LETTERS OF TRANSMITTAL

UNITED STATES SENATE,
COMMITTEE ON FINANCE.

To the Members of the Committee on Finance:

There is transmitted herewith a report to the Committee on Finance by the National Advisory Council on International Monetary and Financial Problems. The National Advisory Council undertook to submit this report, as you may recall, when the committee had under consideration Senate Resolution 103 by Mr. Butler requesting information relative to loans and commitments to foreign governments and other fiscal statistics. In view of the restriction placed upon the information furnished respecting military installations, that information does not appear.

Very truly yours,

EUGENE D. MILLIKIN, *Chairman.*

THE SECRETARY OF THE TREASURY,
Washington, December 18, 1947.

HON. EUGENE D. MILLIKIN,
Chairman, Committee on Finance, Suite 310,
United States Senate.

MY DEAR MR. CHAIRMAN: I am transmitting herewith a detailed report prepared pursuant to my letter to you, dated July 18, 1947, stating that the National Advisory Council was taking the necessary steps to collect the data requested in the proposed Senate Resolution 103. This report covers items 1 to 16, inclusive. Data in response to item 17 of the resolution, now in the course of preparation, will be forwarded shortly.

The work of bringing this material together in accurate and systematic form was done by a committee composed of representatives of the Treasury Department, the Department of State, the Department of Commerce, the Board of Governors of the Federal Reserve System, the Export-Import Bank, and the Securities and Exchange Commission.

Information with respect to military installations abroad as requested in item 8 is separately attached and should be treated as a restricted document.

Very truly yours,

JOHN W. SNYDER,
Chairman, National Advisory Council on International
Monetary and Financial Problems.

TREASURY DEPARTMENT,
Washington, January 13, 1948.

HON. EUGENE D. MILLIKIN,
Chairman, Committee on Finance, United States Senate.

MY DEAR MR. CHAIRMAN: I am transmitting herewith the response to item 17 of the proposed Senate Resolution 103. This is in accordance with my letter to you dated December 18, 1947, transmitting the other material requested in the resolution.

This completes the work on Senate Resolution 103.

Very truly yours,

JOHN W. SNYDER,
Chairman, National Advisory Council on International Monetary and Financial Problems.

FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES AND ITS BALANCE OF INTERNATIONAL TRANSACTIONS

INTRODUCTION

This report is in response to Senate Resolution 103, submitted by Mr. Butler on April 9, 1947, and referred to the Committee on Finance of the Senate. That committee asked the Departments of State and Treasury for comments on the resolution. When these requests were discussed by the National Advisory Council on International Monetary and Financial Problems, the Council offered to supply the data without formal resolution by the Senate. This offer was accepted by the Committee on Finance on June 27.

Senate Resolution 103 listed 17 items as to which information was desired, relating to the international financial position of the United States.

Data on these 17 items have been grouped into six chapters. Additional information has been included where pertinent and data have been supplied with respect to all foreign countries when such was available.

Data in respect to each item is preceded in the report by the item as stated in Senate Resolution 103. A brief statement precedes each set of data explaining any technical points necessary to the understanding and correct use of the data. The first 16 items are largely factual and the data are contained in about 50 tables, many of them quite extensive. The text is primarily descriptive, not analytical.

Chapter I contains a complete record by countries of all loans to foreign countries by the Government of the United States from 1914 to June 1947. It includes information regarding the repayment status of the loans, the extent to which they were utilized and to which they are still unutilized. In addition, information is given regarding the subscriptions made by this Government to the International Monetary Fund and the International Bank for Reconstruction and Development. Although the subscriptions of the United States are not direct loans to foreign countries, they facilitate financial assistance by those institutions in subsequent periods.

Chapter II is devoted to statistical data regarding the creditor-debtor position of the United States as of several significant dates. The data for the earlier dates was, in the absence of official studies, based on private studies. They differ somewhat in completeness and accuracy from studies made more currently and backed by the resources of the Government. This chapter includes a table regarding the total gold and short-term-dollar balances of foreign countries, requested in item 6, and an analysis of the adequacy of those holdings for the purposes for which they are normally held.

2 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

Data regarding the status of American investments in foreign countries are contained in chapter III. Senate Resolution 103 in item 7 called for the legal and actual status of American direct investments in foreign countries. Chapter III includes a short analysis of United States treaties with foreign countries which affect the rights of our citizens to do business abroad and a brief survey of the default status of foreign bonds sold in the United States.

In the chapter on national debts, taxes and incomes—chapter IV—there are shown as complete data as could be obtained relating to the per capita debt and tax burdens of each country and their relation to the national incomes of those countries. Supplementary data are given about the external debts of each country together with some information concerning the interest rates applicable to government borrowing.

The balance of international transactions of the United States is shown in chapter V in standardized form for the period 1914-18 and by years from 1919 to 1947 together with a detailed tabulation of the foreign trade of the United States for 1914, 1932, 1939, and 1946 by major economic groups. Additional to this are data regarding the principal postwar foreign loans made by countries other than the United States and a list of the principal foreign loans made by private institutions in this country.

Chapter VI is devoted to a brief statement, in response to item 17, relating to the problem of servicing the foreign debt to the United States.

CHAPTER I. FOREIGN CREDITS AND OTHER FINANCIAL AID BY THE UNITED STATES GOVERNMENT

This chapter brings together replies to items 2, 3, and 8 in the proposed Senate Resolution 103. It is divided into three main sections: A. Foreign credits, including capital contributions to the International Monetary Fund and International Bank for Reconstruction and Development; B. other financial assistance in the form of lend-lease, civilian supplies, relief and rehabilitation, and financial aid; and C. assets held abroad in the form of installations and surplus property.

Items 2, 3, and 8 read as follows:

Item 2. The total loans made by the United States Government to foreign governments and agencies thereof from 1914 to 1933, inclusive, and from 1933 to the date hereof; itemized for each country, with the repayment history of each.

Item 3. Existing commitments of the United States Government or representatives thereof, including alleged moral commitments, to extend American financial and economic aid to foreign countries and international organizations.

Item 8. The value, classification, and location of United States Government-owned property in foreign countries to December 31, 1946, including installations and surplus property.

A. FOREIGN CREDITS

This section contains data regarding the loans to foreign countries that have been made by the United States Government between 1914 and June 30, 1947, commitments that have been made to extend further loans to foreign countries and the outstanding indebtedness of those countries to this country. World War I intergovernmental debts, as well as loans and credits extended during and since World War II, are included.

Part 1 of this section presents data relative to the World War I loans. This part has been brought up to July 1, 1947. Part 2 contains a series of tables relating to loans and credits to foreign countries by the Government of the United States since 1933. These tables relate to the total commitments, utilizations or disbursements, amounts still available for disbursement as of June 30, 1947, repayments and outstanding indebtedness, also as of the latter date.

Tables 1 and 2 summarize all types of loans, credits, and grants to foreign countries by the United States Government. Further details by countries and by types are given in subsequent tables.

Loans to foreign countries by the United States Government during and just after World War I amounted to \$10,350,000,000. Of this amount, \$7,077,000,000 was cash advanced before the armistice, \$2,533,000,000 was cash advanced after the armistice and \$740,000,000 represents credits extended for surplus property and relief supplies provided foreign countries. On these amounts, \$282,000,000 was paid on principal and \$671,000,000 as interest, prior to the date of funding.

The debts after funding, including amounts not funded by Armenia and Russia, amounted to \$11,909,000,000. This included \$1,716,000,000 of unpaid interest accumulated to the dates of the agreements. On the

4 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

funded debts, \$476,000,000 has been paid on account of principal and \$1,323,000,000 on account of interest.

The serious financial condition of Germany in 1931 led to the proposal for a moratorium by the President of the United States. The condition of Germany affected the ability of other countries to make their payments to the United States because each of our principal debtors had payments due to it directly or indirectly from Germany in amounts somewhat greater than the payments due from it to the United States. Intergovernmental debts servicing was completely suspended for the fiscal year 1932. At the end of that year, however, most of the debts went into default, and for the most part, payments have never been resumed. Altogether, interest accrued and unpaid amounting to \$3,892,000,000 has accumulated and has been added to the total indebtedness (see table 4). Only one debtor country, Finland, has made payments in recent years.

TABLE 1.—Credits to foreign countries by the U. S. Government, through June 30, 1947

(In millions of dollars)

Type	Utilization to June 30, 1947	Payments received to June 30, 1947		Outstanding on June 30, 1947	Unused balance July 1, 1947

Agriculture Department.....	703	456		246	3
Other.....	291	277	9	15	2
Total.....	994	733	9	261	15

¹ The principal of these debts as funded amounted to \$11,577,000,000 and an additional \$127,000,000 of interest was funded under the debt agreements. Unpaid interest accumulated since 1932 amounts for the increase in outstanding indebtedness notwithstanding repayments of principal totaling \$75,000,000.

² The following additional loan authorizations were announced by the Export-Import Bank between June 30 and Dec. 1, 1947: U. S. Scientific Export Association, \$2,500,000; Austria, \$13,505,000; Ecuador, \$3,720,000; Egypt, \$5,600,000; Canada, \$300,000,000; Turkey, \$8,000,000, and Belgium, \$56,000,000. The allocation of European cotton credit to Finland of \$7,500,000 and to Germany of \$19,000,000 were also announced but were not additions to the total.

³ As of Nov. 30, 1947, utilization and outstanding were \$3,350,000,000 and unutilized balance \$400,000,000.

⁴ On Sept. 30, 1947, the total amount outstanding was \$7,982,000,000 and the unutilized balance on Oct. 1, 1947, was \$1,807,000,000.

⁵ On Sept. 30, 1947, the total of outstanding advances was \$148,000,000, while the unutilized balance remained at \$18,000,000.

Source: World War I data, Treasury Department; data from Jan. 1, 1934, to Nov. 30, 1947, Clearing Office for Foreign Transactions, Department of Commerce.

Of the \$10,300,000,000 of loans and other credits extended since 1933, \$9,300,000,000 has been granted and used since 1945. The principal exceptions were loans made by the Export-Import Bank, which was established in February 1934, and loans by the Reconstruction Finance Corporation, of which the largest was the loan to the United Kingdom in 1942. Since the end of World War II, the loan of \$3,750,000,000 to the United Kingdom has been the largest. Export-Import Bank loans to many countries, lend-lease credits partly for postwar shipments and partly in payment of inventories of lend-lease goods suitable for postwar use, and sales of surplus property have accounted for the bulk of credits utilized and indebtedness outstanding (see table 1). The \$10,300,000,000 of credits include \$7,200,000,000 actually disbursed or utilized by the borrowers prior to June 30, 1947, and \$3,100,000,000 not yet utilized on that date. Much of this \$3,100,000,000 was utilized during the 5 months following June 30.

Other financial assistance to foreign countries by the United States Government was dominated by lend-lease assistance to our Allies during the war, amounting to \$47,806,000,000 (see table 2). The United States contribution to the United Nations Relief and Rehabilitation Administration and the provision of civilian supplies for the prevention of disease and unrest by the War and Navy Departments in occupied areas are also important. Some of the amounts shown in table 2 represent outright grants, while others are items as to which terms of repayment were to be negotiated but have not yet been settled. Postwar utilization of these forms of aid amounted, up to June 30, 1947, to \$5,364,000,000. The unutilized balance as of the same date, amounting to \$2,236,000,000 is comprised principally of civilian supply commitments for occupied areas, aid to the Philippine Republic, the aid to Greece and Turkey, and the post-UNRRA aid.

TABLE 2.—Other financial assistance¹ to foreign countries by the U. S. Government, through June 30, 1947

(In millions of dollars)

Type of grant	Authorization to June 30, 1947	Utilization		Unutilized balance July 1, 1947 ²
		July 1, 1945, through June 30, 1947	July 1, 1946, through June 30, 1947	
Lend-lease ³	47,806	1,218	47,806
Civilian supplies.....	3,138	1,499	2,301	837
UNRRA ⁴	2,544	2,445	2,526	16
Post-UNRRA.....	333	333
Aid to Greece and Turkey.....	400	400
Other aid.....	151	15	80	71
Financial aid.....	1,213	199	632	580
Total.....	55,583	5,364	53,347	² 2,236

¹ Some of these items were outright grants, while others were subject to negotiations as to terms of repayment. The amount of credits extended or cash received as a result of negotiations have been deducted from these amounts.

² Committed but not all appropriated (see explanatory notes, table 18). Utilizations in the quarter ending Sept. 30, 1947, are estimated to reduce the unutilized balance on Oct. 1, 1947, to about \$1,700,000,000.

³ Excluding cash lend-lease.

⁴ Utilizations here reported reflect lag in fiscal records; authorizations are understated to extent of the same lag, estimated at about \$150,000,000 as of June 30, 1947, which would bring the total authorization to \$2,700,000,000.

6 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

WORLD WAR I INDEBTEDNESS OF FOREIGN GOVERNMENTS TO THE UNITED STATES (1917-21)¹

Origin

The United States made loans to the Allied Governments before and after the Armistice for the purpose, in general, of assisting those governments to purchase supplies in the United States in connection with the prosecution of the war. In addition the United States, after the Armistice, sold surplus war and relief supplies on credit to various countries of Europe, including some of the Allied Governments. At the conclusion of the war period the Treasury held obligations of 20 nations, payable either on demand or within a short period of time.

The United States acquired obligations of foreign governments as a result of (1) cash advances made under authority of the various Liberty Bond acts; (2) sales on credit of surplus war material under authority of the act of July 9, 1918; (3) sales on credit of relief supplies under authority of the act of February 25, 1919; (4) sales on credit for relief purposes of flour by the United States Grain Corporation under authority of the act of March 30, 1920; and (5) services rendered by the United States Shipping Board Emergency Fleet Corporation.

TABLE 3.—Principal amount of obligations of foreign governments originally acquired under the various acts of Congress

¹ Includes \$12,167,000 authorized under the act of Feb. 14, 1920.

² \$26,000.

³ Includes \$289,898.78 canceled under treaty of Apr. 14, 1938, between the United States and Nicaragua.

⁴ Includes \$3,736,628.42 acquired by the United States Shipping Board Emergency Fleet Corporation for services rendered.

⁵ Exclusive of \$5,000,000 conditional advance not availed of and returned.

¹ The following account of the origin, development and present status of the World War indebtedness of foreign countries to the United States, is taken from a "Memorandum covering the World War indebtedness of foreign governments to the United States (1917-21) and showing the total amounts paid by Germany under the Dawes and Young Plan" prepared by the Treasury Department, Fiscal Service, Bureau of Accounts, revised July 1, 1944, and the July 1, 1947, supplement to that memorandum. Further information on the subject may be found in that memorandum and in the Combined Annual Reports of the World War Foreign Debt Commission.

Cash advances

The Liberty Bond acts authorized the Secretary of the Treasury with the approval of the President, to establish credits in favor of foreign governments engaged in war with enemies of the United States, and, to the extent of those credits, to make advances to such governments through the purchase at par of their respective obligations. The total principal amount of obligations acquired under this authority, including a loan of \$12,167,000 to Greece authorized by the act of February 14, 1929,³ was \$9,610,403,575.45. Of this total, the sum of \$7,077,114,750 was advanced up to November 11, 1918, and \$2,533,-288,825.45 was advanced after the Armistice (see table 3).

¹ Includes principal postponed under moratorium agreements and principal amounts not paid according to contract terms.

² Also includes interest postponed and payable under agreements of May 1, 1941, and Oct. 14, 1943.

³ The German Government was notified that the Government of the United States would look to the German Government for the discharge of the indebtedness of the Government of Austria to the Government of the United States.

⁴ Advance payment of interest June 15, 1933, amounting to \$29,061.46 deducted.

⁵ This Government has not accepted the provisions of the moratorium.

NOTE.—Indebtedness of Germany to the United States on account of costs of army of occupation and awards under Settlement of War Claims Act of 1928, as amended, not shown in above statement.

Sale of war supplies on credit

Under authority of the act of July 9, 1918, the President, through the head of any executive department, was authorized to sell any surplus war supplies on such terms as the head of such department deemed expedient. Sale was carried out by the United States Liquidation Commission (created on February 11, 1919) and by the Secretaries of War and of the Navy, who received in payment obligations of the purchasing governments. The total principal amount of obligations thus acquired was \$595,386,104.79. (This amount is exclusive

¹ This loan, made out of credits established by the Liberty Bond acts, was specifically authorized by Congress in connection with settlement of the Greek war debt to the United States.

of \$3,736,628.42 acquired by the United States Shipping Board Emergency Fleet Corporation for services rendered.)

Sale of relief supplies on credit

American Relief Administration.—The act of February 25, 1919, appropriated \$100,000,000 as a revolving fund until June 30, 1919, for the participation by the United States, in the discretion of the President, in the furnishing of foodstuffs and other urgent supplies to populations of certain countries of Europe or countries contiguous thereto. The American Relief Administration was given the authority of equitably distributing the relief supplies in accordance with the provisions of the act. Out of the appropriation of \$100,000,000 the sum of \$95,050,391.08 was expended, for which there were delivered to the Treasury obligations in the principal amount of \$84,093,963.55 from various foreign governments. Approximately \$10,900,000 was spent for child feeding and other charitable services for which no obligations were taken.

United States Grain Corporation.—The act of March 30, 1920, authorized the United States Grain Corporation, with the approval of the Secretary of the Treasury, to sell or dispose of flour in its possession, not to exceed 5,000,000 barrels, for cash or on credit at such prices and on such terms or conditions as considered necessary to relieve the populations in the countries of Europe or countries contiguous thereto suffering for the want of food. The American Relief Administration acted as the fiscal agent of the United States Grain Corporation in dispensing this relief. For these supplies there were delivered to the Treasury obligations of foreign governments in the principal amount of \$56,858,802.49.

Transportation services

The United States Shipping Board acquired obligations in the net principal amount of \$3,736,628.42 from the Government of Poland for transportation services rendered that Government in connection with the shipment of supplies to Poland. The Shipping Board transferred these obligations to the United States Treasury for collection.

Summary

Table 3 shows the principal amount of obligations originally acquired from each foreign government at under the acts of Congress specified above including those acquired by the United States Shipping Board.

Settlements

Recognizing the fact that in the financially disordered years of 1921 and 1922 the debtor nations could not pay on demand, Congress originally authorized the debts to be funded on not longer than a 25-year basis and at not less than 4½ percent interest. A World War Foreign Debt Commission was created by act of February 9, 1922, amended February 9, 1923, to deal with refunding. This Commission negotiated settlements with the various debtor countries on the basis of their estimated ability to pay. Each settlement received the approval of Congress before it became effective.

¹ See "Payments postponed."

² Represents difference between funded principal and total face amount of bonds delivered or to be delivered under the funding agreements, which difference arises through permitting the governments to fund a part of the interest accruing over the periods specified in the agreements (Czechoslovakia, first 18 years; Rumania, first 14 years).

³ Exclusive of \$53,870,533.27 interest on payments postponed during the fiscal year 1932 under moratorium agreements; exclusive of interest on principal amounts postponed in accordance with terms of funding agreements in certain instances, and exclusive of interest on principal amounts not paid when due.

NOTE.—This table has been prepared on basis of original funding agreements and does not include accrual of interest in those cases where principal amounts have not been paid as provided for in such agreements.

Table 5 shows ³ in each case the principal and interest at the time of funding, the credit allowance, the cash payments upon execution of the agreements, and total debt as funded.

Table 6 shows for each government the amount of the debt as funded, the interest funded under the debt agreements, the amount that the United States was scheduled to receive over the funding period on account of interest (exclusive of interest to be received under the moratorium agreements), and the total amount which the United States was scheduled to have received under the original funding agreements if the payments provided for in such agreements had been made in the amounts and on the dates indicated therein.

Concessions in debt settlements.—It should be recognized that the United States in its settlements with its various debtors did not, with one exception, directly cancel any of the principal of the debt. This exception arose in the settlement concluded with Estonia, under which the United States agreed to a reduction of \$1,932,923.45 in the principal of the Estonian debt because of the loss of a cargo of surplus war material when a steamship was sunk by a mine in the Baltic Sea in September 1919. With this exception the only reductions under the debt settlements were reflected in a reduction in the interest rate. The obligations originally acquired by the United States from its foreign debtors generally bore interest at the rate of 5 percent per annum. In a very few cases the rate was 6 percent. The funding agreements made with the foreign debtor nations provide for payments

³ It will be noted that 3 countries listed in table 3 do not appear in tables 4 and 5. The explanation is as follows: The debts of Armenia and Russia were not funded; the debts of Cuba and Liberia were paid in full prior to funding (see table 8). The unpaid portion of the debt of Nicaragua was canceled by treaty of April 14, 1938, in consideration of Nicaraguan acceptance of a settlement of certain tax claims against the United States.

over a period of 62 years (except in the case of the Austrian settlement, which provides for a period of 40 years), with interest at varying rates, all considerably under 5 percent.

Moratorium

In June 1931, to allay the spread of a financial panic that was causing large withdrawals of funds from Germany, and threatening her banking and credit structure, President Hoover offered, subject to congressional approval, to suspend during the fiscal year 1932 all payments due the United States on account of the indebtedness of foreign governments, provided that the important creditor powers would take similar action with respect to reparations and intergovernmental debts due them. The offer was accepted in principle by all the important creditor governments. The authority to postpone payments due the United States was provided in a joint resolution of Congress approved on December 23, 1931, which provided for the postponement of the amounts due during the fiscal year 1932 (July 1, 1931, to June 30, 1932), and their repayment over a period of 10 years beginning July 1, 1933, with interest at the rate of 4 percent per annum. It also authorized the Secretary of the Treasury to conclude agreements carrying into effect the moratorium proposal.

Agreements were concluded with the various debtors, making effective the President's proposal.

The following statement shows the date of the moratorium agreement with each foreign debtor, the amount postponed, the annuities payable over a period of 10 years, and the total amount to be received over that period by the United States:

TABLE 7.—Dates of moratorium agreements, amounts postponed, and payments to be received over the 10-year period

¹ This government did not accept the provisions of the moratorium, and did not pay the amount due during the fiscal year 1932 amounting to \$250,000.

² Expressed in reichsmarks.

Payments postponed

Austria.—The payments due from the Government of Austria on January 1, 1933, 1934, and 1935, aggregating \$1,207,742 under the funding agreement of May 8, 1930, and \$69,534.46 under the moratorium agreement of September 14, 1932, were postponed at the request of the loan trustees, as provided for in the funding and moratorium agreements. In further accord with the agreements, in exchange for the unpaid annuities during the fiscal year 1937 there were received from the Austrian Government bonds aggregating \$3,489,482.75; evidencing annuities payable by that Government annually from January 1, 1944, to January 1, 1968.

Finland.—Under joint resolutions approved June 15, 1940 (Public Res. 84, 76th Cong.) and June 12, 1941 (Public Law 110, 77th Cong.), the Republic of Finland, at its option, could postpone the payment of amounts payable to the United States during the period from January 1, 1940, to December 31, 1942, inclusive. In such event, the Secretary of the Treasury was authorized to make agreements with Finland for the payment of the postponed amounts. Pursuant to the first of these resolutions, Finland postponed the payment of the sum of \$235,208 which was payable on December 15, 1940. Under the terms of an agreement dated May 1, 1941, Finland is required to pay annually \$27,390.12, beginning on June 15, 1941, each payment to be made in two installments. In accordance with the second of the joint resolutions, Finland postponed payment of a total of \$845,287.24, which had been due over a period from June 15, 1941, to December 15, 1942. The amounts postponed under this resolution are payable under the terms of an agreement dated October 14, 1943, by which Finland is required to pay 20 annuities of \$42,264.36 each, in semiannual installments, beginning January 1, 1945.

Present status of Allied debts.—Tables 4 and 8 show the status as of July 1, 1947, of the indebtedness of Allied governments (plus the Austrian debt referred to Germany) to the United States and total payments received as of July 1, 1947.

Table 9 shows total receipts by fiscal years on account of these debts from the time of funding to July 1, 1947.

¹ Includes \$1,433.01 on unfunded indebtedness.

² Does not include token payment of \$100,000 by Rumanian Government on June 15, 1940.

³ Payments due Dec. 15, 1940, to Dec. 15, 1942, inclusive, postponed under joint resolutions approved June 18, 1940, and June 12, 1941.

THE GERMAN DEBT—WORLD WAR, 1917-21

The Government of Germany is indebted to the United States on account of the costs of the American Army of Occupation and the awards of the Mixed Claims Commission, United States and Germany.

Army costs.—The gross amount originally due the United States on account of Army costs was 292.7 million dollars. Various German credit items reduced this sum to 247.9 million dollars. Payments were received on account of this debt under several successive plans:

(a) The Wadsworth agreement of May 25, 1923, provided for the payment of American Army costs in 12 yearly installments beginning on December 31, 1923. About 14.7 million dollars was received from Germany under this plan before it was superseded by the Finance Ministers' agreement of January 14, 1925, which arranged the distribution of Dawes plan annuities.

(b) By the terms of the Finance Ministers' agreement of January 14, 1925, the United States was to receive the sum of 55,000,000 gold marks per year on account of Army costs (13.1 million dollars at 1925 exchange value of 23.8 cents per mark). The total amount actually received under this arrangement was 39.2 million dollars.

(c) In 1929 the Dawes plan was superseded by the Young plan, which allocated to the United States an average annuity of 66,100,000 reichsmarks a year for 37 years and a flat annuity of 40,800,000 reichsmarks a year for a period of 15 years thereafter. Of the total allocated to the United States, an average annuity of 25,300,000 reichsmarks a year (about \$6,000,000 at 1930 exchange value of 23.8 cents per mark) for 37 years was fixed by the United States as the amount applicable to the costs of the American Army of Occupation.

At the date (September 1, 1929) on which the Young plan became effective, the amount due the United States on account of Army costs had been reduced to 193.9 million dollars. A further reduction of 29.3 million dollars was effected by United States agreement to cancel 10 percent of the original sum, in accord with similar cancellations by France and Great Britain, leaving a balance of 164.7 million dollars.

(d) The funding agreement of June 23, 1930, between the United States and Germany required the payment of the sums set by the Young plan on account of Army costs. (The total of the payments called for, over the 37-year period, at the 1930 par of exchange, amounts to about 249.7 million dollars. The difference between this figure and the balance of 164.7 million dollars mentioned above represents, in part, compensation to the United States for the extension of the repayment period beyond that contemplated in the January 1925 agreement.)

The funding agreement also provided for delivery by the German Government to the United States of bonds in the principal amount of 997.5 million marks, as evidence of its indebtedness (see table 10). The payment of two of these, in the principal amount of 12.65 million marks each, due on September 30, 1931, and March 31, 1932, was postponed under the moratorium arrangements of 1932. Subsequent principal payments on account of Army costs, interest payments, and annuities under the moratorium agreement have not been paid.

German indebtedness as of July 1, 1947, under the funding agreement of 1930 and the moratorium agreement of 1932, as well as total payments received on account of Army costs under these agreements, are shown in table 10.

Mixed claims

A Mixed Claims Commission was created by agreement of August 10, 1922, between the United States and Germany, with authority to determine and adjudicate the amount of all claims of the United States and its nationals against Germany based on the terms of existing treaties. This Commission entered and certified to the Treasury for payment awards in favor of American nationals in the approximate amount of \$139,300,000. Under the provisions of the Finance Ministers' agreement above-mentioned, the United States was to receive out of the Dawes annuities for account of these awards 2½ percent of all receipts from Germany available for reparation payments (after deducting prior charges), provided that not more than 45,000,000 gold marks could be received in any one year. As indicated above, the Dawes plan was superseded in 1929 by the Young plan. Of the 66,100,000 reichsmarks allocated to the United States under the Young plan, a flat annuity of 40,800,000 reichsmarks for 52 years was fixed by the United States as the amount applicable to mixed claims

awards. The funding agreement entered into on June 23, 1930, between Germany and the United States also provides for the payment of this sum each year on account of these claims, in the same manner as it provides for payments on account of Army costs.

Under this agreement the United States also received bonds of the German Government as evidence of its indebtedness, including interest on all awards to the date of payment, in the principal amount of 2,121,600,000 reichsmarks (\$505,365,120 on basis of par of exchange in 1930), of which it is estimated that 1,496,600,000 reichsmarks (\$356,490,120) represent private awards and 625,000,000 reichsmarks (\$148,875,000) represent awards entered in favor of the United States Government. Payments due from Germany on account of these bonds are to be made in semiannual installments of 20,400,000 reichsmarks each for a period of 52 years beginning March 31, 1930. The principal payments aggregating 102,000,000 reichsmarks due on account of mixed-claims awards from September 30, 1931, to September 30, 1933, inclusive, which were postponed to March 31, 1934, and principal and interest payments due from March 31, 1934, have not been paid by the German Government.

TABLE 10.—*Indebtedness of Germany under the funding and moratorium agreements of June 23, 1930, and May 26, 1932*

Class	Indebtedness as funded	Total indebtedness, July 1, 1947 ¹	Principal	Interest accrued and unpaid

¹ Excludes amounts on account of Austrian indebtedness.
² Includes interest accrued under unpaid moratorium agreement annuities.
³ Amounts expressed in reichsmarks.

Summary

Total payments by Germany to the United States on account of both Army costs and mixed claims, under the Dawes plan, amounted to 300.4 million dollars, and under the Young plan amounted to 77.0 million dollars.

Payments on account of both Army costs and mixed claims, up to July 31, 1947, under the funding agreement of June 23, 1930, and under the moratorium agreement of May 26, 1932, together with the status, as of July 31, 1947, of German indebtedness to the United States under these agreements, are summarized in table 4.

Germany (Austrian indebtedness).—In view of the incorporation of Austria in the German Reich in 1938, the German Government was

notified that the Government of the United States will look to it for the discharge of the relief indebtedness of the Government of Austria to the United States under the debt agreement of May 8, 1930, and the moratorium agreement of September 14, 1932. Figures and other information relating to this indebtedness are included in the preceding pages.

FOREIGN CREDITS: 1934 TO JULY 1, 1947

Data regarding loans, credits, and advances to foreign countries by the United States Government since the beginning of 1934 are presented in tables 11 to 15, inclusive. Table 11 supplies information relative primarily to activity in the postwar period with respect to loans and credits. Tables 12, 13, and 14 relate to data regarding loans, property, credits, and advances, respectively, cumulated from July 1, 1940. A detailed explanatory note follows the tables.

Information is also supplied relating to commitments to extend aid to foreign countries, the relation of the International Monetary Fund and Bank to the problem of the foreign needs for dollar financing, and United States Stabilization Fund agreements.

TABLE 11.—Status of foreign credits of the U. S. Government—by agency, by type of credit, and by country; as of June 30, 1945; and as of June 30, 1947, and activity since July 1, 1945

Various countries				5,000,000		5,000,000		5,000,000		5,000,000

¹ Exclusive of cash advances on procurement programs, which are predominantly short-term.

² Credits resulting from supplying commodities, largely raw cotton, by the U. S. Government to Germany and Japan.

³ Negative figures for special exporter-importer credits result from reclassification of items principally assignable to unclassified American Republics.

¹ Represents loans of agent banks fully guaranteed by Export-Import Bank.

² Collections on principal include a portion of 1 loan in Bolivia to an individual, amounting to \$683,957, written off.

³ Loans delinquent 90 days or more total \$271,023 as follows: Brazil, \$142,986; Uruguay, \$64,227; Poland, \$3,992; Angola, \$60,224.

⁴ Data include participation by another agency of \$7,900,000 in loans of Export-Import Bank.

⁵ The utilization of the loan by the Treasury Department has been increased to \$2,350,000,000 and the unutilized commitments reduced to \$400,000,000 through Sept. 30, 1947.

Collections on the Reconstruction Finance Corporation loan do not include \$5,832,144 held as unapplied interest and \$6,946,523 held in a sinking fund for payment of principal.

Source: Clearing Office for Foreign Transactions, Department of Commerce.

⁶ An Export-Import Bank loan to Aluminum Co. of Canada, Ltd., of \$11,730,000 is excluded, since this loan in effect was paid off as a result of a subsequent advance by Office of Metals Reserve, the latter transaction being reflected in advances.

⁷ On July 31, 1947, the availability of this commitment was transferred to "Miscellaneous—Europe, special cotton credit."

⁸ Commercial banks participated in a \$300,000,000 short-term credit to the Netherlands in the aggregate amount of approximately \$93,000,000 without recourse or guaranty by the Export-Import Bank. As disbursements were made by the commercial banks, amount of Export-Import Bank commitment was reduced correspondingly. The \$4,485,000 cancellation resulted from an equivalent amount of funds becoming available to the Netherlands from the proceeds of a bond issue after payment of expenses.

¹ Utilized credit outstanding represents credit utilized less collections on principal. Credit utilized represents (1) reported deliveries of surplus property, except for bulk sales where entire amount of commitment is used (Office of Foreign Liquidation Commissioner), (2) merchant ships delivered against executed mortgages (Maritime Commission), and (3) billings for goods delivered in the case of lend-lease credits (lend-lease fiscal operations). See explanatory note for a listing of the totals by country, representing the contracts for future delivery of surplus property.

² For Belgium, the OFLC commitment is based on estimates as to the amount of sur-

plus property available for sale under the war-account settlement dated Sept. 24, 1946, and consists of a credit of \$23,000,000 plus \$28,000,000 representing the United States share which is half the estimated proceeds to be received by the Belgian Government from sale of United States surplus property.

³ New sales under credit suspended Sept. 12, 1946.

⁴ New sales under credit suspended June 2, 1947.

EXPLANATORY NOTE—FOREIGN CREDITS TABLES 11-14

The majority of property credits were extended beginning in the latter part of 1945 under lend-lease pipe-line agreements, war-account settlements, and in connection with the sale of surplus property. The greater part of the loan activity also has occurred since July 1, 1945. In order to maintain uniformity of presentation, however, July 1, 1940, is cited as the beginning date for all cumulative tables presented.

In the case of the Export-Import Bank, data are reported on all loans made since February 12, 1934, when the bank was established. The EIB reported the following status of its loans as of June 30, 1940:

Gross commitments.....	\$437, 581, 531
Cancellations and expirations.....	119, 103, 091
Net commitments.....	318, 478, 440
Undisbursed commitments.....	168, 435, 206
Total disbursements.....	160, 043, 234
Principal collections.....	61, 525, 058
Outstanding.....	98, 518, 176
Interest and commissions.....	(1)

1 Not reported.

Another agency known to have extended foreign credits in the period between World Wars I and II is the Reconstruction Finance Corporation. Although not included in the tables of this appendix, the essential facts are as follows:

U. S. S. R.—On July 18, 1933, the RFC authorized a loan to the Cotton Export Finance Corporation of New York in the amount of \$1,500,000, and an additional loan of \$1,300,000 1 week later. These loans were secured by notes of the Amtorg Trading Corp., which were endorsed by the State Bank of U. S. S. R. Against these amounts \$2,722,902 was disbursed and subsequently repaid. Two other loans to Amtorg of \$51,247 and \$29,295 were made on July 21 and August 14, 1933, respectively, and have been repaid.

China.—The RFC authorized a loan of \$50,000,000 to China on July 10, 1933. This authorization was reduced on February 16, 1934, to \$20,000,000, against which \$17,100,000 was disbursed. Payments by China to the RFC reduced this amount to \$13,500,000, and the outstanding notes were sold on April 8, 1936, to the EIB. Only the amount of the loan purchased by the EIB is included in this report.

Norway.—On January 12, 1940, the RFC authorized a loan of \$10,000,000 to the Kingdom of Norway. The entire amount of this authorization was subsequently canceled.

Transactions covered.—The following types of United States Government transactions are included:

1. **Loans.**—These represent cash loans to foreign governments and private entities in foreign countries which result in a debtor-credit relationship, anticipating repayment in cash of principal plus interest. Commitments reported by the EIB represent authorizations resulting from approval of loans by the Board of Directors. As of June 30, 1947, certain loans had not been formalized by credit agreements or, in the case of exporter credits, by letter agreements, in the amounts shown for the following countries:

Argentina.....	\$210, 000	China.....	\$4, 243, 750
Brazil.....	27, 826, 521	Finland.....	2, 500, 000
Ecuador.....	1, 000, 000	Italy.....	100, 000, 000
Mexico.....	53, 800, 000	Netherlands Indies.....	100, 000, 000
Austria.....	750, 000		
Canada.....	5, 700, 000	Total.....	206, 030, 271

2. **Property credits.**—These represent credits, other than cash loans and advances, extended to a foreign government or private entities in a foreign country in connection with the disposal of surplus property, ships, or other property, the sale or disposition of or the settlement for lend-lease articles and services, the settlement for civilian supplies and relief and rehabilitation items, or any other transactions, the result of which is to create an obligation of such foreign government or entity to the United States Government, anticipating repayment of principal and interest in accordance with the credit terms.

3. **Advances.**—These represent cash advances to or for the account of foreign governments or private entities in foreign countries which give rise to an obligation to repay by deliveries of material or services or by repayment in cash. Cumu-

30 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

lative repayments data include \$24,805,033 of principal repaid in cash, of which \$14,154,504 was received from other countries for sugar delivered under the advance to Cuba by the Commodity Credit Corporation of the Agriculture Department. Data also include \$578,340 of interest repaid in cash and \$59,861,829 of principal paid in gold.

4. *Commodity programs for Germany and Japan.*—Credits resulting from commodity advances by the United States Government to Germany and Japan are included in table 11. Raw materials are being shipped to these countries for manufacture into finished goods, part of which is retained by the occupied area as a processing fee. The other part is exported to adjacent areas for dollar proceeds, which are used to reimburse the United States Government for the cost of the raw materials and the handling charges and administrative expenses incurred. Any balance of these proceeds will accrue to the respective military government for the procurement of civilian goods for shipment to the occupied area. The major commodity advanced to Germany and the only commodity advanced to Japan has been raw cotton made available by the Commodity Credit Corporation through the U. S. Commercial Company.

The total collections of principal and interest recorded for Japan represent funds realized by USCC from the sale of Japanese textiles. The collections recorded for CCC represent funds transferred from USCC to CCC through June 30, 1947, plus the funds available for transfer on that date.

Credits arising as the result of the following bulk sales of surplus property have been considered utilized as of the dates agreements were signed: Belgium, \$49,000,000; China, \$55,000,000; France, \$300,000,000; Italy, \$160,000,000; Philippines, \$5,000,000; and United Kingdom, \$60,000,000. This was done because ultimate deliveries under bulk sales are expected to approximate the amounts specified in the agreement. Commitments are treated as equivalent to utilizations.

In all cases other than bulk sales, utilization figures regularly have been based on actual deliveries of surplus property, including merchant-ship sales, or bills rendered for goods delivered under lend-lease credits. However, if unfilled contracts for the sale of surplus property were assumed to result in the immediate utilization of related credits, the figure for utilized surplus-property credits would be increased as follows:

Colombia.....	\$184, 933	Japan.....	\$3, 596, 906
Austria	156, 000	Korea.....	13, 127, 390
New Zealand.....	69, 938	Netherlands.....	5, 378, 464
China.....	3, 985, 859	Norway.....	27, 784
Ethiopia.....	80, 000	Poland.....	7, 598, 112
Finland.....	1, 349, 157	Turkey.....	2, 346, 393
Greece.....	21, 731, 878		
Hungary.....	6, 178, 372	Total.....	65, 811, 186

Credits utilized and outstanding under lend-lease fiscal operations for the United Kingdom are stated in the amount of \$590,000,000, although billings to June 30, 1947, of \$250,000,000 for post-VJ-day pipe-line transfers plus \$472,000,000 lend-lease VJ-day inventories total \$722,000,000. Under the lend-lease settlement of December 6, 1945, the post-VJ-day transfers estimated at \$301,000,000 plus the lend-lease VJ-day inventories (\$472,000,000) less an offset estimated at \$183,000,000 for the reverse lend-lease pipe line and allowed claims are expected to approximate \$590,000,000.

Commitments as of June 30, 1947, for China and France under lend-lease fiscal operations show a reduction as compared with March 31, 1947, of \$7,150,000 and \$55,000,000, respectively, bringing the net commitment figures for these two countries to \$51,750,000 and \$365,000,000. The revised figures represent the estimated value of lend-lease aid furnished and to be furnished under the reported credits. With the recording of additional data during the September quarter, it is presently estimated that the net commitment figure as of September 30, 1947, will be reported in the amount of \$385,000,000 for France.

DEFINITIONS

Because of the wide variety of transactions and differences in the accounting procedures of the lending agencies, it was impossible to prepare simple definitions applicable to all cases, but the classifications used are as consistent in principle as possible.

Sales of surplus property against foreign currencies and other property when the currencies have been paid to the account of the United States, or title to the

other property has been transferred, are considered as cash, not credit, transactions, even though there are quantitative limitations on the use of the foreign currencies which prevent their complete utilization for a year or more. On the other hand, sales against foreign currencies, services, or property which are to be paid, performed, or transferred upon demand are considered as credit transactions to the extent that demand has not been made.

"Net commitments" covers all loans and credits approved by the responsible officials of the lending agencies from available funds even if they have not in every case been signed or formalized by credit agreements. Cancellations and expirations up to June 30, 1947, have been deducted from the amounts authorized.

"Utilized" is defined as follows:

(a) Loans such as those by the Export-Import Bank and the Reconstruction Finance Corporation; also, the loan to the United Kingdom—disbursed under the terms of the agreements.

(b) Credits by the Office of the Foreign Liquidation Commissioner—amounts reported as actually delivered on normal sales plus the complete amount of bulk sales regardless of delivery.

(c) Settlements for lend-lease transfers—billings presented to foreign governments. Work completed, as reported to the Treasury Department, was the basis for determining utilization under the Liberian agreement.

(d) Ship sales by the Maritime Commission—principal amount of mortgages received by the Commission from foreign purchasers. The Ship Sales Act provides that vessels may be sold for 25 percent cash and the balance on credit terms. In all sales where credit is involved, mortgages are received when the ships are delivered to the purchaser.

"Repayments" are confined to repayments on principal account. They are exclusive of repayments on debts arising out of World War I.

"Outstanding indebtedness" is usually the net of utilization less repayments of principal.

International Monetary Fund and the International Bank for Reconstruction and Development

By the Bretton Woods Agreements Act, Public Law 171, Seventy-ninth Congress, first session, approved July 31, 1945, the United States was authorized to accept membership in the International Monetary Fund and the International Bank for Reconstruction and Development. Both of these institutions are now in operation.

The contribution of the United States to the capital of these institutions was largely made during 1946 and early 1947 in the following forms:

United States payments to the International Fund and Bank

[In millions of dollars]

Form	International Monetary Fund	International Bank for Reconstruction and Development
Gold	687.5
Dollars	280.5	69.2
Demand notes (in place of dollars).....	1,782.0	565.8
Total.....	2,750.0	635.0

The payments to the fund covered the full amount of the United States quota. The payments to the bank covered the 20 percent of the United States subscription which was subject to call when the bank was ready to start operations. The other 80 percent of the subscription—\$2,540,000,000—is subject to call by the bank when and if required to meet obligations of the bank arising out of its direct issues or those guaranteed by it.

The capacity of the International Monetary Fund and the International Bank for Reconstruction and Development to assist in the task of financing the world's needs for United States dollars is restricted by the articles of agreement under which both organizations operate. These restrictions are of two types, first, actual limitations as to amounts available, and, second, qualitative requirements which must be met before currencies can be purchased from the Fund or loans can be made by the Bank.

International Monetary Fund.—The quantitative limitations on the right of member countries to acquire United States dollars from the Fund are stated in article V, section 3, of the Articles of Agreement. In general a member's aggregate purchases of currency from the fund are limited to the amount of its quota plus the amount of gold that the member has paid in. Also, members may ordinarily not borrow more than 25 percent of their quotas in any one year, unless special exception is made.

The total amount of United States dollars that the fund can furnish to all countries is limited by the amount of dollars and gold possessed by the fund. The balance sheet for June 30, 1947 showed gold holdings amounting to \$1,344,000,000, and dollar deposits and dollar securities held amounting to \$2,005,000,000, a total of \$3,349,000,000.

The qualitative limitations on the rights of members to use the facilities of the fund are many. The principal ones are listed below:

(1) The member must be in good standing.

(2) The member must represent that the currency to be acquired is presently needed for making in that currency payments which are consistent with the fund agreement.

(3) The member must not be using the resources of the fund in a manner inconsistent with the purposes of the fund.

(4) The funds acquired may not be used to meet a large or sustained outflow of capital.

In general, the aim of these and other provisions is to limit the fund's resources to the financing of short-term balance-of-payments deficits.

The operations of the fund according to its report as of August 31, 1947, are shown below:

Currencies acquired by its members from the International Monetary Fund, as of August 31, 1947

Country acquiring currency	Amount of currency acquired	
	Millions of dollars	Other
France.....	100.0
Netherlands.....	18.0	1 6.0
Mexico.....	13.5

¹ In millions of pounds sterling.

According to public releases, the following countries have acquired currency from the fund between August 31, and November 30, 1947: Chile, \$7,500,000, Denmark, \$3,400,000, France, \$25,000,000, Mexico, \$9,000,000, Netherlands, \$12,000,000, Turkey, \$5,000,000, and United Kingdom, \$240,000,000.

International Bank.—The bank's capacity to make loans of United States dollars is limited to its holdings of dollars plus its ability to sell its obligations for dollars. As shown by its balance sheet, on September 30, 1947, its holdings of dollar deposits and securities amounted to \$741,000,000. The bank had yet to make dollar disbursements of \$263,000,000 on loans already authorized. In July it sold \$100,000,000 of a 10-year 2¼-percent issue and \$150,000,000 of a 25-year 3-percent issue at 100.

Qualitative restrictions on the bank's ability to lend, as stated in its second annual report (pp. 15 ff.), are:

- (1) Loans may not be made for relief or for political purposes;
- (2) There must be reasonable prospects for repayment; and
- (3) Specific projects or programs for development or reconstruction must be presented. General balance-of-payments deficits are not to be financed by the bank.

The loans authorized by the bank through November 1947 are as follows:

(In millions of dollars)

Borrowing country	Authorized amount	Amount utilized (through Sept. 30 only)
France.....	250.0	202.4
Netherlands.....	195.0	30.0
Denmark.....	40.0
Luxemburg.....	112.0
Total.....	497.0	232.4

¹ Including \$2,000,000 to be disbursed in Belgian francs.

The bank has also received loan applications from Italy, Poland, Czechoslovakia, Iran, Mexico, and Chile.

Commitments to extend aid

Commitments by the United States Government to extend aid to foreign countries, requested in item 3, are shown in the preceding tables as unutilized balances. A few other commitments which are not susceptible to statistical treatment are discussed below.

Mexico.—Under Public Law 422, Seventy-ninth Congress, Congress authorized United States Government aid to Mexico in the campaign to eradicate the foot-and-mouth disease.

In consequence, the United States Government helped to form and is supporting the Joint Mexican-United States Commission for the Eradication of Foot and Mouth Disease.

United States expenditures under this program, out of funds advanced by the Department of Agriculture, average 5 to 8 million dollars per month.

The United States Government commitment in this matter is expressed in an exchange of notes with the Government of Mexico.

Panama.—The following are the outstanding commitments to Panama (see exchange of notes dated May 18, 1942, executive agreement series 452):

1. The transfer to the Republic of Panama of certain railroad lots in Panama and Colon.
2. The construction at Balboa by the United States of a tunnel or bridge to allow transit under or over the Canal.

3. The removal from their present site to some other suitable site in the Republic of Panama of the terminal facilities of the Panama Railroad in Panama including the station, yards, and other appurtenances.

4. Under paragraph 6 of point No. 5 of the above-mentioned note of May 18, 1942, the United States Government is committed to bear one-third of the current maintenance cost of the roads in Panama being used periodically or frequently by our armed forces. This commitment was made in view of wear or damage caused to such roads by movements related to defense activities.

Scientific and cultural cooperation.—The programs and projects conducted by the Department of State through the Interdepartmental Committee on Scientific and Cultural Cooperation provide for cultural, scientific, and technical cooperation and interchange with all the American Republics in accordance with the resolutions, conventions, and agreements entered into at the Inter-American Conference for the Maintenance of Peace held at Buenos Aires in 1936 and the Eighth International Conference of American States held at Lima in 1938. These programs are carried out pursuant to congressional authorization contained in Public Law 355, Seventy-sixth Congress, and Public Law 63, Seventy-sixth Congress. Inasmuch as these programs are carried out in agreement with and with financial cooperation of the government and people of the other American Republics, they are looked upon as actual and moral commitments within the limitations of the annual congressional appropriations and appropriation language.

These programs are administered by some 16 agencies of Government, including the Department of State through funds appropriated to the Department of State. None of them are direct financial-aid programs but they do constitute economic aid in the broad sense of that term. Although the program includes such varied activities as the exchange of students and professors, the establishment of cooperative agricultural field stations, the training of public administrators and public-health officers, and the translation of official United States publications into Spanish and Portuguese, they are all designed to render closer and more effective the relations between the American Republics and to foster economic and social well-being of the people of this hemisphere.

Commitments in fiscal 1948.—The Congress has made available to the Department of State a total of \$4,000,000 for expenditure during the fiscal year 1948 and this total sum may be regarded, in light of the above, as a commitment to extend United States economic aid to the countries of Latin America.

United States Stabilization Fund agreements

United States Stabilization Fund now has three agreements which are still in effect, namely, agreements with Brazil, Mexico, and Cuba.

The period in which additional exchanges of cruzeiros and dollars can take place under the agreement with Brazil has now expired, but \$80,000,000 of the \$100,000,000 maximum provided for by the agreement was utilized before the expiration date. The agreement contains provisions for the repayment.

Several stabilization agreements with Mexico have been made since 1936. The new and enlarged form of the agreement now in effect

was announced in May 1947. Under it, the United States Stabilization Fund undertakes for a period of 4 years commencing July 1, 1947, to purchase Mexican pesos to an amount equivalent to \$50,000,000 for the purpose of stabilizing the United States dollar-Mexican peso rate of exchange. The agreement fully provided for coordination of this agreement with the articles of agreement of the International Monetary Fund in which both Mexico and the United States are active members.

The stabilization agreement with Cuba was first announced in July 1942. Under it the Government of the United States undertakes to sell gold to the Government of the Republic of Cuba from time to time with payment to be made within 120 days after delivery of the gold. The unpaid-for amount of gold shall not at any time exceed \$5,000,000. This agreement has been extended until June 30, 1949. Cuba has repeatedly purchased gold under this arrangement and made payment within the allowed 120-day period.

B. OTHER FINANCIAL ASSISTANCE TO FOREIGN COUNTRIES

This section contains data covering grants and other forms of financial assistance other than loans and credits to foreign countries by the United States Government during World War II and through June 30, 1947. Table 15 is a summary of authorizations and utilizations through June 30, 1947. Amounts are shown separately for (1) lend-lease; (2) civilian supplies, relief, and rehabilitation; and (3) financial aid. Some of these items were outright grants, while others were subject to negotiations as to terms of repayment.

Unutilized balances as of July 1, 1947, as shown in table 2, and subject to the qualifications noted therein, amounted to \$2,236,000,000.

TABLE 15.—Financial assistance (other than loans and credits)¹ by country, by agency, by type of transaction: July 1, 1940, through June 30, 1947

EXPLANATORY NOTE—OTHER FINANCIAL ASSISTANCE

The aid to Greece and Turkey, and the post-UNRRA programs were initiated before June 30, 1947. However, reporting procedures were not established and these programs are not included in the data in this appendix. Some small activity had taken place with the funds advanced to the State Department by the Reconstruction Finance Corporation under Public Laws 75 and 84, Eightieth Congress, respectively; appropriations for the programs were not made until after June 30, 1947.

Lend-lease

Lend-lease-aid figures presented in table 15 reflect the estimated value of such aid furnished on a grant basis (often referred to as straight lend-lease). This

estimate is derived by reduction of the gross lend-lease-aid totals by the amount of (1) lend-lease aid furnished on a credit basis, including the amount of credit retroactively determined in settlements; (2) the amount of cash received in lend-lease settlements; (3) lend-lease aid originally furnished on a cash basis; and (4) the military civilian supplies program for Italy (so-called YB program), made available from lend-lease appropriated funds, which is excluded because of its inclusion in the relief and rehabilitation total. The grants totals include approximately \$300,000,000 in silver and ships and other goods of undetermined value which are to be returned to the United States Government. Due to the fact that data on retransfers (mainly by the United Kingdom) of lend-lease goods to third countries are not available and therefore have never been included in the lend-lease records, the total cash and credit lend-lease for certain smaller countries exceeds the aid recorded. The original lend-lease data are derived from the official fiscal records maintained by lend-lease fiscal operations, Treasury Department.

Lend-lease estimates are broken down by requisitioning governments and are shown only for major areas. Thus grants appear against the United Kingdom for the British Commonwealth, against France for all French areas, etc., and for the American Republics, in total against the entry "Unclassified American Republics." Hence, the other financial assistance grants-data totals in table 15 and particularly the figures for individual countries, are arithmetic sums including an estimate and must be interpreted in the light of these qualifications.

Relief and rehabilitation

Transactions covered.—This table covers data on relief and rehabilitation financed and furnished by the United States Government to foreign governments or other foreign entities abroad, directly or through international organizations. Specifically, relief and rehabilitation covers:

1. Military civilian supplies, including (a) sales and issues of civilian supplies by the Navy Department on the Pacific Islands; (b) supplies furnished by the United States Army for civilian use abroad; and (c) supplies financed from lend-lease appropriations and furnished to the War Department for the Italian relief program.

2. Other than military civilian supplies, including supplies, services, and funds furnished by the United States Government to international or national agencies for relief abroad, in particular to UNRRA, the Intergovernmental Committee on Refugees, and the American Red Cross.

The War Department reports do not reflect the diversion of the stock pile in the Balkans to UNRRA, although the UNRRA data include \$28,000,000 representing the estimate of the value of the United States share of this stock pile remaining from the combined supply operation in the Balkans, to which the United States Government originally contributed \$90,000,000 in supplies. The relief and rehabilitation totals in this report are therefore overstated, in the cumulatives, by approximately \$28,000,000.

The United States Army has individual responsibility for furnishing civilian supplies necessary to prevent disease and unrest that would endanger the occupying forces in Japan, the Ryukyu Islands, and the United States zones of Korea and Austria. Since January 1, 1947, when the United States and British zones were economically integrated, expenses for civilian supplies in the German bizon were to be split on a 50-50 basis with the United Kingdom. For operating purposes, all shipments which arrived in Germany after January 1, 1947, were considered bizonal; however, some shipments are still being made to the bizon on an individual-responsibility basis. The shipments on the basis of individual responsibility and some shipments procured by the War Department with United Kingdom funds are included in this report in the data presented for Germany.

The data on relief and rehabilitation provided through UNRRA cover only those goods, services, and funds provided by the United States Government. The data shown on United States contributions to UNRRA through June 30, 1947, include \$94,000,000 in supplies transferred to UNRRA by the War Department and the Office of Foreign Liquidation Commissioner, without reimbursement, under the authority of section 202, of the first UNRRA appropriation act. Of this, \$13,000,000 represented part of the Balkan stock-pile transfer by the War Department.

In most cases UNRRA shipments are destined for the country where they are to be used, and data are reported accordingly. In some instances, however (for example, in the case of certain shipments to Egypt that were actually used in Balkan refugee camps), goods were later transhipped and the reported country of destination was not the country actually utilizing the supplies. The dollar value of supplies so transhipped is small relative to the total. The shipments to

Norway, Switzerland, and (mostly) to the United Kingdom represent replacement from the United States, of commodity advances made by these countries to the actual recipient area. Food packages procured from the War Refugee Board in Switzerland are included in the UNRRA unclassified items since no country breakdown as to distribution is available. UNRRA supplies unclassified by country also include (July 1, 1944, through June 30, 1947) \$35,927,378 representing supplies transferred to UNRRA but reported to be in warehouses in the United States, and \$28,718,722 representing surplus procurement overseas for which complete information is not available.

Cumulative transfers to UNRRA reported through June 30, 1947, are short by about \$175,000,000 from the total available funds of \$2,700,000,000. This represents mostly recording lag as of June 30, 1947.

Financial aid

Transactions covered.—This table covers data on financial-aid transactions including direct expenditures or expenditures through controlled or affiliated agencies for the benefit of foreign countries; grants of cash, materials, equipment, or services which do not create an obligation to repay on the part of the recipient; and cash advances to foreign governments with the definitive terms upon which they are made available left to future determination. Excluded from the data on financial aid are transactions which create an obligation of a foreign government or entity to the United States Government and grants of cash, materials, equipment, or services under lend-lease or relief programs. Specifically, financial aid covers:

1. Aid in cultural and economic programs for the American Republics, as reported by the former Office of Inter-American Affairs (transferred to the State Department by Executive Order 9710), except for \$2,434,720 committed and disbursed by the Reconstruction Finance Corporation, Office of Defense Supplies.

2. Aid to China, reported by Treasury Department.

3. Financial aid under the first three titles of the Philippine Rehabilitation Act of 1946, as follows: (a) Title I, disbursements for compensation for war-damage claims and related administrative expenses, \$923,653 reported by the PWDC; (b) title II, fair value of surplus property transferred, \$53,959,000 (as of May 31, 1947) reported by the OFLC; and (c) title III, disbursements for the restoration and improvement of public property and essential public services, \$6,500,746 reported by the agencies to which the State Department has allocated funds for executing the programs.

C. INSTALLATIONS AND SURPLUS PROPERTY ABROAD

Information, as called for in item 8, is available regarding properties held by the State Department for use as embassies and legations in connection with its normal operations. Data with respect to installations of a military nature have been presented to the Committee on Finance as a restricted document.

Installations of both types held abroad by the United States Government amounted to \$1,600,000,000 on June 30, 1947, of which \$1,573,000,000 was the cost of military installations and \$22,000,000 the cost of State Department property. This compares with a high of \$4,200,000,000, representing the total United States cost of all installations held or acquired abroad at any time during the war or postwar periods.

The cost of State Department property is shown in table 16. The value of these properties has increased in recent years, largely as a result of activities under Public Law 547, Seventy-ninth Congress, which provided for an appropriation not to exceed \$125,000,000, of which \$110,000,000 shall be available exclusively for payments representing the value of property or credits acquired through lend-lease settlements, the disposal of surplus property abroad, or otherwise. The State Department has reported acquisitions at cost, through December 31, 1946, of approximately \$6,500,000 as a result of this program.

SURPLUS PROPERTY INVENTORY

Detailed statements by standard commodity classification and countries of location as of December 31, 1946, as requested in item 8, are available in the report of the Clearing Office for Foreign Transactions. In view of the fact that this information is now out of date and would be practically meaningless, it is not included in this report.

Except for certain minor amounts of movable goods and some aircraft and maritime equipment, almost all of the surplus property located overseas outside Europe has been committed for sale. The inventory of surplus property in the European areas as of September 30, at original cost, is shown by countries in table 17. Strenuous efforts are being made to dispose of the property represented by this inventory, and sales are taking place every day, with the result that much of the property outside Germany represented by this inventory is not, in fact, available today.

CHAPTER II. INTERNATIONAL INVESTMENT POSITION OF THE UNITED STATES AND GOLD RESERVES OF FOREIGN COUNTRIES

The first eight items in Senate Resolution 103 are concerned with American investments abroad, foreign investments in the United States, and gold reserves of foreign countries. Items 2, 3, and 8 deal with foreign assets of the United States Government itself and are considered in chapter I. This chapter will consider items 1, 4, 5, 6, and 16, while item 7—which, unlike the others, is not of a statistical nature—is reserved for separate treatment in chapter III.

Item 1. The grand total of indebtedness on loans, investments, commitments, or other obligations outstanding as of December 31, 1946, of all foreign governments, their agencies, and their private citizens to the United States Government, its agencies, and its private citizens; and the same shown separately for public indebtedness and for private indebtedness.

Item 4. The amounts of American portfolio and direct investments abroad, by country, as of the end of 1914, 1932, 1939, and 1946.

Item 5. The amount of foreign portfolio and direct investments in the United States, by country, at the end of 1914, 1932, 1939, and 1946.

Item 6. Gold reserves, dollar balances, and other hard-money assets, as of the end of 1946, of countries whose governments are now in debt to the United States Government or with whom loan and investment discussions have been held by any American official since 1937.

Item 16. Assuming the ultimate necessity of gold settlements under estimated total economic transactions (exclusive of extensions of American loans and credits) between foreign countries and the United States within the next 5 years, what gold is available for such settlements and how is it distributed so that nations likely to be liable for gold settlements to the United States will have the gold to make them?

This chapter is divided into four sections. Section A contains data regarding American-owned assets in foreign countries. Section B relates to foreign-owned United States assets. Sections C and D relate to special phases of foreign-owned gold and dollar assets, particularly action in foreign countries with respect to the mobilization of their dollar assets and to the need for some reserves and working balances.

The data presented in the accompanying tables include direct investments (mainly branches and subsidiaries of American companies), portfolio investments (stocks and bonds, including government bonds) and other investments, such as real estate and interests in estates and trusts. Short-term refers to claims payable on demand or with an original maturity of less than 1 year; all other assets are classed as long-term. The following assets are not included in any of the tables, unless otherwise clearly indicated:

1. Government property held for governmental use, such as embassies and military installations.
2. Personal property and other movable goods.
3. Property of religious and charitable organizations.

In general, the tables on American investments abroad include the assets of all residents of the United States, regardless of citizenship, while table 26, on foreign investments in the United States, includes the assets of Americans permanently residing abroad. Most of the

data on international investments have been collected in connection with balance-of-payments analysis, where residence rather than citizenship is the criterion employed.

The United States includes not only continental United States but Alaska, Hawaii, Puerto Rico, the Canal Zone, the Virgin Islands, and certain other island possessions of the United States.

The bases of valuation differ somewhat from table to table, and are indicated, together with sources, at the foot of each table. The term "government," as it applies to foreign countries, includes local and provincial, as well as national governmental entities. The intergovernmental debts arising out of World War I have been omitted from all tables, but have been discussed in detail in chapter I.

Table 18, showing the estimated value of foreign assets owned in the United States, by government and private categories, is submitted in answer to item 1 in Senate Resolution 103:

TABLE 18.—Estimated value of American-owned assets in foreign countries, by Government and private categories, end of 1946

(In millions of dollars)

Foreign "debtor"	United States owner				Total
	Government		Private		
	Long-term	Short-term	Long-term	Short-term	
Government.....	4,680	510	2,025	7,215
Private.....	35	55	12,355	1,225	13,670
Total.....	4,715	565	14,380	1,225	20,885

NOTE.—U. S. Government assets at stated value; private assets estimated on the following bases: Direct investments, book value; securities, market value; deposits, stated value; and other assets, estimated value.

Source: Based on calculations made in the Department of Commerce and the Treasury Department.

A. AMERICAN-OWNED ASSETS IN FOREIGN COUNTRIES

Data by country are not available for the exact dates specified in item 4 of Senate Resolution 103, although the following global estimates have been made (in billions of dollars):

July 1, 1914.....	8.5	Dec. 31, 1939.....	12.5
Dec. 31, 1931.....	15.9	Dec. 31, 1946.....	20.9

Tables 19, 20, 21, and 22 show details by country for the years nearest the specified ones for which data are available. Table 22 differs from the others in that it includes the property of American citizens residing abroad. A break-down of the 1946 total by types of assets is presented in table 23.

Estimates for 1939, 1943, and 1946 are based on the most complete coverage of American assets ever obtained: All known forms of investment are included and for 1939 and 1946 omission estimates were included for assets not reported for 1943. However, the figures for American investments abroad on May 31, 1943 (table 22), also include the property of American citizens residing abroad, personal property, and other movable goods, and the property of religious and charitable organizations, which are not included in the data for other years. Moreover, the data for 1943 include about half a billion dollars of securities which are classified as direct investments in 1939 and 1946. The data for 1914, 1933, and 1946 are less complete in

46 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

almost every category of investment and in general exclude the assets in foreign countries of American citizens residing abroad.

¹ For statistical purposes only, control was determined on the basis of the ownership by one person or by an affiliated group of persons of 25 percent or more of the voting stock of corporations, and analogous interests in partnerships and other organizations.

² Less than \$50,000.

³ Included in the totals.

⁴ It is estimated that less than \$600,000,000 of foreign assets which should have been reported on Form TFR-500 according to the regulations were actually not reported, a margin of error of less than 5 percent. In addition, it is possible that property exempted from the reporting because of its small value may have aggregated as much as \$300,000,000.

All amounts given in this table are gross assets, without deduction for liabilities. Property reported herein was collateral for indebtedness amounting to approximately \$100,000,000.

NOTE.—The figures are rounded and will not necessarily add to the totals.

Source: Treasury Department, based on Census of American-Owned Assets in Foreign Countries (TFR-500) Government Printing Office, 1947. Values as follows: Interests in controlled enterprise, book value; securities, market value; deposits, principal amount; other assets, estimated value.

B. FOREIGN-OWNED UNITED STATES ASSETS

In the absence of by-country data for the dates specified in item 5 of Senate Resolution 103, the following global estimates are supplied (in billions of dollars):

July 1, 1914.....	7. 2	Dec. 31, 1939.....	12. 8
Dec. 31, 1931.....	3. 8	Dec. 31, 1946 (see table 27).....	16. 1

Again, details by country are shown only for certain years, namely, 1914, 1937, and 1941. See tables 24, 25, and 26.

Of the data presented in this section, the figures for 1939, 1941, and 1946 represent the most comprehensive coverage ever attained in this field. All known forms of investment are included and for 1939 and 1946 omission estimates were included for assets not reported in 1941. However, the figures of foreign assets in the United States on June 14, 1941 (table 26), include personal property and other movable goods, and the property of religious and charitable institutions, which are not included in the data for other years. The data for 1914 and 1937 are less complete in almost every category of investment. Unlike the estimates for other years, the 1937 figures exclude the assets in the United States of Americans residing abroad. The 1914 data partly include the value of such assets.

TABLE 24.—Estimated value of foreign-owned United States assets, July 1, 1914 [Par values, in millions of dollars]

Country	Type of security		Direct investments	Total
	Railroad ¹	Other		
Austria-Hungary, Turkey, and Bulgaria.....	70	50	30	150
France.....	290	75	45	410

Total, all areas.....	1,683	⁶ 3,806	653	⁶ 651	⁶ 6,907	⁶ 10,333

¹ Exclusive of \$100,000,000 of estimated foreign holdings of United States National, State, and municipal Government bonds. These holdings were estimated in total because of a lack of data for a by-country distribution.

² Area totals include short-term data that are not available for specific countries.

³ Less than \$1,000,000.

⁴ Short-term investments of Africa, Asia, Oceania, and unknown totalled \$397,000,000. This figure is not shown in the total for any specific area but is included in the totals for all areas combined.

⁵ After deducting \$148,000,000 from Canada and adding \$3,000,000 to Belgium, \$50,000,000 to France, \$20,000,000 to Netherlands, \$30,000,000 to Switzerland, and \$45,000,000 to United Kingdom. That amount represents the estimated investment held by Canadian nominees for non-Canadian owners. No data were available on which to estimate similar holdings in other foreign countries.

⁶ To put the preferred stock in this figure on a market-value basis, it would be necessary to deduct \$117,000,000 from this total.

⁷ Not shown separately.

NOTE.—Direct investments, book value; bonds and preferred stocks, par value; common stocks, market value.

C. UNITED STATES SECURITIES AND OTHER LONG-TERM ASSETS OF COUNTRIES PARTICIPATING IN THE EUROPEAN RECOVERY PROGRAM

Because of the special interest in the subject, estimates of long-term foreign investments in the United States of the 16 countries participating in the European recovery program have been prepared for the information of the committee. (See table 28.) The total long-term assets of these countries as of the middle of 1947 amounted to \$4,930,000,000. About \$2,200,000,000 consisted of stocks and bonds, the bulk of which are probably of a readily marketable character. Direct investments accounted for an additional \$1,700,000,000; these consist of the American branches and subsidiaries of foreign corporations and other United States companies 25 percent of whose voting stock is held abroad. Interests in estates and trusts and other miscellaneous assets, including real estate, account for the remaining \$1,000,000,000.

The character of these assets and the measures taken by the principal countries with respect to them are discussed by countries below:

¹ Holdings of International Monetary Fund and International Bank for Reconstruction and Development excluded. The United States assets of these and other international organizations on this date, amounted to \$2,714,000,000.

² Including Belgian Congo.

³ Including dependencies.

⁴ Including Netherlands West Indies.

⁵ Short-term foreign assets not broken down by countries include \$110,000,000 of brokerage balances, \$900,000,000 of estimated holdings of United States currency and claims against the United States Government and an omission estimate of \$500,000,000.

NOTE

Gold: Data represent total holdings of governments and central banks without regard to location.

Short-term assets: Composed principally of deposits in American banks and holdings of U. S. Government Treasury bills and certificates.

Long-term assets: Securities item is composed of holdings of stocks and bonds of United States corporations and bonds of the U. S. Government. The "Other" item is composed of controlling interests in United States corporations, interests in estates and trusts, and other types of property holdings. These assets vary widely as to availability and liquidity.

The differences between this table and table 27 are explained as follows: (1) Table 27 includes \$474,000,000 of assets of international organizations. Such assets were excluded from table 28. (2) Between Dec. 31, 1946, and June 30, 1947, the liabilities of United States banks to foreigners decreased by \$680,000,000, principally a reduction in U. S. Government bills and certificates held for foreign account. (3) Various changes in other items including a reduction in the market value of United States common stocks and net sales of United States securities by foreigners.

Source: Based on Treasury Department, TFR-300 data, adjusted by the Department of Commerce and Treasury Department on the basis of current information.

UNITED KINGDOM

Among the countries participating in the European recovery program the United Kingdom held by far the largest amount of long-term assets in the United States. The holdings of the United Kingdom were estimated to have a value over \$2,000,000,000 as of the middle of 1947. The United Kingdom and its nationals hold substantial amounts of stocks and bonds issued by United States corporations. It is estimated that the current market value of these securities is about \$600,000,000.

British subjects also have substantial interests in foreign-controlled United States enterprises. These interests, called direct investments, have a current book value in excess of \$1,000,000,000.

Insurance companies account for about half of the direct-investment total. These consist of 87 fire, marine, and casualty companies, of which 43 are incorporated in the United States and 44 are branches of British companies. Investments in these companies are carried in table 28 at \$450,000,000, which is their estimated net worth. The companies' assets consist largely of high-grade stocks and bonds together with real estate and mortgages which in 1946 produced a net investment income of 20.3 million dollars, in addition to the earnings from their underwriting business.

Similarly, all other direct investments—British and other—shown in table 28 have been entered at book values, i. e., the equity of the foreign owners in the capital stock, surplus, and liabilities of the American company or branch. There is no adequate method of determining a fair market value for most of these investments. There is no public market for their stock, and the price that could be secured either from public offering or private sale of their securities would depend on a large number of variables. Among these might be mentioned (1) the condition of the capital markets, (2) the degree of political pressure placed on the owning countries to liquidate, and (3) the position of any particular company to be sold in the American industry of which it is a part, including the past earnings, history, character of the management, value of patents owned, value of good will, condition and location of the physical equipment, and many other factors.

The only instance in which a British direct investment was liquidated was the sale in the early days of the war of about 90 percent of the stock of American Viscose Corp., the largest producer of rayon yarn in the United States. The stock of this company was vested by the British Government in 1941 and publicly offered in the United States through a banking syndicate. The British Treasury realized only about \$54,000,000 net on this sale, after paying commissions and other expenses, in spite of the fact that the company had a net worth of more than \$100,000,000. It was largely because of the failure to secure what was considered a fair value on this investment that no further steps were taken toward vesting and liquidating other direct investments. Instead, the unsold marketable securities still available to the British Government and most of the direct investments that had any sizeable value were pledged against a loan from the Reconstruction Finance Corporation of \$425,000,000. Only \$390,000,000 was ever drawn, and by the end of August 1947 about half of it had been repaid out of the proceeds of income received on

the pledged securities. The estimated value of the collateral held is about \$900,000,000; the balance of the loan outstanding is about \$186,000,000.

However, before securing the RFC loan, the British Government had vested and sold in the United States about \$700,000,000 of American securities previously owned by its nationals. The private holders were paid in sterling at the equivalent of the dollar value of the securities at the time they were vested.

Except for securities already vested or loaned to the British Government, British holders since October 1, 1947, are no longer required to sell their American securities to the Government on its request. Under the new Foreign Exchange Control Act which went into force on that date, holders of such securities may sell them and reinvest the proceeds in other American securities or may transfer their American securities freely against payment in sterling.

According to estimates of the Department of Commerce, income paid on United Kingdom investments in the United States in 1945 amounted to about \$86,000,000, of which \$43,000,000 was earned by the insurance companies. The earnings of the latter, due to large underwriting losses, dropped to about \$11,000,000 in 1946, thus reducing the total to about \$59,000,000 in the latter year. Most of this income, of course, went to service the RFC loan. In any event, in view of the effective administration of British exchange control, it is probable that substantially all the dollars received as a result of this income do become available to the British Government.

NETHERLANDS

Of the countries participating in the European recovery program, the Netherlands is the second largest holder of United States investments. A much larger proportion of the Dutch holdings consists of marketable securities than is the case for British holdings. There have been no vestings by the Netherlands Government of American securities. Dutch holdings of American stocks, estimated at about \$400,000,000, represent chiefly interests in large United States corporations and are therefore securities of a high degree of liquidity. They have been traditionally held in Holland in the form of bearer certificates issued by the Dutch administration offices, who in turn hold the original American stock certificates. In addition, the Dutch for many years have held substantial amounts of American corporate bonds, particularly railroad. The estimate for Dutch holdings of direct investments includes the full value of the Shell Union Oil Corp. stock owned by the Batavian Petroleum Co. Batavian in turn is owned partly by the Royal Dutch Co. and the British Shell Co., and partly in other countries. As a matter of fact, the estimates presented in table 28 are based in all instances on recorded addresses, and it may well be that in some cases the actual owners are residents of third countries.

Under the foreign-exchange-control decree of 1945 and the Netherlands banking regulation of July 1946, the Netherlands Government has been granted authority to take over the foreign exchange and foreign securities held by its nationals. Pursuant to this authority the Netherlands Bank has taken control of all privately held gold and foreign currency. The Government has required registration of the

securities and other investments of its nationals, but it has not vested them. The Government has attempted to induce private holders of dollar investments voluntarily to liquidate them. It has attempted to stimulate such liquidation by offering a Netherlands bond in dollar denominations and payable in guilders at the rate of exchange at the due date, which may be purchased with the proceeds of sales of United States dollar securities. According to reports received from the Netherlands only nominal amounts of this offering have been taken up. It appears that net sales of these United States securities for Netherlands accounts have been at the rate of less than \$100,000,000 a year. It is understood that the Netherlands Government has agreed with the Export-Import Bank to liquidate United States dollar securities or other obligations owned by its nationals in such amounts as shall be necessary to liquidate outstanding advances under the credit of \$200,000,000 which was granted to that Government on January 1, 1946.

It is felt that results of the census taken by the Dutch authorities, which correspond closely to the results obtained by the United States census, are reliable. Also the Dutch foreign-exchange controls are effective and, therefore, the \$28,000,000 annual income which the Department of Commerce estimates is earned on these assets is available to the Dutch Government as well as the dollar proceeds from sales of these assets.

OTHER EUROPEAN COUNTRIES

Switzerland

The third largest holder in this group of countries is Switzerland, with total United States assets of \$870,000,000. It is believed, however, that a substantial portion of these assets is beneficially owned by nationals of other countries. In particular, it has been frequently alleged that French citizens have invested capital in the United States through the intermediary of Swiss banks. The French Government has made efforts to secure information on this matter, but because of the strictness of banking secrecy code in Switzerland, no progress has been made. Most of the investments held in Swiss names are in stocks and bonds which are listed on one or more United States securities exchanges and enjoy an active market.

All Swiss dollar investments are privately owned. The Swiss Government has not taken a census of these assets or any other steps to utilize them. An agreement has been reached with United States authorities whereby the Swiss Government through accredited banks certify to the nonenemy ownership of United States securities as a condition to their being unblocked for transfer and withdrawal of the proceeds. The Swiss exchange controls permit the free transfer of these securities by its nationals. The Department of Commerce estimates the annual income received by Swiss nationals on these investments is about \$21,000,000.

France

Of the \$465,000,000 of long-term assets estimated for France, a study of available data indicates that perhaps half may be assets which were reported to the United States Treasury but have not been declared to the French authorities.

The French Government authorized a census and mobilization of foreign assets held by its citizens in January 1945. The census was

taken shortly thereafter and in July 1947 an order was issued vesting in the Government the dollar securities of French citizens. French citizens were compensated in francs for their property on the basis of July 1947 prices. As it was indicated above, it is generally believed that the results of this census and vesting order were incomplete due to the failure of some French citizens, in reliance upon the protection of Swiss and United States authorities, to disclose their holdings, particularly those held outside of France.

The French Government has in discussion with the United States on several occasions indicated its intention of utilizing the vested United States securities by sales in the open market. According to the Department of Commerce estimates, France receives income of about \$6,000,000 per year on these investments. It may be that even this small amount of dollar income is not altogether available to the French Government.

Italy

Italian holdings of United States assets are relatively unimportant. As of the middle of 1947 they are estimated to have a total value of \$63,000,000. Of this amount \$40,000,000 is estimated to represent utilizable forms. Holdings of stocks are estimated about \$12,000,000 and bonds at \$2,000,000. It is not known that the Italian Government has made any efforts to mobilize or utilize these assets of its nationals. According to the Department of Commerce estimate, the income received on these investments is about a half million dollars per year and even this amount may not be available to the Italian Government.

Sweden

In October 1947 the Swedish Government took steps to mobilize all private holdings of short-term foreign assets held by its nationals. According to available data, Swedish nationals own about \$115,000,000 of United States assets in the form of stocks, bonds, and direct investments. The Swedish Government has taken a census of these long-term assets but has not taken steps to vest or mobilize them.

Belgium

Of the remaining countries participating in the European recovery program, only Belgium holds United States assets of an appreciable amount. The holdings of this country in the form of stocks, bonds, direct and miscellaneous investments had an estimated value as of the middle of 1947 of \$185,000,000. A census of foreign assets was taken shortly after the liberation, but the Government has not sought authority to acquire the assets.

D. FOREIGN COUNTRIES' GOLD AND SHORT-TERM DOLLAR RESOURCES

At the end of June 1947, the gold and short-term dollar resources of all foreign countries totaled around 19 billion dollars. Out of this total, sterling-area countries held 4.2 billion dollars. Among the other countries that participated in the Paris European recovery program discussions, Switzerland, Portugal, and Turkey held about 2.4 billion dollars and the remaining participants 3.1 billion dollars. Other European countries (including the U. S. S. R.) are estimated to have held somewhat less than 4 billion dollars, Asiatic countries about 1.7 billion dollars, Latin America about 3.3 billion dollars, and

Canada 0.9 billion dollars. Table 29 gives the available figures for individual countries.¹

Most of these resources constituted reserves needed by their holders to finance the current flow of international trade or to back their currencies. Holdings not so required may be estimated roughly as follows: (a) About 1.5 billion dollars held by Switzerland, Portugal, and Turkey and about 1 billion dollars held by some Latin-American countries constituted reserves which might be judged to be over the holders' minimum needs; (b) if there were applied to the Philippine Republic the same general standards applied to other countries, its dollar holdings would seem to be about 250 million dollars over minimum requirements; (c) the holdings of South Africa as of June 30 may have been over that country's minimum needs by 300 million dollars or more, but there has since been announced a loan by South Africa of 325 million dollars of gold to the United Kingdom.

Foreign countries' total resources included about 14 billion dollars in gold stocks held abroad or earmarked in the United States and 5.3 billion dollars in short-term dollar assets held on the books of banks and bankers in the United States. Of these resources, the entire gold stocks and 2,160 million dollars in dollar balances were held officially (by foreign governments, their agencies and central banks), while the remaining dollar balances—3,170 million dollars—were held privately (by commercial banks, business firms, individuals, and others).

It may be noted that private dollar balances are considerably larger than official dollar balances. This represents a change from the situation which prevailed before February 1946, and is the result of an accelerated contraction of official balances and a gradual expansion of private balances. In large part these private balances actually represent the working funds of foreign commercial banks and business firms engaged in international finance and trade activities, and their increase reflects the expansion of the volume and value of their transactions after the war. The remainder (probably a small part only) consists of "refugee" funds held in the United States for safety and stability by private individuals, and their use in financing foreign needs will depend on the degree of control which foreign governments can exercise, or the willingness of private holders to repatriate them.

Net sales of gold to the United States and drawings on official dollar balances by foreign governments amounted during 1946 to 1,835 million dollars, and during the first half of 1947 they amounted to 2,275 million dollars. For the 1½-year period as a whole, the liquidation of gold and dollar balances proceeded at approximately equal rates: Net gold sales came to 2,085 million dollars and net drawings on official balances to 2,020 million dollars. The net decline in gold stocks and official balances during the period was 4,000 million dollars (inclusive of addition from gold production and deduction for contribution to the International Monetary Fund). A further loss of gold and dollars of around 650 million dollars has occurred in the third

¹ These figures cover all official gold stocks (using available estimates where figures are not officially published) and both official and private dollar balances as reported by bankers in the United States to Federal authorities. The figures do not, however, include gold and United States dollar notes that may be privately hoarded in foreign countries or short-term liabilities of brokers, commercial concerns, and the Commodity Credit Corporation. Thus they do not include \$1,510 million carried as "undistributed" short-term assets in table 28. No deduction has been made for foreign countries' gold and dollar liabilities.

quarter of 1947. This contraction of gold and dollar resources has been unevenly distributed, with the result that a number of foreign countries have already reduced their reserves below the levels that prudence would require them to keep, although a few countries, as noted above, continue to hold resources which might be regarded as over their minimum needs. Even these latter countries, with but a few exceptions, have recently been losing reserves, and they could hardly be expected to supply any great amount of loans of gold or dollars of the type needed to overcome other countries' dollar shortages.

The amount of reserves that a country needs depends upon a complex set of considerations including not only financial and economic but also psychological factors involving confidence in the country's currency, as well as political and historical factors. When a country's reserves are reduced below the amount that a prudent man would consider safe, the country may be fortunate and be able to maintain its financial stability; however, it subjects itself to the risks of economic and possible political dislocation arising from external and internal doubts and lack of confidence. A country may have to weigh the question of maintaining a safe level of reserves against the immediate need of imports vital to its economy, and in such a case may decide to hold a lower level of reserves than prudence at other times would dictate. For all these reasons, it is not possible to devise any simple general formula for determining the needs of different countries.

Neither can the amount of reserves needed be judged by a simple comparison with levels prevailing before the war. The erratic price rises since then and the shifts in composition of foreign trade would alone nullify the usefulness of such comparisons. More important, however, is the fact that throughout the thirties most countries already suffered from reserve deficiencies, and it was these deficiencies that led to their imposing restrictions on foreign trade and exchange. The longer-term objective of the United States—freer multilateral world trade—requires the avoidance of such restrictions.

Hence, in the last analysis, the amount of reserves needed by a given country at a given time is a matter that requires determination on the basis of the most expert and responsible judgment.

For purposes of the present discussion, the needs of each country have been estimated very roughly by taking a figure based on the country's volume of current payments to other countries for goods and services, to represent the amount of working balances needed, and adding a second figure based on its volume of currency in circulation, to represent the amount needed for domestic monetary reserves. Even though such approximations cannot represent any real judgment as to the need of any particular country, it is quite apparent that, even allowing for a considerable margin of error, there are few if any countries, outside of the groups previously listed as having surplus holdings, that are in a position to make further drafts on their gold and dollar resources without serious danger to their future financial stability.

The implicit assumption that each country needs to hold working balances proportional to its volume of current payments to other countries arises from normal business practice and procedures. The particular figure used in the present calculations—3 months' payments to other countries—is an arbitrary figure which is undoubtedly too high for some countries and too low for others. Most working balances

for trading purposes have in the past been privately held separately from monetary reserves; government participation in foreign trade and monopoly of exchange resources has tended to shift trade working balances from private to official accounts and to add them to the monetary reserves of central banks or exchange authorities. In normal times such working balances would be distributed among the various currencies of the major trading countries. Nowadays, however, for most imports of foreign countries, settlement is ultimately made in gold or dollars.²

The particular figure used for monetary reserve requirements—25 percent of the notes and other demand liabilities of the central bank (or other issuing institution)—corresponds to the level to which the legal requirement in the United States (for Federal Reserve notes and deposits) was lowered in June 1946. This figure is considerably lower than the 40 percent ratio which was required as a standard for purposes of currency stabilization in the period after World War I. The monetary laws of most countries still provide for reserve requirements in gold and exchange at levels between 25 and 50 percent, or even higher. However, because of the decline in their reserves and the expansion of their currencies, many countries have been forced to suspend legal-reserve requirements and currency convertibility, and to introduce rigorous exchange controls.

In view of the general abandonment of the gold standard and the adoption of managed currency systems, a gold reserve is no longer technically required to meet demands for gold payments within any country. In these circumstances monetary reserves may logically be considered not as internal reserves, but as funds (supplemented, to a limited extent, by the possibility of drawing upon the International Monetary Fund) for meeting contingencies in international payments and for the stabilization of exchange rates. It is clear that the amount of international currency a country needs is not directly related to the volume of its central bank's sight liabilities, or even to the amount of its domestic money supply (currency plus demand deposits). While the traditional reserve ratios of central banks are open to this technical criticism, they nonetheless command the attention and respect of the general public in the countries concerned. Hence, governments continue to regard seriously any decline in the reserve ratio and to impose increasingly stringent restrictions on foreign payments whenever this ratio tends to fall below what is customarily regarded in the country concerned as a safe or minimum level.

While, in the present crisis, many foreign countries have already drawn their reserves below what would ordinarily be regarded as a prudent level, it is clear that such use of monetary reserves for meeting current deficits must in the long run delay and jeopardize the restoration of international convertibility of currencies. The depletion of reserves of foreign countries makes it impossible for them to relax import and exchange controls, and thus ultimately runs counter to the United States objective of expanded multilateral trade.

² For purposes of this discussion, trade between countries within the same monetary area (such as the sterling area) is regarded as internal trade, not foreign trade.

¹ Official gold holdings; for countries whose holdings have not been published, available estimates have been used.

² Deposits and other short-term dollar resources, as reported by banks and bankers in the United States to the Federal Reserve banks and the U. S. Treasury.

³ Includes \$10,000,000 held by Ethiopia, Liberia, Greenland, and unidentified countries.

CHAPTER III. STATUS OF AMERICAN INVESTMENTS IN FOREIGN COUNTRIES

This chapter is based on a survey of available data regarding the status of American investments in foreign countries in response to item 7 of Senate Resolution 103. It is nonstatistical and primarily legal.

Item 7. The legal and actual status of American direct investments under the laws and current practices of the respective foreign countries in which such investments have been made.

The discussion has been divided into three parts. First is a discussion of the provisions of treaties between the United States and foreign countries to the extent that they affect American direct investments abroad. Second is a brief survey of foreign laws and decrees that affect American-owned property, together with available data regarding the administration of such laws and decrees if it is in any manner discriminatory against this country. In addition to this material on direct investments, there is appended, as the third part of this chapter, a note on the status of defaults on foreign bonds publicly offered in the United States.

A. TREATY PROVISIONS

So far as the legal status of American direct investments abroad is concerned, the laws of the respective foreign countries are affected by applicable treaty provisions in force between the United States and such foreign countries. Such provisions may be classified, in general, as follows: (1) those which expressly accord rights to nationals or corporations to engage in commercial activity, enterprise, or business; (2) those which, while not expressly according such rights, do extend (a) most-favored-nation treatment, either conditional or unconditional, so that for all practical purposes American nationals or corporations would be entitled to the rights in question if the nationals or corporations of any third country were accorded such rights, or (b) national treatment, according the same rights as the rights of nationals or corporations of the country in which the activity is carried on; and (3) those which modify or implement the local law in connection with the exercise of an expressed or implied right.

ESTABLISHMENT OF AND PARTICIPATION IN CORPORATIONS

Under the first heading in the attached tabulation, those countries are identified with which treaty provisions deal specifically with rights concerning the establishment of, and participation in, corporations. The earliest of the 11 treaties indicated in that column is the one with Germany concluded on December 8, 1923. Articles XII and XIII of that treaty are typical. Article XII relates to the recognition of the juridical status of corporations of one country which have central offices in the other country, it being provided, nevertheless, that the

right of such corporations to establish themselves within such other country and to establish branch offices and fulfill their functions therein shall depend upon, and be governed solely by, the consent of the government of such other country as expressed in its national, state, or provincial laws. Article XIII relates to the rights of the nationals of one of the countries, reciprocally and upon a most-favored-nation basis and upon certain conditions, with respect to the organization of and participation in corporations.

These specific provisions are in addition to provisions of the customary type relating to entry, residence, and establishment (covered under heading II). In earlier treaties it was not customary to refer to corporations specifically. In fact, many of the existing treaties of the United States were made at times when corporations were virtually unknown in international commercial relations. The position has been taken that treaty provisions which accord certain rights to nationals or citizens of foreign countries with respect to establishment or the carrying on of trade or business do not apply, in general, to corporate bodies. The general principle applicable in this country to a corporation doing business beyond the limits of the sovereign authority under which it was created has always been that the corporation, being the mere creation of local law, can have no legal existence beyond those limits. (See, e. g., *Paul v. Virginia*, 8 Wall. 168, 181.) It is an accepted doctrine in this and in other countries that foreign corporations may be subjected to conditions and restrictions not imposed upon domestic corporations and are forbidden to engage in some activities permitted to domestic corporations. It is true that there has been an evolution in American public law away from the extreme or harshly restrictive theory in regard to foreign corporations, with a tendency toward adoption of the doctrine of compulsory recognition.

Treaty provisions dealing specifically with this matter are, as indicated above, of comparatively recent origin, and corporations as such are not in a tenable position in claiming rights under treaty provisions which accord rights to nationals or citizens without specifying that corporations shall be accorded similar rights. This is true despite the fact that where the treaty provisions are readily capable of a liberal interpretation, so as to cover corporate activity, there is an increasing tendency to extend to corporations privileges which are not inconsistent with local law. Apart from the 11 treaties mentioned above, the provisions in force between the United States and foreign countries respecting the legal status of corporations and their right to carry on business are comparatively few.

RECIPROCAL TRADE AGREEMENTS

The third heading in the tabulation refers to "Provisions otherwise modifying or implementing law." This is in the nature of a catch-all column to cover provisions, not otherwise covered in other columns, which might have some bearing, directly or indirectly^f upon the status of American direct investments abroad by requiring or facilitating the modification or implementation of local law. For the most part, the provisions which are referred to in the fifth column are those which are contained in reciprocal trade agreements and have relation (1) to the establishment or maintenance by either

contracting party of a monopoly for the importation, production, or sale of a particular commodity; or (2) to the establishment or maintenance by either contracting party of any form of exchange controls (control of the means of international payment); for example, articles VIII and IX, respectively, of the trade agreement of 1939 with Venezuela (Executive Agreement Series 180).

It would be impossible in the case of most of the provisions to undertake any authoritative statements as to how the provisions would apply under specific circumstances, inasmuch as this involves interpretations, sometimes by the courts. Nevertheless, it appeared advisable to include some reference to them because of their possible application.

DOUBLE TAXATION CONVENTIONS AND AGREEMENTS

For over a quarter century section 131 of the United States Internal Revenue Code has provided that income and profits taxes paid to foreign governments may be credited against income tax otherwise due to the United States Government. This provision is most helpful to American foreign investment. However, it has been found desirable to supplement it with bilateral treaties for the avoidance of double taxation and for administrative cooperation for the prevention of tax evasion.

Conventions relating to taxes on income are in force between the United States and four countries, namely, the United Kingdom, Canada, France, and Sweden. Conventions relating to taxes on the estates of deceased persons—commonly referred to as estate taxes or death duties—are in force between the United States and two countries, namely, the United Kingdom and Canada.

The imposition and collection of taxes upon the same income or upon the same estate by both the United States and a foreign country may, and often does, result in double taxation of a severe character. The conventions above mentioned have been concluded and brought into force for the purpose of avoiding such double taxation, so far as practicable, modifying certain conflicting principles of taxation for this purpose, and establishing certain procedures for the exchange of information in relation to taxation. It is considered (1) that provisions of income-tax conventions constitute a definite step toward the removal of undesirable impediments to international trade and stabilize to a considerable degree the conditions under which nationals and corporations of one of the countries carry on their business and investment operations in the other country, and (2) that the provisions of estate-tax conventions go far toward eliminating double taxation in connection with the settlement in either country of estates in which nationals and corporations of the other country have interests.

The avoidance of double taxation is achieved, in general, by either of two methods, namely, (1) by the specific exemption of certain types of income or property from taxation in one of the countries, or (2) by the allowance of a credit by one of the countries for taxes paid to the other country upon certain types of income or property. The double taxation conventions are somewhat unique in comparison with other international agreements. While not diminishing in any respect any right, deduction, or credit which taxpayers may have under existing legislation, the conventions have for their primary object the modification

of existing law so as to extend additional benefits to taxpayers or the "freezing" of existing law in order that taxpayers may be relieved of unnecessary apprehension regarding their tax status abroad.

The income-tax conventions with Sweden, France, and the United Kingdom contain national-treatment provisions whereby nationals (citizens or subjects) of one of the countries residing within the other country are accorded treatment, in regard to taxes, no less favorable than the treatment accorded the nationals (citizens or subjects) of such other country. In the case of the convention with France these provisions are extended to apply to corporations, but are restricted expressly to the taxes which are the specific subject of the convention. In the case of the convention with the United Kingdom, the latest to enter into force, the national-treatment provisions are broad, covering taxes of every kind or description whether National, Federal, State, Provincial, or municipal, and extending not only to nationals in the sense of United States citizens and British subjects but also to all legal persons, including corporations, partnerships, and associations. In the more recent discussions with representatives of foreign governments with a view to determining the possible bases for double taxation conventions, it has been the established policy of the United States representatives to propose the inclusion of a broad national-treatment provision along the following lines:

The nationals of one of the contracting states shall not, while resident within the other contracting state, be subjected therein to other or more burdensome taxes than are the nationals of such other contracting state residing in the territory of such other state. The term "nationals" as used in this article includes citizens and likewise all corporations, partnerships, and other legal entities created or organized in, or under the laws in force in the territory of, the respective contracting states. The term "taxes" as used in this article means taxes of every kind or description, whether national, state, provincial, or municipal.

As indicated in the last column of the tabulation, the United States has agreements with 13 countries relating solely to relief from double taxation on shipping profits. It has been customary for these agreements to be effected by exchanges of diplomatic notes. So far as the United States is concerned, the agreements are made under existing law, as expressed in section 212 (b) of the Revenue Act of 1928 (45 Stat. 791), as follows:

The income of a nonresident alien individual which consists exclusively of earnings derived from the operation of a ship or ships documented under the laws of a foreign country which grants an equivalent exemption to citizens of the United States and to corporations organized in the United States, shall not be included in gross income and shall be exempt from taxation under this title.

The agreements made with other countries under this provision of law have the character, in each case, of a joint declaration by the two countries that under their respective laws the profits derived by nonresident aliens, nationals of the other country, and by corporations of the other country from the operation of ships documented under the laws of such other country are exempt from taxation.

AVIATION AGREEMENTS

Agreements regarding air transportation, commercial aviation, and air navigation were not included in the attached tabulation. However, in order to complete the record it should be pointed out that such agreements, which contain provisions affecting the rights and obliga-

tions of American air lines with respect to the operation of aircraft within or over the territory of foreign countries, may have a bearing upon the legal or actual status of American direct investments abroad. It appears that any determination regarding the application of such agreements would depend upon the particular circumstances.

The following bilateral agreements are in force between the United States and foreign countries:

(1) Air transport agreements with Argentina, Australia, Austria, Belgium, Brazil, Canada, Chile, China, Czechoslovakia, Denmark, Ecuador, Egypt, France, Greece, Iceland, India, Ireland, Lebanon, New Zealand, Norway, Paraguay, Peru, Philippine Republic, Portugal, Siam, Spain, Sweden, Switzerland, Syria, Turkey, Union of South Africa, United Kingdom, and Uruguay.

(2) Commercial aviation agreement with Colombia.

(3) Air navigation agreements with Canada, Denmark, France, Germany, Ireland, Italy, Liberia, Norway, Sweden, Union of South Africa, and United Kingdom.

(4) Agreements regarding recognition of certificates of airworthiness for imported aircraft with Belgium, Canada, Denmark, Germany, New Zealand, Norway, Sweden, Union of South Africa, and United Kingdom.

(5) Agreements relating to issuance of pilots' licenses with Canada, Denmark, Norway, Sweden, Union of South Africa, and United Kingdom.

(6) Air facilities service agreements with Australia, Burma, Ceylon, Czechoslovakia, Denmark, France, Italy, Netherlands, Norway, Siam, Spain, Sweden, Switzerland, and United Kingdom.

(7) Provisional arrangements with Finland, Iran, Italy, and Saudi Arabia granting unilateral rights to United States air lines.

The following multilateral agreements are in force between the United States and numerous foreign countries:

(1) Inter-American convention concerning commercial aviation, adopted at Habana February 28, 1928, effective for the United States August 26, 1931 (Treaty Series 840). Denounced by the United States, effective November 29, 1947.

(2) International convention for the unification of certain rules relating to international transportation by air, and additional protocol, signed at Warsaw October 12, 1929, effective for the United States October 29, 1934 (Treaty Series 876).

(3) International sanitary convention for aerial navigation, signed at The Hague April 12, 1933, effective for the United States, November 22, 1935 (Treaty Series 901).

(4) International sanitary convention for aerial navigation, 1944, signed at Washington for the United States January 5, 1945, effective for the United States May 29, 1945, modifying the convention (above) of April 12, 1933 (Treaty Series 992).

(5) Protocol, signed at Washington for the United States April 30, 1946, effective for the United States August 6, 1946, prolonging the international sanitary convention for aerial navigation, 1944 (Treaties and Other International Acts Series 1552.)

(6) International Civil Aviation Conference documents, signed at Chicago December 7, 1944:

(a) Convention on international civil aviation, effective for the United States April 4, 1947 (Treaties and Other International Acts Series 1591.)

72 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

(b) Interim agreement on international civil aviation, effective for the United States, June 6, 1945 (Executive Agreement Series 469).

(c) International air services transit agreement, effective for the United States February 8, 1945 (Executive Agreement Series 487).

¹ E. g., exchange controls, etc.

² The possible effect of the war upon the operation of the treaties with these countries is not dealt with.

B. LEGAL STATUS OF DIRECT INVESTMENTS IN FOREIGN COUNTRIES.

The statements concerning conditions in individual countries should be evaluated bearing in mind the following:

(1) Under present conditions in Europe the value of the statutory rights of foreign investors depends entirely on administrative procedure. This is particularly true of all laws concerning rights to do business, since the ability to do business depends on administrative action in allocation of foreign exchange, raw materials, etc.

(2) In many important instances, for example, in the matter of foreign exchange control, the statutes and regulations only contain the authority for administrative action, while the actual decisions and practices affecting American business undergo frequent changes on which up-to-date information is often not available.

(3) Statutes concerning the taxation of businesses are lengthy, complicated, and subject to changes. The matter of taxation therefore has been gone into only where taxes on foreign business materially differ from those applicable to domestic businesses.

(4) Statutes concerning the right of foreigners to do business and the formalities to be complied with by foreign businesses are frequently voluminous and complicated, but are usually similar to each other in that they concern the proof of the legal status in the country of domicile, the appointment of a fully authorized representative in the foreign country, proof that the bylaws do not interfere with the public interest, an undertaking to abide by local laws and certain regulations concerning publication of financial statements, changes in the bylaws of capitalization, and sometimes a prohibition to acquire land in frontier districts. For this reason the matter has been gone into only where there is special evidence of discrimination or other subjects of particular interest. In many cases the formalities applicable to the establishment of a foreign business can be minimized by incorporating a local subsidiary.

THE UNITED KINGDOM AND THE BRITISH DOMINIONS

Right to do business.—The British Companies Act of 1939, as amended, contains no provisions designed to discriminate between nationals and foreigners in the formation and operation of British companies. Furthermore, an American corporation or other person in establishing a British subsidiary encounters no special nationality requirements such as with respect to directors and shareholders.

When a foreign corporation establishes a place of business within the United Kingdom, it must, within 1 month, register as a branch of the foreign corporation with the Registrar of Companies. This involves the filing of certified copies of its charter, articles of association, etc., the payment of registration fees, and the submission of the annual statement of the company. Such an organization is accorded under the law substantially the same privileges and is subject to the same requirements as a British enterprise.

In all of the Dominions of the British Commonwealth the company laws are adaptations of the 1939 British Act (a consolidating and amending act) or earlier British legislation on this subject. Consequently, the company laws of the Dominions are to a large extent similar to the United Kingdom act and contain no discriminatory provisions against foreigners.

Many of the controls over industrial activities exercised during the war in the United Kingdom continue in effect in modified form, such as the allocation of certain raw materials in short supply, control of industrial construction, and the location of new industries. Many products, especially consumer goods remain subject to price controls. In the administration of these controls American branch plants are apparently being treated on the same basis as national enterprises.

The Borrowing Control and Guarantees Act, 1946, applying both to residents and citizens of the United Kingdom and to resident foreigners in the United Kingdom provides that the borrowing of money or the issuance of securities in excess of £50,000 in any year requires the prior consent of the British Treasury. In addition, under the Exchange Control Act, 1947, all loans of any kind made by United Kingdom residents to any corporation or branch business resident in the scheduled territories which is by any means controlled by residents outside the scheduled territories are subject to the permission of the British Treasury. (Scheduled territories are roughly equivalent to those formerly comprising the sterling area.) Consequently, American subsidiaries and branches operating in the United Kingdom and scheduled territories cannot borrow money in the British money market, whether in the form of bank loans or of securities, without the consent of the British Treasury and subject to such conditions as may be imposed.

There is no Commonwealth companies law in Australia so that foreign companies desiring to establish a place of business in Australia are, as in the United States, subject to the licensing requirements of the individual States, or they may incorporate a subsidiary under the Companies Act of one of the States. The latter type of company is subject to licensing requirements when establishing a place of business in other Australian States to the same extent as an ex-Australian company. There are no discriminatory provisions in the companies acts of any of the Australian States.

Three methods are available for an American corporation intending to operate in Canada: (1) Registration of a branch as an extra-Provincial company in a Canadian Province; (2) formation of a Provincial company as a subsidiary; and (3) formation of a Dominion company as a subsidiary. As among the States of the United States, a foreign corporation (whether incorporated in a foreign country or in another Province) is required to take out a license in each Province in which it carries on business through a branch establishment. There are no nationality restrictions in the several Canadian company laws.

As of August 15, 1947, two separate Dominions were established, designated as India and Pakistan, which, by June 30, 1948, will decide whether they desire to continue as Dominions of the British Commonwealth, or to sever this tie completely. The existing Indian Companies Act, based on British company law principles, does not contain nationality restrictions. It may be stated that there exists in both India and Pakistan considerable sentiment for the imposition of requirements for local participation in industrial enterprises operated by foreign nationals, but this is counterbalanced to some extent by the recognition of a need to encourage foreign technical assistance in the development of the industrialization programs.

Taxation.—United States tax conventions with the United Kingdom for the avoidance of double taxation with respect to income taxes

and estate taxes have removed most of the tax difficulties encountered by American investments and business interests in the United Kingdom. The United States also has conventions similar in scope and purpose with Canada with respect to Dominion income and estate taxes. Conventions for the avoidance of double income and estate tax conventions were signed on December 13, 1946, and April 10, 1947, respectively, by the United States and the Union of South Africa, but the ratification procedures have not as yet been accomplished.

The income tax laws of both Australia and New Zealand have broad definitions of what constitutes doing business in their jurisdictions so as to render nonresident firms liable to income tax on the profits made from sales. When an American firm makes sales in Australia or New Zealand through traveling salesmen, commission agents, or other intermediaries who are "instrumental" in obtaining orders, whether or not concluding contracts on its behalf, such firm is liable to tax on the profits therefrom. Consequently, only direct sales through mail or cable orders or to distributors who buy and sell in their own name are exempt from tax.

Section 19A of the Indian Income Tax Act stipulates that the principal officer of every company shall furnish the names and addresses of its shareholders, and section 3, explanation 3, provides that "a dividend paid without British India shall be deemed to be income accruing and arising in British India to the extent to which it has been paid out of profits subjected to income tax in British India." Although this provision has apparently not been heretofore enforced against American companies operating in India only through registered branches, one American company, at least, was requested to supply the list of its shareholders as a condition to the registration of a branch it sought to establish in India. After representations were made, the finance member issued instructions that this requirement should not be applied, and indicated that an amendment to the tax law would be recommended.

While a nonresident is made liable to Indian income tax only on income derived from sources in India, the total world income of such taxpayer is made the basis for determining the rates of tax to be applied to that Indian income. As a result a nonresident may be subject to a substantially higher rate on his Indian income than would be indicated by the tax rate schedules.

Labor.—Directors and employees of managerial status of branches or British subsidiaries of American firms have in general encountered little difficulty in obtaining permission to enter and remain in the United Kingdom. In the case of technical employees it is necessary to establish that British subjects with the necessary qualifications are not available, and when permission to enter is granted it is usually stipulated that they may remain only so long as it may be necessary for these employees to train local employees to do the work. The bringing in of unskilled labor is generally not permitted. The Dominions have, in general, applied similar regulations.

The Canadian contract labor regulations of 1929 established practices similar to those described in the preceding paragraph, but due to the current scarcity of numerous classes of labor in Canada an order in council dated April 11, 1947, has suspended the 1929 regulations.

Foreign exchange controls.—Exchange controls are in effect in the United Kingdom and all the Dominions. Excluding the Dominion of Canada, the regulations and policies governing exchange transactions are similar in all these countries, subject only to minor variations resulting from particular local conditions. In order to transfer funds for the purchase of goods or services it is necessary for the resident remitter to obtain a permit from the local exchange control authorities, unless the recipient is also a resident in a sterling area country. This requirement extends as a general rule to payments of interest, profits and dividends, whether by individuals or firms. The customary policy which has been followed for some time is to permit transfers of this type to be made on application, subject only to the possible submission of reasonable proof that the transfer represents a bona fide transaction and the funds involved accrue from current operations. Transfers of capital, on the other hand, are permitted under very special circumstances as determined by the merits of each case presented to the authorities. Sums realized from the sale of capital assets are, therefore, ordinarily "blocked," but it is the policy of the authorities to permit reinvestment of these sums and to allow returns to be transferred as they accrue. By following a prescribed form nonresidents purchasing securities in London with newly remitted funds may sell these securities subsequently and transfer the proceeds in the same currency as the original funds were transmitted. Although royalty and rental payments are permitted under prewar agreements, new licensing or leasing arrangements between foreign and domestic companies must be approved in order that transfer of payments arising therefrom may be made without difficulty.

Although the Union of South Africa is a member of the sterling area and has an exchange control system similar to those of the United Kingdom, Australia, New Zealand, and other parts of the area, it has in practice been able by virtue of its large gold production to apply the controls without as rigid supervision.

The Canadian exchange control mechanism differs in several respects from that of the United Kingdom or its sister Dominions. Canada has not, of course, been a member of the sterling area, and has not shared in the freedom of monetary transfer in transactions with that area as have the other Commonwealth countries. The movement of funds between Canada and the United States is controlled, but all current transactions not otherwise prohibited are eligible for payment in official exchange, that is, United States dollars are supplied at the established rate of exchange by the Canadian authorities. Thus, interest, profits and dividends may be remitted at the official rate. The control over capital transfers is more complex, but under present regulations new capital investments other than in bonds and debentures by nonresidents may subsequently be liquidated and transferred if originally registered with the authorities at the time the investment was made. The authorization to liquidate given by the authorities does not carry with it access to official exchange and the proceeds may be transferred only in Canadian dollars. This situation has given rise to a "free" market in the United States where Canadian dollars are sold at a varying discount against United States dollars. Since the Canadian dollars so acquired cannot be used to purchase Canadian goods for export, the chief sources of demand for them are tourists and investors wishing to purchase Canadian securities or real estate.

Nationalization.—The nationalization program in the United Kingdom has been applied to the Bank of England, the coal mines, inland transportation systems, air services, and cable services. Foreign investments in the nationalized industries were apparently negligible, and equitable compensation to private investors, whether British nationals or foreigners, has been provided for in the pertinent legislation. The nationalization of the electric and gas industries is programmed for consideration by the current session of Parliament, and public ownership of the iron and steel industry is on the agenda for future action.

The Cabinet of the Commonwealth has submitted to the Australian Parliament a proposal to nationalize all private trading banks. Since considerable controversy has resulted over this issue, the ultimate outcome of the proposal is uncertain.

Eire

Right to do business.—The British Companies Act in effect on December 6, 1921, was by section 73 of the Constitution of the Irish Free State, and by the Adaptation of Enactments Act of December 20, 1922, applied in the then Irish Free State. There have been no subsequent enactments to change the company law then in effect, so that there are no discriminatory provisions in the Companies Act with respect to the incorporation or registration of companies in Eire.

Under the Control of Manufactures Act, 1932, as amended, a foreign controlled manufacturing business may not be established in Eire without a license from the Minister of Industry and Commerce; if it was established before 1932, it cannot extend the scope of its manufacturing activities without such license. The Minister may, at his absolute discretion, grant a license to do all the things specified in the application or to do some or only one of the things specified or refuse to grant a license.

Since July 2, 1934, it has not been lawful for any company to engage in manufacturing in Eire without this special license unless 51 percent of its issued shares are owned by a national of Eire or by a qualified body corporate. A qualified body corporate (or holding company) must have at least 51 percent of its shares held by qualified persons (i. e., nationals of Eire or ordinary residents of Eire for 5 years before July 2, 1934), at least two-thirds of any class of shares carrying voting rights must be similarly held and a majority of the directors (other than a full-time managing director) must be nationals of Eire. Individuals cannot engage in manufacturing without a special license unless they are qualified persons.

The same act empowers the executive council to declare the manufacture of a particular commodity to be a reserved commodity which no one shall be permitted to engage in without a license, subject to such conditions as the Minister may attach to it. The purpose of this part of the act is apparently to encourage industries hitherto nonexistent in Eire by granting a monopoly position or assurance of limited competition.

EUROPE

Belgium

Right to do business.—No known law exists in Belgium to prohibit the right of foreigners to establish and operate business concerns or to prohibit the manufacture of merchandise, but decree laws have been

instituted to restrict the activities of foreign corporations and the employment of foreigners.

A decree law was passed in 1923 limiting the acquisition of realty and the conclusion of leases by foreigners (except those governed by Belgian law) to 9 years without special authorization of the Ministry of the Interior.

In order to own or lease property for a period greater than 9 years, the foreign company is required to have a Belgian president, Belgian manager, Belgian managing directors and more than 50 percent of its board of directors of Belgian nationals, and its principal place of business in Belgium.

The Belgian Government furthermore reserves the right to reject or prohibit the establishment of foreign branch factories, subsidiaries, and the like, if such establishment meets with the disapproval of Belgian trade associations. This was exemplified by the objections of the Belgian glass industry on the grounds that "There is no room for a competitor," when the Pittsburgh Plate Glass Co. in 1947 applied for the establishment of a branch factory.

By a decree of 1935 the Belgian Government reserves the right to oppose the operation of a foreign company or the extension of an already existing foreign company, if the Belgian Government deems it inexpedient for the country's economy.

The Belgian Government reserves the right to request that a certain percentage of locally manufactured goods be used by a foreign company. For example, by a gentlemen's agreement the United States automotive assembling plants have agreed to utilize at least 40 percent of locally made automotive parts and accessories in the assembling of all automotive vehicles.

Taxation.—A 1938 law gave the Belgian Government the right to assess a local company on any profits realized directly or indirectly through it by a foreign controlling company of the local concern. Furthermore, the company is required to deposit with the Belgian tax authorities guarantee for payment of taxes, and is required to file with its tax declaration the latest balance sheet and profit-and-loss account not only for the local branch company or subsidiary but for the parent or controlling company.

Because of the difficulty inherent in determining the profits of foreign firms operating branches in Belgium, the tax authorities assessed these firms on an arbitrary basis if their profits fell below the average earnings of local firms of a similar nature.

Labor regulations.—A 1930 decree requires foreigners entering the country for employment to obtain an authorization from the Ministry of Justice, an identity card, and to submit an employment contract from an employer established in Belgium. By a 1939 decree all foreigners who apply for employment in Belgium must pay 500 francs upon application for their identity card which in addition is subject to a stamp tax.

Foreign exchange controls.—Foreign exchange is under strict control. Present indications are that current earnings are being transferred but no export of capital seems possible.

Competition with Government-owned companies.—The merchant marine is Government-owned. Railroads and communications are semiprivate monopolies.

Nationalization.—Belgium has not followed a postwar policy of nationalization.

Czechoslovakia

Right to do business.—Before World War II foreign corporations doing business in Czechoslovakia were restricted by requirements for special licensing (particularly as far as acquisition or lease of real estate in frontier zones was concerned), for special reports, requirements for the employment of citizens in key positions, certain regulations referring to the employment of foreigners and restrictions on residents in frontier zones. There were also special provisions restricting the operations of foreign insurance companies in Czechoslovakia. Although all these regulations are probably still in effect, their importance is minimized through the nationalization legislation passed after the war, which is dealt with below.

Taxation.—There appears to be no evidence of discriminatory taxes against foreign enterprises.

Labor regulations.—According to 1936 legislation, the employment of foreigners in industry was subject to license.

Foreign exchange control.—Tight foreign exchange control is maintained. Since all major industrial investments have been nationalized as outlined below, the question of transfer of capital and earnings does not arise except in minor instances.

Nationalization and competition with Government-owned companies.—The law provides for nationalization of key industries, notably power, mining, iron and steel, chemical, banks and insurance, and of all industries if the number of employees exceeds 150 to 500, depending on the industry. Railroads, communications, motion-picture, tobacco, and salt industries are Government monopolies.

In an exchange of notes with the United States Government in November 1946 the Czech Government pledged itself to make adequate compensation for nationalized American-owned property. Negotiations for the implementation of this undertaking have been carried on, but so far have not been brought to a conclusion. According to press reports it has been an obstacle to the negotiations that no agreement could be reached concerning the treatment of claims held by recently naturalized American citizens who had been Czechs.

Denmark

Right to do business.—A foreign stock company which in the opinion of the Minister of Commerce is lawfully organized in its own country may do business in Denmark, but may not conduct a retail business. The fact that the company is foreign and its nationality must be indicated in its name. The usual formalities have to be complied with.

As far as companies organized under Danish law are concerned, members of the board of directors who reside abroad and who are not Danish citizens can sign in the name of the company only collectively with persons residing in Denmark. Except in the case of companies which bore their present name before January 1, 1918, a Danish company may incorporate in its name the name of a Danish locality or of Danish nationality only if all the members of the board are either citizens or have resided in the country for the last 5 years.

Taxation.—The Danish tax law treats a foreign corporation as an individual. The consequent difficulties make it advisable for a foreign corporation to operate in Denmark through a Danish subsidiary.

Labor regulations.—With the exception of the restrictions on foreign directors of corporations, there is no evidence of labor regulations

discriminating against foreigners. However, since the employment of foreigners is subject to license in practically all European countries, it must be assumed that corresponding regulations exist also in Denmark.

Foreign exchange control.—Foreign exchange is tightly controlled and it appears unlikely that capital can be exported from the country. There is no evidence concerning the transfer of earnings.

Competition with Government-owned companies.—Transportation and communications have been Government monopolies since before the war. There is a state organization for the import of coal and the Government exercises some control of industry through the allocation of imported articles and exportable goods.

Nationalization.—Denmark has not followed a postwar program of nationalization.

France

Right to do business.—Little material is available on prewar France but the data on hand indicate an absence of joint-participation requirements, with some exceptions noted below.

While there was no general requirement that the majority of the directors of a French corporation be French nationals, it was a common practice to put French nationals in a majority position on the board because during the First World War the nationality of a company had been determined by the complexion of its board of directors and some firms had been taken over by the Government on that basis. Certain general aspects of French law tend to discourage American investment. For instance, the presidents and boards of directors of corporations are liable for debts of the company.

Exceptions: (1) a 1938 decree required that a French company importing petroleum have a majority of French citizens on its board of directors and also a French president and a French general manager; (2) officers of French shipping companies had to be nationals; (3) foreigners were excluded from bidding for public works and for supply contracts. However, foreign-owned companies organized in France were not excluded, because French jurisprudence considered all companies incorporated in France as French.

All French and foreign businessmen must obtain a "Carte de commerçant" before engaging in business. This is a permit to do business granted by the local prefects of police only after consultation with the professional organization in the field concerned. Even if granted it may take 3 months to a year to obtain a permit. In fields regarded as already overcrowded permits are not granted. Owing to shortages of fuels, raw materials, and manpower, many domestic fields are overcrowded, as is foreign trade due to the shortage of exchange. Many areas of trade are therefore more or less closed to newcomers for the time being.

Taxation.—There was some double taxation on foreign investment in France which was alleviated in respect to American investments by the Franco-American Treaty for the Elimination of Double Taxation, effective January 1, 1946.

Labor regulations.—Prewar France had extensive limitations on foreign labor in the country which may still exist in part.

Foreign exchange control.—Foreign exchange is tightly controlled and transfer of capital not possible except in hardship cases where small sums are involved. As to profits and interest, the French Govern-

ment has given the assurance that it would permit the transfer of current returns on American investments, but there is no information available to show how difficult it is in practice to obtain the transfer, which seems to take place sporadically. The import of capital is also controlled.

At the present time, persons who want to bring in capital to start a business in France must show that such capital importation will either produce foreign exchange or that it will increase over-all production of necessities. In connection with the latter point, the over-all shortages of raw materials, energy and manpower in France are such that additional drains on these resources are not welcomed unless they produce positive over-all benefits.

For foreign exchange reasons, certain insurance risks must be covered with French companies.

Competition with Government-owned companies and nationalization.—After the war the French Government undertook an extensive program of nationalization affecting the major French banks and insurance companies, coal mines and gas and electric companies, as well as the air lines and merchant marine. Through confiscation of German-owned property and property of collaborators, the Government also acquired an interest in two major automobile manufacturing companies and some aircraft plants. Foreign companies operating in France in fields which are not subject to nationalization or which are only partly nationalized (such as banks) are permitted to carry on under certain regulations, and theoretically even new ones could be established with permission of the Government.

Greece

The right to do business.—Law No. 2190 governing the establishment of corporations in Greece makes no distinction between Greek and foreign companies. Foreign companies are treated on an equal footing with Greek, provided reciprocal treatment is accorded by the company's home country, as is the case between United States and Greece.

An American or foreign company may operate in Greece by one of the following methods:

(a) By appointing a resident agent or a field representative, foreign or Greek.

(b) By opening a branch office:

(i) Certain documents must be filed with the Greek Ministry of National Economy; legalized certificate containing information about the company, a power of attorney, and a copy of the statutes of incorporation.

(ii) Payment of dues and fees for obtaining permission to operate.

(c) By establishing a Greek corporation of which the foreign company is a stockholder.

(i) Statutes must be filed with the Ministry for approval.

(ii) Statutes must be notarized and are subject to stamp taxes and fees.

(iii) Payment of dues and fees for obtaining permission to operate.

(iv) Must establish a domicile in Greece.

(v) Books must be kept in Greek.

Taxation.—(a) Foreign companies:

- (i) License tax or tax on professions.
 - (ii) Net income tax (40 percent of the net profits after a deduction of 24,000,000 drachmas on which no tax is collected).
 - (iii) Operating tax (based on the actual or presumed rent on the premises and installations occupied by the company).
- (b) Foreign representatives of foreign firms:
- (i) Net income tax (as above).
 - (ii) If employed on a salary basis, they are subject to a specific category of salaried services of the net income tax (1 percent of the annual earnings after deduction of a tax-free amount of 1,440,000 drachmas).
 - (iii) Composite income tax (collected on the aggregate annual income from all sources after deduction of tax-free amount of 25,000,000 drachmas) is fixed at from 10 to 90 per cent on aggregate income.
 - (iv) License tax or tax on professions.

Labor regulations.—There is no information available concerning the employment of foreign labor.

Foreign exchange controls.—Strict exchange control is exercised and transfers of earnings as well as capital appear impossible at the present time.

Competition with Government-owned companies.—The Government has a monopoly on salt, matches, cigarette paper, kerosene, and some minor items. It also handles the importation and distribution of materials imported through Allied aid, but utilizes the services of private importers and distributors to some extent.

Nationalization.—Greece has not engaged in a postwar policy of nationalization.

Italy

The right to do business.—Under Italian law, it is possible for any foreign citizen to trade, acquire property, or set up establishments in Italy in the same way as an Italian citizen or company. However, authorization from the Italian Ministry of the Treasury is required for foreign entities to set up a commercial company in Italy, or to participate financially in an Italian commercial company (e. g., acquisition of bonds, shares of stock, etc.) according to RD Law No. 807, of July 24, 1946, repeating legislation of 1942.

According to *Il Globo*, Rome economic daily, the Council of Ministers has decided to revoke the aforesaid authorization requirement in a program designed to facilitate the influx of foreign capital into Italy. We do not have information that the aforesaid decision has become effective.

Moreover, all trustee and auditing companies, including branches of foreign firms, undertaking to administer estates for the account of third parties, organize and audit accounts of firms, and represent share and bondholders are required to have (a) two-thirds of the board of directors, as well as the president and managing director, Italian citizens; (b) auditing comptrollers inscribed in the Italian professional rolls and the personnel, other than those assigned to routine work, eligible for admission to such rolls. (Decree No. 1966 of November 23, 1939, published in the *Gazzetta Ufficiale*, of January 10, 1940.)

There are no legal conditions prerequisite to doing business in Italy except those mentioned above.

Taxation.—The Italian fiscal regime is based on the principle of identical treatment of Italians and foreigners. Income realized or property owned in Italy by foreigners is taxed in the same way as if Italian citizens were concerned. The extraordinary property tax (postwar capital levy) applies to foreign corporations as far as their assets in Italy are concerned.

Labor regulations.—There does not appear to be any material showing special requirements for the employment of foreigners in Italy.

Foreign exchange controls.—Foreign exchange is tightly controlled and none is made available for the payment of earnings or capital at the present time.

Competition with Government-owned companies and nationalization.—The Italian Government has a monopoly on tobacco and matches. The railroads are Government owned. Through the Italian Credit Consortium for Public Works and the Public Utility Credit Institute, the Government has provided loans to industrial and public utility companies in substantial amounts. Through the Institute for Industrial Reconstruction it has practical control of the banking system and is a dominating shareholder in some of the basic industrial enterprises of the country, notably shipbuilding, electric manufacturing, the mechanical industry, iron and steel, communications, synthetic rubber, mining, and to some extent in the real estate business.

Unofficial estimates put the state ownership at approximately one-fourth of the electric power plants, with the remainder operated under 60-year concessions; 70 percent of the iron mines; 75 percent of pig-iron production; 45 percent of steel production; about 40 percent of shipbuilding and the four largest shipping companies; and in addition, large percentages in other industries, notably a large majority in mechanical industry enterprises accounting for about 60 percent of total mechanical production.

There is, therefore, already a high degree of nationalization in Italy, but although the problem of nationalization in general has been discussed, no uniform policy in that direction has developed so far.

Netherlands

Right to do business.—All new enterprises, whether owned by Netherlands subjects or foreigners, must be licensed by the Government. It has been the policy of the Netherlands Government recently to use this requirement for regulating production in certain industries. A license is usually issued only if the product in question is not yet being manufactured in the Netherlands and if, by establishing such an industry, the foreign-exchange position of the country is being improved. It is not known whether this principle has been applied to the establishment of periodicals or newspapers. It should be noted, however, that the Government favors American participation in old or new Netherlands industries whereby the American partner puts in up to 25 percent of the capital, if possible in the form of machinery or other capital goods.

Wholesale trade in certain commodities is being exempted from the license requirement as their products become plentiful. However, this fact has to be considered in connection with the allocation of raw materials mentioned below.

There appear to be no restrictions on the number of foreigners who may serve as directors of corporations.

Taxation.—There does not appear to be any discriminatory taxation of foreign business interests or foreigners.

Labor regulations.—Foreigners require a permit for working in the Netherlands.

Foreign exchange control.—Foreign exchange is tightly controlled and the export of capital appears to be prohibitive except in unusual cases. However, the regulations of the exchange control appear to permit the transfer of dividends and interest on investments owned by nonenemy foreigners without interruption since May 10, 1940. In the case of direct investments each case is apparently considered separately. There appears to be little information on the practical execution of a ruling permitting the repayment of maturing obligations.

There are special regulations covering the earnings of insurance companies.

Competition with Government-owned companies.—The Government owns the railroad and communications systems. It also has a very substantial interest in the country's coal mines, as well as in the only existing blast furnace company and its subsidiaries, which, among other things, produce fertilizer. The only existing air line is Government controlled. Through the Bank of Reconstruction the Government has become a lender to, and an influence in, numerous industrial enterprises.

Agricultural and industrial products are with few exceptions controlled through bureaus which are partly composed of Government representatives, so that in this way the Government has an influence on the entire business life of the country. Through its foreign-exchange control and the import-export licensing system it controls foreign trade. The Government has on certain occasions itself entered foreign trade, and all foreign trade with Germany and Japan goes through Government channels.

Nationalization.—A bill for the nationalization of the Netherlands Bank is pending.

Norway

Right to do business.—Under the Norwegian law, a foreign company, properly organized in its own country, may open a branch office and engage in legitimate business activity under the management of a special board of directors, and subject to the provisions of the Norwegian law. The board must file a notification in the office of the Handelregister (Commercial Registrar) duly executed, that the capital is entirely paid up.

The notification must be signed by the members of the board of directors and accompanied by a certified statement from proper foreign authorities, certified by the Norwegian consul, to the effect that the company is duly incorporated in its own country, and has its head office there. The members of the board are individually and collectively liable if the notification is neglected. In the case of any change in the organization, bankruptcy included, the registrar's office must be notified. Only the amount paid up can be designated as the capital of the company. The foreign company's name must always be followed by the words "Utenlands Aktieselskap" (foreign

company) on stationery, advertising matter, and other documents.

Foreign corporations, issuing shares "to bearer" must publish the company's annual balance sheet at the end of each year in the official Norwegian publication, *Norsk Kundgjærelsestidende*.

Although the majority of the voting stock may be owned by foreigners, the board of directors of a corporation, incorporated under Norwegian laws, must be Norwegian citizens or resident foreigners, who may be elected to membership on the board only after a residence of 2 years.

After the company is properly organized, a license must be secured by the managing director, and if he is not on the board of directors, at least one member of the board must secure such a license. To secure it, he must be a resident of Norway; continue to reside there; he must be 21 years of age, and have a certain proficiency in book-keeping and accountancy.

According to prewar information, the Norwegian Government always tried to control the sale of the natural resources of the country in such a manner as to prevent foreign capital and influence from gaining too strong a foothold. Foreign persons and foreign corporations had to obtain special concessions to acquire such natural resources as land, forests, waterfalls, mines, peat bogs, limestone quarries, and fishing rights. Norwegian companies also had to obtain special concessions if 35 percent of their shares were owned by a foreign concern.

In general the shares of bank companies could be held only by Norwegian citizens, but in certain special cases foreigners were permitted to own one-third. Ships of Norwegian registry had to be under two-thirds Norwegian ownership, and the boards of directors of shipping companies had to consist entirely of Norwegian citizens.

Taxation.—It appears that foreign corporations pay income taxes at a somewhat higher rate than domestic corporations.

Labor regulations.—Although there is no material on this point, restrictions of employment of foreigners are so common in Europe that it must be assumed that they also exist in Norway.

Foreign exchange control.—Foreign exchange is tightly controlled and transfers of capital do not seem possible. The transfer of interest and current earnings appears to be difficult at times.

Competition with Government-owned companies.—The Government operates a grain monopoly, the railroads, the telephone and telegraph system, the broadcasting system, and a wine monopoly. State electrical enterprises operate nine important hydroelectric power plants. The Government is establishing a new steel mill. Also, through confiscation of German property it has acquired the Nordic-Scandinavian Light Metal project started by the Germans, as well as an aluminum producing project still under construction.

Nationalization.—Nationalization of the Bank of Norway has been proposed by the Government.

Poland

Information regarding Poland is scarce and thus does not lend itself to a break-down as used in the case of other countries.

Poland is engaged in an extensive program of nationalization affecting all basic industries regardless of size, all other industrial

enterprises capable of employing more than 50 workers per shift, and generally any enterprise regardless of size if in the opinion of the competent minister it holds "a production monopoly in an important branch of the national economy." On the other hand, all establishments in the building industry are exempt from nationalization and the Government may exempt other enterprises. The Government has established a procedure under which persons engaged in trade, if in doubt, can ascertain whether they will be permitted to continue as a private enterprise.

According to Polish law, new industrial and commercial businesses in the category subject to nationalization may be established by anyone fulfilling certain legal requirements, and such new businesses will constitute private property which may be disposed of in accordance with the regulations in force even if they employ more than 50 persons.

The application for a license should be submitted to the appropriate Ministry (i. e., Ministry of Industry, Ministry of Transport, or Ministry of Supply and Trade) having jurisdiction over the proposed enterprises, with a copy for the President of the Central Board of Planning. The following are to be enclosed with the application: A copy of the commercial registration of the enterprise or a similar document; a statement as to the purpose of the enterprise and the scale of production; and a summary of the financial arrangements of the enterprise.

A foreigner applying for a license has to submit, in addition to the above, a certificate from the Polish consulate in his country testifying that Polish enterprises established on the territory of his country enjoy the same rights as do the domestic enterprises.

A license is not required for the establishment of an enterprise which does not fall within the category of those subject to nationalization. However, the kind of enterprise might be prohibited by special regulations.

Strict control is maintained over all transactions in foreign trade. State organizations go into the field of export and import particularly of agricultural products, and of course the products of nationalized industries such as coal.

Foreign exchange is at present apparently not being made available for the payment of either earnings or capital due.

The matter of compensation to American citizens for nationalized properties is still under negotiation but there does not seem to be any evidence that the Polish Government intends to discriminate against former American owners.

There is no up-to-date information on the taxation of private enterprise.

Portugal

Right to do business.—As a rule, foreign businessmen and manufacturers are permitted to exercise their activities in Portugal under conditions of absolute equality with national businessmen and manufacturers.

However, national firms only are permitted in the operation or exercise of (a) public services or property of public domain; (b) activities governed by a special regime, such as those of tobacco, refineries, and tanning industries; and (c) other activities which are of fundamental importance for the defense of the state or the economy of the nation.

In order to qualify as a national company, 60 percent of the ownership must be Portuguese. This percentage may be raised by the Government. In companies existing at the time of the enactment by the Government of the law (1943) Portuguese-owned shares must first be offered to Portuguese before being sold to foreigners, while Portuguese-owned stock in new companies cannot be alienated.

There is no law regulating the nationality of directors except in mining companies. Only all-Portuguese companies can acquire ships.

It appears that companies constituted abroad having their headquarters in Portugal are considered as Portuguese except in businesses reserved for nationals.

Taxation.—There appears to be no special taxation of foreigners.

Labor regulations.—The technical director and president of mining companies must be Portuguese; also crews of ships.

Foreign-exchange control.—Although official foreign-exchange control does not exist, the Bank of Portugal exercises some control over foreign transactions. Payment of current earnings and interest appears to be possible but the policy regarding capital transfer is not clear.

Competition with Government-owned companies and nationalization.—There does not appear to be any Government competition with private business and no postwar policy of nationalization has been followed.

Rumania

Right to do business.—After the First World War the rule was established in the new provinces of Transylvania, Bukovina, and Bessarabia that 75 percent of the directors should be Rumanian nationals in the case of all business enterprises, including existing firms. The Rumanian mining law of 1924 required that the president and two-thirds of the directors of every mining company should be Rumanian; existing companies were given 10 years to transform their boards accordingly, although it was necessary that Rumanians at all times constitute a majority of the directors.

Foreigners could not buy rural land, but they could rent it for a period of 90 years. Foreign corporations had to obtain authorization from the Government to open an agency or a branch in Rumania, and had to submit-proof of reciprocity in the countries of their origin.

In general, Rumanian joint stock companies had to have a board of directors at least one-third Rumanian in complexion. A 1934 law raised the required participation to 50 percent, although it is not clear whether this law applied to the general run of Rumanian joint stock companies. In addition, certain companies subject to the law for the commercialization and control of the economic enterprises of the state (the scope of which is not clear) were required to maintain boards of directors that were at least two-thirds Rumanian.

For vessels to be of Rumanian registry it was necessary that at least two-thirds of the capital of the owning company be Rumanian, and that three-fourths of the board members be Rumanian. Although definite information is difficult to obtain, it appears that at present 80 percent of the personnel of the vessel (in exceptional cases subject to license, 50 percent) must be Rumanian. The chairman of the corporation is required to be an ethnic Rumanian.

Contracts between agents and foreign firms are subject to Government approval.

Foreigners are restricted from buying farm land.

Taxation.—No information regarding the taxation of foreigners in Rumania appears to be available.

Labor regulations.—The employment of foreigners is subject to Government control.

Foreign exchange control.—Foreign exchange is strictly controlled and no transfers of either current earnings or interest at present appear possible. Transfer of capital also appears to be impossible.

Competition with Government-owned companies and nationalization.—The country being under Russian occupation, the so-called Sovrom companies (joint Soviet-Rumanian enterprises) are increasingly dominating the fields in which they operate: transportation, including air transport; petroleum; textiles; and some bauxite-producing and aluminum-producing companies. Although other petroleum and textile companies exist, it would appear that competition with the Sovrom companies will be subject to increasing difficulties.

Spain

Right to do business.—All companies carrying on manufacturing and similar operations in Spain must be domiciled in Spain, which limits foreign corporations practically to trading, selling, and export and import. However, it is sometimes possible to overcome this difficulty through technical contracts. A 1939 law provides that at least three-quarters of the capital of any new industrial enterprise must be Spanish-owned while in the case of industries producing military goods, the entire capital must be Spanish-owned. No new industry may be established and no existing industry may be expanded or transplanted without permission of the Government. Membership in syndicates (groups comprising enterprises in any given field through which certain controls are exercised) is compulsory. Changes of capitalization and liquidation of companies as well as the transfer of shares to foreigners are subject to permit. The same applies to the sale of portfolio securities to foreigners under certain conditions. Existing industrial enterprises may not sell more than 25 percent of any issue of new securities to foreigners and the ownership of industries producing war materials may not under any circumstances be transferred to foreigners. In the case of insurance companies two-thirds of the capital must be Spanish-owned and the majority of the board of directors, as well as the manager, must be Spaniards. Rigorous regulations apply to the operation of branches of foreign insurance companies.

Taxation.—The available material does not indicate any tax discrimination against foreigners. Taxes incidental to the establishment of a typical corporation have been estimated at approximately 2.6 percent of paid capital, but it is not possible to say whether this is higher than the corresponding organizational taxes on a domestic business.

Labor regulations.—The law imposes severe restrictions on employment of foreigners in technical and administrative positions and provides that no more than one-quarter of the directors of an industrial enterprise may be foreigners.

In the case of new enterprises 25 percent of the technical and administrative personnel may be foreigners for the first 3 years, after which

time such foreign personnel has to be reduced to 10 percent unless an exemption is granted.

Foreign exchange control.—Foreign exchange is tightly controlled, preventing the export of capital in the case of earnings. The Spanish Government has apparently given certain oral assurances that 6 to 7 percent earnings can be transferred, but as a practical matter it has been next to impossible to obtain transfer of earnings due to the extreme shortage of foreign exchange. The Government has, however, made payments under its contract with International Telephone & Telegraph Co. for the purchase of the majority of the telephone company.

Competition with Government-owned enterprises and nationalization.—The principal railroads are Government property and the petroleum, tobacco, and motion-picture industries are Government monopolies. The Government also controls the telephone system.

The Spanish Government owns, in fact, a considerable share of Spanish industries, mostly through the Instituto Nacional de Industria including all of the capital stock of leading enterprises such as mining, liquid-fuels production, hydroelectric industry, the only existing air line, shipping, aluminum, and mechanical industries, as well as minority in the airplane, fertilizer, and electric machinery industries. These factors, combined with the strict allocation of raw materials, gives the Government practical control of every branch of trade.

Sweden

Right to do business.—While in general foreign citizens enjoy the same legal rights as Swedish subjects, a foreigner cannot, without Government consent, purchase or hold real estate, engage in any kind of business, or conduct mining operations. The right of a foreign company to do business in Sweden is not absolutely and definitely dealt with in Swedish law, hence foreign firms doing a substantial business in the country have generally found it expedient to operate as a Swedish company.

At present the formation and incorporation of Swedish share companies are governed by the provisions of a law dated August 12, 1910, which went into effect on January 1, 1912. This law provides that in forming a share company there must not be less than five founders, all of whom are required to be Swedish subjects domiciled in Sweden. These founders are required to draw up and individually sign the articles of association, stating the object of the company's formation; the amount of the capital stock, which must not be less than 5,000 crowns and may be made up in property and personal services as well as cash, the value of the shares (not less than 50 crowns), the location of the company, and the composition of the board of directors. According to information furnished by the American commercial attaché in Stockholm, the stock may be held partly or wholly by foreign owners, but a foreign citizen or Swedish subject domiciled abroad may not be elected a member of the board of directors unless authorization has been granted by the Swedish Government.

Before the war, foreign ships were ordinarily prohibited from engaging in coastal trade. For a ship to be of Swedish registry it was necessary that the financial interests of foreigners not exceed one-third.

A new corporation law was enacted in 1944 and will come into force on September 1, 1948. It generally tightens the control of the Govern-

ment over corporations, especially with respect to intercorporate relationships. So far no English version of this law has become available.

Taxation.—In general, there are some discriminatory features against foreigners in the Swedish tax laws but they do not appear to be considerable. Also, there is an agreement in force between the United States and Sweden for the elimination of double taxation.

Labor regulations.—Without special permission, a foreigner cannot seek employment in Sweden, nor is he permitted to follow any occupation except that of commercial traveler.

Foreign exchange control.—Foreign exchange is controlled. While interest and earnings are generally transferred, transfer of capital in each case is subject to special license.

Competition with Government-owned companies and nationalization.—The Swedish Government operates a majority of the railroads and is gradually acquiring the remaining railroads. The telephone and telegraph systems, radio, and the tobacco and liquor monopolies are operated by the Government. The import of sugar is a Government monopoly but rented out to private enterprise.

The Government has acquired some other industrial interests, but has not followed a policy of nationalization.

Switzerland

Laws affecting the establishment and operation of American business concerns:

Right to do business.—With the exception of the importation, production, and sale of alcohol, salt, and gunpowder, which are monopolies operated by the Federal and cantonal governments, and the establishment of publishing firms, which is restricted to Swiss nationals, American business firms enjoy the same rights to engage in commercial activities as Swiss nationals or citizens of other foreign countries. Public utilities, such as the railroad, telegraph, and telephone systems, are owned and operated by the Government.

American firms can establish either a branch or a corporation in Switzerland in order to carry out commercial activities. Under Swiss law, a branch must be recorded in the Register of Commerce at the place where the branch is maintained. Registration is made in the name of the foreign corporation, but there are restrictions upon names which may be so registered. Proof must be furnished that the parent organization has been created and recognized by the state of its creation.

As regards the establishment of a corporation, said corporation must have a capital of at least 50,000 Swiss francs. Shares may be issued either to bearer or a specified person. Both types of shares may be issued at the same time in a proportion fixed by bylaws. Shares are issued only at par or for sums in excess of par. Stockholders are jointly liable for the debts of the corporation to the extent of its capital. Before issuing shares, the corporation must be recorded in the Commercial Register. The board of directors must be composed of one or more persons, all of whom are stockholders. If the board consists of one person only, he must be Swiss; if composed of several, the majority must be Swiss citizens residing in Switzerland.

Taxes, labor laws, etc.—American business concerns in Switzerland are subject to the same labor laws, tariffs, and exchange controls as firms owned and operated by Swiss nationals. As regards income-tax

levies, a branch is taxed by the Swiss Government in accordance with the amount of business done by the branch office. If a Swiss corporation is formed, only the property and profits pertaining to the local enterprise are considered in the Federal and cantonal tax assessments.

LATIN AMERICA

Argentina

Right to do business.—The status of foreigner does not in general constitute a limitation on the right to engage in business in Argentina. As regards foreign companies, the commercial code merely imposes certain conditions which vary with the manner in which operations are to be carried on in that country:

(a) A foreign company with no establishment or representative in Argentina may freely carry on occasional lawful commercial acts therein or trade directly with residents of Argentina.

(b) Firms organized abroad whose principal operations are carried on in Argentina are regarded, for all purposes, the same as domestic firms and are subject to the provisions of Argentine commercial law.

(c) Foreign organized firms may establish a branch or any other kind of company organization within Argentina by complying with the usual legal requirements as to registration, etc. Such an organization is accorded under the law substantially the same privileges and is subject to the same requirements as an Argentine enterprise.

There are, however, limitations specifically provided in connection with the establishment of banks, insurance companies, mining and petroleum companies, public utilities and the manufacture of armaments.

Taxation.—The Argentine income tax is applicable to income derived from Argentine sources and is payable on such income regardless of the nationality, domicile, or residence of the recipient thereof.

The net earnings of branches or affiliates of foreign companies from Argentine sources is determined on the basis of the separate accounts carried by such local establishments. Foreign transportation companies in Argentina, engaged in international traffic between Argentina and other countries, international news agencies, foreign insurance companies, and foreign motion-picture exploitation in that country are accorded different treatment from that applying to local companies.

The income-tax rate on both domestic and foreign corporations operating in Argentina is 15 percent of net earnings or of dividends declared, whichever is greater. An additional 5 percent is, however, collected on dividends remitted abroad.

The remittance or credit abroad of any class of income derived from Argentine sources is likewise subject to the total 20 percent tax. This applies to interest from bearer bonds or other bearer securities (except bearer stocks, which are covered under the 15 and 5 percent tax mentioned above). Valid Argentine recipients of such income tax are subject to the normal tax of 5 percent, plus any corresponding surtax which is levied on net income of 5,000 pesos. Provision is made to prevent evasion of the tax on remittance of income abroad.

Argentine individuals who habitually reside abroad are subject to an absentee surcharge of 30 percent of the normal tax and surtax on income derived from real property ownership or agricultural activities in Argentina. Foreign corporations are likewise subject to the absentee surcharge of 30 percent of the normal corporate tax on such income.

The excess-profits tax and capital gains tax are likewise levied on income from Argentine sources and are applicable alike to nationals and foreigners. The sales tax, stamp tax, license tax, excise taxes, commercial travelers' tax, real-estate taxes, and the municipal service taxes are also collected without discrimination as to nationality.

Labor.—There is no general law fixing the percentage of nationals to be employed in commerce and industry. However, in the field of public telecommunications there are regulations providing that 80 percent of the higher technical and administrative personnel employed by a concessionary must be Argentineans. Of the subordinate employees this percentage is fixed at 50. Measures are being taken so that eventually all employees will be nationals.

In the case of public-works projects it has long been the requirement that a given percentage of nationals be employed. A like requirement is being applied in the so-called mixed company enterprises being formed.

Foreign exchange controls.—For several years there were no restrictions on or control over such transactions, except that upon buying amounts in excess of \$250 for such purposes, the buyer was required to file with the selling institution a declaration as to the purposes for which the funds were to be used. The same rate, free market, was applied to all such exchange sales except those for the financial services of foreign-owned railways (British and French), in which case the preferential buying rate was applicable. The difference in these rates has been small, the preference to the railways amounting to 1.5 to 2.8 percent in recent years.

A recent circular of the Argentine Central Bank, No. 788 of July 7, 1947, limits withdrawals of capital and the payment of interest, dividends, etc., on foreign capital invested after July 8, 1947, as follows:

Duration and nature of investment	Capital reimbursement upon expiry of—	Financial services
Short term (1 year) sundry investments.....	12 months.....	Net profit: Interest or dividend not exceeding 5 percent per annum. ¹
	2 years.....	Net profit: Interest or dividend not exceeding 7 percent per annum.
	3 years.....	Net profit: Interest or dividend not exceeding 8 percent per annum.
Medium term: ² Fixed investments in industrial or agricultural activities.	4 years.....	Net profit: Interest or dividend not exceeding 9 percent per annum.
	5 years.....	Net profit: Interest or dividend not exceeding 10 percent per annum.
	6 years.....	Net profit: Interest or dividend not exceeding 12 percent per annum.
Long term.....	By agreement..	By agreement. ³

¹ Profits exceeding these margins must remain in the country, being then considered as Argentine capital.

² Reinvestment, after 2 years, of medium-term capital may be authorized when it is justified, within the terms of investment, provided that it is effected within the same group of activities; but it will be necessary to apply for this authorization from the Central Bank, for the purpose of retaining the right to reimbursement and to the scale of financial service remittance.

³ Such agreements will contain a clause allowing for the coparticipation of Argentine capital.

Detailed regulations implementing the provisions of circular No. 788 as to capital invested after July 7, 1947, were issued on August 29, 1947, and on September 29 as to foreign capital invested prior to July 7, 1947. The limitation of remittances at the above rates to truly foreign capital, which excludes reinvested earnings is of considerable concern to several large firms which have reinvested in Argentina all or a substantial part of the earnings of their Argentine branches.

Competition with Government-owned companies.—Especially since mid-1946 the Argentine National Government has directly and indirectly extended its influence over many sectors of Argentine business. Through the central bank controls are exercised over credit and foreign exchange. Direct engagement in exporting and importing is effected through the central bank's subsidiary, the Argentine Trade Promotion Institute. This organization exercises a monopoly over the export of certain principal products, such as grains, meat, hides, vegetable oils, etc. It purchases from Argentine producers at fixed official prices and sells on the world market. The profits are retained by the Government for financing, in part, the 5-year plan. The Trade Promotion Institute is also engaged in importing of vehicles, machinery, and industrial equipment, and other articles in short supply.

In some business activities the Government operates its own enterprises in direct competition with private interests. For example, the National Government has long participated in commercial banking through official banking institutions. The Government petroleum organization, known as the YPF, has long dominated the production and marketing of petroleum products. Private companies also operate in this field. The Argentine State Railways is a long-established enterprise. Through the acquisition of the British and French railway holdings the entire common-carrier mileage in Argentina will be government-owned. The state merchant fleet, established during World War II, and which is now being greatly expanded, competes with private Argentine and foreign shipping companies. The wholly government-owned enterprise, Fabricaciones Militares operates various activities connected with the manufacture of military materials and the development of certain basic industries, in which it is authorized to participate with private interests.

In 1946 a basic law, replacing special prior legislation, was enacted authorizing the establishment of enterprises composed of both government and private Argentine capital, to be known as mixed companies. Under this corporate form the government has entered such fields as commercial aviation, security investment, insurance, mining, chemicals, and certain other manufactures. The government-owned telephone system is also a so-called mixed company and it is expected that the railways will be operated by such a company. The new steel-producing industry is likewise to be of mixed capital.

Nationalization.—The movement toward the national recuperation of public-service industries in Argentina became more strongly defined in 1946. During the year, or shortly thereafter, the national government arranged to purchase from private interests the French-owned railways, the British-owned railways, the United States-owned telephone system of Buenos Aires and two privately owned gas companies. Consequently, public ownership was extended to 90 percent of the country's telephones, all of the common carrier railways, and 90 percent of the country's gas services. The internal telegraph services have long been operated by the national government. Although present electric-power facilities continue to be largely under private ownership, the national government's development program envisages an integrated, publicly owned power system. The nationalization of the Central Bank was completed in 1946.

Bolivia

Right to do business.—There are no restrictions under Bolivian law as to the nationality of stockholders, partners or other owners of business enterprises. The only restriction respecting the nationality of directors, officers or employees of business enterprises is contained in article III of the Ley General del Trabajo (general labor law), which provides that foreign employees may not exceed 15 percent of the total number of employees.

Bolivian law is silent concerning the right of foreign individuals or companies to engage in various kinds of business in Bolivia. However, the existence of the Government petroleum monopoly, YPFB (Yacimientos Petroliferos Fiscales Bolivianos) has effectively prevented the entry of foreign capital into the field of petroleum exploitation. Similarly, the match monopoly held by Compania de Fosforos de Bolivia, a subsidiary of a Swedish company, has limited participation in that industry.

Ownership of land and water and power, mining, subsoil and air rights involves no discrimination against foreigners as compared with Bolivian citizens with one exception: Article 19 of the Political Constitution of the State of 1945 provides that "within 50 kilometers of the national frontiers foreigners may not, directly or indirectly, individually or in partnership, acquire or process any soil or subsoil concessions or properties." Failure to comply with this limitation may constitute sufficient grounds for the Government to confiscate the concession or property acquired. However, exceptions may be made in cases of national necessity so declared by law.

Taxation.—A distinction is made in Bolivia between the taxation of incomes of business organizations other than mining companies and that on incomes of mining enterprises, with the result that the tax burden on the large foreign-owned mining companies is greater, the latter being subject to a graduated tax ranging from 4 percent on profits of between 1 and 5 percent to 50 percent on profits of 150 percent plus a flat tax of 10 percent on dividends distributed, while the former are taxed at a fixed rate of 12 percent of net profits. Interpretation and administration of the income tax with respect to the large mining companies has been a source of dispute and litigation, and a cause of confusion and concern among the large mining interests.

Although no exemptions from income or other internal taxes are known to have been granted, exemptions from the payment of import duties have been provided through special contracts with the Bolivian Government. Several large enterprises, among them Panagra, Urania Tungsten Corp., and Ferrocarril de Antofagasta-Bolivia (the British-owned railway system) are so favored. Subsidies are also granted to air lines and other enterprises through the same type of arrangement.

Labor.—As indicated above, the general labor law provides that foreigners may not constitute more than 15 percent of the number of employees of an enterprise.

Foreign exchange controls.—In accordance with the exchange control regulations the Central Bank of Bolivia assigns quotas of exchange to the commercial banks of the country each month, and designates the purposes for which such exchange may be sold. These purposes do not include interest, profits, etc. However, it is reported that on occasions special arrangements have been made with the central bank on a case by case basis. Furthermore, capital entering the country under

contract with the Minister of Finance in accordance with a decree of October 16, 1945, is guaranteed the right to withdraw profits not in excess of 15 percent per annum of the amount invested, and to withdraw capital at the rate of 20 percent or 30 percent per year, depending upon the type of investment. There is also an "extra-legal" exchange market in Bolivia in which it is understood that some exchange may be acquired for purposes other than those designated in the monthly directives of the central bank to commercial banks regarding the sale of exchange.

The above provisions do not in practice affect remittances of profits, etc., by large mining enterprises, all of which are foreign-owned. This is due to the fact that such enterprises are required to return to Bolivia only specified portions of the foreign exchange proceeds of their exports. The remainder may be retained abroad for use in the payment of expenses, interest, dividends and other items customarily payable in foreign currency. Amounts not used for these legitimate purposes are required to be returned to Bolivia.

In recent years the companies have been charged by members of the Bolivian Congress with failure to return to Bolivia the amounts of exchange that should have been returned, and action to force such return has been urged. On August 26, 1947, the Minister of Finance was reported to have issued a resolution requiring the large mining interests to submit within 30 days an accounting for about \$237,000,000 in foreign exchange they have been permitted to retain abroad since 1939.

Competition with Government-owned companies.—So far as is known the Bolivian Government does not own any important business undertaking except YPFB, mentioned above. That, however, is a monopoly.

Nationalization.—At the end of 1936 the Bolivian Government established YPFB (Yacimientos Petroliferos Fiscales Bolivianos) as the official agency of the Government in the petroleum field and granted it a monopoly in the exploitation of petroleum and derivatives. This was followed early in 1937 by the expropriation of the Standard Oil Co. of Bolivia, a subsidiary of the Standard Oil Co. of New Jersey, and since that time all Bolivian petroleum operations have been controlled by the YPFB. Recently there have been indications that the Bolivian Government would permit foreign private capital to operate petroleum concessions in Bolivia, but to date there are no foreign companies in the field, although a contract with the Superior Oil Co. of California for the development of petroleum reserves in the Bolivian Chaco region is now under consideration by Bolivian authorities.

During 1947 the Bolivian Congress considered measures authorizing the nationalization of the mining industry, largely foreign owned, and of the foreign owned railroads, without, however, reaching a decision on these matters.

Brazil

Right to do business.—For general business operations, there are in Brazil no restrictions with reference to the nationality of the owners or partners of business firms or with reference to the nationality of shareholders of Brazilian corporations. In the case of specific lines of business, restrictions did exist, but certain of these were modified by the new Brazilian constitution, which was promulgated in September 1946. The former constitution provided that authorization to engage in mineral exploration and development could be granted

only to Brazilian citizens or to companies formed entirely of Brazilian citizens, whereas the new constitution permits such authorization to be granted to Brazilian citizens or to companies organized in Brazil. The petroleum law and mining code are at present under revision in order to give effect to this provision of the new constitution, and until their completion it is not known under what terms foreign capital will be permitted to engage in petroleum development or in new mining enterprises. (Mining companies in which foreign capital participated are permitted to operate if they were in operation prior to the adoption of the 1934 constitution.) The provisions relating to water power were similarly liberalized by the new constitution.

Other exceptions to the general rule that there exists no restriction as to the nationality of owners or shareholders of a business relate to aviation operating companies, shipping companies, journalistic and radio-broadcasting enterprises, insurance companies, companies manufacturing pharmaceutical products, and companies owning property located on the borders of the country. In each case special legislation is applicable, affecting the proportion of stock which must be owned by Brazilians, and other matters.

Taxation.—In general, juridical entities which are wholly or partially owned by foreigners are taxed at the same rate as their counterparts that are wholly Brazilian owned. However, the Brazilian Treasury has ruled that in the case of a foreign corporation operating with a branch in Brazil, the nonresident's 10 percent income tax is payable on all profits shown by the annual balance sheet and profit-and-loss account of the branch, whether or not these profits are remitted abroad to the head office; this is on the theory that the profits belong to the foreign corporation even though it chooses to allow them to remain in Brazil. The 10 percent tax is in addition to the 8 percent income tax assessed against the branch as a juridical entity operating in Brazil.

In the case of individuals residing abroad who hold investments in Brazil, any income accruing to them, regardless of its nature, arising from Brazilian sources, is subject to deductions of income tax at the source at the rate of 10 percent. It is difficult to compare this rate with that applicable to income accruing to resident Brazilians and to other individuals residing in Brazil for more than 12 months. A proportional rate is assessed, according to the source of the income, on annual incomes of over 24,000 cruzeiros (about \$1,200), and in addition a tax at a progressive rate is assessed after deductions for family maintenance, interest, accidental losses, contributions, etc.—the progressive rate varies from 1 percent on taxable income between 24,000 and 30,000 cruzeiros (about \$1,200 to \$1,500) to 30 percent on taxable incomes of over 700,000 cruzeiros (about \$35,000).

Labor.—Two-thirds of all employees of commercial and industrial firms must be Brazilian and two-thirds of the entire pay roll must be paid to Brazilians. (The main establishment is considered as a unit and branch offices as separate units.) Directors of sociedade anonima companies, elected by the stockholders, are not considered to be employees for the purpose of this law. However, managers of companies are considered to be employees, unless they are in the above category or in cases where the manager is also a partner or shareholder and the capital contributed by him exceeds 30,000 cruzeiros (about \$1,500 United States currency).

If a Brazilian and a foreigner are performing similar duties, the Brazilian cannot receive remuneration less than that given the foreigner. Government control is effected by requiring an annual report of all employees indicating their positions or duties. Moreover, each firm must maintain for inspection in its office a labor registry book legalized by the Government.

The Brazilian Constitution in effect until September 1946, when the present constitution was promulgated, restricted the practice of the professions to Brazilian citizens. The new constitution provides that the practice of any profession shall be free, in accordance with such conditions of capacity as may be established by law. However, the regulatory laws have not yet been passed by the Brazilian Congress.

Foreign exchange controls.—For several years the only control over such remittances was approval of each transaction by the Bank of Brazil, the granting of which depended upon the available supply of exchange. At present the following additional conditions prevail:

(1) After providing for requirements of the Federal Government exchange accruing to Brazil is sold in accordance with a priority schedule consisting of five categories. Essential imports constitute the first category in this schedule, and interest, profits, royalties, and capital, the second category.

(2) The remittance of interest and profits in respect of any one year is limited to an amount equal to 8 percent of the capital registered with the authorities, plus 20 percent of the total of interest and currently declared profits in excess of 8 percent of registered capital. The remaining 80 percent may be remitted in four equal annual installments. The reexport of registered capital is permitted in five equal annual installments, subject to changes which changes in the exchange market may necessitate. The regulations make no provision for unregistered foreign capital but registration may be effected at any time.

Competition with Government-owned companies.—The Brazilian Government has granted duty-free entry or tariff reductions for machinery, apparatus, or supplies imported by specified industries which it desired to foster. Such an exemption was granted to the National Steel Mill (the Government owns the majority of the stock of this company) and in September 1946 the exemption was extended to materials, including railway and steamship equipment required for the company's coal mines in Santa Catarina. This legislation also exempted the company from the payment of consumption tax on its imports and from the payment of customs and fiscal fines. It is believed that this is the first time that any organization in Brazil, whether or not owned or controlled by the Government, has been granted a blanket exemption from fines. Another decree law, also issued in September 1946, declared the National Steel Mill a public utility and exempted it from taxation, including property and income taxes as well as taxes on products and byproducts of its manufactures that it sells. The exemption from the consumption and income tax is to cease when the company distributes a minimum annual dividend of 6 percent to the holders of its common and preferred stock during three consecutive years.

Nationalization.—There is no nationalization movement in Brazil at present in the sense of the Brazilian Government taking over complete operation of any of the economic activities of the country.

The Government operates certain of the railway systems of the country (the management of all lines, based on mileage, is approximately as follows: Federal Government, 40 percent, state governments, 30 percent, private companies, 30 percent); Government participation in railway operations originally developed through force of necessity, when concessionaires failed to raise the required capital, and other railway systems later fell into the hands of the Government as a result of financial difficulties of the operators. Government participation in shipping developed along similar lines; the Government-owned Lloyd Brasileiro is by far the principal shipping company of Brazil, and the Government also operates a shipping service in the Amazon Valley.

The Government has, since the beginning of World War II, participated in the financing of enterprises for which Export-Import Bank loans were obtained. These are the National Steel Mill at Volta Redonda, the Cia Vale do Rio Doce and the Itabira iron ore development, the National Motor Factory, near Rio de Janeiro, and the new caustic soda and soda ash plant to be constructed at Cabo Frio. In addition, the Government has financially participated in the formation of a company for water power development in the Sao Francisco Valley and a refinery in Bahia.

Regulatory agencies, commonly known as "defesa" institutes, have been established to rationalize the production and improve the marketing of coffee, cacao, mate, sugar, tobacco, rice, and a number of other products. The decrees governing these organizations ordinarily extend to the industries something approaching a public utility type of regulation, although they leave to the representatives of the industry themselves considerable latitude in the formulation of the controls instituted. Governmental authority is employed to supervise, enforce, or veto the regulatory measures.

Chile.

Right to do business.—There are no Chilean laws that restrict in any way the nationality of owners of shares, or of partners or other interest holders in business firms. However, firms domiciled outside the country are barred from certain kinds of business activity, including insurance; electric power production and distribution; telegraphic, cable, and radio communication; and railway construction and operation, but foreign-owned companies to engage in these businesses may organize under Chilean law.

Taxation.—While no distinction is made between foreign and domestic firms in the so-called "basic" Chilean income tax law, foreign-owned companies operating in Chile are subject to an "additional" assessment, which amounts to 13 percent of their incomes. Income from mining operations, which are carried out principally by foreign firms, are subject to special rates of taxation, substantially in excess of the general income tax. For example, copper companies—overwhelmingly foreign-owned—pay taxes totalling 36 percent of their taxable income, and, in addition, through the use of an artificial exchange rate, pay what amounts to a disguised tax of about 37.5 percent of their total cost of operations in Chile. The Chilean Government also participates in the gross income of copper companies through a tax based on the difference between 10 cents (United States) per pound and the actual New York price of copper. The tax is applied as follows: If the New York price exceeds 10 cents per pound by 1½ cents or less,

the entire excess accrues to the Chilean Government; if by more than 1½ cents but by not more than 2½ cents, all of this addition accrues to the companies; and if in excess of 2½ cents the excess is divided equally between the producers and the Chilean Government.

Labor regulation.—The Chilean Labor Code provides that at least 85 percent of the employees of a private enterprise employing more than 5 persons must be citizens of Chile, and that at least 85 percent of the pay roll must be paid to Chileans. The restriction does not apply to technical experts who cannot be replaced by Chileans.

Foreign exchange controls.—Purchase of exchange at the rate generally applicable to commercial transactions (31 pesos per dollar for several years) requires official authorization, the granting of which depends upon the availability of exchange. The supply is currently so limited that little if any is being sold for dividends, etc. However, foreign-owned firms are not forbidden to buy exchange for these purposes in the free market, where the rate is substantially higher than in the official market. It has recently been as high as 55 pesos per dollar.

The foreign-owned mining companies that operate in Chile are not affected by these restrictions since of the proceeds of their exports they are required to sell in Chile only enough foreign currency to obtain the pesos for meeting their necessary expenditures in Chile. The rate at which they sell such exchange, however, is fixed at 19.37 pesos per dollar as compared with 31 pesos per dollar paid to other exporters.

Competition with Government-owned companies.—The Chilean Government has been active in the development of industries, principally through its agency, the Fomento Corporation. The fields in which it has participated actively include mining, electric power and other basic industries, as well as large-scale purchasing, notably agricultural machinery. A large part of the Government's activity, however, has been in the development of enterprises, which normally would remain dormant for lack of private investment capital. The Chilean Government likewise has established virtual monopolies over the sale and export of nitrates, and over domestic petroleum production and distribution.

Nationalization.—There are several instances of nationalization in Chile, the outstanding of which are the Government's acquisition of the country's railroads and municipal acquisition of certain street railway and electric power interests. While it is not improbable that most, if not all of the public utilities will eventually be publicly owned, there does not appear to be a trend toward nationalization of other existing industries at the present time.

Colombia

Right to do business.—There are no restrictions regarding the nationality of owners of shares or partners in Colombia except in the case of airline companies. Partners or shareholders may all be foreigners or Colombians without distinction or discrimination. In the case of airline companies Law 89 of 1938 requires that 51 percent of the shares must belong to Colombian nationals or to entities controlled by Colombian nationals. Firms owned wholly (except air lines) or partly by foreigners, irrespective of the country or organization, may engage in any kind of legal business as provided in the contract or organization.

Taxation.—There is no discrimination between domestic and foreign capital in the tax structure of Colombia. However, certain payments under the country's social-security laws, which are applicable alike to foreign and domestically owned businesses, are regarded as onerous by business.

Labor.—Under various laws industrial, agricultural, commercial, petroleum, or other enterprises, with a pay roll exceeding 1,000 pesos per month are subjected to special requirements regarding the employment of aliens. Not more than 10 percent of the wage earners engaged in continuous work for more than 3 months, nor more than 20 percent of the salaried employees may be aliens. Special requirements regarding the training of Colombians for technical work have also been enacted.

Foreign exchange controls.—By the terms of article 3 of decree No. 568 of February 20, 1946, withdrawals of capital from Colombia without limitation are approved in principle "as long as the Ministry of the Treasury and Public Credit does not deem it necessary to limit or suspend them for economic or other reasons * * *." To date there have been no indications that the Ministry has taken steps to prevent the unrestricted issue of exchange permits for this purpose. Resolution No. 175 of the Office of Exchange, Import and Export Control of August 20, 1947, regulating the importation of capital pursuant to decree No. 568, provides that capital imported into Colombia may be reexported or the return on such capital remitted abroad, provided certain conditions are met, the most important of which are that capital funds be sold to the Bank of the Republic upon entry, that the amount and form of the capital be registered with the Office of Exchange, Import and Export Control, and that the investment be made for a minimum of 5 years (petroleum and mining industries excepted) in industrial, commercial or agricultural enterprises beneficial to the Colombian economy in the opinion of the Ministry of National Economy. The return on the capital invested may be transferred quarterly following the sixth month after the introduction of the capital into the country. All such movements of capital, both into and out of the country, require the approval of the Office of Exchange, Import and Export Control.

Like other remittances abroad, remittances on account of capital are subject to the Colombian stamp tax of 4 percent.

Under the Colombian system of exchange control export permits must be obtained for practically all exports. Export permits are issued upon condition that the foreign exchange proceeds of the sale of the products abroad be sold to the Bank of the Republic. One notable exception to this requirement is made in favor of the petroleum industry. Export permits are not required for exports of petroleum, nor must the foreign exchange value be returned to the Bank of the Republic. However, when the Colombian balance of payments position requires it, the Government may require the return of as much as one-fourth of the foreign exchange value of petroleum exports. The return of such funds and any subsequent retransfer abroad are free of all taxes. Furthermore, such foreign exchange as is sold to the Bank of the Republic by the petroleum companies is not subject to the requirement, imposed upon exporters of major products such as coffee, bananas, gold, silver, platinum, cattle, cowhides, and textiles, that 5 percent of the proceeds of export transactions be used to purchase Colombian Treasury bonds.

Competition with Government-owned companies.—In addition to the types of businesses mentioned under nationalization the Colombian Government has monopolies in the production and sale of salt and emeralds, and through its Institute of Industrial Development and the Agricultural, Industrial, and Mining Bank has promoted the establishment and expansion of a number of business enterprises. The competitive advantages of these officially sponsored businesses is not readily apparent. However, exemption from certain taxes for limited periods may give them some advantage.

In 1946 the Governments of Colombia, Venezuela, and Ecuador established a shipping company, the Flota Mercante Grancolombiana, South America. This company is exempt from the payment of Colombian port taxes, dues, and fees, and the National Coffee Federation, the coffee price and sales controlling agency, has stipulated that all coffee purchased from it must be carried in vessels of Grancolombiana.

Nationalization.—With the possible exception of the field of utilities there is no trend toward the nationalization of private enterprises in Colombia. All important railways of the country, the telephone, radiotelephone and radiotelegraph systems and several important electric power systems are publicly owned, having been acquired by negotiation or expropriation. With these exceptions public bodies have not acquired any important business undertakings. Nor has there been any recent legislation or discussion indicating a change in the traditional policy of the country.

Costa Rica

Right to do business.—The Costa Rican law for the nationalization of commerce, of December 28, 1943, forbids the establishment of new commercial enterprises in Costa Rica which may be owned or managed by other than Costa Rican citizens. An exception is provided in the case of certain countries which have treaties of amity and commerce in effect with Costa Rica. The United States is one such country, as there has been such a treaty in effect since 1851, and United States citizens are therefore perfectly free to establish commercial enterprises in that country. It should be noted that this law restricts the establishment of commercial enterprises only, e. g. sales and distribution. No such restriction is placed on production enterprises, such as agriculture, manufacturing, or food processing. Foreign-owned businesses (protected by treaties of amity and commerce), regardless of whether they are domiciled in Costa Rica or abroad, may engage in any business except the distilling of alcohol and liquors, the manufacture and importation of salt, and insurance underwriting, all of which are state monopolies. For such businesses, there are no regulations as to nationality of owners of shares. According to the constitution, however, power, subsoil, and air rights, including wireless services, are the property of the state and may be exploited only under concessions granted by the state for limited periods.

Taxation.—Taxation of business in Costa Rica is low and applied without discrimination to domestic and foreign enterprises.

Labor requirements.—The Costa Rican Labor Code of 1943 provides that 90 percent of the total employees of a business enterprise must be Costa Ricans, and that 85 percent of the entire pay roll must go to nationals. A reduction of 10 percent in both these percentages may be made for a period not to exceed 5 years, if a lack of technical

personnel exists. Administrators, supervisors, directors, and managers are not affected by these provisions, unless there are more than two such persons employed in each enterprise.

Foreign exchange controls.—Remittances for these purposes in exchange acquired at the official rate (5.67 colones per dollar) require authorization by the Board of Export Control. Due to severe shortages, evidenced by delays of as much as 5 months in making payment for essential imports, it is highly improbable that any official exchange is sold for capital remittances. There is, however, an uncontrolled market in which the rate is substantially higher (6.50 colones per dollar) and in which it may be possible to obtain exchange. Technically, transactions in any form of exchange except foreign coins and bank notes without specific authorization is prohibited, but it is understood that some trading in drafts, checks, etc., does take place outside the ordinary channels. Coins and bank notes may not be exported.

Competition with Government-owned companies.—The Government is prohibited by the constitution to grant any monopolies; the only state monopolies, those of alcoholic liquor and salt, are chiefly for revenue purposes. In other lines, there appears to be no difficulty in competition with Government-owned companies.

Nationalization.—There is no noticeable trend toward nationalization in Costa Rica, except in the sense of limitation on the right of foreigners to do business in that country as explained above.

Cuba

Right to do business.—According to title 17, section IV, article 272 of the Cuban Constitution of 1940, foreigners are granted the same rights to engage in "agricultural, industrial, commercial, banking, and other enterprises or business" as nationals of the country.

Taxation.—There is no distinction between foreigners and Cuban nationals in matters concerning taxation. However, there is a tax of 2 percent on all payments, remittances of funds, transfers of credits, valuables and products, and any other operations which directly or indirectly result in an exportation of money or its equivalent from Cuba. In some kinds of transactions the tax is refunded if within 6 months of the export assets equivalent to those exported are returned to Cuba. Since dividends, etc., paid to foreigners are generally not returned to Cuba this in a sense could be regarded as discriminatory against foreign capital.

Labor regulation.—The law for the nationalization of labor provides that at least 50 percent of the pay roll must be paid to native Cubans and at least 50 percent of the wage-earning and salaried personnel must be native Cubans. Vacancies and positions created must be filled by native Cubans if qualified personnel is available. In the release of employees, aliens must be let out first. This law does not apply to establishments employing less than three persons. Foreign technicians must be employed only when it is shown that a qualified Cuban is not available. Technicians permitted to enter Cuba usually can remain for no longer than 1 year and must train Cuban apprentices who will replace them.

Foreign exchange controls.—The Cuban Government does not regulate transactions in foreign exchange for any purpose. There are therefore no restrictions or formalities in connection with the transfer of funds abroad on capital account.

Competition with Government-owned companies.—Since the Cuban Government does not own companies instances of competition of the Government with private enterprise are almost nonexistent.

Nationalization.—Cuba has followed a policy of private ownership and to date has not nationalized any industries. In a few instances as a result of labor difficulties the Government has appointed a Government intervenor who exercises control of the industry or public utility until such time as the labor questions are resolved. Such cases are extremely rare, however, and usually concern public utilities in which the interruption of services would result in extensive injury to the general public. However, nationality of ownership of affected interests has had no significance in past instances of intervention.

Dominican Republic

Right to do business.—The Dominican Republic confers upon foreigners the freedom to engage in commerce, develop any kind of industry, and the enjoyment of the same rights in such activities as nationals.

Taxation.—No special taxes are imposed on the organization or operation of foreign companies. The same equality of treatment between domestic concerns and foreign enterprises applies to special exemptions, subsidies, or concessions.

Labor regulations.—Law No. 51 of December 1938 requires that at least 70 percent of the personnel of all enterprises or establishments be Dominican nationals, and that their remuneration must equal 70 percent of the total pay roll.

Foreign exchange controls.—The Dominican Republic does not control or restrict in any way the transfer out of the country of interest, profits, or capital.

Nationalization.—According to article 96 of the Constitution, mineral deposits belong to the state and may be exploited by private individuals only under concessions or contracts granted in accordance with provisions of law. Special laws deal with exploitation of certain minerals. The right to explore, exploit, manufacture, refine, and transport petroleum carbons and other mineral fuel substances is obtained through concessions granted by executive decree, which do not confer ownership of a deposit, but only exploration and exploitation rights for a definite period and under conditions determined by law. The Dominican Government, through the Department of Public Works, owns and operates the only public railway in the Republic.

Ecuador

Right to do business.—There are no restrictions, limitations, or other special provisions in Ecuadoran law as to the nationality of owners of business enterprises. Neither does the law provide for distinction as to nationality in the granting of licenses to engage in business. However, subsoil and such natural resources as waterfalls in which there is a public interest are considered properties of the state. Concessions to exploit these resources may be granted by the President or the Legislature to foreign or domestic concerns.

In order to remit profits, interest, etc., out of the country in accordance with the foreign exchange regulations discussed below, foreign capital must be registered with the Central Bank. This bank may refuse such registration in case the investment is regarded as not in the national interest.

personnel exists. Administrators, supervisors, directors, and managers are not affected by these provisions, unless there are more than two such persons employed in each enterprise.

Foreign exchange controls.—Remittances for these purposes in exchange acquired at the official rate (5.67 colones per dollar) require authorization by the Board of Export Control. Due to severe shortages, evidenced by delays of as much as 5 months in making payment for essential imports, it is highly improbable that any official exchange is sold for capital remittances. There is, however, an uncontrolled market in which the rate is substantially higher (6.50 colones per dollar) and in which it may be possible to obtain exchange. Technically, transactions in any form of exchange except foreign coins and bank notes without specific authorization is prohibited, but it is understood that some trading in drafts, checks, etc., does take place outside the ordinary channels. Coins and bank notes may not be exported.

Competition with Government-owned companies.—The Government is prohibited by the constitution to grant any monopolies; the only state monopolies, those of alcoholic liquor and salt, are chiefly for revenue purposes. In other lines, there appears to be no difficulty in competition with Government-owned companies.

Nationalization.—There is no noticeable trend toward nationalization in Costa Rica, except in the sense of limitation on the right of foreigners to do business in that country as explained above.

Cuba

Right to do business.—According to title 17, section IV, article 272 of the Cuban Constitution of 1940, foreigners are granted the same rights to engage in "agricultural, industrial, commercial, banking, and other enterprises or business" as nationals of the country.

Taxation.—There is no distinction between foreigners and Cuban nationals in matters concerning taxation. However, there is a tax of 2 percent on all payments, remittances of funds, transfers of credits, valuables and products, and any other operations which directly or indirectly result in an exportation of money or its equivalent from Cuba. In some kinds of transactions the tax is refunded if within 6 months of the export assets equivalent to those exported are returned to Cuba. Since dividends, etc., paid to foreigners are generally not returned to Cuba this in a sense could be regarded as discriminatory against foreign capital.

Labor regulation.—The law for the nationalization of labor provides that at least 50 percent of the pay roll must be paid to native Cubans and at least 50 percent of the wage-earning and salaried personnel must be native Cubans. Vacancies and positions created must be filled by native Cubans if qualified personnel is available. In the release of employees, aliens must be let out first. This law does not apply to establishments employing less than three persons. Foreign technicians must be employed only when it is shown that a qualified Cuban is not available. Technicians permitted to enter Cuba usually can remain for no longer than 1 year and must train Cuban apprentices who will replace them.

Foreign exchange controls.—The Cuban Government does not regulate transactions in foreign exchange for any purpose. There are therefore no restrictions or formalities in connection with the transfer of funds abroad on capital account.

Competition with Government-owned companies.—Since the Cuban Government does not own companies instances of competition of the Government with private enterprise are almost nonexistent.

Nationalization.—Cuba has followed a policy of private ownership and to date has not nationalized any industries. In a few instances as a result of labor difficulties the Government has appointed a Government intervenor who exercises control of the industry or public utility until such time as the labor questions are resolved. Such cases are extremely rare, however, and usually concern public utilities in which the interruption of services would result in extensive injury to the general public. However, nationality of ownership of affected interests has had no significance in past instances of intervention.

Dominican Republic

Right to do business.—The Dominican Republic confers upon foreigners the freedom to engage in commerce, develop any kind of industry, and the enjoyment of the same rights in such activities as nationals.

Taxation.—No special taxes are imposed on the organization or operation of foreign companies. The same equality of treatment between domestic concerns and foreign enterprises applies to special exemptions, subsidies, or concessions.

Labor regulations.—Law No. 51 of December 1938 requires that at least 70 percent of the personnel of all enterprises or establishments be Dominican nationals, and that their remuneration must equal 70 percent of the total pay roll.

Foreign exchange controls.—The Dominican Republic does not control or restrict in any way the transfer out of the country of interest, profits, or capital.

Nationalization.—According to article 96 of the Constitution, mineral deposits belong to the state and may be exploited by private individuals only under concessions or contracts granted in accordance with provisions of law. Special laws deal with exploitation of certain minerals. The right to explore, exploit, manufacture, refine, and transport petroleum carbons and other mineral fuel substances is obtained through concessions granted by executive decree, which do not confer ownership of a deposit, but only exploration and exploitation rights for a definite period and under conditions determined by law. The Dominican Government, through the Department of Public Works, owns and operates the only public railway in the Republic.

Ecuador

Right to do business.—There are no restrictions, limitations, or other special provisions in Ecuadoran law as to the nationality of owners of business enterprises. Neither does the law provide for distinction as to nationality in the granting of licenses to engage in business. However, subsoil and such natural resources as waterfalls in which there is a public interest are considered properties of the state. Concessions to exploit these resources may be granted by the President or the Legislature to foreign or domestic concerns.

In order to remit profits, interest, etc., out of the country in accordance with the foreign exchange regulations discussed below, foreign capital must be registered with the Central Bank. This bank may refuse such registration in case the investment is regarded as not in the national interest.

Taxation.—There is no evidence of discrimination against foreign-owned firms in Ecuador's income tax laws.

Labor regulations.—The Ecuadoran law of alienship requires that 80 percent of the employees of all establishments employing more than five persons must be Ecuadorans.

Foreign exchange controls.—Under the exchange control regulations the Central Bank is required to provide without limitation and at the official rate (13.50 sucres per dollar) exchange necessary to meet interest and amortization payments on loans contracted abroad, provided the respective foreign capital has been previously registered with the bank. It is also required to provide annually at the official rate up to 15 percent of registered capital for the transfer of profits, dividends, and amortization of investment. Larger percentages may be fixed by the bank on a uniform basis for all capital. Amounts in excess of these fixed percentages may, according to the regulations, be obtained in the free market without restrictions. The free rate has recently been stable at about 17.50 sucres per dollar.

Competition with Government-owned companies.—The Government of Ecuador maintains monopolies over the distribution of alcohol, tobacco, salt, and matches. The Government also has established control over the production, importation, and distribution of sugar and other essential foodstuffs, in an attempt to assure sufficient domestic supplies at reasonable prices. It is noteworthy in this connection that Ecuador is a party to the Flota Mercante Gran-colombiana shipping enterprise.

Nationalization.—The Guayaquil and Quito Railway Co., operating the most important railroad in the country, was nationalized by presidential decree in June 1944; however, this is the only important instance of such action in recent years, and does not appear to indicate a positive trend toward nationalization.

El Salvador

Right to do business.—Foreigners who wish to transact business in El Salvador may do so, according to the Commercial Code of El Salvador, even though their domicile, branch, or legal representative is located outside the country. In other instances, where the company is located in the country or has a branch in the country, it is subject to the same laws as Salvadorans. When companies organized in foreign countries have their principal operations in El Salvador, they are considered as Salvadoran companies and subject to laws governing locally organized companies. Under the present Constitution of El Salvador (that of 1886 amended in 1945), foreigners may acquire all kinds of properties which, however, shall be subject to the same obligations as are established by laws concerning the properties of Salvadorans.

Taxation.—Low taxation is imposed alike, without discrimination, on foreigners and nationals.

Labor requirements.—The law for protection of commercial employees, May 31, 1927, provides that at least 80 percent of all employees in commercial establishments must be Salvadorans. Although this requirement applies specifically to commercial employees, it has also been applied to industrial employees. In actual practice, it affects only the upper strata of skilled workmen, technicians, specialists, and administrators, many of whom might ordinarily be brought from foreign countries.

According to a new Labor Code, not yet acted upon by Congress, only 10 percent of the unskilled workers and 30 percent of the technicians may be foreigners, and only 25 percent of the total pay roll may go to these aliens. Persons in administrative positions, up to the number of four, are exempt from the above limitations.

Foreign-exchange controls.—El Salvador exercises no control over transactions in foreign exchange. Consequently there are no restrictions on the transfer of funds out of the country for any purpose.

Competition with Government-owned companies.—Government monopoly in El Salvador is primarily for revenue purposes. The Government has the exclusive monopoly of the manufacture, importation, and sale of rum. The Government also has a monopoly of the importation of saltpeter and explosives, and cigarette paper can be imported only by private individuals with the permission of the Government. The motion-picture theaters in El Salvador are controlled by the National Theater Council, a Government monopoly.

Nationalization.—While the Government of El Salvador has tended to follow the traditional pattern of the Central American Republics generally—that is, of being a free-enterprise nation—there has been some indication recently in El Salvador of a trend toward nationalism, though not necessarily nationalization, in the protection afforded the match and motion-picture industries. Also, in some instances it exerts effective direction over operations of organizations engaged in international trading and affords some protection to industries.

Guatemala

Right to do business.—There are no special provisions in Guatemalan law as to the participation by foreigners in the capital or management of business enterprises. Nor is there any limitation on the type of business in which foreign domiciled or locally domiciled foreign-owned firms may engage. However, no corporation may own any land within 15 kilometers of the frontier, nor in the Department of the Peten, nor within 1,500 meters of the Sarstun River. Ownership of land along the shores of certain navigable lakes is also restricted, but such lands may be leased from the Government for periods of not more than 25 years.

Taxation.—Taxation of business in Guatemala is low by United States standards, and generally the same rates apply to native and foreign enterprises. There is, however, an annual tax, in the nature of a franchise tax, levied on all foreign business associations doing business in that country, amounting to about \$300 annually. Furthermore, a tax of 1 percent of the par value is levied upon the transfer of shares in foreign corporations doing business in Guatemala.

Labor regulations.—The Guatemalan Labor Code, which became effective on May 1, 1947, provides that "employers are prohibited from employing less than 90 percent of Guatemalan workers and of paying them less than 85 percent of the total salaries paid out in their enterprises." These percentages may be decreased by as much as 10 percent under specified conditions. The provisions are not applicable to managers, directors, administrators, superintendents, and general chiefs of enterprises, as long as the total does not exceed two in each enterprise.

Foreign exchange controls.—Guatemala does not control transactions in foreign exchange, and there are no restrictions on the transfer of funds out of the country for any purpose.

Competition with Government-owned companies.—Monopolies of all kinds are specifically prohibited by article 20 of the Guatemalan Constitution. The Guatemalan Government, however, reserves to itself the right to import cigarette paper, arms, and munitions of war, including gunpowder, saltpeter, cartridges, and ammunition. In other lines, there appears to be no difficulty in competition with Government-owned companies.

Nationalization.—There has been a definite nationalistic emphasis in Guatemala during the last 2 years, although not in the sense of governmental expropriation of private enterprise. One instance of this emphasis was a proposed law (November 1946), which would require all foreign firms to be represented in Guatemala by persons domiciled in the country. This project is in line with the provisions of a number of laws which require resident representatives in specific business enterprises, subjection to Guatemalan courts in disputes, and the renunciation of diplomatic recourse. Another proposal, made in November 1946, also aimed at restricting the activities of foreign interests, was the proposed capital investment law, which provided for the reinvestment by foreign firms of 40 percent of their annual profits, when they have operated in the country for as long as 15 years. Guatemalan firms were required to reinvest 60 percent of their annual net profits.

Haiti

Right to do business.—Retail trading is barred to foreigners, the new constitution providing that only Haitians of origin can "practice retail commerce, direct the works of small industries, and devote themselves to all other commercial and professional activities as the law shall determine." A resident foreigner may own but one residential building in the same locale and may not engage in the rental of property.

Taxation.—Taxation in Haiti is discriminatory in that the foreigner pays twice the rate applicable to a Haitian for a national and local license, in order to engage in either industry or commerce. Also, exports of certain industries, e. g., sugar and bananas, which are foreign-owned are taxed heavily. There is no discrimination against foreign capital in the existing tax on profits.

Labor regulations.—There is no law restricting or prohibiting the employment of foreigners. Although there is no law requiring that a given percentage of the labor employed be of Haitian nationality, in practice, concession contracts generally fix a percentage of Haitians to be employed in such individual enterprises.

Foreign exchange controls.—The Haitian Government does not control or restrict in any way transactions in foreign exchange. Therefore, interest, profits and capital may be transferred out of the country without Government interference.

Nationalization.—There is no nationalization of industries in Haiti in the true sense of the word.

Under the new political regime, however, there has been an apparent tendency toward nationalization in the form of legislation vesting more and more control in the state over local industries. The slogan "Haiti for the Haitians" has a wide popular appeal, but it has not been implemented by expropriating or otherwise molesting foreign-owned property.

Honduras

Right to do business.—Both foreign and domestic companies, in order to transact business in Honduras must have the Executive's approval. They must submit annual reports of their operations to the Honduran Minister of Finance, must have two-thirds paid-in working capital, and, if their working capital is over \$7,500, they must have their books kept by native-born Hondurans. Foreign companies, legally established abroad, in order to carry on a business in Honduras, must maintain a representative in Honduras with general power of attorney and must submit proof of the company's volume of business, specifying real estate, cash, Honduran and foreign stockholders, and the quantity, nature and volume of the company's business.

Taxation.—Taxation of business in Honduras is very low and applied without discrimination to domestic as well as foreign enterprises.

Labor regulations.—There appear to be no legislative or administrative restrictions in Honduras applying to the employment of aliens. A bill for the enactment of a labor law, pending in the Congress since 1933 but not yet passed, contains no provisions regarding the percentage of foreigners who may be employed by business firms. The Embassy ascertained from the Ministry of Interior in December 1943 that development contracts and concessions usually contain a provision that a certain percentage of the employees must be Hondurans, and that when a factory is involved, some provision is made for training apprentices.

Foreign exchange controls.—Authorization to transfer funds out of the country is required, but in view of the ample supply of exchange, obtaining this authorization has been little more than a formality. The principal American-owned companies have not been hampered in their transfers of profits, etc., since under the regulations they return to Honduras only a part of the foreign currency value of their exports.

Competition with Government-owned companies.—It does not appear that Government-owned companies in Honduras offer serious competition to foreign investors, since the only Government monopoly in the country is the manufacture of alcohol and aguardiente (popular drink of the people) and this is for the specific purpose of raising Government revenue. Also, the Honduran Government reserves to itself the exclusive right to import arms and ammunition.

Mexico

Right to do business.—The participation of foreigners in most types of Mexican enterprises requires that the permission of the Ministry of Foreign Relations be obtained. Such permission may be, but is not required to be conditioned on the requirement that 51 percent of the capital stock of the enterprise be owned by nationals and that the majority of directors or partners be Mexican. There appears to have been no definite pattern as regards insistence by the Government on the 51 percent participation by nationals, each case apparently being judged on its own merits. Purely commercial activities do not fall within the compass of this requirement, and foreign commercial firms may engage in all types of enterprises except those which relate to public services rendered by the Government, such as domestic telegraph. Furthermore, foreigners wishing

to acquire ownership of lands, waters, and their appurtenances or to obtain concessions for working mines or for the utilization of waters or mineral fuel must agree to consider themselves as Mexicans in respect to such property and bind themselves not to invoke the protection of their governments in matters relating thereto. The Mexican law covering immigration specifies that immigrant investors must prove that they possess a minimum capital of 100,000 pesos (about \$20,000) to establish a business in the Federal District (including Mexico City); 20,000 pesos (about \$4,000) in one of the State capitals; and 5,000 pesos (about \$1,000) elsewhere.

Taxation.—Taxation, except of mining activity, is very light in Mexico when judged by United States standards, and there is no evidence of taxation discriminatory against foreign capital. The same tax rates apply regardless of nationality. Heavy taxation of the mining industry, which happens to be largely foreign-owned, is now reportedly a matter of study by the Mexican Government since minerals constitute a significant portion of Mexico's exports, which the Government realizes must be increased to improve the country's international balance of payments. Foreign capital invested in new manufacturing industries seems to enjoy the same liberal tax-exemption privileges accorded by the Government to any capital invested in such enterprises.

Labor regulations.—In most cases at least 90 percent of employees must be Mexicans, but this restriction does not apply to managers, directors, administrators, superintendents, or the general heads of concerns. Employers must, in general, give preference to Mexicans over aliens.

Foreign exchange controls.—Mexico does not control or restrict in any way the transfer of funds out of the country for any purpose.

Competition with Government-owned companies.—Because of the solidly entrenched tradition of Government intervention in economic life in Mexico there always exists the threat of private capital's incurring competition from Government-owned companies. In certain fields, such as petroleum, the Government exercises a monopoly and competition by private firms is an impossibility. But even in this politically controversial field, economic considerations seem to be initiating a trend toward renewed limited participation by technically superior private interests, as evidenced by recent moves to award contracts for exploration and development to private United States firms. In most other fields, Government participation appears to be limited to lending assistance to new private enterprises that might otherwise not be initiated, and competition with Government-owned companies does not seem to be a matter of concern at present.

Nationalization.—Nationalization, both in the sense of State ownership or control of economic enterprises and in that of State intervention in or regulation of enterprises privately owned or controlled, has long been a characteristic feature of the Mexican economy. It was intensified during the regime of President Cardenas in the period 1934-40. Expropriation and direct State control, in fields such as petroleum and the railways, have been politico-social in motivation while intervention, as through cooperative organizations and Government participation in certain new industries, has had as its purpose the improvement of economic conditions. Since 1940 there has been less emphasis on nationalization for political reasons although there

has been no slackening of intervention and regulation for economic reasons. Judging from postwar United States private interest in Mexico as a market for investment, particularly in manufacturing, numerous well-known United States firms are apparently convinced that the expropriatory nationalization activities of the Cardenas period are not a matter of concern in the present or foreseeable future. The attitude of the present regime, as indicated both in official pronouncements and in concrete acts, seems to be very friendly toward the investment of foreign capital that will participate in its program of industrialization and economic improvement, although it quite definitely reserves the right to regulate such investments.

Nicaragua

Right to do business.—No legal distinction is based on the nationality of owners of shares or of partners or other owners of business concerns in Nicaragua. Foreign-owned firms, irrespective of their domicile, may engage in any business in which locally owned concerns may engage.

Taxation.—Low taxation is assessed without discrimination on domestic and foreign enterprises alike.

Labor requirements.—A law of February 6, 1941, which applies both to individuals and companies, provides that every enterprise and commercial house, whether domestic or foreign, must engage as employees and laborers, not less than 75 percent Nicaraguans. This apparently does not apply to directors and officers of enterprises.

Foreign exchange controls.—All transactions in foreign exchange, except the purchase and sale of foreign paper money and coins, must be approved by exchange control authorities. Withdrawals of capital must in addition be approved by the President of the Republic.

Competition with Government-owned companies.—The monopoly manufacture of cigarette paper is exercised by the Nicaraguan Government, as is the importation of the following articles: cigarette paper, tobacco (leaf or manufactured); matches (wax or wooden); electric cigarette lighters; aguardiente (rum); certain firearms and explosives; lead (crude and manufactured); and certain medicaments. In other lines, there appear to be no difficulties stemming from competition with Government-owned companies.

Panama

Right to do business.—In general no limitation on the right to engage in business is based on nationality except as to retail trade and possibly as to wholesale trade.

Article 234 of the Constitution adopted in 1946, limits the right to engage in retail commerce to Panamanian citizens, except that foreigners who were engaged in retail merchandising in the Republic at the time the new Constitution was enacted may continue to do so. Article 234 also states that retail commerce may be engaged in by nationals of those nations which maintain, on the Isthmus of Panama, enterprises or organizations in which Panamanian citizens find facilities for employment, provided such nationals are legally residing in territory under the jurisdiction of the Republic. This gives United States citizens the right to engage in retail trade in the Republic of Panama.

Wholesale commerce may be carried on by any individual or concern, although the law may, when it is deemed necessary to protect wholesale commerce of Panamanians, restrict the exercise of such

commerce by foreigners. In no case will such restrictions injure foreigners who, at the time the regulations enter into effect, are engaged legally in wholesale commerce; nor will such restrictions apply to citizens of nations which maintain on the Isthmus of Panama enterprises or organizations in which Panamanian citizens find facilities for employment.

On the other hand, the Government has granted concessions to various firms, domestic and foreign, under which the concessionaires are granted tax exemptions or other valuable consideration.

Taxation.—The tax laws of Panama do not discriminate against foreign capital. Moreover, there is a double-taxation treaty between Panama and the United States under which reciprocal exemption from double taxation on the profits of shipping companies is granted.

Labor regulations.—Panama labor law requires that 75 percent of the pay roll of any industry or firm must be paid to Panamanians. An exemption may be granted in the case of technicians.

Foreign exchange controls.—Panama does not control or restrict in any way the remittance abroad of funds for any purpose.

Competition with Government-owned companies.—Through its Banco Agropecuario (Agricultural and Livestock Bank) the Government has competed with private enterprise in the importation of agricultural and livestock equipment, supplies, and products. The Government has also assisted in financing construction of hotels and low-cost housing projects.

Nationalization.—There have been no instances of nationalization of private industries by the Government of Panama. However, article 218 of the constitution of 1946 makes provision for such nationalization.

Official monopolies over imported articles or those not produced in the country may be established by the law as financial revenue. On establishing a monopoly by virtue of which any person is deprived of the exercise of a legitimate business or industry, the State will previously compensate those persons or enterprises whose business has been expropriated in the terms referred to in this article.

Paraguay

Right to do business.—The basis of Paraguayan commercial law is the commercial code adopted by Argentina in 1889. Although subsequent amendments provided for specific changes, it is understood that there are few basic differences between Paraguayan and Argentine law on the establishment and control of ordinary commercial and industrial organizations. Foreign enterprises are subject to the same restrictions and requirements that apply to strictly domestic companies. There appears to be little or no evidence of discrimination between national and foreign capital.

Taxation.—There appears to be no discrimination in taxation levied on domestic and foreign concerns.

Labor regulations.—It is required by law that 90 percent of labor personnel and 95 percent of the other employees of any industrial commercial business be of Paraguayan nationality. Where the employment is not more than four persons there is exemption from this provision. In determining the proportion of nationals to be employed, all specialist technical personnel are excluded except when they can be replaced by Paraguayans capable of performing the same duties.

Foreign-exchange controls.—Under decree law No. 10043 of August 29, 1945, the basic Paraguayan exchange-control law, the importation of foreign capital is encouraged through the establishment of a register of foreign capital, under the supervision of the Bank of Paraguay, in which investors may elect to register, thereby obtaining the right to purchase stipulated amounts of official exchange to cover subsequent dividend, profit, and amortization payments. Application for such registration is approved by the bank, provided the investment meets certain requirements, the most important of which are that it contribute to the social and economic development of the country and that it does not exercise an unduly inflationary effect on the Paraguayan economy.

Registered capital entering Paraguay is converted into guaranties at the official exchange rate, whereas unregistered capital may enter at the higher free-market rate. However, investors who elect not to register with the Bank of Paraguay have no assurance that official exchange will be made available to them for the purpose of remitting dividends, interest, and profits abroad or for withdrawing their funds from the country, and must be prepared to effect all such remittances at the less advantageous free-market rate, should the state of the exchange market require it. Capital invested in Paraguay prior to the effective date of decree law No. 10043 may also qualify for registration by meeting requirements similar to those prescribed for new capital.

It is understood that at the present time the foreign-exchange situation in Paraguay is such that official exchange is being allocated only for remittances on account of registered capital.

Competition with Government-owned companies.—The Government of Paraguay participates in the shipping trade through its Flota Mercante del Estado, but this agency transports only a small portion of the country's water borne international traffic. The Paraguay Central Railway (principal line serving the country) is privately owned. However, the Government owns and operates a very small line, the Concepcion-Horqueta Railway.

A monopoly over the supply and distribution of meat within Paraguay is exercised by the Corporacion Paraguay de Carnes, a corporation owned jointly by the Government and private capital. The Alcohol Corporation, composed of all alcohol producers, is Government-controlled. The sugar industry also is Government-controlled.

The National Administration for Public Enterprises, a new Government organization, was authorized by a decree of August 30, 1947, to engage in the following activities: quarrying, cattle raising, manufacturing of wood pulp, paper, cement, and other products and may assume a monopoly for the domestic distribution of petroleum products. It is too early to determine the extent to which these functions will be implemented.

During the war the National Subsistence Administration was established in order to control imports of essential commodities for allocation among importers. It continues to function and imports on its own account, for resale, certain bulk-purchased commodities such as wheat, salt, cement, caustic soda, etc. Private firms are represented on its governing board.

Nationalization.—Commercial telephone, telegraph, and telecommunication services, also domestic air transport, are exclusive Government enterprises in Paraguay.

Peru

Right to do business.—Under the terms of the Peruvian Code of Commerce foreign nationals as well as companies organized abroad may engage in business in Peru. The national constitution guarantees freedom of work not inimical to morals, health, and public security.

The nationality of shareholders is unrestricted, except in the case of insurance companies and oil companies. A majority of the shares of insurance firms must be owned by Peruvian nationals, and oil companies are obliged to place at least 25 percent of their capital stock with the state or with Peruvian investors. Otherwise, there is no restriction on the nationality of company owners nor as to the type of business in which foreign firms may engage.

Taxation.—There is no evidence of serious discrimination against foreign-owned companies under Peru's income-tax laws. The only instance in which income earned by foreign nationals or firms is taxed at a different rate from that of domestic organizations is in the case of complementary income tax. Under this tax, dividends on registered shares held by residents abroad, net profits obtained by foreign firms, interest paid by affiliate companies to main offices abroad, and certain other income received by residents abroad are subject to a fixed rate of 12 percent. The tax on similar income of Peruvian residents ranges from 2 percent on 10,000 soles to 30 percent on income exceeding 100,000 soles.

Labor regulations.—Under Peruvian labor law, not less than 80 percent of all persons employed by an enterprise must be Peruvian nationals, and 80 percent of the pay roll must be paid to Peruvian citizens.

Foreign exchange controls.—All sales of exchange at the "official" rate of 6.50 soles per dollar require approval of the exchange and import control authorities. In addition there is a free market in which transactions are not controlled and in which the rates fluctuate widely, ranging in recent months from 9 to 18 soles per dollar. Since the foreign-owned mining and petroleum companies are principal suppliers of exchange in Peru, it is understood that they obtain exchange for all their legitimate requirements, including the importation of supplies, and the payment of interest, dividends and salaries, at the rate at which they deliver their export proceeds to the authorities, viz, 6.50 soles per dollar. In view of the current serious shortage of exchange, however, it is unlikely that other foreign interests can obtain exchange for dividends at the official rate, although the authorities are empowered to authorize sales at that rate.

Competition with Government-owned companies.—The Peruvian Government maintains monopolies in the distribution of salt, matches, industrial alcohol, tobacco and tobacco products, guano, playing cards, and explosives, and engages in the direct manufacture of salt, tobacco products, denatured alcohol, and the extraction of guano. The Government likewise participates directly in the production and distribution of petroleum products, but not on a monopolistic basis. Various other enterprises in which the Peruvian Government has been active include coal mining, large-scale construction projects, hydroelectric development, and distribution of basic foodstuffs.

Nationalization.—No nationalistic trends which would operate severely against existing foreign-owned enterprises have been noted. In opposition to this has been the need, generally recognized by the

present administration, for foreign capital investment in Peru. However, discussions of present pending petroleum legislation have indicated the existence of strong sentiment for the reservation of decided advantages for the state or domestically owned companies in the exploitation of Peru's petroleum resources.

Uruguay

Right to do business.—Foreigners may operate freely, with the same rights and privileges as Uruguayan citizens in the engagement in business in that country. The participation of foreign capital which may be invested in such private commercial or industrial enterprises is not limited but is, of course, subject to the provisions regulating the entry of capital into that country.

Special laws apply to the establishment of banks, insurance companies, public utilities, and certain other enterprises referred to under, "competition with government-owned companies."

Taxation.—Taxation on industry and commerce does not distinguish between nationals and foreigners. The only exception is in the case of the real-estate tax, in which there is a surcharge for absenteeism when property owners reside abroad or are Uruguayans remaining outside the country for more than 6 months. The tax on absenteeism affects individuals and business organizations domiciled outside the country.

Labor regulations.—Ordinary commerce and industry are not required to employ a fixed percentage of workmen who are Uruguayan nationals. However, organizations which will require a large personnel are sometimes required under a special clause in their charter to engage a certain percentage of Uruguayans. This percentage may vary from 60 to 90. In the case of public works, regulations specify a minimum of Uruguayans who must be employed.

Foreign exchange controls.—While such remittances from Uruguay do not require specific authorization in each instance, as in some other countries, general supervision is exercised by the exchange control authorities through requiring all nontrade remittances to be effected through the free market, regulating the supply of exchange available in the free market, regulating free-market rates, and the requirement that all free-market transactions shall be reported.

Competition with Government-owned companies.—The National Administration of Fuels, Alcohol, and Cement (ANCAP) has a monopoly on the refining of petroleum products; distribution is shared with private companies, with ANCAP retaining about one-half of this business. The organization also maintains a monopoly of alcohol distillation, and is the exclusive supplier of cement for public works.

The Frigorifico Nacional, Government meat-packing establishment, has a monopoly on meat packing for distribution in Montevideo. Private companies engage in meat packing for export.

Canoprole, the National Cooperative of Milk Producers, is owned jointly by Government and private capital. It exercises a monopoly of milk processing and distribution in Montevideo, and for export. Sulfuric acid and phosphates are produced by Government-owned plants.

The National Government of Uruguay participates in banking activities and also through its Banco de Seguros conducts an insurance business. Only the private companies now in business are permitted to operate in this field.

Mining activities are restricted to Uruguayan citizens.

The municipality of Montevideo operates two hotels, two gambling casinos, and a cabaret.

Nationalization.—The National Government of Uruguay owns and operates all of the country's commercial telegraph services, the principal telephone system, one-fifth of the railway mileage, port of Montevideo facilities, and most of the country's water-supply systems, including Montevideo. The National Government also owns and operates electric power plants and contemplates a completely integrated Government-operated system when additional facilities are completed.

Venezuela

Right to do business.—Foreign companies may carry on business, take part in litigation, establish agencies or branches, exploit natural resources, or introduce any industry in Venezuela (except water power, timber, aviation, and subsoil rights which are permissible only under concessions from the Government), provided they comply with the formalities of Venezuelan law. In these respects no distinction is made between foreign and Venezuelan companies. Foreigners have the same civil rights as Venezuelans, except political rights, which accrue only to Venezuelan citizens.

Taxation.—There is some distinction in current Venezuelan income-tax laws between income of residents and that of nonresidents derived from wages, salaries, pensions, and other emoluments. The rate is 1 percent in the case of residents and 3 percent for nonresidents. The surtax on income in excess of 9,000 bolivares, which ranges up to 26 percent on incomes exceeding 28,000,000 bolivares, while not directly discriminating against foreign-owned firms, nevertheless imposes a heavy burden on foreign petroleum companies operating in Venezuela, in view of their relatively large incomes in comparison with domestic companies. Moreover, the rates applicable to the exchange sold in Venezuela by the oil companies and by other exporters, 3.09 and 3.32 bolivares per dollar, respectively, are in effect a tax paid by the oil companies that is not paid by the exporters of products other than petroleum.

Labor regulations.—According to the 1936 labor law, at least 75 percent of salaried employees and laborers must be Venezuelan, except where, for technical reasons, a temporary reduction of this percentage is permitted.

Foreign exchange controls.—Exchange for these purposes may be obtained in and remitted from Venezuela without official intervention of any kind.

Competition with Government-owned companies.—Through its various dependencies, the Government of Venezuela has participated in an increasing number of economic activities, including air transport, shipping, and the distribution of essential foodstuffs. Notable is the control recently established over sugar. The Government maintains a direct monopoly on matches.

Nationalization.—While continuing efforts are made to secure all possible advantage for the State, notably from the exploitation of Venezuela's natural resources, it is not believed that there exists at present a marked general trend toward actual nationalization.

FAR EAST

Republic of China

Treaties.—The present legal position of American commercial interests in China stems out of the treaty between the United States and China for the relinquishment of extraterritorial rights in China and the regulation of related matters, which treaty was signed on January 11, 1943, and became effective on May 20, 1943. By the provisions of this treaty, the jurisdiction of the United States over its own nationals in China is disavowed, and such nationals made subject to the jurisdiction of the Chinese Government in accordance with the principles of international law and practice. The treaty further provides for the indefeasibility of existing rights or titles of Americans to real property in China, for the rights of American citizens to travel, reside, and carry on trade throughout China, and for national treatment by both countries with respect to all legal proceedings, matters relating to the administration of justice, and taxation.

It is, moreover, provided in the above treaty that the two nations will enter negotiations for the conclusion of a comprehensive modern treaty of friendship, commerce, navigation, and consular rights. Finally, it is stipulated that pending the conclusion of said comprehensive treaty, if any questions affecting the rights in China of nationals (including corporations or associations) or of the Government of the United States should arise in the future and are not covered by the treaty of relinquishment or by provisions of existing treaties, conventions, or agreements between the two nations, and are not abrogated by or inconsistent with this treaty, such questions shall be discussed by representatives of the two governments and decided in accordance with generally accepted principles of international law and with modern international practice.

Upon this background, and after negotiations lasting many months, there was signed on November 4, 1946, a treaty of friendship, commerce, and navigation.

Although not yet ratified by the Senate, this treaty, representing the results of discussions of representatives of both nations, may conceivably be considered binding *pro tempore* within the meaning of the treaty of relinquishment, and in fact has been used as a framework of reference for representations regarding alleged discriminations against Americans. Although technically still operative in part, the treaty as to commercial relations of October 8, 1903, which was the last previous treaty on this subject between the nations, is in practice obsolete.

The unratified 1946 treaty deals with a large number of subjects: The right to travel; reside; carry on trade; acquire, hold, and dispose of real and personal property; matters of taxation; customs; import, export, and trade regulations; monopolistic practices; remittances of funds and foreign exchange; navigation rights; arbitration; and protection of industrial and intellectual property. Most-favored nation, national treatment, and reciprocal treatment are variously applied.

Chinese Government policy.—The Chinese Government's industrial and financial policies with respect to foreign investments in China were most recently stated on August 13, 1947, in a press release of the Government Information Office, and can be summed up as follows: With the exception of arsenals, mints, main railway lines, and large-

scale hydroelectric power plants, which are to be State-operated, and other industries which, according to the provisions of Chinese laws (discussed specifically below), are specifically reserved for Chinese nationals or corporations, the remaining industries are open to direct investment of foreign capital. The investment of such capital is particularly invited in the manufacture of motive-power machinery, tool-making machines, automobiles, locomotives, aircraft, and large steamships.

The mining of iron, petroleum, copper, and high-quality coal suitable for metallurgical or refining purposes is reserved for the Government, but may be leased by the Government to others to be prospected and exploited, provided the lessees are citizens of the Republic of China. In addition, it is provided in the mining enterprise statute that special lots of other minerals may be determined by the Ministry of Economic Affairs to require conservation and set aside as Government-reserved lots where no prospecting or exploitation shall be allowed. Both domestic and foreign capital may be invited to participate in Government-operated mines under a corporate organization, the Government to take part in the business and personnel management of such companies in the role of stockholder, while at the same time exercising such administrative supervision as is prescribed by law.

Registration and authorized scope of commercial activity.—The Chinese company law of 1946 provides for the admission of foreign companies to do business where reciprocal rights are extended to Chinese companies. Such foreign companies must secure authorization to do business in China, based on the submission of various documents including copies of articles of incorporation, statements as to capitalization, officers, directorate, and anticipated scope of business in China.

If a foreign company desires to engage in those types of business which require the special permission of the Chinese Government—such as, for example, banking and insurance—such business can be undertaken only after the special permission has been received. In the case of foreign banks a license to engage in the banking business must first be secured from the Ministry of Finance, and then, additionally, the foreign banking company must register under the provisions of the revised company law.

A foreign company is not entitled to a certificate of authority to do business in China if the purpose or business is repugnant to the law, to public order, or the “decent customs” of the Republic of China; if “the place of the branch office” is not open to residence by aliens or its business “is not open to aliens”; if it misrepresents any particular in its application for admission; or “if its purpose is to escape the law of the country it belongs in, or to make use of the laws of a third country in order to obtain juristic personality and admission into China with the view of enjoying the rights and privileges of a citizen of a third country.”

A foreign company may purchase and hold such land as is necessary for the transaction of its business if it has secured the prior approval of the central competent authority, and if “its own country” grants the same rights and privileges to Chinese companies. It would appear in the case of the United States that the expression “its own country” means the laws of the particular State under which the company is incorporated.

A foreign company is not allowed to be a shareholder of unlimited liability in another company, nor a partner in a partnership business. It may become a shareholder of limited liability in other companies, but in such cases the total amount of such investments cannot exceed one-half the amount of its own paid-in capital. But it is not so limited if its "exclusive" business is to invest in other companies, nor does the limitation apply to investments in "productive" enterprises.

The degree of participation allowed foreign investors in Chinese companies created under the company law varies according to the type of company created. Thus noncorporate foreign investors may participate in Chinese unlimited companies, which consist of two or more members of unlimited liability. They may also participate in unlimited companies with limited-liability shareholders. In both the above cases half the total number of shareholders must be domiciled in China.

Chinese limited companies consist of 2 to 10 shareholders, half of whom must be domiciled in China, and whose liability is limited to the amount of subscription. However, the chairman of the board of directors must be a Chinese citizen and resident, while the remaining managing directors must be residents.

In a company limited by shares, which consists of five or more shareholders, whose liability is limited to the amount of subscription (somewhat similar to an American corporation), more than half the stockholders, half the directors, all the managing directors, and the chairman of the board of directors must be residents, and the chairman of the board must also be a Chinese citizen. The same restrictions are applied to a company limited by shares with stockholders of unlimited liability.

The Chinese banking law was made effective on September 1, 1947, and permits foreign banks the same scope of operations as native banks, except that the former are prohibited from conducting business as savings banks or trust companies. However, since none of the foreign banks in the past engaged in the trust business, and inasmuch as they are not interested in savings accounts because of the vast reserves required to be maintained, these prohibitions are deemed to have little import.

This statute further provides that the Government may, in accordance with the requirements of international trade and productive enterprise, designate regions in which foreign banks may establish branches.

Although it is too early to report the actual operation of this law, it is understood that foreign banks are satisfied that the law itself is reasonable and workable, and that the provisions governing the operation of foreign banks are fair and nondiscriminatory.

Laws affecting operations and administration thereof.—Following the relinquishment of extraterritorial rights in 1943, foreign commercial interests in China at the close of the Far Eastern war in 1945 were for the first time exposed to the direct operation of Chinese laws, particularly in the field of taxation, banking, foreign exchange, shipping, mining, and trade controls.

In the field of taxation, the Chinese Government has sought greatly to increase its revenues by the enactment of a series of statutes designed to tap every possible source, and applicable, theoretically at least, with equal effect to both Chinese and foreigners. Included are

a business tax, stamp tax, land tax, commodity tax, income tax, and excess-profits tax.

Much of the burden of these taxes has been passed off to the ultimate consumer in the form of higher prices, and there have been no complaints of discrimination against foreigners save in the interpretation and application of the income-tax law. Arbitrarily, companies whose head offices are outside China (all foreign corporations) are placed into a different category from companies whose head offices are in China (practically all Chinese companies). By this categorization the rate of tax on Chinese companies is determined by the ratio of income to capital, while the rate of tax on foreign companies is based solely on the amount of income. The net result is that Chinese companies are permitted to readjust their capitalization in accordance with changing economic conditions, thus falling into lower tax brackets, while foreign corporations can do nothing, in the face of the same changing economic conditions, including the very rapid depreciation of the Chinese dollar, to avoid being taxed in the hitherto inflexible higher brackets.

According to the Chinese Government's August 13, 1947, statement on industrial and financial policies with respect to foreign investments in China, foreign businessmen operating within Chinese territory shall pay the same taxes under Chinese tax laws or ordinances as Chinese nationals. The results of recent representations by the United States and other foreign governments with respect to the discriminatory nature of this law are presently being awaited.

Foreign-exchange controls.—Because of the highly inflationary nature of the Chinese economy and a rapidly deteriorating balance-of-payments position, the Chinese Government has found it necessary to impose stringent foreign-exchange and trade controls, the most recent revisions of which were announced on August 17, 1947.

Under the trade regulations, all permitted imports into China require a license issued only to registered importers and firms. Additionally, certain commodities—e. g., lumber, tobacco leaf, wheat, flour, raw cotton, pharmaceuticals, dyes, et cetera—are imported under both license and quota requirements.

Importers are financed at the "official" open market rate, which is subject to daily readjustment.

Exporters, also, are now required to sell their foreign exchange to appointed banks at the open market rate.

The restriction on the export of foreign currency, gold, silver, coins, and bullion, coupled with the absence of any provision for the sale of exchange for remittances, not only makes it impossible presently for foreign firms to remit profits, but also to withdraw capital investment. In the Chinese Government's policy statement of August 13, 1947, however, assurances were given that profits of foreign investments may be remitted in principle, and that regulations are currently being drawn whereby an appropriate portion of profits realized from foreign investments in industrial enterprises may be remitted.

The administration of the exchange and trade control regulations has been the subject of considerable criticism on the part of the foreign commercial community, such criticism dealing with the alleged favored position as to licenses and quotas of state trading organizations and private Chinese concerns, the encroachment of Government monopolies into fields not previously defined as fields of Government monop-

lies, and the alleged arbitrary enforcement of newly promulgated exchange and trade regulations without affording sufficient protection for commitments already made.

Competition of Government-owned corporations.—The Chinese Government through agencies such as the National Resources Commission and the Alien Property Administration has entered into fields of industrial activity, such as cotton textiles, not formerly invaded by the Chinese Government.

Although recent policy statements indicate that the Chinese Government intends to sell certain industrial enterprises taken over from the Japanese and recently run by Government corporation, Chinese Government participation in industry has in the meantime greatly increased over prewar levels.

British Malaya

Right to do business.—There are, generally speaking, no legal provisions restricting the rights of foreigners to do business in Malaya.

Apart from certain "Malay reservation" areas in the Malay States and certain "customary lands" in Malacca where land may be held by Malays only, there is no discriminatory legislation which would prevent the acquisition of mining rights by an American company. However, the control of mining and mining properties, as well as the conditions under which individuals and companies are granted permission to operate is such as to insure that the British Government and its citizens will not at any time be seriously handicapped by operations on the part of foreigners or foreign concerns.

Taxation.—In 1941 legislation was enacted for a war tax on incomes for that year. Late that year the law was extended for another year. Under the law all companies were to pay tax at the rate of 12 percent on their income. While no definite information has been received, it is assumed that this war tax on incomes is still in effect. No other forms of income tax, war profits and excess profit taxes were in effect prior to the war.

Labor regulations.—So far as available information goes, there are no laws which restrict the employment of foreigners in British Malaya. Since more than half the total population is "foreign"—notably Chinese and Indians—and immigration of foreigners is encouraged to provide both skilled and unskilled labor on plantations and in mines, it is most probable that no restrictive measures are contemplated.

Foreign exchange controls.—All transactions involving use of dollar exchange are under strict control: Upon approval of applications, remittances can be made outside the sterling area for "income arising from investments in Malaya, e. g. interest, dividends, rents, and profits of nonresident-owned Malayan companies (after deduction of Malayan taxes), etc. There is nothing to indicate that American companies operating in Malaya are having difficulties remitting profits.

Competition with Government-owned companies.—Except for trade in opium, there is no known Government monopoly of business in British Malaya.

Netherlands Indies

Right to do business.—A foreign company, operating legally in the country where it has its principal office, is recognized as a legal person in the Netherlands Indies and may carry on its activities there. If

an office is established in the colony, registration in the Commercial Register is required.

A foreign company contemplating the holding of real property, the taking up of Government land, the holding of concessions from the Government or taking part in any other transactions involving obligations to the State, is required to establish itself as a Dutch entity. Therefore any company desiring to secure concessions in Netherlands Indies is required to form a limited company registered either in Netherlands Indies or Holland, whose managing directors or the majority of its directors are Netherlanders or reside in Holland or in Netherlands Indies.

Although the mining law itself does not discriminate against foreigners, and article 5a of the mining law expressly authorizes the Indies Government to reserve lands and to enter into contracts with persons or companies for the exploration of the land and the exploitation of the minerals reserved to itself, the law further provides that legislative approval must be obtained of any contracts so formed; therefore American rights with respect to minerals reserved to the Government depend in each instance upon satisfactory negotiations with the Government of the Netherlands Indies and also upon favorable parliamentary action.

The Agrarian Decree of 1870, revised and amended, provides in article 11 that only the following can be leaseholders: (a) Subjects of the Netherlands; (b) residents of the Netherlands; (c) residents of the Netherlands Indies; (d) limited companies established in the Netherlands or Netherlands Indies. A resident of the Netherlands Indies is a person of any nationality who has resided in the colony for more than 18 months and who does not leave the colony for more than 1 year at a time.

The insurance law of April 15, 1941, contains provisions which might prove so burdensome as to prevent foreign insurance corporations from engaging in business within the Indies.

Taxation.—An income tax is payable by all persons or firms earning income in the Indies. Prior to the war there were no requirements relating to the employment of labor. In the event the Netherlands Indies become independent, the Indonesian Government will no doubt enact legislation regarding labor and its employment.

Foreign exchange controls.—In normal times the Netherlands Indies has had available large amounts of foreign exchange and no control was necessary. Owing to the present severe shortage of foreign exchange, controls are strictly applied, exchange being authorized only for absolute necessities. All exchange derived from exports must be turned over to the Exchange Institute, which makes payment in guilders.

As far as is known nationalization of American-owned companies in the Netherlands Indies has not taken place.

Competition with Government-owned companies.—In prewar years the Government of the Netherlands Indies operated three monopolies, viz, pawnshops, opium manufacturing, and salt production.

To assist the Dutch quinine monopoly, the Netherlands Indies Government prior to the war imposed on all producers of cinchona bark a limit on annual exports and restricted the planting of new trees to the replacement of old ones. The monopoly, which is in control of 90 percent of the world's supply of quinine, is operated as

a syndicate, comprising planters in the Netherlands Indies and three manufacturers—two with plants in the Netherlands and the third with a factory in Java. The Netherlands Indies Government which is the owner of a large cinchona plantation is a member of the syndicate.

Republic of the Philippines

Right to do business.—The Republic of the Philippines has gone on record as entirely receptive to American capital and American business enterprise. Moreover, in accordance with provisions of the executive agreement signed in Manila July 4, 1946, the Philippine Constitution was amended, following a plebiscite of the Philippine people in March 1947, to provide that the exploitation of all natural resources and the operation of public utilities should, if open to any person, be open to citizens of the United States and to all forms of business enterprise owned or controlled directly or indirectly by such citizens.

The Philippine Trade Act of 1946 provides specifically that the executive agreement, which implements the act, shall be terminated in the event of discrimination against any form of United States business enterprise on the part of the Government of the Republic of the Philippines or any of its political subdivisions.

A bill to repeal laws granting special privileges to American citizens and corporations—unless such laws affected rights vested under the constitution or by treaty or agreement—was passed by the Philippine Congress in 1946.

Registration under the corporation law of the Philippines is necessary to the conduct of business in the Republic. A license must be obtained from the chief of the Mercantile Register of the Securities and Exchange Commission, upon filing of a statement certifying to certain details of capital stock, assets, liabilities, etc. Acknowledgment and authentication of certain documents pertaining to the establishment of a branch office, articles of incorporation, etc., are also necessary. Fees collected for the filing of articles of incorporation and for registration are based on the capital stock of the foreign corporation.

Taxation.—Taxation includes an income tax, a corporation tax, and an undistributed profits tax, as well as a fixed tax upon business. Certain enterprises pay specified annual taxes, while annual privilege taxes are collected on certain occupations. Special taxes are provided for the mining industry, and all business pays specific, sales, and/or compensating taxes, as applicable. A residence tax is imposed on corporations as well as on individuals. In recent months negotiations have been under way for a tax treaty between the United States and the Philippine Republic under which double taxation of Americans doing business in the Philippines, and of Filipinos operating in the United States, would be avoided.

Labor regulations.—An 8-hour labor law is in force and a minimum-wage law applies to public works. Legislation also provides for workmen's compensations, and inspections of working conditions are made by the Department of Labor. The only industrial establishments required to register systematically with the Department are mines, quarries, and metallurgical operations.

Foreign exchange controls and tariff.—Under terms of the executive agreement between the United States and the Philippine Republic, trade between the two countries is on a reciprocally free basis for a period of 8 years beginning July 4, 1946, with declining trade preferences for 20 years thereafter.

Stabilization of Philippine currency in relation to the United States dollar also is provided by the agreement, which stipulates further that no restrictions may be imposed on the transfer of funds from the Philippines to the United States, except by agreement with the President of the United States.

Government-owned corporations.—Government-owned corporations have not offered serious competition in the Philippines. The declared purpose of Government participation in industry and trade has been to stabilize prices and assist producers and importers. In its plans for postwar economic recovery, however, the Government may take a somewhat more active part in the rehabilitation of industry and trade. Some of the new projects proposed for industrialization will be financed by the Government, if private capital is not interested. To meet criticism that expanding governmental activities constituted an unfair competitive threat to private business, legislation was recently enacted to subject agencies owned or controlled by the Government to all taxes and charges required of private business.

Nationalization.—There has been no nationalization of American property in the Philippines since establishment of the Republic, nor does such a development appear likely. Proposed legislation to nationalize labor—directed specifically at the Chinese—lacked administration support and failed to pass.

Actual administration.—There has been no indication in the actual practices and administration of the law, since establishment of the Philippine Republic, of discrimination against American interests.

Siam

Right to do business.—The Kingdom of Siam generally imposes no restrictions on the doing of business by foreigners in that country.

A royal sanction or concession must be obtained in order to carry on a commercial undertaking of public utility. The following commercial undertakings are deemed of public utility: Railways, tramways, canals, aerial navigation, water supply, irrigation, electric power station, and such other undertakings affecting the public safety or welfare as may, from time to time, be specified by royal decree.

The provisions of special laws must be complied with by all persons or firms in order to carry on a business of insurance, banking, savings bank, credit foncier, or undertaking of a similar nature.

The Siamese Mining Act of 1919 stipulates that all lands and minerals are crown property, and the right to prospect or mine must be expressly granted by the Government. A royalty is payable on minerals produced. For the purpose of collecting royalties on tin, the Government raised the arbitrary basis of calculating the metallic content of tin ore to 72 percent in 1923 from a former level of 70 percent.

The cutting of teak wood is only permitted under concession. To avoid excessive tie-up of lessees' capital, the major royalty on teak is collected not at the time of tree felling but by fiscal stations main-

tained by the forest department at certain down-river points where the teak companies assemble their loose logs into rafts.

Siamese law does not require the qualification of foreign business organizations. Foreign companies engaging in business in Siam are, however, required to register in the business registration office.

Companies, partnerships, or juristic persons established under the law of Siam or established under the law of foreign countries and carrying on business in Siam must pay an income tax.

There are no labor laws discriminating against foreigners.

Foreign exchange controls.—Foreign exchange control is administered by the Bank of Siam, under direction of the foreign exchange board, which was established on June 21, 1947. Private importers desiring foreign exchange may file applications to cover imports of priority goods as listed on the revised priority list. Exchange at the official rate is granted subject to the amount in the central exchange control. Exporters of all commodities, except rice, rubber, teak, and tin are free to utilize 100 percent of their foreign currency proceeds to pay for imports of any commodities. As of June 16, 1947, exporters of rubber from the port of Bangkok are required to surrender to the Bank of Siam only 20 percent of foreign currency proceeds; from Singora to points outside Asia, 20 percent; from all other ports 25 percent. Exporters of teak and tin are required to surrender only 50 percent of foreign exchange proceeds. Sellers of rice to the rice bureau are permitted to buy credit in pounds sterling amounting to 10 percent of the value of rice sold to the bureau. This sterling may be used as desired.

Competition with Government-owned companies.—The following enterprises are Government owned and operated: 1 sugar mill, 2 paper mills, 1 canning factory, 1 cigarette factory, 1 cotton mill, 1 distillery, 11 rice mills, 1 mineral and 1 vegetable oil refinery, 1 airplane factory, 1 arsenal, 1 lumber mill, all the railway systems, and the postal, telegraph, and radio broadcasting systems. A semi-governmental firm purchased vessels during 1940 to carry on overseas trade, and another semigovernmental aviation concern holds the monopoly of internal commercial flying in Siam.

AFRICA

Egypt

Right to do business.—In an effort to bring business, which has been for so long almost exclusively in the hands of foreigners, under the control of Egyptian nationals, drastic action is reflected in newly established regulations. A new company law which became effective August 11, 1947, provides that at least 40 percent of the directors of the board of any joint stock company shall be Egyptian. The Council of Ministers shall have the power to waive this provision in the case of companies whose activities are mostly abroad.

Under the provisions of the company law, at least 51 percent of the shares of joint stock companies shall be earmarked for Egyptians whether on founding a company or on the occasion of increasing the capital.

If the full percentage referred to has not been subscribed to within the period fixed, which shall not be less than 1 month, the Minister of Commerce and Industry is authorized to extend the closing date

for subscriptions for a further period not exceeding 1 month, or to waive the requirements for this percentage in whole or in part.

Labor regulations.—The number of Egyptians employed by a joint stock company shall not be less than 75 percent of the total number of its employees, and their total salaries and allowances shall not be less than 65 percent of the total amount of salaries and allowances paid by the company. "Employee" means persons performing administrative, technical, clerical, or accounting work. The number of Egyptian workmen shall not be less than 90 percent of the total number of workmen, and their total wages shall not be less than 80 percent of the total amount of wages paid by the company.

The Minister of Commerce and Industry shall have the power to authorize the employment, for the period to be fixed by him, of technical managers and expert advisers of foreign nationalities in cases where it proves impossible to find suitable Egyptians.

In analyzing the application of the above provisions in reference to labor, it should be kept in mind that Egypt at the present time is faced with a serious unemployment problem. The population of non-Egyptian workers is not large, and it would seem unlikely that additional non-Egyptian workers would seek employment in Egypt. Egypt is not self-sufficient in skilled technical personnel, which means that there are many non-Egyptians employed at the present time in this capacity. It is expected that a number of years will be required to train a sufficient number of Egyptian employees in technical skills before strict observance of the provisions of the law can be enforced, and in the meantime and thereafter, the Minister of Commerce and Industry has the power to authorize the employment of needed technicians.

Exchange control.—A new exchange control law has been enacted which places all foreign currency transactions under the control of the Egyptian Government. Under this law, all transactions in foreign bank notes, transfers of currency to and from Egypt, and all commitments specified in foreign currency are strictly forbidden unless they conform to the conditions and forms which are laid down by an order issued by the Egyptian Minister of Finance.

C. DEFAULT STATUS OF PRIVATE UNITED STATES LOANS TO FOREIGN COUNTRIES

The first important period of American lending to foreign countries was during World War I. From 1914 to 1917 American private capital had subscribed to about 2,500 million dollars of foreign bonds. These were principally the issues of the United Kingdom, France, and Italy. These issues were all repaid in full during the next 10

years. From 1917 to 1922 the United States Government made its first extensive foreign loans, those made to assist the Allies to procure ammunitions, foodstuffs, and other supplies from this country as well as advances for postwar relief and sales of surplus war materials on credit. The story of these loans and credits is told in chapter I.

From 1920 through 1930 the private investors in the United States subscribed to more than 10,000 million dollars of foreign bonds (after deducting refunding issues). About 45 percent of these were the issues of European countries, 25 percent Latin American, 20 percent Canadian, and 10 percent far eastern. Out of these and earlier flotations, and as a result of transactions in these and other foreign securities, the United States accumulated a portfolio which reached a peak about 1930 of approximately 7,000 million dollars.

Early in 1931, when there had been a serious decline in the prices of raw materials and the world was in the midst of depression, some of the Latin-American countries defaulted on their foreign debt. Within the next few years other borrowers, especially European, also defaulted. During the later years of that decade a few of the defaults were adjusted by temporary or by more permanent arrangements for the reduction of interest payments and extension of amortization over a longer period.

During the period of defaults, transactions in foreign dollar bonds¹ continued and resulted in net sales by investors in this country including substantial net sales of defaulted bonds to the issuing countries. These sales and the regular amortization of the nondefaulted issues reduced the par value of such bonds presently held in this country to about 2,000 million dollars, approximately two-thirds of which are Canadian issues. As of the end of 1946, 50 percent of the issues originally sold in this country were in default, either complete or partial (see table 30). As of the same date, only 25 percent of foreign dollar bonds held by persons resident in the United States were in default. The difference resulted from the large repatriations of the defaulted bonds reducing the holding of that type, and net purchases of Canadian issues which increased the investment in nondefaulted obligations.

Data in table 30 are based on the total of foreign dollar bonds outstanding and take no account of the location of the owners. Furthermore, in some countries part or even all of the issues in default are those of state, municipal, or private corporate borrowers. Detailed information on the course and present status of defaults by countries is available in condensed form in reports of the Foreign Bondholders Protective Council, Inc.

¹ Foreign dollar bonds are bonds of foreign governments and corporations expressed in terms of United States dollars. Usually they were originally sold to American investors in large blocks through public offerings by investment bankers.

126 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

TABLE 30.—Status of publicly offered foreign dollar bonds as of Dec. 31, 1946

Country	Principal amount on which—		Total principal amount outstanding
	Debt service paid in full to Dec. 31, 1946 ¹	Interest in default ²	
Asia:			
China.....	1,022,085	5,500,000	6,522,085
Japan.....		283,267,700	283,267,700
Total Asia.....	1,022,085	288,767,700	289,789,785
Europe:			
Austria.....		36,710,600	36,710,600

CHAPTER IV. NATIONAL DEBT, REVENUE, AND INCOME

This chapter brings together the data in reply to five items in Senate Resolution 103 that relate to internal matters. These questions were as follows:

Item 10. The effects of the war on the public debt of the United States.

Item 11. The per capita tax burden of the people of the United States classified as (1) Federal, (2) State and local, and (3) total; and the total per capita tax burden of the people of each of the countries now in debt to the United States or with whom loan and investment discussions have been held by any American official since 1939.

Item 12. The total per capita debt burden for each of the countries mentioned in item 11.

Item 13. The latest reasonably reliable report on the national income, reduced to a per capita basis, for each country mentioned in item 11.

Item 14. The average interest rates for Government borrowing, according to the latest reasonably reliable report, in each of the countries mentioned in item 11.

GENERAL STATEMENT AND DEFINITIONS

The interpretation of data comparing the public debt, the per capita tax burden, or the national income of various countries is always subject to severe limitations. This is true not only because the data on which this information is based are usually incomplete and the series differ in their composition, but also because the same relative tax or debt figures do not necessarily imply a comparable economic impact or a comparable burden for the individual.

These difficulties are compounded at the present time when, as a result of the war, internal debts in some countries are being practically wiped out by inflation, when tax collections are slow and ineffective and cannot catch up with the progressive inflation of values, and when the yield of the tax system is greatly reduced by the low level of productive activity. Furthermore, in conditions of that kind, the measurement of government revenues and national income is most difficult and the results, particularly for purposes of comparison with prewar and with other countries, are of questionable validity.

All three sets of data—public debt, tax burden, and national income—have been brought together, in table 31, because the principal value of the data is in the relationship between them. The relationship between the tax burden and national income is probably most significant and that has been shown in the table in the form of a ratio.

However, it should be pointed out that the economic impact of the same relative per capita burden might differ considerably as between countries, depending upon the structure of their tax system. The same total revenue could be raised in one case by a tax system in which a graduated income tax would provide the bulk of the revenue, while in another country the chief reliance would be put on customs and excise taxes. The effect in either case on production, consumption, and incomes might be quite different.

Furthermore, the type of expenditures to be financed from the tax revenue should also be taken into consideration. In some cases the

difference in the tax burden indicates merely a different degree of government participation in the economic life of the country; and government expenditures, such as for social-security benefits, are merely an alternative to private expenditures for the same services in other countries. The Government of the United Kingdom, for instance, has held the cost of many of the necessities of life down to a low figure by absorbing a large part of the cost itself. This adds to the cost of government in the United Kingdom, while in countries that do not follow this practice the additional cost is borne by individuals as a personal expenditure outside of the tax structure. Instances of this kind can be multiplied; and, unless the data are limited to comparable functions of government, comparisons will in general only point to the differences in the services performed.

A further point to bear in mind is that in some countries the national governments perform many functions performed by local governments in other countries. For example, in times of peace the tax collections of the national government of the United States have been less than those of State and local governments combined (see table 38), and in Canada and Switzerland the national government receipts are normally the least important, while in France the national government is the dominant factor and local revenue receipts are a small part of taxes collected. Furthermore, since the war, many national governments act as purchasing organizations for some of the essential imports of foodstuffs and industrial raw materials. This makes their revenues and expenditures higher in proportion to their national incomes than would be the case for other countries.

Intercountry comparison of per capita tax and debt burdens is meaningful, therefore, only as a measure of the degree of participation of the government in the economy. Taxes and government debt are payments for goods, services, and additions to national wealth provided by governments. The greater the volume of goods provided and services rendered under government auspices, the higher the tax and/or debt burden.

Supplementary tables are included in this chapter, partly as a service to persons using the data to enable them to see in what manner the gross foreign currency data were put into the form of per capita amounts expressed in dollars. For this purpose table 33, Population and Exchange Rates, was prepared. In table 32, the national debt is divided into its internal and external components. The latter reveals the countries which are most dependent financially upon foreign countries. In a few cases, such as Hungary, the relationship between the internal and external debts is the result primarily of the postwar inflation which, for all practical purposes, wiped out the value of internal obligations.

Government revenue

In the answer to the item 11, the term tax burden was interpreted broadly to include other revenues which constitute a part of the burden imposed on the people for the support of the government. Insofar as possible data were collected regarding all foreign countries. However, it was impossible to obtain any substantial amount of information regarding state and local taxes and revenues and, accordingly, the data supplied relate exclusively to national governments.

The taxation and other revenue figures shown in table 31 are for the calendar years 1939 and 1946; or where the country is on a fiscal-year

basis, for the fiscal years which include the most months in 1939 and 1946. Actual taxes and revenues collected rather than budget estimates were used in all cases where the data were obtainable. Budget estimates are used when actual revenues are not available. These data were culled from a variety of sources including consular dispatches, official publications of the various governments, and Moody's Governments and Municipals. The publication, *Tax Systems of the World*, was especially useful for 1939 data concerning Latin America.

Taxes include direct and indirect taxes such as excise, sales, estate, income, corporation, unemployment compensation and other social-security taxes, customs duties, fees, and licenses. "Other revenues" include government royalties, interest, and dividends from government investments, proceeds from UNRRA sales, sales of public land, confiscated property and surplus property, but exclude loan proceeds, grants-in-aid, and reparation receipts. Net profits derived from government enterprises include such government undertakings and monopolies as the post office and railroads, telephone and telegraph, commodity monopolies, and exchange control. Each government enterprise in this category has been treated as a separate unit; consequently, where the expenditures exceeded receipts, the deficit was not deducted from the profits of some other unit. The total resultant revenue receipts, expressed in the local currency, was then converted to United States dollars at the average official exchange rate for the period.

Government Debt

The same procedures were followed in compiling the public debt of the various countries. Whenever available, the debt as of December 1939 and 1946, or the nearest available date, is broken down into its foreign and domestic components. Debts of government-owned corporations, to the extent that they are held outside of the government, are included. World War I debts to the United States have been excluded, as these are being shown separately in chapter I. Loans to private companies guaranteed by the government are excluded unless the government has been called upon to make good on its guaranty. Municipal debt guaranteed by the Federal government is considered as municipal rather than Federal. In addition to the above sources for the Government revenue, other main sources of debt data were the League of Nations' *Statistical Yearbook* and the *Statesman's Yearbook*.

National income

Data regarding the national incomes of various countries were obtained from official estimates where those were available. There is, however, considerable divergence among them with respect to the methods and principles of compilation and evaluation, particularly the inclusion and exclusion of a number of items. Sometimes these differences are due to the nature of the available statistics and sometimes they arise out of the peculiar structure of the economies to which they relate, and sometimes they are due to conceptual differences with regard to the content of national income.

Another difficulty marring the comparability of the per capita figures in dollar terms is the selecting of a proper exchange rate for translating the foreign currencies into dollars. As a consequence of government control of the exchange rates and the internal maladjust-

130 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

ments brought about by the war, the foreign exchange rates of many countries are kept at an artificially high level which does not correspond to the actual purchasing power of their currencies in their domestic markets.

In general, the estimates relate to national income at factor cost; that is, the aggregate earnings of labor and property which arise from the current production of goods and services.

Data regarding the national income of the United States were obtained from figures released by the United States Department of Commerce. Those relating to foreign countries were obtained from various sources. In the first place data contained in a paper prepared by Dr. J. B. D. Derksen, Chief, National Income Statistics Research Section, Statistical Office, United Nations Secretariat, were used (the Comparability of National Income Estimates, delivered before the World Statistical Congress, Washington, D. C., September 1947). Second, other data were received from reports of the United States consular service.

AVERAGE INTEREST RATE FOR FOREIGN GOVERNMENT BORROWING

Comparable data regarding interest rates effective in foreign countries are not available. In most countries current borrowing has been primarily in the form of advances from the central bank or intergovernmental. Loans of either of these two types would not be indicative of the real cost of money to the foreign country. A better indication of the real cost is given by current yields on foreign government bonds in those countries' domestic markets as calculated and published by the United Nations Statistical Office. Table 34 attached presents such yields.

EFFECT OF THE WAR ON THE PUBLIC DEBT OF THE UNITED STATES

The public debt of the United States has been defined for the purposes of this report as (1) the gross debt of the Federal Government including guaranteed obligations not owned by the United States Treasury and (2) the net interest-bearing debt of State and local governments. (See table 35, footnotes 1 and 2.) Gross debt data for State and local governments comparable to the gross debt figures of the Federal Government are not available.

It should be noted that the total public debt in the United States includes Government securities owned by Federal agencies and trust funds, and by trust and investment funds of State and local governments. The holdings of these agencies and funds amounted to \$40,800,000,000 on June 30, 1947. These holdings have not been deducted from the total public debt as they represent assets accumulated for specific purposes. Consequently, they should not be considered as an offset against the public debt in the sense that securities held in sinking funds are an offset. Securities held in sinking funds of State and local governments have been excluded from the net interest-bearing debt of State and local governments, and, therefore, are not included in the totals.

Size of the public debt

The total public debt of the United States—Federal, State, and local—increased by \$209,400,000,000 from June 30, 1939, to June 30, 1947. The debt of the Federal Government increased \$212,500,000,000 during this period, reflecting the cost of the war which was borne almost entirely by the Federal Government. However, the Federal debt reached a high of \$279,800,000,000 on February 28, 1946, and by June 30, 1947, had been reduced \$21,400,000,000 as a result of drawing down the general fund balance of the Treasury from wartime to peacetime levels and of a surplus of \$754,000,000 for the fiscal year 1947.

¹ Gross debt, including guaranteed obligations not held by the United States Treasury; gross debt consists of interest-bearing debt, matured debt on which interest has ceased, and debt bearing no interest. Source: Treasury Bulletin, July 1947, p. 20: Daily statement of United States Treasury, July 1, 1947.

² Interest-bearing debt less amount of interest-bearing securities issued by Federal, State, and local governments held in sinking funds of States, localities, Territories, and possessions. (The small amount of securities held in sinking funds of Territories and possessions is included.) There is only a very small amount of non-interest-bearing debt of State and local governments outstanding. Source: Annual Report of the Secretary of the Treasury for the fiscal year ended June 30, 1947.

³ Including obligations of Federal, State, and local governments held by Federal agencies and trust funds and by trust and investment funds of States, localities, Territories and possessions.

⁴ Obligations of Federal, State, and local governments held by Federal agencies and trust funds and by trust and investment funds of States, localities, Territories and possessions. Does not include securities held in sinking funds. Source: Annual Report of the Secretary of the Treasury for the fiscal year ended June 30, 1947.

The debt of State and local governments, however, decreased 3.1 billion dollars from the end of June 1939 to the end of June 1947. The decrease in State and local debt resulted from increased revenues of these governmental units and from the postponement of State and local expenditures for some functions, such as public works.

Ownership of the public debt

Through an intensive sales effort and the use of savings bonds and other bank-restricted securities, it was possible to achieve a wide distribution of the Federal debt among various classes of investors. Table 36 shows the estimated ownership of all interest-bearing securities of Federal, State, and local governments in the United States.

The reduction effected in the Federal debt by drawing down the Treasury balance from wartime to peacetime levels, has been concentrated in bank-held debt. As a consequence, the proportion of the interest-bearing Federal debt in the hands of nonbank investors was 64 percent on June 30, 1947, compared with 60 percent on June 30, 1946, and on June 30, 1939.

Rate of interest on the public debt

Although the war resulted in a large increase in the debt of the Federal Government, this debt was financed at a decreasing rate of interest (table 37). The computed average rate of interest on the direct and guaranteed interest-bearing debt of the Federal Government was 2.107 percent on June 30, 1947, although all except a very small amount of the public debt outstanding was taxable. On June 30, 1939, the computed average rate of interest was 2.53 percent; at that time interest on all of the debt was exempt from the normal tax and a part of it from the surtax. The lowest computed average interest rate was 1.92 percent at the end of December 1944.

140 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

The recent increase in the average rate of interest on the public debt has resulted principally from a shift from short-term to long-term securities concurrent with the reduction in bank-held debt. Recent issues of Treasury bills, certificates of indebtedness, and Treasury notes have been sold at higher interest rates, although the rate on long-term Government bonds, except for savings bonds, has remained at 2.50 percent, as pointed out in the reply to item 14.

Figures are rounded and will not necessarily add to totals.

¹ Figures represent par values with the following exceptions: (1) The holdings of commercial and mutual savings banks of State and local governments, Territories, and possessions are book values, (2) the holdings of these securities by individuals are residuals, and so deviate from par values in those cases where the figures for commercial and mutual savings banks are book values, (3) In the case of data which include United States savings bonds series A-D, E, and F, the figures for these bonds represent current redemption values.

² Includes partnerships and personal trust accounts.

³ Includes savings and loan associations, dealers and brokers, and investments of foreign balances in this country.

⁴ Comprises trust, sinking, and investment funds of State and local governments, territories, and possessions.

Source: Annual Report of the Secretary of the Treasury for the fiscal year ended June 30, 1947.

AVERAGE INTEREST RATE FOR UNITED STATES GOVERNMENT BORROWING

The computed average interest rate on the outstanding direct and guaranteed public debt of the United States on June 30, 1947, was 2.107 percent.

At the present time there are four issues of securities continuously on sale by the Government. These are series E, F, and G savings bonds and Treasury savings notes, series C. Series E savings bonds yield 2.9 percent, if held 10 years to maturity; series F and G savings bonds yield 2.53 percent and 2.50 percent, respectively, if held 12 years to maturity; series C savings notes yield 1.07 percent, if held 3 years to maturity.

The rate of interest paid on other securities issued by the United States varies with the term and maturity of the issue. Ninety-day Treasury bills are offered weekly. The issue dated December 4, 1947, sold at an average discount rate of 0.944 percent. The issue of Treasury notes, dated December 1, 1947, is a 1½-percent, 13-month security. From September 29 through October 8, 1947, the Treasury Department offered a 2½-percent Treasury bond, investment series A-1965, at 100 to institutional investors holding savings, insurance, and pension funds, and commercial banks holding savings deposits.

CHAPTER V. BALANCE OF PAYMENTS OF THE UNITED STATES

In this chapter material concerning balance of payments or aspects thereof, has been assembled. The data are in reply to two questions contained in Senate Resolution 103, namely:

Item 9. So far as possible, the total value of American goods exported and services performed for foreigners, excluding reexports and financial and security transfers, annually from 1914 to 1946; together with the corresponding items supplied by foreigners to the United States in the same period.

Item 15. An estimate year by year of the probable expenditure of foreign countries for American goods and services as a result of the loans, credits, grants, and other forms of financial aid, contracted with this country publicly or privately since VE-day.

A discussion of item 9 and a presentation of data on United States exports and imports in the years 1914, 1932, 1939, and 1946 appear in section A. Section B covers a discussion of item 15 and supplies data relative to private United States lending abroad, and section C gives certain supplemental data regarding postwar lending by foreign countries.

A. BALANCE OF PAYMENTS OF THE UNITED STATES

Table 39, which follows, shows, as item I A, total goods exported and services performed for foreigners in the respective years or periods, while item II A represents the corresponding items supplied by foreigners to the United States. More specifically, goods and services include all exports or imports of movable goods and so-called invisible items. The latter include shipping, travel, insurance, rents and royalties, property income (interest, dividends, and profits) and others. Exports are credits (or receipts) since in each case the country is giving up an asset; contrariwise, imports (payments) are debits because the country is acquiring an asset.

Items I B and C, II B and C, and IV represent the financial and security transfers which served to finance the net surplus of exports or imports of goods and services. Items I B and II B cover unilateral transfers, or gifts, contributions, and other transfers of value not involving a quid pro quo in the form of goods, services, gold, or capital assets. Under this heading are included not only cash gifts, such as immigrant remittances, but also the value of gifts in kind, such as UNRRA or lend-lease shipments. Thus unilateral transfer debits (or payments) reflect the value of all gifts, contributions, and similar items to foreign countries, whether in cash or other capital claims, or in the form of goods or services.

Items I C and II C, long-term capital movements, represent shifts in capital claims of indefinite maturity or of a maturity of more than one year. They include not only securities (stocks, bonds, mortgages, etc.) but real property (farms, branch factories, and real estate). Real property purchased by the Government for its own use, how-

ever, has been included in services, while all expenditures of religious and charitable institutions are included in unilateral transfers, even if they involve the purchase of fixed assets.

Investments of the United States abroad are assets; foreign investments in the United States are liabilities. The principle for determining credits or debits has already been stated.

Item IV, short-term capital and gold, includes all capital movements other than long-term, i. e., movements of bank deposits and other claims payable on demand or with an original maturity of less than 1 year. Until 1919 the gold entry in the balance of payments was the net international movement of gold in all its forms. Beginning in 1919, however, the gold entry is the net change in the monetary gold stock, including stabilization fund holdings. Thus the gold stock is considered a special kind of international asset, all increases in which are debited and decreases credited in the balance-of-payments statement. Offsetting entries occur in the merchandise account: If the gold stock increases because domestic production exceeds domestic nonmonetary use, such excess is treated as an export or credit; if domestic consumption exceeds production, the excess is treated as an import and may be considered to be that part of the imported gold used as merchandise and not added to the gold stock. This was the case in the years 1943-46. The algebraic sum of the merchandise entry and the monetary gold entry, it should be noted, still equals the net international gold transactions.

Reexports of foreign merchandise

Reexports of foreign merchandise are included in item I A-1, but are offset by also being included in imports, item II A-1. The amounts involved in the respective years are shown in table 40.

Reexports are exports of goods of foreign origin which have not been changed in form or value during their stay in this country. Such goods would have been entered into the import statistics and again in the export statistics, in the latter case classed as reexports. Exports of sugar of Cuban origin, which has been further refined in this country, would be changed in value and therefore classed as exports of domestic products. On the other hand, Canadian wheat passing through this country en route to Europe would be considered as intransit trade and not entered in either the import or the export statistics. Often nondutiable goods merely passing through the country are included in the statistics as imports and as reexports.

Tables 41 and 42, which follow, contain data regarding total United States exports and imports for the years 1914, 1932, 1939, and 1946 and similar data by economic classes for the years 1932, 1939, and 1946.

TABLE 41.—United States exports* by commodity groups and countries—1914, 1932, 1939, and 1946

[NOTE: The grand total and continent totals include countries not shown. Data by commodity groups not available for 1914]

B. AMERICAN LOANS AND GRANTS TO FOREIGN COUNTRIES IN THE INTERNATIONAL TRANSACTIONS OF THE UNITED STATES

It can be assumed, in response to item 15, that all aid—whether in the form of loans or grants—made available to foreign countries since the end of World War II has been spent on American goods and services, whether directly by the receiving country or by other countries to which the funds were transferred.

The amounts involved are approximately 15.6 billion dollars for the period covered—July 1, 1945, to June 30, 1947. Of this total, loans and credits accounted for about 7.9 billion dollars and gifts and grants-in-aid for about 7.7 billion dollars. Government loans and credits included as major items, lend-lease credits, surplus property credits, disbursements by the Export-Import Bank, dollar disbursements by the World Bank and Fund, and advances under the British loan are included under this heading.

Capital outflow on private account consists mainly in the repurchase, redemption, or amortization of United States obligations to foreigners. A list of new loans by private persons in the United States to foreigners since June 30, 1945, is given in table 44.

Gifts and grants-in-aid, or unilateral transfers as they are called in technical terminology, included straight lend-lease, contributions to UNRRA, and other transfers by the Government, and gifts in cash and in kind by private individuals and organizations in this country.

With two significant exceptions, all loans and grants made by the United States Government have been "tied" to the export of American goods and services. The first of these exceptions was the 10-percent "free fund" contribution to UNRRA, amounting to about \$270,000,000, which that organization was free to spend where it wished. Actually, the money was spent mostly in Canada and Latin-American countries, which, since they were importing more from us than we were from them, must be considered to have resented the money in the United States.

The second major exception was the British loan, which in effect became part of the general dollar resources of the United Kingdom. As of August 20, 1947, the British had drawn \$3,350,000,000 on the loan, of which \$3,115,000,000 had been spent. During the same period, according to public statements by the Chancellor of the Exchequer, the British spent \$1,800,000,000 on United States goods and services for their own use and for shipment to Germany. Against this they had sales to us of \$450,000,000, leaving a net of \$1,350,000,000. Of the remaining \$1,765,000,000 (i. e., \$3,115,000,000 minus \$1,450,000,000), \$960,000,000 was used to make purchases in Canada and Latin America, \$150,000,000 for dollar purchases elsewhere, mainly in Europe. An additional \$620,000,000 (net) was made available to other sterling area countries for expenditures in the United States and foreign countries. The remaining \$35,000,000 is accounted for by the subscription to the International Bank.

Between August 20 and December 1, 1947, the United Kingdom drew upon its gold reserves by \$412,000,000 and purchased \$240,000,000 of dollars from the International Monetary Fund. Canada and the sterling area countries had also used part of their reserves to pay for excess imports from this country.

168 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

Thus it is fair to say that as of December 1, substantially all of the postwar loans and grants by the United States Government have been used, directly or indirectly, to purchase American goods and services. The amounts of such loans and aid by quarters from July 1, 1945, to June 30, 1947, are shown in table 43.

POSTWAR FOREIGN LENDING BY PRIVATE UNITED STATES SOURCES

A list of foreign loans by private lenders in the United States is attached as table 44. It is believed to be relatively complete. Except for the stock issues and a few short-term loans, the issues were predominantly for refunding purposes and did not supply foreign countries new capital. The figures for each issue represent the principal amount of bond and debentures and the amount at offering price for stock issues. Approximately 85 percent of these amounts were subscribed in the United States. The other 15 percent were subscribed abroad and do not represent foreign lending by this country.

FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES 169

 TABLE 44.—Foreign credits¹ by private United States lenders from June 30, 1945, to July 1, 1947

Country	Date	Description of credit	Amount
Argentina.....	February 1947....	Swift International Co., Ltd., certificates for capital shares.	<i>All. of dol.</i> 3.9

170 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

TABLE 44.—Foreign credits¹ by private United States lenders from June 30, 1945, to July 1, 1947—Continued

Country	Date	Description of credit	Amount
Canada.....	February 1947...	The City of Montreal refunding debentures Oct. 15, 1967..	<i>Mill. of dol.</i> 77.8
	April 1947.....	Province of New Brunswick 5 year 2½ percent debentures May 1, 1952.	5.0
	May 1947.....	Donnacona Paper Co., Ltd., 15-year 3½ percent bonds...	5.5
	June 1947.....	Gurney Foundry Co., Ltd., 3 percent mortgage bonds Apr. 1, 1948 to 1952.	.2
	Do.....	New Brunswick Oil Fields, Ltd., capital shares (no par value).	.3
Chile.....	1947.....	Advances for taxes on copper as follows: Mar. 21, 1947— \$10,000,000; Feb. 1947—\$7,000,000. Taxes on copper sales for 1946 totaled \$13,300,000 thereby leaving a balance of \$3,700,000.	3.7
China.....	April 1947.....	To finance shipments of raw cotton.....	40.0
Cuba.....	November 1946..	Expreso Aereo Inter-Americano S. A., 4 percent con- vertible notes, due November 1951.	.3
	January 1947....	Orange-Crust de Cuba, S. A. (Cuba), common stock, P. V. \$1.	.1
Newfoundland..	May 1946.....	Bowater's Newfoundland Pulp & Paper Mill 3¼ percent bonds due June 1, 1968; to retire other bonds and to finance improvements and additions.	7.5
Netherlands....	Do.....	Export-Import Bank and 50 commercial banks each to participate in about half of \$200,000,000 loan—1 and 2 years at 2¼ percent.	93.3
	July 1946.....	10-year informal agreement between KLM Airlines, Netherlands, and Kidder Peabody, New York, for pur- chase of new equipment in the United States.	8.0
	May 1947.....	10-year external sinking fund, 3¾ percent; to finance post- war reconstruction.	20.0
Norway.....	July 1946.....	3-year revolving credit, 2 percent for 2 years and 2¼ percent thereafter.	16.0
	April 1947.....	Kingdom of Norway External 10-year, 3½ percent due April 1957, to increase dollar exchange reserves.	10.0
Nicaragua.....	June 1947.....	Loan to National Bank of Nicaragua to rehabilitate agri- culture, 3½ percent for 8 years. Based on gold.	4.5
Panama.....	May 1946.....	TACA Airways, S. A., capital stock P. V. \$5.....	0.8
Peru.....	January 1947....	Peruvian International Airways, 60-cent convertible pre- ferred stock, and common stock.	2.1
Panama.....	do.....	TACA Airways, S. A. 4 percent convertible notes July 15, 1959.	.1
Rumania.....	March 1947.....	4 years at 2½ percent over current American discount rates; to finance grain shipment. Based on gold.	1.0
Spain.....	October 1946....	To Spanish Exchange Institute to finance cotton purchases in United States.	7.0
Union of South Africa.	November 1946..	American-Anglo Transvaal Investment Corp., Ltd., capital stock.	2.2
			1.0

¹Excludes the \$250,000,000 International Bank debentures sold to the American public in July, 1947.

C. POSTWAR FOREIGN LENDING BY FOREIGN COUNTRIES

Several countries have made foreign loans since VJ-day and have made advances to other countries connected with the financing of current trade balances. Principal among these lending countries is Canada as a result of loans to eight countries amounting to \$594,000,000 plus the \$1,250,000,000 credit to the United Kingdom. The total amount advanced by Canada under these loans was, as of June 18, 1947, \$1,059,000,000 (see table 45). Sweden also has made financial aid available to foreign countries in substantial amount. The largest credits were to the U. S. S. R., Norway and the United Kingdom. Total utilization of all Swedish loans as of December 31, 1946, amounted to \$204,000,000. The amounts authorized totaled \$765,000,000. Loans by the Argentine Government (as listed in table 46) totaled about \$970,000,000 but no data are available relative to the amount utilized.

Many of these credits have been the result of payments agreements which provide for the accumulation of balances by either country depending on the relative volume of imports and exports. In most

FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES 171

cases a maximum amount to be accumulated was specified, any excess to be paid in gold or some transferable currency. The usual period is 1 year with the possibility of renegotiation after that time.

Others among the listed loans are still in the course of negotiation, or have not been ratified by one or by either of the countries involved. This is particularly true of the Argentine loans. Even among the loans or credits that have been made effective there is a scarcity of current data regarding the extent of utilization.

Lists of the available data regarding foreign loans made by countries other than the United States are given in tables 46 to 49. They are not complete but are given primarily for purposes of illustration.

TABLE 45.—*Postwar Canadian loans and advances to foreign governments*¹

(In millions of Canadian dollars)

Country	Amounts authorized	Drawn to Dec. 31, 1946	Advanced as of June 18, 1947	Encumbered as of June 18, 1947
Export credits:				
Belgium.....	100.0	52.6	56.0
China.....	60.0	16.5	23.3	10.5
Czechoslovakia.....	19.0	3.9	5.2	6.2
France.....	242.5	143.8	169.3
Netherlands.....	125.0	64.0	87.1
Netherlands Indies.....	15.0	5.4	6.7
Norway.....	30.0	16.4	18.9
U. S. S. R. ²	3.0	2.9	2.9
Other loans: United Kingdom.....	1,250.0	540.0	690.0
Total.....	1,844.5	845.5	1,059.4	16.7

¹ The terms of the export credits were 2¼ to 3 percent interest, 54 years maturity, and payments of principal beginning 1 to 6 years from date of loan. The loan to Britain bears 2 percent interest, and is repayable in 50 annual installments beginning in December 1951.

² Excluding the wheat loan to U. S. S. R. of \$10,000,000 which was granted in 1943 and 1944 and thus was not a postwar loan.

TABLE 46.—*Postwar foreign loans by Latin-American countries*

ARGENTINA

Borrowing country	Amount	Date	Remarks
Belgium-Luxemburg.	<i>In millions</i> 110 (pesos).....	May 14, 1946.....	Maximum accumulation of balances, no interest. Repayment in goods within 3 years.
Bolivia (in 3 parts)...	50 (pesos).....	Signed Mar. 26, 1947, ratified by Bolivia May 26, 1947, and Argentina, Sept. 23, 1947; not yet effective as of Sept 30, 1947.	Finance balance of trade. Interest, 3.5 percent. Repayment in 10 semiannual installments.
	100 (pesos).....do.....	Finance development corporation. Interest, 4 percent.
do.....do.....	Finance public-works program. Interest, 3.75 percent. Repayment in 50 years through semiannual payments beginning in tenth year.
Chile (in 3 parts)...do.....	Negotiated Dec. 13, 1946 (not yet ratified).	Finance trade deficit. Revolving credit. Interest, 3.5 percent. Repayment in 5 years beginning at end of 3 years.
	300 (pesos).....do.....	Finance public-works program. Bonds to be purchased at 96 percent of par. Interest, 3.75 percent. Repayment in 25 years.
do.....do.....	Finance economic development. Interest, 4 percent.

172 FOREIGN ASSETS AND LIABILITIES OF THE UNITED STATES

TABLE 46.—Postwar foreign loans by Latin-American countries—Continued

ARGENTINA—Continued

Borrowing country	Amount	Date	Remarks
Czechoslovakia.....	<i>In millions</i> 20 (pesos).....	July 2, 1947.....	Finance exchange of goods. Interest, 3 percent. Repayment, end of each year.
Finland.....	75 (pesos).....	Not yet formalized. May 1947.	Finance purchase of Argentine products.
France.....	150 (pesos).....	Oct. 22, 1945.....	Finance balance of payments deficit. Utilized Dec. 31, 1946: 150,000,000 pesos. Interest, none. Repayment after 3 years.
	450 (additional pesos).	July 23, 1947.....	Finance balance of payments deficit. Provides 600,000,000 peso credit which incorporates previous 150,000,000 peso credit. Repayment after 3 years (or 5 years by mutual consent). Utilized Dec. 31, 1946—94,000,000 pesos (in advance of formal signature).
Italy.....	700 (pesos).....	Oct. 13, 1947.....	To finance purchases of cereals, raw materials, etc. Agreement runs through 1951. Terms apparently similar to other recent Argentine agreements. ¹
Rumania.....	25 (pesos).....	Oct. 10, 1947.....	For purchase Argentine products. Credit available only against gold collateral. Interest: 3½ percent. Repayment not specified. Agreement expires July 31, 1950.
Spain.....	30 (pesos).....	Apr. 30, 1946.....	Finance purchases of foodstuffs. Interest, 2.75 percent. Repayment, 3 years.
	350 (pesos).....	Oct. 30, 1946.....	Revolving credit to finance purchases of Argentine products. Interest, 2.75 percent. Repayment, subject to negotiation after 3 to 5 years.
	400 (pesos).....	do.....	Bonds purchased at 90 percent to repay outstanding debts. Interest, 3.75 percent. Repayment in 25 years.
United Kingdom...	Open end until Sept. 17, 1946; no further credit under Sept. 17, 1946, arrangement.	June 14, 1940 and Sept. 17, 1946.	Cover all trade and payments; balances also used for debt repatriation. Argentina's blocked sterling rose from equivalent of 1.4 billion pesos in August 1945 to 1.75 billion at the end of 1946, representing a credit extension of 350 million pesos or about 100 million dollars. The Sept. 17, 1946, agreement provided convertibility of current sterling and some blocked sterling; the blocked balance in August or September 1947 was reported as 1.58 billion pesos—a decline of about 50 million dollars since Dec. 31, 1946. The balance now blocked, plus about 180 million dollars more, is to be used for purchase of British-owned utilities under present plans.

¹ New York Times, Oct. 14, 1947.

BRAZIL

Belgium.....	10 (Belgian francs) ¹ .	May 17, 1946.....	Finance current payments. Repayment within 3 years after expiration of agreement. Agreement duration 2 years and thereafter until terminated on 3 months' notice.
Czechoslovakia.....	20 (United States dollars).	Oct. 16, 1946.....	Finance current payments. Interest, 2 percent. Repayment in 5 years beginning in 1952. \$10,000,000 available in 1947.
Finland.....	10 (United States dollars).	May 31, 1946.....	Finance purchase of Brazilian products. Interest, 4 percent. Repayment by 1960 beginning in 1951.
France.....	25 (United States dollars).	Mar. 8, 1946.....	Finance balance of payments deficits. Utilized Dec. 31, 1946, \$3,700,000. Utilized June 30, 1947, \$25,000,000. Interest and repayment terms not known.

¹ A confidential agreement apparently provides either that the credit may reach 1,000,000,000 Belgian francs or perhaps that the equivalent of 500,000,000 cruzeiros shall be the maximum.

TABLE 46.—*Postwar foreign loans by Latin-American countries—Continued*

BRAZIL—Continued

Borrowing country	Amount	Date	Remarks
United Kingdom...	<i>In millions</i> Open end until June 2, 1947; no further credit under June 2, 1947, arrangement.	June 20, 1940, and June 2, 1947.	Cover all trade and payments; balances also used for debt repatriation. Brazil's blocked sterling rose from about \$181,000,000 in August 1945 to roughly \$200,000,000 at the end of 1946, an increase of about \$20,000,000. The partial agreement effective June 2, 1947, provided convertibility for current sterling. Brazilian blocked sterling on Apr. 1, 1947, was \$245,000,000.

URUGUAY

Belgium.....	5 (Belgian francs).....	June 14, 1946.....	Effective on ratification. Finance current payments. Interest, none mentioned. Repayment within 3 years after expiration of agreement. Agreement duration 1 year and thereafter until terminated on 8 months' notice.
Czechoslovakia.....	1 (United States dollars).	Jan. 2, 1947.....	Not effective until ratified. Finance current payments. Interest and repayment terms not known.
France.....	6 (pesos).....	Sept. 17, 1946.....	Finance purchases of Uruguayan products. Terms not available.
Italy.....	3 (pesos).....	Signed Feb. 26, 1947, but not yet effective.	Finance purchases of wool. Terms not available.
United Kingdom...	Open end.....	Sept. 10, 1940 (July 1947 agreement never signed.)	Covers all trade and payments. Uruguay's blocked sterling rose from \$2.4 million dollars in August 1945 to 68.7 million dollars on Dec. 31, 1946, an increase of 16.3 million dollars. As of June 30, 1947, this balance was 69 million dollars.

VENEZUELA

Ecuador.....	1 (United States dollars).	June 6, 1946.....	Finance Ecuador's investment in shipping concern. Utilized Dec. 31, 1946, 0.2 million dollars. Repayment in 18 annual payments ending 1966.
--------------	----------------------------	-------------------	---

TABLE 47.—*Postwar foreign credits by private British lenders*

Country	Amount	Date	Description of credit
Austria.....	<i>Dollar equivalent in Mil. of dol.</i> 6	November 1946..	To finance Austrian purchase of wool from Australia or United Kingdom, processed wool to be delivered by Austrian factories to United Kingdom interests for sale.
Czechoslovakia.....	4	March 1946.....	For raw material imports; arranged by principal Czechoslovak banks and guaranteed by National Bank of Czechoslovakia to be renewed from year to year.
France.....	50	January 1947....	For French woolen industry; revolving credit with all London banks participating.
	4	Late in 1946....	For raw material imports. Exchange risks guaranteed by Bank of France.
Hungary.....	2	1947.....	For purchase of certain raw materials of sterling-area origin.
Italy.....	40	Unknown.....	Cidino construction firm received amount for construction of hydroelectric plant near Costa.

TABLE 48.—Swedish contributions to the reconstruction of other countries

[Million kronor]

1. Gift contributions:

(a) Government appropriations for—		
help to refugees in Sweden (Sw. kronor).....	165	
relief work abroad (partly in Sw. kronor).....	132	
contributions according to the Washington Agreement of 1946 (not yet disbursed).....	125	
(b) Private contributions: Financial aid to relief work abroad (about).....		422
		500

Total (at out)..... 922

2. Credits granted before or in close connection with the cessation of hostilities.

	Amounts granted	Disbursed as per June 30, 1947	Disbursed July 1, 1946 to June 30, 1947
(a) Credits to Finland during the war.....	218	218	
(b) Credits for noncommercial purposes (consumption expenses in Sweden):			
Denmark:			
Expenses of Danish legation in Stockholm, including training of police corps.....	70	61	1
Expenses for Danish refugees in Sweden (credit written off).....	50	50	
Netherlands: Expenses for repatriation, shipping expenses.....	25	24	2
Norway:			
For auxiliary purposes and other expenses for refugees in Sweden (credits written off).....	100	100	
Expenses of Norwegian legation in Stockholm.....	50	50	
Expenses of Norwegian legation in Stockholm.....	15	3.5	-2
Training of police corps, etc.....	180	80	
Total (b).....	390	368.5	1
(c) Commercial credits extended before the cessation of hostilities (in some cases final agreements have, for technical reasons, not been concluded until somewhat later):			
Denmark, reconstruction purposes.....	110	94	12
Finland, reconstruction purposes.....	150	150	
Netherlands, reconstruction purposes.....	9	8	
Netherlands, reconstruction purposes.....	75	73	6
Norway:			
Reconstruction purposes.....	200	129	11
Shipbuilding credit.....	140	40	
Great Britain, sterling balances to be held by Sweden in accordance with a special payments agreement of 1947.....	190	190	
Total (c).....	774	684	29
(d) Other commercial credits extended before Aug. 1, 1945:			
France, current payments.....	80	80	
Netherlands, current payments.....	13.5	13.5	11
Total (d).....	93.5	93.5	11
(e) Other credits extended:			
Great Britain (this credit was extended during the war and is in this respect referable to (a) above; it was, however, consolidated during the spring of 1945 and is therefore included under (c)).....	50	50	
Ethiopia (this credit is intended for salaries to Swedish officials and is therefore of a noncommercial nature—as in the case of the credits under (b)—but was granted at a later date).....	7.5	7.5	
Total (e).....	57.5	57.5	
Total credits (a) to (e).....	1,533	1,421.5	41

¹ Credits extended against receipts of sterling, tied up for a period to be settled at a later date. The amounts are quoted on the basis of the exchange rates prevailing in 1945.

Private loans:

Belgium telegraph and telephone service.....	50.0
Denmark.....	30.0
Netherlands ²	50.0
Total	130.0

Total, all types..... **772.0**

¹ Mostly credits under payments agreements, to be utilized within from 1 to 5 years; repayment terms have in general been left for later negotiation.

² Original credit of 50,000,000 reduced.

³ Original credit of 250,000,000 and raised August 1946.

⁴ Credit expressed as 15,000,000 pounds sterling.

⁵ 85 percent guaranteed by the Swiss Confederation, duration 5 years.

CHAPTER VI. PROBLEM OF SERVICING THE DEBT

This chapter is limited to a discussion of the problem raised by item 17 of the proposed Senate Resolution 103—the problem of servicing the debt.

Item 17. What changes are necessary in this country's import tariffs to make possible the repayment of the loans and investments already made and contemplated by the United States and by private interests?

It is impossible to state in precise quantitative terms the effect of tariff changes on the flow of imports. Tariff reductions, by augmenting the outflow of dollars, increase the ability of foreign countries to meet interest and amortization payments on external obligations. However, the problem of servicing such obligations is not one of tariffs alone, nor should the effects of tariff changes be considered in isolation from other factors bearing on the international transactions of the United States. The most favorable conditions for debt service include not only the reduction of tariffs but related objectives of United States economic policy, notably:

1. The continuance of conditions of high employment in the United States and of normal long-term growth of the economy.
2. The recovery and expansion of European production and foreign trade.
3. The recovery of devastated areas elsewhere in the world and the development of relatively unindustrialized areas.
4. A reduction in the obstacles to the freer flow of goods and capital across national boundaries.
5. The continuing investment abroad of a small percentage of United States net savings.

There are two possible means by which foreign countries can service their debts to the United States: First, by utilizing their existing gold and dollar assets; and, second, by acquiring additional foreign exchange. The acquisition of additional dollars by the outside world depends on the ability of foreign countries to market goods and services in this country and to attract United States capital. Individual countries can undertake measures to increase their foreign exchange earnings by stimulating exports and decreasing imports, but it is only by an over-all increase in dollar disbursements by the United States that foreign countries as a whole can increase their dollar receipts and service their external debts without sacrificing imports of goods and services from this country.

Consideration should be given, among other factors, to prospective population growth, which will add to the need for expansion of production and foreign trade in many countries and will, where excessive, hamper their efforts to achieve the necessary balance in their international payments.

PROBABLE VOLUME OF DEBT SERVICE

As of the end of 1946 American private investments in and obligations due from foreign countries, plus those due to this Government other than World War I debts, amounted to \$21,260,000,000. At that time commitments had been made which when utilized will add \$5,100,000,000 to that figure. During 1946 the investment income received in the United States from foreign countries amounted to \$611,000,000; ¹ preliminary estimates indicate that the 1947 total was about \$200,000,000 higher. Of the 1946 receipts about \$21,000,000 was interest from obligations due to the Government. Receipts from the latter will increase on the basis of present commitments to a peak of about \$200,000,000 in 1951-52. Receipts on private investments are particularly difficult to forecast. However, it is estimated that total investment income received in 1952 will probably be between \$800,000,000 and \$1,000,000,000—excluding income on any loans not yet committed as of December 1, 1947.

Existing contracts require annual repayments (amounting in 1952 to \$250,000,000) of principal on the debt due this Government. To this must be added about \$160,000,000 of repayments of private portfolio investments. In 1952, therefore, foreign countries should be paying to the United States as service (interest and amortization) on loans and investments about \$1,200,000,000 to \$1,400,000,000. Additional loans in connection with the European recovery program will add to these amounts.

CONCLUSION

If the conditions stated above as the objectives of United States economic policy are realized, it is reasonable to expect that the magnitude of our imports, tourist expenditures, and capital exports will be such as to provide enough dollars to enable the world to pay for a high level of dollar imports and to service existing and contemplated foreign investment. Under these conditions, any adjustments which foreign countries as a whole might be required to make to insure payment of interest and amortization would entail little sacrifice. However, failure to realize any of the foregoing objectives would make such expectations less reasonable.
