RE: Response to Opioid Epidemic

Dear sirs:

For seven years we have made an intense effort to get the attention of the Veteran Administration, our Congress Representatives, various FDA related branches and others in the health field as it relates to a significant advancement in the area of pain relief.

We have consistently run into a "Catch 22." If a product is not FDA approved, then it will not be considered. On the other hand, the FDA won't consider "natural" formulated products. All of our ingredients are GRAS.

We are delighted to see a significant turnaround in the acceptance of integrative medicine to include alternative treatments for pain. Yet, while the words sound good, we have yet to see any significant acceptance in the marketplace by MDs or the willingness of Payers to include alternative medicines in their formularies.

We manufacture alternative medicines based on essential oil formulas. Our products are primarily used for non-cancer modalities. Our products have been used by hundreds of health professionals (Chiropractors) and thousands of users worldwide. As alternative pain treatments, the products are very fast-acting, long lasting and effective. They are non-addictive and topical in application. As such, very little ingredients actually enter the patents' biologic systems.

A Clinical Trial performed by Scripps Medical of San Diego found our primary analgesic to be effective on many pain problems. The Clinical Trial may be viewed on our website by clicking Articles at the bottom of any page.

Since that Clinical Trial, we have also developed formulas to include inflammation as well as pain, treatment for Shingles and PHN and treatment for STDs. Our formulas are the only non-pharmacological treatments for Herpes viruses. Reunion™ products are not intended to be cures, simply excellent pain relievers.

On our website, you will find numerous Customer Reviews, many from health professionals.

As you are aware, Doctors are prescribing opioids for pain problems, often over prescribing them for non-cancerous conditions. Systemic pharmacological pain relief medicines such as Cymbalta, Lyrica and Gabapentin have been found to not only be very expensive, but also ineffective ... generally not particularly more effective than placebos. Ref: Pain Medicine News.

Specifically, Medicare and Medicaid should take a serious look at our Reunion pain relief products and add them to their formularies. Not only are they non-addictive and very effective, they cost a fraction of pharmaceutical drugs.

Further, the VA should also consider our Reunion products.

We couldn't agree more there is an opioid problem in the U.S. Unfortunately, yesterday's preconceptions and today's red tape are keeping American families, veterans and elderly from an alternative that could be very useful in pain control.

I look forward to your reply.
