Corp. in Baltimore, Md.

I am also full-time counsel to the Bendix radio division. My company appreciates the opportunity which has been given me to appear before your committee to suggest modifications to section 482 of H. R. 4473, which section amends section 3404 of the Internal Revenue Code.

Section 482 would exempt sales to the United States of certain radio-receiving equipment and component parts thereof but the term "radio receiving set" is still left undefined. We subscribe fully to the action of the House in giving voice to this exemption feature for reasons which have already been made known to the committee of that body. However, it is our belief that the exemption should be broadened so as to include all of the devices and component parts thereof which are exempt when sold to the United States, so that the exemption applies when such devices and component parts thereof are sold to commercial or other nongovernmental enterprises.

We seek these modifications to the end that in the application of the tax there should certainly be (1) as to liability and amount of the tax in advance of the taxable sale; (2) that the tax might be imposed uniformly and without discrimination; (3) that the statute might be subsequenly enacted in a form which will present the least possible number of difficult administrative problems; and (4) that radio and communication devices in many instances required by law for the safety and welfare of those being served, can in no way be considered as luxury or entertainment items and, therefore, should not be taxed.

The chief difficulty in complying with and in administering section 3404 as presently written and as proposed in section 482 of the present bill lies in the fact that the words "radio receiving set" are not sufficiently defined in the law.

We believe that it was the original intent of Congress, as expressed in the 1932 statute, to tax only radio receiving sets of the type you and I have in our homes or in our cars and which are used for entertainment purposes.

We understand that the Treasury people who are involved in the specific administration of this law hold the same belief, but since the words "radio receiving set" are susceptible of a much broader meaning, they felt compelled, due to the lack of a legal definition, to construe those words broadly enough to include all radio receivers which produced sound, and I repeat, "sound."

Thus they have taxed such receivers as those used on airplanes for communication with airports and those used on trains for dispatching purposes. They have also taxed receivers used solely for the reception of the dots and dashes of the Morse code so long as an operator hears the dots and dashes. If, however, the dots and dashes are used to punch holes in a paper tape which is later deciphered, they have held that such a receiver is not taxable since it does not produce sound.

This obviously arbitrary definition is in no way a reflection upon the ability of the Treasury Department since they were put in the unenviable position of having to arrive at a compromise solution which lay somewhere between what they felt to be congressional intent and the actual engineering dictionary meaning of the words.

An engineer defines a radio receiving set as a device which intercepts electromagnetic waves radiated through space and transforms these signals into some useful effect.

It is generally a fact in the industry, and specifically so with respect to that portion of the industry which our own company represents, that many of the devices of an electronic nature which are sold to the United States, and which are enumerated under section 482, are sold in their identical form to nongovernmental users such as railroads, airlines, marine operators, and various utilities.

The use of communication, navigation, and detection devices by these private and semiprivate enterprises is as essential as the very functioning of the activities themselves. At the same time, while Congress has seen fit through subsidies, preferential tax treatment, and other actions to be of assistance to such users, there has been no specific action taken in the direction of relieving them of their payment of an excise tax on their purchase of such necessary augmenting devices, notwithstanding the fact that the total annual gross tax revenue from such sources is microscopically insignificant.

We are working in a no man's land between the letter of the law and the clear intent of the Congress. It is our desire to have the letter of the law merely conformed to the intent of Congress.

The manufacturers and the Bureau of Internal Revenue have struggled with several definitions of a radio receiving set in an effort to establish at the point of sale the taxability and the amount of tax in any given situation.

In 1932 and subsequently Congress clearly intended that taxability of a device under section 3404 of the Internal Revenue Code should be confined solely to the reception of "entertainment sound," that is to say, the universally known entertainment-type radio receiving set. Actually it was intended to levy a luxury tax, imposed at the point of manufacture for ease of collection.

By way of simple illustration and as a means of further clarification of the foregoing statements, we recognize that much of the radio equipment produced by our company and by our associates in the industry is composed of combination receivers and transmitters housed within a single package, the separation of which in terms of functional ability being known only to the most capable electronics engineer.

It is a device of this nature which the manufacturer is called upon constantly to examine and to make his own determination of which portion or portions of the device is taxable and to what extent.

Since he is guided by no formula, he and his industry associates are left to make their own determinations to their own detriment or to the possible detriment of the Government, and with the possible imposition of tax liability upon himself should he err in his tax determination, since each manufacturer must obtain his own rulings as none are officially published by the Treasury Department.

Since his only means of securing some degree of protection is through the submission of requests for specific rulings, each of which consumes from 1 week to 12 months in its resolution, it appears that the solution to the problem is to make modifications to section 482 so as to delete therefrom all equipment of the type whose function is that of communications, navigation, and detection when sold to the United States Government and to commercial enterprises.

This can be accomplished by any one of several very simple methods. Attached to this statement for the record are two possible methods of accomplishing this purpose. One of these involves changes in section 482 of H. R. 4473. The other proposes revision of section 3404 so as to impose the tax only on the entertainment-type radio and television receiving sets, excluding commercial equipment which would be consistent with the application of tax to other applications.

This is not a revenue problem. A recent study indicated that the revenue from the taxation of commercial types of electronics receiving equipment averages about $50,000 a month. It is our firm belief that the taxpayers' cost for compliance and enforcement costs to the Bureau of Internal Revenue undoubtedly exceeds 50 percent of the total revenues produced from this source.

Senator BYRD. Thank you very much.

(The material referred to in Mr. Horney's statement follows:)

ALTERNATIVE No. 1

DEFINITION OF RADIO AND TELEVISION RECEIVING SETS

(a) DEFINITION OF SETS.—Section 3404 (a) (relating to manufacturers' excise tax on radio receiving sets, etc.) is hereby amended to read as follows:

"Radio receiving sets, television receiving sets, phonographs, combinations of any of the foregoing, of the household, portable, automobile, or other amusement type."

(b) DEFINITION OF COMPONENTS.—Section 3404 (b) (relating to manufacturers' excise tax on certain components of radio receiving sets, etc.) is hereby amended to read as follows:

"Chassis, cabinets, tubes, speakers, amplifiers, power supply units, antennae of the built-in type, and phonograph mechanisms (hereinafter referred to as 'radio components') for, or suitable for use as parts of or with, any of the articles enumerated in subsection (a), except when sold as component parts of a complete radio receiving set, television receiving set, phonograph, any combination of the foregoing, or other electronic apparatus. Under regulations prescribed by the Secretary, the tax under this subsection shall not apply in the case of sales of any such radio components by the manufacturer, producer, or importer to a manufacturer or producer of radio receiving sets, television receiving sets, phonographs, any combinations of the foregoing, or other electronic apparatus. If any such radio components are resold by such vendee otherwise than on or in connection with, or with the sale of, complete radio receiving sets, television receiving sets, phonographs, any combinations of the foregoing, or other electronic apparatus, manufactured or produced by such vendee, then for the purposes of this section the vendee shall be considered the manufacturer or producer of the radio components so resold."

(c) EFFECTIVE DATE.—The amendments made by subsections (a) and (b) shall take effect on the first day of the first month which begins more than 10 days after the date of the Act, except that the related tax imposed by section 3444 (b) (on use by the manufacturer of taxable components) shall not apply to the use of components formerly included under section 3404 (b) when contained in articles sold on and after the first day of the first month which begins more than 10 days after the date of the enactment of this Act. Refund or credit shall be allowed with respect to tax paid or incurred thereunder.

ALTERNATIVE NO. 2

SEC. 482. NAVIGATION RECEIVERS [~~SOLD TO THE UNITED STATES~~]

(a) EXEMPTION ON SALES [~~TO UNITED STATES~~ OF CERTAIN RADIO SETS].—Section 3404 (a) (relating to manufacturers' excise tax on radio receiving sets, etc.) is hereby amended by adding at the end thereof the following new sentence: "No tax shall be imposed under this subsection with respect to the sale ~~to the United States for its exclusive use~~ of a communication, detection, or navigation receiver of the type used in commercial, military, or marine installations."

(b) TAX-FREE SALES OF RADIO PARTS.—Section 3404 (b) (relating to manufacturers' excise tax on component parts of radio receiving sets, etc.) is hereby amended by adding at the end thereof the following new sentence: "Under regulations prescribed by the Secretary, no tax shall be imposed under this subsection with respect to the sale of any article for use by the vendee as material in the manufacture or production of, or as a component part of, communication, detection, or navigation receivers of the type used in commercial, military, or marine installations ~~if such receivers are to be sold by the vendee to the United States for its exclusive use~~. If any article sold tax-free to such vendee is not so used by him, or being so used the receiver is not so sold, the vendee shall be considered as the manufacturer or producer of such article."

(c) REFUND IN CASE OF USE OF PARTS.—Section 3443 (a) (1) (relating to credits and refunds) is hereby amended to read as follows:

"(1) to a manufacturer or producer, in the amount of any tax under this chapter which has been paid with respect to the sale of—

"(A) any article (other than a tire, inner tube, or automobile radio or television receiving set taxable under section 3404) purchased by him and used by him as material in the manufacture or production of, or as a component part of, an article with respect to which tax under this chapter has been paid, or which has been sold free of tax by virtue of section 3442, relating to tax-free sales;

"(B) any article described in section 3404 (b) purchased by him and used by him as material in the manufacture or production of, or as a component part of, communication, detection, or navigation receivers of the type used in commercial, military, or marine installations ~~if such receivers have been sold by him to the United States for its exclusive use.~~"

(d) REFUND IN CASE OF RESALE TO UNITED STATES.—Section 3443 (a) (3) (A) is hereby amended by adding at the end thereof the following:

"(vii) in the case of a communication, detection, or navigation receiver of the type used in commercial, military, or marine installations, ~~resold to the United States for its exclusive use.~~"

(e) USE BY MANUFACTURER OF TAXABLE PARTS.—Section 3444 (b) (relating to tax on use by manufacturer of taxable articles) is hereby amended by adding at the end thereof the following: "This section shall not apply with respect to the use by the manufacturer, producer, or importer of articles described in section 3404 (b) if such articles are used by him as material in the manufacture or production of, or as a component part of, communication, detection, or navigation receivers of the type used in commercial, miliatry, or marine installations ~~if such receivers are to be sold to the United Staest for its exclusive use.~~"

(f) EFFECTIVE DATES.—The amendments made by subsections (a) and (b) shall take effect as provided in section 489. The amendments made by subsections

(c) and (e) shall be applicable with respect to articles used in receivers sold ~~to the United States~~ on or after the first day of the first month which begins more than ten days after the date of the enactment of this Act, and the amendment made by subsection (d) shall be applicable with respect to articles resold ~~to the United States~~ on or after such first day.

Senator BYRD. Mr. Sprague.

STATEMENT OF ROBERT C. SPRAGUE, CHAIRMAN OF THE BOARD, RADIO-TELEVISION MANUFACTURERS ASSOCIATION

Mr. SPRAGUE. Mr. Chairman and members of the committee, my name is Robert C. Sprague. I am president of the Sprague Electric Co., North Adams, Mass., but I appear today as chairman of the board, Radio-Television Manufacturers Association.

Last November 1 an excise tax went into effect on television sets for the first time. This new tax, imposed at a 10-percent rate, had been in effect only 3 months when the Secretary of the Treasury requested that it be increased to 25 percent.

He made the same request with regard to radio sets. I am here to oppose the Treasury's proposal. I shall also explain why we think you should consider removing the tax on these important instruments of public communication.

Our industry is undergoing a trying experience.

In October 1950, before the imposition of the 10-percent tax on television sets, our industry was producing at the average rate of 210,000 television sets per week. By June, 8 months later, we were producing at the rate of only 65,000 sets per week. That is a decrease from 210,000 to 65,000.

Before the imposition of the 10-percent tax, factory sales average was 218,000 sets per week. For the month of June of this year they averaged only 39,000 sets. At the end of October 1950 inventories totaled 47,000 television sets or approximately 1 day's supply. At the end of June, 1951, there were 724,000 sets in inventory—that is at the manufacturers' level, only, and does not include the inventory at the dealers' level—or about 18 weeks supply.

As of the end of June 1951 the number of employees engaged in making television sets had declined 40 percent from the levels of June 1950. The extent of the decline would be even greater if measured from the time the tax was imposed.

This depressed condition in the industry was brought about by a number of factors which are discussed in the attached study of our consulting economists. Conspicuous among them is the 10-percent excise tax.

This depression in television set sales is not offset by military contracts. A recent survey shows that during the month of June 1951, production of military equipment accounted for an average of only 10.8 percent of the capacity of manufacturing members of the industry.

Another recent survey revealed that total employment in the industry, civilian and military, had been reduced by about 50,000 persons since early 1951. I have heard no dissent from the opinion of competent industry observers that military contracts cannot be expected to offset the loss in production and employment now being experienced. One reason for this is that at the present stage of the mobilization program, at least 50 percent of the dollar value of military electronic contracts represents foundry, sheet metal, and precision machine work, which is generally performed by companies outside the electronics industry.

One important result of the foregoing situation is that the highly trained working forces in the industry are being dispersed and will not be available when needed to produce an increasing volume of electronic equipment for the military forces.

With these facts in mind, I will speak first to the point that the tax should not be increased.

It is clear from these striking facts that any increase in the present excise tax on television sets and radios would seriously aggravate an already distressing situation—see attached study of consulting economists.

The higher prices resulting from an increased tax would cause many consumers to refrain from buying because television is unusually sensitive to price increases.

The Government-imposed freeze on new telecasting stations limits broadcasting service to approximately one-half the families of the country. Within these limited market areas those with moderate and high income tended to buy early. Thus the prospective purchasers in the market areas are largely those with incomes of less than $5,000 who, under today's conditions must be particularly price conscious. This statement is confirmed by the Federal Reserve Board's study, 1950 Survey of Consumer Finances.

This Board found that:

> The great increase in purchases of television sets during 1949 reflected in large part rapid consumer acceptance of a new product and substantial declines in prices. Reduced prices apparently brought large numbers of middle- and low-income consumers into the market. Sharply expanded buying by spending units (family groups) with incomes of less than $5,000 accounted for most of the spectacular increase in buying during 1949. The expansion was particularly marked for consumers with incomes of less than $3,000.

The 1950 expansion of sales also came largely from the income groups below $5,000. This income group comprises 83 percent of all taxpayers and it is estimated that more than 50 percent of this group were in the bracket under $3,000.

It is obvious that the impact of any increase in radio and television prices would fall more heavily upon the lower-income groups and on the segment of our economy which can least afford it.

Any increase in the tax would undoubtedly cause a further reduction in sales, resulting in a decrease in the profits of manufacturers, dealers, and distributors, and earnings of their employees and the income taxes paid by all of them. Thus an increase in excise taxes would not necessarily result in greater revenue to the Government.

I will now speak to the proposition that instead of increasing the tax, the Congress should give consideration to removing the tax.

We are conscious of the committee's responsibility to produce revenue adequate to our Government's needs in a period of world stress. It would seem indefensible, however, to raise that revenue by taxing these important instruments of public communication while leaving untaxed other household durable goods such as furniture, floor coverings, and glassware, just to mention a few items not taxed.

In time of war and public danger, television and radio are a vital means of public communication, training, and civil defense. Their distribution and use should be encouraged, rather than burdened.

Factors in favor of the removal of the tax are particularly urgent in the case of television:

First, television is a new industry. It is the traditional policy of the Congress not to tax industries during their formative periods.

The House Ways and Means Committee last year rejected the Treasury's proposal for a tax on television before the Korean outbreak, but the taxe was imposed under the stress of emergency pressures immediately following that outbreak. Television is an especially appropriate case for observance of the traditional policy because its growth has been hindered by a number of Government-imposed barriers.

Second, television combines, for the first time in history, the power of visual appeal with the circulation possibly only through home installation. It is the greatest technical instrument ever devised for public communication. Scientists tell us that 90 percent of what we learn comes through the eye. It will open a new era in Government by its power to encourage participation by the ordinary citizen in governmental affairs. This participation can be the difference between democracy and dictatorship.

Third, the damaging events which followed the imposition of the tax, referred to at the beginning of my testimony, have brought the growth of television virtually to a standstill. Removal of the tax would give it the encouragement it needs now.

Fourth, this country could hardly make a more serious mistake than by so taxing or burdening television that it is available only to the well-to-do. The New York Times has referred to television as a "new element in the functioning of Government."

In order to achieve the full promise which it holds as an instrument for strengthening democracy, television must be within reach of the ordinary citizen.

If the Congress decides that an excise tax on radio and television is unavoidable, then we propose an emergency excise tax on a broad base, which would include all household durable goods at a uniform rate and at the retail level. In the event any part of the excise tax on radio and television is retained, we would also like to see the principles of the provisions of section 482 of H. R. 4473 retained with certain modifications.

Because the radio excise tax as now imposed by an obsolete law must be applied to expanded purchases of electronic equipment for the Armed Forces, this exemption of sales to the United States is needed to eliminate many problems and uncertainties. However, this is really not enough. The same problems and uncertainties are found throughout all nongovernmental products of the industry other than the household-type receiver.

We request that you reexamine section 3404 (a) and (b) of the code. Attached as appendix A is a suggested revision of this section.

I respectfuly request that appendix A attached and Study of Our Consulting Economists, Boni, Watkins, Mounteer & Co., be made a part of the record.

Senator BYRD. Very well.

(The material referred to follows:)

APPENDIX A

DEFINITION OF RADIO AND TELEVISION RECEIVING SETS

(a) DEFINITION OF SETS.—Section 3404 (a) (Relating to manufacturer's excise tax on radio receiving sets, etc.) is hereby amended to read as follows:

"Radio receiving sets, television receiving sets, phonographs, combinations of any of the foregoing, of the household, portable, automobile, or other amusement type."

(b) DEFINITION OF COMPONENTS.—Section 3404 (b) (Relating to manufacturers' excise tax on certain components of radio receiving sets, etc.) is hereby amended to read as follows:

"Chassis, cabinets, tubes, speakers, amplifiers, power supply units, antennae of the 'built-in' type, and phonograph mechanisms (hereinafter referred to as 'radio components' for, or suitable for use as parts of or with, any of the articles enumerated in subsection (a), except when sold as component parts of a complete radio receiving set, television receiving set, phonograph, any combination of the foregoing, or other electronic apparatus. Under regulations prescribed by the Secretary, the tax under this subsection shall not apply in the case of sales of any such radio components by the manufacture, producer, or importer to a manufacturer or producer of radio receiving sets, television receiving sets, phonographs, any combinations of the foregoing, or other electronic apparatus. If any such radio components are resold by such vendee otherwise than on or in connection with, or with the sale of, complete radio receiving sets, television receiving sets, phonographs, any combinations of the foregoing, or other electronic apparatus, manufactured or produced by such vendee, then for the purposes of this section the vendee shall be considered the manufacturer or producer of the radio components so resold."

(c) EFFECTIVE DATE.—The amendments made by subsections (a) and (b) shall take effect on the first day of the first month which begins more than 10 days after the date of the Act except that the related tax imposed by section 3444 (b) (on use by the manufacturer of taxable components) shall not apply to the use of components formerly included under Section 3404 (b) when contained in articles sold on and after the first day of the first month which begins more than 10 days after the date of the enactment of this Act. Refund or credit shall be allowed with respect to tax paid or incurred thereunder.

BONI, WATKINS, MOUNTEER & CO.

CONSULTING ECONOMISTS

NEW YORK, N. Y., *July 30, 1951.*

RADIO TELEVISION MANUFACTURERS ASSOCIATION,
Washington, D. C.

GENTLEMEN: This letter is in response to your request for an analysis of the impact on the radio-television market of the present 10-percent excise tax and an estimate of the effect of raising the rate still higher to 25 percent, as the Treasury has proposed.

Our analysis discloses that the radio-television market is currently not only severely depressed, but much more so than other segments of the economy which have also been hard hit. This unusual condition is attributable to a combination of circumstances, including the imbalance in the current economy created by the uneven impact in the present inflationary pressures, regulation W, the present 10-percent excise tax, television's arbitrarily narrowed market, its unusual sensitivity to the price factor and finally the uncertainties created by the color controversy. The imposition at this time of a higher excise tax would unquestionably depress and aggravate the industry sales even further.

In order to view conditions in the radio-television market in proper perspective, it is helpful to review current trends in the economy as a whole and particularly in the consumers' durable-goods sector.

CURRENT ECONOMIC CONDITIONS

By all outward indications the American economy is in a boom phase. National income is at an all-time high, and unemployment at a record low. Farm income is at peak levels. Industrial equipment (producers' durable goods) manufacturers are enjoying a record volume of new business, with unfilled orders and shipments mounting month by month to unprecedentedly high levels. Retail sales generally are being maintained at near-peak levels.

Analysis of the performance of individual segments of the economy reveals, however, that this seeming prosperity is not at all universal, and that important groups of industries are currently depressed, some acutely so.

A symptom of this imbalance in the economy is found in the divergent sales patterns of retail stores dealing in various types of merchandise. Exhibit 1 (appended hereto) provides an example of this divergence. In the exhibit are charted, for the period January 1950 through May 1951, the trends of monthly sales of nondurable-goods stores and of home-furnishings stores (which deal in durable goods such as furniture, household appliances, and radios). The chart reveals that the sales of both these retail-store groups rose to a peak in January 1951, but since then they have followed different courses. Whereas sales of the nondurable group declined moderately after January and then leveled off, with volume still above any month in 1950, sales of the home-furnishings group dropped precipitately from the January peak to a level in May below that of any month in 1950. This divergence in pattern of retail sales is one manifestation of an increasing imbalance in the economy which is being artificially nurtured, and which will certainly grow worse and create unfortunate repercussions unless soon checked.

It is also pertinent that this divergence of trend on the retail level is fully reflected on the wholesale level. In its Monthly Wholesale Trade Report for May 1951 the Department of Commerce reports, regarding wholesale trade in general, that "Wholesale dollar sales during May rose 3 percent above the April level and increased 10 percent over sales a year ago." However, the report continues, "Compared with a year ago, only four trades showed declines—commercial refrigeration (2 percent), coal (15 percent), furniture and house furnishings (16 percent), and electrical appliances and specialties (20 percent)."[1] Moreover the report also discloses that the house furnishings and the electrical appliances groups alone, among all divisions of wholesale trade, registered a decline from April to May (1951) of as much as 10 percent.

Furthermore, the recession in consumers' durable goods markets has now spread to automobiles, which constitute by far the largest element in this product class. Production of automobiles started declining in April and June output dropped to 483,153 units, or only 67 percent of the output in June 1950. The recession is also spreading to residential construction. Although home building or purchasing is technically classed as a form of investment, for the vast majority of people such expenditures represent simply the purchase of a consumers' durable goods. It is significant, therefore, that the demand for housing, paralleling the trend noted for other durable goods, has dropped sharply in recent months. Measured by the number of new dwelling starts, the downturn started in March, when the number was 21 percent below that in March 1950. The declining trend has continued and by May the number was 35 percent below the figure in May a year ago.

One of the major reasons for the sustained high-level sales of consumers' nondurable goods and the sharp decline in those of the durable-goods group is the current decline in disposable real income per capita, induced by inflation, and the accompanying diversion of purchasing power from deferrable items of consumer expenditure, such as durable goods, to nondeferrable items such as foods, for which in general the demand is highly inelastic. As evidence on this point, exhibit 2 charts the trends, in 1950 and the first 5 months of 1951, of disposable personal income, of per capita disposal real income, of retail food prices, and of retail prices generally. The exhibit shows that, although total disposable income has risen almost uninterruptedly, per capita purchasing power, as measured by disposable real income, has actually fallen and is currently below the 1950 level (annual average). The cause of this seldom-recognized fact is, of course, the rise of prices, as shown in the bottom half of the exhibit. While retail prices in general have just about kept pace with the rise in disposable income, prices of food, the most important element in the cost of living, have soared. They have risen no less than 16 percent since January 1950, far outstripping the price rise of nonfood items of consumer expenditure. In view of the fact that expenditures for food constitute approximately one-third of total consumer expenditures,[1] the exceptional rate of price advances in this sphere—a typical phenomenon of inflationary periods—has led, inevitably, to a severe curtailment of expenditures for other consumers' goods.

The foregoing data should suffice to demonstrate, first, that inflationary pressures have exerted a steadily tightening "squeeze" on consumers' purchasing power in the past year and a half and, secondly, that the impact of this development on consumers' durable goods demand has been extremely adverse, due to the differential rates of price advance for various categories of goods. In short, sharply rising food prices have diverted from consumers' durable goods markets much of the current purchasing power that would otherwise, i. e., normally, have been expended there. The resulting imbalance of the economy will undoubtedly become worse as inflationary pressures mount. To the extent that such legislative and administrative measures as excise taxes and regulation W act as additional deterrents to sales of most types of consumer durable goods (through higher prices and greater down-payment requirements), the current lop-sidedness of the economy will be further compounded. It is against this general background that we turn now to examine current conditions in the radio-television industry.

DEPRESSION IN TELEVISION

Television, the country's newest major industry, is for several reasons currently in a state of depression bordering on distress. The extent of the depression in retail sales of television sets may be seen from exhibit 3 which traces the trend, as reflected in two series: radio and appliance store sales and dealers' television sales, monthly, for the period January 1950 through April 1951.[2] The chart reveals that in April 1951 radio and appliance store sales were slightly below those in April of the previous year and about 15 percent below the 1950 average. The downward trend of television set sales is obscured in this series by the inclusion of sales of numerous other types of household appliances. The series reporting television set sales alone shows that in April 1951 they were 38 percent below the April 1950 level and about 50 percent below the 1950 average. It may also be noted that television sales have been plummeting, except for the holiday season pickup, ever since October when the revised regulation W and the excise tax went into effect.

The significance of the much greater drop in television set sales than in the total sales of radio and appliance stores can be better appreciated in the light of the fact, revealed by the Survey of Current Business monthly tabulation of retail sales by type of establishment, that radio and appliance stores were one of only two types of retail outlets that reported a lower sales volume in April 1951 than in April a year ago. Moreover, the decline for the other trade (shoe stores) was only 2 percent compared with the 11-percent drop experienced by radio and appliance stores. And in May, sales of the latter group declined still further, to a level 8 percent below the preceding month.

The depression in the radio and appliance retail trade is reflected in the rate of dealer bankruptcies in this field, exhibit 4 graphically compares the trend, semiannually, January 1950 through June 1951, of bankruptcies in all retail establishments and among radio and appliance dealers. The chart discloses that radio and appliance dealer bankruptcies rose spectacularly in the first 6 months of 1951 (222 percent of the 1950 average), whereas the bankruptcy rate among all retail establishments remained virtually unchanged (113 percent of the 1950 average).

In summary, the foregoing data demonstrate that retail television sales have declined far more than sales of appliances generally, which, in turn, are severely depressed in comparison with retail sales in other trades.

The steep and uninterrupted decline of retail television sales has been reflected, with some lag, in manufacturing activities. Exhibit 5 portrays graphically the course of television-set production, factory sales, and inventories, monthly, January 1950 through June 1951. The chart discloses that both production and sales were maintained at a relatively even rate through March 1951 and then dropped off sharply. Factory sales declined in June to a rate 58 percent below

[1] For 1949, the latest year for which data are available, for Department of Commerce reported expenditures for food of $58.6 billion, and total consumer expenditures of $17.8 billion. See Survey of Current Business, July 1950.

[2] The tend of retail sales of television sets is based on a survey conducted by the Radio-Television Manufacturers Association covering 478 dealers in 31 States, for the period January 1950 through April 1951.

that for June 1950, and 75 percent below the first quarter 1951 monthly average. Meanwhile factory inventories have mounted to almost three-quarters of a million sets, or over 18 weeks' supply at the current rate of sales compared with a 1950 average of less than 1 week's supply and a first quarter 1951 average only slightly higher. Based on the average factory price of $171 per set (as of April 1951) the indicated value of accumulated factory inventories now stands at approximately $125 million.

BASIC CAUSES OF TELEVISION DEPRESSION

The principal causes of the severe depression in the television market have been indicated in the course of the preceding review, but summarizing them here will help to point them up.

(a) Inflation, which is generating an imbalance in the economy, due to differentials in the rate of price advance in various sectors, causing a sharp curtailment of effective demand for consumers' durable goods as an increasing portion of the diminishing real purchasing power is drained away toward products (such as foods) for which the demand is comparatively inelastic.

(b) Regulation W, which by requiring larger cash down payments and shorter periods of repayment is cutting down sales of many classes of consumers' durable goods more drastically than necessary to meet the manpower and materials requirements of the rearmament program, as officially certified, and more drastically also than can be justified from the standpoint of an equitable distribution of the curbs involved in mobilizing inflation defenses. Recent action of the Congress in liberalizing regulation W terms as applied to television sets is a recognition of the seriousness of the depression in the television industry.

(c) Excise taxes, which by raising some prices, mainly those of certain categories of consumers' durable goods to uneconomic levels, out of line with other prices, have prompted impulsive shifts in the pattern of consumer expenditures, warped the trend of business activity, and aggravated the inflation-generated disequilibrium of the economy.

The above factors have adversely affected sales of other consumers' durable goods besides television—the first, sales of all such goods; the second and third, sales of only the particular categories of goods to which they apply. But in no other instance has their combined impact on sales been so depressive as in the case of television. The reasons for the exceptional severity of their repercussions on the television market may be classified under three headings: (1) A narrowed market, (2) an elastic demand, and (3) an unsettled technology. These factors will be briefly discussed in the above order.

(1) Television's arbitrarily narrowed market

Because of the Federal Communications Commission's so-called "freeze" order, temporarily withholding licenses for additional telecasting stations, television's domestic market has been, and continues to be, restricted to 63 market areas. The boundaries of these market areas are defined by the range of effective television reception from each telecasting center. Such areas encompass only about 60 percent of the country's population.

It should be emphasized that the television market is even more limited than these figures indicate. In the 63 areas presently receiving television broadcasts, only 12 are served by three or more telecasting stations.[3] Since the range of program choice constitutes a prime factor affecting television's appeal, or utility to the consumer, the prevailing thinness of program selection in most television market areas (51 out of 63) holds down demand well below the level it would otherwise reach. This is evident from exhibit 7, which tabulates saturation percentages, at the end of 1950 for the several television market areas, grouped according to the number of telecasting stations in each.[4] The following table summarizes the exhibit:

---

[3] Dallas with two stations and Fort Worth with one station are here counted as one reception area with three stations because of their proximity to each other and the overlapping of their telecasting ranges.

[4] Saturation percentage, as the term is here used, means the ratio of set installations to total number of family units (or homes). Number of families within telecasting range is based on National Broadcasting System survey demarcating areas within minimum standard television signal strength. Set installations within these areas are based on periodic surveys conducted by NBC.

Number of telecasting stations in market area	Number of market areas	Average saturation per market area
		Percent
1	39	28.7
2	11	33.0
3	8	46.3
4 or more	4	59.1

From these data it appears that the thinness of station coverage within the great majority of television market areas may be an even more important factor constricting television demand than the limited geographic scope of such market areas.

Although the Federal Communications Commission has recently taken action to hasten the lifting of the "freeze," most observers believe that it will be well into 1952 before station licenses can be issued.

At the moment the Commission has indicated it will receive comments and data until November 26 on general policy problems such as allocation principles and allotments to geographical regions and special services like educational television. These data will require at least until the end of the year. Applicants will then have 60 days in which to make their applications. Only then will the Commission begin considering and passing on the hundreds of individual applications for telecasting station licenses.

In the event of objection to its findings by unsuccessful applicants, further delays will ensue. Successful applicants will thereafter have to secure local building permits, purchase and install transmitting equipment, and plan and contract for programs before actual telecasting can begin.

In these circumstances it is quite unlikely that any new telecasting stations will be in operation before late in the spring of next year, and no substantial addition to the number of stations can be anticipated before the middle of 1952, at the earliest. Accordingly, the outlook for the proximate future is for the continued restriction of television sales to only 60 percent of the national market. No other consumer good has its market so artificially restricted.

(2) Television's highly elastic demand

The spectacular increase in consumer purchases of television sets in recent years, from 170,000 sets in 1947 to 7,464,000 sets in 1950, has been in no small measure a popular response to their declining prices. In the absence of a comparable price inducement, similar items of consumer expenditure have experienced no such increase in the rate of retail absorption. The leverage the steeply sloping television price curve gave the industry can be deduced from exhibit 9, which charts along therewith, for comparative purposes, the price trend of the entire home-furnishings group, January 1948 through April 1951. The chart displays not only the sharp absolute decline of television prices but also their relative decline, compared with prices of similar merchandise. It is noteworthy that in the last 6 months, while home-furnishings prices have risen about 7 percent, television prices have dropped about 14 percent.

The exceptional sensitivity of television-set demand to the price factor stems from the predominance of low-income groups in this market. The Federal Reserve Board compiles data on the income distribution of purchasers of various categories of consumers durable goods. These series are not kept current, but are compiled at infrequent intervals, and data for 1948 and 1949 are summarized and portrayed graphically in exhibit 8. They reveal that during the initial stages of television development (1948 and prior years), when sales were at a rate of less than 1 million sets a year and prices were high, families with an annual income of $5,000 and over purchased more than half the total number of sets sold. In 1949, however, when total set sales rose to approximately 3 million units and prices were substantially reduced (see exhibit 9), the distribution of set purchasers by income groups were reversed—income groups below the $5,000 level accounted for 60 percent of the total number sold.

This indicated trend, considered in conjunction with the large number of sets sold to date, suggests that the television market among upper-income groups is pretty well saturated and that the remaining market consists almost entirely of families earning less than $5,000 a year. Since any significant replacement demand for television sets is still a long way off, and since there is little demand evident for a second set per family, demand for television sets in the proximate future will come, even more than in 1948–49, from families in the lower-income groups. These families are, of course, more price conscious than those with higher incomes. Moreover, because of the growing "squeeze" on consumer purchasing power available for durable goods purchases (described earlier on pp. 4 and 5), the television market is especially hard hit, depending as it does on the demand from lower-income groups.

(3) Television's unsettled technology

Uncertainties regarding the ultimate outcome of current technical developments in television have engendered a "holding off" attitude among many potential set purchasers. There is a natural disinclination to buy any device that may become obsolete within a few months.

A major uncertainty centers around the color controversy. The Supreme Court's decision upholding the Federal Communications Commission's authority in the matter has not resolved the question. For one thing, the Commission has indicated that it still maintains an "open mind" on the licensing of alternative color systems should a superior one be developed and proven workable. Moreover, even were the Commission's "first choice" of the CBS system to change, or be supplemented later, the emergency of color would still be a temporary and serious deterrent to sales. For there is slight prospect of a sufficient number of color sets reaching the market in the initial stages of its commercial introduction to offset the decline in black-and-white set sales. In these circumstances, many prospective purchasers of sets are adopting a "wait and see" attitude before committing themselves to the purchase of a set.

Another technical development that is causing buyers to hold off relates to the use of ultra high frequency (UHF) wave bands. Sets presently on the market are incapable of receiving telecasts on these high frequencies. They must be adapted, at substantial extra cost, for such reception. The Federal Communications Commission has announced prospective allocation of new telecasting channels in the UHF range, but it is uncertain when telecasting thereon will begin.

SUMMARY AND CONCLUSION

In summary, it is the cumulative effect of all these special factors affecting television demand that is causing exceptionally severe depression in set sales. The net effect of the present excise tax cannot be isolated. However, in view of the composition of the television market and the uncommon elasticity of demand for sets, it is clear that the adoption at this time of any measure that will raise prices, as a higher excise tax would, will further depress sales and aggravate the industry's distress. Such a development could permanently impair the industry's productive capacity and would certainly result in a tidal wave of dealer bankruptcies.

The foregoing analysis makes plain how wide of the mark was any estimate of sustained demand for television sets in 1951 notwithstanding the impact of the excise tax and the credit restrictions imposed last fall. Such an assumption appears to have lain behind the recommendation in the Treasury's 1951 excise-tax proposals to raise the excise on television sets to the extraordinarily high and intolerably discriminatory rate of 25 percent. The analysis also serves to indicate how serious would be the consequences of imposing such a heavy additional burden on an industry whose plight is even now so desperate.

Very truly yours,

Senator BYRD. Mr. Hardy.

STATEMENT OF RALPH W. HARDY, DIRECTOR OF GOVERNMENT RELATIONS FOR THE NATIONAL ASSOCIATION OF RADIO AND TELEVISION BROADCASTERS

Mr. HARDY. My name is Ralph W. Hardy.

I am director of Government relations for the National Association of Radio and Television Broadcasters, and I appear at this hearing in behalf of that organization.

The National Association of Radio and Television Broadcasters is a trade association whose members are engaged in all forms of broadcasting—amplitude modulation, frequency modulation, and television. The association has a membership of approximately 1,400.

The operators of the broadcasting stations of this country have consistently opposed the principle of placing an excise tax on the means of the public's reception of the program material released daily by the public's reception of the program material released daily by the nearly 3,000 AM and FM stations, and the 107 new television stations in this country.

When you compare that number of broadcasting stations with the approximately 1,900 daily United States newspapers, you immediately see the significant position of the medium of broadcasting. The reliance of the general public upon radio and television as a major source of news and general information is an established fact clearly indicated in Nation-wide surveys of the information-acquiring habits of our people.

Radio has become such an integrated part of our lives that its presence and constant and instant availability is taken for granted as a necessary adjunct of the American home. In those areas where television programing has been available to the public, the same patterns of utilization and dependence are firmly established.

I make these points at this hearing, because it is not uncommon to hear the expression "Radio and television sets are luxuries, and they belong in the class of goods properly marked for excise taxes."

We think the overwhelming judgment of the owners and prospective buyers of radio and television sets, based upon their own appraisal of the functional purpose of these modern instruments of communication, would not agree with such an opinion.

The times in which we live afford frightening evidence of the absolute necessity for the means of instantaneous communications to the widely scattered people of our country. Whether it be for the more dramatic events such as air-raid warnings and instructions, pronouncements of national import by the Government, debates and hearings on national and international issues, election procedures, or the continuing and vital job of maintaining the news channels open for the incalculable strength of an informed citizenry, the broadcasting service of this country has long since arisen out of the novelty and gadget and luxury class.

The Congress has recognized that the gathering and dissemination of news, by whatever means, is too vital a function in the United States to be burdened. This is shown not only by the subsidizing of the mailing of newspapers, magazines, and books but also by the excise-tax statutes themselves.

Thus section 3466 of the Internal Revenue Code expressly exempts from the tax on telegraph, telephone, radio, and cable facilities—

> Services or facilities utilized in the collection of news for the public press or radio broadcasting, or in the dissemination of news through the public press or by means of radio broadcasting.

Section 3443 permits the credit or refund of any excise tax paid on motion-picture film "for use in the making of newsreel motion-picture films."

In view of these provisions, the excise tax on radio and television receivers is completely illogical. It is obviously inconsistent to exempt the facilities necessary for the gathering and dissemination of news and at the same time to tax the facilities indispensable for its reception by the public. The relationship between dissemination and reception is so close that a burden upon one is in fact a burden on the other.

In testimony before the House Ways and Means Committee on this same subject, I directed their attention to a significant declaration by George Washington that has a direct bearing on one vital issue in this connection.

President Washington, in a historic message to the Congress urging them to repeal the transportation tax on newspapers, reminded the legislators:

> No resource is so firm for the Government of the United States as the affection of the people guided by an enlightened policy; and, to this primary good, nothing can conduce more than a faithful representation of public proceedings diffused without restraint throughout the United States.

Annihilating time and space as they do, radio and television, if kept free from discriminatory tax encumbrances to their circulation by way of the required receiving sets, have the capacity to break down economic barriers to full enlightenment and understanding far beyond the dreams of our first President who prayed for the "faithful representation of public proceedings diffused without restraint throughout the United States."

But what has been done? Already the Government has imposed a "transportation tax" of 10 percent on our modern version of Washington's prized facility. And now the Congress—first the House of Representatives, and now your distinguished body in the Senate—has been asked to require the people of this country to pay to the Government a premium of 25 percent of the manufacturers' price of new radio and television sets for the privilege of availing themselves of these infinitely more efficient and effective means of diffusing the "faithful representation of public proceedings."

The House, as you know, rejected the proposed increase from 10 to 25 percent, and we are all very grateful for their action in so doing.

Broadcasters who have chafed for a long time under the discriminatory aspects of this excise tax on the means of the public's reception of their programs cannot help but wonder what public reaction would be if, following the same principle upon which the tax is imposed on broadcast receiving sets, a similar tax were to be imposed upon the circulation means of daily newspapers. Would there not be a hue and a cry if the newsboys accosted you with a story like this: "The Government has placed a 25-percent excise tax on the subscription price of this newspaper. From now on there will be this tax penalty for the use of your daily newspaper." Certainly the broadcasters advocate no such tax on newspaper subscriptions.

I can assure you the subject of this tax has long ago ceased to be an academic one for radio and television people. All over the country the broadcasters have talked with the wholesale and retail merchants who sell the radio and television receiving sets to the public. They have watched inventories pile up. They have watched public buying stiffen to a near standstill.

They have listened to buyer after buyer asking "How much Federal tax is there on this set?"

They have talked with county agricultural agents and heard their reports on deteriorating farm radio receiving equipment and heard of the reluctance to replace obsolete sets because of prices already out of range of the family pocketbook. They know from first-hand experienc that every price or tax rise cuts back their service potential in inhibiting new buyers who are just as vital to them in terms of circulation as are the subscribers to newspapers.

In the final analysis, all a broadcaster has to offer to those who use his facilities, be they sponsors, public servants, artists, or whatever, is audience.

The struggle for audience—its size, its composition, its loyalty—is the very essence of the competition that fires our American free-enterprise broadcasting system.

It is because of this that the broadcaster looks with great concern on any device that has the effect of placing discriminatory restrictions on this all-important audience.

We honestly believe that the excise tax on radio and television receivers does just that, and for that reason, and upon that principle, as broadcasters we raise our voices against it and respectfully urge this Senate Committee on Finance to reach the conclusion that there is merit in the preservation of free channels to the homes and hearth-sides of America for all of the media of public information and enlightment.

This free channel for radio and television is impeded by the imposition of the excise tax.

We urge you, as a matter of principle, to reject it.

Senator BYRD. Thank you very much, Mr. Hardy.

I submit for the record a statement by Mr. Ralph L. Van Name, secretary, New York City Employees' Retirement System, entitled, "Certain Recurring Arguments Opposing Greater Income-Tax Exemption for Pensioners," as well as a copy of the speech made by Congressman Sidney A. Fine in the House of Representatives on Wednesday, June 20, 1951. Mr. Van Name's request for appearance was not received until after the schedule of witnesses had been closed. Therefore, it was impossible for the committee to receive his views in person.

(The two documents referred to follow:)

AN ANSWER TO CERTAIN RECURRING ARGUMENTS OPPOSING GREATER INCOME-TAX EXEMPTION FOR PENSIONERS, SUBMITTED BY RALPH L. VAN NAME, SECRETARY, NEW YORK CITY EMPLOYEES' RETIREMENT SYSTEM

Argument 1.—Discrimination against persons who live on their own savings would be shown by exempting pensioners and not individuals.

Answer 1.—The discrimination is not theoretical; the discrimination is now practiced wholesale by the United States Government. The Federal Government now exempts up to $1,800 social-security income of 45,000,000 of the low-paid and high-paid in industry—a majority of the country's workers—as they attain age 65, whether their other income is $5 or $5,000 or $50,000. The Federal Government also discriminates to exempt the pension of millions of military personnel, railroad workers, printers, etc., to a greater or lesser degree, while the few self-supporting aged individuals and 6,000,000 governmental employees, as they retire, are income-taxed.

The practice is no longer based on size or need, since the new social-security untaxed pensions will average as high as taxed governmental pensions.—Federal, State, city, court, and teaching.

As to total, report of the Senate Committee on Finance accompanying submission of the present new social-security law indicates the prospect of addition of another tax-exempt $1,000,000,000 a year to the social-security rolls in the next year or two.

Many high-bracket taxpayers are being professionally advised to pay their $54 a year (1½ percent of $3,600) not only because of the possible $1,800 social-security pension itself but for the $1,800 tax exemption, which is worth an additional $1,800 a year to a taxpayer in the 50 percent bracket.

Only fear of loss of present right to retire before age 65 with taxpayer assistance prevents huge groups of local governmental employees in many States from electing entrance upon tax-exempt social security at $54 a year or less. Meanwhile, the Federal Government taxes not only the below-age-65 pensions of governmental pensioners, but the over-65 pensions comparable in amount and average to social-security pensions to be granted under the recently adopted social-security tax-exempt scale.

No sound reason can be given for exempting from income tax social-security pensions of the high-paid and low-paid, while taxing governmental pensions—Federal, State, city, court, and teaching—up to $400 as proposed in the tax bill now under consideration in the Senate Committee on Finance.

Argument 2.—Young wage earners are entitled to exemption equal to that granted to the aged retired.

Answer 2.—The Federal Government conspicuously neglects that precept. It assists States in granting relief up to $900 a person out of taxes paid by the young; it exempts up to $1,800 pension payable to most pensioners (Federal, State, and city pensioners excepted); then it limits millions of single young wage earners to less than $700 exemption.

A. Their income may be less certain.

Answer A: Wage earners are not taxed on the wages they may earn; only on wages actually received. They meet inflation with increased wages.

Governmental pensioners on fixed income and increasing income taxation have no recourse but again and again to reduce their standard of living as Government, again and again, taxes and taxes, spends and spends.

In millions of cases, measured by reasonable and widely accepted standards, Government is now forcing these fixed income, taxable governmental pensioners beneath the subsistence level. With its own retired civil service workers, for example, it goes through the business of increasing somewhat their inadequate pensions, on the one hand, and, on the other, taxing at 20 percent pensions in the \$700-\$1,800 range from which nongovernmental social-security pensioners—the retired from 45,000,000 in industry—would be totally exempt.

The \$700-\$1,800 wage earner may look for increased income as inflation proceeds: the \$700-\$1,800 taxed governmental pension not only does not rise with inflation; it is further reduced by increased taxation as well as by decreasing purchasing power.

B. They may have to live in more costly neighborhoods.

C. The may have greater day-to-day expense.

Answer B-C: The heavy sickness and disability special requirements of the aged so far exceed those of young and vigorous workers that Government and private groups vie to provide partial assistance for the peak need.

Congress, in 1950, lifted social security from the pauper assistance stage for far fewer to the \$1,800 maximum self-help basis for industrial workers, 45,000,000 of them. Congress rightly regards aged income in the lowest \$1,800 area as appropriate for exemption regardless of exact lesser exemption limits of young workers.

Notwithstanding tax-free assistance up to \$900 regardless of age and tax-free social-security pension up to \$1,800, Congress has continued to tax aged governmental pensioners in the lowest \$1,800 area. Much of the cheerfulness with which industry's workers, 45,000,000 of them, pay their annual social-security contribution of \$54 or less springs from the knowledge that not only pension income to \$1,800 but tax exemption to \$400 and more is being purchased.

Actually, young wage earners need not be exempted in the same degree that the pensioned aged should be exempted, because, generally, they like the practice of paying during their productive years for prospective tax-free existence on a lower (usually half-pay) standard of living in old age.

Unfinished business dictates that the remainder of the aged, those retired and retiring from 6,000,000 governmental positions, be given tax privileges identical with the majority of the other aged.

Argument 3.—Married persons over 65 are sid to have \$2,675 tax exemption—four \$600's adjusted upward on the return to \$2,675.

Answer 3.—45,000,000 industrial employees, as they attain age 65, may have up to \$4,475 exemption—\$2,675 as above, plus up to \$1,800 tax-free social-security pension. Governmental pensioners receiving \$1,800 governmental pension would have \$1,800 less exemption. Congress may properly determine the tax-exemption ceiling. It is inexcusable that, year after year, Congress compels its own employees and the employees of local government to pay up to \$400 more income tax than the pensioners of private industry.

Example.—A married 65-year-old bus driver on the privately owned Third Avenue Railroad in New York retires on \$1,800 social-security pension with \$2,675 other income, all totally exempt from income tax. A married 65-year-old bus driver on the parallel municipal bus route in New York retires on \$1,800 municipal pension with \$2,675 other income. The latter will pay, depending on exactly the new scale of taxation, \$350 to \$400 income tax from which his privately employed fellow union member is tax free. Thanks to Federal discrimination, one takes home \$1,800 pension; the other, \$1,400.

That \$400 governmental tax discrimination on \$1,800 pension income of two men of identical title and wage in the same union is a matter of serious economic and political importance to more than 30,000 members of the Transport Workers Union and to the over-all CIO organization.

If Federal discrimination of this sort is not ended, pivotal States and districts will be won and lost in protest against congressional neglect, year after year, to equalize pension-income taxation.

Argument 4.—It has been argued that since social security, until recently, averaged only about \$516 a year and railroad pensions less than \$1,000, whereas all over 65 are exempt to \$1,333 and married couples to twice that sum, the average social-security and railroad pensioners are not benefited by their additional special exemptions running up to \$1,440 and \$1,800.

Answer 4.—Averages are what they are because of the lesser and greater than average figures commingled to make the average. That some railroad and social-security pensioners receive less than $1,000 and less than $516, as they do, does not of itself justify exemption of railroad and social-security pensioners whose pensions of $1,440, more or less, keep the low average from falling lower.

In the next year or two, with the addition of $1,000,000,000 a year to the social-security rolls, as expected by Senate and House tax-fixing bodies, the present averages will become inconsequential and obsolete. Congress need not apologize for deliberately passing the present social-security law to greatly increase the social-security average. Taxation of the $1,400 pension, which combines with the $400 to make the average, should not stand or fall because of $400 treatment. Each level should be determined on its merits.

POSITIVE REASONS FOR GREATER TAX EXEMPTION OF AGED GOVERNMENTAL PENSIONERS

Limited exemption from income taxation of the aged governmental pensioners is to be justified for the following reasons:

1. Income taxation of the aged is uneconomic. Never before has income tax law condoned $1,800 tax exemption of most pensioners and withheld it from other (governmental) pensioners.

It is as sound economics to untax people during their unproductive years as to tax them during their earlier productive years. Thus is provided fair and equal treatment to each citizen at successive stages of each citizen's life.

2. Anticipatory taxation of the aged before old age is preferable and is preferred by young and old.

3. Government revenues would not suffer by anticipatory taxation (taxation during productive years). The Government itself has argued at times that social security tax exemption is inconsequential. Exemption of fewer (one-seventh as many) governmental pensioners would be of less consequence. The small amounts involved have been noted in official reports to the tax-making committees of the Senate and the House.

4. Taxation of long-lived aged pensioners substitutes high income taxation for lesser inheritance taxation. The income of the long-lived aged pensioner is possible through forfeitures of the short lived which the long-lived inherit. Other heirs share $60,000 estate exemption: here, too, governmental pensioners are the forgotten stepchildren.

5. Pensioners commonly retire on about half pay; that is, pensioners are commonly persons who have been accustomed to a standard of living double that possible for the remainder of life. Considerations of decency should prompt lighter taxation for their few remaining years.

6. If it is social security for private industry, Congress makes $1,440 tax free available after as little as 1½ years and after contrbution by the worker of as little as $81.

If it is governmental pension, Congress taxes $1,440 pension income $288 annually, more or less, after a lifetime of service. Why?

7. Tax exemption of social security pensioners was begun when the pension was small and the recipient poor. Under 1950 social security law, taxpayers in the 50 percent bracket have the equivalent of $3,600 additional other income, since they would pay $1,800 tax were it not social security.

With this Government bounty to the rich, there is no sound basis for withholding tax exemption in the $1,800 area to underpaid, underpensioned Government workers one-seventh as numerous, and with one-seventh the income of 45,000,000 industrials.

8. In both Government and industry, employer contributions for employee pensions are generally tax-exempt on the way in. In industry, they are also exempt on the way out via social security. Government employer money, on the other hand, is not exempt on the way out to the pensioner. It is taxed at 20 percent, more or less, compared to industry's 0. Why?

The overtaxation of governmental pension cuts two ways. It reduces the governmental pensioner's take-home pay and his standard of living. It compels taxpayers to raise additional millions of tax money to be siphoned from the local treasury to the Federal Treasury from private industry. Why the discrimination? Why?

9. Congress does not seek a profit from social security operation. It would be pleased if the Government were to break even.

Besides huge sums for the needy poor, New York City raises $100,000,000 a year for staff pensioners—persons retiring from its employ. New York City's staff pension appropriation must be as large as $100,000,000 annually because the

Federal Government, which seeks no profit from industry's contribution for pensions, collects an income tax beginning at 20 percent, from those whose pension income is derived from New York City taxpayers' local tax payment.

What have the States and cities done that their taxpayers and their employees retired should be worse treated taxwise, than industry and industry's 45,000,000? Local taxpayers and State and city pensioners are also people—and voters.

10. Finally. Unquestionably, present congressional treatment of the governmental pensioner is unplanned, inadvertent, accidental. Present congressional treatment cannot be condoned or justified. Congress need not apologize for or explain its past neglect. It must begin, now, equal tax treatment of industry's pensioners and Government's pensioners.

Why Not Equalization of Tax Exemption?

(Speech of Hon. Sidney A. Fine, of New York, in the House of Representatives, Wednesday, June 20, 1951)

Mr. Fine. Mr. Speaker, I would like to make the point that since the tax bill now before us is being considered under a closed rule, there will be no opportunity to offer an amendment during the debate except through the committee. I therefore address these remarks to the committee and respectfully urge them to amend the bill to provide the same tax exemption for governmental pensioners now provided for social-security pensioners and for railroad pensioners. The omission of this important provision has resulted in the following inequitable situation:

Consider the tax problem of three separate individuals doing the same type of work, one employed in private industry, the second by a railroad, and the third by a municipality. The first and second gain a tax exemption of $1,800 and the third no tax exemption at all on retirement. The first two take home $1,800 in pension pay; the third only $1,395 in pension—all income being the same.

The unfairness of the situation is even better pointed out by the following forceful illustration: Where we have a privately owned bus line which has been taken over by a municipality, the employees of said privately owned bus line already retired and receiving social security, or who retire just before unification, are given a tax exemption, but those who become part of the municipal scheme and later retire as members of the municipal pension system do not get the tax exemption.

What difference can there be between a social-security pensioner, a railroad pensioner, and a governmental pensioner? None, of course. And yet, the committee has rejected a provision sponsored by our colleague and member of the committee, the gentleman from New York, the Honorable Eugene Keogh, which would have eliminated this rank discrimination. What justification can there be for this differentiation?

The fight to put governmental pensioners on the same plane with social-security pensioners is being led by Ralph L. Van Name, the fiery secretary of the New York City retirement system who has lined up in support of the program the leading civil-service and public-employee organizations as follows:

New York State Joint Council Government and Civic Employees Organizing Committee, CIO.

The Civil Service Employees Association.

Civil Service Technical Guild.

Civil Service Forum.

The National Education Association.

The Congress of Industrial Organizations.

New York and New Jersey Retired Teachers Association.

National Association of Retired Teachers.

Retired Patrolmen's Association.

In addition to these organizations, organized Government employee groups and retired employee associations in California and Ohio and elsewhere are mobilizing for action on the controversy.

Much credit is due not only to Mr. Van Name, but also Mr. Jesse B. McFarland, president of the Civil Service Employees Association of the State of New York, Mr. Philip F. Brueck and Mr. Raymond E. Diana, chairman and executive secretary of the New York State Joint Council of the Congress of Industrial

Organizations, respectively, and the many other officials of the employee groups for their untiring efforts to bring about equality in treatment.

My interest in this legislation stems from my many years of active identification with these men and organizations and I am grateful to them for supplying me with information and data in the preparation of this statement. An analysis of said information and data supports the need for the adoption of the amendment.

First. Under the present income-tax bill, employees are taxed more if they retire from 1 of the 7,000,000 Federal, State, and city positions than if they retire under social security from 1 of the 45,000,000 positions in private industry. This is violently discriminatory.

Second. Pensioners are usually aged people. Income taxation of the aged forces continuance of aged employment to the detriment of youthful employment and advancement. Governmental pensioners, whose pension at one twenty-fifth of $1,800, that is, $72 for each year of 25 to age 65 are obliged to work seven additional years to age 72 to produce the $522 Federal income tax which would leave them with the $1,800 take-home pension available 7 years sooner to social security's untaxed $1,800 pension. Governmental pensioners must work up to 7 years longer solely because of Federal discrimination against governmental pensioners in income taxation.

Third. The tax bill as presently written continues an unconscionable hardship upon old persons who have served their adult lives in Government employment, and offers an additional argument for those who claim that Government service is growing less attractive in relation to private industry.

Fourth. It has been suggested that by this method, governmental employees would be compelled to become part of the social-security system to gain the tax exemption now in the law—certainly not a laudable way to treat the problem. If this be the motive, it amounts to an unfair trade practice and should be condemned. Furthermore, to force the many city and State employees into the Federal plan would be depriving them of all of the benefits of pension systems built up over many years of trial and error. The complexity of the change-over and the inherent difficulties, would make the transition much too difficult and costly.

Fifth. The place to derive taxes is from production. The time to derive pension tax income from the first-bracket taxpayers is during their productive years. Any first-bracket taxpayer—and there are millions of them—would prefer to pay more during his productive years, so as to be relieved of income taxation during his aged unproductive years. The Government would suffer no loss by using common sense in this matter. During his productive years, the taxpayer properly provides: (a) for his current needs, (b) for the current needs of the Government, (c) for the anticipated needs of his old age. If his successors do likewise as they would prefer to do, there will be no need to tax first-bracket aged. Certainly, this is true within the $1,800 area established for 45,000,000 industrial employees and ignored by Congress as to 7,000,000 governmental employees and pensioners.

* * * * * * *

Seventh. Governmental pensioners who survive their expectation of life as at their retirement age, are scheduled to benefit from the forfeiture to the fund of the capital equities of short-lived pensioners. The only way first-bracket wage earners may provide for costly survivorship in their eighties and beyond is by mutual consent at the outset to short-lived forfeitures to make possible long-lived payments if long life ensues. The Federal Government which provides tax free $1,800 income to industrial pensioners does not merely tax governmental pensioners similarly situated. If taxes, on an annual income-tax basis, inheritance received in annual installments by long-lived pensioners from short-lived pensioners—through retirement fund, of course. It is unprincipled and discriminatory to free industrial pensioners from all tax on $1,800 pension and then to tax governmental pensioners on an annual income-tax basis with that which is not annual income but annual installments of the inheritance by the long-lived from the short-lived through the retirement fund.

Eighth. The income which a Government employee earns is taxed as he earns it precisely as is the preretirement income of employees in private industry who are covered by social security; taxation of governmental employees should cease at retirement as it does prior to social-security retirement.

CONCLUSION

I suggest to the committee one of two proposals. Either that the bill be immediately amended to bring about even-handed justice in this regard or to agree to offer an amendment so that we, the Members of the House, may, by our votes, determine the question. By this method at least we can once and for all solve the problem of whether or not public employees are to be differently treated taxwise.

Senator BYRD. The Chair inserts numerous statements and letters in the record at this point.

STATEMENT OF EDWARD J. BRECK

1. My name is Edward J. Breck. I am vice president of John H. Breck, Inc., 115 Dwight Street, Springfield 3, Mass.

2. We are manufacturers of Breck hair and scalp preparations, including three different types of hair shampoos. John H. Breck, Inc., was created in 1929 as the outgrowth of a business providing hair and scalp treatments for men and women, established in 1907 by my father. In other words, we, the Breck family, have been shampooing heads of both men and women for over 40 years.

3. I submit this statement in opposition to the proposal of the Treasury Department to extend the definition of "toilet preparations," as it is found in section 2402 (a) of the Internal Revenue Code, to include shampoos containing more than 5 percent of saponaceous matter, and thereby place a 20-percent Federal retailers' excise tax on such shampoos.

4. Earlier this year the Secretary of the Treasury, in his statement to the Committee on Ways and Means, proposed that a 20-percent Federal retailers' excise tax be imposed on shampoos containing more than 5 percent of saponaceous matter in the 1951 tax bill then under consideration by that committee.

5. I appeared before the Committee on Ways and Means and submitted reasons why an excise tax should not be imposed on shampoos containing more than 5 percent. My statement before the Committee on Ways and Means appears on pages 2490 to 2493 of the printed hearings before that committee (pt. 3, Revenue Revision of 1951).

6. American women and men are thankful that the Committee on Ways and Means and the House of Representatives rejected the proposal of the Treasury Department to impose a tax on shampoos containing more than 5 percent saponaceous matters in approving H. R. 4473, the Revenue Act of 1951. The reason they are thankful is because, first, a shampoo containing more than 5 percent saponaceous matter is a soap, or its equivalent, and secondly, the primary function of a shampoo—just like a soap—is to clean. Regardless of its constituent materials and irrespective of the form, whether it be a liquid, paste, jelly, cream, or powder, a shampoo is, in effect, soap and is used to cleanse the hair and scalp of men, women, and children. So, the American public rejoiced at the action of the Committee on Ways and Means from a feeling that things had not gotten so bad that the Government had to impose a tax on cleanliness.

7. Despite the rejection of its proposal to tax shampoos by the Committee on Ways and Means and the House of Representatives, the Treasury Department recently made a similar proposal to the Committee on Finance of the Senate (see statement of Secretary Snyder before Senate Committee on Finance, June 28, 1951, table 4, schedule B: Miscellaneous excise-tax proposals).

8. As a result, it is necessary for me to again emphasize the primary purposes of shampoos containing more than 5 percent saponaceous matter and to point out why these items should not be made subject to a Federal retailers' excise tax.

9. Cleanliness and those products which promote it are not luxuries under American standards of living. Soaps, solid or liquid, lathering or nonlathering, synthetic or natural, which promote cleanliness are necessities in our country today.

10. Congress, in 1938, made its decision that soaps and shampoos were necessities and not luxuries when it terminated the manufacturers' excise tax which had been levied on those items, along with mouth washes and dentifrices. In the short time that they were taxed, they were taxed at the manufacturer's level at 5 percent as compared to other toiletries at 10 percent. In doing so, Congress recognized that any preparation that promotes the hygiene of the body, mouth, hair and scalp, is in a somewhat different category from those toilet preparations solely intended to beautify and promote attractiveness or alter appearance, and on which an excise tax was maintained.

11. You will recall that even during World War II, when the problems of financing that crises called for drastic action on the part of Congress, you did not see fit to impose an excise tax on such necessities as shampoos, soaps, mouth washes and dentifrices.

12. Shampoos are widely used day-in and day-out in every season by American families and such wide usage stamps these items as necessities in the American life.

13. Fawcett Publications in December 1950 completed 10 years of surveying personal preparations used by women. In 1942, which, in my opinion, was 10 years after the actual birth of the shampoo industry, according to this Fawcett survey 93 percent of the women reporting used shampoo in their home. Their 1950 survey stated a 97 percent usage. These surveys are typical of many surveys made by the publishers of such magazines as Good Housekeeping, Woman's Home Companion, and others, all of which indicate that approximately 97 to 98 percent of American families use hair shampoos.

14. In my own family, where there are six children from age 8 to 16, it is just as necessary to shampoo at age 8 as it is at age 16. Parents are the ones that know the 8-year-old should be shampooed for cleanliness purposes. At age 16, the girls, and I think boys, too, feel the need of shampooing for cleanliness, and of course, at that age for attractiveness, too.

15. I might point out here, without attempting to imply that I am a medical authority, that frequently at the teen-age level, it is necessary for both boys and girls to shampoo frequently. Many youngsters are confronted during that adolescent period with an acne condition, a very oily skin, scalp, hair. Cleanliness, while not a cure for such conditions, is a necessary adjunct to treatment.

16. For the older person, both male and female, frequently dry, oily hair and scalp and dandruff conditions can be helped by proper shampooing.

17. From time to time in this country, there have been epidemics of ringworm of the scalp among school children. Again, shampoos are not a cure for that skin disease but I feel that it indicates a definite need that the hair and scalp of men, women, and children should be kept clean and the easiest, simplest way to do it is by the use of a good shampoo.

18. Bar soap can be used to shampoo just as bar soap can be used to clean the teeth. I am sure that you feel that modern dentrifrices do a more efficient job of cleaning the teeth than bar soap and so also have shampoos replaced bar soap to clean the hair during the past 20 years.

19. Shampoos have increased tremendously in usage in the American home, because they accomplish better than any other materials a specific, specialized function—that of properly cleansing the hair and scalp. Bar soap has never been satisfactory for shampooing, particularly in the case of the long hair of women. The outer layer of the hair shaft is frequently likened to shingles on a roof. These tiny barbs on the hair are apt to catch and hold particles of bar soap, thus preventing free and clean rinsing of the hair. This undesirable action is particularly pronounced in hard water areas and it must be realized that the great majority of our people live in hard water areas.

20. The business of my own company, while that of manufacturing and selling hair and scalp preparations, is basically shampoos. During the past 5 years our variation from quarter to quarter differs only 9 percent between our lowest quarter and our highest quarter, indicating, I believe, a pretty consistent general year-round use of shampoo. In other words, it isn't a seasonable business. Shampoos are used, like bar soap, on a pretty consistent basis every month of the year.

21. Part of our total volume of shampoos is sold in the beauty shop field. The beauty shops cannot operate their business without shampoos.

22. The beauty shop business has had rather rough going in the last 4 or 5 years, due to some extent to the competition from home permanent waves, but mainly however, due to the decreased purchasing power of the American woman's dollar, increased cost of operating her home, feeding her family, etc. Now the Treasury Department proposes that she be further taxed if she is going to shampoo at home when she cannot readily afford to attend a beauty shop as frequently as she did a few years ago.

23. Perhaps a man cannot afford shaves in his barber shop because of the need of every dollar to support the family, yet the Treasury does not propose to tax shaving soap. He can shave at home without paying a tax.

24. The Bureau of National Affairs, Inc., in publishing, "Survival Under Atomic Attack as well as other similar direction folders, indicates that anyone exposed to radioactivity material or radio-activity should bathe with warm water and

soap. The National Affairs Bureau folder says, "In washing, pay particular attention to your hair for that is one place the waste is sure to pile up."

25. While that is rather a solemn note and a condition which certainly we all hope no one in America has to face, I could inject a little lighter note by referring to a cartoon which appeared in the February 16 issue of Time magazine in which an advertising executive, talking to the research librarian against a background of books, is saying, "Find out if any soap manufacturer has ever used the slogan, 'It gets you clean.'"

26. Shampoos should not be put at the disadvantage of being subject to a 20 percent excise tax when soap apparently is not going to be taxed. Shampoos are one of the few soaps or its equivalent preparations that small business can manufacture. Soap, bar and cake soap, powdered soap, etc., are manufactured by big business. There are many more brands of shampoo than there are brands of bar soap simply because the small manufacturer can manufacture shampoo with a minimum amount of investment in equipment and he can enjoy that privilege which is still American—the freedom to sell.

27. I feel that the American people are aware of the need for raising revenue to finance the mobilization program. However, I am sure they also feel that if excise taxes must remain as a part of our revenue system for an indefinite time, then they must be levied fairly and in a non-discriminatory manner. Shampoos are cleansing agents and, like soap, a necessity in America and our way of life today. Neither soap nor shampoos should be made subject to excise taxation. However, any proposal to tax shampoos and not soap is discriminatory and will work an unnecessary hardship on consumers and producers of shampoos.

28. The Treasury Department has estimated that a 20 percent tax on shampoos will yield about $8 million in taxes annually. I am sure the Congress will feel that the Government can forego this insignificant amount in order to promote the health and cleanliness of the Nation's hair and scalps.

29. In conclusion, the Committee on Finance of the Senate is respectfully requested to follow the action of the Committee on Ways and Means and the House of Representatives in rejecting the proposal to impose a 20 percent Federal retailers' excise tax on shampoos containing more than 5 percent saponaceous matter.

BAR ASSOCIATION OF THE DISTRICT OF COLUMBIA,
Washington, D. C., July 31, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: I enclose herewith a copy of a resolution adopted July 31, 1951, by the board of directors of the Bar Association of the District of Columbia, urging the adoption of the amendment to H. R. 4473, which was proposed by Senator Ives and referred to your committee on July 25, 1951.

As you know, the proposed amendment would permit the postponement of tax on a limited amount of the income of the self-employed, if paid into a retirement fund, thus placing the self-employed professional man on an equality with corporate employees who now enjoy this opportunity to build up a reasonable retirement fund.

In the interest of fairness and equity, we respectfully urge the favorable consideration of this amendment by your committee, and that this resolution be included in the record of the current hearings on H. R. 4473.

Sincerely yours,

LEONARD P. WALSH, *President.*

Whereas the present high levels of Federal taxation on earned income make it virtually impossible for professional persons and other recipients of earned income to provide for their retirement from their income; and

Whereas the problem of providing retirement benefits has to a great extent been solved for corporate employees by section 165 of the Internal Revenue Code; and

Whereas the need for such retirement benefits is equally great in the case of professional persons and other persons having earned income but not covered by a pension plan; Now, therefore, be it

Resolved, That the board of directors of the bar association of the District of Columbia favors in principle amending the Internal Revenue Code so that taxpayers not covered by a pension plan qualified under section 165 of the Code may be encouraged by a tax credit, a tax deduction or other means to accumulate, out of current earned income, funds which would be available under appropriate regulations of the Treasury Department to provide retirement income for such taxpayers; and be it further

Resolved, That the president of this association be directed to urge upon the appropriate committees of the Congress the adoption of the amendment to H. R. 4473 proposed by Senator Ives and referred to the Senate Finance Committee by the Senate on July 25, 1951.

STATEMENT OF STANLEY VAN DAMM, ELIAS KRAFT & CO., NEW YORK, N. Y.

Recommendation to make average base-period computation more equitable to corporations formed during the base years (1946–49).

It is my opinion that the Excess Profits Tax Act is equitable, that it has one major inequity which is not glaring only because those corporations that are at an unfair or inequitable disadvantage are small corporations formed during the period 1946–49; of this group those having the greater efficiency are subject to the greater inequity.

The Excess Profits Tax Act presumes 1946, 1947, 1948, and 1949 to be (peace years) normal years. As such I have termed earnings during this period as "normal earnings."

Let us illustrate a case—a small corporation is formed June 30, 1948. It is a very efficient firm and until December 31, 1949, makes $180,000 or an average of $10,000 a month. This corporation actually has an average annual earning of $120,000 made in what is considered normal years—normal earnings such as these are not excessive. I do not think that such earnings, continued after December 31, 1949, were thought by Congress to be excessive, yet the result taxwise is just that. Actually this is the computation of the average annual earnings under the Excess Profits Tax Act, for such a new corporation organized June 30, 1948:

1946	0
1947	0
1948	$60,000
1949	120,000
Best 3 years	120,000
Average annual earnings	60,000

A corporation formed before 1946 has many advantages. Nineteen hundred forty-six basically was a prosperous year. The average annual earnings take the best 3 out of 4 years of actual earnings. Thus:

1946	$250,000
1947	150,000
1948	80,000
1949	120,000
Best 3 years	450,000
Average annual earnings	150,000

The new corporation was in business 18 months in the base-period years and made $180,000, or an average of $120,000 a year, but finds itself using $60,000 for tax computation.

The corporation in business 4 years actually earned $300,000, or an average of $75,000 a year but finds itself using $150,000 for this tax computation.

The old corporation thus has an obvious advantage, which it is fortunate to possess. But why unduly penalize a new corporation for not having engaged in business during the Second World War? In one case I represent a client who got out of the Army during the base-period years, formed a small corporation with certain other individuals. He and his family own almost all of the stock. He is the only officer drawing a salary—but because he was in the Army, he is now penalized in just such an instance.

Let us explore beyond this immediate hardship that is applied to a new corporation. All corporations are allowed an alternative, i. e., 12 percent of its capital and surplus, but most corporations organized during the base-period years do not have large capitals; nor have they been in business long enough to accumulate a large surplus; thus, this alternative is not to the advantage of a new corporation.

As to relief sections, and there are many relief provisions, all of them are open only to corporations organized prior to January 1, 1946, with one exception; the one exception is the dubious relief that is given to new corporations. That is a ratio of their industry's earnings to their assets. This ratio is computed by combining the average of all corporations' profits to assets; the average includes the efficient and the inefficient—an immediate disadvantage to an efficient organization. Many efficient firms turn over their money many times during the year, thus requiring less assets. In preparing tax returns this year I could use this new corporation formula in only one instance; in that case the taxpayer through inefficiency and bad purchases had abnormally large assets, but their bad business judgment gave them large assets and an advantage under the new corporation formula over a competitor with about the same capital who did a bigger business with less assets.

Any corporation formed at least 1 year before December 31, 1949, has had an opportunity of earning normal profits even if the start is slow, as it is with most new corporations. Why should they not be permitted to use their actual average earnings? Why treat corporations formed in peacetimes as if they were war babies formed after Korea? This inequity can be corrected by permitting new corporations to use their actual base-period average. It is my further recommendation that this inequity should be corrected retroactively to the beginning of the Excess Profits Tax Act.

Statement of John E. O'Neill, General Counsel of the Small Brewers Association

My name is John E. O'Neill. I am an attorney and my office address is suite 604, Washington Building, Washington, D. C. I appear today as general counsel of the Small Brewers Association. The main office of the Small Brewers Association is 188 West Randolph Street, Chicago, Ill.

The Small Brewers Association is the largest American trade association of brewers in point of membership. It numbers in its membership approximately 250 of the 407 breweries now operating in the United States. While these small brewers constitute a majority of the breweries in the United States, the volume of their production is estimated to be only about 30 percent of the total volume of production.

Due to the local and sectional nature of the operations of these small plants, and the pressure of competition from large producers, they would be more acutely affected by increased excise taxes than their large heavily financed competitors who do a national business. The Treasury Department's proposal to increase the beer excise tax from $8 to $12 a barrel, if adopted, would bankrupt half of the small breweries in the United States who are even now struggling to survive under the heavy tax burden imposed by Federal, State, and local laws.

SMALL PLANTS NEED TAX RELIEF

The last time I appeared before this committee in February 1950 I urged the committee, on behalf of small brewers, to reduce the beer excise tax from $8 to $7 a barrel, if not for the industry generally, at least for the small units of the industry. In connection with this recommendation I pointed out the growing trend toward concentration of production in fewer and fewer plants, and the increasing number of failures and bankruptcies among local operators. The situation has not changed in the past year. The four largest brewers in the United States now enjoy over 21 percent of the total volume of business, whereas in 1945 the four largest companies enjoyed only 11.8 percent of the business. This growing trend toward concentration is further indicated by the fact that the 25 leading breweries in the United States now enjoy more than 50 percent of the total of the volume of business, while the other 50 percent is divided in varying poportions among the other 375 plants. In 1934 there were 725 breweries operating in the United States. At the end of the last fiscal year, according to internal revenue statistics, there were 407 plants operating. During that period the volume of beer production has increased from approximately 30 million barrels to approximately 89 million barrels annually. Of the 318 breweries that closed since 1934, about 60 failed in the past 3 years.

AN INCREASED EXCISE TAX WOULD FALL MOST HEAVILY UPON SMALL OPERATORS

The large manufacturer in every field, as a matter of common knowledge, has competitive advantages over the small producers. His very bigness gives him the competitive advantage. The brewing industry is no exception.

In the brewing industry the prices charged by the large producers, for their nationally distributed beers, are substantially above the level of prices charged by their local and regional competitors. Consequently, with an equal rate of tax on all production, it is obvious in the case of local beers sold by small brewers that the tax represents a substantially higher percentage of the sales price than in the case of the nationally advertised brands. A Massachusetts brewer called me only a few days ago to point out that his product sells for $24 a barrel, which includes the $2 per barrel State tax and the $8 Federal tax. In his case, 42 cents of every dollar represents excise taxes. On top of that he pays occupational taxes and license fees, and income taxes if he has any income left.

Wisconsin and Missouri beer sells in Massachusetts for $30 a barrel, including the State and Federal tax, so that the tax on these higher-priced beers represents only 33⅓ percent of the sales price. If the Treasury's proposal for an additional $4 increase is adopted, 50 cents of every dollar the local brewer collects for his draft beer will be paid over in excise taxes. The large brewers' contribution will be proportionately less.

The situation in Massachusetts is typical of the country. It can be said conservatively that in the case of the average small brewer, the tax on his production represents from 40 to 45 percent of his sales price, as compared with 33⅓ percent of the sales price in the case of large producers.

AN INCREASED EXCISE TAX WILL REDUCE CONSUMPTION

Because of high prices, necessitated by high taxes, the per capita consumption of beer in the United States is lower today than it was 5 years ago. During the late war, and for some time thereafter when payrolls were high, and money free, the volume of beer production held up even under the burden of high excise taxes. However, for the past three fiscal years, according to internal revenue reports, the volume of beer production has dropped, as follows:

Fiscal year ending June 30—	*Barrels produced*
1948	91,291,219
1949	89,735,047
1950	88,807,075

Most of the loss in this volume of business was felt by the smaller plants who could not finance large advertising programs to keep up sales.

Any increase in current tax rates, with resulting increases in the sales price, will undoubtedly accelerate the trend toward reduced beer production, and this will be felt first by the small local units of the industry who sell the economically priced beer and whose principal patrons are those in the lower-income brackets.

INCREASED BEER EXCISE TAXES WOULD DISCOURAGE MODERATION

Beer is the beverage of moderation. It is lower in alcoholic content than any other alcoholic beverage. It has high nutritional value as a food and it is healthful to consume. Beer is the workingman's drink and it should be priced within the reach of the workingman. The days of the 5-cent glass of beer are gone, and the 10-cent glasses are becoming smaller and smaller, because of increased costs and increased taxes. An additional 50-percent increase in the Federal excise tax would eliminate the 10-cent glass of beer, and place the cost of the product beyond the reach of many beer consumers in the working class. This indeed would constitute a blow to the cause of moderation in alcoholic beverage consumption and would not be for the good of the country.

The Treasury's proposal of the 50-percent increase in the excise tax on beer is also highly discriminatory, when considered in the light of its proposal that distilled spirits taxes be increased by only 33⅓ percent. If alchoholic-beverage taxes need to be increased to raise the revenue, it is certainly illogical to impose the highest percentage increase upon the beverages containing the lowest alcohol.

CONCLUSION

In conclusion, the Small Brewers Association respectfully urges your committee not to report favorably upon any increase in the current rate of excise taxes upon beer because—

1. The burden of such an increase would fall most heavily upon small producers and force many of them out of business;

2. Further increases in beer taxes would discourage moderation in the consumption of alcoholic beverages;

3. Such an increase would place the cost of the working man's drink beyond the reach of the workingman;

4. The Treasury proposal of a 50-percent increase in the beer excise tax is highly discriminatory.

NEW YORK STATE BANKERS ASSOCIATION,
New York, N. Y., July 31, 1951.

Hon. WALTER F. GEORGE,
Chairman, Finance Committee of the Senate,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: The New York State Bankers Association represents 97 percent of all commercial banks in the State of New York, and these banks constitute a major segment of the banking system of the country. Because of the importance of these banks in the Nation's economy, we urge that consideration be given to alleviating the burden that the excess-profits tax, in its present form, places upon many of these banks.

The inflationary trend of our times has caused a tremendous increase in bank deposits and risk assets. To protect these risk assets adequately, many of the banks should raise additional capital funds, and this can be done by only two means: (1) the obtaining of fresh capital and (2) the retention of a fair amount of the net earnings and profits, after the payment of reasonable dividends. Either method fails of success if there is not adequate earning power, and it is evident that this earning power is presently and prospectively lacking when one finds so many bank stocks selling at 25 to 30 percent discount from book value.

While gross operating income has improved, the additional earnings have not kept pace with the rise in expenses and higher income taxes. A further decrease in net operating earnings can be expected in many banks as a result of the provisions of the excess-profits-tax law which reduces the exemption credit from 12 percent on the first $5,000,000 of invested capital to 10 percent on the second $5,000,000, and to 8 percent on the balance of invested capital. After allowing for the approximately 50 percent normal and surtax income rates, this means that such banks will be permitted yields of only 6, 5, and 4 percent before being subject to excess-profits taxes.

Yields of less than 6 percent would not appear to be large enough to justify being classified or considered as being "excess profits." Such low limits also appear to be discriminatory when compared with the more favorable treatment accorded to public utilities and railroads.

To rectify this situation, to strengthen the capital funds of banks, and to protect the investments of hundreds of thousands of holders of bank stocks, we strongly urge that the law be amended to provide a flat exemption credit of 12 percent of invested capital, irrespective of amount.

Respectfully yours,

WILLIAM T. TAYLOR,
President, New York State Bankers Association.

STATEMENT OF HERBERT C. JACKSON, PARTNER, PICKANDS MATHER & CO., AND CHAIRMAN OF TAX COMMITTEE OF LAKE SUPERIOR IRON ORE ASSOCIATION, CLEVELAND, OHIO

IDENTIFICATION AND QUALIFICATION

I am Herbert C. Jackson, a partner in the firm of Pickands Mather & Co., of 2000 Union Commerce Building, Cleveland, which operates iron-ore mines in the Lake Superior district of Minnesota, Michigan, and Wisconsin.

I appear also as chairman of the tax committee of the Lake Superior Iron Ore Association, representing most of the companies which mine and ship iron from the Lake Superior district, which normally supplies more than 80 percent of all the iron ore required for the iron and steel industry of the United States.

The iron-ore activities of our firm include both open-pit and underground operations, involving all types of mining of both shallow and deep ore bodies. During the past 5 years, as managers, we produced and shipped 16 percent of total output of the Lake Superior district.

My duties with Pickands Mather & Co., presently and for the past 35 years, have been intimately connected with iron-ore mining.

SUBJECT

My comments are directed to the support of section 302 (a) (D) of the pending revenue bill, H. R. 4473, relating to the treatment of expenditures for the development of mines. This proposed amendment to the tax laws is of great importance to the iron-ore industry which I represent, and I understand is likewise important to many other branches of mining. However, I shall confine my discussion to the significance of this provision as regards iron-ore mining with which I am familiar.

Representative John R. Dingell of Michigan, member of the Ways and Means Committee, who is an ardent advocate of conservation and development of our natural resources, has been the earnest sponsor of this amendment, as a measure to stimulate development of latent, vitally needed mineral resources, not only in Michigan but throughout the Nation.

As stated in the Ways and Means Committee report, this amendment is intended to eliminate "a serious obstacle to the expansion of the mining industry" which exists because of the present arbitrary rule requiring that all development costs in excess of net receipts from any minerals produced while a mine is in the development stage must be capitalized and recovered through the allowance for depletion.

I assure you that the existing rule is a serious deterrent to developing and bringing into production new iron-ore mines which are absolutely vital to maintaining the supplies of iron ore on which our national economy and security depend. The present national emergency makes it imperative that our supplies of mineral raw materials—of which iron ore is paramount—be expanded rapidly, not only because of the need for the minerals but because only increased production can provide the new sources of tax revenue on which the Government depends. Laws and regulations which destroy incentives to production, and thus the sources of income, must be modified.

The confiscatory tax rates on individuals in the upper income brackets, as proposed in the pending bill, go far to destroy the sources of income sought to be taxed. Whether or not the country can long survive this sort of taxation on its individuals is a question, but there can be no question that unreasonable taxation cannot be applied without disastrous results to the productive enterprises vitally needed in the defense effort and for the general welfare of the Nation at all times.

Section 302 (a) (D) will provide a real incentive to the expansion of iron-ore capacity and production, thereby accomplishing a twofold purpose of providing both an essential raw material and additional sources of tax revenue.

TREATMENT OF NEW MINES UNDER EXISTING LAW

The House committee report points out that the existing law and regulations require that while a mine is in the "development stage," that is, prior to the time the main business of the operation is production of ore, the net cost of the development must be capitalized and recovered out of the depletion allowance, whereas after a mine has reached the "production stage," the identical type of development costs are no longer treated as capital charges recoverable through depletion, but are deductible operating expenses, as they should be.

The effect of requiring preproduction development costs to be capitalized and recovered through depletion is disastrous to the depletion allowances of prospective new iron-ore mines in the Lake Superior district, because the tremendous preproduction costs of developing the remaining deeper and smaller ore bodies, when amortized in future costs, practically cancel the percentage depletion allowance.

The difference in tax treatment of development expenditures incurred prior to the production stage and of identical expenditures made after the mine is in the production stage is purely arbitrary. It creates serious inequities and definitely hinders the development of the reserves in deep open pit mines and deep underground mines from which most of the future high grade natural ores must be produced. This distinction between preproduction and during-production development expenditures was established in 1934, quite contrary to the previous 20-year history of Bureau practice. It was also at variance with the so-called Parker report of the Joint Committee on Internal Revenue Taxation, used by Congress in 1932 as a basis for its determination of the depletion allowance at the time percentage depletion was extended to metal mines, including iron ore mines. This report, based on a careful statistical study, showed that the actual depletion allowed iron ore mines by the Bureau during the 5-year period, 1922 to 1926, inclusive, amounted to 17.74 percent of their gross income. This allowance was in addition to the amortization of all capital costs for development, both preproduction and during production. If development costs were to be recovered through depletion, as subsequently determined by the Bureau, this percentage would have been higher.

In 1934 the distinction between preproduction-development expenditures and expenditures for development after reaching the productive stage was not too important to the iron-ore industry. At that time the ore reserves in the Lake Superior district, as estimated by the various State tax commissions, in terms of the then current shipments, apparently were ample for many decades. Iron ore was a drug on the market, the open-market sale price per ton being about equivalent to the price of a ton of gravel. The general feeling in the industry that iron-ore reserves were practically inexhaustible, and certainly ample supplies of ore were readily available. At that time also the existing open-pit and underground mines had been in operation for many years; thus preproduction development expenditures had been largely recovered. These development expenditures then were never too significant, because the large open pits had required relatively little stripping prior to starting production, and the underground mines were relatively shallow and the cost of shaft sinking relatively low.

An example of the changed situation with reference to preproduction-development expense is indicated by the experience of my firm. In the open-pit mines, which we now operate, it has only been necessary to remove, on the average, less than 1 ton of stripping per ton of ore developed for mining, whereas from the proposed open pits which we either are now stripping or hope to strip in the future, an average of about 6 tons of stripping is required for each ton of ore. In contrast to the large and wide open pits of the past, these new pits are small and confined, and much deeper, requiring removal of 200 to 400 feet of surface deposit before the ore body is reached. Practically all of this overburden must be removed prior to production of ore. The average cost of removing 6 tons of material is approximately $1.20, which is decidedly more than the allowable percentage depletion per ton of ore mined. Thus, the present requirement that preproduction development be recovered out of the percentage depletion allowance has the effect of completely eliminating percentage depletion as a deduction for these new open pit mines.

A similar situation exists with respect to the underground mines. With some exceptions, prior to 1934 underground mines generally reached depths of only about 500 to 1,800 feet, whereas the prospective future underground mines now possible to be developed will be 3,000 to 5,000 feet or more in depth. Shaft sinking, which, prior to 1934, cost less than $100 per foot, now costs about $500 per foot, and other costs likewise are greatly magnified. These increased preproduction development costs, amortized over the tonnage benefited, and recovered through percentage depletion as presently required, greatly reduce or even eliminate the percentage depletion deduction for these prospective new deep, underground mines.

If the essential new iron ore productive capacity is to be allowed a percentage depletion deduction that means anything, then the changed physical conditions accompanying the development of these new mines requires a change in the revenue laws, so that preproduction development expenditures will be rightly considered as advance operating expense, to be deferred and recovered independent of the percentage depletion allowance.

The proposed amendment in section 302 is intended to provide the same treatment for preproduction development as for the later development expenditures when the mine is in production. This amendment recognizes the fact that preproduction development is simply an advance operating expense, to be deferred and deducted ratably against the tonnage benefited, the same as any other operating expense which may not properly be deducted in the year made.

The amendment at once eliminates a legal inequity and at the same time gives encouragement to every producer of iron ore to open new properties. With this discrimination against new mines eliminated, operators of such properties can look forward to competing on a more nearly equal basis with the old established but exhausting mines.

THE NEED FOR NEW IRON ORE MINES

I have already referred to the vital need for increased iron-ore supplies to support the expanding steel production, and this is well known to all of you. A simple fact that may not be so well known, is that this country does not lack adequate reserves of iron minerals, for in its combined remaining high-grade and low-grade deposits, there is sufficient iron to support the steel industry for an indefinitely long period. What we do lack are sufficient reserves presently developed to produce, for a prolonged period, the anticipated annual iron-ore requirements of the steel industry. We must develop new iron-ore mines to replace existing mines which will become exhausted in the near future. Our dire need is sustained annual productive capacity of iron ore, rather than reserves.

This year the production of iron ore in the Lake Superior district will exceed 90,000,000 tons. Present operating mines cannot long continue to yield this large annual production and, unless new mines are developed promptly to replace those being exhausted, there will be a drastic curtailment in annual productive capacity in a relatively few years.

This curtailment need not occur. As I have stated above, ample reserves of iron minerals are available in the Lake Superior district, and annual productive capacity can be maintained and increased if development of such reserves is given the necessary stimulus. This will mean development, at previously untouched depths, of underground mines in Michigan and Wisconsin, and of deep flat ore bodies in Minnesota requiring extraordinary stripping. Also, it will mean the development of production from the practically inexhaustible supplies of low-grade iron-bearing rock, the so-called "taconite" of Minnesota and the "iron formations" of Michigan and Wisconsin.

However, the development of production from the low-grade taconite and other iron formations involves vast expenditures of risk capital for pioneering in new fields. In order to give positive encouragement to the very large expenditures for plant and equipment and preparatory work in these enterprises, the tax relief offered by this amendment relating to development expenditures is wholly inadequate. Congress should give consideration to more positive measures to stimulate the creation of productive capacity from these new sources.

For the benefit of the country, not only in the present emergency but for the long future, it should be evident that the tax discrimination against the development of new mines needs to be promptly eliminated. The proposed amendment in section 802 is intended to accomplish this. By encouraging needed new developments, it will foster increased domestic production of iron ore and other minerals, with all the obvious benefits to our self-sufficiency and our security as a nation, and to the revenue requirements of the Government.

MEDICAL SOCIETY OF THE COUNTY OF NEW YORK,
New York 20, N. Y., July 31, 1951.

HON. WALTER F. GEORGE,
Senate Finance Committee, Washington, D. C.

DEAR SENATOR GEORGE: At the stated meeting of the Medical Society of the County of New York held on April 23, 1951, the following resolution was adopted and the recommendations of the American Bar Association were endorsed in principle:

"Whereas the present high levels of Federal taxation on earned income make it virtually impossible for professional persons and other recipients of earned income to provide for their retirement from their income; and

"Whereas the problem of providing retirement benefits has to a great extent been solved for corporate employees by section 165 of the Internal Revenue Code; and

"Whereas the need for such retirement benefits is equally great in the case of professional persons and other persons having earned income but not covered by a pension plan; and

"Whereas the American Bar Association has made a special study of and has prepared legislation to be submitted to Congress aimed to make available to those persons having earned income but not covered by a pension plan; now, therefore, be it

"*Resolved*, That the Medical Society of the County of New York support, and seek to participate in, all measures that may facilitate the enactment of this proposed legislation into law; and be it further

"*Resolved*, That the Medical Society of the County of New York advise the special committee of the American Bar Association on retirement benefits for lawyers of its action; and be it further

"*Resolved*, That the Medical Society of the County of New York advise and urge State and National support of this proposed legislation by the Medical

Society of the State of New York and by the American Medical Association; and be it further

"*Resolved*, That the delegates be instructed to present the above resolution to the House of Delegates of the Medical Society of the State of New York at the annual meeting in May 1951."

Since the adoption of the above resolution, measures have been introduced by Representatives Coudert, Keogh, and Reed, and while the society is thoroughly in accord with Representative Coudert's measure in principle, we are more favorably disposed to the identical measures introduced by Representatives Keogh and Reed.

Sincerely yours,

HERBERT S. OGDEN, M. D., *Secretary*.

REQUEST BY TEACHERS INSURANCE AND ANNUITY ASSOCIATION OF AMERICA TO AMEND SECTION 22 (b) (2) (B) OF THE INTERNAL REVENUE CODE

This request is made by Teachers Insurance and Annuity Association of America, hereinafter called TIAA, a nonprofit organization with offices at 522 Fifth Avenue, New York, N. Y. TIAA serves as the medium for funding the retirement plans of more than 600 educational institutions, including most of the colleges and universities in the United States which are not under public retirement systems. Its funds presently accumulated toward retirement benefits are over $300,000,000 and it serves over 65,000 persons.

TIAA requests that section 22 (b) (2) (B) of the Internal Revenue Code be amended by inserting the language italicized below:

> "(B) EMPLOYEES' ANNUITIES.—If an annuity contract is purchased by an employer for an employee under a plan with respect to which the employer's contribution is deductible under section 23 (p) (1) (B), or if an annuity contract *providing for payments of either fixed or variable amounts* is purchased for an employee by an employer exempt under section 101 (6), the employee shall include in his income the amounts received under such contract for the year received except that if the employee paid any of the consideration for the annuity, the annuity shall be included in his income as provided in subparagraph (A) of this paragraph, the consideration for such annuity being considered the amount contributed by the employee."

This amendment is made necessary by the organization of a new agency to complement TIAA's present funding of retirement benefits. Under the existing arrangement all of the funds contributed by a college and its employees toward retirement are being invested in fixed dollar obligations to produce a guaranteed dollar income upon the individual's retirement. It is proposed that a part of these funds (not to exceed 50 percent of those for any one individual) will be placed in a new organization which will invest entirely in common stocks and other equities. The individual will be credited with units of participation in the fund, and upon his retirement the units standing to his credit will be converted on an actuarial basis into an annuity stated in terms of units rather than dollars. Each payment then made will be in the dollar value of the units at the time of payment, and will fluctuate with the total value of the fund.

This new equity fund should provide a hedge against the destructive effect inflation has upon fixed dollar retirement benefits. The possibilities of increased yield and capital appreciation in common stocks and other equities should to some extent offset any further general increases in the price level. The use of the annuity payable in terms of units will continue this hedge into the retirement period for the individual.

For tax purposes there is no significant difference between this arrangement and the present TIAA plans it is designed to complement, and the same result should be reached as now applies under section 22 (b) (2) (B) to the present college annuity plans. This basis is the same as that applicable to pension trusts, namely, that the employer's contribution is not taxable income until it is actually received as annuity payments.

The Bureau of Internal Revenue has ruled that the new method of payments does not come within the existing language of section 22 (b) (2) (B) since that section makes no express provision for payments to a retired employee that vary in amount. As a result it seems that the only means of obtaining the natural tax consequences in the situation is by amending the section as we are requesting.

Respectfully submitted,

GEORGE E. JOHNSON,
Vice President and Secretary,
Teachers Insurance and Annuity Association of America.

Statement of Charles N. Ford, Counsel, Beauty & Barber Supply Institute, Inc.

My name is Charles N. Ford. My home is in Arlington, Va., and I am engaged in private law practice at 201 Barr Building, Washington, D. C. I am appearing as Washington counsel for the Beauty & Barber Supply Institute, Inc., with principal offices at 10 West Forty-fourth Street, New York, N. Y. The Institute is a trade association representing some 650 wholesale dealers in beauty and barber supplies throughout the country. In addition approximately 320 manufacturers of beauty and barber supplies are associate members of the Institute.

This statement is submitted to the committee in support of the amendment contained in section 482 of H. R. 4473 repealing certain excise taxes imposed upon sales of toilet preparations under section 2402 of the Internal Revenue Code.

The bill would exempt from the retailers' excise tax sales of toilet preparations to the operator of a beauty or barber shop, or similar establishment, for use in the operation thereof.

TAX IS A HYBRID—IMPOSED ON SALES AT WHOLESALE

Section 2402 (b) specifically provides that the sale of such articles to beauty and barber shops for use in the operation thereof "shall be considered a sale at retail." Aside from this statute such sales are in fact wholesale. They are made in professional quantities at wholesales prices, are recognized by the industry as wholesale, and have been classified as sales at wholesale by the Wage and Hour Division of the Department of Labor. We can learn of no other instance in which the retail excise tax has been extended to cover sales at wholesale. Subsection (b) of the proposed amendment recognizes this anomaly and corrects it by stating that such a sale "shall not be considered as a sale at retail."

TAX IS ON TOOLS OF TRADE AND BUSINESS COST ITEMS

Toilet preparations used by beauty and barber shops in the performance of their services are indispensible tools of these occupations. Many services could not be performed at all without the toilet preparations subject to this tax. It is also true that they are business cost items.

The Congress has been reluctant in the past to impose excises on business cost items such as these which are passed along to the ultimate consumer and pyramided in the process. It has established even a stronger policy against imposing excises upon the tools of trade of a particular profession or occupation. There is no more justification for taxing materials used by the barber or beautician in performing his services than in taxing the leather used by the shoe repairman, the cleaning fluid used by cleaning shops, or the gold used by dentists in their profession. This tax has long been outmoded by the standards of taxation established by the Congress itself, and therefore should be repealed.

CERTIFICATE OF PURCHASE FOR RESALE SHOULD BE ABOLISHED

Under existing law, sales to beauty and barber shops for consumption therein are subject to tax, whereas sales to shops for resale are exempt from tax. To assist in collection on all taxable sales, the Bureau of Internal Revenue has imposed upon the seller, in the case of sales to shops for resale, the duty of obtaining from the purchaser a certificate of tax exemption known as a "certificate of purchase for resale." The wholesaler must report all sales monthly (showing exempt sales), keep records of exempt sales and retain the certificates of exemption on file. This burden has cost the wholesale distributors of cosmetics hundreds of thousands of dollars through the years. Since the proposed amendment would relieve the wholesaler of the duty to pay excise taxes on all sales of cosmetics to beauty and barber shops, we respectfully urge that the committee make clear in its report that the amendment is intended to eliminate the necessity of requiring the seller to obtain certificates of tax exemption from the purchaser where sales are made for resale. We believe if this is done the amendment as written will be adequate.

COLLECTION PROCEDURES PLACE SHOPS AT COMPETITIVE DISADVANTAGE

There are in round numbers 92,000 barber shops, 75,000 beauty shops, and 2,500 combined beauty and barber shops in the United States, employing a total of 157,164 persons, according to the latest census figures. These are indeed small enterprises. To the extent that they sell cosmetics at retail, they are in competition with big business—drug stores, 10-cent stores, and department stores, many of them chain store combines. But the beauty and barber shops are the only retailers of cosmetics burdened by the Bureau of Internal Revenue with the certificate of purchase for resale, bookkeeping, and reporting in connection with their purchases of cosmetics. It is significant that in spite of the fact that beauty and barber shops are natural retail outlets for cosmetics, census figures show that less than 5 percent of the shops sell cosmetics. It is reasonable to conclude that repeal of this discriminatory and burdensome collection procedure would result in increased taxable sales of cosmetics through beauty and barber shops. It would restore the shops to their rightful competitive position, give them an opportunity to augment their incomes, and offset any revenue loss that might result from repeal of the tax in question. It is of great importance to the shops, therefore, as well as the wholesalers, that the proposed amendment be approved and that the Congress in doing so make abundantly clear that the amendment is intended to eliminate the necessity for continuing the use of the certificate of purchase for resale.

SAFE DEPOSIT & TRUST CO., OF BALTIMORE,
Baltimore, Md., July 31, 1951.

Hon. WALTER F. GEORGE,
Senate Building, Washington, D. C.

DEAR SENATOR GEORGE: The revenue bill of 1951 (H. R. 4473) now before the Senate Finance Committee, contains a provision, in section 201, which has given us concern because of its effect upon people of moderate means. Our business is largely devoted to the management of estates, trusts, and agencies. A majority of the beneficiaries of these accounts are of this group. We also represent various hospitals, churches, and like charitable institutions which are exempt from tax.

This provision requires payors of interest and dividends to withhold 20 percent thereof, to be paid over to the Government and applied on account of the tax liability of the payees; but in most cases, the amounts withheld will exceed materially their tax liabilities because, for one important reason, no allowance is made for the exemptions to which they are entitled. For example, an individual who receives an income of $2,400 derived from such interest and dividends would be entitled to exemptions of $600 to $2,400, depending on age, marital status, or dependents, which would reduce materially or wipe out his tax liability. Yet $480 would be retained from his income until his return is filed in the succeeding year, and until he files and is allowed a claim for refund by the Bureau of Internal Revenue. As a result, he would be deprived of $480 (or a portion thereof) without interest for a considerable period of time. This manifestly would produce a hardship.

The same would be true of religious and charitable organizations. While it is true they would be allowed to apply social security taxes against this retention, in most cases, this allowance would afford minor relief. On the other hand, these institutions would be required to forego a large part of the income on which they rely for the maintenance of their activities.

The beneficiaries of the trusts and estates whom we represent are largely widows, dependent children, and others who cannot be gainfully employed and whose taxes would be less than the amounts retained.

If this provision is enacted into law, millions of claims from people of modest means must be handled by the Bureau of Internal Revenue; so that the process of making refunds will inevitably be delayed. These people are, as a rule, not conversant with the machinery set up by law for securing refunds; they would be required to establish to the satisfaction of the Bureau the extent of their overpayments and the items from which the retentions were made; so that the Bureau could verify the claims. In many cases they would be put to the expense of employing assistance.

While the burden of securing these refunds will, of course, fall upon the people and institutions above-mentioned, it will, in addition fall upon the banks and the trust companies to whom these people will turn for assistance; and this will occur at a time when the staffs of these institutions are reduced by enlistments and the mounting needs of defense industry. Our institution is required to prepare some 5,000 Federal and State returns each year, which will be affected by this provision. The State authorities are concerned as to the manner in which State returns reflect the retentions; and we understand that the Maryland authorities are considering the need for a detailed report to accompany the returns, to establish the correctness thereof. In our institution alone, the retentions will affect hundreds of thousands of separate items of interest and dividends.

Questions will arise as to the treatment of special cases such as stock dividends and the like which would have to be ironed out between the Treasury Department and the recipients.

When we consider the hardships which will be imposed upon the people of modest means—and they are the most numerous taxpayers—and the burdens which will be imposed alike upon the Bureau of Internal Revenue, the collectors, banking institutions, and the State taxing authorities, it is our considered belief that the injustices and the burdens on everyone concerned will outweigh the mischief at which the provision is aimed. The overwhelming majority of people make honest returns; and they and the churches and charities would be penalized because of the evasions of a minority.

We therefore respectfully ask your consideration for the elimination of this provision. The people must of necessity face the prospect of increased taxes and other privations resulting from our defense efforts; and they should not be asked to assume the additional burdens that this provision would impose.

Respectfully yours,

D. LUKE HOPKINS.

INDEPENDENT PETROLEUM ASSOCIATION OF AMERICA,
Washington, D. C., August 1, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington 25, D. C.

DEAR SIR: This is to urge your committee to reject the proposal set forth in section 493 of H. R. 4473 providing for a 3-percent tax on the transportation of oil by water in privately owned vessels.

The Independent Petroleum Association of America opposes this proposal primarily because of its discriminatory effects in the following respects:

(1) The proposal singles out the private transportation of oil and therefore is discriminatory with respect to other commodities, including competitive fuels, privately transported.

(2) The proposal applies only to transportation by water, from one point in the United States to another. It therefore is discriminatory against domestic oil in favor of foreign oil.

There are many other commodities, including competitive fuels, which are transported in large volume by water within the United States by owners of the commodities who are also the owners of the vessels used for such transportation. There has been no reason advanced which would justify the singling out of oil as section 493 proposes. The proposal is discriminatory against one commodity and against one class of consumer. It is therefore inequitable and should not be enacted into law.

There are large quantities of domestic petroleum regularly transported from the Gulf coast area to the eastern Atlantic seaboard and also large quantities which are regularly transported by water over the inland rivers and waterways. This domestic oil is in competition with imported oil. For example, that transported from the Gulf coast area to the eastern Atlantic seaboard is in direct competition with large quantities of imports from the Caribbean area and the Middle East. The proposed tax would add to the competitive disadvantage of domestic petroleum in competition with such imported oil.

In addition to the two respects mentioned above in which this proposal is discriminatory, the proposal also would involve burdensome administrative procedures which would not appear to be justified in view of the rather limited revenue derived therefrom.

We shall greatly appreciate your consideration of the association's position in opposition to this proposed tax.

Very truly yours,

RUSSELL B. BROWN.

STATEMENT BY CIGAR MANUFACTURERS ASSOCIATION OF TAMPA, FLA.

The Cigar Manufacturers Association of Tampa, Fla. (hereinafter called Tampa), is composed of 14 cigar manufacturers located in Tampa, Fla.

The Tampa association approves the statement filed this date by the Cigar Manufacturers Association of America and this statement is filed as supplementary thereto due to the peculiar position of the Tampa manufacturers.

Tampa in 1950, manufactured 231,000,000 cigars out of the total of 5,537,000,000 manufactured in the United States and its possessions. Tampa manufactured only 4.17 percent of the total manufactured.

The 14 Tampa association factories paid a total of $3,144,848 excise taxes out of the total of $42,801,301 paid by all cigar manufacturers in the United States and its possessions. Tampa paid 7.38 percent of the total paid. In other words Tampa members, on the cigars manufactured by them, paid excise taxes at the rate of almost twice that paid by the other manufacturers. Tampa's average was $13.60 per thousand and the average of the other manufacturers was $7.47 per thousand.

Tampa members manufacture cigars out of all clear Havana, imported tobacco, or out of all clear Havana filler wrapped with shade grown domestic tobacco. About 75 to 80 percent of all clear Havana and the remainder are clear Havana filler and shade wrapped.

Of the total cigars manufactured annually, approximately 100,000,000 are all hand-made, 120,000,000 are all machine-made and 12,000,000 are bunched by hand and rolled by machine. They are manufactured and sold in classes B to G inclusive of present statutory classifications.

There are only 41,000 production workers employed in the cigar-manufacturing business in the United States (Bureau of Labor Statistics for October 1950). The 14 Tampa factories employ about 4,200 of this total or approximately 10 percent of the total. Tampa employs 3,000 hand workers to make 100,000,000 all hand-work cigars and only 350 machine operators to make 120,000,000 all machine-made cigars and 180 bunch breakers to make 12,000,000 cigars rolled by machine and only 30 machine operators to roll the same. In other words, 1 cigar-machine operator on the average, makes as many cigars as 10 hand workers. Tampa is the only remaining area where cigars are made by hand for national distribution.

The Tampa association members oppose the recommended increases in cigar excise taxes and the reclassification from 7 to 10 classifications as proposed by the Secretary of the Treasury for the following reasons:

I

The Secretary of the Treasury's proposal to change the classification of cigars for revenue purposes and increase the present excise thereon is a change only in form and somewhat in amount from the proposal of the Secretary of the Treasury made to the Ways and Means Committee of the House. In that proposal instead of changing from 7 to 10 classifications as now proposed, it proposed 11 classifications.

II

The Treasury estimates its present proposal based on 1950 production would amount to $25,000,000. The total excise tax paid by cigar manufacturers in 1950 was $42,801,301. The Treasury is asking for an increase from the cigar manufacturers of approximately 60 percent, which, of course, is entirely disproportionate to the tax increase being made generally.

Based on the Tampa production in 1950, and taking into consideration transfers from present tax classifications to higher classification under the proposal, the proposed increases amount to approximately $2,350,000. Tampa, on the present rates of its 1950 production, paid $3,144,348 in excise taxes. So the increase to Tampa would amount to over 70 percent.

In June 1950, due to the economic condition of the cigar industry, the Ways and Means Committee recommended a reduction in cigar excise taxes and it was only due to the defense emergency that the same was not carried forward to legislation at that time. Conditions in the cigar industry have not improved since that time. This condition was fully gone into by the Ways and Means Committee of the House at its hearings held in March and April this year, and it did not include any increase on the Treasury's recommendation made at that time but rejected the same.

During World War II a wartime emergency tax increase on cigars was put into effect and is still effective. As a matter of fact, economic conditions in the cigar industry are in no better position than they were in June 1950 and Tampa manufacturers are not in a position to pay any additional excise taxes and the consuming public is not in a frame of mind to accept any increase in cigar prices so as to absorb additional taxes.

III

The Tampa manufacturers are not in a position to absorb any additional taxes. For the year 1949 (the latest available composite figures), the 14 association members did a gross business of $22,227,442. Their net profit thereon was only $646,169.50 before provision for income taxes or only 2.90 percent. General and administrative expense was only 4.54 percent, selling only 6.12 percent and the remainder, 86.44 percent, was actual cost of manufacturing. Their investment employed in manufacturing only, exclusive of borrowed capital, was $12,254,000. (These figures are from a composite statement compiled by a CPA from CPA audits of the individual companies.) In other words, after provision for income taxes the Tampa manufacturers made not in excess of $2 per thousand on the cigars manufactured. The figures for 1948 showed only a profit, before provision for income taxes, of 1.62 percent on a gross business of $21,352,802.57. The improvement was due to more cigar machines being put into operation.

Due to increased cost of tobacco, materials, and supplies and wage increases, the position now is no better than it was in 1949. In fact, the manufacturers, due to consumer resistance, were unable to increase prices on mnay sizes and in order to stay in the market on those sizes have been compelled to further mechanize.

In 1950 on a demand for wage increases from the union, the matter was submitted to Alfred A. Colby, arbitrator, of Washington, D. C., and in his findings and decision dated March 14, 1950, he stated:

"This arbitration could well determine whether the Tampa cigar-manufacturing industry will survive or perish and since such a heavy responsibility falls into the hands of this arbitrator, the decision is the result of a practical and realistic approach.

"It is undisputed that a surplusage of labor exists in the Tampa cigar-manufacturing industry and that the industry is at this time hard-pressed with a steadily declining market for its products and with formidable competition of machine-made production at appreciably lower manufacturing costs.

"I doubt if it (union) was aware, before the calculable costs were analyzed, that almost $1,500,000 would be added to the labor costs of the manufacturers and that in a very short time the industry's entire capital would be wiped out and that the workers would be left without means of livelihood, particularly since practically all of them are unfitted for any other occupation, and this for so many reasons unnecessary to relate."

The arbitrator granted only a few cents increase in some classifications. In the summer of 1950 the union, all production employees in all factories being members of the C. M. I. U. of A., demanded further wage increase and the parties, effective October 12, 1950, agreed on increases amounting to approximately 10 percent.

Cuban tobacco is not subject, of course, to American price controls. However, the Cuban Government does control production and also supports the price of tobacco. Tampa paid for 1950 approximately 8 percent higher than the 1949 market price. The 1951 crop now on the market is running about the same or a little higher over-all than the 1950 price.

Tampa manufacturers, in October 1950, due to increased cost of tobacco, all materials going into cigars, and wage increases granted, in an attempt to reimburse themselves, raised the price of about half of their cigar classifications. The increases did not meet all increased costs. They were unable to raise prices in other classifications due to consumer resistance. Cigars need no price ceilings as consumer resistance has already taken care of this. Due to the manner in which Tampa factories, from time immemorial, have sold their cigars to distributors, any increase in excise taxes carries an additional profit on such increase on the distributors as well as the dealers' profit margin. Cigars have always been sold at a list price which is based on the retail selling price and which price list includes the excise tax and the dealers' profit margin, which is 25 percent of his selling price, or 33⅓ percent of the cost price and includes the distributor's discount of 12 percent and 2 percent and includes the salesman's commission of 5 percent of list less the discounts. Therefore for the manufacturer to recover any increase in excise tax the list price will have to have added, in addition to the increase in excise taxes, an amount sufficient to take care of the increased dealers' mark-up, the discounts and salesman's commission. In actual practice it figures out that for each $1 of additional excise tax per thousand cigars that the retail selling price is increased $1.75 per thousand cigars. For example, if $10 additional excise is added to a class of cigars per thousand, it will be necessary for the list price to be increased to $17.50. So the selling price would have to be increased 2 cents per cigar. We call this to your attention to emphasize the fact that any increase in excise carries additional costs to the consumer and will be an additional factor in building up consumer resistance.

Due solely to the economic factor sinvolved and their economic position, the Tampa manufacturers, as much as they dislike to do so, are compelled to oppose any increase in excise taxes because they are unable to absorb the same and the consuming public will not pay the same even if the Economic Stabilization Agency grants a price increase. A heavy loss in production would result and a corresponding heavy loss in employment, particularly among the hand-made workers. Those employees, due to age and lack of other training would become subjects of Government relief. There would also be less revenue collected by the Government due to loss of production.

IV

The classification proposed by the Secretary of the Treasury is unrealistic. Its application would violate historically established business practices and principles in the industry. The application of such classification would cause some classes of cigars, due to the increased excise, to automatically go into a higher classification, thus causing such cigars to carry two increases.

The following is a table showing the present tax and the Treasury-proposed tax on present retail prices:

Retail price (cents)	Present tax	Proposed tax	Increase in rate
Not over 2½	$2.50	$3.00	$0.50
Over 2½ to 4	3.00	3.00	....
Over 4 to 6	4.00	5.50	1.50
Over 6 to 8	7.00	9.00	2.00
Over 8 to 10	10.00	12.00	2.00
Over 10 to 12	10.00	15.00	5.00
Over 12 to 14	10.00	18.00	8.00
Over 14 to 15	10.00	21.00	11.00
Over 15 to 16	15.00	21.00	6.00
Over 16 to 18	15.00	24.00	9.00
Over 18 to 20	15.00	27.00	12.00
Over 20	20.00	32.00	12.00

As shown by the above table, cigars now retailing at over 8 cents and up to 15 cents carry one classification and pay one rate. The Treasury has broken this down into four classifications, paying four different rates, and increasing the rates from $2 to $11 per thousand. Under present rates, cigars retailing at over 15 cents up to 20 cents pay $15, and the Treasury's proposal breaks this into three classifications paying from $21 to $27 and making increases from $6 to $12. To show how unrealistic it is, for example, the increase on a cigar now selling at over 14 cents and up to 15 cents is $11, while one selling at over 15 cents to 16 cents is $6, while cigars retailing at over 12 cents up to 14 cents are increased $8. We have explained above how Tampa sells its cigars, namely, the list price is the retail price of cigars and it is on this price that the brokers, dealers, and salesmen's commissions are based. Therefore, in order for the manufacturer to recover any increase in excise tax he has to increase an additional amount to take care of these profits. In other words, every dollar in increased tax figures out $1.75 in the list price of cigars. Therefore, under the Treasury's proposal, for example, for cigars now retailing at 15 cents, therefore if the proposed increase of $11 is granted the price of the cigar would have to be increased $20 per thousand or 2 cents per cigar, then this present 15-cent cigar would have to be priced at 17 cents and it would put this cigar then in the Treasury's bracket of cigars selling at over 16 cents and up to 18 cents, where there would be an additional increase in revenue of $3 over the $11. The same applies to the Treasury's proposal in other brackets, particularly in cigars now selling at over 12 cents and up to 14 cents and cigars now selling at over 16 cents and up to 18 cents and cigars now selling at over 18 cents and up to 20 cents. So it can readily be seen what such a result would be with the consumers.

There is nothing which indicates that the Treasury's proposal will bring in any additional revenue to the Government. The history of the cigar business for the last 2 or 3 years all indicates that if the proposal is put into effect revenue from cigars will decrease, will cause hardship to manufacturers and to their employees.

Administratively such classifications would cause great hardship and additional expense to the Government and the manufacturers. Our factories pack some classes of cigars in boxes of both 25 and 50 per box. Each pack for each classification requires a different stamp. Some of our factories would have to carry and affix as many as 14 different stamps.

We respectfully request that the proposal of the Secretary of the Treasury be denied both as to increases in excises and change in classification.

Respectfully submitted.

CIGAR MANUFACTURERS ASSOCIATION OF TAMPA,
By FRANCIS M. SACK, *Secretary*.
BROWN, BROWN & CORCORAN,

Attorneys for Cigar Manufacturers Association of Tampa.

BRIEF OF R. J. REYNOLDS TOBACCO CO.

ADJUSTMENT FOR CHANGES IN BORROWED CAPITAL DURING THE TAX YEAR

Section 435 (a) (1) of the Internal Revenue Code provides that the excess-profits credit—based on income—of domestic corporations is increased by 12 percent of the net capital addition for the taxable year and is decreased by 12 percent of the net capital reduction for the year. The net capital addition and reduction are determined under section 435 (g).

Under section 435 (g), in determining the net capital addition for the taxable year, there is included 75 percent of the amount by which the taxpayer's average borrowed capital for the year exceeds its borrowed capital as of the beginning of its first taxable year. Similarly, in determining the net capital reduction for a taxable year, there is included 75 percent of the amount by which the borrowed capital at the beginning of the taxpayer's first taxable year exceeds its average borrowed capital for the year.

Borrowed capital of a corporation may vary greatly during the course of its taxable year. In the case of some corporations, borrowed capital is at its minimum at the beginning of the taxable year and in the case of others may be at its maximum. Section 435 (g), in requiring that determination of increases or decreases in borrowed capital occurring during a year be made by comparison of average borrowed capital for the year with borrowed capital at the beginning of the first taxable year, favors those corporations which had minimum borrowings at the beginning of their first taxable year and discriminates against those corporations having maximum borrowings at the beginning of their first taxable year.

The business of R. J. Reynolds Tobacco Co., which is a corporation manufacturing and selling tobacco products, necessitates that it purchase each year large quantities of leaf tobacco during the season when such tobacco is sold by the growers. This season generally starts in July and ends in the following January or February. Large sums of money are required for the purchasing of tobacco and as an aid in financing the acquisitions the company for many years has made borrowings on a short-term basis. The peak of these borrowings occurs at the end of the leaf-buying season and approaches its maximum on January 1, the first day of the company's taxable year. Consequently, normally the company's borrowed capital at the beginning of the year far exceeds its average borrowed capital for the year. Thus, on January 1, 1950, the company's borrowed capital exceeded its average borrowed capital for that year by over $15,000,000. In 1949, the borrowed capital at the beginning of the year exceeded the average borrowed capital for the year by over $32,000,000.

Because the average borrowed capital of the company for the year was some $15,000,000 less than its borrowed capital at the beginning of 1950, the company's excess-profits credit for that year was decreased by approximately $1,850,000.

The act in recognizing the necessity for adjustment of the excess-profits credit for increases or decreases in invested and borrowed capital occurring subsequent to the base-period years is unquestionably sound. However, the method of determining such adjustment is inequitable and discriminatory. The earnings of a corporation for any particular year are not dependent on its capital and borrowings at the beginning of the year but on the use of capital and borrowings during the entire year. Thus, the only fair approach in determining increases or decreases in capital and borrowings for the purposes of the excess-profits-tax law is by comparing the average capital and borrowings for the particular year with the average for the period as against which the comparison is being made. With particular respect to borrowed capital, the test, therefore, should be a comparison of the average borrowed capital for the tax year with the average borrowed capital of the last year in the base period.

ADJUSTMENT FOR BASE PERIOD CAPITAL ADDITIONS

With respect to the adjustment for base period capital additions provided for in section 435 (a) (1) (B), a similar inequity exists in the method of computing increases in borrowed capital and capital additions in the various years of the base period. While for base-period purposes the comparisons for the respective years are consistently made on the basis of capital as it existed at the beginning of each year, such comparisons, limited as they are to a single day in a year, do not measure the difference in true capital used for the various years.

In October 1948 the company obtained $20,000,000 in new capital as the result of the issuance of preferred stock. This additional capital, since it was added in the last months of 1948 and not in 1949, is recognized for the purposes of determining base-period capital additions only to the extent of 50 percent. If this financing had been postponed for only 3 months so that it occurred in the first part of 1949, it would have been recognized at 100 percent. As the financing occurred late in 1948, it had little effect on the earnings for that year.

Since, as previously stated, a corporation's earnings are normally dependent on the use of capital funds throughout the entire year, in computing additions to capital during the base-period years, equity requires that the comparisons of 1 year as against the other be on the basis of the average invested capital and borrowed capital for each year rather than such capital at the beginning of each year.

CONCLUSION

In order to eliminate such inequities and discriminations in computing the excess profits credit—based on income—it is respectfully submitted that section 435 should be amended as follows:

1. As to base-period capital additions, the yearly base period capital should be determined by adding to the equity capital as it existed at the beginning of the year the average daily amount of new capital (excluding earned surplus additions) for the year and 75 percent of the average daily borrowings for the year, less reductions for inadmissible assets, loans to members of a controlled group and interest, all computed on an average basis.

2. As to net capital additions for taxable years, these should be determined by adding to the equity capital as it existed at the beginning of the year the average daily amount of new capital (excluding earned surplus additions) for the year and 75 percent of the average daily borrowings for the year, with appropriate adjustment for inadmissible assets and loans to members of a controlled group, computed on an average basis. To the extent the capital thus determined exceeds or is less than capital similarly determined for the last year of the base period, 1949, the credit for the year should be increased or decreased, as the case may be, by 12 percent of the amount.

Respectfully submitted.

R. J. REYNOLDS TOBACCO CO.,
By H. H. RAMM, *Solicitor.*

COMMITTEE ON TAXATION OF THE ASSOCIATION OF THE BAR
OF THE CITY OF NEW YORK,
New York, August 3, 1951.

Hon. WALTER F. GEORGE,
Senate Office Building, Washington, D. C.

DEAR SENATOR: The committee ontaxation of the Association of the Bar of the City of New York desires to invite to the attention of each member of the Senate Committee on Finance three points which our committee believes should have consideration at this time:

(*a*) Proposals to stabilize restricted stock options.

(*b*) Retroactive applications of section 211 of the Revenue Act of 1950 relating to short sales.

(*c*) Proposed withholding on the gross amount of royalties under section 201 of the revenue bill of 1951 (H. R. 4473).

A brief discussion of each of these points follows.

A. PROPOSALS TO STABILIZE RESTRICTED STOCK OPTIONS

Largely as a result of the efforts of your committee, Congress in the Revenue Act of 1950 gave statutory recognition to the fact that certain types of employee stock options, called restricted stock options, were not compensatory.

The Salary Stabilization Board, however, has appointed a stock option panel to hold hearings and make recommendations as to whether employee stock options, including restricted-stock options, are subject to stabilization under the Defense Production Act of 1950. The Board has cautioned employers against granting such options until the issue is determined, and there are indications that on the staff level the issue may have been resolved in favor of stabilization of all employee stock options.

Under the circumstances our committee recommends the adoption of legislation, believed to be declaratory of the present law, to make it clear beyond dispute that restricted stock options conforming to section 130A are not compensatory and, therefore, are not subject to stabilization. This legislation is considered necessary in order to prevent administrative bodies from frustrating the use of restricted stock options as noncompensatory incentive devices despite the will of Congress expressed in section 130A.

We consider it clear as a matter of statutory construction that restricted stock options are not subject to stabilization. The exercise of taxpayers' rights should not, however, unlawfully be obstructed and delayed by administrative agencies and their extrastatutory panels for lack of a clear legislative expression on the issue.

Section 402 (b) (1) of the Defense Production Act of 1950 authorizes the President to "issue regulations and orders stabilizing wages, salaries, and other compensation." The question raised is whether stock options, more particularly stock options conforming to section 130A of the Internal Revenue Code, constitute "other compensation" subject to stabilization.

Section 702 (e) of the Defense Production Act, contains the following further statutory definition.

"The words 'wages, salaries, and other compensation' shall include all forms of remuneration to employees by their employers for personal services, including, but not limited to, vacation and holiday payments, night shift and other bonuses, incentive payments, year-end bonuses, employer contributions to or payments of insurance or welfare benefits, employer contributions to a pension fund or annuity, payments in kind, and premium overtime payments."

The committee reports and hearings in connection with the Defense Production Act do not expressly consider whether restricted stock options are subject to stabilization as "other compensation." The foregoing definition, however, was added to the act by Senate amendments to H. R. 9176 on August 21, 1950. On the following day your committee reported to the Senate the revenue bill of 1950, H. R. 8920, first introducing the detailed provisions with respect to restricted stock options. The two bills were considered concurrently by both Houses. It is clear as a matter of legislative history that the key to the application of the Defense Production Act to stock options is to be found in the Internal Revenue Code and particularly in section 130A thereof.

The concept of "wages, salaries, and other compensation" dealt with in the Defense Production Act of 1950, is identical with that contained in the Internal Revenue Code. The general definition of "income" is contained in section 22(a) of the Internal Revenue Code. It provides in part:

"'Gross income' includes gains, profits, and income derived from salaries, wages, or compensation for personal service * * *, of whatever kind, and in whatever form paid * * *."

It has been recognized that Congress thereby intended to include in income compensation in its most comprehensive sense. In *Commissioner* v. *Smith* (324 U. S. 177 (1945)), the Supreme Court said:

"Section 22(a) of the revenue act is broad enough to include in taxable income any economic or financial benefit conferred on the employee as compensation, whatever the form or mode by which it is effected" (p. 181).

There is nothing in the legislative history of the Defense Production Act to indicate that Congress could have intended a broader definition of "compensation" than that included in the Internal Revenue Code. The identity of basic concept in the two statutes and the interrelation of the statutes is also evidenced by the intended use of disallowances of income-tax deductions as sanctions for enforcement of wage stabilization (sec. 405 (b); S. Rept. No. 2250, 81st Cong., 2d sess. 39 (1950)). Stabilization of restricted stock options is patently inconsistent with this provision, for the employer receives no deduction for a restricted stock option.

The significant characteristic common to each type of compensation itemized in the definition of wages, salaries, and other compensation contained in section 702 (e) of the Defense Production Act is that it is by nature taxable as income. (Cf. U. S. Treasury Reg. 116, sec. 405.101 (1949), defining wages for withholding purposes.) Employer contributions to a pension fund is an apparent exception only because Congress there by statute expressly relieved from taxation payments which otherwise would be taxable to the employee. Under accepted rules of statutory construction, restricted stock options should be included in the term "wages, salaries, and other compensation," subject to stabilization, only if by nature they are taxable as income.

Under section 130A the granting of restricted stock options does not give rise to taxable income. More significant, however, is the fact that it is clear from the legislative, judicial, and administrative history of stock options that the enactment of section 130A did not change the preexisting law in this respect. It merely gave statutory definition to those stock options which never had been compensatory and never had been taxable as income.

A bargain purchase does not in itself give rise to the receipt of taxable income. When granted by an employer to an employee the option may be of such nature as to be compensatory. But courts, before and since the Smith case, have recognized that incentive stock options are not compensatory and do not give rise to ordinary income. (For example, Delbert G. Geeseman, 38 B. T. A. 258 (1938), acq. 1939—1 C. B. 13; Norman G. Nicholson, 13 T. C. 690 (1949).)

The Government conceded in its brief before the Supreme Court in the Smith case that an employee stock option would not give rise to compensation "where the sole purpose is to insure the employee's unflagging loyalty by giving him a stake in the employer's business" (p. 11). The Government also there stated—

"The governing Treasury regulations providing that where property is transferred by an employer to an employee for an amount substantially less than its fair market value, the employee shall include the difference in his gross income *to the extent that it is in the nature of compensation for services*, express well settled principles, are of long standing, and must be deemed to have congressional approval" (p. 22). [Italics supplied.]

The Treasury Department thought it found in the Smith opinion authority for the proposition that every employee stock option was compensatory, and amended its income tax regulations accordingly. Your committee corrected this impression, however, in its report accompanying the Revenue Act of 1950 wherein it said:

"Moreover, your committee believes these regulations go beyond the decision of the Supreme Court in *Commissioner* v. *Smith* (324 U. S. 177 (1945). Rept. No. 2375, 81st, Cong., 2d sess. 59 (1950))."

Section 130A is therefore to be recognized as merely congressional definition of the existing line between compensatory and noncompensatory options. Because of the identity of concept in the stabilization and income-tax statutes, this statutory definition should be controlling for both purposes. Legislative clarification seems necessary, however, in order to prevent administrative interpretation from again blurring the lines so recently drawn.

The intended operation of section 130A was described in your report as follows:

"Under your committee's bill no tax will be imposed at the time of exercise of a 'restricted stock option' or at the time the option is granted and the gain realized by the sale of the stock acquired through the exercise of the option will be taxed as a long-term capital gain. Such treatment is limited to the 'restricted stock option' for the purpose of excluding cases where the option is not a true incentive device." (S. Rept. No. 2375, 81st Cong., 2d sess. 60 (1950)).

Section 130A(b), relating to so-called 85 percent options, specifies the very limited extent to which restricted stock options shall be "included as compensation." Section 402(d)(2) of the Defense Production Act expressly provides that no action shall be taken with respect to wages, salaries or other compensation which is inconsistent with any other law of the United States. The Salary Stabilization Board is thus devoid of statutory authority to adopt regulations subjecting restricted stock options generally to stabilization as "other compensation," but legislation is nevertheless necessary to remove the threat.

In recommending such legislation our committee would like to point out that stabilization of restricted stock options is not only inconsistent with section 130A but is entirely unjustified by the purposes of the Defense Production Act. Restricted stock options are not inflationary. The grant of such an option places no funds in the hands of the optionee. The exercise of the option requires substantial investment by the optionee, thereby shrinking the funds in the hands of consumers for inflationary spending. These funds will not be released for extended periods of time, probably far outlasting the temporary stabilization legislation. Stock acquired under options granted today cannot be sold prior to August 1953, without loss of the benefits of section 130A. The extended option periods of restricted stock options already granted suggest that exercise and sale will in practice be much longer deferred. (See Wall Street Journal, July 9, 1951.)

If the Salary Stabilization Board, despite its lack of jurisdiction, were to attempt to stabilize restricted stock options, endless administrative confusion would result. If restricted stock options are held to result in compensation when granted, the problems of valuation at that date are well nigh insuperable. If the extent of compensation is not to be measured until the option is exercised, it becomes impossible to regulate the present granting of the option.

There is a clear need for clarifying legislation to avoid the return of confusion to the field of stock options and to forestall unwarranted administrative interference with the operation of section 130A as intended by Congress. To this end our committee recommends that section 130A(a)(1) be amended to read as follows:

"(1) for the purposes of this title and of any other law of the United States, no income or compensation for personal services shall result at the time of the grant of such option or the transfer of such share to the individual upon his exercise of the option with respect to such share;".

B. RETROACTIVE APPLICATIONS OF SECTION 211 OF THE REVENUE ACT OF 1950 RELATING TO SHORT SALES

Section 211 of the Revenue Act of 1950 enacted certain rules to be followed with respect to short sales. Although the legislation was expressly limited to transactions in taxable years beginning after the date of enactment, the Bureau of Internal Revenue is currently applying these rules to commodity futures transactions in earlier years. Our committee feels that this situation calls either for a new expression of intention by your committee or for corrective legislation.

In mimeograph 6243, dated March 8, 1948, the Bureau of Internal Revenue notified its field officers that concurrent long and short positions in the same commodity in the same market for delivery in the same contract period are considered closed when the offsetting trade is first made. Congress has now given legislative authority to the contention of taxpayers that mimeograph 6243 does not properly reflect the law existing prior to the change made by the Revenue Act of 1950.

Section 211 of the Revenue Act of 1950 gave prospective statutory force to the rules which mimeograph 6243 had attempted to impose prior thereto. In procuring this legislation full recognition was given by the congressional committees to the fact that under then-existing law taxpayers were entitled to the tax advantages which section 211 would thereafter deny.

The report of your committee said:

"At the present time it is possible for an investor in stocks to realize a capital gain in less than 6 months and obtain long-term capital-gain tax treatment on it by making a short sale, which will assure his gain on his original investment, and then defer closing out the short sale until he has held his original stock investment for more than 6 months. A similar result may be obtained where the initial transaction is a short sale.

"Much the same device may be used by a taxpayer to avoid tax on his profits from speculation in commodity futures. * * *" (S. Rept. No. 2375, 81st Cong., 2d sess. 44 (1950)).

Prior to the issuance of mimeograph 6243 the Bureau of Internal Revenue itself had long recognized that with respect to commodity transactions the law was contrary to the position therein taken. (E. g., unpublished Bureau rulings dated December 14, 1943, and March 10, 1947.) And in the case of security transactions, concurrent long and short positions prior to 1950 are still recognized for tax purposes. (G. C. M. 7451, IX-1 C. B. 81 (1930); Robert W. Bingham, 27 B. T. A. 186 (1932), Acq. XII—1 C. B. 2.)

Mimeograph 6243 is thus contrary to law existing prior to enactment of the Revenue Act of 1950 as viewed in congressional committee reports, former Bureau rulings, and court decisions. The Bureau of Internal Revenue is nevertheless currently applying mimeograph 6243 to transactions in taxable years beginning prior to enactment of the Revenue Act of 1950, and even to taxable years prior to the issuance of the mimeograph. Taxpayers have contested this action in more than a dozen petitions now docketed with the Tax Court, the first of which, docket Nos. 31057 and 31058, are scheduled for hearing in October.

The Bureau's attempt to apply the rules retroactively to transactions which occurred in taxable years beginning before September 23, 1950, under the guise of following an administrative ruling, would be in violation of the express provisions of section 211 (b) of the Revenue Act of 1950. Section 211 (a) adds to the code section 117 (l), which commences: "In the case of a short sale of property made by the taxpayer after the date of enactment of the Revenue Act of 1950:" Section 211 (b) provides "EFFECTIVE DATE.—The amendment made by this section shall be applicable only with respect to taxable years beginning after the date of enactment of this act."

Congress was well aware of the existence of mimeograph 6243, since both committee reports refer to it (S. Rept. 2375, 81st Cong., 2d sess. 87 (1950); H. Rept. 2319, 81st Cong., 2d sess. 96 (1950)). Section 211 (b) does not, however, contain any provision against the drawing of inferences from nonretroactivity such as that contained in the following section, section 212, relating to collapsible corporations. As a matter of statutory construction, therefore, it should be inferred that transactions prior to the effective date of the short sales provision should be treated differently than those which followed it.

As further evidence, your committee's report on section 211 contains the following passage:

"The amendments made by this section are applicable only with respect to taxable years beginning after the date of enactment of the bill. Even with respect to such taxable years, however, the amendments do not apply where the short sale was made on or before the date of enactment of the bill" (S. Rept. 2375, 81st Cong., 2d sess. 88 (1950).

Your committee thus carefully excluded from the effect of the amendment short sales initiated before its effective date, even though substantially identical property was acquired after such effective date and before closing of the short position. Congress clearly cannot have contemplated a continuing application of mimeograph 6243 to transactions occurring before the effective date of the amendment, thus obliterating the distinction your committee took pains to point out.

Because of the Bureau's persistence in the continued application of mimeograph 6243 despite the apparent contrary intent of Congress, it is recommended that your committee give new expression to this intent, by legislation or otherwise.

C. PROPOSED WITHHOLDING ON THE GROSS AMOUNT OF ROYALTIES UNDER SECTION 201 OF THE REVENUE BILL OF 1951 (H. R. 4473)

Section 201 of the revenue bill of 1951 (H. R. 4473) provides for withholding at source of 20 percent of the gross amount of dividends, interest, and royalties paid. Section 1220 (a), to be added to the Internal Revenue Code, defines "royalties" to include royalties in respect of mines, oil and gas wells, and other natural deposits. The definition appears to include the landowner's royalty, overriding royalties, and oil and gas payments.

Section 201 fails to give any recognition to the fact that such royalties, as contrasted with dividends and interest, are the fruits of a wasting asset. For tax purposes, a portion of each payment constitutes a return of the capital investment of the owner of the mineral deposit and to that extent does not constitute taxable income. This capital recovery is represented by the cost-depletion allowance or, where higher, by statutory percentage depletion.

To require a withholding of 20 percent of the gross royalty paid without recognition of the depletion allowance will thus result in a substantial overwithholding of tax on the taxable income actually involved. Many royalties and oil payments have been purchased by investors after the approximate extent of the oil reserve and duration of the payments have been ascertained. In such cases the risk is small and the capital invested represents a large part of the total recovery to be received over the years. For example, if an investor purchased on a 6-percent discount basis a $500,000 oil payment expected to pay out ratably over 5 years, his purchase price would be $421,000. He would receive payments of $100,000 each year, of which $15,800 would represent taxable income and $84,200 a return of capital. If 20 percent of the gross payment is withheld as tax, the withholding would absorb 100 percent of the income and 5 percent of the return of capital as well.

This overwithholding in many cases will work a great hardship on the taxpayers involved even though tax refunds will ultimately be received. Royalties and oil payments in very substantial amounts have been assigned to institutional lenders as security for borrowing, and the reduction of 20 percent in the amounts immediately applied to the loans may result in defaults.

To a lesser extent, the problem above referred to exists in the case of royalties on patents, copyrights, trade-marks, etc., which are included in the definition under proposed section 1220(b) of the Internal Revenue Code. In these cases, the capital investment is recoverable by way of depreciation rather than depletion. As in the case of mineral royalties, however, the taxpayer will not be taxed on the entire royalty.

Normally it is not possible for the withholding agent to ascertain the portion of the royalty which would be taxable to the recipient. Because of the administrative difficulty which this presents, our committee recommends against the extension of withholding at source to royalties. If such withholding is to be required, however, it recommends that legislation be adopted permitting taxpayers to obtain a quick refund of amounts withheld on royalties. Such refunds would be based on the taxpayer's estimate of the depletion or depreciation allowance to which he is entitled.

Respectfully submitted.

COMMITTEE ON TAXATION OF THE ASSOCIATION OF THE BAR OF THE CITY OF NEW YORK.
By JOHN P. OHL, *Chairman*.

NEW JERSEY GUERNSEY BREEDERS' ASSOCIATION, INC.,
New Brunswick, N. J., July 31, 1951.

Senator WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: I am president of the New Jersey Guernsey Breeders' Association that comprises the great majority of all the pure-bred Guernsey breeders and milk producers in the State of New Jersey.

We have been discussing the various interpretations that the Internal Revenue Department seems to have placed in the past on the revenue acts as passed by Congress. It is our understanding that the Senate Finance Committee, of which you are chairman, is now considering the new Revenue Act of 1951, and we would like to direct ourselves to one provision of the bill (H. R. 4473) as it was passed by the House.

This provision is of vital interest to our members, as well as to the countless taxpayers throughout the country who have herds of animals used for draft, breeding, or dairy purposes. It is our understanding that section 306 of the bill reads as follows:

"Effective with respect to taxable years beginning after December 31, 1950, section 117 (j) (1) is hereby amended by adding at the end thereof the following new sentence: 'Such term also includes livestock held by the taxpayer for draft, breeding, or dairy purposes for 12 months or more.'"

It would seem to us that the intention of the provision was to make sure that the taxpayer shall receive a capital gains treatment when he sells draft, breeding, or dairy livestock, with the requirement that to secure such treatment the livestock must have been "held by the taxpayer" for such purposes for 12 months or more.

You and your committee must be familiar with the past confusion of the taxability of sales of draft, breed, and dairy animals. Despite the fact that an interpretation of the language of the past law and the fact that judicial decisions have been to the contrary, the Commission of Internal Revenue for the past few years has changed their decision and are now holding that sales of such animals result in ordinary income. Last year your honorable committee was most cognizant, we believe, of this situation when it considered the insertion of a provision on this subject in the Revenue Act of 1950 which spelled out just what you meant by the language it contained. However, for certain reasons this was not done and I call your attention to the conference committee report (H. Rept. No. 3214, 81st Cong., 2d sess., p. 28) which said: "It is the hope of the conferees that, pending such study and further legislation, the Treasury Department will follow the decision of the Eighth Circuit Court in the *Albright Case* (173 F. 2d 339)."

Since then, the Treasury Department has come out with a new position set forth in mimeograph 6660 (June 27, 1951), but in this ruling the Commissioner still has not gone as far as some of the court decisions.

Obviously, and especially in view of what happened last year, the intent behind section 306 of the pending revenue bill is to afford taxpayers certain benefits and to make sure that they receive them, notwithstanding what the position of the Commissioner may be.

However, we would like to point out to you that the language in the bill lacks clarity and could very well result in considerable litigation which would be costly to taxpayers, as well as the Government, and which might very well defeat the intent of this new legislative provision. While the language to be added to section 117 (j) refers to livestock "held by the taxpayer" for 12 months or more, there is no way of determining when such holding period begins. The report of the House Committee accompanying this bill (H. Rept. No. 586, 82d Cong., 1st sess.) sheds no light on this at all. It states:

"Your committee believes that the term 'livestock' in this new sentence should be given a broad, rather than a narrow, interpretation; and that the gains from sales of live stock should be computed in accordance with the method of livestock accounting used by the taxpayer and presently recognized by the Bureau of Internal Revenue."

To give you a specific example, let us refer to a bull which is owned by the owner of a dairy herd. The bull cannot be used for breeding until it is from 10 to 12 months old. When does a taxpayer begin to hold such an animal for breeding purposes? If the bull was born on taxpayer's farm and the taxpayer did not sell it to the butcher after a few weeks, but held it in the herd, incurring the resulting expense awaiting the time when the animal can be used for breeding, it seems to us quite clear that once the bull has passed 1 month of age, the taxpayer begins holding it for breeding purposes.

The same is true with regard to a heifer calf. It would not be bred until about 18 months of age and would first drop a calf about 9 months thereafter. Yet, once a month or so has gone by after the birth of this heifer calf, with the taxpayer not selling it but holding it in the herd, with the attendant expenses, taxpayer is holding such animal for dairy or breeding purposes.

In order to avoid confusion and considerable and costly litigation in the future, and in keeping with the apparent intent behind this provision, it is requested that your honorable committee modify this language so as to make it crystal clear when the holding period begins.

Knowing how busy your committee is, with numerous witnesses requesting permission to appear before it, we are attempting to cooperate with you and are confining our request to the form of this letter. We trust you will be good enough to see to it that it receives the attention of yourself and your honorable committee. If you or your committee so desire, we would be glad to personally appear before it to discuss this particular subject at greater length.

Thanking you for your consideration.

Respectfully,

ATHERTON W. HOBLER.

AMERICAN MEDICAL ASSOCIATION,
Chicago 10, July 31, 1951.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: In compliance with the promise contained in my telegram to you yesterday, I am enclosing copies of resolutions considered by our house of delegates at its Atlantic City meeting in June of this year, and the action taken on them, relating to retirement benefits for professional persons who are self-employed. I shall appreciate it if this material be incorporated in the hearings on the Ives amendment to H. R. 4473.

I am also enclosing a copy of a statement prepared by the director of our bureau of medical economic research, Frank G. Dickinson, Ph. D., entitled "Income Tax Discrimination Against the Professions." I think this statement will clearly indicate the interest of medicine in the Ives amendment and I hope that the statement can be included in the record of the hearings now under way.

Sincerely yours,

ERNEST B. HOWARD.

RESOLUTIONS ON RETIREMENT BENEFITS FOR PROFESSIONAL PERSONS

Dr. W. P. Anderton, New York, presented the following resolutions, which were referred to the reference committee on legislation and public relations:

"Whereas the present high levels of Federal taxation on earned income make it virtually impossible for professional persons and other recipients of earned income to provide from this income for retirement; and

"Whereas the problem of providing retirement benefits has to a great extent been solved for corporate employees by section 165 of the United States Internal Revenue Code; and

"Whereas the need for such retirement benefits is equally great in the case of professional persons and other persons having earned income but not covered by a pension plan; and

"Whereas the American Bar Association has made a special study and has prepared legislation to be submitted to Congress aimed at making available retirement benefits for those persons having earned income but not covered by a pension plan; therefore be it

"*Resolved*, That the House of Delegates of the American Medical Association urge the board of trustees to support and seek to participate in all measures that may facilitate the enactment of such legislation into law; and be it further

Resolved, That this House of Delegates approve in principle United States House of Representatives bill No. 3456, introduced by Mr. Frederic R. Coudert, Jr., Seventeenth District, New York."

REPORT OF REFERENCE COMMITTEE ON LEGISLATION AND PUBLIC RELATIONS

Dr. L. G. Christian, chairman, submitted the following report which was duly adopted:

"Your reference committee has given careful consideration to the three resolutions referred to it relating to pension plans for physicians, introduced by Dr. Huron, of Michigan; Dr. Anderton, of New York; and Dr. Stovall, of Wisconsin. Since all of these resolutions deal with the same subject matter, they were considered jointly.

"The objective sought is to establish a procedure whereby physicians and members of other professional groups may during their most productive years provide for their old age and less productive years by the purchase of retirement benefits with tax-deferred income, the benefits being taxable when received. Such a procedure is presently available for the benefit of employees and officers of corporations but not to taxpayers who are self-employed.

"The board of trustees in February 1948 gave consideration to a somewhat similar proposal and approved it in principle. At a subsequent meeting of the house of delegates, also in 1948, the action of the board was expressly commended by the House. Since that time the directors of the Bureau of Medical Economic Research and of the Bureau of Legal Medicine and Legislation have had a number of conferences with representatives of the American Bar Association and of the Association of the Bar of New York City in an effort to develop appropriate legislation for presentation to Congress. Your reference committee has been informed that the draft of legislation being prepared by a special committee of the American Bar Association is approaching final form which will be introduced in the Congress in the near future.

"There have been introduced in the Congress from time to time a number of bills dealing with this subject. There are now pending the bill referred to in the New York resolution, H. R. 8456, and another introduced within the last several days. Your reference committee does not believe it timely for the House to express its support of any particular bill. It does recommend that the House reemphasize its 1948 endorsement of the principle embodied in this proposal, with a reasonable ceiling on the amount of the retirement benefit and that the board of trustees be requested to continue its efforts in support of this principle, giving special consideration to any legislation formulated by the American Bar Association."

BULLETIN 74—INCOME-TAX DISCRIMINATION AGAINST THE PROFESSIONS[1]

(By Frank G. Dickinson, Ph. D., director, Bureau of Medical Economic Research, American Medical Association)

Under section 165 (a) and related sections of the 1942 Federal Internal Revenue Code, funds used by companies for the purpose of providing employees with pensions or shares in profit-sharing trusts are deductible from gross receipts as business expenses and thus are not a taxable part of the employer's or company's income, if the particular plan is approved by the Bureau. These funds do not become a taxable part of the recipient's income until they are actually received, either when the recipient retires or when he cashes in on his profit-sharing account—at which time he will presumably be in a lower-income bracket. Since the provisions of section 165 (a) and related sections are restricted to employees, professional men who can qualify as employees—for example, company lawyers and company physicians—can receive the benefits of these pensions and profit-sharing trusts, while those who conduct their professions as single proprietorships or partnerships may not qualify for these benefits. The income-tax discrimination, which is particularly burdensome to professional men who practice as individual proprietors and partners, is the subject of the following discussion.

THE PROBLEM—ITS ORIGIN

Until 1935 the problem of financing the retired years of life has been left largely to private initiative, although a few States had enacted pension laws prior to that date. The Social Security Act of 1935 embodied a new doctrine of individual irresponsibility, or social responsibility; society through Government would provide minimum benefits for the aged. The Social Security Act, however, because of its limitations and exclusions, introduced certain glaring inequities.

The old-age and survivors' insurance sections of this act provide for employee pensions financed by equal taxes paid by employer and employee on the portions of annual salaries not in excess of $3,000. Employers pay their share out of gross receipts. Their payments, as costs of doing business, are income tax free. Employees, on the other hand, cannot deduct their contributions for income-tax purposes, but the pensions, when received, are not subject to Federal income taxes. The effect of the act was to provide proportionally greater benefits for those with incomes below $3,000 than for those with incomes above $3,000. Before the new social theory could become properly integrated with our way of life, an inequity such as this had to be eliminated.

Section 165 (a) and related sections of the 1942 Federal Internal Revenue Code provide for additional pensions or shares in profit-sharing trusts on the basis of total income, not just that portion under $3,000. Although these additional pensions and profit-sharing plans largely benefit those with incomes of less than $3,000, I firmly believe that section 165 (a) and related sections were primarily designed to round out the program first introduced in an incomplete form in the

---

[1] This discussion is based on a paper read at a symposium on medico-legal problems in the fall of 1948. The symposium was jointly sponsored by the Chicago Bar Association, the Chicago Medical Society, and the Institute of Medicine of Chicago.

depression-born Social Security Act in that they provide more equitable treatment for those with incomes above $3,000 in an era of steeply progressive income-tax rates. Since the code's provisions, however, are restricted to employees including executives of corporations, those who conduct their businesses or professions as single proprietorships or partnerships are excluded. Thus all single proprietors or partners—farmers, shopkeepers, professional men—suffer this income-tax discrimination.

The very nature of professional work and training makes this discrimination a particular hardship for professional men. The total lifetime income taxes paid by a professional man on a lifetime income may greatly exceed those paid by a nonprofessional person on the same lifetime income, because the former has a long training period and his high earnings are bunched into a relatively small number of peak earning years. Those professional men who can qualify as employees under section 165 (a) of the Federal Internal Revenue Code—for example, company physicians or company lawyers—receive more reasonable treatment. Their employers can set aside funds for pensions which, as already noted, are deductible from company income as business expenses and therefore are not a taxable part of employer or company income. Section 165 (a) and related sections also provide that these funds are not subject to individual income taxes as a part of the recipient's income until he actually receives them, either on retirement or when he cashes in on his profit-sharing account. Thus the real benefit to the salaried professional man is derived from the postponement of the payment of taxes on his income until a time when his income, and therefore his tax rate, is expected to be lower. The realization of this benefit, of course, hinges on the income-tax laws at the time the cash is received as well as on the individual's income at that time.

THE CASE FOR PHYSICIANS

Since my work is most closely associated with the medical profession, I shall discuss their particular situation. Important in evaluating income-tax policies affecting the physician is a knowledge of the unusual pattern of his economic life. First, consider the cost of becoming a physician. The prospective physician typically spends at least 3 years in premedical training and 4 years in a medical college—a total of 7 years. Almost all graduating doctors of medicine today spend a year in internship. During this year the physician receives board and room and sometimes a nominal salary. The year of internship, or eighth year of training, is thus one of zero income but no cost. The previous 7 years were years of cost and years of zero income. The physician who wishes to specialize, in addition to his year of internship, must serve one or more years—depending, in part, on the field he has chosen—as a resident in an approved hospital. As a resident he will receive board and room and a nominal salary. At about age 28, then, our typical physician may begin to earn an income.

During the 7 years before graduation from medical school our physician spent about $3,500 for tuition, books and the like—exclusive of board, room and clothing. During his 2 years of internship and residency he was presumably self-sustaining on his small salary. But the money he might reasonably have earned throughout the entire 9 years of training, in addition to the value of the perquisites and small salary of his internship and residency, must be added to the $3,500 expenses incurred in school. This income would have been roughly $26,500 for the 9 years. Thus his out-of-pocket expense plus his lost income is approximately $30,000. When interest is accumulated on this amount the 9-year training period has cost the young man entering the practice of medicine at age 28 roughly $35,000.[1] He must amortize that investment—pay it off in annual installments—before it can be truly said that he is even with another man of the same age who started to earn after leaving high school at age 18.

An endowment policy for $35,000 in force from age 28 to age 65—the traditional age of retirement—and payable in full at age 65 or death, whichever is earlier, would require a premium of about $800 per year.[2] An additional $1,400 per year, the 4-percent interest on a $35,000 capital investment, must also be recovered. Thus a physician must earn $2,200 per year after paying the expenses of operat-

[1] This sum excludes, of course, the costs to the medical school (over and above tuition) for the 4 years of training, about $10,000.

[2] The self-employed physician does not face automatic retirement at age of 65 as do many company physicians and therefore may provide for his old age by continuing to work. But if he does continue to practice he is, of course, denied the leisure of the retired company physician, who can live on a pension prepaid during his working years.

ing his office and after paying taxes on his income just to amortize the cost of his training. The operating expenses (office rent, personnel, supplies) of a physician in private practice generaly run about two-fifths of his gross income. His income taxes, depending on his income bracket, may be any one of numerous possible amounts. Nevertheless, considering expenses and taxes, it is reasonable to estimate $5,000 per year as the minimum allowance in terms of gross income necessary to amortize a capital cost of $35,000. Hence the first $5,000 of gross income for the physician should be excluded in making comparisons with the earnings of a person whose earning period started at age 18.

The original investment cost, depending on the length of the training period, is not equally great for all professions. For example, the time spent in training by the certified public accountant is appreciably shorter than that of the physician. Four years of college and some additional work are generally necessary for certification. The accountant's working life expectancy, or the probable number of years between the beginning and end of his career, is greater than that of the physician. His lifetime earnings will accordingly be spread over a longer period of time and the degree of income tax discrimination against him less than the discrimination against the physician. The smaller amount of capital investment in accountancy training also imposes a smaller burden of annual amortization.

PHYSICIANS' INCOMES

How much does the typical physician earn? Available data indicate that at the outbreak of World War II the average annual income (after expenses) of physicians in active private practice was between $5,000 and $5,200. During the war the picture was greatly disturbed by the induction of 40 percent of the physicians into the Armed Forces. Sixty percent of the physicians, then, were left to care for the 90 percent of the population that remained at home. Studies of the Bureau of Medical Economic Research of the American Medical Association indicate that during the war period patient visits per physician increased three-fourths. Consequently the income of the civilian physicians rose sharply during the war, but not as fast as the national income. It is likely that the average net income in 1947 was about double the prewar level. More definitive statements can be made when the United States Department of Commerce returns to its prewar practice of conducting surveys of physicians' incomes.[4]

We do know, however, that the percentage of personal consumer expenditures made for the services of physicians is lower now than it was before World War II. National income and total personal consumer expenditures for all goods and services, when adjusted for the increase in population, have increased more rapidly than the income of the typical physician in the United States. (The number of physicians has increased 14 percent since 1940, whereas the United States population increased only 12 percent in the 8 years since 1940.) Moreover the amount spent for physicians' services as a percentage of the amount spent for all medical care items has been declining.

An examination of the Consumers' Price Index, developed by the United States Bureau of Labor Statistics, reveals that physicians' fees have not risen as rapidly as the entire index since the base period 1935–39. In 1947 the Consumers' Price Index stood at 159, as compared with 130 for the physicians' services part of the index. Thus, from the standpoint of prices or fees the physician has not enjoyed the general prosperity of the country. The physician has benefited from this prosperity in the fact that the percentage of uncollected fees has sharply decreased.

Of the roughly 200,000 physicians in the United States, about three-fourths, or 150,000, are in active private practice; the remaining 50,000 are retired or in full-time hospital service as interns, residents, or hospital superintendents or employed by Government agencies or business firms. Roughly 4,000 physicians are now (November 1948) employed by business firms, and roughly 19,000 are Government employees, many of whom share in retirement programs. Of the 150,000 physicians in active private practice more than 90 percent are individual proprietors. Approximately 2 percent are in group practice usually conducted as a partnership. Possibly 5 percent are in small partnerships, which we do not classify as group practice. Relatively few physicians in private practice are full-time salaried employees of nonprofit corporations. Some may derive more

[4] Plans have been completed for a survey of physicians' incomes to be conducted jointly by the U. S. Department of Commerce and the Bureau of Medical Economics Research in April 1950. The results of this survey will be published late in 1950.

than one-half of their income as part-time physicians for corporations. No data are available on the number of physicians now benefiting from corporation pensions and profit-sharing plans. In economic terms the overwhelming majority of physicians in active private practice in the United States can be best described as small retailers of professional services. It is reasonable to say that almost all the net income derived by physicians from private practice is fully subject to current Federal income taxes.

The physician's case, then, is this: He undergoes a long training period at a high cost. His earning period is substantially shortened because of this long training period. Since a considerable portion of his lifetime income is bunched into a relatively few peak earning years, he is placed in a higher income-tax bracket during those peak earning years and hence pays more income taxes during his lifetime than another person who receives the same lifetime income spread more evenly over a greater number of years. If he practices as an employee, he can receive some relief through section 165 (a) and related sections of the Internal Revenue Code by qualifying for an employee pension, which is not taxable until it is received. But since he typically practices as a single proprietor or partner, and not as an employee, he is subject to income-tax discrimination in this matter of pensions.

AMA ACTION

The board of trustees of the American Medical Association authorized its representatives (Mr. J. W. Holloway, Jr., director of the bureau of legal medicine, and me) to record, at a meeting of the Association of the Bar of the City of New York in February 1948, its support, in principle, of the proposal that the Internal Revenue Code be amended to permit physicians doing business as individual proprietors or partners to declare as business expenses the costs of pension programs for themselves with the proviso that there should be a reasonable maximum pension.[3] The American Medical Association believes that such an amendment would appreciably reduce the present discrimination.

The qualifying phrase "with the proviso that there should be a reasonable maximum pension" springs from a belief that without this limitation the proposal would lead to abuses and would sharply reduce Federal tax revenues. Regulations have been promulgated under section 165 (a) and related sections which set forth formulas designed to prevent abuses, that is, disproportionate benefits for high-salaried corporation executives, especially those who are large stockholders. Since employers are required to set up a plan which provides reasonable benefits for lower-paid employees, it is unlikely that pensions for higher-paid employees will be out of line. The infrequency of the employee-employer relationship in the practice of medicine might make a similar set of checks unworkable for the medical profession. For this reason the American Medical Association has recommended an over-all maximum pension.

In the hearings before the Committee on Ways and Means, House of Representatives, Seventy-seventh Congress, second session, on the revenue act (March and April 1942), Mr. Ralph E. Paul, then tax adviser to the Secretary of the Treasury, suggested $7,500 per year as one reasonable maximum for pensions financed by tax-free gross income. His suggestion was not adopted. If the decline in the purchasing power of the dollar is taken into account, his maximum today might be about $10,000. The American Medical Association has not recommended any specific amount as the maximum.

TWO METHODS

Two proposals for eliminating this tax discrimination against professional persons have been presented at this symposium by two eminent tax authorities, Mr. John R. Nicholson, of the Chicago Bar Association, and Mr. Harry Silverson, of the Association of the Bar of the City of New York.[4] Nicholson has suggested

---

[3] This action of the board of trustees was reported in the Journal (136 : 834 [March 20] 1948).

[4] A complete description of the proposals of Mr. J. R. Nicholson (135 South La Salle Street, Chicago 3) and Mr. H. Silverson (1440 Broadway, New York 18) can be found in the following publications: Nicholson, J. R.: Pensions for Partners, American Bar Association Journal 33 : 302 (April) 1947; Comments on Mr. Rudick's Plan and Replies to His Strictures, American Bar Association Journal 33 : 1005 (October) 1947; Partnership Agreement Providing for Payment to Partner's Widow, Business Lawyer 2 : 20 (April) 1947; Tax Inequities Against Professional Men: A Remedy, Chicago Bar Association Symposium on Taxation of Earned Income (October 27) 1948 (mimeographed). Silverson, H.: A New Tax Proposal, American Mercury 44 : 345 (March) 1947; Earned Income and Ability to Pay, Tax Law Review 3 : 209 (February–March) 1948.

that the code be amended to permit individual proprietors and partners to qualify for the pensions financed by tax-free gross income. A different approach has been presented by Silverson. His premise is that taxation should be based on lifetime earnings or some kind of an average of lifetime earnings. Since it is impractical to devise a system of lifetime income taxes involving this concept, he believes that individuals should be enabled to postpone for some years, possibly to age 60, but at least for 5 years, the constructive receipt of some of their income. His plan involves exclusive investment of limited amounts of tax-free income in a special issue of low-interest-bearing Government bonds; taxes on the income invested in these bonds would be deferred until the bonds were cashed. The Silverson plan would appear to hold more appeal for some other professions than for physicians. Its greatest benefit would be received by those professional men whose incomes are severely affected by the business cycle, for example, architects. Both the Nicholson and Silverson plans deserve continued study. The extension of the Social Security Act to cover individual proprietors and partners has not been suggested in these meetings as a third proposal, for it obviously would not provide equitable treatment for those professional men with annual earnings in excess of $3,000, the present social-security limit.

It has been argued by some tax attorneys that it is not possible to eliminate the discrimination against the professions without making whatever relief is given available to all individual proprietors and partners—to farmers, storekeepers, and the like who do not incorporate. Be that as it may, I submit that the problem is greatest for professional persons—in particular, for physicians. It is imperative that a solution be found by those versed in the drafting of income-tax laws.

I do think, however, that in removing the present inequities we must be guided by one important consideration or limitation. We should not provide this tax relief in such a way as to increase the burden of the public debt for all of us. The specter of an increasing public debt is already before us. It is felt in the inflationary pressures in our economy. It may make the real benefits of a plan of deferred-income payments unrealized by the very persons whom the plan was designed to help, not only by decreasing the purchasing value of the pensions but also by making increased taxes necessary. The public debt in the form of Government bonds, although recognized as assets by the holders of the bonds (individuals and corporations) must be considered the liability of all our taxpayers. For the public debt consists of claims to be paid out of general revenues. These claims on the wealth of the country should be recognized as a debt by every person. If these claims were recognized as personal liabilities, citizens would realize that they are much poorer than they think they are when they forget about the public debt. Moreover, if each physician, lawyer, or other professional person would compute his share [7] of the burden of the public debt, he would be more anxious than ever to obtain immediate relief from the income-tax discrimination under discussion. With a rising public debt, there is no assurance that a tax rate for a given income bracket would not be increased at a later date to amortize the debt.

There will undoubtedly be much disagreement over the final details of a plan for eliminating the present tax discrimination against professional men. Nevertheless, professional persons, who must endure the cost of entering their profession late in life after prolonged and expensive training, must be encouraged to provide pensions for themselves. The need for amending our tax laws must be recognized and met if the goal of reasonable pensions for all is to be attained. The Social Security Act of 1935 marked the departure, at the Federal level, from the doctrine of individual responsibility for pensions. The 1942 Federal Revenue Act was a long step forward in rounding out this new idea. The task of rounding out that act to provide reasonable pensions for the self-employed in all income brackets must be completed before the new doctrine of social responsibility can be considered integrated and mature.

[7] My method for computing an individual family's share of the public debt burden is presented in Bureau Bulletin 65, How Rich Are You? Chicago, American Medical Association, September 1948.

[Reprinted from the Current Comment of the Journal of the American Medical Association, April 29, 1950, vol. 142, p. 1366]

TAXES AND PENSIONS FOR PHYSICIANS

Under existing Federal tax laws, physicians who practice as individual proprietors or partners face certain tax inequities with respect to pensions. Elsewhere in this issue (p. 1357) Dickinson points out that section 165 (a) and related sections of the Federal Internal Revenue Code provide that a company can set aside funds under approved plans for employee pensions or shares in profit-sharing trusts which are deductible from the company's income as business expenses and, therefore, are not subject to income taxes. These funds do not become a taxable part of the recipient's income until they are received, either when the recipient retires or when he cashes in on his profit-sharing account—at which time he will presumably be in a lower income-tax bracket with a reduced tax burden. Only physicians and other professional men who are employees—for example, company physicians and company lawyers—can receive the benefits of such pensions. A physician undergoes a long training period (the longest among the professions), during which he foregoes income and incurs expenses accumulating to approximately $35,000 at the time of entering medical practice, at approximately age 28. The working lifetime remaining after this prolonged training period is shortened, and a considerable portion of his lifetime earnings is bunched into a relatively few peak earning years. During these peak earning years he is placed in a higher income-tax bracket, and hence pays more income taxes during his lifetime than another person who receives the same lifetime income spread more evenly over a greater number of years. Thus, the question of pensions for physicians acting as individual proprietors and partners is particularly perplexing for them because of the unusual economic pattern of their professional lives.

STATEMENT OF MAX L. WATERMAN, VICE PRESIDENT OF THE SINGER MANUFACTURING CO.

In connection with the pending tax-revision bill (H. R. 4473) the Treasury Department has proposed addition of household-type sewing machines to the list of electric, gas, and oil appliances that are taxable under section 3406 of the Internal Revenue Code. The Department advanced the same proposal before Ways and Means Committee, where it was rejected; section 484 of the bill does not include sewing machines.

While the proposal was not the subject of any specific comment in Secretary Snyder's appearance before this Committee on Finance in his February 8, 1951, statement before the Committee on Ways and Means, the Secretary supported the proposed extension of the tax on the ground that, in the interest of equity, some appliances not now taxed should be brought into the base of the tax. Also, he referred to the President's suggestion that additional revenue be raised from excise taxes on those consumer goods which are less essential or which use materials that will be in short supply.

So long as the excise tax is not imposed on the workman's tools or on the farmer's plow, it should not be extended to the housewife's sewing machine. For, as has been appropriately said, the sewing machine is a tool of home industry. Many women make their living by sewing on domestic or home-type sewing machines, and all use it as an important aid in reducing the cost of living.

The domestic sewing machine is an item of productive equipment—not a labor-saving device. Use of the sewing machine in the home will increase the housewife's burden, but will enable her to reduce the family's clothing costs by substituting her own labor for the cost of labor involved in manufactured clothing. A tax on sewing machines is indirectly a tax on clothing. When it is considered that no tax is proposed for industrial or factory-type sewing machines, it becomes clear that a tax on household sewing machines discriminates against clothing made in the home. This added burden placed on home clothing narrows the advantage to be gained by the enterprising housewife through her own efforts. This reduced incentive will produce results contrary to the announced desires of the Government. In the first place, large-scale home sewing means a reduced demand for the available supply of manufactured clothing which, in turn, eases the manpower demands of that industry. Scarcity of manpower is one of the serious problems in the present defense effort. Home sewing supplements the defense effort by adding spare-time hours of housewives to the labor pool supporting the production of clothing, a basic necessity. Over a hundred million new patterns are sold annually. More than 400,000 women take sewing lessons at the Singer shops alone each year. It may be conservatively stated that an equal number receive instruction at other points. These facts demonstrate that women are trying to clothe themselves and their families by their own effort, and avoid as much as possible the high prices of ready-made clothes.

The proposed tax cannot be justified on the theory that it will fall on an item which is not essential or which uses important amounts of materials that will be in short supply. From what has been said, it is clear that the sewing machine is the direct antithesis of the dispensable luxury. It is an absolute essential as we go into a period of belt tightening. The principal materials used in the manufacture of domestic sewing machines are ordinary cast iron, low-carbon steel, and noncritical hardwoods. The amount of aluminum used, when averaged over the different styles of domestic machines which we produce, amounts to approximately 1½ pounds of secondary aluminum per sewing machine. In the case of copper the only use is for a motor, and the average usage is only approximately one-half pound per sewing machine. The continued volume production of domestic sewing machines, with all the beneficial effects which flow therefrom, can therefore be supported by the consumption of relatively insignificant amounts of critical materials.

The returns from such a tax will be negligible, but the addition of the tax will have the effect of pricing the article in question out of the buying range of many consumers—those who may need it most.

Nor does any consideration of equity require that sewing machines be added to the base of the tax. A domestic sewing machine is not an electrical appliance. A sewing machine is a sewing machine. It is an article to perform sewing operations. The same sewing machine head may be operated by hand, by foot with a treadle, or by a motor. All three serve the same purpose. The use of an electric motor does not add one single function to the sewing machine. Electric power is merely another kind of power used to drive the machine. A true electrical appliance is useless without electricity or its usefulness is drastically impaired without an electrical motor. This is not true of sewing machines. The difference in time alone has made ordinary hand sewing well-nigh obsolete, particularly in the United States. The addition of a motor to a saw does not make it an electrical appliance.

The sewing machine is not a luxury. Its utility as an instrument of production gives it its appeal to those who, in times of emergency or rising prices, can afford only essentials. Thus, it is not competitive, directly or indirectly, with other items now subject to tax or proposed to be added to the tax base. The sewing machine serves a function of a different type, and its purchase arises from wholly different considerations.

In past national emergencies much of the burden of providing clothing for civilian needs has been thrown on the housewife using her domestic-type sewing machine. This was particularly true in World War II when a large part of manufacturers of clothing produced uniforms, etc., for the Armed Forces. In such times shortages of civilian clothing develop and unless an adequate number of household sewing machines are available at a price which the average citizen can afford, the depleted supply of available civilian clothing is rapidly exhausted with no means of replacement. Then, too, in times of emergencies domestic sewing machines are used extensively in repair work and in remaking existing articles of clothing. Home sewing should be encouraged, not discouraged.

The proposal to tax sewing machines was the subject of comprehensive testimony before the Committee on Ways and Means in March. The statements of the witnesses are set forth in part 8 of the printed hearings before the Committee on Ways and Means on Revenue Revision of 1951, as follows: Mrs. Mary Brooks Picken, president, Mary Brooks Picken School, page 2290; Mr. Glenn G. Nuss, president, White Sewing Machine Corp., page 2203; Mr. Raymond F. List, vice president, National Sewing Machine Co., page 2302; Mr. Lewis Emery, treasurer, Free Sewing Machine Co., page 2304; Mr. Max L. Waterman, vice president, the Singer Manufacturing Co., page 2306.

CONCLUSION

We respectfully submit that the home-type sewing machine should not be subjected to an excise tax. Such a tax would be a tax on clothing and this is contrary to the expressed policy of the Treasury and this committee. Home-type sewing machines are an essential item, and it is not in the national interest to discourage their use. They are in a separate category and not in competition with time-saving or convenience electrical household appliances.

JULY 24, 1951.

Senator EVERETT M. DIRKSEN,
United States Senate Office Building, Washington, D. C.

MY DEAR SENATOR: As the present head of a home-building organization, organized in 1887 by the writer's father, I find it very difficult to see any justice in a new tax proposal (which I understand has been passed by the House of Representatives), penalizing closely held corporations. Our organization, which now numbers among its executives my son (third generation), for 67 years has battled to build a worth-while business.

The bill in question provides, in the case of corporations wherein 95 percent of the voting stock is held by five or fewer persons, that such corporations shall be treated as one, getting the benefit of but one surtax exemption and one excess-profits-tax exemption. The difference in taxes is such as to make such taxes well-nigh confiscatory.

The victim of such legislation is the small-business man, since stock of most of such corporations is held similar to ours. Our shares are held by more than five people, but because of the provision respecting family ownership, legally would be considered to be fewer than five.

We believe you will agree that taxes should be fairly apportioned, and that in cases involving few shareholders in a corporation, such corporation should not be singled out for excessive taxation.

Surely, we should all pay heavy taxes in order adequately to assist in a strong defense program. We are, and of course should be, willing to bear our proper share, but the inequity of the situation in question tends to remove creative incentive, and a creative incentive we must retain. I believe you will agree.

Should the bill in question reach an appropriate Senate committee for hearings, I most sincerely hope that you will find it consistent to agree with my position. Further, I would appreciate an opportunity to appear before a committee during its investigation into the merits of the bill in question.

I would appreciate hearing from you and having your views. Thanks in advance.

Yours very truly,

MILLS & SONS,
By LAURANCE H. MILLS,
President.

BRIDGEPORT BRASS CO.,
Bridgeport, Conn., August 1, 1951.

Hon. WALTER F. GEORGE,
Chairman, Finance Committee,
The Senate, Washington, D. C.

DEAR SENATOR GEORGE: We appreciate an opportunity to present certain views to your committee on the application-of-growth provisions of the current excess profits tax.

Bridgeport Brass Co. is the largest independent company[1] in the brass-mill industry with manufacturing plants located at Bridgeport, Conn.; Indianapolis, Ind.; and Exeter, N. H. The company provides employment for some 5,000 employees with current payrolls running in excess of $10,000,000 annually.

GROWTH PRIOR TO 1946

Our company experienced growth problems of a type analogous to those recognized by your committee in its report on H. R. 9827 last December. It has grown steadily over the 85 years of its existence, particularly during the last 15 years when its sales and assets have increased more than five times. Unfortunately from a tax viewpoint, the company's major expansions took place in the two excess-profits-tax base periods, 1936–39 and 1946–49.

[1] It manufactures and sells a complete line of brass mill products in the form of sheet, rod, wire, and tubes, as well as fabricated products, such as plumbing goods, tire valves, and aerosol pressure-packaged products.

As a result of expansion in 1937 and 1938 when we built the first continuous rolling mill in the brass-mill industry at a cost of over $5,000,000, our earnings in the 1936-39 base period were materially reduced. The consequence was that during World War II the company paid out some $25,000,000 in taxes and renegotiation, which was more than our total assets at the end of the war.

This big pay-out left the company in a weakened condition at the end of the war to continue its growth and to meet the postwar inflation. When it acquired new plants in 1946, 1947, and 1948, it had to borrow some $13,000,000 to pay for these plants and to provide the additional working capital required to run them.

1947-49 NOT NORMAL YEARS

During the years 1946-49 the company was building up its organization to operate these new facilities, but it had to carry the load of the additional debt which it had incurred without obtaining the benefits of the potential earnings from the new plants. We have learned that people, rather than plants alone, make the most important contribution to our company's operations, and it takes us a long time (from 3 to 5 years) to develop a skilled organization to run a new brass mill profitably. Consequently, our expansion years 1946-49 do not truly represent the normal earnings to be expected from our investment in new mills during those years.

1946 AND 1950 APPROACHED NORMAL PROFIT LEVELS

In 1950 for the first time the company began to approach a normal profit from these new facilities in line with its experience over many years.

Your committee at its hearings in December made inquiry concerning our profits both before and after taxes for a period of years. In response to your inquiry, we attach exhibit 1. This is a comparison of our profits both before and after taxes with those experienced by all manufacturing concerns.

In the postdepression years of the 1930's our profits approached 7 percent before taxes. They were reduced by our expansion and the resultant dislocation and training of personnel in 1937-39. But the completion of the program enabled us to reach levels before taxes of some 9.9 percent during World War II.

However, a low average earnings credit from the base period 1936-39 reduced our profits after taxes to 2.3 percent of sales for the entire World War II period.

In 1946, the first postwar year, the company again achieved a normal earnings level of 9.6 percent before taxes.

However, a large part of the facilities included in the company's postwar modernization and expansion program were acquired toward the end of the 1946-49 base period. For that reason earnings realized during this base period did not reflect the return which our stockholders had a right to expect from these facilities.

In 1947 and 1948 our net profits after taxes were not sufficient to sustain service on our enlarged debt and to make provision for depreciation on our improved facilities and known future replacements, to say nothing of a fair return for our stockholders. Profits in 1947 were adversely affected by a sharp decline in customer demand created by a drastic reduction in customer inventories and further aggravated by uncertainties in the copper market. Also, in 1947 substantial quantities of surplus brass products were sold by governmental agencies at prices well below the existing market.

Profits in 1948 were unsatisfactory largely due to the fact that several new departments, including our newly acquired Indianapolis plant, had not reached their proper level of operating efficiency and potential earnings. During the year, substantial sums were expended in preparing the Indianapolis plant for producing thinner gages and smaller sizes of mill products needed by customers for regular commercial business. And, of course, the training of the organization of this plant to use this equipment was expensive and took several more years.

For the brass industry, 1949 was a recession year and our company suffered a severe loss.

So that, of the base period years, 1946-49, the only year which even approached normal rates of profit was 1946.

1950 NOT AN INFLATED YEAR

In 1950 we again reached a more normal profit return on commercial sales. We reached more efficient operation of our facilities contemplated by our training program, and our sales volume recovered from the low levels of 1949. We had only a nominal amount of Government business, and Government stockpiling of copper and zinc, which are our raw materials, limited even our commercial business.

We did not have the inflationary lift in 1950 experienced by many industries. For example, the average selling price per pound of all our brass mill shipments (including interdivisional) in 1950 was only 5.7 percent above the corresponding average for the year 1948. Copper and zinc hardly more than recovered their 1948 year-end levels (see exhibits 2 and 3), and our own 1950 margins remained substantially in line with those we experienced in 1948. So, by any standard, the 20-percent adjustment already made by Congress in the 1950 part of the growth formula would be more than adequate to cover a case like ours.

For all of these reasons 1950 was a fairer reflection of normal profits for our company with its expanded facilities than any of the years 1946–49.

PRESENT GROWTH FORMULA MISSES US

Your committee courteously considered our situation in its hearings on excess-profits tax proposals on December 6, 1950. At that time you indicated that our case was one which seemed worthy of relief, and a growth formula was devised to take care of many such growth situations. Unfortunately, the growth formula as enacted narrowly missed our qualifications.

1. Our assets were slightly more than the $20,000,000 total assets set forth in that formula.

Were $20,000,000 of assets to be continued as the dividing point, we respectfully suggest that this figure be used after an appropriate deduction for current liabilities. The resulting net figure would surely offer a fairer measure.

2. We did not reach the required increase of 80 percent in payroll or 50 percent in gross receipts during the last half of the base period. We could not because of the nature of our expansion and the low level of our operations during the loss year 1949.

We believe that the Congress will desire to develop a suitable alternative for growth companies which expanded in the base period years.

SUGGEST SLIGHT AMENDMENT TO GROWTH FORMULA

We, therefore, respectfully suggest that a growth formula equivalent to that provided in section 435 (e) be made available to companies whose total assets less current liabilities at the beginning of the base period were less than $20,000,000, whose growth during the base period was in line with that which we experienced, who suffered losses in 1949, and whose 1950 gross receipts were 150 percent of the average of those for 1946 and 1947. Further, such a formula could incorporate a choice of one-half of 1946, 1947, or 1948 profits before taxes to be added to 40 percent of those for 1950.

SMALL EFFECT ON TAX REVENUE

It is our belief that the enactment of this suggestion will not materially diminish the tax revenues of the Government, and we should be pleased to discuss this suggestion with the technical staff.

Recent events have emphasized the truth of the statements of Secretaries Marshall and Snyder to the effect that our present emergency will be prolonged for many years. Since production is our most potent weapon against the Communist world, we would avoid weakening our industry. Rather we should do everything possible to make it strong. This being so, it is particularly important that the interest in companies which grew during the base period expressed by your committee at its December hearings be enacted into the growth provisions of the excess profits tax.

This need of remaining strong has particular application to a company such as ours where remaining strong is the price of independence.

Respectfully submitted.

BRIDGEPORT BRASS CO.,
JOHN S. DAWSON,
Secretary and General Counsel.

AMERICAN INSTITUTE OF ACCOUNTANTS,
New York 16, N. Y., August 2, 1951.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: The American Institute of Accountants, through its committee on Federal taxation, respectfully submits herewith recommendations for revision of the Internal Revenue Code. Our committee had sought an opportunity to appear before your committee for the purpose of making these suggestions but was requested by your committee last week to forego making a personal appearance and submit its recommendations in written form. The present submission, therefore, is made in accordance with your committee's request.

The American Institute of Accountants is the national organization of certified public accountants and has a membership in excess of 17,000. Most of our members are engaged daily in the application of the Internal Revenue Code in their accounting practice and we, therefore, represent a group which is well-qualified to make observations and suggestions on tax matters.

As a policy matter, our committee does not concern itself with tax rates or the tax structure. Accordingly, our comments will be limited to the technical features of H. R. 4473 and to the provisions of the Internal Revenue Code which have created gross inequities among taxpayers.

Our committee has for a number of months been giving serious consideration to a number of inequities in the Excess Profits Tax Act of 1950. Due to their great number, as well as their complex nature, our committee is not prepared, at this time, to make a detailed report on its proposed recommendations to correct these inequities. Additionally, a very important segment of the regulations, specifically, those dealing with part II, have not been promulgated by the Commissioner of Internal Revenue. Our committee has been in close contact with the Commissioner's office, has made numerous suggestions for incorporation in the regulations, and has a deep appreciation of the serious problems confronting the Commissioner in getting out regulations within a reasonable time. Nevertheless, these regulations have not yet been promulgated. In view of this most difficult situation, our committee desires to inform you that as soon as regulations are promulgated and finalized, we will submit detailed recommendations concerning excess-profits-tax matters.

As a result of the delay in the promulgation of regulations (which delay our committee fully appreciates could not be avoided), a very serious situation confronts corporate taxpayers. Under section 53 (a) (2) the Commissioner of Internal Revenue is empowered to grant extensions of time for filing returns for a period no longer than 6 months after the original due date. It is entirely likely that, at the very earliest, final regulations will not be out until shortly before September 15, which is the statutory limitation date for calendar-year returns (and even fiscal-year returns under the Excess Profits Tax Act). It will, therefore, be manifestly impossible for corporate taxpayers to digest and understand the regulations so that the numerous questions involved in filing proper returns by September 15, 1951, can be resolved. We, therefore, recommend that there be incorporated in H.R. 4473 an amendment granting an extension of time for filing returns for corporate taxpayers for a period of 90 days from September 15, 1951. We earnestly request your very serious attention to this grave matter.

In the alternative, if time does not permit incorporation in H. R. 4473 of a section which will adequately take care of this dire emergency, we suggest passage of a joint resolution of the House and Senate to grant appropriate relief to corporate taxpayers in this situation.

On April 4, 1950, our committee submitted to the Committee on Ways and Means 28 specific recommendations for amendment of the Internal Revenue Code. Three of these recommendations, Nos. 15, 18, and 23, have been adopted in principle by the Congress and enacted into law. There still remains a very pressing need for adoption of the remaining 25 recommendations and, while it is realized that revision matters will probably not receive consideration in the current bill, our committee feels impelled to renew with all earnestness its previous recommendations. A copy of the April 1950 recommendations is enclosed.

One of our April 1950 recommendations is included, in substance, in section 303 of H. R. 4473, which relates to nonrecognition of gain on the sale of a personal residence. We endorse that provision, but we wish to point out that the 1-year period for replacement may not be sufficient if the taxpayer desires to build a home under present conditions.

Another provision of H. R. 4473 merits comment, namely, section 201, relating to withholding of tax on dividends, interest, and royalties. This section places an impossible burden on the payor corporation if a dividend is paid in property. Not only is there a problem of converting some of the property into cash to pay the withholding tax, but, in addition, there is frequently a real problem of valuation of the property distributed as a dividend. The bill appears to place the liability on a corporation to withhold tax based on the correct valuation even though litigation may be necessary to determine the correct amount. Such property dividends should be exempt from withholding tax.

Section 131 of H. R. 4473 relating to fiscal-year taxpayers does not go far enough. Income of a partnership on a fiscal year basis should be prorated so that the individual partner pays tax thereon at the rates applicable to the calendar year in which such income is earned to be consonant with the treatment accorded to individuals under this proposed section. A partnership is not taxed as an entity, but each partner is taxed individually.

Our committee has followed with great interest the matter of granting tax relief to individuals to provide retirement income for themselves. A special subcommittee of our committee has made a detailed study of the Keogh and Reed bills (H. R. 4371 and H. R. 4373). As a result of this study, our committee desires to go on record approving the principles of these bills. There has long been need for a provision permitting a tax deduction for payments into a fund to provide retirement income for professional people since most lawyers, accountants, doctors, and other professional people are not covered by existing employer pension provisions. We recommend that the principle of the Reed and Keogh bills be incorporated into H. R. 4473.

In the light of the understanding with your committee at the time we were requested to forego making a personal appearance at your hearings on H. R. 4473, it is our desire that this letter shall become part of the official record of hearings on H. R. 4473.

Respectfully submitted.

THOMAS J. GREEN,
General Chairman, Committee on Federal Taxation.
WALLACE M. JENSEN,
Chairman, Subcommittee on Current Tax Legislation.

STATEMENT OF F. CLEVELAND HEDRICK, JR., WASHINGTON, D. C., ON BEHALF OF WDSU BROADCASTING CORP., NEW ORLEANS, LA.

WDSU Broadcasting Corp., the owner and operator of a radio and television station in New Orleans, La., appreciates this opportunity to bring to the attention of the committee an obvious error in section 445 (c) of the Internal Revenue Code which vitally affects the computation of the excess-profits credit of every corporation commencing business after December 31, 1949, and seeking to use the provisions of such section, which purports to permit the credit to be determined by applying the base period industry rate of return to the total assets of the company.

Under section 445 (c) the total assets for any of the first three taxable years are computed by taking the total assets on December 31, 1949, and adding the net capital addition for the taxable year involved. The total assets for determining excess-profits credit for any taxable year after its third taxable year is computed by taking the total assets on December 31, 1949, or the last day of its third taxable year, whichever day is later, and adding net capital additions.

Where the taxpayer commenced business on or after January 1, 1950, its total assets for its first 3 years are determined under section 445 (c), which means that its total assets is in effect the amount of the net capital addition for such years determined under section 435 (g) since it obviously has no assets on December 31, 1949. The effect of this is to give the taxpayer a much lower credit than would be obtained by applying the industry rate of return to total assets as of December 31, 1950. Only 75 percent of assets acquired by borrowed capital are used in calculating the capital addition, while 100 percent of the interest on borrowed capital is deducted. On the other hand, the total assets for its fourth and subsequent taxable years is measured by the total assets on the last day of the third taxable year, plus capital additions for the current year, and the total assets on the last day of the third taxable year are not affected by whether the money was borrowed or acquired through stock issue. Furthermore, if the corporation had commenced business prior to January 1, 1950, and had acquired assets before December 31, 1949, the computation of its total assets would commence with a determination of its total assets on December 31, 1949, unaffected by whether the assets were purchased with borrowed money or equity money.

The legislative history of the section indicates that no such discrimination against corporations commencing business after December 31, 1949, was intended.

The House bill contained the following language with reference to the matter of computing excess-profits credit of such a taxpayer for the first three excess-profits-tax years: "For the taxpayer's first taxable year, if such taxable year is in excess-profits-tax taxable year, by multiplying the amount of the taxpayer's total assets for the last day of such taxable year by the base period rate of return for the taxpayer's industry." Similar provisions were made for the second and third excess-profits-tax years.

The Senate Finance Committee made the changes which appear in the present provisions of section 445. However, the Senate Finance Committee report (Rept. No. 2679, 81st Cong., on H. R. 9827, at p. 26) states: "When the taxpayer's first, second, or third taxable year ends after the base period, the credit is determined for each of these years by applying the industry average base period rate of return to the taxpayer's total assets for each of such years. The credit for subsequent years is determined in a similar manner on the basis of total assets at the close of the taxpayer's third year or its last excess-profits tax year, whichever is later."

The conference committee report merely states with reference to the Senate amendment that "Amendment No. 134: This amendment strikes out certain provisions of section 444 of the House bill relating to the method of computing average base period net income for new corporations and inserts new rules for the computation."

A document entitled: "Summary of H. R. 9827—The Excess Profits Tax Act of 1950" as agreed to by the conferees prepared by the staff of the Joint Committee on Internal Revenue Taxation, December 1950, and distributed January 3, 1951, states at page 16 in explanation of the alternative basis for new corporations as follows: "When the taxpayer's first, second, or third taxable year ends after the base period, the credit is determined for each of these years by applying the industry average base period rate of return to the taxpayer's assets for each of such years. The credit for subsequent years is determined in a similar manner on the basis at the close of the taxpayer's third year. A new corporation receives an adjustment for capital additions in the tax period when made more than 3 years after it commenced business."

It seems clear that neither your committee nor the staff of the joint committee contemplated the result described above. We understand that the staff is aware of the problem and will at the appropriate time make a recommendation to correct the statute.

It is suggested that the intent of your committee as expressed in Report No. 2679 can best be carried out by restoring the House language, which will clearly permit corporations commencing business after December 31, 1949, to have the full benefits of the "total assets" method of computing excess-profits credit.

MILWAUKEE, WIS., *August 2, 1951.*

HON. WALTER S. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.:

Will you please have inserted at the appropriate time in the record of the present hearing the following statement of Harold E. Waltz, executive manager of the Photographers Association of America, Toledo, Ohio. This association representing professional and industrial photographers respectfully requests and urges the great importance of favorable action of your committee on section 485 of the tax bill as our testimony on previous hearings verifies the correction in the present photographic excise-tax law which will be made by the section. This has long been greatly needed to correct serious and special inequities and to stop taking our production equipment, materials, and livelihood tools.

HAROLD E. WALTZ,
Executive Manager, Photographers Association of America, Secor Hotel, Toledo, Ohio.

KANSAS STATE CHAMBER OF COMMERCE,
Topeka, Kans., July 31, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: As you know, thousands of people in Kansas and the Midwest have lost their homes and all of their property as a result of the floods which have ravaged this area in recent weeks. The spirit which these flood victims have demonstrated has been heart-warming and encouraging, but it cannot overcome the fact that they cannot absorb their losses unless they are aided in every way possible.

Accordingly, the Kansas State Chamber of Commerce appeals to you and to the members of the Senate Finance Committee to give immediate favorable consideration to including provisions in the Internal Revenue Code which will permit the offsetting in its entirety of any flood loss against current and future income subject to income tax, whether suffered by business or nonbusiness property, to the end that victims of these floods will receive tax benefit for every dollar of flood loss sustained, less amounts recovered by insurance or grant.

This relief measure was recommended July 26, 1951, by the Federal Taxation Council of the Kansas State Chamber of Commerce, which is composed of the leading authorities on Federal taxation in this State. It was unanimously adopted on July 27, 1951, by the board of directors of this organization, which represents every section of Kansas and every phase of the economy of the State.

We believe it would be a reasonable and fair procedure to permit owners of nonbusiness property to spread their loss over a period of time, as is currently the procedure open to owners of business property. We respectfully urge that the Senate Finance Committee take immediate action to incorporate such provisions in the new revenue act which is not under consideration by this committee.

Sincerely yours,

M. W. WATSON, *President.*

MEDICAL SOCIETY, STATE OF NORTH CAROLINA,
North Wilkesboro, N. C., August 1, 1951.

Senator WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR MR. GEORGE: It has been brought to the attention of the North Carolina State medical headquarters that an amendment to the revenue code No. 18 has been proposed. This has to do I understand, with retirement benefits for self-employed and professional people. It is felt by the medical men with whom I have talked, many of whom find themselves in the high income brackets over a relatively short period of time during the height of their earning capacity which averages about 15 to 20 years, that this works a great hardship and is unfair discrimination.

The average doctor spends about 10 years and large sums of money in obtaining his education and preparing himself for the practice of medicine. The time spent during his training, in which there is no income, and expense involved has been figured at approximately $30,000. The average man, of course, begins at the same period with a lower income, pays less income tax and accumulates more over a longer period of time than the doctor for reasons set forth above.

For these reasons I personally feel, and I believe I express the feelings of the medical profession of North Carolina, that the medical profession should be included in the provisions of this bill.

The bill referred to above I understand is H. R. 4473 and is now being considered by the Senate Finance Committee of which you are chairman.

Cordially yours,

FRED C. HUBBARD,
President, North Carolina Medical Society.

CHICOPEE MANUFACTURING CORP.,
New Brunswick, N. J., July 31, 1951.

Hon. WALTER GEORGE,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR GEORGE: Chicopee now has 5 mills in Georgia employing over 1,500 people. The economic progress and financial stability of our employees is being materially affected because of the excess-profits tax in its present form.

The tax seriously affects the financial condition of our business. The resultant effect is to limit growth and expansion, which in turn has its limiting effect on job opportunities for our people. The growth of this company has always been financed out of profits; without reasonable profits, we face economic strangulation. Under the existing excess-profits tax, we have no possibility of relief. Amendments to the law would only create greater inequities. The application of a base period should be removed as unrealistic.

I, therefore, urge that the excess-profits tax be abolished and a flat tax on all corporate profits be substituted—a more sensible and sound approach.

Sincerely yours,

G. O. LIENHARD, *President.*

YOUNG AMERICAN BUSINESS CONFERENCE,
Houston 5, Tex., August 1, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: Reference is made to my telegram of July 23. The Young American Business Conference, which now represents scores of small businesses throughout the country, believes the present excess-profits-tax law is highly discriminatory to those companies formed since 1946, and that a full exploration of the drastic effects of this law on small new businesses who will be America's industry of tomorrow should be undertaken immediately. We believe that the 10-minute token hearings now being held by the Senate are insufficient to bring out the facts or delve into the problem of justified relief.

The members of the Young American Business Conference do not believe that it is the intention of Congress to create a discriminatory tax or to work an undue hardship on small, new businesses. Although we are perfectly willing to pay our fair share of the tax burden, we absolutely cannot continue to maintain our present positions competitively, much less enjoy our normal growth and expansion, with the tax as it now stands and as it is proposed.

In his report of January 15, 1951, to the Senate, Senator Sparkman of the Small Business Committee, stated, as a result of his hearings along other lines:

"It (the Excess Profits Tax Act) of necessity will bear more heavily on the young and growing businesses which have no historical profit base with which to meet the burdens of emergency taxation. * * * Furthermore, it is these really small enterprises which often need all their profits to plow back into the business to meet their capital requirements. Many studies have shown this reinvestment of profit to be the chief source of capital for small businesses and, as the basic tax rate rises, the amount of profits remaining after taxation will be proportionately reduced. With taxes at increasingly high wartime rates, it becomes more evident that no entrepreneur, however wise, will be able to meet his capital needs in this manner."

Further, it is the already expressed policy of both your committee and the House Ways and Means Committee to avoid undue penalty to new businesses through this law. This desire is expressed in paragraph 10, page 25, of Report No. 2679 of the Senate Finance Committee. Unfortunately, the "industry average" form of relief thus proposed is far from adequate, as the experience of hundreds of small corporations has already demonstrated.

The present excess-profits tax law, hastily enacted last fall to meet an emergency, has created a condition which threatens the American system of free enterprise and competition; and the future American business leadership is being taxed out of existence because:

1. There are insufficient funds left after taxes to plow back into necessary plant expansion and improvement;
2. There are insufficient funds left after taxes for the increased working capital requirements in an expanding business;

3. The necessity of paying 50 percent of the tax by March 15 further decreases available working capital;

4. Small new businesses are forced to charge regular depreciation on plant and equipment and yet compete with older established companies who in many cases have already written off such equipment;

5. Small new businesses are forced to plow back every cent to fixed assets and increased inventories and therefore cannot accumulate any of the necessary reserves required to tide the business over a business cycle bobble;

6. Small new businesses less than 5 years old are still considered risky by bankers and insurance companies, and therefore it is virtually impossible to obtain capital loans from these sources;

7. Small new businesses which have developed new products and processes but which are held down by high taxes to the extent that they cannot expand fast enough to meet the demand they have created and enjoy the business which they have rightfully earned, are being made a prey to the larger corporations who have the necessary funds to take advantage of the market which the little fellow has developed;

8. Of all the small corporations formed since 1946, only a few, perhaps 1,000, are advanced enough in their profit picture to be severely hurt by the excess-profits tax law. Yet, under a less severe tax program these rapidly growing companies of today would be America's new industries of tomorrow. Through rapid growth they would actually furnish more revenue to the Government in 2 or 3 years. The loss of revenue to the Treasury this year and next year would be relatively small under our proposals (probably less than $50,000,000), yet we shall be encouraging competition, free enterprise, and American leadership and industry of tomorrow. This is certainly a small tax for the Treasury Department to defer.

9. None of the present methods of computing taxes takes into consideration that in most cases a manufacturer loses money during the first 12 to 18 months before he is able to break even and start making money.

10. The law as it presently stands, extending no growth company relief to new corporations, is ex post facto legislation against veterans. The majority of World War II veterans were still in uniform on January 1, 1946, and thus had no chance to get into postwar business in time to qualify for growth-company relief.

There was a time in American history when a man could invent a new product or discover a new way of doing something and, through diligent work, good leadership, efficient management, and aggressive selling he could build an industry. Under such conditions the automobile industry, the aircraft industry, the appliance industry, and the chemicals industries were built. Tomorrow's industries which will keep our country strong and employment at a high level cannot be built on a 62 or 70 percent tax today.

Please understand that small new businesses do not cry for tax relief to put money in their own pockets. We want this tax relief to put the money back into our businesses. Therefore, the Young American Business Conference proposes:

(1) That a modification of the growth-company formula be extended to those qualified firms who have been incorporated since 1946, even up through 1951; and

(2) That small new corporations of less than 5 years' corporate existence be allowed 20 percent of their income each year tax free, providing such income is used for plant expansion or improvements.

Under No. 1 above, Congress should realize that in spite of Korea there are bound to be some new businesses and industries formed as a result of technological advances and new ideas, which would prosper without a mobilization-stimulated market. We can't brand all new corporations as "war profiteers" simply because they were formed just prior to or during a limited war.

Under No. 2 above, a 20 percent income exemption for expansion purposes would place small new corporations on a 42 to 50 percent tax, which would allow them to grow on a somewhat similar tax basis to those companies formed from 1936 to 1946.

I think you will find that the above proposals are neither greedy nor unreasonable. But the present excess-profits-tax law is certainly discriminatory, unmerciful, and unjust.

For the above reasons it is only fair, prudent, and in the interest of the future of our country, as well as for future revenue to the Treasury Department, that the question of excess-profits tax as it affects small new businesses formed since 1946 should be investigated fully and quickly, either by a subcommittee of the Senate Finance Committee or by the Senate Small Business Committee. We sincerely believe that if the Treasury Department and Congress will only pause to consider for a brief moment, you will quickly realize that you can pluck more feathers from an adult rooster tomorrow than you can from a baby chick today.

Cordially,

J. S. FINGER, *Chairman.*

AMERICAN DENTAL ASSOCIATION,
Chicago, Ill., August 3, 1951.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington 25, D. C.

DEAR SENATOR GEORGE: This letter is in response to the telegram of Miss Elizabeth Springer, inviting the American Dental Association to submit for the record its views with regard to the amendment to H. R. 4473, a bill to provide revenue, proposed by Senator Ives of New York on July 25.

Briefly stated, the purpose of this amendment is to provide a method whereby bona fide members of professional organizations can, to a certain extent, level off their lifetime earnings by postponing a portion of the income tax which would otherwise be levied upon their earned net incomes in any 1 year, until the funds upon which such tax would otherwise be levied would become available for personal use upon the retirement of the professional person.

Under the proposal a professional man could pay not to exceed 10 percent, or $7,500, whichever is less into a retirement fund sponsored by his profession, during each of his earning years. This sum would not be subjected to income tax during the year in which it was paid into the fund, but would become taxable at the rates then current, when withdrawn after retirement by any of the methods proposed in the amendment.

In electing to serve his fellow man in the field of personal health services, the dentist, like the physician, the lawyer, and other professional personnel, deliberately postpones the beginning time of his earning period until many years beyond the time when high-school graduates first enter the employment market, and for a considerable time beyond the time when the 4-year-college graduate becomes employable. Today no person can become a dentist until at least 6 years after his graduation from high school and in most instances this time is postponed 7, 8 or more years, depending upon the number of years he spends in college prior to entrance to dental school and in an internship or residency subsequent to graduation but prior to commencing practice.

During this period of preparation for his life work the professional man is investing both actual cash for the cost of his education and subsistence and time when he might otherwise be accumulating funds in gainful employment. Subsequent to his entry into practice he passes through years of low income while attempting to establish a practice. After he is established he has a relatively few years of peak income, following which there is a rapid decline. In the case of dentists this income curve starts at about $3,000 annually at age 25, rises to slightly in excess of $9,000 in his early forties, and then diminishes until it reaches the $3,000 point of beginning after he passes his sixty-fifth year. His death, in accordance with the statistics for most white males, will occur shortly after age 65. During his earning period, he must recoup the funds he has invested in his education, meet his ordinary living expenses and still find a way to provide for his old age and that of his widow.

During his earning lifetime the member of a learned profession is dependent solely upon the difference between his gross and his net earnings for his sustenance. No special provisions favor him in providing for his old age. Unlike many of those employed by others, no one provides a pension fund for him and pays part of its cost. No friendly law guarantees him minimum income in the event his patients fail to patronize him, as is provided for the farmer whose market is depressed. No one pays him unemployment benefits in the event his business fails. By his own choice he is excluded from the benefits of old age and survivors' insurance.

His very independence makes him more susceptible to the inherent inequities in our tax laws. It gives him the chance to make a varying income but it subjects him to the loss of a larger part of that income to the tax collector, viewed from the aspect of his total lifetime earnings, than is the lot of his fellow citizen who chooses to work for another. In his years of low income he pays as much tax as his neighbor; in his years of high income, the surtax sequesters a large part of his temporarily high earnings.

The Ives' amendment offers a partial relief to the professionally self-employed. It does not absolve them of the total tax cost of years of abnormally high earnings, but it does serve to eliminate some of that burden and to postpone the remainder until that portion of the funds set aside under the provisions of the amendment actually become available as disposable personal income. The house of delegates of the American Dental Association considered this problem in 1948 and adopted a resolution endorsing the principle of some form of tax relief for the professionally self-employed. The council on legislation has examined the proposal of Senator Ives and believes that it comes under the terms of that resolution. It therefore endorses the proposal as made.

The cost of the proposal, so far as dentists are concerned, would not be unduly high. As is shown by the attached table, the revenue lost to the Government in any one year would be approximately $8,000,000 if every dentist availed himself of the benefits of the amendment to the maximum extent, a highly improbable occurrence.

The council on legislation, on behalf of the American Dental Association, respectfully requests the favorable recommendation of the committee with regard to the proposed legislation.

Respectfully yours,

Paul E. Jones, D.D.S.,
Member, Council on Legislation.

Mean net income of self-employed dentists, by age groups, as affected taxwise by the Ives amendment to H. R. 4473

Age group	Number of dentists	Net earned income	Present tax	Tax under amendment	Available for fund	Tax saving	Group cost tax loss
Under 25	825	$3,058	$270	$222	$306	$48	$39,600
25 to 29	10,050	4,868	553	476	487	77	773,850
30 to 34	10,425	7,480	762	660	748	102	1,063,350
35 to 39	9,525	9,032	1,042	880	903	162	1,543,050
40 to 44	8,325	9,308	1,090	924	931	166	1,381,950
45 to 49	7,950	8,623	968	812	862	156	1,240,200
50 to 54	8,325	8,307	910	762	831	148	1,232,100
55 to 59	6,825	7,144	942	814	714	128	873,600

Notes

Columns 2 and 3 derived from 1948 Survey of Dental Income by Department of Commerce.

Income-tax amounts calculated by Bureau of Economic Research and Statistics, American Dental Association. Groups "under 25, 25 to 29, and 55 to 59" assume 2 tax exemptions; all others assume 4 tax exemptions.

Data on incomes of dentists over 60 excluded since that age is fixed for retirement under Ives' amendment.

Total maximum cost to Government in any one year, assuming above data and 1950 tax rates, $8,147,490.

Gross tax savings to dentists on incomes ages 25 to 59, both inclusive, estimated at $4,743. Gross deposits in pension fund, possible $27,576 during same period. Annual withdrawals over 15-year period after retirement if maximum contributed $1,838.40 plus share of earnings of pension fund.

Pennies have been disregarded in all examples and sums rounded to nearest dollar.

Controlled Companies of
American District Telegraph Company,
New York, N. Y., August 1, 1951.

Hon. Walter F. George,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

My Dear Senator George: Further reference is hereby made to information received from Elizabeth B. Springer, the clerk of your committee, that although a requested appearance before your committee in opposition to the inclusion in the Senate version of the Revenue Act of 1951 of section 123 of H. R. 4473 could not be effected due to necessary time limitations, a written statement of our views could be submitted to you, as chairman of the committee, for inclusion in the record of your hearings.

We should like to avail ourselves of this courteous invitation and submit herewith a memorandum of our views on section 123, for inclusion in the record.

Thank you very much for this opportunity to present the facts which we believe clearly demonstrate the inequity of section 123 as presently proposed.

Very truly yours,

E. A. WARD, *President.*

MEMORANDUM IN OPPOSITION TO THE ENACTMENT OF SECTION 123 OF H. R. 4473 IN ITS PRESENT FORM BECAUSE SUCH ENACTMENT WOULD INTRODUCE SEVERE INEQUITIES INTO THE DETERMINATION OF THE FEDERAL INCOME TAX LIABILITY OF CORPORATE BUSINESS ENTERPRISE IN GENERAL AND THE CONTROLLED COMPANIES OF THE AMERICAN DISTRICT TELEGRAPH CO. (NEW JERSEY) IN PARTICULAR

THE PROPOSAL AND ITS PURPOSE

Section 123 of H. R. 4473, as passed by the House of Representatives, would reduce to one the number of surtax tax exemptions which may be claimed by a group of "related" corporations and also confine such group to a single $25,000 minimum excess profits tax credit. The avowed purpose behind this proposal is to avoid loss to the revenues in a period of high corporate income and excess profits taxation through "the deliberate splitting up of corporations for the purpose of realizing the unusual tax advantages which present law permits" (H. Rept. No. 586, 82d Cong., 1st sess., p. 24).

LEGAL UNSOUNDNESS OF THE PROPOSAL

The revenues are now and long have been adequately safeguarded against the atomization of business into multiple units for tax-minimization purposes alone. Specific safeguards, among others, are contained in section 112 (k) and section 129 of the Internal Revenue Code, as well as the broad "in good faith for the purposes of the business" test which runs throughout the Excess Profits Tax Act of 1950. More general in scope, but no less effective, are the provisions of section 45. In addition, far-reaching judicial safeguards have been enunciated by the courts in such cases as *Gregory* v. *Helvering* (293 U. S. 465), *National Carbide Corp.* v. *Commissioner* (336 U. S. 422), *Fairfield Steamship Corp.* v. *Commissioner* (157 F. 2d 321), and *Commissioner* v. *Transport Trading & Terminal Corp.* (176 F. 2d 570, cert. denied, 338 U. S. 955), among a host of others.

The real purpose of the Treasury would thus appear to be not so much to protect the revenues against corporate split-ups motivated by tax considerations as to place a formidable tax obstacle to the operation of business enterprise through locally incorporated companies created in accordance with sound, independent business purposes. See for example such recent cases as *Alcorn Wholesale Co.* (16 T. C. ——, No. 10), *Berland's Inc. of South Bend* (16 T. C. 182), and *Chelsea Products, Inc.* (16 T. C. ——, No. 102).

The Treasury's present bitter opposition to subsidiary corporations is to be contrasted with the following very sane statement made by Mr. Justice Robert H. Jackson, then assistant general counsel of the Treasury Department, in testimony before this committee then considering the Revenue Act of 1936:

"We see examples of legitimate and almost necessary uses of subsidiary corporations by those whose operations are widely spread geographically. A nationally owned business may find it almost necessary, and certainly expedient to have subsidiaries in different States, often to comply with the requirements of the several jurisdictions as to qualifications for holding property or franchises. The Treasury would not favor a tax which would bear oppressively upon such legitimate operations."

The enactment of section 123, as presently conceived, into law would have the very effect which the Treasury wisely, in 1936, wholeheartedly wished to avoid.

PERTINENT HISTORY OF THE AMERICAN DISTRICT TELEGRAPH SYSTEM'S DEVELOPMENT

Starting from the most modest of beginnings about the turn of the century, the A. D. T. system through its fire and burglar alarm services today protects tangible property values exceeding $27,000,000,000. Central stations are maintained in all the principal cities in the United States to serve the subscriber to the electric protective services furnished by the A. D. T. system. Among these subscribers may be numbered the United States Treasury, 28 Federal Reserve bank buildings, the United States mints, and the Fort Knox and West Point bullion depositaries.

Today the controlled companies of American District Telegraph Co. comprise a group of 48 companies, the capital stock of each of which is owned virtually in entirety by American District Telegraph Co. (New Jersey), each operating in the State of its incorporation to supply electric protection service which safeguard lives and properties from the hazards of fire, intrusion, and sabotage. See attached pamphlet entitled "Protecting Life and Property" for brief description of services provided and scope of territorial coverage.

Set forth below are the incorporation dates of the various corporate entities comprising the A. D. T. system together with the dates upon which the parent company acquired its stock interest.

Controlled companies of American District Telegraph Co. (New Jersey)

Name	State of incorporation	Date of incorporation	Date of acquisition
The American District Telegraph Co	Alabama	Apr. 9, 1901	1902
Do	California	Sept. 10, 1887	1902

The American District Telegraph Co. of Pennsylvania	Pennsylvania	Mar. 27, 1899	1902
American District Telegraph Co	South Carolina	June 13, 1903	1903
American District Telegraph Co. of Dakota	South Dakota	Nov. 8, 1919	1919
American District Telegraph Co., Memphis	Tennessee	Jan. 28, 1892	1910
American District Telegraph Co., Tennessee	do	Aug. 19, 1902	1902
American District Telegraph Co. of Texas	Texas	Oct. 9, 1900	1902
American District Telegraph Corp	Virginia	Apr. 2, 1908	1908
American District Telegraph Co	Utah	Dec. 28, 1897	1902
Seattle American District Telegraph Co	Washington	July 28, 1887	1931
American District Telegraph Co. of Washington	do	July 30, 1900	1902
American District Telegraph Co	West Virginia	May 12, 1903	1903
American District Telegraph Co. of Milwaukee	Wisconsin	Feb. 9, 1888	1902
American District Telegraph Co. of Wisconsin	do	Oct. 9, 1899	1902

From the foregoing it is seen that of the 48 corporations which comprise the A. D. T.-controlled companies, 41 have been owned by the parent corporation since before the ratification of the sixteenth amendment. In addition, it may be noted that the stock of the remaining seven companies was acquired in 1919, 1928, 1930, 1931, 1939, and 1946. The absurdity of supposing that the A. D. T. system's method of doing business has in any way been dictated by a desire to escape its just burden of Federal taxation when all but 4 of the 48 companies have been in existence since before March 1, 1913, is thus amply demonstrated.

The creation and maintenance of the individual corporate entities was and is virtually inescapable for many reasons, among which are (1) a normal desire for limitation of liability, (2) the preservation of certain franchise and other rights embraced in the original charter heritage, (3) the greater facility with which negotiations for franchise and other permissions can be conducted at State and municipal levels, and (4) simplification of accounting apportionments affecting revenues, expenses, plant investment, etc. The operations of each A. D. T. company are essentially intrastate in character, and there appears to be every reason to so regard and maintain them, for all purposes. The individual companies operate autonomously. The Treasury's 1936 views as to the virtual business necessity of corporate subsidiaries as voiced by its then assistant general counsel, Robert H. Jackson, in language quoted above, is fully and peculiarly applicable to the business realities faced by the A. D. T. system.

FINANCIAL EFFECT OF SECTION 123 UPON THE OPERATION OF THE A. D. T. COMPANIES

Set forth below in schedular form is a chart showing the fiscal import, at once both severe and capricious, of the proposed changes in the law to be affected by section 123 upon the individual units of the A. D. T. system and upon the system as a whole. Based on 1950 taxable net income, the additional tax liability amounts to $181,314. As will be observed, the added tax liability ranges from a low of 1.6 percent to a high of 97.4 percent of the liability that would result without the application of section 123. This statement brings into sharp relief the effect upon low earnings companies. The depressive effect of the additional Federal tax upon the growth of such low-earnings companies must be obvious, and surely runs counter to the long expressed intent of the Congress to lend encouragement to such enterprises.

Showing effect of changes proposed in H. R. 4473, sec. 123, on the tax liability of the controlled companies of American District Telegraph Co. (New Jersey)

Name	1950 taxable net income	Normal, surtax, and excess profits tax at proposed 1951 rates but at 1950 exemptions	Normal, surtax, and excess profits tax at 1951 rates and exemptions	Indicated additional tax liability	Percent increase

[1] No taxable income.

SPECIFIC INEQUITABLE RESULTS OF THE APPLICATION OF SECTION 123, IN ITS PRESENT FORM, ON THE TAX LIABILITY OF ADT COMPANIES

1. We know of no other group of corporations on which the provisions of section 123 of H. R. 4473 will weigh so heavily. That many will be affected we have no doubt, but with respect of few other groups of corporations are you likely to encounter a situation where, as here, the aggregate disallowance of the $25,000-surtax exemption is equal to 28 percent of aggregate taxable net income.

2. In its over-all effect, the Revenue Act of 1951, as passed by the House, proposes an increase from 47 to 52 percent, or 5 percent in the normal and surtax rates applicable to corporations. By reason of the disallowance of the $25,000 surtax exemption, the aggregate tax liability of the ADT controlled companies is increased not 5 percent but 10.6 percent.

3. The retention of the $25,000 surtax exemption in the 1950 Revenue Act was specifically for the purpose of lending encouragement to the growth of small enterprises. It is not clear that a small corporation needs any less encouragement simply because its capital stock happens to be owned by another corporation. Regardless of its ownership, the small enterprise cannot flourish unless it be permitted, within the provisions of the Federal-tax structure, to retain the funds necessary to sound growth. Nor is it clear that the Ways and Means Committee, in drafting section 123 of H. R. 4473, intended to espouse the philosophy that the earnings of a corporation organized under the law of one State in which it does business, should be employed to support the low or deficit earnings of a corporation, similarly situated, doing business in another State.

It would seem, basically, that the Congress already has defined a small-business enterprise as one whose net taxable income does not exceed $25,000. Such being the case, and where there is no evidence of incorporation with intent to take undue advantage of tax exemptions, it is inequitable to allow the $25,000 surtax exemption and minimum excess-profits-tax credit to one specific group of small-business enterprises and not to another.

4. The Internal Revenue Code already imposes one penalty upon the employment of corporate subsidiaries by taking 15 percent of all dividend income. During 1950, ADT controlled companies paid dividends of $1,479,575 to the parent corporation, the tax on which at 52 percent of 15 percent would amount to $115,407. It is respectfully suggested that if the corporate entity is to be disregarded for the purpose of application of the surtax exemption and minimum-excess-profits-tax credit, it should be disregarded for all other purposes, and either that intercompany-dividend payments should be treated as wholly tax-exempt or the 2-percent premium eliminated which presently is assessed for the privilege of filing a consolidated income-tax return.

5. The proposed additional tax of $181,314, which would be assessed against ADT companies by reason of the enactment of section 123 of H. R. 4473, in its present form, appears doubly inequitable in light of the fact that subscribers to ADT protection services already are subject to a considerable tax burden imposed under section 3465 (a) (2) (B) of the Internal Revenue Code upon charges for wire and equipment service. During the year 1950, pursuant to this section of the code, ADT companies paid into the United States Treasury the sum of $1,910,020. Truly, the many ADT companies which fall into the small-business class of corporations have long borne up, cheerfully, under a crushing Federal tax load, and should not be asked to bear the additional burden threatened under section 123 of H. R. 4473.

6. The electric protection service industry, for several years, has been in a state of expansion, spurred by an ever increasing necessity to protect lives and property in a dynamic industrialized economy. This situation has called for the reinvestment of all available funds. The corporations have no surplus cash resources. It appears a foregone conclusion that the imposition of an additional tax liability totaling $181,314 will require the companies to seek relief from the ceiling price provisions imposed by the Office of Price Stabilization. Such action of necessity can but swell the forces of inflation and serve as a deterrent to the further use of electric protection services in the protection of industrial plants, stores of strategic materials and in the conservation of manpower, all so badly needed in furtherance of the country's defense effort.

7. From the standpoint of competition, the proposal contained in section 123 of H. R. 4473 seems calculated to work grave inequities. A. D. T. companies are faced with severe competition within every city of operation at the hands of many individuals and corporations relatively few of whom comprise members of a controlled group. The effect of section 123 of H. R. 4473, therefore, will be to place each A. D. T. company at a competitive disadvantage in the minimum sum of $5,500 annually. Dependent upon the excess-profits tax situation, the annual competitive disadvantage could amount to considerably more than this figure. It is not believed that it is the desire of Congress to act, thus, to weight the scale of the competitive economy.

8. For almost 50 years the ownership of the companies has been constituted substantially as at present. By the enactment of section 123 of H. R. 4473 Congress will so have rewritten the rules for doing business as to assess an inequitable tax burden upon the A. D. T. group of companies that long have striven, under competitive strain, to hold their place at even odds in the domestic economy.

SUGGESTED MODIFICATION OF SECTION 123

There are two ways in which the objective of section 123 of H. R. 4473 could be attained, while at the same time avoiding the creation of the foregoing inequities which would discriminate so unfairly against companies possessing a corporate structure and tax situation similar to that of the A. D. T. controlled companies. These are by the insertion of one or the other of the following provisions as section 123 (d) of H. R. 4473:

1. "(a) The provisions of this section shall not apply to any corporation which became a member of a 'controlled group' prior to January 1, 1940, or

"(b) The provisions of this section shall not apply to any corporation which became a member of a 'controlled group' prior to March 1, 1913."

2. "The provisions of this section shall not apply in the case of any corporation a member of a 'controlled group' furnishing wire and equipment services, charges for whose services are subject to taxation under section 3465 (a) (2) (B) of the Internal Revenue Code."

Favorable consideration of the foregoing representations is earnestly and respectfully sought.

STATEMENT ON BEHALF OF PABCO PRODUCTS, INC.

My name is Randolph E. Paul, attorney of Washington, D. C. I am submitting this statement on behalf of Pabco Products, Inc., 475 Brannan Street, San Francisco, Calif., in order to bring to the attention of this committee several serious inequities in the excess-profits-tax law.

As the committee is well aware, Congress imposed the excess-profits tax in 1950 in order to siphon off increased corporate profits attributable to the Korean hostilities and the large military expenditures of our defense effort. Needless to say, the tax was not designed to reach the normal earnings of a corporation. However, in actual operation, as specifically illustrated by Pabco Products, the existing law provides an inadequate credit for the normal earnings of a company which began the construction of increased productive capacity more than 2 years before its first excess profits taxable year and completed such construction after the end of its base period.

The excess profits credit based on income is predicated upon the allowance of an amount which is a fair and just reflection of the normal earning capacity of a business. Congress provided various relief provisions to assure that only excessive profits would be taxed. It had no desire to penalize a corporation which earns no abnormal profits. However, in the hurried drafting of the law, relief from the situation under which Pabco Products is unable to retain its normal earnings was overlooked in the letter of the law although it comes within its spirit. Unless the company can obtain adequate relief from the onerous hardships of existing law, it faces serious financial consequences because it expanded its peacetime productive capacity while less progressive competitors maintained their status quo.

FINANCIAL HARDSHIP UNDER THE EXCESS-PROFITS-TAX LAW

Pabco Products manufactures roofing, floor coverings, paints, and other building materials. It has a large plant in Emeryville, Calif., and smaller plants in other communities in California. Although the company has a reconstructed calendar year base period, it reports its income on the basis of a fiscal year ending June 30.

On February 9, 1948, Pabco Products borrowed $12,500,000 from two life-insurance companies to finance the construction of a linoleum- and felt-base floor covering plant at Raritan, N. J. The loan is repayable in annual installments of $300,000 in each of the years 1949 through 1951 and $750,000 in each of the years 1952 through 1962, with the balance payable in 1963. The proceeds of the loan were temporarily invested in United States Treasury bonds, which were periodically redeemed as funds were required for the payment of construction costs. The felt-base floor covering unit was completed and began operations in May 1950, more than 2 years after construction was commenced. The linoleum unit was completed and began operations in January 1951, almost 3 years after the start of construction.

The additional plant constructed by the company represents more than 190 percent of its entire net investment in capital assets at the time construction was begun. The decision in late 1947 to build the new plant was based on projected normal profits of $1,200,000 per year from its operation, taking into account the then current tax rate of 38 percent. Under the existing law, however, the income attributable to the additional $12,500,000 invested in this plant productive capacity, the additional facilities seemingly must have been in active is excluded from the company's normal earnings credit. The taxation of the entire income from the new plant as excessive profits reduces the projected net profits from its operation to about $400,000. Manifestly, Pabco Products will not be able to meet the annual repayments of $750,000 under the loan agreement out of the profits of this plant. Already the company has been forced to reduce the income of its stockholders from a quarterly dividend of 30 cents per share to a quarterly dividend of 15 cents per share. Not only are the stockholders deprived of any portion of the normal earnings of the new plant in the form of dividends, but they will continue to be penalized in order to assure working capital and annual loan repayments in excess of the potential plant earnings.

INADEQUACY OF EXISTING RELIEF PROVISIONS

Section 444 of the excess-profits-tax law is designed to provide some relief for companies which have increased their capacity for production or operation. However, the section is so narrowly drawn that its application fails to relieve gross inequities in many situations. To qualify for relief based on increased production by the end of the base period. Hence under the stringent requirements of section 444, companies such as Pabco Products are denied relief, although they began to increase production facilities long before the Korean War and the expanded military expenditures. They are denied relief merely because they were unable to complete their new plants before the end of the base period due to the extensive nature of their expansion.

Section 444, as it now stands, overlooks the basic consideration that an excess-profits tax does not properly apply to those earnings which reflect a corporation's normal earning capacity. In the case of old facilities those earnings are usually represented by actual earnings during the normal years of the base period. At the very least, new facilities which are unrelated to the abnormalities of the defense economy should be allowed the same rate of earnings as was normal for such facilities on an industry-wide basis. Even the much-criticized relief provisions of the former excess-profits-tax law wisely afforded relief in such situations. And under section 445 a new corporation formed to construct and operate the new plant constructed by Pabco Products would be entitled to a normal earnings return on the plant before its profits would be subject to the excess-profits tax.

Apparently the credit for capital additions during the latter part of the base period, contained in section 435 (f), was intended to complement section 444 and provide a measure of relief to a company investing in productive facilities which were not completed by the end of the base period. This section, however, falls short of the policy which it was designed to serve. Since the draftsmen assumed that investments in the first half of the base period are fully, or largely, reflected in the base period earnings, section 435 (f) makes no provision for those companies which invested capital funds in expanded production facilities more than 2 years before their first excess profits taxable year. The section overlooks the fact that, in many instances, such investments are not finally converted into production until after the end of the base period.

The inadequacy of section 435 (f) is particularly emphasized in the case of a fiscal year corporation which receives the credit for capital additions during the last 2 years prior to its first year subject to the excess profits tax, although its base period is reconstructed on a calendar year basis. The effect of this divergence from the reconstructed calendar year in the case of a company such as Pabco, which has a taxable year ending on June 30, is that Pabco receives credit for capital additions only during the last 18 months of its base period instead of during the last 24 months as is true for calendar year corporations.

I understand that the reason for the lack of uniformity was the fear of administrative difficulties in connection with capital additions in the base period by way of earnings and profits. It was apparently thought that fiscal year companies would not have adequate records of earnings and profits as of the end of the calendar years 1948 and 1949. This difficulty, if any, however, cannot apply to borrowed capital, and the importance of borrowed capital as a source of base period capital additions has been unfairly minimized.

Pabco Products is further harshly penalized. As it repays the borrowed capital, its excess profits credit will be reduced by 12 percent of 75 percent, or 9 percent, of the amounts repaid. Not only does the company receive no credit for the additional borrowed capital, but the inadequate excess-profits credit that it otherwise has is further diminished annually by the repayment of capital funds which were never reflected in its earnings base.

PROPOSED AMENDMENTS

At present the excess-profits tax seriously penalizes expanding corporations at a time when additional production is urgently needed. The relief provisions do not satisfactorily provide for the progressive corporation which, during the normal years of the base period, took the risk of investing additional capital funds in expanded productive capacity to meet the needs of the peacetime economy. In order to correct the inequity and remedy the oversight, a new subsection (4) should be added to section 444 (b) along the following lines:

"(4) Any increase in the taxpayer's capacity for production or operation consummated during any taxable year ending after the last day of the base period, as a result of the construction of additional facilities begun and continued during the base period, shall be deemed to be an increase in capacity in existence on the last day of the base period."

Respectfully submitted.

RANDOLPH E. PAUL.

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
Washington, D. C., August 2, 1951.

Hon. WALTER F. GEORGE,
Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR: Enclosed please find a copy of a resolution adopted or presented at a meeting of citizens in Memphis, Tenn., on July 27, 1951, concerning income taxes.

I have received numerous letters from my constituents enclosing me copies of this resolution, and if you will lay it before your committee for consideration I shall greatly appreciate it.

Thanking you and with best regards, I am

Sincerely your friend,

KENNETH MCKELLAR.

RESOLUTION PRESENTED AT A MEETING OF CITIZENS AT THE PEABODY HOTEL, MEMPHIS, TENN., JULY 27, 1951, AT 11:15 A. M. IN PROTEST TO THE RAISING OF ALL INCOME TAXES

Whereas the House of Representatives has passed a bill known as the Revenue Act of 1951 authorizing a straight 12½-percent increase in all existing income taxes collected by the Federal Government and imposing an additional 5-percent tax and raising excess-profits taxes up to 70 percent on the already overburdened and overtaxed business corporations of this Nation; and

Whereas our Government, while urging civilians to economize on manpower is squandering manpower (which is being increased at the rate of 1,900 Government employees per day) as in the case of 13,565 employees last year in the Bureau of Indian Affairs (one for every 30 Indians) and as in the case of 17,365 employed chauffeurs to drive our public servants around Washington, to enumerate two small items as examples of wasted manpower; and

Whereas there is general confusion, waste and inefficiency in our overwhelming bureaucracy as exemplified in the Federal Supply Services of the General Services Administration, which is divided into 4 branches, 17 sections, 27 units, 34 subunits, 13 groups, and 1 inquiry office; and

Whereas no new tax legislation would be needed if Congress would eliminate waste in Government spending and lending for nonessential projects, most of which the people do not need, do not want and cannot afford to pay for: Now therefore be it

Resolved, That in the interest of justice, equity and the preservation of our free Republic, we, the citizens of Memphis, gathered here to consider the Revenue Act of 1951, do condemn its passage by the House and petition our representatives in the United States Senate to defeat this measure which is socialistic in principle and destructive in purpose; and be it further

Resolved, That we, the taxpaying public, rise in righteous indignation and demand of our elected Representatives and Senators, that they shall first demonstrate a true measure of economy and efficiency before they request one additional cent of revenue from an already overtaxed public about to lose the last vestige of freedom and solvency: Be it further

Resolved, That we are opposed to the levying of any new Federal taxes whatever until every dollar of nonessential spending and lending is eliminated and then shold the levying of new taxes be judged sound and necessary that such taxes should be paid by all the people through a pay-as-you-go manufacturers' sales tax, and no further discriminatory or punitive taxes be assessed; and be it further

Resolved, That each citizen present will mail a copy of this resolution to the following Senators and Congressmen: Congressman Cliff H. Davis, House Office Building; Senators Kenneth D. McKellar and Estes Kefauver, Senate Office Building.

WOMAN'S DIVISION OF CHRISTIAN SERVICE,
OF THE BOARD OF MISSIONS AND
CHURCH EXTENSION OF THE METHODIST CHURCH,
New York 11, N. Y., August 1, 1951.

The Honorable WALTER F. GEORGE,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR GEORGE: If the tax withholding at source from dividends and interest which is proposed in chapter 6, H. R. 4473 is adopted and becomes part of our tax law, organizations which are by law exempt from Federal income tax will be adversely affected; income will be diminished, application of funds to the purposes for which they have been dedicated will be retarded and much-needed funds will be constantly frozen in the hands of the Treasury Department. Additional costs of operating will be imposed upon tax-free organizations in connection with the requisitioning, accounting and handling of funds.

It is hoped that tax withholding at source from dividends and interest will be eliminated from the tax bill when it is finally adopted. However, should this withholding or any portion of the proposal be retained, the attached suggestion of procedures for currently obtaining tax refunds would relieve some of the burden this withholding imposes on tax-free organizations.

Your consideration of the enclosed memorandum will be appreciated.

Respectfully yours,

HENRIETTA GIBSON,
Treasurer.

PROPOSED 20 PERCENT TAX WITHHOLDING AT SOURCE FROM DIVIDENDS AND BOND INTEREST

If the proposed tax withholding at source from dividends and interest becomes effective, and no exceptions are recognized at source, entities which are by law exempt from Federal income tax will be adversely affected. Income will be diminished, application of funds to religious, charitable, and educational purposes will be retarded and the actuarial basis for pension trusts will be seriously disturbed. Millions of dollars, representing tax refundable to tax-exempt entities, will be constantly frozen with the Treasury Department.

The procedure outlined below would relieve tax-exempt entities of some of the burden this proposed tax withholding at source would impose and provide all such entities with a means of obtaining a tax refund each month. The Ways and Means Committee of the House of Representatives, recognizing that refunds should be made to tax-exempt entities as quickly as possible, has proposed that such entities able to do so be permitted, each month, to offset, against funds held by them representing taxes withheld from wages for social security, and so forth, the tax withheld at source from dividends and interest. There are many tax-exempt entities which will not be able to obtain a tax refund in this manner; however, if the below-suggested procedure is permitted, all tax-exempt entities would receive like consideration.

SUGGESTED PROCEDURE

1. The tax-exempt entity would file with its depositary or depositaries a certification, verified by the Treasury Department, of its tax-exempt status. An acceptable form would be prescribed by the Treasury Department.

2. A dividend payment or interest payment order would be filed with corporations or their paying agents for all stocks and bonds registered in the name of the tax-exempt entity, so that all dividends and interest on such investments would be received through a depositary. All income on stocks and bonds owned by such an entity, but registered in the name of a nominee, and so forth, would be collected through the depositary, as would all interest on bonds held in coupon or bearer form. This procedure is suggested as a means of proof of receipt of income.

3. The depositaries, upon receipt of dividends and interest, representing 80 percent of the amount due, would credit the proper account of the tax-exempt

entity. Depositaries would be looked to for the correctness only of the dividends and interest on stocks and bonds held by them in custody. The correctness of all other income would be determined by the tax-exempt entity, with all necessary adjustments made through the proper account with its depositary.

4. Each month, the tax exempt entity would file with its depositary a certification (in duplicate), in such detail and form as prescribed by the Treasury Department, of the income its depositary has received and credited to its account during the month. This detailed certification would set forth the income due, the refundable tax withheld, and the net amount received, and would be checked by the depositary against its control records.

5. Attached to the certification statement submitted by the tax-exempt entity to the depositary would be a draft drawn on the Federal Reserve bank by the tax-exempt entity payable to the depositary for the account of such entity in the amount of the tax refundable. This draft would be in a form prescribed by the Treasury Department and would contain the endorsement and guarantee of the depositary similar to the following, or in a form to be prescribed by the Treasury Department:

"By endorsement of this draft, the depositary bank guarantees—

"(1) That the drawer has filed with the depositary bank a Treasury certificate evidencing its tax-exempt status.

"(2) That the draft has been signed by a duly authorized officer of the drawer.

"(3) That the proceeds have been credited to the drawer's account.

"(4) That the amount of the draft does not exceed 25% of the total interest and dividend payments credited to the drawer's account in the depositary bank during the preceding calendar month."

The draft would be presented by the depositary to the Federal Reserve bank accompanied by the duplicate copy of the tax-exempt entity's certification. If the Treasury Department would honor these drafts, it will result in the tax-exempt entities obtaining each month a refund of the tax withheld at source during the previous month.

WITHHELD TAX REFUND DRAFT

NEW YORK.............19.... 1–120
210

Pay to the order of
For account of

$............

.... Dollars

To—Federal Reserve Bank of New York,
Fiscal Agent for Treasurer of the United States.

....
(Authorized signature)

[See endorsement—reverse side]

[Reverse side]

By endorsement of this draft, the depositary bank guarantees—

(1) That the drawer has filed with the depositary bank a Treasury certificate evidencing its tax-exempt status.

(2) That the draft has been signed by a duly authorized officer of the drawer.

(3) That the proceeds have been credited to the drawer's account.

(4) That the amount of the draft does not exceed 25 percent of the total interest and dividend payments credited to the drawer's account in the depositary bank during the preceding calendar month.

Concerning interest on bonds, notes, etc., traded in between interest dates, the certification will always agree with the depositary's control if tax is withheld only on regular interest payment dates. If tax withholding on accrued interest is taken into account by buyer and seller on between-interest-date transactions, there will be certain instances where tax refunds requested in the certifications will be less than 25 percent of amount shown by the depositary's control as collected. For example:

A. Where a tax-exempt entity buys a bond, etc., between interest dates and holds the security at the next regular interest date, the refund requested would be based on the period such entity held the security.

B. Where a tax-exempt entity sells a bond, etc., between interest dates, providing such entity held the security on the previous regular interest payment date the tax refund requested will be 25 percent of the amount the depositary would show as collected, but if the security was not held on the previous regular interest payment date the refund requested would be based on the period the tax-exempt entity held the security.

C. It is recognized that where a tax-exempt entity sells bonds, notes, etc., between interest dates with adjustments made for tax withholdings, should such entity include in its certification for the month in which the sale took place a request for refund, such refund might be in advance of the month when the Treasury Department will collect the tax at source. In such instances, these items could be included in the certification for the month in which the regular interest date occurs.

D. Regarding tax-withholding on true discount notes, bills, etc., the method as to how the Government will want this income treated for tax withholding will first have to be determined and, based upon that determination, such amounts could be satisfactorily worked into the certification.

SUGGESTED PROCEDURE FOR THE SMALLER TAX-EXEMPT ENTITIES

The tax-exempt entity would deposit dividend payments, interest payments, etc., from which a 20-percent tax has been withheld in its local bank and simultaneously hand said bank a draft drawn on the Federal Reserve Bank as fiscal agent for the Treasury of the United States in the amount of the tax withheld at source from these specific dividend and interest payments, etc. This draft would contain endorsements similar to the following:

A. "By endorsement of this draft the drawer certifies—

"1. That it holds a good and valid ruling from the Treasury Department evidencing its tax-exempt status.

"2. That the proceeds have been credited to the account of the drawer.

"3. That the amount of the draft does not exceed 25 percent of the total interest and dividends, etc, from which tax has been withheld at source, which has been credited to the drawer's account simultaneously with this draft."

(B) "By endorsement of this draft the bank certifies—

"1. That the amount of interest, dividends, etc, noted above have been credited to the account of the drawer."

NATIONAL FEDERATION OF
STATE HIGH SCHOOL ATHLETIC ASSOCIATIONS,
Chicago, Ill., August 2, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR: Our organization, the National Federation of State High School Athletic Associations, is the governing body in athletics in the high schools in the 48 States. As such we are very much interested in the promotion of athletics in the high schools.

In the present tax bill, H. R. 4473, the excise tax is to be removed from such equipment as football, basketball, track, gymnasium equipment used principally by the schools, but it is proposed to continue the tax on baseball equipment, such as balls, bats, gloves, masks, body protectors, and leg guards.

It is the feeling of our association that the tax should also be removed from baseball equipment because this equipment is very important in carrying on our physical-training program in the schools, just the same as football, basketball, track, etc.

For a number of years, baseball in high schools was curtailed but because baseball fills such an important part in our physical training of boys in the ages of 12 to 17, our association initiated a program 5 years ago of increasing interest in the game.

For the 1950 year baseball was played in over 9,000 high schools with an estimated 200,000 students participating. In addition there are an additional 600,000 boys participating in informal baseball practice connected with the public school programs, making a total of 800,000 in all.

The public high schools can purchase their equipment free of excise tax, although there is considerable clerical work involved in the completing and filing of the excise-tax exemptions forms.

We respectfully request that baseball equipment be exempted from excise tax and thus relieve our school officials of the necessity of filing tax-exemption certificates. There will be no loss in revenue to the Government. As it is impossible for our associations to appear before your committee, it will be appreciated if this letter can be made a part of the record of the hearings.

Very truly yours,

H. V. PORTER, *Executive Secretary.*

LITTLE LEAGUE BASEBALL, INC.,
Williamsport, Pa., August 1, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: Thirteen years ago, there was created the Little League Baseball movement that is now growing rapidly and which sets up baseball leagues for boys from 9 to 12 years of age. There are over 50,000 boys now playing in these leagues.

We understand in the present tax bill, H. R. 4473, the excise tax on baseball is continued, though it is removed from other similar equipment.

We strongly urge that the tax be removed from baseball equipment, for the continuance of the tax at a 15 percent level, as proposed in H. R. 4473, would be a curtailing factor in the growth of the Little League Baseball, because of the increased cost produced by this tax.

The public schools can purchase their equipment free of the excise tax through a rather complicated procedure of filing an exemption form. This exemption, however, is not available to any organization such as the Little League.

Baseball has played a very important part in helping to curb juvenile delinquency in many areas and we are hopeful that your committee will favorably act upon the removal of the excise tax on baseball equipment.

We will appreciate it if you will include this letter as a part of the record of the hearings.

Yours very truly,

CARL E. STOTZ, *Commissioner.*

AFFILIATED GAS EQUIPMENT, INC.,
Cleveland, Ohio, August 2, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

MY DEAR SENATOR: In view of the limited time available to the Senate Finance Committee for hearings on H. R. 4473, the Revenue Act of 1951, we are setting forth in writing our views on amendment of the excess profits tax. We respectfully request that the committee give consideration to our letter and that it be incorporated into the record of the committee's hearings.

As you know, part II of the Excess Profits Tax Act of 1950 enables only "acquiring corporations," as defined in section 461 (a), to take into account the income credits of their predecessor companies in computing their own excess profits credits. Corporations acquiring their predecessors' assets and business in transactions other than those specifically described in section 461 (a) do not qualify for the benefits of part II.

Affiliated Gas Equipment, Inc., was incorporated in August 1948, and began business in January 1949, when it purchased for cash all the assets subject to all recorded liabilities of three wholly owned subsidiaries of Dresser Industries, Inc. This acquisition was not one of those described in section 461 (a). The three Dresser subsidiaries, Bryant Heater Co., Day & Night Manufacturing Co., and Payne Furnace Co., were the only gas-appliance subsidiaries of Dresser Industries, Inc., and shortly after the sale they were dissolved and Dresser withdrew from the gas-appliance field. Affiliated Gas Equipment, Inc., has continued to operate the plants of the three companies whose assets it purchased, and has continued to manufacture and sell gas appliances of the same general nature as were manufactured and sold by its three predecessor companies. Since Affiliated Gas Equipment is not entitled under the present provision of part II to use the income credit of the three predecessor companies and since it was in existence and doing business itself in only 1 year (1940) of the base period, it has had to make use of the "new corporation" relief provisions of section 445 in constructing an average base-period net income. This has not been wholly satisfactory, however, because the industry group in which it falls, "Primary metal industries and fabricated metal products (except ordnance, machinery, and transportation equipment)," is an extremely large and diversified group including metal industries from steel works to tin cans. The tentative industry rate of return for this broad industry group is 13.8 percent, which we believe is substantially lower than the rate would be on our industry if a more refined classification were employed. Since there is no general relief provision in the 1950 act, we have no opportunity to construct a more realistic income credit based upon the merits of our own particular case.

We, therefore, commend to the consideration of the committee an amendment of the Excess Profits Tax Act to broaden the definition of "acquiring corporations" to include at least companies acquiring, in a taxable transaction, all the assets and assuming the liabilities of predecessor companies where the predecessors dissolve after the sale and where the proceeds of the sale are not used in pursuit of the same business. For reasons set forth below, however, we consider it important that such an amendment provide an alternative credit to be used at the option of the taxpayer, and that the availability of the new credit provided by part II not withdraw from an eligible corporation its present right to construct a base period net income under the "new corporation" method of section 445.

Such an amendment would eliminate the penalty imposed by the present law on corporations such as Affiliated Gas Equipment, Inc., which are taxed on so-called excess profits which would not be excess had the predecessor companies been continued in existence or had they transferred their property to their successors in any of the types of corporate absorptions recognized in section 461 (a). In the case of Affiliated Gas Equipment, Inc., the excess-profits credit in 1950 would have been approximately $400,000 greater, and in 1951 would be approximately $600,000 greater, if the base period experience of its predecessors could be taken into account. This represents a direct tax penalty which its competitors do not have and which would have been avoided if it had purchased the stock of the three predecessor companies instead of their assets.

We also think, however, that it is important to realize that some taxable asset acquisitions involving new management and personnel may not represent a true extension of predecessor company base period income. In such cases, where the successor company is now entitled to the "new corporation" relief provision, it would certainly seem unfair to deprive it of its existing rights to its industry rate of return, and for that reason we strongly recommend that any amendment to part II to extend its provisions to taxable asset acquisitions be extended as an alternative credit which would not deprive "new corporations" of their existing rights to their industry rate of return.

To summarize, we recommend amendment of the Excess Profits Tax Act in the following two particulars:

(1) To include in the definition of "acquiring corporation" in part II at least companies acquiring all the assets and assuming the liabilities of one or more predecessor companies during or after the base period in taxable acquisitions where after the sale the predecessors discontinued business and dissolved; and

(2) To make available this new credit of part II on an optional basis to corporations otherwise entitled under existing law to the "new corporation" provision of section 445.

In conclusion, we appeal to the committee to provide relief from the inequities described herein in any proposed legislation which it may report.

Very truly yours,

PHILIP W. SCOTT, *Vice President.*

NEW YORK, N. Y., *August 3, 1951.*

Senator WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

The members and executive council of the Federation for Railway Progress respectfully urge your committee not to increase the already high surtax on the income of railroad companies. We estimate that the 5-percent increase in these taxes provided for in House bill 4473 which you are now considering would mean

$60 to $70 million additional annual tax burden for an industry already paying over a half billion dollars per year Federal income taxes. Instead of adding this new burden to railway industry, respectfully suggest this amount be realized by eliminating completely cash subsidies to airlines now running $40 to $70 million per year. These cash subsidies are in addition to hidden subsidies we estimate at close to $400 million per year which air transport industry enjoys. The millions of people who own and work for railroads are unable to understand why their industry which pays its own way in every respect must contribute an additional $70 million per year to Treasury while their airline competitors continue to draw an equal amount in unnecessary cash subsidies.

THOMAS J. DEEGAN, Jr.,
President, Federation for Railway Progress.

LITHOGRAPHERS NATIONAL ASSOCIATION, INC.,
New York, N. Y., August 2, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Committee on Finance,
Senate Office Building, Washington, D. C.

DEAR SIR: On numerous occasions over the past years the Lithographers National Association has recorded with the Senate Finance Committee the facts with respect to the discriminatory burden placed upon this industry of small business enterprises by section 3406 (a) (4) of the revenue code which levies extremely high excise taxes on photographic equipment and film.

Among others we have pointed out the following facts:

1. That photographic equipment and film are tools of production and production supplies for lithographers.
2. The rate of these taxes was sharply increased under the Revenue Act of 1942 to a point where, taking into account the sharply increased cost price of photographic equipment, the actual tax in dollars is increased to more than 550 percent of the amount of the tax collectable prior to the passage of the 1942 act.
3. That the smaller lithographers bear the brunt of the taxes on film.
4. That the tax is inflationary.
5. That, if continued, the tax threatens the growth of this industry.

The purpose of this communication is to record our support of the proposals set forth in section 485 of H. R. 4473, which provides long-needed correction of the excises on photographic equipment and film, as well as to urge affirmative action on this proposal by the Committee on Finance and by the Senate.

We would appreciate it greatly if this letter could be made a part of the record in the current hearings.

Respectfully yours,

EDWARD D. MORRIS, *Secretary.*

STATEMENT OF E. J. BACHMAN, VICE PRESIDENT, JEFFERSON ISLAND SALT CO., LOUISVILLE, KY.

The total salt production in the United States for the peak war year of 1944, according to the United States Department of Interior, Bureau of Mines, was 15,717,171 short tons. The average yearly production of salt from 1944 to and including 1949 was 15,714,831 short tons, or within 2,340 short tons of the country's requirements during the last war.

Recent Government and industry estimates[1] point out that 10,000 tons of chlorine per day will be required by war industries by the end of 1951. In view of this, the Government has issued certificates of necessity for 3,121 tons of chlorine per day additional capacity and 319 more tons per day are under study. This additional chlorine capacity will require over 6,000 additional tons of salt per day, or an increased yearly capacity of over 2,000,000 tons of salt.

Synthetic-rubber plants, military installations, and expanding industry will also require more salt, which will substantially increase the 2,000,000-ton chlorine requirements.

In recent years there has been a negligible amount of capacity added to existing salt plants because the returns on this low-price commodity have not justified

[1] As reported in Chemical Industries, week of April 7, 1951.

the large investment required to produce additional salt. In order to alleviate the forthcoming shortage, it is essential that the salt producers be given stimulus for expansion and modernization of existing facilities and incentive to invest in additional productive capacity.

The most feasible way of providing this incentive is for the Federal Government to allow a percentage depletion on salt comparable to the depletion allowed on similar minerals, such as coal, oil, sulfur, phosphate, etc.

Based on statistics released by the Bureau of Mines in its 1949 Minerals Yearbook, the total value of naked salt produced in 1949 amounted to $54,048,220. Assuming a 50-percent cost of extraction, treatment, etc., for the industry and a 15-percent percentage-depletion allowance, disregarding possible interim excess-profits taxes, the cost to the Federal Government of this depletion allowance would be only about $1,500,000 per year. This is an insignificant figure when compared with the benefits to be derived from expanding the salt industry commensurate with the increased needs for salt during the present emergency.

It is, therefore, recommended that Congress provide for a 15-percent percentage-depletion allowance on salt by including the word "salt" in section 114 (b) (4) of the Internal Revenue Code of 1950 between the words "rock asphalt" and "phosphate rock."

WHEELING, W. VA., *August 2, 1951.*

SENATE FINANCE COMMITTEE,
Washington, D. C.

GENTLEMEN: The following statements are true and correct and will be attested to by the affidavit which follows the close of the statements.

Because of the fact that we were not in business prior to January 1, 1946 (having begun business on May 1, 1946), we cannot even use the growth factor but must be considered a new corporation which is given a credit equal to the return that the rest of its industry received on total assets. This, for a young fast-growing corporation, gives us nothing. We are not asking for any special privilege but simply that we be treated no differently than a corporation who began business January 1, 1946. We believe we are entitled to at least comparable consideration with such a concern.

In the case of a company such as ours, comprised of men who were experienced in the business and whose ability and experience permitted a rapid expansion of the business, any return on assets for the industry is entirely inadequate to measure the growth of our particular business. We believe that we should at least be permitted to use as favorable a method of determining our credit as are concerns who were in business prior to January 1, 1946. Those concerns can, if they meet certain requirements as to increase in sales or increases in payrolls during the last half of their base period—that is, 1948 and 1949 combined compared with 1946 and 1947 combined—use either the last half of their base period or the last year of their base period as their credit factor. This does give consideration to growth because if a company grew, then its growth would be reflected in the last half of its base period and especially in the last year of its base period.

We would be satisfied at least in some measure if we could do this, but we cannot because the growth provisions of the code provide that a firm such as ours, which is a new corporation, cannot use that provision. Therefore, even if we had a growth that was twice as good as our competitor who happened to be in business prior to January 1, 1946, we are stuck with an average base-period net income that takes into consideration a very low start and a very high finish in the base period; also, which gives no relief at all when comparing the return on our total assets with the return for the industry since we were probably the only member of our particular industry that had such a growth factor.

We believe that any corporation, no matter when they started business, should be permitted to use the growth factor if it could show that over four equal periods, beginning with the time it was incorporated and ending with the end of its base period, it had the type of growth provided for in the growth sections of the Excess Profits Tax Act. In other words, let us say we started business on May 1, 1946, and thus our base-period record could only be for 3 years, 8 months. That would be 44 months. We believe that if we can show that in the last 22 of those 44 months we had the same type of growth as that provided for in section 435 (e) for the "alternative based on growth," that we, too, should be permitted to use the same portion of our base period as the credit as is provided under that subsection for those firms who meet the growth factors. This would mean that if a firm had only a 2-year existence in the base period, if it could show in the last half of those 2 years—that is the last year compared with the first year—that it had the required growth factors, it, too, would be entitled to use whatever credits are provided for in the manner provided under section 435 (e) of the code. This would not be giving any firm any advantage, but simply giving a firm the same privilege as any other firm has who may have happened to have been organized prior to January 1, 1946. After all, if a firm does meet the growth factors, what is the difference how long it has been in business? It should be permitted to use a similar type of credit as any other firm may use under the same circumstances, even if the latter firm happens to have been in existence longer than the first firm.

We ask this in equity only and in fairness to a corporation whose growth has been phenomenal and who is continuing to grow. For instance, our experience, especially as shown by our 1950 fiscal year (October 1, 1949, to September 30, 1950) indicates that our base-period net earnings were as follows:

Year ended Sept. 30—	
1947	$117,442.58
1948	203,995.48
1949	359,799.15
1950	478,454.42

The foregoing figures are all before Federal income tax. Under normal conditions, if the foregoing were representative of four calendar years beginning January 1, 1946, under the growth formula permitted under section 435 (e) of the Internal Revenue Code, a firm with the above history of earnings (assuming, of course, that it met the growth factors as this firm does in both the case of sales and payrolls), we would have a credit of 85 percent of $478,454.42. Because our firm did not begin business until May 1, 1946, we are unable to calculate our credit by allowing for a growth factor, but must compute it under section 445 of the Internal Revenue Code as a new corporation. Because of the fact that our growth was far and away ahead of any increase in our assets, it is far better for us to simply average our income for the three full years we were in business during the base period rather than attempt to take a credit based on an industry return on total assets. Under these circumstances a firm like ours, which has had a much better growth than that even provided for under section 435 (e) of the Internal Revenue Code, comes up with a credit of 85 percent of $257,410.49 plus $31,171.04 for an increase in capital during the last 2 years of the base period. This results in a total credit of approximately $250,000, whereas, if we were permitted the same privilege of using the growth provisions of the code, our credit would be almost $407,000, or 60 percent more than the credit permitted us at present.

As an example of how this works, compared with our chief competitor in this area who has been in business for many years, we submit the following comparable information for our fiscal years ended September 30, 1947, to September 30, 1950, inclusive, with their calendar years ended December 31, 1946, to December 31, 1949, inclusive. The latter represents the base period for that company and the former represents the years out of which we carve the information for our base-period credit:

	Comparison of net sales		Comparison of taxable net profit before income taxes	
	Local competitor	Ours	Local competitor	Ours
Calendar year 1946 and fiscal year ended Sept. 30, 1947	$3,324,947.63	$644,955.98	$502,278.08	$117,442.58
Calendar year 1947 and fiscal year ended Sept. 30, 1948	4,828,958.89	1,012,798.63	1,076,530.89	203,995.48
Calendar year 1948 and fiscal year ended Sept. 30, 1949	5,218,776.13	1,633,728.54	1,063,889.06	359,799.15
Calendar year 1949 and fiscal year ended Sept. 30, 1950	4,674,663.45	2,183,187.92	729,850.99	478,454.42

In addition to the foregoing situation, our net sales for the 6 months ended March 31, 1951, amounted to $1,509,898.22 and our taxable net income, before income taxes, for the same period amounted to $359,746. This indicates a very decided continuance of our growth factor. The competitor's figures for the 1950 calendar year were net sales of $5,898,020.65 for the full year and profits, before income taxes, of approximately $947,535.35, also for the full year. I am a substantial stockholder in the competitor's business and have secured this information from the financial statements which they send me each year after the close of the calendar year.

On the basis of the foregoing figures, the competitor's credit, which takes into consideration an increase of $277,133.28 in net worth for the calendar year 1949 and an increase in net worth of $622,535.28 for the calendar year 1948, for excess-profits tax, will amount to approximately $884,000, whereas our credit is but about $250,000 despite the fact that within 6 months or a year our sales and our profits before taxes will probably be running on a par with the local competitor. We cannot see where there is any equity in a situation of that kind simply because our management has exerted tremendous efforts in developing the product and getting business. As soon as we reach the same level of earnings as our competitor we will be penalized at 30 percent of the difference between $250,000 and $884,000 on the basis of the same earnings as our competitor. That represents a slight penalty of about $190,000 when we reach that point. We believe that might be called materially unfair competition. To even give us the benefit of the growth factor permitted to other corporations who have been in business prior to January 1, 1946, would give us a credit of less than half that of our local competitor, but at least it will have been computed on the only growth basis permitted so far under the statute. Actually, we believe there should be a special relief section covering business which developed at a fast pace, such as ours, similar to the special relief granted under the Excess Profits Tax Act during World War II, which permitted a company to obtain special relief if its capacity for production or operation was materially increased during its base period.

Yours sincerely,

ALFRED BRIESE,
President, Pipe Coupling Manufacturers, Inc., Martins Ferry, Ohio.

STATE OF OHIO,
County of Belmont:

I, Alfred Briese, being duly sworn, do depose and say that I am president of Pipe Coupling Manufacturers, Inc., of Martins Ferry, Ohio, and that the facts and figures contained in the foregoing statement are true and correct.

ALFRED BRIESE.

Subscribed and sworn to before me this 2d day of August 1951.

[SEAL] MARIE E. OLIVER, *Notary Public.*

My commission expires November 8, 1953.

STATEMENT OF ROBERT A. GRANT, SOUTH BEND, IND.

This statement is submitted on behalf of the Ethanol Committee, an organization of users of ethyl alcohol engaged in the manufacture of medicinal and pharmaceutical products, together with the manufacturers of food products, flavors, and flavoring extracts. Together these represent the only two segments of the industry today who bear the tax burden imposed on the users of ethyl alcohol in the manufacture of nonbeverage products.

We appear here in support of section 462 of H. R. 4473, which is presently before your committee.

It was pointed out in my statement before the Committee on Ways and Means of the House of Representatives that, beginning in 1906, Congress recognized the necessity of making provision for industry to procure alcohol free of tax in the manufacture of many commodities which we use in our everyday life. This was accomplished by providing for the denaturation of the alcohol so as to make it unfit for beverage purposes. The list of items thus made today with tax-free alcohol would be far too long to recite in these hearings, but that list includes such things and processes as cellulose, resins, and related products, plastics, photographic materials, solvents, thinners, shellacs, toilet preparations, cleaning fluids, motor fuel, antifreeze, and the processing of industrial foods and other products.

Over and above the denatured alcohol above referred to, alcohol which is not denatured may be withdrawn free of tax and used by hospitals, sanitariums, clinics operated for charity, colleges, universities, and similar institutions in research and allied work.

It might seem there is no limit to the list of users of tax-free alcohol, but, Mr. Chairman, there is such a limit. And that is where we feel and have felt for years that there has been discrimination—discrimination against those who manufacture medicines and pharmaceutical preparations, and against the manufacturers of food products, flavors, and flavoring extracts. There are literally thousands of manufacturers who pay no tax at all upon the alcohol which is used in their products or their processes. In an average year there are about 325,000,000 proof gallons of alcohol withdrawn and used free of tax. But the makers of medicinal and pharmaceutical preparations, for example, use only about 2,000,000 proof gallons a year, or less than 1 percent of the amount of tax-free alcohol which is withdrawn and used under the present law. Let us consider this inequitable situation for just a moment. The alcohol contained in the antifreeze in your automobile or in a can of shellac is tax-free alcohol, but the alcohol which is contained in the spirits of ammonia, spirits of camphor, fluid extract cascara, or other medicinal preparations in your family medicine chest has been taxed at the net rate of $3 per proof gallon. This, of course, is accomplished by the payment of the tax at the regular rate of $9 per proof gallon at the time the alcohol is withdrawn, and then following the end of each calendar quarter we are permitted to make claim for refund, and upon our showing that such alcohol has gone into the manufacture of medicines or pharmaceutical products we are refunded $6 of the $9 paid. The result is that there are at all times between $10,000,000 and $12,000,000 of the proprietary medicine industry's funds tied up at the Alcohol Tax Unit and the net tax we pay is $3 per proof gallon.

About a year ago the House of Representatives recognized this inequity and wrote into the tax bill then under study a proposed amendment that would have increased the rate of draw-back to $7. That action would not have erased the inequity, but it was some indication on the part of the House of Representatives that an inequity did, and still does, exist and it offered some measure of relief in a much-needed direction.

That bill was, as we all know, sidetracked by the outbreak of war in Korea and an entirely new bill was substituted by this committee and that action was ratified by the Congress.

Mr. Chairman, we do not intend to be critical of the draw-back system. We commend the Bureau of Internal Revenue on the efficient manner in which it has administered this system. Then, too, we realize that we are dealing with a volatile chemical and there is, perhaps, a penalty which must be paid, because of possible diversion when in the hands of an unscrupulous user. It has been our earnest opinion that use of the draw-back system, tying up, as it does, millions of dollars of the industry's funds, without interest, is enough of a penalty to pay to guard against the possible abuse of the use of tax-free alcohol.

The Committee on Ways and Means supported by the House of Representatives has proposed by section 462 of the bill before us, to increase the draw-back to $9.50 out of a proposed tax of $10.50. We do not know what action the Finance Committee may take on the proposed increase of the alcohol tax, but whatever that action may be, we sincerely feel that the draw-backs permitted in these cases should, if possible, be in an amount equal to the full amount of the alcohol tax, but in no event should our net tax, after giving effect to the draw-back, be greater than the $1 as proposed in the House version of section 462 of H. R. 4473.

The Committee on Ways and Means in its report (pp. 38-39) indicates that the net tax of $1 per proof gallon is intended to cover the cost of administering the draw-back system. If it is the judgment of Congress at this time that the industry should bear the cost of administering the draw-back system, then we shall interpose no objection at this time on account of the great demand on our Federal finances occasioned by the hostilities in Korea. We shall only express our deep appreciation for the fact that recognition is now given that an inequity has existed and that relief from the major portion of that inequity is now being provided.

In closing, Mr. Chairman, we thank you and the members of the committee for your sympathetic consideration of the vital problem of these little industries affected.

To: Senators Carl Hayden and Ernest W. MacFarland.
From: Undersigned Arizona industry associations.
Date: July 9, 1951.
Subject: Currently proposed tax law; taxing of presently exempt sources.

The undersigned leaders of Arizona industry groups are among the many who have written Arizona's congressional delegates during the spring of this year to request that the new tax law take cognizance of the vast source of revenue now lying untapped in mutual savings and loan associations, properties owned by religious organizations, cooperatives, and other tax-exempt corporations. Our letters have been intended to protest the fact that these concerns pay no tax, or do not pay taxes equally with the businesses with which they compete.

We feel the bill formulated by the House Ways and Means Committee is grossly unfair to a great segment of American citizens who shoulder the daily increasing cost of Government. Incidentally, this segment is decreasing, because of the number who are converting to a tax-exempt status. We request your efforts to encourage the Senate Finance Committee to draft a measure taxing the presently exempt groups on an equal basis with other business concerns, and further request an effort on your part in behalf of the passage of such a measure.

It is our feeling that each unit (new industry and old taxpaying groups converted) added to the list of those who are exempt from taxation places an increasing load on a constantly diminishing source of tax income. Daily, going businesses are abandoning the role of taxpayers and joining the ranks of those who are exempt. One Arizona industry was recently approached for purchase by a tax-exempt organization which promised to pay an exorbitant purchase price readily from the great savings which would result from paying no taxes. To allow large business enterprises to avoid taxation by adopting the guise of charity, education, or cooperative venture, while yet doing business on an aggressively competitive scale with the general public, is to discourage individual initiative. Such discouragement of risk capital from the venture of private enterprise is destroying the philosophy expressed in our Constitution and is encouraging the collective philosophy of those countries with whom this Nation is now contending.

If the Senate Finance Committee will formulate and the Senators will work to pass a measure tapping this huge (exempt) pool of funds, and if our Congress will create meaningful measures to insure economy in nondefense spending, the pressure for new tax sources will have been removed.

Only such association leaders as are readily available in Phoenix at this time are signatory to this letter. More than double this number could be included if time permitted. We invite your attention to the number of business organizations involved and the many citizens employed by them and interested in their welfare.

The undersigned, representing thousands of Arizona citizens, take this means of asking you to go on record as to your attitude in this matter.

Lewis E. Haas, Manager, Phoenix Chamber of Commerce; Don Petty, Vice President, Air Conditioning and Sheet Metal Contractors' Association, 21 members; O. D. Miller, Chairman, Arizona Council of Associations, 41 member groups; D. H. Bonsall, Jr., President, Arizona Grain Dealers' Association, 14 members; Malcolm Strauss, President, Retail Jewelers' Association, 75 members; Frank Feffer, President, Arizona Chemical Association, 16 members; Claude Quebedeaux, Chairman, Arizona Tax Equality Association, 367 members; Frank Middleton, President, Arizona Association of Insurance Agents, 281 members; J. Davis Wynne, Executive Secretary, Arizona Hotel Association, 252 members; J. Earl Stowe, President, Arizona Tire Dealers' Association, 24 members; J. V. Guerin, Vice President, Arizona Implement Dealers' Association, 21 members; W. L. Kolberg, President, Laundry and Dry Cleaners' Association, 91 members; James C. O'Malley, President, Arizona Retail Lumber and Builders Supply Association, 150 members; Claude Stephens, Vice President, Arizona Automobile Dealers' Association, 193 members; Guy R. Cutler, President, Arizona Motor Transport Association, 80 members; Joe Banks, Manager, Arizona Restaurant Association, 160 members; Wm. Larson, Executive Secretary, Vegetable Growers' Association, 140 members; L. G. Vinson, President, Arizona Chapter, Associated General Contractors, of America, 73 members.

ROUND HILL, VA., *August 8, 1951.*

Senator GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: I wish to urge your careful consideration of section 117J of Revenue Code. I am asking no personal favoritism whatsoever. If the intention of the law is that purebred breeding cattle are ordinary income—so be it. If the intention of the law is that such cattle are to be regarded as capital gains after being held 1 year, I pray you say so clearly.

I feel it is little enough to expect the Congress to express its intention in language so clear that the Treasury cannot make fools of the taxpayers who are willing and try to pay taxes in accordance with the act of Congress. All the Commissioner seems interested in is to waste taxpayers' time, cause expense, and clutter the courts.

First, he ruled cattle 2 years of age or over are capital assets. Later, he ruled none are capital assets. We took our case to the Tax Court and got the absurd decision that females 20 months of age and males 34 months of age are capital assets (case 10 T. C. 1081). One month later the same court, in the case of A. Harold Schmidt and Albert H. Schmidt held that all breeding cattle 24 months old are subject to capital gains. The two cases are analogous. One can only conclude that the decisions are absurd and that the court is confused on the whole question, since 117J reads, 6 months of age or older.

The root of the confusion arises from the fact that section 117J uses the word "used" in the breeding herd. The Commissioner is so ignorant that he does not know we cannot use a female for breeding before she is 15 months of age, and males not before they are 18 months of age. These are laws of nature which must be observed unless we are to ruin cattle and produce runts. The young cattle are in and have to be held in the herd to these ages before they can be used in the breeding herd.

The House revenue bill of 1951 section 323 reads "such term includes livestock held by taxpayers for draft, breeding, or dairy purposes for 12 months or more." If this amendment is enacted and made retroactive to all years not barred by statute of limitations, it should end the confusion. It is possible even with this amendment that the Commissioner might argue that the cattle were not held for breeding purposes until they reached a certain age. This would be clarified if the amendment was made to read "livestock 12 months of age and held by taxpayers for draft, breeding, etc."

The Commissioner has gone to great length to avoid applying what appears to have been the intention of Congress in section 117J.

I am simply asking that you make the intention of Congress so clear, in such simple language, that a dumb commissioner and a confused court will have no choice but to follow that intention. We breeders are building the quality and quantity of cattle so badly needed and pay enormous taxes with no complaint. Are we not entitled to language clearly expressing the intentions of Congress so we do not have to waste our time fighting the Commissioner in the courts and wasting money that otherwise would produce additional taxes?

Sincerely yours,

WALTER S. FOX.

P. S.—The Revenue Bureau's ruling of April 18, 1951, is helpful as far as it goes. However, it confines capital gains to worn-out and defective animals and does not apply such treatment to the young animals (the new plant) from which the new and greater production is to come. Likewise it does not apply this treatment to breeding animals generally.

STATEMENT OF MARY BROOKS PICKEN

Mr. Chairman and members of the committee, some months back, I appeared before the House Ways and Means Committee when it considered and rejected a proposed excise tax on electric sewing machines. I explained to the gentlemen of the committee the importance of home sewing to the women of the country and pointed out the added burden that the tax would have on them. As the same proposal has been laid before the Senate Committee on Finance, I would like to place at your disposal my view as to the interest of women in this possible tax.

Practically all my life has been spent in teaching women and girls to sew. In Kansas many years ago I taught sewing in YWCA classes and later I gave sewing instructions to the women prisoners at the Federal penitentiary at Leavenworth. During the First World War, when there was a great upsurge of interest in home sewing, I wrote and directed the home-study courses in dressmaking for the Women's Institute, Scranton, Pa., where we taught more than 200,000 women to make their own clothes.

Since then I have written many books on sewing which are sold through the book stores to home women and used as textbooks in schools and colleges. I give you these details of my own experience because, through working with so many home women, I know how vitally important to them is the ability to make their own and their children's clothes and fabric furnishings for their homes. Because women sew primarily for reasons of economy and because it is the only way most of them can dress themselves and their children adequately, they should not be penalized with a burdensome tax on the tool that is so essential to their work.

Whenever we have a war, a depression, or other national emergency in this country, there is a great increase in home sewing. This is true because when the cost of living is high or the family income low, there is no other way by which a wife, a mother, or a girl at home or in business can meet the requirements of respectable living. Food prices go up, and no matter how thrifty a housewife may be, she must provide her family with three meals a day and it takes more money to do so. However, by doing her own sewing, she can actually have clothes for herself and her children at just about one-third of their cost ready-made.

I gave the members of the House committee a practical demonstration of the savings home sewing can offer to the hard-pressed housewife. I showed them a relatively simple cotton dress for a little girl which I had purchased in a New York department store for $10.95. It would have cost approximately the same amount anywhere in the country. I then displayed an identical dress that we had made up at home. The materials cost just $3.12, or less than one-third of the ready-made price. To a mother with several children to clothe that would be a very important saving. It should be remembered that there are far more children to clothe in the United States today than ever before. Since 1941 we have had one of the highest birth rates in history. Today there are approximately 20 million children in this country under 10 years of age.

Women sew for another reason—because of pride in their own appearance and in the attractiveness of their homes. A women who makes her own clothes can have three times as many or save two-thirds of their cost ready-made. The same ratio applies to slip covers, curtains, draperies, and other fabric furnishings.

Because women recognize these possible economies and because the dollar will buy so much less today, more women and girls are sewing than ever before. Sales of tissue paper dress patterns have more than doubled in the past 10 years. The four major pattern companies report a sale of 110 million last year. While speaking in millions—home women converted 120 million fabric feed sacks last year into garments for themselves and their children and articles for their homes. From this yardage in 120 million feed sacks, a sizable number of articles can be made. I understand these sacks are designed in some 50 to 60 patterns, thus giving women a wide choice.

A survey by the Women's Home Companion shows that 77 percent of its 4 million readers make some of their own clothes, 39 percent make more than half of their own clothes. A survey by McCall's magazine among 12,000 women who sew shows that they make an average of 27 garments per year.

The Government is trying to combat inflation, trying to get women to conserve materials, spend less, save more. I know of no one way in which all three of those objectives can be accomplished so effectively as by encouraging women to sew. The most essential item of equipment for that purpose is an electric sewing machine. A burdensome tax on that machine serves only to make it more difficult for a woman to own one or to place it entirely beyond her reach.

An electric sewing machine is not a luxury. It is a necessary piece of productive and money-saving equipment for the home today. It is a carefully considered purchase. It is bought for a lifetime of service and in most homes requires sacrifice to pay for. In my judgment the Government should avoid doing anything that will make its purchase more difficult or the sacrifice to obtain it a greater one. Therefore, I believe I speak for the interests of millions of home women all over this country when I urge that the proposed tax be not levied on electric sewing machines.

LUCAS & THOMAS,
Washington, D. C., August 3, 1951.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: As special counsel for the Acacia Mutual Life Insurance Co. on tax and other legal matters, I have had occasion to read some of the testimony presented before the Finance Committee relative to H. R. 4473. In this letter I have reference particularly to the hearing of July 11 and the statements made by the three witnesses, Mr. John J. Magovern, Jr., of the Mutual Benefit Life Insurance Co.; Mr. Charles G. Dougherty, Metropolitan Life Insurance Co.; and Mr. Willis H. Satterthwaite, Penn Mutual Life Insurance Co.

These witnesses testified concerning the effect upon life insurance companies of the so-called tax withholding provided under section 201 of H. R. 4473, adding two new sections, 1200 and 1201, to the Internal Revenue Code. New section 1201 would require a 20 percent withholding in the case of certain dividend and interest payments. New section 1200 includes in the definition of interest "interest on amounts held by an insurance company under an agreement to pay interest thereon." These provisions would affect both certain payments made by a life-insurance company to its policyholders and beneficiaries and interest and dividends paid to the life-insurance companies on their investments.

The Acacia Mutual Life Insurance Co. is in complete agreement with the position taken by the three witnesses referred to above. We concur in all of the reasons set forth by these witnesses as a basis for their request that life-insurance companies be exempted from these proposed new provisions of the Internal Revenue Code.

In addition, there is a further point which we believe is of concern to the Government, and which has not been developed by any witness during the hearings; namely, that if this bill were enacted in its present form the withholding provisions thereof would result in a direct loss to the Government in the amount of income tax received from life-insurance companies. The income tax that each life insurance company pays is based upon the net investment income of the company; that is, interest and dividends from all sources less investment expenses and less an allowance for the interest required to maintain reserves and to fulfill other interest obligations to policyholders and beneficiaries. As the interest and dividends are received they in turn are invested to produce additional investment income. Deferring the time of such reinvestment because of the withholding plan, as pointed out by the three witnesses referred to above, would result in reducing the net investment income of each company. This in turn would mean a reduction of equal amount in the taxable income of each company and, consequently, a reduction of tax revenues received by the Government.

We do not have figures available for the entire life-insurance industry, but we do refer to the testimony of Mr. Charles G. Dougherty, of the Metropolitan Life, to indicate the amount of reduction in tax for that one company alone. At the end of Mr. Dougherty's testimony he points out that with respect to the Metropolitan Life Insurance Co. alone the proposed withholding program would result in a decrease in net investment income of $630,000 per year. Accordingly, the taxable income of the Metropolitan would be reduced by that amount and the income tax paid to the Government would be reduced proportionately. In other words, if there should be a tax rate of 50 percent the loss to the Government in income taxes on the Metropolitan Life alone would be $315,000 per year.

For all of the reasons advanced by the three witnesses who appeared before your committee on July 11 and for the additional reason set forth herein—namely, the loss of income-tax revenues from life-insurance companies which the enactment of section 201 of H. R. 4473 would cause the Government—we respectfully urge that payments made or received by life-insurance companies be exempted from the withholding provisions of H. R. 4473.

With best wishes, I am
Yours most sincerely,

SCOTT W. LUCAS.

STATEMENT OF JOSEPH A. SCHAFER, CERTIFIED PUBLIC ACCOUNTANT, WASHINGTON, D. C.

The desirability of simplifying the Federal tax system has been ignored under pressure of heavy demands for additional taxes. In the hunt for tax dollars every source of income is placed under the spotlight, so that eventually everything under the sun contributes its share to the cost of human relationships in domestic and international affairs. In the course of expansion there have arisen confusion and complications, duplication, and wastage, and inconsistencies and injustices.

When taxation becomes burdensome and oppressive, proper principles must be sought and applied, such as the following:

1. The taxes imposed must be just and equitable to all classes of citizens.
2. The system must be practical and as simple as possible, in order that collection of the revenue will be at the lowest cost, and also that it will cause the least distraction and disturbance to the taxpayers.

The revenue bill of 1951 (H. R. 4473) violates those principles because it creates new complications and will greatly increase the cost of collection and administration, and for the following specific reasons:

1. Individual tax rates are exorbitant and confiscatory in the high-income brackets.
2. Benefits allowed to heads of households and those filing joint returns are unfair to the low-income groups.
3. Withholding on dividends and interest, as proposed, will be an intolerable imposition upon those persons who owe no tax.
4. Expansion of the system, as proposed, will cause considerable unnecessary work for corporations and the Government, and will result in increasing administrative costs to the extent of millions of dollars, and the wastage of manpower and critical materials, supplies, and services.
5. Corporation income tax rates under the present method of computation are extremely inflationary.
6. Excise tax changes continue a discriminatory system.

INDIVIDUAL TAX RATES

The special limitation on tax provision has been increased from 80 percent in 1950 and 87 percent in 1951 to 90 percent as proposed for 1952. The latter limitation percentage would permit a person who earned taxable net income of $500,000 in 1952 to retain $50,000. That concession, however, does not take into consideration the relationship, duplication, and superimposition of other taxes.

State personal income-tax rates reach up to 10 percent. In many States sales taxes are 2 or 3 percent. Federal excise taxes are 20 percent on many items. Sales and excise taxes cannot be considered to be anything but a tax on income which is being spent for some commodity or service. The combination of those taxes establishes a system of double and triple taxation on personal incomes to such an extent that it constitutes unreasonable seizure of property.

The combined rate for income and defense taxes on all income over $90,000 in 1952 would be 91.5 percent, but if a State income tax of 10 percent is added the rate becomes 101.5 percent. Assuming for that level of income that the taxpayer spends $1,000 of his earnings for goods which are subject to 3 percent State sales tax and 20 percent Federal excise tax, he would have to pay an additional tax of $230 besides the income taxes of $1,045, or a total of $1,275.

In other words, for every $1,000 of earned income that was spent, it would be necessary to earn an additional $1,275 representing the tax dollars. An effective tax rate of 127½ percent violates the principle of tax limitation. Incomes over $90,000, therefore, will be subject to penalty taxation. Such a condition is outright confiscation of earnings and capital.

True limitation of taxes on personal incomes should provide that at any rate no more than 100 percent of income can be demanded from taxpayers for the combined Federal and State income, excise, and sales taxes.

JOINT RETURNS AND HEAD OF HOUSEHOLD BENEFIT

In order to equalize the tax advantage previously enjoyed by husbands and wives in community-property States, the splitting of income on joint returns was extended in 1948 to married couples in all States. It now is proposed that a portion of that benefit should also apply to persons who must maintain a household. This is a relief measure that is warranted because of the hardship which might exist, as in the case of a parent who must maintain a home for a small child.

The benefit of income splitting and the relief now proposed for a family unit, however, do not include all groups because of technical limitations. If hardship is to alleviated, then it should apply to all in that category without discrimination.

Reference to the 1951 tax table will show that a married couple filing a joint return receives no benefit if they have less than $3,000 adjusted gross income. A married couple with a child receives no benefit if they have less than $4,300 adjusted gross income. For adjusted gross incomes from $3,000 to $5,000 the benefits to a married couple range from $1 to $25, while the benefits to a married couple with a child range from $1 to $13 for adjusted gross incomes from $4,300 to $5,000.

In the same manner the tax tables presented in the House bill do not give any benefit to a head of the household with one dependent for adjusted gross income less than $3,050. If there are two dependents, the head of the household would obtain no benefit if adjusted gross income is less than $4,250. For adjusted gross incomes from $3,050 to $5,000 the benefits to a head of the household with one dependent range from $2 to $14, while the benefits for two dependents range from $1 to $8 for adjusted gross incomes from $4,250 to $5,000.

Consequently, married couples and heads of households obtain no benefits if they are in the low-income groups, those having three exemptions obtain less benefit than those having two exemptions in the benefited brackets up to $5,000 adjusted gross income; and those having four to seven exemptions obtain no benefit whatever up to $5,000 on the tax tables. It would seem that those family units in the low-income groups and those with additional dependents have a greater burden to bear and therefore are entitled to greater relief than those in the higher income groups.

Based on changes proposed in the House bill, the following figures show the increase or decrease of income tax for the year 1952 (12½ percent over the 1951 tax) for various amounts of income involving a family unit of two persons:

Adjusted gross income	Single person with 1 dependent	Head of household with 1 dependent	Married couple, no dependent
$2,000 to $2,025	$16.00	$16.00	$16.00
$3,000 to $3,050	51.00	51.00	51.00
$3,050 to $5,000	55.00	71.00	81.00
$12,000	321.50	83.00	208.50
$25,000	1,190.25	−349.75	840.50
$50,000	3,151.50	−302.25	2,378.25

All groups shown above will pay an increased amount of taxes in 1952 except the higher-income head-of-the-household groups, which will pay less tax in 1952 than in 1951.

To extend benefits to heads of households and to married couples in the low-income groups it is recommended that a special personal exemption in the amount of $300 be granted to those categories. Heads of households in all income brackets would be entitled to the special allowance. There would be no special adjustment in surtax rates. With respect to married couples with less than $5,000 adjusted gross income, the special allowance of $300 would be in addition to the splitting of income on joint returns.

Based on allowance of the $300 special extemption to heads of households in all income brackets, and to married couples with less than $5,000 adjusted gross income, the following figures show the increase or decrease (—) of income tax for the year 1952 (12½ percent over the 1951 tax) for various amounts of income involving a family unit of two persons:

Adjusted gross income	Single person with 1 dependent	Head of household with 1 dependent	Married couple, no dependent
$2,000 to $2,025	$10.00	[1]—$32.00	[1]—$32.00
[illegible] to $3,000	51.00	[1]—17.00	[1]—16.00
$4,950 to $5,000	85.00	[1] 11.00	[1] 14.00
$12,000	321.50	[1] 256.75	278.00
$25,000	1,190.25	[1] 981.12	840.00
$50,000	3,154.00	[1] 2,911.00	2,875.25

[1] Benefited by $600 special exemption.

WITHHOLDING ON DIVIDENDS

The House bill provides that a tax of 20 percent shall be withheld by every person who pays out dividends after December 31, 1951. There will be no allowance for personal exemptions for individuals as in the case of salaries and wages.

Withholding will be required where the recipients are individuals, partnerships, estates, trusts, corporations, regulated investment companies, personal holding companies, tax-exempt organizations, and governmental bodies.

On the other hand, no withholding will be required on dividends paid by Federal banking institutions because such dividends are received entirely by corporations. And no withholding will apply for dividends paid within an affiliated group of corporations which file a consolidated return. Likewise exempt from withholding will be governments, political subdivisions, international organizations, and their agencies or instrumentalities, if they own the entire class of stock for which the dividends were paid, for the reason that withholding would serve no useful purpose.

Withholding on dividends is desirable, and ordinarily would be a simple matter for the corporation payors. However, the system proposed in the House bill is objectionable because—

1. As to individuals, it would cause untold annoyance and hardship to persons in the low-income groups who owe little or no tax.
2. The requirements relating to corporations and other organizations are extremely cumbersome, complicated, and impracticable, and would serve no useful purpose.

As to individuals

In the case of individuals it should be noted that many persons receive income only from dividends during the course of the year. And in many cases the total income received is not in excess of the total exemptions so that no tax is due. In other cases the exemption amount offsets only part of the income and only a small amount of tax is due. In those cases it is probable that the person who depends on the regular receipt of dividend income for subsistance operates on a close budget, and consequently any diminution of receipts because of withheld tax would deprive that person of the necessities and essentials of life.

On $1,000 dividend income during the year, $200 would be withheld by the corporations for the 20 percent tax, so that only $800 would be received. The $200 reduction in receipts during the present high cost of living period cannot be other than a severe hardship to those people. Such a state of affairs is intolerable and must be condemned as an unjust and unwarranted imposition on the citizens.

Permission to obtain a refund of the wrongfully withheld tax would not alleviate the inconvenience and suffering that would be caused, because the withholding would be a recurring matter and would overlap from one year to the next. That is, the Government would always be in possession of funds belonging to those persons, without interest, and some of it for longer than a full year. In the case of older persons it is certain that they would never have the benefit of the withheld portion of their income during the last year of their lives.

The conditions recited above could be overcome by the simple process of allowing recipients of dividends to file certificates for the number of exemptions to which they are entitled. The exemption certificates would be filed with the corporation or other payors of dividends in the same manner that is in effect for the filing of employees' withholding exemption certificates with employers in connection with the collection of income tax at the source on wages. Then, if a person receiving $1,000 from dividends during a year was entitled to two exemptions totaling $1,200, no amount would be withheld because no tax was due for that year.

This procedure should apply only to those who file certificates for their allowable exemptions. But withholding from individuals would be required in every case where no exemption certificate was filed.

As to corporations and other organizations

The withholding system for dividends should apply only to individuals and not to corporations or other organizations. If no withholding by Federal banking institutions will be required because dividends paid by them are received entirely by corporations, then it would seem just as logical to eliminate from withholding all dividends paid to corporations, in every case and whether or not they are related or affiliated.

Furthermore, corporations and governmental bodies are specifically exempted from withholding on their royalty income. Also exempted as interest paid on equipment trust certificates because they are ordinarily held by corporations.

It should be noted that corporations are on a different tax basis than individuals, and also that their financial records generally are satisfactory and complete with respect to all transactions. The theory that income is unreported because of evasion, forgetfulness, carelessness, and a failure to keep records, does not usually apply to corporations and other organizations.

The exemption from withholding, because no useful purpose would be served, in the case of dividends paid to governments or their agencies, etc., if they own the entire class of stock, seems to be subject to an arbitrary restriction, because if no useful purpose is served in such case, then presumably no useful purpose would be served if they own only 50 or 25 percent or any other percentage of a corporation's stock.

Special rules are proposed for withholding on dividends paid to regulated investment companies, personal holding companies, tax-exempt organizations, and governmental bodies. In those cases, it is believed outright exemption of payments would greatly complicate the work of the withholding agent. It is difficult to see how exemption of those classes would create complications. On the other hand, the complications created by the special rules could not be worse.

It is recognized by the House committee that such withholdings would interfere with current operations of those organizations, because they must disburse practically all of their receipts, so they would be given credit for any withholdings from their dividend income, which credit they could apply against any payment due by them for income and payroll taxes and against amounts they themselves had withheld from their own dividend disbursements. The credit is limited to the amount of the liability for taxes or withholdings, and any excess credit over the liability would be recoverable upon the filing of refund claims quarterly or otherwise.

In the case of a tax-exempt organization, for example, an amount first of all would be withheld from its dividend income, then it would subsequently have to claim a credit therefor when it filed its payroll tax returns or income tax return, and if a balance of credit remained it would have to file a claim for the refund of that amount. If it desired it could file a claim at the end of each quarterly period for the balance due it. Such useless procedures can only cause more confusion and create unnecessary work all around.

WITHHOLDING ON INTEREST

The above criticisms with respect to withholding on dividends also apply to interest income as the procedures are alike.

Exemption from withholding on interest income is provided by the House bill in connection with equipment trust certificates, United States savings bonds, postal savings certificates of deposit, bank deposits and savings accounts, and payments on accounts in other financial associations.

In order to assure collection of tax on all sources of income, the above items should not be exempted from withholding in the case of individuals.

Upon the cashing in of savings bonds or certificates of deposit it would be a simple matter to withhold tax on the interest income, for which a receipt form could be filled out and given to the individual by the financial institution. With respect to interest earned on bank deposits and savings accounts, the system should provide for withholding of tax on the income at the time the interest is credited in the account, an offsetting charge being entered for the tax withheld and a receipt form given therefor. On small accounts it could be provided that no tax less than $1 should be withheld on interest credited, but that withholding should be deferred until a withdrawal is made or the account closed out.

PENSIONS AND ANNUITIES

No provision is made in the House bill for withholding of tax relating to income from pensions and annuities. Aside from the probability that some income from those sources is unreported in tax returns and thus escapes taxation, the withholding by corporation payers of tax on such income would be a great relief to taxpayers.

To the average taxpayer no item to be reported is more confusing than pensions and annuities. In the determination of the proper amount to report for such income it has always been necessary to provide a special schedule in the tax return. The confusion arises because several factors must be taken into account, such as cost basis, the portion of past receipts that was taxed and the portion that was tax-free, and the computation of the portion of the current year's receipts that constitutes taxable income.

It should be obvious that the corporations paying out pensions and annuities are in a much better position to determine the correct amount of such taxable income since they have all the essential information available in their records. Therefore, it would seem desirable for corporations to withhold tax on pension and annuity income at the source. Such procedure would assure better collection of tax on those sources of income, and at the same time would relieve taxpayers of one of the most confusing aspects involved in filing tax returns.

THE WITHHOLDING SYSTEM

Expansion of the withholding system to dividends, interest, and royalties should be limited to the payment of such income to individuals. All payments to corporations and other organizations should be exempted from withholding. Otherwise the withholding agents, as well as the corporation recipients and the Government, will have thrust upon them additional work and expense that is unnecessary.

The extra expense will be incurred in connection with the collection, recording, accounting, reporting, and payment of the withheld funds by the payers, recipients, and Government. If the receiving and disbursing of the withholdings will involve 600,000 corporations, the importance of keeping added burdens to a minimum must be realized.

Internal Revenue Bureau statistics on corporation income tax returns for a prior year reveal that less than 500,000 active corporations paid out dividends totaling $7.5 billion, and received dividends from domestic corporations in the total amount of $1.7 billion. Assuming dividends of $2 billion paid by corporations to other corporations, the withholding at 20 percent would equal $400 million. Using only active corporations, it would take an average over-all cost of $800 per corporation to match total withholdings. If that were the case then the additional costs would equal the tax withheld.

With respect to regulated investment companies and tax-exempt organizations, the special rules for the claiming of credit for withheld taxes by application to payroll and income taxes, or the filing of quarterly refund claims for excess credit balances, will cause complications and confusion.

Adding insult to injury for the poor taxpayers whose gross income is less than $600 and who therefore would not have to file a tax return because they would owe no tax, is the provision in the House bill which would permit them to wait 7 years to file a claim for refund, without interest, for tax withheld on their income from dividends, interest, and royalties. But the poor taxpayer would have to keep careful account of his withholdings during the 7 years because it appears that a refund under that provision could not exceed $2 for the taxable year. This seems to be one of the most impracticable provisions of tax law ever written.

The requirement that withholding must apply to the full amount of the dividend or interest without regard to offsetting exemptions will result in the filing of perhaps 3,000,000 additional refund claims each year. More than 90 percent of those additional refunds will involve individuals who have also received salaries or wages, the withholdings from the latter sources having taken into consideration allowable exemptions and the standard deduction. The other additional refunds will involve those whose only sources of income are dividends and interest and who will owe less tax than that withheld, or no tax, depending upon their exemptions.

According to statistics for the fiscal year 1949, 36½ million income-tax returns were treated as refund claims because of excess withholding of tax on salaries and wages. Including 2 million claims on Form 843, the total amount repaid to all classes of taxpayers by the Government was $2.9 billion, which included interest. It has been reported that refund checks amount to as little as 3 cents and 30 cents. At an estimated cost of $10 per refund, the extravagance of such a system becomes apparent. It may be correct to state that the cost of refunding excess withholdings amounts to as much as the total amount refunded. Therefore, instead of expanding the system in such a manner that the number of refunds will be increased, it would seem expedient to revise the withholding system in order to eliminate the necessity for refunding overpayments.

Of vital importance during the present emergency is not only the costliness of an improper system, which because of higher prices adds greatly to the cost of administration, but the utter disregard for the squandering of manpower and the unnecessary wastage of critical materials and supplies. The Commissioner of Internal Revenue has stated: "We should strive toward seeing that the taxes are obtained with the least possible drain on our manpower and supplies in their administration. * * * Not only is manpower vital for defense purposes, but also supplies of various types."

Suggested simplification

An attempt is made in the House bill to have the tax withheld on wages during the year equal the actual tax liability of the taxpayer. That would be accomplished by voluntary agreement between the employer and employee, according to regulations to be prescribed as to the conditions and the extent deemed proper. Pending issuance of regulations it is not certain whether that provision will permit an employee to calculate his tax before the end of the year on all his income, and then inform his employer of the correct balance due which should be withheld from the last salary payment for that year. Would the employee be permitted to include in his calculation sources of income other than wages, such as dividends and interest? And instead of additional withholding, would it be possible to inform the employer that a lesser amount should be withheld on the final salary payment in order that total withholdings will equal the tax liability and thus make unnecessary the obtaining of a refund for overpayment of tax?

If such procedure is practicable for employers and employees, so that withholdings equal tax liability, then another step could be taken by eliminating the requirement that those persons file a return on which the year's figures are reported. This could be made applicable to those who elect to file Form 1040A as an optional individual income-tax return, and on which the tax is computed by the Collector of Internal Revenue. Filing under this method is provided for under supplement T, which relieves individuals of the task of computing the tax on the income reported if their gross income is less than $5,000 and entirely from wages, dividends, and interest subject to withholding.

Under those circumstances it should not be necessary for employees to file Form 1040A for the year involved, but instead a "substituted" Form 1040A could be filed for the employees by the employer at the close of the year. The "substituted" return would combine the withholding statement (Form W-2), on which total wages and tax withheld are reported for the year, and the employee's withholding exemption certificate (Form W-4), on which personal exemptions are claimed.

The revised form combining the present Forms W-2 and W-4 would show the names and addresses of the employer and employee, a detailed listing of every person claimed as an exemption, the total number of exemptions and certification thereof, the total wages paid during the year, and the total tax withheld. The original copy of the revised form would be designated "Collector's copy," the duplicate "Employee's copy," and if necessary a triplicate copy could be retained by the employer.

The detailed procedure would be as follows:

1. At the beginning of the year the employee would list his dependents and exemptions on the revised Form W-2/4, which then would be retained by the employer.

2. At the end of the year the employer would complete the revised Form W2/4 by inserting in the spaces provided therefor the total wages and tax withheld for the year.

3. The original copy of the form would be mailed to the Collector as the employee's tax return and the duplicate would be given to the employee. No further action would be required of the employee.

4. The Collector also would receive information returns from corporations reporting payments of dividends or interest to the employee during the year and the tax withheld thereon.

5. All forms relating to a taxpayer would be assembled, and subsequently the Collector would compute the tax on the various items of income reported to prove that the correct amount of tax had been withheld and collected. In case of discrepancy a bill could be sent to the taxpayer.

Correlation between the sections providing for voluntary agreement on withholding and the use of optional tax return, Form 1040A, would effect a major step in the simplification of the system for collection of tax at the source. If the taxpayer can be relieved of the task of filing a tax return because the correct amount was withheld, it would not only be of the greatest convenience to him, but a tremendous saving would result from the elimination of millions of forms and all the work connected with their filing, processing, reviewing, examining, transporting, storing, and other tasks.

On the basis of practically 36 million tax returns with adjusted gross income under $5,000 as shown by the House committee report, it can be estimated that about 20 million would report salaries or wages only, while an additional 2 million would report dividends and/or interest along with salary or wage income. If 20 million tax returns can be eliminated at an over-all cost of $5 per return (for paper, printing, processing, transportation, etc.), the saving to the Government would be $100 million. And if 20 million refunds for excess withholdings are eliminated at an over-all cost of $10 per refund, another $200 million would be saved. Such savings in the total amount of $300 million certainly make the attempt at simplification worth while.

Alternative method

The above procedures are adapted from the revised tax-collection system which I have been advocating for 4 years, but they entail only part of the program. In order to prevent the escape of tax on certain sources of income and therefore make it possible to collect the maximum tax due the Government at the lowest cost of administration, my plan provided for the following:

1. Expansion of the income-tax-withholding system to include wages of domestic workers and agricultural labor by correlation with the social-security-tax-withholding system.

2. Expansion of the withholding system to include income from dividends, interest, pensions, and annuities, to which now can be added royalties.

3. Operation of the withholding system in such a manner that the tax withheld would be the actual tax due on the related income, instead of the present method of withholding the incorrect amount of tax all during the year.

4. Elimination of the requirement for filing tax returns to apply to taxpayers having adjusted gross income under $5,000 from the various sources of income to be included in the expanded system.

As that plan would assure complete collection of tax on those sources of income, there would be no point in their filing tax returns. Since 90 percent of the taxpayers having adjusted gross income under $5,000 would thus be fully paid up on their tax liability, more than 30 million tax returns could be dispensed with, as well as perhaps 20 million refunds. The total saving to the Government then would be $350 million, not to mention the saving of vitally needed manpower and critical materials and supplies.

More important is the probability that expansion of the withholding system to cover all individuals receiving salaries, wages, dividends, interest, pensions, annuities, and royalties would result in the collection of perhaps $1 billion of additional income taxes, it being estimated that from $1 to $1½ billion of tax liabilities are neither reported nor uncovered at present.

The procedure to withhold the correct tax during the course of the year, by splitting the mathematical process into two parts, the taxable and exempt income portions, and the application of the tax rate, is as follows:

1. A taxpayer would be allowed to receive tax-free, without withholding, as much income as would equal the total amount of his exemptions. That is, if an employee was entitled to two exemptions, the first $1,200 of his salary would not be subject to withholding, but after the value of his exemptions had been absorbed, tax would be withheld on every dollar of his earnings during the remainder of the year.

2. A taxpayer receiving dividend income in addition to salary would have his allowable exemptions absorbed by his salary earnings and therefore the full amount of dividends whenever paid to him during the year would be subject to withholding. But if a taxpayer had only dividend income and no salary income, he should be permitted to file an exemption certificate with the payor corporation so that he can receive tax-free income to the extent of his exemption.

3. The tax withheld on income during the taxable part of the year would be determined by application of a single effective rate, which would take into account the various factors involved in the computation of income tax—the normal tax, surtax, and defense tax rates, and deductions for contributions, interest, taxes, medical expenses, and other losses and expenses. The single rate would apply to only the first bracket of income, which could be fixed at $3,600 to conform to the basis of the social-security tax, as a matter of convenience to the employer, instead of extending the first bracket to $5,000.

4. A taxpayer would be permitted to file a tax return at the end of the year in order to adjust his tax payments because of error, extraordinary deductions, or special conditions which prevented correct withholding during the year.

For example, an employee entitled to two exemptions ($1,200) and earning $50 salary per week would receive the full amount free of the withholding deduction for the first 24 weeks, at which time his $1,200 exemption would be fully absorbed. Thereafter he would enter the taxable period and every dollar of his earnings would be subject to withholding. Assuming an effective rate of 20 percent (which would automatically provide for the standard deduction and the defense tax), the tax withheld on the $50 weekly salary would amount to $10 for each of the final 28 weeks of the year, or a total of $280, which would correspond to the total tax otherwise computed for the year. In that event the tax withheld would equal the actual tax liability so the filing of a tax return would be unnecessary.

The above is merely a general outline of the plan I have proposed. For a thorough understanding of the detailed procedures, including special situations and all the related problems, reference may be made to my original article, The Withholding System Needs Revision, which was published in the May 1948 issue of Taxes—The Tax Magazine, and a supplemental article, Is it Time to Revise the Withholding System?, which was published in the September 1949 issue of that magazine.

CORPORATION INCOME TAXES

The House bill increases corporation income taxes from 47 to 52 percent. Although the rate increase is only 5 points, the inflationary effect will be almost three times greater than the increase in the direct tax element. That arises because of the method of computing corporation income taxes.

Assuming that corporations are required to pay dividends aggregating $8 billion for the use of the invested funds of stockholders, at a 52 percent rate it would be necessary that they earn more than twice that amount because Federal income taxes first must be paid. The following figures show a comparison of the 1951 rate of 47 percent and the proposed rate of 52 percent:

	47 percent rate	52 percent rate	Increase
	Millions	*Millions*	*Millions*
Taxable net income required	$15,094	$16,666	$1,572
Corporation income taxes	7,094	8,666	1,572
Balance left for dividends	8,000	8,000	

At 52 percent corporations would have to earn $16.6 billion net income in order to pay $8.6 billion tax and have $8 billion left with which to pay dividends.

Since the $8 billion of dividends is part of the net income, the direct tax on that $8 billion portion is the true tax element for the purpose of this illustration, and the difference between that and the actual corporation income taxes shown above represents the differential which must be made up. The composition of the corporation tax is as follows:

[In millions]

	47 percent rate	52 percent rate	Increase
Corporation income taxes (above)	$7,094	$8,666	$1,572
Direct tax on $8 billion of net income representing dividends	3,760	4,160	400
Differential	3,334	4,506	1,172

These figures show that the direct-tax element increased $400 million, but that the differential needed to make up the actual tax increased almost $1,200 million.

It must be recognized that all costs, expenses, taxes, dividends, and reserve profits must be obtained in the first place through the prices charged to consumers. Therefore, the entire amount of tax, including the direct-tax element as well as the differential must be recovered from them. This means that for an increase of five points in the tax rate, prices to consumers must be inflated $1,200 million beyond the direct-tax element.

That amount, however, must be more than doubled because the dividend portion used as a basis in the above calculation ordinarily represents less than 50 percent of the net income, as reserves, expansion, and other commitments must also be provided for. Consequently, it can be stated that prices and the cost of living for 1 year will be inflated $2½ billion.

In order to overcome that severe inflationary burden on the customers it is recommended that corporations compute their income taxes on the balance of net income after the deduction of dividends paid to stockholders. In that event the balance of net income after dividends could be shared by the Government, but only after providing for reserves, expansion, and other commitments. That method could provide a substitute for the very complicated excess profits tax system, and at the same time it could be used to control prices. That is, if prices increased 10 percent, the tax rate could be increased proportionately in order to extract the profit which had resulted from unwarranted or exorbitant price rises.

EXCISE TAXES

The change suggested above in the method of computing corporation income taxes would make it possible to abolish excise taxes (except those of a regulatory nature). The $2 billion of excises charged to corporations then would be replaced by taxes that are based on net income that has been earned.

Otherwise, the excise tax system will continue to discriminate against the people and also goods and services, it will continue to disrupt and interfere with business; and it will continue to deprive certain people of goods and services. The inconsistencies presented by the House committee point out the arbitrary results of any attempted adjustment of a faulty system.

It is proposed to exempt photographic items used in business because "a tax on business cost items is likely to be shifted forward as an operating expense and thus appear in the price of commodities." That also should apply to many other items now taxed which positively will be added to costs and prices, such as communication and transportation expenses, leather goods, equipment, and other items used for business purposes. But the tax on trucks is being increased.

It is proposed that the 3⅓ percent tax on electrical energy be repealed because it is "one of the most burdensome of the excise taxes with respect to the lower-income groups," and, since the tax did not apply to publicly-owned electric power systems, "to impose the tax on some consumers and not on others is believed discriminatory." But the House bill provides that no tax shall be levied upon any admissions to swimming pools, bathing beaches, skating rinks, and other places operated by a governmental unit. If the facilities are operated as a private enterprise the customers must pay tax. If tax on some users of electricity but not on others is discrimination, then why is it not discriminatory to impose a 20 percent tax on admissions of young boys and girls to private pools and rinks when no tax will apply if the facility is publicly-owned?

The unfair imposition upon the youth of the country is amplified by the proposed exemption of fishing trips from transportation tax. Now practically all sports personally engaged in will be exempt from excise tax, including fishing, bowling, golf, tennis, and horseback-riding. But no relief is granted to children who might find it more convenient to swim or roller skate at a private pool or rink.

SHOULD SEWING MACHINES BE SUBJECT TO A 25-PERCENT EXCISE TAX?—AN ANALYSIS BY THE FREE SEWING MACHINE CO.

(By Lewis Emery, treasurer, Free Sewing Machine Co.)

We assume the primary reasons for such a tax at this time are—
1. To curb inflation by curbing demand.
2. To increase Government revenue.

These are reasons in the public interest. This analysis is in terms of how such a tax would affect the public interest.

Our conclusion is that it would not be in the public interest to impose a 25-percent excise tax. In fact, we believe the opposite to be true.

In this analysis we are illustrating specifically why we feel a 25-percent excise tax on sewing machines now will actually operate to the detriment of the defense program and be contrary to public interest.

In the first place, a sewing machine is a production tool. Sewing machines are not home appliances as such.

This is not the case with the woman using the ordinary home appliance as a labor-saving device. A woman using a sewing machine actually creates, fabricates, produces, maintains, and repairs basic necessities of life.

In 1949 the United States garment industry manufactured 728,000,000 items of women's and children's apparel. In the same year women at home made 800,000,000 items of similar apparel. Three out of every ten garments were home-sewn and this does not take into account the many more millions of garments which were repaired in the home and thereby kept in daily use. Every family with growing children knows what this means. We also must remember that with the likelihood of further clothing shortages, families of moderate means will more and more have to repair the clothing which they already have for themselves and their children. Furthermore, this does not take into account the many millions of other items which each year are home-sewn—draperies, furniture coverings, curtains, towels, bedspreads, sheets, and many other necessities.

As a production tool that is used by millions of women to supply a basic need in our economy, the sewing machine conserves manpower, curbs inflation, and is indispensable to millions of users.

Our second point is the conservation of manpower. An average of two man-hours is required to produce an article of clothing by the garment industry. This means that the sewing machine is currently conserving our industrial manpower at an estimated rate of 450,000,000 man-hours per year. This, from new garments alone, established the sewing machine as a production tool of tremendous value to our defense program. Furthermore, a woman with a sewing machine needs fewer new clothes. She can repair, alter, and remodel, and in doing so she conserves materials as well as needed skilled manpower.

During our defense economy women should be encouraged to own sewing machines, because with them they can produce needed goods for the Nation. If they are discouraged by excise tax, some professional workers will have to fill this need. Every million garment made or repaired at home means 1½ million man-hours saved to produce other civilian or military goods.

In addition to the first point that the sewing machine is a production tool and the second point that it conserves manpower, our third point is that as a production tool it also helps to curb inflation. I should like to explain why, in very simple terms. The principal reason why a woman makes clothing at home is because it is cheaper than buying ready-to-wear clothing. During the past 10 years prices of ready-to-wear clothing have more than doubled. An excise tax on sewing machines which will compel more women to buy ready-to-wear clothing (many of whom cannot afford to do so) will serve to force the price of ready-to-wear clothing even higher. A more direct form of inflation cannot be imagined.

Now for point 4. The principal market for sewing machines is among families with moderate or low incomes. A family with an income of $5,000 per year has a much greater need for a sewing machine than the $10,000 a year family. Almost 80 percent of the families in America are in or below the $5,000 per year income bracket. A substantial portion of the annual income of these families must be budgeted for clothing and other home necessities, which may be made on a sewing machine. These families must sew at home in order to afford proper clothing. To them the sewing machine is a major purchase. A manufacturer's excise tax of 25 percent would mean an increase of approximately $45 in the retail price of a sewing machine. Since this is a substantial increase it would place the purchase of a sewing machine beyond the reach of those who need it most.

Therefore, a tax upon sewing machines would not be a tax based upon the ability to pay. It would be a tax burden which falls most heavily on those least able to pay, although they are the people who have the greatest need for a sewing machine.

To emphasize this very important point we would like to remind the committee that there are some 41 million family units in America today: 15 million of these family units were started in the last 10 years. One out of every three family units was started in the last 10 years. Obviously, these family units include a large percentage of young children whose clothes constantly need repair and replacement, and these young families are the ones which can least afford to pay the increased cost of such a tax.

To come to point No. 5, we believe the sewing machine is indispensable to millions of people. As we have already indicated, over 50 million women sew at home. Over 3 million youngsters are now learning to sew in schools and classes throughout the country. Close to 1 million 4-H Club girls are completing hundreds of thousands of sewing projects each year. Large numbers of sewing machines in the hands of schools, churches, Red Cross, and other charitable institutions are needed for clothing of needy people and for our own defense needs.

In summation, because—

1. The sewing machine is a production tool;
2. The sewing machine conserves manpower;
3. The sewing machine curbs inflation;
4. The sewing machine is most needed by those least able to pay the tax;
5. The sewing machine is indispensable to millions of people:

Therefore, we urge your consideration in eliminating home sewing machines from the classification of products subject to the proposed excise tax. We are convinced that such a tax on sewing machines would be contrary to the public interest and the defense program of the Nation.

Senator BYRD. The committee will recess until 10 o'clock tomorrow morning.

(Whereupon, at 12:55 a. m., the committee recessed to reconvene at 10 a. m Friday, August 3, 1951.)

REVENUE ACT OF 1951

FRIDAY, AUGUST 3, 1951

UNITED STATES SENATE,
COMMITTEE ON FINANCE,
Washington, D. C.

The committee met, pursuant to recess, at 10 a. m., in room 312, Senate Office Building, Senator Harry F. Byrd presiding.

Present: Senators Byrd, Hoey, Kerr, Millikin, and Martin.

Also present: Senator Henry C. Dworshak, of Idaho; Elizabeth B. Springer, chief clerk; Colin F. Stam, chief of staff, Joint Committee on Internal Revenue Taxation.

Senator BYRD. The committee will come to order.

Our first witness is James V. Carmichael.

STATEMENT OF JAMES V. CARMICHAEL, PRESIDENT, SCRIPTO, INC.

Mr. CARMICHAEL. Mr. Chairman, my name is James V. Carmichael. I am president of Scripto, Inc., of Atlanta, Ga., manufacturer of mechanical pencils, fountain pens, and ball pens.

I am appearing on behalf of the National Fountain Pen and Mechanical Pencil Manufacturers Association.

May I proceed, Mr. Chairman?

Senator BYRD. Yes.

Mr. CARMICHAEL. Mr. Chairman and gentlemen of the committee, I just want to express to you my gratitude for permitting me to appear today. I know how heavily pressed you are for time and what a chore it is to listen to all of us—the people who are protesting every tax that comes along.

I want to say at the outset, though, that this is the first time our association has ever appeared before either the House or Senate Finance Committees to protest a tax.

It is the policy of our association to go along with all taxes which are general and which are thought necessary by the Congress.

The only reason that we appear in this instance is the fact that we feel very sincerely that this tax singles us out and is discriminatory and is unfair and unjust.

Senator MILLIKIN. May I make an observation?

Mr. CARMICHAEL. Yes, sir.

Senator MILLIKIN. I think that it is very healthy for this country that people are "hollering" about taxes. I think that is the only thing that will save this country, and that is for people to "holler" about taxes and it certainly is not offensive to me to see any group of our citizens who do not want to go along with the tax.

Mr. CARMICHAEL. Thank you, sir.

Senator MILLIKIN. It is quite natural that they do not want to go along with taxes that hit them especially.

Mr. CARMICHAEL. Thank you, sir.

I appreciate that and I believe that we have reached almost the limit of our ability——

Senator MILLIKIN. Whenever we reach the point where we go along without protesting what we think are unfair taxes put on us, we are done—we are dead ducks.

Mr. CARMICHAEL. I think you are right. I appreciate your remarks.

The first point I want to make to this committee is that mechanical pencils, fountain pens, and ball pens are not luxuries, but are an essential part of our dailly life in this modern age.

It is hard to conceive of any sort of business being transacted in this day and age without the use of writing instruments.

They are necessary to institute the designs on the drafting boards of our industries, to handle the work orders. They are necessary in all processes of education, from the grammar schools through our colleges, and they are essential to the morale of our people.

The essentiality of our industry and of our product has been recognized by the National Production Authority and our industry has been so classified as an essential industry and is allocated material for the production of its products on that basis.

As a matter of fact, the mechanical writing instrument of today is the tool of trade of millions of white-collared workers in America.

They sit at their desks or they work at their jobs, and almost constantly they use a fountain pen, a ball pen, or a mechanical pencil, and to impose a tax such as this proposed here upon these mechanical writing instruments is to tax a tool of trade of those millions of white-collared workers, just as much as if you were taxing the saw that the carpenter uses or the trowel that a mason uses or the tools that a mechanic uses, because they are the tools with which they make their living, and to impose this tax is, in fact, to tax a tool of trade of millions of white-collared workers of America.

Probably the largest class of users of mechanical writing pens and pencils are the school children of this Nation. There are 32,000,000 school children in this Nation and from the time they get out of their primary grades they are required to use fountain pens or ball pens and mechanical pencils.

Senator MILLIKIN. Just think of all the people in Government employment who use fountain pens. It is just a case of taxing the Government.

Mr. CARMICHAEL. Exactly sir.

Senator MILLIKIN. The Government taxing itself.

Mr. CARMICHAEL. And if you take the fountain pens and pencils away from the Government it would stop tomorrow.

Senator MILLIKIN. That would be a wonderful thing. [Laughter.] You have got something there. I had not thought of that.

Mr. CARMICHAEL. The best way to end all bureaucracy, Senator, is maybe to take the writing instruments away from the Government. [Laughter.]

Senator BYRD. Especially the red ink. [Laughter.]

Mr. CARMICHAEL. Yes, the red ink. Back in the days when I was in school, a child had an ink bottle and a staff that he used for his work, but today that is impossible. They move from class to class and without the fountain pen the boy could not possibly get his work done, and certainly, as I say, business could not be carried on.

Of these 32,000,000 children, 17,000,000 of them have families who have a $3,000 or less income, and to impose a 20-percent tax on the instruments which these children have to use in their schools would certainly be placing it on the group least able to pay it.

And I think one of the most important factors of the mechanical writing instrument is the morale factor to our servicemen.

We have got over 3,000,000 in the service, and there is no single factor that does as much for their morale as to be able to write home to mama and papa and to receive a letter from mama and papa and without the mechanical writing instrument and the fountain pen, such correspondence would be impossible, and to say you are going to tax that soldier, with his modest income, 20 percent for the instrument with which he comes in contact with the home folks, to me is unthinkable.

Now, this tax was not even proposed by the Secretary of the Treasury—and he usually thinks of most things that can be taxed—but this tax was not even proposed to the House committee by the Treasury Department. It was not even proposed by a member of the House Ways and Means Committee.

The first our industry knew about it was on May 14 when we read a press release that it had been included by the House Ways and Means Committee and was thought up by a staff member after all public hearings had been closed, and the industry had no chance to appear to voice its protest.

It is an ill-conceived, hastily thought up tax, and was based on the fact that it was an extension of the jewelry tax, and was so announced in the press by the House Ways and Means Committee—that the jewelry tax—that is, the tax on writing instruments which have gold upon them or precious metals—would be extended to cover all fountain pens, mechanical pencils, and ball pens.

Now, our industry has no objection to the 20 percent tax on fountain pens, ball pens, and mechanical pencils which have gold on them that is made up for ornamental purposes. And the person who wants his dressed up with gold, let him pay a tax on it, if it is necessary for the support of this Government.

Senator BYRD. How much revenue will this bring in?

Mr. CARMICHAEL. The most liberal estimate from the writing industry is $26,000,000 and that is, as I say, liberal. At least half of that would be paid by the school children of America, and then another large segment of it would be paid by the servicemen, and the rest of it would be paid by the white-collared workers of America, the people who use these things to make their daily bread.

We want no special favors; we are not asking you to give us any special exemptions, but we feel this tax is discriminatory in that it singles us out. We are not a luxury; we are strictly a utilitarian product and, as such, should not be taxed until the time comes when this country is willing to say that we are going to place a general sales tax on everything that is sold.

If that becomes necessary for the support of our Government, or for the defense of our country, we will not appear to protest it, but we do not feel that we should be singled out at a time—by this, and classified as a luxury—when there is absolutely nothing but essentiality surrounding our entire product.

I will be glad to try to answer any questions that any member of the committee might have.

As I say, it will produce probably $26,000,000.

I would like to point out that it is levied at the manufacturers' level, and we sell on a varied discount structure, and what is going to happen is that a profit is going to be added, and it is going to be added up and going to be about a 40 percent retail tax when it gets to the retail trade, and the consumer is going to pay more without any benefit to the Government.

Senator BYRD. Thank you very much.

Mr. CARMICHAEL. Thank you.

(The prepared statement of the Fountain Pen and Mechanical Pencil Manufacturers Association and a letter from Senator Hickenlooper to the chairman follow:)

MECHANICAL PENCILS, FOUNTAIN PENS, AND BALL POINT PENS

Proposed excise tax, section 486 of H. R. 4473:

"(a) IMPOSITION OF TAX.—There shall be imposed on the following articles, sold by the manufacturer, producer, or importer, a tax equal to 20 per centum of the price for which so sold: Mechanical pencils, fountain pens, and ball point pens.

"(b) EXEMPTION IF ARTICLE TAXABLE AS JEWELRY.—No tax shall be imposed under this section on any article under section 2400 (relating to jewelry tax)."

This brief is submitted on behalf of the Fountain Pen and Mechanical Pencil Manufacturers Association, Inc. That association is composed of some 83 manufacturers of fountain pens, ball point pens, and mechanical pencils. The membership represents approximately 90 percent of the total production of these writing instruments. Its headquarters are at the Albee Building, Washington, D. C.

ESSENTIALITY

Writing instruments are not a luxury. They rank among the most important necessities of everyday living. There is not one single vital process which can be carried through from beginning to end without the use of some kind of writing instrument. Freight does not move without a written order or consignment. Production stops if the administrative and clerical staffs have nothing with which to write. Conceive of military operations without written orders or communications. The paper work which is involved in every operation—civilian or military—is basic and essential. Without writing instruments, every operation in our present-day economy would come to an abrupt end. Production would stop. Mass transportation would cease. Communication would be confined to the spoken word, trade and commerce would disappear, and even education would be virtually halted.

Mechanical writing instruments are the most efficient, portable, all-purpose writing instruments ever conceived. They are durable—their utility is measured in years, not in days or weeks. They are efficient. A fountain pen, whether conventional or ball type, carries its own reservoir of ink. A mechanical pencil carries a lasting supply of lead. No ink wells or pencil sharpeners are needed for mechanical writing instruments. They save time. Anyone can write legibly, smoothly, and quickly under almost any conditions, and any place, with a mechanical writing instrument.

Thus, an unadorned mechanical writing instrument is not a luxury item. It isn't a toy or a novelty. It is a vital, utilitarian instrument filling a demand for which there is no substitute. The proposed excise tax is on a necessity, not a luxury. It is going to hit all classes of people from educators and students to clerks, soldiers, and executives.

THE PROPER TEST: FUNCTIONALITY VERSUS ORNAMENTATION

For many years the Congress, the Treasury Department, and the industry have recognized the fairness of a taxability test based on the presence or absence of ornamentation on fountain pens, ball-point pens, and mechanical pencils.

We must bear in mind that a functional part can be pleasing to the eye without being ornamented or adorned in the sense of a use for purely decorative purposes. If ornamentation is not needed for functional or utilitarian purposes, it has been and can continue to be taxed on the retail sales price.

If the part is actually utilitarian in character, even though pleasing to the eye, there should be no excise tax of any kind on it at any level unless and until all articles of lesser essentiality are taxed at the same or a higher rate.

BACKGROUND

The background out of which this proposal arose is significant. It shows that the tax was not a considered move. It was conceived hurriedly without consultation or hearing. The Secretary of the Treasury did not recommend or even suggest such a tax. (See pp. 10 and 20, hearings, Ways and Means Committee, pt. 1, 1951).

We have been informed by members of the House Committee that this suggestion to tax all fountain pens, ball-point pens, and mechanical pencils originated with a staff member after the hearings before the committee had been closed.

It was adopted by the House committee without giving the industry a hearing or an opportunity to be heard either orally or by written brief. The industry first learned of this proposal on May 14, 1951, from our daily newspapers. The release stated that the House Ways and Means Committee voted to make no change in the rate of tax on jewelry, but that the jewelry classification would be extended to cover fountain pens, ball-point pens, and all mechanical pencils. By this extended coverage the committee estimated $36 million additional revenue would be forthcoming. Thus it is proposed to classify fountain pens, ball-point pens, and mechanical pencils as jewelry items and tax them as such. It is not necessary to dwell on the weakness of this position. Jewelry is certainly a luxury. Writing instruments just as certainly are not.

EFFECT ON STUDENTS

Perhaps the largest group of daily users of mechanical writing instruments is comprised of the students in the schools and colleges of the country. There are more than 32 million such students. A writing instrument of some kind is so essential to the educational process that without it there could be no such thing as the kind of education we know today. As soon as the child emerges from the first grades to the departmental system, it is virtually compulsory for him to have a fountain pen because he must carry all of his equipment with him. Ordinary pen and ink, such as he may have used when he did all of his work at one desk, become impractical. Thus the great majority of all students beyond the early grades must have mechanical writing instruments as an absolute necessity. Any excise tax, such as that proposed, would mean an additional cost to all of these students.

Many of these students come from homes whose incomes are exceedingly moderate. According to the bulletin of the Federal Reserve Board of August 1950 and based on 46 million families, the incomes of American families are as follows:

	Percent		Percent
$1,000 and under	14	$4,000–$5,000	11
$1,000–$2,000	10	$5,000–$7,000	11
$2,000–$3,000	21	$7,500–$10,000	2
$3,000–$4,000	19	$10,000 and over	3

Families whose income is $3,000 or less constitute 54 percent of the total. Applying this percentage to the total of school and college students we find that approximately 17,280,000 of them come from families which, in these days of high prices, are existing on a marginal level. Any addition, however slight, to the educational burden of such families would work an undue hardship.

Believing the educational aspect of this subject to be so important and so fundamental, the industry has reviewed available statistical surveys indicating the extent of use by students of mechanical writing instruments. These surveys have been made by wholly independent organizations, they were conducted solely for the purpose of ascertaining facts. Here is what they show.

1. Survey conducted by the magazine Varsity in 1947:
   (a) 98.5 percent of those contacted own a fountain pen.
   (b) 12 years is the average age of those receiving their first fountain pen.
2. Survey conducted by the magazine Seventeen in 1948:
   (a) 98.0 percent contacted by the survey own fountain pens.
   (b) 92.0 percent have owned mechanical pencils.
   (c) 10 years is the average age when first fountain pen was received.
   (d) 9 years is the average age when first mechanical pencil was received.

These surveys contacted teen-age boys (Varsity) and girls (Seventeen). The results show an almost universal use of fountain pens and mechanical pencils. The students so covered are in the secondary school group—junior high school and senior high school. Classes are large and in the modern system the student moves about from room to room to attend classes. It is impractical to carry ink bottles or to sharpen pencils while moving from room to room. Certainly everyone knows that the ink supply in a good fountain pen will last for days; and that the leads contained in a mechanical pencil will last for months as will the ink supply in a ball-point pen.

At the college and university level the essentiality of mechanical writing instruments is accentuated. Writing speed and legibility are necessary in higher education. The mechanical writing instrument best serves such needs. The students realize it as shown by the results of the above surveys.

It seems probable that this educational aspect of the proposed tax was not considered by the House committee. The levying of an excise tax on the "tools of education" seems clearly unwarranted.

EFFECT ON MILITARY PERSONNEL

Soldiers, sailors, and other national defense personnel and their families constitute another large group who would be adversely affected by a tax on mechanical writing instruments. During war and preparation for war, such as we are now experiencing, there is a vast separation of people from their normal locations, either to join the armed services or to take occupations in some military establishment or other form of war work. Such family separations bring about a tremendous increase in personal correspondence. The maintenance of such correspondence is a highly important factor. Prompt receipt and frequency of letters to and from service personnel was recognized as a preeminent morale factor during World War II. At one juncture, an urgent message came from the high command in the Pacific theater which said in effect: "Send us food first and send us mail second." During World War II the Army Chaplain Corps intervened against too great a curtailment of fountain-pen production.

In consideration of this morale factor, the major pen companies have announced free pen service for all men in the service overseas for the duration of the national emergency. These companies can exhibit many letters from servicemen in Korea and Europe who have returned their writing instruments for repair. The essence of their messages is to speed the writing instrument back to them because they cannot be without it for any length of time.

There are now more than 3,000,000 men under arms, a great many more in veterans' hospitals, and more and more troops leaving this country to serve abroad. The proposed tax on these writing instruments would comprise a penalty on one of the prime factors of morale in the Armed Forces. Military personnel, regardless of their economic or social status in civilian life, while in the Armed Forces are certainly not to be classed among those best able to bear additional taxes. Their modest incomes are not suited to additional levies. These men and their families who are left behind are making the greatest sacrifice in the interests of national defense of any group of citizens; any additional burden should not be imposed upon them.

EFFECT ON INDUSTRIAL AND PROFESSIONAL WORKERS

As already pointed out, mechanical writing instruments are necessary throughout all production and commercial processes: clerical, drafting, designing, production planning, inspection, office, shipping, bookkeeping, timekeeping, payrolls, production control, engineering, supervision, storage, sales, and management. The mechanical writing instrument is an essential tool that must be used by almost every worker in industry, trade, commerce, or the professions. For all those who perform their work, for the most part, away from a desk, a fountain pen, mechanical pencil, or a ball-point pen is necessary, as one cannot very well carry around an ordinary pen and a bottle of ink. And even for those who work at a desk, a mechanical writing instrument is oftentimes greatly preferred and more efficient. To tax writing instruments used as tools by the millions of workers, would be no more logical or just than to tax a hammer or saw used by a carpenter, a wrench used by a plumber, a clinical thermometer used by a nurse, or the contents of a mechanic's tool box. These millions of workers, for the most part, earn modest incomes and the proposed tax would be one imposed on one of the essential tools by which they earn their living.

PROPOSED TAX WILL BE CONCEALED AND COLLECTED DOUBLE FROM THE CONSUMER WITH GOVERNMENT GETTING ONLY ONE-HALF

Any excise tax on functional as distinguished from adorned or ornamental fountain pens, ball-point pens, or mechanical pencils, which ornamented items are now taxed at 20 percent under the jewelry classification, will be discriminatory unless there is a general consumption tax on all articles regardless of essentiality. This will be true regardless of the level at which the tax is proposed and regardless of the amount of rate of the tax.

The proposed tax has the further vice of being susceptible of concealment—which means it will be concealed.

Most important of all there is nothing to prevent a profit being collected at each stage of the distribution of such writing instruments to the ultimate consumer. This means a double tax on the consumer with the Government getting half.

CONCLUSION

The millions of students, workers, and members of the Armed Forces and their families would be the ones called upon to contribute to the proposed tax on mechanical writing instruments. The fact that the tax is a "hidden" tax (being imposed on the sale by the manufacturer rather than on the sale by the retailer) makes it no less unfair and unjust. It is imposed on a utility item that is essential to the conduct of everyday business and in every phase of modern life. As a subject of taxation these writing instruments—tools in the hands of most users—do not qualify under the principles upon which the excise taxes were imposed in the acts of 1941 and 1943. Those taxes were intended to place a premium on luxuries, to discourage the acquisition of articles and things not essential in a state of war, and to be levied on those best able to bear the burden. The present tax on those mechanical writing instruments ornamented with gold or other precious metals is a tax of that character. It can be continued. It could even be increased, as an emergency tax, although any increase is bound to produce but little additional revenue. But the proposed tax on all other fountain pens, ball point pens and mechanical pencils is a tax on a utilitarian item that in most cases is a necessity; it is a tax on an article the acquisition and use of which should be encouraged rather than discouraged during a war emergency with the many family separations which inevitably occur; and it will be borne by the millions of students, workers and members of the armed services most of whom are least able to bear additional burdens and against whom the imposition of additional burdens is least warranted.

UNITED STATES SENATE,
COMMITTEE ON FOREIGN RELATIONS,
August 3, 1951.

Hon. WALTER F. GEORGE,
Chairman, Finance Committee, United States Senate,
Washington, D. C.

DEAR SENATOR GEORGE: It is my understanding that Mr. Frank L. King, executive secretary of the Fountain Pen and Mechanical Pencil Manufacturers Association, Inc., will appear before the Senate Finance Committee to present the views of this industry when excise tax witnesses are scheduled in hearings on H. R. 4473.

The W. A. Sheaffer Pen Co. of Fort Madison, Iowa, which is one of the largest of its kind in the country, is very much concerned with the excise tax on fountain pens, ball-point pens, and mechanical pencils. Representatives of this company have called upon me. Under the present law, ornamental writing instruments are subject to an excise tax of 20 percent of the retail price.

The W. A. Sheaffer Pen Co. does not seek a reduction in that excise tax for ornamental instruments, in fact, they would not seriously object if the rate were increased. I make this statement to indicate that Sheaffer is not attempting to avoid taxes but that they believe that ornamental founain pens have been for many years the proper subject for imposition of a special excise tax; however, they are concerned with the question of an excise tax on functional writing instruments. These may be looked upon in the same category as working tools for business and professional people and for college students and school children.

It is my understanding that in the House Ways and Means Committee there were not hearings on the question of imposition of excise taxes on unornamental writing instruments and that the Treasury Department did not propose such tax. I am advised also that the vote in the committee on this item was close and, therefore, am glad to know that the Senate Finance Committee expects to give the pen manufacturers an opportunity to be heard and I hope that in its final decision the committee may give full consideration to the elimination of the tax on unornamental writing instruments. I understand that the amount of revenue which would be raised is very small.

Yours sincerely,

B. B. HICKENLOOPER.

Senator BYRD. This will be included for insertion into the record from Senator McCarran.

(The letter referred to follows:)

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
July 31, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: It has come to my attention that certain provisions of the Revenue Act of 1951, H. R. 4473, are directly prejudicial to the continued well-being of the economy and government of the State of Nevada. I am certain that this cannot be the intention of the Congress or of your Finance Committee.

Section 403, amending section 3267 (a) by increasing the tax on coin-operated gaming devices to $250 per year per machine, will put many individuals out of business in Nevada. This is the third such increase in this tax and it cannot be borne by those engaged in legalized gambling, unless there is some equitable adjustment, such as I intend to propose by way of an amendment, a copy of which is attached hereto.

If this proposed increase in taxes on slot machines becomes effective, the figures in my possession show that over one-half of the State's licensees will not renew their licenses. The revenue loss to the State of Nevada for this item alone will be tremendous, the resulting unemployment will be serious, and the dislocations to the economy of the State will be paralyzing.

The effect on our few, scattered, small cities and towns will be even more drastic. The actual loss in direct taxes to local governments in Nevada will amount to one-half million dollars compared to an estimated Federal gain of only $57,000.

The direct revenues received from gaming represent one of the most important sources of revenue of State, county, and local governments in Nevada. For the fiscal year ending June 30, 1950, a study by the Nevada Tax Commission discloses the following:

1. Of State revenues available for legislative appropriation, 28.03 percent were from direct gaming taxes.
2. At the county level, gaming taxes now represent the second largest source of county revenue.
3. At the city and municipal government level, gambling revenues loom large, making up 23.93 percent of total revenue, the largest factor other than the general property tax which accounts for 43 percent of the total. Much of this property tax is also borne by gambling properties.

It should be kept in mind that the above percentages represent direct gaming taxes on the gaming itself. Our gaming laws are strictly enforced and observed in Nevada. Records are required, and the history of gaming in Nevada has been one of cooperation and fairness rather than one of corruption. No district attorney in Nevada has had an opportunity to publicize himself by uncovering illicit relationships between gamblers and State or local officials.

If, as may really be the case, the proposed tax is intended to suppress all gambling, whether legal or illegal, throughout the United States, it goes far beyond the recommendations of the Kefauver committee which is the most quoted source in the country on this subject. Its recommendations (see Recommendations VI, VII, IX, of the Third Interim Report) are directed at the illegal operator, requiring him to furnish annual net worth statements, to keep detailed records, and to deny him deductions for tax purposes. That committee apparently asumes that legal gambling, locally regulated and operating in the open, is to be treated as any other legitimate enterprise. Nevada has long operated on this same principle.

I do not know just how many countries or localities in the United States levy a tax on gaming devices. It is my belief that there are very few, outside of Nevada, and that this tax will work a greater hardship on our localities than on any other.

With this in mind, I intend to offer an amendment to the proposal as it now appears in the tax bill. If the licensed taxpayers are permitted to deduct the amount of similar license tax paid to State and local governments, from the $250 license tax per machine to be paid to the Federal Government, the total burden would be equalized over the United States, as all slot machines would then carry an equal tax burden of $250.

Insofar as the State of Nevada is concerned, this deductibility would result in increased revenue to the Federal Government since licensees would not be forced out of business through double taxation on a licensing basis. It goes without saying that the Federal Government would also benefit by the continued payment of Federal income tax and income derived from this industry. Furthermore this procedure should also result in more adequate law enforcement in other jurisdictions which license coin-operated gaming devices.

With this in mind I submit, for the record, a copy of the amendment as I propose it. I would appreciate your committee giving it the utmost consideration, keeping in mind the effect on Nevada of any penalizing tax of the nature contemplated here.

My kindest personal regards and all good wishes to you.

Sincerely,

PAT MCCARRAN.

AMENDMENT TO H. R. 4473

On page 122, strike out all in lines 15 to 17, inclusive, and insert in lieu thereof the following:

"(a) Section 3267 (a) (tax on coin-operated gaming devices) is hereby amended by striking out '$150' wherever appearing therein and inserting in lieu thereof '$250.'

"(b) Such section is hereby further amended by redesignating subsection (d) thereof as subsection (e) thereof, and by inserting, immediately after subsection (c) thereof, the following new subsection:

"'(d) CREDIT AGAINST TAX FOR CERTAIN STATE AND LOCAL LICENSE FEES.—In the case of every person liable for the payment of any tax under this section for any year upon any device or devices defined in clause (2) of subsection (b), there shall be allowed a credit against such tax in an amount equal to the amount of any license tax or taxes paid by such person for such year to any State or any political subdivision thereof for the use or operation of such device or devices, except that the amount of such credit shall not exceed the amount of such State or local taxes computed at the rate or rates prescribed by law or regulation in effect on June 30, 1951.'"

Senator BYRD. Mr. McMains.

STATEMENT OF THOMAS F. McMAINS, VICE PRESIDENT AND ASSISTANT TO THE PRESIDENT, WESTERN UNION TELEGRAPH CO.

Mr. McMAINS. Mr. Chairman, I have a statement which I would like to read into the record of the proceedings.

My name is Thomas F. McMains. I am vice president and assistant to the president of the Western Union Telegraph Co.

I am glad to have this opportunity to supplement the testimony presented by my company before your committee on July 6, 1950, which described the critical position of the Nation's domestic telegraph industry, primarily due to the postwar application of a 25-percent excise tax on telegrams.

Recent developments which have seriously affected the operations of this vital industry, make relief from the 25-percent telegram tax more urgently necessary than ever before, in the national interest. While, in accordance with the committee's directive, this presentation will be brief, we respectfully request that, in addition, renewed consideration be given in your current deliberations to the facts which have been submitted to your committee at earlier public hearings.

We are, of course, fully aware of the exhaustive study your committee is giving to the development of a new tax program to meet the requirements of the country's defense and mobilization program.

It is generally assumed that the requirements of national defense are of such a character that the revenue needs of the Federal Government will remain at high levels for a long time to come.

Therefore, we urge that the committee in dealing with the unique excise-tax problem confronting Western Union give primary consideration to the long-term consequences of the tax rates made applicable to telegrams, in the light of the vital importance such a determination will hold for the future of the national telegraph system.

The immediate cause of this urgent appeal to your committee is the recent granting of wage increases aggregating $16,500,000 annually to the company's employees, to meet higher living costs, and to avert a Nation-wide strike which would have seriously impeded the national defense and disrupted the public's record communications in a time of national emergency.

The company had no alternative in this situation but to apply to the Federal Communications Commission for telegraph rate increases. Compelling evidence of the urgency of the rate application is the fact that this added wage burden would again thrust the domestic operations of Western Union into a deficit position.

I might underline the gravity of the immediate situation by adding that, as a result of wage increases, our operations for the month of July resulted in a substantial deficit. Since only part of the wage increases became effective July 1, with the remainder scheduled to go into effect on September 1, it is obvious that the impact on the company's wage bill in future months will be greater even than in July.

It should be emphasized that the rate increases applied for by the company, together with comparable increases for intrastate traffic which must be authorized by 45 State regulatory commissions will, if granted in their entirety, fall short by about $4,000,000 annually of meeting the added cost of the wage increases already agreed to by the company. This additional burden will thus fall with heavy impact upon the telegraph company, which has all too recently emerged from an extended period of deficit operations.

Since competitive rates for other rapid communications services are factors affecting the extent to which the telegraph rate increases can be sought, the existing excise tax discrimination against the telegram in favor of the telephone has an important bearing on this situation.

Telegrams, Western Union's major source of revenue, now bear a 25-percent excise tax, in contrast with a 15-percent rate applied to the telephone companies' major source of revenue—local telephone service. The effect of this existing competitive discrimination would be even more sharply accentuated by the continued imposition of a 25-percent tax on telegrams, at the increased rates necessary to meet Western Union's increased wage costs.

While the telephone companies have met their rising costs by increasing their local telephone rates, the impact on telephone users has been substantially less than in the case of telegraph users, because of the lower telephone excise tax rate. In the long-distance field, telephone rates have been reduced, the last reduction being effective in 1946.

In this connection it should be pointed out that at House committee hearings in 1947, and in 1950, a representative of the telephone system, while advocating the repeal of all communications taxes, expressed the preference, if complete elimination were not possible, for primary relief in the local field.

In discusing with the House committee in 1947 the question of selective treatment for the telegraph business in the event an over-all elimination of excise taxes was not possible, the representative of the telephone company frankly recognized the serious problem confronting Western Union as warranting special consideration.

It should be noted, incidentally, that the approval of the telegraph rate increases applied for by the company would automatically increase the tax yield to the Treasury, and impose, in addition to 10-percent higher telegraph rates, a still higher tax burden on telegraph users already required to pay a superluxury rate.

You will recall that H. R. 8920 was passed by the House of Representatives of the Eighty-first Congress and was pending before the Senate when the international crisis required abandonment of the adjustments which were included therein. Even though the House did not extend to Western Union the full relief requested, it gave consideration to the unique features existing in Western Union's case and reduced the telegram tax to 10 percent.

With regard to H. R. 4473 currently under consideration by your committee, providing for a reduction in the telegraph tax from 25 to 20 percent. I would call to your attention the following quotation from the report of the Committee on Ways and Means which accompanied this measure:

* * * Since World War II telegraph service in the United States generally has been carried on at a deficit. So far this year the service has been operated at a profit but wage negotiations now under consideration may again place telegraph service in a deficit position. By reducing this tax on telegraph service your committee anticipates that it will be possible to decrease the amount paid for telegraph messages, and that as a result the volume of business done will be increased and the profit position of the industry improved. Telegraph service not only is essential to the civilian economy but also is essential to national security.

At the time the report of the House Committee on Ways and Means was prepared, Western Union had offered to grant its employees wage increases aggregating $12,500,000 annually, in accordance with the national wage formula. It proved necessary, however, in order to avert a Nation-wide strike, to increase this offer by $4,000,000 annually, thus providing far greater reason for the concern expressed in the report about the impact of these wage negotiations on the telegraph industry, and it is submitted, making crucially necessary a greater degree of relief than is provided in the House measure.

Western Union, since World War II, has mechanized and increased its facilities to the extent that it can accommodate the requirements of mobilization and at the same time meet civilian and business demands at higher levels. The carrying out of a Nation-wide mechanization and improvement program, which has doubled the company's World War II plant capacity, was based on the firm conviction that the 25-percent telegram tax, imposed during the war at super-luxury levels to discourage the use of the telegraph and keep the wires open for urgent war traffic, would be repealed at the end of the war. Instead, the continuance of this volume-destroying tax, and the absence of relief from the competitive tax inequity it created, have hindered Western Union's efforts to attract increased telegraph business, and we have now been confronted with the necessity of increasing telegraph rates, as stated, to produce part of the added revenues required to provide cost-of-living wage increases to telegraph employees.

We respectfully urge that your consideration of Western Union's present critical situation take into account recognition of the foregoing factors.

Now, as to Western Union's current position: For the calendar year 1951, even if the full amount of the rate increases requested were made effective on September 1, the company could reasonably anticipate a net return of less than 4½ per cent on its plant investment. Under the present excess-profits tax bill the company is entitled to earn a net return of 7 per cent before the application of any Federal excess-profit tax provisions. We point this out to indicate that the estimated results for the year, even under the most favorable conditions possible, would fall far short of any semblance of a fair return.

The forecast of a net return of less than 4½ percent for the year 1951 is the most optimistic figure that could be presented since, with respect to revised intrastate rates which represent an important part of the telegraph rate increases requested, it would be impossible to make these effective as early as September 1. Even without rate hearings, some States require 60 to 90 days after filing before the rates can become effective and, where hearings are necessary the delay would be even greater.

With regard to subsequent years, since a major portion of the wage increases granted by the company became effective on July 1, with the remainder scheduled to become effective September 1, it is obvious that the full impact of these wage increases will not be felt in the calendar year 1951. In 1952 and subsequently the full impact of the wage increases will of course be felt, with additional and even more serious effect upon the company's earnings.

It is clear therefore that Western Union could not anticipate, at best, any more favorable results for 1952 and subsequently than the return of less than 4½ percent forecast for this year.

Indeed, to approach even this result would require—in addition to approval of the full amount of the rate increases requested by the company—continuance of the present emergency-induced higher level of telegraph business; retention of the present corporate tax level;

and the maintenance of operating costs at their present levels, a combination of circumstances which is highly unlikely.

It is obvious that so inadequate a rate of return—even if it were possible of achievement in the light of the uncertainties I have mentioned—would seriously jeopardize the strength and solvency of any public service company and make difficult, if not impossible, the continuing improvements in the country's vital telegraph system which are of imperative importance to the national interest.

For the reasons already cited, the gap between the amount of rate relief requested and the cost of wage increases granted by the company can be narrowed at this time only by attracting increased telegraph business through reducing the over-all cost of telegraph service to the public. To accomplish this a reduction in the excise tax on telegrams to a maximum of 10 percent or less would be required.

We have a deep sense of appreciation of the problems with which your committee is confronted in determining the manner in which the funds needed to assure our national safety and well-being can be obtained with minimum disturbance to the economy.

Insofar as the telegraph excise tax is concerned, it is submitted that the reduction in Federal revenues which would result from lowering this tax to 10 percent—a total reduction of $21,500,000 based on the full year 1950—could have no material bearing whatever on the Government's budget problem, particularly since there would be important offsets to the Treasury, as for example, through increased corporate income taxes from telegraph users. Approximately 75 percent of the domestic telegraph revenue comes from business concerns, whose telegraph excise-tax payments are deductible in the computation of corporate income taxes.

In any event, based on Treasury Department estimates for the fiscal year 1951, the entire amount of the proposed reduction represents less than one-half of 1 percent of all excise-tax collections.

The reduction would have, however, an all-important bearing on the problem of this industry, competing as it does—unlike the telephone—with the tax-free and Government-subsidized air mail, and with the selective telegraph operations of the telephone companies, which companies have for years enjoyed a substantial competitive excise-tax advantage over the telegraph company.

I should like to repeat a statement by Senator Ernest W. McFarland which was quoted in our appearance before your committee on July 6, 1950, on this same important subject:

> While few realize it, the future of our kind of life is involved in the kind of communications policies we have. All over the world, the avenues of communications are in the hands of the state. Only in the United States do we have a free, privately owned system. We want to keep it that way.

We stated at the time of this previous hearing, and it is even more timely today in the light of recent developments:

> The decision which Congress will make concerning the excise tax on domestic telegrams is not simply a policy decision regarding the small amount of tax revenue obtained from this source. The decision directly affects the fundamental question of national communications policy referred to by Senator McFarland.

We therefore believe we are acting in the national interest, as well as in the interests of more than 43,000 telegraph employees, 4,800 pensioners, and 20,000 stockholders in requesting your committee at this time to extend the equitable tax treatment which was provided for in H. R. 8920 in the Eighty-first Congress, thus providing the only presently practicable means for obtaining the additional revenue needed to offset the cost of the wage increases granted to the company's employees.

Senator MILLIKIN. What is the dividend history of Western Union in recent years?

Mr. McMAINS. We were in deficit operations for several years, up until the latter part of last year. A dividend was paid of $2 during the latter part of 1950, and so far this year we have paid 50 cents each quarter.

Senator MILLIKIN. Prior to that time for how many years had you been in a deficit position?

Mr. McMAINS. The history is spotty, going back to 1929. You had two or three of the war years in which we did pay a dividend.

Prior to the war we paid, during the latter part of the thirties, a dividend of about $2 a year, and then there were several years in which we had deficit operations and paid no dividends; and prior to 1929, for quite a number of years, we paid an $8 dividend.

Senator MILLIKIN. In previous testimony, officials of your company stated that you had a large modernization program underway.

How far along are you on that?

Mr. McMAINS. In the modernization program that has been referred to at various hearings, we have that program practically completed at the present time but, of course——

Senator MILLIKIN. How did you get the money to do that?

Mr. McMAINS. Partly through depreciation reserves, and partly through the sale of real estate as, for example, when we sold the headquarters building of Western Union and leased it back, and quite a number of our other buildings which were sold and leased back by us on lease-back arrangements, in order to raise money for the modernization program, and also for debt reduction.

Senator BYRD. Thank you very much.

Mr. McMAINS. In the light of the critical situation now confronting Western Union, I respectfully but urgently recommend extension by your committee of excise-tax relief to a degree that will impose a maximum telegram tax of no more than 10 percent.

Thank you.

Senator MILLIKIN. I should have caught it before this but exactly what are you asking for?

Mr. McMAINS. I guess I did not——

Senator MILLIKIN. The House reduced you to 20 percent.

Senator KERR. To 20, and he wants to reduce it to 10.

Senator MILLIKIN. You want us to reduce it to 10?

Mr. McMAINS. That is correct.

Senator BYRD. Mr. Louis Ruthenburg.

STATEMENT OF LOUIS RUTHENBURG, CHAIRMAN, NATIONAL COMMITTEE FOR FAIR EMERGENCY EXCISE TAXATION, ACCOMPANIED BY LEON HENDERSON, CONSULTING ECONOMIST

Mr. RUTHENBURG. Mr. Chairman and gentlemen of the committee, I am Louis Ruthenburg, of Evansville, Ind., chairman of the board of Servel, Inc., manufacturer of gas refrigerators and water heaters.

I appear before you as chairman of the National Committee for Fair Emergency Excise Taxation, a committee of more than 50 principal executives of companies directly affected by excise taxation. Attached to my statement is a letterhead of the committee which shows its membership.

The members of this committee are traditionally opposed to all Federal excises or sales taxes, whether they are imposed selectively or at the manufacturers' level, or at the retail level; in fact, last year I appeared before you in behalf of the National Committee for Repeal of Wartime Excise Taxes to seek repeal of the taxes imposed or increased during World War II. After Korea, in recognition of the realities of mobilization, our committee was reconstituted into its present form. When the present emergency is over we shall again seek the repeal of all Federal excise taxes.

Senator KERR. You do not hold the view of those then who have come before us recommending a flat tax at the manufacturers' level on all manufactured products except food?

Mr. RUTHENBURG. No, sir. As will appear in my testimony, we believe that the tax should be applied uniformly at the retail level and not at the manufacturers' level.

We are glad that the House in its wisdom rejected the Treasury proposal to pile extremely high sales taxes on a small group of commodities. They would have been harmful to the country and most unfair. We think that the House bill is good in that it did not accept those extremely high rates; we think it is bad in that it continues the discrimination that is basic to any selective approach.

If Congress concludes that substantial revenue from the field of excises is required for this emergency our committee unanimously suggests the enactment of a defense emergency tax, at the retail level, at a uniform rate, and across the board, exempting only food, medicine, rent, and certain other traditionally exempted services. This is a retail sales tax, but we suggest the name "defense emergency tax" so as to label it clearly, as one imposed for the emergency only.

If exercises are to be used in a major way during the present emergency, we believe that the present selective hodgepodge of excises—some at the manufacturers' level, and others at the retail level; at various rates; and under different conditions—should be abandoned and that they should be replaced with a system which is equitable, revenue producing, nondiscriminatory, and specially earmarked for the emergency only.

At the first moment that Congress concludes that revenue from excises is no longer required for the emergency, our committee urges that this defense-emergency tax be eliminated entirely from the Federal tax system.

Senator KERR. Suppose it got to the point where the Congress would decide that they would not put on a defense-emergency sale at the retail level, then would you favor such a tax at the manufacturers' level and on an across-the-board basis in preference to the one that we now have?

Mr. RUTHENBURG. Senator, I believe that would be a lesser evil than the present discriminatory taxes.

We believe, however, that it has weaknesses that can be clearly pointed out.

Senator KERR. Do you point some of those out in here?
Mr. RUTHENBURG. Yes, sir.
Senator KERR. Fine.
Mr. RUTHENBURG. Such a tax would produce substantial revenue, and be flexible for adjustment with changing requirements; it would retard inflation and avoid discrimination; it is administratively feasible; and it would be for the emergency only.
Here are some of these high lights as we see this proposed defense emergency tax.
First, it would produce substantial revenue at low rates.
Because of its broad base this proposed defense-emergency tax would involve a low rate. It would raise greater revenue than is contemplated by the excise proposals of the Treasury.
Senator MILLIKIN. What revenue do you estimate would be obtained
Mr. RUTHENBURG. I beg pardon?
Senator MILLIKIN. What rate do you propose, and what do you believe would be the amount of revenues?
Mr. RUTHENBURG. When we presented our case before the Ways and Means Committee, Senator, we made some very elaborate computations. They were made by our consulting economist, Mr. Henderson, who is here and can give you a considerable amount of detail.
Senator MILLIKIN. Do not give us the detail, Mr. Henderson, but roughly, what is the return and what is the rate?
Mr. HENDERSON. There was no recommended rate. We say that there is a base of about $130 billion in fiscal 1952 for consideration, and that if applied to the entire base, naturally a 5-percent rate would yield about $6,500,000,000, which is at least $2 billion more than the present excises, other than gasoline, alcohol, and tobacco.
Senator MILLIKIN. Making allowance for the exemptions?
Mr. HENDERSON. Allowance for exemptions of food, shelter, and medicine.
Senator MILLIKIN. Roughly a billion per point, making allowance for exemptions.
Mr. HENDERSON. It is more than that.
Senator MILLIKIN. How much more?
Mr. HENDERSON. Again I made a calculation at the request of Representative Curtis which appears in the hearing, in which he gave me the terms of reference. It is not a recommendation of our committee. He wanted to know, assuming all the traditional exemptions that are being considered——
Senator MILLIKIN. Yes.
Mr. HENDERSON. What it would be at 5 percent, and we say it would be something like 5 or 6 billion, other than gasoline, tobacco, and alcohol, which is at least a billion and a half more than the existing system produces.
Senator BYRD. What do you mean by shelter?
Senator KERR. Rents.
Mr. HENDERSON. All rents.
Senator BYRD. You do not mean the construction of houses would be exempt?
Mr. HENDERSON. There are a number of things that go into houses which are taxed now mainly at the manufacturing level. If you

went across the board you would catch those materials just the same as you would catch any other material.

Senator BYRD. In other words, if you constructed a house those finished products that go into a house would be taxed?

Mr. HENDERSON. That is right, and a number of them are now, just like parts going into an automobile.

Senator BYRD. You recommend then that the other excise taxes above 5 percent be reduced to this 5-percent level?

Mr. HENDERSON. That is right.

Senator BYRD. Except on tobacco——

Mr. HENDERSON. Alcohol and gasoline.

Senator BYRD. Alcohol and gasoline.

Senator KERR. I understood you to say that the base was roughly 120 billion.

Mr. HENDERSON In fiscal year 1952, on the liberal exemption basis that I worked out for Congressman Curtis in great detail, taking every category of expenditures, there would be about $111 billion and 5 percent on that——

Senator KERR. Yes.

Mr. HENDERSON. You get from that, Senator Millikin, a rough computation of about a billion per point.

Seator BYRD. How much would the reductions reduce, for instance, the automobile tax which, in this bill, is 10 percent? You would lose 5 percent on that?

Mr. HENDERSON. It would be 5 percent at retail.

Senator BYRD. Then you would have to allow, would you not, for those losses; by reducing it to 5 percent, how much would that be?

Mr. HENDERSON. Well, your present 111-billion base is approximately 8½ times the base of purchases which is taxed now.

You may remember, Senator, that Secretary Snyder said that only about 22 to 25 percent of the personal consumption expenditures are taxed now, so you get a large base and a lower rate.

Senator BYRD. I understand that. I understood you to say it was a billion dollars for every 1 percent.

Mr. HENDERSON. Yes, sir.

Senator BYRD. Then you have got to take a loss off there because you are reducing other taxes.

Mr. HENDERSON. That is right.

Senator BYRD. How much would the loss be?

Mr. HENDERSON. The taxes now, other than the three which we have mentioned, produced in 1950 about 3.5 billion.

Senator BYRD. But you have not answered my question.

Mr. HENDERSON. You would lose the 3.5 billion, and your total would be something in excess of 5, so you would have at least a billion and a half additional revenue, with a reduction of these extraordinarily high rates.

Senator MILLIKIN. May I ask one more question of Mr. Henderson?

Mr. Henderson, have you ever made a study of how much a tax at the manufacturers' level expands as it reaches its way to the ultimate consumer?

Mr. HENDERSON. Yes.

Senator MILLIKIN. Do you have a general observation on that?

Mr. HENDERSON. Yes. It is about an 80 percent increase.

Senator BYRD. Go ahead, Mr. Ruthenburg.

Mr. RUTHENBURG. Our committee's consulting economist, Leon Henderson, has made original and extensive studies as to the amount of revenue our proposal will produce at varying rates. He testified before the Ways and Means Committee——

Senator BYRD. One more question: Have you got a list of those things that would be taxed under your plan?

Mr. RUTHENBURG. I beg your pardon?

Senator BYRD. Do you have a list of the things taxed under your plan?

Mr. RUTHENBURG. Those are filed in the record before the Ways and Means Committee, Senator.

Senator BYRD. A complete list?

Mr. RUTHENBURG. Yes, sir.

He testified before the Ways and Means Committee and in response to questions from members of the committee he prepared and submitted additional data.

At the conclusion of my testimony he will be available to your committee for any questions any of you may care to ask him. His studies show that this suggested defense emergency tax will produce substantial revenue from excises, and will do it equitably.

2. It would be flexible. We are just starting the second year of this emergency. How long it will last, and what expenditures it will require, no one can foretell. The "selective" sales tax proposed by the Treasury causes great difficulty whenever more money is required.

Witness the problem of the House committee and the one which is now presented to you: Which rates, if any, should be increased?

What commodities or services, if any, should be added? And so with each increase which might be necessitated if the emergency should grow more serious, or if war should come. When the time comes for reduction of taxes as the emergency ceases, the unscrambling of the hodge-podge is just as difficult.

But if the rate is uniform, the task of adjustment is easy. The rate can be fixed at one figure this year and, if need be, increased next year, and then, if circumstances permit, decreased in a succeeding year, and finally repealed entirely.

Whenever a change is desired, up or down, all that is required is a simple change in the rate of the tax.

Senator MILLIKIN. May I ask another question, please? Have you made a study of what the total burden of taxation, Federal, State, and local would be on the lower income people if you imposed this Federal sales tax?

Mr. HENDERSON. I have not made it.

Senator MILLIKIN. I am talking about open and concealed taxes. Have you made a study of that?

Mr. HENDERSON. I have not made an independent study, but I am familiar with the whole question going back to the days when I was with the TNEC when I instituted the first study. And I have reviewed all the existing studies, and a number of the criticisms on these, so I have, what I would call, a working knowledge of the burden of taxation.

I might say that the information right now on burden is, well, to say the least, in a theoretical stage, and if you adjust your theories of how taxes are passed on, you come to a completely different idea of the incidence or the burden of taxation than is commonly accepted.

Senator MILLIKIN. That is what I am driving at, what I have been driving at through all of these hearings, and I am somewhat amazed at the fuzzy nature of the information that we have available on the pass-down of all types of taxes, and on the extent of indirect taxation. Obviously, when you are talking about imposing a general sales tax, we should have some knowledge of the total burden that results, and so far I do not believe we have a very good foundation of fact on which to act.

Mr. HENDERSON. You have got a fairly good idea—so far as the low-income groups are concerned, you know fairly well what percent of their income they spend for food, for shelter, and for medicine.

Senator MILLIKIN. Yes.

Mr. HENDERSON. If you had a 5 percent tax at retail, it would mean in the incomes below a thousand there could not be more than $300 or $350 taxed by these other than the alcohol and tobacco, which are pretty regressive in those low categories.

It would reduce it, I would say—the burden, as it is published in the Joint Committee on the Economic Report. A 5 percent across-the-board retail tax would reduce it—1 percentage point of income, at least, because there would be no tax on food, or shelter, or on medicine, and that takes up a very high proportion of the very low-income group spending.

Senator MILLIKIN. The lesser the margins that are available to the people in those lower brackets, of course, the harder the impact of a tax that is put upon those things which they do buy.

Mr. HENDERSON. That is correct.

Senator MILLIKIN. It is a burden that must be given some attention.

Mr. HENDERSON. They have an enormous burden now, as Mr. Barit pointed out, I think, before your committee; 29 percent of the cost of an automobile is taxed. There are $102 of that which is the Federal excise, and there are $99 of other excises in it so that anybody in the low-income bracket who buys an automobile has got at least $200 that he pays as excise tax alone.

Senator KERR. That would not be changed.

Mr. HENDERSON. It would be changed to the extent of the 5 percent on a $2,000 automobile which would then mean $100, you see, in total.

Senator KERR. Rather than 8 percent on a $1,500 product, $1,400, I think——

Mr. HENDERSON. It is 7 now, and recommended for 10.

Senator KERR. Is it 7 now?

Mr. HENDERSON. It is 7 now and recommended for 10.

Senator KERR. Well, the president of the Hudson Motor Co. indicated that the average wholesale price of that $2,000 car was about $1,400.

Mr. HENDERSON. That is correct.

Senator KERR. Seven percent on that is $98, and 5 percent on $2,000 is $100.

Mr. HENDERSON. Yes; but you would get lower rates on the heater, the radio, all the parts and the things that go into the other $99.

Now, that $99 that goes in there is also subject to the 80 percent increase, by pyramiding, you see, and you would get rid of the pyramiding, also.

Senator KERR. You think that there would be a material saving——

Mr. HENDERSON. On the automobile.

Senator KERR. In the amount of tax paid on the purchase of a new automobile?

Mr. HENDERSON. That is correct.

I might point out that of all the manufactured items that are taxed at the manufacturers' level, the automobile industry, because of its nature in the way it handles franchises, and selling, is the only one that has the pass-through.

Senator KERR. The what?

Mr. HENDERSON. Pass-through.

Senator KERR. Yes, sir.

Mr. HENDERSON. That is, that the tax that you pay is on the factory price other than the concealed taxes I am talking about, on all the other manufactured items; they are naturally a part of the cost and are so considered, and so you picked out the one peculiar one, and even at that I would say there would be a saving.

Senator MILLIKIN. We had a witness here, who, as I recall it, said a $2,500 income family pays $700 and some aggregate taxes of all kinds, of which he pegged $300 and some as labeled taxes, and $400 and some as concealed taxes.

Well, the burden is the same, whether it is labeled or concealed, and when you take seven-hundred-and-some-odd dollars out of a $2,500 income family for taxes, considering the margins on which it lives, the small, narrowness of the margins, if there are any margins on which it has to work, you are imposing quite a burden, and I had been hoping that we would sometime during this hearing get some rather reliable facts that wuold cover that whole area.

Mr. HENDERSON. If you would want to ask me at the conclusion of Mr. Ruthenburg's testimony further on this burden, I would give you the benefit of the work I have done for this committee for pretty nearly 2 years.

Senator BYRD. Let me ask you this question: Do you exclude the sales to the Government in the computation of revenue?

Mr. HENDERSON. The sales to the Government are handled in two ways: Some of them are billed without the tax and some the Government pays the tax now.

Senator BYRD. What do you do? You figure so much on a gross-income basis of the sales—on the base. You must then include in the revenue the sales to the Government which, of course, will not be collected.

Mr. HENDERSON. That is correct, but they are now on——

Senator BYRD. Well, your estimate is probably too high.

Mr. HENDERSON. Well, the estimate of net, Senator, receipts on Federal income taxes, is grossly inflated right now because of the fact that the Federal Government does pay the excise tax practically on everything.

Senator BYRD. But that is just taking money out of one pocket and putting it into another.

Senator KERR. $3½ billion now received in excise taxes are, in reality, probably one-third from moneys paid by the Government now, is it not?

Mr. HENDERSON. It is not that high.

I might say that our committee tried to get that information for quite a long time from the Federal Government, from the Treasury, and from any other source, and we did not find it available, and I think your committee staff has had about the same difficulty.

Senator BYRD. If we spend $85 billion in the fiscal year after this, we are told we will spend, and 60 or more of that would be for military, practically all of that would be included in these figures, would it not, in the base figures that you have?

Mr. HENDERSON. It would not—that $60 billion you have got both your housekeeping and your material. You are buying a lot of——

Senator BYRD. Of course, then the other departments of Government buy, make purchases that would be included, so that would balance it off.

Mr. HENDERSON. My rough guess, Senator, is——

Senator BYRD. It would be pretty nearly 50 or 60 billion dollars.

Mr. HENDERSON. When it comes to 5 percent, as it is now 5 percent on the broader base would be no higher than what the Government is paying now, you see; so that if you undertook to get a realistic picture of the net of the excise taxes, and applied it against our proposal, I think that you would find that we came out about the same.

Senator MILLIKIN. Roughly speaking, even on the wage side of the Federal Government's operations, we have to increase the wages as the living costs of the employees mount—so one way or another, you get caught with that tax. You either get it by the direct purchase of materials, or you get caught because it reflects itself in increasing costs of living of the workers.

Senator BYRD. The sales to the States is another question. Is it not true that the Secretary of the Treasury has the right to exempt the collection of the Government tax on a good many of the excise taxes now?

Mr. HENDERSON. That is correct.

Senator BYRD. What about the sales to the States? Does this contemplate, this estimate of revenue, include the sales to the States?

Mr. HENDERSON. Yes.

Senator BYRD. Well, you cannot tax a State, can you, on a direct excise?

Mr. HENDERSON. This contemplates only a part of this because this figure, Senator, is built up mainly of sales at retail, and it is built from the personal-consumption expenditures. But to the extent that the Government or a State bought things which are now personal consumption items——

Senator KERR. At retail?

Mr. HENDERSON. At retail, they would pay——

Senator BYRD. But you have no breakdown here to show——

Mr. HENDERSON. They would not pay at wholesale.

Senator BYRD. To what extent your figures include sales to States and sales to the Federal Government, have you?

Mr. HENDERSON. I would be glad to furnish that to you, but it would not represent the total amount of Federal purchases of goods which I think Senator Kerr is suggesting, because our table is built on the personal-consumption expenditures. The 5-percent tax would only affect those that the Government bought, commodities ordinarily which are personal expenditures, and which are sold at retail; bought at wholesale the Government would not pay the tax.

Senator BYRD. I suggest though that is an area that should be examined because we will be spending soon about a hundred billion dollars a year, which is about a third of the total national income, and that will be spent by the Federal Government and the State and local governments.

We want to see to what extent your estimate here will be changed if you do not include that tax to be collected from the Federal, State, and local governments.

Senator KERR. Does not the State and local government now pay excise taxes on those items which carry it?

Mr. HENDERSON. Yes.

Senator BYRD. Well, the Secretary of the Treasury has the right to exempt certain items.

Mr. HENDERSON. He can, but it is true that for the most part they are paid today.

Senator BYRD. You take a gasoline tax; I do not imagine a State would pay a Federal gasoline tax for it. They just get a refund for it, just like a farmer gets a refund if the tax is not used on his road.

Mr. HENDERSON. That is right.

Senator BYRD. Although those things should be taken into consideration, and I believe it needs a little further study along that line——

Mr. HENDERSON. Yes; but I want to make sure I am understood. Our base that I suggest is what is predominantly and overwhelmingly personal expenditures, and it would be only where the Government bought those items, and at retail, you see, that it would pay.

Senator BYRD. But outside of the personal services, in the armed services, they are direct purchases, of planes, automobiles, tanks, and everything.

Senator KERR. Mr. Chairman, Mr. Henderson's estimate is based upon an estimate of the amount of income of the Americans that is devoted to the purchase of those items that he figures would be covered by this tax.

Mr. HENDERSON. That is right; and that——

Senator KERR. At retail. In other words, there is a certain percentage of every American's income which is estimated to be used to buy food and shelter and medicine; that is not included.

Senator BYRD. This is not a retail sales tax that you are proposing.

Mr. RUTHENBURG. Yes; it is.

Senator KERR. It is.

Senator BYRD. How would it be collected? through the stores as other retail taxes?

Mr. RUTHENBURG. Yes, sir.

Senator KERR. Then he estimates that a certain percentage of that income is used to buy other commodities at retail, and that most of the $111 billion base that he has told us is the result of his calculations with reference to the percentage of Americans' income which they use in buying at retail those items.

Mr. RUTHENBURG. That is correct.

Senator BYRD. Then, of course, the tax on an automobile would be much more at retail than it would be at the manufacturers' level?

Mr. HENDERSON. No.

Now, the Federal tax now is $102, you see, and it also includes, as I say, $99 as costs which they have paid.

Senator BYRD. But the agent sells the car at a profit of $200 or $300; is that not true?

Mr. HENDERSON. That is true.

Senator BYRD. If you put that tax on the retail level you will be taxing that $200 or $300.

Mr. HENDERSON. But you will be taxing it at a lower rate. You will be taxing a $2,000 automobile and the wholesale price is $1,400 to $1,500, and the 7-percent tax is applied to that, and the House bill makes it 10.

Senator BYRD. I do not see how you can figure much reduction as between the 7 percent and the 5 percent if you put it on the retail level; I do not see that there would be much saving to the purchaser.

Mr. HENDERSON. It would be in the higher taxes than 7 percent which the company has to pay for electrical products, for radios, for heaters, which they say are $90 now.

Their estimate is that it is $90, which are the concealed taxes that they pay.

Senator BYRD. There is a straight retail tax, sales tax, in other words?

Mr. RUTHENBURG. That is correct, sir.

Senator BYRD. I see. You used the word "excise" tax, and it confused me.

I thought you meant an excise tax, such as we were discussing the other day on certain changes from the excise taxes we now have to an average of 5 percent.

Mr. RUTHENBURG. Senator, on page 3 of my statement I said that this is a retail sales tax.

Senator BYRD. Yes.

Mr. RUTHENBURG. But we suggest the name "defense emergency tax" so as to suggest clearly that it is one imposed for the emergency only.

Senator BYRD. I see. You can proceed, sir.

Mr. RUTHENBURG. Yes. I should like to briefly point out the fact that this proposed tax is not discriminatory.

Calling an excise tax "selective" is just a euphonious way of saying the tax is discriminatory. No matter how patient and thorough the study of the problem, a "selective" sales tax is always unfair and discriminatory. It is not possible to divide up America's products into the more essential and the less essential; and then to subdivide the "more essential" into those which are just "more essential" and those which are "most," and to subdivide those still further, which are "less essential" into those which are "least" and those which are just "less." But just that kind of Quixotic approach is required when we undertake to impose sales taxes "selectively"—under the Treasury approach—at various rates of 7 percent, 10 percent, 15 percent, 20 percent, and 25 percent.

Furthermore, in these United States yesterday's luxuries are today's necessities. Moreover, what is a luxury to one person is a necessity to another.

I would like to file for the record a table which points out many of the discriminations between the taxed and the untaxed. Discriminations of this kind come inescapably from any system of "selective" taxes.

To adopt the Treasury proposal of high rates on a few selected products would discriminate against low-income families—in fact it would "pocket book" ration many of them right out of the market for these particular products.

The Treasury proposal would discriminate as between competing business; some would become second-class industries.

On the other hand, if the tax is imposed at a uniform rate on a broad base, there is no unfairness or discrimination.

Next, it would retard inflation.

The defense emergency tax, which we propose, would curb inflation since it would discourage spending in a broad area of consumer expenditures.

If the tax isn't across-the-board, if it is put on just a few things—as the Treasury has recommended—it will simply transfer spending from items that are taxed at high rates to items that are not taxed. That will not stop inflation. That will just change the course of the inflation.

The defense emergency tax would run across the stream of spending. It would be imposed in that whole area where the supply of dollars presses against the less plentiful supply of commodities and services to cause inflation.

The defense emergency tax would divert into the Federal Treasury a part of the money that will otherwise continue to inflate our whole economy.

Senator MILLIKIN. What happens to the money after it gets into the Federal Treasury? Does it not continue to inflate?

Mr. RUTHENBURG. I beg your pardon, sir.

Senator MILLIKIN. I say, after you take it from the market and put it into the Federal Treasury, after it is put into the Federal Treasury, it then goes back to the same people, does it not, and it thus continues to inflate?

Mr. RUTHENBURG. I believe I have heard that endlessly debated, and I do not know that any sound conclusion has been reached.

Senator MILLIKIN. Thank you.

Senator KERR. It would not inflate nearly as much as it would for that amount of money to be left in the hands of the private consumers, and then for the Government to borrow or create additional money to buy those things that they would have paid for with the money that you are talking about, by taking it from the taxpayers, and using it to buy the things they are going to buy anyway.

Mr. RUTHENBURG. I believe that is correct, sir.

Senator KERR. It would reduce inflation to that extent.

Mr. RUTHENBURG. I think it would have the practical effect of reducing inflation pressures.

Senator MILLIKIN. I understood, Senator Kerr, it might multiply inflation. If you take this money away from the taxpayer and put it in the Treasury and then return it to the taxpayer in the form of wages and payments for goods, and so forth, the net result roughly speaking, is nothing. But if, on top of that, you have expanded your credit by inflationary issuance of bonds, for example, you have multiplied your problem rather than decreased it.

Senator KERR. There is no difference between us on that point.

Senator MILLIKIN. No; I may have misunderstood you.

Senator KERR. Here is the point I was trying to make: If the Government has to have an additional $15 billion, and that is merely a designated figure, with which to buy things that it needs, there is less over-all demand and less over-all competition for those items if the Government gets that money from taxpayers who are thereby reduced in what they can spend by that amount rather than by the Government's borrowing that amount of money and leaving the same amount of money in the taxpayers' hands, because then the Government uses its borrowed money to compete against the retained money in the taxpayers' hands to buy the same commodities that it otherwise would have bought with the taxpayers' money had it taken it by taxation and not obtained it by borrowing.

Senator MILLIKIN. I will accept that completely. The only thing that I was driving at is that we always hear that if we impose the type of tax you are talking about that it reduces inflation. It does for the moment. Then it depends on what the Government does with the money.

If the Government takes $10 from me as a wage earner by way of a tax, and then gives it back to me by way of salary, I still have the same amount of money to spend.

Mr. RUTHENBURG. I wonder, Senator, if that would not apply to taxes derived from any source? That is, the Government's revenue might come from various sources——

Senator MILLIKIN. I think you then get into——

Mr. RUTHENBURG. But taken from this source, it would probably have the better effect on the inflation than if it were taken from other sources.

Senator MILLIKIN. I think you then get into the question of degrees.

Mr. RUTHENBURG. Yes, sir; I agree with you.

Senator MILLIKIN. You get into the question of degrees of the velocity of spending, and when you get into that you get into an endless morass, but the end point is that after one or two stages it all comes to the same thing; it comes back to the consumer.

Mr. RUTHENBURG. I think it is generally accepted——

Senator MILLIKIN. Is that not reasonably sound?

Would you not say that was reasonably sound, sir?

Mr. HENDERSON. Yes, sir.

Mr. RUTHENBURG. Yes. I think it is a generally accepted fact that the inflationary effect of collecting taxes is less than the inflationary effect of increasing the debt and the money supply.

Senator MILLIKIN. That is true.

That is, depending on how you borrow the money.

Mr. RUTHENBURG. Yes, sir.

Senator BYRD. It is my understanding that you propose a collection exclusively on the retail level.

Mr. RUTHENBURG. Yes, sir.

Senator BYRD. On the retail level?

Mr. RUTHENBURG. That is right, sir.

Senator BYRD. Suppose things are sold at wholesale, what then?

Mr. RUTHENBURG. No tax until it reaches the retail level.

Senator BYRD. Well, then, could a consumer then purchase a farm tractor at wholesale and not pay any tax, but if it went through a retailer he would have to pay a tax?

Mr. RUTHENBURG. Well, I should say that a consumer purchase must be regarded as a retail purchase.

Senator BYRD. You just said, though, that a wholesaler, if you bought it at wholesale, you just said you would not pay any tax.

There is a good deal of difference between a sale at wholesale——

Mr. RUTHENBURG. We assume the man who buys wholesale would be a distributor and dealer.

Senator KERR. Buying for resale and——

Mr. RUTHENBURG. That ultimate consumer would be buying for retail.

Senator BYRD. In other words, this is a retail sales tax.

Mr. RUTHENBURG. Very definitely.

Senator BYRD. And it is collected from the retailers, and not from the manufacturer?

Mr. RUTHENBURG. That is correct.

Senator BYRD. And it is the same kind of a tax that practically every State is getting now.

Mr. RUTHENBURG. Yes, sir; 20 States, I believe.

We are not unmindful of the fact that the National Association of Manufacturers advocates a manufacturers' tax.

We are convinced that if the tax is imposed at the manufacturers' level, it will be pyramided, and inflation will be increased at every step of the mark-up as the commodity moves through the channels of distribution to the final customer. I know that some people will say that it need not be pyramided, but the plain fact is that a manufacturers' tax is an item of cost and, like the rest of the cost, it is pyramided.

Anyone in the business of manufacturing, or wholesaling, or retailing, knows that this is one of the A B C's of American business procedure.

A manufacturers' tax inflates the inventory figures and inflates the mark-up on each transaction. If anyone doubts it all he has to do is to have a look at our experience with the present manufacturers' taxes, or at the Canadian experience, which shows clearly that their tax is pryamided.

Our committee has studied the Canadian experience; some of our members have subsidiaries in Canada. We know that the Canadian manufacturers' tax is pyramided.

That is explained here in detail but I will not go into detail.

Senator BYRD. Have you made an estimate with respect to the House bill, after you made these changes, and canceled part of the House taxation, and replacing it with this, as to what would be the net increased revenue for the Government?

Mr. RUTHENBURG. We made no definite recommendation, except to supply them with the data upon which their own computations can be made and, as Mr. Henderson has made, and upon their assumptions as to taxable commodities, a 5-percent tax would produce something in excess of 5 billions.

Senator BYRD. Mr. Stam estimates that it will only be $300,000,000 additional revenue.

Mr. RUTHENBURG. Under the present proposals?

Senator BYRD. Yes, sir.

In other words, I believe if you strike out the House bill—strike out those things that your proposal contemplates, and substitute yours, we would only get 300,000,000 more than we would get under the House bill?

Mr. RUTHENBURG. Can you reconcile that statement?

Mr. HENDERSON. I know I cannot reconcile it because the net increase by the House bill calculated, I think, a net of 1.1 billion, is that not it?

Mr. STAM. 1.2 billion, and you had 1.5 billion net, you see, so that difference would be 300,000.000.

Mr. HENDERSON. No, I had a 1.5 billion based not with the House increases in it.

I say that the commodities to which we are applying—to which I applied the Curtis analysis, would produce something in excess of a billion and a half more than is presently being produced.

Senator BYRD. I see.

Mr. STAM. That is a billion and a half compared to the 1.2 billion additional of the House.

Mr. HENDERSON. Yes. I take no account of the House estimates on the 1952 revenue, and the estimates of what would be yielded, you see, would be higher, certainly, with increased business; but, if you want to say that 5 percent produces in the neighborhood of a half billion more than the House bill, I think that I could accept it. If you are only going to raise this amount of revenue from excises, the 5 percent would only raise a half billion dollars more than the House has already provided.

Mr. Stam, we are completely in agreement on that.

Mr. STAM. That is what I thought. You are just comparing one method with the other, that is all.

Mr. HENDERSON. That is right. We compared it with the House bill, and with the Treasury's proposals, you see.

Senator BYRD. What is your estimate of net increased revenue above the House bill?

Mr. HENDERSON. About half a billion, my estimate is.

Senator BYRD. That is only $200 million more?

Mr. HENDERSON. That is right, as far as the House excises are concerned here.

Senator BYRD. It is pretty close to the estimates we get around here, which is $200 million.

Go ahead, sir.

Mr. RUTHENBURG. Let me mention an enigma in the Treasury position.

Like the NAM the Treasury has recommended manufacturers' taxes—but to be applied "selectively" rather than uniformly. When the Secretary testified before the House committee in February he presented tables which assumed no pyramiding of proposed tax increases.

Nevertheless, the Secretary has recently advised the Senate Finance Committee that if a general sales tax is enacted it should be imposed at the retail rather than the manufacturers' level since taxes on the retail product avoid pyramiding due to retail mark-ups, and also tend to disturb the price ceiling program less.

The Committee for Economic Development—with whose position on excises we find ourselves in general agreement—has stated that it is fundamental both to tax policy and to stabilization policy that the new or increased excises should be excluded from the measurement of the cost of living in any controls that link wage increases to the cost of living. This is possible with a uniform retail tax, but not with a manufacturers' tax.

Next, I would like to point out it is administratively feasible: That it requires compliance by many businesses, not few, is scarcely an objection when we consider that the mainstay of the Federal Treasury is the income tax, which is composed of many times as many taxpayers. Innumerable businesses—drugstores, retail stores, and so forth—now comply with the hodge-podge of "selective" sales taxes; it would be easier for all if the tax were at a uniform rate on a broad basis. In 29 States and the District of Columbia businesses and individuals are already accustomed to this type of tax. Its feasibility is underscored by the fact that against the background of years of knowledge, discussion, and experience, the use of the sales tax has increased, not decreased. In a democracy that is the acid test.

The defense emergency tax would no more interfere with the State sales tax than the Federal income tax interferes with the State income taxes (imposed in 31 States and the District of Columbia) nor than the Federal gasoline tax interferes with gasoline taxes imposed by all the States.

Perhaps the final test is: What do the retailers themselves say? Like our own National Committee for Fair Emergency Excise Taxation, they are normally opposed to all Federal excise taxes, but the American Retail Federation, representing the retailers of the country, have gone on record as favoring an across-the-board retail excise tax, limited to the emergency.[1] And they have done this with the full realization that they will be the ones on whom the burden will fall to collect it.

It would be earmarked for the emergency only. The fact that the hodge-podge of "selective" taxes is still on the books 10 years after these taxes were first imposed in preparation for World War II, and the fact that they are the only tax category which was not reduced after the war was over, is proof of the difficulty of getting such taxes out of the tax structure. And this is in the face of the fact that they have been marked for removal by the President, the Senate Finance Committee, the House Ways and Means Committee, and Congress as a whole—all with the active support of the AFL, the CIO, the CED, our own group, and many others.

Because manufacturers' taxes (both those advocated by the Treasury and those advocated by the NAM) are hidden taxes, and because they would tend to become permanent taxes, we oppose them.

We believe that the defense emergency tax which we propose should have an expiration date written into the law which enacts it. This would require reexamination of the tax in order to continue it.

We believe the law should carry a strong statement of congressional disapproval of Federal excise taxes except as an emergency measure for the defense of the country.

The defense emergency tax would be the means of raising substantial revenue for defense, and then, since it would undoubtedly be repealed when the emergency is over, it would be the means of ultimate elimination of excises from the Federal tax system.

That, gentlemen, concludes our testimony, and we express our ap-

[1] Statement of John F. Lebor to this committee: If as a result of adopting these principles there is a need for a substantial amount of revenue which cannot be made up by increased efficiency and real economy, and if consequently the Congress decided to raise this amount by the use of excise taxes, then a broad, biased excise tax, at the retail level without exemptions, is the proper method to select.

preciation for your having heard us. If you have any questions, I would like to answer them.

Senator MILLIKIN. Mr. Chairman, I would like to ask Mr. Henderson if he would like to send us a letter or a memorandum on the pass-down burden of a sales tax in connection with the whole subject of tax burdens on the lower-income brackets?

Mr. HENDERSON. I would be very glad to send that to you. As I say, I have done quite a bit of work on burden, but I have done more work on the excise tax burden because it is very——

Senator MILLIKIN. The job to be done at the expense of your clients. [Laughter.]

Mr. HENDERSON. I might say that my clients have wanted me to examine all the related items to make sure that their proposal was a sound one; that it met all the challenges of the NAM proposal, or the Magill proposal, or any of those.

Mr. RUTHENBURG. May I say, that we have asked Mr. Henderson to go into all sorts of collateral issues, so that we could not get a distorted view of this thing.

Senator MILLIKIN. That kind of information will be useful to the committee.

Senator BYRD. Mr. Henderson, I would like you to add to that the statement of the reductions that would be incurred in existing taxes—under the House bill, what the laws would be in each category, and then the increases to take the place of that.

I may say that this only brings in the sales tax of 5 percent which would give a net revenue of three to five hundred million dollars, and we have got a prospective deficit of six or seven billion. That will not go far toward paying that deficit.

Mr. HENDERSON. Well, Senator, if I recall correctly, Mr. Ruthenburg said that if this committee finds that it needs additional revenue from the consumption tax, then it can look to the retail tax. The 5 percent is not the recommendation of our committee. We have said that you can easily measure from this base, based on about a billion for each percent, for each percentage point.

Senator BYRD. That would be a pretty burdensome tax, 5 percent, is that not right? Is there any State that has as much as 5 percent?

Mr. HENDERSON. No, but the Federal Government is charging 20 percent now on many items at retail.

Senator BYRD. In this case they are supposed to be a luxury class. Whether or not they are, that is a supposition. That will go on the necessities of life, outside of food. Does it apply to clothing?

Mr. HENDERSON. It applies to clothing.

Senator BYRD. Food and medicine are exempted?

Mr. HENDERSON. Food, medicine, and shelter.

You might be interested—I am not submitting this for the record, but the question I asked——

Senator BYRD. You would not advocate a 10-percent retail sales tax, would you?

Mr. HENDERSON. We would advocate whatever revenue the Federal Government seeks to obtain from the excise taxes that it gets by applying whatever uniform rate is necessary. Our advocacy——

Senator BYRD. I mean the proposal of 5 percent; does that mean with a small balance, but it does not improve the fiscal condition of the Government because it only adds about three to five hundred million dollars of increase?

Mr. HENDERSON. Yes, sir. But we did not propose the five. Congressman Curtis asked the question.

Senator BYRD. What figure do you propose?

Mr. HENDERSON. We do not propose any set figure. We say that in your deliberations you have three broad groups from which you are going to draw additional revenue.

Senator BYRD. Where did this 5-percent figure come from in the discussion?

Mr. HENDERSON. Congressman Curtis, in the Ways and Means hearing, asked if I would prepare for him an estimate of a 5-percent retail sales tax with exemption of food, clothing, medicine, and the traditionally accepted items.

Now that estimate is in the hearings before the House at page 1842. Then I submitted to Congressman Curtis in a letter, a copy of which I have here, all the things that we included and all the things that we excluded, which still left a base of $111,640,000,000, as I say, which is, roughly, three times what is taxed now. I would like to give this to you.

Senator MILLIKIN. Mr. Chairman, I would like to have him put in in the record, if he has no objection.

Senator BYRD. Put it in the record.

Senator MILLIKIN. This is not in the House record? I think it would be useful to put this letter into the record.

Senator BYRD. Do you have it in condition to submit?

Mr. HENDERSON. I can furnish it within a short time.

Senator BYRD. Then this other information I would like to have also from Mr. Henderson.

(The information referred to follows:)

AUGUST 13, 1951.

Senator HARRY F. BYRD,
Senate Finance Committee, United States Senate,
Washington 25, D. C.

DEAR SENATOR BYRD: At the conclusion of the testimony before the Senate Finance Committee on excise-tax legislation by Louis Ruthenberg and myself, for the National Committee for Fair Emergency Excise Taxation, you were kind enough to ask me to prepare a statement for the record. This statement, as I understood it, was to indicate the changes which would take place in the excise-tax structure if the National Committee for Fair Emergency Excise Taxation proposal for a retail sales tax were substituted for most of the present selective excises at the manufacturing and retail level, and those on services, such as communications, transportation, admissions, etc.

I am pleased to submit my calculations in three tables below.

Fortunately, the computation I prepared at the request of Representative Curtis for the House Ways and Means Committee provides a basis for comparing the effect of the plan suggested by the National Committee for Fair Emergency Excise Taxation. (See table A, p. 1842, House Ways and Means Committee hearings, 1951.) This computation shows an estimated revenue of $6,082,000,000 from his suggested 5-percent retail tax for a full year operation in fiscal 1952, and this figure is used in all three tables below. The assumptions employed appear with the computation in the House hearings.

The products and services which are included and excluded appear in detail in a table inserted by me at the suggestion of Senator Millikin and yourself at the end of Mr. Louis Ruthenberg's testimony before the Senate Finance Committee on August 8, 1951. (The table is headed "Goods and services included and excluded in tax base of $111,640,000,000 used by Leon Henderson for estimate of revenue from 5-percent retail sales tax.")

SUMMARY

In brief, the three tables below indicate that a 5-percent retail tax would yield the following:

(*a*) Total excise revenue of $2.2 billion more than the present law (table 1).

(*b*) Total excise revenue of $2 billion more than the House bill, assuming identical yields from increases for alcoholic beverages, tobacco products, gasoline and oil, the new wagering excise, and other House bill changes (table 2).

(*c*) Total excise revenue of $700 million more than the House bill, without the additional revenue from other categories provided by the House bill. (Discussion following table 3.)

(*d*) Total excise revenue in excess of the Treasury 1951 proposals for increases in selected commodity excise rates. (Discussion, table 8.)

TABLE 1 AND DISCUSSION

TABLE 1.—*Comparison of estimated excise tax yields for full fiscal year from present excise legislation and from a 5-percent tax at retail on selected goods and services, assuming present rates on alcoholic beverages, tobacco products, gasoline and oil, transportation of property, and electrical energy, and assuming a 25-percent cutback in principal durable goods.*

[In millions]

	Present law	Assumed 5-percent retail tax	Differences
Alcoholic beverages	$2,400	[1] $2,400	0
Tobacco products	1,470	[1] 1,470	0
Gasoline and oil	750	[1] 750	0
Other manufacturers' excises	1,343	0	−1,343
Retailers' excises	513		
Miscellaneous	1,978	6,082	+3,591
Stamp taxes	100	[1] 100	0
Total	8,560	10,808	2,248

[1] Identical with estimates under present law because National Committee for Fair Emergency Excise Taxation makes no proposals for changing the rates in these categories.

The estimate of fiscal 1952 yield from existing excise legislation of $8,560,000,000 is my new estimate. It is slightly higher than the Treasury estimates, but I believe it will closely correspond with the forecast of the staff of the Joint Committee on Internal Revenue.

No increases have been included in the estimated retail-tax yield for transportation of property or for electrical energy, whose rates are below 5 percent now. Nor does it include revenue from excises on sugar, narcotics, and several other miscellaneous taxes which in fiscal 1951 yielded approximately $125 million.

TABLE 2 AND DISCUSSION

TABLE 2.—*Comparison of estimated excise-tax yields for full fiscal year from (a) present laws plus House bill changes and from (b) a 5-percent tax at retail on selected goods and services (assuming 25-percent cut-back in principal durable goods), assuming present rates on transportation of property and electrical energy, and assuming revenue changes from House bill on alcoholic beverages, tobacco products, gasoline and oil, wagering, etc.*

[000,000 omitted]

	Present law	Increases under House bill	Total under House bill	Assumed 5 percent retail tax	Difference
Alcoholic beverages	$2,400	$252	$2,658	[1] $2,658	0
Tobacco products	1,470	177	1,647	[1] 1,647	0
Gasoline and oil	750	220	970	[1] 970	0
Other manufacturers' excises	1,343	227	1,570	0	−$1,570
Retailers' excises	513	−5	508		
Miscellaneous	1,978	[2] 381	2,359	[3] 6,482	+3,615
Stamp tax	100	0	100	[1] 100	0
Total	8,560	1,252	9,812	11,857	2,045

[1] Identical with estimates under House bill because National Committee for Fair Emergency Excise Taxation makes no proposals for these categories.

[2] Reflects primarily estimate of $400 million to be derived from wagering together with increases and decreases in other items.

[3] Includes estimate of $400 million from wagering as in House bill and $6,082 million as in Curtis memorandum.

The estimate of "increases under House bill" of $1,252 million is taken from the Committee on Ways and Means "Summary of the provisions of H. R. 4473 (revenue bill of 1951)."

The estimate of $6,482 million revenue from an assumed 5 percent retail tax represents my estimate of $6,082 million, plus the $400 million expected revenue from the new wagering tax.

My retail tax estimate includes the existing electrical-energy excise, which the House bill repeals. This represents about $100 million, which I have assumed to be offset by the some $125 million revenue from sugar, narcotics, etc., which do not appear in my estimates anywhere.

TABLE 3 AND DISCUSSION

In table 3, below, are listed those categories of manufacturers', retailers', and miscellaneous excises whose rates would be reduced to 5 percent if a 5-percent retail tax, across the board, were substituted. Existing excise rates on these categories appear in detail in table 2 of Secretary Snyder's testimony before the House Ways and Means Committee on February 5, 1951 (p. 10, House hearings, 1951).

TABLE 3.—*Categories of excise taxes whose existing rates would be changed by adoption of an assumed 5-percent retail excise tax, used in projection for Representative Curtis*[1]

(Category designations from Treasury Department Form 7005, monthly release Collections of Internal Revenue)

Manufacturers' excise taxes:
- Tires and tubes
- Automobile trucks and busses
- Other automobiles and motorcycles
- Parts and accessories for automobiles
- Electric, gas, and oil appliances
- Electric light bulbs and tubes
- Radio sets, phonographs, components, etc.
- Phonograph records
- Musical instruments
- Mechanical refrigerators, air-conditioners, etc.
- Business and store machines
- Photographic apparatus
- Sporting goods
- Firearms, shells, and cartridges
- Pistols and revolvers

Retailers' excise taxes:
- Furs
- Jewelry
- Luggage
- Toilet preparations

Miscellaneous taxes:
- Telephone, telegraph, radio, cable, leased wires, etc.
- Local telephone service
- Transportation of persons, seats, berths
- Leases of safe-deposit boxes
- Admission to theaters, concerts, etc.
- Admission to cabarets, roof gardens, etc.
- Club dues and initiation fees
- Bowling alleys, pool tables, etc.
- Coin-operated devices

The categories of excise taxes listed in table 3, above, yielded revenue of $3.4 billion in fiscal 1951. With the addition of revenue from the categories "transportation of property" and "electrical energy," the yield was $3.8 billion in fiscal 1951. It is this latter figure of $3.8 billion which is to be used for comparison with the yield of a 5 percent retail excise tax, which is calculated (p. 1842, House hearings 1951) to be $6 billion for fiscal 1952.

[1] Table A, page 1842, hearings, part 3, Revenue Revision of 1951, House Committee on Ways and Means.

(NOTE.—No rate change was suggested for categories "Transportation of property" and "Electrical energy," both of which are currently taxed at less than 5 percent.)

In other words, the proposal of the National Committee for Fair Emergency Excise Taxation for substitution of an across-the-board, uniform retail tax, with liberal exemptions, would produce at the assumed 5 percent rate over $2 billion more revenue than was collected from selected commodities and services in fiscal 1951.

From these same selected categories (which do not include alcohol, tobacco, or gasoline) the Treasury proposals made to the House Ways and Means Committee on February 5, 1951, would be expected to yield $4.9 billion in fiscal 1952. The 5 percent retail tax, as projected for Representative Curtis, would yield more than a billion dollars more than the Treasury request for 1952 from these categories, without imposition of the unprecedentedly high, selected rates asked by Secretary Snyder.

The fiscal 1952 estimated yield under the House bill of the categories listed in table 8 may also be compared with the $6 billion estimate of a 5 percent tax at retail. The House bill provides for new revenue, on a full-year basis, of $1.2 billion. Of this $1.2 billion, it is estimated that $400 million would come from the new wagering excise, and from increases over present rates there would come additional revenue of $252 million from alcoholic beverages, $177 million from tobacco products, and $220 million from gasoline and oil. Thus a total of about $1,050 million increase would come from categories not included in the $6 billion retail tax calculation.

Under the House bill, total excise revenue for fiscal 1952 would be in the neighborhood of $9.8 billion. The estimate of total excise revenue I supplied Representative Curtis (p. 1842, House hearings) was $10.5 billion. No rate increases in any category whatsoever was assumed in this $10.5 billion estimate. Therefore, if the only excise-rate change adopted were that of substituting the retail excise tax at 5 percent for the present hodgepodge of selective rates, this change would produce $700 million more than the $9.8 billion which the present House bill provides.

I estimate that the House bill would provide excise revenue of $3.9 billion in fiscal 1952 from the categories listed in table 8, above. If this estimate is correct—and I believe it will closely correspond with the estimate of the staff of the Joint Committee on Internal Revenue—then the proposal as calculated for Representative Curtis would yield over $2 billion more than the House bill for the same categories.

Sincerely yours,

LEON HENDERSON.

AUGUST 13, 1951.

Senator EUGENE D. MILLIKIN,
Senate Finance Committee,
Washington, D. C.

DEAR SENATOR MILLIKIN: When I appeared before the Senate Finance Committee on August 8 on behalf of the National Committee for Fair Emergency Excise Taxation, you asked me to submit a letter on "the pass-down burden of a sales tax in connection with the whole subject of tax burdens on the lower-income brackets."

As I indicated, I have made no original studies of tax burdens on different income classes, but I have analyzed the all-too-few surveys which have been made, and the technical criticisms of these which are available. The material below flows from my observations and statistical analyses of my associates, Mr. and Mrs. E. R. Lerner.

One conclusion is abundantly clear, and this is that the disagreements between those who have studied the subject are so pronounced that the Congress has no exact basis on which to rely, if an exact basis is required for national tax policy.

The disagreements stem from (*a*) choices of statistical tools and (*b*) differing economic theories as to the ability to shift taxes, and to allocate the shifts by economic and income classes.

One of the most acute conflicts revolves around the relative burden of taxation on the extremely low income groups and on those with incomes above $7,500. My opinion, which is elaborated below, is that spending units with less than $1,000 cash income differ very markedly from those which include most worker families, and their patterns of spending differ also. Then, too, to lump all incomes above $7,500 and assume these have identical patterns of spending is to blink at realities.

There is no doubt in my mind that the burden of taxation falls very heavily on low-income spending units, and that hidden taxes, plus the pyramiding of tax costs at other than retail levels, tends to conceal the real weight of this burden. The progressivity of personal income tax exemptions only offsets a part of the burden. I have pointed out elsewhere that low-income units buy substantial quantities of automobiles, refrigerators, and other household appliances. The sheer money outpayments for taxes on these items will claim large shares of current income of any low-income buyer.

Sometimes the dispute over relative burdens of taxation gets bogged down in the dispute over "regression." Roswell Magill gave an excellent discussion of the confusion over exise tax regression when he appeared before your committee at these hearings.

Frankly, I am not convinced that the Federal tax system is especially regressive on incomes below $1,000, for example. But I am convinced that spending units in this group bear heavy burdens from taxation, and, in addition, the burden is compounded by the relation of prices to their total income. Such units lose buying power for many reasons: they pay highest prices, get fewer discounts, pay installment charges, pyramided taxes, and other dilutions of real purchasing power.

To measure with exactness the regressivity of a new tax on various income classes is not possible at this time. But to choose a system of taxation on consumption which will not add to the already heavy burden of low-income classes can be done.

INCIDENCE

Who pays the taxes? is the question that is involved in all discussions of tax incidence, for it is generally conceded that the individual who makes the monetary payment of a tax may be able to shift the payment to other individuals and thus recoup in part or in whole the amount of money he has paid out. He may not be able to shift the total amount of the tax; he may not be able to shift every kind of tax. The problem of incidence is thus the problem of the shifting of the money expenditure for taxes.

It is understood that the monetary payment of the tax is in a sense not a true statement of the burden because all individuals derive the benefits of Government activities.

This letter is concerned only, however, with the monetary burden among different income groups and the shifting that may come about among income classes and more specifically with the shifting of excise taxes. Thus this letter is concerned with the impact or burden of excise taxes on individuals and families measured in dollars that are expended for taxes in relation to their total income.

There are numerous and serious problems involved in any analysis that seeks to measure the burden. In the first place total income must be measured and this would mean all money income, including money gifts, and all income in kind. Excluding either of these raises the ratio of burden to income and actually distorts the true picture. There is actually little precise information on the expenditures of individuals and families (whose patterns may be quite different from one another) on presently taxed items. What information is available is fragmentary and spotty, reflecting largely expenditures of families in urban centers.

The measurement of the degree of shifting is also complicated by other factors. The stage of the business cycle, the elasticity of demand, the competitiveness within industries, the ability of consumers to obtain substitutes for taxed items, and the presence of a buyers' or sellers' market all have an effect on the degree to which a tax may be shifted.

CONGRESSIONAL STUDY NEEDED

To me it is quite clear that the Congress, faced with almost inevitable consideration of raising substantial new revenue, should take responsibility for a burden study of its own. At present, the most widely quoted conclusions are those contained in the Musgrave report, mentioned above. This practice runs the very real danger that Dr. Musgrave's extensive cautions will not be quoted also. The Musgrave report has added considerably to the fund of knowledge on tax burden. It has also stimulated additional surveys and critical review. One of the most challenging reviews, which I have analyzed in advance, will appear as an article by Rufus Tucker in the forthcoming September issue of the National Tax Journal. When the Musgrave and Tucker articles are read together, they will fortify my recommendation for a congressional study.

TAX BURDEN

Despite the great political and economic importance of an understanding of the tax burden on American families and individuals relatively few comprehensive studies of this type have been made. Among the most noteworthy are:

TNEC Monograph No. 3—Who Pays the Taxes, Gerhard Colm and Helen Tarasov, 1940.

Social Research, Supplement IV, Who Does Pay the Taxes, Tarasov, 1942.

The Fiscal System, The Distribution of Income and Public Welfare by John H. Adler, Chapter in Fiscal Policies and The American Economy, edited by Kenyon E. Poole, 1951.

Distribution of Tax Payments by Income Groups: A Case Study for 1948, by Richard A. Musgrave et al; National Tax Journal, March 1951.

All of the studies attempted to demonstrate statistically the incidence or burden of all taxes (Federal, State, and local), after full consideration of various assumptions. Nevertheless, the authors fully recognized the limitations of such treatment of so complex and involved a problem. In this connection it is well to recall the rather cogent series of observations contained in the opening chapter of the TNEC study to the effect that "*even the most complete statistical material can never measure the incidence of taxation. The incidence of taxes can be derived from figures on tax payments only on the grounds of theoretical reasoning and hypothetical conjecture. Whatever statistical refinement is achieved, therefore, the results necessarily rest on a number of assumptions.* The incidence of taxation depends, among other factors, on the degree of competition and monopoly prevailing in an economy, on the direction of Government regulation of prices and cost factors, on the general trend of economic growth or stagnation, on the development of labor productivity, on the time which has elapsed since the introduction of new taxes, on the increase (or decrease) in tax rates, and finally, it depends on the use made of taxes and on the other fiscal policies (e. g. borrowing) pursued at the same time." [Italics mine.]

The most recent of the studies—that by Musgrave—has been attracting a good deal of attention not only because of its comprehensiveness but also because it differs in several important respects from the assumptions and techniques used in other studies.

Many users of Musgrave's conclusions are failing to keep in mind his own cautions that different conclusions may have been reached with other assumptions and statistical methods. In particular he expresses emphatic cautions with respect to his results which reflect incomplete consumption expenditure patterns, methods of distributing corporate tax payments, and allocating of payroll and property taxes. Furthermore, he recognizes the difficulties of interpreting results obtained both at the bottom of the income scale, because of the heterogeneity of the composition of the low spending unit brackets, and the top income bracket which combines all groups having $7,500 or more.

Musgrave's concepts as to what constitutes the income base, what types of taxes are shifted from the payer to other economic classes, to whom they are finally shifted, and how the taxes so determined are to be allocated and distributed are areas of major differences with other studies.

That his results differ from those of the pioneer TNEC study is not surprising. Even if there were no major differences in assumptions, the income distribution, the expenditure patterns, and the tax structure were so radically different in 1938–39 that the surprise would have been much greater had the results been similar. Moreover, the statistical tools available to the TNEC authors were indeed blunt instruments. In addition, in the controversial area of corporate income tax, the TNEC study assumed that such taxes were not shifter, whereas Musgrave assumed they were in his "standard case." [1]

A better evaluation of Musgrave's final results is afforded by comparison with the equally contemporary study by Adler. While the latter study does not describe its assumptions and techniques in nearly as great details as Musgrave, it is clear that it departed in several respects from Musgrave. As a consequence, the results of the Adler study are markedly different from Musgrave. While both find the over-all tax structure (Federal, State, and local) to be regressive at the lowest bracket—under $1,000—the Adler findings show a fairly sharp progression thereafter, whereas Musgrave's "standard case" carries forward almost on a proportional basis from $2,000 through $5,000 and shows fairly sharp

[1] Represents from among several alternatives the assumptions and methodology Musgrave regards most applicable.

progression thereafter. Throughout, the impact of all tax payments on various income classes is lower in the Adler study than in the Musgrave study, except in the highest income class of $7,500 and over, where they coincide.

These varying results are due to several important differences in assumptions and statistical methods. First, Adler uses the Department of Commerce series for his income base, which provides a higher figure than the source used by Musgrave, namely, the Survey of Consumer Finances of the Federal Reserve Board. Second, the basic data selected to represent expenditure patterns differ. Adler uses throughout the Bureau of Labor Statistics studies of three cities made in 1947 exclusively whereas Musgrave uses the Survey of Consumer Finances study for general expenditure patterns and BLS (for nine cities) and SCF for specific expenditure patterns. Since the patterns used by each differ considerably, any allocation of a certain type of tax payment by either of these methods will result in different distributions. Finally, Adler assumed—as did TNEC study—that corporate taxes were not shifted, contrary to the Musgrave concept. Since corporate taxes represented about 30 percent of the Federal tax collections in 1948 and about 23 percent of total Federal, State, and local taxes, it is understandable why patterns of burden will vary, depending upon the treatment of corporate income taxes as far as shifting is concerned.

Quite apart from the comparisons, and confining ourselves strictly to the Musgrave study, several observations are worth mentioning. Furst there is a finding that the pattern of effective rates shows sharp regressivity (on an over-all basis) at the lowest income level of "under $1,000"—a finding supported by the other studies. Just who are the families or individuals with incomes of less than $1,000 annually has challenged the curiosity of many, including several members of Congress. A considerable amount of statistical evidence is available that shows how dissimilar in composition this income class is: nearly half were single, 35 percent were over 65 years of age; 51 percent lived in rural areas: about a fourth were farm operators; 35 percent received pensions, annuities, or relief, only 40 percent received wage or salary payments; and lastly nonmoney income was a substantial part of total income for this group. The composition of this group clearly differs substantially from that of all other income classes. Moreover, as evidence of their financial condition, about 50 percent owned their own homes. Under these conditions, the finding that total tax structure is regressive at the lowest income levels still requires an elaborate explanation to give it any significance. It is significant, however, that over-all effective rate for the lowest income class, as computed by Musgrave, is regressive almost entirely because of the impact of State and local tax rates on this income class. The burden of Federal tax payments is essentially a progressive one.

The Musgrave study points out the difference of $36 billion less between its personal income base and that of the Department of Commerce but does not fully explore the effects of that omission. Some idea of the significance of the omission is gained from the Adler-Musgrave comparison in which Musgrave adjusts his series to the Commerce Department level. The effect is to lower the effective rate for the lowest bracket by 5 percentage points and to narrow considerably the regressive pattern of his "standard" case. From another point of view, even this treatment of the $36 billion is not entirely satisfactory, since it is known that a very large portion—about $21 billion—went to the incomes below $7,500 and very likely bulked largest in the lower income classes. Consequently omitting these amounts from the income base of these classes resulted in increasing their effective rates of tax payments in relation to their low income.

Another area of doubt arises in connection with the assumption that undistributed profits of corporations should be regarded as income of stockholders. This has the opposite effect of the omission of income mentioned above in that it raises the income base of the higher income classes and therefore results in a lighter load. Whether income that never reaches the stockholders and furthermore which may not be reflected in appreciation in value of securities should be so regarded is debatable.

The statistical measures used by Musgrave in making his allocation of tax payments are frequently crude, as admitted by him. In a number of instances, he is compelled to rely on a general pattern of consumer expenditures to make his allocation—a pattern which is a derivative of the Survey of Consumer Finances—or on a pattern for a class of expenditures derived from a sample based on BLS studies of nine cities. While Musgrave expresses some concern over the reliability of the latter, he appears more confident of the former. While more reliable data will become available upon the completion of BLS studies now in progress, there is no basis for assuming that either measure was sufficiently satisfactory for the purpose for which it was utilized. There is, however, further doubt as to the validity of the use of BLS data for this purpose. While BLS data do show broad patterns, their application for very precise measurement can result in large statistical errors. Since these expenditure patterns are for urban families of two or more persons, their application to the low income groups is of dubious validity. Moreover, according to the latest census data, 18 percent of American "family units" are represented by individuals. A group of this magnitude cannot be assumed to have the same expenditure pattern as families of two or more persons, particularly when all known facts are to the contrary. All of these weaknesses are recognized by Musgrave but he finds no better alternative statistical measures.

The assumption that contributions made by employees covered under social insurance legislation are "tax" payments is also likely to prove highly controversial. About $4 billion are involved in this item, representing about 10 percent of Federal tax collections, a substantial part of which is for old-age retirement. Because of the limitation of contributions under this legislation to the first $3,000 (now $3,600) in wages and salaries, the tax is necessarily regressive and obviously increases the burden of tax payments in the lower brackets. Whether a mandatory tax of this nature should be regarded as a tax in the normal sense of the word is debatable, without getting involved in the larger question of benefits to the entire population derived from all tax payments as explored by Adler. In this instance, the tax is presumably a partial contribution toward a retirement or survivor benefit.

In either case, it can be regarded as a form of compulsory savings rather than a tax. It might be further deduced that such payments are not taxed in the true sense from the fact that Government payments under the social-insurance system are not subject to income tax and are not reported as income on personal income taxes. One argument for their inclusion as taxes is that the income derived on retirement is reflected in the various income distributions of the various income classes. The problem of classification is illustrated by consideration of the treatment of medical care under a social-insurance system. The individual subject to the tax for such purpose would shift from paying personally for medical care to paying taxes as medical care insurance. The same amount may be involved in each method of payment but where the former payment was merely an expenditure like any other not subject to excises, under the latter, the expenditures would be regarded as a "tax" payment. Perhaps the illustration becomes even sharper where an individual insures himself and family under a voluntary surgical and hospitalization system and has regular monthly deductions made from earnings—an optional expenditure. Should it become a mandatory deduction from wages under a social-insurance system, it would then be regarded as a tax, according to Musgrave's assumption.

EXCISES

A number of questions raised above with respect to the Musgrave general approach are equally applicable to consideration of his treatment of excises. If his theory and statistical methods have reduced the income base in the lower brackets, then the burden of existing excises—the percentage of income paid out in the form of these taxes—has been exaggerated. Because excises are identifiable and because the place of final payment is clearer than in other areas of taxation, however, there is less controversy over the assumptions on shifting of excises than elsewhere in the study. The same questions as to the applicability of general consumption expenditure patterns derived as a residual (money incomes less Federal income taxes and savings) from the income distributions of the Survey of Consumer Finances based on a small sample of the population or of specific consumption patterns derived from a miscellaneous group of nine urban centers are still pertinent.

With respect to the theory that all excises are shifted forward to consumers, the TNEC study agrees with this, in general but concedes that this is not necessarily true at all times—that prices may be held at a lower level under certain business conditions, thereby absorbing the tax in whole or in part. Having decided however, that all such taxes are passed on to consumers, Musgrave is still faced with the problem of determining how much is to be allocated to specific consumption items rather than to a general "catch-all," since in a number of instances, a sizable portion of the revenue from such sources come from business rather than consumer purchases.

The problem varies in degree for the different excises but is particularly acute for the categories yielding among the largest amounts of revenue—namely, automotive (e. g., gasoline and oil, trucks and busses, automobiles and motorcycles, tires and tubes, and parts and accessories), communication, recreation, and transportation. Only crude estimates, bordering on conjecture, could be used in making the separation between business and consumer purchases of such goods and services. Finally, having made the allocation, a dubious expenditure pattern is applied to obtain the necessary distribution of tax payments which can then be related to the income of each class. Because even small changes in the amount of tax payments allocated to the lower income classes produce widely varying results, it is essential that a revenue source of this magnitude be distributed as accurately as possible. One critic of the study, in accepting generally Musgrave's theory of shifting and incidence but modifying slightly a few assumptions regarding allocation, obtained a far different burden picture with respect to Federal excises than did Musgrave. Still other results were obtained when different sources of expenditure patterns of a more comprehensive nature though less recent date were used. In both instances, the distinctive U-shaped curve, indicating regressivity, at the lowest income level, of the Musgrave findings, disappeared. There was no distinct over-all tendency toward regression on excises until income bracket of $15,000 and over was reached.

On the burden of Federal excises, Musgrave, as do others, makes no special distinction for sumptuary taxes, such as those on alcoholic beverages and tobacco products. Of the total amount of $7.0 billion allocated to Federal excises, $3.5 billions were derived from these two categories. Since such taxes are characteristically regressive, inclusion with excises from other consumer expenditures is bound to yield a regressive pattern. If tax payments on such items were separated from the Musgrave distributions. the resulting pattern is essentially proportional between the $1,000 and $7,500 income classes, as shown below:

Spending unit income brackets—Tax payments as a percentage of income—Federal excises

[Thousands of dollars]

	Under 1	1 to 2	2 to 3	3 to 4	4 to 5	5.75	7.5 and over	Total
Total, including tobacco and liquor.	5.6	4.9	4.5	4.6	4.0	3.8	2.5	3.8
Total, excluding tobacco and liquor.	3.7	2.4	2.2	2.3	2.2	2.1	1.4	2.0

The lowest bracket of "under $1,000" shows regression but the composition and character of this group lessens the significance of sharp deviations from the general-burden pattern. This is particularly pertinent in this instance because the regressivity is caused almost entirely by Musgrave's resort to a general consumption pattern for allocating $2.2 billion of the total $4.4 billion 1948 Federal excise collections, exclusive of alcoholic beverages and tobacco products. At this juncture, such technique falls largely in the realm of conjecture. It exemplifies the need for precision instruments rather than hand-made tools.

THE EFFECT OF THE NATIONAL COMMITTEE FOR FAIR EMERGENCY EXCISE TAXATION PROPOSAL ON BURDEN

The foregoing discussions high lighted the impact of excise taxes on various income classes and pointed out the numerous difficulties involved in such measurement. The very fact that these excises, as they exist today, are imposed at various levels of the process of production, complicates the problem of uncovering the groups who really pay them. Since a large proportion are levied at the manufacturers' level, and since much is pyramided all along the way, in those instances where the final consumer does bear the burden of the tax, he pays far more heavily than had the same tax been imposed on him at the retail level. A study of the true burden of current excises should obviously take account of pyramiding.

Thus, were the same excises as are in effect today all levied at the retail level, the consumer would pay less than he pays today. To the extent that these commodities are purchased by the lower-income groups, their burden would be reduced. The change from a manufacturers' excise to an equivalent "retail"—point of final consumption—tax even on the presently taxed items, would return to the Government at a lower tax rate as much as it derives now and save the consumer considerable money. The Treasury Department estimated that in many industries a 10-percent tax at the manufacturers' level, would get as much revenue as a 6-percent tax at retail, where the retail price included the tax and took no account of pyramiding. In other industries an even sharper drop could be made because of the mark-up practices of the industry and the distribution channel common to the industry. Thus a product which travels from the manufacturer to the wholesaler to the retailer would have the tax marked up at both levels; one that was sold directly by the manufacturers to the retailer has the tax marked up only once.

The extension of excises to all retail sales or to all sales to the final consumer, as proposed by our NCFEET, would substantitally increase the tax base and still not increase the burden on the lower-income classes. As can be seen from a table submitted to Congressman Curtis (p. 1842, House hearings, 1951) the tax base would be more than doubled or tripled. The tax would not, of course, extend to food, rent, or medicine or to the traditionally excepted items. But by such an extension of the tax base, the same revenue as now obtained could be collected at much lower rates. Food, which takes the largest proportion of expenditures in the budget of the lower-income classes (those under $3,000), would be exempt. This means that approximately 35 percent of expenditures would automatically be exempt. An additional 15 to 20 percent would be excluded by the exemption of rent, approximately another 5 percent for drugs and medicines, and the exemption of traditionally excepted services means that at least 55 to 60 percent of the total expenditures of these lower-income groups would be free of retail taxation.

Conversely, it appears that the burden on the higher-income classes would tend to increase as a result of the application of this type of tax, since recent miscellaneous studies of consumer expenditures indicate that the main categories of expenditures that would be subject to the retail tax have a tendency toward progression—that is, expenditures as a percent of income increase as income increases.

Sincerely yours,

LEON HENDERSON

Mr. HENDERSON. One other item Mr. Stam and I had a little bit of disagreement on; if I can check for 1 minute, I think that we can correct that.

The estimate of the present law, I think, for 1952 is about 8.3 billion for fiscal 1952 from all——

Mr. STAM. I think, Mr. Henderson, on the excises, if you are just looking at the fiscal year 1952, the estimate of the additional revenue from excise is about $1,037,000,000, which makes your figure about right, the 500 instead of the 300, you see?

Mr. HENDERSON. But in our Curtis estimate we estimated that 10.5 billion, which is 2 billion more than the present law, so if you pick up a billion, then ours is, roughly, a billion.

I will give you my computation. I think that is correct.

Mr. STAM. I do not think there is any disagreement on this particular point.

Mr. HENDERSON. It would be upward of a billion, but the question then comes, Is it worth while changing the whole tax structure?

Senator BYRD. Thank you very much, Mr. Henderson. The attachments to Mr. Ruthenburg's statement will be placed in the record at this point.

(The documents referred to follow:)

DISCRIMINATION BY GENERAL CATEGORIES

Consumer durables

TAXED OR PROPOSED TO BE TAXED	NOT TAXED
Automobiles	Used automobiles
Trucks and busses	Used trucks and busses
Parts and accessories	Used parts and accessories
Tires and tubes	Other rubber products (hot water bags; rubber heels)
Business and store machines	Cash registers
Gas and electric appliances: Electric direct motor-driven fans and air circulators; electric, gas, or oil water heaters; electric flat-irons; electric air heaters (not including furnaces); electric immersion heaters; electric heating pads (exempted by H. R. 4473) and blankets; electric, gas, or oil stoves, warmers, coffee makers, ranges, roasters, toasters, waffle irons, hot plates, griddles, casseroles, steam tables, etc. (Proposed by H. R. 4473: power lawn mowers, gas or electric clothes driers, belt driven fans, dehumidifiers, dishwashers, door-bell chimes, food choppers and meat grinders, hedge clippers, ice cream freezers, electric sheets and spreads, shavers, floor polishers and waxers, pants pressers, mangles, and motion or still picture projectors.)	Gas and electric appliances: Blowers, vacuum cleaners, washing machines, sewing machines, hair dryers. Household furniture and furnishings, floor covering, draperies, light fixtures, etc. Furnishings include china, glassware, utensils, comforters, quilts, pillows, pottery, shears, portable lamps, lawn mowers, garden tools, etc. Also curtains, tablecloths, sheets, slipcovers, brooms, shower-bath curtains, towels, draperies, bedspreads, blankets.)
Mechanical refrigerators or quick freezes for household use.	Mechanical refrigerators or quick-freezes not for household use. Ice boxes.
Self-contained air conditioning units.	Air conditioning, not self-contained.

Personal appearance

Jewelry and watches	Clothing
Handbags	Accessories
Luggage	Shoes
Some toilet articles and preparations	Other toilet articles and preparations
Fur coats	Other coats
Some fur coats	Other fur coats

Services

Transportation [1]	Barber shops
Persons [1]	Beauty parlors
Property [1]	Laundries
Communications [2]	Classified advertising
Safe deposit boxes	Cleaning, dyeing and pressing
Household utilities	Household cleaning and repairs
(*a*) Electricity	Automobile storage, repair, rental
(*b*) Telephone	Dressmakers
	Household utilities
	(*a*) Gas
	(*b*) Water
	Shoe repair
	Hotel rooms and tourist cabins
	Upholstery and furniture repair
	Professional services
	Rug and drapery cleaning and repair
	Meals

Recreation

Admissions	Parimutuel wagering
Golf green fees	Golf instruction and caddy fees
Dues in athletic and social clubs	Dues in fraternal, business, patriotic, and women's clubs
Toys that look like musical instruments	Toys, bicycles, etc.
Radios	Radio programs
Televisions	Television programs
Photographic equipment	Photographic studios, developing and printing
Musical instruments and records	Books and magazines, and circulating libraries

Personal habits

Liquor, wine, and beer	Soft drinks
Cigarettes and tobacco	Candy and ice cream
Entertainment in cabaret	Entertainment in private club

Miscellaneous

Photographic lenses	Eyeglass lenses
Beads (strung)	Beads (unstrung)
Seat covers	Custom-made seat covers
	Building materials

NATIONAL COMMITTEE FOR FAIR EMERGENCY EXCISE TAXATION, NEW YORK, N. Y.

Officers:

Chairman: Louis Ruthenburg, chairman of the board, of Servel, Inc.

Vice chairmen:

Ardé Bulova, chairman of the board, of Bulova Watch Co.

J. H. Carmichael, president, Capital Airlines, Inc.

John A. Robertshaw, president, Robertshaw-Fulton Controls Co.

Robert C. Tait, president, Stromberg-Carlson Co.

Treasurer: Charles T. Lawson, vice president, Nash-Kelvinator Corp.

Secretary: H. Leigh Whitelaw, managing director, Gas Appliance Manufacturers Association, Inc.

[1] Transportation has its own discriminatory features, thus: Public transportations is taxable, private is not; travel by intercity bus, plane, train, or ship is taxable, by taxicab or rented car, plane, or boat is not; a flat rate in freight tax discriminates against the long haul as against the short haul. Commutation tickets exempt.

[2] There are also discriminations within the communications taxes, i. e., a domestic telegraphic message is taxed at 25 percent (20 percent under H. R. 4473); international at 10 percent. If I call Paris collect from New York, I pay no tax. If I call New York collect from Paris I pay a tax.

General counsel: Wilson W. Wyatt, Wyatt, Grafton & Grafton.
Committee on procedures:
Chairman: Glen McDaniel, vice president, Radio Corp. of America.
Members:
J. Carlton Bagnall, president, Swank, Inc.
Harold V. Bozell, president, General Telephone Co.
William J. Hogan, vice president and treasurer, American Airlines, Inc.
R. J. Irish, executive administrator, A. O. Smith Corp.
Glenwood J. Sherrard, president, Parker House Hotel.
Committee members:
Arthur L. Blakeslee, president, Kalamazoo Stove & Furnace Co.
Henry P. Bristol, chairman of the board of Bristol-Myers Co.
J. H. Carmine, executive vice president, Philco Corp.
Alden P. Chester, president, Globe American Corp.
Clarence Coleman, vice president, the Coleman Co., Inc.
J. W. Craig, vice president, Avco Manufacturing Corp.—American Central Division, Bendix Home Appliances Division, Crosley Division.
Robert Driscoll, vice president, the Greyhound Corp.
M. P. Duke, president, Duke Manufacturing Co.
C. W. Engelhard, president, Engelhard Industries.
D. H. Farrington, executive vice president, Farrington Manufacturing Co.
Albert J. Feldman, treasurer, A. Hollander & Son, Inc.
Bruce A. Fleming, vice president, Edwin L. Weigand Co.
Marion B. Folsom, treasurer, Eastman Kodak Co.
Charles J. Gibson, president, Gibson Refrigerating Co.
Julius Green, president, Julius Green Fur Co., Inc.
H. E. Handley, president, Handley Brown Heater Co.

Harry Winston, Harry Winston, Inc.

GOODS AND SERVICES INCLUDED AND EXCLUDED IN TAX BASE OF $111,640,000,000 USED BY LEON HENDERSON FOR ESTIMATE OF REVENUE FROM 5 PERCENT RETAIL SALES TAX

[(s)=service, (dc)=durable commodity, (ndc)=nondurable commodity]

INCLUDED

I. Food and tobacco

Purchased meals and beverages (ndc):
 Retail, service, and amusement establishments (ndc)
 Hotels
 Dining and buffet cars
 Clubs
Tobacco products and smoking supplies
Alcoholic beverages

II. Clothing, accessories, and jewelry

Shoes and other footwear (ndc)
Shoe cleaning and repair (s)
Clothing and accessories except footwear (ndc)
Fur storage and repair (s)
Cleaning, dyeing, pressing, alteration, storage, and repair of garments, n. e. c. (in shops) (s)
Dressmakers and seamstresses (not in shops) (s)
Costume and dress-suit rental (s)
Net purchases from second-hand clothing dealers (s)
Miscellaneous personal services (s)
Jewelry and watches (dc)
Watch, clock, and jewelry repair (s)

III. Personal Care

Toilet articles and preparations (ndc)
Barber-shop services (s)
Beauty-parlor services (s)
Baths and masseurs (s)

IV. Housing

Transient hotels and tourist cabins

EXCLUDED

I. Food and tobacco

Food purchased for off-premise consumption (ndc)
Purchased meals:
 Schools and school fraternities (ndc)
 Institutions and industrial lunchrooms
 Food furnished government (including military) and commercial employees, and withdrawn by nonfarm proprietors (ndc)
 Food produced and consumed on farms

II. Clothing, accessories, and jewelry

Standard clothing issued to military personnel

III. Personal care

IV. Housing

Owner-occupied nonfarm dwelling space, rental value (s)
Tenant-occupied nonfarm dwellings (including lodging houses), space rent (s)
Rental value of farm houses (s)
Clubs, schools, and institutions

V. Household operation

Furniture (dc)
Floor coverings (dc)
Refrigerators and washing and sewing machines (dc)
Miscellaneous electrical appliances except radios (dc)
Cooking and portable heating equipment (dc)
Durable house furnishings, n. e. c. (dc)
Products of custom establishments, n. e. c. (dc)
Writing equipment (dc)
Net purchases from second-hand furniture and antique dealers (s)
Upholstery and furniture repair (s)
Rug, drapery, and mattress cleaning and repair (s)
Care of electrical equipment except radios and of stoves
Semidurable house furnishings (ndc)
Lighting supplies (ndc)
Cleaning and polishing preparations (ndc)
Miscellaneous household paper products (ndc)
Stationery and writing supplies (ndc)
Fuel (except gas) and ice purchased (ndc)
Household utilities:
  Electricity (s)
  Gas (s)
  Water (s)
Telephone (s)
Telegraph, cable, and wireless (s)
Express charges (s)
Moving expenses and warehousing (s)
Miscellaneous household operation services (s)

V. Household operation

Fuel (except gas and ice) produced and consumed on farms (ndc)
Postage (s)
Domestic service (excluding practical nurses)
Fire and theft insurance on personal property, net payments

VI. Medical care and death expenses

VI. Medical care and death expenses

Drug preparations and sundries (ndc)
Ophthalmic products and orthopedic appliances (dc)
Physicians (s)
Dentists (s)
Osteopathic physicians (s)
Chiropractors (s)
Chiropodists and podiatrists (s)
Private-duty trained nurses (s)
Practical nurses and midwives (s)
Miscellaneous curative and healing professions
Privately controlled hospitals and sanitariums (s)
Net payments to group hospitalization and health associations (s)
Student fees for medical care (s)
Accident and health insurance, net payments (s)
Mutual accident and sick benefit associations, net payments (s)
Funeral and burial services (s)
Cemeteries and crematories (s)
Monuments and tombstones (dc)

VII. Personal business

Miners' expenditures for explosives, lamps, and smithing (ndc)
Tools (do)
Safety-deposit-box rental (s)
Classified advertisements (s)
Net purchases from pawnbrokers and miscellaneous second-hand stores (s)

VII. Personal business

Theatrical employment agency fees (s)
Nontheatrical employment agency fees (s)
Net payments to labor unions (s)
Employees' dues and fees to professional associations (s)
Brokerage charges and interest and investment counseling (s)
Trust services of banks (s)
Bank service charges for deposit accounts, check collections, and foreign exchange (s)
Money-order fees (s)
Services furnished without payment by financial intermediaries except insurance companies (s)
Expenses of handling life insurance, life-insurance companies and fraternal and assessments associations (s)
Legal services
Interest on personal debt
Personal business services, n. e. c. (s)—notary public, detective, etc.

VIII. Transportation

User-operated transportation:
- New cars (dc)
- Used cars (dc)
- Tires and tubes (dc)
- Parts and accessories (dc)
- Automobile repair, greasing, washing, parking, storage, and rental (s)
- Gasoline and oil (ndc)
- Bridge, tunnel, ferry, and road tolls (s)
- Automobile insurance, net payments

Purchased intercity transportation:
- Steam railway (excluding commutation) (s)
- Sleeping and parlor car, fares and tips (s)
- Intercity bus (s)
- Airline (s)
- Coastal and inland waterway (s)
- Baggage transfer, carriage, storage, and excess charges (s)
- Luggage (dc)

VIII. Transportation

IX. Recreation

Admissions to specified amusements:
- Motion-picture theaters (s)
- Legitimate theaters and opera (s)
- Entertainment of nonprofit organizations, except athletics (s)
- Professional baseball (s)
- Professional football (s)
- Professional hockey
- Horse and dog race tracks (s)
- College football (s)
- Other amateur spectator sports (s)
- Ticket brokers' mark-up on admissions (s)
- Purchase of programs (s)

Parimutuel net receipts (s)

Nonvending coin machines, receipts minus pay-off (s)

Specified commercial participant amusements:
- Billiard parlors and bowling alleys (s)
- Dancing, riding, shooting, skating, and swimming places (s)
- Amusement devices and parks (s)
- Daily fee golf courses, green fees (s)
- Golf instruction, club rental, and caddy fees (s)
- Sightseeing busses and guides (s)
- Private flying operations (s)

Informal recreation:
- Books and maps (dc)
- Magazines, newspapers, and sheet music (ndc)
- Book rental and repair
- Nondurable toys and sport supplies (ndc)
- Wheel goods, durable toys, and sport equipment (dc)
- Boats and pleasure aircraft (dc)
- Boat and bicycle rental, storage, and repair (s)
- Radios, phonographs, parts, and records (dc)
- Pianos and other musical instruments (dc)
- Radio repair (s)
- Photo developing and printing (s)
- Photographic studios (s)
- Collectors' net acquisition of stamps and coins (s)
- Hunting dog purchase and training, and sports guide service (s)
- Veterinary service and purchase of pets (s)
- Flowers, seeds, and potted plants (ndc)
- Clubs:
  - Athletic and social (s)
  - Luncheon
- Commercial amusements, n. e. c. (s)

IX. Recreation

Camp fees (s)

Clubs:
- School fraternities
- Fraternal, patriotic, and women's

X. Private education and research	*X. Private education and research*

XIII. Miscellaneous

Trucks and busses
Building materials
Farm implements
Hardware

Senator BYRD. The next witness is Mr. John Wicker, Jr.

Mr. Wicker is a very prominent member of the Virginia Bar, and has been for 25 years. He has been a member of the State Senate of Virginia; was president of the State electoral college in 1944; and was temporary chairman of the Constitutional Convention of Virginia in 1945.

STATEMENT OF JOHN J. WICKER, JR., AMERICAN MUTUAL ALLIANCE

Mr. WICKER. Thank you, Senator Byrd, for that generous comment. I appreciate it.

Mr. Chairman, and gentlemen, I am truly grateful for the opportunity to appear before you, and knowing how much you are pressed for time, I will take less than 3 minutes.

I have a prepared statement here which I am not going to read, but which I believe fully answers and refutes the misrepresentations that have been made to you by representatives of a notorious propaganda association calling itself the National Tax Equality Association, which misrepresentations were intended to convey the utterly erroneous impression that mutual fire and casualty companies are either tax-exempt or are not bearing their full share of the tax burden.

Both sides of this question were fully heard and considered by the Ways and Means Committee, and that committee agreed with these mutuals, and refused to recommend any change in the existing mutual insurance tax laws, which have proven satisfactory for the past 9 years to the Treasury Department.

Instead of recommending any changes at this time, the Ways and Means Committee directed the staff of your own Joint Committee on

Internal Revenue Taxation, together with the Treasury, to make a thorough and impartial study of the taxation of all types of fire and casualty insurance companies, and this study should be completed in a few months hence.

If it were not for this special study we would have desired a full hearing, and I believe that we could have convinced you, as we did the Ways and Means Committee, that mutual fire and casualty insurance companies are already fully and fairly taxed.

However, since we feel your committee would not care to consider this involved and controversial subject until after you have had the benefit of your special study by your own staff, we are merely presenting our own statement with the attached exhibits, and ask that it be received as a part of the record of these hearings.

If, perhaps, any member of this committee has any doubt in the meantime, we believe that a reading of our statement, and the exhibits therewith, will remove that doubt.

In closing, Mr. Chairman, I want to leave with you a photostatic copy of a proposed advertisement which contains a libelous attack upon this committee and upon the Congress as a whole.

This proposed advertisement was very recently, July 20, sent out all over this country, with the suggestion that it be published locally in August.

It was sent out by the National Tax Equality Association, and in sending it out, as you will see from their transmittal letter, they said it could be published over their name or over a fictitious name that they suggested.

This is nothing less, as you will see, than a brazen attempt to undermine the confidence of the American people in the honor and integrity of their duly-elected representatives.

Thank you.

Senator MILLIKIN. What, may I ask, do you desire of this committee?

Mr. WICKER. As we have indicated here, we believe, Senator Millikin, that the logical course is for the committee to defer consideration of this involved subject until you have the benefit of the study before you, and we will have an opportunity to discuss it—the study of your own joint committee staff and the Treasury Department, and then we think you can make an intelligent decision.

Senator MILLIKIN. As I understand it, the House requested that kind of a study, and I assume that some kind of a study of that kind is under way?

Mr. WICKER. Yes, sir.

Senator MILLIKIN. Thank you, sir.

(The prepared statement of Mr. Wicker together with the exhibits follow:)

REPLY TO ATTACKS ON THE TAX STATUS OF MUTUAL FIRE AND CASUALTY INSURANCE COMPANIES

(Statement submitted on behalf of American Mutual Alliance)

INTRODUCTION

My name is John J. Wicker, Jr. I am a lawyer with offices in Richmond, Va. The experience I gained while serving on the finance committee in the Senate of Virginia enables me to appreciate the perplexing problems of any legislative committee dealing with taxation. I am appearing here today on behalf of American

Mutual Alliance, which is an association of mutual fire-insurance companies and mutual casualty insurance companies with its headquarters in Chicago, Ill. Its members write a substantial part of the fire and casualty insurance risks insured by mutual insurance companies in the United States. While I speak as counsel only for these companies which write a substantial portion of the business, material presented applies to mutual fire and casualty insurance generally.

Inasmuch as no official proposals are before your committee, to our knowledge, for any change in the law under which mutual fire and casualty insurance companies (which I will refer to hereafter as these mutuals) have been paying very substantial Federal income taxes each and every year since 1942, perhaps it may appear unusual or even unnecessary to discuss their Federal income-tax status.

After considering arguments on both sides of the matter, in its recent hearings, the House Ways and Means Committee decided against making any change at this time. The House committee directed that the staff of your Joint Committee on Internal Revenue, together with the Treasury Department staff, make a special study of the Federal tax status of fire and casualty insurance of all types—mutual, stock, reciprocal, etc. The mutual fire and casualty insurance companies promptly offered their complete cooperation to the joint committee staff and to the Treasury staff in this study. On the other hand, NTEA and other antimutual propagandists have appeared before your committee and urged premature action, before this study can be completed.

ATTACKS ON MUTUAL TAX STATUS ARE INSPIRED BY VICIOUS ANTIMUTUAL PROPAGANDA CAMPAIGN

Unfortunately, some vicious attacks have been made upon the tax status of these mutuals. There have been many misrepresentations and distortions of fact, not only before your committee but also by circulars and publications, as part of a Nation-wide campaign designed to flood the Congress and the general public with antimutual proganda.

Its obvious purposes are—

(1) To undermine the confidence of the American people in mutual insurance, in an effort to cripple the mutuals, and to weaken, if not destroy, the wholesome competition now existing between the mutuals and the stock insurance companies. This campaign involves such devises as insinuating that those who become mutual insurance policyholders are helping to advance the cause of communism and socialism, etc.

(2) To high-pressure Congress into ignoring the fundamental differences between these mutuals and the stock companies in the hope that these mutuals will be saddled with an unfair tax burden, and with the further hope that the present exemption of the very small mutual insurance companies will be wiped out.

Unless these misrepresentations are publicly answered and refuted, the public may be left under the false impression that the Congress and the Treasury Department have granted, and are permitting to continue, some sort of unfair tax preference for these mutuals. Accordingly we are making this statement.

MUTUALS PAID OVER $80,000,000 FEDERAL INCOME TAXES, 1942–50

The fact that mutual fire and casualty insurance companies have been paying substantial Federal income taxes since the enactment of the present mutual tax provision in 1942 is attested by the following tabulation:

1942	$5,125,000	1948	$11,237,000
1943	5,859,000	1949	12,816,000
1944	6,893,000	1950	13,851,000
1945	7,622,000		
1946	8,596,000	Total	80,803,000
1947	9,804,000		

These figures represent the Federal income taxes incurred by mutual fire and casualty insurance companies as shown by Best's Insurance Reports for 1942; Best's Aggregates and Averages 1943–49 and for 1950 by Best's Insurance Guide (1951 edition).

As shown above, during the period of the present mutual tax formula (1942–50, both inclusive) the Federal income taxes incurred by these mutuals have aggregated more than $80,000,000; have been substantial each and every year; have steadily increased each year; so that for the year 1950, alone, the tax incurred by these mutuals aggregated more than $18,000,000.

THE MUTUAL INSURANCE PREMIUM DOLLAR ACTUALLY PRODUCES GREATER FEDERAL REVENUE

But even this total of more than $80,000,000 constitutes only a portion of the income-tax revenue which the Federal Government derives as a result of the operations of mutual fire and casualty insurance companies. A much larger amount is paid in Federal income taxes by commercial policyholders as a result of dividend refunds made to them by these mutuals.

During the 9-year period, 1942 to 1950 inclusive, on the basis of the most complete data available, these mutuals saved for their millions of policyholders and refunded in cash to those policyholders, the very substantial sum of $1,144,407,000. It is conservatively estimated that about 80 percent of the fire and casualty insurance premiums come from commercial policyholders, rather than nonbusiness sources. Accordingly, when these savings are returned to business policyholders, they become fully taxable to those business policyholders, as a reduction in their cost of doing business.

When the Federal income taxes incurred by these mutual business policyholders on these premiums returned as savings are added to the Federal income taxes paid by the mutual fire and casualty insurance companies themselves, it can be seen at a glance that the mutual-insurance dollar is producing greater revenue for the Federal Government than the stock-insurance dollar. Included as exhibits herewith, are two statistical charts which very clearly illustrate the fact that, under the existing tax formulas, the Federal Government has derived proportionately more in taxes from mutual fire and casualty insurance than from stock insurance. Best's Insurance Guide (1951 edition) reveals the interesting fact that the majority of stock fire and casualty companies, accounting for a substantial volume of their total business, incurred no Federal income-tax whatever for one or more years during the last 5 years.

MORE THAN 97 PERCENT OF MUTUAL INSURANCE BUSINESS PAYS SUBSTANTIAL INCOME TAXES EVERY YEAR—ONLY SMALL MUTUALS, DOING LESS THAN 3 PERCENT OF THE BUSINESS, ARE TAX-EXEMPT

It frequently is charged that "80 percent of all mutuals are exempt from taxation." This is a half-truth of the sort more misleading than an absolute falsehood.

It is true that many small mutual companies (usually local farm mutuals) are tax-exempt and that they aggregate about 78 percent of the number of all mutual fire and casualty insurance companies. However, it also is true that the premiums written by all of these small companies combined account for less than three percent of the total volume of mutual fire and casualty insurance premiums written. Conversely, the mutual companies writing more than 97 percent of the total volume of mutual fire and casualty insurance business are not tax-exempt, but on the contrary have been subject to substantial Federal income taxes in each year since 1942. Thus, even though 78 percent of the number of mutual companies may be exempt, 97 percent of the mutual premium volume is taxed—and taxed substantially.

The only mutuals exempt from income taxes are those whose gross receipts (from premiums, assessments, investment earnings, and other income, without any deductions for expenses or losses) do not exceed $75,000 per year. In fact, the average gross income of these small mutuals from all sources (in 1948) was less than $18,000 per year. Often total receipts of these small mutuals merely represent the total of the losses for which the policyholders have assessed themselves, and they usually have little or no investment income.

When the mutual tax formula was developed by the Congress in 1942, the Treasury Department, the staff of the Joint Committee on Internal Revenue, the Senate Finance Committee, and the House Ways and Means Committee were all of the opinion that these small mutuals should continue to be exempt from Federal income taxes. The tax-exempt status of these very small mutuals is analogous the tax-exempt status of millions of individual citizens whose gross income is so small that no income tax is imposed upon them.

FUNDAMENTAL DIFFERENCES BETWEEN STOCK AND MUTUAL INSURANCE

Certain basic facts must be kept in mind before an evaluation can be made of the relative tax positions of the mutuals on the one hand, and of the stock companies on the other hand.

There are several important fundamental differences between mutual and stock insurance companies. The mutual is a nonprofit organization, designed and operated on behalf of its policyholders to provide insurance protection at the lowest reasonable net cost. In contrast, the stock insurance company is designed primarily—and quite properly so—to produce profits for its third-party owners, the stockholders, while providing insurance protection for its policyholders.

Mutual insurance companies and stock companies are chartered and regulated under State insurance laws. Unlike the stock companies, mutual companies have no stockholder-owners. Anyone obtaining a policy of mutual insurance becomes thereby a member of a mutual insurance company, and is carried individually by name on the mutual company's membership rolls. He cannot secure a policy of mutual insurance without becoming a member; he cannot become a member in any other way.

Mutual policyholder-members generally are the only ones who have the legal right to control mutual companies through the election of directors. In stock companies, the policyholders have no voice or control in the management, or in the election of directors, since these powers are vested entirely in the third-party stockholder-owners.

In both stocks and mutuals, the funds which are collected as insurance premiums and derived from investments, are used first for the payment of losses and expenses, and to set up such reserves as may be required by law or by good business judgment for the safe operation of the company.

In mutual companies, funds not required for these purposes are returned to the policyholders. These refunds are paid in cash, unless the policyholder desires to apply them in payment for new insurance.

In stock companies, on the other hand, funds not required for such purposes may be paid to the stockholders as dividends at any time the directors choose; or such funds may be retained in the company, thereby enhancing its net worth and usually enhancing the market value of its stock.

In a mutual insurance company there are no "profits," and there never are any third-party owner interests. The assets of a mutual insurance company remain at all times the property of its policyholders. In case of liquidation of a stock insurance company all surplus assets belong to the third-party stockholders, and the policyholders have no right to any part of such surplus assets. On the other hand, in case of liquidation of a mutual company, all of its surplus assets belong to the policyholders.

RECOGNIZING THESE FUNDAMENTAL DIFFERENCES, CONGRESS HAS DEVISED DIFFERENT TAX PLANS

The Congress always has recognized the important fundamental differences between stock and mutual insurance, and in consequence has devised different plans for taxing the two different types of insurance companies, just as it has devised different plans for taxing many other types of business corporations.

Stock fire and casualty insurance companies pay Federal income taxes at regular corporation rates upon the gains they make for the account of their stockholders in all income transactions with third parties; these are the gains growing out of insurance transactions with their policyholders, and the gains growing out of investment transactions.

Mutual fire and casualty insurance companies have no stockholders. They pay Federal income taxes at regular corporation rates upon the gains they make for the account of their policyholders in all income transactions with third parties; these are the gains growing out of investment transactions. No gains for the account of policyholders of a mutual insurance company can grow out of insurance transactions with policyholders; the two groups are identical.

In 1942, after the Treasury Department and the staff of the Joint Committee on Internal Revenue had given long and careful study to the subject of insurance taxation, the Congress—then, as now, facing emergency wartime revenue demands—adopted a tax plan for mutual fire and casualty insurance companies. Under this plan, found in section 207 of the Internal Revenue Code, each of these mutuals must pay each and every year—

Either a tax at regular corporation rates on its entire net investment income (net income from interest, dividends, rents, and net capital gains);

Or a tax of 1 percent of the total of its gross income from interest, dividends, rents, and of its gross premiums (less return premiums, premiums paid for reinsurance, and dividend refunds to policyholders).

MUTUALS HAVE A "TAX FLOOR" PRODUCING SUBSTANTIAL TAXES EVERY YEAR

The mutuals must compute the tax by both methods, and must pay the larger of the two taxes.

Consequently, these mutuals have a substantial income tax floor. Neither the stock insurance companies nor any other substantial group of taxpayers has any such income tax floor. Every increase in the corporate tax rates, as applied to ordinary business corporations, is applicable to the investment income of the mutuals. Thus, when corporate tax rates rise, the dollar amount of tax paid on their investment income increases. Ever since 1942, this mutual tax plan has produced a steady and substantial flow of tax revenue for the Federal Government without regard to whether mutual insurance operating experience was good or bad.

On the other hand, the stock insurance company is taxed only on its net profits, after it has first deducted all losses and operating expenses and any dividends to policyholders. Thus when a stock insurance company's profits are high, its Federal income taxes rise; when its profits are low, its Federal income taxes decline; when it incurs a net loss for the year, a stock insurance company incurs no Federal income tax.

The effect of the present different tax formulas on stock and mutual fire and casualty insurance companies is shown by a study of Federal income taxes incurred in 1949 by 475 stock companies and 313 mutual companies, and the taxes incurred in 1950 by identically the same lists of companies. The figures are shown in Best's Insurance Reports and Best's Insurance Guide.

The net premium volume of these 475 stock companies increased 9 percent in 1950, as compared to 1949, but their Federal income taxes incurred decreased 25 percent.

The net premium volume of these 313 mutual companies increased 8⅔ percent and their taxes increased more than 13 percent.

ANTIMUTUAL PROPAGANDA VARIES AS STOCK INSURANCE PROFITS VARY

These wide variations in the year-to-year amounts of Federal income taxes paid by stock insurance companies have somewhat the result which would be expected. When stock insurance taxes increase, there are loud complaints about Federal income-tax discrimination; when stock insurance taxes are low, then the complaints quiet down. Hostile propaganda against the Federal income-tax position of the mutuals has gone into high gear in 1949 and 1950, following years in which many stock insurance companies made profits which—while they were entirely legitimate—were greater than any in their previous histories. Years like 1946 and 1947—when mutual taxes were relatively higher than those of stock, fire, and casualty insurance companies—were years when the antimutual propagandists spoke only in whispers.

ANTIMUTUAL STATEMENTS AND STATISTICS ARE UNFAIR, DISTORTED AND MISLEADING

On July 19, Prof. O. Glenn Saxon, appeared before your committee on behalf of the NTEA. He presented as his own, almost word for word, the antimutual statement presented to the Ways and Means Committee last February by Mr. William E. Webb, Jr., a stock insurance agent. The Webb statement, in turn, had been taken largely from the statement filed with both of the congressional tax-writing committees in 1950 by the National Tax Equality Association—the notorious propaganda organization which raises hundreds of thousands of dollars each year for use in attempting to high-pressure Congress into following the partisan tax recommendations.

It is not clear whether Professor Saxon was offering his own conclusions as a serious economics scholar, or was merely serving as an advocate for the NTEA's standard arguments.

A part of these presentations consisted of statistics which have been relied upon and quoted from by several other witnesses speaking on behalf of the NTEA. Although these raw statistics were taken from the authoritative Best's Fire and

Casualty Aggregates and Averages, their use in these witnesses' attempted analysis of Federal tax principles is very unfair and misleading in several important particulars.

(1) They completely ignored the factor of refunds to policyholders (although for mutual companies these refunds aggregated $842,422,652 for 1943–49). This device seriously distorted the significance of the statistics.

(2) They included in the data concerning mutuals figures based on the health and accident premiums of certain substantial mutual companies, which may be taxed on a very different basis. This constituted a further distortion.

(3) They ignored the very substantial income taxes incurred by commercial policyholders on approximately 80 percent of the mutual policyholder refunds, the inclusion of which would have shown that the mutual premium dollar produces even more Federal tax revenue than the stock premium dollar.

DIFFERENCES IN TAXES OR PERCENTAGES DO NOT NECESSARILY INDICATE TAX INEQUALITY OF UNFAIR DISCRIMINATION

However, even on the basis of the NTEA-Webb-Saxon statistics, unfair as they are to the mutuals, it should be apparent that differences in amount or percentages of taxes do not necessarily indicate any sort of tax inequality or unfair discrimination.

For example, the NTEA-Webb-Saxon statistics reveal the following amazing tax differences between the stock fire companies and the stock casualty companies:

(1) For the period 1943–49, inclusive: The stock fire companies incurred taxes averaging only 16.8 percent of their total profits, which was nearly one-fourth less than the 21.5 percent incurred by the stock casualty companies. Yet during this entire period stock fire companies and stock casualty companies were governed by identically the same tax law (sec. 204, Internal Revenue Code).

(2) Furthermore, for the year 1945 the taxes of the stock casualties companies, in relation to profits, were nearly twice as large as those of the stock fire companies, as shown by the following tabulation.

	Earned premiums	Total profits	Federal income taxes incurred	Tax as percent of total profits
Stock fire companies	$1,128,133,000	$328,089,000	$16,313,000	5.0
Stock casualty companies	1,127,884,000	222,151,000	21,472,000	9.7

Consequently, when such substantial tax differences between different groups of stock companies, under the same section of the tax law, are not regarded as evidence of tax discrimination or tax inequality, no one can reasonably argue that tax differences between stock companies on the one hand and mutual companies on the other hand are any evidence of tax inequality or unfair discrimination.

IDENTICAL TAX PLANS ARE NOT REQUIRED BETWEEN ALL COMPETITORS

Three competing merchants, in the same line of business and with similar locations and business volumes, may pay income taxes which differ vastly in amounts, percentages of volume, and percentages of profit. One operates as a sole proprietor, one as a partnership, another as a corporation. Yet these differences in taxes of competitors are not regarded as tax inequalities, because of the fundamental differences in the nature and operation of the three competitors. Similarly, even though stock and mutual insurance companies are competing in the same lines of business, they are fundamentally different in character, ownership, purpose, and so forth. Consequently, it is only natural and proper that they should have different tax plans which may develop varying differences in taxes from time to time.

NTEA ATTEMPTED ANALOGY BETWEEN LIFE INSURANCE TAXATION AND FIRE AND CASUALTY INSURANCE TAXATION IS NOT SOUND

In his statement to this committee Professor Saxon undertook to argue that there is no legal or economic justification for taxing mutual fire and casualty insurance corporations on a gross-receipts basis while taxing their capital-stock competitors on net income as all other corporations are taxed. He indicated Federal income-tax provisions for mutual and stock fire and casualty insurance companies should be identical because provisions for taxing mutual and stock life insurance companies are identical.

The efforts of uninformed advocates to force sweeping changes in the laws governing one of the major economic institutions of this country—insurance—upon the basis of illogical and unsound comparisons of just this sort is the principal reason why there is congressional sentiment for a thoroughgoing study of the whole subject of insurance taxation by experts who understand the many complexities involved.

In the first place, mutual fire and casualty insurance companies are not taxed upon a gross-receipts basis; they are taxed at full corporation rates upon the only income they receive from outside sources—namely, investment income. The gross-receipts tax is merely a "floor" below which the tax on investment income is not permitted to fall. This is essentially the basis upon which life insurance companies now pay Federal income taxes, except that only a small portion of their investment income is considered taxable income, whereas the entire net investment income of mutual fire and casualty insurance companies is considered taxable income.

In the second place, the great bulk of life insurance, both stock and mutual, is written on the participating plan, by both types of companies. Consequently it is understandable that life insurance companies are taxed identically.

In the third place, it is assumed that there are important differences between life insurance and fire and casualty insurance which may have significant legal and economic bearings upon the Federal income-tax plans suitable for the different types of carriers. The fact that a life insurance policy may run for scores of years without possibility of a change in rate, and that each policy must at some time mature, is a situation very different from that existing in fire and casualty insurance, and makes it possible to determine with great accuracy how much each policy will cost the life insurance company. Life insurance policies are sold upon a basis which requires a certain amount of investment earnings; in fire and casualty insurance rates are made without giving any consideration to investment earnings.

It might be pointed out that, according to Professor Saxon's own figures covering the 1943–49 period, the actual dollar amount of Federal income taxes incurred by both stock and mutual fire and casualty insurance companies was exactly 25.2 percent of the dollar amount of the net investment gain of each type of carrier.

It might also be pointed out that Professor Saxon's contention that the present tax situation will lead to domination of the fire and casualty insurance business by mutual companies—as he says the life insurance business now is dominated—cannot be demonstrated historically. The mutual life insurance companies were writing most of the life insurance in this country long before there was a Federal income tax law, and the mutual life insurance companies have maintained their position under a system of so-called tax equality with stock life insurance companies.

ANTIMUTUAL PROPAGANDA, WHILE FALSELY PORTRAYING MUTUALS AS TAX SLACKERS, IGNORES FACT THAT MUTUALS IN SOME YEARS HAVE PAID HIGHER TAXES THAN STOCK COMPANIES

Some recent antimutual propaganda circulars actually claim that the mutuals are tax slackers—tax 4-F's—who did not pay their fair share of Federal income taxes during and since World War II. Such claims are viciously false, and they display a cynical disregard for the intelligence of Congress and of the public. Even the NTEA-Webb-Saxon statistics show that in 1944, 1946, and 1947, mutual fire companies as a group paid relatively higher Federal income taxes than stock fire companies, and also that in 1946 and 1947, the mutual casualty insurance companies as a group paid relatively higher taxes than the stock casualty companies.

The NTEA-Webb-Saxon statement attempted to explain away these higher mutual payments in some years by stating: "The only year in the 7-year period studied (1943–49) in which the fire-insurance business was close to normal was the year 1949." As a matter of fact, in 1949 the stock fire insurance companies' profits were so great that in that year alone they incurred as much in Federal income taxes as they had during the six previous years combined. Here is what the Alfred M. Best Co., Inc., the standard insurance statistical authority, says in its annual review as of the end of 1950:

"The year (1950) ranks among the best the fire companies have ever had and firmly establishes the last 3 years as the most profitable 3-year period in fire-insurance history."

MUTUALS SOMETIMES PAY MUCH HIGHER TAXES THAN STOCK COMPANIES

The following arbitrarily selected comparisons are taken from Best's Insurance Reports, covering the latest 5-year period 1946–50, inclusive:

	Net earned premiums [1]	Federal income taxes [2]
Massachusetts Bonding & Insurance Co. (Massachusetts) (stock casualty)	$132,900,000	−$228,000
Michigan Mutual Liability Co. (Michigan) (mutual casualty)	81,603,000	+791,000
Sun Indemnity Co. (New York) (stock casualty)	27,888,000	−45,000
Security Mutual Casualty Co. (Illinois) (mutual casualty)	20,313,000	+402,000
New York Casualty Co. (New York) (stock casualty)	37,208,000	−319,000
Iowa National Mutual Insurance Co. (Iowa) (mutual casualty)	38,200,000	+401,000
Louisville Fire & Marine Insurance Co. (Kentucky) (stock fire)	6,801,000	−73,000
Implement Dealers Mutual Fire Insurance Co. (North Dakota) (mutual fire)	6,580,000	+73,000
Hamilton Fire Insurance Co. (New York) (stock fire)	1,972,000	−1,000
Granite Mutual Insurance Co. (Vermont) (mutual fire)	1,114,000	+2,000
Dubuque Fire & Marine Insurance Co. (Iowa) (stock fire)	16,815,000	+1,000
Employers Mutual Fire Insurance Co. (Wisconsin) (mutual fire)	9,548,000	+103,000

[1] These "net-earned premiums" are stated before deduction of policyholder refunds-dividends.
[2] − indicates tax credit carry-over and no income tax incurred.

Anyone caring to use the same tactics employed by antimutual propagandists could cite the foregoing comparisons as proof that mutual companies pay relatively much higher Federal income taxes than stock companies do. They are not cited here for any such purpose but merely as glaring examples, exactly opposite, in appearance and effect, to the statistical comparisons cited by tax critics of the mutuals.

This spurious statistical comparison device has been widely and indiscriminately used by Massachusetts Bonding & Insurance Co. in its wholesale distribution of antimutual propaganda. While criticizing the mutual tax status, this particular stock company overlooked the weakness of its own tax record as shown by Best's Insurance Guide (1951 ed.) This stock company, for the years 1946–50 had a premium volume aggregating nearly $133 million, and distributed more than $3½ million in dividends to stockholders; but it incurred no Federal income taxes whatever for the entire 5-year period as a whole. In fact this stock company actually ended the period with a tax credit carry-over of more than $200,000.

Great differences in tax payments frequently develop between stock insurance companies of the same type, which approximately the same business volume, even though they are subject to the same identical tax law.

For example, during the 5-year period (1944–48), inclusive, Firemen's Insurance Co. of New Jersey, a stock fire company, with a premium volume of approximately $124,000,000 paid Federal income taxes aggregating $303,000. For the same period National Fire Insurance Co. of Connecticut, another stock fire company, with a volume of more than $125,000,000, paid Federal income taxes aggregating a little more than $8,000. Even Professor Saxon in his testimony before this committee on July 19, deplored what he calls the intellectual dishonesty of "statistical manipulation by both capital stock and mutual analysts." In the next breath, however, Professor Saxon proceeds to adopt the unfair and misleading NTEA statistics as the basis of a performance in statistical manipulation, thus providing a classic example of the practice he professed to deplore.

As pointed out in the attached reprint of editorials from the Richmond, Va., News Leader, the facts are that, for any given period of time, some mutual companies will pay relatively higher Federal income taxes than some stock companies; and some stock companies will pay relatively higher taxes than some mutuals. This is entirely natural, entirely proper, and no indication whatsoever of any "tax inequality."

MUTUAL TAXES ARE VERY SUBSTANTIAL AND CANNOT REASONABLY BE CALLED TOKEN TAXES

A typical antimutual misrepresentation is that the mutuals pay only token taxes. Considering the nonprofit character and ownership of these mutuals, Federal income taxes incurred aggregating more than $80,000,000 (1942-50), including taxes of more than $18,000,000 in 1 year, cannot fairly or reasonably be considered as merely token taxes.

MUTUALS ENJOY NO TAX ADVANTAGE BY DEDUCTION OF POLICYHOLDER DIVIDENDS BECAUSE INCOME-TAX LAW GIVES STOCK COMPANIES IDENTICALLY SAME RIGHT OF DEDUCTION

The NTEA argument that these mutuals enjoy a tax advantage over their stock-company competitors because the mutuals are permitted to deduct all dividend refunds to policyholders before computing Federal income taxes has been demonstrated to be utterly ridiculous. The Federal tax laws allow to both stock companies and mutual companies identically the same full deductions for dividend refunds to policyholders. Consequently, whatever has been said or written alleging tax discrimination, tax preference, or tax inequality, because of the dividend distribution of savings to mutual members, has no application whatsoever to mutual fire and casualty insurance companies' distribution of dividend refunds to their policyholders.

Last February Professor Saxon, speaking on behalf of the NTEA before the Committee on Ways and Means asserted that "the mutuals, because of tax inequality, can charge much lower rates by giving larger dividends." Apparently, the professor was then ignorant of the fact that stock companies have the same right as the mutuals to make policyholder refunds before computing Federal income taxes. The NTEA statistics, which the professor adopted, show in themselves that the alleged tax differential averages only a little more than $1 per $100 of premium volume. Clearly, this could not account for policyholder dividend refunds averaging $12 to $20 per $100 of premium.

In the interim Professor Saxon seems to have discovered this fact, for in his July 10 testimony before your committee, he proposed that the credit for policyholders' dividends be removed completely for both stock and mutual companies.

This shift in position by the NTEA, and its witness, reveals clearly that its program is not really "tax equality" but rather that it seeks the complete destruction of a method by which mutual, and certain stock insurance companies, have furnished insurance to the public at lower costs.

The real objective of the NTEA in its insurance activities is to prevent the continuance of this method of doing business.

The lower cost of mutual insurance is based on a combination of lower loss costs and lower expenses resulting from superior safety engineering and more efficient operation.

SLOWER GROWTH OF STOCK COMPANY ASSETS HAS BEEN CAUSED BY STOCK COMPANY DISTRIBUTION OF PROFITS TO THIRD-PARTY STOCKHOLDERS

It also has been charged that, in recent years, the growth of the assets of the mutual fire and casualty companies has been disproportionately greater than that of the stock companies. Even so, no one questions the sufficiency of the stock companies' assets. A little analysis shows the reason why the rate of growth of mutual assets has been somewhat greater. During the period 1948-49, the stock insurance companies paid cash dividends totaling $674,064,348 to their third-party stockholders. Had only a portion of these dividends been retained in the stock companies for the protection of their policyholders the gap would have been narrowed appreciably.

DIFFERENT TAX PLANS FOR STOCKS AND MUTUALS HAVE HAD NO APPRECIABLE EFFECT ON THEIR RELATIVE COMPETITIVE POSITIONS

Some antimutual critics have bitterly complained that the Federal tax status of the mutuals has had a crippling competitive effect upon their stock insurance competitors. In fact these critics have gone so far as to predict that a continuation of the two separate tax plans would inevitably result in serious progressive losses of business by the stock companies to the mutuals until the latter would completely dominate the field. Reference to the authentic records exposed the utter lack of foundation for these complaints.

In 1942 the combined stock fire and casualty volume of net premiums amounted to $1,778,920,000; while the combined mutual fire casualty volume of net premiums written amounted to $491,700,000. Thus, in 1942 the stock companies enjoyed 78.3 percent of the business.

In 1950 the combined stock fire and casualty volume of net premiums written amounted to $4,616,188,000; while the combined mutual fire and casualty volume of net premiums written amounted to $1,251,707,000. Thus, in 1950 the stock insurance companies enjoyed 78.6 percent of the combined volume.

This demonstrates that the alleged differences in the tax plans of the stocks and the mutuals have had no appreciable influence or effect upon their relative competitive situation. In view of the maintenance of stock company domination in the volume of fire and casualty insurance, what can be the real purpose of the antimutual critics of the present tax formula—the destruction of mutual fire and casualty insurance, and monopoly for stock companies?

EXISTING TAX LAWS HAVE NOT ENABLED MUTUALS TO RETAIN UNREASONABLE RESERVES

It is, of course, well recognized that all insurance companies must have, and must retain, reasonable reserves for the protection of the policyholders and the public to meet the uncertainties and contingencies of the future. Some antimutual propagandists have stated that the present tax laws have enabled these mutuals to retain larger reserves proportionately than those retained by the stock companies. Complete refutation of this charge is apparent from Best's Insurance Reports and even from the NTEA statistics. According to these NTEA statistics for the period 1913 to 1949, inclusive, the stock fire and casualty insurance companies' total premium income amounted to $20,886,290,000. During this period their surplus reserves increased $1,485,556,000. This increase amounted to 7.11 percent of premium volume. During the same period—and using the same statistics—the mutual fire and casualty insurance companies had a total premium volume of $5,810,398,000 and their surplus reserves during that period increased $363,745,000. This mutual increase is only 6.25 percent of premium volume.

"MUTUAL" HAS PRECISE MEANING IN INSURANCE

Antimutual propagandists contend that the word "mutual" has no significance in connection with a large fire or casualty insurance company, and that it is "only incidental" that the "capital" of a mutual insurance company comes from its policyholder-members, while that of a stock insurance company is subscribed by its stockholders. The answer is, the fact that a stock insurance company belongs to its third-party stockholders, while a mutual insurance company belongs solely to its policyholder-members, is a fundamental difference between the two types of insurance organizations; it has far-reaching legal and economic consequences and it is not "merely incidental."

It has been charged that there is no "mutuality of interest between the mutual policyholders because they vary greatly in their locations, business and property." The answer is, there is a definite mutuality of interest among all of the policyholders in a mutual insurance company, regardless of the variety of their property, their individual locations or their vocations. They have the common interest of protecting themselves effectively from economic loss at the lowest cost compatible with sound protection, and an interest in being willing to exercise the degree of care and personal responsibility which mutual insurance companies require of their members.

Members of fraternal, religious, political, or labor organizations, for example, also may be widely separated geographically, and may vary widely in other respects; and yet no one could reasonably argue that they do not have mutuality of interest as to their basic objective.

Some critics characterize the nonprofit nature of mutual insurance as the "nonprofit myth", but they have never been able to demonstrate that any "profits" are derived from the insurance operations of a mutual insurance company. These critics quarrel also with the fact that the very nature of insurance prohibits the precise determination of the actual cost to any insurance company of carrying any individual risk; but these critics ignore the well-known fact that insurance—whether stock or mutual or otherwise—cannot operate other than through the averaging process.

TAXATION OF INSURANCE SURPLUS IS NOT IN THE INTEREST OF THE PUBLIC

Some questions have been raised about the possible taxation of additions to policyholders' surplus. Mutual insurance companies and their policyholders believe that taxation of funds accumulated for the sole purpose of providing against present losses and for future protection is basically unsound. Such taxation would be most undesirable from the standpoint of the insuring public.

Additions to policyholder surplus are made for the purpose of providing the necessary protective reserves—which are required either by law or by sound business judgment, or both—for the protection of the policyholders who have paid in their premiums. Unquestionably, it is to the best interest of the general public that insurance companies of all types should acquire and maintain adequate reserves to guard against the losses for which the insurance is provided. While the policyholders' surplus of these mutuals has steadily increased through the years, this increase has only been in keeping with the increase in the total amount of risk assumed by mutual insurance companies. Any independent examination of the policyholders' surplus of the mutuals makes it obvious that, while this surplus is reasonable, it is in no degree excessive in relation to potential insurance liability at risk. Apart from all of the listed considerations, the policyholders' surplus of the mutuals remains the property of the policyholders.

TAXING MUTUALS AND STOCKS ON SAME PLAN WOULD NOT END THE CONTROVERSY

Some ask: "Why not tax both mutual and stock fire and casualty insurance companies on the same plan, and end all this controversy?"

The simple fact is that both mutual and stock fire and casualty insurance companies pay substantial Federal income taxes—they each pay taxes upon that portion of their net margins which the law considers to be "profits." In the mutual company this is "net income from investments;" in a stock company this is the combination of "net income from underwriting and investments." In addition, a mutual company is subject to "tax floor" of 1 percent of its gross income, even if this must be paid out of funds that are not properly considered "profits."

As heretofore pointed out, fundamental differences in structure, ownership, purpose, and operational methods not only justify but actually require different tax plans between these mutuals and the stock companies so as to avoid injustice to one group or the other.

We do not believe that the Congress will make revolutionary changes in the tax structure of these mutuals merely to appease the propaganda-inspired complaints of critical competitors.

The differences between mutual and stock insurance are so clear-cut as to be obvious, and they have been reviewed in this statement. Such differences as exist in the amounts of "profits" subject to Federal income tax are differences which develop with inescapable logic out of a simple fact: The margin between the amount collected from policyholders and the amount required to furnish them with insurance protection is a fund which belongs to the policyholders in a mutual company, but it is a fund which belongs to the stockholders in a stock insurance company.

CONCLUSION

We are not here criticizing the tax status of the stock companies, nor do we suggest any change therein. We have referred to the stock companies only because it has been necessary to do so to accomplish the sole purpose of this statement—namely, to answer and refute the unfair and misleading attacks which have been made on the tax status of the mutual fire and casualty insurance companies.

It is true that mutual fire and casualty insurance companies are taxed on a basis different from stock insurance companies, but that fact does not prove that the different methods of taxing these different types of insurance companies result in tax inequality, tax discrimination, or any "loop-hole" in the Federal income-tax laws. On the contrary, the different bases of taxation exist because of the very real and fundamental differences between stock insurance companies on the one hand and mutual insurance companies on the other hand.

The fact that both types of companies pursue many similar business practices in the course of their operations in no way destroys or modifies their basic differences in character and purpose. For many years, mutual fire and casualty insurance companies have been paying substantial Federal income taxes year in and year out, regardless of whether the operating experience of these companies is favorable or unfavorable. The income taxes paid by these mutuals constitute a steady and substantial and constantly increasing source of Federal Government revenue.

The Congress is being subjected to an increasing flood of communications, inspired by the deliberate distortions and malicious misrepresentations of NTEA and other antimutual groups.

However, if the views of the more than 20,000,000 mutual policyholders were to be communicated to the Congress, they would be based upon truth and logic. Furthermore, they would far outnumber and outweigh all the antimutual communications from every source.

Important tax changes, affecting a vital Nation-wide industry such as mutual insurance, should never be influenced by partisan propaganda. Consideration of any such changes should come only after careful, impartial and objective study of the important subject of taxation of mutual insurance.

SUMMARY OF CROSS EXAMINATION OF JOHN J. WICKER, JR., BY HOUSE COMMITTEE ON WAYS AND MEANS, MARCH 15, 1951

Upon conclusion of presentation of Mr. Wicker's statement, committee chairman R. L. Doughton inquired why—if mutual insurance companies have no tax advantage over stock insurance companies under present law—both should not be placed in exactly the same category in order to stop arguments. Wicker pointed out that the two types of companies are entirely different in corporate structure, purpose, and organization, and that simply because they are competing with each other is no reason for their being placed in the same tax basket. He pointed out that all of the funds which come in to a mutual insurance company come from the policyholders, and that even in a stock company the funds which the stockholders have contributed in order to get the business started are only a drop in the bucket as compared with the funds which policyholders contribute to these stock insurance companies.

Chairman Doughton inquired whether the statement that the management of a mutual insurance company is in the hands of the policyholders is true in reality or just in theory. Wicker pointed out that perhaps a parallel situation exists in the degree of management exercised by the stockholders of a stock corporation, who also have the right to control the business. He gave it as his opinion that the degree of participation by policyholders in the mutual insurance company is larger than the degree of participation by stockholders in the average stock insurance company.

Chairman Doughton inquired whether management of mutual insurance companies receive large salaries. Wicker disclaimed knowledge of the subject, but suggested that if the committee wished to write the five largest mutual and the five largest stock fire and casualty insurance companies as to the salaries paid their presidents, he would pledge that the mutual officials would reply.

Chairman Doughton inquired whether the savings returned to policyholders constitute profits; Wicker stated that the amounts turned back to policyholders are in the nature of an overpayment by the policyholder when he pays his original premium, and that there is no profit to the policyholder.

Representative D. A. Reed, member of the committee, inquired as to how voting rights are determined in a mutual insurance company, and how the amount of premiums to be collected is determined. He summarized his understanding of the situation by stating that good management requires that mutual insurance companies make their estimates of premiums required large enough to cover their probable losses so that it will not be necessary to come back to the policyholders for additional payments, that people wish to protect themselves by paying a large enough premium so the company will be sound, and that they know they will have returned to them what is not required by the company. He asserted that he could see no profit in such a situation.

Representative Reed also took occasion to criticize sharply the National Tax Equality Association, characterizing it as "one of the worst racketeering organizations that was ever permitted to exist in this country."

Wicker pointed out that some of the misstatements which have been circulated around the country have tried to make a left-handed attempt to connect mutual insurance with communism, despite the fact that mutual insurance is conducted today on identically the same principles as it was founded upon by men such as George Washington, Benjamin Franklin, and Thomas Jefferson.

Representative H. P. Eberharter, member of the committee, inquired about the claim that had been made by previous witnesses that if mutual fire and casualty insurance companies were taxed upon the same basis as stock fire and casualty insurance companies it would mean additional Federal revenue of $60,000,000. Wicker explained that this statement was based upon distortion of statistics that ignored return of $842,422,052 in savings or dividends to policyholders. He stressed the fact that mutual policyholders who are engaged in business pay Federal income taxes upon dividends returned to them by their mutual insurance companies, in the sense that these are offset against deductions taken as business expense for insurance premiums paid, and that in 1949 Federal income-tax revenue on this account actually exceeded $40,000,000. He said it was estimated that 80 percent of the savings refunded by mutual fire and casualty insurance companies are to commercial policyholders, that Federal income taxes are paid on this money, and that a 30-percent tax rate would be about the average in recent years.

Representative R. W. Kean, member of the committee, inquired whether money paid in by policyholders is so used as to result in earnings for the mutual insurance company. Wicker explained that money received from policyholders indeed is invested by a mutual company, but in response to a further question by Representative Kean said that such earnings have been taxed to mutual fire and casualty insurance companies at the regular corporation rates since 1942.

Representative N. M. Mason, member of the committee, said: "If there is any one member of this committee interested in tax equality I think I am he. I am interested in tax equality on these mutual fire insurance and mutual casualty insurance companies. I have gone into this matter with our staff and with Mr. Stam. I have been assured by our staff that since 1942 when the Congress by law placed a tax upon the mutual insurance companies, either the corporate tax upon the net income of your companies, or 1 percent of the gross income of your companies, whichever is the larger. Since that time the payment from the mutual insurance companies has fluctuated with that of the stock companies, but as a whole they have at least equaled what the stock companies have had to pay because even when you could not show any net profits or net income, you had to pay 1 percent on your gross income, which the stock companies do not have to pay. So from what our staff has told me and from the tax basis upon which you are now being taxed since 1942, I feel that your mutual insurance companies, both fire and casualty, have been paying their proportionate share of taxes as well as the stock insurance companies. I am honest enough to assert that here in public. I think you are in a different class entirely from mutual savings banks and the building and loan associations because of this tax which was placed upon you in 1942. I think up until that time there was a little reason for some questioning."

Representative B. P. Harrison, member of the committee, inquired whether the fact that mutual companies charge policyholders considerably less than stock companies do for insurance is due to a tax differential, or what does account for the ability of mutual companies to return dividends. Wicker said that the tax differential's effect is negligible, but that savings could be returned because of the mutuals' lower selling cost, their lower losses due to fire prevention and safety engineering activity, and the fact that there were no third-party stockholders to whom dividends have to be paid.

Representative T. E. Martin, member of the committee, asked for further information upon the previous Wicker testimony that the mutual insurance premium dollar already produces more Federal income-tax revenue than the stock insurance premium dollar.

Wicker explained that from 1943 through 1949 Federal income taxes paid by mutual fire and casualty insurance companies were $62,207,000. Assuming that 80 percent of mutual policyholders to whom savings are returned are commercial policyholders, and that their Federal income tax rate averages about 30 percent, the income tax liability of mutual commercial policyholders on dividends returned during the 1943–49 period was about $202,000,000. Added to the Federal income taxes paid by the mutual fire and casualty insurance companies themselves that gives a total of $264,478,000, or 4.54 percent of the gross total mutual premium volume for the period.

During the same period the stock fire and casualty insurance companies paid $494,195,000 in Federal income taxes, and returned as savings to their policyholders $136,941,000. Applying the same 30 percent average Federal income tax rate, and assuming that 80 percent of the stock insurance policyholders are commercial policyholders, these policyholders had tax liability of $32,085,840. Stock companies also paid during that period $674,054,000 to their stockholders. Assuming again an average tax rate of 30 percent, these stockholders incurred tax liability of $192,210,000. So the total of Federal income tax liability of stock fire and casualty insurance companies, their policyholders on account of returned savings, and their stockholders on account of stockholder dividends was $729,277,000 for the 1948–49 period. This is only 3.5 percent of the gross total stock premium for that period.

Chairman Doughton asked what becomes of savings returned to policyholders as far as taxation is concerned, either as to stock or mutual policyholders, if the policyholders do not pay taxes on these refunds. Wicker said that the commercial policyholder incurs Federal income tax liability on these refunds, assuming that he has deducted the original cost of his insurance as a business expense. The insurance company—stock or mutual—does not pay Federal income tax on these savings returned to policyholders, any more than another type of businessman would pay Federal income tax on discounts he allows his customers.

Chairman Doughton inquired as to the difference, as far as taxation is concerned, between the dividends paid to a stockholder in an insurance company, and the savings or dividends returned to a policyholder as a refund of the unused portion of his insurance premium. Wicker indicated that a dividend paid to a stockholder of an insurance company who had invested his money in the organization in the hope of earning a profit would be taxable like any other income the stockholder receives. The savings or dividend refunded to a policyholder likewise would be taxable to a commercial policyholder like any other income, in the sense that it offsets the deduction of the cost of his insurance which the commercial policyholder previously has made as a business expense.

Federal Government actually derives more tax revenue proportionately from mutual fire and casualty insurance than from stock insurance

[As shown by following comparison for the entire period (1942–50 inclusive) that present tax laws (sec. 204 for stock insurance; sec. 207 for mutual insurance) have been in effect]

	Stock companies	Mutual companies
Gross premium volume	$34,825,000,000	$7,490,000,000
Less dividend refunds to policyholders	179,458,000	1,144,407,000
Net total premium volume	34,645,542,000	6,345,593,000
Net underwriting income[1]	642,040,000	228,978,000
Net investment income	2,374,900,000	303,171,000
Total profits (net underwriting and investment income)	3,016,940,000	532,149,000
Income tax incurred:		
By companies	634,272,000	80,803,000
By commercial policyholders on dividend refunds	43,069,920	346,657,680
By stockholders	296,510,676	....
Total income tax incurred	973,852,596	427,460,680
Ratio of total tax:		
To net total premium volume ... percent	2.81	6.67
To total profits (net underwriting and investment income) ... percent	32.27	80.32

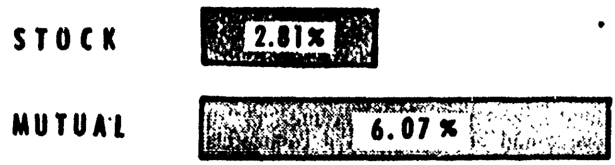
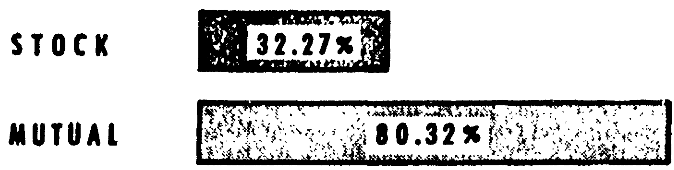
COMPARISON OF TAXES AS PERCENTAGE OF PREMIUM VOLUME:



COMPARISON OF TAXES AS PERCENTAGE OF TOTAL "PROFITS":



[From the Richmond News-Leader, March 19, 1951]

WHOSE STATISTICS?

One of the arguments raised in the House of Representatives by supporters of the Reconstruction Finance Corporation dealt with the RFC's benefit to small business. It was submitted, for example, that in the last 6 months of 1950, some 89.55 percent of the RFC's loans were small-business loans in amounts of less than $100,000. There's another way of looking at it. When one considers the abuse of discretion in the handling of large sums of the taxpayers' money—which was the principal point at issue—it is of passing interest to note that dollarwise, only 28.37 percent of the RFC's loans were in this small-business classification. More than two-thirds of the RFC's loan volume in this period went to business that was pretty big, indeed.

We are reminded in this connection of the phony assault made recently on the mutual insurance companies. Some of the stock company spokesmen hollered that approximately 80 percent of the mutuals are tax exempt. But what they failed to disclose was that mutuals with 97 percent of the premium volume are not tax exempt at all.

In these days, when figures are flying every which way, it is a good idea to look all gift statistics in the mouth. A lot of them are like Senator McCarthy's charges—sound and fury, signifying nothing.

[From the Richmond News-Leader, March 28, 1951]

MISLEADING, HE SAYS OF INSURANCE STATISTICS

EDITOR THE NEWS-LEADER:

Speaking of "Whose Statistics?" [March 10], the least I would think one could say is that yours are certainly misleading.

HARRY F. THOMPSON,
Manager, Virginia-Carolina Department,
Boston Insurance Co., Old Colony Insurance Co.

Reader Thompson refers to our criticism of tactics used by stock insurance companies in warring upon the mutuals. Among the statistics put out by the stock companies was a statement that 80 percent of the mutual fire and casualty companies are tax exempt. The figure was the truth but not all the truth. The truth is that the small companies making up this 80 percent account for less than 3 percent of the total volume of mutual premiums; the companies with 97 percent of the premium volume are not tax exempt. Mr. Thompson's further ammunition is commented upon editorially today.—EDITOR.

[From the Richmond News Leader, March 23, 1951]

FIGHTING THINGS OUT WITH STATISTICS

A Richmond insurance man, writing in today's Forum, charges that certain figures we presented editorially on March 10 were certainly misleading. Our correspondent is a partisan for the stock insurance companies, who now are engaged in a knock-down-and-drag-out battle with the mutual-insurance companies. These combatants, represented on both sides by well-heeled lobbies, are pounding at each other before the House Ways and Means Committee. It is a whale of a fight, and important to every person who carries fire insurance on his home or liability insurance on his automobile, but our observations today are concerned not with the outcome, but with the weapons. This donnybrook is being fought with statistics, as so many Washington rhubarbs are fought these days, and the struggle emphasizes all over again the advisability of teaching some statistical analysis in the public schools. It has been said that statistics, like quotations from Jefferson, can be used to prove anything; the stock insurance companies are giving this maxim a wonderful time.

Our correspondent, for example, in an earnest effort to set us aright on the question at issue, sends along a hand-out from the W. J. Perry insurance office in Staunton. These widely publicized statistics, which appear in table I, are for the year 1949 alone; they are supposed to show how lightly the mutuals are taxed and how heavily the stocks are burdened. At first glance, the figures look powerfully impressive. But look at table II. It sums up premium and tax figures for the identical companies in 1946. From these statistics, it seems apparent that the stock companies had a free ride while the mutuals were paying heavily.

The facts are, of course, that mutuals and stocks are fundamentally different in their structure and operations, and they wisely are taxed on a different basis. In a lean year, the mutuals pay relatively high taxes, while the stocks pay low ones; in fat years, the picture is reversed. The mutuals are not getting any free ride; the stocks apparently are putting up a fair share of the tax burden. There's merit on both sides, but to read their statistics—and especially the stock companies' statistics—you'd never on earth believe it.

TABLE I

Company	1949 net premiums	1949 Federal income tax
Maryland Casualty	$60,012,000	$1,553,830
American Mutual	62,227,000	533,610
Travelers Indemnity	73,550,000	3,546,605
Lumbermen's Mutual	83,526,000	777,988
U. S. F. & G	100,071,000	2,732,250
State Farm Mutual	82,448,000	874,917
Indemnity of N. A	44,301,000	1,569,140
Hardware Mutual	32,788,000	279,802
Hartford Accident & Indemnity	115,019,000	3,562,455
Liberty Mutual	131,411,000	1,497,959

TABLE II

Company	1946 net premiums	1946 Federal income tax
Maryland Casualty	$38,083,000	None
American Mutual	36,756,000	$525,000
Travelers Indemnity	40,421,000	None
Lumbermen's Mutual	44,218,000	398,000
U. S. F. & G	56,026,000	None
State Farm Mutual	61,121,000	697,000
Indemnity of N. A	27,647,000	121,000
Hardware Mutual	21,473,000	182,000
Hartford Accident & Indemnity	66,892,000	None
Liberty Mutual	74,527,000	1,144,000

Senator BYRD. Following Mr. Wicker's testimony, I have a statement from the opposing side, which I will insert.

(The statement referred to by the National Association of Insurance Agents follows:)

STATEMENT OF THE NATIONAL ASSOCIATION OF INSURANCE AGENTS

There is a distinct inequality in the method of taxing mutual and stock fire and casualty insurance companies.

The facts are:

1. Stock fire and casualty insurance companies are taxed at regular corporate and capital gain rates under section 204 of the Internal Revenue Code.

2. Mutual fire and casualty companies are taxed under section 207 of the Internal Revenue Code, which provides a tax of 1 percent of their premiums or corporate rates on their investment income whichever is the larger.

Both sections 204 (*c*) (11) and 207 provide for deductions on otherwise taxable income, in the form of "dividends or similar distributions paid or declared to policyholders in their capacity as such * * *. The term 'paid or declared' shall be construed according to the method of accounting regularly employed in keeping the books of the insurance company."

Thereby there was conferred upon mutual companies a tax privilege which has raised the issue of inequality in taxing insurance companies. The simple question here involved is as to whether all insurance companies, both stock and mutual, should be taxed on a corporate basis on the net income, as ordinarily understood in the insurance business, or whether a Federal preference shall be provided for mutual companies.

We believe that any tax structure created by the Congress on corporations should have as its definite intention, the levying of a tax on the net income of a corporation before dividends are distributed. It would therefore appear that the exemption provided in section 204 (*c*) (11) and section 207 of the Internal Revenue Code should be eliminated or other provision made for equality of taxation as applied to all insurance corporations.

Senator MILLIKIN. Mr. Chairman, I would like to request that this advertisement and letter of transmittal mentioned by Mr. Wicker be incorporated at the end of his remarks.

Senator BYRD. It will be done.

(The advertisement referred to follows:)

NATIONAL TAX EQUALITY ASSOCIATION,
Chicago 4, Ill., July 20, 1951.

DEAR MEMBER AND FRIEND: The Senate Finance Committee is now rewriting the 1951 tax bill. Chairman George, of Georgia, and other members of this tax-writing committee have repeatedly stated they intend to include provisions that will tax the profits of co-ops, mutuals and other tax-exempt commercial businesses.

They should have as much public support as possible. One sure way to develop this backing in your own community is through the use of newspaper advertising. We are enclosing proofs of four new newspapers advertisements, which we would like to see published in your community. We suggest that you get in touch with your local newspaper man and two or three of your business friends. Together, you can quickly make the necessary financial arrangements to underwrite the small cost of publishing these ads in your home city newspaper.

We will supply mats, free and postpaid, upon receipt of the enclosed order blank from you or your newspaper. The ads can be started at once, running one ad per week for 4 weeks.

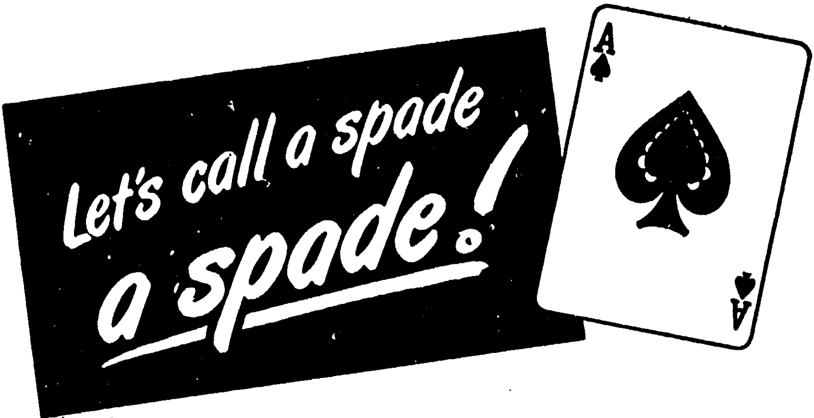
The name of this association may be used at the bottom as the sponsor, or the ads may be signed by your local State tax equality organization, or "Local Independent Taxpaying Businessmen"[1] if you have no local or State group. Just send the order blank and we will take over from there and communicate direct with the newspaper you designate thereon.

These ads should appear in every American city to arouse taxpayers to the necessity of demanding that tax-exempt businesses—now escaping a billion dollars in income tax every year—be fully taxed before your or anyone else's taxes are again increased. Please call your newspaper and a number of your business associates now and enlist them in seeing that these ads are underwritten for publication in your city.

Tax equality can be achieved in this 1951 tax bill if we act now.

Very truly yours,

GARNER M. LESTER, *President.*



Congress is playing politics with YOUR INCOME!

CONGRESS is about to boost *YOUR* income tax again. At the same time, purely for ulterior political reasons, still permits income tax exemption to more than 35,000 profit-making business corporations. Congress allows *ONE OUT OF TEN* corporations to pay little or no Federal income tax on their business profits. Congress lets them escape taxes of more than *ONE BILLION DOLLARS A YEAR*...while taxing *YOU* more!

Congress adds that billion dollars onto the tax bill of *you* and every other income taxpayer. Their political chicanery is costing you money ...will soon cost *you* more unless *you demand an end to this tax discrimination.*

These profit-making businesses coddled by Congress...in return for political favors from their leaders and promoters ...are COOPERATIVES, SAVINGS AND LOAN ASSOCIATIONS, MUTUAL SAVINGS BANKS, CREDIT UNIONS, and other cooperative banks and corporations of this kind. Even some MUTUAL FIRE AND CASUALTY INSURANCE COMPANIES are given favored tax treatment that adds to *YOUR* tax bill.

It is time *you* protested against Congress making a political football out of your pay check, your pocketbook, or your business income. Write your Congressman and your two United States Senators *immediately*.

The House of Representatives has *ALREADY PASSED* the new 1951 tax bill raising your individual and business income taxes by billions, but doing absolutely nothing to tax the billions in profits of these tax-exempt corporations. This legislation is *NOW* before the Senate.

Make your resentment of this *tax discrimination* against *you* heard in the halls of Congress. Write your Congressman and Senators today. Demand that they tax the untaxed *first*, before increasing your or anyone else's Income Tax again.

* * *

Write your Congressmen—c/o House Office Bldg.

Write your Senators—c/o Senate Office Bldg.

WASHINGTON, D. C.

(IMPRINT)

[1] Suggested fictitious name.

Senator BYRD. Mr. Theodore K. Warner, Jr.

STATEMENT OF THEODORE K. WARNER, JR., CHAIRMAN, FEDERAL TAXATION COMMITTEE, PENNSYLVANIA STATE CHAMBER OF COMMERCE

Mr. WARNER. Mr. Chairman and gentlemen of the committee, my name is Theodore K. Warner, Jr.

I am an attorney in Philadelphia, and chairman of the Federal taxation committee of the Pennsylvania State Chamber of Commerce.

It is my privilege today to present the views of that business organization.

In view of the time limitation, I shall ask leave to submit our statement, and I shall summarize certain portions of it.

We can appreciate some of the difficulties encountered by your committee in formulating tax legislation in this trying period. No one wants to pay higher taxes, but unless the $68 billion in expenditures forecast by Secretary Snyder for 1952 can be cut substantially—and we think they should be—there will apparently be a sizable deficit if taxes are not decreased.

I understand that much higher Federal spending is being forecast for 1953. State and local government budgets are approximately $20 billion. To balance our rising governmental budgets—they should be balanced in this inflationary period, if at all possible—will require taxes which are equivalent to one-third or more of our National income.

Our organization commends the constructive work of the members of this committee who are advocating the elimination of waste in both military and nonmilitary spending.

We are also convinced that the first approach to the perplexing tax problem should be the removal of wasteful and inflationary spending by the Federal, State, and local governments.

If taxes must be increased to balance the 1952 budget, we believe the new taxes should be directed toward a major source of inflation, consumer spending. The present stem of excises is no longer adequate to provide the revenues required from consumer taxes. Of total consumer spending of $179 billion in 1949, according to Secretary Snyder, only $4.6 billion, or 22.7 percent, were subject to Federal taxation. A huge area of consumer spending, in spite of its inflationary pressure, is not being taxed.

The present excises are also discriminatory in their effects. Some lines of consumption, without any clear reason, are singled out for especially heavy taxation. Some competing lines are not taxed at all. Some industries must struggle along under a heavy tax load which they endeavor to shift to consumers while other industries are free from this handicap.

Our selective excises have had a long historical development and will doubtlessly need to be retained in some form, preferably along more rational lines. Canada, Britain, and other leading national governments have eventually found it necessary to supplement their traditional sources of revenue with a broad consumer tax. We believe that the time has come in this country, when personal and corporate income taxes have already been pushed to staggering heights, that any new revenues required should be sought in the consumer area in order to prevent the overburdening of investment and production and to discourage inflationary consumer spending.

Two general types of consumer taxation are available, the one to be imposed at the manufacturing level and the other at the retail level. Either would be preferable to increases in the individual and corporate income taxes. Along with the majority of the State chambers of commerce affiliated with the Council of State Chambers of Commerce, we in Pennsylvania believe a consumer purchase tax, collected through retailers, would be superior to a tax collected through manufacturers.

We fear that hidden taxes would invite governmental extravagance, ever-increasing budgets, and still higher taxes. A tax on retail purchases would bring home to the citizens the gravity of our financial situation and enable them to contribute fairly to the cost of national defense.

A tax at the retail level, charged separately to purchasers, would disturb price ceilings less than a tax on manufacturing or wholesaling. It would enter into business costs to a much lesser extent and would not pyramid from producer to producer and dealer to dealer. Because the tax would have a broader base, it could raise an equivalent amount of revenue at a lower rate.

A tax on retail purchases could be excluded from cost-of-living wage contracts, unlike a tax on manufacturing, which would commonly be concealed in retail prices. This would be an important factor in the fight against inflation. Unless selective and general excise and income taxes, imposed to finance defense expenditures, are excluded from escalator clauses in wage contracts to the extent their burdens on individuals are known, those receiving higher wages under such contracts will escape their fair share of national defense costs. Similarly, a tax on retail purchases could be eliminated from parity prices for farm products much more readily than a tax on manufacturing.

From an administrative standpoint, a tax on retail purchases could be administered within the existing framework of the Bureau of Internal Revenue organization. Ample precedent for filing returns and paying the tax exists in the present regulations relating to the selective retailer's excises, to which many retailers are already subject, and the social-security tax, which affects almost all retailers. In many cases, the total taxable sales for the year would be the same amount as the total sales shown on the retailer's income-tax return. It is believed that a Federal tax on retail purchases could be collected without undue inconvenience to the retailer or the Government.

To minimize the taxation of the lower incomes, purchases of foods in the retail markets to be consumed off the premises should be exempt. It is assumed that rentals for living quarters and payments for the purchase of homes would not be taxed. A large part of the typical family budget would thus be exempt from taxation.

The type of tax on purchases at retail which we propose should yield an annual revenue of approximately $1 billion at 1 percent and proportionately more revenue at a higher rate.

These are the several reasons why the Pennsylvania State Chamber of Commerce would prefer a general consumption tax at the retail level. Other witnesses appearing before you have emphasized the advantages of a tax at the level of final manufacture.

We noted that businessmen, in general, are in agreement of the desirability of some type of broad base consumer tax. Our group favors it at the retail level.

Heavier consumer taxation is one of the harsh requirements in this critical period, if we are to go ahead and fight inflation as well as the Communists.

But the inflation which inevitably would be engendered by deficit spending would be far more destructive of living standards and American institutions than higher taxes.

There are no exemptions from inflation. It hits the poorest along with the richest.

If additional revenues must be raised, after consumer taxation has been increased to its rational limits, we would favor a higher tax on personal incomes. But the tax increase in the House bill seems to us to be harsh and inequitable. We would prefer a flat increase of not over 8 percentage points on each bracket of surtax net income. More desirable, since the higher brackets already pay very steep taxes, would be to add any additional tax imposed as a flat rate increase upon the income remaining after exemptions, deductions, and present income taxes.

We oppose the increased taxation of capital gains and the lengthening of the holding period for capital assets as measures which would discourage risk taking and productive investment. As a general principle, we believe that capital losses should be recognized to the extent that capital gains are taxed.

After thoughtful consideration, we wish to register our opposition to the introduction of the proposed withholding taxes on dividends, interest, and royalties at this time. The enumeration of the dividends and interest received by the taxpayer on his return and the complete reporting by corporations of dividends distributed should first be given a fair trial.

As an organization of businessmen, we are opposed to the proposed increase in the normal tax on corporations from 25 to 30 percent, resulting in most cases in an over-all tax rate, exclusive of excess-profits taxes, of 52 percent, retroactive to January 1, 1951. Even during World War II the maximum tax upon corporations not subject to the excess-profits tax was 40 percent. The proposed rate imposes an unconscionable burden upon productive enterprise.

We oppose the provision in the House bill reducing the excess-profits credit based on income from 85 percent of the taxpayer's base period average earnings to 75 percent of such earnings.

The effect of such a provision would be to subject 25 percent of a taxpayer's admittedly normal earnings to an excess-profits tax, with a combined rate upon a portion of the income as high as 82 percent.

We believe that such action is wholly unwarranted. In view of the continuing decline in the purchasing power of the dollar, it would be more realistic and equitable to increase the credit to 100 percent of average earnings. This would provide some measure of relief against the necessity of paying excess-profits taxes on more inflated dollar profits which do not, in fact, reflect any increased economic benefit.

The effect of these changes has been presented to you by Secretary Snyder (table 16) which indicates that a corporation, whose present income is identical with that in the base period, will be taxed 54 to 59.4 percent. This exceeds even the recommendation of a 55-percent rate proposed by the Treasury Department.

Furthermore, the maximum tax upon every dollar of corporate income would be increased from 62 to 70 percent, leaving but 30 percent for capital expenditures, debt payments, and dividends.

We are opposed to the provision in the House bill which would allow only one surtax exemption and one minimum excess-profits credit to a related group of corporations.

Many of our industries find it necessary to operate by means of two or more corporations under arrangements which were made years ago solely for business reasons and without regard to Federal income or excess-profits taxes.

In such cases, each of the corporations is a valid, subsisting corporation. The proposed provision, however, would in practical effect refuse to recognize the separate existence of these corporations and to this extent would repudiate the corporate entity theory of taxation, which has been sustained in numerous court decisions.

The allowance of a single credit to related corporations would be similar to the single credit now granted to affiliated corporations filing a consolidated return. Incongruously, however, the law exacts a penalty from those corporations which choose to file a consolidated return. If a provision of this type is necessary to prevent tax evasion, it should be aimed only at those whom it is intended to affect.

We, therefore, recommend that if such a provision is found to be necessary, it should be applicable only to those corporate divisions which occur after January 1, 1951, and which are undertaken without a legitimate corporate business purpose other than tax reduction.

Then there are technical amendments which are not appropriate to present at this time at any length. On the other hand, we never seem to have any opportunity to present these technical problems which are thorns in the flesh, so I will just enumerate them.

Under the historical method, the taxpayer must make his election with his return. Under all other provisions he has the opportunity later to take the higher credit. This way, if his guess is right, he pays a fair amount of tax. If his guess is wrong, the Government has a windfall.

The net capital addition under the historical method is not 12 percent, as it is under the others, and it should be.

Your estimated base period net income on industry classification works out inequitably and there are many publications on that issue.

Many corporations have attacked the $20,000,000 limitation on the growth formula. The inadmissible assets factor should be applied as it was in World War II, rather than the present excess-profits-tax law.

On the income tax, we notice that they have corrected one of the inequities on the sale of a residence. We hope that sometime they will get around to considering the problems of the corporations operating in foreign countries with your foreign tax credit.

Then there is the 2-percent penalty, and all the other things that you have heard comments upon at many other occasions.

Thank you very much.

(The prepared statement of Theodore K. Warner, Jr., previously referred to, follows:)

STATEMENT OF THEODORE K. WARNER, JR., ON BEHALF OF THE PENNSYLVANIA STATE CHAMBER OF COMMERCE

Mr. Chairman and gentlemen of the Senate Finance Committee, my name is Theodore K. Warner, Jr. I am an attorney in Philadelphia and chairman of the Federal taxation committee of the Pennsylvania State Chamber of Commerce. It is my privilege today to present the views of that business organization.

I can appreciate some of the difficulties encountered by your committee in formulating tax legislation in this trying period. No one wants to pay higher taxes, but unless the $68 billion in expenditures forecast by Secretary Snyder for 1952 can be cut substantially—and we think they should be—there will apparently be a sizable deficit if taxes are not increased. I understand that much higher Federal spending is being forecast for 1953. State and local government budgets are approximating $20 billion. To balance our rising governmental budgets—and they should be balanced in this inflationary period, if at all possible—will require taxes equivalent to one-third or more of our national income.

Our organization commends the constructive work of the members of this committee who are advocating the elimination of waste in both military and nonmilitary spending. We are also convinced that the first approach to the perplexing tax problem should be the removal of wasteful and inflationary spending by the Federal, State, and local governments.

If taxes must be increased to balance the 1952 budget, we believe the new taxes should be directed toward a major source of inflation, consumer spending. The present system of excises is no longer adequate to provide the revenues required from consumer taxes. Of total consumer spending of $179 billion in 1949, according to Secretary Snyder, only $40.6 billion, or 22.7 percent, were subject to Federal taxation. A huge area of consumer spending, in spite of its inflationary pressure, is not being taxed.

The present excises are also discriminatory in their effects. Some lines of consumption, without any clear reason, are singled out for especially heavy taxation. Some competing lines are not taxed at all. Some industries must struggle along under a heavy tax load which they endeavor to shift to consumers while other industries are free from this handicap.

Our selective excises have had a long historical development and will doubtlessly need to be retained in some form, preferably along more rational lines. Canada, Britain, and other leading national governments have eventually found it necessary to supplement their traditional sources of revenue with a broad consumer tax. We believe that the time has come in this country, when personal and corporate income taxes have already been pushed to staggering heights, that any new revenues required should be sought in the consumer area in order to prevent the overburdening of investment and production and to discourage inflationary consumer spending.

Two general types of consumer taxation are available, the one to be imposed at the manufacturing level and the other at the retail level. Either would be preferable to increases in the individual and corporate income taxes. Along with the majority of the State chambers of commerce affiliated with the Council of State Chambers of Commerce, we in Pennsylvania believe that a consumer purchase tax, collected through retailers, would be superior to a tax collected through manufacturers.

We fear that hidden taxes would invite governmental extravagance, ever-increasing budgets and still higher taxes. A tax on retail purchases would bring home to the citizens the gravity of our financial situation and enable them to contribute fairly to the costs of national defense.

A tax at the retail level, charged separately to purchasers, would disturb price ceilings less than a tax on manufacturing or wholesaling. It would enter into business costs to a much lesser extent and would not pyramid from producer to producer and dealer to dealer. Because the tax would have a broader base, it could raise an equivalent amount of revenue at a lower rate.

A tax on retail purchases could be excluded from cost-of-living wage contracts, unlike a tax on manufacturing, which would commonly be concealed in retail prices. This would be an important factor in the fight against inflation. Unless selective and general excise and income taxes, imposed to finance defense expenditures, are excluded from escalator clauses in wage contracts to the extent their burdens on individuals are known, those receiving higher wages under such contracts will escape their fair share of national defense costs. Similarly, a tax on retail purchases could be eliminated from parity prices for farm products much more readily than a tax on manufacturing.

From an administrative standpoint, a tax on retail purchases could be administered within the existing framework of the Bureau of Internal Revenue organization. Ample precedent for filing returns and paying the tax exists in the present regulations relating to the selective retailer's excises, to which many retailers are already subject, and the social-security tax, which affects almost all retailers. In many cases, the total taxable sales for the year would be the same amount as the total sales shown on the retailer's income tax return. It is believed that a Federal tax on retail purchases could be collected without undue inconvenience to the taxpayer or the Government.

The State taxes on retailing prove that purchases at retail can be taxed readily and productivity. Some argue that because many of the States tax retailing, a Federal tax of the same type should not also be imposed. But no clear division in this respect exists even today. Several of the States also tax manufacturing, and the Federal Government already has a number of taxes collected directly from consumers, including the admissions tax. As a matter of fact, a Federal tax on retailing does not duplicate State taxes of this type to a greater extent than a tax on manufacturing, since both types of taxes are ultimately shifted to the consumer and, hence, constitute taxes on consumer spending.

To raise the maximum revenue while curbing inflationary consumer spending, the base of the tax on retail purchasing should include such services as those provided by barber and beauty shops, hotels, laundries, dry cleaners, repair shops, and certain other dispensers of service. Transportation and communication services are already being taxed. We do not have in mind the taxation of such services as those of architects, accountants, and attorneys, which are commonly employed in business, or those of the medical profession or of morticians.

To minimize the taxation of the lower incomes, purchases of foods in the retail markets to be consumed off the premises should be exempt. It is assumed that rentals for living quarters and payments for the purchase of homes would not be taxed. A large part of the typical family budget would thus be exempt from taxation.

The type of tax on purchases at retail which we propose should yield an annual revenue of approximately $1 billion at 1 percent and proportionally more revenue at a higher rate.

These are the several reasons why the Pennsylvania State Chamber of Commerce would prefer a general consumption tax at the retail level. Other witnesses appearing before you have emphasized the advantages of a tax at the level of final manufacture. We are encouraged to observe that businessmen are in general agreement on the present desirability of some type of broad-based consumer tax.

Let us consider some of the effects of the alternatives to a general consumption tax. If Congress raises a billion dollars by extending the system of selective excises and advancing the rates of certain existing excises, the lower incomes will probably bear the brunt of this commodity-tax increase. If the corporate income and excess profits taxes are advanced, much of this increase will presumably be shifted to consumers. Moreover, as the corporate and personal income taxes are raised, investment is penalized and economic incentives are dulled, to the disadvantage of production and employment. In whatever direction we may move to raise very substantial new revenues, we shall probably find we cannot escape the unpleasant necessity of going directly or indirectly to the only remaining source of such revenue, the incomes and spending of the middle and lower income brackets. We would prefer to go directly to that source with a general tax on consumer purchasing.

Heavier consumer taxation is one of the harsh requirements in this critical period, if we are to fight inflation as well as the Communists. But the inflation which inevitably would be engendered by deficit spending would be far more destructive of living standards and American institutions than higher taxes. There are no exemptions from inflation. It hits the poorest along with the richest. Food costs, rents, and the prices of everything purchased by the poor are advancing. We cannot escape the insidious inroads of inflation and its hidden, universal, and cruelly inequitable burdens unless we choose the lesser evil of heavier taxation of consumers.

If additional revenues must be raised, after consumer taxation has been increased to its rational limits, we would favor a higher tax on personal incomes.

But the tax increase in the House bill seems to us to be harsh and inequitable. We would prefer a flat increase of not over 8 percentage points on each bracket of surtax net income. More desirable, since the higher brackets already pay very steep taxes, would be to add any additional tax imposed as a flat-rate increase upon the income remaining after exemptions, deductions, and present income taxes.

We oppose the increased taxation of capital gains and the lengthening of the holding period for capital assets as measures which would discourage risk-taking and productive investment. As a general principle, we believe that capital losses should be recognized to the extent that capital gains are taxed.

After thoughtful consideration, we wish to register our opposition to the introduction of the proposed withholding taxes on dividends, interest, and royalties at this time. The enumeration of the dividends and interest received by the taxpayer on his return and the complete reporting by corporations of dividends distributed should first be given a fair trial.

As an organization of businessmen we are opposed to the proposed increase in the normal tax on corporations from 25 to 30 percent, resulting in most cases in an over-all tax rate, exclusive of excess-profits taxes, of 52 percent, retroactive to January 1, 1951. Even during World War II the maximum tax upon corporations not subject to the excess-profits tax was 40 percent. The proposed rate imposes an unconscionable burden upon productive enterprise.

We oppose the provision in the House bill reducing the excess-profits credit based on income from 85 percent of the taxpayer's base period average earnings to 75 percent of such earnings. The effect of such a provision would be to subject 25 percent of a taxpayer's admittedly normal earnings to an excess-profits tax, with a combined rate upon a portion of the income as high as 82 percent. We believe that such action is wholly unwarranted. In view of the continuing decline in the purchasing power of the dollar, it would be more realistic and equitable to increase the credit to 100 percent of average earnings. This would provide some measure of relief against the necessity of paying excess-profits taxes on mere inflated-dollar profits which do not in fact reflect any increased economic benefit.

The effect of these changes has been presented to you by Secretary Snyder (table 10), which indicates that a corporation whose present income is identical with that in the base period will be taxed 54 to 59.4 percent. This exceeds even the recommendation of a 55 percent rate proposed by the Treasury Department. Furthermore, the maximum tax upon every dollar of corporate income would be increased from 62 percent to 70 percent, leaving but 30 percent for capital expenditures, debt payments, and dividends.

We are opposed to the provision in the House bill which would allow only one surtax exemption and one minimum excess-profits credit to a related group of corporations. Many industries find it necessary to operate by means of two or more corporations under arrangements which were made years ago solely for business reasons and without regard to Federal income or excess-profits taxes. In such cases, each of the corporations is a valid, subsisting corporation. The proposed provision, however, would in practical effect refuse to recognize the separate existence of these corporations and to this extent would repudiate the corporate entity theory of taxation, which has been sustained in numerous court decisions. The allowance of a single credit to related corporations would be similar to the single credit now granted to affiliated corporations filing a consolidated return. Incongruously, however, the law exacts a penalty from those corporations which choose to file a consolidated return. If a provision of this type is necessary to prevent tax evasion, it should be aimed only at those whom it is intended to affect. We, therefore, recommend that if such a provision is found to be necessary, it should be applicable only to those corporate divisions which occur after January 1, 1951, and which are undertaken without a legitimate corporate business purpose other than tax reduction.

We believe that the first step to be taken in the amendment of the Excess-Profits Tax Act should be the correction of inequities which appear to be the result of errors in draftsmanship. Since these provisions should be corrected for the first year under the act, it is essential that the amendments be made immediately.

Taxpayers should not be required to elect at their peril to compute their excess-profits credit upon either the asset method or the historical invested capital method. No similar election is required as between the invested capital method and the income method, the code merely providing that the credit shall be computed upon whichever method produces the lesser tax. A similar rule should be provided with respect to the computation of credit under either the asset method or the historical capital method.

Section 435 of the Internal Revenue Code should be amended so as to allow a rate of 12 percent of the amount of net new capital addition for the taxable year in cases where the excess-profits credit is computed under the historical invested capital method. Such a credit is allowed to taxpayers using both the average-earnings method and the asset method of computing excess-profits credit, and a similar allowance should be granted to those taxpayers who use the historical invested capital method.

Sections 442 to 446 of the Internal Revenue Code should be broadened to provide a more detailed breakdown of industry groupings in cases where a substitute base period net income is to be computed by reference to an industry classification base period yearly rate of return. The present law provides that such base period rates of return shall be determined for approximately 60 major industry groupings. It is clear, however, that within any single industry group there may be a wide variety of subgroups for which there would be widely varying rates of return on total assets. As a result severe hardships will result to those taxpayers whose normally anticipated rates of return will be substantially higher than the average for the major industry grouping applicable under the present statute. Similarly, a distinct advantage will be granted to those companies whose normal rate of return is materially less than the average for the major industry grouping. This situation would be alleviated if the law provided for a more detailed breakdown of industry groupings for the purpose of applying the relief sections.

Section 435 (e) (1) (A) of the code should be amended by repealing retroactively to the first excess-profits tax year the requirement that for a corporation to compute its excess profits credit under the alternative "growth" method, its assets at the beginning of the base period may not exceed $20 million. Corporations of all sizes which were growing rapidly during the base period need a growth credit to equalize their position as compared with other corporations of equivalent size which achieved their growth prior to 1946. Clearly, a growth formula based upon any predetermined level of assets will not afford a fair measure of the need for relief.

The inadmissible assets factor should be applied to reduce the taxpayer's invested capital rather than its excess-profits credit. The purpose of the inadmissible assets factor is the elimination of that portion of the taxpayer's assets the income from which is not subject to the excess-profits tax. This elimination, therefore, should properly be accomplished by a reduction in the invested capital upon which the excess-profits credit is to be based, rather than upon a reduction of the credit itself. We, therefore, recommend that the World War II law treatment of inadmissible assets be followed in the present excess-profits tax law.

The present House bill removes the long-standing unfairness of applying the income tax to taxpayers who sell one residence and purchase another. There are other provisions of the income tax law which also should be corrected. Among them are those relating to the taxation of foreign investments and business operations in foreign countries. The provisions relating to the foreign tax credit should be liberalized in order to encourage foreign trade and investment. Under the existing provisions of section 131 (f), the allowance of the foreign-tax credit is unduly limited to certain restricted situations. Thus, under section 131 (f) (1), the credit is allowed only where the domestic corporation owns a majority of the stock of the foreign corporation. Under section 131 (f) (2), the credit is allowed only in those instances where the foreign parent owns 100 percent of the foreign subsidiary. It is recommended that the provisions of section 131 (f) (1) be liberalized to permit the allowance of the credit in all cases where a domestic corporation which owns any stock of a foreign corporation receives dividends from the latter. The provisions of section 131 (f) (2), relating to a foreign subsidiary of a foreign corporation, should be amended so as to allow the credit in cases where the foreign parent owns less than 100 percent of the voting stock of the foreign subsidiary. We suggest a requirement of 20 percent ownership.

The 2 percent penalty upon the filing of consolidated returns should be repealed. As a result of increased rates, this penalty would take an increased percentage of retained earnings. Consolidated returns have been provided for in the tax laws since 1921, as a means of determining the net income of a single enterprise, even though the business is carried on through two or more corporations. No special advantages are derived through the use of such returns. They are recognized and favored by both the Treasury Department and taxpayers alike, as the only practical method of determining net income in such cases, and as a method which is fair and easy to administer. The additional rate of 2 percent imposed upon those filing consolidated returns, however, imposes a penalty upon their use which in many cases compels the filing of separate returns. Such a provision clearly discriminates against the business which must be carried on through subsidiaries. Considered either from a viewpoint of equity or administrative convenience, consolidated returns should be fostered by eliminating the 2 percent penalty imposed on their use. In addition, and in any event, the taxpayer should be given by statute the right of an annual election to file either consolidated or separate returns, in place of the present restrictive provisions contained in the regulations.

Sections 165 and 23 (p) were originally designed to cover voluntary pension plans set up by employers. In the last 2 or 3 years many pension and welfare plans have been set up pursuant to negotiated contracts with labor unions. In an effort to apply sections 165 and 23 (p) to these negotiated pension plans many complications have arisen, particularly with respect to the limitations on deductions under 23 (p). Where employers set up trusts to cover their liabilities under agreements with labor unions, there would seem to be no question but that the contribution made to such a trust should be deductible. In order to provide for this new situation, it is suggested that a new provision should be inserted in section 23 (p) which would permit employer companies to deduct all amounts paid into a trust for the purpose of funding their liabilities under negotiated contracts with labor unions.

We appreciate the opportunity which has been extended to us to appear before your committee.

Senator BYRD. At the request of Senator McClellan, of Arkansas, here is an insertion to be made, coming from C. H. Scott, of Little Rock, Ark.

(The document referred to follows:)

LITTLE ROCK, ARK., *August 1, 1951.*

Re Titanium—Special tax treatment on same basis as granted other strategic and precious minerals that are so essential to furtherance of defense efforts.

United States Senator WALTER F. GEORGE,
Chairman, Senate Finance Committee, Washington, D. C.

DEAR SENATOR: Every group interested in any particular mineral, oil, or businesses of any kind from a purely selfish standpoint naturally try to get as much tax consideration as possible, quite often to the detriment of other groups. Those interested in the production of titanium are interested in seeing that this mineral receives the same equal treatment pertaining to taxes as any other strategic mineral that is used in the furtherance of our defense efforts.

I doubt if there is another mineral that is occupying as much spotlight from and by the chemists, metallurgists, corporations, with research laboratories and the Government as is now found in titanium. This is particularly true in trying to find a process that will refine the ore into finished metal that is so badly needed for military uses by Army, Navy, and Air. The finished metal will play a great part in making our military equipment lighter, more efficient, stronger and effective as well as many other uses in our over-all economy.

We feel like your committee might want to make a distinction and give special treatment on any titanium which is refined into metal that will be used for and in the development of our military power. We use approximately 750,000 tons of ilmenite that is produced in this country and some foreign countries and practically all of this is used in paint by Du Pont, National Lead, Kenecott Co., and other companies. I doubt if Congress would want to make any special treatment on any titanium that is used in this manner but, on the other hand, I think when titanium in any form is refined into metal by any process that will make it cheap enough for the Government to use in strengthening our military equipment it should have special treatment the same as lead, zinc, tungsten, bauxite, barite, etc.

I want to take the liberty of asking the committee to study several recent articles by men and research laboratories who have devoted a great deal of time to improving and perfecting a process in making it possible for titanium to compete with aluminum, stainless steel, and other metals.

Exhibit No. 1: New Wonder Metal: Titanium. Condensed from Popular Science Monthly, Harland Manchester, published by the Reader's Digest, October 1950.

Exhibit No. 2: Potential Uses of Titanium Metal—Military Uses, by C. C. Ralston and F. J. Cservenyak, Bureau of Mines, Washington, D. C., published by Industrial and Engineering Chemistry, February 1950.

Exhibit No. 3: Release from Washington, D. C., July 2, 1951, appearing in Arkansas Gazette, July 3, 1951, pertaining to new process developed by Horizons, Inc., Cleveland, Ohio.

Exhibit No. 4: Titanic Titanium, article appearing in Business Week, July 21, 1951.

Exhibit No. 5: Excerpts from statement prepared by Felix A. Vogel, Jr., of the Bureau of Mines, dated September 1944, pertaining to titanium properties.

Some remarks by Dr. R. G. Knickerbocker, Chief of Minerals Technology Division Region VI, Bureau of Mines, Rolla, Mo.

Remarks by M. E. J. Chapin, Metallurgy Division, Naval Research Laboratory, Washington, D. C.

Exhibit No. 6: Statement by Helena M. Meyer, Bureau of Mines Minerals Yearbook 1949, Titanium.

It is the consensus of opinion by and among the chemists and metallurgists that different forms of titanium will ultimately be used in metal which will be produced in abundance by and through an easier process, which will be developed by some research laboratory or pilot plant.

We feel that this special tax treatment should apply to ilmenite, rutile, or any other form of titanium that will actually go into metal used in the development of our military equipment.

There are only three or four substantial known deposits of rutile in the United States. It is the consensus of opinion of men who have studied these deposits that the largest one in this country is at Magnet Cove, Ark. There could be 8 to 9 million tons of titanium (rutile).

I think this special tax treatment we are requesting would strengthen our hands in the development of these deposits, especially if and when a new process is finally perfected to the extent that the raw titanium can be refined into abundance of finished metal.

Any courtesy that your committee can extend in meeting our request will be greatly appreciated.

Sincerely yours,

C. H. SCOTT.

[From the Reader's Digest, October 1950]

NEW WONDER METAL: TITANIUM

(By Harland Manchester—Condensed from Popular Science Monthly)

A few years ago Dr. Charles H. Moore, Jr., a young industrial-research scientist of Perth Amboy, N. J., made in a small furnace of his own design a pear-shaped crystal of titanium oxide the size of his thumb. He was working with titanium to try to make white paint a little whiter, and eventually he succeeded. But as he looked at the crystal he got another idea. He took it to a lapidary, who cut and polished it. The result was an amazingly beautiful gem, not quite as hard as a diamond but far more brilliant.

Thus the first really new gem in history was born. Unlike synthetic rubies and emeralds, "titania" or "rutile" is not an imitation of anything. It is a gem in its own right. National Lead Co., Dr. Moore's employer, operates six furnaces to make the crystals and sells them to gem cutters all over the country. Thousands of women are proudly displaying them. Most titania stones are white, but they are also made in rich blue, orange-brown, red, green, and yellow. They sell for about one-thirtieth the price of diamonds.

This new gem is only one facet of the great titanium development which many scientists, manufacturers, and military men are excited about. They predict that titanium, light, strong, and rust-resistant, will become a major metal, rivaling in importance aluminum, magnesium, and stainless steel.

Better and faster planes, more powerful jet engines and gas turbines, lighter and more durable automobile engines, ships that need no paint, long-wearing and nonrusting edged tools, cool handles for kitchen pots and pans, better optical lenses—these are a few of the things that titanium in its various forms may bring about.

The new metal is a natural for airborne vehicles and weapons, since its use instead of steel cuts weight 40 percent with no sacrifice in strength. Army Ordnance, testing the new metal for tanks, finds that it resists penetration better than steel of the same thickness.

From the Navy point of view, this silvery metal is highly desirable because it is virtually rustproof. Samples of titanium immersed in the sea for 60 days showed no trace of corrosion—a record equal to that of platinum, the noncorroding champion. The prospect of decks which need no paint and of cabins and other seagoing gear which never rust is tremendously cheering to naval men. The metal is also unaffected by many highly corrosive acids and alkalis, and its resistance to vinegar, citrus juices, and other corrosive foods makes it eligible for kitchen containers.

Titanium has the great merit of being plentiful. It is the ninth most common element in the earth's crust, far more plentiful than nickel, copper, or lead. Also it is the fourth most abundant structural metal, exceeded only by aluminum, iron, and magnesium. This does not mean that our factories can start using the metal tomorrow. Production is yet in the pilot-plant stage. But in scores of Government, university, and industrial laboratories, a concentrated drive is under way to harness this versatile and long-neglected element. In the last 4 years Government and industry have spent more than $15,000,000 on titanium research, and belief is common among experts that it will become a major structural material within 5 or 10 years.

Titanium is by no means new. The ore was first discovered about 160 years ago by William Gregor, an English clergyman and amateur chemist. Martin Heinrich Klaproth, famous as the discoverer of uranium and other elements, rediscovered titanium in an ore called ilmenite, announced it as a new element, and gave it its name.

The first big-scale use of titanium developed indirectly from the fact that a French chemist named Auguste J. Rossi was something of a gourmet. He was employed in the laboratory of the Titanium Pigment Corp., Niagara Falls, N. Y., which produced titanium oxide to improve the whiteness of false teeth, billiard balls, and other articles. He always brought his lunch to the laboratory, and there mixed his own salad dressing. Spilling some olive oil on his workbench one day in 1908, he noticed how it mixed with the titanium. Thereupon he began research into the possible use of the oxide as a paint pigment. The result many years later was the whitest white paint ever known. The tiny crystals are highly efficient reflectors of light, hence titanium paint has great opacity or "hiding power." This means that a little of it will cover a lot of surface. A dash of titanium oxide is used by the Johns-Manville Corp. in the manufacture of a long-lasting white asbestos-cement siding for houses.

Titanium oxide has largely supplanted white lead in paint. It is also used in whitewall tires, white rubber bathing caps, kitchen-equipment enamels, face powders and creams, and many other products. Some 225,000 tons of titanium oxide are now used every year to make white things whiter.

Dr. Wilhelm Kroll, of Luxemburg, 18 years ago invented a promising process for extracting the pure metal from the ore. When he fled to the United States in 1940 to escape the Nazis the Bureau of Mines signed him up. A pilot plant was set up at Boulder City, Nev., and by 1946 the Bureau was making the new metal—spongy gray stuff which looked like oversize furnace clinkers. The Bureau set up another pilot plant at College Park, Md., to fabricate the metal into bars and sheets and to work on alloys. At this time world production of the metal ran about 10 pounds a year. Today United States production is in the neighborhood of 40 tons annually, enough for large-scale experiments. Having nursed the new metal to the toddling stage, the Bureau is now turning it over to industry.

Discovery of superior new titanium alloys will hasten its adoption. The pure metal is strong and stable up to 800° F. Tests indicate that the right alloys will push this ceiling far higher. When the alloys become available aviation experts foresee a possible 20 percent reduction in the weight of airplanes, which would more than double the plane's pay load of passengers, freight, fuel, or bombs.

When titanium was used only for pigments we got most of it from the black-sand beaches at the southern tip of India. Now geologists report such widespread distribution of the ore throughout North America that we can be completely independent of imports. From a huge, terraced, open-strip mine at Tahawus, N. Y., titanium-bearing ilmenite is being scooped up by National Lead Co. The Kennecott Copper and New Jersey Zinc Cos. are jointly spending $25,000,000 to open up a tremendous ilmenite deposit in the Allard Lake region of Quebec. Du Pont and other firms are getting titanium from the sands of Florida beaches.

As for titania, the gem with more fire than a diamond, its fascinating possibilities are not limited to jewelry. Because of its superior light-gathering ability, it has important optical uses. As bigger crystals of optical purity are made, titania lenses might make possible powerful small telescopes, smaller periscope tubes, smaller tubes for internal physical examinations. A research job in this field has been launched by Bausch & Lomb. Titanium also has interesting electrical properties. Tiny wafers of barium titanate are used in place of crystals in hearing aids, radios, radar, and television sets, and record players.

Whatever other uses may be found for the new metal, you may be sure there is titanium in your future.

[Reprinted from *Industrial and Engineering Chemistry*, vol. 42, p. 214, February 1950]

Potential Uses of Titanium Metal

(By O. C. Ralston and F. J. Cservenyak, Bureau of Mines, Washington, D. C.)

Potential uses of titanium are based on the favorably combined properties of high strength, light weight, and resistance to corrosion. Uses of titanium as disclosed by the literature and reported by those who are actually testing its suitability for numerous purposes are cited. The field of usefulness by the Army, Navy, and Air Force is given. Although this relatively new metal with unique and highly desirable properties has a promising future, its production today is too costly to warrant the conclusion that it will have almost universal applications and compete with steel, aluminum, and copper where these cheaper metals can function satisfactorily.

Titanium, a metal inadvertently but correctly named after the Titans, may naturally be expected to have many uses. As a pure metal it is unusually strong, and because it has a specific gravity only a little over half that of steel it has the advantage of exceptionally high strength-weight ratio—the real basis of comparison. Another great advantage is its corrosion resistance, which places titanium in the same class as the stainless steels. It is obvious, therefore, that the biggest immediate field of usefulness is in aviation, where high strength, light weight, and resistance to corrosion are all important. The same applies to marine conditions, but the necessity for getting nothing but top quality is not so pressing.

This paper gathers some details on the uses of titanium as disclosed by the literature and reported by those who are actually testing its suitability for numerous purposes. Many of the potential uses have minor importance as far as amounts of metal are concerned, but everything taken together indicates a promising future for enterprisers.

The Bureau of Mines pioneered and developed the first commercially adaptable process for the production of high-purity titanium metal. It has been the Bureau's policy to distribute new products to qualified technical and scientific organizations to expedite industrial interest and exploitation. This practice has accelerated commercial development in the case of electrolytic manganese and is doing the same for titanium.

The potential uses of titanium are based mainly on the favorably combined outstanding properties of high strength, light weight, and excellent resistance to corrosion. Its development should have an important bearing on the future welfare of the Nation not only as a substitute for presently used strategic materials in short domestic suply, but also for construction materials having a combination of properties not possessed by other available metals and alloys.

It is estimated (*4*) that titanium is the fourth most plentiful metallic element in the earth's crust suited for structural uses. Commercial ores of titanium are widely distributed in the United States and the cost of developing them has been charged in part to the titanium-oxide industry, which, up to the present, has been the main use for titanium. The titanium industry has been featured year after year by the record-breaking consumption of titanium dioxide in pigments for paints, the only large quantitative use (*17*). Production of the oxide, therefore, has provided excellent sources of ore for the development of the metal.

INDUSTRIAL USES

The availability of high-purity titanium will advance its use far beyond prior applications where alloys or impure titanium metal have been previously utilized. These prior uses are well known and include ferrotitanium as a scavenger or purifier for steel, as a primary precipitation hardening element, and as a ferrite former (*22*). In the form of ferro alloys, titanium is used as an alloying element in austenitic stainless steels (*23*) to stabilize carbon and prevent intergranular corrosion. It is also employed in heat-resisting alloys, weld-rod coatings, and in permanent magnets (*11*).

Titanium belongs to that class of elements that causes unmixing when added in small amounts to melts of iron and ferrous sulfide, converting the ferrous sulfide into titanium disulfide (*25*) similar to the action of manganese.

The metal is principally used in steel because of its property of forming stable carbides and nitrides; it acts also as a deoxidizer. Steel with a titanium content of only 0.02 percent reduces the equilibrium oxygen content in a melt just as much as 0.2 percent silicon (*29*).

Titanium is claimed to be suitable for use in chromium-free, heat-resisting steels (*26*). It was also found most effective in a group of alloying elements used to reduce grain size in high-chromium, heat-resistant steel (*24*).

It was found possible to get high creep-strength values for certain steels containing titanium (*9*). In low-carbon steels tested for high-temperature use, it is believed that titanium will prevent hot shortness due to sulfur and that, therefore, manganese above the usual residual content of about 0.15 percent is unnecessary (*5*). The addition of titanium stabilizes enameling iron (*27*) and steel (*6*) by converting the carbon to a more stable form. Most defects in the vitreous enameling iron result from reaction of an iron-carbon aggregate with the molten glass. Addition of titanium in enameling steel stabilizes the carbon and stops its reaction with the oxides in the enamel coating that forms gas and blisters.

Porosity is eliminated in monel castings by use of titanium to combine with the hydrogen and nitrogen. In aluminum alloys, titanium acts as a grain refiner and strengthener.

Small quantities of titanium added to copper or nickel give strong age-hardening alloys which may be utilized as a substitute for tin (*16*). At 900° C., titanium spreads in a thin layer over copper surfaces, which suggests the titanizing of ferrous plates that have first been given a copper coating.

Titanium forms extremely hard nitrides and carbides, the latter being useful for special cutting tools.

A high-temperature, 70-percent-nickel alloy, Inconel X, uses titanium now introduced as ferrotitanium. The availability of unalloyed pure titanium low in nitrogen and oxygen might mean that 7 to 10 percent titanium could go into the production of this alloy (*14*). Inconel X possesses outstanding spring characteristics at elevated temperatures and may have application in the gas turbine and jet engine fields.

Tests indicate that addition of titanium decreased grain size and increased flexural strength of cobalt silumin and manganese silumin (*12*).

The gettering or gas-absorbing property of titanium is well known. Gases such as oxygen, nitrogen, carbon dioxide, etc., are absorbed by titanium in the production of high-vacuum tubes. Chips of titanium can be used to remove oxygen and nitrogen from helium and argon.

During World War II there was considerable interest in Germany on certain potential uses of high-purity titanium (*21*). In the vacuum tube industry, tests were conducted with pure titanium in sheet form for use as functional elements and as getters. Addition of the metal to certain steels seemed to enhance their high-temperature resistance properties and to lower their creep rates. Some of the German work included cladding steel with high-titanium alloys of copper, nickel, and cobalt to provide fairly good heat-resistant surfaces. It was also indicated that light armor plate might be prepared by incorporating titanium into a steel surface, followed by carburizing and heat treatment. Preliminary experiments indicated that laminated plate formed from sheets of titanium showed promise for this purpose. Consideration was also given to the application of titanium in jet-propulsion aircraft. It was thought that the metal might have useful applications in the production of mirrors because of its excellent resistance to corrosion and condensation. A very thin layer of the ductile metal was evaporated onto a glass surface to make such mirrors.

A low-carbon German steel with 0.5 percent titanium was used (*1*) as sheet material in jet planes for high-temperature service and for turbine wheels. It was reported (*3*) that when small amounts of titanium were added to Thomas steel, the product could be used to make machine gun barrels.

The German war metallury (*15*) brought out a type of alloy that was protectively chromized by gaseous chromous chloride or chromic chloride. Various basis metals were chromized most effectively and an important type was a steel-containing titanium.

The influence of titanium as grain refiner is evident in all of these processes. In one instance, the titanium proportion is definitely specified to be less than enough to combine with the carbon content of the steel. High-temperature creep strength was attained by hot-working the metal above 1100° C. A heat treatment for titanium-bearing chromized steel was also described heating at 500° to 900° C. and then quenching in air, water, or oil. Products manufactured from such steel were heat- and scale-resistant and good for exhaust parts of internal combustion engines.

Pearlitic nickel-vanadium steel with less than 0.2 percent carbon, up to 1.5 percent vanadium and 1.8 percent nickel (in which the vanadium could be replaced by titanium) was corrosion-resistant and had high impact strength at lower temperatures. It was designed for vessels and tubing for refrigerator coolers. It is claimed that a basis metal of austenitic manganese steel with 12 to 22 percent manganese and under 0.2 percent carbon should contain a grain refiner like titanium, zirconium, vanadium, or molybdenum to impart resistance to corrosion at high and low temperatures when chromized, high hot strength, toughness, and high fatigue strength.

The phenomenon of marking glass with pure titanium is well known. The glass should be clean and free of grease or oil, and if it is wet with a mild alkali it is possible to draw consistent lines without pressure. The mark is essentially a streak of smeared titanium, but the surface is also scratched, as can be noted by dissolving the metal with dilute hydrofluoric acid. Many minute scratches are formed transverse to the direction of marking. Rubbing titanium metal against other hard surfaces often produces smears which are difficult to remove. Such smears have been investigated (28) on diamond, corundum, hematite, magnetite, rutile, chrysoberyl, spinel, quartz, topaz, diopside, beryl, albite, axinite, epidote, garnet, and tourmaline. Titanium smears can be used to make high electrical resistances by marking glass with a metal point or pencil.

The smearing of titanium parallels the seizure of aluminum in the early days of experimenting on aluminum engine blocks and pistons. That difficulty was cured by alloying and heat treatment. Therefore, any trouble that might be encountered with pure titanium under similar conditions or in operating titanium shafting against bearing metals should not indicate that all forms of the metal are unsuitable for such purposes.

The combination of stainlessness, high proportional limit, and low modulus makes titanium an interesting material for springs where a considerable expansion in relatively low loads is required. Main and hair springs for watch and clock products may be improved by replacing the steel wire now used with titanium. Titanium or alloyed titanium hair springs may be used in control equipment such as time devices for water softeners that are usually installed in basements, which in many cases are damp, and give trouble due to rusting of the hair spring.

Titanium has been suggested for use in boiler and boiler-feed-water systems as replacement for 18-8 stainless steel, which is about the only metal resistant to high purity and aerated water. Some suggested uses for titanium in the boiler plant include valve seats, corrugated gaskets, and pump parts. In applications where titanium proves insufficient, consideration should be given to its sister metal, zirconium. Since titanium resists attack by dilute sulfuric acid and also by concentrated acid, especially in the range of 40 to 60 percent, it might be used in recuperator elements for preheating air in power plants. Some of these elements are alternately exposed to temperatures ranging from below the dew point of the flue gases to 1000° F., and there is a tendency for condensation and absorption of sulfur dioxide from the flue gases, forming acid in varying concentrations, which attacks the metal. The thin oxide film which will form at the maximum temperature might be of assistance in resisting the acid attack. It is hoped that titanium can be used for measuring chambers and for powdered-metal gears in water meter gear trains, both of which suffer greatly from corrosive waters.

A small percentage of titanium is used in steel tubing at a steam power plant (8) to superheat steam from 850° to 1050° F. in the last two stages of a three-stage system.

It is believed that titanium can be used as a rotary shaft seal operating in fuming nitric acid because of its chemical resistance to this acid and its possibility of resisting frictional wear. The resistance to frictional wear, mainly dependent on the service conditions, may be increased by surface hardening in a cyanide bath (7) or introducing oxygen by heating under controlled conditions. Temperature control is necessary to obtain the desired surface hardness without scaling. The ability of titanium to be surface-hardened suggests its use for parts subject to frictional wear, such as cutting tools, dies, bearings, pistons, cylinders, and other engine components (8).

Titanium appears to have a future in the design of portable machine tools where strength and light weight combined with a definite proportional limit are desirable. It is also being considered for use in sensitive geophysical instruments.

Titanium powder, with its sister metal, zirconium powder, has been used experimentally in a low-melting alloy matrix in producing sparking flints for cigarette lighters. Experiments showed that a satisfactory flint can be produced as a substitute if cerium or misch metal became scarce. The pyrophoric properties of these flints are satisfactory, although their softness leads to rapid consumption.

An optical firm is experimenting with titanium evaporation onto glass surfaces to produce high-index films. Successful tests have been made on sealing hard glass to titanium wire by an electronic tube manufacturer. Because of its wetting properties, titanium has found use in an alloy for sealing window glass to metal frames (*23*). Approximately 2 percent titanium is preferred in a copper alloy (*13*) used in metalizing glass. The alloy is easily atomized into droplets small enough to eliminate largely local shattering of glass by droplets of hot metal.

It has been estimated that there are 12,000,000 orthopedic patients in this country, of whom 2,000,000 wear full braces. Because of its light weight titanium could replace stainless steel in the manufacture of such braces. It is also believed that titanium might have a place in the prosthetic dentistry field in making stronger appliances for the mouth. Titanium may be used for medical and dental equipment where strength and freedom from corrosion have prime importance.

Preliminary tests indicate that titanium would be satisfactory for metal coil springs in oviduct diaphragms. It has been suggested for spectacle cases where strength and light weight are required. It is claimed that aluminum cases are too soft and steel cases too heavy. The extra cost of titanium is compensated by the added protection given in rimless glasses. Titanium should also be useful in making fancy frames for women's glasses. Although aluminum frames are light, they reportedly become dull and lose their polish. In cutting lens shapes the glass blanks may be marked with a titanium pencil. The special inks now being used for marking glass blanks come off during handling and edging.

Corrosion studies with various foods (*10, 19*), such as pineapple juice, cider vinegar, lard, tea, coffee, grapefruit juice, and lactic acid showed no attack on titanium. This suggests that titanium could be used for food handling and processing equipment in restaurants and lunch counters. Its low thermal conductivity indicates many possible household uses, such as handles for pots and pans.

The development of titanium may be an important contribution to the electronic industry for making miniature capacitors of smaller size than now obtainable. Tests have been made on oxidizing the surface of titanium to a thickness of 0.5 mil of oxide and by firing a silver film on the exposed side in nitrogen atmosphere. It was reported that higher capacities per unit volume of the composite metal and oxide were produced than is possible using ceramic material.

X-ray targets of titanium have been prepared and have proved to be satisfactory in practice, showing no signs of deterioration. Only a thin layer of titanium is necessary on a water-cooled copper base because of the low thermal conductivity of titanium. A considerable reduction in the amount of scattered radiation is indicated by the use of titanium radiations in X-ray diffraction photographs.

It is believed that the intensity of radiation from a synchrotron may be increased by enclosing barium aluminate in a titanium foil jacket with a heater buried in the center. There is reason to expect that the barium, which diffuses through small holes punched in the titanium, will condense on the surface of the titanium and provide a greater source of electrons than can be obtained from a pure tungsten or a coated filament that can be provided in the available space.

The stability of the discharge in lamps is greatly improved by the use of titanium electrodes (*20*). Titanium may also be used as a capacitor electrode material and as an electrode for disintegrator drills.

Interest is also being shown in titanium for the fabrication of thin-window Geiger tubes for counting beta particles and in a radioactive isotope of vanadium which may be conveniently obtained from a titanium target by deuteron bombardment.

Titanium should find use in textile machinery (*8*) for high speed, light-weight spindles, spools, warp beams, and other working parts. It may be used for sporting equipment such as light-weight noncorroding golf clubs, tennis racquets, and fishing rods. Its corrosion resistance, together with its ability to surface-harden, is being utilized in making pen points and styluses.

MILITARY USES

Potential applications of titanium by the Army, Navy, and Air Force were reported at a recent symposium on titanium sponsored by the Office of Naval Research.

The property most attractive to the Navy and Air Force is the outstanding resistance of titanium to corrosion by sea water and saline atmospheres. Corrosion tests on titanium in sea water have shown scarcely any effect on the metal and indicate that titanium is more resistant to salines than any common engineering material. The life span of naval equipment subject to corrosion could be greatly prolonged by the use of titanium (*30*), and this metal would thus compete economically with materials now produced at a lower cost. Numerous possibilities exist for the use of titanium on ships. Possible applications are for lightweight piping systems handling salt water, condenser tubes operating with high water velocities, replacing Monel or stainless steel in plumbing fixtures, substituting for stainless steel in pump rods or rotor shafts, and for water-lubricated and antifriction bearings of high load capacity operating in salt water. Titanium wire may be used for shipboard radio aerials if tests prove that it is resistant to stack gases. Small, high-speed propellers may be made from titanium if satisfactory resistance to hydraulic cavitation is shown. To date, few, if any, alloys tested have better corrosion resistance than pure titanium for the above applications.

Numerous applications of titanium for aircraft are now being considered (*18*), the majority of which involve substitution of titanium for other materials in structures where intermediate temperatures, weight, or corrosion problems are encountered. Where a high strength-weight ratio or esistance to salt water corrosion is required, titanium could be substituted for lightweight alloys and steel. At high speeds the organic protective coatings on leading edges made of light alloys are removed by dust and rain impingement, and the efficiency of the airplane is decreased because of increased turbulence and drag resulting from roughening of the edges.

The present high-strength light alloys begin to weaken at temperatures between 300° and 400° F. Elevated temperatures are becoming more common in aircraft as a result of aerodynamic heating at high speeds, use of heat for deicing, proximity of structural parts to jets and afterburners, and higher temperatures in the compressors of jets and turbines. Titanium is preferable to steel for moderate-temperature service because of its lightness and corrosion resistance.

Titanium has also been suggested for special aircraft applications, such as high-speed hot-air heater wheels, armor plate, electrical components, pontoons, cables, structural braces, wing coverings, and fuselage construction.

Army engineers are interested in titanium for such equipment as truck bodies, girders, and other members of portable bridges. Air-borne equipment used by future armies undoubtedly will utilize light-weight, strong titanium advantageously.

The following quotation from a letter from the Office of Chief of Ordnance, Department of the Army, will show the vital interest of the Armed Forces in uses of titanium:

"The Ordnance Department, Department of the Army, is intensely interested in the potential uses of titanium metal for military applications. In the past it has directed its efforts in research and development to the more basic problems, such as preparation of equilibrium diagrams for the most promising alloys, effects of impurities, and other metallurgical investigations. It will continue to emphasize the more fundamental aspects of this research to the utmost of its capabilities to provide data urgently needed in the development of titanium alloys.

"The Ordnance Department is particularly interested in the use of this metal as a replacement for other metals where light weight, high strength, hardness, corrosion resistance, shock resistance, etc., are required. Ordnance equipment of the future is pointing more and more toward air transportability. The over-all weight of equipment which the foot soldier must carry into battle must be reduced to render him more effective. The combat man must have more effective protection with lighter weight against whatever missile the enemy might employ.

"In order to accomplish these objectives, the Ordnance Department must depend largely upon industry and others to devote as much of their efforts as possible to perfecting economical methods for reducing titanium ore and producing the metal; the proper alloying of titanium metal to secure maximum toughness, hardness, strength, resistance to impact, corrosion resistance, etc.; and appropriate welding techniques and fabrication procedures for the various alloys which may be developed.

"The apparent advantages to be gained by the use of titanium in military equipment are so marked that the significant future improvement of equipment may well be predicated on an early solution to the problems outlined above."

CONCLUSION

Commercially pure titanium is a new base metal whose alloys have not yet been developed. Extensive development and testing are now being conducted on high-temperature alloys. The study of alloys based on titanium is still in its infancy, and some very useful alloys may be developed that will be as far superior to the pure metal as stainless steel is to iron. When the essential information on titanium alloys is available, the usefulness of the new metal can be fully evaluated. Although considerable progress in alloying is being reported, the results are not conclusive enough to permit making definite recommendations. Commercially pure titanium is a very good metal for a wide variety of uses, but alloying might greatly improve it and increase its advantages. The principal improvements noticed in alloying have been in its strength rather than its corrosion resistance.

From certain articles that have appeared in newspapers and the popular press one might be led to believe that titanium is destined to replace the better-known structural metals and have almost universal applications.

Although this relatively new metal has unique and highly desirable properties, its preparation today, even with the advances made in its recovery from natural sources, is too costly to warrant the conclusion that it will compete with steel, aluminum, and copper for purposes where these cheaper metals can function satisfactorily.

[From the Arkansas Gazette, July 3, 1951]

Cheaper Method of Making Titanium Revealed by Navy

Washington, July 2.—The Navy announced today it had developed a process which it expected to reduce by 80 percent the cost of producing titanium, a light, strong metal. One pound of sponge metal which formerly cost $5 can be obtained now for $1, the Navy said.

Titanium is used in jet and gas turbine aircraft and for component parts in ship construction. It is being tested for possible use as a skin over air frames, for wing edges and jet plane ducts. It is 70 percent heavier than aluminum and six times as strong.

The new process was developed by Horizons, Inc., at Cleveland, Ohio. The pilot plant stage in the new production method has been reached.

Successful commercial production of titanium and titanium alloys at the new low cost is expected to fulfill heavy military demands for a light metal of that type. The Navy said that the lower cost should lead to extensive use of titanium in the production of civilian goods.

[From Business Week, July 21, 1951]

Titanic Titanium—New Metal Has Vast Potential if Cheap Production Method Pans Out, But Fabrication Woes May Delay Its Spread

Horizons Titanium Corp. is looking out at some very broad horizons. A 100-million-pound-a-year market for titanium, for instance—the sober guess of a Government authority.

Prospects for that sort of military and commercial demand hang on the big-scale production success of Horizons' new process for making titanium (Business Week—July 7, 1951, p. 20). So far, the Horizons process is in the test-tube stage. But the company is betting that it will be able to bring the cost of titanium down to $1 a pound, from the present cost of $5 a pound for sponge and $7 a pound for ingot.

Titanium enthusiasts see almost no limits to the expansion, if the price can be chopped down. They point to the case of aluminum, which conquered enormous markets as soon as the price was right.

Fabrication.—Of course, no new metal comes into mass use overnight. Once it's established that it has the desired properties, you have to lick the problems of extraction. That's what Horizons believes it is doing now. But success there is not the end; you also have to learn how to fabricate the metal. That knowledge comes from experience alone. And in the case of titanium it promises to be a long job, for the metal is hard to work.

The virtue of titanium lies in its combination of three properties—strength, light weight, and corrosion resistance. It's about twice as heavy as aluminum and four times as strong, less than half the weight of stainless steel and almost as strong. In certain places, like salt water atmospheres, titanium will resist corrosion better than aluminum or stainless steel.

Pots and pans.—Some enthusiasts feel that low-priced titanium could crack the pots-and-pans market. Although it is heavier than aluminum, thinner sections could be used because it's stronger. Titanium might move in even faster in places like railroad car structural parts, auto bright work and trim, and chemical processing equipment like valves and piping.

Unlike private industry, Government goes ahead on a cost-doesn't matter basis when it feels that a material is vital. That's why it is using titanium even at present prices, in relatively small quantities for research and prototypes. If titanium's price should drop from $5 to $1 per pound, the services would rush to put it to work in lots of places where it is desirable, but not wholly essential. Here are some of these military jobs for $1 titanium:

Aircraft.—There are many promising uses in jet and gas turbine engines. Titanium has withstood tests in firewalls, shrouds, baffles, and diaphragms, where its big advantage over stainless steel is in weight saving. A 0.015-inch thick sheet of stainless weighs 0.60 pound per square inch; a titanium sheet of the same thickness weighs only 0.35 pound per square inch. Titanium alloys might also stand up in blades for jet engines, provided they aren't subjected to excessively high temperatures. Using titanium instead of stainless steel might lighten a jet engine by as much as 300 pounds. That's equivalent to about 50 gallons of fuel.

Naval uses.—Titanium's resistance to salt-water corrosion makes it a natural for shipboard use; the Navy is hot about Horizons Titanium's new process. Brine has been known to attack stainless steel in certain cases; titanium can stand the gaff. A few parts that the Navy would like to make of titanium are: snorkel tubes for submarines, valve seats, heat exchangers, condenser piping systems, pump shafts, small propellers and propeller shafts, and steam turbine blading.

Ordnance.—Army Ordnance wants to use titanium in applications involving manual handling because of its lightness. A case in point is the 81-millimeter mortar base plate, where it has been shown that titanium can be used instead of steel. Made of titanium, the plate can be of one-piece construction weighing about 24 pounds. The standard steel plate is made in two pieces, each weighing 24 pounds and each carried by one man. The rest of the weapon is carried by a third man. With the titanium plate, the mortar can be handled by a two-man crew.

Armour plate.—Col. Benjamin S. Mesick, Chief, Reserve and Materials Branch, Army Ordnance Research and Development Division, recently said that titanium alloy may possibly be substituted "thickness for thickness for alloy steel armor, reducing armor weight by about 40 percent."

Hard to work.—Actually, reducing the cost of titanium is only a part of the problem. Right now the material isn't too easy to work. It's tough to machine and is rough on grinding wheels. But there shouldn't be too much trouble in welding, forging, or extruding titanium. In rolling sheet and strip, the material will have to be hot-worked, probably followed by a cold finishing operation.

Present fabricating experience with titanium is limited. But specialists say that when more is learned about its characteristics it should be comparable to stainless steel in workability.

EXCERPTS FROM STATEMENT PREPARED BY FELIX A. VOGEL, JR., OF THE BUREAU OF MINES, DATED SEPTEMBER 1944, PERTAINING TO TITANIUM PROPERTIES

* * * The report indicates that there were 27 holes in depths varying from 15 to 150 feet. The core samples averaged from 3 to 4 percent TiO_2. This exploration covered about 10 percent of the area of the company's property. Although the exploration depth did not exceed 150 feet the author of the above-mentioned report stated therein that the "geological inference" is that the ore deposit may be presumed to reach over 1,000 feet in depth. Local estimates based on the author's statement and expanded for the total area of the deposits existing on the company's property would indicate about 600,000 tons of rutile to a depth of 200 feet, or 3,000,000 tons if practical and economical to mine the area to a total depth of 1,000 feet.

* * * * * * *

Dr. R. G. Knickerbocker, Chief of Minerals Technology Division, region VI, Bureau of Mines, Rolla, Mo., personally told me over long-distance telephone on two occasions and in person at the Albert Pike Hotel recently that if he owned the property it would not be for sale, that he knows there is a tremendous deposit of titanium and that sooner or later a process will be found which will refine the ore into a finished metal that is so sorely needed by the Army, Navy, and Air Forces in the manufacture of war material.

* * * * * * *

Mr. Chapin, civilian chemist of Naval Research Laboratories in Washington, D. C., personally told me some 6 weeks ago while I was in Washington that he had been working on titanium for a period of 7 years trying to find a process to refine it into finished metal. He is sanguine about the possibilities of such process being developed.

[Preprint from Bureau of Mines Minerals Yearbook, 1949]

TITANIUM

(By Helena M. Meyer)

GENERAL SUMMARY

The year 1949, like 1948, was characterized by widespread interest and research in connection with the production of titanium metal and alloys. The unprecedented amount of money and effort being expended by Government and industry in experimental work are largely responsible for the many predictions that titanium will find large-scale use much more rapidly than its predecessor metals. More than one authority predicted during the year that titanium and titanium alloys would become primary structural materials within 10 years. The problem of producing metal at a price low enough to attract production and consumption in large quantities remains to be solved. In 1949 titanium metal was produced commercially for the second successive year and on an increasing scale. One pilot plant operated continuously at approximately 100 pounds a day throughout the year, and a second pilot plant of somewhat larger capacity went into production near the close of the year. Other pilot plants were under construction at the year end, and the Bureau of Mines continued production of metal at Boulder City, Nev., throughout the year.

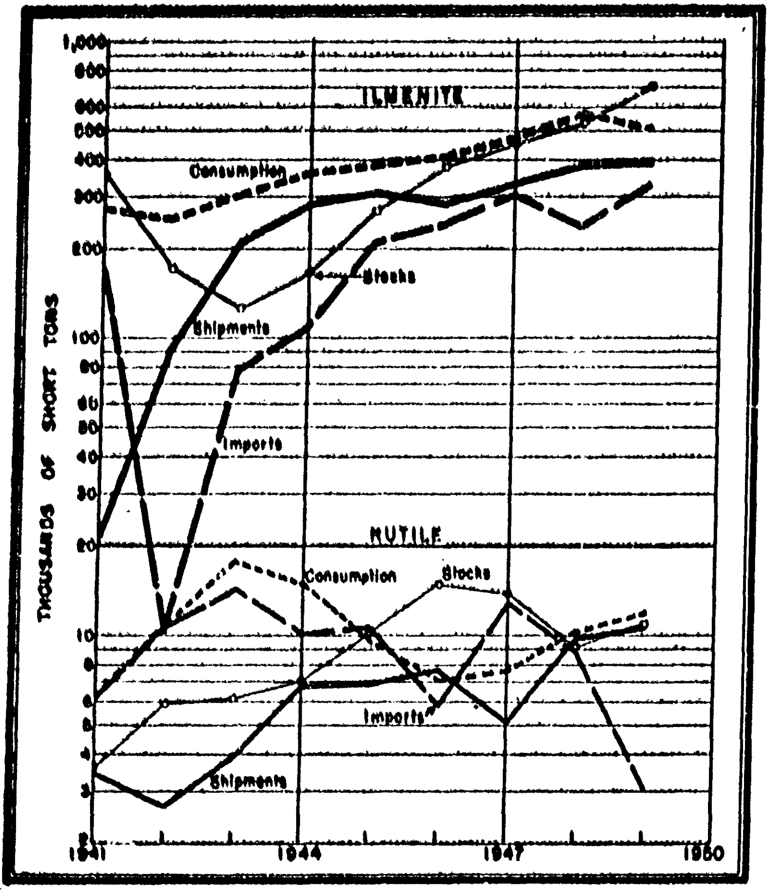
The titanium industry, in addition to the enthusiasm and energy expended in connection with the metal, was featured by new maximum production and shipments of ilmenite for the third successive year, by new peak imports, and by unprecedented output and shipments of rutile. However, 1949 was the first year in 7 that a new high ilmenite consumption record was not established. Rising inventories of crude materials were recorded also.

Present world sources of ilmenite and expected additions in the next year or two promise more than adequate supplies for present pigment needs, the only large tonnage use. Possibilities for expansion in requirements for the production of metal, however, as well as for potential growth in consumption in pigments, as a result of hoped-for improvement in world living standards particularly outside of the United States, are such that it is not safe to forecast that anticipated world supplies for the next several years will greatly exceed world requirements.

Production and shipments of ilmenite were 5 and 2 percent, respectively, greater than in 1948, following 14-percent gains for both in that year. Imports were 84 percent higher than in 1948 and 8 percent above the earlier peak in 1947. Domestic shipments and imports together were 40 percent above consumption, resulting in a 83-percent rise in industry stocks. Inventories at the end of 1949 were equivalent to 1.4 years' needs at the 1949 rate of use.

Titanium pigments, which take 99 percent of the ilmenite consumed in the United States, declined 6 percent in output and 9 percent in shipments in 1949. The drop in general industrial activity in midyear adversely affected use of titanium pigments; but this class of pigments fared much better than other white pigments, namely white lead (dry and in oil), zinc oxide (lead-free and leaded), and lithopone, shipments of which declined 41, 33, and 44 percent, respectively, in 1949 as compared with 1948.

Production and shipments of rutile were 62 and 7 percent, respectively, larger than in 1948 and thus established new peaks. Some of the material covered, however, was not consumed for customary rutile purposes (see section on Domestic Production). Imports of rutile were little more than one-third of the reduced quantity entered in 1948. Supplies from domestic and foreign sources were more than adequate for the increased requirements in 1949, and inventories rose 18 percent. Stocks at the year end would fill United States needs at the 1949 rate of consumption for 11 months.



Quotations for both ilmenite and rutile trended downward in 1949, a reflection of the ample supply of these concentrates in that year. The average quotation per gross ton for ilmenite containing 56-59 percent TiO_2, f. o. b. Atlantic seaboard, dropped from a range of \$18-\$20, according to grade and impurities, at the beginning of the year to \$14-\$16 in the first half of November and continued at this level beyond the year end. Quotations were nominal throughout the year. Nominal quotations for rutile, guaranteed minimum 94 percent concentrate, after continuing at 8-10 cents a pound for a number of years, fell to 6-8 cents in December 1948 and further to 4-5 cents by the end of 1949.

Progress toward bringing into production an ilmenite property that will rank with the world's largest producers and may exceed all others was reported in 1949. This is the property of the Quebec Iron & Titanium Corp. (owned by the Kennecott Copper Corp. and the New Jersey Zinc Co.) in the Allard Lake area of Quebec, Canada.

DOMESTIC PRODUCTION

Production and shipments of ilmenite rose 5 and 2 percent, respectively, in 1949, and both established new records for the third successive year. Rutile likewise reached new peaks in both classes, but rutile in 1949 includes a quantity of mixed product containing altered ilmenite, leucoxene, and rutile. The mixed product more nearly resembles rutile than ilmenite in TiO_2 content but was used in the manufacture of titanium pigments and metal. Total shipments of ilmenite ranged from 44 to 64 percent TiO_2 and of rutile from 84 to 96 percent TiO_2.

Arkansas.—Several recent reports[1] of the Bureau of Mines referred to titanium in Arkansas.

Production and mine shipments of titanium concentrates from domestic ores in the United States, 1940–44 (average) and 1945–49, in short tons

Year	Ilmenite				Rutile			
	Production	Shipments			Production	Shipments		
		Gross weight	TiO_2 content	Value		Gross weight	TiO_2 content	Value

[1] Includes a mixed product containing altered ilmenite, leucoxene, and rutile.

California.—A small quantity of ilmenite was produced at the property of the Ferro-Titan Minerals Co., Sun Valley, Los Angeles County, Calif.

Florida.—The property of E. I. du Pont de Nemours & Co. at Starke, Fla., began to produce ilmenite and a mixed product containing altered ilmenite, leucoxene, and rutile in March 1949. The mixed product is included in this report in the rutile tonnages because it more nearly resembles rutile in TiO_2 content, although it was used in 1949 to make pigments and metal. In addition of this product to rutile resulted in raising United States production and shipments to the highest annual quantities on record. A report[2] on titanium in Florida was recently released. According to this report, the du Pont property was expected to produce 100,000 tons of titanium products annually. As a result of the disclosure of a large concentration of heavy minerals in Trail Ridge, owing to drilling by the Bureau of Mines and extensive investigation by du Pont, as well as indication of the possibility of similar occurrences elsewhere, the drilling of other locations within the State was begun in August 1947. This exploration was completed in April 1948, and results were described in the aforementioned report.

Production of ilmenite and rutile came again from the Rutile Mining Co. of Florida near Jacksonville and from the property of the Florida Ore Processing Co. near Melbourne.

New York.—Production of ilmenite at Tahawus, Essex County, N. Y., by the National Lead Co. in 1949 slightly exceeded that in 1948 and thus established a new peak by a narow margin. This property continued to be the leading producer in the world. A brochure prepared by the company, dated August 29, 1949, for distribution to an inspection party of the United Nations Conference on Conservation and Utilization of Resources, contained the following paragraph on production:

Since beginning operation in 1942, 7,000,000 tons of ilmenite-magnetite ore have been mined from the MacIntyre open-cut. To accomplish this 5,000,000 tons of rock and soil were removed from this immediate area to make this ore available for open-cut mining. From this ore 1,000,000 tons of ilmenite and 3,000,000 tons of magnetite concentrates were produced. All of the ilmenite was shipped directly to processing plants, while 1,000,000 tons of the magnetite (iron ore) have been converted to sinter and 500,000 tons have been shipped as raw concentrate to various iron, steel, and other manufacturers. At present, 1,500,000 tons of magnetite remain in stockpiles at the plant and are currently being shipped to steel companies.

Technical progress is disclosing new uses for titanium and its derivatives, one of the most recent being the use of the metal itself in uses which combine the

properties of stainless steel and aluminum. This promises increased demand for titanium ores, and continued operation of the MacIntyre Development for many years to come, with all the attendant benefits to its employees, the community in general, other supplier industries, the people of the State of New York, and the Nation.

North Carolina.—The Yadkin Mica & Ilmenite Co., subsidiary of the Glidden Co., produced 31,864 tons of ilmenite (averaging 51 percent TiO_2) at Finley, Caldwell County, N. C., and shipped 31,714 tons. The 1949 output and shipments were 8 and 10 percent, respectively, above 1948. Production in 1949 was at a new record rate, marked a continuous rise since 1946, and was 80 percent above that year.

Virginia.—Ilmenite and rutile were produced again in 1949 near Roseland, Nelson County, Va., by the American Rutile Corp., subsidiary of the Metal & Thermit Corp. This property closed in July; the corporation was in process of liquidation early in 1950 owing to the fact that the grade of ore mined at Roseland is too low to be profitable. The Calco Chemical Division of American Cyanamid Co. continued to produce ilmenite at Piney River, also in Nelson County.

CONSUMPTION AND USES

Consumption of ilmenite dropped 10 percent in 1949 and thus failed to establish a new peak for the first time in 7 years; except for 1948, the rate of use in 1949 was at a higher level than ever before. The manufacture of pigments, as usual, took 99 percent of all ilmenite consumed. In addition a high percentage of the rutile used was consumed in the manufacture of pigments. Actually the material so used was a mixed product containing altered ilmenite, leucoxene, and rutile, which in titanium dioxide content resembled rutile more closely than ilmenite. The total tonnage shown as rutile was 16 percent above 1948, but the quantity for customary rutile uses dropped in 1949.

Consumption of ilmenite and rutile in the United States, 1941–46 (total) and 1947–49, by products, in short tons

[1] "Pigments" include all manufactured titanium dioxide, consumption of which in welding-rod coatings was 1,257 tons in 1947, 1,[illegible] tons in 1948 and 1,062 tons in 1949.
[2] Bureau of Mines not at liberty to publish; figures included in "Miscellaneous."
[3] Revised figures. Includes rutile used to make pigments.
[4] Revised figures.
[5] Includes a mixed product containing altered ilmenite, leucoxene, and rutile, used to make pigments and metal.

Titanium pigments.—Production and shipments of titanium pigments in 1949 dropped somewhat from 1949, following the establishment of five successive peaks; except for 1948, both items were at the highest annual rates ever attained. Figures on this industry are supplied in confidence and, consequently, are not given here. As already stated, a mixed product containing altered ilmenite, leucoxene, and rutile, produced at a domestic mine was used in 1949 chiefly in the manufacture of pigments.

Distribution of titanium pigments shipments, by industries, 1935–49, in percent of total

Metal.—Titanium metal was produced on a commercial basis at Newport, Del., by E. I. du Pont de Nemours & Co. for the second successive year. One pilot plant was operated continuously at approximately 100 pounds a day throughout the year and a second pilot plant of somewhat larger capacity went into production near the close of the year. Bureau of Mines produced metal at the rate of 200 pounds a week, except for several brief interruptions. Early in the year most of the output was in the form of powder, but at the end of the year production was largely in the form of sponge. A pilot plant for metal production was under construction at Sayreville, N. J., by the National Lead Co. at the end of 1949 and began to produce early in 1950. The potential uses of titanium metal were recently discussed.[3] The authors indicated that although this relatively new metal with unique and highly desirable properties has a promising future, its production today is too costly to warrant the conclusion that it will have almost universal applications and compete with steel, aluminum, and copper where these cheaper metals can function satisfactorily.

Welding-rod coatings.—Production of titanium-coated welding rods was 154,000 short tons in 1949, a drop of 18 percent from the 188,000 tons for 1948; 153,000 tons were coated in 1947, 133,000 in 1946, and 481,000 in 1943. Of the 1949 tonnage, 54 percent was coated with natural rutile, 33 percent with manufactured titanium dioxide, and nearly 7 percent each with both varieties and with ilmenite.

Other uses.—In a recent article[4] it was pointed out that alkyl titanates, derived from the action of titanium tetrachloride on alcohols, are very effective waterproofing agents. These compounds, the titanium analogs of alkyl silicates, are capable of imparting a water-repellent finish to such diverse materials as paper, cotton, wool, rayon, nylon, silk, felt, and wood.

An article[5] stated that, although the superior qualities of titanium dioxide as an opacifier have been known for many years, its commercial utilization as the major opacifying agent in porcelain enamels is a comparatively recent de-

velopment. The development and physical properties of these enamels were discussed. The fact that the enamels are applied directly to the metal without the need of an intermediate ground coat was said to be an outstanding development. Another article[6] discussed the standards and practices that permit application of titanium enamel to steel without the use of a ground coat. A development of increasing scientific and technical importance, another article[7] stated, was the electromechanical effect exhibited by barium titanate ceramics under the influence of a high electric polarizing field. Titanate ceramics, the author said, have become an important raw material for the manufacture of capacitors, especially in certain types of high-voltage condensers, such as those used in television sets.

Titanium carbides were discussed in articles[8] appearing recently.

Experiments were conducted on the preparation of metal-ceramic seals by use of brazing alloy and a flux of titanium hydride in an atmosphere of highly purified hydrogen.[9]

Efforts to form single crystals of rutile were described[10] in recent literature. Synthetic rutile for use as gem stones is an outgrowth of such investigations.

STOCKS

Inventories of ilmenite rose 33 percent in 1949 and were equivalent to 15 months' requirements at the record rate of consumption maintained in 1948; they were adequate for 15 months at the 1949 rate. Rutile stocks rose 18 percent in 1949 and would sustain industry at the 1949 rate of use for 11 months.

Stocks of titanium concentrates in the United States at end of year, 1948–49, in short tons

Stocks	1948				1949			
	Ilmenite		Rutile		Ilmenite		Rutile	
	Gross weight	Estimated TiO_2 content	Gross weight	Estimated TiO_2 content	Gross weight	Estimated TiO_2 content	Gross weight	Estimated TiO_2 content

[1] Includes ilmenite and rutile content of mixed zirconium-titanium concentrates.

PRICES

The average E&MJ Metal and Mineral Markets quotation per gross ton for ilmenite containing 56–59 percent TiO_2, f. o. b. Atlantic seaboard, dropped from a range of $18–$20, according to grade and impurities, at the beginning of the year to $16–$18 in early October, to $15–$17 late in that month, and further to $14–$16 in the first half of November. There were no further changes in 1949. Quotations were given as nominal. Nominal quotations for rutile, guaranteed minimum 94-percent concentrate, after continuing at 8–10 cents a pound for a number of years, fell to 6–8 cents in December 1948, to 4–6 cents in May 1949, and further to 4–5 cents by the end of the year.

According to the magazine Steel, quotations for ferrotitanium were unchanged throughout 1949, as follows:

Ferrotitanium, Low-Carbon: (Ti 20–25 percent, Al 3.5 percent maximum, Si 4 percent maximum, C 0.10 percent maximum). Contract, ton lots, 2" x D, \$1.40 per pound of contained Ti; less ton \$1.45. (Ti 38–43 percent, Al 8 percent maximum, Si 4 percent maximum, C 0.10 percent maximum). Ton lot \$1.28, less ton \$1.35, f. o. b. Niagara Falls, N. Y., freight allowed to St. Louis. Spot add 5 cents.

Ferrotitanium, High-Carbon: (Ti 15–18 percent, C 6–8 percent). Contract \$160 per net ton f. o. b. Niagara Falls, N. Y., freight allowed to destination east of Mississippi River and north of Baltimore and St. Louis.

Ferrotitanium, Medium-Carbon: (Ti 17–21 percent, C 3–4.5 percent). Contract, \$175 per ton f. o. b. Niagara Falls, N. Y., freight not exceeding St. Louis rate allowed.

Titanium metal, 96–98 percent, was quoted at \$5–\$6 a pound from mid-September 1948 through September 1949, after which it was quoted for the remainder of the year at \$5.

Manufactured titanium dioxide (anatase), chalk-resistant, plain, and (rutile) nonchalking, in bags, carlots, delivered, were quoted in Oil, Paint and Drug Reporter throughout the year at 19½, 19½, and 21½ cents a pound, respectively. Beginning October 31, quotations on a ceramic grade were added; this grade was quoted at 19½ cents a pound from then to the end of the year.

FOREIGN TRADE [11]

From a tonnage standpoint, foreign trade in titanium materials is preponderantly of imports of the crude products, ilmenite and rutile. Exports are largely of titanium dioxide; the values of exports of this class and of ferrotitanium far exceed the combined values of receipts of ilmenite and rutile from abroad.

Imports.—Receipts of ilmenite established a new record in 1949, being 34 percent higher than in 1948 and 8 percent above the previous peak in 1947. Imports from India, always by far the dominant source, were likewise at a new top, having exceeded slightly the previous high in 1939. Imports from Norway, which had been rising, dropped 20 percent in 1949. Norway supplied 10 percent of the 1949 total and was the only source of consequence outside of India. Brazil and Malaya, which sent significant quantities to the United States in 1948, did not appear on import declarations in 1949. Only 38 short tons of ferrotitanium were entered in 1949, all from the United Kingdom.

All imports of rutile again were from Australia; little more than one-third of the 1948 quantity was received in 1949.

---

[11] Figures on imports and exports compiled by M. B. Price and E. D. Page, of the Bureau of Mines, from records of the U. S. Department of Commerce.

[1] Classified as "ore" by the U. S. Department of Commerce.

[2] Most of the imports of titanium from Australia in 1940-47 were in mixed zircon-rutile ilmenite concentrates. Totals of mixed concentrates are derived by addition of the U. S. Department of Commerce figures for imports of ilmenite, rutile, and "zirconium ore" from Australia. These totals are apportioned by the Bureau of Mines (on the basis of surveys of importers) into the 3 component minerals. The excess quantities of ilmenite and rutile over the quantities reported by the U. S. Department of Commerce in those specific categories are entered as "In 'zirconium ore'."

[3] Most of the ilmenite, rutile, and zircon from Australia in 1947 was imported in the form of zircon-rutile or zircon-rutile-ilmenite mixed concentrates. These concentrates (including separated concentrates of a single mineral) totaled 36,074 short tons, of which 1,659 were ilmenite, 12,521 rutile, and 21,894 zircon. For statistical convenience, it can be assumed that 5,061 tons of the material reported by the Department of Commerce as ilmenite was actually rutile; the value of this 5,061 tons of rutile, however, is inseparable from the ilmenite as reported.

[4] Less than 1 ton.

[5] Includes 309 tons not recovered from mixed concentrates.

[6] Revised figure.

[7] Includes quantities reported by the U. S. Department of Commerce as originating in French Equatorial Africa, from which no rutile production has been recorded.

Exports.—Shipments of titanium materials from the United States consist largely of titanium pigments. The uptrend in exports of this item, in virtually continuous progress since the movement began prior to 1939, reached a new high level in 1949. Exports totaled 20,621 tons in 1949 or considerably more than double the quantity for 1945. Canada was by far the chief destination of titanium dioxide exports with 10,053 tons, and next in importance were Brazil with 1,577 tons, France 1,409, Belgium-Luxembourg, 1,150, Mexico 959, Cuba 859, Netherlands 770, followed by 49 other countries with smaller quantities. Exports of concentrates totaled 1,505 tons, of which Canada received 904, Netherlands 386, Belgium-Luxembourg 132, and four other countries the remainder. Canada received 127 tons of the ferro-alloys exported and Belgium-Luxembourg 28; insignificant quantities went to six others.

Exports of titanium products from the United States, 1942–44 (average) and 1945–49, by classes

[U. S. Department of Commerce]

Year	Concentrates		Ferro-alloys		Dioxide and pigments		Tetrachloride and other compounds	
	Short tons	Value	Short tons	Value	Short tons	Value	Short tons	Value
1942–44 (average)	495	$91,220	[1] 658	[1] $101,828	9,853	$1,796,411	376	$223,984
1945	609	121,951	744	122,887	12,824	2,315,552	75	46,718
1946	1,385	200,866	550	63,723	16,314	3,092,607	(2)	(2)
1947	1,266	192,703	509	80,590	21,171	5,183,936	(2)	(2)
1948	1,454	187,225	480	82,874	26,824	7,126,956	(2)	(2)
1949	1,505	143,412	179	40,918	29,621	8,140,991	(2)	(2)

[1] Includes metal and nonferrous alloys.
[2] Beginning Jan. 1, 1946, not separately classified.

TECHNOLOGY

Treatment of titaniferous ores was the subject of reports published [12] recently.

Progress in research work on the development of a new method for preparing lower-cost titanium tetrachloride and preparing titanium oxide pigment was reported [13] in 1949.

Bureau of Mines production of metallic titanium was described.[14] The report states that—

"To produce ductile titanium by powder metallurgy, the method used by the Bureau, it is necessary to start with powder free from gaseous impurities. Although hydrogen, if present, can be removed completely enough for all practical purposes by heating the metal in a high vacuum, no method of removing nitrogen or oxygen is yet known. To prevent contamination, therefore, the titanium tetrachloride from which the powder is produced is treated in equipment so designed that the titanium comes in contact only with iron and helium during production. After it has cooled to room temperature, exposure of titanium to air does no material harm."

The history of titanium tetraiodide was recently reviewed [15] and a new method of its preparation described. The authorities stated:

"The practical importance of titanium tetraiodide increased greatly when van Arkel and de Boer showed that it could be thermally decomposed by impingement of the vapors on a highly heated tungsten wire, with the building up of a rod of pure titanium metal and the liberation of elementary iodine. To date, the best ductile titanium metal has been produced by the van Arkel-de Boer method."

Several recent articles [16] bore on the properties of titanium metal and also on the effects of other elements thereon. A résumé of current findings in connection

[3] Data not available.
[4] Exports.
[5] Approximately 20 percent of ilmenite concentrates is zircon.

Australia.—A plant for the production of titanium pigments was completed[19] by Australian Titan Products, Ltd., subsidiary of British Titan Products Co., Ltd., near Burnie, Tasmania, in 1949. Initial output of 5 tons daily (about 1,800 annually) was anticipated; this was expected to be increased by 1951 to 10 tons daily. Indian ilmenite was being used, but experiments with Australian concentrate were in progress. Titanium dioxide was produced[20] experimentally in 1949 from Australian rutile by Zircon Rutile, Ltd., at South Yarra, Victoria. Construction of a larger plant was under consideration. Australia has produced[21] experimental quantities of titanium metal. Research work has been carried out by the Australian Council for Scientific and Industrial Research. Technology of production of the metal in the form of rod, wire, and sheet has

been developed by the Physical Metallurgy Section of the council in collaboration with the University of Melbourne.

Canada.—Progress in 1949 was reported in development of the Allard Lake property by the Quebec Iron & Titanium Corp.—owned two-thirds by the Kennecott Copper Corp. and one-third by the New Jersey Zinc Co. At the end of the year the 27-mile railway from Harve St. Pierre to the mine was more than half completed, and construction of harbor facilities was well under way, according to Kennecott's annual report to stockholders. Construction of the wharf and smelter at Sorel, on the south bank of the St. Lawrence River, was in progress, as was construction of the power line from Three Rivers. If the present schedule is maintained in 1950, as anticipated, one furnace of the five now contemplated, should be in operation in 1951. The over-all expenditure to bring the property to the anticipated daily production of 1,500 tons of ilmenite, to yield 500 tons of iron and 700 tons of titanium dioxide, now is expected to be $30,000,000. The company's annual production target was 550,000 tons of ore, from which the furnaces at Sorel would yield 175,000 tons of high-grade iron and 250,000 tons of titanium oxide slag, averaging over 70 percent TiO_2.

Dominion Magnesium, Ltd., began production of titanium metal in September 1948 at its Government-built pilot plant at Haley, Ontario, using the Pidgeon-Rostrom process, claimed to be considerably cheaper than other processes. Ingots of 25 to 200 pounds of metal of 99.5–99.6 percent purity are being produced occasionally for Government experimental work.

Ceylon.—From time to time the reports of this series have indicated that consideration was being given to the production of ilmenite from extensive black beach sands in Ceylon. Several reports in 1949 indicated that the Government proposed erecting a milling plant; and one, at least, indicated [a] that a plant for the production of pigments was under consideration. Plans were for exploitation first of the sands at Pulmoddai in the Trincomalee district.

India.—Before World War II, India led all other countries by a substantial margin in the production of ilmenite. The disruption to international trade, caused by World War II, resulted in establishment of the United States as the leading world producer of this product. Concern has been expressed in India over the possible loss of the United States market as an outlet for Indian ilmenite exports, but the shipment of new peak quantities of these concentrates to the United States in 1949 showed that the fears were premature and perhaps entirely unwarranted.

United Kingdom.—Imports of titanium ores into the United Kingdom were reported as 75,693 long tons in 1949 compared with 57,247 in 1948 and 71,250 in 1947.

Senator BYRD. I understand Mr. Miles E. Robertson must take a plane, so we will hear from him now.

STATEMENT OF MILES E. ROBERTSON, PRESIDENT AND GENERAL MANAGER, ONEIDA, LTD., ONEIDA, N. Y.

Mr. ROBERTSON. Mr. Chairman and members of the Senate Finance Committee, my name is Miles E. Robertson. I am president and general manager of Oneida, Ltd., Oneida, N. Y., manufacturers of sterling silver and silver-plated flatware.

I appear before you in opposition to the proposal of the Secretary of the Treasury that the 20-percent retail excise tax on jewelry be extended to silver-plated flatware, for the reason that the knives, forks, and spoons, which constitute the category of silver-plated flatware, are not luxury items but are just as necessary in every home as cups and saucers, which bear no tax. It is to this proposal by Secretary Snyder that I now address myself.

We all realize that the defense program may last for a long time; the tax and fiscal program of the Federal Government, therefore, must be adjusted to an indefinite period of high defense expenditures.

[a] Mining Journal (London), Ceylon and India: Vol. 232, No. 5934, May 14, 1949, p. 351.

If inflation is to be kept within reasonable control, there must be some emergency taxation to meet the situation.

Excise taxes, usually on luxury or nonessential items, have been considered a valid section of such emergency taxation programs.

It is easily demonstrated that silver-plated knives, forks, and spoons are not luxury items. They are, on the contrary, essential items which should not carry an excise tax unless there is to be imposed an excise tax on the sales of all necessities. There is no justification for imposing a discriminatory excise tax on knives, forks, and spoons when other commonplace, utilitarian items are not subject to a similar tax.

It is my opinion that the proposal to place a 20-percent excise tax on knives, forks, and spoons stems from a series of misconceptions: First misconception: that, since silver is a precious metal, the use of the word "silver" in connection with any article implies that such article is a luxury item. Second misconception: that since one of the retail channels used in the distribution of silver-plated flatware is the jewelry store, any item carried and sold by the retail jeweler must automatically be a luxury and nonessential item. Combine these two misconceptions and you find the reason for the proposal of a 20-percent excise tax.

Let me now dispose of these misconceptions:

(*a*) The base metal of silver-plated flatware—knives, forks, and spoons—is nickel silver—copper, zinc, nickel alloy—and steel.

The silver plating is necessary both to give a pleasing appearance and to insure safety when spoons and forks are put in the mouth after acid foods. The amount of silver deposited, by all manufacturers in the industry, even on the better qualities, constitutes but a small fraction of the total weight of the piece.

The thickness of silver deposit varies from 0.000156 inch on the cheapest grade, to 0.00132 inch on the best grades. In both cases I have used a teaspoon for measuring, since that item is the most used piece in the home, and universally manufacturers plate it to a higher standard than is used on other pieces. Surely such plated articles are not luxury items, even though silver is used in the plating.

(*b*) Our merchandise is distributed in the United States through many different types of retail outlets, for example:

5-and 10-cent chain stores	15,000
Jewelry stores	15,000
Hardware stores	5,000
Miscellaneous variety stores	5,000
Department stores	2,500
Drug stores	1,000
Boarding house and restaurant supplies	600
Premium redemption stores	300

The mere fact that silver-plated flatware is sold in jewelry stores does not classify it as a luxury item or a nonessential item. If that be the logic, then the same reasoning would persuade us that the 5- and 10-cent stores and the hardware stores were mainly purveyors of luxury goods and nonessentials, because these two great groups of retailers also carry in stock, display, and sell large quantities of silver-plated knives, forks, and spoons.

Silver-plated knives, forks, and spoons are not "jewelry" within the general meaning of the term. This is the customary definition:

Jewelry includes articles designed to be worn on the person or apparel for the purpose of adornment and which, in accordance with custom of ordinary usage, are worn so as to be displayed, such as rings, chains, brooches, bracelets, cuff buttons, necklaces, earrings, beads, etc.

It also includes articles to be carried in the hand, or hung on the arm, or carried or worn on the person, whether in pocket or bag or under the outer garment, such as cigarette cases, eyeglass cases, pencils, powder boxes, garter buckles, canes, purses, or handbags, if made of, or ornamented, mounted, or fitted, with pearls, precious or semiprecious stones, or imitations thereof.

Knives, forks, and spoons are not jewelry. They are essential tools used in eating. In accepted society, at least, there are no substitutes for them. Remove them from the dining rooms and kitchens of America and you might just as well discard the chairs and the table, the tea kettle, and pots and pans. If such obviously utilitarian items are to be taxed, it must be because they are plated with silver. If they were not plated, they would be tax-free. But, actually, silver is not the governing factor. The question is, Are silver-plated knives, forks, and spoons essential to our civilian economy?

We, as manufacturers, understand the definition of luxury items and nonessential items:

(1) Sterling silver knives, forks, and spoons have been so classed, and now carry a 20-percent excise tax. We make sterling silver knives, forks, and spoons and have not complained about either the definition or the 20-percent excise tax. With the great body of our purchasing public, solid silver is a luxury. There are substitutes for sterling silver knives, forks, and spoons. Silver-plated knives, forks, and spoons are the substitutes for the lower-income families.

(2) Silver-plated hollowware—tea sets, vegetable dishes, trays, and so forth—have been classed as semiluxury items and now carry a 20-percent excise tax. We make silver-plated hollowware and have not complained about either the definition or the tax. There are substitutes for silver-plated hollowware. For the great bulk of our purchasing public, the china and glass industries offer reasonable substitutes.

On the question of "essentiality," silver-plated flatware must not be confused with sterling flatware or even silver-plated hollowware. Silver-plated knives, forks, and spoons are essential items in every home and there are no substitutes. Only in the Far East, where chopsticks are in common use, are substitutes to be found.

Silver-plated flatware—knives, forks, and spoons—has been repeatedly declared, by various Government agencies, as an essential civilian commodity.

During World War II the War Production Board clearly indicated that it considered silver-plated flatware as an essential civilian commodity. See War Production Board General Limitation Order L-140, issued November 5, 1943. Actually, during the war period, the Office of Civilian Requirements specifically arranged for the manufacture of tens of thousands of gross of silver-plated knives, forks, and spoons under its definition of a "necessity"—essential civilian commodity.

On February 3, 1949, our industry task group met with the National Security Resources Board in Washington. The Government officials, who conducted that meeting, stated that silver-plated flatware had been defined as an essential commodity.

Recently NPA limitation orders on copper, nickel, zinc, and so forth, have clearly defined silver-plated flatware as an essential civilian commodity.

In the tax laws of 1924, 1932, and 1943, the Congress specifically exempted silver-plated flatware—knives, forks, and spoons—from excise taxes on the proper ground that it was a "household necessity," as much so as china or glassware; but it was not a jewelry item and it was not a luxury.

There are over 12 million dozens of sliver-plated knives, forks, and spoons made and sold each year.

This quantity sorts up into approximately four different qualities, which are sold at four different price levels.

As a matter of statistics, not more than 20 percent of this volume is sold in jewelry stores; the other 80 percent is sold in hardware stores, drug stores, general stores, department stores, 5- and 10-cent stores, and so forth.

A very large percentage of the production is distributed in the hotel, restaurant, and boarding-house field. There, of course, it is just as important and just as much a necessity as are brooms, dustpans, glassware, and china.

Well over 1,500,000 dozens are distributed annually through the 5- and 10-cent stores.

This merchandise is resold at 15 cents, 20 cents, and 25 cents, depending on the size and type of the piece, and the margin of profit is very low. An excise tax would force higher prices, and since these chain stores usually adhere to 5-cent differentials in their pricing, the imposition of a tax would mean a more than ordinary increase in price.

The Government itself—National, State, institutions, and so forth—buys well over $1 million of these items each year. This is further indication that the items are necessities.

Generally speaking, the retailers in all trade categories cut down or soft pedal their advertising, merchandisin, and exploiting efforts on merchandise which carries a high excise tax, such as 20 percent. Their heaviest selling effort is reserved for tax-free merchandise.

Thus, excise taxes reduce sales or limit their increase, curtail employment, increase unit costs of production, increase the overhead burden, and reduce income-tax revenues which the Government would otherwise receive.

It is for these reasons solely that a manufacturer, such as Oneida, and so forth, would consider that a 20-percent excise tax on silver-plated knives, forks, and spoons was discriminatory. The items are essentials and household necessities and are properly classed with household furniture, chinaware, glassware, pots and pans, and so forth. If other essentials or semiessentials are tax-free, can it be equitable to single out knives, forks, and spoons for taxation?

Practical substitutes can be found in the case of all truly luxury items. There are no substitutes for knives, forks, and spoons.

For example, the GI's when they came home—thousands of whom were married before they left and other thousands who married later—found that they had to buy knives, forks, and spoons among their first purchases.

For those of limited income the 5- and 10-cent stores, hardware stores, and bargain basements are the natural suppliers. It does not seem proper for young men and young women, who are just starting to make a home, to find that their bare necessities are taxed the same as diamonds, fur coats, and sterling silver.

This noon you will eat your luncheon. You will buy food, but you will need certain essential equipment. Needed will be a table, a chair, a tablecloth and napkin, a glass, china, and knives, forks, and spoons.

Every one of these items is essential. Of them all, why should the knife, fork, and spoon be singled out to be taxed? Most of us eat three meals a day for 365 days in each year, and for as many years as we will live. We must have knives, forks, and spoons, until some genius can find substitutes other than sandwiches in a paper bag. Is that not a proper measure for "essentiality"?

There is now a 20 percent excise tax on jewelry, fur coats, sterling silver, and other luxury or semiluxury items.

Can it be other than unjust and discriminatory to impose the same 20 percent excise tax, and include in the same classification of "nonessentiality" an essential item such as silver-plated flatware?

In view of the reasons presented, I definitely beg and recommend that no excise tax be imposed on silver-plated flatware—knives, forks, and spoons.

Senator MILLIKIN (presiding). Thank you very much.

Our next witness this morning is Mr. Doub, Franklin Novelty Co., of Baltimore.

STATEMENT OF R. M. DOUB, FRANKLIN NOVELTY CO., BALTIMORE, MD.

Mr. DOUB. Mr. Chairman and committee members, I have a statement here which I would like to read.

Senator MILLIKIN. Make yourself comfortable.

Mr. DOUB. My name is R. M. Doub. My address is 644 West Baltimore Street, Baltimore, Md.

I am one of a small group of owners of so-called claw machines which are placed in various restaurants and other retail establishments in and about Baltimore. There are some two to three hundred of these machines in the Baltimore area. A number are also operated elsewhere, principally, I believe, in New Orleans, La., and San Francisco, Calif.

The claw machine works essentially on the same principle as a traveling excavating crane, as you can see from the photographs before you.

It consists of a miniature claw suspended from a boom located at the rear center of a glass-enclosed case, in which are displayed various articles of modest value, such as safety razors, flashlights, household tools, and so forth.

The lower end of the boom is hinged at the foot of a derrick or mast so that the boom may be moved forward or backward and from side to side, thus placing the claw in position to grasp and pick up a selected item of merchandise from among the articles visible in the display case. The cost of playing is 5 cents.

Success in operating the machine so as to obtain the desired article is dependent upon the player's skill and judgment, as I shall explain more fully.

Under section 3267 of the Internal Revenue Code, coin-operated amusement or music machines are subject to a special tax of $10 and so-called slot machines, whose successful operation depends upon chance, are subject to a tax of $150. The Bureau of Internal Revenue holds our claw machines subject to the $150 slot-machine tax. This tax would, of course, be raised to $250 by the House revenue bill, H. R. 4473.

The tax of $50 originally enacted in 1941 was not too difficult for us to sustain as a temporary war measure. But as a permanent feature of our revenue laws at the $150 rate, now to be increased to $250, it will force us out of business. Therefore we are here to save our business by asking that claw machines be removed from the slot machine classification. We seek only to be placed in a reasonable tax bracket suitable to the character and resources of our business.

The term "slot machine" is commonly used to mean the so-called one-armed bandit—a device of pure chance, insofar as the player is concerned, which is operated simply by inserting a coin and pulling a lever. We are not in that business nor in any way connected with it. It is entirely out of our league, not only in terms of the character of the machines used but also from the standpoint of scope of operations and comparative financial return on capital investment.

The application of the slot-machine tax to our business is not justified as an incident of a campaign of repression of gaming devices like one-armed bandits, because the claw machine is not a slot machine in that sense at all; nor is it justified as a revenue measure, because it is actually killing the source of taxes at which it is directed.

The tax has already caused the withdrawal from operation of hundreds of claw machines. This, in turn, has resulted in loss of revenue not only from the special tax but also from income taxes of owners of the machines, whose business has been curtailed or destroyed.

To operate the claw machine the customer turns the locator handle at the right center of the machine to the right or left, thus moving the boom and the claw so that the latter will be suspended at a point just above a desired article. The point from front to rear at which the claw will light is shown on an indicator at the rear of the machine. Having placed the claw in position, the operator inserts a nickel in the aperture at the left center of the machine, thus starting an electric motor which causes the boom to move forward and the claw to open and drop down. The claw closes when it has completed its descent. If the player is skillful the claw will grasp the desired object as it closes and deposit it in a chute which leads to a receptacle from which the player obtains the object. If it appears to the player that the claw will miss he can improve its position during its descent by spinning the locator handle to the right or left.

Every object in the case can be obtained by the player. His success depends on his skill in determining the correct angle of the boom for grasping a desired article and in manipulating and controlling it.

Senator MILLIKIN. Can he miss?

Mr. DOUB. He sure can, sir. If he does not position the claw strategically, he can expect to get nothing. If he does, and skillfully manipulates it, he will succeed.

The mechanism of the machine consists simply of an electric motor driving a cam shaft with three arms which are connected to the boom and claw. This mechanism has not been and cannot be set to govern either the percentage or the number of the merchandise units which will be grasped by the claw.

By contrast, the one-armed bandit and similar types are built to pay off at a predetermined percentage. All use the three-reel principle which you can see in the photographs which have been passed out. There is no skill involved in putting money in a slot and pulling a lever, and that is all the player does. His success is thus dependent entirely upon chance.

In determining whether a device constitutes a lottery or other game of chance the courts ordinarily apply the test of the dominating element. If the dominating element determining the result is skill, the machine is not a gaming device (*People* v. *Lavin*, 179 N. Y. 164; 71 N. E. 752, 755 (1904); 27 C. J. 968).

No claw-machine player expects a prize to turn up by the laws of chance. Instead, by means of the locator to which I have referred, he controls the position of the boom and claw, not only before the machine is set in operation by insertion of the nickel but during the entire time of its operation. It thus seems clear that the dominant element is skill. We, therefore, think that these machines would be more accurately classified as amusement and vending devices than as gaming machines like the one-armed bandit.

They are similar to coin-operated and manually controlled shuffleboard games and bowling games. These have been ruled by the Bureau to be games of skill subject to the $10 tax, in spite of the fact that a prize is offered for high score.

Permit me to describe briefly our method of doing business. The key factor is our ability to buy merchandise directly from the manufacturer at slightly less than 50 percent of its retail value. For example, on merchandise purchased for 45 cents the machine should return a gross of about $1.

Of this, 45 cents is, of course, allocable to the cost of the merchandise; another 25 cents is paid to the proprietor of the establishment where the machine is located; and 12 cents goes to the salesman who services the machines for us. These expenses amount to 82 cents, leaving a gross profit to the owner of the machine of about 18 cents, or 18 percent of the total collection. Out of this must come substantial amounts for Federal, State, and city taxes, and overhead. The Baltimore city tax alone is $65 per machine.

Our net profits, before personal taxes, will average less than 10 percent of the gross return of the claw machines owned by us. This is shown by the financial statements which I shall submit to the committee. The cost of the merchandise will be not less than 45 percent of the total collections from the machines, as the above example indicates. It is only because we buy directly from the manufacturer that we obtain a profit as substantial as the modest one shown by our statements. This is understandable when it is realized that, although the machines are still played for 5 cents, the cost of the merchandise has risen enormously since they were first used years ago.

In a sense, we are in a position comparable to that of jobbers marking up merchandise to the customer or player at a percentage which is customarily in ordinary business transactions. Every customer does not pay at the same rate because some are more skilled than others. But, on the average, the articles are disposed of by us at the going retail price.

From another point of view, the payment of a nickel to operate the claw machine is not unlike the purchase of a hunting or fishing license from the State or from the owner of a private game preserve.

Like the preserve owner, we find it profitable to sell licenses. The hunting or fishing license may or may not pay off in fish or game, depending largely upon the skill of the fisherman or hunter. It will always pay off, however, in the enjoyment of hunting or fishing. Certainly nobody would regard the sale of a license or right to fish or hunt as a gambling arrangement. Yet it is basically quite similar to the enterprise in which the owners of the claw machines are engaged.

We submit, therefore, that our machines are simply not a part of the gambling picture to which the $150 tax was intended to apply. Last year's collections of the slot-machine tax amounted, we understand, to about $10 million. Of this sum it is a safe estimate that no more than 1 or 2 percent came from those few claw machines which still remain in operation, in spite of the special tax.

The claw machine is entirely out of place, and cannot long maintain itself, in a company which can pay such a tax. We would appreciate this committee's recognition of our true position and the granting of relief by removing these machines from the slot-machine classification.

Senator HOEY. How much does it cost to take a try at the machine?

Mr. DOUB. Five cents.

Senator HOEY. How much can you win if you should use skill?

Mr. DOUB. Our articles run anywhere from 10 cents to roughly 3 or 4 dollars in retail values, sir.

Senator HOEY. I see. And you get 5 cents a try?

Mr. DOUB. Five cents a try.

Senator HOEY. If you are skilled at it you get something. If you are not, you miss?

Mr. DOUB. That is right.

I would like to say this, also, that previously to this tax I operated about a hundred machines. When this tax came into being it was $50, increased to $100, and last year increased to $150. I am now down to operating about 20 machines.

I have here a financial statement for the first 6 months of this year, and on a gross business of $39,531.45 I made a net profit of $570.82. That is not allowing for any salary for myself or any use of a building which I own in rent or anything else, and that seems to be the trend in our business. The tax has become and reached the stage where it is really confiscatory, and I feel, if the $250 tax now proposed goes into effect, it will amount to confiscating our business.

I have these statements here, financial statements from three of the operators who are operating.

Senator MILLIKIN. We will put them into the record.

Mr. DOUB. I thank you, sir.

(The documents referred to follow:)

Franklin Novelty Co.—Statement of income and expenses on claw-machine operations for the 6 months ended June 30, 1951

Income:		
Machine receipts		$36,531.45
Less merchandise used		9,744.84
		26,786.61
Less location owners' share		10,675.20
Gross profits on operations		16,111.41
Overhead expenses:		
Salaries and wages of employees		6,685.92
Employees' auto and service expenses, etc		418.75
Repairs and maintenance of machines and equipment		1,830.00
Automobile expenses, owner		370.46
Heat and light		200.04
Depreciation		1,140.02
Telephone, telegraph, and postage		391.21
Printing, stationery, and office expense		18.25
Legal and accounting		150.00
Insurance		357.95
Freight in		304.53
Ground rent		85.50
Traveling expenses		421.74
Taxes, payroll		62.35
Taxes and licenses, machines:		
Federal tax, 28 machines, at $150 per year	$2,100.00	
City tax, 16 machines, at $65 per year	520.00	
County tax, 12 machines, at $25 per year	150.00	
		2,770.00
Miscellaneous expense		323.27
Total expenses		15,540.59
Net profit		570.82

NOTE.—Building and office rental expense, ordinarily an expense of operations, is not included in this statement. No deduction was taken in this statement for owners or proprietor's salary.

Novelty Sales Co.—Operating income on claw machines for 6 months ended June 30, 1951

Gross income		$127,202.33
Commissions paid to locations		31,800.58
Income less commissions to locations		95,401.75
Cost of income:		
Inventory Jan. 1, 1951	$30,083.47	
Purchases	78,999.00	
Total	109,082.47	
Inventory June 30, 1951	65,235.42	
Cost of income	43,847.05	
Add commissions	14,031.48	
Employees expense	4,502.12	
Total cost of income		62,380.65
Gross income		33,021.10

Novelty Sales Co.—Operating income on claw machines for 6 months ended June 30, 1951—Continued

Expenses:		
Machine expense	$850.00	
Supplies	800.00	
Salaries and wages	8,092.11	
Telephone	734.72	
Hardware and parts	3,470.00

Totals expenses		$23,081.73
Net operating income		14,162.48

NOTE.—Partnership: No salaries to partners included.

Senator MILLIKIN. Mr. Osherman of the National Ballroom Operators Association.

STATEMENT OF J. A. OSHERMAN, ACCOMPANIED BY THOMAS B. ROBERTS, REPRESENTING THE NATIONAL BALLROOM OPERATORS ASSOCIATION

Mr. OSHERMAN. My name is J. A. Osherman. I represent the National Ballroom Operators Association as Washington counsel.

This association is composed of the owners of ballrooms in 27 States, and the number of ballrooms so represented is approximately 200, comprising 90 percent of the important ballrooms of the entire country.

Mr. Roberts, who is general counsel of the association, from Des Moines, Iowa, is also here with me.

Our position is simply that Congress never intended to classify ballrooms under the cabaret tax, and the House, in section 404 of H. R. 4473, gave us that relief.

The amendment and the committee report are set forth in our statement, and the effect of this committee report is that the principle laid down in the *Geer* case, Geer against Birmingham, should control, rather than the principle of the *Avalon* case. The *Geer* case held that a ballroom was not a cabaret. The *Avalon* case, held that a ballroom was a cabaret.

The effect of that amendment is to confirm the fact that Congress had never intended to tax ballrooms as cabarets; that has always been the law prior to the *Avalon* case, and was recognized by the Bureau of Internal Revenue in numerous rulings given ballroom operators.

Gentlemen, the relief which we seek is not ordinary relief from an excise-tax inequity but a confirmation of what has always been the intent of Congress as shown by the legislative history of section 1700 (e) of the Internal Revenue Code.

While it is submitted that the reasons given by the House committee in its committee report for the enactment of section 404 of H. R. 4473 are alone sufficient to warrant your enactment of the same amendment, nevertheless we believe that we can demonstrate conclusively that your failure to enact such an amendment will radically reduce revenue and thereby defeat the very purpose of the new revenue act.

Ballrooms, as they are commonly known, are not cabarets, never have been cabarets, and never will be. No better indication of the correctness of this statement can be had than the fact that they are not considered cabarets by the American Federation of Musicians, the American Society of Composers, Authors, and Publishers, and amusement-trade publications. As we all know, a ballroom is fundamentally a place to dance and the primary purpose of those who attend such an establishment is to engage in dancing. The sale of such minor items as soft drinks, pop corn, and candy bars is for the convenience of the patrons and, as such, is purely incidental. No patron frequents a ballroom solely for the purpose of partaking of refreshments. A cabaret, on the other hand, is a place, as Judge Graven pointed out in the case of *Geer* v. *Birmingham*, which the public usually and generally patronizes for purposes other than dancing, such as to see the floor show, entertain guests, and partake of food and drink. For more than 30 years prior to the *Avalon* case, ballrooms were classified under section 1700 (a) of the Internal Revenue Code, the same as skating rinks, movie theaters, baseball and softball games, amusement parks, boxing and wrestling shows, horse and dog races, circuses and carnivals, autocar races, high-school and college athletic events, concert halls, and legitimate theaters. In every one of those places of amusement soft drinks and refreshment items, such as pop corn, peanuts, and candy, are available to patrons as merely incidental to the entertaiment offered. Only an admissions tax has been levied and is now levied on each of the foregoing places of entertainment.

It affirmatively appears that while the incidental relationship between the sale of refreshments to the form of entertainment offered in ballrooms is the same as the incidental relationship between the sale of refreshments and the form of entertainment offered in each of the foregoing establishments, the effect of imposing an extra tax on the sale of refreshments in ballrooms is to single out ballrooms and thereby discriminate against them in favor of all other competitive places of entertainment wherein the sale of refreshments is likewise incidental to the entertainment furnished. We make that statement as to competition because a ballroom, like these other establishments above-mentioned, is primarily a poor man's place of entertainment as compared to a cabaret which is frequented almost entirely by people of far more means. It is well known that prices charged for refreshments in a ballroom do not exceed those charged for the same items by ordinary retail outlets, while the prices charged for the same items in cabarets are many times higher than those charged by such outlets.

The legislative history of section 1700 (a) and section 1700 (e) for over 30 years, as summarized by District Judge Graven in *Geer* v. *Birmingham*, shows that the admissions tax was intended to tax those places of entertainment which make a charge at the box office fairly reflecting the value of the entertainment offered. Cabarets might have been placed in this same category except for the fact that they do not charge an admission at the box office but include the cost of the entertainment in the prices of the food and drinks and consequently a special tax had to be designed for them.

To place ballrooms in the same category as cabarets is in effect to subject them to confiscatory double taxation, inasmuch as one tax is imposed at the box office on the price of the entertainment and another tax for the same purpose is imposed on the charges for refreshments. These charges, unlike those in a cabaret, are not increased to include the cost of the entertainment offered. Obviously, ballrooms cannot survive such manifestly unfair and grossly discriminatory taxation while their afore-mentioned competitors, appealing to the same class of patrons, pay but a single tax levied only on their admission charges.

Taxing ballrooms under section 1700 (e), instead of section 1700 (a), is already having a disastrous effect on the entire industry. As proof of this fact, we have with us several letters from ballroom operators in which they state that they have either gone out of business or are contemplating going out of business. To read all of those letters to your committee would take more time than that allotted to us, so we have appended to this memorandum copies of those letters. The originals, of course, are available for your examination. The gist of those letters, of which the letter appearing on page 6 of our statement is typical, is that attendance has fallen off entirely due to the tax and such tax is so highly discriminatory that patrons who formerly patronized ballrooms are now being diverted to other places of entertainment where incidental sales of refreshments are not subject to a cabaret tax.

As further proof of the deplorable state of the ballroom industry due to the imposition of the cabaret tax, the National Ballroom Operators Association has made a spot check of ballrooms in the States of California, Colorado, Illinois, Indiana, Iowa, Kansas, Missouri, Minnesota, Nebraska, Ohio, Oklahoma, Wisconsin, South Dakota, and Utah and found that 33 ballrooms have gone out of business, 14 ballrooms are contemplating going out of business, and 22 ballrooms have curtailed their nights of operation. The names of these ballrooms in their respective groups are shown on lists appended to this statement. In this same connection the following telegram was received yesterday from the association's managing secretary:

DES MOINES, IOWA, *August 2, 1951.*

J. A. OSHERMAN and T. B. ROBERTS,
Washington, D. C.:

As the result of a survey which I recently made of the ballroom business it is my opinion that a majority of the ballrooms of this country have been so adversely affected by the cabaret tax that they have either closed their doors, curtailed their operation, or are considering doing one or the other.

NATIONAL BALLROOM OPERATORS ASSOCIATION,
OTTO WEBER, *Managing Secretary.*

We know, as your committee knows, that it is just as important not to lose revenue as it is to increase revenue. We, therefore, come to the important consideration that unless the amendment in H. R. 4473 is enacted, ballrooms will be driven out of business with a large resultant loss of revenue.

In the year 1948 54 representative ballrooms in 17 States paid about $860,000 in admissions taxes. Were your committee to have before it the total admissions taxes paid by all the ballrooms in the 48 States, it would, of course, amount to several millions of dollars annually.

Having clearly shown that the effect of the discriminatory tax imposed by section 1700 (a) is to force ballrooms out of business and decrease the nights of operation, it necessarily follows that the admissions tax heretofore received by the Federal Government will be reduced to the extent of millions of dollars. Certainly no one familiar with the ballroom industry as a whole can, by the greatest stretch of the imagination, make the statement that the placing of ballrooms under the cabaret tax imposed by section 1700 (e) will result in any increase in revenue. This point can be graphically illustrated by the Archer Ballroom Chain, which operates seven ballrooms in South Dakota, Iowa, and Missouri. These ballrooms paid a total Federal admissions tax of $78,350.81 for the year 1950. Had it not been for the fact that the House enacted the amendment here in question, Mr. T. H. Archer, would by now have leased one of his ballrooms for other business purposes and, in the event the amendment does not become law, will be forced to do likewise with his other six ballrooms. That would result in a complete loss to the Government of admission taxes amounting to approximately $80,000 annually.

Many of these ballroom operators who have either gone or are going out of business are veterans, while others are people of small means who are losing their only means of livelihood. They complain bitterly about the fact that the corner movie theater, the roller-skating rink, ball park, and the stockcar race track in their same community pay only an admissions tax, and the further fact that many so-called private clubs operated by some veterans' group, lodge, or similar organization and in direct competition with ballrooms because they regularly put on public dances, pay no taxes whatever.

Many of our ballroom operators have voiced the complaints of patrons who like to go to ballrooms as a relaxation from their labors and who cannot now afford to do so. It all comes down to the fact, therefore, that the workingman and the young people with limited means are being deprived of wholesome and healthy entertainment. Certainly with all the current talk against juvenile delinquency it seems unfair to deprive young people of the opportunity of listening and dancing to good music in a wholesome environment and, instead, to drive them into the unwholesome atmosphere of many places frequented mainly by undesirable people. It must be remembered that every ballroom in our entire association is supervised by the police, something which cannot be said of the many pubs, dives, and undesirable honky-tonks which will be the only remaining places of entertainment which they can afford to patronize.

Gentlemen, we feel sure that should we fully pursue our rights for relief in the courts that the ambiguity in section 1700 (e) will be resolved in our favor. The wheels of justice, however, grind so slowly that by the time such relief comes it will be too late. We submit therefore that where such an ambiguity admittedly exists it is the duty of Congress to resolve that ambiguity, for the reasons we have stated, in favor of the ballrooms of the United States and thereby save an old and established industry upon whom the livelihood of thousands of people depend.

Senator MILLIKIN. The House has done it?

Mr. OSHERMAN. The House has done it.

Senator MILLIKIN. And you are in favor of our going along with the House?

Mr. OSHERMAN. Absolutely. I believe that Mr. Stam is familiar with the whole question, and it merely means that we ask you to confirm what had been done for 30 years, and by legislative history which shows the intent of Congress during that period.

Senator MILLIKIN. Thank you very much.

Mr. ROBERTS. Senator, letters are attached to our prepared statement.

Senator MILLIKIN. You may have the full statement, with all attachments, which you wish to add, put into the record.

Mr. OSHERMAN. Thank you.

(The prepared statement and attachments are as follows:)

STATEMENT OF J. A. OSHERMAN AND THOMAS B. ROBERTS, APPEARING ON BEHALF OF THE NATIONAL BALLROOM OPERATORS ASSOCIATION

Since Congress intended that bona fide ballrooms and other similar places be taxed under section 1700 (a) of the Internal Revenue Code rather than under section 1700 (e) of said Code, and the House in this Eighty-second Congress confirmed that intention by an amendment in H. R. 4473, this statement urges the Senate to enact the same amendment.

My name is J. A. Osherman. I am a member of the law firm of Gallagher, Osherman, Connor & Butler, Bowen Building, Washington, D. C. We are the Washington counsel for the National Ballroom Operators Association with its principal office in Des Moines, Iowa. The National Ballroom Operators Association is an organization composed of owners of ballrooms operating in 27 States and the number of ballrooms so represented is approximately 200, comprising 90 percent of the important ballrooms of the entire country.

I have with me today Mr. Thomas B. Roberts, of Des Moines, Iowa, who has assisted me in the preparation of this statement. Mr. Roberts is the legal counsel for the association and was the principal attorney representing the plaintiff ballroom operators in the case of *Geer* v. *Birmingham* (88 F. Supp. 189, and 185 F. 2d 82).

The House in section 404 of H. R. 4473 of this Congress, after careful consideration, excluded bona fide ballrooms from the provisions of section 1700 (e) of the Internal Revenue Code, which imposes a tax on cabarets, by inserting after the second sentence thereof the following new sentence: "In no case shall such term include any ballroom, dance hall, or other similar place where the serving or selling of food, refreshment, or merchandise is merely incidental, unless such place would be considered, without the application of the preceding sentence, as a 'roof garden, carbaret, or other similar place.' "

In the House committee report accompany said act, House Report 586 at page 126, the purpose of this amendment is stated to be:

"This section amends section 1700 (e) (1) of the Internal Revenue Code to exempt from the cabaret tax bona fide dance halls, ballrooms, and other similar places where the serving or selling of food, refreshments, or merchandise is merely incidental to the music and dancing privileges furnished, unless the conduct of the place is such as to bring it within the normal concept of a roof garden, cabaret, or similar place. This determination will be made by reference to the over-all operation of the establishment, including such factors as the relative income from the several activities over a period of time, the relative portion of space devoted to the various activities, the type of refreshments served or sold, the scope and character of the entertainment furnished, and the hours of operation.

"The purpose of this amendment is to make it clear that the principles set forth by the district court in the case of *Geer* v. *Birmingham* (88 F. Supp. 189) are controlling in the determination of whether the establishment involved is operating as a cabaret or as a dance hall, and to avoid the broad construction placed upon the statute in the case of *Avalon Amusement Corporation* v. *United States* (165 F. 2d 653), and in the court of appeals decision reversing the decision of the district court in the *Geer* case (*Birmingham* v. *Geer* (185 F. 2d 82), which require that dance halls and similar establishments be taxed as cabarets, even though the serving or selling of food, refreshments, or merchandise is merely incidental."

The effect of that amendment is to confirm the fact that Congress had never intended to tax ballrooms as cabarets. That had always been the law prior to the Avalon case and was so recognized by the Bureau of Internal Revenue in numerous rulings given ballroom operators.[1]

[1] Many of these rulings are set out verbatim on pp. 215 to 220 of Judge Graven's opinion in *Geer* v. *Birmingham* as reported in 85 F. Supp. 189.

Gentlemen, the relief which we seek is not ordinary relief from an excise-tax inequity but a confirmation of what has always been the intent of Congress as shown by the legislative history of section 1700 (e) of the Internal Revenue Code.[2]

While it is submitted that the reasons given by the House committee in its committee report for the enactment of section 404 of H. R. 4473 are alone sufficient to warrant your enactment of the same amendment, nevertheless we believe that we can demonstrate conclusively that your failure to enact such an amendment will radically reduce revenue and thereby defeat the very purpose of the new revenue act.

Ballrooms, as they are commonly known, are not cabarets, never have been cabarets, and never will be. No better indication of the correctness of this statement can be had than the fact that they are not considered cabarets by the American Federation of Musicians, the American Society of Composers, Authors, and Publishers, and amusement trade publications. As you know, a ballroom is fundamentally a place to dance and the primary purpose of those who attend such an establishment is to engage in dancing. The sale of such minor items as soft drinks, popcorn, and candy bars is for the convenience of the patrons and, as such, is purely incidental. No patron frequents a ballroom solely for the purpose of partaking of refreshments. A cabaret, on the other hand, is a place, as Judge Graven pointed out in the case of *Geer* v. *Birmingham*, which the public usually and generally patronizes for purposes other than dancing, such as to see the floor show, entertain guests, and partake of food and drink. For more than 30 years prior to the Avalon case, ballrooms were classified under section 1700 (a) of the Internal Revenue Code, the same as skating rinks, movie theaters, baseball and softball games, amusement parks, boxing and wrestling shows, horse and dog races, circuses and carnivals, auto-car races, high school and college athletic events, concert halls, and legitimate theaters. In every one of those places of amusement soft drinks and refreshment items such as popcorn, peanuts, and candy are available to patrons as merely incidental to the entertainment offered. Only an admissions tax has been levied and is now levied on each of the foregoing places of entertainment.

It affirmatively appears that while the incidental relationship between the sale of refreshments to the form of entertainment offered in ballrooms is the same as the incidental relationship between the sale of refreshments and the form of entertainment offered in each of the foregoing establishments, the effect of imposing an extra tax on the sale of refreshments in ballrooms is to single out ballrooms and thereby discriminate against them in favor of all other competitive places of entertainment wherein the sale of refreshments is likewise incidental to the entertainment furnished. We make that statement as to competition because a ballroom, like these other establishments above-mentioned, is primarily a poor man's place of entertainment as compared to a cabaret which is frequented almost entirely by people of far more means. It is well known that prices charged for refreshments in a ballroom do not exceed those charged for the same items by ordinary retail outlets, while the prices charged for the same items in cabarets are many times higher than those charged by such outlets.

The legislative history of section 1700 (a) and section 1700 (e) for over 30 years, as summarized by District Judge Graven in *Geer* v. *Birmingham*, shows that the admissions tax was intended to tax those places of entertainment which make a charge at the box office fairly reflecting the value of the entertainment offered. Cabarets might have been placed in this same category except for the fact that they do not charge an admission at the box office but include the cost of the entertainment in the prices of the food and drinks and consequently a special tax had to be designed for cabarets.

To place ballrooms in the same category as cabarets is in effect to subject them to confiscatory double taxation inasmuch as one tax is imposed at the box office on the price of the entertainment and another tax for the same purpose is imposed on the charges for refreshments. These charges, unlike those in a cabaret, are not increased to include the cost of the entertainment offered. Obviously, ballrooms cannot survive such manifestly unfair and grossly discriminatory taxation while their afore-mentioned competitors, appealing to the same class of patrons, pay but a single tax levied only on their admission charges.

Taxing ballrooms under section 1700 (e) instead of section 1700 (a), is already having a disastrous effect on the entire industry. As proof of this fact

---

[2] This legislative history is fully set forth on pp. 195 to 215 of Judge Graven's opinion in *Geer* v. *Birmingham* as reported in 85 F. Supp. 189.

we have with us several letters from ballroom operators in which they state that they have either gone out of business or are contemplating going out of business. To read all of those letters to your committee would take more time than that allotted to us so we have appended to this memorandum copies of those letters. The originals, of course, are available for your examination. The gist of those letters, of which the letter appearing on page 6 of our statement is typical, is that attendance has fallen off entirely due to the tax and such tax is so highly discriminatory that patrons who formerly patronized ballrooms are now being diverted to other places of entertainment where incidental sales of refreshments are not subject to a cabaret tax.

MELODY MILL BALLROOM,
Dubuque, Iowa, July 24, 1951.

Mr. OTTO WEBER,
Managing Secretary, Des Moines, Iowa.

DEAR SIR: I am writing you to see if you can help correct a very unfair double taxation situation. We have operated a ballroom for many years with the admission price charged at the door as our principal source of revenue and we have paid the 20 percent admissions tax as required by Federal law, we have no complaint on just taxes but people simply rebel after paying their admission and tax they are forced to pay another 20 percent on hamburgers, pop, etc., when they can go next door and buy the same merchandise for 20 percent less.

Naturally this makes people feel that we are trying to gouge them because it is impossible to explain to every customer that it is the Government and not us who gets the extra 20 percent. For example, in this farm area entire families of 6 to 10 people attend our regular old-time dances and naturally the kids want a hamburger, a bottle of pop, and maybe a candy bar and we feel very, very cheap trying to explain why we must charge 20 percent more than any other place they go. We do not mind collecting taxes that are fair but this is the most unfair tax because it singles out ballrooms and does not apply to other forms of amusements such as ball games, races, carnivals, theaters, etc.

Why are we being discriminated against? What have we done to deserve special double taxation? Please advise us what can be done to get our lawmakers to realize the gross unfairness of this law.

Sincerely yours,

VINCE. SCHULTING, *Manager.*

As further proof of the deplorable state of the ballroom industry due to the imposition of the cabaret tax, the National Ballroom Operators Association has made a spot check of ballrooms in the States of California, Colorado, Illinois, Indiana, Iowa, Kansas, Missouri, Minnesota, Nebraska, Ohio, Oklahoma, Wisconsin, South Dakota, and Utah and found that 33 ballrooms have gone out of business, 14 ballrooms are contemplating going out of business, and 22 ballrooms have curtailed their nights of operation. The names of these ballrooms in their respective groups are shown on lists appended to this statement. In this same connection the following telegram was received yesterday from the Association's Managing Secretary:

DES MOINES, IOWA, *August 2, 1951.*

J. A. OSHERMAN and T. B. ROBERTS,
Bowen Building, Washington, D. C.:

As the result of a survey which I recently made of the ballroom business it is my opinion that a majority of the ballrooms of this country have been so adversely affected by the cabaret tax that they have either closed their doors, curtailed their operations, or are considering doing one or the other.

OTTO WEBER,
Managing Secretary, National Ballroom Operators Association.

We know, as your committee knows, that it is just as important not to lose revenue as it is to increase revenue. We therefore come to the important consideration that unless the amendment in H. R. 4473 is enacted, ballrooms will be driven out of business with a large resultant loss of revenue.

In the year 1948, 54 representative ballrooms in 17 States paid about $860,000 in admission taxes. Were your committee to have before it the total admissions taxes paid by all the ballrooms in the 48 States, it would, of course, amount to several millions of dollars annually.

Having clearly shown that the effect of the discriminatory tax imposed by section 1700 (e) is to force ballrooms out of business and decrease the nights of operation, it necessarily follows that the admissions tax heretofore received by the Federal Government will be reduced to the extent of millions of dollars. Certainly no one familiar with the ballroom industry as a whole can, by the greatest stretch of the imagination, make the statement that the placing of ballrooms under the cabaret tax imposed by section 1700 (e) will result in any increase in revenue. This point can be graphically illustrated by the Archer Ballroom chain which operates seven ballrooms in South Dakota, Iowa, and Missouri. These ballrooms paid a total Federal-admission tax of $78,350.81 for the year 1950. Had it not been for the fact that the House enacted the amendment here in question, Mr. T. H. Archer, he has advised us, would by now have leased one of his ballrooms for other business purposes and in the event the amendment does not become law, will be forced to do likewise with his other six ballrooms. That would result in a complete loss to the Government of admission taxes amounting to approximately $80,000 annually.

Many of these ballroom operators who have either gone or are going out of business are veterans, while others are people of small means who are losing their only means of livelihood. They complain bitterly about the fact that the corner movie theater, the roller-skating rink, ball park, and the stock-car race track in their same community pay only an admission tax and the further fact that many so-called private clubs operated by some veterans' group, lodge, or similar organization and in direct competition with ballrooms because they regularly put on public dances, pay no taxes whatever.

Many of our ballroom operators have voiced the complaints of patrons who like to go to ballrooms as a relaxation from their labors and who cannot now afford to do so. It all comes down to the fact, therefore, that the workingman and the young people with limited means are being deprived of wholesome and healthy entertainment. Certainly with all the current talk against juvenile delinquency it seems unfair to deprive young people of the opportunity of listening and dancing to good music in a wholesome environment and, instead to drive them into the unwholesome atmosphere of many places frequented mainly by undesirable people. It must be remembered that every ballroom in our entire association is supervised by the police, something which cannot be said of the many pubs, dives, and undesirable honky-tonks which will be the only remaining places of entertainment which they can afford to patronize.

Gentlemen, we feel sure that should we fully pursue our rights for relief in the courts that the ambiguity in section 1700 (e) will be resolved in our favor. The wheels of justice, however, grind so slowly that by the time such relief comes, it will be too late. We submit therefore that where such an ambiguity admittedly exists it is the duty of Congress to resolve that ambiguity, for the reasons we have stated, in favor of the ballrooms of the United States and thereby save an old and established industry upon whom the livelihood of thousands of people depend. That legislative relief is badly needed and needed now.

CONCLUSION

In conclusion we respectfully urge that your committee recommend enactment of section 404 of H. R. 4473 into law.

EHLERS-GERKEN POST, NO. 694,
Arcadia, Iowa, July 26, 1951.

Mr. OTTO WEBER,
Managing Secretary, Des Moines, Iowa.

DEAR SIR: The executive committee of our local Legion post has requested that I write to you concerning the cabaret tax which we have been paying on all refreshments and services at the ballroom which is owned and operated by the post here in Arcadia, Iowa.

Since our ballroom was built in 1948 (by the post, composed entirely of veterans of World Wars I and II) until the time the cabaret tax was levied, we were able to show a fair profit from our operations. We have always tried to keep our operating expenses at the lowest possible figure and in most cases using members from the post and the auxiliary of the post to act as waiters, waitresses, ticket sellers, and check-room employees. Because of their interest in the post and the community in general, these people have worked for from $3 to $5 per night. All our other operating expenses have been held to the very minimum in an effort to at least try to show a profit at the end of the year. Our prices have been as high as we feel we dare go without hurting business too seriously. In other words, when the cabaret tax was levied instead of increasing our prices, we absorbed the tax ourselves.

To clarify, I should like to quote a few figures. From November 22, 1949, through June 30, 1951, we have paid $7,520.10 in cabaret tax. The figure, of course, represents 20 percent of our gross receipts. In addition to this, we have collected $9,378.67 in admission taxes. This makes a total of nearly $17,000 paid in Federal admission and cabaret taxes in less than 2 years' time. In comparison to many other ballrooms the country over, ours is a small concern. During our fiscal year (March 1, 1950, to March 1, 1951) our gross income was $78,000 yet, after holding our overhead to the very least figure, our financial statement for the end of the year showed a loss. The ironic part of it all is that had we not had to pay the unfair cabaret tax, we could have shown a profit for the period.

In conclusion, I should like to say that it all boils down to one thing. If we must continue to pay the cabaret tax, I am almost certain that our ballroom will close. Any suggestions or help you can give us along this line will be sincerely appreciated.

Very truly yours,

LEO C. SCHWEERS.

RIVERSIDE RANCHO,
Los Angeles 27, Calif., July 23, 1951.

Mr. OTTO WEBER,
Managing Secretary, National Ballroom Operators Association,
Des Moines, Iowa.

DEAR MR. WEBER: Would certainly like to know what we ballroom operators can do toward eliminating the cabaret tax imposed on ballrooms where the revenue derived is from ballroom dancing mainly. The overhead in maintaining our place of business has naturally increased in cost, and our admission price of course cannot be increased, therefore, with the increases in salaries of musicians, employees, and maintenance, we find the burden of the cabaret tax so great that it has come to the point of either going out of business as so many of our competitors on the Pacific coast have or selling out.

Personally I find that I am in business merely to pay salaries, taxes, and cost of operating a ballroom and have to seek a different way of earning a living, Mr. Weber, unless I can get some relief from this taxation.

Hope you can find some way of keeping the ballroom operators from folding.

Sincerely yours,

RIVERSIDE RANCHO,
By MARTY LANDAN,

CASSVILLE, WIS., *July 24, 1951.*

Mr. OTTO WEBER,
Des Moines, Iowa.

DEAR SIR: I wish to register a complaint against the cabaret tax on ballrooms.

Ballrooms sell dancing; the refreshments are just an accommodation to our patrons, as are the refreshments sold at a ball park, for their baseball fans.

We have lost money the last few seasons but still had to pay cabaret tax on the refreshments sold.

It isn't the profit that is taxed, it's the total sales cost and profit. Twenty percent on cost and profit take nearly all the profit made.

The customer to a ballroom pays his tax when he enters the ballroom, and does not complain, but he does rebel when he pays tax on his refreshments and that's why ballroom business has lost out, they have been going elsewhere, where there is no cabaret tax.

I'm not a crank on taxes, but ballrooms are not cabarets. Ballrooms advertise bands and dancing, not refreshments.

Wishing you success,

Respectfully yours,

MR. and MRS. GEORGE PAPE.

THE ELMS,
Youngstown 2, Ohio, July 27, 1951.

Mr. OTTO WEBER,
Secretary, National Ballroom Operators Association,
Des Moines, Iowa.

DEAR MR. WEBER: In answer to your letter of July 22 inquiring about the East Market Gardens, I wish to inform you that we closed the East Market Gardens on June 1, 1951, and are converting it to a bowling alley.

I see no future in the ballroom business with the cabaret tax up in the air and also with the exemption of the so-called charity dances in the new tax bill.

In the last 12 months of operations we paid the Federal Government $5,608.07 in admission taxes. Had we been classified as a cabaret we would have paid $11,826, an increase of $6,218.58.

If the so-called charity dances are exempt they will be able to operate 20 percent cheaper than any legitimate ballroom which in effect is worse than the cabaret tax.

If they are looking for additional taxes why exempt the public who attend charity dances. If amusement taxes are to be collected why should they be collected from just certain groups. After all it is not the institution that pays the taxes but the individual who attends the dances.

So, all in all, the future looks too dark; therefore, the only thing left for us to do is to convert to another use for our buildings.

I will write you further at a later time, or see you at the next convention.

Respectfully yours,

L. A. CAVALIER, Jr., *Manager.*

CIMARRON BALLROOM,
Tulsa, Okla., July 25, 1951.

Mr. OTTO WEBER,
Des Moines 13, Iowa.

DEAR SIR: We have been in the ballroom business for the past 6 years and have used all types of bands and now operate the finest ballroom in the Southwest and pay more admissions taxes than any other ballroom in the State of Oklahoma.

Since it is illegal to sell refreshments in a ballroom in our State other than soft drinks and set-ups, the cabaret tax has worked such a hardship on us that it is almost impossible to operate. We charge only 1[illegible] cents for soft drinks and 30 cents for ice and 30 cents for white soda and ginger ale and since the cabaret tax went into effect our margin of profit has become so slim that unless something can be done to either eliminate the cabaret tax entirely or cut down on the admissions tax, I am afraid we will find it necessary to cease operations.

Sincerely yours,

C. M. COOKSEY, *Manager.*

AMERICANA CORP.,
Hollywood, Calif., July 2[illegible], 1951.

OTTO WEBER,
Secretary NBOA, Des Moines, Iowa.

DEAR SIR: We have been informed that the excise-tax revision is to come before the Senate Finance Committee in the near future.

We operate two ballrooms in southern California: the Harmony Park Ballroom and Hometown Jamboree. The present cabaret tax as it applies to ballrooms we believe is unfair and works such a hardship that we may have to discontinue the operation of the ballrooms if some relief is not given soon.

Sincerely,

AMERICANA CORP.,
STEVE STEBBINS,
President.

BOSTONIA BALLROOM,
Bostonia, Calif., July 25, 1951.

Mr. OTTO WEBER,
3208 Second Avenue, Des Moines, Iowa.

DEAR SIR: I am writing to inform you of the hardship of trying to remain in business due to the Federal admission and cabaret tax.

As you know the cost of advertising is sky-high, name bands and musicians are also very expensive. But I find that I must advertise very strongly to draw any people. Then the "take" on admission isn't enough to take care of the cost of advertising and payment of the band. Therefore, I am forced to absorb the balance of expenses from the sale of refreshments.

I can't raise the price of refreshments as the trade can't afford it. Therefore, I am forced to pay the Federal cabaret tax from the small profit of sales. As you can see it is becoming more difficult to remain in business.

Anything that could be done to help me remain in business would be greatly appreciated. Thank you.

Yours truly,

MICKEY WHALEN, *Owner-Manager.*

CHAMBER OF COMMERCE,
Bancroft, Iowa, July 26, 1951.

OTTO WEBER,
Manager-Secretary, N. B. O. A., Des Moines, Iowa.

DEAR MR. WEBER: Received your letter of July 12 regarding National Ballroom Operators Association dues. Am sorry to say we were forced to close our ballroom, almost 2 years ago.

The only dances we now have are wedding dances, these but once in a while, and always free. We don't even try to open our concessions for these dances.

Our ballroom opened in 1923, and although it was remodeled quite frequently we were always able to make a small profit which in return was spent for local community activities, such as youth's programs, junior legion baseball, Boy Scouts, etc.

The 20 percent admission tax and the 2 percent State tax hurt us plenty, but when the 20-percent cabaret tax was added on all merchandise, refreshments, and services there was nothing for us to do but close the ballroom.

If at any time we think we can see our way clear to reopen our ballroom, we will be more than pleased to again join the N. B. O. A.

Sincerely,

ANDY H. DIETERING,
Manager, Legion Ballroom.

THE PROM TERRACE BALLROOM,
Chicago, Ill., July 24, 1951.

MR. OTTO WEBER,
National Ballroom Operators Association,
3208 Second Avenue, Des Moines, Iowa.

DEAR MR. WEBER: As you no doubt know, in January we received a notice from the collector of internal revenue, Chicago, Ill., advising us that we should start charging the customers cabaret tax effective February 1, which we did.

Our business was already at a very low point and the reaction to this cabaret tax was so severe, it was necessary for us to give up our lease on May 12, 1951, and discontinue the operation of the ballroom.

Yours very truly,

ROY E. MCILRATH AND L. M. WATSON
(Doing business as:)

Senator MILLIKIN. Senator Dworshak is here. Please go ahead, Senator Dworshak.

Senator DWORSHAK. Thank you, Mr. Chairman.

Earlier during these hearings, Mr. Henry B. Fernald, chairman of the American Mining Congress, presented his statements earnestly urging some changes in the tax laws, and the changes that might be made in the consideration of new legislation.

I think that Senator George, of your committee, has received a letter from L. J. Randall, who is also a member of this tax committee of the American Mining Congress, and which letter has already been printed in your hearings.

At this time I should like to call attention to a letter received from the Idaho Mining Association, Boise, Idaho, and the Northwest Mining Association at Spokane, Wash., calling attention to the statement submitted to your committee by Mr. Fernald, and approving some of the recommendations which he has made.

I should like permission to insert these two letters in your hearings.

Senator MILLIKIN. They will be inserted. Thank you very much, Senator.

(The letters referred to follow:)

IDAHO MINING ASSOCIATION,
Boise, Idaho, July 30, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

MY DEAR SENATOR GEORGE: We have examined a statement made by Henry B. Fernald, chairman of the American Mining Congress Tax Committee, dated July 18, 1951, made to your Senate Committee on Finance pertaining to the revenue bill of 1951, together with a letter to you dated July 24, 1951, signed by L. J. Randall, comptroller of the Hecla Mining Co., who is chairman of our tax committee. We have also examined a letter dated July 27 addressed to you as chairman of the Senate Finance Committee and signed by Mr. David E. Watson, vice president of the Northwest Mining Association at Spokane, Wash.

We not only endorse the statements made by Mr. Fernald, Mr. Randall, and Mr. Watson but we sincerely urge that your committee take action to amend our present Federal tax laws in accordance with their recommendations. In Idaho we are particularly interested in the recommendation that the tax laws be amended to permit a deduction for the cost of prospecting and exploration prior to discovery as an expense against other income in the year incurred. It seems to me that our whole defense program is largely dependent upon a ready source of metals.

I do not concur with the statement I have often heard by those not familiar with mining to the effect that our potential ore reserves have been exhausted. However, known metal reserves are being rapidly depleted, and unless some incentive is provided for continued prospecting and exploration, the industry will not be in a position to furnish metals so vitally needed for the national safety.

While the expensing of prospecting and exploration is vital, we also urge that you give consideration to the following recommendations made by Mr. Fernald and Mr. Randall:

1. Normal development costs to maintain production of an operating mine should be treated as an operating expense.

2. Net receipts from minerals produced prior to the productive stage should be applied as a reduction against prospecting, exploration, and development costs incurred prior to the productive stage.

3. The combined corporate normal and surtax rates should, in no case, be increased to a figure in excess of 50 percent of the net profits of the corporation, and the present excess profits tax credit based on income should be increased to 100 percent rather than reduced from the present 85 percent allowance to 75 percent as provided by the revenue bill of 1951 (H. R. 4473).

4. Code section 131 (f) which, under present law, grants a foreign tax credit only in the case of a majority-owned foreign subsidiary, should be amended to provide for an ownership requirement not in excess of 10 percent.

We urge that your committee act favorably upon the above recommendations.

Yours very truly,

HARRY W. MARSH, *Secretary.*

NORTHWEST MINING ASSOCIATION,
Spokane, Wash., July 27, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee, United States Senate,
Washington, D. C.

DEAR SENATOR GEORGE: We have just examined a statement made by Henry B. Fernald, chairman of the American Mining Congress Tax Committee, on July 18, 1951, to the Senate Committee on Finance, pertaining to the revenue bill of 1951 (H. R. 4473) on behalf of the mining industry in general. We have also examined a letter to you dated July 24, 1951, signed by L. J. Randall, comptroller of the Hecla Mining Co., and chairman of our tax committee, pertaining to the same subject.

Both of these men have emphasized the necessity for amendments to our present tax laws in order to encourage the discovery of new metal mines so vitally necessary at the present time for our national safety. We must urge that your Senate Finance Committee give careful consideration to the suggestions made by these two men. We are particularly interested in the following:

1. Our tax laws must be amended to permit a tax deduction for expenditures incurred in prospecting and exploration prior to discovery. The present law which permits a recovery of such expenditures only through depletion over ore reserves, if and when an ore body is discovered, does not serve as an inducement to expend funds for prospecting and exploration. I am sure that Dr. Boyd, Director of the Bureau of Mines, and other men familiar with the problems of the mining industry would certainly concede that such an amendment would immediately attract capital into the industry, and the resulting expenditures would unquestionably lead to discovery of new reserves to replace present reserves now being worked out.

2. Both Mr. Fernald and Mr. Randall point out that section 302 of the 1951 revenue bill is beneficial to some extent in that a deduction is permitted for development subsequent to discovery of a commercial ore body. However, they also note that no provision is made for the deduction of expenditures incurred prior to discovery, except through depletion. The proposed amendment, set forth above, is a must for the reason set forth. They also point out that section 302 might very well be interpreted to prevent the taxpayer from charging off normal development currently since the proposed bill states specifically that if the recovery of such expenditures is conditioned upon future production, duced ores or minerals benefited by such expenditures are sold." Such a requirement would obviously curtail the development of presently producing mines, and this is especially true in the case of a zinc property. The operator can hardly afford to risk capital for extensive development of an ore body for fear that if the recovery of such expenditures is conditioned upon future production, he may never secure the benefit of a tax deduction, which, of course, is true if the write-off must be made in a year when there is no profit. Expenditures to maintain production of an operating mine should not be considered as an expenditure for development, and such expenditures should be deductible as an ordinary cost of operation in the year such expenditures are made.

3. The proposal by Mr. Fernald and Mr. Randall that any net receipts from minerals produced prior to the productive stage should be applied as a reduction against cost of exploration and development prior to the productive stage is logical. Certainly the mine hasn't realized any operating profit until such time as the deposit is sufficiently developed to maintain a continuous production.

In conclusion, we are also in agreement with other suggestions by Mr. Fernald and Mr. Randall pertaining to any increase in the normal and surtax rates of corporations, and we certainly see no reason why the present excess-profits tax credit based on income should be reduced from 85 to 75 percent. In fact, it should be increased to 100 percent.

We were rather surprised to learn that code section 131 (f) grants a foreign tax credit only in the case of a majority-owned foreign subsidiary. Why make a 50-percent cut-off? Mr. Fernald points out that, for practical purposes, the ownership requirement should probably be a figure not in excess of 10 percent.

If your committee members could have an opportunity to visit the Coeur d'Alene district, I can arrange to have you visit as many of these mining ventures as you desire, and I think you would leave with a much more accurate picture of the problems confronting the mining industry, and the big problem of course is that present tax law just doesn't provide any incentive to attract capital so vitally needed for prospecting and exploration. I am sure that I could show you that not more than 1 mining venture out of 10, or perhaps 100, is ever successful. You wouldn't operate a slot machine if the bartender demanded 50 percent of every jackpot.

We urge that your committee take immediate action to amend the tax laws along the lines suggested by Mr. Fernald and Mr. Randall.

Yours very truly,

David E. Watson, *Vice President.*

STATEMENT OF RICHARD H. BALCH, PRESIDENT, HORROCKS-IBBOTSON CO., UTICA, N. Y.

Mr. Balch. Gentlemen, my name is Richard H. Balch, and I reside in Utica, N. Y. I am president of the Horrocks-Ibbotson Co., which is engaged in the manufacturing of fishing tackle and equipment. I appear on behalf of my own company and also on behalf of other manufacturers engaged in the manufacture of fishing tackle as we are.

We, in the fishing-tackle business appreciate the difficult task that confronted the House Committee on Ways and Means, and now confronts your distinguished committee, to raise revenue for the defense of the country.

If the revenue derived from the proposed increase of the excise tax on fishing rods, creels, reels, and so forth, from 10 percent to 15 percent were to be used in the defense of our country, we would have no complaint. Our situation, however, is entirely different. In a revenue bill designed principally to increase the tax receipts of the Government for the defense of this country, we find included therein a tax increase for "Fish restoration and management projects"—a field that must be conceded to be as far from defense as the North Pole is from the South Pole. It is my belief that the House Committee on Ways and Means proposed this tax in error. I am advised that when the committee removed the excise tax on such articles as children's toys and on sporting goods used principally at high-school level or lower, they increased the tax from 10 percent to 15 percent on other athletic and sporting goods, including fishing equipment, in order to make up the tax loss.

As I say, we would have no complaint if the tax imposed on us under the provision of H. R. 4473 was for the defense of the country like the tax on other sporting, athletic, and recreational goods. The House Committee on Ways and Means apparently overlooked, however, Public Law 681, Eighty-first Congress, second session, which established "Fish restoration and management projects," and under the law—

> there is authorized to be appropriated an amount equal to the revenue accruing from the tax imposed by section 3406 of title 26 on fishing rods, creels, reels, and artificial lures, baits, and flies during the fiscal year 1951 and each fiscal year thereafter.

I understand that there is a provision in the pending appropriation bill for the Department of Interior which implements the Fish Restoration and Management Project Act and freezes the tax receipts from fishing equipment for the purposes of fish restoration and management projects and that hereafter the item will not be included in any budget estimate or in any appropriation bill, but will be earmarked for those purposes only. So that I may the more clearly bring before you our complaint that the increased tax is not for national defense, permit me to read from Senate Report No. 2029 which accompanied the fish restoration and management projects bill before the Senate. I quote:

> The purpose of this bill is to inaugurate a program of Federal aid to the States for the restoration and management of their fishery resources, similar to that now in effect with respect to other wildlife under the provisions of the Pittman-Robertson Act of 1937 (50 Stat. 917; 16 U. S. C. 669). Under the Pittman-Robertson Act, wildlife-restoration programs are financed by the sportsmen of the country out of a special fund derived from a tax on firearms and shells and cartridges. Under this bill the proposed fish restoration and management projects would be financed by the fishermen enjoying the benefits of the program through a tax on fishing rods, creels, reels, and artificial lures, baits and flies. * * *

Now permit me to read the definition in the law:

For the purpose of this chapter the term "fish restoration and management projects" shall be construed to mean projects designed for the restoration and management of all species of fish which have material value in connection with sport or recreation in the marine and/or fresh waters of the United States. * * *

and the statute continues giving specific items included within the definition.

I submit that there is nothing even remotely connected between our national defense and sport and recreation in the marine and/or fresh waters of the United States. Yet under the guise of national defense, the excise tax on fishing equipment is increased 50 percent.

To further show that the distinguished Committee on Ways and Means inadvertently increased the tax on fishing equipment under the mistaken belief that the funds would be used for national defense, I wish to call your attention to the fact that for several months—I believe four—the Internal Revenue Department never even allocated the tax receipts to this new undertaking and is now in consultation with our industry in endeavoring to work out some reasonable allocation which apparently neither the Internal Revenue Department or the Department of Interior knew should be made.

After having inquiry made at the Interior Department, I am advised that the estimated revenue during fiscal year 1952 was $3,000,000 and the estimated expenditures were in the neighborhood of $2,100,000, leaving a surplus of $900,000.

Despite that surplus for fish restoration and management projects, the Ways and Means Committee has proposed to put upon us an additional 5 percent tax. I should point out, and this to my way of thinking is particularly important, that the Interior Department did not even request this increased tax although I have no doubt the money will be spent if the Department gets it, not for defense, but for the purposes set forth in the law—

in connection with sport or recreation in the marine and/or fresh waters of the United States. * * *

In pointing out again that these funds are not necessary for defense, I call your attention to the fact that they are under the law to be allocated to the States after sums not exceeding respectively, $75,000 for Alaska, 25,000 for Hawaii, and $10,000 each for Puerto Rico and Virgin Islands in any 1 year are deducted before any apportionment to the States. If the State has no projects which the Secretary of the Interior will approve, the State is just out of luck insofar as these funds are concerned. Any apportionment of the funds to the State must be expended or obligated within 2 years and if not, the funds are authorized to be made available to the Secretary of the Interior for expenditure, and I quote the law:

In carrying on the research program of the Fish and Wildlife Service in respect to fish of material value for sports and recreation.

Furthermore, I should like to state a few other pertinent facts. In 1947, the last year for which figures are available, the total amount of fishing tackle for sports sold at the retail level was $120,000,000.

There may be some discrepancy between my figure of three million and this but it is explained by the fact that only about half of the fishing tackle that is sold as sporting fishing tackle is taxable.

Items like tackle boxes and fishing lines and many other items are not taxable, and it is taxed, of course, at the manufacturers' level, which is about half at the retail level and that explains the discrepancy.

In the year ending June 30, 1950, the total volume of fishing tackle sales did not change very much.

In the meantime, the fishermen of the United States paid in 1950—the last year we have figures for—the various States for fishing licenses, resident and nonresident, the sum of $34,018,000.

In most States this revenue is earmarked for conservation projects so the proposed increase in the excise tax on fishing tackle, on the basis of last year's receipts and provided that the increased tax would not develop a sales resistance on the part of the consumer that might actually decrease the tax yield, would be approximately $1,500,000 which would be added to the present surplus of $900,000.

This is a heavy burden to put on our little industry, especially where the Government has a surplus in that account, and has not asked for this new tax. Increasing this tax to 15 percent might price rods and reels subject to the tax out of the market and would result in less funds for the above projects.

Gentlemen of the committee, I am a small-business man. The fishing tackle business is a small business, however, whatever hardship that we would have to bear by way of increased personal income taxes, by increased corporate and excess-profits taxes and by increased excise taxes too, which would be needed for the defense of our country, I and my company would gladly bear. But when, with increased personal income taxes and increased corporate and excess-profits taxes, we are penalized with a 50-percent increase in our excise taxes, when the receipts therefrom do not go to defense, when the department to which they are allocated has not even asked for an increase in our tax, when in fact, there is an unexpended surplus of nearly a million dollars in that account, and when this surplus may even increase, depending upon the ability and willingness of the States to embark on new fish restoration and maintenance projects, I submit that we have a legitimate grievance, and we should be relieved of the tax increase as proposed in H. R. 4473 on fishing rods, creels, reels, and fishing equipment generally.

Thank you.

Senator MILLIKIN. Mr. Stam, I suggest that you bring this matter especially to our attention during the executive session.

Thank you, Mr. Balch.

Mr. BALCH. Thank you very much.

Senator MILLIKIN. In lieu of an appearance the statements of the Southern States Industrial Council and Commonwealth Services will be inserted in the record at this point.

(The statements referred to follow:)

STATEMENT OF TYRE TAYLOR, GENERAL COUNSEL, SOUTHERN STATES INDUSTRIAL COUNCIL

The administration has asked for $10 billion in additional taxes.

This additional revenue is needed, it is said, for two reasons: (1) To prevent a deficit during the current fiscal year; and (2) to soak up excess purchasing power and thereby help check inflation.

This request is in addition to the two tax increases—aggregating $10 billion—imposed since the outbreak of the war in Korea.

The technical staff of the Joint Committee on Internal Revenue Taxation estimated in April that existing tax laws would yield $61 billion during the current fiscal year—or $16 billion more than was collected in any year of World War II. Some authorities now estimate this prospective tax yield at $62 to $63 billion.

On the spending side, the administration has proposed a budget for fiscal 1951–52 of $71.6 billion, which includes $40 billion for defense; $23 billion for nonmilitary purposes; and $8.6 billion for foreign military and economic aid. While it represents merely a postponement to future years, the administration now estimates that total Federal expenditures during fiscal 1951–52 will be $68 billion.

Based upon these estimates, the prospective cash deficit in fiscal 1951–52 without the enactment of any new tax legislation would be $7 billion, assuming total revenues of $61 billion, or $5 to $6 billion, assuming the higher estimate mentioned above.

If these figures are correct, it is clearly possible to avoid a deficit this fiscal year through a reduction in nonessential spending and without the necessity for imposing any additional taxes at this time. In his Atlanta speech on June 25, 1951, Senator Byrd stated that, "with the President's cooperation * * * the Federal budget as now proposed ($71.6 billion) could be trimmed to the extent of at least $8 billion without sacrificing a single essential Federal function."

Unfortunately, the President's cooperation is not likely to be forthcoming. While stating in a message to Congress in January that "the Government must practice rigid economy in its nondefense activities," he later—as Senator Byrd points out—proposed a budget that increased domestic civilian spending to the highest level in history. This budget he described as "tight" and "good" and dared Congress to cut it. The House—evidently convinced that Congress would not make the reductions necessary to avoid a deficit with its dire inflationary possibilities—passed a bill providing for $7.2 billion in additional taxes. More recently—on July 23 to be exact—Senators Taft and Millikin, distinguished minority members of this committee, expressed their conviction that no significant cuts would be made. "It just isn't going to be done," Senator Millikin said.

So we take it that there is going to be a tax bill and upon this assumption I shall submit several observations and recommendations at the close of this statement. Before going into that, however, I wish to explore further the prospective fiscal situation and outlook. For the purpose of this discussion, it is assumed (1) that we shall not become involved in a full-scale war with Soviet Russia; (2) that national income will continue at the present high level and even increase somewhat; and (3) that the defense build-up proceeds generally according to the plans already announced by the administration.

As already noted, the President's January budget contemplated the expenditure of $40 billion for defense this fiscal year. In his message of July 23 transmitting to Congress his midyear economic report, Mr. Truman stated that total security program costs have now reached an annual rate of more than $35 billion; that they are scheduled to increase to an annual rate of more than $50 billion by the end of this calendar year and to nearly $65 billion by the middle of next year.

If we assume no increase in domestic nonmilitary spending and foreign military and economic aid, this would mean that Federal expenditures for the next fiscal year will aggregate $96.6 billion. The highest Government expenditures for any year in World War II amounted to $98.7 billion, of which $84.5 billion was for prosecution of the war and $14.2 billion for civilian governmental activities. However, of this $98.7 billion, only $44.7 billion was raised in taxes and the deficit for 1944–45 was $53.9 billion. In a prior year—1943—with total expenditures of $79.6 billion, tax revenues amounted to only $22.2 billion and the deficit was $57.4 billion.

And here we come upon some fiscal facts of life that we feel have received far too little attention by Congress and the public. In compiling them, I was reminded of the man who jumped off the Empire State Building and upon being asked as he fell past a window on the fortieth floor how he was getting along replied, "All right so far."

Is a $96.5 billion budget fantastic? This astronomical sum would be sufficient to repair the damage of 96½ Kansas City floods—or two such floods for each of the 48 States. It is $5 billion more than the total of Federal receipts from the time of Washington to F. D. Roosevelt—144 years. But there are the figures—the $65 billion item for defense being Mr. Truman's own estimate. It should also be noted in this connection that, in addition to the $71.2 billion budget proposed for fiscal 1951–52, the President has requested new obligational authority up to $23.2 billion, bringing the total up to $94.4 billion. With the prospect of an increase in the Air Force to 150 groups costing $40 billion, the defense figure is not likely to be less than $65 billion. The other two items—$23 billion for nondefense activities and $8.5 billion for foreign military and economic aid—represent no increase over the proposed budget for the current fiscal year. Incidentally, the New York Times reported on July 26 that the ECA has now completed a master plan to revivify Western Europe.

Assuming total national income of $300 billion (it is running at an annual rate of $270 billion now), the prospect is that Federal spending will equal almost one-third of total income. And if State and local government spending is added—and assuming no increase in the current rate of $18 billion annually—the total becomes $114.5 billion—or 38 percent of national income.

Where is this money coming from?

Many industry-representing organizations—including the council—have strongly favored a pay-as-we-go policy of financing the defense program. The estimated yield of the bill passed by the House is $7.2 billion and if we adopt the $61 billion estimate of the tax yield under existing laws, the total would be $68.2 billion. A belief apparently generally held in the House is that this is the limit of Federal taxes our economy can support, Chairman Doughton, of the Ways and Means Committee, stating he considered it "unlikely that we shall be able to increase substantially the yield of the Federal tax system beyond what is included in the present bill."

If this is correct and the amount provided for in the House bill is finally approved, the indicated deficit for the next fiscal year is $28.4 billion. It is impossible to determine what this would mean in additional inflation and the further depreciation of the purchasing power of the dollar. In this respect we find ourselves in a position we have never occupied before in that as we start this rearmament and preparation for possible war, the Federal debt is more than a quarter of a trillion dollars. We are also starting this program with a dollar worth only 54 cents in terms of its 1940 purchasing power and still declining in value. These factors introduce into the situation an element of rigidity that has never been present before and the implications of which are not yet generally understood. It is no longer possible for us to fight or prepare for world wars largely on credit without producing a paralyzing inflation.

But suppose a serious attempt should be made to pay as we go and to collect nearly $100 billion annual in Federal taxes. Just as the thirty-eighth parallel separates communism from noncommunism in Korea, there is a tax parallel which separates free enterprise from socialism. Most economists draw this line—i. e., the total tax burden that an economy can support and still preserve free enterprise—at from 25 to 30 percent of national income. In socialist Britain, it is now 40 percent. As already noted, if State and local expenditures are included the total cost of Government under the spending program in prospect would be 38 percent, or more than enough to destroy the free-enterprise system in this country.

Another factor that must be taken into account is that of the duration of the emergency. You and I can carry a load across this room that we could not carry to Alexandria or even to the Union Station. Similarly, the national economy could support a much larger tax load for a year or two without destroying the free enterprise system than it could support for 4, 5, or 10 years. Yet, so far as we can see now, the present emergency is one of indefinite duration. We are told on the highest authority that it may last for a generation or longer.

Mr. Truman and others attempt to minimize the impact of this program upon the lives of the people by asserting that, at its planned maximum, it will divert to defense purposes only 20 percent of national production, as compared with roughly 45 percent at the height of World War II. However, the difficulty with this line of reasoning is that in World War II we only taxed ourselves on an average of 18 percent of our national income, while spending 42 percent. As already noted, we mortgaged the future during World War II and this credit leway is no longer available to us. The present program must be paid for—in taxes or savings or both. The result—the only possible result—will be a greatly lowered scale of living for the overwhelming majority of the people and this bleak prospect is something a politically sensitive administration is understandably reluctant to talk about or face up to.

How long will the American people find life in a garrison state tolerable?

Do we have the moral and physical stamina to surmount the worst crisis in our history and preserve our freedom?

Only time will tell. But in considering these somber facts, several thoughts occur:

1. Whatever the cost, we must build an impregnable national defense. On this we have no choice if we are to survive.

2. Government waste—unnecessary Government spending—is as much an act of sabotage against the American people as would be the destruction of an atom bomb plant. A dollar that is wasted by the Government is much more inflationary than when left in private hands. And here the responsibility of Congress is clear. To be sure, the job would be made much easier if the President would cooperate. But the President can spend only what the Congress appropriates. It holds the purse strings. Any time Congress makes up its mind to stop the waste in both civilian and military spending, it can do so.

3. The supreme problem is how to ride out and eventually surmount this crisis without losing our freedom. Some taxes are far more destructive of free enterprise than others. For example, a broad tax on consumption would be less destructive than near-confiscatory and incentive-killing income taxes on individuals and corporations. The latter—and especially excess-profits taxes—are also highly inflationary.

4. At best—and after all the nonessentials have been eliminated—the tax burden will be crushing. The people are going to have to make sacrifices greater than they have ever before had to make and this irrespective of whether their scale of living is depressed through confiscatory taxes or inflation. In these circumstances, they are entitled to a wide and equitable distribution of the total tax burden. Special tax advantages—such as are now enjoyed by the cooperatives and by the President, Vice President, and Members of Congress—must be paid for in additional taxes on all other taxpayers.

World War II Federal expenditures, taxes, deficits, production, and income

Period	Total Federal expenditures [1]	National defense expenditures [1]	Total Federal receipts [1]	Yearly deficit [1]	Gross national product [2]	National income [2]	Total expenditures as a percent of national income	Total receipts as a percent of national income

COMMONWEALTH SERVICES, INC.,
New York, N. Y., August 3, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Chambers, Washington, D. C.

DEAR SIR: The undersigned, vice president of Commonwealth Services Inc., 20 Pine Street, New York, N. Y., respectively submits for your consideration a statement concerning the unfair and inequitable impact of the excess-profits-tax law upon this corporation.

Commonwealth Services is a company which has a long history as a service company rendering services through its staff of experts in a number of fields such as accounting, financial, rates, purchasing, insurance, etc., and wholly owns a subsidiary organized in Michigan in 1949 which renders engineering services. It was formed in March 1930, under the then name of The Commonwealth & Southern Corp. (New York) by the consolidation of certain predecessor service companies. Both these predecessor service companies and the consolidated company made normal profits, until 1931 when the operations of the consolidated company were changed to a cost basis as the service company for the Commonwealth & Southern Corp. (Delaware) public-utility system. In 1938 the service company came under the jurisdiction of the Securities and Exchange Commission pursuant to the Public Utility Holding Company Act of 1935, and was approved as a mutual service company on a cost basis rendering services only for the system, and so continued until the conclusion of the integration proceedings before the SEC, whereupon it became, on November 1, 1940, an independent service company owned by its employees, and the name changed to Commonwealth Services, Inc. It is only since November 1, 1940, that the independent company has operated on a profit basis.

A service company, by the very nature of its business, has a small capital since its most valuable asset is its experienced and expert personnel, and ordinarily, as an independent service company, would compute its excess-profits tax credit on the basis of its average earnings during the base period. Its requirement for capital consists principally of current accounts receivable and payroll. However, by reason of the fact that the service company did not become a profit organization until the last 2 months of the base period, it does not have the average earnings during the base period of independent service companies which became such at earlier dates, with the approval of the Securities and Exchange Commission, or otherwise.

Commonwealth Services is thus forced to relay for its excess-profits credit on its small amount of invested capital, as it does not seem to qualify for any of the so-called relief provisions of the act. Even if the company comes within one of the "relief" credits, the tentative industry rates of return for "Miscellaneous business services" or "Other services," as promulgated by the Secretary of the Treasury pursuant to the act, are grossly inadequate for an independent service company, inasmuch as apparently they cover service companies of a nonprofit character and many types of establishments which are in no way similar to a service company of the type of Commonwealth Services, Inc.

We believe that a corporation such as ours which was in existence during the entire base period but operated practically the entire base period on a nonprofit basis and then changed its method of doing business to a profit basis late in the base period (November 1, 1940), and now does a normally profitable business on a small capitalization, requires an adequate industry rate of return to base its credit upon. Only by this method can this company obtain fair and equitable treatment under the act.

Under the present law the corporation is apparently forced to file under the "invested capital" method, and it seems apparent that a corporation filing its excess-profits-tax return under the "historical invested capital method" cannot change to another more favorable method for that year, and accordingly, any amendment giving relief should provide that a taxpayer filing on the "historical invested capital basis" should have the right to switch to a more favorable method. This restriction is presently applicable to only the "historical invested capital method" and there appears to be no reason for this restriction.

Respectfully submitted.

W. B. TIPPY, *Vice President.*

Senator MILLIKIN. Mr. Berg.

Will you identify yourself, Mr. Berg, and make yourself comfortable.

STATEMENT OF RUDY BERG, CHAIRMAN, EXCISE TAX COMMITTEE OF REFRIGERATION EQUIPMENT MANUFACTURERS ASSOCIATION

Mr. BERG. My name is Rudy Berg. I am assistant sales manager of Copeland Refrigeration Corp., Sidney, Ohio. I appear here as chairman of the excise tax committee of the highside equipment section of the Refrigeration Equipment Manufacturers Association, known as the REMA.

REMA is composed of 120 manufacturers of refrigeration and air-conditioning parts, supplies, and equipment. The highside equipment section of REMA is composed of manufacturers of taxable and nontaxable refrigeration component parts—including condensing units, compressors, and motor-compressors—which are sold to manufacturers, wholesalers, jobbers, and dealers. We have two amendments to H. R. 4473 to submit for your consideration.

I should like to preface the amendment comments here by having noted that previous presentations at this hearing have referred to the essentiality of product. In that case I think it would be well to go on record that refrigeration is probably as vital from an essential standpoint of food. However, again, our appeal here is in connection with amendments.

Under the Internal Revenue Code—section 3405 (b) as amended by the Revenue Act of 1950—and the regulations thereunder Treasury Regulations 46, with amendments currently proposed, see Federal Register of May 10, 1951, the manufacturer of such component parts as I have mentioned, and which are otherwise taxable, may sell them tax-free under exemption certificate to a manufacturer of end products such as refrigerators and freezers—whether or not such end products are themselves taxable. With one exception noted below, there is, however, no exemption applicable to sales by or to wholesalers who resell to the manufacturers of end products—unless any such wholesaler qualifies as a "manufacturer" by reason of the fact that he also assembles complete end products.

The exception mentioned relates to wholesalers who are specifically registered with the Bureau of Internal Revenue as vendees of articles for resale to manufacturers; see Internal Revenue Code, section 3442, and Regulations 46, section 316.20–23. Registration under section 3442 is limited to wholesalers who resell to manufacturers of taxable end products.

The manufacturers of these taxable component parts are substantially dependent on the stocking and credit facilities of the wholesalers and jobbers representing their equipment in strategically located cities throughout the United States. These wholesalers, of course, carry inventories of the products they represent in order to serve the field needs of smaller manufacturers who are not and cannot economically be served direct.

It is our contention that in applying the excise tax to refrigeration equipment, it was not the intent of Congress to change any established medium of distribution then in effect. The present discrimination against the wholesaler, however, imposes a costly and forced change in long-established distribution channels, and disrupts relations of long standing between manufacturers of taxable refrigeration equipment and their wholesalers. The wholesalers and jobbers in our industry represent a business of integrity and a vital medium of distribution, particularly for the smaller manufacturers.

We appeal for an amendment to the House bill to cover the following points:

1. To permit a wholesaler to accept an exemption certificate from a qualified manufacturer, and in turn extend a similar exemption certificate to his manufacturing supplier, in order to permit him to purchase, tax-free, equipment which is to be furnished specifically to meet an order for which he has an exemption certificate from his manufacturing customer.

2. To permit a wholesaler to extend an approved exemption certificate to his manufacturing supplier for credit of tax paid on equipment sold under exemption certificate from his stock to a qualified manufacturing account customer.

That composes under the first amendment that we appeal for the two relief measures desired.

I should like to state here that the manufacturers have spent years and considerable expense to set up these stocking wholesalers throughout the Nation, so as to efficiently and economically serve their customers and equipment users.

If you are living in the far West and you needed a new component or a replacement of some defective item, you would not want to wait weeks to obtain it. The stocking wholesaler, we must keep in mind, is invariably the small independent businessman and he supplies this efficient localized service and availability.

He, too, has spent much in time and money cultivating his territory. It is conceivable, therefore, that with one fell swoop his elected representatives of Government could impose legislation that would be a curtailment of his long-established accepted channels of doing business.

Incidentally—and I will refer again to my bulletin, the foregoing facts were discussed on January 3, 1951, during a joint meeting of a committee of manufacturers and wholesalers with officials of the Bureau of Internal Revenue. We assume that your staff members will, as a matter of routine, ascertain the position of the Bureau on this proposal. We cannot, of course, in any way speak for the Bureau, but we believe you will find that the Sales Tax Division is sympathetic to this problem.

I believe that the Bureau, if objecting at all to relief to the wholesaler under this measure, would do so solely on the premise that it would add to policing problems.

On amendment No. 2, where a component part, such as the motor-compressor of a taxable type refrigeration unit, is returned to us, out of warranty, for repair, no tax applies if the identical returned motor-compressor of the customer is repaired and returned to the customer.

When so handled, however, the cost of repair is greater because of the individual handling necessary.

Furthermore, the customer is without the use of his equipment while the compressor is enroute to and from the factory and during that time required for repair.

In the interest of lowest possible prices to the user and to minimize "out of use" time, manufacturers have been following the practice of furnishing—through their stocking wholesalers or jobbers, or on occasion for immediate direct shipment from the factory—an exchange compressor of the same type obtained from a common repair pool stock at a flat rate price. Present Internal Revenue rulings are that when so handled from a repair pool, the tax applies and is not even limited to the cash amount received; the tax being based on the manufacturers' established selling price of the same type compressor when sold new.

It is our contention that it was not the intent of the Congress to impose a tax which is, in substance, a penalty on user-maintenance of existing essential food preservation equipment. It seems to us that the tax should not apply in this situation, since it is in substance the equivalent of the ordinary repair job, which is not taxed.

We have attached, for the consideration of your draftsman, suggested statutory language to meet the problems we have discussed.

Senator MILLIKIN. Thank you very much.

The amendments you referred to will be inserted in the record at this point.

(The amendments referred to follow:)

AMENDMENTS TO H. R. 4473 PROPOSED BY REFRIGERATION EQUIPMENT MANUFACTURERS ASSOCIATION

1. Proposed new section between present sections 482 and 483, as follows:

"Section 3405 (b) is hereby amended by changing the period at the end of the second sentence thereof (after the word "units") to a semicolon, and adding "or to a bona fide wholesaler or jobber for resale by him to such a manufacturer or producer, if such refrigerator components are or have been in due course so resold"; and by adding in the following sentence, before the word "vendee" (wherever it appears) the word "ultimate."

Note: The second and third sentences of section 3405 (b) will then read as follows:

"Under regulations prescribed by the Secretary, the tax under this subsection shall not apply in the case of sales of any such refrigerator components by the manufacturer, producer, or importer to a manufacturer or producer of refrigerators, refrigerating or cooling apparatus, or quick-freeze units; or to a bona fide wholesaler or jobber for resale by him to such a manufacturer or producer, if such refrigerator components are or have been in due course so resold. If any such refrigerator components are resold by such ultimate vendee otherwise than on or in connection with, or with the sale of, complete refrigerators, refrigerating or cooling apparatus, or quick-freeze units, manufactured or produced by such ultimate vendee, then for the purposes of this section the ultimate vendee shall be considered the manufacturer or producer of the refrigerator components so resold."

2. Section 3405 (b) is hereby amended by adding at the end thereof the following:

"Under regulations prescribed by the Secretary, the tax under this subsection shall not apply to the exchange of used refrigerator components for other refrigerator components of the same type rebuilt wholly or substantially from used parts, whether or not an additional amount of cash is paid in connection with the exchange."

Senator MARTIN. Mr. Chairman, before you conclude these hearings, in order to save time, I would like to place in the record a statement of G. Mason Owlett, executive vice president and general counsel of the Pennsylvania Manufacturers Association and Casualty Insurance Co.

Senator MILLIKIN. It will be entered in the record.

(The statement referred to follows:)

STATEMENT OF G. MASON OWLETT, PENNSYLVANIA MANUFACTURERS ASSOCIATION AND CASUALTY INSURANCE CO.

On July 19, 1951, O. Glenn Saxon, professor of economics at Yale University, appeared before the Senate Finance Committee on behalf of the National Tax Equality Association and recommended changes in sections 204 and 207 of the Internal Revenue Code, the effect of which would make taxable as income to participating stock and mutual insurance companies, dividends paid to policyholders.

His argument in favor of the recommended changes was twofold. First, that stock, fire, and casualty insurance companies are placed in a disadvantageous competitive position because mutual and participating stock, fire, and casualty insurance companies are permitted to deduct from gross income dividends paid to policyholders, and second, that the elimination of this deduction from sections 204 and 207 of the Internal Revenue Code would produce considerable revenue to the Federal Government.

His argument is directed almost entirely against the mutuals which are taxed under section 207, but in order to be consistent, recommended that similar amendments be made in section 204 under which stock, fire, and casualty companies, such as ours, are taxed.

The arguments presented are patently fallacious. The proposal made on behalf of the National Tax Equality Association is a thinly veiled effort by the old-line stock companies to retain profits for the benefit of their shareholders and yet wipe out the competitive advantage held by those companies which do not retain profits for shareholders. It may as well be argued that one merchant who sells his goods at a lesser price than his competitor should be required to pay a tax on the profit which he would have realized had he sold his goods at the same price as the competitor.

It is also doubtful whether the proposed amendment would result in any substantial increase in revenue because the companies affected by the proposed amendment could, except in the case of workmen's compensation premiums, reduce rates to reflect the anticipated dividends to policyholders.

As stated by Mr. Saxon, taxation should be "measured by net profits." A return of unused premium to a policyholder, either by virtue of the terms of the contract of insurance or by the bylaws of the corporation, cannot under any circumstances be considered net profits to the corporation. Mr. Saxon does not attempt in any way to dispute this fact which is the basic issue.

The adoption of the amendment proposed to section 204 would have far-reaching consequences upon our companies and their policyholders. We understand that no further witnesses will be heard before the Senate Finance Committee unless a member of the committee so requests. If the National Tax Equality Association's proposal is to be given any serious consideration by the committee, we would like an opportunity for a spokesman of the participating stock companies to appear before the committee in the near future.

Senator MILLIKIN. As this point numerous statements and letters will be inserted in the record for the consideration of the committee.

RETAIL TOBACCO DEALERS OF AMERICA, INC.,
New York, N. Y., August 3, 1951.

Protest against any increase in excise taxes on cigars.

To the Members of the Senate Finance Committee:

The Retail Tobacco Dealers of America, Inc. is a national association of retail tobacconists, having thousands of members located in practically every large city in the United States.

About 1 year ago we appeared before the House Ways and Means Committee urging consideration of the proposal for reduction in excise taxes on cigars.

As a result of the facts presented by the cigar manufacturers which were heartily endorsed by us, the committee favorably recommended a reduction in these taxes.

The events in Korea, rapidly followed by the Government's decision to rearm, necessitated a complete reconsideration of the entire tax program.

However, the cigar industry never anticipated a further increase in existing excise taxes, since it was still struggling under the burden of the last war emergency tax increase.

May we point out for your earnest consideration—

1. Government figures over the past years have shown a setady decline in the consumption of cigars: 1920, 8,096,758,603; 1930, 5,889,132,434; 1950, 5,538,152,400.

2. Census figures prove that our population has steadily increased and with it we have the largest national income ever recorded.

The decline in consumption of cigars assumes even more serious proportions when compared with the increase in population and what should normally prove an increase in the potential cigar market.

3. From the retail standpoint, cigar sales constitute a most important part of the volume of our businesses, and we are dependent on the sale of this product for a profit which will enable us to continue in business. We know the consumer's reaction and we are certain that we will never be able to keep our present customers, let alone secure new ones, if this committee recommends any increase in the present excise taxes, which must be reflected in higher prices for the product.

4. Might we state that the cigar manufacturers have faced tremendous increases in the cost of leaf and labor, which in most cases they have absorbed, realizing that consumer resentment to any further increase in price of their product would be ruinous. Our industry, saddled with exceptionally high excise taxes, cannot produce cigars at a price which will encourage the youth of the Nation to smoke them.

We feel sure that the figures and facts prove that higher excise-tax rates in the long run will produce a decrease in revenue rather than an increase because of consumer resistance to higher cigar prices, and the Treasury Department will be defeating its own purpose.

Concurrent with this decrease in revenue to the Government will be the hardships worked on all branches of our trade. from the leaf farmer to the retailer who will watch their business dwindle year by year under the impact of a disproportionate tax load.

The cigar industry is cognizant of its own responsibilities in the matter of encouraging consumer demand and building volume. A tremendous promotional and advertising effort has been undertaken in recent years to encourage cigar smoking. Every branch of the trade is doing its share to stimulate the business. All promotional efforts will be unavailing if the Government saddles our trade with additional cigar excise taxes.

RETAIL TOBACCO DEALERS OF AMERICA, INC.,
By ERIC CALAMIA, *Managing Director.*

THE LANCASTER LEAF TOBACCO BOARD OF TRADE,
Lancaster, Pa., August 3, 1951.

Re Opposition to increase in excise tax on cigars.

SENATE FINANCE COMMITTEE,
Washington, D. C.:

The Lancaster Leaf Tobacco Board of Trade, located in Lancaster, Pa., is composed of all the leaf packers and dealers in Pennsylvania cigar leaf tobacco in Lancaster County, Pa. Collectively, we sell in excess of 60,000,000 pounds of this type of tobacco annually. Our warehouses are located in the vicinity of the farms where the tobacco is grown and we prepare this tobacco for market to the cigar manufacturer. We are entirely dependent upon the cigar industry for our livelihood and we are greatly concerned at the present downward trend in cigar consumption. We are firmly of the opinion that a contributing cause in the inability of the cigar industry to adjust to a peacetime economy is the great tax burden upon it.

Accordingly, we join in the protest of the industry in opposing any increase in cigar taxes and respectfully urge that you reject in its entirety the proposed schedule of the Secretary of the Treasury for an increase in cigar taxes.

Respectfully yours,

LANCASTER LEAF TOBACCO BOARD OF TRADE,
B. E. MANN, *President.*

STATEMENT OF MARK HESS, MANAGING DIRECTOR, PENNSYLVANIA TOBACCO GROWERS ASSOCIATION

Lancaster County, Pa., grows more cigar leaf tobacco than any other county in the United States. The Pennsylvania Tobacco Growers Association represents almost all of the growers of cigar leaf tobacco in the Lancaster area where all of the cigar-filler tobacco in Pennsylvania is grown. There are more than 2,500 growers in this area. The continued welfare of these growers is obviously dependent upon the prosperity of cigar manufacturers in the United States.

We were very much distrubed by the original proposal of Secretary Snyder who requested a $25 million increase in excise taxes on cigars when he testified before the Ways and Means Committee earlier this year. We were even more disturbed when following the refusal of the Ways and Means Committee to accept his recommendation, he appeared before the Senate Finance Committee and repeated his request for a $25 million increase in cigar excise taxes. We believe that the cigar industry would suffer gravely if such a tax increase were actually imposed.

It should be noted that the Secretary of Agriculture, last year, called for marketing quotas on Pennsylvania cigar leaf tobacco because he found that the supply of tobacco was tending to exceed the demand. This cooperative acted as agent for the Commodity Credit Corporation in making price-support loans on cigar leaf tobacco in Pennsylvania this year. This is the first year in which such a loan program has been undertaken. Some evidence of the extent to which supply now exceeds demand can be found in the fact that by June of this year we had made loans on more than 2½ million pounds of tobacco. This is about 5 percent of the Pennsylvania crop. In no previous year has so much tobacco failed to go directly into the warehouses of cigar manufacturers.

We feel that the above facts are clear evidence of the weakened position in which the cigar industry finds itself. Therefore we respectively urge that the Senate Finance Committee reject Secretary Snyder's proposal to increase the excise tax on cigars just as the House Ways and Means Committee did earlier this year.

STATEMENT OF JAMES LOVE, IN BEHALF OF FLORIDA AND GEORGIA CIGAR LEAF TOBACCO ASSOCIATION

The growers of cigar wrapper tobacco in the States of Florida and Georgia produce one of the most valuable cigar crops grown in the United States. The Florida and Georgia Cigar Leaf Tobacco Association represents almost all of the growers of this type of tobacco and is comprised of over 250 farmers.

It is our opinion that the proposal of the Secretary of the Treasury to increase the tax on cigars would have very disastrous economic effects upon us. All the evidence available indicates that the consumer is extremely reluctant to pay any more than he is now paying for his cigars.

If the cigar industry is forced to raise its prices as a result of the tax increase, there is only one place from which this tax increase can come, and that is, from the suppliers of the raw materials.

We feel, therefore, that our own welfare will be seriously jeopardized unless the Senate Finance Committee rejects the proposal of the Secretary of the Treasury.

THE SHADE TOBACCO GROWERS
AGRICULTURAL ASSOCIATION, INC.,
Hartford, Conn., August 3, 1951.

Senate Finance Committee:

The Shade Tobacco Growers Agricultural Association, Inc., is an association of tobacco farmers who grow shade-grown cigar wrapper tobacco in the Connecticut Valley. We represent the most valuable crop of cigar leaf tobacco grown in the United States.

Connecticut Valley shade growers are aware of the fact that the cigar industry has been suffering under the yoke of heavy excise taxes, and we are greatly concerned with the continued downward trend in the consumption of cigars. Our livelihood as farmers and that of thousands of workers whom we employ, is dependent entirely upon the cigar industry and any further recession in cigar sales will have its ultimate adverse effect upon us

Excessive taxation is a serious deterrent to healthy business and the imposition of increased excise taxes on cigars will be disastrous to the entire industry.

Therefore, we respectfully urge that you reject the proposal of the Secretary of the Treasury for an increase in cigar excise taxes.

Respectfully,

THE SHADE TOBACCO GROWERS AGRICULTURAL ASSOCIATION, INC.,
NELSON A. SHEPARD, *President.*

THE LEAF TOBACCO BOARD OF
TRADE OF THE CITY OF NEW YORK,
August 3, 1951.

Re protest against increase in excise taxes on cigars.

SENATE FINANCE COMMITTEE,
Washington, D. C.:

The New York Leaf Tobacco Board of Trade is composed of dealers in all types of cigar-leaf tobaccos. Collectively we sell a major portion of all tobacco used by independent cigar manufacturers, particularly the smaller ones. Our warehouses are located in the vicinity of the farms where the tobacco is grown and in many instances we prepare this tobacco for market to the cigar manufacturers, employing a large number of local workers. We are entirely dependent upon the cigar industry for our livelihood and we are greatly concerned with the present downward trend in cigar consumption.

We believe that a major cause of the cigar industry's inability to prevent a further decline in cigar sales has been the undue tax burden which it has borne these many years.

Therefore, we respectfully pray that your committee vote against the imposition of any increase in excise taxes on cigars.

Respectfully yours,

THE LEAF TOBACCO BOARD OF
TRADE OF THE CITY OF NEW YORK,
By JOHN A. REGAN, *Secretary.*

NEW YORK, N. Y., *August 7, 1951.*

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building:

Book publishers are deeply concerned by the proposal in the pending revenue act that 20 percent of the total literary royalties paid by publishers to authors be withheld at source. Book publishers earnestly and respectfully suggest consideration of the recommendations contained in the July 23, 1951, letter of Oscar Hammerstein II, president, Authors League, on behalf of all authors, including authors of books, in which he pointed out the great hardship which would, in very many instances, be imposed on authors whose total incomes do not justify the proposed withholding.

JOHN O'CONNOR,
President, American Book Publishers Council.

AMERICAN LIFE CONVENTION,
LIFE INSURANCE ASSOCIATION OF AMERICA,
New York 22, N. Y., August 7, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: Recent rulings issued by the Bureau of Internal Revenue have, in thir practical effect, destroyed the pension rights of a great number of insurance agents who are presently under pension plans of long standing; there is an urgent need for amending legislation to correct the inequities resulting from these rulings.

The enclosed memorandum more fully develops the hardships created by the rulings and also contains our suggestion for corrective legislation. We are authorized to say that the National Association of Life Underwriters joins us in strongly urging the adoption of the proposed amendment.

Yours sincerely,

AMERICAN LIFE CONVENTION,
ROBERT L. HOGG,
Executive Vice President and General Counsel.
LIFE INSURANCE ASSOCIATION OF AMERICA,
EUGENE M. THORÉ, *General Counsel.*

LIFE-INSURANCE AGENTS' PENSIONS—NEED FOR PROPOSED AMENDMENT TO SECTIONS 165 AND 22 (B) (2) (B)

The pension benefits of thousands of ordinary-life-insurance agents are in jeopardy as a result of rulings of the Commissioner of Internal Revenue. Under these rulings the aggregate contributions of the life-insurance company to the agent's pension fund would be taxed as income in the year in which the agent retires.

Under sections 165 and 22 (b) (2) (B) employee retirement payments are taxed to the recipient as they are received. The Commissioner contends, however, that these sections do not apply because life-insurance agents are not employees. These life-insurance agents' retirement plans meet all of the other requirements of these sections.

While most ordinary-life-insurance agents are independent contractors, they are a class of individuals who have many characteristics similar to employees. This was recognized by the Congress last year when the employee definition under the Social Security Act was amended to include the full-time life-insurance salesman.

The following actual cases illustrates the hardship these rulings have created:

A life-insurance agent retired on September 30, 1950, and was entitled to a monthly retirement benefit of $68.11, payable for life. The lump-sum value of this pension, $8,128.27, was contributed entirely by the life-insurance company over a period of years beginning with the establishment of the plan in 1942. It was assumed by the company and its agents that these pension payments would be taxed to the retired agent as received. Under the Commissioner's rulings, however, the entire value of the pension, $8,128.27, is taxable as income received during the year 1950. In this case, the resulting income tax of approximately

$2,000 would confiscate the agent's pension benefits for the first 2½ years of his retirement, or a part of his savings if he did not live that long, thus defeating the purpose of the plan.

THE PROPOSED AMENDMENT SHOULD BE ADOPTED FOR THE FOLLOWING REASONS

1. Unless legislative relief is granted; life-insurance agents' pension plans will not be able to serve the purpose for which they were created; therefore, it will be necessary to discontinue them. This result would be socially undesirable. It would be most unfortunate if plans adopted years ago to provide for such a worthy need should now fail because the technicalities of the law prevent carrying out the purpose for which they were adopted.

2. There is no fundamental reason why life-insurance agents who occupy a status similar to common-law employees should have their pension benefits dissipated by a tax on the value thereof in the year of retirement.

3. Employee pension benefits are taxed as they are received by the retired individual. Under the proposed amendment the life-insurance agent would be treated in the same manner. It is not proposed that retirement benefits payable to a life-insurance agent should escape taxation.

4. Life-insurance agents are now covered for old-age and survivorship social-security benefits. The life-insurance companies pay the employer social-security taxes on their earnings. When agents retire they are entitled to receive the same social-security benefits as common-law employees. To be consistent their pension benefits, if otherwise qualified under section 165, should be taxed like similar benefits paid to common-law employees.

5. No sound tax purpose would seem to be accomplished by laying such a confiscatory income tax on the value of these agents' retirement plan. The tax revenue involved is not significant. The Commissioner, in ruling on these cases, has informally expressed the opinion that he lacks the authority to correct this injustice. The amendment proposed will accomplish that result.

A BILL To amend the Internal Revenue Code relating to employees' trusts

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 165 of the Internal Revenue Code (relating to employees' trusts) is hereby amended by adding thereto a new subparagraph (e) to read as follows:

"(e) For the purposes of this section and of sections 22 (b) (2) (B) and 23 (p), the term 'employee' shall include a life-insurance salesman who is within the definition of an employee under the provisions of section 1426 of this code. This amendment shall be applicable with respect to taxable years beginning after December 31, 1938."

United States Senate,
Committee on Interior and Insular Affairs,
Washington, D. C., August 6, 1951.

Senate Office Bulding, Washington, D. C.

Dear Walter: I am submitting herewith the text of the presentation I had intended to make personally before your committee in support of my proposed amendment to the tax bill, H. R. 4473, to have trona included as a strategic mineral under the excess profits sections of the Internal Revenue code.

It is my understanding that this statement will be included in the transscript of the hearings as though presented, and I will appreciate it if you can see that this is done.

With every good wish, I am

Sincerely yours

Joseph C. O'Mahoney, *Chairman.*

Statement of Hon. Joseph C. O'Mahoney

Mr. Chairman and members of the committee, on August 2, on behalf of my colleague, Senator Hunt, and myself, I proposed from the floor of the Senate an amendment to the 1951 tax bill, H. R. 4473, by which the mineral trona would be included as a strategic and critical mineral under the provisions of the excess-profits tax law. Specifically, I proposed that a new section be added to title V of H. R. 4473, as follows:

On page 152, after line 7, add a new section, as follows:

"Sec.—. DEFINITION OF STRATEGIC MINERALS—(a) Inclusion of trona as a strategic mineral in the Excess Profits Tax Act of 1950:

"(1) Paragraph (1) (b) of section 450 of the Excess Profits Tax Act of 1950 (relating to the definition of strategic minerals) is hereby amended by inserting the word "trona" after the word "quartz crystals."

"(b) Effective date.

"The amendment made by this subsection (a) shall be applicable only with respect to taxable years ending after December 31, 1950."

The members of the committee will recall that when the excess-profits tax bill, H. R. 9827, Eighty-first Congress, was before the Senate last winter, I proposed an amendment to that bill from the floor to have trona included in the definition of strategic and critical minerals. The Senate accepted this amendment. The Senate and House conferees, unfortunately, did not follow the Senate, and trona was dropped from the bill in conference. I am very reliably informed that the dropping of trona was without prejudice, and was in no way a reflection upon the merits of the proposal, but rather was the result of insufficient information as to what trona is and its basic importance to our security and economy.

It is my intention at this time to give the committee further information.

WHAT IS TRONA?

Trona is the ore of a natural soda ash of virtually commercial purity in its natural state. The largest known deposits in the world are near Green River, Wyo., and the reserves there are in reality tremendous, possibly totaling, according to the estimate of reliable engineers, 7 billion tons. The deposit is found at 1,500 feet, and the bed ranges from 15 to 20 feet in thickness, extending over a known area of more than 40 miles.

Perhaps at this point I should state another very significant fact, namely, that in close proximity to this truly great deposit of natural soda ash are immense reserves of natural gas and coal. Thus the fundamentals for economic development, the importance of which is looming large in national-defense planning, is to be found in this area.

USES AND IMPORTANCE OF TRONA

When we speak of trona, we speak of natural soda ash—soda ash which can be produced at one-half the investment in plant per ton produced in comparison with the synthetic or ammonia soda method. In these times of critical shortages of steel, machinery, and other materials, the committee will give especial consideration to this fact, I know; namely, that it takes only one-half as much steel, for example, to produce a ton of soda ash from trona as it takes a produce a like amount by synthetic or manufacturing methods.

The basic importance and widespread use of soda ash is emphasized by the fact that more than 5 million tons are now produced annually in the United States. It is essential for the production of aluminum metal, a quarter-pound of soda ash being required for every pound of aluminum metal; for the manufacture of glass; and for the processing of metallurgical ores, among other basic uses.

For example, the processing of uranium ores in Colorado is dependent on uninterrupted supplies of soda ash which are now coming from the Wyoming deposit. Soda ash currently is being produced on a small scale at Green River. This operation is being carried at a loss, however, because of the lack of its small-scale basis.

Other basic industrial uses of soda ash are glass, which takes about 30 percent of current production, or almost 2 million tons annually; oil refining; wool scouring; rubber; printing inks; boiler compounds; paints; ceramics; enamels; and the like.

Of great potential importance also is its use in high-grade concentrated fertilizer. On this subject, the Bureau of Mines—since the production of soda ash from trona is basically a mining enterprise—has made several favorable reports.

Fertilizer based on Wyoming trona processed with phosphate rock contains both ammonia and nitrate nitrogen, and is subject to a considerable variation of constituents to meet the requirements of different soils and different crops. Its concentration is so great that it can be shipped economically to all parts of the United States, but it would of course be of especial importance to western agriculture.

The development of the Wyoming trona deposits offers tremendous opportunities for the development of agriculture in the Rocky Mountain and Northern and Southwestern States, as well as providing a basic industrial chemical for the growing aluminum and other defense industries in the area.

ADVANTAGES OF TRONA

The advantages of trona, or natural soda ash, over the manufactured product, or over such substitutes as caustic soda, are threefold:

(1) Economy in the use of scarce materials;
(2) The strategic geographic location of huge deposit;
(3) Lower cost of the finished product.

I would like to discuss these three national advantages in brief detail:

Soda ash from trona is economical in scarce materials

Production of soda ash from trona requires less materials and manpower than conventional methods. In view of widespread shortages of all materials for industrial construction, the fact that it is possible to produce soda ash from trona in plants costing less than one-half of the more conventional types of plants in terms of steel and building materials makes trona of prime importance to the rearmament effort. Since there is expected to be an ever-increasing shortage of soda ash in the next several years throughout the United States and particularly in the Western States, it is important that expansion of the soda ash industry be carried out by the cheapest methods in terms of critical materials and manpower. Development of the trona deposits offers the only way in which materials and manpower can be saved in this program.

Strategic location

The immense reserves of trona are found in the heart of the Rocky Mountain region—an area considered safe, relatively speaking, from probable enemy attack. It will serve the new aluminum plants in the Northwest as well as insure a continuous supply of soda ash from the processing of uranium ores in Colorado and elsewhere in the West. As I pointed out previously, a quarter of a pound of soda ash is required for each pound of aluminum metal. Development of trona deposits also will serve a great variety of other industries, present and planned, in the Rocky Mountains and Northwest.

At present, there is no production of soda ash of any significance in the Rocky Mountain-Northwest area. The area is suffering from a shortage of soda ash here and now. In fact, it is not too much to say that the industrial development of the West is being delayed by the lack of this basic industrial chemical.

The importance to western agriculture of large supplies of locally produced soda ash as a base for an extremely high-grade fertilizer, capable of great flexibility, as it were, in its constituents to meet varying crop needs, is self-evident.

Because it is produced from a natural deposit in the area, most of the finished product necessarily will be cheaper than products which have to be hauled considerable distance from eastern and midwestern centers of production. Equally important, since soda ash is now in short supply, the only possible substitute to supply the growing demand is caustic soda. Caustic soda is nearly twice as costly, per unit of contained alkali, as is soda ash. The following brief table illustrates this point:

Current market price Na_2O per net ton at works

Form:	*Value*
In light ash	$41.40
In heavy ash	44.80
In liquid caustic in tank cars	67.30
In solid caustic in 700-pound net weight drums	88.40
Flake caustic in 400-pound net weight drums	98.80

It should be noted that transportation of caustic requires either steel tank cars or steel drums. And steel in both of these forms is gravely needed by petroleum and other industries.

Transportation of soda ash from trona, on the other hand, can be had in wooden boxcars or trucks.

As a supplement to my statements with respect to shortages and costs, I would like to introduce into record by reference an article appearing in the technical journal, Chemical Week, for June 30, 1951. This industry observer finds serious shortages of soda ash probable within 2 or 3 years, and as a result foresees shap price increases, possibly double those currently prevailing.

Failure to include trona as a strategic mineral is a deterrent to the establishment of a chemical industry in the West.

The mining and processing of trona requires large amounts of capital which industry is reluctant to invest now under the present tax structure. Inclusion of trona as a strategic mineral in section 450 of the excess-profits-tax law will stimulate the development of trona in the same way such treatment helps the minerals now listed in the excess-profits tax law. Since soda ash is required for processing many of the listed minerals, a number of which are mined in the West, this action will also aid in increasing production of other strategic minerals.

At least one company is prepared to spend $15,000,000 in developing the Wyoming trona deposit. Such an investment would add at least 300,000 tons yearly to our soda ash supplies, and even this is capable of great expansion.

I earnestly urge favorable action by you gentlemen on amendment C of August 2 to H. R. 4473 and the inclusion of this basic chemical, produced from a great natural deposit in a safe area, in that section of the law providing for the stimulation of production of strategic minerals.

[H. R. 4473, 82d Cong., 1st sess.]

AMENDMENT Intended to be proposed by Mr. O'MAHONEY to the bill (H. R. 4473) to provide revenue, and for other purposes, viz: On page 152, after line 7, add a new section as follows:

"SEC.—DEFINITION OF STRATEGIC MINERALS.—(a) Inclusion of trona as a strategic mineral in the Excess Profits Tax Act of 1950.

"(1) Paragraph (1) (b) of section 450 of the Excess Profits Tax Act of 1950 (relating to the definition of strategic minerals) is hereby amended by inserting the word "trona" after the words "quartz crystals,".

"(b) Effective date.

"The amendment made by this subsection (a) shall be applicable only with respect to taxable years ending after December 31, 1950."

KALAMAZOO, MICH., *August 4, 1951.*

UNITED STATES SENATE FINANCE COMMITTEE, AND MEMBERS OF CONGRESS,
Washington, D. C.

GENTLEMEN: In accordance with the wire received from Elizabeth B. Springer, clerk of the Senate Finance Committee, I was informed your schedule of witnesses are filled, but I wish to thank you, Mr. George, for the opportunity of submitting my letter for the record of the hearing.

For me to be able to give you a full understanding of my views in a brief statement, it is impossible, as the economic structure of our great nation has become so complicated through the years by the repetition of tax bill after tax bill being added to more tax bills that I don't believe there is a living person that could name one-tenth of them—Federal, State, local and private—and I cannot put such an important thing as this in a brief letter.

The past 19 years I have been an ardent student of our economic structure from every angle, knowing that the day is at hand for the government of all nations to collapse and if you are a student of the Pyramids, you no doubt know that their prophecies are very clear and the government of this world will completely collapse by the year 1953 as we are living in the end of the Kings Chamber, besides the Pyramids we have the Bible of which is very clear on the rise and fall of the nations and when one is a real-born-again student of these two great God-given documents they don't need hesitate as to what lies before the nations today. I believe you can see it would be impossible for me to make these things plain in a letter.

In 1932 when the world was up against a stone wall, as it were, I said, "If there was any solution to our problem, it was in the Bible, and the only way anyone could find it was in God's own way, to fast for understanding." On March 10, 1932, I went on a fast for this understanding, and at the end of 10 days was given the understanding I was after. Then I started to search for figures to prove my point, so I could convince the Government of its merits. In November 1932 I went to Washington, D. C., for 4 weeks, and while there I talked with many Representatives, including the Speaker of the House, and I studied in the Library of Congress to get a thorough understanding of all the things I was interested in. Having gathered all the necessary information and statistics which I needed, I returned to Kalamazoo and started working on my charts, which I prove beyond all doubt that God's methods are the only way to solve our problems and stabilize our economy giving ample security to everyone in every walk of life from the cradle to the grave.

In September 1934, after the Supreme Court declared the NRA unconstitutional, I returned to Washington, with the hope of getting before a proper committee with this plan. I contacted Jasper J. Mayer, chief correspondent, about October 20. He got me to write my plan out briefly, as he told me he knew of no other way to get it under consideration. At that time Mr. Mayer told me I had the most complete set of figures ever brought to Washington by anyone, and that he knew every figure I had was authentic, but that he had never seen them applied as I had applied them. He also said if I would write the letter he knew he would O. K. it and that when he did there were dozens of people in the Government that would have to read it and either O. K. or object to it. Fifty percent O. K.'s would bring it before a committee.

October 22, 1934, I mailed copies of my letter to Mr. Mayer and to Lewis McHenry Howe, secretary to the President, and before the night of October 23 Mr. Howe wrote me that my letter had been brought to the President's attention. October 30 Mr. Mayer wrote me that it would be given every consideration of the administration, and on October 31 the United Press carried an article with the heading, "Weigh New Plan of Relief for Idle." And that was my plan.

Now I would like to show you a prophecy of the Pyramids of 5,000 years ago, which states October 1934 will start to mark the beginning of a new era, and from October 1934 to 1953 more will be accomplished along the economic lines than has been accomplished in the past 6,000 years, and before the year 2,000 has arrived the full establishment of the Kingdom of Christ will have taken place. That is the reason the Pyramid picture was placed on our dollar bill in 1935, showing this Nation is in that channel. I will defy the Government to show any plan other than the one I submitted that will coincide with the prophecies. There are many other prophecies which I would be able to show you, but I cannot find room in a letter to write them all out.

In November 1934 you should remember the 300 delegates and the brain trust that Mr. Roosevelt called in and placed my plan before them, but I had no chance to appear and debate my own views. Why? I know why.

Nevertheless the social-security bill was drafted off my plan, but all they did was a small fraction of what I offered. Therefore, its purpose was defeated, and many people were left paupers, and today we are head-over-heels in debt, with so many taxes placed on our backs that the mass of people can hardly exist, and more billions of taxes are being added, thus creating more and more inflation. Ninety percent of all inflation is created through Government tax policies under the disguise of stopping inflation. Had I been given a chance to appear before a proper committee in 1935 and had there been a proper bill drafted to accomplish all that God requires, we could have put the Government on a pay-as-you-go basis and not had one idle person from that day until now, with a pension for everyone unable to provide for themself, with ample purchasing power for everyone, and there would be only one single tax to replace all other taxes, and our Nation would have a flourishing economy and be free from debt today.

I pray that God can find enough Christian spirit within the hearts of the ones that read this letter to be able to move you to a place where you will have a thorough investigation of what God in His word requires us to do as a Nation before He has to pour any more of his judgments out upon our great Nation such as the great flood in Kansas, Missouri, and Oklahoma, which has at least cost these States a loss of a billion dollars to say nothing of what has been in other States, besides the untold other disasters in our land inflicted upon us by God, look at our war which is becoming world-wide with a terrible slaughter of human lives, to mention nothing of the billions of dollars of property destruction. Every one of these things are happening to our Nation simply because of our own national sins, and this can be corrected by Congress and Congress alone.

Now just sit back and figure up how much God has punished this Nation since October 22, 1934, through the present day, all because we don't humble ourselves before God to find out what He requires of us as a Christian Nation, as God never in the history of the world has ever brought war or calamity against His people at any time only when they were out of His will and disobedient.

In the past 16 years there has been thousands of years in man-days spent on hearings and drafting tax bills and social-security bills, all of which has only made millions of our people paupers and are grinding the face of all our people to the bone and bankrupting our Government while business is being brought to a standstill through such policies and now you again ask me to write another letter the same as when I asked to appear on your committee when you were having hearings on the expansion of the social security and I wrote you a letter then which was read before the Finance Committee in executive session and when they finished the session the committee voted to thoroughly investigate this plan and when you went before the Senate with the expansion bill the Senate passed a resolution demanding this plan be thoroughly investigated, and yet this never has been done. You may think I am very harsh in the way I write but there has never in the history of the world been a time when the people needed the guidance of God's word as it does in this day and hour.

In all my writing and appearances before committees and individuals in Government, I have never had one of you attempt to start an argument against what I offer. I feel it is high time for a proper committee to take my advice and thoroughly investigate what I offer before the atomic and hydrogen bombs start falling on us, because God is going to destroy two-thirds of the people of the nations and then try the rest; unless we humble ourselves and do His will we may get our share. Enclosed is a card for your benefit. I sent hundreds of them in to various Government groups following the war between Israel and the Arabians. At that time President Truman and Secretary Marshall jumped up one morning and wanted to stop the partition, thinking God would change His mind, but to this day He has not, but all nations are heading for war if we don't do something to straighten out this situation we are in.

Don't be fooled, God is going to completely crush all the world forms of government and rule in His own way of righteousness and He is going to establish it through the U. S. A. You can do a great deed by letting me have the necessary time to place before you God's requirements and save us from communism and untold destruction before it is too late.

For the past 19 years I have pleaded with various committees and divisions of Government to accept divine guidance to correct our economic structure and set before the world a system of economy that will give the world permanent peace and security for everyone, there is but one perfection that is God and His divine word, which includes His method of government, and the time for its adoption is at hand and there is but one way to find what it consists of, that is in God's own appointed way and by this method only can we ever stop Stalin and his communistic powers.

Since World War II there has been over $40 billion spent in an endeavor to correct the economy of Europe, whereas my contention is, if we correct our own economic structure and show them the merits of a true democracy where there is justice and ample security for everyone, they could adopt the same system and become self-supporting, the trouble is the money we send over there does not get into the pocket of the mass of the people so they can buy what they need.

President Truman once said "If the living standards of the people of the world could be raised 2 percent it would take years for industry to catch up with production." This I agree with, but the only way living standards can be raised is to put the purchasing power in the pockets of the masses of the people. If we would have adopted this plan in full detail in the year 1935 it would have raised the living standards of millions of our people by at least 50 percent and millions of others by more than 25 percent and everyone would have benefited more than we ever have, then other nations would have seen its merits and could have adopted the same method and communism would have been a thing of the past today.

There is a bill (H. R. 6453) before the House Ways and Means Committee known as the prosperity revenue bill introduced by Representative Plumley, which embeds the principles of this plan on the front cover of which I quote. "A bill to equalize taxes; to provide adequate social-security benefits for all American citizens; to solve both the wage problem and the pension problem to untax private enterprise and thus stimulate efficient production and full employment; to cut the hidden sales taxes out of prices and reduce the high cost of living; to provide incentive pay for Government employees to raise the efficiency and reduce the cost of Government; to collect enough revenue to balance the budget, retire the national debt, and in due course revalue the dollar; to make the tax rate automatically adjustable to stabilize our economy on a rising standard of living; and to correct the two basic faults of capitalism, remove the cause of socialization, and achieve honest and general economic freedom."

Every Member of Congress as well as the President and every economist knows as well as I do that in order to accomplish the establishment of a sound and permanent flourishing economy and a stable national income, it is absolutely necessary to take into our national planned economy every individual, as we are all a part of our economy and to obtain a perfect function we must understand in reality and practice the fundamental meaning of the statement over the doorway to the Justice Department, which states, "Equal justice under law" and this we haven't got, nor won't have until we have proper legislation by Congress that will give ample security to everyone and not just a few.

The present Social Security Act we now have does not give ample security to anyone so we have a repetition of relief agencies to supplement wherever it falls short.

This plan I have provides guaranteed employment, this method establishes ample purchasing power by perpetuating steady employment at all times for everyone able to work and an adequate pension for those unable to work, regardless of age, this would not require any relief agencies of any kind and these unfortunates would have a purchasing power as well as the fortunate ones. The present methods make such a repetition of agencies that the cost is so great it will eventually destroy our whole economy unless we correct it.

We now have several million unemployed and business is continuing on the downward trend. Why? Simply because the ones in our stable commodity industries are in a position today where they, through organized labor, have driven their earnings to such high levels they have forced the prices of most, if not all, commodities so high that the great mass of people are unable to pay the price. There are millions right now without purchasing power for anything other than just the bare necessities of life, and there are multiplied millions on incomes of less than $1,000 annually. This is far less than enough for even bare necessities, to say nothing about these people being able to purchase the stable commodities, which gives us a healthy economy.

I am 100 percent for ample security for everyone, from the cradle to the grave, and what I have to offer can easily be accomplished in a very short time and I am absolutely sure it is the only way to solve our economic problem.

To show you one man has always been used to speak, I will refer you to the past and I will show you too how this Nation can escape the wrath of God which is to be poured out upon the world in the near future without mercy.

There was Joseph, the slave in Egypt, 1707 B. C., Genesis: fortieth chapter and onward. If God had not raised him up, all mankind would have starved at that time.

Then came the deliverance of Israel from Egypt by Moses the sheepherder. Read the Book of Exodus.

Again when his people had fallen away from Him to worship Baal, God raised up Elijah and he straightened them out, but the nation was punished until they finally gave in and they listened to Elijah (1: Kings seventeenth and eighteenth chapters). This was 906 B. C.

Just think what a blessing those nations would have received had they taken these men before a proper committee and throughly investigated what they had to offer, before God had to pour out His punishing elements upon them.

Read the Book of Jonah, 862 B. C., when Jonah was sent to Nineveh, how God blessed them when they heard his warning and obeyed it.

We all know how Jesus pleaded with the Jews and they wouldn't listen and we know what has happened to them, as Jesus told them in Matthew, twenty-third chapter, thirty-seventh to thirty-ninth verses. He tells us the signs to watch for to be able to know when His day is at hand (Matthew, twenty-fourth chapter).

2 Chronicles, chapter 7, thirteenth and fourteenth verses states: "If I shut up heaven that there be no rain, or if I command the locusts to devour the land, or if I send pestilence among my people; if my people, which are called by my name, shall humble themselves, and pray, and seek my face, and turn from their wicked ways; then will I hear from Heaven, and will forgive their sin, and will heal their land."

In Malachi 3: 10 He states, "Prove me now wherewith saith the Lord of Hosts, if I will not open you the windows of Heaven and pour you out a blessing, that there will not be room enough to receive it."

In Malachi 3: 1 He states, "Behold, I will send my messenger and he shall prepare the way before Me"—showing specifically that one man is to show the way out of this crisis.

This Bible plan is His divine word and it contains full instruction for government regulation and He has always raised up a spokesman to show what was and is to be done.

In order to find out in full detail God's requirements, may I suggest that Congress appoint a subcommittee to work out a bill to accomplish all that is stated on the cover of H. R. 6453. In order to accomplish this task with proper details I believe this subcommittee should be composed of at least 8 Senators and 7 Members of the House and 1 member from each of the executive branches of Government, and at least 75 private citizens, to be appointed by various businesses on the basis of 1 being appointed by each line of enterprise.

In this way the subcommittee can be 100 percent nonpartisan and nonsectarian in scope. In order to finance this effort, I suggest Congress make the appropriation in the following order. Congress has just been asked for $8½ billion for defense and relief of Europe. May I suggest they appropriate this and allot $6 billion for defense of Europe and $2 billion for their relief and one-half billion for our own defense, this to be used for this subcommittee.

In order to get high-quality personnel I believe every one of these salaries should be set at $25,000 per year and if they complete the necessary methods to solve our problems and stabilize our economy as outlined on this bill in 1 year then give every one on the committee a bonus of $200,000 tax-free.

I feel that through my 10 years of work on this plan I am as qualified as any living person for one of these positions on this subcommittee, especially in view of the fact that I am the author of the plan; and the first thing the subcommittee should do is to let me place before them in full detail every angle of what I have to offer for the benefit of the committee. Then let them have a chance to debate it from every angle then draft a bill or bills necessary to establish our own national income on sound and practical business principles, giving ample security to everyone from the cradle to the grave, as outlined on the cover of H. R. 6453.

If Congress can see fit to carry out this suggestion in full detail and let us get started by September 1, 1951, I can assure you it can be possible to stop the spread of communism and end the war in a very short time and we never will need worry about another recession. Neither will we need finance other nations any more, as they can adopt this method and support themselves.

Hoping to be able to serve my country for the good of humanity as outlined.

Very truly yours,

FRED WHITMORE.

STATEMENT OF J. S. FINGER, PRESIDENT, CORRULUX CORP., HOUSTON, TEX., CHAIRMAN, YOUNG AMERICAN BUSINESS CONFERENCE

This statement is made by me as the authorized representative of a group comprising nearly a hundred successful postwar companies, and I address this committee not only on behalf of the corporation of which I am president, but on behalf of this entire group, the Young American Business Conference.

First let me define the Young American Business Conference. It is a group of companies formed after January 1, 1946, numbering 92 as of Monday of this week, and adding new participants at the rate of about 10 each week. This conference exists solely for one purpose—that of analyzing fully the impact of the present excess-profits-tax law on postwar business, and of bringing the facts of that analysis before this committee.

All the member companies in our conference, which are distributed geographically from Portland, Ore., to Macon, Ga., have three things in common. First, they were incorporated after January 1, 1946. Second, they are small companies, by the definition of 500 or less employees, or $5,000,000 or less in assets. Third, they face stagnation or extinction because of the excess-profits tax.

The members of this national group do not believe it was the intention of this committee or this Congress to create a discriminatory hardship for small new businesses. We are perfectly willing to pay our fair share of the tax burden, but we cannot maintain our present positions competitively nor fulfill our normal growth and expansion under the present and proposed tax structure.

In a report dated January 15, 1951, to the Senate, Senator Sparkman, chairman of the Senate Small Business Committee, stated as a result of his committee's hearings—

"It (the Excess Profits Tax Act) of necessity will bear more heavily on the young and growing businesses which have no historical profit base. * * * Furthermore, it is these really small enterprises which often need all their profits to plow back into the business to meet their capital requirements. Many studies have shown this reinvestment of profit to be the chief source of capital for small businesses and, as the basic tax rate rises, the amount of profits remaining after taxation will be proportionately reduced."

This conference has not rushed headlong into a position of opposing the present tax structure simply because its members are averse to paying taxes.

Careful studies have been made of the individual members' situations, and sound economic conclusions drawn both on the individual case histories and on the economics of the postwar section of business as a whole. Here are some of the conclusions which are inevitable and inescapable.

The present condition is a literal threat to the system of free enterprise and is definitely conducive of monopoly and of restriction of the development of any but old and established business firms. A published editorial in the Dallas Times-Herald thus expressed the question very succinctly: "Will this country continue to develop new businesses to meet new needs, or will established corporations take over new fields and new needs for increased productivity as they become apparent?"

Here are the specifics of the way the present tax law operates to the detriment of every successful business which has been incorporated after January 1, 1946.

1. There are insufficient funds left after taxes to plow back into necessary plant expansion and improvement.

2. There are insufficient funds left after taxes for the increased working-capital requirements in an expanding business.

3. The necessity of paying 50 percent of the tax by March 15 further decreases available working capital.

4. Small new businesses are forced to charge regular depreciation on plant and equipment and yet compete with older established companies who in many cases have already written off such equipment.

5. Small new businesses are forced to plow back every cent to fixed assets and increased inventories and therefore cannot accumulate any of the necessary reserves required to tide the business over a business-cycle bobble.

6. Small new businesses less than 5 years old are still considered risky by bankers and insurance companies, and therefore it is virtually impossible to obtain capital loans from these sources.

7. Small new businesses which have developed new products and processes but which are held down by high taxes to the extent that they cannot expand fast enough to meet the demand they have created and enjoy the business which they have rightfully earned, are being made a prey to the larger corporations who have the necessary funds to take advantage of the market which the little fellow has developed.

8. Of all the small corporations formed since 1946, only a few, perhaps 1,000, are advanced enough in their profit picture to be severely hurt by the excess-profits-tax law. Yet, under a less severe tax program these rapidly growing companies of today would be America's new industries of tomorrow. Through rapid growth they would actually furnish more revenue to the Government in 2 or 3 years. The loss of revenue to the Treasury this year and next year would be relatively small under our proposals (probably less than $50,000,000), yet we shall be encouraging competition, free enterprise, and American leadership and industry of tomorrow. This is certainly a small tax for the Treasury Department to defer.

9. None of the present methods of computing taxes takes into consideration that in most cases a manufacturer loses money during the first 12 to 18 months before he is able to break even and start making money.

10. The present law is a direct discrimination against veterans. Growth company relief being confined to companies incorporated prior to January 1, 1946, this arbitrarily rules out the thousands of American businessmen who were wearing uniforms on that date and whose postwar business efforts are thus arbitrarily and automatically subjected to the maximum confiscatory tax rate.

There was a time in American history when a man or a group of men could invent a new product or discover a better way of doing something and, through diligent work, good leadership, efficient management, and aggressive selling, they could build an industry. This is the history of the automobile industry, the aircraft industry, the appliance industry, and the chemical industry. Tomorrow's industries which will keep our productive capacity high and our employment full cannot be built under the ceiling of a 62-percent tax.

It is our conviction that the provision in the present law, which denies use of any growth formula to companies formed after an arbitrary date of January 1, 1946, is working an unintended hardship on new business. We do not think that Congress intended to lower an iron curtain on all expansion and industrial opportunity after a certain date. We know you gentlemen realize that there would inevitably be many businesses formed as a result of technological advances, new ideas, and new needs for more products in any period, without regard to military events, such as the Korean adventure. We can't brand all new corporations as "war babies" just because they came into existence after a certain arbitrary date some 4 years prior to Korea.

We submit that any taxation which imposes a higher rate on small new firms, because of their youth and lack of historical earnings experience, than is imposed on many large firms with plenty of surplus and capital investment, is an absolute monstrosity. Its inevitable effect is to limit the growth of all new businesses, and make it simple and easy for older, larger corporations to move in on the markets, simply because new companies cannot retain enough of their earnings to expand in step with the markets they have helped to create. This Government is pledged to the support and protection of "small business" but under this law all postwar business is virtually frozen at its 1950 level of expansion and capacity.

It seems needless to point out that the present law is direct discrimination against veterans. How could men who were in uniform on January 1, 1946, have started a postwar business in time to qualify for the present growth company relief formula? As one member of this conference has already said before your committee, "We were soldiering when, according to the excess profits tax law, we should have been incorporating."

The Young American Business Conference does not represent one selfish company which seeks to retain more of its earnings to put in its stockholders' pockets, nor a dozen such. It represents an entire sector of American industry—the pioneering and dynamic sector—the industrial leadership of tomorrow. We have made a survey of over 3,000 certified public accountants throughout the entire country. On the basis of this survey, we can tell you that there are not less than 2,000 small postwar companies in the same situation. This figure may run as high as 4,000, but 2,000 is an absolute minimum. These companies, their employees, stockholders, and members of the communities in which they play an important part as local employees, are looking to this Congress for the same opportunity to expand and grow that every other company in this country's history has had up to July 1, 1950. We propose certain relief provisions as amendments to the present excise profits tax law. These relief provisions will probably be an asset to the Treasury Department in that the net revenue over the next 5 years will actually be increased through capital reinvestment rather than decreased. This is due to the fact that most successful new businesses who are being hurt by the present excess-profits-tax law are growing very rapidly and some are probably earning as much as 50 percent per year on its reinvested capital before taxes. This high rate of earning is not due primarily to the war situation but rather to the normal rapid expansion of a new industry taking its place in the domestic economy. Therefore, every dollar of earnings which Congress allows us to plow back into our businesses this year will probably produce 50 cents of income next year, which in turn is taxed to the extent of 25 cents. Every dollar of investment taken away from us during this fast-growing stage means a minimum loss of 25 cents of revenue next year and succeeding years for the Treasury.

Obviously the cumulative result of reinvesting 20 percent of our income each year in a rapidly expanding business will continue to produce a high income subject to taxation, which will more than offset the "losses" which the Treasury Department might believe it is suffering if this relief is given us. Furthermore, tax relief for capital reinvestment is the type which does not go into someone's pocket but rather is the type that produces more jobs and income subject to taxation.

Therefore, it is highly essential that the Congress and the Treasury Department realize that they will not be taking a loss by granting this relief; but will actually be making the best possible type of investment: an investment which will yield 25 percent per year net profit to the Treasury and in addition produce a capital gain of the finest sort—a capital gain in America's future.

Attached hereto is a summary of the adjustments to this law which this conference submits would eliminate the inequities herein described.

AMENDMENT TO EXCESS-PROFITS LAW ENACTED IN 1950 IS SUGGESTED EMBODYING THE FOLLOWING PROVISIONS TO ELIMINATE DISCRIMINATION AGAINST NEW COMPANIES

QUALIFICATIONS FOR RELIEF

It is suggested that the terms of relief herein expressed be available only to corporations to whom the present growth company relief is now denied, i. e., corporations formed subsequent to January 1, 1946.

Total assets of such corporation must be less than $5,000,000 or total employees must be less than 500 persons at all times during the excess-profits-tax year. This limitation includes any and all persons defined as employees by FOAB tax legislation.

Assets defined as in sections 442–446: The sum of the cash and other property (other than inadmissible assets and loans to members of a controlled group as defined in sec. 435 (f) (4)), held by taxpayer at the end of such day in good faith for purposes of business. "Property" shall be included in an amount equal to its adjusted basis for determining gain upon sale or exchange, except that the adjusted basis for secret processes and formulas, good will, trade-marks, and other like property shall be determined without regard to value as of March 1, 1913.

RELIEF SOUGHT

A. Extension of "growth company" benefits now incorporated in the excess-profits-tax law to companies formed during 1946 who qualify under the present definition of "growth companies" in all respects other than date of incorporation.

B. Establishment of a base period within each qualified (incorporated after January 1, 1946) corporation's earnings experience. This base period would commence from the first day of each corporation's incorporation to a total of 48 months or less. During this period the corporation may use its highest 12 consecutive months as a base for computation of excess-profits-tax credit, providing that such portions of this base as may occur subsequent to 1950 shall be discounted at the rate by which the average of all corporate earnings during the current tax year exceed the average of all corporate earnings during the 48 months 1946 to 1949, inclusive. (This is expressive of the philosophy of the present law permitting some taxpayers to develop an average base period net income from experience in 1949 and 1950, discounting the 1950 income by 20 percent, Senate Finance Committee Rept. No. 2679, p. 27.) It is suggested that such discount in computing an average base period net income be limited to 20 percent as expressed in the present growth-company formula.

If such corporation has less than 12 months' experience prior to the excess-profits-tax year, it shall take its actual number of months divided into the income for the tax period and multiply by 12.

The corporation's average base period net income shall be deemed to have been established by the highest 12 consecutive months of its first 36 months of existence (with post-1950 discounts as indicated above) and shall remain fixed during the life of the excess profits tax law, provided, however, that corporations whose earnings during the last 2 years of the 48 months' base period are 50 percent above earnings in the first 2 years of the period, or whose gross sales are 30 percent increased in the last 2 years over the first 2 years, shall be permitted to calculate their average base period net income as the highest 12 consecutive months in the 48 months period, subject to adjustment as provided above.

Provided further, that during the first 8 years of a corporation's existence, the philosophy of the growth company formula apply to companies having growth characteristics of an increase in profit of 50 percent over the previous year or an increase in sales of 30 percent over the previous year, to the extent that, in computing tax for each excess profits tax year, they may use as their average base period net income their best 12 consecutive months including the first 6 months of the excess profits tax year.

C. In lieu of the 12 percent capital additions credit now provided during the current excess profits tax year, a 20 percent growth allowance should be granted for the first 5 years of such corporations' existence, expressed as tax exemption for capital additions and improvements up to 20 percent of the net taxable revenue for the tax year.

D. All taxation (normal, surtax and excess profits tax) on companies herein qualified, regardless of tax computation, to be limited to 52 percent of their net taxable income for five excess profits tax years or during the life of excess profits tax legislation, whichever is the shorter.

E. Amounts used to retire bank loans, debentures, or preferred stock obligations, contracted prior to July 1, 1950, and after January 1, 1946, in accordance with schedule of retirement set up at time loan was contracted shall be exempt from excess profits tax computations.

SPECIFIC CASE HISTORIES OF SMALL NEW GROWTH COMPANIES INCORPORATED AFTER JANUARY 1, 1946, RETARDED BY EXCESS PROFITS TAX

Company A, plastics manufacturing—Starting capital, $55,000

Incorporated 1948. Lost money 1949, first earnings 1950. Earnings rate doubled in 1951. Capital assets doubled in 1950. Now in maximum excess profits tax bracket; needs to reinvest at least $75,000 per year for 3 years in increased productive capacity to hold place in market.

Company C, vitrified pipe manufacturing—Starting capital, $500,000

Incorporated 1947, lost money first year, first earnings in 1948; 100 percent earnings increase in 1949, and again 100 percent in 1950. Capital investment increase 300 percent in 1948, 50 percent in 1949, 100 percent in 1950. Needs to reinvest minimum of $50,000 per year next 3 years in increased productive capacity. Company fully qualified as "growth company" if in existence in 1946; under growth formula, for a full year in 1950, taxes would have been $16,000 less in 1950.

Company C, vitrified pipe manufacturing.—Starting capital, $500,000

Started in 1947, lost money that year. First earnings 1948, increased 10 percent in 1949, increased 180 percent in 1950. Now in maximum bracket, needs $200,000 reinvestment to follow present expansion curve.

Company D, specialized steel pipe for geophysical exploration—Starting capital, $12,000

Started in 1946. Sales trebled in 1947, doubled in 1948, fell off in 1949, up 500 percent in 1950. Earnings up 90 percent in 1947, up 150 percent in 1948, net loss in 1949, up 500 percent (over 1948) in 1950. Needs $50,000 a year for next 5 years to increase productivity to hold market created by new product. Fully qualified as growth company in every way except age.

Company E, metal products—Starting capital, $120,000

Formed in 1949, loss first year of operation. Sales up 500 percent in 1950, first earnings in 1950. Orders for new equipment for expansion placed full 12 months in advance, now has expansion commitments which cannot be met under present law.

Company F, ceramic manufacturers—Starting capital, $100,000

Started in 1947. Earnings up 700 percent in 1948, down to 200 percent of first year in 1949, up 700 percent in 1950, projected increase of 100 percent in 1951. Now paying from 5 percent to 15 percent more taxes than direct competitors only 2 years older. This is the first year no substantial expansion has been made; competitors taking over markets. Net profit after taxes this year, under present law, will be the same as it was 3 years ago on capital investment of one-third present investment.

Company G, automotive equipment—Starting capital, $500,000

Started 1949. Earnings doubled in 1950, present rate up 120 percent over 1950. Under present law has only one-third the excess profits tax credit allowed older competitors with same assets, same sales, same approximate earnings rate. Unable to continue expansion program, or even to purchase building in which operation is housed.

BALLARD, SPAHR, ANDREWS & INGERSOLL,
Philadelphia, August 2, 1951.

Hon. WALTER F. GEORGE,
Chairman, Finance Committee, United States Senate,
Senate Office Building, Washington, D.C.

Re Section 863 (c), Internal Revenue Code, Works of Art on Loan in United States.

MY DEAR SENATOR GEORGE: As president of the Philadelphia Museum of Art, I write to you on the above matter.

I have before me a copy of the letter which Mr. Redmond, as president of the New York Metropolitan Museum of Art addressed to you under date of July 27. Please accept this letter of mine as a wholehearted endorsement of Mr. Redmond's presentment.

You may have noticed the immense publicity in Life and in other national magazines with respect to the loan exhibitions of European art brought here during the past few years on the initiation of American museums. This publicity is indicative of the great cultural stimulus that the American public receives from such exhibitions.

As matters now stand, the Internal Revenue Code places upon any European a grave threat of taxation if he, following generous impulses, loans a masterpiece to one of our American museums. We certainly should not run the risk of taxing a resident European for pursuing a course so valuable to this country as lending to this country his masterpieces. The risk exists if the generous lender should die during the period of the loan. This condition makes it more and more difficult for the publicly supported museums of the United States to give to the public the inspiration and pleasure that comes from overseas loans. The situation would be entirely cured if Mr. Redmond's suggestion for the amendment of section 863 (c) was carried out, and I do trust you will give thoughtful consideration to his request.

Very truly yours,

R. STURGIS INGERSOLL,
President, Philadelphia Museum of Art.

THE NATIONAL WRITERS CLUB,
Denver, Colo., August 3, 1951.

The SENATE FINANCE COMMITTEE,
Senate Office Building, Washington, D. C.

DEAR SIRS: The members of the National Writers Club urge you to reconsider the provision of title 2 of the Revenue Act of 1951, pertaining to the withholding of tax at the source on payments made by publishers of magazines, newspapers, and books. Sections 1220 and 1221, as I understand the proposed act, are especially unsatisfactory.

The National Writers Club, a nonprofit organization incorporated under the laws of the State of Colorado, represents more than 5,000 writers throughout the United States. The organization was founded 14 years ago in order to serve the best interests of the part-time, free-lance writer. We are probably more aware of the needs, problems, and difficulties of this group of writers than any other single source. Having given careful thought to the proposed act, we are convinced that its enactment into law would create an extreme hardship on a large group of citizens characterized solely by their special ability to write salable material.

We speak particularly for the professional and semiprofessional writers who supplement their earnings through their writing or who are just beginning to earn more than token amounts. Compensation received for manuscripts, especially by this class of writer, is usually far from commensurate with the amount of effort that goes into the writing of stories, articles, poems, and other material. Should payment in an amount equal to 20 percent be withheld at the source, these persons would thereby be taxed far out of proportion to the amounts levied on the returns from labor or creative efforts of other classes.

We can foretell an even more disastrous result from the act. The responsibility of magazines to keep records would react against the interests of thousands of new writers. Rather than face the burden of keeping records on payments to a large number of writers, it is entirely likely that many publications, especially the smaller ones which offer the best markets to new writers, would either depend upon staff employees or a limited group of regular contributors for their manuscript needs. This would result in a curtailment of opportunity that would not only affect a great number of individuals but would also have a limiting effect upon the literary output of America.

Many publications are short-lived. Free-lance writers even now experience frequently the difficulty of getting back manuscripts from defunct publications whose owners apparently have little conscience. If the new Revenue Act of 1951 is imposed, it is entirely likely that many of these publications, whose records appear to be insubstantial, will disappear along with any records of the 20 percent withheld from writers. Often these publications have no employees and therefore are not answerable to the Government on other provisions dealing with taxes relating to employees.

Apparently the intent of the sections of the proposed act is to insure inclusion of such income on income-tax reports made out by individuals. It appears that the necessity to observe the operations of hundreds of small publications and the cost of necessary forms and additional employees would more than wipe out any possible gain to the Government as a result of withholding 20 percent on the sale of literary material. This from the practical side. As a point of justice, the revenue act would place a penalty on the ambition and extravocational efforts of thousands of persons who would have to pay an abnormally high tax rate. The result may well be a stultification of creative literary effort at a time when encouragement is so sorely needed.

For the reasons stated in the foregoing paragraph, we respectfully urge that you spare the free-lance writers of America the difficulties and limitations which the proposed act would impose.

Sincerely yours,

DAVID RAFFELOCK, *President.*

STATEMENT OF R. J. WILKINSON, EXECUTIVE MANAGER OF THE MASTER PHOTO DEALERS' & FINISHERS' ASSOCIATION

Mr. Chairman and gentlemen, my name is R. J. Wilkinson. I am executive manager of the national trade organization in this field, the Master Photo Dealers' & Finishers' Association. This organization is composed of the retail photographic dealers and photo finishers who operate the commercial processing laboratories.

Knowing the pressure for time, under which you gentlemen are working and that our previous comprehensive statement is in your files, I am eliminating the volume of statistical facts and would focus your attention on a few major points which we feel should get full consideration in revising the legislation on photographic excise taxes.

PHOTOGRAPHIC TAX IS A TAX ON BUSINESS OPERATION

1. Despite a common opinion, photography is not a luxury by any measure. Industry statistics show conclusively that well over two-thirds of all equipment and materials produced and sold are for commercial, industrial, medical, reproduction, illustrative publishing and other business uses. All of these business uses are curtailed or burdened by the present provisions of the photographic excise tax law. Even in the so-called amateur end of the business a great portion of sales are made for semicommercial or illustrative photography.

TAXING TOOLS AND MATERIALS TO WORK WITH IS WRONG

2. The excess photographic excise tax that has been applied on machinery, equipment, and the tools to work with has worked a peculiar hardship on the photo finishers who are constantly required to add new machinery for processing as the industry becomes more mechanized. Taxing photographic processing equipment and the materials that these photo finishers work with is just the same as taxing the lathe that goes into a small machine shop or the cooking grill that goes into a restaurant. It's the tools they work with. Obviously such taxes should be eliminated and the correction is long overdue.

3. Contrary to general opinion, while the photographic excise taxes are manufacturers excise taxes—the retail photo dealer and photo finishers are the ones who are directly hurt. They are forced to prepay these excise taxes and put on their shelves thousands of dollars in a dead investment in "no profit" tax dollars upon which they can make no profit whatever. This results in a reduction of the

normal profit mark-ups which this business requires to make a decent return on investment. This situation stems from wartime decrees of OPA which prohibited making a mark-up profit in the handling of manufacturers' excise taxes. The result now is that with reduced sales volume coupled with the reduced mark-up which these wartime taxes thus imposed, many store are operating near the break-even point or with a loss.

PROPOSED ADJUSTMENT IN H. R. 4473

Members of the industry are of course aware of the revenue problems of the Congress that have been precipitated by the present state of international emergency. We recognize that in this situation any hope of complete elimination of the World War II excise taxes on photographic goods must be revised. We believe, however, that there is a definite obligation upon the Congress to adjust the long time existing inequities and particularly as they exist in imposing excise taxes on raw materials and processing tools to work with.

We have presented our views to and have worked with the House Ways and Means Committee to the end of adjusting the inequities while at the same time recognizing the revenue raising obligations resting upon Congress. The provisions of H. R. 4473 (sec. 485), as passed by the House, seems to us to represent a practical workable compromise approach to the imposition of excise taxes on photographic goods and equipment. We feel that the amendment in section 485 of H. R. 4473 expresses a taxing formula that should meet with the demands of reasonable persons in the photographic business and at the same time take note of the tax requirements of the present situation insofar as this segment of business is concerned.

In view of the corrections to the business cost items which this bill proposes, we are voicing no objecion to the taxes imposed but we do wish to point out that they amount to a rate of taxation that is still twice the manufacturers' excise taxes which have been imposed in the war and postwar years on other similar businesses. We recognize that nothing can be done now to further alleviate this tax burden but we urge that the record show that photography is and should be one of the first businesses to secure complete removal of excise taxes, if and when the emergency period has passed.

We respectfully recommend that the committee approve and pass to the Senate for approval the provisions for amendment of the photographic excise taxes as proposed in H. R. 4473.

Respectfully submitted.

THE AUTHORS LEAGUE OF AMERICA, INC.,
New York 16, N. Y., August 3, 1951.

To The SENATE FINANCE COMMITTEE,
Senate Finance Building, Washington 25, D. C.

DEAR SIRS: We of the Authors' League of America, Inc., submit this statement in support of an amendment to the proposed Revenue Act of 1951 introduced by the Honorable Irving M. Ives on July 25, 1951.

Throughout our more than 25 years of existence we have become familiar with all of the problems that confront authors, playwrights, and other creators of literary material. During this time, our most perplexing problem has been that of financial security for the individual self-employed author. As the committee well knows, the amount of yearly earnings of any one author is uncertain and subject to tremendous change from year to year. An author for example, might receive an income in excess of $35,000 for the year in which a work of his enjoyed popularity. The next 3 or 4 years might very well prove to be complete financial failures. Because of this unsteadiness of yearly earnings and unpredictability of the future, it would be to the great advantage of every author in the United States to have some plan whereby he could provide, in those few years of plenty, for the future when his income would be greatly diminished.

As we understand it, the amendment proposed by Senator Ives provides that an author, among others, may put a portion of his yearly income into a retirement fund and the tax on the income so set aside would be postponed until some later date when the income from the aforesaid retirement fund is utilized. Among the advantages to the author of this provision are the following:

1. Inasmuch as the earned income of an author for the year in which he is exceptionally successful is not a true reflection of his earning capacity, it is

unfair that he be placed in an income-tax bracket corresponding to the amount of income received for that year, without taking into consideration the unproductivity of past and future years. This provision would in part remedy this unfortunate situation in that the setting aside of a portion of the author's income into a restricted retirement fund would relieve him of some of the tax burden sustained for the exceptional year and apportion it more evenly among the years of feast and famine.

2. The proposed amendment gives to the self-employed author the benefits which an employee of a large corporation has in that the author will have his own pension plan, in much the same way as the employee enjoys the benefits received from a corporate pension plan. For many years, self-employed individuals have been at a disadvantage in this respect and the proposed legislation would now give them an opportunity to provide for their future.

In accordance with the views herein stated, we respectfully submit that the amendment of Senator Ives introduced on July 25, 1951, to the proposed Revenue Act of 1951 be adopted.

Respectfully,

OSCAR HAMMERSTEIN, 2d, *President.*

STATEMENT OF HON. CLAUDE I. BAKEWELL

Mr. Chairman, the St. Louis Symphony Orchestra is the second oldest symphonic organization in the country. It was founded more than 71 years ago. Now it is confronted with financial difficulties which make the continuance of the orchestra uncertain. Last year it operated at a deficit of $40,000. This is approximately the amount which the orchestra contributed to tax revenue of the United States as a result of the payment of the 20-percent Federal amusement tax.

The experience of the St. Louis Orchestra is typical of similar orchestras all over the country. Friends of symphony orchestras and opera associations throughout the country were heartened by the action of the House in passing a bill which would exempt such cultural, nonprofit groups from the present 20-percent amusement tax. In numerous instances this tax would impel the organizations to be discontinued. Certainly that is the case of the St. Louis Orchestra.

In the interest of our cultural heritage I most strongly urge, Mr. Chairman, that your committee adopt the bill which is in the committee providing for exemption from Federal tax nonprofit, cultural groups such as symphony societies and opera associations. I urge you, Mr. Chairman, and the mebers of this distinguished committee to retain that provision of the House bill.

A RESOLUTION

Resolved, That the proposal of the Senate Finance Committee to remove from tax exemption the sale of municipal bonds, thereby forcing upward the interest rates necessarily chargeable on such bonds, would wreak an unwarranted financial hardship on municipalties throughout the country: Therefore, be it further

Resolved, That the Business and Civic Association of the Tonawandas, Inc., hereby goes on record in direct opposition to the proposal so to remove the tax exemption of municipal bonds.

Adopted: Unanimously.

Date: July 19, 1951, regular monthly meeting.

By: Board of Directors, Business and Civic Association of the Tonawandas, Inc., Power Building, North Tonawanda, N. Y.

CHARLES A. SUCHAN,
Secretary to the Board.

LOS ANGELES CHAMBER OF COMMERCE,
August 3, 1951.

Senator WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington 25, D. C.

DEAR SENATOR GEORGE: In connection with your consideration of the new tax bill, we are listing below the recommendations of the Los Angeles Chamber of Commerce:

SIZE OF TAX BILL

The amount of estimated new revenue produced under the House bill (H. R. 4473) should be taken as a maximum goal in the current tax program, and the budget should be brought into balance through reduction in expenditures in civilian and military items aggregating not less than $5.3 billions.

INDIVIDUAL INCOME TAXES

(*a*) Proposals for increases in individual taxes measured by a flat percentage of the present tax should not be adopted; but additional levies, if made, should be in the form of increases in the individual tax brackets.

(*b*) If additional income taxes are levied, recognition should be given to the fact that tax legislation for almost two decades has been passed upon a "soak the rich" philosophy, with the result that rates in the middle and upper income brackets already are so high as to constitute a positive deterrence to personal initiative and the development of the productive capacity of America.

CORPORATE TAXATION

(*a*) There should be no further increase in corporate excess profits taxes.

(*b*) The ceiling rate upon corporations should in no event be raised beyond the present indefensibly high 62 percent.

EXCISE TAXES

To the extent that the budget for fiscal 1952 remains unbalanced after giving effect to the above recommendation, the difference should be made up through the imposition of a manufacturers' excise tax of general applicability.

These recommendations were formulated after careful study by our Federal affairs committee and are as approved by the board of directors at its meeting August 2, 1951.

Since we were not personally represented at your hearings, we would appreciate your incorporating this letter in the hearing record.

Sincerely,

HAROLD W. WRIGHT, *General Manager.*

Suggested changes to be made in the Revenue Act of 1951, H. R. 4473, submitted by John E. McClure, McClure & Updike, Washington, D. C.:

1. Section 313 pertaining to family partnerships should be made retroactive.
2. S. 942, a bill to provide for the abatement of tax for certain trusts, the income and corpus of which are equitably owned by members of the Armed Forces who died on or after December 7, 1941, while in active service as a member of the military or naval forces of the United States or of any of the other United Nations and prior to January 1, 1948, should be written into H. R. 4473. S. 942 is a most equitable provision in view of the other congressional provisions presently contained in section 421 of the Internal Revenue Code.
3. H. R. 3168, pertaining to the Virginia Hotel Corp. case should be enacted into law for the reasons stated in Report No. 312 to accompany H. R. 3168.
4. Section 3801 of the Internal Revenue Code should be amended to provide for the allowance of deductions in the proper year, notwithstanding the statute of limitations, where the Commissioner has disallowed the deduction in an open year; provided the proper year for the deduction is within 2 years of the year in which the item was disallowed. In this connection I understand that the American Bar Association has tentatively worked out a provision acceptable by the Treasury Department.

5. The added tax for filing consolidated returns should be reduced from 2 to 1 percent. Years ago when the corporate tax rate was about 30 percent, corporate taxpayers could stand an added 2 percent. With the high corporate rate today, a further tax of 2 percent becomes very important.

6. Consolidated returns should be mandatory where groups of corporations are owned or controlled by the same interest. Making consolidated returns mandatory would have the effect of doing away with a lot of so-called tax avoidance schemes, thus reducing the amount of work before the Bureau of Internal Revenue, the Tax Court, and the appellate courts.

WASHINGTON BANKERS ASSOCIATION,
Seattle Wash., August 2, 1951.

Re taxation of savings and loan associations.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
United States Senate, Washington, D. C.

DEAR SENATOR GEORGE: My attention has been directed to an article in the American Banker under date of July 25, 1951, in which it is stated:

"The 17 State bankers' associations which designated Mr. Tark as spokesman for their officially voted opposition to the tax-free status of the savings and loan associations, in addition to Illinois, are: * * * Washington * * *."

Please be advised that the Washington Bankers Association, whose membership consists of all the State and national banks in this State, has taken no position on this matter nor has it authorized anyone to speak for it regarding such taxation.

This letter is written you for the purpose of keeping the record straight.

Yours very truly,

R. R. KNAPP,
Chairman, Legislative and Taxation Committee,
Washington Bankers Association.

STATEMENT OF WALTER P. REUTHER, PRESIDENT, UAW-CIO

Since July 16, when the Congress of Industrial Organizations presented its recommendations for $10 billions on additional taxes based upon ability to pay, it has become apparent that a concerted drive is on to promote—and, if possible, to persuade the Congress to adopt as permanent policy—a Federal sales tax to be levied either at the retail counter or as a "manufacturers' excise tax."

The National Association of Manufacturers, leader of this latest attack upon the living standards, health, strength, and productive power of American wage-earners and farmers, proposes a sales tax program that would raise the total tax take from families with less than $1,000 a year cash income to substantially more than 50 percent. This would be done in order to obtain a reduction of 25 percent in taxes paid by families in the upper income brackets. It would relieve these families of more than $5 billions in taxes; this burden would be shifted to families with incomes of less than $5,000 a year.

Concentrated economic power seeks to shift tax load to others

As will be shown later, this drive is being made by a more or less united front of certain industrial, business, and financial groups. They represent vast concentrations of wealth and economic power. Their purpose is plain. They propose a scheme whereby, were Congress to enact it into law, they could avoid bearing their fair share of the cost of a defense production program that, within a year, will be costing more than a billion dollars a week. Their scheme would make more inequitable a tax structure that already bears with inequitable severity upon the lowest income groups.

Dissociating themselves from the motives that carry men to the front lines of freedom's defenses against Communist aggression they insist upon getting and keeping the unusual profits of business-as-usual during the most critical emergency our Nation has ever faced; they deck themselves in imaginary rags and patches to warn this committee and the American people of broken hearts and spirit among high- and middle-income persons and corporations unless you "ease the squeeze" on high and middle incomes.

Their formula is simple. They propose to unload the tax burden they are well able to bear. They insist that Congress load that burden upon those least able to bear additional strains upon their living standards. These standards have been shrunken once by inflation since Korea; they are due for further shrinkage in another inflationary upsurge of prices, profits, and trailing wages provided and permitted by title IV of the new Defense Production Act.

Farmers and workers would pay the tax

Both farmers and wage earners are the intended victims of this drive for a Federal sales tax. We quote from section II of the NAM news for May 5, 1951, entitled "Questions and Answers—A Manufacturers' Uniform Excise Versus a Retail Sales Tax," two passages that show how the NAM, since 1940 the leading advocate of a Federal sales tax, thinks a Federal sales tax can be passed on to American farmers and wage earners for them to pay, with legal prohibitions against including the cost of such a tax in their parity prices or cost-of-living wage adjustments:

"Question. Are excise [sales] taxes included in the cost of living (Consumers Price Index) and in the farmers' parity index?

"Answer. Yes, the Federal manufacturers' and retailers' excise [sales taxes] are included in the Consumers Price Index and the parity index.

"Question. Could these indexes be changed if a manufacturers' or retailers' uniform excise [sales] tax were adopted, so as to exclude the tax?

"Answer. Yes. Our information is that this is merely a matter of working out a statistical procedure. *Such a change is necessary if farmers and workers are to bear part of the burden of defense costs. Otherwise the farm parity index and the cost of living index would rise.* Farm income and wage income would then be adjusted to provide the same return after the tax as before." [Emphasis supplied.]

Thus after the mere mater of "working out a statistical procedure," both farmers and wave earners would not be able to apply to the Department of Agriculture or the Wage Stabilization Board for adjustment of their prices or wages to make up for the cut in buying power suffered by them in paying cost plus profit plus sales taxes for everything they bought, except food. Wage earners and farmers together would be required to carry the tax burden of the defense emergency.

As the NAM states frankly in the document already cited—

"Whether the tax is levied at final manufacture or at retail sale, it is an excise or consumption tax. Both may properly be called sales taxes. *Both are intended to be borne eventually by the ultimate consumer, the one who buys for use rather than for resale.*" [Emphasis supplied.]

If a Federal sales tax is passed now or later, no consumer can ever accuse the NAM of having hidden its strictly dishonorable intentions toward the pocketbooks and living standards of 150,000,000 American consumers.

Announced aims can be achieved by a tax on big spenders

Because this drive for a Federal sales tax has broken in full force, bent on victory now or in 1952, and because many billions of dollars in the buying power of wage earners and farmers are at stake, we appreciate this opportunity to present this statement for consideration as part of the committee's record of testimony on the pending tax bill.

We are opposed to sales taxes in any shape or form.

We propose an equitable and more effective way of achieving the announced but incidental objectives of the advocates of the Federal sales tax. Those objectives, they have told the committee, are:

1. to increase the tax yield;
2. to cut down purchasing power, narrow the gap between spendable dollars and available goods during the emergency when defense requires diversion of materials, conversion of plants, and reduction of civilian products and thereby to keep inflationary pressure from blowing off the economic stabilization lid.

But it is significant that a principal reason given by the NAM for preferring the manufacturers' sales tax to the retail sales tax is that the manufacturers' sales tax is hidden from the ultimate consumer who pays it while the retail sales tax is visible, causing pain with every purchase and therefore more likely to be repealed after the emergency is passed. The NAM says in so many words that it wants a permanent, not just a temporary Federal sales tax for the duration of the emergency. Therefore, the second announced objective may be regarded as an attempt to take advantage of the national emergency for permanent private profit.

Our statement will be in three parts. First, we offer our comments on the Federal sales-tax proposals that have been made; second, we shall show how a Federal sales tax would aggravate the gross inequities in the present tax structure; third, we shall outline a proposal for a progressive tax on spending that will increase the tax yield while at the same time decreasing the inflationary pressure.

A progressive spending tax such as we shall outline would discourage excessive spending on nonessentials; it would tend to prevent the bidding up of prices for scarce goods in either legal or black markets. We offer this proposal to show its fair and simple method of accomplishing the purposes claimed for the sales tax by those who hope to use that tax as a substitute for adequate and equitable income and corporation taxes based on ability to pay.

Because on July 31, 1951, the head of the staff of the House-Senate Tax Committee was directed to prepare a report on the sales-tax proposals made to this committee during these hearings, we urge that he be directed to study simultaneously and to report on the equitable and more effective progressive spending tax which we shall describe.

A sales tax is a wage cut

A sales tax, however levied, however concealed and disguised, is a wage cut for workers, a cut in income for farmers. Applied as the National Association of Manufacturers and other spokesmen for high and middle income corporations and individuals are urging you to apply it as a substitute for $23 billion in income taxes—a Federal sales tax would mean a rate of 30 percent and would amount to a wage cut of about $200 a year or $4 a week for the average auto worker with a wife and two children. That would mean a wage cut, imposed by Congress, of 10 cents an hour. For smaller families, the wage cut would be less, illustrating one of the most antisocial features of the sales tax which imposes the heaviest penalties on the largest families.

Under the Committee for Economic Development's proposal that increased tax burdens be excluded from measurement of cost-of-living increases for purposes of wage adjustments under title IV of the Defense Production Act (also suggested by the NAM) such a wage cut would be absolute for the duration of the defense emergency.

Similarly, farmers' parity prices would fall behind increasing costs of the things farmers want to buy.

Sales taxes added to inflation would mean a double wage cut

The appetite of profiteering elements in business and industry seems to grow by what it has been feeding on since Korea Prices and profits climbing higher in an inflationary spiral have cost workers and other consumers more than $17 billions to date; a $7 billion increase in prices for Government purchases has canceled the last increase in taxes.

Having succeeded in getting a new round of higher prices written into the new Defense Production Act that will mean new wage cuts for workers, greater hardship for retired workers on pensions, disabled veterans, servicemen's dependents and all persons living on fixed incomes and the absorption in higher defense costs of all or most of the additional money to be raised by the pending tax bill, these profiteering elements now ask you to impose sales taxes that would increase by more than half the wage cuts already written into the Defense Production Act signed by President Truman under protest.

Although it is impossible to measure accurately in advance the new inflation that will set in when defense production reaches $1,000,000,000-plus per week, it seems conservative to say that the combined effects of wage cuts in the Defense Production Act and in the sales-tax proposals could amount to a drop of more than $550 a year in the purchasing power of a family consisting of husband, wife, and two children and earning $75 a week. This would amount to a wage cut imposed by inflation and taxes of $11 a week or 27½ cents an hour.

Of course, organized workers will continue to chase the devil of inflation around the stump, insisting on cost-of-living as well as improvement-factor wage adjustments. But cost-of-living adjustments will always be 90 days behind the hard facts of higher prices and rents and, when paid, will be in the wooden nickels of inflation.

The new Defense Production Act sentences the American people to another bout with inflation. We urge you to reject the proposal that, at the same time, they also be subjected to a Federal sales tax that would bear down hardest on those least able to pay.

Retailers reveal pyramiding of manufacturers' sales tax

As set forth in Life magazine for July 9, 1951, the united front for a sales tax includes the National Association of Manufacturers, the once reputedly liberal Committee for Economic Development, and the Committee on Federal Tax Policy. Other advocates are the National Retail Dry Goods Association, the American Retail Federation, and the Automobile Manufacturers' Association.

The two retail groups, until now opposed to any sales tax, have been converted to a Federal sales tax, but insist that it be levied at the retail counter. They deserve some thanks from consumers for having pointed out in testimony before this committee that a manufacturers' excise (sales) tax would be built into the cost of the product and is of necessity pyramided and produces additions to the retail price far in excess of the tax imposed (John F. Lebor, American Retail Federation, testimony, July 7, 1951).

Perhaps the retailers' fear is that, caught between the manufacturer and wholesaler on one side and the consumer on the other, they might not be able to pass on to the consumer the full pyramided amount wrapped up in the final price but would have to absorb (pay) some of it.

Our concern is increased by the fact that, during his appearance before your committee, Secretary of the Treasury Snyder seems to have left the door open for a Federal sales tax in the future if, as anticipated by Acting Budget Director Staats, the Federal budget increases to $80 or $90 billions in the fiscal year 1953, dropping to $75 billions in 1954. Secretary Snyder appears to have accepted the contention—which we believe to be unduly pessimistic and defeatist—that a budget of $80 to $90 billions cannot be financed without wrecking our economy—except by taking the last $5 or $10 or $20 billions out of the hides of low-income citizens by a Federal sales tax that would hurt low-income persons most and high-income persons and corporations not at all. True, Secretary Snyder says he is against a sales tax now, but we regret that he has helped the NAM's 5-year plan to fasten such a tax upon the American people, in lieu of income and corporations taxes based on ability to pay.

Needed: A single moral standard in tax policy

Basically, the arguments against further increases in income and corporation tax rates and in favor of a Federal sales tax amount to a threat—a threat by the NAM and its collaborators that defense production will suffer unless income and corporation tax rates are held down or reduced and the additional billions needed for the survival of freedom are taken from the Nation's low-income consumers and awarded to the wealthy few.

It is surprising to find at the core of this argument the unashamed assumption that free enterprise necessarily by its very nature is less patriotic than the men conscripted into our armed services to fight and die for freedom, less dedicated to the defeat of Communist world imperialism than the men and women of organized labor who have consistently accepted, supported, and cooperated in the enforcement of an economic stabilization program including wage stabilization.

Fifteen years of experience in bargaining with many thousands of employees, both persons and corporations, leads us to believe that neither the threat of the NAM and its collaborators nor the assumption on which it is based is wholly true. Once a moral standard is set by our elected representatives in an emergency such as we now face, we believe that most businessmen will fall in line and do their share. Until a code of genuine equality of sacrifice for the duration of this emergency is set, base standards of conduct will tend to drive out good standards, and we will continue to have such insistence upon a double standard as this sample, taken from the testimony of Charles R. Sligh, Jr., chairman of the NAM taxation committee:

"We feel that income, individual income, taxes, for instance, are much more liable to kill incentive to earn than are consumption taxes. Taxing income as it is received is more liable to kill incentive than taxing income as it is spent."

Automobile Manufacturers' Association would spread, not end, the sales-tax evil

Because we believe any increase or extension of excise taxes on necessities is unwise and unnecessary, we deplore the decision of the Automobile Manufacturers' Association to jump from the discriminatory selective excise tax frying pan into the manufacturers' sales tax fire. Chairman A. E. Barit, of the AMA taxation committee, was right on July 31 in opposing the House bill's provision for boosting the excise tax on automobiles from 7 to 10 percent, and particularly in pointing out that the House increase of the tax on replacement parts from 5 to 8 percent would be a tax misfortune, inequitable because it would bear most heavily on low-income persons using old cars whose average age has increased from the prewar figure of 5.5 years to 8 years. But Mr. Barit was wrong in attempting to get rid of the evil of sales taxes on automobiles and parts by spreading the evil to cover all manufactured products on the wholly specious and demonstratably untrue contention that a general sales tax would soak the poor a lot less than the present selective excise (sales) taxes.

The remedy is not to spread the evil, but to do away with and find fair and equitable ways to raise the taxes for a pay-as-we-go defense program.

These ways are at hand. They have been pointed out again and again by the CIO and others.

I. PRESENT TAX LOAD IS INEQUITABLE; A SALES TAX WOULD MAKE IT MORE SO

The well-oiled campaign for a sales tax is a campaign to accentuate the injustices of a national tax structure already iniquitous in its inequities.

It is a campaign to assure the fulfillment of a melancholy prediction made by the staff of the Joint Congressional Committee on the Economic Report:

"* * * those receiving flexible incomes such as dividends and profits and other entrepreneurial returns, which in turn constitute the major portion of the incomes of those in the upper-income brackets, are most likely to emerge from this emergency, as indeed they have from every war in American history, considerably wealthier and better off, both absolutely and relatively, than before. Every war seems to bring its crop of war millionaires."

The drive for a sales tax is a drive to charge the costs of national defense against the living standards of those who can least afford it while turning over the income created in defense production to those who already have far more than they need and much more than is good for the long-term health and stability of the economy.

How taxes are loaded upon those least able to pay

The staff of the joint committee has noted:

"The fact is shocking but true that it is those in the lowest income bracket who already bear a disproportionate share of the tax burden."

This charge is substantiated by a study of the distribution of the tax burden prepared at the University of Michigan. The study shows that spending units with incomes under $1,000 in 1948 paid out a larger proportion of their income in Federal, State, and local taxes than any other group except those with incomes of $7,500 and over.

This unjust tax burden on families with the smallest incomes is in large part the effect of existing sales and excise taxes. The effects of the relatively progressive income tax structure in lightening the tax load on those least able to carry it are largely nullified by regressive sales and excise taxes.

Step by step, up the income structure, sales and excise taxes take smaller proportions of income from the better-off than they do from those with lower incomes.

TABLE I.—*Federal, State, and local excise taxes as percent of income by income groups, 1948*

Spending unit income brackets	Percent of income		
	Federal excise taxes	State and local excise taxes	Total excise taxes
Under $1,000	6.0	5.8	11.8
$1,000-$2,000	5.2	3.9	9.1
$2,000-$3,000	4.8	3.6	8.4
$3,000-$4,000	4.8	3.6	8.4
$4,000-$5,000	4.2	3.4	7.6
$5,000-$7,500	4.0	3.1	7.1
$7,500 and over	2.6	2.0	4.6
Tloal all groups	4.0	3.1	7.1

Source: R. A. Musgrave, J. J. Carroll, L. D. Cook, L. Frane, Distribution of Tax Payments by Income Groups: A Case Study for 1948, National Tax Journal, Mar. 1951, vol. IV, No. 1.

Spending units with incomes under $1,000 are forced to pay out 11.8 percent of those pitifully small incomes in excise taxes while those with incomes of $7,500 and over pay out only 4.6 percent in such taxes. In relation to income, the least well off are saddled with a tax burden more than 2½ times as great as that borne by those in the highest income brackets.

The Federal Government is equally guilty with the State and local governments in perpetrating the gross inequities of the sales and income taxes. Such taxes imposed at the Federal level take 6 percent of income from spending units earning less than $1,000 and only 2.6 percent from those having incomes of $7,500 or more. State and local sales and excise taxes take 5.8 percent of the incomes of those in the lowest bracket and only 2 percent of the incomes in the top bracket.

Poor pay above, wealthy below, average sales tax take

On the average, excise sales taxes took 7.1 percent of income in 1948. Spending units in every income group below $5,000 were forced to pay more than 7.1 percent of their income in such taxes. Based on their incomes, they paid considerably more than their share. Spending units with incomes $7,500 and over, on the other hand, paid substantially less than their proportionate share, based on income, of the total revenues raised from such taxation.

In order to lighten their own contribution to the national defense and to make secure for themselves a disproportionate share of the income created by the national effort to meet the greatest crisis in our history, those behind the sales tax drive would compound the inexcusable injustices of our present excise tax structure by throwing even more of the burden on families who now pay taxes out of incomes, that, before taxes, are insufficient to buy the basic necessities of life.

In place of equality of sacrifice, the sales taxers propose to aggravate existing inequalities by shifting their share of the burden of defense sacrifices to others. According to the Wall Street Journal of July 6, 1951, Chairman Charles R. Sligh, Jr., of the NAM taxation committee, appearing before your committee.

"* * * advocated broadening the Federal tax base by 'substantial use of consumption taxes.' He was particularly enthusiastic about an excise to apply to all end products except food and food products, with tobacco and alcoholic beverages taxed separately at present rates.

"*Mr. Sligh advocated manufacturers' excises as a method of bringing in revenue close to the $28 billion a year now collected through the individual income tax.*" (Italics supplied.)

What this NAM proposal would have meant as of 1948 in terms of redistribution of the tax burden can be seen from the following table. It must be emphasized that, with the rise in income taxes since 1948, substitution of sales taxes for income taxes at the present time would have much more drastic effects than the table shows, both in adding to taxes on low-income families and in relieving upper income families of their share of the tax load.

TABLE II.—*Taxes paid and percent of income paid out in taxes by spending unit at various income levels as of 1948 under then existing taxes and under NAM proposal*

Income group	Taxes paid [1]		Tax liability under NAM proposal [2]	
	Billions of dollars	Percent of income	Billions of dollars	Percent of income
Under $1,000	1.1	28.1	1.9	51.3
$1,000 to $2,000	3.4	24.3	4.3	30.9
$2,000 to $3,000	7.5	25.9	8.9	30.7
$3,000 to $4,000	9.2	26.1	10.5	29.8
$4,000 to $5,000	6.8	26.0	7.3	27.8
$5,000 to $7,500	8.8	27.6	8.3	25.9
$7,500 and over	20.5	36.3	16.1	28.5
Total	57.3	29.2	57.3	29.2

[1] Musgrave, supra, table 6.
[2] For derivation see exhibit 1.

In all NAM's history of blind, reckless, and socially irresponsible greed there has never been an example of heartless rapacity to compare with that revealed in the above table. The NAM proposes that Government to take in taxes more than 51 cents out of every dollar of cash income earned by families with incomes below $1,000 a year. They would become sharecroppers, compelled to give up to Government half of the meager fruits of their labor, of their inadequate pensions, of their payments from public relief agencies and private charities, so that the NAM's constituents, freed of bearing their fair share of taxes, could spend more liberally and save more avariciously.

As of 1948, the NAM's proposal would have reduced by $5 billion the tax burden on families with incomes ranging upward from $5,000 and shifted an equivalent burden onto those with incomes below $5,000. More than $3 billions of the savings in the upper brackets would have been gained at the expense of those with incomes of less than $4,000 a year.

Less for the needy; more for the greedy

As of 1951, total personal income is higher than in 1948 and income tax rates have increased even faster than total income. Thus the tax burden to be shifted to the lower income groups by substituting sales for income taxes is now much larger and the potential savings to the NAM's supporters correspondingly greater than in 1948. The proposed steal from the needy for the benefit of the greedy, which this committee is asked to authorize, is now considerably greater than the $5 billions which the NAM's proposal would have yielded 3 years ago.

In terms of its impact on individual families, the NAM proposal as of 1948 would have been equivalent to a wage cut of $133 a year, $2.56 a week, or 6.4 cents per hour for spending units whose breadwinners earn less than $1,000 a year. For those earning $7,500 or more the NAM seeks an income increase averaging $1,760 a year, $33.85 a week or 84.6 cents an hour on the basis of the 1948 situation.

For reasons noted above, both the wage cuts for the low-income groups and the hand-outs to those in the higher brackets would be substantially greater as of 1951 than would have been the case in 1948.

To carry through its program, the NAM demands, in effect, a sales tax on all goods except food, liquor, and tobacco that, at the retail level, would have equaled the fantastic rate of 32.6 percent in 1948, and would be substantially higher now. If a tax were levied at the manufacturers' level to yield the amounts necessary to replace the revenues from present personal income and special excise taxes (except liquor and tobacco), pyramiding of the tax burden through maintenance of percentage mark-ups on manufacturers' prices would raise the impact at the retail level substantially above the incredible percentage implicit in the NAM's proposal. At every step in the distribution process, the claim would be advanced that costs had been increased by the necessity for more working capital to support inventories made more expensive by the tax passed on from the manufacturer.

The tax bite on the lowest income consumers as of 1948 would, in consequence, have been considerably greater than the 51 percent of income that emerges from direct application of the NAM's proposal without the profit pyramiding that can be expected to be added to it in practice in a sellers' market.

II. TAX HIGH INCOMES MORE TO REDUCE INFLATIONARY PRESSURE

The advocates of the sales tax mask their true motives behind the argument that such a tax would abate inflationary pressures by diminishing excessive consumer spending. They rely heavily on the glib and superficially plausible theory that there are so many more families at low than high income levels that, to be effective, an attack on spending must be aimed at persons and families in the lower income brackets.

The fact that this theory has been repeatedly demonstrated to be at odds with the facts has not deferred the sales taxers from persisting in their efforts to mislead the Congress and the public. In Detroit, one of the three major daily newspapers has gone so far as to publish concocted figures, for which it refuses to give any source, in order to bolster this tottering theory against the weight of the evidence. What is truth worth when there are billions to be gained by twisting it?

If spending is to be diminished, as we agree it must in the present national crisis, it should be at the expense of the luxury standards of the few who have too much rather than the living standards of the many who have too little. This

Nation will be able to produce neither the soldiers nor the weapons it needs if fighters, workers, and farmers and their families are deprived of the means to maintain their health and strength. Neither the men in uniforms nor the men in overalls can be expected to have the morale that it takes to produce and fight effectively if they are made to bear the sacrifices of defense while others exploit the national emergency for personal gain.

Where is the spending money that can best be taxed?

The CIO has already presented to this committee, and we repeat here because of their importance, data derived from authoritative Government sources showing that the 10 percent of spending units with the highest incomes account for as large a share of all consumer expenditures as the 50 percent with the lowest incomes.

TABLE III.—*Distribution of personal income and expenditures, 1948* [1]

Spending units ranked according to income	Range of money income	Personal income after taxes [2]		Net savings, billions of dollars	Expenditures	
		Billions of dollars	Percent of total		Billions of dollars	Percent of total
Highest tenth	Over $6,000	$51.6	29.0	$8.5	$43.1	25.8
Second	$4,800 to $6,000	26.7	15.0	2.1	24.6	14.7
Third	$3,750 to $4,800	21.4	12.0	1.0	19.8	11.9
Fourth	$3,200 to $3,750	17.8	10.0	.7	17.1	10.2
Fifth	$2,840 to $3,200	16.0	9.0	.6	15.4	9.2
Sixth	$2,400 to $2,840	14.2	8.0	.2	14.0	8.4
Seventh	$2,000 to $2,400	12.5	7.0	−.1	12.6	7.5
Eighth	$1,500 to $2,000	8.9	5.0	−.3	9.2	5.5
Ninth	$800 to $1,500	7.1	4.0	−.5	7.6	4.5
Lowest tenth	Under $800	1.8	1.0	−1.9	3.7	2.3
Total		178.0	100.0	10.0	167.1	100.0

[1] 1948 data used because 1950 figures are not yet available and because 1949 was a recession year.
[2] Excludes income in kind and change in value of farm inventories.

Based on income and savings estimates of Department of Commerce, and on distribution of income and savings estimates in Federal Reserve Board Survey of Consumer Finances.

Families in the top-income 10 percent, in other words, spend five times as much, on the average, as the families in the lower half of our income structure. If spending by the top-income tenth were reduced only to the level of the second-highest tenth, that alone would, in 1948, have curtailed total spending by $18.5 billions. Those affected by such a reduction would still have been left better off in terms of living standards than 80 percent of the American people.

The nonessential spending—the fat which can be reduced without harm either to the spenders or the economy—lies obviously in the upper parts of the income structure. At lower levels, there is only the essential bone and muscle of spending on the necessities of life. The sales taxers, however, propose to reduce spending by families who live on or below the margin of necessity. Having lighened the tax burden on themselves and thus increased their own spending potential, they could and would compete with defense production for scarce manpower and materials that should not be diverted to luxury goods and services.

High incomes are biggest contributors to inflation

Sales taxes, by their very nature, can be effective in reducing spending only at the lower levels of the income structure where spending is already, in most cases, inadequate to sustain health and decency. Such taxes do not compel the upper-income groups to deny themselves anything of consequence. At worst, the well-to-do merely pay a little more for what they buy and save a little less. If sales taxes were to replace income taxes, as the NAM proposes, the well-to-do could actually save more while they spend more. If sales taxes were enacted at a level high enough to be effective in deterring spending by upper-bracket families, such exactions would make life impossible for families in the lower-income groups who would find basic necessities priced far beyond their reach.

Scarcities and inflationary pressures will be greatest in the durable goods segment of the civilian economy. Tax discussions too often overlook the obvious and important fact that the greatest contributors to inflationary demand for durables are those with the largest incomes. In 1948, the 5 percent of the spending units at the top of the income structure accounted for roughly 20 percent of all spending on durable goods—four times their proportionate share. The lowest income 50 percent of all spending units accounted for 22 percent of total spending on durables—less than half their proportionate share. For each dollar spent on durables by the average family in the bottom half of the income structure, almost $10 was spent by the average family in the top 5 percent.

Increased sales taxes would undoubtedly affect the small amounts which might be spent for durables by the low-income families. They would deter spending little if at all by the upper-bracket families who spend 10 times as much for durables. Will an additional tax of $25, $50, or even $100 on a refrigerator force a $50,000-a-year family to substitute an icebox for a refrigerator in its new country home?

The NAM recommends to this committee a tax net which would let the big spending fish through while catching the small ones.

After taxes, top 10 percent have more left than have bottom 50 percent

By carrying further the improvements in the income-tax structure proposed in the House tax bill, this committee can reduce nonessential spending out of current income. Present tax rates are not suited to the present emergency requirement that such spending be discouraged and drastically reduced.

Data presented to the House Ways and Means Committee by Secretary of the Treasury Snyder on February 5, 1951, show the inadequacy of our present income tax as a curb on excessive spending by persons in the upper income brackets. Mr. Snyder's figures reveal that in 1951, under the present tax structure, the 10 percent of the Federal income taxpayers reporting the highest incomes will have in the aggregate more income remaining after paying the tax than the combined income after taxes of the 50 percent with the lowest incomes.

TABLE IV.—*Distribution of adjusted gross income, income tax and income after tax of Federal income taxpayers ranked by size of income, 1951, under present tax law*

Taxable returns ranked by size of income	Adjusted gross income		Income tax	Income after taxes	
	Billions	*Percent*	*Billions*	*Billions*	*Percent*
Highest tenth	$55.1	32.2	$12.1	$42.9	28.9
Second highest tenth	23.1	13.5	2.7	20.4	13.7
Third highest tenth	18.5	10.8	1.7	16.8	11.3
Fourth highest tenth	15.7	9.2	1.4	14.3	9.6
Fifth highest tenth	14.5	8.5	1.2	13.3	9.0
Lowest half	44.1	25.8	3.3	40.9	27.5

Source: Based on statement of Secretary of the Treasury Snyder before the Committee on Ways and Means of the House of Representatives, Feb. 5, 1951, table 12. Data by deciles read off chart plotted from figures in table.

We do not understand how Mr. Snyder was able to deduce from his figures the policy conclusion that, "The bulk of any major increase in individual income tax revenues will * * * come from the lower taxable brackets."

The analysis of the Treasury estimates of the distribution of 1951 taxpayer income presented in the table above shows, instead, the great possibilities still available for making substantial inroads on excesive inflationary spending by taking the major share of needed increases in individual income tax revenues from the upper layers of the taxpayers, those best able to pay.

Backstop the income tax with a progressive spending tax

The CIO, in testimony before this committee, has shown how revenue can be raised equitably to put us on a pay-as-we-go basis. If the CIO's recommendations are followed, taxes will take out of current consumer and business incomes as much additional purchasing power as the Government will pour into the economy for defense purposes.

In combination with and reinforced by effective controls over prices, wages, salaries, business credit, the allocation of scarce materials, and so forth, pay-as-we-go personal and corporate income taxes based on ability to pay may stem the inflationary flood.

An equitable and adequate income tax program can bring demand more closely into balance with supply, insofar as demand is dependent on current incomes.

The balance could be upset, however, if people and businesses saved less than usual or if they drew on past savings to maintain or increase nonessential spending in the face of reduced supplies available for the civilian economy.

If that happened it would be necessary to take further steps aimed directly at reducing nonessential expenditures out of savings, actual or potential.

But who does the saving? Is it the lower income families, those who would be hit hardest by a sales tax? Or is it the upper income groups on whose spending a sales tax would have only negligible effect?

Federal Reserve Board figures supply the answer. In 1948,[1] the top-income 10 percent of all spending units had 44 percent of all liquid assets—potentially the most inflationary form of savings. The bottom-income 50 percent of spending units had 22 percent.

The top-income 10 percent accounted for 80 percent of all net saving put aside during the year 1948. The bottom-income 50 percent went into debt or used up past savings to an extent equal to 26 percent of total net savings by all spending units combined.

Who holds the stocks and corporate bonds and other nonliquid assets that can readily be converted into cash for spending? The story is essentially the same. Among the top income 5 percent of all spending units, more than a third held corporate stock in 1948. Only about 1 out of 20 spending units with incomes below $5,000 owned any corporate stock.

Only the top-income groups enjoy the dual luxuries of heavy spending and heavy saving. Low-income families lack means to do either, and excise taxes would force them to do less of both to the detriment of their health, productive efficiency, morale, and economic security.

Progressive income taxes can reduce excessive spending out of current incomes. A progressive spending tax would back-stop the income tax by reducing excessive spending out of both income and savings.

III. A PROGRESSIVE SPENDING TAX—TAILORING THE TAX TO FIT THE INFLATIONARY CRIME OF SPENDING TOO MUCH

As defense production takes hold, it will bite much more deeply into our productive resources than it does now. Revenue needs to support a pay-as-we-go policy will be greater; the need to curtail nonessential consumer spending will be more acute.

If defeated this year, the advocates of the sales tax will intensify their efforts in 1952, using the need for more revenue and less spending as their excuse. They no doubt hope for aid and comfort from the report on sales-tax proposals which the head of the staff of the House-Senate tax committee has been directed to prepare.

To meet immediate revenue needs and to prepare for the problems of the future with due weight given to the facts about the distribution of spending by income groups, we urge this committee:

1. To adopt the personal and corporate income-tax proposals of the CIO now;
2. To study the extent to which steeper graduation of personal income taxes in the upper brackets would diminish the threat of excessive inflationary spending on nonessentials;
3. To direct its staff to begin at once to develop for future enactment a progressive spending tax bill designed to discourage and deter upper-income families from injuring the national interest during the emergency by spending at unduly high levels despite increased income taxes and reduced civilian supplies.

The Treasury Department proposed a progressive spending tax to this committee in 1942. The Treasury presented its proposal after extensive study ranging from the broad economic implications to the administrative details of such a tax. As far as we have been able to determine, the proposal was never given adequate consideration in Congress.

The tragic evolution of world affairs since 1942 has now created a situation in which consideration of such a tax is again necessary. We believe it was a mistake to reject it in 1942. We believe it would be a grievous mistake to ignore its possibilities now.

We do not urge that Congress adopt the specific provisions of the 1942 Treasury proposal. The exemption levels recommended by the Treasury were much too low then and subsequent increases in the prive level make them even more seri-

[1] Data for 1950 have not been published yet; and 1949 figures are less applicable to the present situation than 1948 because 1949 was a recession year.

ously inadequate today. There was no need then, nor is there now, for the flat rate tax to be applied to amounts spent below the exemption level the moment total spending exceeded the exemption. The provision for postwar refunds of part of the tax is obviously inapplicable in an emergency of unpredictable duration.

We do, however, urge the most thorough and serious consideration of the essential principles behind the Treasury's 1942 proposal.

How such a tax might be applied

Members of this committee who served on it during World War II will recall those principles. We summarize them here for the convenience of the newer members of the committee and of the general public.

In essence, the Treasury proposed that spending above specified exemption levels be taxed on a graduated basis. To take a hypothetical example, suppose an exemption of $1,500 per person were allowed. In that case a family of four would be liable under the spending tax only if its spending exceeded $6,000 per year. For purposes of this example, we can assume tax rates equal to the surtax rates proposed by the Treasury, which were as follows:

Spending	*Tax rate percent*
Less than $1,000 above exemptions	10
$1,000 to $2,000 above exemption	20
$2,000 to $3,000 above exemption	30
$3,000 to $5,000 above exemption	40
$5,000 to $10,000 above exemption	50
Over $10,000 above exemption	75

Thus, a family of four which spent a total of $7,000 would be liable to a spending tax of 10 percent on the last $1,000 or $100. A similar family which spent $10,000 would have to pay a tax of $1,000. A four-person family spending $25,000 would pay a spending tax of $10,650.

Such a tax would obviously be a powerful deterrent to nonessential spending. Yet, if the exemption level were set high enough, no family would be hampered in the purchase of necessities. Every well-to-do family could maintain a high standard of living—only its standard of luxury would be somewhat curtailed. (No family would be reduced by such a tax to living in the home front equivalent of a Korean foxhole.) Proper exemptions would assure that only nonessential spending would be taxed. Exemptions would protect large families, who would suffer worst under a sales tax.

Spending for necessities should be exempted

Big spenders would be forced to turn proportionately big shares of their purchasing power into the Treasury. Thus the total spending potential would be reduced. The heavy tax penalties on excessive spending would encourage savings, thus limiting current consumer demand and making additional funds available directly or indirectly for borrowing by the Government if total tax revenues were insufficient to finance the full costs of defense plus other Government expenses. The reservoir of savings created by discouragement of excessive spending would also be available for investment in expansion of private plants and facilities.

Individuals would be free to determine for themselves the extent of their own liabilities under the progressive spending tax. If they chose to spend more, they would be taxed more. If they chose to save more, they would be taxed less. The tax punishment would be tailored to fit the inflationary crime of excessive spending. Restraint would be rewarded and inflationary hoggishness would be penalized.

Upper-bracket families would be deterred from obtaining unfairly large shares of an insufficient supply of consumer goods. Discouragement of excessive spending by such families would reduce pressure against price ceilings and would minimize the danger of black markets.

Administratively, the progressive spending tax presents no problems any more complex than many the Treasury confronts in connection with the income tax. The Treasury in 1942 drafted a simple tax schedule—a copy of which is attached to this statement as exhibit 2—which would provide the information needed to calculate the tax.

Savings would, of course, be exempt from the tax. Noninflationary types of spending can also be exempted from the tax without difficulty. The attached Treasury schedule, for example, provides for exemption of cash gifts and contributions, interest and taxes paid, life insurance premiums, annuity and pension payments, outlays for repayment of debt, and loans made to others.

This list could be extended or reduced to include or to eliminate forms of spending deemed advisable. Medical care costs and outlays for housekeeping help by working women and purchases required in connection with employment, for example, could and should be excepted.

Revenue yield would be substantial

Based on experience with the tax, rates could be raised or reduced as civilian supplies were made scarcer or more plentiful by the expanding and contracting needs of the defense economy. The tax could be used as a flexible instrument to expand or contract consumer demand for nonessentials in accordance with changes in the international situation and in the output of our growing productive facilities.

Since we make no specific proposals at this time except the proposal that a progressive spending tax bill be drafted and held in readiness, we make no estimates of the revenue to be derived from such a tax. The yield would depend in part on the efficacy of the tax in reducing spending. The potential yield, however, is obviously great.

The Treasury estimated in 1942 that its proposals then would bring in $6½ billion. Changes in the Treasury proposals which we would urge would reduce the yield somewhat below the percentage of total personal income represented by $6½ billion in 1942. Depending upon the details of the tax, this reduction in percentage of personal income would be substantially offset in dollar terms as a result of the doubling of total personal income since 1942.

We recognize the fact that if this committee rejects, as it should, the sales tax proposals that have been presented by representatives of high income tax payers, the campaign for such taxes will be continued and stepped up in the coming year. We shall continue to fight all such proposals to transfer tax burdens from those best able to pay to those least able to pay. And we shall do everything possible to promote the widest possible understanding of the enormity of the proposed crime against American wage earners, farmers, and all consumers, particularly those in the lowest income brackets who must spend every penny, as received, for the bare necessities of life.

This committee can contribute to thorough understanding of this issue by early publication of all the facts about sales taxes, including a comparison of their effects, income group by income group, with those that could be obtained by the adoption of a progressive spending tax along the lines here proposed.

INSULAR LUMBER CO.,
Philadelphia, Pa., August 3, 1951.

THE COMMITTEE ON FINANCE,
United States Senate.

MR. CHAIRMAN AND GENTLEMEN: The Insular Lumber Co., a New York State corporation, has since 1904 conducted lumbering and sawmill operations in the Philippine Islands. Because of the size and nature of the business, it has conducted these operations directly as a domestic corporation and not through any subsidiary company. As a consequence, we have been subjected to taxes on our Philippine income both in the Philippines and in the United States ever since the formation of the independent Philippine Republic terminated the relief formerly accorded by section 251 of the Internal Revenue Code. We understand this committee has heard, or will hear, testimony from other sources on the great urgency for a general revision of American tax treatment of income from foreign sources. We wholeheartedly concur in the need for such action and sincerely hope the committee may find it feasible.

If, however, it is found impossible to undertake at this time the general revision of tax provisions affecting income from foreign sources, we believe the committee's attention can properly be asked to the adoption of some form of immediate tax relief for American corporations in our position so as to at least equalize our position with that of American corporations which operate abroad

[1] Annual Report of the Secretary of the Treasury on the state of the finances for the fiscal year ended June 30, 1948.

through subsidiary companies. Both President Truman and the Treasury Department have approved this objective, and a measure which would afford it has been introduced in the present Congress by Congressman Simpson of Pennsylvania, H. R. 4082 (copy herewith attached).

We strongly urge the committee to give its most serious consideration to the incorporation in the present tax bill of provisions similar to those of H. R. 4082 in order to terminate the discrimination now imposed on American corporations operating abroad through branches and agencies rather than through foreign subsidiaries and in order to carry out the recommendations to this effect made by both the President of the United States and the Department of the Treasury.

We do believe that any such measure should include one provision which does not appear in H. R. 4082. This provision would be an amendment to section 112 of the Internal Revenue Code, would provide that in cases where the election to defer income of a foreign establishment has been taken, such foreign establishment shall be considered to have the same status as a foreign corporation for the purpose of determining gain or loss under the provisions of section 112 (b) (6) upon complete liquidation of such foreign establishment. Such a provision would do no more than to place the foreign establishment on the same basis as a foreign corporation in permitting tax-free remittance of proceeds of liquidation subject to the prior approval of the Commissioner. Without such a provision the liquidation of a foreign establishment would be severely penalized in that it would be possible for assets acquired with taxed United States dollars to again be subject to tax upon liquidation.

Favorable action on the above suggestion would result in further investment of American capital in the Philippines, both from reinvestment of profits and new investment. This would strengthen Philippine economy and, in turn, its defense potential.

MERLE D. THOMPSON,
Chairman, Executive Committee.

[H. R. 4082, 82d Cong., 1st sess.]

A BILL To amend sections 42 and 43 of the Internal Revenue Code to give an option to domestic corporations to report income of foreign branches at the time of receipt of the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 42 of the Internal Revenue Code is hereby amended by adding at the end thereof the following new subsection:

"(e) FOREIGN ESTABLISHMENT INCOME OF DOMESTIC CORPORATIONS.—In the case of a domestic corporation carrying on a trade or business in a foreign country through a permanent establishment situated in that or another foreign country, the gains, profits, and income of such establishment, to the extent that such gains, profits, and income do not constitute gross income from sources within the United States as defined in section 119 (a), may at the election of the taxpayer in its return for any taxable year beginning after December 31, 1950, be treated, subject to regulations of the Commissioner, as nontaxable until the year in which such income is actually received in the United States.

"Such election shall be binding until revoked with the permission of the Commissioner and shall apply to all the taxpayer's foreign permanent establishments during any year that the election is in effect.

"The term 'permanent establishment' means a branch, management, factory, mine, oil well, farm, timberland, sawmill, plantation, workshop, warehouse, office, or other fixed place of business, but does not include a foreign subsidiary corporation."

SEC. 2. Section 43 of the Internal Revenue Code is hereby amended by adding at the end thereof the following new sentence: "In the case of an election to defer the income of a foreign permanent establishment under section 42 (e), the related deductions and credits (including the credit for foreign taxes under section 131) shall be deferred until the year in which the gross income of the foreign permanent establishment is includible in the taxpayer's income under section 42 (e)."

STATEMENT OF JAMES W. HALEY, GENERAL COUNSEL, COAL EXPORTERS ASSOCIATION OF THE UNITED STATES, INC.

Mr. Chairman and gentlemen of the committee, the Coal Exporters Association of the United States, Inc., is an incorporated voluntary association of coal and coke exporters. Purpose of the association is to promote and encourage the increased exportation of the products and byproducts of the coal and coke industries in the United States; to promote and encourage the consumption of United States coal and coke in foreign countries; to cooperate with members of the coal and coke industries and the public on problems affecting the exportation of coal and coke; to prepare, develop, compile, issue, and distribute such written or other information and material as may be deemed advisable to carry out these purposes; to use all lawful means of promoting the general welfare of the exporters of United States coal and coke.

The association's membership handles more than 90 percent of all the coal exported from the United States.

The American coal export business is of course directly related to the American coal-producing industry. We therefore endorse the presentation made to your honorable committee on July 12, 1951, by the National Coal Association on behalf of the bituminous coal producers of the country.

The coal-producing industry of the United States is highly competitive, not only within the industry itself, but with the oil, gas, and hydroelectric industries, all seeking constantly a larger part of the over-all fuel and energy market. The export of United States coals has a healthy and stabilizing effect upon the entire coal industry, and the general economy of our country. To the quantitative extent that our coals are shipped abroad, running time is improved and equalized in the United States mines, labor given more employment, railroad revenues increased, railroad employees benefited, and competition created for gearing production within a reasonable range of peak wartime requirements.

Notwithstanding the fact that the United States is the largest coal-producing country in the world, our coal and coke exports (not including Canada) throughout the years have varied from a few thousand tons a year to the peak export of 47,758,443 net tons in 1947. Due to the fact that Canada is a contiguous country, and the related fact that shipments to Canada are handled differently from our overseas movement, that market has never been looked upon as an export market in the true sense; therefore, any figures cited herein, or in the accompanying table, will not include our coal shipments to Canada, although they are indeed sizable, varying between fifteen and thirty million tons annually.

Important as the export aspect of the coal business is to the general coal-mining industry of the United States, it is of even more significance and consequence to our friends and allies across the seas. It would be impossible, under present conditions, for the European countries to rearm and equip themselves, as we expect them to do, without substantial importations of American coal. We submit that one of the best ways to promote the construction of adequate defenses in Europe in the shortest possible time is to encourage in every way possible the shipment of American coals to our friends and allies in Europe.

We therefore strongly urge your honorable committee and the Senate to reject the action of the House in making still further oppressive excess-profits tax.

It is doubted that there is any industry in America which will feel the impact of an oppressive excess-profits tax as much as the coal-exporting industry.

Of all American industries, it is doubted that there is another one which shows the fluctuations in business activity reflected in the record of the American coal-export business. Naturally, the coal-export business is subject to the same difficulties which beset the coal-producing industry in the United States, such as national strikes, governmental regulations, car shortages, etc. But over and above the many outside influences which bear directly on the coal-producing industry of the United States—and with equal force upon the coal-export industry—the coal exporters of the United States are subject to serious problems of demand within the foreign consuming areas, hazards of ocean shipping, monetary exchange, import licensing, political considerations in foreign countries, and other international problems with which the members of the committee are no doubt familiar.

The story of the coal-export business is told vividly in appendix A attached to my statement.

Examination of appendix A shows that for the four base-period years 1946 through 1949 overseas shipments averaged 25,482,465 net tons.

The table further shows that in the calendar year 1950 overseas shipments were only 2,484,889 net tons, or 9.6 percent of the 1946–49 average.

In 1951, however, it will be noted that in the first 5 months of the year overseas shipments amounted to 10,964,843 net tons and the estimate for the full year 1951 is 33,700,000 net tons, or 132.2 percent of the average for the base-period years.

In all probability, according to present indications, overseas requirements for United States coal and coke in the year 1952 will be close to 50,000,000 net tons, an all-time record.

Is it not manifestly unfair to place high so-called excess-profits taxes on an industry which fluctuates in activity as much as does the coal-export industry, ranging from slightly under 2,500,000 tons in 1950 to almost 34,000,000 tons in 1951, and probably 50,000,000 tons in 1952? While the coal exporters are subjected to high costs and unusual business hazards, they have little, if any, opportunity to use the invested-capital-credit method in computing excess-profits-tax liability. It is necessary for the coal exporters to maintain their organizations and absorb consequent losses in years when there is little or no business. Historically they have done so in the hope that the occasional years of good business will justify their position. Certainly an excess-profits tax such as the one contained in the House-passed bill will discourage and ultimately destroy the American coal-export business, which is now so important to our domestic economy and to our international relations.

I thank you for the privilege of presenting the views of the Coal Exporters Association to your honorable committee.

APPENDIX A

Principal overseas exports of solid fuels (coal and coke) 1946 through May, 1951, and the year 1951 estimated [1]

[Net tons]

STATEMENT OF SENATOR THOMAS R. UNDERWOOD

The manufacture of chewing tobacco, particularly plug and twist, has decreased greatly during the past 30 years. The manufacture of these products is still declining. The decrease in manufacture has, of course, been in direct ratio to consumer demand.

Tobacco growers in certain areas have suffered as a consequence of the decreased manufacture and consumption of plug and twist chewing tobacco. This is especially true of those farmers who grow dark air-cured tobacco in the States of Kentucky, Tennessee, Virginia, and Indiana. The dark air-cured types are used in domestic manufacture mostly for chewing purposes and the decline in farm production of this tobacco has followed closely the decline in the manufacture of plug and twist chewing tobacco. The attached tables show the close correlation.

The excise tax on plug and twist tobacco is 18 cents per pound. A moderate rate of slightly more than 1 cent per ounce. This is, however, the highest rate of excise since that of 1875 which was 24 cents per pound. During this century the lowest excise tax on chewing tobacco was 6 cents per pound in April 1902 to July 1909. The present rate has been in effect since February 1919.

The manufacturers of plug and twist chewing tobacco, especially the small manufacturers who rely solely on the manufacture of chewing tobacco for their income, are in the same plight as the growers of dark air-cured tobacco. In both cases their source of income is rapidly drying up.

It is not known to what extent, if any, the present rate of excise tax decreases the consumption of plug and twist chewing tobacco. However, since these products are used mostly by the low-income group of our population, it would appear that a reduction in excise would lead to some increase in consumption. A decrease of 10 cents per pound should have this effect. The rate of excise would then be 8 cents per pound, or ½ cent per ounce.

The reduced rate would result in some loss of revenue. It is estimated that the loss in revenue would be about $4,700,000, an insignificant sum. If this loss to the Treasury would stimulate the consumption of plug and twist tobacco, it would be a great help to both producers and manufacturers.

STATEMENT OF SENATOR MILTON R. YOUNG

Mr. Chairman, certain facts with respect to the manner in which the present excess-profits-tax law affects a small business in the State of North Dakota have been brought to my attention, and I have proposed an amendment to H. R. 4473 to correct what appears to me to be a grave inequity.

The Nodak Ford Tractor Corp. was organized on August 18, 1949. All of the capital stock of Nodak is owned by Smith, Inc., another North Dakota corporation. On August 31, 1949, Nodak acquired all of the assets of a partnership which had been engaged in the distribution of farm machinery at Fargo, N. Dak. The money that was used to purchase these assets came from the sale of Smith, Inc.'s preferred and common stock, from the issuance of Smith, Inc.'s bonds, and from money borrowed by Nodak. All of this money came from the outside and Smith, Inc. in no way depleted its own assets in order to bring about the purchase of this business.

The farm machinery business which was purchased by Nodak had been prosperous for years prior to this sale, and it was because of its sound earning record that Smith, Inc., and Nodak incurred heavy obligations in order to bring about the sale. Nodak is now being further burdened financially and unfairly discriminated against because the present law denies it the tax earning base of the acquired business. The transaction was consummated on August 31, 1949, long before Korea, and long before there was any thought of an excess-profits-tax law. Immediately after the sale of its assets, the partnership ceased to do business, and it was liquidated.

It would appear to me that under these circumstances it would be manifestly unfair to continue to deny to Nodak the excess-profits net income credit which had been built up by the business Nodak acquired, and yet that is exactly what would happen under the excess-profits-tax law as it now exists.

I do not believe that anyone will seriously defend the denial of this credit and I believe that it is realized by all of the tax experts in and out of the Government that this is a gap in the law which is crying for immediate remedial legislation. I have discussed this particular problem and the facts in this case with Mr. Colin F. Stam and he is fully familiar with them. To correct this inequity, I have offered an amendment to H. R. 4473, and I feel confident that it should and will receive early and favorable consideration. Only in this way will an obvious omission be remedied.

AIR TRANSPORT ASSOCIATION OF AMERICA,
Washington 6, D. C., August 6, 1951.

Subject: Hearings on revenue bill of 1951, Federal gasoline tax.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

MY DEAR SENATOR GEORGE: As you may know, the Air Transport Association of America represents virtually all of the certificated airlines operating under the American flag. Recently Senator Byrd, as acting chairman of the Senate Committee on Finance, by letter suggested that we file a written statement, in lieu of a personal appearance before the committee, setting forth the position of the airline industry relative to the proposed increase in the Federal gasoline tax.

In compliance with the suggestion we are enclosing, for your information, a brief memorandum setting forth what we feel are cogent reasons why the Congress should not impose any additional gasoline tax on the airlines.

We feel that the principal objection to any increase in the gasoline tax is the fact that the burden of the levy will not, and cannot, be spread evenly or equitably over the industry. Since the tax is an arbitrary figure assessed against the purchase of each gallon of gasoline, it bears no relationship to the ability of the particular airline to pay the tax. The smaller airlines are the ones which would be particularly hurt by the increase, the smaller and weaker the airline, the more crippling the burden of the tax would be.

In the air transport industry there are about 40 certificated airlines. They differ greatly in size, in their gross revenues, and in the average percentage of airplane seats which they fill. That percentage varies from 70 percent down as low as 25 percent. The smaller, so-called "local service," airlines, fill on an average of 25 percent of their seats.

Most of the smaller airlines operate DC-3s, which consume about 100 gallons of gasoline an hour, and, on the basis of a 1½-cent increase in the Federal gasoline tax, they would have to pay $3 tax for each hour a DC-3 operated. An airline would have to pay this same $3, whether the airplanes were operated at capacity or whether, as is generally the case of the smaller airlines, only six or seven passengers are being carried.

There is attached to our memorandum a table which shows, for each domestic airline, the percentage which an increase of 1½ cents in the Federal gasoline tax bears to that airline's net operating income, before income taxes, for 1950. In computing that percentage, the gallonage consumed in 1950 was used. The table reveals that of the 32 airlines listed, 7 operated at a loss in 1950. Even for the airline with the largest net operating income the increase in gasoline taxes would constitute 5.2 percent of that income. In one case the increase in tax would be more than seven times the net operating income. The total tax increase would be 9.8 percent of the total net operating income of the domestic airlines. Thus the airlines would be subject not only to the additional income taxes proposed in H. R. 4473, but also to an additional similar burden which is proportionately even higher.

As doubtless you know, Southern Airways, Inc., a local service carrier, serves a considerable number of cities in your State. Based on Southern's gasoline consumption in 1950, an increase of 1½ cents in the Federal gasoline tax would have amounted to 16.3 percent of Southern's net income, before income taxes, for that year, and would have virtually wiped out Southern's profit for the year. I am sure you will agree that the Congress should not impose such a burden on a carrier, or on an industry, so vital to the commerce and national defense of this country.

We urge the committee, therefore, not to recommend the imposition of any additional gasoline tax on the airlines.

Sincerely,

E. S. LAND, *President.*

STATEMENT OF AIR TRANSPORT ASSOCIATION OF AMERICA, WASHINGTON, D. C. WITH RESPECT TO THE PROPOSED INCREASE IN THE FEDERAL GASOLINE TAX

SUMMARY OF STATEMENT

The Air Transport Association of America, which represents virtually all of the certificated airlines operating under the American flag, urges the committee not to impose an additional gasoline tax on the airlines. Gasoline used by the airlines is not a commodity which, under tests prescribed by Secretary Snyder, should be taxed at an increased rate. The proposed increase not only would have a serious impact on the industry, but would discriminate among the airlines, falling particularly heavily on the smaller airlines.

In the hearings before the Ways and Means Committee, Secretary Snyder made two tax proposals which directly affect the airlines. He suggested that the corporate income tax be raised by eight percentage points, and that the present 1½-cent gasoline tax be increased to 3 cents per gallon:

H. R. 4473, as passed by the House, would increase corporation income taxes by five percentage points and, due to changes made in the excess-profits tax, would produce approximately as much income tax revenue from corporations as recommended by the President. We do not raise any question with respect to the proposed increases in income taxes on corporations since they will apply to business generally. They will not be levied so directly and specifically against the airlines as is the proposed increase in the gasoline tax.

H. R. 4473 would increase the gasoline tax from 1½ cents to 2 cents per gallon. In his testimony before this committee, the Secretary pointed out that the net yield of H. R. 4473 is about $7 billion, or roughly $3 billion less than the goal set by the President. The Secretary urged that this gap be closed, and that approximately $2 billion extra revenue be obtained by further increases in "selected excise taxes," including an increase in the gasoline tax from 1½ to 3 cents, as originally proposed to the House committee.

We are greatly concerned with the Secretary's proposal to double the tax on gasoline. The air-transport industry operates on gasoline. It is the heart of our business. It is our basic raw material, as is coal to the steel mills. The domestic airlines will use an estimated 425,000,000 gallons of aviation gasoline during 1951. Consequently, they would be hit particularly hard by such an increase in this tax.

There are three principal reasons why the Congress should not increase the tax on gasoline used by the airlines.

1. Gasoline used by the airlines is not a commodity which, under tests prescribed by Secretary Snyder, should be taxed at an increased rate.

In his statement before the Ways and Means Committee, the Secretary pointed out that additional revenue was to be raised from excise taxes "on those consumer goods which are less essential or which use materials that will be in short supply." The gasoline used by the airlines clearly does not fall in either of those categories.

There can be no question but that continued operation and rapid expansion of the airlines is a prime essential. The Nation's economy has become more and more reliant upon the speed and services of air transportation. Moreover, the increasing tempo of our production machine is going to require rapid expansion of the airline industry. An even further expansion is required by the fact that military plans for airlift requirements generally are hinged upon the use of a high percentage of the commercial airlines' fleet. In a speech in the fall of 1950, the Secretary of the Air Force, in speaking of the requirement for air transport in times of emergency, stated in part: "When we * * * take into consideration * * * not only the military planes available but a practicable percentage of the civilian airlines which might be taken over in the event of war, we find a very substantial deficit." Thus, for both business and military uses the airlines must expand, and the use of gasoline is essential to that expansion.

Nor does the Secretary's reference to materials which are in short supply apply to the gasoline used by the airlines. Presumably he had in mind that a tax imposed on such materials would discourage their purchase and use. But, as stated, it is quite clear that the public interest does not require a reduction in the use of gasoline by the airlines—it requires just the opposite.

2. The proposed increase would have a serious impact on the industry

If the proposed increase is adopted, our conservative estimate is that the industry would pay to the Federal Government in the neighborhood of $13 million a year in gasoline taxes alone, based on 1951 figures. An item of $13 million does not create much of an impression any more, but this amount of money is a very heavy burden to the air-transport industry. The total amount of gasoline taxes which the airlines would pay to the Federal Government under the Treasury Department's proposal would amount to more than their total net profits in 1949, and about 50 percent of those for 1950 and 1951.

There is attached to my statement a table which shows, for each domsetic airline, the percentage which the proposed additional gasoline tax it would have to pay, bears to its net operating income, before income taxes.

A review of that table reveals that of the 32 airlines listed, 7 operated at a loss in 1950. That even for the airline with the largest net operating income, the increase in gasoline taxes alone would constitute 5.2 percent of that income. In one case the increase in tax would be more than seven times the net operating income. Generally, for airlines with comparatively small net operating income, the new tax would virtually wipe out anticipated small profits.

The total tax increase would be 9.8 percent of the total net operating income of the domestic airlines. Thus, the airlines would be subject not only to the proposed additional income taxes, but also to an additional similar burden which is even higher.

Even if it were possible for the airlines to require the air traveler to absorb every bit of the additional gasoline tax, and we do not think it is, it seems unfair and inequitable to impose an additional burden of taxation upon him. He is already paying very substantial taxes for the privilege of riding on an airplane. In the year 1949 the air traveler paid $40,700,000 in transportation taxes. In 1950 he paid $53,200,000, and it is estimated that in 1951, his tax bill will be increased to $66,500,000. It seems to us that the air traveler is paying enough. Apparently the Secretary thought so, too, since he proposed no increase in the transportation tax rate.

Most Federal taxes, unlike the gasoline tax, are expressed as percentages of the tax base. While a tax of 3 cents per gallon, at first blush, sounds rather innocuous, the full burden of the tax can be appreciated when it is expressed as a percentage of the price of the article taxed. The airlines buy their gasoline at prices in the neighborhood of 17 to 19 cents per gallon. A 3 cent tax on a gallon of gasoline purchased at 17 cents amounts to a tax of approximately 18 percent. That is a "luxury tax rate," as witnessed by the fact that the excises on jewelry, furs, cosmetics, and cabaret checks are only 20 percent. But gasoline is no "luxury" to the airlines—it is their life blood.

3. The tax would discriminate among airlines

An even greater objection to the proposed gasoline tax increase is the fact that the heavy burden which it would impose is not, and cannot, be spread evenly over the industry. It is the small airline that is particularly hurt. As a matter of fact, the smaller and weaker the airline, the more heavy the burden of the tax.

Some airlines have a high percentage of long-haul traffic between major traffic centers; others, particularly the feeder lines, serve primarily the smaller cities where the traffic volume is very small. For this reason, the percentage of seats occupied on the airplanes of the various companies will vary from 70 down to as low as 25 percent.

The gasoline tax, which is an arbitrary figure assessed against the purchase of each gallon of gasoline, bears no relationship to the ability of the particular airline to pay the tax. No consideration is given to the earning capacity of the airline, the traffic-producing potentialities of its route, or to the passengers or other cargo that it carries. Most of the smaller airlines operate DC-3's, which consume about 100 gallons of gasoline an hour. On the basis of the proposed tax, they would have to pay $3 tax for each hour a DC-3 is operated. They would have to pay this same $3 even though they were actually carrying only six or seven passengers in the airplane. These smaller airlines, who fill only 25 to 35 percent of their seats, have no way of mitigating the discriminatory effects of the tax except by applying to the Government for subsidy, and it is clearly unsound policy to impose a tax upon an airline and promptly increase Government-subsidy payments in amounts sufficient to offset the tax.

For all of the reasons we have stated, we hope that the committee will not impose any additional gasoline tax on the airlines. We do not believe that such a tax increase is necessary in order to insure that air transportation makes its proper contribution to the additional revenues required. The 15-percent transportation tax, for instance, which is collected for the Government by the airlines, will increase from $53,200,000 in 1950 to about $66,500,000 in 1951, thus providing additional revenue of $13.3 million. This increase is twice the amount which would be collected by a 1½-cent increase in the gasoline tax.

Relationship of proposed increase in gas tax of 1½ cents to net operating income, before taxes, of carriers in 1950

Company	Net operating income	Percent tax increase to net operating income	Company	Net operating income	Percent tax increase to net operating income

[1] Loss.
[2] Proposed increase in gas tax would be $443,415, or more than 7 times the net operating income.

HAWLEY TRAILER STORES, INC.,
Spokane 63, Wash., August 1, 1951.

Hon. HARRY CAIN,
Washington State Senator, Washington, D. C.

DEAR SENATOR CAIN: I am writing you again regarding the 7-percent excise tax now being imposed on trailer coaches. This excise tax has been imposed for some years on the trailer-coach industry due to the fact that the honorable Members of the Senate and the House of Representatives believe the trailer coach to be a method of transportation, when, in effect, for many years, the trailer coach has been a method of semipermanent housing. It affords the construction worker and military personnel the only known home which is mobile and can be taken from job to job or base to base.

The records of the trailer-coach industry show that 93 percent of the trailer coaches manufactured are used for housing. We feel that the imposition of the 7-percent manufacturer's excise tax is definitely a discriminatory tax on one segment of the population. No other housing bears such a tax. We urgently request that you do your very best to see that trailer coaches are eliminated from the excise-tax provisions.

Thanking you very much for your consideration in this matter, I am,

Sincerely yours,

HAWLEY TRAILER STORES, INC.,
D. H. HAWLEY, *President.*

ALUMINUM CO. OF AMERICA,
Vancouver, Wash., July 31, 1951.

Senator HARRY CAIN,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: Realizing you have always shown a sincere and keen interest in the development of American youth and problems of industry, we are writing to acquaint you with our summer-vacation program of industrial education for precollege and college undergraduates, and to endeavor to enlist your good services to correct that section of the United States income-tax law pertaining to dependent exemptions.

We feel the requirement that a dependent cannot have a gross income of $500 or more is not realistic and is working a great hardship on all phases of American industry, in that the productive effort of countless thousands of American youth is lost to our national economy for several weeks each year.

This has come about due to the upward trend in wages for the past several years and as this trend continues the problem will become more acute.

Attached to this letter are copies of our summer-classwork program and management bulletins describing our plan.

This year, at the request of a number of the boys, and because of the $500-dependent-exemption problem, we thought it advisable to change the classwork part of our program from 10 to 8 weeks.

We have made the number of weeks of work experience optional; however, indications are that we will lose the services of the majority of these summer workers when they will be needed most and at a time when their training would have made them most effective.

We respectfully urge your consideration of this problem faced by American industry and hope a solution through your efforts is possible.

Very truly yours,

ALUMINUM CO. OF AMERICA,
H. W. GILES, *Personnel Manager.*

KENT-COFFEY MANUFACTURING CO.,
Lenoir, N. C., August 6, 1951.

The Honorable WALTER F. GEORGE,
Committee on Finance, United States Senate,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: I, Harold F. Coffey, president of the Kent-Coffey Manufacturing Co. of Lenoir, N. C., submit herewith the following facts and figures which show this company's predicament under the relief provisions of the existing excess profits tax law. A careful examination of the facts in this case discloses the complete inadequacy of the existing excess profits tax relief provisions in affording any relief whatsoever in hardship cases such as beset our company.

By way of qualification in making the statements hereinafter, I would like to state that I have been with the Kent-Coffey Manufacturing Co. since its organization, beginning as a factory workman and serving in various capacities, including that of executive vice president and sales manager for more than 25 years prior to 1948. Since my father's death in 1948, I have served as president and general manager.

ORIGIN AND HISTORY

This company is a manufacturer of wood bedroom furniture and began business in 1907, with a paid-in capital of $33,800. By consistently plowing back its profits, after income taxes, into plant expansion to take care of the increased demand for its product, the company is enjoying an increased volume of sales, which for the fiscal year ended November 30, 1950, exceeded $5,000,000.

The company's sales are widely distributed in the United States, Canada, Mexico, and Hawaii.

At November 30, 1950, the company had 596 employees at its factory location and 27 commission salesmen, a total personnel of 623.

Although the foregoing sales volume is stated in millions which looks big to us, when compared with the corporations comprising industry as a whole, we are definitely in the small-corporation class. I assume that you have already been furnished figures showing that it was the small corporation that was hardest hit in the previous excess profits tax law for the reason that they did not have the comparable credit to that of the larger corporations, either by the earnings or invested-capital method.

HIS COMPANY'S PREDICAMENT

In the light of the excess profits tax act of 1950 using the base period earnings (1946–49) as the basis for a credit, this company finds itself in this predicament:

1. During the base-period years (1946–49) and to November 30, 1950, this company, using earnings and borrowed capital, made the following expansion of its plant and equipment:

Plant and equipment Nov. 30, 1946		$520,064.47
Additions fiscal year ended Nov. 30, 1947	$54,434.10	
Additions fiscal year ended Nov. 30, 1948	124,412.90	
Additions 19 months ended June 30, 1950	848,973.65	
Plant expansion to June 30, 150		1,027,820.65
Plant expansion June to November 1950		14,446.35
Plant and equipment Nov. 30, 1950 (per exhibit A)		1,562,331.47

You will notice by the foregoing that the major plant expansion extended over a 19-month period to June 30, 1950, and as 1949 is the last year of the base period, this period of expansion extended 10 months beyond the close of the base period.

In making this expansion, it was necessary to demolish a large area of wooden buildings and replace them with modern standard mill construction, consisting of brick walls, steel beams, and standard 5-inch factory flooring. The productive floor space was increased to 388,751 square feet, an increase of approximately 104,000 square feet. Included in this expansion was the installation of new and modern machinery, laror-saving devices, conveyorized equipment and a system of quality control, which together with the increased productive floor space should produce an annual earnings credit considerably in excess of any year shown in the base period years.

2. Of the 19-month period of plant construction and renovation, the 18 months ended May 30, 1950, was the most affected by the interruption made necessary by the expansion program, and in this 18-month period, the company sustained an actual loss of $30,287.88. The management was confronted with the choice of closing the plant down completely and concentrating all efforts on building for a period of 6 to 8 months, or of building practically a new plant around the workmen and suffering the consequent loss of production of goods during the period of construction. The latter course was chosen, resulting in the dollar loss just stated. To close down completely for such an extended period would have entailed

the disruption of the plant organization and the permanent loss of some skilled workmen who could not remain unemployed for such a length of time, thereby requiring years to train new personnel to the degree of skill and efficiency existing prior to the time of interruption. Likewise, with no product available for sale, contact with the customer would have been lost, the sales force would have been forced to disband, all of which would have required a long uphill pull of reactivating the sales force and regaining anything like the previous status with the trade.

3. For purposes of this discussion, the fiscal years ended November 30 are used, being within 1 month of the base period requirements, and net income is used as excess profits net income as the necessary adjustment to arrive at excess profits net income would be less than 1 percent.

By referring to exhibit B, attached hereto, you will note that the company had net earnings before income taxes for the base period as follows:

Fiscal year ended—	4 years	3 best years
Nov. 30, 1946	$338,938.41	$338,938.41
Nov. 30, 1947	559,865.62	559,865.62
Nov. 30, 1948	737,813.97	737,813.97
Nov. 30, 1949	174,635.40	0
Total	1,811,253.40	1,636,618.00
Average	452,813.35	545,539.34

An average 4-year earnings of $452,813.35 or a three-best-year average of $545,539.34 would be a severe handicap to this company as either credit would not reflect the substantial and consistent growth during the base period, and above all, would not reflect the profits they could have earned with the new and modern plant with the increased productive floor space and improved facilities.

The plant expansion and installation of improved facilities was practically completed by May 30, 1950. As an index of what the company could have done under the improved facilities, the following actual net profits for the 6-month period, May 30 to November 30, 1950, and the 6-month period, December 1 to May 30, 1951, are shown:

Net profits, May 30 to Nov. 30, 1950	$451,203.15
Net profits, Nov. 30, 1950, to May 31, 1951	330,267.28
Total net profits for first year following completion of plant expansion	781,267.28

This figure, although an index of the effect of the plant expansion, is inadequate for the reason that the full effect was not felt for the full 12 months, as it required part of the year to "get in high gear."

The profits earned for the year ended May 30, 1951, did not include any war contracts, and so far as the officials of this company know, none of its product was sold for housing projects connected with the war effort.

APPLICATION OF FACTS TO EXISTING RELIEF PROVISIONS

The various methods of relief afforded by the existing law have been applied to the facts in this case. In order to see the effect of the application of the relief provisions, the following figures are necessary. The adjusted basis of plant and equipment as of the close of each base period stated in round figures was as follows:

1946	$334,000
1947	372,000
1948	473,000
1949	959,000

The total assets of the company as of the close of each base-period year stated in round figures were as follows:

1946	$1,414,000
1947	1,734,000
1948	2,227,000
1949	2,348,000

The secretary's published tentative rate of return (Code 25, Furniture and Fixtures) for the base period is compared with that of the Kent-Coffey Manufacturing Co. as follows:

	Kent-Coffey's rate of return	Industry rate of return
	Percent	*Percent*
1946	27.6	16.4
1947	36.6	16.4
1948	36.9	14.6
1949	8.4	13.7

Section 444 (b) obviously was intended to apply to cases such as this. Kent-Coffey Manufacturing Co. meets the technical requirements of this provision, but the application of it to the facts in this case affords no relief whatsoever. The adjusted basis of the company's plant and facilities on the last day of the base period was more than 200 percent of the basis of these facilities at the beginning of the 36-month period. In addition, Kent-Coffey's capacity for production at the close of the base period obviously was more than 150 percent of its capacity at the beginning of the 36-month period. However, applying the rule set forth in section 444 (c) produces an average earnings of only $360,000 (15.3 percent of total assets as of the close of 1949 of $2,348,000). This figure is substantially below the company's average base-period earnings computed without the correction for abnormality and shows the total inadequacy of this relief provision.

Likewise, it is clear that the company technically qualifies for relief under section 442 (a) (1) because normal production, output, and operations were interrupted or diminished because of the rebuilding of the plant in 1949. By reference to the measure of relief, however, afforded by section 442 (e), again it will be seen that this provision is totally inadequate. Kent-Coffey's assets as of the close of 1949 were $2,348,000. The Secretary's tentative rate of return for the furniture industry for 1949 is 13.7 percent. This would produce a substitute income for 1949 of $321,000. This figure for 1949, of course, would not increase the company's average earnings credit under any of the above-indicated methods.

The following information was taken from the Statistical Income Reports of the United States Treasury Department. The first 2 years had only one classification: "All forest products." The remaining years are classified as "Code 25: Furniture and fixtures." These figures are compared with the comparable statistics of the Kent-Coffey Manufacturing Co.:

Year	Code 25: Furniture and fixtures			Kent-Coffey Manufacturing Co.		
	Assets (000 omitted)	Net income (000 omitted)	Ratio	Assets	Net income	Ratio
			Percent			*Percent*
1936	$2,241,607	$73,068	3.3	$918,261	$56,509	6.2
1937	2,178,807	84,797	3.9	876,773	18,354	2.1
1938	967,424	17,100	1.8	846,912	(35,900)	(4.2)
1939	987,024	50,659	5.1	888,346	68,925	7.8
1940	1,046,882	68,486	6.5	892,316	138,853	15.6
1941	1,103,210	143,956	13.0	1,058,748	201,439	19.0
1942	1,077,196	149,014	13.8	1,204,722	233,675	19.4
1943	1,067,341	145,262	13.6	1,188,891	41,578	3.5
1944	1,119,324	168,596	15.1	1,063,083	118,706	11.2
1945	1,141,579	138,413	12.1	1,034,849	343,123	33.2
1946	1,486,431	243,774	16.4	1,228,246	338,938	27.6
1947	1,760,856	289,764	16.4	1,531,426	559,865	36.6
1948	(1)		14.6	2,001,714	737,814	36.9
1949	(1)		13.7	2,087,661	174,635	8.4
Total, 14 years			149.3			223.3
Average, 14 years			10.7			16.0

[1] Not available.

These figures demonstrate clearly the sustained superiority of Kent-Coffey's earning power as measured by total assets over that for the entire furniture industry throughout this entire period. These figures are given to show that the ratios between this company and the industry during the base-period years are not fortuitous nor an isolated example of the earnings of this company as contrasted with those of the industry as a whole. All these figures show that to replace abnormal experience in Kent-Coffey's base period with industry averages affords no measurement whatsoever of what reasonably could be expected for the period of the abnormality if the abnormality were corrected. To substitute industry average figures for abnormal periods harshly penalizes the efficient units, and conversely constitutes an undeserved windfall for the inefficient units.

If Kent-Coffey were given for 1949 a yearly rate of return on its assets bearing the same ratio to the Secretary's published rate of 13.7 percent which Kent-Coffey's rate of return for the first 3 years of the base period bears to the Secretary's published rate of approximately 15.8 (15.8 : 30 percent : 13.7 : 26.1 percent), a substituted earnings figure for 1949 of $613,000 would result (26.1 percent of 1949 assets of $2,348,000). If this figure of $612,000 were substituted for the actual earnings of $175,000 for 1949, then the company's average earnings for the entire base period would be $562,000 instead of $453,000, and would be slightly more than the company's earnings of $546,000 for its three best years computed without the substitution for 1949. If the substitution for 1949 is made, then Kent-Coffey's earnings for its three best years would become $640,000 (three best years: 1947, $569,000; 1948, $738,000; 1949, $613,000).

From the above, it is clear that the relief provisions in the existing law are completely inadequate and inappropriate as applied to the facts in the company's case. It not only is entitled to fill in its wholly abnormal 1949 earnings with a reasonable level of earnings, but it also should be entitled to treat its base-period earnings after such substitution to the rule permitting the use of the three best years.

CONCLUSION

We strongly urge, first, that the substituted earnings during the period of construction, in our case the year 1949, be based on our own experience, and not that of the general industry-wide average alone; and, second, that the rule of permitting the use of the three best years be applied after having substituted such earnings for the period of construtcion.

Only by these means can companies such as ours, whose earnings were materially reduced during the period of expansion, be allowed an earnings credit comparable to those companies whose earnings were not reduced by the interruption of plant expansion. Even such a credit would allow nothing for the increased capacity as the result of plant expansion.

We hope your committee will see fit to enact into law such provisions as will afford relief merited by the conditions herein outlined.

Respectfully submitted.

KENT-COFFEY MANUFACTURING CO.
By HAROLD F. COFFEY, *President.*

STATEMENT BY HON. HUBERT H. HUMPHREY, A UNITED STATES SENATOR FROM MINNESOTA

I deeply appreciate this opportunity to submit a statement to the Committee on Finance concerning H. R. 4473. This bill is of crucial importance to the defense effort and to the welfare of this country, and it is therefore essential that the soundest possible consideratino be given its provisions.

The citizens of this country are aware of the dangers that beset us. Communist aggression continues to threaten our security and the security of the free world. It can be halted in one of two ways. The first way is to stop the aggressor when he ventures to attack, as he was stopped in Korea. The second way is to arm ourselves and help build up the strength of our allies so that the aggressor will know that he cannot succeed. We must show our determination to protect freedom all over the world wherever it may be attacked.

The production program which is necessary to build the free world's defenses against communism is a large undertaking. It is expensive. It requires the diversion of a large proportion of our human and physical resources from production of peacetime goods to the production of arms and munitions. It means that we will temporarily have fewer automobiles, refrigerators, and television sets, and that our wage earners and farmers will have to work longer hours. Above all, it needs all the courage and foresight which is characteristic of the American people.

The genius of the American people to produce more in times of great stress is always underrated, but it has been proved many times. I believe we can achieve the production goals required to complete the military program and also to lay the groundwork for increasing living standards, not only in this country but also in the rest of the free world. We need only to harness some of the tremendous potentials which are still untapped here and abroad to realize these objectives. We will not succeed if we listen to the prophets of doom who for years have been underestimating the strength of our economy.

The cold war is not a temporary phenomenon. It is one of the practical political facts of our generation. In the present armistice talks in Korea, we are dealing with only one thrust of communism. Even though one thrust may be stopped, there is no telling when a second will strike in another corner of the globe. We will not cope with communism unless we face the cold, hard fact that we must build up our strength for a long pull. We cannot arm quickly to meet one threat and then disarm as soon as it has been averted. Such a course of action is wasteful and inefficient. More important, if we relax our guard even once, we are likely to lose the fight against the enemies of freedom.

The fact that the cold war is likely to last a long time makes it imperative that we plan ahead. Our economic system must be based on a strong foundation if we are to succeed in our resolve to stop communism. Part of this foundation must be a strong and equitable tax system which will be adequate to pay the cost of rearmament.

ECONOMIC POLICIES FOR DEFENSE

The production job which lies ahead of us is no more difficult nor more challenging than the job of keeping the economic system in balance. Inflation is as much a threat to our security from within as military aggression is from without. If we falter, inflation will reduce and distort production, destroy savings and will impoverish those who fall behind in the race between incomes and prices.

Control of inflation requires the full use of direct and indirect controls. We must control prices and wages, direct the flow of raw materials and allocate scarce and strategic metals. At the same time, we must keep a balanced budget, hold down credit, and stimulate savings. Both direct and indirect controls reenforce one another and must used simultaneously.

We must continue to rely on direct controls, but we cannot at the same time allow Federal expenditures to outstrip revenues. The result of continuing deficits is that the incomes of consumers and business will be substantially higher than the goods and services available for their use. The excess demand would quickly undermine effective price controls.

Although the program of direct and indirect controls which was in effect the first half of this year was much maligned by its opponents, the plain fact is that it worked effectively, once it was put into effect. Within 2 months after the price freeze, the price level was practically stabilized. Consumers' prices rose 1 percent per month from June 15, 1950, to February 15, 1951; they rose less than three-tenths of 1 percent per month between February and May and then fell in June. Wholesole prices rose 17 percent between June 15, 1950, to February 15, 1951; on July 15, 1951, they were 2 percent lower than in February.

This is no accident. The inflationary spiral was halted by taxes, credit controls, and price controls. The cessation of inflation in the last 2 months is a classic example of how effective the appropriate combination of direct and indirect controls can be.

The man on the street may not be familiar with the exact logic supporting a program of direct and indirect controls. Yet, he has consistently indicated his support for both. He knows that price controls are needed. He knows also that the Government cannot go on spending without levying the taxes needed to pay for it. His insistence on price controls, his acceptance of the higher tax burdens imposed shortly after Korea, and his demand for an excess-profits tax demonstrate that the Congress is not ahead of him in these matters. The intelligence he has displayed gives further proof of the basic strength of our democratic form of government.

GUIDING TAX PRINCIPLES

In facing the tax problem, we should be guided by these self-evident principles:

First, the total amount of revenue to be raised by any tax bill must be predicated on appropriations and authorizations made by the Congress. As yet, this is not a fixed sum since Congress has not yet completed action on authorizations or appropriations. It is clear, however, that substantial additional revenues will be needed to meet these obligations.

Second, in this extended period of mobilization and defense, it is imperative that we abide by the principle of pay as we go. Therefore, it is the responsibility of Congress to revise the tax structure and to increase the tax yield in accordance with congressional authorizations and appropriations.

Third, while tax rates may be subject to alterations to meet current revenue needs, the structural aspects of the basic tax law must be based upon principles of equity and ability to pay. In a period of high cost of living, in a period when American business enterprise is called upon to convert to defense production, in a period when workers' wages are controlled by wage-stabilization formulas, sound public policy and good conscience demand that the glaring loopholes and inequities in our tax structure be corrected.

THE NEED FOR HIGHER TAXES

The fiscal year which ended June 30, 1951, closed with a surplus of $3.5 billion. This surplus is due to the foresight of the Congress in increasing taxes during the latter half of 1950 and to the ability of the American economy to produce more than the most optimistic forecasts. Had we waited for a budget deficit to develop before taxes were increased, it would have been too late to repair the damage which an unbalanced budget would have done. No further proof is necessary of the wisdom of increasing tax revenues to balance a prospective budget than events in the past 6 months. We must continue to plan ahead.

During the early stages of a defense program it is difficult to determine precisely what our revenue requirements will be. It is nevertheless certain that at least during the coming 12 months the defense program will be building up rapidly. On the basis of current estimates by the Bureau of the Budget expenditures in this fiscal year will be $68.4 billion. If this total is realized, the annual rate of expenditures at the end of this fiscal year will be substantially higher, since we begin the present fiscal year with an annual rate of expenditures of something like $55 billion.

In making fiscal plans for the coming year, it is important to understand that present Government expenditures do not adequately reflect the prospective impact of the defense program on the economy. Total Government contracts already made run into the tens of billions of dollars. Work has already begun on many of these contracts and our resources are already being converted to defense production. Further price pressures are expected to materialize in the next few months as soon as curtailment of raw materials needed for defense purposes has its effect on the supply of goods. The inflationary potential which the defense program will generate when it is in high gear can have disastrous effects unless we are prepared to meet it with adequate fiscal measures.

We must not unduly delay enactment of this tax program. Every month that passes before the tax bill is enacted means that the revenues will be correspondingly reduced. Inflationary pressures are being generated by the Federal budget at this very moment—expenditures are already exceeding estimated receipts. In the month of July alone, there was a budget deficit of over $2 billion.

In his testimony before this committee, the Assistant Director of the Budget estimated that expenditures in fiscal year 1953 will be no less than $80 billion. Under these circumstances, we are likely to err on the low side rather than on the high side in making our tax plans for the future. It is unwise to try to trim the tax program precisely to get no more than a budget balance in the present fiscal year. A moderate budget surplus, if it is achieved, would be welcome. It would enable us to further reduce the public debt and thus to counteract the excess demand which will surely materialize as the defense program develops. Equally important, it will put us in a better position next year to face the full impact of inflationary pressures when Government expenditures will be substantially higher than they are today.

THE ESSENTIALS OF A SOUND AND FAIR TAX PROGRAM

I believe you will agree with me that the man on the street, however unsophisticated he may be, endorses a pay-as-we-go policy. He is willing to be taxed to pay for his own defense. But he insists that taxes be levied fairly, that everybody shoulder the burden according to his ability to pay.

I want to emphasize this point because I believe it is important. When we increase the tax burden of a married man with two children and with an income of $60 a week by $1 a week, we are denying him the use of a dollar which would otherwise go for food, clothing, or lodging. There is little room for anything else in his budget. This sacrifice can and will be borne by our wage earners and farmers if they are assured that others are paying their fair share.

We cannot in good faith ask the rank and file to make a substantially larger tax contribution for the defense effort when a chosen few can take advantage of glaring loopholes in the tax laws. It would violate every test of equal sacrifice to ask the man with low income to pay higher excise and income taxes when the rich become richer through our failure to close loopholes.

There are those who will argue that loophole-closing will not raise much revenue. This line of argument is familiar: why worry about a relatively small amount of revenue when billions are needed: substantial additional revenue can be raised only by raising rates. This is false counsel. Let there be no mistake about this: billions of dollars can be raised by plugging loopholes. If these loopholes are not plugged the required revenue must be raised from those less able to pay. Here are a few examples of these loopholes.

First, the unbelievably generous depletion provisions hand the oil and mining interests hundreds of millions of dollars each year. Last year, the President called this loophole the most glaring in the tax laws. Congress did nothing about it. This year with tax rates going still higher, this loophole is even more indefensible.

Second, the estate and gift taxes are in a pitiful state. It is unbelievable that, in a country as wealthy as ours, these taxes raise little more than three-quarters of a billion dollars. The Secretary of the Treasury presented a plan to the Congress last year for tightening up these taxes but nothing was done. The estate and gift taxes should be made to contribute substantially more than they do now. A tax bill of the size being considered here would be deficient without a thorough revision of these taxes.

Third, at the same time that wage earners are paying every last cent of their taxes because it is withheld from their pay envelopes, billions of dollars of interest and dividends are evading taxes. This critical evasion must be stopped. The best way to do this is to withhold the tax from interest and dividends just like we do on wages and salaries. The withholding provision for dividends and certain interest payments in this bill is a good start in this direction.

Fourth, the income-splitting provisions enacted by the Eightieth Congress confer unwarranted tax benefits on the well-to-do. People with incomes under $5,000 gained nothing from this provision and this includes 80 percent of all the taxpayers. At the $25,000 level, it reduces taxes of a married person by about $2,500; at the $200,000 level, it saved a married taxpayer about $25,000 in taxes. We cannot afford to give such large tax reductions to the higher income groups in times like these. Equally important, this type of tax favoritism is a violation of the principle of the ability to pay.

Aside from these four items there are many others, such as the loopholes in the excess-profits tax and in the capital-gains provisions, the tax exemption for interest on State and local government bonds, the weak tax provisions for life-insurance companies, and the tax hand-outs to the large corporations through accelerated amortization provisions which are now available for some six billion dollars of prospective plant expansion.

A determined effort to close all the loopholes could be made to yield billions more. I realize that the need for speed will preclude a complete study of all of these loopholes. Nonetheless, there is more than enough to choose from to raise the yield in the bill now before you without delaying it unnecessarily.

Since congressional action on appropriations is not yet completed, the exact amount needed for this bill is not known. However, there is every indication on the basis of the Bureau of the Budget estimates and the estimated requirements of the defense program, that the prospective yield of the House bill will prove to be insufficient to balance the budget. In that case, the deficiency can be made up by closing the loopholes that I have described. If, on the other hand, the revenue yield of the House bill proves to be adequate, the percentage increases in tax rates on individuals and corporations can be substantially reduced by a concerted effort to close these loopholes.

ANALYSIS OF H. R. 4878

According to the estimates of the Joint Committee on Internal Revenue Taxation, the $7.2 billion of additional revenue which would be collected in a full year of operation under H. R. 4473 would be obtained from the following sources: $2,847 million from changes in the individual income tax; $2,855 million from changes in corporation income and excess profits taxes; $1,252 million from increases and revisions in the excise taxes and a net increase of $245 million from structural changes.

The bill as it now stands has three major defects:

First, as I have already indicated, the revenue yield may be too low. It will not balance the budget in fiscal year 1952 at prospective levels of expenditures and will moreover probably fail to strengthen the tax system efficiently to do the job it will be required to do before the fiscal year is over.

Second, although the structural changes in the bill show a net increase in revenues of almost a quarter of a billion dollars, this net figure covers up the fact that the House bill introduces several important new loopholes. By reference to the detailed table on pages 62 through 65 of the report of the Ways and Means Committee on the bill, you will find a number of important large tax reduction items which are unwarranted. In total, the admitted cost of these provisions, which I shall enumerate later, is $153 million and the actual cost will undoubtedly be much greater. This tax bill must be rid of such flagrant attempts to distort the tax laws in favor of a chosen few.

The third deficiency of the tax bill is that it does not close enough loopholes. There are a number of desirable revisions in the bill, including the new withholding provision for dividends, interest and royalties, the elimination of the two for one offset of short-term capital losses against long-term capital gains and the denial of multiple surtax exemptions and excess profits credits resulting from corporate split-ups. These provisions should be retained but the scope of tax revision should be substantially expanded.

Individual income tax

Perhaps the most equitable feature of the entire bill is the defense tax which increases all present taxes by 12½ percent. Nonetheless, it has been criticized severely, mainly by the same people who object to closing loopholes.

We can dispose of the first criticism quite easily. It is said that the 12½-percent increase in tax liabilities is confiscatory and that it is too burdensome on the rich. There can be no doubt that this portion of the bill calls for the rich to make a real contribution to the defense effort. This is exactly why I consider this measure to be equitable and desirable. For a married person with two dependents, the defense tax would reduce spendable income by 2.3 percent at the $5,000 net-income level, 3.6 percent at the $10,000 level, 4.8 percent at the $25,000 level and 8.1 percent at the $100,000 level. The charge of confiscation cannot be taken seriously, since the $100,000 taxpayer will have $41,600 left after taxes even after the increase provided by this bill, and without taking into account the many opportunities for tax avoidance which are available to the $100,000 taxpayer.

The argument against the 12½-percent increase which is to be given more serious consideration is that there are other means of raising $3 billion in the framework of the individual income tax which would more effectively relieve inflationary pressures. It is theoretically true that, potentially, a dollar in the hands of a person who needs that dollar for everyday expenditures is more inflationary than a dollar in the hands of those who are fortunate enough to save part of their income. However, I feel strongly, and I am convinced that the majority of the American people share this feeling, that taxable individuals in the lowest brackets are already contributing more than their fair share of the total tax burden.

The staff of the Joint Committee on the Economic Report recently published the latest study of the distribution of total Federal, State, and local taxes by income levels. These figures are no less than startling and it is unfortunate that they have not been given more widespread publicity. The facts are that, in 1948, individuals and families with incomes under $1,000 paid 23.6 percent of their income in taxes to all levels of government. This compares with 20.8 percent between $1,000 and $2,000; almost 22 percent between $2,000 and $5,000; 23.1 percent between $5,000 and $7,500; and 31.7 in the classes above $7,500. Thus, the people with incomes below $1,000 actually bear a heavier tax load, when all taxes are taken into account, than any group up to the $7,500 level.

The brunt of the recent rise in prices fell on those people who can barely make ends meet. In the light of the facts I have just mentioned, it would be cruel to require low-income people to pay a disproportionate share of the additional tax load needed for defense. I submit that the need to impose taxes to help control inflation should not be used as an excuse for the adoption of oppressive increases in income taxes or some form of sales taxation which would weigh less heavily on wealthy individuals who can contribute to the national effort without suffering any hardship.

It is well to recall, in this connection, that persons in the middle and higher-income brackets derive the largest benefits from the preferential treatment granted married persons in the Revenue Act of 1948. The income-splitting provision, which was adopted at that time to equalize tax burdens of married persons in all States, created serious inequalities in the tax treatment of single persons and married persons. H. R. 4473 not only does not remove these inequalities but actually increases the tax differential between single persons and married persons by the same 12½ percent by which all rates are increased.

The Ways and Means Committee was well aware of these inequalities and felt it necessary to extend half of the advantage of income splitting to single persons who are "heads of households." A "head of household" is defined in H. R. 4473 as single persons who maintain in their household children or their descendants whether or not they can support themselves or who maintain any relative for whom they claim an exemption under present law. The line between single persons who do and who do not qualify as heads of households is not sharply drawn by this definition. Considerable litigation will result and there is grave danger that eventually the principle of income-splitting with its regressive effects will be extended to all single persons.

Income-splitting reduced the effectiveness of rate graduation in the individual income tax and consequently increased the relative tax burden of the lower income classes, particularly those whose surtax net income is below $2,000. Extending this privilege or parts thereof to heads of households further reduces the effectiveness of rate graduation and does so precisely at a time when the burdens of all other taxpayers are being increased in the interest of the defense effort. It is my conviction that the reduction of the differential in tax liabilities between married persons and single persons should be reduced not by extending the regressive feature of income splitting to a new category of taxpayers but on the contrary by eliminating this privilege in the case of married persons.

I suggest that the head-of-household provision be removed from the bill and that the bill be revised so as to remove the advantage of income-splitting for all married persons. This can be done without destroying the equality of tax treatment for married persons in all States and without peopardizing the operation of local property laws. It would mainly affect married couples whose surtax net income is in excess of $10,000. It would not alter the tax liabilities of married persons in the first surtax net income bracket and would increase the liabilities of married couples under $10,000 by relatively small amounts. The revenue to be gained from this revision amounts to about $2.8 billion under the rates provided by the bill.

Corporation taxes

The bill raises corporation income and excess profits taxes by a total of $2.8 billion in a full year. This increase is justified on the basis of the large increases in profits which corporations have experienced. For the entire year 1951, the Joint Committee on Internal Revenue Taxation estimates that corporation profits will amount to $20 billion after the taxes imposed by this bill. This compares with average profits after taxes in the three best years of the base period 1946–49 of $18.8 billion. Even though corporations are subject to an excess profits tax on earnings in excess of 85 percent of average base period earnings, it is now clear that relief provisions which greatly enlarge the concept of normal earnings operate to exempt a large portion of excess profits from special taxation.

It has been contended that the tax increase imposed by the House bill which becomes effective on January 1 of this year is retroactive. Except for the increased corporation income taxes adopted last year, changes in corporation tax rates have ordinarily been made effective beginning in the calendar year during which the legislation was enacted. I consider the departure last year as having been unwarranted. This year, deferment of the corporation income tax increase until after the bill is enacted would free the corporations from increased tax burdens on their record profits. Profits in the first half of the year will run at an average annual rate of close to $50 billion before taxes and after taxes they will probably average $23 billion. These are high profits by any standard and are properly subject to higher taxes. The argument that increased corporation taxes made effective the first of the year are retroactive is merely a pretense to enable corporations to escape their fair share of this year's tax burden.

Undesirable provisions in the bill

As I have indicated, there are a number of technical provisions which have been inserted in the bill in the name of tax revision, but which provide substantial and unwarranted tax reduction. It is unconscionable to impose $3 billion of taxes on ordinary individual incomes and at the same time to allow a few to have very substantial tax reductions.

The provisions I refer to are the extension of percentage depletion to a large number of minerals at a cost of $67 million; the double deduction granted to development costs in mining at a cost of $20 million; the extension of capital gains treatment to coal royalties at a cost of $10 million; and the head-of-household provision, which I have already discussed, at a cost of $50 million. Finally, the provision on family partnerships, which was eliminated in the Revenue Act of 1950, is back again to plague us. The Committee on Ways and Means did not estimate the revenue loss from this provision but it will certainly run into millions of dollars.

I believe it is desirable to examine only one of these provisions to illustrate how thin the justification for the relief is in these cases. On the subject of coal royalties, for example, the Committee on Ways and Means stated that coal royalties should be treated as capital gains because lessors of coal property have not, it is claimed, received price adjustments for royalty contracts made in the past and that some of them cannot benefit from percentage depletion even under the generous terms of present law. To compensate such individuals for these great "hardships" the tax law singles them out and grants them capital-gains treatment. This is no more unfair than if we were to grant capital-gains treatment to interest on bonds issued before January 1, 1951, on the ground that the interest rate is fixed by contract and is not adjusted for price increases. There is absolutely no justification for such discriminatory provisions and they should be eliminated from this bill.

I need not dwell at great length on the family partnership provision which was discussed in full on the Senate floor in connection with the Revenue Act of 1950. This provision is the same as that in the Senate version in the Revenue Act of 1950 which was eliminated by the House and Senate conferees.

There is no question that this family partnership provision opens up a very substantial new loophole. Far from simplifying the law this provision will multiply and codify a number of existing complications. It literally invites every owner of a moderately successful business to split his business income with his children and other relatives by granting them an interest in the business through a gift of capital. The report of the Ways and Means Committee justifies the provision on the ground that it is intended to clarify the law. But it is really intended as an announcement to all individuals that for the relatively minor cost of changing their business from a sole proprietorship to an artificial partnership it will be possible to split their incomes several ways for tax purposes.

Combined with the elimination of the advantage of income splitting for all married people, removal of the provisions which I have enumerated would add a total of almost $3 billion of revenue to the bill.

PROPOSED LOOPHOLE CLOSING PROVISIONS

Percentage depletion

The first and most important loophole which should be closed is the percentage depletion loophole. At present rates and income levels, percentage depletion saves oil and mining interests at least three quarters of a billion dollars a year. Such a tax relief cannot be justified either on equity grounds or on economic grounds.

The Secretary of the Treasury has discussed with your committee and the Committee on Ways and Means the nature of this loophole and has presented some astounding figures as to how big it really is. He also outlined to you in some detail, during the hearings on the Revenue Act of 1950, the adjustments which can be made as a first step toward eliminating this loophole. His proposal was to reduce percentage depletion for oil, gas, and sulfur to 15 percent of gross income and for nonmetallic minerals to 5 percent. He also proposed that oil and gas operators who elect to deduct as expense intangible drilling and development costs be required to reduce income from the property by the amount of such expended costs in computing their depletion allowance. These changes would increase revenues by $300 million. If adopted, they would eliminate the excuse for extending percentage depletion to other minerals, as the House bill does. So long as these provisions remain unchanged, it will be difficult to withstand the pressure to enlarge the list of minerals allowed percentage depletion.

Estate and gift taxes

Except for the estate- and gift-splitting provisions which were enacted in 1948, the estate and gift taxes have remained untouched since 1942. The opportunities to avoid high transfer taxes either by placing property in trust or making gifts still remain open for those who have skilled legal counsel. The 1948 provisions, moreover, undercut substantially the effectiveness of the already weakened rate structures of these taxes. In their present state, the transfer taxes are no more than a mere appendage of the tax system and do not accomplish either the equity objective for which they were designed or raise sufficient revenue in a defense period.

The Secretary of the Treasury has given to your committee a detailed account of the loopholes in this area and has also recommended specific measures that might be adopted to strengthen them. He suggested that exemptions be reduced and that rates be increased. I would add to this that the estate- and gift-splitting provisions should be repealed. At least $700 million of additional revenue can easily be raised from these revisions. This would increase the total yield of the estate and gift taxes to almost $1½ billion, an amount which would not be unduly burdensome in view of our requirements for additional revenue.

Capital gains

The capital-gain rate is now limited to a maximum of 25 percent, and profits from the sale of assets held for 6 months or more are given this preferential treatment. So far as I have been able to determine, the 6-month holding period accomplishes nothing except to reduce the taxes of speculators who are able in one way or another to hold their gains for at least 6 months in order to obtain the preferential rate on long-term capital gains.

The low rate of tax on capital gains singles out for special treatment incomes which are no less evidence of ability to pay than other types of incomes. Moreover, capital gains are a high proportion of income in the highest brackets and the preferential treatment accorded them is, therefore, especially favorable to the wealthy.

The logic presented by the Secretary of the Treasury seems to be appropriate for correcting this deficiency in the tax bill. He pointed out in his statement to you that the starting rate on ordinary incomes and the rate on long-term capital gains for individuals not subject to the alternative tax were increased substantially under the Revenue Act of 1950 and will also be increased again under this bill. The adjustment in the rate in the alternative tax should be increased correspondingly.

Another adjustment in capital-gains provisions which should now be made is the elimination of sections 117 (j) and (k). Section 117 (j) is the "one-way street" which gives individuals and corporations the opportunity to be taxed at capital-gains rates on profits from the sale of depreciable property, but allows them to deduct losses on such property in full. Section 117 (k) gives capital-gains treatment to timber, and under the bill it is expanded to coal royalties.

Lengthening the holding period, an increase in the alternative tax rate commensurate with the increases in the starting rate on ordinary incomes since Korea, and repeal of sections 117 (j) and (k) would raise the revenue from capital gains by an additional $400 million.

I have reviewed fairly extensively the provisions of the House bill in order to indicate how they can be revised and strengthened to yield sufficient revenue for our pay-as-we-go policy. Most of my suggestions involve eliminating loopholes which have crept into this bill and old loopholes which still remain in the law. Loophole closing is not an easy undertaking since it will raise opposition by powerful interests. Unfortunately, the man on the street does not have a lobby to protest the injustices in our tax laws, he must be protected nonetheless.

We are all committed to a pay-as-we-go policy. It is essential to the continued success of the defense program. It is our duty and responsibility to the people to see to it that increases in their taxes are accompanied by reductions in the unwarranted relief provisions of the present tax laws. Your colleagues in the Senate are relying heavily on this committee to report to them a tax bill which meets these requirements.

BETHESDA, MD., *August 7, 1951.*

Hon. WALTER F. GEORGE,
Chairman, United States Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: With reference to the Revenue Act of 1951 (H. R. 4473), particularly section 303 thereof, amending "the present provisions relating to a gain on the sale of a taxpayer's principal residence so as to eliminate a hardship under existing law which provides that when a personal residence is sold at a gain the difference between its adjusted basis and the sale price is taxed as a capital gain":

According to the report of the Committee on Ways and Means, House of Representatives, accompanying H. R. 4473, "the hardship is accentuated when the transactions are necessitated by such facts as an increase in the size of the family or a change in the place of the taxpayer's employment." The writer comes within the first category of an increase in the size of family by virtue of having had to purchase a new home of larger size and facilities in order to provide quarters for a married daughter and two small grandchildren due to the fact that my son-in-law had to leave the country for foreign service with the United States Air Force.

It was therefore necessary for me to acquire a larger and more costly home in July 1950, but, in view of the existing capital-gains tax, it was felt that the most prudent procedure at that time was for me to make a down payment on the new home, and assume a mortgage for the balance due, and to rent my former residence rather than to sell it and apply the proceeds therefrom on the new home.

Section 303 of the bill proposes that "when the sale of the taxpayer's principal residence is followed within a period of 1 year by the purchase of a substitute, or when the substitute is purchased within a year prior to the sale of the taxpayer's principal residence, gain shall be recognized only to the extent that the selling price of the old residence exceeds the cost of the new one."

As will be seen under the proposed law, I do not believe I could qualify for the benefits held out to these taxpayers because my new home will have been purchased more than 1 year prior to the sale of the former residence. However, as every home owner knows too well, unless one can afford to pay the full cash purchase price for the substitute home, a mortgage must be assumed and while, technically, you have thus purchased a new home, you are certainly far from owning it until the mortgage is paid.

Under the circumstance, then, it is believed that the hardships mentioned would be more apt to be relieved if this section was so amended in those cases of involuntary conversion as to provide that if the home owner sold his old residence, say, at any time within 3 to 5 years (or whatever period seems right, but certainly more than 1 year) after the purchase of a new home, and applied the funds received from such sale toward the payment of the mortgage assumed on the new residence, that any gain within the limitations enumerated in section 303 should not be taxed as a capital gain.

It would seem that the present provisions of section 303 are too restrictive to alleviate the hardships mentioned and that just a slight change in the provisions referred to is necessary in order to help the taxpayers mentioned.

Your earnest and favorable consideration of the subject will be more than appreciated by many home owners caught in the predicaments mentioned.

Yours very truly,

CLARENCE I. POORE.

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
August 10, 1951.

Senator WALTER F. GEORGE,
Chairman, Committee on Finance,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: This will refer to a memorandum filed with you for the committee by L. O. Monroe on behalf of the National Association of Fan Manufacturers regarding a clarifying amendment to section 484 of H. R. 4473.

Mr. Monroe has proposed a clarification to specifically designate the recognized types of fans for household use which would be subject to tax. If the committee should reject that amendment, may I respectfully suggest that it incorporate in its report language which will be a part of the legislative history and which will more clearly designate the types of fans which are subject to tax. This, of course, is on the assumption that there will be a provision for some such tax.

The desirability for incorporating such language revolves about the apparent intent of the House as revealed in its report, page 46, to apply the tax on "fans of the household type" which is in conflict with the Treasury Department's application of section 3406 (a) (3) of the Internal Revenue Code regarding "electric direct motor-driven fans" which has been extended far beyond fans for household use to what are essentially industrial machinery products otherwise exempt from an excise tax.

With best wishes, I am
Yours sincerely,

HOMER FERGUSON.

NATIONAL ASSOCIATION OF FAN MANUFACTURERS, INC.,
Detroit 26, Mich., August 13, 1951.

Re proposed clarifying amendment to section 484 (p. 188), H. R. 4473, Revenue Act of 1951.

Hon. WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.:

Supplementing memorandum of August 1, 1951, find attached a chart bearing on the above subject. The chart attempts to show graphically basic types of fans, specific types of fans, functions and other pertinent data. It is presented in the hopes of simplifying the technical points on fans and to help in reaching an understanding of the problem.

When "electric direct motor-driven fans" were first included in the list submitted by the Treasury Department to the Congress for excise purposes in 1941, Mr. John L. Sullivan, Assistant Secretary of the Treasury said, "We have selected certain luxury articles which though widely used are not necessities" (p. 50, vol. 1, 1941, Ways and Means Committee).

On the same subject of items, before the Committee on Finance, Secretary Morgenthau said, "That list has been carefully selected from the point of view of articles which would compete with our national defense, or articles which are considered luxuries at this time" (p. 24, Committee on Finance, August 8, 1941).

A further search of the records has not revealed that either the Congress or the Treasury Department has ever advocated an excise tax on industrial machinery products. There is, therefore, no justification, either in the past or now, for imposing an excise tax on industrial types of fans.

We raise no objections to a tax on fans in the luxury class or for household use. Our objection is to the extension of the tax on industrial fans either by law or by subsequent ruling of the Treasury.

May we respectfully ask for your approval of the proposal outlined in our memorandum of August 1, 1951.

L. O. MONROE, *Secretary.*

CHART OF BASIC AND SPECIFIC TYPES OF FANS-REFERENCE BULLETIN Nº108 NATIONAL ASSOCIATION OF FAN MANUFACTURERS
(SECTION 484 H.R. 4473, PAGE 138, REVENUE ACT 1951 TO AMEND SECTION 3406 (a) (3) OF THE INTERNAL REVENUE CODE)

BASIC TYPES	SPECIFIC TYPES	FUNCTION	TAX STATUS	SALES 1950	REMARKS
ELECTRIC FANS	 WALL OR BRACKET FAN	FOR HOUSEHOLD AND OFFICE USE (DIRECT MOTOR DRIVEN ONLY)	SUBJECT TO TAX	NOT DISTRIBUTED TO THE PUBLIC. STATISTICS COLLECTED BY NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION	PROPOSED CLARIFYING AMENDMENT AS RECOMMENDED IN LETTER AUGUST 1, 1951 TO HONORABLE WALTER F GEORGE, CHAIRMAN, COMMITTEE ON FINANCE, UNITED STATES SENATE: "ELECTRIC DIRECT MOTOR-DRIVEN FANS OF THE CEILING, WALL BRACKET, DESK, PEDESTAL AND AIR CIRCULATOR TYPES AND THOSE TYPES OF PROPELLER FANS FOR HOUSEHOLD USE ONLY, COMMONLY CALLED KITCHEN, WINDOW AND ATTIC FANS, BOTH DIRECT MOTOR-DRIVEN AND BELT DRIVE;"

UNITED STATES SENATE,
COMMITTEE ON AGRICULTURE AND FORESTRY,
August 7, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SENATOR GEORGE: I should like to call to your attention a matter which I believe deserves the consideration of your committee, in connection with its consideration of the revenue bill, H. R. 4473.

Certain of my constituents are owners of so-called claw or digger machines, which are placed in retail establishments in New Orleans. I understand that such machines are also operated elsewhere on a small scale. On August 3 of this year there was testimony before your committee by a representative of Baltimore owners of claw machines.

These machines are classified by the Bureau of Internal Revenue in the same category as the so-called one-armed bandit, under section 3267 of the Internal Revenue Code. As such they are now subject to the slot machine tax of $150, which would be increased to $250 under H. R. 4473.

The information made available to me indicates that the claw machine is not a gambling device in the nature of the "one-armed bandit" and should therefore be placed in a different classification for purposes of the special tax levied under section 3267. The claw machine owners feel that the competent officers of the Bureau of Internal Revenue would be sympathetic to a reclassification which would be more suitable to the character of the machines and the modest resources of the owners. I am informed that even with the present $150 levy the owners of the machines will be forced out of business, as indeed many already have.

It is my hope that you find it possible to request Mr. Colin Stam to examine this matter and to ascertain the attitude of the Treasury Department toward a reclassification of these machines.

With kindest regards, I am

Sincerely,

ALLEN J. ELLENDER,
United States Senator.

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
August 7, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR GEORGE: It has come to my attention that one of the provisions of H. R. 4473, now under consideration by your committee, may do much more harm than good.

Section 123, regarding surtax exemptions and certain credits of related corporations, should be stricken from the act unless it can be rewritten so as to exclude bona fide multiple-corporation structures which are not created merely to avoid taxes.

It seems highly unfair to me to double the existing tax rates on many small businesses in an attempt to close a loophole in the law that may have worked to the advantage of a few chronic tax avoiders. This provision ignores the maxim of tax equity that a business should be taxed on its own profits. It works a severe hardship on an honest person who has more than one interest.

I cannot believe that this result is the intention of the Treasury Department or of the Congress. Sections 45 and 120 of the existing Internal Revenue Act appear adequate to control multiple corporate structures which are developed to avoid taxes.

I trust that your Finance Committee will recall the action it took in 1943 when it limited the impact of section 120 to artificial corporate divisions. Such a limitation is imperative in the case of the proposed section 123 unless your committee can see fit to eliminate it entirely.

My kindest personal regards and best wishes.

Sincerely,

PAT MCCARRAN.

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
August 8, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR GEORGE: I have been interested in the urgent need for elimination of the tax on admissions and the tax on cabarets, roof gardens, etc., for several years.

The present 20-percent tax on cabarets, roof gardens, etc., is nothing more than a nuisance tax. It is unfair to the hotel industry, and places an undue burden on both the entertainer and the entertainment seeker.

There can be no question that this tax has hurt the hotel business to a considerable extent. For the information of your committee, I offer a tabulation of cabaret tax receipts since 1941 as reported by the Commissioner of Internal Revenue:

Cabaret tax payments

	Percent	Amount		Percent	Amount
Fiscal year ending June 30—			Fiscal year ending June 30—Continued		
1941	4	$2,343,310.00	1947	20	$63,349,838.00
1942	5	7,399,542.00	1948	20	53,527,145.00
1943	5	16,396,829.00	1949	20	48,850,069.00
1944	30	26,726,311.00	1950	20	41,453,394.00
1945	20	56,877,239.00	1951	20	[1] 42,646,313.70
1946	20	72,076,898.00			

[1] Preliminary.

It is noteworthy that receipts from this tax have been declining since 1946. There are two major reasons for this decline in receipts. One of them it the mounting resistance by the public to paying for entertainment when the tax is applicable; the other is the fact that hundreds of entertainment rooms have been closed in hotels because this tax is too onerous to bear.

The effect of the tax on employment can easily be seen by a quick perusal of the statistics relating to unemployed entertainers.

Section 404 (a) of H. R. 4473 seems to further confuse the already difficult-to administer cabaret provision. I believe that this tax should be eliminated entirely. To do so would require amendment to both section 1650 of the Internal Revenue Code by striking out, in the table contained in such section, the matter relating to cabarets, roof gardens, etc.; and also the repeal of section 1700 (e) of the Internal Revenue Code, relating to the admissions tax on cabarets, roof gardens, etc.

Sections 401 and 402 of H. R. 4473 are steps toward elimination of the tax on admissions, but they do not go far enough. Some of the provisions of these sections may result in inequity. If a movie-goer's entertainment should be taxed, then why should not admissions to a cooperative or community center moving-picture theater be taxed? If a swimmer it to be taxed for swimming, then why not for swimming in a municipal pool where admission is charged? There are other, and equally absurd, contradictions in the admissions tax proposal. The simplest solution, and the solution which I urge upon your committee, is that this tax be abolished.

My kindest regards and best wishes.

Sincerely,

PAT MCCARRAN.

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
August 8, 1951.

Hon. WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: It has come to my attention that the additional revenue to be derived from manufacturers' excises under H. R. 4473 is composed 110 percent of increase in taxes on highway users. This increase of $533 million will work a particular hardship on both automobile owners and truckers in the West.

The day has passed when an automobile could be considered a luxury. In my part of this country it is an absolute necessity. It is a necessity for hundreds of thousands of American families and the increased tax on automobiles, parts, and accessories increases the cost of keeping the family car running.

For commercial users, in most instances, these new taxes will have to be regarded as costs of production, and consequently passed on to the consumer in higher prices. However, for private owners of motor vehicles the tax is direct; that is, it rests on the payer and cannot be passed on. These taxes will make a considerable draft upon persons of small income. The higher prices occasioned by the additional taxes, coupled with current credit restrictions, will make it impossible for the workingman to replace his now-aged jalopy. That is particularly the case when it is added to the cost of a license, property, and other taxes which fall upon the owner of a car.

These taxes are, in large part, regressive and bear much more heavily on a man with small means than on one who has a more flexible and remunerative source of income. Our unbalanced tax structure has no more room for additional taxes of this sort.

It is my sincere hope that your committee sees fit to eliminate the increases in these excises.

My kindest personal regards and best wishes.

Sincerely,

PAT MCCARRAN.

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
Washington, D. C., August 9, 1951.

Senator WALTER F. GEORGE,
Chairman, Committee on Finance,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I am writing to request the Senate Finance Committee's earnest consideration of the attached proposed amendment to H. R. 4473, and I am outlining below the reasons for this request.

In Birmingham, Ala., each year a benefit football game is played between two of the State's outstanding high-school teams, and all proceeds from the game go to the crippled children's clinic. We have in Birmingham one of the most modern hospitals for crippled children in the entire country, and it is proving a difficult task to provide funds to operate the hospital for the benefit of crippled children of the State. A large part of the operating funds each year come from the benefit football game mentioned above.

No expense is attached to the game except the Federal admissions tax. Everything is donated. The Quarterback Club and members of the Birmingham Police Department sell the tickets. No charge is made by the city for use of Legion Field, and the officials donate their services. The Federal admissions tax last year amounted to approximately $7,500. This amount would have paid for the cost of 1,000 patient days in the hospital.

Under the circumstances, I very much hope that favorable consideration may be accorded the proposed amendment attached, or other change in the language of section 402 (b) so as to exempt this type of benefit event from payment of the Federal admissions tax.

Thanking you, and with kindest personal regards, I am,

Very sincerely,

LISTER HILL.

(H. R. 4473)

REVENUE BILL OF 1951

Paragraph (2) of bill section 402 (b) should be amended to read as follows:

"(2) NONEXEMPT ADMISSIONS.—The exemption provided under paragraph (1) shall not apply in the case of admissions to (A) any athletic game or exhibition unless the proceeds inure exclusively to the benefit of an elementary school, secondary school *or purely religious or charitable institution*, (B) wrestling matches, prize fights, or boxing, sparring, or other pugilistic matches or exhibitions, or (C) carnivals, rodeos, or circuses in which any professional performer or operator participates for compensation."

STATEMENT OF ALLEN B. DU MONT, PRESIDENT, ALLEN B. DU MONT LABORATORIES, INC., CLIFTON, N. J.

I am conscious of your responsibility to produce a revenue measure adequate to our Government's needs in a time of emergency. It is my hope, therefore, that our carefully considered position and suggestions will be helpful in the production of that revenue while at the same time preserving the well-being of an important revenue source.

You will recall that during the last session Congress imposed an excise tax on television for the first time. The Secretary of the Treasury now has proposed an increase in this tax from 10 to 25 percent one of the sources of additional revenue "from excise taxes on those consumer goods which are less essential and which use materials that will be in short supply."

Since it is revenue you seek, we propose that better results can be obtained by rejecting the Secretary's recommendation for an increase in the excise levies and by eliminating the present levy on television.

We suggest that the Government Treasury would profit more by the elimination of a levy, rather than by the imposition of one.

While both radios and television receivers have many of the same components and are marketed by the same dealers and distributors, the proposition of a tax on television is quite different from a tax on radio.

In television we have a striking example of the law of diminishing returns at work. For the year 1950, television was a lucrative source of corporate income and excess-profits taxes. It was a lucrative source of individual income taxes deriving from full employment and profitable operations of an expanding distribution system.

In 1951, we see the situation reversed, with a 10-percent excise tax as one of the important contributing factors.

Warehouses are bulging with unsold television sets—unproductive and unprofitable to manufacturers, distributors, dealers, or the Government.

Elimination of the causes of this condition will be more productive of revenue than will aggravation of the condition.

Television is in its infancy. While its tremendous potential of public service as the most vital means of communication has been recognized in some quarters, it has been a victim of cross-purpose governmental policies before it has had a chance to fully develop or achieve national coverage.

On one hand, we find the Federal Communications Commission, the Senate Interstate and Foreign Commerce Committee, civil defense agencies, and even the Armed Forces dealing with television as a great national resource and planning full development and use of its potential.

On the other hand, we are confronted here with the recommendation of another department of the same Government which relegates this great national resource to the category of "less essential," in the same grouping as ordinary household appliances, and with hamstrings to prevent attainment of its great public usefulness. We might repeat, also, for emphasis, without the virtue of being a more productive revenue source.

Television in its present state of development and lack of national coverage is an entirely different creature than that you may have to consider if you permit it to grow and expand and fulfill its destiny.

In its present state, it is truly in a precarious position. Inventories are at an all-time high despite constantly decreasing production. Production for the week ending November 3, 1950 (the week the excise tax took effect) was 218,000. For the last week in June 1951, it was 27,000 and the following week it was 13,000. Despite the continual production decreases, factory inventories have risen steadily from 53,000 on November 3 to 740,000 on July 6, each week seeing an increase.

A situation just as bad, if not worse, exists with dealers.

The bankruptcy rate among dealers has risen rapidly and threatens to go even higher. Dealers, generally, do not have the capital to hold large inventories or to afford losses on conversion of inventory to cash to meet payrolls, rent, and other ordinary expenses. In that way, another source of Government revenue is being dried up.

At this point, it is not a case of needing curbs on production to release materials for defense. The industry is not even close to using its allowables, and materials already have been converted to inventory serving no healthy purpose.

This is not just a case of relief for a suffering industry. It calls for relief, sure, as a matter of good economics but what is important from the standpoint of revenue, it calls for constructive action to prevent revenue sterility of components of the industry. We contend that constructive action would consist of removal of the 10-percent excise levy and would result in greater benefits to the Treasury and to accomplishment of policy aims of other Government interests.

THE AMERICAN JERSEY CATTLE CLUB,
COLUMBUS, OHIO, *August 7, 1951.*

Senator WALTER F. GEORGE,
Chairman, Senate Finance Committee,
Senate Office Building, Washington, D. C.

DEAR SENATOR GEORGE: We are writing on behalf of 80,000 Jersey dairy farmers, many of whom have been harassed by the conflict between the regulations and rulings of the Bureau of Internal Revenue and the judgments and opinions of the courts (including the Tax Court) in the application of section 117 (j) (1) of the Revenue Code as it relates to the sale of dairy cattle. The proposed amendment in the bill (H. R. 4473) now before your committee will not, in our opinion, contribute to clarify the conflict but will serve to generate more confusion, problems, and litigation, the cost of which will mean hardship for thousands of small dairy farmers throughout the country.

We urge you to take into consideration that the primary business of the dairy farmer is the production and sale of milk and dairy products and, as a necessary incident of which, he must either buy or breed dairy animals to maintain his herd and its production to conform to the varying market for his product on the one hand and his ability to maintain (produce feed for) his herd, neither of which is within his control. In other words, to survive he must keep his operation in balance with the two controlling elements above referred to. This was ably treated and made clear by Judge Riddick of the Eighth United States Circuit Court of Appeals in the Albright case (173 Fed. 2d 339). In relation to this problem, we do not believe that there is any parallel in industry to the dairy farmer. The nearest comparison might be said to be a manufacturer who, for lack of a market for his product, a labor shortage, or other cause, finds it necessary to discontinue the operation of a portion of his production machinery. In such a situation he can do so and leave them idle at a cost of his depreciation, or he can sell the unused, and then surplus, machines, in which case, if he realizes a profit, no one, in or out of the Bureau of Internal Revenue, would question the fact that the transaction constituted the sale of capital assets and any gain was therefore taxable as a long-term capital gain.

The situation of the dairy farmer with reference to a lost or lagging market for his product is the same except that if he does not sell, he must maintain and feed (what to him is) his "production machinery" and manifestly constituting a capital asset. It is clear that in such a situation a dairy farmer could not long survive.

It must also be recognized and taken into consideration that no dairyman, though well qualified and efficient, can either control or foresee the results of the forces and uncertainties of nature. While great progress is being made in the science of breeding and breeding control and also the control of disease, the uncertainties involved in any breeding schedule or program and the ravages of disease place the dairyman in a situation where he must be able to control his capital investment in his "production machinery" (dairy animals) by the sale, when necessary or economically advisable, of his surplus cattle on a taxable par with other producers of commodities for sale.

In lieu of the proposed amendment we suggest, and urge for your consideration, the following:

"Such term also includes draft, breeding, or dairy livestock held by the taxpayer for 12 months or more, which livestock was not produced or acquired primarily for sale by the taxpayer."

In advocating the adoption of this amendment, we are asking for no special privilege, only that which appears to be fair, just, and equal treatment, at the cost of little and diminishing revenue to the Government but of tremendous importance to the future of dairy farming throughout the country.

Respectfully submitted.

THE AMERICAN JERSEY CATTLE CLUB,
FLOYD JOHNSTON, *Executive Secretary.*

MASSACHUSETTS SOCIAL SECURITY ASSOCIATION, INC.,
Framingham, Mass., July 21, 1951.

Senator WALTER GEORGE,
Chairman, Senate Committee on Finance,
Washington, D. C.

DEAR SENATOR: The writer called at the office of your committee last week and was informed that information suggested by him would be given consideration by your committee.

Accordingly, the writer respectfully submits for the consideration of your committee the following record:

Exhibit A.—Comparison of the operation of the Boston Federal Reserve Bank with the Bank of Canada showing that the Boston Federal Reserve Bank, doing about the same amount of business so far as providing money in each case about $1,400 million of currency outstanding, makes a loss compared with Canada of $121 millions a year besides the loss in local and States taxes of any revenue from taxation that would run to the State and cities and towns.

On that basis our Federal Reserve System is so bad that the cost to the people of this country is more than 3 billions a year besides putting in the control of private bankers the monopoly that in my opinion is the cause of high taxes by the failure to provide an adequate supply of money.

In support of this statement besides the comparison of the record of the Bank of Canada and the Boston Federal Reserve Bank, there is an opinion by Robert L. Owen who guided the finances of this country during World War I without any material debt and with low taxes and no interference with the internal affairs of the States and no meddling by Federal collection of payroll taxes for extortion of money from taxpayers before the end of the taxable year.

There is also enclosed exhibit B that indicates a way to provide an adequate supply of money as provided under the guidance of Robert Owen and reduce the Federal debt to one-half the amount now outstanding.

This would also make free for possession by the United States Treasury all the gold certificates that are now in the hands of private bankers who control the Federal Reserve System. This also would provide the means to use those gold certificates by our European allies or others to provide a system of money and currency and relieve this country from any dictatorship or internal management of affairs of our European allies.

The present guardianship by the United States of the internal affairs of our European allies seems to indicate they are so helpless and incompetent that they can't run their own affairs.

This also will relieve the United States from any occupation of any country by the United States troops.

If advisable, money and credit provided under this system would produce local armies made up of citizens of each country and relieve the United States of the stigma that the United States is trying to be the dictator of a great part of Europe and of the world.

There is also enclosed exhibit C which is a copy of the last annual report of the Bank of Canada, showing how simple and wise Canada is in this branch of its public affairs. It would seem to me that if Canada has set this example for the United States that this country should do as well or better in this branch of our Government.

Yours truly,

MASSACHUSETTS SOCIAL SECURITY ASSOCIATION, INC.,
RICHARD H. LONG, *Director.*

(Exhibits A and B referred to in the above letter follow. Exhibit C has been made a part of the official record and is on file with the committee.)

EXHIBIT A

Comparative statement of condition of Boston Federal Reserve Bank and Bank of Canada

BOSTON FEDERAL RESERVE BANK

And the Boston Federal Reserve Bank a loss for 1949	101,363,145.00
The Bank of Canada appears to have wiser business methods by	121,250,693.41

At that rate if the United States can follow Canada's leadership in banking, there will be a saving of more than 3 billions a year.

Twenty-five years ago today, Woodrow Wilson, in the presence of members of his Cabinet, chief executive officers, the leaders of the United States Senate and House of Representatives, approved the Federal Reserve Act. Three solid gold penholders and pens had been prepared for the occasion. Three original copies of this act were printed in parchment and signed by Hon. Champ Clark, Speaker of the House of Representatives; Hon. Thomas R. Marshall, President of the Senate; and the President of the United States.

One of these copies went to the Secretary of State, Hon. William Jennings Bryan, for permanent record. One of the copies was presented to Hon. Carter Glass, chairman of the Committee on Banking and Currency of the House of Representatives, and one was presented to the chairman of the Committee on Banking and Currency of the United States Senate. One of the gold pens was given to Hon. William Gibbs McAdoo, Secretary of the Treasury; one to Hon. Carter Glass; and one to the chairman of the Senate committee.

This act was generally regarded as the greatest achievement of that administration.

Under this act $40,000,000,000 of liquid money was created to finance the World War. It financed not only the United States, but financed to the extent of billions of dollars, Great Britain, France, Italy, and their allies. "That one act won the war," said John Skelton Williams, Comptroller of the Currency.

The United States came out of this war in a highly prosperous condition. This prosperity was the result of the expansion of credit and currency which enormously stimulated production and employment.

In 1921 those in control of the Federal Reserve System contracted credit and currency by the use of the great powers of the Federal Reserve Act. It resulted in depression.

Again in 1929–32 another depression followed the contraction of the money supply. And a third depression took place in 1937 from a similar cause.

The Federal Reserve System is supported by men of all parties. Under no circumstances should it be considered in a partisan light. The operation vitally affects the economic and financial condition of the entire country, including the Government itself.

There is lacking in the United States an informed public opinion as to the cause and cure of depression.

With the hope of laying the foundation for a better understanding of the principles of the Federal Reserve System and the use of its powers to restore prosperity and prevent future depression, this commentary is submitted for the considerate judgment of leaders of public opinion in the United States.

EXHIBIT 13

Plan to—

Refund the public debt.
Restore real value of United States bonds.
Protect solvency of insurance companies and banks.

Provide adequate funds for financing private and public business in the United States.

Increase interest by savings banks.

Offer option to all bond and security holders, including gold certificates, 50 percent in new bonds with 5 percent interest payable in 10 years, 50 percent in new United States money.

Establish a United States bank to take over Federal Reserve System.

Provide United States money enough to permit banks to carry 25 percent of demand deposits in legal-tender money and report financial condition showing legal-tender money on hand.

Provide United States money enough for business having consideration of prices of food and other living costs.

This will provide the following conditions:

Under this plan suggeted by the writings and policies of Robert L. Owen, author of the Federal Reserve Acts, the following results will be available:

United States public debt	$125,000,000,000
Lawful money in circulation	75,000,000,000
Lawful money in banks	25,000,000,000
Lawful money in U. S. Treasury	25,000,000,000
Taxable property increase	50,000,000,000
United States gold free of debt	22,000,000,000

This condition will permit business in the United States to extend trade and commerce with Canada and other countries and increase wealth and employment in the United States.

This condition will permit loaning friendly allies 5 billions of gold to establish an adequate money and currency supply and save the United States from issuing bonds to loan money to allies.

By this plan the following can be provided with the following benefits and protection:

Income-taxes maximum, 25 percent.

Individual income tax minimum exemption, $2,000.

Abolition of all advance estimate of income for tax purposes and no more payroll deductions.

The United States will collect and levy taxes only after end of taxable year.

Benefits

Estimated increased individual income by 50 billions.

This plan will permit loan of 5 to 10 billions of United States gold to European allies for a basis for currency and make them free financially and no more burden to our taxpayers.

Protection

This plan will save commercial banks from impending bankruptcy as they are now running with only 2 percent of demand deposits in legal-tender money and making false reports of cash on hand.

Statement of National Lawyers' Guild, New York, N. Y.

ESSENTIALS OF AN EQUITABLE TAX PROGRAM

In fashioning the new tax program, there is an insistent and primary need to hold fast to the basic principle that taxes should be fair and nondiscriminatory and imposed in accordance with ability to pay. This means that special privileges in our tax laws should be eliminated. It means that taxes which cannot be adjusted to differences in income or family responsibility, such as sales taxes, should be avoided. It means that undue profits should be recaptured wherever they occur. Unreasonable profits are not necessary in order to achieve maximum production with economical business management. Our people will not tolerate the retention of undue profits at a time when men called into military service are asked to make the utmost sacrifice. And, finally, tax burdens should not be imposed which undermine the health, strength, and morale of the American people.

TREASURY'S TAX PROPOSALS

The Treasury's program for $10 billion in new revenues contemplates raising an additional $3 billion from the corporation income tax, $4 billion from the individual income tax, and about $3 billion from selective increases in excise tax rates. The Treasury also recommended that loopholes be closed.

The principal changes recommended by the Treasury for raising the additional $10 billion are as follows:

1. *Corporations.*—The normal tax rate would be increased by 8 percentage points. Thus, the normal tax rate would rise from 25 to 33 percent. On net income over $25,000, the combined rate would increase from 47 to 55 percent. Income subject to excess-profits tax would be taxed at 85 percent (now 77 percent). The combined 62-percent ceiling rate for excess-profits and income tax would be raised to 70 percent.

2. *Individuals.*—The rate in each income-tax bracket would be raised by 4 percentage points. The effective 25-percent rate on long-term capital gains would be raised to 37½ percent for both individuals and corporations. Instead of the 6-month holding period for a long-term capital gain, the holding period would be increased to 1 year.

3. *Excise taxes.*—An increase of one-third to one-half in the tax rates on alcoholic beverages, cigarettes, and cigars to raise over $1.2 billion. The yield of the gasoline tax to be increased $580 million by raising the present tax of 1½ cents per gallon to 3 cents. About $1.1 billion to be raised by increasing the tax on passenger automobiles from 7 to 20 percent of the manufacturer's price and increasing the rate of other manufacturers' excises on durable goods (refrigerators, radios, electric appliances, phonographs, etc.) from 10 to 25 percent.

REVENUE ESTIMATES AND MAIN PROVISIONS OF HOUSE BILL (H. R. 4473)

H. R. 4473 (the proposed Revenue Act of 1951), which passed the House on June 22, is estimated to raise an additional $7.2 billion in a full year of operation.[1] As noted in the Ways and Means Committee Report, "this is the largest amount of additional money collected from a tax bill in the history of this country." Together with $6.1 billion obtained under the Revenue Act of 1950 and the $3.9 billion under the Excess Profits Tax Act of 1950, the annual increase in Federal revenues since 1950 totals $17.2 billion. It is anticipated that with the enactment of H. R. 4473, tax collections in the fiscal year 1952 will total $66.3 billion.

The major changes provided in H. R. 4473 are: (1) Individual income taxes are raised by 12½ percent effective September 1, 1951 (yield, $2,854 million increment); (2) heads of households are given half the benefits of income splitting for future years (loss: $56 million); (3) the income-tax rate on corporations is raised by 5 percentage points, increasing the combined normal tax and surtax on profits above $25,000 from 47 to 52 percent, yielding $2,085 million additional; (4) the excess-profits credit is lowered to include only 75 percent rather than 85 percent of 1946–49 earnings (yield: $732 million increment); (5) major changes in the excise taxes provide increases on alcoholic beverages, tobacco, gasoline, and automobiles and impose a new tax on wagering; (6) withholding on dividends and certain interest and royalty payments.

While the House bill increases the tax burden on those with little incomes by reason of the 12½-percent increase in individual income taxes and the increases in excise taxes, it fails completely to close any of the glaring loopholes now found in the income-tax structure. Ironically, the Ways and Means Committee did in fact expand the avenues of tax escape. The income-splitting feature is extended to family heads; family partnerships, invalidated under court decisions, are validated permitting income-splitting among members of the family; percentage depletion, instead of being restricted, is extended to a long list of nonmetallic minerals, and increases the percentage allowance for coal from 5 to 10 percent; coal royalties will be taxed at low capital-gains rates. The Treasury estimates that $550 million will be lost annually (full year's operations) because of the revenue-losing provisions incorporated in the House bill. Thus, those with real ability to pay are allowed to escape their share of taxes which loss must be borne by the public by additional tax burdens. Special privileges are extended at the very time that increased revenues are demanded from those with insufficient incomes to maintain minimum standards of health.

---

[1] The increase in tax liabilities by $7,200 million is broken down as follows: Individual income tax, $2,847 million; corporate income and excess-profits tax, $2,855 million; excise taxes, $1,252 million; structural changes, $245 million; total, $7,199 million.

THE PAY-AS-YOU-GO CONCEPT

The Treasury continues to advocate raising $10 billion in additional revenues toward the end of balancing the budget. The fetish of an annually balanced budget may, however, be detrimental to the national interests. However desirable the goal of a balanced budget, the period over which it should be achieved cannot be arbitrarily fixed within the 12-month span constituting a fiscal year. Budget policy and tax policy should aim to promote the economic and social welfare of the people and the national interests. The dangers of an inflexible policy of seeking an annually balanced budget have been set forth by Randolph E. Paul, formerly Tax Adviser to the Secretary of the Treasury during World War II:

"One thing that we must get out of our heads is the obsolete concept of the annually balanced budget, which has been derived in part from a false analogy to the individual's budget. The dogma of a balanced budget often fails to fit the economic situation. Although at times a balanced budget may be desirable, at other times it would be disastrous."[2]

The tax load to be assessed against individuals and business enterprises cannot be controlled by the single consideration of an annually balanced budget. Nor can oppressive taxation be justified by declaiming against any increase in the public debt. Care must be exercised that taxation and other policies advocated in the name of keeping down the public debt do not exert such a depressing effect upon the national economy as to result in an actually heavier debt burden. Here it is well to recall Mr. Paul's observations on the national debt:

"It is at least clear that the national debt is no occasion for black defeatism. What we need is a new outlook. We need to exercise the old-fashioned taboo against the national debt. The debt does not betoken economic ruin; it can be maintained indefinitely. This country has not been wholly out of debt since 1837. We need to recognize clearly that public debt is unlike private debt."

The important principle to keep in mind is that taxes should be levied from sources able to pay and that no arithmetic figure can arbitrarily be chosen to measure the tax burden. Oppressive tax burdens which undermine the health and morale of the people cannot be justified by appeals for a balanced budget or a managed public debt.

THE INEQUITY OF OVERTAXING THE LOW-INCOME GROUPS

In his appearances before the congressional committees, Secretary Snyder stressed the point that the low-income groups must be taxed if the revenue goals are to be reached. Thus, before the Ways and Means Committee on February 5, 1951, Secretary Synder stated: "It is estimated that 83 percent of all taxpayers and 58 percent of their taxable income is accounted for by the income groups below $5,000. This concentration of income must be kept if the tax is to raise enough revenue."

This thesis presupposes that revenues cannot be raised from other sources—a thesis not supported by the facts—and wholly overlooks the critical question as to whether the low-income groups can or should properly bear and tax burdens beyond existing levels.

Here it should be noted that families earning under $5,000 annually are already heavily taxed. Thus, according to estimates of the United States Treasury, over $8 billion will be collected from these families in income taxes alone during 1951, on the basis of existing tax levels. Billions more will be paid by low-income families by reason of the excise taxes levied on cigarettes, beer, gasoline, cosmetics, and other consumer goods.

One must not overlook that the tax rates now imposed on the low-income families are already near the peak rate of World War II. Because of rising prices, the $600 exemption allowed for each dependent actually buys much less food, clothing, and shelter than the $500 exemption (then submarginal) allowed during World War II. Democracy in taxation would require an upward revision of the $600 exemption per capita to enable American families to maintain at least minimum standards of health and decency.

The simple fact is that millions of families are already paying Federal income taxes although their savings cannot support the minimum requirements of decent family living. The United States Department of Labor recently released findings which showed that a city family of four required a minimum of from

[2] Paul, Randolph E., Taxation for Prosperity, p. 228.

$3,453—in New Orleans—to $3,038 in Milwaukee—to maintain minimum standards of health and decency. Families with earnings below these minimum levels will be required to pay more than $3 billion in Federal income taxes alone in 1951. Taxes exacted from such families are, in fact, taken from people whose living standards are already below the acceptable minimum. It is indeed callous thinking to advocate additional burdens on the already heavily burdened low-income families merely because there are so many of them and because statistically they may constitute a large majority of all taxpayers. These low-income families need every penny of their earnings to make both ends meet and are already overtaxed very heavily.

In order to place the individual income tax structure on an equitable and democratic foundation, which requires exemptions adequate to maintain minimum standards of health and decency, the lawyers recommends that a single person have an exemption of $1,200 (instead of the existing $600) and that married couples have an exemption of $1,800 (instead of the existing $1,200). Thereunder a family of four would pay no income tax if its gross income were less than $3,330. Elemental decency requires that those with real ability to pay should be called upon to bear their fair share of additional revenues. There can be no justification for special privilige.

The contrast in income and expenditures between the upper-income and lower-income families is strikingly revealed in the findings of the Consumer Income Studies of the Federal Reserve Board of the National Income Statistics of the United States Department of Commerce. In 1948, the top tenth of American families by income (those earning $6,000 and over) received 20 percent of the money income after payment of taxes, a total of about $51 billion. After setting aside about $9 billion in savings—these families accounted for practically all of the savings—they had about $42 billion left they used for personal consumption.

Up to 50 percent of American families at the bottom of the income ladder earned only 25 percent of the income—about $44.5 billion. These low-income families—all of whom earned less than $2,840 in 1948—had no net savings; they actually went $2 billion in debt in order to spend about $46.5 billion in consumption—hardly more than was spent by the highest income 10 percent of the families at the crest. Surely, the incomes in the top brackets should be taxed more heavily before considering reducing the living standards of low-income families still further.

The 1949 survey of consumer finances provides some interesting information about the families purchasing durable goods—automobiles, furniture, television sets, radios, and household appliances. In 1949, 41 percent of the total expenditure for these items was made by the 20 percent of the families at the top of the income ladder, while the lowest-income 60 percent of the families at the bottom accounted for only 36 percent. It is not the low-income groups in this country whose buying power is exerting inflationary pressure on durable goods—it is the family at the top of the income ladder.

It is, therefore, sound anti-inflationary policy to siphon off as much as possible of the incomes of the higher-income brackets, through income and corporation taxes, and to resist all attempts to increase the tax burdens on low-income groups, through sales taxes, higher tax rates or otherwise. Thereby the incomes which threaten inflation will be diverted without impairing the health and stamina of those families which have insufficient earnings to maintain the minimum requirements of health and decency.

LAWYERS' GUILD TAX PROGRAM

The National Lawyers Guild advocates a four-point program for the Revenue Act of 1951:

I. Eliminate special privileges and close existing loopholes in our tax laws to yield an additional $4 billion.

II. Overhaul the gift-estate tax structure to produce an additional $1 billion.

III. Increase taxes on corporations mainly through revision of the excess-profits tax to yield at least $5 billion.

IV. Increase personal exemptions for a married couple to $1,800, and $1,200 for a single person.

Under this program there will be no necessity to increase the rates of any brackets in the individual income tax. And there will be no necessity to increase excise taxes. The program here advocated would tap ability-to-pay sources and remove inequities in our Federal tax system. In the succeeding sections we detail the concrete proposals necessary to effectuate the first three points of our program.

Point I. Elimination of special privileges

1. *Income splitting.*—The split-income provisions introduced in the Revenue Act of 1948 granted generous bounties to upper-bracket couples, the bounty increasing with a rise in income. It is no answer to say that universal income splitting was adopted in order to "correct" tax discrimination between residents of community and noncommunity property States. If one State were plague-ridden while the other healthy, no one would suggest introducing bacteria into the healthy State to achieve equality between the two States. But this is precisely what was done in the income-splitting provision. The unwarranted favoritism enjoyed by residents in community States, instead of being eliminated, was projected into all non-community-property States. Instead of mandatory joint returns, advocated by the Treasury during the Roosevelt regime, universal income splitting was enacted. Secretary Snyder, in his testimony before the Ways and Means Committee in February, made no concrete-recommendation to eliminate this inequitable provision. He stated: "The committee will undoubtedly want to examine this problem in all its implications before completing this year's tax legislative program." In contrast to this noncommittal attitude, the Secretary, in referring to the income groups below $5,000, stated: "This concentration of income must be kept if the tax is to raise enough revenue." The continuance of the income-splitting provision undermines the income-tax structure as a progressive instrumentality. It should be eliminated at this session in the present revision of the tax system. But instead of eliminating the inequitable income-splitting program, the House has extended this feature (to the extent of 50 percent) to heads of households.

2. *Percentage depletion.*—Percentage depletion is a glaring inequity which should forthwith be eliminated. Taxpayers should hereafter be permitted to obtain depletion only on a cost basis. Under existing law, owners of oil wells and mines are allowed to deduct 27½ percent of gross income in the cases of oil and may amount to 50 percent of the net income. But unlike other capital recovery allowances, percentage depletion continues to be deductible even after the entire investment has been recovered tax-free. Thus, the total deductions may ultimately equal many times the taxpayer's actual investment.

On top of these overgenerous depletion allowances, oil producers are permitted to make immediate deductions of their expenditures for drilling and development. Capital investments thus written off do not in any way reduce future percentage depletion deductions. Thus, the oil producer receives a double deduction with respect to the same capital investment. In this manner, tax liabilities running into hundreds of millions of dollars each year are wiped out—which depletion in revenues must, of course, be offset by higher taxes on those less favored.

The Treasury proposed that the rate of percentage depletion be reduced to 15 percent of gross income for oil, gas and sulfur, and to 5 percent for nonmetallic minerals. The Guild proposes that depletion be permitted only on a cost basis—a recommendation made by the Treasury in considering the 1942 revenue bill. In addition, the existing option to capitalize or expense intangible drilling and development costs should be eliminated for both oil and gas wells and mines, and hereafter such costs should be charged to capital account.

If it is desired to offer a tax advantage as an inducement to new discoveries, we suggest that percentage depletion at a rate of 15 percent be allowed to a taxpayer who in the future discovers a new pool of oil or gas—each new zone or horizon being considered a new pool. This allowance of percentage depletion should be limited to those taxpayers who contribute substantially toward the cost of the exploratory well. As to metal mines, and nonmetal mines or deposits including coal mines developed in the future, the allowance should be 10 percent and 5 percent, respectively.

In this important area, the House, instead of curtailing depletion allowances, has in fact provided for additional percentage depletion allowances.

3. *Tax-exempt securities.*—For years the Lawyers Guild has been a leading advocate of the termination of immunity from tax of interest on all intergovernmental securities, both outstanding and future issues. The law now provides for the taxation of all interest on Federal securities issued since March 1, 1941. Because of tax-exemption clauses which appeared in many of the outstanding issues of Federal securities issued prior to that date, the interest thereon cannot be reached. No action has been taken, however, with respect to the interest on future or outstanding State and local securities. Through tax-exempt securities, persons with large taxpaying ability find themselves in a sheltered

position. The holders of such tax-exempt securities are obtaining what are essentially windfall profits at a time when heavy burdens are imposed upon large sections of the population.

If this burden were not so heavy, there would be much to be said for the gradual elimination of this tax immunity by starting with a tax on interest on future issues only. But this gradual approach is unacceptable in the face of the heavy demands made by the National Government. We, therefore, recommend repeal of the present exemption applicable to outstanding issues of State and local securities.

In the case of State and local securities, there has never been any contract or moral commitment between the Federal Government and the security holders or the State and local governmental authorities regarding Federal taxation. Since the Supreme Court decision in the case of Graves against O'Keefe in 1939, the power and moral right of the Federal Government to tax the income from State and municipal securities is unchallenged.

A tax system cannot be defended which calls upon the great mass of our taxpayers to shoulder unprecedented tax burdens and yet permits persons with large tax-paying ability to escape their share of the tax load by investing in tax-exempt securities.

4. *Capital gains.*—The treatment of capital gains is another glaring example of a special privilege in our tax law. The maximum effective date on long-term capital gains (where the assets has been held for more than 6 months) is only 25 percent; and may be included to the extent of 50 percent in taxable income and subjected to regular rates if this results in a lesser tax.

The "capital gain" provision first introduced into our revenue legislation by the 1921 act and retained with changes in later acts was originally designed primarily to save from prohibitive surtaxes profits of individuals derived from the sale or exchange of capital assets representing an increment in value over a period of 2 years or more. This principle was implemented by including a percentage of the capital gain in income. Thus, under the 1934 act, 100 percent of the gain was taxable if the capital asset has been held for less than a year, 80 percent if held for more than 1 year and less than 2 years, 60 percent if held for more than 2 but less than 5 years, 40 percent if held for more than 5 but less than 10 years, and 30 percent if the capital asset had been held for more than 10 years. By taxing only a percentage of the total capital gain, the effect of lumping the total capital gain in a single year was counteracted. During the early revenue acts, however, there was no ceiling on the effective rate. The relief was afforded by reason of the fact that only a percentage of the total capital gain was subjected to the regular rates.

The current Treasury proposal is that the alternative capital-gains rate be increased from 25½ to 37½ percent—an increase of 12½ percent—and also that the unduly short holding period of 6 months be lengthened to 1 year. The House increased the liability under the present 25 percent rate by 12½ percent, raising the alternative rate to 28.1 percent, retaining the short holding period of 6 months. This puny increase fails utterly to meet the problem.

Viewed in this historical background, it becomes apparent how overgenerous are the present provisions. Thereunder, a capital asset held for 9 months—less than 1 year—is subject to a maximum effective tax of 25 percent. But clearly, under such circumstances, the gain having been realized within the period of 1 year, there is no occasion for affording relief, since the increment in value was realized within the period of one taxable year. And, ironically, the maximum effective rate on capital gains, namely, 25 percent, is only slightly higher than the initial rate in the lowest tax bracket. But, surely, relief from the higher tax levy over a period of years into a single tax year does not justify a tax levy at the rate applicable to the bottom rungs in the present tax ladder. If a taxpayer, for example, were in the 75-percent bracket during the period when he held securities or other capital assets, the profits from the sale of such securities would be subjected to a minimum of 75 percent, whether the increment in value were taxed each year (although unrealized), but there can be no earthly reason for reducing his tax levy below the level he would have been subject to if the increase in value were taxable annually.

To eliminate the existing favoritism, we should return to the principles originally embodied in the revenue acts. In the interest of equity for all taxpayers in all brackets, capital gains on assets held for less than 1 year should be taxed at 100 percent. For assets held more than 1 year, the principle of including a percentage of the total capital gain should be adopted—with no ceiling as to rates. The rates embodied in the 1934 act present a rational approach to the problem.

If for reasons of simplicity, it is desired to consolidate the categories for holding periods beyond 1 year, we recommend that 75 percent of the gains on assets held for more than 1 year and less than 2 years be taxed as ordinary income, and that 50 percent of gains be included in ordinary income for assets held for more than 2 years. These recommendations will not only restore rationality and equity in the tax treatment of capital gains but will also tend to curb speculation and at the same time provide a more effective taxation of speculative profits.

Point II. Estate and gift taxes

Estate and gift taxes should be overhauled and strengthened in the interests of distributing the tax burden fairly. The structure of the estate and gift taxes permits large amounts of transfers to be made with no tax or at a very low tax rate. The defective structure stems principally from: (1) The double exemptions available under the gift tax ($30,000) and the estate tax ($60,000); (2) the opportunity to escape the higher estate tax rates by making gifts subject to lower tax rates; (3) the low levels of the present rate schedules; and (4) the excessively favorable treatment of property placed in trust for several generations. These defects were accentuated by the estate and gift-splitting provisions introduced by the Revenue Act of 1948.

We recommend that the gift and estate taxes be integrated into a single coordinated system with a single exemption and a single set of rates, progressively graduated. The estate and gift-splitting revisions should forthwith be repealed. The preferential tax treatment now enjoyed by property placed in trusts should be terminated so that this category of transfer should bear its appropriate tax burden. New revenues of $1 billion could be raised by overhauling the estate gift tax structure along the lines here proposed.

Point III. Corporate taxes

Corporate profits have risen spectacularly during 1950 to reach the highest levels on record, as sales and prices climbed to new highs. The volume of dividends swelled to new all-time highs and undistributed profits were the second highest on record. According to statistics submitted by Secretary Snyder at the hearings before the House Ways and Means Committee, corporate profits at the end of 1950 were running at the annual rate of $48 billion. At this rate, Federal, State, and local corporate taxes, including the excess profits tax, would absorb $23.5 billion, leaving $24.5 billion after taxes. Thus, corporate profits after taxes would approach the peak level of profits before taxes during World War II. In 1943—the peak year—corporate profits before taxes reached $25.1 billion; and, after taxes of $14.4 billion, corporate profits after taxes amounted to $10.6 billion.

We recommend that an additional $5 billion be raised in corporate taxes, mainly through revision of the excess profits tax. Even after the impost of this $5 billion additional tax, corporations would retain profits, after taxes, above the level existing during 1946–49, a period of unusual and sustained prosperity. Corporations would thus have available adequate funds for dividends and expansion.

The bulk of the increased corporation tax should fall on excess profits. Taxes paid from excess profits have less disrupting effects on business than taxes which are generally applicable to all corporate earnings irrespective of the rate of return. A tax which absorbs excess profits still leaves the corporate taxpayer with a sufficient margin of income for dividends and safety. On the other hand, a tax which dips too deeply into the incomes of low-earning corporations may seriously affect their debt-paying capacity, if not their very existence. It is significant that big business stoutly resists excess profits taxation, preferring higher "normal taxes" which fall on all corporations.

The newly enacted excess profits tax is unnecessarily generous and is not designed to tax effectively the sources from which emanate those profits which must be looked upon as excess in the harsh light of current events.

The theory of the new excess-profits tax is that a "normal" standard of earnings is the higher of (*a*) 85 percent of the average of the incomes of the best 3 out of 4 years in the 1946–49 period or (*b*) 12 percent on the first $5 million of invested capital, 10 percent on the next $5 million and 8 percent on amounts over $10 million. Profits above that are deemed "excess" profits taxable at 30 percent, but a ceiling rate of 62 percent is provided which can have the effect of cutting down the corporations' excess-profits tax liability. In addition, numerous relief provisions limit the amount of profits subject to this tax.

Because of high earnings of some companies during 1946–49 or because of the high capitalization of others, the excess profits tax is weak and ineffective. The

If for reasons of simplicity, it is desired to consolidate the categories for holding periods beyond 1 year, we recommend that 75 percent of the gains on assets held for more than 1 year and less than 2 years be taxed as ordinary income, and that 50 percent of gains be included in ordinary income for assets held for more than 2 years. These recommendations will not only restore rationality and equity in the tax treatment of capital gains but will also tend to curb speculation and at the same time provide a more effective taxation of speculative profits.

Point II. Estate and gift taxes

Estate and gift taxes should be overhauled and strengthened in the interests of distributing the tax burden fairly. The structure of the estate and gift taxes permits large amounts of transfers to be made with no tax or at a very low tax rate. The defective structure stems principally from: (1) The double exemptions available under the gift tax ($30,000) and the estate tax ($60,000); (2) the opportunity to escape the higher estate tax rates by making gifts subject to lower tax rates; (3) the low levels of the present rate schedules; and (4) the excessively favorable treatment of property placed in trust for several generations. These defects were accentuated by the estate and gift-splitting provisions introduced by the Revenue Act of 1948.

We recommend that the gift and estate taxes be integrated into a single coordinated system with a single exemption and a single set of rates, progressively graduated. The estate and gift-splitting revisions should forthwith be repealed. The preferential tax treatment now enjoyed by property placed in trusts should be terminated so that this category of transfer should bear its appropriate tax burden. New revenues of $1 billion could be raised by overhauling the estate gift tax structure along the lines here proposed.

Point III. Corporate taxes

Corporate profits have risen spectacularly during 1950 to reach the highest levels on record, as sales and prices climbed to new highs. The volume of dividends swelled to new all-time highs and undistributed profits were the second highest on record. According to statistics submitted by Secretary Snyder at the hearings before the House Ways and Means Committee, corporate profits at the end of 1950 were running at the annual rate of $48 billion. At this rate, Federal, State, and local corporate taxes, including the excess profits tax, would absorb $23.5 billion, leaving $24.5 billion after taxes. Thus, corporate profits after taxes would approach the peak level of profits before taxes during World War II. In 1943—the peak year—corporate profits before taxes reached $25.1 billion; and, after taxes of $14.4 billion, corporate profits after taxes amounted to $10.6 billion.

We recommend that an additional $5 billion be raised in corporate taxes, mainly through revision of the excess profits tax. Even after the impost of this $5 billion additional tax, corporations would retain profits, after taxes, above the level existing during 1946–49, a period of unusual and sustained prosperity. Corporations would thus have available adequate funds for dividends and expansion.

The bulk of the increased corporation tax should fall on excess profits. Taxes paid from excess profits have less disrupting effects on business than taxes which are generally applicable to all corporate earnings irrespective of the rate of return. A tax which absorbs excess profits still leaves the corporate taxpayer with a sufficient margin of income for dividends and safety. On the other hand, a tax which dips too deeply into the incomes of low-earning corporations may seriously affect their debt-paying capacity, if not their very existence. It is significant that big business stoutly resists excess profits taxation, preferring higher "normal taxes" which fall on all corporations.

The newly enacted excess profits tax is unnecessarily generous and is not designed to tax effectively the sources from which emanate those profits which must be looked upon as excess in the harsh light of current events.

The theory of the new excess-profits tax is that a "normal" standard of earnings is the higher of (*a*) 85 percent of the average of the incomes of the best 3 out of 4 years in the 1946–49 period or (*b*) 12 percent on the first $5 million of invested capital, 10 percent on the next $5 million and 8 percent on amounts over $10 million. Profits above that are deemed "excess" profits taxable at 30 percent, but a ceiling rate of 62 percent is provided which can have the effect of cutting down the corporations' excess-profits tax liability. In addition, numerous relief provisions limit the amount of profits subject to this tax.

Because of high earnings of some companies during 1946–49 or because of the high capitalization of others, the excess profits tax is weak and ineffective. The
